A learner who remains absent for any end semester examination shall be assigned a letter grade of ABand a corresponding grade point of zero. He/she should reappear for the said evaluation/examination in due course.

18. The Semester grade point average (SGPA)

The performance of a student in a semester is indicated by a number called 'Semester Grade Point Average' (SGPA). The SGPA is the weighted average of the grade points obtainedin all the courses by the student during the semester. For example, if a student takes five courses(Theory/Practical) in a semester with credits C1, C2, C3, C4 and C5 and the student's grade pointsin these courses are G1, G2, G3, G4 and G5, respectively, and then students' SGPA is equal to:

$$\text{SGPA} = \frac{C_1G_1 + C_2G_2 + C_3G_3 + C_4G_4 + C_5G_5}{C_1 + C_2 + C_3 + C_4 + C_5}$$

The SGPA is calculated to two decimal points.It should be noted that, the SGPA for any semester shall take into consideration the F and ABSgrade awarded in that semester. For example if a learner has a F or ABS grade in course 4, theSGPA shall then be computed as:

$$\text{SGPA} = \frac{C_1G_1 + C_2G_2 + C_3G_3 + C_4 * \text{ZERO} + C_5G_5}{C_1 + C_2 + C_3 + C_4 + C_5}$$

19. Cumulative Grade Point Average (CGPA)

The CGPA is calculated with the SGPA of all the VIII semesters to two decimal points and is indicated in final grade report card/final transcript showing the grades of all VIII semesters and their courses. The CGPA shall reflect the failed statusin case of F grade(s),till the course(s) is/are passed. When the course(s)is/are passedby obtaining a pass grade on subsequent examination(s) theCGPA shall only reflect the new grade and not the fail grades earned earlier.The CGPA is calculated as:

$$\text{CGPA} = \frac{C_1S_1 + C_2S_2 + C_3S_3 + C_4S_4 + C_5S_5 + C_6S_6 + C_7S_7 + C_8S_8}{C_1 + C_2 + C_3 + C_4 + C_5 + C_6 + C_7 + C_8}$$

where $C_1, C_2, C_3,\ldots$ is the total number of credits for semester I,II,III,…. and $S_1,S_2, S_3,\ldots$is the SGPA of semester I,II,III,…. .

20. Declaration of class

The class shall be awarded on the basis of CGPA as follows:

First Class with Distinction	= CGPA of. 7.50 and above
First Class	= CGPA of 6.00 to 7.49
Second Class	= CGPA of 5.00 to 5.99

21. Project work

All the students shall undertake a projectunder the supervision of a teacher and submit a report. The area of the project shall directly relate any one of the elective subject opted by the student in semester VIII. The project shall be carried out in group not exceeding 5 in number. The project report shall be submitted in triplicate (typed & bound copy not less than 25 pages).

The internal and external examiner appointed by the University shall evaluate the project at the time of the Practical examinations of other semester(s). Students shall be evaluated in groups for four hours (i.e., about half an hour for a group of five students). The projects shall be evaluated as per the criteria given below.

Evaluation of Dissertation Book:

Objective(s) of the work done		15 Marks
Methodology adopted		20 Marks
Results and Discussions		20 Marks
Conclusions and Outcomes		20 Marks
	Total	**75 Marks**

Evaluation of Presentation:

Presentation of work		25 Marks
Communication skills		20 Marks
Question and answer skills		30 Marks
	Total	**75 Marks**

Explanation: The 75 marks assigned to the dissertation book shall be same for all the students in a group. However, the 75 marks assigned for presentation shall be awarded based on the performance of individual students in the given criteria.

22. Industrial training (Desirable)

Every candidate shall be required to work for at least 150 hours spread over four weeks in a Pharmaceutical Industry/Hospital. It includes Production unit, Quality Control department, Quality Assurance department, Analytical laboratory, Chemical manufacturing unit, Pharmaceutical R&D, Hospital (Clinical Pharmacy), Clinical Research Organization, Community Pharmacy, etc. After the Semester – VI and before the commencement of Semester – VII, and shall submit satisfactory report of such work and certificate duly signed by the authority of training organization to the head of the institute.

23. Practice School

In the VII semester, every candidate shall undergo practice school for a period of 150 hours evenly distributed throughout the semester. The student shall opt any one of the domains for practice school declared by the program committee from time to time.

At the end of the practice school, every student shall submit a printed report (in triplicate) on the practice school he/she attended (not more than 25 pages). Along with the exams of semester VII, the report submitted by the student, knowledge and skills acquired by the student through practice school shall be evaluated by the subject experts at college leveland grade point shall be awarded.

24. Award of Ranks

Ranks and Medals shall be awarded on the basis of final CGPA. However, candidates who fail in one or more courses during the B.Pharm program shall not be eligible for award of ranks.Moreover, the candidates should have completed the B. Pharm program in minimum prescribed number of years, (four years) for the award of Ranks.

25. Award of degree

Candidates who fulfill the requirements mentioned above shall be eligible for award of degree during the ensuing convocation.

26. Duration for completion of the program of study

The duration for the completion of the program shall be fixed as double the actual duration of the program and the students have to pass within the said period, otherwise they have to get fresh Registration.

27. Re-admission after break of study

Candidate who seeks re-admission to the program after break of study has to get the approval from the university by paying a condonation fee.

No condonation is allowed for the candidate who has more than 2 years of break up period and he/she has to rejoin the program by paying the required fees.

CHAPTER - II: SYLLABUS

Semester I

BP101T. HUMAN ANATOMY AND PHYSIOLOGY-I (Theory)

45 Hours

Scope: This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body. It also helps in understanding both homeostatic mechanisms. The subject provides the basic knowledge required to understand the various disciplines of pharmacy.

Objectives: Upon completion of this course the student should be able to

1. Explain the gross morphology, structure and functions of various organs of the human body.
2. Describe the various homeostatic mechanisms and their imbalances.
3. Identify the various tissues and organs of different systems of human body.
4. Perform the various experiments related to special senses and nervous system.
5. Appreciate coordinated working pattern of different organs of each system

Course Content:

Unit I **10 hours**

- **Introduction to human body**
  Definition and scope of anatomy and physiology, levels of structural organization and body systems, basic life processes, homeostasis, basic anatomical terminology.
- **Cellular level of organization**
  Structure and functions of cell, transport across cell membrane, cell division, cell junctions. General principles of cell communication, intracellular signaling pathway activation by extracellular signal molecule, Forms of intracellular signaling: a) Contact-dependent b) Paracrine c) Synaptic d) Endocrine
- **Tissue level of organization**
  Classification of tissues, structure, location and functions of epithelial, muscular and nervous and connective tissues.

Unit II **10 hours**

- **Integumentary system**
  Structure and functions of skin
- **Skeletal system**
  Divisions of skeletal system, types of bone, salient features and functions of bones of axial and appendicular skeletal system
  Organization of skeletal muscle, physiology of muscle contraction, neuromuscular junction

- **Joints**
  Structural and functional classification, types of joints movements and its articulation

Unit III **10 hours**

- **Body fluids and blood**
- Body fluids, composition and functions of blood, hemopoeisis, formation of hemoglobin, anemia, mechanisms of coagulation, blood grouping, Rh factors, transfusion, its significance and disorders of blood, Reticulo endothelial system.
- **Lymphatic system**

  Lymphatic organs and tissues, lymphatic vessels, lymph circulation and functions of lymphatic system

Unit IV **08 hours**

Peripheral nervous system:
Classification of peripheral nervous system: Structure and functions of sympathetic and parasympathetic nervous system.
Origin and functions of spinal and cranial nerves.

- **Special senses**
  Structure and functions of eye, ear, nose and tongue and their disorders.

Unit V **07 hours**

- **Cardiovascular system**
  Heart – anatomy of heart, blood circulation, blood vessels, structure and functions of artery, vein and capillaries, elements of conduction system of heart and heart beat, its regulation by autonomic nervous system, cardiac output, cardiac cycle. Regulation of blood pressure, pulse, electrocardiogram and disorders of heart.

BP107P. HUMAN ANATOMY AND PHYSIOLOGY (Practical)

4 Hours/week

Practical physiology is complimentary to the theoretical discussions in physiology. Practicals allow the verification of physiological processes discussed in theory classes through experiments on living tissue, intact animals or normal human beings. This is helpful for developing an insight on the subject**.**

1. Study of compound microscope.
2. Microscopic study of epithelial and connective tissue
3. Microscopic study of muscular and nervous tissue
4. Identification of axial bones
5. Identification of appendicular bones

6. Introduction to hemocytometry.
7. Enumeration of white blood cell (WBC) count
8. Enumeration of total red blood corpuscles (RBC) count
9. Determination of bleeding time
10. Determination of clotting time
11. Estimation of hemoglobin content
12. Determination of blood group.
13. Determination of erythrocyte sedimentation rate (ESR).
14. Determination of heart rate and pulse rate.
15. Recording of blood pressure.

Recommended Books (Latest Editions)

1. Essentials of Medical Physiology by K. Sembulingam and P. Sembulingam. Jaypee brothers medical publishers, New Delhi.
2. Anatomy and Physiology in Health and Illness by Kathleen J.W. Wilson, Churchill Livingstone, New York
3. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co,Riverview,MI USA
4. Text book of Medical Physiology- Arthur C,Guyton andJohn.E. Hall. Miamisburg, OH, U.S.A.
5. Principles of Anatomy and Physiology by Tortora Grabowski. Palmetto, GA, U.S.A.

6. Textbook of Human Histology by Inderbir Singh, Jaypee brother's medical publishers, New Delhi.
7. Textbook of Practical Physiology by C.L. Ghai, Jaypee brother's medical publishers, New Delhi.
8. Practical workbook of Human Physiology by K. Srinageswari and Rajeev Sharma, Jaypee brother's medical publishers, New Delhi.

Reference Books (Latest Editions)

1. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co, Riverview, MI USA
2. Text book of Medical Physiology- Arthur C, Guyton and John. E. Hall. Miamisburg, OH, U.S.A.
3. Human Physiology (vol 1 and 2) by Dr. C.C. Chatterrje ,Academic Publishers Kolkata

BP102T. PHARMACEUTICAL ANALYSIS (Theory)

45 Hours

Scope: This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs

Objectives: Upon completion of the course student shall be able to

- understand the principles of volumetric and electro chemical analysis
- carryout various volumetric and electrochemical titrations
- develop analytical skills

Course Content:

UNIT-I **10 Hours**

(a) Pharmaceutical analysis- Definition and scope

i) Different techniques of analysis

ii) Methods of expressing concentration

iii) Primary and secondary standards.

iv) Preparation and standardization of various molar and normal solutions- Oxalic acid, sodium hydroxide, hydrochloric acid, sodium thiosulphate, sulphuric acid, potassium permanganate and ceric ammonium sulphate

(b)Errors: Sources of errors, types of errors, methods of minimizing errors, accuracy, precision and significant figures

(c)Pharmacopoeia, Sources of impurities in medicinal agents,limit tests.

UNIT-II **10 Hours**

- **Acid base titration**: Theories of acid base indicators, classification of acid base titrations and theory involved in titrations of strong, weak, and very weak acids and bases, neutralization curves
- **Non aqueous titration**: Solvents, acidimetry and alkalimetry titration and estimation of Sodium benzoate and Ephedrine HCl

UNIT-III **10 Hours**

- **Precipitation titrations**: Mohr's method, Volhard's, Modified Volhard's, Fajans method, estimation of sodium chloride.
- **Complexometric titration**: Classification, metal ion indicators, masking and demasking reagents, estimation of Magnesium sulphate, and calcium gluconate.
- **Gravimetry**: Principle and steps involved in gravimetric analysis. Purity of the precipitate: co-precipitation and post precipitation, Estimation of barium sulphate.

- Basic Principles,methods and application of diazotisation titration.

UNIT-IV **08 Hours**

Redox titrations

(a) Concepts of oxidation and reduction

(b) Types of redox titrations (Principles and applications)

Cerimetry, Iodimetry, Iodometry, Bromatometry, Dichrometry, Titration with potassium iodate

UNIT-V **07 Hours**

- **Electrochemical methods of analysis**
  - **Conductometry**- Introduction, Conductivity cell, Conductometric titrations, applications.
  - **Potentiometry** - Electrochemical cell, construction and working of reference (Standard hydrogen, silver chloride electrode and calomel electrode) and indicator electrodes (metal electrodes and glass electrode), methods to determine end point of potentiometric titration and applications.
  - **Polarography** - Principle, Ilkovic equation, construction and working of dropping mercury electrode and rotating platinum electrode, applications

BP108P. PHARMACEUTICAL ANALYSIS (Practical)

4 Hours / Week

I **Limit Test of the following**

(1) Chloride
(2) Sulphate
(3) Iron
(4) Arsenic

II **Preparation and standardization of**

(1) Sodium hydroxide
(2) Sulphuric acid
(3) Sodium thiosulfate
(4) Potassium permanganate
(5) Ceric ammonium sulphate

III **Assay of the following compounds along with Standardization of Titrant**

(1) Ammonium chloride by acid base titration
(2) Ferrous sulphate by Cerimetry
(3) Copper sulphate by Iodometry
(4) Calcium gluconate by complexometry
(5) Hydrogen peroxide by Permanganometry
(6) Sodium benzoate by non-aqueous titration
(7) Sodium Chloride by precipitation titration

IV **Determination of Normality by electro-analytical methods**

(1) Conductometric titration of strong acid against strong base
(2) Conductometric titration of strong acid and weak acid against strong base
(3) Potentiometric titration of strong acid against strong base

Recommended Books: (Latest Editions)

1. A.H. Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I & II, Stahlone Press of University of London
2. A.I. Vogel, Text Book of Quantitative Inorganic analysis
3. P. Gundu Rao, Inorganic Pharmaceutical Chemistry
4. Bentley and Driver's Textbook of Pharmaceutical Chemistry
5. John H. Kennedy, Analytical chemistry principles
6. Indian Pharmacopoeia.

BP103T. PHARMACEUTICS- I (Theory)

45 Hours

Scope: This course is designed to impart a fundamental knowledge on the preparatory pharmacy with arts and science of preparing the different conventional dosage forms.

Objectives: Upon completion of this course the student should be able to:

- Know the history of profession of pharmacy
- Understand the basics of different dosage forms, pharmaceutical incompatibilities and pharmaceutical calculations
- Understand the professional way of handling the prescription
- Preparation of various conventional dosage forms

Course Content:

UNIT – I **10 Hours**

- **Historical background and development of profession of pharmacy**: History of profession of Pharmacy in India in relation to pharmacy education, industry and organization, Pharmacy as a career, Pharmacopoeias: Introduction to IP, BP, USP and Extra Pharmacopoeia.
- **Dosage forms:** Introduction to dosage forms, classification and definitions
- **Prescription:** Definition, Parts of prescription, handling of Prescription and Errors in prescription.
- **Posology:** Definition, Factors affecting posology. Pediatric dose calculations based on age, body weight and body surface area.

UNIT – II **10 Hours**

- **Pharmaceutical calculations**: Weights and measures – Imperial & Metric system, Calculations involving percentage solutions, alligation, proof spirit and isotonic solutions based on freezing point and molecular weight.

- **Powders:** Definition, classification, advantages and disadvantages,Simple & compound powders – official preparations, dusting powders, effervescent, efflorescent and hygroscopic powders, eutectic mixtures. Geometric dilutions.

- **Liquid dosage forms:** Advantages and disadvantages of liquid dosage forms. Excipients used in formulation of liquid dosage forms. Solubility enhancement techniques

UNIT – III **08 Hours**

- **Monophasic liquids:** Definitions and preparations of Gargles, Mouthwashes, Throat Paint, Eardrops, Nasal drops, Enemas, Syrups, Elixirs, Liniments and Lotions.
- **Biphasic liquids:**
- **Suspensions:** Definition, advantages and disadvantages, classifications, Preparation of suspensions; Flocculated and Deflocculated suspension & stability problems and methods to overcome.
- **Emulsions:** Definition, classification, emulsifying agent, test for the identification of type ofEmulsion, Methods of preparation & stability problems and methods to overcome.

UNIT – IV **08 Hours**

- **Suppositories**: Definition, types, advantages and disadvantages, types of bases, methods of preparations. Displacement value & its calculations, evaluation of suppositories.
- **Pharmaceutical incompatibilities**: Definition, classification, physical, chemical and therapeutic incompatibilities with examples.

UNIV – V **07 Hours**

- **Semisolid dosage forms:** Definitions, classification, mechanisms and factors influencing dermal penetration of drugs. Preparation of ointments, pastes, creams and gels. Excipients used in semi solid dosage forms. Evaluation of semi solid dosages forms

BP109P. PHARMACEUTICSI (Practical)

3 Hours / week

1 . Syrups

a) Syrup IP'66

b) Compound syrup of Ferrous Phosphate BPC'68

2. Elixirs a) Piperazine citrate elixir

b) Paracetamol pediatric elixir

3.Linctus a) Terpin Hydrate Linctus IP'66

b) Iodine Throat Paint (Mandles Paint)

4. Solutions

a) Strong solution of ammonium acetate

b) Cresol with soap solution

c) Lugol's solution

5. Suspensions

a) Calamine lotion

b) Magnesium Hydroxide mixture

c) Aluminimum Hydroxide gel

6. Emulsions a) Turpentine Liniment

b) Liquid paraffin emulsion

7. Powders and Granules

a) ORS powder (WHO)

b) Effervescent granules

c)Dusting powder

d)Divded powders

8. Suppositories

a) Glycero gelatin suppository

b) Coca butter suppository

c) Zinc Oxide suppository

8. Semisolids

a) Sulphur ointment

b) Non staining-iodine ointment with methyl salicylate

c) Carbopal gel

9. Gargles and Mouthwashes

a) Iodine gargle

b) Chlorhexidine mouthwash

Recommended Books: (Latest Editions)

12. Francoise Nieloud and Gilberte Marti-Mestres: Pharmaceutical Emulsions and Suspensions, Marcel Dekker, INC, New York.

BP104T. PHARMACEUTICAL INORGANIC CHEMISTRY (Theory)

45 Hours

Scope: This subject deals with the monographs of inorganic drugs and pharmaceuticals.

Objectives: Upon completion of course student shall be able to

- know the sources of impurities and methods to determine the impurities in inorganic drugs and pharmaceuticals
- understand the medicinal and pharmaceutical importance of inorganic compounds

Course Content:

UNIT I **10 Hours**

- **Impurities in pharmaceutical substances:** History of Pharmacopoeia, Sources and types of impurities, principle involved in the limit test for Chloride, Sulphate, Iron, Arsenic, Lead and Heavy metals, modified limit test for Chloride and Sulphate

  General methods of preparation, assay for the compounds superscripted with **asterisk (*),** properties and medicinal uses of inorganic compounds belonging to the following classes

UNIT II **10 Hours**

- **Acids, Bases and Buffers:** Buffer equations and buffer capacity in general, buffers in pharmaceutical systems, preparation, stability, buffered isotonic solutions, measurements of tonicity, calculations and methods of adjusting isotonicity.
- **Major extra and intracellular electrolytes**: Functions of major physiological ions, Electrolytes used in the replacement therapy: Sodium chloride*, Potassium chloride, Calcium gluconate* and Oral Rehydration Salt (ORS), Physiological acid base balance.
- **Dental products**: Dentifrices, role of fluoride in the treatment of dental caries, Desensitizing agents, Calcium carbonate, Sodium fluoride, and Zinc eugenol cement.

UNIT III **10 Hours**

- **Gastrointestinal agents**

  Acidifiers: Ammonium chloride* and Dil. HCl

  Antacid: Ideal properties of antacids, combinations of antacids, Sodium

Bicarbonate*, Aluminum hydroxide gel, Magnesium hydroxide mixture

Cathartics: Magnesium sulphate, Sodium orthophosphate, Kaolin and Bentonite

Antimicrobials: Mechanism, classification, Potassium permanganate, Boric acid, Hydrogen peroxide*, Chlorinated lime*, Iodine and its preparations

UNIT IV **08 Hours**

- **Miscellaneous compounds**

  Expectorants: Potassium iodide, Ammonium chloride*.

  Emetics: Copper sulphate*, Sodium potassium tartarate

  Haematinics: Ferrous sulphate*, Ferrous gluconate

  Poison and Antidote: Sodium thiosulphate*, Activated charcoal, Sodium nitrite333

  Astringents: Zinc Sulphate, Potash Alum

UNIT V **07 Hours**

- **Radiopharmaceuticals**: Radio activity, Measurement of radioactivity, Properties of α, β, γ radiations, Half life, radio isotopes and study of radio isotopes - Sodium iodide I^{131}, Storage conditions, precautions & pharmaceutical application of radioactive substances.

BP110P. PHARMACEUTICAL INORGANIC CHEMISTRY (Practical)

4 Hours / Week

I **Limit tests for following ions**

Limit test for Chlorides and Sulphates
Modified limit test for Chlorides and Sulphates
Limit test for Iron
Limit test for Heavy metals
Limit test for Lead
Limit test for Arsenic

II **Identification test**

Magnesium hydroxide
Ferrous sulphate
Sodium bicarbonate
Calcium gluconate
Copper sulphate

III **Test for purity**

Swelling power of Bentonite
Neutralizing capacity of aluminum hydroxide gel
Determination of potassium iodate and iodine in potassium Iodide

IV **Preparation of inorganic pharmaceuticals**

Boric acid
Potash alum
Ferrous sulphate

Recommended Books (Latest Editions)

1. A.H. Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I & II, Stahlone Press of University of London, 4th edition.
2. A.I. Vogel, Text Book of Quantitative Inorganic analysis
3. P. Gundu Rao, Inorganic Pharmaceutical Chemistry, 3rd Edition
4. M.L Schroff, Inorganic Pharmaceutical Chemistry
5. Bentley and Driver's Textbook of Pharmaceutical Chemistry
6. Anand & Chatwal, Inorganic Pharmaceutical Chemistry
7. Indian Pharmacopoeia

BP105T.COMMUNICATION SKILLS (Theory)

30 Hours

Scope: This course will prepare the young pharmacy student to interact effectively with doctors, nurses, dentists, physiotherapists and other health workers. At the end of this course the student will get the soft skills set to work cohesively with the team as a team player and will add value to the pharmaceutical business.

Objectives:

Upon completion of the course the student shall be able to

1. Understand the behavioral needs for a Pharmacist to function effectively in the areas of pharmaceutical operation
2. Communicate effectively (Verbal and Non Verbal)
3. Effectively manage the team as a team player
4. Develop interview skills
5. Develop Leadership qualities and essentials

Course content:

UNIT – I **07 Hours**

- **Communication Skills:** Introduction, Definition, The Importance of Communication, The Communication Process – Source, Message, Encoding, Channel, Decoding, Receiver, Feedback, Context

- **Barriers to communication:** Physiological Barriers, Physical Barriers, Cultural Barriers, Language Barriers, Gender Barriers, Interpersonal Barriers, Psychological Barriers, Emotional barriers

- **Perspectives in Communication:** Introduction, Visual Perception, Language, Other factors affecting our perspective - Past Experiences, Prejudices, Feelings, Environment

UNIT – II **07 Hours**

- **Elements of Communication:** Introduction, Face to Face Communication - Tone of Voice, Body Language (Non-verbal communication), Verbal Communication, Physical Communication

- **Communication Styles:** Introduction, The Communication Styles Matrix with example for each -Direct Communication Style, Spirited Communication Style, Systematic Communication Style, Considerate Communication Style

UNIT – III **07 Hours**

- **Basic Listening Skills:** Introduction, Self-Awareness, Active Listening, Becoming an Active Listener, Listening in Difficult Situations
- **Effective Written Communication:** Introduction, When and When Not to Use Written Communication - Complexity of the Topic, Amount of Discussion' Required, Shades of Meaning, Formal Communication
- **Writing Effectively:** Subject Lines, Put the Main Point First, Know Your Audience, Organization of the Message

UNIT – IV **05 Hours**

- **Interview Skills:** Purpose of an interview, Do's and Dont's of an interview
- **Giving Presentations:** Dealing with Fears, Planning your Presentation, Structuring Your Presentation, Delivering Your Presentation, Techniques of Delivery

UNIT – V **04 Hours**

- **Group Discussion:** Introduction, Communication skills in group discussion, Do's and Dont's of group discussion

BP111P.COMMUNICATION SKILLS (Practical)

2 Hours / week

Thefollowing learning modules are to be conducted using wordsworth® English language lab software

Basic communication covering the following topics

Meeting People

Asking Questions

Making Friends

What did you do?

Do's and Dont's

Pronunciations covering the following topics

Pronunciation (Consonant Sounds)

Pronunciation and Nouns

Pronunciation (Vowel Sounds)

Advanced Learning

Listening Comprehension / Direct and Indirect Speech

Figures of Speech

Effective Communication

Writing Skills

Effective Writing

Interview Handling Skills

E-Mail etiquette

Presentation Skills

Recommended Books: (Latest Edition)

1. Basic communication skills for Technology, Andreja. J. Ruther Ford, 2nd Edition, Pearson Education, 2011
2. Communication skills, Sanjay Kumar, Pushpalata, 1stEdition, Oxford Press, 2011
3. Organizational Behaviour, Stephen .P. Robbins, 1stEdition, Pearson, 2013
4. Brilliant- Communication skills, Gill Hasson, 1stEdition, Pearson Life, 2011
5. The Ace of Soft Skills: Attitude, Communication and Etiquette for success, Gopala Swamy Ramesh, 5thEdition, Pearson, 2013
6. Developing your influencing skills, Deborah Dalley, Lois Burton, Margaret, Green hall, 1st Edition Universe of Learning LTD, 2010
7. Communication skills for professionals, Konar nira, 2ndEdition, New arrivals – PHI, 2011
8. Personality development and soft skills, Barun K Mitra, 1stEdition, Oxford Press, 2011
9. Soft skill for everyone, Butter Field, 1st Edition, Cengage Learning india pvt.ltd, 2011
10. Soft skills and professional communication, Francis Peters SJ, 1stEdition, Mc Graw Hill Education, 2011
11. Effective communication, John Adair, 4thEdition, Pan Mac Millan,2009
12. Bringing out the best in people, Aubrey Daniels, 2ndEdition, Mc Graw Hill, 1999

BP 106RBT.REMEDIAL BIOLOGY (Theory)

30 Hours

Scope: To learn and understand the components of living world, structure and functional system of plant and animal kingdom.

Objectives: Upon completion of the course, the student shall be able to

- know the classification and salient features of five kingdoms of life
- understand the basic components of anatomy & physiology of plant
- know understand the basic components of anatomy & physiology animal with special reference to human

UNIT I **07 Hours**

Living world:

- Definition and characters of living organisms
- Diversity in the living world
- Binomial nomenclature
- Five kingdoms of life and basis of classification. Salient features of Monera, Potista, Fungi, Animalia and Plantae, Virus,

Morphology of Flowering plants

- Morphology of different parts of flowering plants – Root, stem, inflorescence, flower, leaf, fruit, seed.
- General Anatomy of Root, stem, leaf of monocotyledons & Dicotylidones.

UNIT II **07 Hours**

Body fluids and circulation

- Composition of blood, blood groups, coagulation of blood
- Composition and functions of lymph
- Human circulatory system
- Structure of human heart and blood vessels
- Cardiac cycle, cardiac output and ECG

Digestion and Absorption

- Human alimentary canal and digestive glands
- Role of digestive enzymes
- Digestion, absorption and assimilation of digested food

Breathing and respiration

- Human respiratory system
- Mechanism of breathing and its regulation
- Exchange of gases, transport of gases and regulation of respiration
- Respiratory volumes

UNIT III **07 Hours**

Excretory products and their elimination

- Modes of excretion
- Human excretory system- structure and function
- Urine formation
- Rennin angiotensin system

Neural control and coordination

- Definition and classification of nervous system
- Structure of a neuron
- Generation and conduction of nerve impulse
- Structure of brain and spinal cord
- Functions of cerebrum, cerebellum, hypothalamus and medulla oblongata

Chemical coordination and regulation

- Endocrine glands and their secretions
- Functions of hormones secreted by endocrine glands

Human reproduction

- Parts of female reproductive system
- Parts of male reproductive system
- Spermatogenesis and Oogenesis
- Menstrual cycle

UNIT IV **05 Hours**

Plants and mineral nutrition:

- Essential mineral, macro and micronutrients
- Nitrogen metabolism, Nitrogen cycle, biological nitrogen fixation

Photosynthesis

- Autotrophic nutrition, photosynthesis, Photosynthetic pigments, Factors affecting photosynthesis.

UNIT V **04 Hours**

Plant respiration: Respiration, glycolysis, fermentation (anaerobic).

Plant growth and development

- Phases and rate of plant growth, Condition of growth,Introduction to plant growth regulators

Cell - The unit of life

- Structure and functions of cell and cell organelles.Cell division

Tissues

- Definition, types of tissues, location and functions.

Text Books

a. Text book of Biology by S. B. Gokhale
b. A Text book of Biology by Dr. Thulajappa and Dr. Seetaram.

Reference Books

a. A Text book of Biology by B.V. Sreenivasa Naidu
b. A Text book of Biology by Naidu and Murthy
c. Botany for Degree students By A.C.Dutta.
d.Outlines of Zoology by M. Ekambaranatha ayyer and T. N. Ananthakrishnan.
e. A manual for pharmaceutical biology practical by S.B. Gokhale and C. K. Kokate

BP112RBP.REMEDIAL BIOLOGY (Practical)

30 Hours

1. Introduction to experiments in biology
   a) Study of Microscope
   b) Section cutting techniques
   c) Mounting and staining
   d) Permanent slide preparation
2. Study of cell and its inclusions
3. Study of Stem, Root, Leaf, seed, fruit, flower and their modifications
4. Detailed study of frog by using computer models
5. Microscopic study and identification of tissues pertinent to Stem, Root Leaf, seed, fruit and flower
6. Identification of bones
7. Determination of blood group
8. Determination of blood pressure
9. Determination of tidal volume

Reference Books

1. Practical human anatomy and physiology. by S.R.Kale and R.R.Kale.
2. A Manual of pharmaceutical biology practical by S.B.Gokhale, C.K.Kokate and S.P.Shriwastava.
3. Biology practical manual according to National core curriculum .Biology forum of Karnataka. Prof .M.J.H.Shafi

BP 106RMT.REMEDIAL MATHEMATICS (Theory)

30 Hours

Scope: This is an introductory course in mathematics. This subject deals with the introduction to Partial fraction, Logarithm, matrices and Determinant, Analytical geometry, Calculus, differential equation and Laplace transform.

Objectives: Upon completion of the course the student shall be able to:-

1. Know the theory and their application in Pharmacy
2. Solve the different types of problems by applying theory
3. Appreciate the important application of mathematics in Pharmacy

Course Content:

UNIT – I **06 Hours**

- **Partial fraction**

Introduction, Polynomial, Rational fractions, Proper and Improper fractions, Partial fraction , Resolving into Partial fraction, Application of Partial Fraction in Chemical Kinetics and Pharmacokinetics

- **Logarithms**

Introduction, Definition, Theorems/Properties of logarithms, Common logarithms, Characteristic and Mantissa, worked examples, application of logarithm to solve pharmaceutical problems.

- **Function***:*

Real Valued function, Classification of real valued functions,

- **Limits and continuity** :

Introduction , Limit of a function, Definition of limit of a function ($\in$ - δ definition) , $\lim_{x\to a}\frac{x^n - a^n}{x-a} = na^{n-1}$, $\lim_{\theta\to 0}\frac{\sin\theta}{\theta} = 1,$

UNIT –II **06 Hours**

- **Matrices and Determinant:**

Introduction matrices, Types of matrices, Operation on matrices, Transpose of a matrix, Matrix Multiplication, Determinants, Properties of determinants , Product of determinants, Minors and co-Factors, Adjoint or adjugate of a square matrix , Singular and non-singular matrices, Inverse of a matrix, Solution of system of linear of equations using matrix method, Cramer's rule, Characteristic equation and roots of a square matrix, Cayley–Hamilton theorem,Applicationof Matrices in solving Pharmacokinetic equations

UNIT – III **06 Hours**

- **Calculus**

Differentiation : Introductions, Derivative of a function, Derivative of a constant, Derivative of a product of a constant and a function , Derivative of the sum or difference of two functions, Derivative of the product of two functions (product formula), Derivative of the quotient of two functions (Quotient formula) – **Without Proof**, Derivative of x^n *w.r.t*x,where *n* is any rational number, Derivative of e^x,, Derivative of $\log_e x$, Derivative of a^x,Derivative of trigonometric functions from first principles **(without Proof)**, Successive Differentiation, Conditions for a function to be a maximum or a minimum at a point. Application

UNIT – IV **06 Hours**

- **Analytical Geometry**

Introduction: Signs of the Coordinates, Distance formula,

Straight Line : Slope or gradient of a straight line, Conditions for parallelism and perpendicularity of two lines, Slope of a line joining two points, Slope – intercept form of a straight line

Integration:

Introduction, Definition, Standard formulae, Rules of integration , Method of substitution, Method of Partial fractions, Integration by parts, definite integrals, application

UNIT-V **06 Hours**

- **Differential Equations** : Some basic definitions, Order and degree, Equations in separable form , Homogeneous equations, Linear Differential equations, Exact equations, **Application in solving Pharmacokinetic equations**
- **Laplace Transform** : Introduction, Definition, Properties of Laplace transform, Laplace Transforms of elementary functions, Inverse Laplace transforms, Laplace transform of derivatives, Application to solve Linear differential equations, **Application in solving Chemical kinetics and Pharmacokinetics equations**

Recommended Books (Latest Edition)

1. Differential Calculus by Shanthinarayan
2. Pharmaceutical Mathematics with application to Pharmacy by Panchaksharappa Gowda D.H.
3. Integral Calculus by Shanthinarayan
4. Higher Engineering Mathematics by Dr.B.S.Grewal

Semester II

BP 201T. HUMAN ANATOMY AND PHYSIOLOGY-II (Theory)

45 Hours

Scope: This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body. It also helps in understanding both homeostatic mechanisms. The subject provides the basic knowledge required to understand the various disciplines of pharmacy.

Objectives: Upon completion of this course the student should be able to:

1. Explain the gross morphology, structure and functions of various organs of the human body.
2. Describe the various homeostatic mechanisms and their imbalances.
3. Identify the various tissues and organs of different systems of human body.
4. Perform the hematological tests like blood cell counts, haemoglobin estimation, bleeding/clotting time etc and also record blood pressure, heart rate, pulse and respiratory volume.
5. Appreciate coordinated working pattern of different organs of each system
6. Appreciate the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of human body.

Course Content:

Unit I **10 hours**

- **Nervous system**

Organization of nervous system, neuron, neuroglia, classification and properties of nerve fibre, electrophysiology, action potential, nerve impulse, receptors, synapse, neurotransmitters.

Central nervous system: Meninges, ventricles of brain and cerebrospinal fluid.structure and functions of brain (cerebrum, brain stem, cerebellum), spinal cord (gross structure, functions of afferent and efferent nerve tracts,reflex activity)

Unit II **06 hours**

- **Digestive system**

Anatomy of GI Tract with special reference to anatomy and functions of stomach, (Acid production in the stomach, regulation of acid production through parasympathetic nervous system, pepsin role in protein digestion) small intestine

and large intestine, anatomy and functions of salivary glands, pancreas and liver, movements of GIT, digestion and absorption of nutrients and disorders of GIT.

- **Energetics**

  Formation and role of ATP, Creatinine Phosphate and BMR.

Unit III

- **Respiratory system** **10 hours**

  Anatomy of respiratory system with special reference to anatomy of lungs, mechanism of respiration, regulation of respiration

  Lung Volumes and capacities transport of respiratory gases, artificial respiration, and resuscitation methods.

- **Urinary system**
  Anatomy of urinary tract with special reference to anatomy of kidney and nephrons, functions of kidney and urinary tract, physiology of urine formation, micturition reflex and role of kidneys in acid base balance, role of RAS in kidney and disorders of kidney.

Unit IV **10 hours**

- **Endocrine system**
  Classification of hormones, mechanism of hormone action, structure and functions of pituitary gland, thyroid gland, parathyroid gland, adrenal
  gland, pancreas, pineal gland, thymus and their disorders.

Unit V **09 hours**

- **Reproductive system**

  Anatomy of male and female reproductive system, Functions of male and female reproductive system, sex hormones, physiology of menstruation, fertilization, spermatogenesis, oogenesis, pregnancy and parturition

- **Introduction to genetics**

  Chromosomes, genes and DNA, protein synthesis, genetic pattern of inheritance

BP 207 P. HUMAN ANATOMY AND PHYSIOLOGY (Practical)

4 Hours/week

Practical physiology is complimentary to the theoretical discussions in physiology. Practicals allow the verification of physiological processes discussed in theory classes through experiments on living tissue, intact animals or normal human beings. This is helpful for developing an insight on the subject**.**

1. To study the integumentary and special senses using specimen, models, etc.,
2. To study the nervous system using specimen, models, etc.,
3. To study the endocrine system using specimen, models, etc
4. To demonstrate the general neurological examination
5. To demonstrate the function of olfactory nerve
6. To examine the different types of taste.
7. To demonstrate the visual acuity
8. To demonstrate the reflex activity
9. Recording of body temperature
10. To demonstrate positive and negative feedback mechanism.
11. Determination of tidal volume and vital capacity.
12. Study of digestive, respiratory, cardiovascular systems, urinary and reproductive systems with the help of models, charts and specimens.
13. Recording of basal mass index .
14. Study of family planning devices and pregnancy diagnosis test.
15. Demonstration of total blood count by cell analyser
16. Permanent slides of vital organs and gonads.

Recommended Books (Latest Editions)

1. Essentials of Medical Physiology by K. Sembulingam and P. Sembulingam. Jaypee brothers medical publishers, New Delhi.
2. Anatomy and Physiology in Health and Illness by Kathleen J.W. Wilson, Churchill Livingstone, New York
3. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co,Riverview,MI USA

4. Text book of Medical Physiology- Arthur C,Guyton andJohn.E. Hall. Miamisburg, OH, U.S.A.
5. Principles of Anatomy and Physiology by Tortora Grabowski. Palmetto, GA, U.S.A.
6. Textbook of Human Histology by Inderbir Singh, Jaypee brothers medical publishers, New Delhi.
7. Textbook of Practical Physiology by C.L. Ghai, Jaypee brothers medical publishers, New Delhi.
8. Practical workbook of Human Physiology by K. Srinageswari and Rajeev Sharma, Jaypee brother's medical publishers, New Delhi.

Reference Books:

1. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co, Riverview, MI USA
2. Text book of Medical Physiology- Arthur C, Guyton and John. E. Hall. Miamisburg, OH, U.S.A.
3. Human Physiology (vol 1 and 2) by Dr. C.C. Chatterrje ,Academic Publishers Kolkata

BP202T. PHARMACEUTICAL ORGANIC CHEMISTRY –I (Theory)

45 Hours

Scope: This subject deals with classification and nomenclature of simple organic compounds, structural isomerism, intermediates forming in reactions, important physical properties, reactions and methods of preparation of these compounds. The syllabus also emphasizes on mechanisms and orientation of reactions.

Objectives: Upon completion of the course the student shall be able to

1. write the structure, name and the type of isomerism of the organic compound
2. write the reaction, name the reaction and orientation of reactions
3. account for reactivity/stability of compounds,
4. identify/confirm the identification of organic compound

Course Content:

General methods of preparation and reactions of compounds superscripted with asterisk (*) to be explained

To emphasize on definition, types, classification, principles/mechanisms, applications, examples and differences

UNIT-I **07 Hours**

- **Classification, nomenclature and isomerism**

  Classification of Organic Compounds

  Common and IUPAC systems of nomenclature of organic compounds

  (up to 10 Carbons open chain and carbocyclic compounds)

Structural isomerisms in organic compounds

UNIT-II10 Hours

- **Alkanes*, Alkenes* and Conjugated dienes***

  SP^3 hybridization in alkanes, Halogenation of alkanes, uses of paraffins.

  Stabilities of alkenes, SP^2 hybridization in alkenes

  E_1 and E_2 reactions – kinetics, order of reactivity of alkyl halides, rearrangement of carbocations, Saytzeffs orientation and evidences. E_1 verses E_2 reactions, Factors affecting E_1 and E_2 reactions. Ozonolysis, electrophilic addition reactions of alkenes, Markownikoff's orientation, free radical addition reactions of alkenes, Anti Markownikoff's orientation.

  Stability of conjugated dienes, Diel-Alder, electrophilic addition, free radical addition reactions of conjugated dienes, allylic rearrangement

UNIT-III10 Hours

- **Alkyl halides***

  SN_1 and SN_2 reactions - kinetics, order of reactivity of alkyl halides, stereochemistry and rearrangement of carbocations.

  SN_1 versus SN_2 reactions, Factors affecting SN_1 and SN_2 reactions

  Structure and uses of ethylchloride, Chloroform, trichloroethylene, tetrachloroethylene, dichloromethane, tetrachloromethane and iodoform.

- **Alcohols*-** Qualitative tests, Structure and uses of Ethyl alcohol, Methyl alcohol, chlorobutanol, Cetosteryl alcohol, Benzyl alcohol, Glycerol, Propylene glycol

UNIT-IV10 Hours

- **Carbonyl compounds* (Aldehydes and ketones)**

  Nucleophilic addition, Electromeric effect, aldol condensation, Crossed Aldol condensation, Cannizzaro reaction, Crossed Cannizzaro reaction, Benzoin condensation, Perkin condensation, qualitative tests, Structure and uses of Formaldehyde, Paraldehyde, Acetone, Chloral hydrate, Hexamine, Benzaldehyde, Vanilin, Cinnamaldehyde.

UNIT-V **08 Hours**

- **Carboxylic acids***

  Acidity of carboxylic acids, effect of substituents on acidity, inductive effect and qualitative tests for carboxylic acids ,amide and ester

  Structure and Uses of Acetic acid, Lactic acid, Tartaric acid, Citric acid, Succinic acid. Oxalic acid, Salicylic acid, Benzoic acid, Benzyl benzoate, Dimethyl phthalate, Methyl salicylate and Acetyl salicylic acid

- **Aliphatic amines* -** Basicity, effect of substituent on Basicity. Qualitative test, Structure and uses of Ethanolamine, Ethylenediamine, Amphetamine

BP208P. PHARMACEUTICAL ORGANIC CHEMISTRY -I (Practical)

4 Hours / week

1. Systematic qualitative analysis of unknown organic compounds like
    1. Preliminary test: Color, odour, aliphatic/aromatic compounds, saturation and unsaturation, etc.
    2. Detection of elements like Nitrogen, Sulphur and Halogen by Lassaigne's test
    3. Solubility test
    4. Functional group test like Phenols, Amides/ Urea, Carbohydrates, Amines, Carboxylic acids, Aldehydes and Ketones, Alcohols, Esters, Aromatic and Halogenated Hydrocarbons, Nitro compounds and Anilides.
    5. Melting point/Boiling point of organic compounds
    6. Identification of the unknown compound from the literature using melting point/ boiling point.
    7. Preparation of the derivatives and confirmation of the unknown compound by melting point/ boiling point.
    8. Minimum 5 unknown organic compounds to be analysed systematically.
2. Preparation of suitable solid derivatives from organic compounds
3. Construction of molecular models

Recommended Books (Latest Editions)

1. Organic Chemistry by Morrison and Boyd
2. Organic Chemistry by I.L. Finar , Volume-I
3. Textbook of Organic Chemistry by B.S. Bahl & Arun Bahl.
4. Organic Chemistry by P.L.Soni
5. Practical Organic Chemistry by Mann and Saunders.
6. Vogel's text book of Practical Organic Chemistry
7. Advanced Practical organic chemistry by N.K.Vishnoi.
8. Introduction to Organic Laboratory techniques by Pavia, Lampman and Kriz.
9. Reaction and reaction mechanism by Ahluwaliah/Chatwal.

BP203 T. BIOCHEMISTRY (Theory)

45 Hours

Scope: Biochemistry deals with complete understanding of the molecular levels of the chemical process associated with living cells. The scope of the subject is providing biochemical facts and the principles to understand metabolism of nutrient molecules in physiological and pathological conditions. It is also emphasizing on genetic organization of mammalian genome and hetero & autocatalytic functions of DNA.

Objectives: Upon completion of course student shell able to

1. Understand the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.
2. Understand the metabolism of nutrient molecules in physiological and pathological conditions.
3. Understand the genetic organization of mammalian genome and functions of DNA in the synthesis of RNAs and proteins.

Course Content:

UNIT I **08 Hours**

- **Biomolecules**

  Introduction, classification, chemical nature and biological role of carbohydrate, lipids, nucleic acids, amino acids and proteins.

- **Bioenergetics**

  Concept of free energy, endergonic and exergonic reaction, Relationship between free energy, enthalpy and entropy; Redox potential.

  Energy rich compounds; classification; biological significances of ATP and cyclic AMP

UNIT II **10 Hours**

- **Carbohydrate metabolism**

  Glycolysis – Pathway, energetics and significance

  Citric acid cycle- Pathway, energetics and significance

  HMP shunt and its significance; Glucose-6-Phosphate dehydrogenase (G6PD) deficiency

  Glycogen metabolism Pathways and glycogen storage diseases (GSD)

  Gluconeogenesis- Pathway and its significance

  Hormonal regulation of blood glucose level and Diabetes mellitus

- **Biological oxidation**

  Electron transport chain (ETC) and its mechanism.

Oxidative phosphorylation & its mechanism and substrate level phosphorylation

Inhibitors ETC and oxidative phosphorylation/Uncouplers

UNIT III **10 Hours**

- **Lipid metabolism**

  β-Oxidation of saturated fatty acid (Palmitic acid)

Formation and utilization of ketone bodies; ketoacidosis

De novo synthesis of fatty acids (Palmitic acid)

Biological significance of cholesterol and conversion of cholesterol into bile acids, steroid hormone and vitamin D

Disorders of lipid metabolism: Hypercholesterolemia, atherosclerosis, fatty liver and obesity.

- **Amino acid metabolism**

  General reactions of amino acid metabolism: Transamination, deamination & decarboxylation, urea cycle and its disorders

  Catabolism of phenylalanine and tyrosine and their metabolic disorders (Phenyketonuria, Albinism, alkeptonuria, tyrosinemia)

  Synthesis and significance of biological substances; 5-HT, melatonin, dopamine, noradrenaline, adrenaline

  Catabolism of heme; hyperbilirubinemia and jaundice

UNIT IV **10 Hours**

- **Nucleic acid metabolism and genetic information transfer**

  Biosynthesis of purine and pyrimidine nucleotides

  Catabolism of purine nucleotides and Hyperuricemia and Gout disease

  Organization of mammalian genome

  Structure of DNA and RNA and their functions

  DNA replication (semi conservative model)

  Transcription or RNA synthesis

  Genetic code, Translation or Protein synthesis and inhibitors

UNIT V **07 Hours**

- **Enzymes**

  Introduction, properties, nomenclature and IUB classification of enzymes

  Enzyme kinetics (Michaelis plot, Line Weaver Burke plot)

  Enzyme inhibitors with examples

  Regulation of enzymes: enzyme induction and repression, allosteric enzymes regulation

  Therapeutic and diagnostic applications of enzymes and isoenzymes

  Coenzymes –Structure and biochemical functions

BP 209 P. BIOCHEMISTRY (Practical)

4 Hours / Week

1. Qualitative analysis of carbohydrates (Glucose, Fructose, Lactose, Maltose, Sucrose and starch)
2. Identification tests for Proteins (albumin and Casein)
3. Quantitative analysis of reducing sugars (DNSA method) and Proteins (Biuret method)
4. Qualitative analysis of urine for abnormal constituents
5. Determination of blood creatinine
6. Determination of blood sugar
7. Determination of serum total cholesterol
8. Preparation of buffer solution and measurement of pH
9. Study of enzymatic hydrolysis of starch
10. Determination of Salivary amylase activity
11. Study the effect of Temperature on Salivary amylase activity.
12. Study the effect of substrate concentration on salivary amylase activity.

Recommended Books (Latest Editions)

1. Principles of Biochemistry by Lehninger.
2. Harper's Biochemistry by Robert K. Murry, Daryl K. Granner and Victor W. Rodwell.
3. Biochemistry by Stryer.
4. Biochemistry by D. Satyanarayan and U.Chakrapani
5. Textbook of Biochemistry by Rama Rao.
6. Textbook of Biochemistry by Deb.
7. Outlines of Biochemistry by Conn and Stumpf
8. Practical Biochemistry by R.C. Gupta and S. Bhargavan.
9. Introduction of Practical Biochemistry by David T. Plummer. (3rd Edition)
10. Practical Biochemistry for Medical students by Rajagopal and Ramakrishna.
11. Practical Biochemistry by Harold Varley.

BP 204T.PATHOPHYSIOLOGY (THEORY)

45Hours

Scope: Pathophysiology is the study of causes of diseases and reactions of the body to such disease producing causes.This course is designed to impart a thorough knowledge of the relevant aspects of pathology of various conditions with reference to its pharmacological applications, and understanding of basic pathophysiological mechanisms. Hence it will not only help to study the syllabus of pathology, but also to get baseline knowledge required to practice medicine safely, confidently, rationally and effectively.

Objectives: Upon completion of the subject student shall be able to –

1. Describe the etiology and pathogenesis of the selected disease states;
2. Name the signs and symptoms of the diseases; and
3. Mention the complications of the diseases.

Course content:

Unit I **10Hours**

- **Basic principles of Cell injury and Adaptation:**
  Introduction, definitions, Homeostasis, Components and Types of Feedback systems, Causes of cellular injury**,**Pathogenesis (Cell membrane damage, Mitochondrial damage, Ribosome damage, Nuclear damage)**,**Morphology of cell injury – Adaptive changes (Atrophy, Hypertrophy, hyperplasia, Metaplasia, Dysplasia)**,**Cell swelling, Intra cellular accumulation, Calcification, Enzyme leakage and Cell Death Acidosis &Alkalosis,Electrolyte imbalance

- **Basic mechanism involved in the process of inflammation and repair:**
  Introduction, Clinical signs of inflammation, Different types of Inflammation,Mechanism of Inflammation – Alteration in vascular permeability and blood flow, migration of WBC's,Mediators of inflammation,Basic principles of wound healing in the skin,Pathophysiology of Atherosclerosis

Unit II **10Hours**

- **Cardiovascular System:**
  Hypertension, congestive heart failure, ischemic heart disease (angina,myocardial infarction, atherosclerosis and arteriosclerosis)
- **Respiratory system:**Asthma, Chronic obstructive airways diseases.
- **Renal system:**Acute and chronic renal failure .

Unit II **10Hours**

- **Haematological Diseases:**
  Iron deficiency, megaloblastic anemia (Vit B12 and folic acid), sickle cell anemia, thalasemia, hereditary acquired anemia, hemophilia
- **Endocrine system:** Diabetes, thyroid diseases, disorders of sex hormones
- **Nervous system:** Epilepsy, Parkinson's disease, stroke, psychiatric disorders: depression, schizophrenia and Alzheimer's disease.
- **Gastrointestinal system:** Peptic Ulcer
-

Unit IV **8 Hours**

- Inflammatory bowel diseases, jaundice, hepatitis (A,B,C,D,E,F) alcoholic liver disease.
- **Disease of bones and joints:** Rheumatoid arthritis, osteoporosis and gout
- **Principles of cancer:** classification, etiology and pathogenesis of cancer
- **Diseases of bones and joints:**Rheumatoid Arthritis, Osteoporosis,Gout

- **Principles of Cancer:** Classification, etiology and pathogenesis of Cancer

Unit V **7 Hours**

- **Infectious diseases:**Meningitis,Typhoid, Leprosy, Tuberculosis

Urinary tract infections

- **Sexually transmitted diseases:**AIDS, Syphilis, Gonorrhea

Recommended Books (Latest Editions)

2. The American Journal of Pathology. ISSN: 0002-9440
3. Pathology. 1465-3931 (Online)
4. International Journal of Physiology, Pathophysiology and Pharmacology. ISSN: 1944-8171 (Online)
5. Indian Journal of Pathology and Microbiology. ISSN-0377-4929.

BP205 T. COMPUTER APPLICATIONS IN PHARMACY (Theory)

30 Hrs (2 Hrs/Week)

Scope: This subject deals with the introduction Database, Database Management system, computer application in clinical studies and use of databases.

Objectives: Upon completion of the course the student shall be able to

1. know the various types of application of computers in pharmacy
2. know the various types of databases
3. know the various applications of databases in pharmacy

Course content:

UNIT – I **06 hours**

Number system: Binary number system, Decimal number system, Octal number system, Hexadecimal number systems, conversion decimal to binary, binary to decimal, octal to binary etc, binary addition, binary subtraction – One's complement ,Two's complement method, binary multiplication, binary division

Concept of I nformation Systems and Software : Information gathering, requirement and feasibility analysis, data flow diagrams, process specifications, input/output design, process life cycle, planning and managing the project

UNIT –II **06 hours**

Web technologies:Introduction to HTML, XML,CSS and Programming languages, introduction to web servers and Server Products

Introduction to databases, MYSQL, MS ACCESS, Pharmacy Drug database

UNIT – III **06 hours**

Application of computers in Pharmacy – Drug information storage and retrieval, Pharmacokinetics, Mathematical model in Drug design, Hospital and Clinical Pharmacy, Electronic Prescribing and discharge (EP) systems, barcode medicine identification and automated dispensing of drugs, mobile technology and adherence monitoring

Diagnostic System, Lab-diagnostic System, Patient Monitoring System, Pharma Information System

UNIT – IV **06 hours**

Bioinformatics: Introduction, Objective of Bioinformatics, Bioinformatics Databases, Concept of Bioinformatics, Impact of Bioinformatics in Vaccine Discovery

UNIT-V **06 hours**

Computers as data analysis in Preclinical development:
Chromatographic dada analysis(CDS), Laboratory Information management System (LIMS) and Text Information Management System(TIMS)

BP210P. COMPUTER APPLICATIONS IN PHARMACY (Practical)

1. Design a questionnaire using a word processing package to gather information about a particular disease.
2. Create a HTML web page to show personal information.
3 Retrieve the information of a drug and its adverse effects using online tools
4 Creating mailing labels Using Label Wizard , generating label in MS WORD
5 Create a database in MS Access to store the patient information with the required fields Using access
6. Design a form in MS Access to view, add, delete and modify the patient record in the database
7. Generating report and printing the report from patient database
8. Creating invoice table using – MS Access
9. Drug information storage and retrieval using MS Access
10. Creating and working with queries in MS Access
11. Exporting Tables, Queries, Forms and Reports to web pages
12. Exporting Tables, Queries, Forms and Reports to XML pages

Recommended books (Latest edition):

1. Computer Application in Pharmacy – William E.Fassett –Lea and Febiger, 600 South Washington Square, USA, (215) 922-1330.
2. Computer Application in Pharmaceutical Research and Development –Sean Ekins – Wiley-Interscience, A John Willey and Sons, INC., Publication, USA
3. Bioinformatics (Concept, Skills and Applications) – S.C.Rastogi-CBS Publishers and Distributors, 4596/1- A, 11 Darya Gani, New Delhi – 110 002(INDIA)
4. Microsoft office Access - 2003, Application Development Using VBA, SQL Server, DAP and Infopath – Cary N.Prague – Wiley Dreamtech India (P) Ltd., 4435/7, Ansari Road, Daryagani, New Delhi - 110002

BP 206 T. ENVIRONMENTAL SCIENCES (Theory)

30 hours

Scope: Environmental Sciences is the scientific study of the environmental system and the status of its inherent or induced changes on organisms. It includes not only the study of physical and biological characters of the environment but also the social and cultural factors and the impact of man on environment.

Objectives: Upon completion of the course the student shall be able to**:**

1. Create the awareness about environmental problems among learners.
2. Impart basic knowledge about the environment and its allied problems.
3. Develop an attitude of concern for the environment.
4. Motivate learner to participate in environment protection and environment improvement.
5. Acquire skills to help the concerned individuals in identifying and solving environmental problems.
6. Strive to attain harmony with Nature.

Course content:

Unit-I **10hours**

The Multidisciplinary nature of environmental studies

Natural Resources

Renewable and non-renewable resources:

Natural resources and associated problems

a) Forest resources; b) Water resources; c) Mineral resources; d) Food resources; e) Energy resources; f) Land resources: Role of an individual in conservation of natural resources.

Unit-II **10hours**

Ecosystems

- Concept of an ecosystem.
- Structure and function of an ecosystem.
- Introduction, types, characteristic features, structure and function of the ecosystems: Forest ecosystem; Grassland ecosystem; Desert ecosystem; Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Unit- III **10hours**

Environmental Pollution: Air pollution; Water pollution; Soil pollution

Recommended Books (Latest edition):

1. Y.K. Sing, Environmental Science, New Age International Pvt, Publishers, Bangalore
2. Agarwal, K.C. 2001 Environmental Biology, Nidi Publ. Ltd. Bikaner.
3. Bharucha Erach, The Biodiversity of India, Mapin Pu blishing Pvt. Ltd., Ahmedabad – 380 013, India,
4. Brunner R.C., 1989, Hazardous Waste Incineration, McGraw Hill Inc. 480p
5. Clark R.S., Marine Pollution, Clanderson Press Oxford
6. Cunningham, W.P. Cooper, T.H. Gorhani, E & Hepworth, M.T. 2001, Environmental Encyclopedia, Jaico Publ. House, Mumbai, 1196p
7. De A.K., Environmental Chemistry, Wiley Eastern Ltd.
8. Down of Earth, Centre for Science and Environment

SEMESTER III

BP301T. PHARMACEUTICAL ORGANIC CHEMISTRY –II (Theory)

45 Hours

Scope: This subject deals with general methods of preparation and reactions of some organic compounds. Reactivity of organic compounds are also studied here. The syllabus emphasizes on mechanisms and orientation of reactions. Chemistry of fats and oils are also included in the syllabus.

Objectives: Upon completion of the course the student shall be able to

1. write the structure, name and the type of isomerism of the organic compound
2. write the reaction, name the reaction and orientation of reactions
3. account for reactivity/stability of compounds,
4. prepare organic compounds

Course Content:

General methods of preparation and reactions of compounds superscripted with asterisk (*) to be explained

To emphasize on definition, types, classification, principles/mechanisms, applications, examples and differences

UNIT I **10 Hours**

- **Benzene and its derivatives**
  - **A.** Analytical, synthetic and other evidences in the derivation of structure of benzene, Orbital picture, resonance in benzene, aromatic characters, Huckel's rule
  - **B.** Reactions of benzene - nitration, sulphonation, halogenation- reactivity, Friedelcrafts alkylation- reactivity, limitations, Friedelcrafts acylation.
  - **C.** Substituents, effect of substituents on reactivity and orientation of mono substituted benzene compounds towards electrophilic substitution reaction
  - **D.** Structure and uses of DDT, Saccharin, BHC and Chloramine

UNIT II **10 Hours**

- **Phenols*** - Acidity of phenols, effect of substituents on acidity, qualitative tests, Structure and uses of phenol, cresols, resorcinol, naphthols
- **Aromatic Amines* -** Basicity of amines, effect of substituents on basicity, and synthetic uses of aryl diazonium salts
- **Aromatic Acids* –**Acidity, effect of substituents on acidity and important reactions of benzoic acid.

UNIT III

10 Hours

- **Fats and Oils**

a. Fatty acids – reactions.

b. Hydrolysis, Hydrogenation, Saponification and Rancidity of oils, Drying oils.

c. Analytical constants – Acid value, Saponification value, Ester value, Iodine value, Acetyl value, Reichert Meissl (RM) value – significance and principle involved in their determination.

UNIT IV **08 Hours**

- **Polynuclear hydrocarbons:**

a. Synthesis, reactions

b. Structure and medicinal uses of Naphthalene, Phenanthrene, Anthracene, Diphenylmethane, Triphenylmethane and their derivatives

UNIT V **07 Hours**

- **Cyclo alkanes***

Stabilities – Baeyer's strain theory, limitation of Baeyer's strain theory, Coulson and Moffitt's modification, Sachse Mohr's theory (Theory of strainless rings), reactions of cyclopropane and cyclobutane only

BP305P. PHARMACEUTICAL ORGANIC CHEMISTRY -II (Practical)

4 Hrs/week

I Experiments involving laboratory techniques

- Recrystallization
- Steam distillation

II Determination of following oil values (including standardization of reagents)

- Acid value
- Saponification value
- Iodine value

III **Preparation of compounds**

- Benzanilide/Phenyl benzoate/Acetanilide from Aniline/ Phenol /Aniline by acylation reaction.
- 2,4,6-Tribromo aniline/Para bromo acetanilide from Aniline/
- Acetanilide by halogenation (Bromination) reaction.
- 5-Nitro salicylic acid/Meta di nitro benzene from Salicylic acid / Nitro benzene by nitration reaction.
- Benzoic acid from Benzyl chloride by oxidation reaction.
- Benzoic acid/ Salicylic acid from alkyl benzoate/ alkyl salicylate by hydrolysis reaction.
- 1-Phenyl azo-2-napthol from Aniline by diazotization and coupling reactions.
- Benzil from Benzoin by oxidation reaction.
- Dibenzal acetone from Benzaldehyde by Claison Schmidt reaction
- Cinnammic acid from Benzaldehyde by Perkin reaction
- *P*-Iodo benzoic acid from *P*-amino benzoic acid

Recommended Books (Latest Editions)

1. Organic Chemistry by Morrison and Boyd
2. Organic Chemistry by I.L. Finar , Volume-I
3. Textbook of Organic Chemistry by B.S. Bahl & Arun Bahl.
4. Organic Chemistry by P.L.Soni
5. Practical Organic Chemistry by Mann and Saunders.
6. Vogel's text book of Practical Organic Chemistry
7. Advanced Practical organic chemistry by N.K.Vishnoi.

8. Introduction to Organic Laboratory techniques by Pavia, Lampman and Kriz.

BP302T. PHYSICAL PHARMACEUTICS-I (Theory)

45Hours

Scope: The course deals with the various physica and physicochemical properties, and principles involved in dosage forms/formulations. Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.

Objectives: Upon the completion of the course student shall be able to

1. Understand various physicochemical properties of drug molecules in the designing the dosage forms
2. Know the principles of chemical kinetics & to use them for stability testing nad determination of expiry date of formulations
3. Demonstrate use of physicochemical properties in the formulation development and evaluation of dosage forms.

Course Content:

UNIT-I **10 Hours**

Solubility of drugs: Solubility expressions, mechanisms of solute solvent interactions, ideal solubility parameters, solvation & association, quantitative approach to the factors influencing solubility of drugs, diffusion principles in biological systems. Solubility of gas in liquids, solubility of liquids in liquids, (Binary solutions, ideal solutions) Raoult's law, real solutions. Partially miscible liquids, Critical solution temperature and applications. Distribution law, its limitations and applications

UNIT-II **10Hours**

States of Matter and properties of matter: State of matter, changes in the state of matter, latent heats, vapour pressure, sublimation critical point, eutectic mixtures, gases, aerosols – inhalers, relative humidity, liquid complexes, liquid crystals, glassy states, solid-crystalline, amorphous & polymorphism.

Physicochemical properties of drug molecules: Refractive index, optical rotation, dielectric constant, dipole moment, dissociation constant, determinations and applications

UNIT-III **08 Hours**

Surface and interfacial phenomenon: Liquid interface, surface & interfacial tensions,

surface free energy, measurement of surface & interfacial tensions, spreading coefficient, adsorption at liquid interfaces, surface active agents, HLB Scale, solubilisation, detergency, adsorption at solid interface.

UNIT-IV **08Hours**

Complexation and protein binding: Introduction, Classification of Complexation, Applications, methods of analysis, protein binding, Complexation and drug action, crystalline structures of complexes and thermodynamic treatment of stability constants.

UNIT-V **07 Hours**

pH, buffers and Isotonic solutions: Sorensen's pH scale, pH determination (electrometric and calorimetric), applications of buffers, buffer equation, buffer capacity, buffers in pharmaceutical and biological systems, buffered isotonic solutions.

BP306P. PHYSICAL PHARMACEUTICS – I (Practical)

4 Hrs/week

1. Determination the solubility of drug at room temperature
2. Determination of pKa value by Half Neutralization/ Henderson Hasselbalch equation.
3. Determination of Partition co- efficient of benzoic acid in benzene and water
4. Determination of Partition co- efficient of Iodine in CCl_4 and water
5. Determination of % composition of NaCl in a solution using phenol-water system by CST method
6. Determination of surface tension of given liquids by drop count and drop weight method
7. Determination of HLB number of a surfactant by saponification method
8. Determination of Freundlich and Langmuir constants using activated char coal
9. Determination of critical micellar concentration of surfactants
10. Determination of stability constant and donor acceptor ratio of PABA-Caffeine complex by solubility method
11. Determination of stability constant and donor acceptor ratio of Cupric-Glycine complex by pH titration method

Recommended Books: (Latest Editions)

1. Physical Pharmacy by Alfred Martin
2. Experimental Pharmaceutics by Eugene, Parott.
3. Tutorial Pharmacy by Cooper and Gunn.
4. Stocklosam J. Pharmaceutical Calculations, Lea &Febiger, Philadelphia.
5. Liberman H.A, Lachman C., Pharmaceutical Dosage forms, Tablets, Volume-1 to 3, MarcelDekkar Inc.

7. Physical Pharmaceutics by Ramasamy C and ManavalanR.
8. Laboratory Manual of Physical Pharmaceutics, C.V.S. Subramanyam, J. Thimma settee
9. Physical Pharmaceutics by C.V.S. Subramanyam
10. Test book of Physical Phramacy, by Gaurav Jain & Roop K. Khar

BP 303 T. PHARMACEUTICAL MICROBIOLOGY (Theory)

45Hours

Scope:

- Study of all categories of microorganisims especially for the production of alchol antibiotics, vaccines, vitamins enzymes etc..

Objectives: Upon completion of the subject student shall be able to;

1. Understand methods of identification, cultivation and preservation of various microorganisms
2. To understand the importance and implementation of sterlization in pharmaceutical processing and industry
3. Learn sterility testing of pharmaceutical products.
4. Carried out microbiological standardization of Pharmaceuticals.
5. Understand the cell culture technology and its applications in pharmaceutical industries.

Course content:

Unit I **10 Hours**

Introduction, history of microbiology, its branches, scope and its importance.
Introduction to Prokaryotes and Eukaryotes
Study of ultra-structure and morphological classification of bacteria, nutritional requirements, raw materials used for culture media and physical parameters for growth, growth curve, isolation and preservation methods for pure cultures, cultivation of anaerobes, quantitative measurement of bacterial growth (total & viable count).
Study of different types of phase constrast microscopy, dark field microscopy and electron microscopy.

Unit II **10 Hours**

Identification of bacteria using staining techniques (simple, Gram's &Acid fast staining) and biochemical tests (IMViC).

Study of principle, procedure, merits, demerits and applications of physical, chemical gaseous,radiation and mechanical method of sterilization.

Evaluation of the efficiency of sterilization methods.

Equipments employed in large scale sterilization.

Sterility indicators.

Unit III **10 Hours**

Study of morphology, classification, reproduction/replication and cultivation of Fungi and Viruses.

Classification and mode of action of disinfectants

Factors influencing disinfection, antiseptics and their evaluation. For bacteriostatic and bactericidal actions

Evaluation of bactericidal & Bacteriostatic.

Sterility testing of products (solids, liquids, ophthalmic and other sterile products) according to IP, BP and USP.

Unit IV **08 Hours**

Designing of aseptic area, laminar flow equipments; study of different sources of contamination in an aseptic area and methods of prevention, clean area classification.
Principles and methods of different microbiological assay. Methods for standardization of antibiotics, vitamins and amino acids.
Assessment of a new antibiotic.

Unit V **07Hours**

Types of spoilage, factors affecting the microbial spoilage of pharmaceutical products, sources and types of microbial contaminants, assessment of microbial contamination and spoilage.

Preservation of pharmaceutical products using antimicrobial agents, evaluation of microbial stability of formulations.

Growth of animal cells in culture, general procedure for cell culture, Primary, established and transformed cell cultures.

Application of cell cultures in pharmaceutical industry and research.

BP 307P.PHARMACEUTICAL MICROBIOLOGY (Practical)

4 Hrs/week

1. Introduction and study of different equipments and processing, e.g., B.O.D. incubator, laminar flow, aseptic hood, autoclave, hot air sterilizer, deep freezer, refrigerator, microscopes used in experimental microbiology.
2. Sterilization of glassware, preparation and sterilization of media.
3. Sub culturing of bacteria and fungus. Nutrient stabs and slants preparations.
4. Staining methods- Simple, Grams staining and acid fast staining (Demonstration with practical).
5. Isolation of pure culture of micro-organisms by multiple streak plate technique and other techniques.
6. Microbiological assay of antibiotics by cup plate method and other methods
7. Motility determination by Hanging drop method.
8. Sterility testing of pharmaceuticals.
9. Bacteriological analysis of water
10. Biochemical test.

Recommended Books (Latest edition)

2. Prescott and Dunn., Industrial Microbiology, 4th edition, CBS Publishers & Distributors, Delhi.
3. Pelczar, Chan Kreig, Microbiology, Tata McGraw Hill edn.
4. Malcolm Harris, Balliere Tindall and Cox: Pharmaceutical Microbiology.
5. Rose: Industrial Microbiology.
6. Probisher, Hinsdill et al: Fundamentals of Microbiology, 9th ed. Japan
7. Cooper and Gunn's: Tutorial Pharmacy, CBS Publisher and Distribution.
8. Peppler: Microbial Technology.
9. I.P., B.P., U.S.P.- latest editions.
10. Ananthnarayan : Text Book of Microbiology, Orient-Longman, Chennai
11. Edward: Fundamentals of Microbiology.
12. N.K.Jain: Pharmaceutical Microbiology, Vallabh Prakashan, Delhi
13. Bergeys manual of systematic bacteriology, Williams and Wilkins- A Waverly company

BP 304 T. PHARMACEUTICAL ENGINEERING (Theory)

45 Hours

Scope: This course is designed to impart a fundamental knowledge on the art and science of various unit operations used in pharmaceutical industry.

Objectives: Upon completion of the course student shall be able:

1. To know various unit operations used in Pharmaceutical industries.
2. To understand the material handling techniques.
3. To perform various processes involved in pharmaceutical manufacturing process.
4. To carry out various test to prevent environmental pollution.
5. To appreciate and comprehend significance of plant lay out design for optimum use of resources.
6. To appreciate the various preventive methods used for corrosion control in Pharmaceutical industries.

Course content:

UNIT-I **10 Hours**

- **Flow of fluids:** Types of manometers, Reynolds number and its significance, Bernoulli's theorem and its applications, Energy losses, Orifice meter, Venturimeter, Pitot tube and Rotometer.
- **Size Reduction:** Objectives, Mechanisms & Laws governing size reduction, factors affecting size reduction, principles, construction, working, uses, merits and demerits of Hammer mill, ball mill, fluid energy mill, Edge runner mill & end runner mill.
- **Size Separation:** Objectives, applications & mechanism of size separation, official standards of powders, sieves, size separation Principles, construction, working, uses, merits and demerits of Sieve shaker, cyclone separator, Air separator, Bag filter & elutriation tank.

UNIT-II **10 Hours**

- **Heat Transfer:** Objectives, applications & Heat transfer mechanisms. Fourier's law, Heat transfer by conduction, convection & radiation. Heat interchangers & heat exchangers.

- **Evaporation:** Objectives, applications and factors influencing evaporation, differences between evaporation and other heat process. principles, construction, working, uses, merits and demerits of Steam jacketed kettle, horizontal tube evaporator, climbing film evaporator, forced circulation evaporator, multiple effect evaporator& Economy of multiple effect evaporator.

- **Distillation:** Basic Principles and methodology of simple distillation,flash distillation, fractional distillation, distillation under reduced pressure, steam distillation & molecular distillation

UNIT- III **08 Hours**

- **Drying:** Objectives, applications & mechanism of drying process, measurements & applications of Equilibrium Moisture content, rate of drying curve. principles, construction, working, uses, merits and demerits of Tray dryer, drum dryer spray dryer, fluidized bed dryer, vacuum dryer, freeze dryer.

- **Mixing:** Objectives, applications & factors affecting mixing, Difference between solid and liquid mixing, mechanism of solid mixing, liquids mixing and semisolids mixing. Principles, Construction, Working, uses, Merits and Demerits of Double cone blender, twin shell blender, ribbon blender, Sigma blade mixer, planetary mixers, Propellers, Turbines, Paddles & Silverson Emulsifier,

UNIT-IV **08 Hours**

- **Filtration:** Objectives, applications, Theories & Factors influencing filtration, filter aids, filter medias. Principle, Construction, Working, Uses, Merits and demerits of plate & frame filter, filter leaf, rotary drum filter, Meta filter & Cartridge filter, membrane filters and Seidtz filter.
- **Centrifugation:** Objectives, principle & applications of Centrifugation, principles, construction, working, uses, merits and demerits of Perforated basket centrifuge, Non-perforated basket centrifuge, semi continuous centrifuge & super centrifuge.

UNIT- V **07 Hours**

- **Materials of pharmaceutical plant construction, Corrosion and its prevention:** Factors affecting during materials selected for Pharmaceutical plant construction, Theories of corrosion, types of corrosion and there prevention. Ferrous and nonferrous metals, inorganic and organic non metals, basic of material handling systems.

Recommended Books: (Latest Editions)

1. Introduction to chemical engineering – Walter L Badger & Julius Banchero, Latest edition.
2. Solid phase extraction, Principles, techniques and applications by Nigel J.K. Simpson- Latest edition.
3. Unit operation of chemical engineering – Mcabe Smith, Latest edition.
4. Pharmaceutical engineering principles and practices – C.V.S Subrahmanyam et al., Latest edition.
5. Remington practice of pharmacy- Martin, Latest edition.
6. Theory and practice of industrial pharmacy by Lachmann., Latest edition.
7. Physical pharmaceutics- C.V.S Subrahmanyam et al., Latest edition.
8. Cooper and Gunn's Tutorial pharmacy, S.J. Carter, Latest edition.

BP308P - PHARMACEUTICAL ENGINEERING (Practical)

4 Hours/week

I. Determination of radiation constant of brass, iron, unpainted and painted glass.
II. Steam distillation – To calculate the efficiency of steam distillation.
III. To determine the overall heat transfer coefficient by heat exchanger.
IV. Construction of drying curves (for calcium carbonate and starch).
V. Determination of moisture content and loss on drying.
VI. Determination of humidity of air – i) From wet and dry bulb temperatures –use of Dew point method.
VII. Description of Construction working and application of Pharmaceutical Machinery such as rotary tablet machine, fluidized bed coater, fluid energy mill, de humidifier.
VIII. Size analysis by sieving – To evaluate size distribution of tablet granulations – Construction of various size frequency curves including arithmetic andlogarithmic probability plots.
IX. Size reduction: To verify the laws of size reduction using ball mill and determining Kicks, Rittinger's, Bond's coefficients, power requirement and critical speed of Ball Mill.
X. Demonstration of colloid mill, planetary mixer, fluidized bed dryer, freeze dryer and such othermajor equipment.
XI. Factors affecting Rate of Filtration and Evaporation (Surface area, Concentration and Thickness/ viscosity
XII. To study the effect of time on the Rate of Crystallization.
XIII. To calculate the uniformity Index for given sample by using Double Cone Blender.

SEMESTER IV

BP401T. PHARMACEUTICAL ORGANIC CHEMISTRY –III (Theory)

45 Hours

Scope: This subject imparts knowledge on stereo-chemical aspects of organic compounds and organic reactions, important named reactions, chemistry of important hetero cyclic compounds. It also emphasizes on medicinal and other uses of organic compounds.

Objectives: At the end of the course, the student shall be able to

1. understand the methods of preparation and properties of organic compounds
2. explain the stereo chemical aspects of organic compounds and stereo chemical reactions
3. know the medicinal uses and other applications of organic compounds

Course Content:

Note: To emphasize on definition, types, mechanisms, examples, uses/applications

UNIT-I **10 Hours**

Stereo isomerism

Optical isomerism –

Optical activity, enantiomerism, diastereoisomerism, meso compounds

Elements of symmetry, chiral and achiral molecules

DL system of nomenclature of optical isomers, sequence rules, RS system of nomenclature of optical isomers

Reactions of chiral molecules

Racemic modification and resolution of racemic mixture.

Asymmetric synthesis: partial and absolute

UNIT-II **10 Hours**

Geometrical isomerism

Nomenclature of geometrical isomers (Cis Trans, EZ, Syn Anti systems)

Methods of determination of configuration of geometrical isomers.

Conformational isomerism in Ethane, n-Butane and Cyclohexane.

Stereo isomerism in biphenyl compounds (Atropisomerism) and conditions for optical activity.

Stereospecific and stereoselective reactions

UNIT-III **10 Hours**

Heterocyclic compounds:

Nomenclature and classification

Synthesis, reactions and medicinal uses of following compounds/derivatives

Pyrrole, Furan, and Thiophene

Relative aromaticity and reactivity of Pyrrole, Furan and Thiophene

UNIT-IV **8 Hours**

Synthesis, reactions and medicinal uses of following compounds/derivatives

Pyrazole, Imidazole, Oxazole and Thiazole.

Pyridine, Quinoline, Isoquinoline, Acridine and Indole. Basicity of pyridine

Synthesis and medicinal uses of Pyrimidine, Purine, azepines and their derivatives

UNIT-V **07 Hours**

Reactions of synthetic importance

Metal hydride reduction ($NaBH_4$ and $LiAlH_4$), Clemmensen reduction, Birch reduction, Wolff Kishner reduction.

Oppenauer-oxidation and Dakin reaction.

Beckmanns rearrangement and Schmidt rearrangement.

Claisen-Schmidt condensation

Recommended Books (Latest Editions)

1. Organic chemistry by I.L. Finar, Volume-I & II.
2. A text book of organic chemistry – Arun Bahl, B.S. Bahl.
3. Heterocyclic Chemistry by Raj K. Bansal
4. Organic Chemistry by Morrison and Boyd
5. Heterocyclic Chemistry by T.L. Gilchrist

BP402T. MEDICINAL CHEMISTRY – I (Theory)

45 Hours

Scope: This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs. The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs. The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Objectives: Upon completion of the course the student shall be able to

1. understand the chemistry of drugs with respect to their pharmacological activity
2. understand the drug metabolic pathways, adverse effect and therapeutic value of drugs
3. know the Structural Activity Relationship (SAR) of different class of drugs
4. write the chemical synthesis of some drugs

Course Content:

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted (*)

UNIT- I **10 Hours**

Introduction to Medicinal Chemistry

History and development of medicinal chemistry

Physicochemical properties in relation to biological action

Ionization, Solubility, Partition Coefficient, Hydrogen bonding, Protein binding, Chelation, Bioisosterism, Optical and Geometrical isomerism.

Drug metabolism

Drug metabolism principles- Phase I and Phase II.

Factors affecting drug metabolism including stereo chemical aspects.

UNIT- II **10 Hours**

Drugs acting on Autonomic Nervous System

Adrenergic Neurotransmitters:

Biosynthesis and catabolism of catecholamine.

Adrenergic receptors (Alpha & Beta) and their distribution.

Sympathomimetic agents: SAR of Sympathomimetic agents

Direct acting: Nor-epinephrine, Epinephrine, Phenylephrine*, Dopamine,

Methyldopa, Clonidine, Dobutamine, Isoproterenol, Terbutaline, Salbutamol*, Bitolterol, Naphazoline, Oxymetazoline and Xylometazoline.

- Indirect acting agents: Hydroxyamphetamine, Pseudoephedrine, Propylhexedrine.
- Agents with mixed mechanism: Ephedrine, Metaraminol.

Adrenergic Antagonists:

Alpha adrenergic blockers: Tolazoline*, Phentolamine, Phenoxybenzamine, Prazosin, Dihydroergotamine, Methysergide.

Beta adrenergic blockers: SAR of beta blockers, Propranolol*, Metibranolol, Atenolol, Betazolol, Bisoprolol, Esmolol, Metoprolol, Labetolol, Carvedilol.

UNIT-III **10 Hours**

Cholinergic neurotransmitters:

Biosynthesis and catabolism of acetylcholine.

Cholinergic receptors (Muscarinic & Nicotinic) and their distribution.

Parasympathomimetic agents: SAR of Parasympathomimetic agents

Direct acting agents: Acetylcholine, Carbachol*, Bethanechol, Methacholine, Pilocarpine.

Indirect acting/ Cholinesterase inhibitors (Reversible & Irreversible): Physostigmine, Neostigmine*, Pyridostigmine, Edrophonium chloride, Tacrine hydrochloride, Ambenonium chloride, Isofluorphate, Echothiophate iodide, Parathione, Malathion.

Cholinesterase reactivator: Pralidoxime chloride.

Cholinergic Blocking agents: SAR of cholinolytic agents

Solanaceous alkaloids and analogues: Atropine sulphate, Hyoscyamine sulphate, Scopolamine hydrobromide, Homatropine hydrobromide, Ipratropium bromide*.

Synthetic cholinergic blocking agents: Tropicamide, Cyclopentolate hydrochloride, Clidinium bromide, Dicyclomine hydrochloride*, Glycopyrrolate, Methantheline bromide, Propantheline bromide, Benztropine mesylate, Orphenadrine citrate, Biperidine hydrochloride, Procyclidine hydrochloride*, Tridihexethyl chloride, Isopropamide iodide, Ethopropazine hydrochloride.

UNIT- IV **08 Hours**

Drugs acting on Central Nervous System

A. Sedatives and Hypnotics:

Benzodiazepines: SAR of Benzodiazepines, Chlordiazepoxide, Diazepam*, Oxazepam, Chlorazepate, Lorazepam, Alprazolam, Zolpidem

Barbiturtes: SAR of barbiturates, Barbital*, Phenobarbital, Mephobarbital, Amobarbital, Butabarbital, Pentobarbital, Secobarbital

Miscelleneous:

Amides & imides: Glutethmide.

Alcohol & their carbamate derivatives: Meprobomate, Ethchlorvynol.

Aldehyde & their derivatives: Triclofos sodium, Paraldehyde.

B. Antipsychotics

Phenothiazeines: SAR of Phenothiazeines - Promazine hydrochloride, Chlorpromazine hydrochloride*, Trifluprомazine, Thioridazine hydrochloride, Piperacetazine hydrochloride, Prochlorperazine maleate, Trifluoperazine hydrochloride.

Ring Analogues of Phenothiazeines: Chlorprothixene, Thiothixene, Loxapine succinate, Clozapine.

Fluro buterophenones: Haloperidol, Droperidol, Risperidone.

Beta amino ketones: Molindone hydrochloride.

Benzamides: Sulpieride.

C. Anticonvulsants: SAR of Anticonvulsants**,** mechanism of anticonvulsant action

Barbiturates: Phenobarbitone, Methabarbital. **Hydantoins:**

Phenytoin*, Mephenytoin, Ethotoin **Oxazolidine diones:**

Trimethadione, Paramethadione **Succinimides:**

Phensuximide, Methsuximide, Ethosuximide* **Urea and**

monoacylureas: Phenacemide, Carbamazepine*

Benzodiazepines: Clonazepam

Miscellaneous: Primidone, Valproic acid , Gabapentin, Felbamate

UNIT – V **07 Hours**

Drugs acting on Central Nervous System

General anesthetics:

Inhalation anesthetics: Halothane*, Methoxyflurane, Enflurane, Sevoflurane, Isoflurane, Desflurane.

Ultra short acting barbitutrates: Methohexital sodium*, Thiamylal sodium, Thiopental sodium.

Dissociative anesthetics: Ketamine hydrochloride.*

Narcotic and non-narcotic analgesics

Morphine and related drugs: SAR of Morphine analogues, Morphine sulphate, Codeine, Meperidine hydrochloride, Anilerdine hydrochloride, Diphenoxylate hydrochloride, Loperamide hydrochloride, Fentanyl citrate*, Methadone hydrochloride*, Propoxyphene hydrochloride, Pentazocine, Levorphanol tartarate.

Narcotic antagonists: Nalorphine hydrochloride, Levallorphan tartarate, Naloxone hydrochloride.

Anti-inflammatory agents: Sodium salicylate, Aspirin, Mefenamic acid*, Meclofenamate, Indomethacin, Sulindac, Tolmetin, Zomepriac, Diclofenac, Ketorolac, Ibuprofen*, Naproxen, Piroxicam, Phenacetin, Acetaminophen, Antipyrine, Phenylbutazone.

BP406P. MEDICINAL CHEMISTRY – I (Practical)

4 Hours/Week

I Preparation of drugs/ intermediates

1 1,3-pyrazole

2 1,3-oxazole

3 Benzimidazole

4 Benztriazole

5 2,3- diphenyl quinoxaline

6 Benzocaine

7 Phenytoin

8 Phenothiazine

9 Barbiturate

II Assay of drugs

1 Chlorpromazine

2 Phenobarbitone

3 Atropine

4 Ibuprofen

5 Aspirin

6 Furosemide

III Determination of Partition coefficient for any two drugs

Recommended Books (Latest Editions)

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.

7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug Synthesis by Lednicer, Vol. 1-5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

BP 403 T. PHYSICAL PHARMACEUTICS-II (Theory)

45Hours

Scope: The course deals with the various physica and physicochemical properties, and principles involved in dosage forms/formulations. Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.

Objectives: Upon the completion of the course student shall be able to

1. Understand various physicochemical properties of drug molecules in the designing the dosage forms
2. Know the principles of chemical kinetics & to use them for stability testing nad determination of expiry date of formulations
3. Demonstrate use of physicochemical properties in the formulation development and evaluation of dosage forms.

Course Content:

UNIT-I **07 Hours**

Colloidal dispersions: Classification of dispersed systems & their general characteristics, size & shapes of colloidal particles, classification of colloids & comparative account of their general properties. Optical, kinetic & electrical properties. Effect of electrolytes, coacervation, peptization& protective action.

UNIT-II **10 Hours**

Rheology: Newtonian systems, law of flow, kinematic viscosity, effect of temperature, non-Newtonian systems, pseudoplastic, dilatant, plastic, thixotropy, thixotropy in formulation, determination of viscosity, capillary, falling Sphere, rotational viscometers

Deformation of solids: Plastic and elastic deformation, Heckel equation, Stress, Strain, Elastic Modulus

UNIT-III **10 Hours**

Coarse dispersion: Suspension, interfacial properties of suspended particles, settling in suspensions, formulation of flocculated and deflocculated suspensions. Emulsions and theories of emulsification, microemulsion and multiple emulsions; Stability of emulsions, preservation of emulsions, rheological properties of emulsions and emulsion formulation by HLB method.

UNIT-IV **10Hours**

Micromeretics: Particle size and distribution, mean particle size, number and weight distribution, particle number, methods for determining particle size by different methods, counting and separation method, particle shape, specific surface, methods for determining surface area, permeability, adsorption, derived properties of powders, porosity, packing arrangement, densities, bulkiness & flow properties.

UNIT-V **10 Hours**

Drug stability: Reaction kinetics: zero, pseudo-zero, first & second order, units of basic rate constants, determination of reaction order. Physical and chemical factors influencing the chemical degradation of pharmaceutical product: temperature, solvent, ionic strength, dielectric constant, specific & general acid base catalysis, Simple numerical problems. Stabilization of medicinal agents against common reactions like hydrolysis & oxidation. Accelerated stability testing in expiration dating of pharmaceutical dosage forms. Photolytic degradation and its prevention

BP 407P. PHYSICAL PHARMACEUTICS- II (Practical)

3 Hrs/week

1. Determination of particle size, particle size distribution using sieving method
2. Determination of particle size, particle size distribution using Microscopic method
3. Determination of bulk density, true density and porosity
4. Determine the angle of repose and influence of lubricant on angle of repose
5. Determination of viscosity of liquid using Ostwald's viscometer
6. Determination sedimentation volume with effect of different suspending agent
7. Determination sedimentation volume with effect of different concentration of single suspending agent
8. Determination of viscosity of semisolid by using Brookfield viscometer
9. Determination of reaction rate constant first order.
10. Determination of reaction rate constant second order
11. Accelerated stability studies

Recommended Books: (Latest Editions)

1. Physical Pharmacy by Alfred Martin, Sixth edition
2. Experimental pharmaceutics by Eugene, Parott.
3. Tutorial pharmacy by Cooper and Gunn.
4. Stocklosam J. Pharmaceutical calculations, Lea & Febiger, Philadelphia.
5. Liberman H.A, Lachman C., Pharmaceutical Dosage forms, Tablets, Volume-1 to 3, Marcel Dekkar Inc.
6. Liberman H.A, Lachman C, Pharmaceutical dosage forms. Disperse systems, volume 1, 2, 3. Marcel Dekkar Inc.
7. Physical Pharmaceutics by Ramasamy C, and Manavalan R.

BP 404 T. PHARMACOLOGY-I (Theory)

45 Hrs

Scope: The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics. The subject covers the information about the drugs like, mechanism of action, physiological and biochemical effects (pharmacodynamics) as well as absorption, distribution, metabolism and excretion (pharmacokinetics) along with the adverse effects, clinical uses, interactions, doses, contraindications and routes of administration of different classes of drugs.

Objectives: Upon completion of this course the student should be able to

1. Understand the pharmacological actions of different categories of drugs
2. Explain the mechanism of drug action at organ system/sub cellular/ macromolecular levels.
3. Apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
4. Observe the effect of drugs on animals by simulated experiments
5. Appreciate correlation of pharmacology with other bio medical sciences

Course Content:

UNIT-I **08 hours**

1. General Pharmacology

a. Introduction to Pharmacology- Definition, historical landmarks and scope of pharmacology, nature and source of drugs, essential drugs concept and routes of drug administration, Agonists, antagonists(competitive and non competitive), spare receptors, addiction, tolerance, dependence, tachyphylaxis, idiosyncrasy, allergy.

b. Pharmacokinetics- Membrane transport, absorption, distribution, metabolism and excretion of drugs .Enzyme induction, enzyme inhibition, kinetics of elimination

UNIT-II **12 Hours**

General Pharmacology

a. Pharmacodynamics- Principles and mechanisms of drug action. Receptor theories and classification of receptors, regulation of receptors. drug receptors interactions signal transduction mechanisms, G-protein–coupled receptors, ion channel receptor, transmembrane enzyme linked receptors, transmembrane JAK-STAT binding receptor and receptors that regulate transcription factors, dose response relationship, therapeutic index, combined effects of drugs and factors modifying drug action.
b. Adverse drug reactions.
c. Drug interactions (pharmacokinetic and pharmacodynamic)
d. Drug discovery and clinical evaluation of new drugs -Drug discovery phase, preclinical evaluation phase, clinical trial phase, phases of clinical trials and pharmacovigilance.

UNIT-III **10 Hours**

2. Pharmacology of drugs acting on peripheral nervous system

a. Organization and function of ANS.

b.Neurohumoral transmission,co-transmission and classification of neurotransmitters.

c. Parasympathomimetics, Parasympatholytics, Sympathomimetics, sympatholytics.

d. Neuromuscular blocking agents and skeletal muscle relaxants (peripheral).

e. Local anesthetic agents.

f. Drugs used in myasthenia gravis and glaucoma

UNIT-IV **08 Hours**

3. Pharmacology of drugs acting on central nervous system

a. Neurohumoral transmission in the C.N.S.special emphasis on importance of various neurotransmitters like with GABA, Glutamate, Glycine, serotonin, dopamine.

b. General anesthetics and pre-anesthetics**.**

c. Sedatives, hypnotics and centrally acting muscle relaxants.

d. Anti-epileptics

e. Alcohols and disulfiram

UNIT-V **07 Hours**

3. Pharmacology of drugs acting on central nervous system

a. Psychopharmacological agents: Antipsychotics, antidepressants, anti-anxiety agents, anti-manics and hallucinogens.

b. Drugs used in Parkinsons disease and Alzheimer's disease.

c. CNS stimulants and nootropics.

d. Opioid analgesics and antagonists

e. Drug addiction, drug abuse, tolerance and dependence.

BP 408 P.PHARMACOLOGY-I (Practical)

4Hrs/Week

1. Introduction to experimental pharmacology.
2. Commonly used instruments in experimental pharmacology.
3. Study of common laboratory animals.
4. Maintenance of laboratory animals as per CPCSEA guidelines.
5. Common laboratory techniques. Blood withdrawal, serum and plasma separation, anesthetics and euthanasia used for animal studies.
6. Study of different routes of drugs administration in mice/rats.
7. Study of effect of hepatic microsomal enzyme inducers on the phenobarbitone sleeping time in mice.
8. Effect of drugs on ciliary motility of frog oesophagus
9. Effect of drugs on rabbit eye.
10. Effects of skeletal muscle relaxants using rota-rod apparatus.
11. Effect of drugs on locomotor activity using actophotometer.
12. Anticonvulsant effect of drugs by MES and PTZ method.
13. Study of stereotype and anti-catatonic activity of drugs on rats/mice.
14. Study of anxiolytic activity of drugs using rats/mice.
15. Study of local anesthetics by different methods

Note: All laboratory techniques and animal experiments are demonstrated by simulated experiments by softwares and videos

BP 405 T.PHARMACOGNOSY AND PHYTOCHEMISTRY I (Theory)

45 Hours

Scope: The subject involves the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.

Objectives: Upon completion of the course, the student shall be able

1. to know the techniques in the cultivation and production of crude drugs
2. to know the crude drugs, their uses and chemical nature
3. know the evaluation techniques for the herbal drugs
4. to carry out the microscopic and morphological evaluation of crude drugs

Course Content:

UNIT-I **10 Hours**

Introduction to Pharmacognosy:

(a) Definition, history, scope and development of Pharmacognosy

(b) Sources of Drugs – Plants, Animals, Marine & Tissue culture

(c) Organized drugs, unorganized drugs (dried latex, dried juices, dried extracts, gums and mucilages, oleoresins and oleo- gum -resins).

Classification of drugs:

Alphabetical, morphological, taxonomical, chemical, pharmacological, chemo and sero taxonomical classification of drugs

Quality control of Drugs of Natural Origin:

Adulteration of drugs of natural origin. Evaluation by organoleptic, microscopic, physical, chemical and biological methods and properties.

Quantitative microscopy of crude drugs including lycopodium spore method, leafconstants, camera lucida and diagrams of microscopic objects to scale with camera lucida.

UNIT-II **10 Hours**

Cultivation, Collection, Processing and storage of drugs of natural origin:

Cultivation and Collection of drugs of natural origin

Factors influencing cultivation of medicinal plants.

Plant hormones and their applications.

Polyploidy, mutation and hybridization with reference to medicinal plants

Conservation of medicinal plants

UNIT-III **07 Hours**

Plant tissue culture:

Historical development of plant tissue culture, types of cultures, Nutritional requirements, growth and their maintenance.

Applications of plant tissue culture in pharmacognosy.

Edible vaccines

UNIT IV **10 Hours**

Pharmacognosy in various systems of medicine:

Role of Pharmacognosy in allopathy and traditional systems of medicine namely, Ayurveda, Unani, Siddha, Homeopathy and Chinese systems of medicine.

Introduction to secondary metabolites:

Definition, classification, properties and test for identification of Alkaloids, Glycosides, Flavonoids, Tannins, Volatile oil and Resins

UNIT V **08 Hours**

Study of biological source, chemical nature and uses of drugs of natural origin containing following drugs

Plant Products:

Fibers - Cotton, Jute, Hemp

Hallucinogens, Teratogens, Natural allergens

Primary metabolites:

General introduction, detailed study with respect to chemistry, sources, preparation, evaluation, preservation, storage, therapeutic used and commercial utility as Pharmaceutical Aids and/or Medicines for the following Primary metabolites:

Carbohydrates: Acacia, Agar, Tragacanth, Honey

Proteins and Enzymes : Gelatin, casein, proteolytic enzymes (Papain, bromelain, serratiopeptidase, urokinase, streptokinase, pepsin).

Lipids(Waxes, fats, fixed oils) : Castor oil, Chaulmoogra oil, Wool Fat, Bees Wax

Marine Drugs:

Novel medicinal agents from marine sources

BP408 P. PHARMACOGNOSY AND PHYTOCHEMISTRY I (Practical)

4 Hours/Week

1. Analysis of crude drugs by chemical tests: **(**i)Tragaccanth (ii) Acacia (iii)Agar (iv) Gelatin (v) starch (vi) Honey (vii) Castor oil
2. Determination of stomatal number and index
3. Determination of vein islet number, vein islet termination and paliside ratio.
4. Determination of size of starch grains, calcium oxalate crystals by eye piece micrometer
5. Determination of Fiber length and width
6. Determination of number of starch grains by Lycopodium spore method
7. Determination of Ash value
8. Determination of Extractive values of crude drugs
9. Determination of moisture content of crude drugs
10. Determination of swelling index and foaming

Recommended Books: (Latest Editions)

1. W.C.Evans, Trease and Evans Pharmacognosy, 16th edition, W.B. Sounders & Co., London, 2009.
2. Tyler, V.E., Brady, L.R. and Robbers, J.E., Pharmacognosy, 9th Edn., Lea and Febiger, Philadelphia, 1988.
3. Text Book of Pharmacognosy by T.E. Wallis

5. Text book of Pharmacognosy by C.K. Kokate, Purohit, Gokhlae (2007), 37th Edition, Nirali Prakashan, New Delhi.
6. Herbal drug industry by R.D. Choudhary (1996), Ist Edn, Eastern Publisher, New Delhi.
7. Essentials of Pharmacognosy, Dr.SH.Ansari, IInd edition, Birla publications, New Delhi, 2007
8. Practical Pharmacognosy: C.K. Kokate, Purohit, Gokhlae
9. Anatomy of Crude Drugs by M.A. Iyengar

SEMESTER V

BP501T. MEDICINAL CHEMISTRY – II (Theory)

45 Hours

Scope: This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs. The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs. The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Objectives: Upon completion of the course the student shall be able to

1. Understand the chemistry of drugs with respect to their pharmacological activity
2. Understand the drug metabolic pathways, adverse effect and therapeutic value of drugs
3. Know the Structural Activity Relationship of different class of drugs
4. Study the chemical synthesis of selected drugs

Course Content:

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted (*)

UNIT- I **10 Hours**

Antihistaminic agents: Histamine, receptors and their distribution in the humanbody

H_1–antagonists: Diphenhydramine hydrochloride*, Dimenhydrinate, Doxylamines cuccinate, Clemastine fumarate, Diphenylphyraline hydrochloride, Tripelenamine hydrochloride, Chlorcyclizine hydrochloride, Meclizine hydrochloride, Buclizine hydrochloride, Chlorpheniramine maleate, Triprolidine hydrochloride*, Phenidamine tartarate, Promethazine hydrochloride*, Trimeprazine tartrate, Cyproheptadine hydrochloride, Azatidine maleate, Astemizole, Loratadine, Cetirizine, Levocetrazine Cromolyn sodium

H_2-antagonists: Cimetidine*, Famotidine, Ranitidin.

Gastric Proton pump inhibitors: Omeprazole, Lansoprazole, Rabeprazole, Pantoprazole

Anti-neoplastic agents:

Alkylating agents: Meclorethamine*, Cyclophosphamide, Melphalan,

Chlorambucil, Busulfan, Thiotepa

Antimetabolites: Mercaptopurine*, Thioguanine, Fluorouracil, Floxuridine, Cytarabine, Methotrexate*, Azathioprine

Antibiotics: Dactinomycin, Daunorubicin, Doxorubicin, Bleomycin

Plant products: Etoposide, Vinblastin sulphate, Vincristin sulphate

Miscellaneous: Cisplatin, Mitotane.

UNIT – II **10 Hours**

Anti-anginal:

Vasodilators: Amyl nitrite, Nitroglycerin*, Pentaerythritol tetranitrate, Isosorbide dinitrite*, Dipyridamole.

Calcium channel blockers: Verapamil, Bepridil hydrochloride, Diltiazem hydrochloride, Nifedipine, Amlodipine, Felodipine, Nicardipine, Nimodipine.

Diuretics:

Carbonic anhydrase inhibitors: Acetazolamide*, Methazolamide, Dichlorphenamide.

Thiazides: Chlorthiazide*, Hydrochlorothiazide, Hydroflumethiazide, Cyclothiazide,

Loop diuretics: Furosemide*, Bumetanide, Ethacrynic acid.

Potassium sparing Diuretics: Spironolactone, Triamterene, Amiloride.

Osmotic Diuretics: Mannitol

Anti-hypertensive Agents: Timolol, Captopril, Lisinopril, Enalapril, Benazepril hydrochloride, Quinapril hydrochloride, Methyldopate hydrochloride,* Clonidine hydrochloride, Guanethidine monosulphate, Guanabenz acetate, Sodium nitroprusside, Diazoxide, Minoxidil, Reserpine, Hydralazine hydrochloride.

UNIT- III **10 Hours**

Anti-arrhythmic Drugs: Quinidine sulphate, Procainamide hydrochloride, Disopyramide phosphate*, Phenytoin sodium, Lidocaine hydrochloride, Tocainide hydrochloride, Mexiletine hydrochloride, Lorcainide hydrochloride, Amiodarone, Sotalol.

Anti-hyperlipidemic agents: Clofibrate, Lovastatin, Cholesteramine and Cholestipol

Coagulant & Anticoagulants: Menadione, Acetomenadione, Warfarin*, Anisindione, clopidogrel

Drugs used in Congestive Heart Failure: Digoxin, Digitoxin, Nesiritide, Bosentan, Tezosentan.

UNIT- IV **08 Hours**

Drugs acting on Endocrine system

Nomenclature, Stereochemistry and metabolism of steroids

Sex hormones: Testosterone, Nandralone, Progestrones, Oestriol, Oestradiol, Oestrione, Diethyl stilbestrol.
Drugs for erectile dysfunction: Sildenafil, Tadalafil.
Oral contraceptives: Mifepristone, Norgestril, Levonorgestrol
Corticosteroids: Cortisone, Hydrocortisone, Prednisolone, Betamethasone, Dexamethasone
Thyroid and antithyroid drugs: L-Thyroxine, L-Thyronine, Propylthiouracil, Methimazole.

UNIT – V **07 Hours**

Antidiabetic agents:

Insulin and its preparations

Sulfonyl ureas: Tolbutamide*, Chlorpropamide, Glipizide, Glimepiride.

Biguanides: Metformin.

Thiazolidinediones: Pioglitazone, Rosiglitazone.

Meglitinides: Repaglinide, Nateglinide.

Glucosidase inhibitors: Acrabose, Voglibose.

Local Anesthetics: SAR of Local anesthetics

Benzoic Acid derivatives; Cocaine, Hexylcaine, Meprylcaine, Cyclomethycaine, Piperocaine.

Amino Benzoic acid derivatives: Benzocaine*, Butamben, Procaine*, Butacaine, Propoxycaine, Tetracaine, Benoxinate.

Lidocaine/Anilide derivatives: Lignocaine, Mepivacaine, Prilocaine, Etidocaine.

Miscellaneous: Phenacaine, Diperodon, Dibucaine.*

Recommended Books (Latest Editions)

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug Synthesis by Lednicer, Vol. 1to 5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

BP 502 T. Industrial PharmacyI (Theory)

45 Hours

Scope: Course enables the student to understand and appreciate the influence of pharmaceutical additives and various pharmaceutical dosage forms on the performance of the drug product.

Objectives: Upon completion of the course the student shall be able to

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms
3. Formulate solid, liquid and semisolid dosage forms and evaluate them for their quality

Course content:

3 hours/ week

UNIT-I **07 Hours**

Preformulation Studies: Introduction to preformulation, goals and objectives, study of physicochemical characteristics of drug substances.

a. Physical properties: Physical form (crystal & amorphous), particle size, shape, flow properties, solubility profile (pKa, pH, partition coefficient), polymorphism

b. Chemical Properties: Hydrolysis, oxidation, reduction, racemisation, polymerization

BCS classification of drugs & its significant

Application of preformulation considerations in the development of solid, liquid oral and parenteral dosage forms and its impact on stability of dosage forms.

UNIT-II **10 Hours**

Tablets:

a. Introduction, ideal characteristics of tablets, classification of tablets. Excipients, Formulation of tablets, granulation methods, compression and processing problems. Equipments and tablet tooling.

b. Tablet coating: Types of coating, coating materials, formulation of coating composition, methods of coating, equipment employed and defects in coating.

c. Quality control tests: In process and finished product tests

Liquid orals: Formulation and manufacturing consideration of syrups and elixirs suspensions and emulsions; Filling and packaging; evaluation of liquid orals official in pharmacopoeia

UNIT-III **08 Hours**

Capsules:

a. ***Hard gelatin capsules:*** Introduction, Production of hard gelatin capsule shells. size of capsules, Filling, finishing and special techniques of formulation of hard gelatin capsules, manufacturing defects. In process and final product quality control tests for capsules.

b. ***Soft gelatin capsules:*** Nature of shell and capsule content, size of capsules,importance of base adsorption and minim/gram factors, production, in process and final product quality control tests. Packing, storage and stability testing of soft gelatin capsules and their applications.

Pellets: Introduction, formulation requirements, pelletization process, equipments for manufacture of pellets

UNIT-IV **10 Hours**

Parenteral Products:

a. Definition, types, advantages and limitations. Preformulation factors and essential requirements, vehicles, additives, importance of isotonicity

b. Production procedure, production facilities and controls,
aseptic processing

c. Formulation of injections, sterile powders, large volume parenterals and lyophilized products.

d. Containers and closures selection, filling and sealing of ampoules, vials and infusion fluids. Quality control tests of parenteral products.

Ophthalmic Preparations: Introduction, formulation considerations; formulation of eye drops, eye ointments and eye lotions; methods of preparation; labeling, containers; evaluation of ophthalmic preparations

UNIT-V **10 Hours**

Cosmetics: Formulation and preparation of the following cosmetic preparations: lipsticks, shampoos, cold cream and vanishing cream, tooth pastes, hair dyes and sunscreens.

Pharmaceutical Aerosols: Definition, propellants, containers, valves, types of aerosol systems; formulation and manufacture of aerosols; Evaluation of aerosols; Quality control and stability studies.

Packaging Materials Science: Materials used for packaging of pharmaceutical products, factors influencing choice of containers, legal and official requirements for containers, stability aspects of packaging materials, quality control tests.

BP 506 P. Industrial PharmacyI (Practical)

4 Hours/week

1. Preformulation studies on paracetamol/asparin/or any other drug
2. Preparation and evaluation of Paracetamol tablets
3. Preparation and evaluation of Aspirin tablets
4. Coating of tablets- film coating of tables/granules
5. Preparation and evaluation of Tetracycline capsules
6. Preparation of Calcium Gluconate injection
7. Preparation of Ascorbic Acid injection
8. Qulaity control test of (as per IP) marketed tablets and capsules
9. Preparation of Eye drops/ and Eye ointments
10. Preparation of Creams (cold / vanishing cream)
11. Evaluation of Glass containers (as per IP)

Recommended Books: (Latest Editions)

1. Pharmaceutical dosage forms - Tablets, volume 1 -3 by H.A. Liberman, Leon Lachman &J.B.Schwartz
2. Pharmaceutical dosage form - Parenteral medication vol- 1&2 by Liberman & Lachman
3. Pharmaceutical dosage form disperse system VOL-1 by Liberman & Lachman
4. Modern Pharmaceutics by Gilbert S. Banker & C.T. Rhodes, 3rd Edition
5. Remington: The Science and Practice of Pharmacy, 20th edition Pharmaceutical Science (RPS)
6. Theory and Practice of Industrial Pharmacy by Liberman & Lachman
7. Pharmaceutics- The science of dosage form design by M.E.Aulton, Churchill livingstone, Latest edition
8. Introduction to Pharmaceutical Dosage Forms by H. C.Ansel, Lea &Febiger, Philadelphia, 5thedition, 2005
9. Drug stability - Principles and practice by Cartensen & C.J. Rhodes, 3rd Edition, Marcel Dekker Series, Vol 107.

BP503.T. PHARMACOLOGY-II (Theory)

45 Hours

Scope: This subject is intended to impart the fundamental knowledge on various aspects (classification, mechanism of action, therapeutic effects, clinical uses, side effects and contraindications) of drugs acting on different systems of body and in addition,emphasis on the basic concepts of bioassay.

Objectives: Upon completion of this course the student should be able to

1. Understand the mechanism of drug action and its relevance in the treatment of different diseases
2. Demonstrate isolation of different organs/tissues from the laboratory animals by simulated experiments
3. Demonstrate the various receptor actions using isolated tissue preparation
4. Appreciate correlation of pharmacology with related medical sciences

Course Content:

UNIT-I **10hours**

1. Pharmacology of drugs acting on cardio vascular system

a. Introduction to hemodynamic and electrophysiology of heart.
b. Drugs used in congestive heart failure
c. Anti-hypertensive drugs.
d. Anti-anginal drugs.
e. Anti-arrhythmic drugs.
f. Anti-hyperlipidemic drugs.

UNIT-II **10hours**

1. Pharmacology of drugs acting on cardio vascular system

a. Drug used in the therapy of shock.
b. Hematinics, coagulants and anticoagulants.
c. Fibrinolytics and anti-platelet drugs
d. Plasma volume expanders

2. Pharmacology of drugs acting on urinary system

a. Diuretics
b. Anti-diuretics.

UNIT-III **10hours**

3. Autocoids and related drugs

a. Introduction to autacoids and classification
b. Histamine, 5-HT and their antagonists.
c. Prostaglandins, Thromboxanes and Leukotrienes.
d. Angiotensin, Bradykinin and Substance P.
e. Non-steroidal anti-inflammatory agents
f. Anti-gout drugs
g. Antirheumatic drugs

UNIT-IV **08hours**

5. Pharmacology of drugs acting on endocrine system

a. Basic concepts in endocrine pharmacology.
b. Anterior Pituitary hormones- analogues and their inhibitors.
c. Thyroid hormones- analogues and their inhibitors.
d. Hormones regulating plasma calcium level- Parathormone, Calcitonin and Vitamin-D.
d. Insulin, Oral Hypoglycemic agents and glucagon.
e. ACTH and corticosteroids.

UNIT-V **07hours**

5. Pharmacology of drugs acting on endocrine system

a. Androgens and Anabolic steroids.
b. Estrogens, progesterone and oral contraceptives.
c. Drugs acting on the uterus.

6. Bioassay

a. Principles and applications of bioassay.
b.Types of bioassay
c. Bioassay of insulin, oxytocin, vasopressin, ACTH,d-tubocurarine,digitalis, histamine and 5-HT

BP 507 P. PHARMACOLOGY-II (Practical)

4Hrs/Week

1. Introduction to *in-vitro* pharmacology and physiological salt solutions.
2. Effect of drugs on isolated frog heart.
3. Effect of drugs on blood pressure and heart rate of dog.
4. Study of diuretic activity of drugs using rats/mice.
5. DRC of acetylcholine using frog rectus abdominis muscle.
6. Effect of physostigmine and atropine on DRC of acetylcholine using frog rectus abdominis muscle and rat ileum respectively.
7. Bioassay of histamine using guinea pig ileum by matching method.
8. Bioassay of oxytocin using rat uterine horn by interpolation method.
9. Bioassay of serotonin using rat fundus strip by three point bioassay.
10. Bioassay of acetylcholine using rat ileum/colon by four point bioassay.
11. Determination of PA_2 value of prazosin using rat anococcygeus muscle (by Schilds plot method).
12. Determination of PD_2 value using guinea pig ileum.
13. Effect of spasmogens and spasmolytics using rabbit jejunum.
14. Anti-inflammatory activity of drugs using carrageenan induced paw-edema model.
15. Analgesic activity of drug using central and peripheral methods

Note: All laboratory techniques and animal experiments are demonstrated by simulated experiments by softwares and videos

Recommended Books (Latest Editions)

10. Kulkarni SK. Handbook of experimental pharmacology. Vallabh Prakashan.

BP504 T. PHARMACOGNOSY AND PHYTOCHEMISTRY II (Theory)

45Hours

Scope: The main purpose of subject is to impart the students the knowledge of how the secondary metabolites are produced in the crude drugs, how to isolate and identify and produce them industrially. Also this subject involves the study of producing the plants and phytochemicals through plant tissue culture, drug interactions and basic principles of traditional system of medicine

Objectives: Upon completion of the course, the student shall be able

1. to know the modern extraction techniques, characterization and identification of the herbal drugs and phytoconstituents
2. to understand the preparation and development of herbal formulation.
3. to understand the herbal drug interactions
4. to carryout isolation and identification of phytoconstituents

Course Content:

UNIT-I **7 Hours**

Metabolic pathways in higher plants and their determination

a) Brief study of basic metabolic pathways and formation of different secondary metabolites through these pathways- Shikimic acid pathway, Acetate pathways and Amino acid pathway.
b) Study of utilization of radioactive isotopes in the investigation of Biogenetic studies.

UNIT-II **14 Hours**

General introduction, composition, chemistry & chemical classes, biosources, therapeutic uses and commercial applications of following

secondary metabolites:

Alkaloids: Vinca, Rauwolfia, Belladonna, Opium,
Phenylpropanoids and Flavonoids: Lignans, Tea, Ruta
Steroids, Cardiac Glycosides & Triterpenoids: Liquorice, Dioscorea, Digitalis
Volatile oils: Mentha, Clove, Cinnamon, Fennel, Coriander,
Tannins: Catechu, Pterocarpus
Resins: Benzoin, Guggul, Ginger, Asafoetida, Myrrh, Colophony
Glycosides: Senna, Aloes, Bitter Almond
Iridoids, Other terpenoids & Naphthaquinones: Gentian, Artemisia, taxus, carotenoids

UNIT-III **06 Hours**

Isolation, Identification and Analysis of Phytoconstituents

a) Terpenoids: Menthol, Citral, Artemisin
b) Glycosides: Glycyrhetinic acid & Rutin
c) Alkaloids: Atropine,Quinine,Reserpine,Caffeine
d) Resins: Podophyllotoxin, Curcumin

UNIT-IV **10 Hours**

Industrial production, estimation and utilization of the following phytoconstituents: Forskolin, Sennoside, Artemisinin, Diosgenin, Digoxin, Atropine, Podophyllotoxin, Caffeine, Taxol, Vincristine and Vinblastine

UNIT V **8 Hours**

Basics of Phytochemistry

Modern methods of extraction, application of latest techniques like Spectroscopy, chromatography and electrophoresis in the isolation, purification and identification of crude drugs.

BP 508 P. PHARMACOGNOSY AND PHYTOCHEMISTRY II (Practical)

4 Hours/Week

1. Morphology, histology and powder characteristics & extraction & detection of: Cinchona, Cinnamon, Senna, Clove, Ephedra, Fennel and Coriander
2. Exercise involving isolation & detection of active principles
   a. Caffeine - from tea dust.
   b. Diosgenin from Dioscorea
   c. Atropine from Belladonna
   d. Sennosides from Senna
3. Separation of sugars by Paper chromatography
4. TLC of herbal extract
5. Distillation of volatile oils and detection of phytoconstitutents by TLC
6. Analysis of crude drugs by chemical tests: **(**i) Asafoetida (ii) Benzoin (iii) Colophony (iv) Aloes (v) Myrrh

Recommended Books: (Latest Editions)

6. Herbal Cosmetics by H.Pande, Asia Pacific Business press, Inc, New Delhi.
7. A.N. Kalia, Textbook of Industrial Pharmacognosy, CBS Publishers, New Delhi, 2005.
8. R Endress, Plant cell Biotechnology, Springer-Verlag, Berlin, 1994.
9. Pharmacognosy & Pharmacobiotechnology. James Bobbers, Marilyn KS, VE Tylor.
10. The formulation and preparation of cosmetic, fragrances and flavours.
11. Remington's Pharmaceutical sciences.
12. Text Book of Biotechnology by Vyas and Dixit.
13. Text Book of Biotechnology by R.C. Dubey.

BP 505 T. PHARMACEUTICAL JURISPRUDENCE (Theory)

45 Hours

Scope: This course is designed to impart basic knowledge on important legislations related to the profession of pharmacy in India.

Objectives: Upon completion of the course, the student shall be able to understand:

1. The Pharmaceutical legislations and their implications in the development and marketing of pharmaceuticals.
2. Various Indian pharmaceutical Acts and Laws
3. The regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals
4. The code of ethics during the pharmaceutical practice

Course Content:

UNIT-I **10 Hours**

Drugs and Cosmetics Act, 1940 and its rules 1945:

Objectives, Definitions, Legal definitions of schedules to the Act and Rules

Import of drugs – Classes of drugs and cosmetics prohibited from import, Import under license or permit. Offences and penalties**.**

Manufacture of drugs – Prohibition of manufacture and sale of certain drugs,

Conditions for grant of license and conditions of license for manufacture of drugs, Manufacture of drugs for test, examination and analysis, manufacture of new drug, loan license and repacking license.

UNIT-II **10 Hours**

Drugs and Cosmetics Act, 1940 and its rules 1945.

Detailed study of Schedule G, H, M, N, P,T,U, V, X, Y, Part XII B, Sch F & DMR (OA)

Sale of Drugs – Wholesale, Retail sale and Restricted license. Offences and penalties

Labeling & Packing of drugs- General labeling requirements and specimen labels for drugs and cosmetics, List of permitted colors. Offences and penalties.

Administration of the Act and Rules – Drugs Technical Advisory Board, Central drugs Laboratory, Drugs Consultative Committee, Government drug analysts, Licensing authorities, controlling authorities, Drugs Inspectors

UNIT-III **10 Hours**

- **Pharmacy Act –1948**: Objectives, Definitions, Pharmacy Council of India; its constitution and functions, Education Regulations, State and Joint state pharmacy councils; constitution and functions, Registration of Pharmacists, Offences and

Penalties

- **Medicinal and Toilet Preparation Act –1955**: Objectives, Definitions, Licensing, Manufacture In bond and Outside bond, Export of alcoholic preparations, Manufacture of Ayurvedic, Homeopathic, Patent & Proprietary Preparations. Offences and Penalties.
- **Narcotic Drugs and Psychotropic substances Act-1985 and Rules**: Objectives, Definitions, Authorities and Officers, Constitution and Functions of narcotic & Psychotropic Consultative Committee, National Fund for Controlling the Drug Abuse, Prohibition, Control and Regulation, opium poppy cultivation and production of poppy straw, manufacture, sale and export of opium, Offences and Penalties

UNIT-IV **08 Hours**

- **Study of Salient Features of Drugs and Magic Remedies Act and its rules:** Objectives, Definitions, Prohibition of certain advertisements, Classes of Exempted advertisements, Offences and Penalties
- **Prevention of Cruelty to animals Act-1960:** Objectives, Definitions, Institutional Animal Ethics Committee, CPCSEA guidelines for Breeding and Stocking of Animals, Performance of Experiments, Transfer and acquisition of animals for experiment, Records, Power to suspend or revoke registration, Offences and Penalties
- **National Pharmaceutical Pricing Authority:** Drugs Price Control Order (DPCO)-2013. Objectives, Definitions, Sale prices of bulk drugs, Retail price of formulations, Retail price and ceiling price of scheduled formulations, National List of Essential Medicines (NLEM)

UNIT-V **07 Hours**

- **Pharmaceutical Legislations –** A brief review, Introduction, Study of drugs enquiry committee, Health survey and development committee, Hathi committee and Mudaliar committee
- **Code of Pharmaceutical ethics** D efinition, Pharmacist in relation to his job, trade, medical profession and his profession, Pharmacist's oath
- **Medical Termination of Pregnancy Act**
- **Right to Information Act**
- **Introduction to Intellectual Property Rights (IPR)**

Recommended books: (Latest Edition)

1. Forensic Pharmacy by B. Suresh

2. Text book of Forensic Pharmacy by B.M. Mithal
3. Hand book of drug law-by M.L. Mehra
4. A text book of Forensic Pharmacy by N.K. Jain
5. Drugs and Cosmetics Act/Rules by Govt. of India publications.
6. Medicinal and Toilet preparations act 1955 by Govt. of India publications.
7. Narcotic drugs and psychotropic substances act by Govt. of India publications
8. Drugs and Magic Remedies act by Govt. of India publication
9.Bare Acts of the said laws published by Government. Reference books (Theory)

SEMESTER VI

BP601T. MEDICINAL CHEMISTRY – III (Theory)

45 Hours

Scope: This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs. The subject emphasis on modern techniques of rational drug design like quantitative structure activity relationship (QSAR), Prodrug concept, combinatorial chemistry and Computer aided drug design (CADD). The subject also emphasizes on the chemistry, mechanism of action, metabolism, adverse effects, Structure Activity Relationships (SAR), therapeutic uses and synthesis of important drugs.

Objectives: Upon completion of the course student shall be able to

1. Understand the importance of drug design and different techniques of drug design.
2. Understand the chemistry of drugs with respect to their biological activity.
3. Know the metabolism, adverse effects and therapeutic value of drugs.
4. Know the importance of SAR of drugs.

Course Content:

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted by (*)

UNIT – I **10 Hours**

Antibiotics

Historical background, Nomenclature, Stereochemistry, Structure activity relationship, Chemical degradation classification and important products of the following classes.

β-Lactam antibiotics: Penicillin, Cepholosporins, β- Lactamase inhibitors, Monobactams

Aminoglycosides: Streptomycin, Neomycin, Kanamycin

Tetracyclines: Tetracycline,Oxytetracycline, Chlortetracycline, Minocycline, Doxycycline

UNIT – II **10 Hours**

Antibiotics

Historical background, Nomenclature, Stereochemistry, Structure activity relationship, Chemical degradation classification and important products of the following classes.

Macrolide: Erythromycin Clarithromycin, Azithromycin.

Miscellaneous: Chloramphenicol*, Clindamycin.

Prodrugs: Basic concepts and application of prodrugs design.

Antimalarials: Etiology of malaria.

Quinolines: SAR, Quinine sulphate, Chloroquine*, Amodiaquine, Primaquine phosphate, Pamaquine*, Quinacrine hydrochloride, Mefloquine.

Biguanides and dihydro triazines: Cycloguanil pamoate, Proguanil.

Miscellaneous: Pyrimethamine, Artesunete, Artemether, Atovoquone.

UNIT – III **10 Hours**

Anti-tubercular Agents

Synthetic anti tubercular agents: Isoniozid*, Ethionamide, Ethambutol, Pyrazinamide, Para amino salicylic acid.*

Anti tubercular antibiotics: Rifampicin, Rifabutin, Cycloserine Streptomycine, Capreomycin sulphate.

Urinary tract anti-infective agents

Quinolones: SAR of quinolones, Nalidixic Acid,Norfloxacin, Enoxacin, Ciprofloxacin*, Ofloxacin, Lomefloxacin, Sparfloxacin, Gatifloxacin, Moxifloxacin

Miscellaneous: Furazolidine, Nitrofurantoin*, Methanamine.

Antiviral agents:

Amantadine hydrochloride, Rimantadine hydrochloride, Idoxuridine trifluoride, Acyclovir*, Gancyclovir, Zidovudine, Didanosine, Zalcitabine, Lamivudine, Loviride, Delavirding, Ribavirin, Saquinavir, Indinavir, Ritonavir.

UNIT – IV **08 Hours**

Antifungal agents:

Antifungal antibiotics: Amphotericin-B, Nystatin, Natamycin, Griseofulvin.

Synthetic Antifungal agents: Clotrimazole, Econazole, Butoconazole, Oxiconazole Tioconozole, Miconazole*, Ketoconazole, Terconazole, Itraconazole, Fluconazole, Naftifine hydrochloride, Tolnaftate*.

Anti-protozoal Agents: Metronidazole*, Tinidazole, Ornidazole, Diloxanide, Iodoquinol, Pentamidine Isethionate, Atovaquone, Eflornithine.

Anthelmintics: Diethylcarbamazine citrate*, Thiabendazole, Mebendazole*, Albendazole, Niclosamide, Oxamniquine, Praziquantal, Ivermectin.

Sulphonamides and Sulfones

Historical development, chemistry, classification and SAR of Sulfonamides: Sulphamethizole, Sulfisoxazole, Sulphamethizine, Sulfacetamide*, Sulphapyridine, Sulfamethoxaole*, Sulphadiazine, Mefenide acetate, Sulfasalazine.

Folate reductase inhibitors: Trimethoprim*, Cotrimoxazole.

Sulfones: Dapsone*.

UNIT – V **07 Hours**

Introduction to Drug Design

Various approaches used in drug design.

Physicochemical parameters used in quantitative structure activity relationship (QSAR) such as partition coefficient, Hammet's electronic parameter, Tafts steric parameter and Hansch analysis.

Pharmacophore modeling and docking techniques.

Combinatorial Chemistry: Concept and applications of combinatorial chemistry: solid phase and solution phase synthesis.

BP607P. MEDICINAL CHEMISTRY- III (Practical)

4 Hours / week

I Preparation of drugs and intermediates

1 Sulphanilamide

2 7-Hydroxy, 4-methyl coumarin

3 Chlorobutanol

4 Triphenyl imidazole

5 Tolbutamide

6 Hexamine

II Assay of drugs

1 Isonicotinic acid hydrazide

2 Chloroquine

3 Metronidazole

4 Dapsone

5 Chlorpheniramine maleate

6 Benzyl penicillin

III Preparation of medicinally important compounds or intermediates by Microwave irradiation technique

IV Drawing structures and reactions using chem draw®

V Determination of physicochemical properties such as logP, clogP, MR, Molecular weight, Hydrogen bond donors and acceptors for class of drugs course content using drug design software Drug likeliness screening (Lipinskies RO5)

Recommended Books (Latest Editions)

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry.
3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.

7. Organic Chemistry by I.L. Finar, Vol. II.
8. The Organic Chemistry of Drug Synthesis by Lednicer, Vol. 1-5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

BP602 T. PHARMACOLOGY-III (Theory)

45 Hours

Scope: This subject is intended to impart the fundamental knowledge on various aspects (classification, mechanism of action, therapeutic effects, clinical uses, side effects and contraindications) of drugs acting on respiratory and gastrointestinal system, infectious diseases, immuno-pharmacology and in addition,emphasis on the principles of toxicology and chronopharmacology.

Objectives: Upon completion of this course the student should be able to:

1. understand the mechanism of drug action and its relevance in the treatment of different infectious diseases
2. comprehend the principles of toxicology and treatment of various poisoningsand
3. appreciate correlation of pharmacology with related medical sciences.

Course Content:

UNIT-I **10hours**

1. Pharmacology of drugs acting on Respiratory system

a. Anti -asthmatic drugs
b. Drugs used in the management of COPD
c. Expectorants and antitussives
d. Nasal decongestants
e. Respiratory stimulants

2. Pharmacology of drugs acting on the Gastrointestinal Tract

a. Antiulcer agents.
b. Drugs for constipation and diarrhoea.
c. Appetite stimulants and suppressants.
d. Digestants and carminatives.
e. Emetics and anti-emetics.

UNIT-II **10hours**

3. Chemotherapy

a. General principles of chemotherapy.

b. Sulfonamides and cotrimoxazole.

c. Antibiotics- Penicillins, cephalosporins, chloramphenicol, macrolides, quinolones and fluoroquinolins, tetracycline and aminoglycosides

UNIT-III **10hours**

3. Chemotherapy

a. Antitubercular agents

b. Antileprotic agents

c. Antifungal agents

d. Antiviral drugs

e.Anthelmintics

f. Antimalarial drugs

g. Antiamoebic agents

UNIT-IV **08hours**

3. Chemotherapy

l. Urinary tract infections and sexually transmitted diseases.

m. Chemotherapy of malignancy.

4. Immunopharmacology

a. Immunostimulants

b. Immunosuppressant

Protein drugs, monoclonal antibodies, target drugs to antigen, biosimilars

UNIT-V **07hours**

5. Principles of toxicology

a. Definition and basic knowledge of acute, subacute and chronic toxicity.

b. Definition and basic knowledge of genotoxicity, carcinogenicity, teratogenicity and mutagenicity

c. General principles of treatment of poisoning

d. Clinical symptoms and management of barbiturates, morphine, organophosphosphorus compound and lead, mercury and arsenic poisoning.

6. Chronopharmacology

a. Definition of rhythm and cycles.

b. Biological clock and their significance leading to chronotherapy.

BP 608 P. PHARMACOLOGY-III (Practical)

4Hrs/Week

1. Dose calculation in pharmacological experiments
2. Antiallergic activity by mast cell stabilization assay
3. Study of anti-ulcer activity of a drug using pylorus ligand (SHAY) rat model and NSAIDS induced ulcer model.
4. Study of effect of drugs on gastrointestinal motility
5. Effect of agonist and antagonists on guinea pig ileum
6. Estimation of serum biochemical parameters by using semi- autoanalyser
7. Effect of saline purgative on frog intestine
8. Insulin hypoglycemic effect in rabbit
9. Test for pyrogens (rabbit method)
10. Determination of acute oral toxicity (LD50) of a drug from a given data
11. Determination of acute skin irritation / corrosion of a test substance
12. Determination of acute eye irritation / corrosion of a test substance
13. Calculation of pharmacokinetic parameters from a given data
14. Biostatistics methods in experimental pharmacology(student's t test, ANOVA)
15. Biostatistics methods in experimental pharmacology (Chi square test, Wilcoxon Signed Rank test)

**Experiments are demonstrated by simulated experiments/videos*

Recommended Books (Latest Editions)

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology, Churchil Livingstone Elsevier
2. Katzung B. G., Masters S. B., Trevor A. J., Basic and clinical pharmacology, Tata Mc Graw-Hill
3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A. K., Bradley R.W., Applied Therapeutics, The Clinical use of Drugs. The Point Lippincott Williams & Wilkins
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews-Pharmacology
6. K.D.Tripathi. Essentials of Medical Pharmacology, , JAYPEE Brothers Medical Publishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisher Modern Pharmacology with clinical Applications, by Charles R.Craig& Robert,
8. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata,
9. Kulkarni SK. Handbook of experimental pharmacology. VallabhPrakashan,
10. N.Udupa and P.D. Gupta, Concepts in Chronopharmacology.

BP 603 T. HERBAL DRUG TECHNOLOGY (Theory)

45 hours

Scope: This subject gives the student the knowledge of basic understanding of herbal drug industry, the quality of raw material, guidelines for quality of herbal drugs, herbal cosmetics, natural sweeteners, nutraceutical etc. The subject also emphasizes on Good Manufacturing Practices (GMP), patenting and regulatory issues of herbal drugs

Objectives: Upon completion of this course the student should be able to:

1. understand raw material as source of herbal drugs from cultivation to herbal drug product
2. know the WHO and ICH guidelines for evaluation of herbal drugs
3. know the herbal cosmetics, natural sweeteners, nutraceuticals
4. appreciate patenting of herbal drugs, GMP .

Course content:

UNIT-I **11 Hours**

Herbs as raw materials

Definition of herb, herbal medicine, herbal medicinal product, herbal drug preparation
Source of Herbs
Selection, identification and authentication of herbal materials
Processing of herbal raw material

Biodynamic Agriculture

Good agricultural practices in cultivation of medicinal plants including Organic farming.
Pest and Pest management in medicinal plants: Biopesticides/Bioinsecticides.

Indian Systems of Medicine

a) Basic principles involved in Ayurveda, Siddha, Unani and Homeopathy
b) Preparation and standardization of Ayurvedic formulations viz Aristas and Asawas, Ghutika,Churna, Lehya and Bhasma.

UNIT-II **7 Hours**

Nutraceuticals

General aspects, Market, growth, scope and types of products available in the market. Health benefits and role of Nutraceuticals in ailments like Diabetes, CVS diseases, Cancer, Irritable bowel syndrome and various Gastro intestinal diseases.
Study of following herbs as health food: Alfaalfa, Chicory, Ginger, Fenugreek, Garlic, Honey, Amla, Ginseng, Ashwagandha, Spirulina

Herbal-Drug and Herb-Food Interactions: General introduction to interaction and classification. Study of following drugs and their possible side effects and interactions: Hypercium, kava-kava, Ginkobiloba, Ginseng, Garlic, Pepper & Ephedra.

UNIT-III **10 Hours**

Herbal Cosmetics

Sources and description of raw materials of herbal origin used via, fixed oils, waxes, gums colours, perfumes, protective agents, bleaching agents, antioxidants in products such as skin care, hair care and oral hygiene products.

Herbal excipients:
Herbal Excipients – Significance of substances of natural origin as excipients – colorants, sweeteners, binders, diluents, viscosity builders, disintegrants, flavors & perfumes.

Herbal formulations :
Conventional herbal formulations like syrups, mixtures and tablets and Novel dosage forms like phytosomes

UNIT- IV **10 Hours**

Evaluation of Drugs WHO & ICH guidelines for the assessment of herbal drugs
Stability testing of herbal drugs.

Patenting and Regulatory requirements of natural products:
a) Definition of the terms: Patent, IPR, Farmers right, Breeder's right, Bioprospecting and Biopiracy
b) Patenting aspects of Traditional Knowledge and Natural Products. Case study of Curcuma & Neem.

Regulatory Issues - Regulations in India (ASU DTAB, ASU DCC), Regulation of manufacture of ASU drugs - Schedule Z of Drugs & Cosmetics Act for ASU drugs.

UNIT-V **07 Hours**

General Introduction to Herbal Industry
Herbal drugs industry: Present scope and future prospects.
A brief account of plant based industries and institutions involved in work on medicinal and aromatic plants in India.

Schedule T – Good Manufacturing Practice of Indian systems of medicine
Components of GMP (Schedule – T) and its objectives
Infrastructural requirements, working space, storage area, machinery and equipments, standard operating procedures, health and hygiene, documentation and records.

BP 609 P. HERBAL DRUG TECHNOLOGY (Practical)

4 hours/ week

1. To perform preliminary phytochemical screening of crude drugs.
2. Determination of the alcohol content of Asava and Arista
3. Evaluation of excipients of natural origin
4. Incorporation of prepared and standardized extract in cosmetic formulations like creams, lotions and shampoos and their evaluation.
5. Incorporation of prepared and standardized extract in formulations like syrups, mixtures and tablets and their evaluation as per Pharmacopoeial requirements.
6. Monograph analysis of herbal drugs from recent Pharmacopoeias
7. Determination of Aldehyde content
8. Determination of Phenol content
9. Determination of total alkaloids

Recommended Books: (Latest Editions)

1. Textbook of Pharmacognosy by Trease & Evans.
2. Textbook of Pharmacognosy by Tyler, Brady & Robber.
3. Pharmacognosy by Kokate, Purohit and Gokhale
4. Essential of Pharmacognosy by Dr.S.H.Ansari
5. Pharmacognosy & Phytochemistry by V.D.Rangari
6. Pharmacopoeal standards for Ayurvedic Formulation (Council of Research in Indian Medicine & Homeopathy)
7. Mukherjee, P.W. Quality Control of Herbal Drugs: An Approach to Evaluation of Botanicals. Business Horizons Publishers, New Delhi, India, 2002.

BP 604 T. BIOPHARMACEUTICS AND PHARMACOKINETICS (Theory)

45 Hours

Scope: This subject is designed to impart knowledge and skills of Biopharmaceutics and pharmacokinetics and their applications in pharmaceutical development, design of dose and dosage regimen and in solving the problems arised therein.

Objectives: Upon completion of the course student shall be able to:

1. Understand the basic concepts in biopharmaceutics and pharmacokinetics and their significance.
2. Use of plasma drug concentration-time data to calculate the pharmacokinetic parameters to describe the kinetics of drug absorption, distribution, metabolism, excretion, elimination.
3. To understand the concepts of bioavailability and bioequivalence of drug products and their significance.
4. Understand various pharmacokinetic parameters, their significance & applications.

Course Content:

UNIT-I **10 Hours**

Introduction to Biopharmaceutics

Absorption; Mechanisms of drug absorption through GIT, factors influencing drug absorption though GIT, absorption of drug from Non per oral extra-vascular routes, **Distribution** Tissue permeability of drugs, binding of drugs, apparent, volume of drug distribution, plasma and tissue protein binding of drugs, factors affecting protein-drug binding. Kinetics of protein binding, Clinical significance of protein binding of drugs

UNIT- II **10 Hours**

Elimination: Drug metabolism and basic understanding metabolic pathways renal excretion of drugs, factors affecting renal excretion of drugs, renal clearance, Non renal routes of drug excretion of drugs

Bioavailability and Bioequivalence: Definition and Objectives of bioavailability, absolute and relative bioavailability, measurement of bioavailability, *in-vitro* drug dissolution models, *in-vitro-in-vivo* correlations, bioequivalence studies, methods to enhance the dissolution rates and bioavailability of poorly soluble drugs.

UNIT- III **10 Hours**

Pharmacokinetics: Definition and introduction to Pharmacokinetics, Compartment models, Non compartment models, physiological models, One compartment open model. (a). Intravenous Injection (Bolus) (b). Intravenous infusion and (c) Extra vascular administrations. Pharmacokinetics parameters - K_E ,t1/2,Vd,AUC,Ka, Clt and CL_R- definitions methods of eliminations, understanding of their significance and application

UNIT- IV **08 Hours**

Multicompartment models: Two compartment open model. IV bolus
Kinetics of multiple dosing, steady state drug levels, calculation of loading and mainetnance doses and their significance in clinical settins.

UNIT- V **07 Hours**

Nonlinear Pharmacokinetics: a. Introduction, b. Factors causing Non-linearity.
c. Michaelis-menton method of estimating parameters, Explanation with example of drugs.

Recommended Books: (Latest Editions)

1. Biopharmaceutics and Clinical Pharmacokinetics by, Milo Gibaldi.
2. Biopharmaceutics and Pharmacokinetics; By Robert F Notari
3. Applied biopharmaceutics and pharmacokinetics, Leon Shargel and Andrew B.C.YU 4th edition,Prentice-Hall Inernational edition.USA
4. Bio pharmaceutics and Pharmacokinetics-A Treatise, By D. M. Brahmankar and Sunil B.Jaiswal,Vallabh Prakashan Pitampura, Delhi
5. Pharmacokinetics: By Milo Glbaldi Donald, R. Mercel Dekker Inc.
6. Hand Book of Clinical Pharmacokinetics, By Milo Gibaldi and Laurie Prescott by ADIS Health Science Press.
7. Biopharmaceutics; By Swarbrick
8. Clinical Pharmacokinetics, Concepts and Applications: By Malcolm Rowland and
9. Thomas, N. Tozen, Lea and Febrger, Philadelphia, 1995.
10. Dissolution, Bioavailability and Bioequivalence, By Abdou H.M, Mack, Publishing Company,Pennsylvania 1989.
11. Biopharmaceutics and Clinical Pharmacokinetics-An introduction 4th edition Revised and expanded by Rebort F Notari Marcel Dekker Inn, New York and Basel, 1987.
12. Remington's Pharmaceutical Sciences, By Mack Publishing Company, Pennsylvnia

BP 605 T. PHARMACEUTICAL BIOTECHNOLOGY (Theory)

45 Hours

Scope:

- Biotechnology has a long promise to revolutionize the biological sciences and technology.
- Scientific application of biotechnology in the field of genetic engineering, medicine and fermentation technology makes the subject interesting.
- Biotechnology is leading to new biological revolutions in diagnosis, prevention and cure of diseases, new and cheaper pharmaceutical drugs.
- Biotechnology has already produced transgenic crops and animals and the future promises lot more.
- It is basically a research-based subject.

Objectives: Upon completion of the subject student shall be able to;

1. Understanding the importance of Immobilized enzymes in Pharmaceutical Industries
2. Genetic engineering applications in relation to production of pharmaceuticals
3. Importance of Monoclonal antibodies in Industries
4. Appreciate the use of microorganisms in fermentation technology

Unit I **10 Hours**

a) Brief introduction to Biotechnology with reference to Pharmaceutical Sciences.

b) Enzyme Biotechnology- Methods of enzyme immobilization and applications.

c) Biosensors- Working and applications of biosensors in Pharmaceutical Industries.

d) Brief introduction to Protein Engineering.

e) Use of microbes in industry. Production of Enzymes- General consideration - Amylase, Catalase, Peroxidase, Lipase, Protease, Penicillinase.

f) Basic principles of genetic engineering.

Unit II **10 Hours**

a) Study of cloning vectors, restriction endonucleases and DNA ligase.

b) Recombinant DNA technology. Application of genetic engineering in medicine.

c) Application of r DNA technology and genetic engineering in the production of:

i) Interferon ii) Vaccines- hepatitis- B iii) Hormones-Insulin.

d) Brief introduction to PCR

Unit III **10 Hours**

Types of immunity- humoral immunity, cellular immunity

a) Structure of Immunoglobulins

b) Structure and Function of MHC

c) Hypersensitivity reactions, Immune stimulation and Immune suppressions.

d) General method of the preparation of bacterial vaccines, toxoids, viral vaccine, antitoxins, serum-immune blood derivatives and other products relative to immunity.

e) Storage conditions and stability of official vaccines

f) Hybridoma technology- Production, Purification and Applications

g) Blood products and Plasma Substituties.

Unit IV **08Hours**

a) Immuno blotting techniques- ELISA, Western blotting, Southern blotting.

b) Genetic organization of Eukaryotes and Prokaryotes

c) Microbial genetics including transformation, transduction, conjugation, plasmids and transposons.

d) Introduction to Microbial biotransformation and applications.

e) Mutation: Types of mutation/mutants.

Unit V **07 Hours**

a) Fermentation methods and general requirements, study of media, equipments, sterilization methods, aeration process, stirring.

b) Large scale production fermenter design and its various controls.

c) Study of the production of - penicillins, citric acid, Vitamin B12, Glutamic acid, Griseofulvin,

d) Blood Products: Collection, Processing and Storage of whole human blood, dried human plasma, plasma Substituties.

Recommended Books (Latest edition):

1. B.R. Glick and J.J. Pasternak: Molecular Biotechnology: Principles and Applications of RecombinantDNA: ASM Press Washington D.C.
2. RA Goldshy et. al., : Kuby Immunology.
3. J.W. Goding: Monoclonal Antibodies.
4. J.M. Walker and E.B. Gingold: Molecular Biology and Biotechnology by Royal

Society of Chemistry.
5. Zaborsky: Immobilized Enzymes, CRC Press, Degraland, Ohio.
6. S.B. Primrose: Molecular Biotechnology (Second Edition) Blackwell Scientific Publication.
7. Stanbury F., P., Whitakar A., and Hall J., S., Principles of fermentation technology, 2nd edition, Aditya books Ltd., New Delhi

BP606TPHARMACEUTICAL QUALITY ASSURANCE (Theory)

45 Hours

Scope: This course deals with the various aspects of quality control and quality assurance aspects of pharmaceutical industries. It deals with the important aspects like cGMP, QC tests, documentation, quality certifications and regulatory affairs.

Objectives: Upon completion of the course student shall be able to:

- understand the cGMP aspects in a pharmaceutical industry
- appreciate the importance of documentation
- understand the scope of quality certifications applicable to pharmaceutical industries
- understand the responsibilities of QA & QC departments

Course content:

UNIT – I **10 Hours**

Quality Assurance and Quality Management concepts: Definition and concept of Quality control, Quality assurance and GMP

Total Quality Management (TQM): Definition, elements, philosophies

ICH Guidelines: purpose, participants, process of harmonization, Brief overview of QSEM, with special emphasis on Q-series guidelines, ICH stability testing guidelines

Quality by design (QbD): Definition, overview, elements of QbD program, tools

ISO 9000 & ISO14000: Overview, Benefits, Elements, steps for registration

NABL accreditation : Principles and procedures

UNIT - II **10 Hours**

Organization and personnel: Personnel responsibilities, training, hygiene and personal records.

Premises: Design, construction and plant layout, maintenance, sanitation, environmental control, utilities and maintenance of sterile areas, control of contamination.

Equipments and raw materials: Equipment selection, purchase specifications, maintenance, purchase specifications and maintenance of stores for raw materials.

UNIT – III **10 Hours**

Quality Control: Quality control test for containers, rubber closures and secondary packing

materials.

Good Laboratory Practices: General Provisions, Organization and Personnel, Facilities, Equipment, Testing Facilities Operation, Test and Control Articles, Protocol for Conduct of a Nonclinical Laboratory Study, Records and Reports, Disqualification of Testing Facilities

UNIT – IV **08 Hours**

Complaints: Complaints and evaluation of complaints, Handling of return good, recalling and waste disposal.

Document maintenance in pharmaceutical industry: Batch Formula Record, Master Formula Record, SOP, Quality audit, Quality Review and Quality documentation, Reports and documents, distribution records.

UNIT – V **07 Hours**

Calibration and Validation: Introduction, definition and general principles of calibration, qualification and validation, importance and scope of validation, types of validation, validation master plan. Calibration of pH meter, Qualification of UV-Visible spectrophotometer, General principles of Analytical method Validation.

Warehousing: Good warehousing practice, materials management

Recommended Books: (Latest Edition)

1. Quality Assurance Guide by organization of Pharmaceutical Products of India.
2. Good Laboratory Practice Regulations, 2nd Edition, Sandy Weinberg Vol. 69.
3. Quality Assurance of Pharmaceuticals- A compendium of Guide lines and Related materials Vol I WHO Publications.
4. A guide to Total Quality Management- Kushik Maitra and Sedhan K Ghosh
5. How to Practice GMP's – P P Sharma.
6. ISO 9000 and Total Quality Management – Sadhank G Ghosh
7. The International Pharmacopoeia – Vol I, II, III, IV- General Methods of Analysis and Quality specification for Pharmaceutical Substances, Excipients and Dosage forms
8. Good laboratory Practices – Marcel Deckker Series
9. ICH guidelines, ISO 9000 and 14000 guidelines

SEMESTER VII

BP701T. INSTRUMENTAL METHODS OF ANALYSIS (Theory)

45 Hours

Scope: This subject deals with the application of instrumental methods in qualitative and quantitative analysis of drugs. This subject is designed to impart a fundamental knowledge on the principles and instrumentation of spectroscopic and chromatographic technique. This also emphasizes on theoretical and practical knowledge on modern analytical instruments that are used for drug testing.

Objectives: Upon completion of the course the student shall be able to

1. Understand the interaction of matter with electromagnetic radiations and its applications in drug analysis
2. Understand the chromatographic separation and analysis of drugs.
3. Perform quantitative & qualitative analysis of drugs using various analytical instruments.

Course Content:

UNIT –I **10 Hours**

UV Visible spectroscopy

Electronic transitions, chromophores, auxochromes, spectral shifts, solvent effect on absorption spectra, Beer and Lambert's law, Derivation and deviations.

Instrumentation - Sources of radiation, wavelength selectors, sample cells, detectors- Photo tube, Photomultiplier tube, Photo voltaic cell, Silicon Photodiode.

Applications - Spectrophotometric titrations, Single component and multi component analysis

Fluorimetry

Theory, Concepts of singlet, doublet and triplet electronic states, internal and external conversions, factors affecting fluorescence, quenching, instrumentation and applications

UNIT –II **10 Hours**

IR spectroscopy

Introduction, fundamental modes of vibrations in poly atomic molecules, sample handling, factors affecting vibrations

Instrumentation - Sources of radiation, wavelength selectors, detectors - Golay cell, Bolometer, Thermocouple, Thermister, Pyroelectric detector and applications

Flame Photometry-Principle, interferences, instrumentation and applications

Atomic absorption spectroscopy- Principle, interferences, instrumentation and applications

Nepheloturbidometry- Principle, instrumentation and applications

UNIT –III **10 Hours**

Introduction to chromatography

Adsorption and partition column chromatography-Methodology, advantages, disadvantages and applications.

Thin layer chromatography- Introduction, Principle, Methodology, Rf values, advantages, disadvantages and applications.

Paper chromatography-Introduction, methodology, development techniques, advantages, disadvantages and applications

Electrophoresis– Introduction, factors affecting electrophoretic mobility, Techniques of paper, gel, capillary electrophoresis, applications

UNIT –IV **08 Hours**

Gas chromatography - Introduction, theory, instrumentation, derivatization, temperature programming, advantages, disadvantages and applications

High performance liquid chromatography (HPLC)-Introduction, theory, instrumentation, advantages and applications.

UNIT –V **07 Hours**

Ion exchange chromatography- Introduction, classification, ion exchange resins, properties, mechanism of ion exchange process, factors affecting ion exchange, methodology and applications

Gel chromatography- Introduction, theory, instrumentation and applications

Affinity chromatography- Introduction, theory, instrumentation and applications

BP705P. INSTRUMENTAL METHODS OF ANALYSIS (Practical)

4 Hours/Week

1. Determination of absorption maxima and effect of solvents on absorption maxima of organic compounds
2. Estimation of dextrose by colorimetry
3. Estimation of sulfanilamide by colorimetry
4. Simultaneous estimation of ibuprofen and paracetamol by UV spectroscopy
5. Assay of paracetamol by UV- Spectrophotometry
6. Estimation of quinine sulfate by fluorimetry
7. Study of quenching of fluorescence
8. Determination of sodium by flame photometry
9. Determination of potassium by flame photometry
10. Determination of chlorides and sulphates by nephelo turbidometry
11. Separation of amino acids by paper chromatography
12. Separation of sugars by thin layer chromatography
13. Separation of plant pigments by column chromatography
14. Demonstration experiment on HPLC
15. Demonstration experiment on Gas Chromatography

Recommended Books (Latest Editions)

1. Instrumental Methods of Chemical Analysis by B.K Sharma
2. Organic spectroscopy by Y.R Sharma
3. Text book of Pharmaceutical Analysis by Kenneth A. Connors
4. Vogel's Text book of Quantitative Chemical Analysis by A.I. Vogel
5. Practical Pharmaceutical Chemistry by A.H. Beckett and J.B. Stenlake
6. Organic Chemistry by I. L. Finar
7. Organic spectroscopy by William Kemp
8. Quantitative Analysis of Drugs by D. C. Garrett
9. Quantitative Analysis of Drugs in Pharmaceutical Formulations by P. D. Sethi
10. Spectrophotometric identification of Organic Compounds by Silverstein

BP 702 T. INDUSTRIAL PHARMACYII (Theory)

45 Hours

Scope: This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market

Objectives: Upon completion of the course, the student shall be able to:

1. Know the process of pilot plant and scale up of pharmaceutical dosage forms
2. Understand the process of technology transfer from lab scale to commercial batch
3. Know different Laws and Acts that regulate pharmaceutical industry
4. Understand the approval process and regulatory requirements for drug products

Course Content:

UNIT-I **10 Hours**

Pilot plant scale up techniques: General considerations - including significance of personnel requirements, space requirements, raw materials, Pilot plant scale up considerations for solids, liquid orals, semi solids and relevant documentation, SUPAC guidelines, Introduction to platform technology

UNIT-II **10 Hours**

Technology development and transfer: WHO guidelines for Technology Transfer(TT): Terminology, Technology transfer protocol, Quality risk management, Transfer from R & D to production (Process, packaging and cleaning), Granularity of TT Process (API, excipients, finished products, packaging materials) Documentation, Premises and equipments, qualification and validation, quality control, analytical method transfer, Approved regulatory bodies and agencies, Commercialization - practical aspects and problems (case studies), TT agencies in India - APCTD, NRDC, TIFAC, BCIL, TBSE / SIDBI; TT related documentation - confidentiality agreement, licensing, MoUs, legal issues

UNIT-III **10 Hours**

Regulatory affairs: Introduction, Historical overview of Regulatory Affairs, Regulatory authorities, Role of Regulatory affairs department, Responsibility of Regulatory Affairs Professionals

Regulatory requirements for drug approval: Drug Development Teams, Non-Clinical Drug Development, Pharmacology, Drug Metabolism and Toxicology, General considerations of Investigational New Drug (IND) Application, Investigator's Brochure (IB) and New Drug Application (NDA), Clinical research / BE studies, Clinical Research Protocols, Biostatistics in Pharmaceutical Product Development, Data Presentation for FDA Submissions, Management of Clinical Studies.

UNIT-IV **08 Hours**

Quality management systems: Quality management & Certifications: Concept of Quality, Total Quality Management, Quality by Design (QbD), Six Sigma concept, Out of Specifications (OOS), Change control, Introduction to ISO 9000 series of quality systems standards, ISO 14000, NABL, GLP

UNIT-V **07 Hours**

Indian Regulatory Requirements: Central Drug Standard Control Organization (CDSCO) and State Licensing Authority: Organization, Responsibilities, Certificate of Pharmaceutical Product (COPP), Regulatory requirements and approval procedures for New Drugs.

Recommended Books: (Latest Editions)

1. Regulatory Affairs from Wikipedia, the free encyclopedia modified on 7th April available at http,//en.wikipedia.org/wiki/Regulatory_ Affairs.

BP 703T. PHARMACY PRACTICE (Theory)

45 Hours

Scope: In the changing scenario of pharmacy practice in India, for successful practice of Hospital Pharmacy, the students are required to learn various skills like drug distribution, drug information, and therapeutic drug monitoring for improved patient care. In community pharmacy, students will be learning various skills such as dispensing of drugs, responding to minor ailments by providing suitable safe medication, patient counselling for improved patient care in the community set up.

Objectives: Upon completion of the course, the student shall be able to

1. know various drug distribution methods in a hospital
2. appreciate the pharmacy stores management and inventory control
3. monitor drug therapy of patient through medication chart review and clinical review
4. obtain medication history interview and counsel the patients
5. identify drug related problems
6. detect and assess adverse drug reactions
7. interpret selected laboratory results (as monitoring parameters in therapeutics) of specific disease states
8. know pharmaceutical care services
9. do patient counseling in community pharmacy;
10. appreciate the concept of Rational drug therapy.

Unit I: **10 Hours**

a) Hospital and it's organization

Definition, Classification of hospital- Primary, Secondary and Tertiary hospitals, Classification based on clinical and non- clinical basis, Organization Structure of a Hospital, and Medical staffs involved in the hospital and their functions.

b) Hospital pharmacy and its organization

Definition, functions of hospital pharmacy, Organization structure, Location, Layout and staff requirements, and Responsibilities and functions of hospital pharmacists.

c) Adverse drug reaction

Classifications - Excessive pharmacological effects, secondary pharmacological effects, idiosyncrasy, allergic drug reactions, genetically determined toxicity, toxicity following sudden withdrawal of drugs, Drug interaction- beneficial interactions, adverse interactions, and pharmacokinetic drug interactions, Methods for detecting

drug interactions, spontaneous case reports and record linkage studies, and Adverse drug reaction reporting and management.

d) Community Pharmacy

Organization and structure of retail and wholesale drug store, types and design, Legal requirements for establishment and maintenance of a drug store, Dispensing of proprietary products, maintenance of records of retail and wholesale drug store.

Unit II: 10 Hours

a) Drug distribution system in a hospital

Dispensing of drugs to inpatients, types of drug distribution systems, charging policy and labelling, Dispensing of drugs to ambulatory patients, and Dispensing of controlled drugs.

b) Hospital formulary

Definition, contents of hospital formulary, Differentiation of hospital formulary and Drug list, preparation and revision, and addition and deletion of drug from hospital formulary.

c) Therapeutic drug monitoring

Need for Therapeutic Drug Monitoring, Factors to be considered during the Therapeutic Drug Monitoring, and Indian scenario for Therapeutic Drug Monitoring.

d) Medication adherence

Causes of medication non-adherence, pharmacist role in the medication adherence, and monitoring of patient medication adherence.

e) Patient medication history interview

Need for the patient medication history interview, medication interview forms.

f) Community pharmacy management

Financial, materials, staff, and infrastructure requirements.

Unit III: 10 Hours

a) Pharmacy and therapeutic committee

Organization, functions, Policies of the pharmacy and therapeutic committee in including drugs into formulary, inpatient and outpatient prescription, automatic stop order, and emergency drug list preparation.

b) Drug information services

Drug and Poison information centre, Sources of drug information, Computerised services, and storage and retrieval of information.

c) Patient counseling

Definition of patient counseling; steps involved in patient counseling, and Special cases that require the pharmacist

d) Education and training program in the hospital

Role of pharmacist in the education and training program, Internal and external training program, Services to the nursing homes/clinics, Code of ethics for community pharmacy, and Role of pharmacist in the interdepartmental communication and community health education.

e) Prescribed medication order and communication skills

Prescribed medication order- interpretation and legal requirements, and Communication skills- communication with prescribers and patients.

Unit IV 8 Hours

a) Budget preparation and implementation

Budget preparation and implementation

b) Clinical Pharmacy

Introduction to Clinical Pharmacy, Concept of clinical pharmacy, functions and responsibilities of clinical pharmacist, Drug therapy monitoring - medication chart review, clinical review, pharmacist intervention, Ward round participation, Medication history and Pharmaceutical care.

Dosing pattern and drug therapy based on Pharmacokinetic & disease pattern.

c) Over the counter (OTC) sales

Introduction and sale of over the counter, and Rational use of common over the counter medications.

Unit V 7 Hours

a) Drug store management and inventory control

Organisation of drug store, types of materials stocked and storage conditions, Purchase and inventory control: principles, purchase procedure, purchase order, procurement and stocking, Economic order quantity, Reorder quantity level, and Methods used for the analysis of the drug expenditure

b) Investigational use of drugs

Description, principles involved, classification, control, identification, role of hospital pharmacist, advisory committee.

c) Interpretation of Clinical Laboratory Tests

Blood chemistry, hematology, and urinalysis

Recommended Books (Latest Edition):

1. Merchant S.H. and Dr. J.S.Quadry. *A textbook of hospital pharmacy*, 4th ed. Ahmadabad: B.S. Shah Prakakshan; 2001.

BP 704T: NOVEL DRUG DELIVERY SYSTEMS (Theory)

45 Hours

Scope: This subject is designed to impart basic knowledge on the area of novel drug delivery systems.

Objectives: Upon completion of the course student shall be able

1. To understand various approaches for development of novel drug delivery systems.
2. To understand the criteria for selection of drugs and polymers for the development of Novel drug delivery systems, their formulation and evaluation

Course content:

Unit-I **10 Hours**

Controlled drug delivery systems: Introduction, terminology/definitions and rationale, advantages, disadvantages, selection of drug candidates.Approaches to design controlled release formulations based on diffusion, dissolution and ion exchange principles. Physicochemical and biological properties of drugs relevant to controlled release formulations

Polymers: Introduction, classification, properties, advantages and application of polymers in formulation of controlled release drug delivery systems.

Unit-II **10 Hours**

Microencapsulation: Definition, advantages and disadvantages, microspheres /microcapsules, microparticles, methods of microencapsulation, applications

Mucosal Drug Delivery system: Introduction, Principles of bioadhesion / mucoadhesion, concepts, advantages and disadvantages, transmucosal permeability and formulation considerations of buccal delivery systems

Implantable Drug Delivery Systems: Introduction, advantages and disadvantages, concept of implantsand osmotic pump

Unit-III **10 Hours**

Transdermal Drug Delivery Systems: Introduction, Permeation through skin, factors affecting permeation, permeation enhancers, basic components of TDDS, formulation approaches

Gastroretentive drug delivery systems: Introduction, advantages, disadvantages, approaches for GRDDS – Floating, high density systems, inflatable and gastroadhesive systems and their applications

Nasopulmonary drug delivery system: Introduction to Nasal and Pulmonary routes of drug delivery, Formulation of Inhalers (dry powder and metered dose), nasal sprays, nebulizers

Unit-IV **08 Hours**

Targeted drug Delivery: Concepts and approaches advantages and disadvantages, introduction to liposomes, niosomes, nanoparticles, monoclonal antibodies and their applications

Unit-V **07 Hours**

Ocular Drug Delivery Systems: Introduction, intra ocular barriers and methods to overcome –Preliminary study, ocular formulations and ocuserts

Intrauterine Drug Delivery Systems: Introduction, advantages and disadvantages, development of intra uterine devices (IUDs) and applications

Recommended Books: (Latest Editions)

1. Y W. Chien, Novel Drug Delivery Systems, 2nd edition, revised and expanded, Marcel Dekker, Inc., New York, 1992.
2. Robinson, J. R., Lee V. H. L, Controlled Drug Delivery Systems, Marcel Dekker, Inc., New York, 1992.

4. N.K. Jain, Controlled and Novel Drug Delivery, CBS Publishers & Distributors, New Delhi, First edition 1997 (reprint in 2001).
5. S.P. Vyas and R.K. Khar, Controlled Drug Delivery -concepts and advances, Vallabh Prakashan, New Delhi, First edition 2002.

Journals

1. Indian Journal of Pharmaceutical Sciences (IPA)
2. Indian Drugs (IDMA)
3. Journal of Controlled Release (Elsevier Sciences)
4. Drug Development and Industrial Pharmacy (Marcel & Decker)
5. International Journal of Pharmaceutics (Elsevier Sciences)

SEMESTER VIII

BP801T. BIOSTATISITCS AND RESEARCH METHODOLOGY (Theory)

45 Hours

Scope: To understand the applications of Biostatics in Pharmacy. This subject deals with descriptive statistics, Graphics, Correlation, Regression, logistic regression Probability theory, Sampling technique, Parametric tests, Non Parametric tests, ANOVA, Introduction to Design of Experiments, Phases of Clinical trials and Observational and Experimental studies, SPSS, R and MINITAB statistical software's, analyzing the statistical data using Excel**.**

Objectives: Upon completion of the course the student shall be able to

- Know the operation of M.S. Excel, SPSS, R and MINITAB®, DoE (Design of Experiment)
- Know the various statistical techniques to solve statistical problems
- Appreciate statistical techniques in solving the problems**.**

Course content:

Unit-I **10 Hours**

Introduction: Statistics, Biostatistics, Frequency distribution

Measures of central tendency: Mean, Median, Mode- Pharmaceutical examples

Measures of dispersion: Dispersion, Range, standard deviation, Pharmaceutical problems

Correlation: Definition, Karl Pearson's coefficient of correlation, Multiple correlation - Pharmaceuticals examples

Unit-II **10 Hours**

Regression: Curve fitting by the method of least squares, fitting the lines y= a + bx and x = a + by, Multiple regression, standard error of regression– Pharmaceutical Examples

Probability: Definition of probability, Binomial distribution, Normal distribution, Poisson's distribution, properties - problems

Sample, Population, large sample, small sample, Null hypothesis, alternative hypothesis, sampling, essence of sampling, types of sampling, Error-I type, Error-II type, Standard error of mean (SEM) - Pharmaceutical examples

Parametric test: t-test(Sample, Pooled or Unpaired and Paired) , ANOVA, (One way and Two way), Least Significance difference

Unit-III **10 Hours**

Non Parametric tests: Wilcoxon Rank Sum Test, Mann-Whitney U test, Kruskal-Wallis test, Friedman Test

Introduction to Research: Need for research, Need for design of Experiments, Experiential Design Technique, plagiarism

Graphs: Histogram, Pie Chart, Cubic Graph, response surface plot, Counter Plot graph

Designing the methodology: Sample size determination and Power of a study, Report writing and presentation of data, Protocol, Cohorts studies, Observational studies, Experimental studies, Designing clinical trial, various phases.

Unit-IV **8 Hours**

Blocking and confounding system for Two-level factorials

Regression modeling: Hypothesis testing in Simple and Multiple regressionmodels

Introduction to Practical components of Industrial and Clinical Trials Problems: Statistical Analysis Using Excel, SPSS, MINITAB®, DESIGN OF EXPERIMENTS, R - Online Statistical Software's to Industrial and Clinical trial approach

Unit-V **7Hours**

Design and Analysis of experiments:

Factorial Design: Definition, 2^2, 2^3design. Advantage of factorial design

Response Surface methodology: Central composite design, Historical design, Optimization Techniques

Recommended Books (Latest edition):

1. Pharmaceutical statistics- Practical and clinical applications, Sanford Bolton, publisher Marcel Dekker Inc. NewYork.
2. Fundamental of Statistics – Himalaya Publishing House- S.C.Guptha
3. Design and Analysis of Experiments –PHI Learning Private Limited, R. Pannerselvam,
4. Design and Analysis of Experiments – Wiley Students Edition, Douglas and C. Montgomery

BP 802T SOCIAL AND PREVENTIVE PHARMACY

Hours: 45

Scope:
The purpose of this course is to introduce to students a number of health issues and their challenges. This course also introduced a number of national health programmes. The roles of the pharmacist in these contexts are also discussed.

Objectives:
After the successful completion of this course, the student shall be able to:

- Acquire high consciousness/realization of current issuesrelated to health and pharmaceutical problems within the country and worldwide.
- Have a critical way of thinking based on current healthcare development.
- Evaluate alternative ways of solving problems related tohealth and pharmaceutical issues

Course content:

Unit I: 10 Hours

Concept of health and disease: Definition, concepts and evaluation of public health. Understanding the concept of prevention and control of disease, social causes of diseases and social problems of the sick.

Social and health education: Food in relation to nutrition and health, Balanced diet, Nutritional deficiencies, Vitamin deficiencies, Malnutrition and its prevention.

Sociology and health: Socio cultural factors related to health and disease, Impact of urbanization on health and disease, Poverty and health

Hygiene and health: personal hygiene and health care; avoidable habits

Unit II: 10 Hours

Preventive medicine: General principles of prevention and control of diseases such as cholera, SARS, Ebola virus, influenza, acute respiratory infections, malaria, chicken guinea, dengue, lymphatic filariasis, pneumonia, hypertension, diabetes mellitus, cancer, drug addiction-drug substance abuse

Unit III: 10 Hours

National health programs, its objectives, functioning and outcome of the following: HIV AND AIDS control programme, TB, Integrated disease surveillance program (IDSP), National leprosy control programme, National mental health program, National

programme for prevention and control of deafness, Universal immunization programme, National programme for control of blindness, Pulse polio programme.

Unit IV: **08 Hours**

National health intervention programme for mother and child, National family welfare programme, National tobacco control programme, National Malaria Prevention Program, National programme for the health care for the elderly, Social health programme; role of WHO in Indian national program

Unit V: **07 Hours**

Community services in rural, urban and school health: Functions of PHC, Improvement in rural sanitation, national urban health mission, Health promotion and education in school.

Recommended Books (Latest edition)*:*

1. Short Textbook of Preventive and Social Medicine, Prabhakara GN, 2nd Edition, 2010, ISBN: 9789380704104, JAYPEE Publications
2. Textbook of Preventive and Social Medicine (Mahajan and Gupta), Edited by Roy Rabindra Nath, Saha Indranil, 4th Edition, 2013, ISBN: 9789350901878, JAYPEE Publications
3. Review of Preventive and Social Medicine (Including Biostatistics), Jain Vivek, 6th Edition, 2014, ISBN: 9789351522331, JAYPEE Publications
4. Essentials of Community Medicine—A Practical Approach, Hiremath Lalita D, Hiremath Dhananjaya A, 2nd Edition, 2012, ISBN: 9789350250440, JAYPEE Publications
5. Park Textbook of Preventive and Social Medicine, K Park, 21st Edition, 2011, ISBN-14: 9788190128285, BANARSIDAS BHANOT PUBLISHERS.
6. Community Pharmacy Practice, Ramesh Adepu, BSP publishers, Hyderabad

Recommended Journals:

1. Research in Social and Administrative Pharmacy, Elsevier, Ireland

BP803ET. PHARMA MARKETING MANAGEMENT (Theory)

45 Hours

Scope:

The pharmaceutical industry not only needs highly qualified researchers, chemists and, technical people, but also requires skilled managers who can take the industry forward by managing and taking the complex decisions which are imperative for the growth of the industry. The Knowledge and Know-how of marketing management groom the people for taking a challenging role in Sales and Product management.

Course Objective: The course aims to provide an understanding of marketing concepts and techniques and their applications in the pharmaceutical industry.

Unit I **10 Hours**

Marketing:

Definition, general concepts and scope of marketing; Distinction between marketing & selling; Marketing environment; Industry and competitive analysis; Analyzing consumer buying behavior; industrial buying behavior.

Pharmaceutical market:

Quantitative and qualitative aspects; size and composition of the market; demographic descriptions and socio-psychological characteristics of the consumer; market segmentation& targeting.Consumer profile; Motivation and prescribing habits of the physician; patients' choice of physician and retail pharmacist.Analyzing the Market;Role of market research.

Unit II **10 Hours**

Product decision:

Classification, product line and product mix decisions, product life cycle,product portfolio analysis; product positioning; New product decisions; Product branding, packaging and labeling decisions, Product management in pharmaceutical industry.

Unit III **10 Hours**

Promotion:

Methods, determinants of promotional mix, promotional budget; An overview of personal selling, advertising, direct mail, journals, sampling, retailing, medical exhibition, public relations, online promotional techniques for OTC Products.

Unit IV **10 Hours**

Pharmaceutical marketing channels:

Designing channel, channel members, selecting the appropriate channel, conflict in channels, physical distribution management: Strategic importance, tasks in physical distribution management.

Professional sales representative (PSR):

Duties of PSR, purpose of detailing, selection and training, supervising, norms for customer calls, motivating, evaluating, compensation and future prospects of the PSR.

Unit V **10 Hours**

Pricing:

Meaning, importance, objectives, determinants of price; pricing methods and strategies, issues in price management in pharmaceutical industry. An overview of DPCO (Drug Price Control Order)and NPPA (National Pharmaceutical Pricing Authority).

Emerging concepts in marketing:

Vertical & Horizontal Marketing; RuralMarketing; Consumerism; Industrial Marketing; Global Marketing.

Recommended Books: (Latest Editions)

1. Philip Kotler and Kevin Lane Keller: Marketing Management, Prentice Hall of India, New Delhi
2. Walker, Boyd and Larreche : Marketing Strategy- Planning and Implementation, Tata MC GrawHill, New Delhi.
3. Dhruv Grewal and Michael Levy: Marketing, Tata MC Graw Hill
4. Arun Kumar and N Menakshi: Marketing Management, Vikas Publishing, India
5. Rajan Saxena: Marketing Management; Tata MC Graw-Hill (India Edition)
6. Ramaswamy, U.S & Nanakamari, S: Marketing Managemnt:Global Perspective, IndianContext,Macmilan India, New Delhi.
7. Shanker, Ravi: Service Marketing, Excell Books, New Delhi
8. Subba Rao Changanti, Pharmaceutical Marketing in India (GIFT – Excel series) Excel Publications.

BP804 ET: PHARMACEUTICAL REGULATORY SCIENCE (Theory)

45Hours

Scope: This course is designed to impart the fundamental knowledge on the regulatory requirements for approval of new drugs, and drug products in regulated markets of India & other countries like US, EU, Japan, Australia,UK etc. It prepares the students to learn in detail on the regulatory requirements, documentation requirements, and registration procedures for marketing the drug products.

Objectives: Upon completion of the subject student shall be able to;

1. Know about the process of drug discovery and development
2. Know the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals
3. Know the regulatory approval process and their registration in Indian and international markets

Course content:

Unit I **10Hours**

New Drug Discovery and development

Stages of drug discovery, Drug development process, pre-clinical studies, non-clinical activities, clinical studies, Innovator and generics, Concept of generics, Generic drug product development.

Unit II **10Hours**

Regulatory Approval Process

Approval processes and timelines involved in Investigational New Drug (IND), New Drug Application (NDA), Abbreviated New Drug Application (ANDA). Changes to an approved NDA / ANDA.

Regulatory authorities and agencies

Overview of regulatory authorities of India, United States, European Union, Australia, Japan, Canada (Organization structure and types of applications)

Unit III **10Hours**

Registration of Indian drug product in overseas market

Procedure for export of pharmaceutical products, Technical documentation, Drug Master Files (DMF), Common Technical Document (CTD), electronic Common Technical

Document (eCTD), ASEAN Common Technical Document (ACTD)research.

Unit IV **08Hours**

Clinical trials

Developing clinical trial protocols, Institutional Review Board / Independent Ethics committee - formation and working procedures, Informed consent process and procedures, GCP obligations of Investigators, sponsors & Monitors, Managing and Monitoring clinical trials, Pharmacovigilance - safety monitoring in clinical trials

Unit V **07Hours**

Regulatory Concepts

Basic terminology, guidance, guidelines, regulations, Laws and Acts, Orange book, Federal Register, Code of Federal Regulatory, Purple book

Recommended books (Latest edition):

1. Drug Regulatory Affairs by Sachin Itkar, Dr. N.S. Vyawahare, Nirali Prakashan.
2. The Pharmaceutical Regulatory Process, Second Edition Edited by Ira R. Berry and Robert P. Martin, Drugs and the Pharmaceutical Sciences,Vol.185. Informa Health care Publishers.
3. New Drug Approval Process: Accelerating Global Registrations By Richard A Guarino, MD, 5th edition, Drugs and the Pharmaceutical Sciences,Vol.190.
4. Guidebook for drug regulatory submissions / Sandy Weinberg. By John Wiley & Sons. Inc.
5. FDA Regulatory Affairs: a guide for prescription drugs, medical devices, and biologics /edited by Douglas J. Pisano, David Mantus.
6. Generic Drug Product Development, Solid Oral Dosage forms, Leon Shargel and Isader Kaufer, Marcel Dekker series, Vol.143
7. Clinical Trials and Human Research: A Practical Guide to Regulatory Compliance By Fay A. Rozovsky and Rodney K. Adams
8. Principles and Practices of Clinical Research, Second Edition Edited by John I. Gallin and Frederick P. Ognibene
9. Drugs: From Discovery to Approval, Second Edition By Rick Ng

BP 805T: PHARMACOVIGILANCE (Theory)

45 hours

Scope: This paper will provide an opportunity for the student to learn about development of pharmacovigilance as a science, basic terminologies used in pharmacovigilance, global scenario of Pharmacovigilance, train students on establishing pharmacovigilance programme in an organization, various methods that can be used to generate safety data and signal detection. This paper also develops the skills of classifying drugs, diseases and adverse drug reactions.

Objectives:

At completion of this paper it is expected that students will be able to (know, do, and appreciate):

1. Why drug safety monitoring is important?
2. History and development of pharmacovigilance
3. National and international scenario of pharmacovigilance
4. Dictionaries, coding and terminologies used in pharmacovigilance
5. Detection of new adverse drug reactions and their assessment
6. International standards for classification of diseases and drugs
7. Adverse drug reaction reporting systems and communication in pharmacovigilance
8. Methods to generate safety data during pre clinical, clinical and post approval phases of drugs' life cycle
9. Drug safety evaluation in paediatrics, geriatrics, pregnancy and lactation
10. Pharmacovigilance Program of India (PvPI) requirement for ADR reporting in India
11. ICH guidelines for ICSR, PSUR, expedited reporting, pharmacovigilance planning
12. CIOMS requirements for ADR reporting
13. Writing case narratives of adverse events and their quality.

Course Content

Unit I **10 Hours**

Introduction to Pharmacovigilance

- History and development of Pharmacovigilance
- Importance of safety monitoring of Medicine
- WHO international drug monitoring programme
- Pharmacovigilance Program of India(PvPI)

Introduction to adverse drug reactions

- Definitions and classification of ADRs
- Detection and reporting
- Methods in Causality assessment
- Severity and seriousness assessment
- Predictability and preventability assessment
- Management of adverse drug reactions

Basic terminologies used in pharmacovigilance

- Terminologies of adverse medication related events
- Regulatory terminologies

Unit II **10 hours**

Drug and disease classification

- Anatomical, therapeutic and chemical classification of drugs
- International classification of diseases
- Daily defined doses
- International Non proprietary Names for drugs

Drug dictionaries and coding in pharmacovigilance

- WHO adverse reaction terminologies
- MedDRA and Standardised MedDRA queries
- WHO drug dictionary
- Eudravigilance medicinal product dictionary

Information resources in pharmacovigilance

- Basic drug information resources
- Specialised resources for ADRs

Establishing pharmacovigilance programme

- Establishing in a hospital
- Establishment & operation of drug safety department in industry
- Contract Research Organisations (CROs)
- Establishing a national programme

Unit III **10 Hours**

Vaccine safety surveillance

- Vaccine Pharmacovigilance
- Vaccination failure
- Adverse events following immunization

Pharmacovigilance methods

- Passive surveillance – Spontaneous reports and case series
- Stimulated reporting
- Active surveillance – Sentinel sites, drug event monitoring and registries
- Comparative observational studies – Cross sectional study, case control study and cohort study
- Targeted clinical investigations

Communication in pharmacovigilance

- Effective communication in Pharmacovigilance
- Communication in Drug Safety Crisis management
- Communicating with Regulatory Agencies, Business Partners, Healthcare facilities & Media

Unit IV **8 Hours**

Safety data generation

- Pre clinical phase
- Clinical phase
- Post approval phase (PMS)

ICH Guidelines for Pharmacovigilance

- Organization and objectives of ICH
- Expedited reporting
- Individual case safety reports
- Periodic safety update reports
- Post approval expedited reporting
- Pharmacovigilance planning
- Good clinical practice in pharmacovigilance studies

Unit V **7 hours**

Pharmacogenomics of adverse drug reactions

- Genetics related ADR with example focusing PK parameters.

Drug safety evaluation in special population

- Paediatrics
- Pregnancy and lactation
- Geriatrics

CIOMS

- CIOMS Working Groups
- CIOMS Form

CDSCO (India) and Pharmacovigilance

- D&C Act and Schedule Y
- Differences in Indian and global pharmacovigilance requirements

Recommended Books (Latest edition):

1. Textbook of Pharmacovigilance: S K Gupta, Jaypee Brothers, Medical Publishers.
2. Practical Drug Safety from A to Z By Barton Cobert, Pierre Biron, Jones and Bartlett Publishers.
3. Mann's Pharmacovigilance:Elizabeth B. Andrews, Nicholas, Wiley Publishers.
4. Stephens' Detection of New Adverse Drug Reactions: John Talbot, Patrick Walle, Wiley Publishers.
5. An Introduction to Pharmacovigilance: Patrick Waller,Wiley Publishers.
6. Cobert's Manual of Drug Safety and Pharmacovigilance: Barton Cobert,Jones& Bartlett Publishers.
7. Textbook of Pharmacoepidemiolog edited by Brian L. Strom, Stephen E Kimmel, Sean Hennessy,Wiley Publishers.
8. A Textbook of Clinical Pharmacy Practice -Essential Concepts and Skills:G. Parthasarathi, Karin NyfortHansen,Milap C. Nahata

BP 806 ET. QUALITY CONTROL AND STANDARDIZATION OF HERBALS (Theory)

Scope: In this subject the student learns about the various methods and guidelines for evaluation and standardization of herbs and herbal drugs. The subject also provides an opportunity for the student to learn cGMP, GAP and GLP in traditional system of medicines.

Objectives: Upon completion of the subject student shall be able to;

1. know WHO guidelines for quality control of herbal drugs
2. know Quality assurance in herbal drug industry
3. know the regulatory approval process and their registration in Indian and international markets
4. appreciate EU and ICH guidelines for quality control of herbal drugs

Unit I **10 hours**

Basic tests for drugs – Pharmaceutical substances, Medicinal plants materials and dosage forms

WHO guidelines for quality control of herbal drugs.

Evaluation of commercial crude drugs intended for use

Unit II **10 hours**

Quality assurance in herbal drug industry of cGMP, GAP, GMP and GLP in traditional system of medicine.

WHO Guidelines on current good manufacturing Practices (cGMP) for Herbal Medicines

WHO Guidelines on GACP for Medicinal Plants.

Unit III **10 hours**

EU and ICH guidelines for quality control of herbal drugs.

Research Guidelines for Evaluating the Safety and Efficacy of Herbal Medicines

Unit IV **08 hours**

Stability testing of herbal medicines.Application of various chromatographic techniques in standardization of herbal products.

Preparation of documents for new drug application and export registration

GMP requirements and Drugs & Cosmetics Act provisions.

Unit V **07 hours**

Regulatory requirements for herbal medicines.

WHO guidelines on safety monitoring of herbal medicines in pharmacovigilance systems

Comparison of various Herbal Pharmacopoeias.

Role of chemical and biological markers in standardization of herbal products

Recommended Books: (Latest Editions

1. Pharmacognosy by Trease and Evans
2. Pharmacognosy by Kokate, Purohit and Gokhale

BP 807 ET. COMPUTER AIDED DRUG DESIGN (Theory)

45 Hours

Scope: This subject is designed to provide detailed knowledge of rational drug design process and various techniques used in rational drug design process.

Objectives: Upon completion of the course, the student shall be able to understand

- Design and discovery of lead molecules
- The role of drug design in drug discovery process
- The concept of QSAR and docking
- Various strategies to develop new drug like molecules.
- The design of new drug molecules using molecular modeling software

Course Content:

UNIT-I **10 Hours**

Introduction to Drug Discovery and Development

Stages of drug discovery and development

Lead discovery and Analog Based Drug Design

Rational approaches to lead discovery based on traditional medicine, Random screening, Non-random screening, serendipitous drug discovery, lead discovery based on drug metabolism, lead discovery based on clinical observation.

Analog Based Drug Design: Bioisosterism, Classification, Bioisosteric replacement. Any three case studies

UNIT-II **10 Hours**

Quantitative Structure Activity Relationship (QSAR)

SAR versus QSAR, History and development of QSAR, Types of physicochemical parameters, experimental and theoretical approaches for the determination of physicochemical parameters such as Partition coefficient, Hammet's substituent constant and Tafts steric constant. Hansch analysis, Free Wilson analysis, 3D-QSAR approaches like COMFA and COMSIA.

UNIT-III **10 Hours**

Molecular Modeling and virtual screening techniques

Virtual Screening techniques: Drug likeness screening, Concept of pharmacophore mapping and pharmacophore based Screening,

Molecular docking: Rigid docking, flexible docking, manual docking, Docking based screening. *De novo* drug design.

UNIT-IV **08 Hours**

Informatics & Methods in drug design

Introduction to Bioinformatics, chemoinformatics. ADME databases, chemical, biochemical and pharmaceutical databases.

UNIT-V **07 Hours**

Molecular Modeling: Introduction to molecular mechanics and quantum mechanics.Energy Minimization methods and Conformational Analysis, global conformational minima determination.

Recommended Books (Latest Editions)

9. Silverman R.B. "The organic Chemistry of Drug Design and Drug Action" Academic Press New York.

BP808ET: CELL AND MOLECULAR BIOLOGY (Elective subject)

45 Hours

Scope:

- Cell biology is a branch of biology that studies cells – their physiological properties, their structure, the organelles they contain, interactions with their environment, their life cycle, division, death and cell function.
- This is done both on a microscopic and molecular level.
- Cell biology research encompasses both the great diversity of single-celled organisms like bacteria and protozoa, as well as the many specialized cells in multi-cellular organismssuch as humans, plants, and sponges.

Objectives: Upon completion of the subject student shall be able to;

- Summarize cell and molecular biology history.
- Summarize cellular functioning and composition.
- Describe the chemical foundations of cell biology.
- Summarize the DNA properties of cell biology.
- Describe protein structure and function.
- Describe cellular membrane structure and function.
- Describe basic molecular genetic mechanisms.
- Summarize the Cell Cycle

Course content:

Unit I **10Hours**

a) Cell and Molecular Biology: Definitions theory and basics and Applications.
b) Cell and Molecular Biology: History and Summation.
c) Properties of cells and cell membrane.
d) Prokaryotic versus Eukaryotic
e) Cellular Reproduction
f) Chemical Foundations – an Introduction and Reactions (Types)

Unit II **10 Hours**

a) DNA and the Flow of Molecular Information
b) DNA Functioning
c) DNA and RNA
d) Types of RNA
e) Transcription and Translation

Unit III **10 Hours**

a) Proteins: Defined **and** Amino Acids
b) Protein Structure

c) Regularities in Protein Pathways
d) Cellular Processes
e) Positive Control and significance of Protein Synthesis

Unit IV **08 Hours**

a) Science of Genetics
b) Transgenics and Genomic Analysis
c) Cell Cycle analysis
d) Mitosis and Meiosis
e) Cellular Activities and Checkpoints

Unit V **07 Hours**

a) Cell Signals: Introduction
b) Receptors for Cell Signals
c) Signaling Pathways: Overview
d) Misregulation of Signaling Pathways
e) Protein-Kinases: Functioning

Recommended Books (latest edition):

1. W.B. Hugo and A.D. Russel: Pharmaceutical Microbiology, Blackwell Scientific publications, Oxford London.
2. Prescott and Dunn., Industrial Microbiology, 4th edition, CBS Publishers & Distributors, Delhi.
3. Pelczar, Chan Kreig, Microbiology, Tata McGraw Hill edn.
4. Malcolm Harris, Balliere Tindall and Cox: Pharmaceutical Microbiology.
5. Rose: Industrial Microbiology.
6. Probisher, Hinsdill et al: Fundamentals of Microbiology, 9th ed. Japan
7. Cooper and Gunn's: Tutorial Pharmacy, CBS Publisher and Distribution.
8. Peppler: Microbial Technology.
9. Edward: Fundamentals of Microbiology.
10. N.K.Jain: Pharmaceutical Microbiology, Vallabh Prakashan, Delhi
11. Bergeys manual of systematic bacteriology, Williams and Wilkins- A Waverly company
12. B.R. Glick and J.J. Pasternak: Molecular Biotechnology: Principles and Applications of RecombinantDNA: ASM Press Washington D.C.
13. RA Goldshy et. al., : Kuby Immunology.

BP809ET. COSMETIC SCIENCE(Theory)

45Hours

UNIT I **10Hours**

Classification of cosmetic and cosmeceutical products

Definition of cosmetics as per Indian and EU regulations, Evolution of cosmeceuticals from cosmetics, cosmetics as quasi and OTC drugs

Cosmetic excipients: Surfactants, rheology modifiers, humectants, emollients, preservatives. Classification and application

Skin: Basic structure and function of skin.

Hair: Basic structure of hair. Hair growth cycle.

Oral Cavity: Common problem associated with teeth and gums**.**

UNIT II **10 Hours**

Principles of formulation and building blocks of skin care products:

Face wash,

Moisturizing cream, Cold Cream, Vanishing cream and their advantages and disadvantages.Application of these products in formulation of cosmecuticals.

Antiperspants & deodorants- Actives & mechanism of action.

Principles of formulation and building blocks of Hair care products:

Conditioning shampoo, Hair conditioner,anti-dandruff shampoo.

Hair oils.

Chemistry and formulation of Para-phylene diamine based hair dye.

Principles of formulation and building blocks of oral care products:

Toothpaste for bleeding gums, sensitive teeth. Teeth whitening, Mouthwash.

UNIT III **10 Hours**

Sun protection, Classification of Sunscreens and SPF.

Role of herbs in cosmetics:

Skin Care: Aloe and turmeric

Hair care: Henna and amla.

Oral care: Neem and clove

Analytical cosmetics: BIS specification and analytical methods for shampoo, skin-cream and toothpaste**.**

UNIT IV **08 Hours**.

Principles of Cosmetic Evaluation:Principles of sebumeter, corneometer. Measurement of TEWL, Skin Color, Hair tensile strength, Hair combing properties

Soaps,and syndet bars. Evolution and skin benfits.

UNIT V **07 Hours**

Oily and dry skin, causes leading to dry skin, skin moisturisation. Basic understanding of the terms Comedogenic, dermatitis.

Cosmetic problems associated with Hair and scalp: Dandruff, Hair fall causes

Cosmetic problems associated with skin: blemishes, wrinkles, acne, prickly heat and body odor.

Antiperspirants and Deodorants- Actives and mechanism of action

References

1) Harry's Cosmeticology, Wilkinson, Moore, Seventh Edition, George Godwin.
2) Cosmetics – Formulations, Manufacturing and Quality Control, P.P. Sharma, 4th Edition, Vandana Publications Pvt. Ltd., Delhi.
3) Text book of cosmelicology by Sanju Nanda & Roop K. Khar, Tata Publishers.

BP810 ET. PHARMACOLOGICAL SCREENING METHODS

45 Hours

Scope: This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.

Objectives

Upon completion of the course the student shall be able to,

- Appreciate the applications of various commonly used laboratory animals.
- Appreciate and demonstrate the various screening methods used in preclinical research
- Appreciate and demonstrate the importance of biostatistics and researchmethodology
- Design and execute a research hypothesis independently

Unit –I	**08 Hours**
Laboratory Animals: Study of CPCSEA and OECD guidelines for maintenance, breeding and conduct of experiments on laboratory animals, Common lab animals: Description and applications of different species and strains of animals. Popular transgenic and mutant animals. Techniques for collection of blood and common routes of drug administration in laboratory animals, Techniques of blood collection and euthanasia.	
Unit –II	**10 Hours**
Preclinical screening models a. Introduction: Dose selection, calculation and conversions, preparation of drug solution/suspensions, grouping of animals and importance of sham negative and positive control groups. Rationale for selection of animal species and sex for the study. b. **Study of screening animal models for** Diuretics, nootropics, anti-Parkinson's,antiasthmatics, **Preclinical screening models:** for CNS activity- analgesic, antipyretic,anti-inflammatory, general anaesthetics, sedative and hypnotics, antipsychotic, antidepressant, antiepileptic, antiparkinsonism, alzheimer's disease	

Unit –III **Preclinical screening models:** for ANS activity, sympathomimetics, sympatholytics, parasympathomimetics, parasympatholytics, skeletal muscle relaxants, drugs acting on eye, local anaethetics	
Unit –IV **Preclinical screening models:** for CVS activity- antihypertensives, diuretics, antiarrhythmic, antidyslepidemic, anti aggregatory, coagulants, and anticoagulants Preclinical screening models for other important drugs like antiulcer, antidiabetic, anticancer and antiasthmatics.	
Research methodology and Bio-statistics Selection of research topic, review of literature, research hypothesis and study design Pre-clinical data analysis and interpretation using Students 't' test and One-way ANOVA. Graphical representation of data	**05 Hours**

Recommended Books (latest edition):

1. Fundamentals of experimental Pharmacology-by M.N.Ghosh
2. Hand book of Experimental Pharmacology-S.K.Kulakarni
3. CPCSEA guidelines for laboratory animal facility.
4. Drug discovery and Evaluation by Vogel H.G.
5. Drug Screening Methods by Suresh Kumar Gupta and S. K. Gupta
6. Introduction to biostatistics and research methods by PSS Sundar Rao and J Richard

BP 811 ET. ADVANCED INSTRUMENTATION TECHNIQUES

45 Hours

Scope: This subject deals with the application of instrumental methods in qualitative and quantitative analysis of drugs. This subject is designed to impart advanced knowledge on the principles and instrumentation of spectroscopic and chromatographic hyphenated techniques. This also emphasizes on theoretical and practical knowledge on modern analytical instruments that are used for drug testing.

Objectives: Upon completion of the course the student shall be able to

- understand the advanced instruments used and its applications in drug analysis
- understand the chromatographic separation and analysis of drugs.
- understand the calibration of various analytical instruments
- know analysis of drugs using various analytical instruments.

Course Content:

UNIT-I **10 Hours**

Nuclear Magnetic Resonance spectroscopy

Principles of H-NMR and C-NMR, chemical shift, factors affecting chemical shift, coupling constant, Spin - spin coupling, relaxation, instrumentation and applications

Mass Spectrometry- Principles, Fragmentation, Ionization techniques – Electron impact, chemical ionization, MALDI, FAB, Analyzers-Time of flight and Quadrupole, instrumentation, applications

UNIT-II **10 Hours**

Thermal Methods of Analysis: Principles, instrumentation and applications of ThermogravimetricAnalysis (TGA), Differential Thermal Analysis (DTA), Differential Scanning Calorimetry (DSC)

X-Ray Diffraction Methods: Origin of X-rays, basic aspects of crystals, X-ray

Crystallography, rotating crystal technique, single crystal diffraction,powder diffraction, structural elucidation and applications.

UNIT-III **10 Hours**

Calibration and validation-as per ICH and USFDA guidelines

Calibration of following Instruments

Electronic balance, UV-Visible spectrophotometer, IR spectrophotometer,

Fluorimeter, Flame Photometer, HPLC and GC

UNIT-IV **08 Hours**

Radio immune assay: Importance, various components, Principle, different methods, Limitation and Applications of Radio immuno assay

Extraction techniques:General principle and procedure involved in the solid phase extraction and liquid-liquid extraction

UNIT-V **07 Hours**

Hyphenated techniques-LC-MS/MS, GC-MS/MS, HPTLC-MS.

Recommended Books (Latest Editions)

1. Instrumental Methods of Chemical Analysis by B.K Sharma
2. Organic spectroscopy by Y.R Sharma
3. Text book of Pharmaceutical Analysis by Kenneth A. Connors
4. Vogel's Text book of Quantitative Chemical Analysis by A.I. Vogel
5. Practical Pharmaceutical Chemistry by A.H. Beckett and J.B. Stenlake
6. Organic Chemistry by I. L. Finar
7. Organic spectroscopy by William Kemp
8. Quantitative Analysis of Drugs by D. C. Garrett
9. Quantitative Analysis of Drugs in Pharmaceutical Formulations by P. D. Sethi
10. Spectrophotometric identification of Organic Compounds by Silverstein

BP 812 ET. DIETARY SUPPLEMENTS AND NUTRACEUTICALS

No. of hours :3 **Tutorial:1** **Credit point:4**

Scope :

This subject covers foundational topic that are important for understanding the need and requirements of dietary supplements among different groups in the population.

Objective:

This module aims to provide an understanding of the concepts behind the theoretical applications of dietary supplements. By the end of the course, students should be able to :

1. Understand the need of supplements by the different group of people to maintain healthy life.
2. Understand the outcome of deficiencies in dietary supplements.
3. Appreciate the components in dietary supplements and the application.
4. Appreciate the regulatory and commercial aspects of dietary supplements including health claims.

UNIT I **07 hours**

a. Definitions of Functional foods, Nutraceuticals and Dietary supplements. Classification of Nutraceuticals, Health problems and diseases that can be prevented or cured by Nutraceuticals i.e. weight control, diabetes, cancer, heart disease, stress, osteoarthritis, hypertension etc.
b. Public health nutrition, maternal and child nutrition, nutrition and ageing, nutrition education in community.
c. Source, Name of marker compounds and their chemical nature, Medicinal uses and health benefits of following used as nutraceuticals/functional foods: Spirulina, Soyabean, Ginseng, Garlic, Broccoli, Gingko, Flaxseeds

UNIT II **15 hours**

Phytochemicals as nutraceuticals: Occurrence and characteristic features(chemical nature medicinal benefits) of following

a) Carotenoids- α and β-Carotene, Lycopene, Xanthophylls, leutin
b) Sulfides: Diallyl sulfides, Allyl trisulfide.
c) Polyphenolics: Reservetrol
d) Flavonoids- Rutin , Naringin, Quercitin, Anthocyanidins, catechins, Flavones
e) Prebiotics / Probiotics.: Fructo oligosaccharides, Lacto bacillum
f) Phyto estrogens : Isoflavones, daidzein, Geebustin, lignans
g) Tocopherols
h) Proteins, vitamins, minerals, cereal, vegetables and beverages as functional foods: oats, wheat bran, rice bran, sea foods, coffee, tea and the like.

UNIT III **07 hours**

a) Introduction to free radicals: Free radicals, reactive oxygen species, production of free radicals in cells, damaging reactions of free radicals on lipids, proteins, Carbohydrates, nucleic acids.

b) Dietary fibres and complex carbohydrates as functional food ingredients..

UNIT IV **10 hours**

a) Free radicals in Diabetes mellitus, Inflammation, Ischemic reperfusion injury, Cancer, Atherosclerosis, Free radicals in brain metabolism and pathology, kidney damage, muscle damage. Free radicals involvement in other disorders. Free radicals theory of ageing.

b) Antioxidants: Endogenous antioxidants – enzymatic and nonenzymatic antioxidant defence, Superoxide dismutase, catalase, Glutathione peroxidase, Glutathione Vitamin C, Vitamin E, α- Lipoic acid, melatonin
Synthetic antioxidants: Butylated hydroxy Toluene, Butylated hydroxy Anisole.

c) Functional foods for chronic disease prevention

UNIT V **06 hours**

a) Effect of processing, storage and interactions of various environmental factors on the potential of nutraceuticals.

b) Regulatory Aspects; FSSAI, FDA, FPO, MPO, AGMARK. HACCP and GMPs on Food Safety. Adulteration of foods.

c) Pharmacopoeial Specifications for dietary supplements and nutraceuticals.

10. Shils, ME, Olson, JA, Shike, M. 1994 *Modern Nutrition in Health and Disease*. Eighth edition. Lea and Febiger

Semester VIII – Elective course on Pharmaceutical Product Development

No of Hours: 3 Tutorial:1 Credit points:4

Unit-I **10 Hours**

Introduction to pharmaceutical product development, objectives, regulations related to preformulation, formulation development, stability assessment, manufacturing and quality control testing of different types of dosage forms

Unit-II **10 Hours**

An advanced study of Pharmaceutical Excipients in pharmaceutical product development with a special reference to the following categories

i. Solvents and solubilizers
ii. Cyclodextrins and their applications
iii. Non - ionic surfactants and their applications
iv. Polyethylene glycols and sorbitols
v. Suspending and emulsifying agents
vi. Semi solid excipients

Unit-III **10 Hours**

An advanced study of Pharmaceutical Excipients in pharmaceutical product development with a special reference to the following categories

i. Tablet and capsule excipients
ii. Directly compressible vehicles
iii. Coat materials
iv. Excipients in parenteral and aerosols products
v. Excipients for formulation of NDDS

Selection and application of excipients in pharmaceutical formulations with specific industrial applications

Unit-IV **08 Hours**

Optimization techniques in pharmaceutical product development.A study of various optimization techniques for pharmaceutical product development with specific examples.Optimization by factorial designs and their applications.A study of QbD and its application in pharmaceutical product development.

Unit-V **07 Hours**

Selection and quality control testing of packaging materials for pharmaceutical product development- regulatory considerations.

CURRICULUM AND SYLLABI

B.C.A

DATA SCIENCE

VISION AND MISSION OF THE INSTITUTION

VISION

B.S. Abdur Rahman Crescent Institute of Science and Technology aspires to be a leader in Education, Training and Research in Engineering, Science, Technology and Management and to play a vital role in the Socio-Economic progress of the Country.

MISSION

- To blossom into an internationally renowned Institution
- To empower the youth through quality education and to provide professional leadership
- To achieve excellence in all its endeavors to face global challenges
- To provide excellent teaching and research ambience
- To network with global institutions of Excellence, Business, Industry and Research Organizations
- To contribute to the knowledge base through Scientific enquiry, Applied research and Innovation

VISION AND MISSION OF THE DEPARTMENT OF COMPUTER APPLICATIONS

VISION

Aspires to provide quality education in the field of computer applications with state of the art computational facilities and undertake quality research in collaboration with industries and universities to produce committed professionals and academicians to meet the needs of the industries and society.

MISSION

The Department of Computer Applications, endeavors

- To disseminate knowledge through education and training of graduates in the field of computer applications.
- To focus on teaching - learning, research and consultancy to promote excellence in computer applications.
- To foster graduates with opportunities required to explore, create and face challenges of IT related industries.
- To equip the graduates with the necessary skills in communication, team work and leadership qualities to meet the needs of the IT related sector globally.
- To disseminate the outcome of projects and research work undertaken by the department through appropriate measures for the benefit of society and industry.

PROGRAMME EDUCATIONAL OBJECTIVES:

The students of BCA- Data Science Programme would be able to

- Produce graduates who will be competent professionals in IT industry, academics, government, or entrepreneurs.
- Adapt to the fast changing world of Information Technology needs.
- Become effective collaborators and through innovative methodologies, they will be able to address the social, technical and business challenges.
- Be a good team player and in course of time will be able to lead the team to find solutions and improvements in their field of expertise.
- Communicate efficiently and effectively.
- Function in multiple disciplinary teams.
- Understand the need for lifelong learning and IT skill up gradation, through taking up certifications or higher education.
- Understand professional and ethical responsibilities.

PROGRAMME OUTCOMES:

On successful completion of the programme, the graduates will have

- Ability to apply the knowledge of mathematics, science and information technology concepts..
- Have basic knowledge of programming and create first level programs.
- To Fulfill the concept of Statistics and Probability with Statistical Analysis.
- Implement Statistical concept for Data Analysis using tools.
- Knowledge of RDBMS with programming language used for Data Science.
- Applying data analysis on Big Data.
- Have knowledge of Artificial Intelligence with Machine Learning Algorithms.
- Ability to communicate efficiently with team.

B.S. ABDUR RAHMAN CRESCENT INSTITUTE OF SCIENCE & TECHNOLOGY

ENC1182	GENERAL ENGLISH - I	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To help the students acquire efficiency in Spoken English through role plays.
- To enable them to make Presentation effectively.
- To develop reading skills among students through extensive readers.
- To orient them in writing letters.
- To train them in appreciating and interpreting English literature.

MODULE I **7**

Oral and Written Communication – implications in real life and workplace situations
Essential English Grammar - 1-6 units

MODULE II **8**

One–minute Presentations (JAM) on concrete and abstract topics that test their creative thinking (ii) Prepared presentations and extempore presentations
Short Story ; O Henry - “Robe of Peace” (Extensive Reading)

MODULE III **8**

Role-Play – establishing a point of view - convincing someone on social issues such as
preservation of water, fuel, protection of environment, gender discrimination.
Poetry: William Shakespeare - “All the World’s a Stage”

MODULE IV **8**

Letter Writing- Letter of Invitation & Permission
Developing story from hints- Short Story : John Galsworthy - “Quality” (Extensive Reading)

MODULE V **8**

Précis Writing- Writing instructions and recommendations
Reading Comprehension: Short Story**--**Rudyard Kipling – “The Miracle of Puran Bhagat”(Extensive Reading)

MODULE VI **6**

Written correspondence - - e-mail writing

Prose : Education, Employment, Unemployment

TOTAL HOURS – 45

TEXT BOOKS:

1. 'Prism: Spoken and Written Communication, Prose & Poetry', Orient Longman

REFERENCES:

1. Anderson, Kenneth & et.al. "Study Speaking : A Course in Spoken English for
2. Academic Purposes" (Second Edition). Cambridge University Press, UK. 2004.
3. Sharma, R.C. & Krishna Mohan, "Business Correspondence and Report Writing".
4. Tata MacGraw – Hill Publishing Company Limited, New Delhi. 2002
5. Hurlock, B. Elizabeth. "Personality Development". Tata McGraw Hill, New York. 2004.
6. Krishnaswamy. N, Sriraman T. **Current English for Colleges.** Hyderabad: Macmillan Indian Ltd, 2006.
7. Dahiya SPS. Ed. **Vision in Verse- An Anthology of Poems**. New Delhi: Oxford University Press, 2002
8. Murphy, Raymond. **Essential English Grammar**. New Delhi: Cambridge University Press, 2009.
9. Seshadri, K G Ed. **Stories for Colleges.** Chennai: Macmillan India Ltd, 2003.

OUTCOMES:

Students would be able to

- Actively take part in role plays
- Make effective presentation s
- Read and comprehend various texts.
- Write letters without making mistakes.
- Analyse literary texts.

MAC1187	ALGEBRA, CALCULUS AND TRIGONOMETRY	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To develop the skills of students in applying basic concepts in chosen topics of mathematics that are imperative for effective understanding of application oriented topics.
- To understand the basic concepts of matrices and know the importance of rank of matrix in data science.
- To know the importance of equation in data science models and its transformation.
- To understand the importance of differential calculus in estimation of linear models and to find the optimal values in minima and maxima.
- To know the basic concepts of integral calculus in statistical distribution functions.
- Laying the foundation for learning concepts of Trigonometry and inverse functions.

MODULE I MATRICES **(9+3)**

Symmetric – Skew-Symmetric - Orthogonal and Unitary matrices - Rank of a Matrix -Consistency - Characteristic equation - Eigenvalues and Eigenvectors - properties -Cayley Hamilton's Theorem (proof not needed) - Simple applications.

MODULE II THEORY OF EQUATIONS **(9+3)**

Partial Fractions - Theory of equations- Polynomial Equations with real Coefficients -Irrational roots - Complex roots - Symmetric functions of roots - Transformation of equation by increasing or decreasing roots by a constant - Reciprocal equations.

MODULE III DIFFERENTIAL CALCULUS **(9+3)**

Rules of differentiation - Derivative of implicit function - Successive differentiation nth derivatives - Leibnitz theorem (without proof) and applications - maxima and minima of functions of two variables - Partial differentiation - Euler's Theorem.

MODULE IV INTEGRAL CALCULUS **(9+3)**

Integration of rational functions - algebraic expressions involving only one irrational quantity- rational functions of sinx and cosx - Trigonometric substitutions - Bernoulli's formula for integration by parts - reduction formulae - properties of definite integral -Evaluation of double and triple integrals.

MODULE V TRIGONOMETRY **(9+3)**

De Moivre's theorem and its application - Circular and Hyperbolic functions – Inverse circular and hyperbolic functions - Expansion of trigonometric functions in terms of power and multiples - Separation of real and imaginary parts of logarithmic -trigonometric and inverse trigonometric functions - Summation of series including C+iS method.

TOTAL HOURS – 60

5. Ushri Dutta, A.S.Muktibodh and S.D. Mohagaonkar: Algebra and Trigonometry, PHI India, 2006.

OUTCOMES:

On completion of the course the students will be able to

- Understand how Eigen values and vectors are calculated and its importance in data science.
- Classify and solve polynomial equations of different types.
- Differentiate different types of functions.
- Integrate rational and trigonometric functions and to evaluate definite integrals (double and triple).
- Demonstrate the application of Demoivre's theorem and find the sum of series of trigonometric functions.

CAC1102	COMPUTER FUNDAMENTALS &ORGANIZATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide the basic knowledge of how a computer works is very important for any fresh networking or operating system professional.
- To provide the functional knowledge of a computers working and its main building parts are paramount.
- To understand the basics of computers of today may come with variety of features but the basic working principles remain the same.
- To explore the fundamentals of organization of a computer and the principles and building units of a computer (its hardware).
- To understand the basics of networking and MS Office.

MODULE I GENERAL FEATURES OF A COMPUTER 9

General features of a computer, Generation of computers, Personal computer, workstation, mainframe computer and super computers. Computer applications – data processing, information processing, commercial, office automation, industry and engineering, healthcare, education, graphics and multimedia.

MODULE II COMPUTER ORGANIZATION 9

Computer organization, central processing unit, computer memory – primary memory and secondary memory, Secondary storage devices – Magnetic and optical media, Input and output units, OMR, OCR, MICR, scanner, mouse, modem.

MODULE III COMPUTER HARDWARE AND SOFTWARE 9

Computer hardware and software, Machine language and high level language, Application software, computer program, operating system, Computer virus, antivirus and computer security, Elements of MS DOS and Windows OS, Computer arithmetic, Binary, octal and hexadecimal number systems, Algorithm and flowcharts, illustrations, elements of a database and its applications, Basic Gates (Demorgans theorems, duality theorem, NOR, NAND, XOR, XNOR gates), Boolean expressions and logic diagrams, Types of Boolean expressions

MODULE IV MS OFFICE 9

Word processing and electronic spread sheet, An overview of MSWORD, MSEXCEL and MSPOWERPOINT

MODULE V INTRODUCTION TO NETWORKING 9

Network of computers, Types of networks, LAN, Intranet and Internet, Internet applications, World Wide Web, E-mail, browsing and searching, search engines, multimedia applications

TOTAL HOURS – 45

REFERENCES:

1. Alexis Leon and Mathews Leon (1999) : Fundamentals of information Technology, Leon Techworld Pub.
2. Jain, S K (1999) : Information Technology “O” level made simple, BPB Pub
3. Jain V K (2000) “O” Level Personal Computer software, BPB Pub.

5. Hamacher, Computer Organization McGrawhill
6. Alexis Leon: Computers for everyone. Vikas, UBS
7. Anil Madaan : Illustrated Computer Encyclopedia. Dreamland Pub
8. Sinha. Computer Fundamentals BPB Pub.

OUTCOMES:

Students are provided learning experiences that enable them to:

- Get in-depth knowledge about the general features of a computer.
- Be introduce them to various features of computer,
- Insight to the different software and hardware components of a computer will take them a step ahead in terms of what they can accomplish from their learning.
- Provides knowledge about fundamentals of organization of a computer.
- Provides knowledge of software in MS-Office.

CAC1103	PROGRAMMING IN C	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The object oriented platforms and event driven systems use procedural languages for coding integral command content.
- C is an important procedural language and was developed initially to write the UNIX operating system.
- UNIX operating system, C compiler and all UNIX application programs are written in C.
- C is popular because, it is easy to learn, produces efficient programs, can handle low-level activities, and can be compiled on a variety of platforms.
- This course focuses on all the basic concepts, syntax and constructs of the C language.
- For students, who are new to programming, this unit can be considered as the starting point before taking up any other programming oriented units.

MODULE I OVERVIEW OF PROGRAMMING **9**

Introduction to computer based problem solving, Program design and implementation issues- Flowcharts & Algorithms, Top down design & stepwise refinement, **Programming environment** – Machine language, assembly language, high level languages, Assemblers, Compilers, Interpreters

MODULE II FUNDAMENTALS OF C PROGRAMMING **9**

Overview of C, Data Types, Constants & Variables, Operators & Expressions, **Control constructs**-if then, for, while, **Arrays**- single & multidimensional arrays, **Functions**-fundamentals – general form, function arguments, return value, **Basic I/O**-formatted and Unformatted I/O, **Advanced features**- Type modifiers and storage class specifiers for data types, Bit operators, ? operator, &operator, * operator, Type casting, type conversion.

MODULE III ADVANCED PROGRAMMING TECHNIQUES **9**

Control constructs- Do while, Switch statement, break and continue, exit() function, go to and label, **Scope rules**- Local & global variables, scope rules of functions, **Functions**-parameter passing, call by value and call by reference, calling functions

with arrays, argc and argv, recursion- basic concepts, ex-towers of Hanoi

MODULE IV DYNAMIC DATA STRUCTURES IN C 9

Pointers- The & and * operator, pointer expression, assignments, arithmetic, comparison, malloc vs calloc, arrays of pointers, pointers to pointers, initializing pointers, pointers to functions, function retuning pointers, **Structures**- Basics, declaring, referencing structure elements, array of structures, passing structures to functions, structure pointers, arrays and structures within structures, **Unions** – Declaration, uses, enumerated data-types, typedef

MODULE V ADDITIONAL FEATURES 9

File Handling – The file pointer, file accessing functions, fopen, fclose, puc, getc, fprintf, **C Preprocessor-** #define, #include, #undef, Conditional compilation directives, **C standard library and header files**: Header files, string functions, mathematical functions, Date and Time functions

TOTAL HOURS – 45

TEXT BOOKS:

1. Let us C by Yashwant Kanetka, 6th Edition, PBP Publication

REFERENCES:

1. The C programming Language by Richie and Kenninghan, 2004, BPB Publication
2. Programming in ANSI C by Balaguruswamy, 3rd Edition, 2005, Tata McGraw Hill

OUTCOMES:

- Students will learn how to write simple programs using C Language and execute them.
- Student will be able to understand the development of procedural codes is important in several commercial app developments.
- The students will be implementing the concepts explained here to create simple to complex programs.
- Student will get basic knowledge of C to learn, produces efficient programs, can handle low-level activities, and can be compiled on a variety of platforms.
- Understands the concepts of dynamic data structures using C.
- Student will understand the several high level languages and frameworks

CAC1121	OPERATING SYSTEM	L	T	P	C
		3	1	0	4

OBJECTIVES:

- The operating system is the most important program that runs on a computer.
- Every general-purpose computer must have an operating system to run other programs.
- Operating systems perform basic tasks, such as recognizing input from the keyboard.
- Sending output to the display screen, keeping track of files and directories on the disk, and controlling peripheral devices such as disk drives and printers.
- This course covers the concept of operating system and its applications.

MODULE I **INTRODUCTION TO OPERATING SYSTEM** **12**

Objectives and Functions of OS, Evolution of OS in the pretext of evolution of UNIX, OS Structures, OS Components, OS Services, System calls, System programs, commands to monitor and perform the operations,Virtual Machines.

MODULE II **PROCESS MANAGEMENT – PROCESSES AND THREADS** **12**

Processes in Unix environment: Process concept, Process scheduling, Co-operating processes, Inter process Communication Threads in Unix environment: Introduction to Threads, Single and Multi-threaded processes CPU Scheduling in Unix environment: Basic concepts, Scheduling criteria, Scheduling Algorithms, Multiple Processor Scheduling, Real-time Scheduling

MODULE III **PROCESS MANAGEMENT – SYNCHRONIZATION AND DEADLOCKS** **12**

Process Synchronization in Unix: Mutual Exclusion, Critical – section problem, Synchronization hardware, Semaphores, Classic problems of synchronization, Critical Regions, Monitors, OS Synchronization, Atomic Transactions. Deadlocks: System Model, Deadlock characterization, Methods for handling Deadlocks, Deadlock prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock.

MODULE IV **STORAGE MANAGEMENT** **12**

Memory Management in the Unix environment: Logical and physical Address Space,

Swapping, Contiguous Memory Allocation, Paging, Segmentation with Paging. Virtual Memory Management in Unix: Demand paging, Process creation, Page Replacement Algorithms, Allocation of Frames, Thrashing.

File-System Interface in UNIX: File concept, Access Methods, Directory structure, File-system Mounting, File sharing, Protection and consistency semantics. File-System Implementation: File-System structure. Directory Implementation, Allocation Methods, Free-space Management, Efficiency and Performance, Recovery. Disk Management: Disk Structure, Disk Scheduling, Disk Management, Swap-Space Management, Disk Attachment, stable-storage Implementation

MODULE V PROTECTION AND SECURITY 12

Protection: Goals of Protection, Domain of Protection, Security: Security Problem, User Authentication, One – Time Password, Program Threats, System Threats.

TOTAL HOURS – 60

TEXT BOOKS:

1. Operating System Concepts and design by Milan Milonkovic, II Edition, McGraw Hill 1992.
2. Operation System Concepts by Tanenbaum, 2nd Edition, Pearson Education.
3. Operating System by Silberschatz / Galvin / Gagne, 6th Edition,WSE (WILEY Publication)

REFERENCES:

1. Operating System by William Stallings, 4th Edition, Pearson Education.
2. Operating System by H.M.Deitel , 2nd Edition,Pearson Education
3. Operating System by Abraham Silberschatz and peter Baer Galvin, 8th Edition, Pearson Education 1989
4. Operating Systems by Nutt, 3/e Pearson Education 2004

OUTCOMES:

- After learning the fundamental concepts in Operating system including how OS has evolved over the years and different components of OS.
- Students will continue to more significant functions of OS like Process management,

storage and memory management etc.

- This will provide the necessary information for students to extract maximum benefits out of the OS while developing programs, working with applications and etc.
- To enable the students to have a hands on practical exposure to the Linux Red Hat Enterprise and make them prepared for the RHCE Certification.
- Student will be able to understand the security and protection of operating system.
- Students can learn storage management.

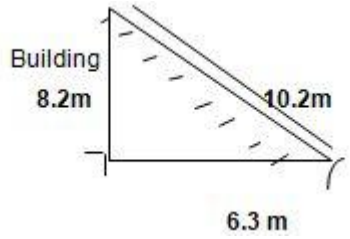
CAC1122	PROGRAMMING IN C LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

- For students, who are new to programming, this unit can be considered as the starting point before taking up any other programming oriented units.
- The students will be implementing the concepts explained here to create simple to complex programs.

LIST OF PROGRAMS

1. A cow is tied to a pole centered in field using 45 m rope. Write a C program to compute the total area that the cow is capable of grazing.
2. A ladder is laid onto a building such that the distance between the ladder and building is 6.3 m. The length of ladder is 10.2 m as shown below.Write a C program to calculate the area of triangle so formed.



3. Write a C program to find whether a given number is Odd or Even. Also if entered number is even, print half of that number and if odd, print double the number as output.
4. Rahul's birthday falls on 28th February 1994. Write a C program to check if given year is a leap year or not.
5. Heights of two classmates Priya and Lavanya are 163 cm and 171 cm respectively. Write a C program to find the person who is shorter among the two.
6. A patient is suffering from high fever with 104.2 F. Write a C program to find his body temperature in Celsius.
7. Write a C program to find Odd & Even numbers in n series.
8. A user has password 4221899 as his login credential for a banking website. His password is about to expire. He has to change his password and has decided that the new password would be the reverse of the existing one. Write a C program to display the newly changed password.
9. Write a C program to display a series such that the sum of two consecutive

numbers equals the next number in series. Let the first two numbers be 0 and 1.

10. Write a C program to find sum and average of first 99 numbers.
11. Write a C program to multiply consecutive numbers in series beginning from 1 till any n value as input.
12. Write a C program to find the sum of digits in a debit card's cvv number.
13. 5 passengers travelling to Bangalore have booked tickets in bus. The names of those members are Ajay, Pooja, Rohan, Arun and Sukanya and their respective age are 23,21,19,25 and 30.Write a C program to display these data using an array.
14. Rainfall received in few areas in Chennai were recorded as 31 cm, 11.64 cm, 16.87 cm, 28 cm and 23.5 cm. Write a C program to calculate total amount of rainfall and average rainfall received that day.
15. A health survey was conducted to record the weights of students in a class. Six among them had weights above 70 kg and they were recorded as 74 kg, 87kg, 79kg, 71 kg, 85 kg and 93kg. Write a C program to find the greatest weight using an array.
16. Consider an array in following order:
    58, 51, 35, 78, 15, 22 and 85. Write a C program to search the value 35.
17. The heights of ten students were marked as 163cm, 171 cm, 158 cm, 167cm, 175cm, 160cm, 173 cm, 149 cm, 180cm and 154cm.Write a C program to sort the given heights in ascending or descending order.
18. Consider the CAT 1 exam marks of 5 subjects for 5 students. Similarly CAT 2 exam marks as 2nd matrix. Write a C program to find the total marks obtained in CAT1 and CAT2 by those 5 students.
19. Ayisha has 5 five stars and 4 kitkats. Ashwin has 10 five stars and 3 kitkats. Both of them ate 2 five stars and 2 kitkats each. Write a C program to find the remaining chocolates left using matrix.
20. The quantity of stationary sold for 3 days are shown.Write a C program to find the product of the quantity of items mentioned below in the form of matrix.

Day/Item	Pen	Pencil	Eraser
Day 1	10	5	5
Day 2	8	4	2
Day 3	5	10	10
Day/Item	Notebook	Whitener	Marker
Day 1	3	6	5

Day 2	2	1	3
Day 3	5	4	15

21. A faculty entered marks of 6 students for 6 subjects in form of matrix. Later she realized that the order was incorrect(the rows and columns were interchanged). Write a C program to find the correct matrix of marks.
22. Write a C program to find factorial of a given number using Recursion.
23. Consider an array in following order:
    25, 33, 53, 65, 83, 87 and 92. Write a C program to search the value 83.
24. Write a C program to check if a given string is read the same both from the beginning as well as when read backwards.
25. Write a C program to store and display the student mark details for 3 students including name, department,subjects and respective marks using Structure.
26. Write a C program to input details(name, department,salary) for 3 employees into a file created and read the contents from the file to display all the details along with average salary of those employees on output terminal using suitable file handling functions.
    Create a scenario based on real time domain.

TOTAL HOURS :30

OUTCOMES:

- Students will write programs in C Language for lab experiments in this course and execute them.

CAC1123	LINUX & SHELL PROGRAMMING LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

- The students will be implementing the concepts of UNIX experiments.
- Explained here to create simple to complex programs the course provides an overview of the Linux Operating System.

LIST OF PROGRAMS

1. 1. Execute 25 basic commands of UNIX.
2. Basics of functionality and modes of VI Editor.
3. Create a file called vegetables and add the contents as follows
    - Brinjal
    - Carrot
    - Onion
    - Potato
    - Tomato

   Create one more file called Fruits and add the contents as follows
    - Apple
    - Banana
    - Cherry
    - Kiwi
    - Peach

a. Display the contents of the vegetables file on screen
b. Concatenate vegetables and fruits file and display the result
c. Show the difference between fruits and Vegetables
d. Add the content in the Fruits file as Mango, Grape

4. Create a directory called foods
    a) Move **vegetables and fruits to foods directory**
    b) Remove **vegetables** files from **foods**
    c) Comes out from foods
    d) List all the files from this directory
    e) Display all hidden files from the directory

5. Display the detailed result for the below

   a. Get manual help and display the detailed information about bash
   b. Display the time to be taken for executing a file
   c. Change the mode of a fruits file to Read only to all users
   d. Count the number of words in vegetables file.
   e. Count the Number of Characters in Fruits file.

6. Create a file called marklist and add the following data

SNo	Name	Subject	Marks
1.	ABCD	Physics	100
2.	XYZ	Chemistry	90
3.	MNO	Biology	88
4.	EFG	Computer	88

   a. Print the 3rd and 4th column on the screen alone
   b. Print a row which has ‘r’ character
   c. Print all columns
   d. Search **Computer** from the marklist file
   e. Replace ‘i’ to ‘x’ in the file marklist
   f. Remove a marklist from the directory

7. Create a file in vi editor and do the following

   a) Type 1-10 numbers and repeat it for two times using macros
   b) Find the current working directory inside vi editor
   c) Open two files horizontally
   d) Add line numbers
   e) Split the window
   f) Search all the occurrences of the word TEXT

8. Create a file in vi editor and do the following

   a) Insert a line in the beginning and end of line
   b) Yank the last line of the text and paste as first line.
   c) List all the files with detailed information from this directory inside vi editor
   d) Change all the occurrences of the word TEXT to UNIX
   e) Swap first and second paragraph

9. Disk related commands and communication commands in Unix
   a) Find the disk used space in your directory .
   b)Find disk free space in your directory with options.
   c) Send message to all users ,"To shutdown the System"
   d) Block other user from writing in your terminal
   e) Find the disk usage
10. Write a shell program to print all odd numbers between 10-30 .
11. Write a shell program that prompts user for a starting value and counts up from there and execute it.
12. Write a shell program to execute shell program which displays the menu and executes the option selected by user.

Menu

- who
- pwd
- ls –l
- who am i
- ls -a

13. Write a shell program to accept user name and reports if user log has logged in.
14. Create a data file called employee in the format given below:

a. EmpCode Character

b. EmpName Character

c. Grade Character

d. Years of experience Numeric

e. Basic Pay Numeric

$vi employee

A001	ARJUN	E1	01	12000.00
A006	Anand	E1	01	12450.00
A010	Rajesh	E2	03	14500.00

A002	Mohan	E2	02	13000.00
A005	John	E2	01	14500.00
A009	Denial Smith	E2	04	17500.00
A004	Williams	E1	01	12000.00

Perform the following functions on the file:

a. Sort the file on EmpCode.

b. Sort the file on

(i) Decreasing order of basic pay

(ii) Increasing order of years of experience.

c. Display the number of employees whose details are included in the file.

d. Display all records with ‘smith’ a part of employee name.

e. Display all records with EmpName starting with ‘B’.

f. Display the records on Employees whose grade is E2 and have work experience of 2 to 5 years.

g.Store in ‘file 1’ the names of all employees whose basic pay is between 10000 and 15000.

h.Display records of all employees who are not in grade E2.

15. Create a scenario based on real time domain.

TOTAL HOURS –30

OUTCOMES:

- To use Linux desktop and GNU tool chain with Eclipse IDE.
- Cross compile Linux kernel and port it to target board.
- Add applications and write customized application for the Linux kernel in the target board.

SEMESTER II

ENC1283	**GENERAL ENGLISH-II**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To prepare students for Interviews and Group Discussions
- To train them in writing official letters, resume' writing and reports.
- To train them in analysing different genre of literature.

MODULE I **7**

Filling Money Order Challan and Bank Challan
Short Story :G.K.Chesterton – The Hammer of God (Extensive Reading)
Essential English Grammar – 7-12 units

MODULE II **8**

Brainstorming – Think, pair and share activity
Poetry **:** Walt Whitman- I Celebrate Myself

MODULE III **8**

Dialogue Writing- Discussion etiquette -Assigning different roles in a GD (Note-taker, Manager, Leader and Reporter)
Prose**:** Environment

MODULE IV **8**

Interview skills- SWOT Analysis
Letter Writing- Letter to the Editor- Letter of Application and CV

MODULE V **8**

Report Writing- feasibility report and survey report
Short Story : Katherine Mansfield—A Cup of Tea (Extensive Reading)

MODULE VI **6**

Technical reports –Writing a technical report – format and content

TOTAL HOURS – 45

REFERENCES:

1. M. Ashraf Rizvi ‘Effective Technical Communication”. Tata McGraw – Hill Education, 2005. Gerson, Sharon & Steven M. Gerson, “ Technical Writing : Process and Product”
2. Pearson Education, New Delhi, 2004. 6. Riordan & Pauley. ‘Report Writing Today’. 9th Edition. Wadsworth Cengage Learning, USA. 2005.

4. Macmillan Indian Ltd, 2006.
5. Dahiya SPS. Ed. **Vision in Verse- An Anthology of Poems**. New Delhi: Oxford
6. University Press, 2002.
7. Murphy, Raymond. **Essential English Grammar**. New Delhi: Cambridge
8. University Press, 2009.
9. Seshadri, K G Ed. **Stories for Colleges.** Chennai: Macmillan India Ltd, 2003.

OUTCOMES:

Students would be able to

- Take part in group discussions and interviews with confidence.
- Write official letters, their application letter with CV and reports.
- Analyse various genre of literature.

MAC1288	PROBABILITY AND STATISTICS	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To impart knowledge about the basic concepts of probability in solving application oriented problems
- To provide an understanding on the concepts of statistics

Recap Introduction to Probability (4)

Sample space - events - algebraic operations on events - definition of probability - Conditional probability - addition and multiplication theorems of probability – Baye's theorem.

MODULE I RANDOM VARIABLES AND DISTRIBUTION FUNCTIONS (10+3)

Discrete and continuous random variables - distribution function and its properties - probability mass function and probability density function - discrete and continuous probability distributions - Binomial, Geometric, Poisson, Uniform, Exponential and Normal distributions.

MODULE II MOMENTS AND MOMENT GENERATING FUNCTIONS (8+3)

Expectation of a random variable – probability generating function – properties - moment generating function.

MODULE III TWO DIMENSIONAL RANDOM VARIABLES (6+3)

Joint, marginal and conditional distribution functions - independence of random variables.

MODULE IV DESCRIPTIVE STATISTICS (8+3)

Types of data - primary and secondary data - classification and representation of data -formation of frequency distribution - various measures of central tendency, dispersion - and their merits and demerits - concept of skewness and kurtosis.

MODULE V CORRELATION AND CURVE FITTING (9+3)

Correlation coefficient and regression - rank correlation - curve fitting by least square methods - fitting a straight line, parabola, power curve and exponential curves. (no derivation, numerical problems only)

TOTAL HOURS – 60

TEXT BOOKS:

1. Richard Arnold Johnson, Irwin Miller, John E. Freund , Miller & Freund's

2. Probability and Statistics for Engineers, Prentice Hall, 2011.
3. Dr. P. Kandaswamy, Dr. K. Thilagavathy and Dr. K. Gunavathy, Probability and Queuing Theory, Revised edition, S. Chand Publishing, 2013.
4. T. Veerarajan, Probability, Statistics and Random Processes, Tata McGraw Hill, 2nd edition.

REFERENCES:

1. Goon, A.M., M. K. Gupta and B. Das Gupta Fundamentals of Statistics- Vol. I, World Press Ltd, Kolkata, 2002.
2. Gupta, S.C. and V.K. Kapoor, Fundamentals of Mathematical Statistics, Sultan Chand & Sons, New Delhi, 2002.
3. Hogg, R.V. and A. Craig, Introduction to Mathematical Statistics, McMillan Publishing co., Inc. 1978.
4. Mood A.M., F.A. Graybill and D.C. Boes, Introduction to Theory of Statistics McGraw Hill Book Co., 1974.
5. Sheldon M. Ross, Introduction to Probability and Statistics for Engineers and Scientists, Fourth Edition, Elsevier.

OUTCOMES:

On completion of the course the students will be able to

- solve basic problems in probability and fundamentals of statistics.
- solve problems using standard probability distributions.
- find the marginal and conditional distributions of two dimensional random
- variables.
- calculate rank correlation and fitting curves for the given data.
- use method of moments and moment generating functions.

CAC1221	INTRODUCTION TO DATA SCIENCE	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To understand the overview and definition of Data Science with its crucial role in current business world.
- To understand the importance of mathematics & Statistics in Data Science.
- To understand the role of machine learning techniques in Data Science and its different types.
- To know the integrated role of computers and its components in Data Science
- To understand the flow and process model of data science project management.

MODULE I **10**

Data Science - An Overview

Introduction to Data Science, Definition and description of Data Science, history and development of Data Science, terminologies related with Data Science, basic framework and architecture, difference between Data Science and business analytics, importance of Data Science in today's business world, primary components of Data Science, users of Data Science and its hierarchy, overview of different Data Science techniques, challenges and opportunities in business analytics, different industrial application of Data Science techniques.

MODULE II **15**

Mathematics and Statistics in Data Science

Role of mathematics in Data Science, importance of probability and statistics in Data Science, important types of statistical measures in Data Science : Descriptive, Predictive and prescriptive statistics, introduction to statistical inference and its usage in Data Science, application of statistical techniques in Data Science, overview of linear algebra : matrix and vector theory, role of linear algebra in Data Science, exploratory data analysis and visualization techniques, difference between exploratory and descriptive statistics, EDA and visualization as key component of Data Science.

MODULE III **15**

Machine Learning in Data Science

Role of machine learning in Data Science, different types of machine learning techniques

and its broad scope in Data Science : Supervised, unsupervised, reinforcement and deep learning, difference between different machine learning techniques, brief introduction to machine learning algorithms, importance of machine learning in today's business, difference between machine learning classification and prediction.

MODULE IV **10**

Computers in Data Science

Role of computer science in Data Science, various components of computer science being used for Data Science, role of relation data base systems in Data Science: SQL, NoSQL, role of data warehousing in Data Science, terms related with data warehousing techniques, importance of operating concepts and memory management, various freely available software tools used in Data Science : R, Python, important proprietary software tools, different business intelligence tools and its crucial role in Data Science project presentation.

MODULE V **10**

Machine Learning in Data Science

Role of machine learning in Data Science, different types of machine learning techniques and its broad scope in Data Science : Supervised, unsupervised, reinforcement and deep learning, difference between different machine learning techniques, brief introduction to machine learning algorithms, importance of machine learning in today's business, difference between machine learning classification and prediction.

TOTAL HOURS – 60

TEXT BOOKS:

1. Data Smart: Using Data Science to Transform Information into Insight 1st Edition by John W. Foreman. (2015) Wiley Publication.
2. Data Science from Scratch: First Principles with Python 1st Edition by Joel Grus .

REFERENCES:

1. Data Science For Dummies by Lillian Pierson (2015)
2. Data Science for Business: What You Need to Know about Data Mining and Data-Analytic Thinking by Foster Provost, Tom Fawcett

OUTCOMES:

- After completing this course, students will be able to appreciate the need of data science in day to day life.
- They will be able to understand the process and components of data science project.
- Student will the Learn importance of probability and statistics in data science
- Student will be able to understand the machine learning in today's business world.
- Understands the various components of computer science being used for data science
- Student will bale to understand the execution flow of a data science project

CAC1203	OOPS WITH C++	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The main objective is to learn the basic concept and techniques which form the object oriented programming paradigm.
- Object-oriented programming is a new way of thinking about problem using models organizes around real world concept.
- The Fundamental construct is the object which combines both data-structure and behaviour in a single entity which is in contrast to conventional programming in which data-structure and behaviour are loosely connected.

MODULE I Introduction **9**

Evolution of programming methodologies-Procedure oriented versus Object Oriented Programming-characteristics of OOP, Basics of OOP, Merits and Demerits of OOP. **Data Types:** Different data types, operators and expressions in C++, Keywords in C++. **Input and Output:** Comparison of stido.h and iostream.h, cin and cout. **Decision and loop:** Conditional statement - if-else statement, nested if-else statement, switch, break, continue, and goto statements, Looping statements- for loop, while loop, Do-while loop. **Arrays, String and Structures :** fundamentals-Single dimensional, multi-dimensional arrays, fundamentals of strings, different methods to accept strings, different string manipulations, array of strings, Basics of structures-declaring and defining structure- Accessing structure members, array of structures, Unions difference between structures and Unions, Enumerated data types-declaration and their usage.

MODULE II **9**

Class: Definition-defining the class, defining data members and member functions, Access specifier-private, public, protected, objects as function arguments, returning objects from the function, scope resolution operator, and member function defined outside the class, difference between class and structure, array as class member data, Array of objects. **Functions in C++ :** Function definition, function declaration, Built-in functions, user defined functions, calling the function, passing parameter-actual and formal, different methods of calling the function call by value, call by reference using reference as parameter and pointer as parameter, overload

function-different types of arguments-different number of arguments, inline function, default argument, storage classes-automatic, external, static, register. **Constructor and Destructor:** Constructors-constructor with argument, constructor without arguments, constructor with default arguments, Dynamic constructor, constructor overloading, copy constructor, destructors, Manipulating private data members.

MODULE III **9**

Operator overloading: Defining operator overloading, overloading unary operator, overloading binary operator, manipulation of string using overloaded operator, rules for overloading operator.Data conversion: conversion between Basic types, conversion between objects & Basic types, conversion between objects of different classes. **Inheritance:** Base Class & derived class, defining derived classes, protected access specifier, public inheritance and private inheritance-member accessibility, constructors and destructors in derived classes, Level of inheritance-single inheritance, multiple inheritance, multi-level inheritance, hierarchical inheritance, hybrid inheritance.

MODULE IV **9**

Pointer: Pointer declaration and Access, Pointer to void, pointer and arrays, pointer constant and pointer variable, pointer and functions, pointer, call by pointer arrays, array of pointers to string, printer sort, memory management-new and delete, pointer to object-referencing members using pointers, self-containing class, this pointer, returning values using this pointer. **Virtual function:** Normal member functions accessed with pointers, virtual member function access, late binding, pure virtual function, abstract class, virtual base class. **Friend functions and static function:** Purpose, defining friend functions, friend classes, static function, accessing static function numbering positive objects.

MODULE V **9**

Templates and Exception Handling: Introduction to templates, class templates, function templates, Member function templates, Template arguments, Exception handling. **Console IO Operator:**C++ stream and C++ stream classes, unformatted I/O operators, formatted I/O operators-manipulators-user defined manipulators. **Files :** Class for file stream operators, opening and closing a file, file nodes, writing an object to disk, reading an object from disk, binary versus character files, I/O with multiple object, stream class, file pointer-specifying the position, specifying the

object, tellg() function, seekg() function. Command line arguments.

TOTAL HOURS – 45

TEXT BOOKS:

1. E. Balaguruswamy: Object Oriented Programming with C++, Tata McGraw Hill. Publications
2. Strousstrup: The C++ Programming Language, Pearson Edition, 3rd Edition
3. Lafore Robert: Object Oriented Programming in Turbo C++, Galgotia Publications

REFERENCES:

1. Lippman: C++ Primer, 3/e Pearson Education
2. C++ completer reference by Herbert Schildt, Tata McGraw Hill Publications.
3. Let us C++ by Yeshwanth Kanetkar

OUTCOMES:

- Students will learn how to write and execute programs using C++ Language.
- Student will be able to understand Merits and Demerits of OOP.
- Understands the concepts of arrays, strings & structure
- Will get to know the concepts of defining data members and member functions in a class
- Student will be able to understand the concepts of operator overloading
- Student can analyze the pointer declaration & addressing of variables.

CAC1204	DATA STRUCTURES USING C	L	T	P	C
		3	0	0	3

OBJECTIVES:

- A data structure is a particular way of storing and organizing data in a computer so that it can be used efficiently.
- Different kinds of data structures are suited to different kinds of applications and some are highly specialized to specific tasks.
- This course covers the basic concepts of different data structures which are the basic building blocks of Programming and problem solving.

MODULE I INTRODUCTION TO DATA STRUCTURES **9**

Definition, Classification of data structures: primitive and non primitive, Elementary data organization, Time and space complexity of an algorithm (Examples), String processing. Dynamic memory allocation and pointers: Definition of dynamic memory allocation, Accessing the address of a variable, Declaring and initializing pointers, Accessing a variable through its pointer, Meaning of static and dynamic memory allocation, Memory allocation functions: malloc(), calloc(), free() and realloc(). Recursion: Definition, Recursion in C (advantages), Writing Recursive programs – Binomial coefficient, Fibonacci, GCD.

MODULE II SEARCHING AND SORTING **9**

Basic Search Techniques: Sequential search: Iterative and Recursive methods, Binary search: Iterative and Recursive methods, Comparison between sequential and binary search. Sort: General background and definition, Bubble sort, Selection sort, Insertion sort, Merge sort, Quick sort

MODULE III STACK AND QUEUE **9**

Stack – Definition, Array representation of stack, Operations on stack: Infix, prefix and postfix notations, Conversion of an arithmetic expression from Infix to postfix, Applications of stacks. Queue: Definition, Array representation of queue, Types of queue: Simple queue, Circular queue, Double ended queue (deque) , Priority queue , Operations on all types of Queues

MODULE IV LINKED LIST **9**

Definition, Components of linked list, Representation of linked list, Advantages

and Disadvantages of linked list. Types of linked list: Singly linked list, doubly linked list, Circular linked list, Operations on singly linked list: creation, insertion, deletion, search and display.

MODULE V TREE GRAPHS AND THEIR APPLICATIONS: 9

Definition : Tree, Binary tree, Complete binary tree, Binary search tree, Heap Tree terminology: Root, Node, Degree of a node and tree, Terminal nodes, Non-terminal nodes, Siblings, Level, Edge, Path, depth, Parent node, ancestors of a node. Binary tree: Array representation of tree, Creation of binary tree. Traversal of Binary Tree: Preorder, Inorder and postorder. Graphs, Application of Graphs, Depth First search, Breadth First search.

TOTAL HOURS – 45

REFERENCES:

1. Weiss, Data Structures and Algorithm Analysis in C, II Edition, Pearson Education, 2001
2. Lipschutz: Schaum's outline series Data structures Tata McGraw-Hill
3. Robert Kruse Data Structures and program designing using 'C'
4. Trembley and Sorenson Data Structures
5. E. Balaguruswamy Programming in ANSI C.
6. Bandyopadhyay, Data Structures Using C Pearson Education, 1999
7. Tenenbaum, Data Structures Using C. Pearson Education, 200
8. Kamthane: Introduction to Data Structures in C. Pearson Education 2005.
9. Hanumanthappa M., Practical approach to Data Structures, Laxmi Publications, Fire Wall media 2006
10. Langsam, Ausenstein Maoshe & M. Tanenbaum Aaron Data Structures using C and C++ Pearson Education

OUTCOMES:

- Students will benefit from the knowledge of Data Structures.
- Understands the data structure different operating one can perform on these like searching, sorting, stacking.
- This forms a very strong foundation for programming in different languages that the students will take up in subsequent semesters or in any other course.

- Understand the concepts of Stack Queue.
- Student will able to analyze which sorting technique will be used.
- Student will get the knowledge of Tree Graphs and their Applications

CAC1222	PROGRAMMING with C++ LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

The aim of the course is to

- Understand and solve logical & mathematical problems through C++ language
- Strengthen knowledge of a procedural programming language.
- Design and develop solutions to intermediate level problems
- Develop their skills in software development using a procedural language
- Get programming skill of object oriented technology with the usage of C++.

LIST OF PROGRAMS

1. Number of vowels and number of characters in a string.
2. Write a function called zeros maller () that is passed with two introduce arguments by reference and set the smaller of the number to zero. Write a man() program to access this function.
3. Demonstration of array of object.
4. Using this pointer to return a value (return by reference).
5. Pointer sort.
6. Demonstration of virtual function.
7. Demonstration of static function.
8. Accessing a particular record in a student's file.
9. Using different methods to write programs to implement function overloading with default arguments for the following problems :

a) To find whether a given number is prime.

b) To find the factorial of a number

10. Write a program to create a database for a bank account contains Name, Account no, Account type, Balance, Including the following a) Constructors b) destructors call) default constructors d) input and output function ; input and output for 10 people using different methods.
11. Create a class to hold information of a husband and another for the wife. Using friend functions give the total salary of the family.
12. Write a program to overload the following operators (any 3)

a) Binary operator '+' to concatenate 2 strings

b) Relational operator '<' to find whether one data is less than the other

c) Unary operator '++' to find the next date of a given date.

13. Create a base class for a stack and implement push and pop operation. Include a derived class to check for stack criteria such as a) stack empty b)stack full c) stack overflow d) stack underflow.

14. Create a database using concepts of files for a student including the following fields : Student- name, Student's Reg No, Student's Attendance (overall % of attendance); and enter data for 10 students and output the same in proper format.

15. Using operator overloading concept implement arithmetic manipulation on two complex numbers.

16. Create a scenario based on real time domain.

TOTAL HOURS –30

OUTCOMES:

After completion of this course, the students would be able to

- Create classes and objects in C++.
- Implement inheritance, polymorphism and object relationship in C++.
- Design methods and procedure.
- Manipulate data through file in C++.
- Trained to write programs to produce the desired result

CAC1223	DATA STRUCTURES AND ALGORITHMS LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

The aim of the course is to:

- Understand the implementation of recursive functions and strings.
- Introduce the implementation of linked list and the various operations.
- Implement stack and queue using dynamic memory allocation.
- Introduce the Binary Search Tree implementation using C.
- Learn to implement various sorting and searching algorithms.

LIST OF PROGRAMS

1. Given with two numbers 36 and 60, write recursive function using C to find GCD of two numbers.
2. Write a recursive function using C program to display a series such that the sum of two consecutive numbers equals the next number in series. Let the first two numbers be 0 and 1.
3. Use a recursive function for the towers of Hanoi with three discs.
4. Two strings “Welcome” and “World” are provided. Write a program using pointers to find the length of a string and to concatenate the two strings.
5. String1 is stored with “Greater”. Write a program using pointers to copy string1 to string2 and to extract “Great” from string2.
6. Consider an array in following order:
   25, 33, 53, 65, 83, 87 and 92. Write a C program to insert the value 88 and remove 65.
7. Write a C Program using dynamic variables and pointers, to construct a singly linked list consisting of the following information n each node: student id (integer), student name (character string) and semester (integer). The operations to be supported are:
   a. The insertion operation
      i. At the front of a list
      ii. At the back of the list
      iii. At any position in the list

b. Deleting a node based on student id. If the specified node is not present in the list an error message should be displayed. Both the options should be demonstrated.

c. Searching a node based on student id and updating the information content. If the specified node is not present in the list an error message should be displayed. Both situations should be displayed.

d. Displaying all the nodes in the list.

8. The heights of ten students were marked as 163cm, 171 cm, 158 cm, 167cm, 175cm, 160cm, 173 cm, 149 cm, 180cm and 154cm. Find the difference while sorting the given heights in ascending or descending order using
    - Insertion sort
    - Selection Sort
    - Merge Sort
9. Write a C program to implement the following operations in stacks:
    - Push
    - Pop
    - Display
10. Write a C program to implement the following operations in queue:
    - Insert
    - Delete
    - Display

11. Create a binary search tree and traversing it using in order,pre order and post order.

12. Create a scenario based on real time domain.

TOTAL HOURS –30

OUTCOMES:

- At the end of the course, the students will be able to:
- Design and implement programs using recursive functions and strings.
- Implement linear data structures like stack, queue and linked list.
- Develop programs to implement Binary Search Tree.
- Implement searching algorithms.
- Implement and compare various sorting algorithms.
- Sort N numbers using merge sort

CAC1256 ENVIRONMENTAL STUDIES L T P C

2 0 0 2

OBJECTIVES:

To impart knowledge on

- Various natural resources, availability, utilization and its current scenario.
- Different ecosystems, energy transfer.
- Values, threats and conservation of biodiversity.
- Levels of different pollutants and its impact and the causes and effects of natural disasters

MODULE I NATURAL RESOURCES 8

Land resources: land degradation, soil erosion and desertification - Forest resources: use and over-exploitation, deforestation - Water resources: use and over-utilisation of surface and ground water, water conservation (rainwater harvesting and watershed management) - Food resources: world food problems, changes in land use by agriculture and overgrazing, modern agriculture and its effects - Energy resources: increasing energy needs, renewable and non-renewable, use of alternate energy sources.

MODULE II ECOSYSTEM 8

Ecosystem- energy flow in the ecosystem - food chains, food webs and ecological pyramids - characteristics, structure and function of (a) Terrestrial ecosystems (forest, grassland, desert) and (b) Aquatic fresh water ecosystems (pond, lake, river) (c) Aquatic salt water ecosystems (ocean, estuary) - ecological succession.

MODULE III BIODIVERSITY AND ITS CONSERVATION 8

Biodiversity - genetic, species and ecosystem diversity – hot-spots of biodiversity –bio geographic classification of India - endangered, endemic, extinct and invasive species of India - red data book - values of biodiversity: consumptive, productive, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts -

conservation of biodiversity: in-situ and ex-situ conservation of biodiversity

MODULE IV ENVIRONMENTAL POLLUTION AND NATURAL DISASTER **6**

Definition, cause, effects and control measures of (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards - ill-effects of fireworks and upkeep of clean environment - solid waste management: types (urban, industrial, biomedical and electronic wastes), collection, processing and disposal (incineration, composting and land-fill).

Natural disaster and management: flood, cyclone, drought, landslide, earthquake and tsunami.

Case studies related to current situation.

TOTAL HOURS – 30

TEXT BOOKS:

1. Erach Bharucha, Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education for University Grants Commission, Orient Blackswan Pvt Ltd, Hyderabad, India, 2013.
2. Benny Joseph, Environmental Studies, Tata McGraw-Hill Education, India, 2009.
3. Ravikrishnan A, Environmental Science and Engineering, Sri Krishna Publications, Tamil Nadu, India, 2015.
4. Raman Sivakumar, Introduction to Environmental Science and Engineering, McGraw Hill Education, India, 2009.
5. Venugopala Rao P, Principles of Environmental Science and Engineering, Prentice Hall India Learning Private Limited; India, 2006.
6. Anubha Kaushik and Kaushik C.P., Environmental Science and Engineering, New Age International Pvt Ltd., New Delhi, India, 2009.
7. Rajah G, Basic Environmental Studies, Margham Publications, Chennai, 2016.

REFERENCE BOOKS:

1. Masters G.M. and **Wendell P.,** Introduction to Environmental Engineering and Science, **3rd** Edition, Prentice Hall, New Delhi, 2007.
2. Miller T.G. Jr., Environmental Science, Wadsworth Publishing Co. Boston, USA, 2016.

OUTCOMES:

At the end of the course the student will be able to

- Predict the scenario of various natural resources and suggest remedies to curb the exploitation of these resources.
- Identify food chain and web and its role in various ecosystems.
- Assess the impacts on biodiversity and provide solutions to conserve it.
- Analyze the impacts of pollutants in the environment and propose suitable method to alleviate the pollutants and the natural disasters.

CAC1224	COMMUNICATION SKILLS	L	T	P	C
		3	0	0	0

OBJECTIVES:

- The objective of this course is to make students feel the significance of communicating well and how it can have a profound effect in both our professional and personal lives.
- Students will learn various aspects of managerial writing including report writing.
- Business writing like Quote creation, Business letters, Orders, Complains and etc. are also taught to students.

MODULE I TECHNICAL VOCABULARY 9

Technical Vocabulary, Punctuation, Numerical Expressions, Expanding Acronyms and Abbreviations, Concord, 'If' clauses, Infinitives. Homonyms, Homographs and Homophones, Telephone conversations, Reading Comprehensions, Making of an advertisement.

MODULE II BASIC SKILLS-READING AND SPEAKING SKILLS 9

Reading and interpretation, Intensive reading,. Writing reviews on books and films, Descriptions, Process description, Summarizing, Instructions, Oral presentations. Debate.

MODULE III BASIC SKILL: TECHNICAL WRITING SKILL 9

Letters – formal, informal, Cover Letter and CV, Synonyms and Antonyms, Indefinite Adjectives, Non-verbal communication, Interactive sessions. Role Plays, Critical reading, Listening and Note taking.

MODULE IV BASIC SKILL: LISTENING AND SPEAKING SKILLS 9

Active and Passive Voice, Impersonal Passive, Essay Writing, Comprehension Passage, Editing, Correction of errors, Direct and Indirect, Conversations , Dialogue writing, Discourse Markers. Group activities.

MODULE V TECHNICAL WRITING AND COMMUNICATION 9

Reports – Types, structure, data collection, content, form, Definitions, extended definition, Recommendations, Memos, Checklists. Group Discussions, Listening and

comprehending the conversations.

TOTAL HOURS –45

TEXT BOOKS:

1. Department of English, Anna University, Mindscapes, 'English for Technologists and Engineers', Orient Longman Pvt. Ltd, Chennai: 2012.
2. Department of Humanities and Social Sciences, Anna University, ''English for Engineers and Technologists'' Combined Edition (Volumes 1 and 2), Chennai: Orient Longman Pvt. Ltd., 2006.
3. M.Ashraf Rizvi, "Effective Technical Communication",Tata mcGraw-Hill Publishing Company Limited, New Delhi.2009.

REFERENCES:

1. Sumant. S, 'Technical English', Second Edition, McGraw-Hill Education (India) Pvt. Ltd., 2008.
2. Dr. M. Hariprasad," Communicative English "Third Edition, Neelkamal Publications, PVT. LTD.,2007.
3. Sangeeta Sharma , Binod Mishra, 'Communication Skills for Engineers and Scientists, PHI Learning Private Limited., New Delhi, 2009.

OUTCOMES:

- Students shall overcome their inhibitions and limitations in communication and become effective communicators.
- They will learn to compose letters in English error-free and communicate effectively with their peers, colleagues, managers and so on, via appropriate business communication forms.
- Student will able to understand the Basic skills-reading and speaking skills.
- Student will understand the concept of Basic skill: technical writing skill.
- Student will able understand Basic skill: listening and speaking skills.
- At the end of the semester students will be able to Technical writing and communication.

SEMESTER-III

CAC2101 REASONING AND THINKING

L	T	P	C
3	0	0	3

OBJECTIVES:

- It is the objective of the course to introduce to the students, concepts like Reasoning and thinking.
- which are very important for any individual in every aspect and walk of life
- To assists them in taking the right decisions, approach every problem with diligence and perform action accordingly.

MODULE I VERBAL ABILITY **9**

Synonyms**,** Antonyms and One word substitutes

MODULE II BASIC QUANTITATIVE APTITUDE **9**

Speed, Time and Distance, Time and Work, Linear Equations, Progressions (Sequences & Series), Permutation and Combination, Probability, Functions, Set Theory, Number Systems, LCM and HCF, Percentages, Collection and Scrutiny of data: Primary data, questionnaire and schedule; secondary data, their major sources including some government publications

MODULE III LOGICAL REASONING - I **9**

Number and Letter Series, Calendars, Clocks, Cubes, Venn Diagrams, Binary Logic, Seating Arrangement, Logical Sequence, Logical Matching, Logical Connectives, Syllogism. Blood Relations; concept of a statistical population and sample from a population; qualitative and quantitative data.

MODULE IV MEASURES OF CENTRAL TENDENCY **9**

Objective of averaging, characteristics of good average, types of average, arithmetic mean of grouped and ungrouped data, correcting incorrect values, weighted arithmetic mean

Median - median of grouped and ungrouped data merit and limitation of median, computation of quartile, decile and percentileMode - calculation of mode of grouped and ungrouped data, merits and limitation of mode, relationship between mean, median and mode. Geometric mean and Harmonic mean.

MODULE V PRESENTATION OF DATA 9

Construction of tables with one or more factors of classification; Diagrammatic and Graphical representation of non-frequency data; Frequency distribution, cumulative frequency distribution and their graphical representation - histogram, Column Graphs, Bar Graphs, Line Charts, Pie Chart, Data Interpretation – Introduction and approach

TOTAL HOURS =45

TEXT BOOKS:

1. Bajpai, N. Business Statistics, Pearson, 2010
2. Sharma J.K., Business Statistics, Pearson Education India, 2010.
3. Richard I Levin, David S. Rubin: Statistics for Management, Pearson Prentice Hall Education Inc. Ltd, NewDelhi, 5th Ed.

REFERENCES:

1. Anderson; David R, Dennis J. Sweeney and Thomas A. Williams, Quantitative Methods for Business, Prentice-Hall, WestPublishing Company, 1996.
2. CAT Complete course, UPKAR publications

OUTCOMES:

At the end of this course, the students will be able to:

- Understand Verbal ability activities and concepts
- Participate in solving questions in aptitude
- Solve logical reasoning questions.

CAC2121 DATABASE MANAGEMENT SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

The aim of the course is to

- Provide an introduction to the management of database systems.
- Understand the fundamentals of relational systems including data models, database architectures, and database manipulations.
- Provide knowledge about relational database model.
- Learn the basic concepts of databases in general with an emphasis on relational databases, modeling techniques and writing queries.
- Understand Normalization techniques, Transaction processing, Concurrency Control techniques and Recovery of databases against crashes are also covered.

MODULE I INTRODUCTION 9

Purpose of Database System -– Views of data – Data Models – Database Languages –– Database System Architecture – Database users and Administrator – Entity– Relationship model (E-R model) – E-R Diagrams -- Introduction to relational databases

MODULE II RELATIONAL MODEL 9

The relational Model – The catalog- Types– Keys - Relational Algebra – Domain Relational Calculus – Tuple Relational Calculus - Fundamental operations – Additional Operations- SQL fundamentals, Oracle data types, Data Constraints, Column level & table Level Constraints, working with Tables, Defining different constraints on the table, Defining Integrity Constraints in the ALTER TABLE Command, Select Command, Logical Operator, Range Searching, Pattern Matching, Oracle Function, Grouping data from Tables in SQL, Manipulation Data in SQL. Joining Multiple Tables (Equi Joins), Joining a Table to itself (self Joins), Sub queries Union, intersect & Minus Clause,

MODULE III SQL VIEWS, INDEX AND TRIGGERS 9

Creating view, Renaming the Column of a view, Granting Permissions, - Updating, Selection, Destroying view Creating Indexes, Creating and managing User, Integrity – Triggers - Security – Advanced SQL features –Embedded SQL– Dynamic SQL-

Missing Information– Views – Introduction to Distributed Databases and Client/Server Databases

MODULE IV DATABASE DESIGN 9

Functional Dependencies – Non-loss Decomposition – Functional Dependencies – First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form-Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form

MODULE V TRANSACTIONS 9

Transaction Concepts - Transaction Recovery – ACID Properties – System Recovery – Media Recovery – Two Phase Commit - Save Points – SQL Facilities for recovery –Concurrency – Need for Concurrency – Locking Protocols – Two Phase Locking – Intent Locking – Deadlock- Serializability – Recovery Isolation Levels – SQL Facilities for Concurrency.

TOTAL HOURS =45

TEXT BOOKS:

1. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, “Database System Concepts”, Fifth Edition, Tata McGraw Hill,2006
2. Ramez Elmasri, Shamkant B. Navathe, “Fundamentals of Database Systems”, Fourth Edition, Pearson/Addision Wesley.2007
3. Raghu Ramakrishnan, “Database Management Systems”, Third Edition, McGraw Hill.2003

REFERENCES:

1. S. Sumathi, S. Esakkirajan, "Fundamentals of Relational Database Management Systems", Springer Science & Business Media.
2. N. P. Singh, C.S. Gupta, "Relational Database Management Systems", Abhishek Publications, 15-May-2014

OUTCOMES:

The student will be able to:

- Write queries, transactions and different modelling techniques in a relational database.
- Normalize data and know its techniques.
- Find the familiarity with relational database model.
- Understand fundamentals of relational systems including data models.

CAC2105	COMPUTER NETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES:

This course provides a comprehensive introduction to

- Basics of networking and networking technology
- Networking and its underlying principles.
- Fundamentals of layered models, devices used in networks and their wireless connectivity.
- The ways to troubleshoot network related issues.
- Protocols, standards and the models associated with networking technology and their troubleshooting mechanisms.

MODULE I NETWORKING FUNDAMENTALS 9

Basics of Network & Networking, Advantages of Networking, Types of Networks, Network Terms- Host, Workstations, Server, Client, Node, Types of Network Architecture- Peer-to-Peer & Client/Server, Workgroup Vs. Domain. Network Topologies, Types of Topologies, Logical and physical topologies, selecting the Right Topology, Types of Transmission Media, Communication Modes, Wiring Standards and Cabling- straight through cable, crossover cable, rollover cable, media connectors (Fiber optic, Coaxial, and TP etc.) Introduction of OSI model, Seven layers of OSI model, Functions of the seven layers, Introduction of TCP/IP Model, TCP, UDP, IP, ICMP, ARP/RARP, Comparison between OSI model & TCP/IP model. Overview of Ethernet Addresses

MODULE II BASICS OF NETWORK DEVICES 9

Network Devices- NIC- functions of NIC, installing NIC, Hub, Switch, Bridge, Router, Gateways, And Other Networking Devices, Repeater, CSU/DSU, and modem, Data Link Layer: Ethernet, Ethernet standards, Ethernet Components,Point-to-Point Protocol(PPP),PPP standards, Address Resolution Protocol, Message format, transactions, Wireless Networking: Wireless Technology, Benefits of Wireless Technology, Types of Wireless Networks: Ad-hoc mode, Infrastructure mode, Wireless network Components: Wireless Access Points, Wireless NICs, wireless LAN standards: IEEE 802.11a, IEEE 802.11b, IEEE 802.11g, wireless LAN

modulation techniques, wireless security Protocols: WEP,WPA, 802.1X, Installing a wireless LAN

MODULE III BASICS OF NETWORK, TRANSPORT AND APPLICATION LAYERS **9**

Network Layer: Internet Protocol (IP), IP standards, versions, functions, IPv4 addressing, IPv4 address Classes, IPv4 address types, Subnet Mask, Default Gateway, Public & Private IP Address, methods of assigning IP address, IPv6 address, types, assignment, Data encapsulation, The IPv4 Datagram Format, The IPv6 Datagram Format, Internet Control Message Protocol (ICMP), ICMPv4, ICMPv6, Internet Group Management Protocol (IGMP),Introduction to Routing and Switching concepts, Transport Layer: Transmission Control Protocol(TCP), User Datagram Protocol (UDP), Overview of Ports & Sockets, Application Layer: DHCP, DNS, HTTP/HTTPS, FTP, TFTP, SFTP, Telnet, Email: SMTP, POP3/IMAP, NTP

MODULE IV WAN TECHNOLOGY **9**

What Is a WAN?, WAN Switching, WAN Switching techniques Circuit Switching, Packet Switching etc., Connecting to the Internet : PSTN, ISDN, DSL, CATV, Satellite-Based Services, Last Mile Fiber, Cellular Technologies, Connecting LANs : Leased Lines, SONET/SDH, Packet Switching, Remote Access: Dial-up Remote Access, Virtual Private Networking, SSL VPN, Remote Terminal Emulation, Network security: Authentication and Authorization, Tunneling and Encryption Protocols, IPSec, SSL and TLS, Firewall, Other Security Appliances, Security Threats

MODULE V NETWORK OPERATING SYSTEMS AND TROUBLESHOOTING NETWORK **9**

Network Operating Systems: Microsoft Operating Systems, Novell NetWare, UNIX and Linux Operating Systems, Macintosh Networking, Trouble Shooting Networks: Command-Line interface Tools, Network and Internet Troubleshooting, Basic Network Troubleshooting : Troubleshooting Model, identify the affected area, probable cause, implement a solution, test the result, recognize the potential effects of the solution, document the solution, Using Network Utilities: ping, traceroute, tracert, ipconfig, arp, nslookup, netstat, nbtstat, Hardware trouble shooting tools, system monitoring tools.

TOTAL HOURS =45

TEXT BOOKS:

1. CCNA Cisco Certified Network Associate: Study Guide (With CD) 7th Edition (Paperback), Wiley India, 2011
2. CCENT/CCNA ICND1 640-822 Official Cert Guide 3 Edition (Paperback), Pearson, 2013.

REFERENCES :

1. Routing Protocols and Concepts CCNA Exploration Companion Guide (With CD) (Paperback), Pearson, 2008

2. CCNA Exploration Course Booklet : Routing Protocols and Concepts, Version 4.0 (Paperback), Pearson, 2010

OUTCOMES:

The student will be able to:

- Develop knowledge and skills required to take up vendor certifications in the networking domain.
- Understand how communication works in data networks
- Learn the role of protocols in networking.
- Analyze the services and features of the various layers of data networks

CAC2122 **LINEAR ALGEBRA**

L	T	P	C
3	1	0	4

OBJECTIVES:

- To understand the basic concepts of vector spaces and matrices
- To understand the inverse of matrix and its application in data science
- To understand the system of linear equation and its representation in business studies
- To understand the importance of Eigen values and Eigen Vectors in dimension reduction techniques.
- To understand the basic concepts in application of tree in data science.

MODULE I **9**

Introduction to Linear Algebra, Field Theory: Characteristic of a field, Subfield and prime field, Extension of fields, Finite and infinite extensions, Algebraic element,

MODULE II **9**

Minimal polynomial of an algebraic element, Algebraic and transcendental extensions, Splitting fields, Multiple roots, Separable and inseparable extensions, Finite fields, Galois theory, Mono-morphisms and their linear independence, Normal extensions, Fundamental theorem of Galois theory.

MODULE III **9**

Vector Spaces: Vector spaces, Subspaces, Quotient spaces, Linear dependence, Basis, Dimension, Algebra of linear transformations, Matrix representation of linear transformations, Change of basis.

MODULE IV **9**

Canonical Forms: Linear transformations and their characteristic roots and vectors, Minimal polynomial of a linear transformation, Geometric and algebraic multiplicity, Singular and non-singular transformations,

MODULE V **9**

Minimal polynomial of a vector relative to a linear transformation, Triangular form, Jordan canonical form. Applications of Linear Algebra in data science.

TEXT BOOKS:

1. Linear Algebra concepts and methods – Martin Anthony, Michele Harvey, Cambridge University Press

2. Singh, Surjeet and ZameeruddinQazi, Modern Algebra, Vikas Publishing House, (2006).

3. Hoffmann, K. and Kunze R., Linear algebra, PHI, (2011).

REFERENCES:

1. Bhattacharya, P.B., Jain, S.K. and Nagpaul, S.R. Basic Abstract Algebra, Cambridge University Press (1997).

2. Luthar, I.S., and Passi, I.B.S., Algebra (Vol. 4), Narosa Publishing House (2004).

OUTCOMES:

Upon completion of this course, the student will be able to:

- Put a matrix into reduced row echelon form using row operations
- Recognize consistent and inconsistent systems of equations by the row echelon form of the augmented matrix
- Understand the importance of Eigen values and Eigen vectors in data dimension reduction techniques.
- Understand the application of cosine projection in producing the non-correlated variables.
- Apply graph theory in data mining techniques.
- Understand tree structures and its importance in data science.

CAC2123 SCIENTIFIC PROGRAMMING USING R

L	T	P	C
3	0	0	3

OBJECTIVES:

The student will be able to:

- Understand the R programming environment and data important R Statistical Packages.
- Know functions writing in R and important points in Comments and commands.
- Understand the important programming concepts of R, class and objects.
- Work with basic R commands, packages, accessing R packages, writing R functions, debugging, profiling R code, and organizing and commenting R code.

MODULE I **9**

Introduction to scientific programming, R basics, code editors for R, finding help, control structures, conditional executions, loops.

MODULE II **9**

Functions in R, useful utilities, debugging utility, regular expressions, interpreting character string as expression, time-date-sleep, calling external software with system commands, running R commands.

MODULE III **9**

Object oriented programming in R, define class and objects in R, assign generics and methods.

MODULE IV **9**

Packages in R, installation process of various packages in R, data science packages in R, Building R packages.

MODULE V **9**

Comparison of R with other scientific programming software, implementation of various industry use cases of scientific programming using R.

TEXT BOOKS:

1. Mark Gardener, Beginning R: The Statistical Programming Language (2013).
2. Roger Peng R Programming for Data Science (2016)

REFERENCES:

3. Grolemund, Garrett, Hands-On Programming with R (2014)
4. Garrett Wickham, Garrett Grolemund, R for Data Science (2017)

OUTCOMES:

Upon completion of the course, students will be able to

- Know how to install R packages and invoking the same for data analysis.
- Program in R and how to use R for effective data analysis.
- Know the important statistical packages for data analytics.
- Know the data management like importing different data types and exporting the same into different file format.
- Understand the environment and describe generic programming language concepts as they are implemented in a high-level statistical language.
- Implement various concepts learnt in earlier courses like statistics and probability, linear algebra etc.

CAC2124 DATABASE MANAGEMENT SYSTEMS LAB

L	T	P	C
0	0	4	2

OBJECTIVES:

The Students will be able to:

- Provide practical experience to students and reinforce the theory concepts.

LIST OF PROGRAMS:

1. Create User in Oracle Database and grant and revoke the privileges and use of commit save point rollback command.
2. Create the following:
   - Synonym sequences and Index
   - Create alter and update views.
3. Create PL/SQL program using cursors, control structure, exception handling
4. Create following:
   - Simple Triggers
   - Package using procedures and functions.
5. Create the table for
   - COMPANY database
   - STUDENT database and Insert five records for each attribute.
6. Illustrate the use of SELECT statement
7. Conditional retrieval - WHERE clause
8. Query sorted - ORDER BY clause
9. Perform following:
   - UNION, INTERSECTION and MINUS operations on tables.
   - UPDATE, ALTER, DELETE, DROP operations on tables

10. Query multiple tables using JOIN operation.
11. Grouping the result of query - GROUP BY clause and HAVING clause
12. Query multiple tables using NATURAL and OUTER JOIN operation.
13. Create a scenario based on real time domain

OUTCOMES:

- Students will work on the tasks provided to them in the form of experiments and write programs to produce the desired result.

CAC2125 SCIENTIFIC PROGRAMMING USING R Lab

L	T	P	C
0	0	4	2

OBJECTIVES:

The Aim of the course is to:

- Provide students a hands-on exposure to scientific programming using R.
- Provide wider knowledge to know about data structures in R and its types.
- Know about the statistical modeling with real time data.
- Know the customized graphical techniques in R using inbuilt graph packages.

LIST OF PROGRAMS:

1. Install and configure R, set working directory.
2. Implement basic R operations (data input, missing values, importing data into R)
3. Use R as a calculator
4. Explore various functionalities of dataframes
5. Explore various functionalities of plots
6. Formal data exploration in R
7. Data summary in R
8. Sampling distribution and central limit theorem in R
9. Linear regression model in R
10. Data visualization using ggplots in R.
11. Create a scenario based on real time domain

Case Study - 1
Scientific Programming using R Lab

The air pollution is one of the main causes of serious respiratory problem in the world especially difficulty in breathing in asthmatic patients. Several cities are on the radar of WHO (World Health Organization), which are about to touch the dangerous level. Sadly, India is one of the countries with maximum number of most polluted cities in the world.

Especially, on the onset of Diwali, the air quality index of Chennai soars to new heights. This year the air quality index has already crossed last year's post Diwali index.

To know the intricacies of the problem, we decided to do an analytical study for the factors that contribute most to air pollution in Chennai.

In this article, we share a case study on "Identifying Patterns in Chennai's Air Pollution", in which we closely studied the air quality data for Chennai, identified patterns, factors that lead to rise in air pollution across three key locations in Chennai.

On this occasion of Diwali, we want to sensitize the readers towards celebrating environmentally safe Diwali this year.

The rate at which urban air pollution has grown across India is alarming. A vast majority of cities are caught in the toxic web as air quality fails to meet health-based standards. Almost all cities are reeling under severe particulate pollution while newer pollutants like oxides of nitrogen and air toxics have begun to add to the public health challenge.

According to WHO, India ranks among the world's most polluted countries. Out of the 20 most polluted cities in the world, 13 are in India. In which, Chennai is the one among the most polluted city in India today.

Exposure to particulate matter for a long time can lead to respiratory and cardiovascular diseases such as asthma, bronchitis, lung cancer and heart attack. Last year, the Global Burden of Disease study pinned outdoor air pollution as the fifth largest killer in India, after high blood pressure, indoor air pollution, tobacco smoking, and poor nutrition. In 2010, about 620,000 early deaths in India occurred from air pollution-related diseases. The Central Pollution Control Board (CPCB) sponsored the study that links the pollutants, pm 10 (particulate matter smaller than 10 microns), the cause of these diseases. The central regulatory authority recently regulated stricter norms for a number of air toxins and pollutants but omitted revision of the standard for pm 10.

We feel, if we closely study the Air Quality Data, we should be able to identify patterns (spike in air pollution levels) and identify correlating factors on key levels of Air Pollution across Chennai. Also as part of the exercise, we wanted to study the impact of Government sponsored Initiatives like 'Odd-Even' Pilot Project Phase II. The Phase I of the 'Odd- Even' experiment was a huge success in terms of people compliance and reduction of traffic congestion, it had very little impact on the Air Pollution levels during the Campaign period.

It is also important to understand the behaviour of meteorological parameters in the planetary boundary layer because, atmosphere is the medium in which air pollutants are transported away from the source, which is governed by the meteorological parameters such as atmospheric wind speed, wind direction, and temperature.

Air pollutants are being let out into the atmosphere from a variety of sources, and the concentration of pollutants in the ambient air depends not only on the quantities that are emitted but also the ability of the atmosphere, either to absorb or disperse these pollutants.

There were conflicting reports in media on the actual cause of air pollution in Chennai. Some sections claimed vehicles as the main source of pollution, while others held road dust & construction debris responsible. But the root cause of the problem is Industrial pollution.

Through this study, we hope to develop some insights that can help organizations (State / Central Pollution Control Boards & NGOs) to advocate more stringent policies to control air pollution.

- Study Air Pollution Data for various locations in Chennai to identify patterns of spike in Air Pollution levels w.r.t to various monitored parameters
- Identify the Meteorological factors that correlate with the air pollution levels for the respective locations using R Functions
- Explore the possibility of developing a Predictive Model for predicting the levels for key pollutants like PM 5 using suitable R predictive model.
- Explore the factors which most impact on air pollution PM 5 using R PCA analysis and Factor Analysis.

Case Study - 2
Scientific Programming using R Lab

High concentrations of certain harmful algae in rivers constitute a serious ecological problem with a strong impact not only on river life forms, but also on water quality. Being able to monitor and perform an early forecast of algae blooms is essential to improving the quality of rivers.

With the goal of addressing this prediction problem, several water samples were collected in different European rivers at different times during a period of approximately 1 year. For each water sample, different chemical properties were measured as well as the frequency of occurrence of seven harmful algae. Some other characteristics of the water collection process were also stored, such as the season of the year, the river size, and the river speed.

One of the main motivations behind this application lies in the fact that chemical monitoring is cheap and easily automated, while the biological analysis of the samples to identify the algae that are present in the water involves microscopic examination, requires trained manpower, and is therefore both expensive and slow. As such, obtaining models that are able to accurately predict the algae frequencies based on chemical properties would facilitate the creation of cheap and automated systems for monitoring harmful algae blooms.

Another objective of this study is to provide a better understanding of the factors influencing the algae frequencies. Namely, we want to understand how these frequencies are related to certain chemical attributes of water samples as well as other characteristics of the samples (like season of the year, type of river, etc.).

The data available for this problem was collected in the context of the ERUDIT1 research Network and used in the COIL 1999 international data analysis competition. It is available from several sources, such as in the UCI Machine Learning Repository of data sets.2 There are two main datasets for this problem. The first consists of data for 200 water samples. To be more precise, each observation in the available datasets is in effect an aggregation of several water samples collected from the same river over a period of 3 months, during the same season of the year. Each

observation contains information on 11 variables. Three of these variables are nominal and describe the season of the year when the water samples to be aggregated were collected, as well as the size and speed of the river in question. The eight remaining variables are values of different chemical parameters measured in the water samples forming the aggregation.

Exercise:

1. Load the Data into R
2. Visualize and summarize data and interpret
3. Find Data normality assumptions
4. Remove the Observations with Unknown Values
5. Fill in the Unknowns with the Most Frequent Values
6. Fill in the Unknown Values by Exploring Correlations
7. Fill in the Unknown Values by Exploring Similarities between Cases

OUTCOMES:

After completing this lab, students will be able to:

- Work on R, use its features in the field of data science.
- Understand the statistical model building and post testing.
- Understand the graphical techniques in R.

SEMESTER-IV

CAC2221 **INFERENTIAL STATISTICS** **L T P C**

3 0 0 3

OBJECTIVES:

- To understand the basic concepts of statistical inference and different estimation methods.
- To understand testing of hypothesis with important terminologies related with testing of hypothesis.
- To know the difference between large and small sample test.
- To know about the non-parametric testing procedures.

MODULE I **9**

Introduction to Statistical Inference, Estimation of Parameters, Point estimation, Properties of a good estimate, Methods of estimation: Maximum Likelihood method, Interval estimation: Confidence Interval for mean, variance and proportion.

MODULE II **9**

Testing of hypothesis: Introduction, Type I and Type II error, Null hypothesis and Alternative hypothesis, Simple and Composite hypothesis, Critical Region of the test, Significance level of the test, Power of the test, p value, Procedure for a statistical test.

MODULE III **9**

Large Sample test: Test for specified mean, test for equality of means, test for a specified proportion, and test for equality of proportions (Derivations not required).

MODULE IV **9**

Small sample Test: Test for specified mean, test for equality of means, Paired t test, test for specified variance, and test for equality of variances (Derivations not required).

MODULE V **9**

Chi Square Test: Goodness of fit, test for independence, test of homogeneity,

Analysis of Variance: Introduction, one way classification, two-way classification. (Derivations not required).

TEXT BOOKS:

1. S.C. Gupta and V.K. Kapoor: Fundamentals of Mathematical Statistics, Sultan, Chand & Sons.
2. S.P. Gupta: Statistical Methods, Sultan, Chand & Sons.
3. Rao C R (1985) Linear Statistical Inference and its Applications (2^{nd} edition), Wiley Eastern Limited.

REFERENCES:

1. Miller and Freund: Probability and Statistics for Engineers, Pearson Education.
2. B.L. Agarwal: Basic Statistics, New Age International (P) Ltd.
3. B.S. Grewal: Higher Engineering Mathematics, Khanna Publishers.

OUTCOMES:

- After completing this course, students will be able to:
- Implement the concepts of inferential statistics in real world scenarios.
- They will be able to apply hypothesis testing
- Implement various statistical tools to test the homogeneity and independence.
- Student will able to understand the Testing of hypothesis.
- Student will able to analyze test for equality of variances.

CAC2222 **NOSQL DATABASES**

L	T	P	C
3	0	0	3

OBJECTIVES:

The course is aimed at:

- Provide students an exposure to unstructured data.
- Work with query unstructured database.

MODULE I: INTRODUCING NOSQL **9**

The value of Relational Databases, Disadvantages of Relational Databases, A Brief History of NoSQL, Features of NoSQL : Features of NoSQL, ACID vs. BASE, Managing Different Data Types

MODULE II: DATA MODELS **9**

Aggregates, key-value and document data models, Column-Family Stores, relationships, graph databases, schema-less databases, materialized views. Distribution models: Single Server, sharding, master-slave replication, peer-peer replication, sharding and replication

MODULE III: UPDATE AND READ CONSISTENCY **9**

Update Consistency, Read Consistency. Relaxing Consistency: Relaxing Consistency, Relaxing Durability

MODULE IV: NOSQLDATABASES **9**

Key-Value Databases, Document Databases, Column-Family Stores

MODULE V: GRAPH DATABASES **9**

Graph Databases, Beyond NoSQL.

TEXT BOOKS:

1. P. J. Sadalage and M. Fowler, "NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence",Copyright © 2013 Pearson Education, Inc. 2012.
2. NoSQL For Dummies®, 2015 by John Wiley & Sons, Inc
3. Professional NoSQL, Shashank Tiwari, Wrox
4. E. Capriolo, D. Wampler, and J. Rutherglen, "Programming Hive", O'Reilley, 2012.

REFERENCES:

1. Lars George, "HBase: The Definitive Guide", O'Reilley, 2011.
2. Eben Hewitt, "Cassandra: The Definitive Guide", O'Reilley, 2010.
3. “MongoDB: The Definitive Guide” by Kristina Chodorow

OUTCOMES:

At the end of the course, the students will be able to:

- Identify the use of unstructured data.
- Know the knowledge of features of NO SQl Data Base.
- Know the Key-Value Databases, Document Databases.
- Learn various concepts of Graph Databases .
- Analyze the advantage & disadvantages of Relational database .

CAC2223 **BIG DATA ANALYTICS**

L	T	P	C
3	0	0	3

OBJECTIVES:

This course aimed to:

- Introduce the concepts of big data analytics to the students.
- Introduces the big data framework, its characteristics and use cases associated with it.
- A concise introduction to Hadoop framework will prepare students to handle industry scenarios of big data analytics.

MODULE I

Introduction to Big Data, Characteristics and its Use Case **9**

Introduction – Why Big data - What is big data – Facts about Big Data - importance of Big Data Evaluation of Big Data – Market Trends – Sources of Data Explosion – Types of Data – Case Study for Netflix and the house of card. Need of Big Data – Big Data and its sources – Characteristics of Big Data – Difference between Traditional IT Approach and Big Data Technology – Capabilities of Big Data – Handling Limitations of Big Data - Technologies Supporting Big Data - Big Data Use Cases.

MODULE II

Introduction to Hadoop **9**

Introduction – Why Hadoop – What is Hadoop – History and Milestone of Hadoop – Core Components of Hadoop – Difference between Regular File System and HDFS – Common Hadoop Shell Commands – Hadoop Configuration.

MODULE III

Hadoop Distributed File System (HDFS) **9**

Concepts and Architecture - Data Flow (File Read, File Write) - Fault Tolerance - Java Base API - Different Daemons in Hadoop cluster (NameNode, Secondary NameNode, Job Tracker, Task Tracker and DataNode) - Loading a dataset into the HDFS.

MODULE IV

Introduction to YARN and MapReduce **9**

What is YARN – YARN Infrastructure - Introduction of MapReduce – Analogy of MapReduce – MapReduce Architecture - Example of MapReduce –Sorting, Shuffling – Reducing – Combiner – Partitioner – Creating MapReduce program by using Eclipse.

MODULE V

Introduction to Big Data Streaming **9**

Real time Big Data Streaming, Big data streaming framework, data streaming process, tools for big data streaming, industry use cases for big data streaming.

TEXT BOOKS:

1. Seema Acharya (Author), Subhashini Chellappan, Big Data and Analytics (2015). Wiley Publication.
2. Data Science and Big Data Analytics: Discovering, Analyzing, Visualizing and Presenting Data (2015), EMC Education Services

REFERENCES:

1. Big Data, Black Book: Covers Hadoop 2, MapReduce, Hive, YARN, Pig, R and Data Visualization (2016), DT Editorial Services
2. Tom White, Hadoop: The Definitive Guide, 4th Edition (2015)

OUTCOMES:

At the end of the course, the students will be able to:

- Understand the characteristics of big data.
- Explore Hadoop framework and its components.
- Use HDFS and Map Reduce to analyze various industry use cases of big data analytics.
- Understand the YARN Infrastructure.
- Learning different Sorting, Shuffling.

CAC2224 **CLOUD COMPUTING**

L	T	P	C
3	1	0	4

OBJECTIVES:

- Cloud computing is a colloquial expression used to describe a variety of different computing concepts that involve a large number of computers involves a large number of computers that are connected through a real-time communication network.
- In science, cloud computing is a synonym for distributed computing over a network and means the ability to run a program on many connected computers at the same time.
- This course covers basic concepts of cloud types, services and security etc.

MODULE I: Introduction **9**

Introduction to Cloud Computing, History and Evolution of Cloud Computing, Types of clouds, Private Public and hybrid clouds, Cloud Computing architecture, Cloud computing infrastructure, Merits of Cloud computing, , Cloud computing delivery models and services (IaaS, PaaS, SaaS), obstacles for cloud technology, Cloud vulnerabilities, Cloud challenges, Practical applications of cloud computing.

MODULE II: Cloud Computing Companies and Migrating to Cloud **9**

Web-based business services, Delivering Business Processes from the Cloud: Business process examples, Broad Approaches to Migrating into the Cloud, The Seven-Step Model of Migration into a Cloud, Efficient Steps for migrating to cloud., Risks: Measuring and assessment of risks, Company concerns Risk Mitigation methodology for Cloud computing, Case Studies

MODULE III: Cloud Cost Management and Selection of Cloud Provider **9**

Assessing the Cloud: software Evaluation, System Testing, Seasonal or peak loading, Cost cutting and cost-benefit analysis, selecting the right scalable application. Considerations for selecting cloud solution. Understanding Best Practices used in selection of Cloud service and providers, Clouding the Standards

and Best Practices Issue: Interoperability, Portability, Integration, Security, Standards Organizations and Groups associated with Cloud Computing, Commercial and Business Consideration

MODULE IV: Governance in the Cloud **9**

Industry Standards Organizations and Groups associated with Cloud Computing, Need for IT governance in cloud computing, Cloud Governance Solution: Access Controls, Financial Controls, Key Management and Encryption, Logging and Auditing, API integration. Legal Issues: Data Privacy and Security Issues, Cloud Contracting models, Jurisdictional Issues Raised by Virtualization and Data Location, Legal issues in Commercial and Business Considerations

MODULE V: Ten cloud do an do nots **9**

Don't be reactive, do consider the cloud a financial issue, don't go alone, do think about your architecture, don't neglect governance, don't forget about business purpose, do make security the centerpiece of your strategy, don't apply the cloud to everything, don't forget about Service Management, do start with a pilot project.

TEXT BOOKS:

1. Cloud Computing: Principles and Paradigms, Rajkumar Buyya, James Broberg, Andrzej M. Goscinski,, John Wiley and Sons Publications, 2011

REFERENCES:

1. Brief Guide to Cloud Computing, Christopher Barnett, Constable & Robinson Limited, 2010
2. Handbook on Cloud Computing, Borivoje Furht, Armando Escalante, Springer, 2010

OUTCOMES:

At the end of the course, the students will be able to:

- Learn the underlying principles of Cloud Technology and various types of cloud computing architecture and types.

- Evaluate between different cloud solutions offered by various providers based on their merits and demerits.
- Understand the Cloud Cost Management and Selection of Cloud Provider.
- Understand the IT governance in cloud computing.
- Track the Ten cloud do an do nots**.:**

LIST OF PROGRAMS: **15**

Study the basic cloud architecture and represent it using a case study

1. Enlist Major difference between SAAS PAAS & Iaas also submit a research done on various companies in cloud business and the corresponding services provided by them , tag them under SAAS , Paas & Iaas.
2. Study and present a report on Jolly cloud.
3. Present a report on obstacles and vulnerabilities in cloud computing on generic level
4. Present a report on Amazon cloud services.
5. Present a report on Microsoft cloud services.
6. Present a report on cost management on cloud
7. Enlist and explain legal issues involved in the cloud with the lelp of a case study
8. Explain the process of migrating to cloud with a case study.
9. Present a report on google cloud and cloud services
10. Create a scenario based on real time domain

CAC2225 **EXPLORATORY DATA ANALYSIS** **L T P C**

3 1 0 4

OBJECTIVES:

This course is aimed to:

- Understand difference between EDA and summary statistics in context of interpretation.
- Understand the importance of data pre-processing for Exploratory Data Analysis.
- Understand the significance of missing value imputations in better EDA interpretations.
- Understand the importance measure of central tendency in describing the quick view of data set.
- Understand the importance of measure of dispersion and its interpretation in spread ness of data.

MODULE I **9**

Introduction to Exploratory Data Analysis, Difference between classic data analysis and exploratory data analysis, difference between summary analysis and data exploratory analysis.

MODULE II **9**

Basic EDA assumptions, importance of underlying assumptions, techniques for testing assumptions, interpretation of 4-Plot, consequences of non-randomness, non-fixed parameters like location and variation parameters, consequences related to distributional assumptions.

MODULE III **9**

EDA techniques, analysis questions, graphical techniques, auto correlation plot for random data, moderate correlation, strong and autoregressive correlation, sinusoidal correlation, Various Plot.

MODULE IV **9**

Graphical techniques for EDA, Quantitative techniques, ANOVA, Bartlett's test, probability distributions, family of probability distribution, location and scale parameters, estimation of parameters, various distributions.

MODULE V **9**

EDA case studies – Random distribution, Random walk, standard resistor, Heat flow meter.

LIST OF PROGRAMS:

1. Explore and implement interpretation of 4-Plot,
2. Explore and comment on consequences of non-randomness, non-fixed parameters like location and variation parameters, consequences related to distributional assumptions.
3. Explore and implement various parameters of summary analysis in a given business scenario.
4. Explore and implement EDA techniques of analysis questions in a given business scenario
5. Explore and implement EDA graphical techniques in a given business scenario
6. Explore and implement EDA technique of auto correlation plot for random data in a given business scenario
7. Explore and implement EDA technique of moderate correlation in a given business scenario
8. Explore and implement EDA technique of strong and autoregressive correlation in a given business scenario
9. Explore and implement EDA technique of sinusoidal correlation in a given business scenario
10. Explore and implement ANOVA in a given business scenario.
11. Create a scenario based on real time domain

TEXT BOOKS:

1. Exploratory Data Analysis by John W. Tukey (1977) – 2016 Reprint.
2. Exploratory Data Analysis with R by Roger Peng (2016).

REFERENCES:

1. Think Stats: Exploratory Data Analysis (2nd edition) by Allen B. Downey (2014)

OUTCOMES:

After completing this course, students will be able to:

- Do exploratory data analysis on a given dataset, they will be able to implement various probability distributions,
- Do autocorrelation and ANOVA.
- Understand the EDA techniques & different kinds of techniques for testing.
- Understands the EDA case studies.

CAC2226 **INFERENTIAL STATISTICS LAB**

L	T	P	C
0	0	4	2

OBJECTIVES:

This lab is aimed at:

- Provide students a hands-on exposure to the concepts of inferential statistics.
- To calculate the parameters using different estimation techniques.
- To form null and alternative hypothesis based on problem situation.
- To use ChiSquare test for goodness fit.
- To calculate Z and t test for large and small sample testing procedure.

LIST OF PROGRAMS:

1. Estimation of Parameters, Point estimation for a given dataset using R.
2. Implement Maximum Likelihood method using R.
3. Find Confidence Interval for mean, variance and proportion for a given dataset using R.
4. Implement Null hypothesis and Alternative hypothesis using R.
5. Implement Simple and Composite hypothesis using R.
6. Find Critical Region of the test, Significance level of the test using R.
7. Perform Test for specified mean, test for equality of means for a given dataset using R.
8. Perform test for a specified proportion, test for equality of proportions for a given dataset using R.
9. Perform Test for specified mean, test for equality of means for a given dataset using R.
10. Implement Chi Square Test to check the goodness of the test.

Case study – 1

Inferential Statistics.

Field Experiment – Inference on Sorghum Variety

An experiment was conducted in RBD to study the comparative performance of fodder sorghum under rainfed conditions of different tropical region of Tamil Nadu under Department of Agriculture. The rearranged data are given below.

a. Estimate the linear model for the better variety.

b. Fit One way and two-way ANOVA.

c. Analyse the post ANOVA test to find the higher yielding variety.

Green matter yield of sorghum, Kg/plot.						
Variety	Replication				Total	Mean
	I	II	III	IV		
African tall	22.9	25.9	39.1	33.9	121.8	30.4
Co-11	29.5	30.4	35.3	29.6	124.8	31.2
FS-1	28.8	24.4	32.1	28.6	113.9	28.5
K-7	47.0	40.9	42.8	32.1	162.8	40.7
Co-24	28.9	20.4	21.1	31.8	102.2	25.6
Total	157.1	142.0	170.4	156.0	625.5	31.3

Analyse the difference between one way and two-way ANOVA and suggest which one of them is suitable for estimating linear model.

Case study – 2

Independence of Attributes among different Race.

1. 100 individuals of a particular race were tested with an intelligence test and classified into two classes. Another group of 120 individuals belong to another race were administered the same intelligence test and classified into the same two classes. The following are the observed frequencies of the two races:

Race	Intelligence		
	Intelligent	Non-intelligent	Total
Race I	42	58	100
Race II	55	65	120
Total	97	123	220

Test whether the intelligence is anything to do with the race.

2. From the following table, showing the number of plants having certain characters. Test the hypothesis that the following colour is independent of shape of the leaf.

Colour of the flower	Shape of the leaf	
	Flat	Curved
Orange	115	32
Violet	29	14

3. A health status survey in a few villages revealed that the normal serum protein value of children in that locality is 7.0 g/100ml. A group of 16 children who received high protein food for a period of six months had serum protein values shown below. Can we consider that the mean serum protein level of those who were fed on high protein diet is different from that of the general population?

S.No. (Child No.)	1	2	3	4	5	6	7	8
Protein level (g%)	7.10	7.70	8.20	7.56	7.05	7.08	7.21	7.25

S.No. (Child No.)	9	10	11	12	13	14	15	16
Protein level (g%)	7.36	6.59	6.85	7.90	7.27	6.56	7.93	8.56

OUTCOMES:

- After completing this lab, students will be able to work on inferential statistics using R, use its features in the field of data science.
- Parametric and non-parametric statistical testing procedure.
- Chisquare test for goodness of fit for statistical model.

CAC2227 **BIG DATA ANALYTICS LAB** **L T P C**
0 0 3 2

OBJECTIVES:

- This lab is aimed at providing students a hands-on exposure to big data analytics.

LIST OF PROGRAMS:

1. Install and configure Hadoop, set working directory and various processes.
2. Implement basic commands in Hadoop to manipulate big data.
3. Set up Hadoop cluster configuration.
4. Implement HDFS and explore its characteristics
5. Explore the properties of YARN
6. Import data from MySQL into HDFS
7. Import data from MS Excel into HDFS
8. Implement reducer in Hadoop
9. Implement partitioner in Hadoop
10. Implement nested MapReduce
11. Create a scenario based on real time domain

Case study1:

Experiment 1:

Due to the advent of new technologies, devices, and communication means like social networking sites, the amount of data produced by mankind is growing rapidly every year. The amount of data produced by us from the beginning of time till 2003 was 5 billion gigabytes. If you pile up the data in the form of disks it may fill an entire football field. The same amount was created in every two days in 2011, and in every ten minutes in 2013. This rate is still growing enormously. Though all this information produced is meaningful and can be useful when processed, it is being neglected. By 2020, 1.7 megabytes of data will be created every second, for every person on earth. There are different uses of Big Data, but not only limited to, Industry influencers, academicians, and other prominent stakeholders certainly agree that big data has become a big game changer in most, if not all, types of modern industries over the last few years. As big data continues to permeate our day-to-day lives, there has

been a significant shift of focus from the hype surrounding it to finding real value in its use.

Considering Big Data in general, explain different use cases for below mentioned domain and comment how companies are converting Big Data into profit:

- Healthcare
- Education
- Agriculture
- Space Technology

Experiment 2:

Prepare infrastructure for setting up single node Hadoop cluster.

Experiment 3:

Install all the software to set up single node Hadoop cluster.

Experiment 4:

Configuration of single node Hadoop cluster and testing by creating directory at HDFS location

Experiment 5:

You need to find the location of below Hadoop configuration file and understand the purpose of different attributes mentioned in below xml files.
hdfs-site.xml
core-site.xml
yarn-site.xml

Experiment 6:

You need to perform 20 basics Hadoop commands on single node Hadoop cluster.
(Faculty will share commands)

Experiment 7:

Install IDE to code and compile map reduce framework.

Experiment 8:

You need to program Mapper Class, Reducer Class and Driver Class for map reduce word count Job.

Experiment 9:

You need to find out word count job for the given input file provided by faculty.

Experiment 10:

You need to trouble shoot log file generated in experiment Number 09 and note all the steps involved in job execution

Experiment 11:

You need execute word count job based on 0 reducer, 2 reducer, Default reducer & 4 reducer and observe different outputs.

Case Study 2:

Consider a scenario, you are working for a startup company. Your cluster size is 10 Node. Number of data node in your cluster is 09. The size of each data node of your cluster is 2 TB. Currently you are working on 5 Tb of Data with Replication factor 03. Recently you got a new project from your client. You are expecting 20Tb of data to be processed in your cluster.

Based on above scenario, you need to explain below:

1. How many data node you are going to add in your cluster?
2. What will be your new cluster size?
3. What will be your new data size considering Replication factor?
4. What will be your new data size considering only original data (without replication)?
5. What will be your total number of task tracker in your cluster?

OUTCOMES:

After completing this lab, students will be able to:

- Work on big data analytics; use its features in the field of data science.

CAC2228 **EMPLOYABILITY SKILLS**

L	T	P	C
3	-	-	-

OBJECTIVES:

- To be qualified for employment and to work in a corporate sector demands not only the technical knowledge and experience but interpersonal skills like speaking skills.
- Professional etiquettes and so on. In this course, students will be taught how to develop these skills and apply them in our everyday interactions with people, both in our personal and professional lives.

MODULE I: Speaking skills **9**

Group Discussions; Importance of Group Discussions; Difference between Group Discussion, Panel Discussion and Debate; Format of GD as used in national level recruitment boards, Rules, ambience and normal practices, Dos and Don'ts in Group Discussions, Traits Evaluated in GDs

MODULE II: Etiquette and Mannerism **9**

Introduction; Professional etiquette – Etiquette at meetings, Dining, Involuntary Awkward Actions; Technology Etiquette – Phone, Email, Social Media, Video Conferencing, Web interview

MODULE III: Professional Presentations **9**

Nature of Oral Presentation; Planning a Presentation, Preparing the Presentation; Delivering the Presentation

TEXT BOOKS:

1. Objective English: 3 rd Edition, Edgar Thorpe and Showick Thorpe, Pearson Publishers, 2010 print.
2. Presentation skills. The essential guide for students, Patsy Mc Carthy & Caroline Hatcher, Sage publications, 2002.

REFERENCES:

1. Soft Skills – An integrated approach to Maximise Personality, Gajendra Singh Chauhan & Sangeeta Sharma, Wiley Publications

OUTCOMES:

At the end of this program, students will able to:

- Participate in various group discussions.
- Participate in debates and get familiar with patterns and interactive methods.
- Get knowledge and presentation skills.
- Understand the Traits Evaluated in GDs.
- Learn different ways of Delivering the Presentation.

*** Note: This is a value added Course**

SEMESTER-V

CAC3121 TIME SERIES ANALYSIS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the basic concepts of time series analysis.
- To understand the elementary time series models and model evaluation techniques.
- To understand the integration process of non-stationary data set.
- To understand the importance of ARMA and ARIMA models for forecasting.
- To understand the basic concepts and estimation procedure for VAR models.
- To understand the method to select the appropriate number of order of variables.
- To understand the ARCH and GARCH models.

MODULE I **9**

Introduction to Time Series: Definition, Examples, Components of time series, Trend, Seasonal, Cyclic and Irregular Variations, Determination of trend: Method of moving average, method of least squares, Determination of seasonality: Ratio to trend method, Ratio to moving average method, Exponential Smoothing: Simple exponential Smoothing, Holt Winter's Smoothing Procedure.

MODULE II **9**

Stationarity, Auto covariance, Autocorrelation functions and its properties, Partial Autocorrelation function, Test for stationarity, Test for randomness, Spectral density Function.

MODULE III **9**

Models of Time series: Autoregressive (AR) models, Moving average (MA) models, Properties such as stationarity, invertibility, ACF, PACF, Spectral density function.

MODULE IV **9**

Box-Jenkins analysis of time series: Model identification using ACF and PACF, Estimation of parameters of AR, MA and ARMA models by method of MLE and

method of least squares, fitting of the models, residual analysis and diagnostic checking. Autoregressive integrated moving average (ARIMA) models: Definition and elementary properties.

MODULE V **9**

Non Linear Time Series Models, ARCH and GARCH Models: definition and basic properties, Multivariate Time Series Models: Introduction, Stationary Multivariate Time Series, Vector Autoregressive Models, Vector ARMA Models, Co-integration.

TEXT BOOKS:

1. C. Chatfield: The Analysis of Time Series - An Introduction Chapman and Hall.
2. G.E.P. Box, G.M. Jenkins and G.C. Reinsel: Time Series Analysis, Forecasting and Control, John Wiley & Sons Publications.
3. P.J. Brockwell .and R.A. Davis**:** Time Series: Theory and Methods, Springer-Verlag.

REFERENCES:

1. Chris Brooks: Introductory Econometrics for Finance, Cambridge University Press.
2. S.P. Gupta: Statistical Methods, Sultan, Chand & Sons.

OUTCOMES:

- Understand the different elementary models related to time series analysis.
- Apply different model evaluation technique to identify better model to forecast.
- Understand the importance of stationarity in building time series models.
- Understand the use of Granger Causality and Johensen Cointegration method.
- Apply VAR model to the dynamic behaviour of financial time series conditions.
- Select the order of Vector Auto Regression model for better forecast of time series data.
- Build the model using ARCH and GARCH technique for non-constant variance data.

CAC3122 DATA ANALYSIS USING MS EXCEL AND SQL

L	T	P	C
3	1	3	4

OBJECTIVES:

- To understand the general purpose of MS Excel and its built in functions for data analysis.
- To understand the importance of ROC curve and its use in finding the fitness of classification model.
- To know the basics of macros in MS Excel.
- To understand the working knowledge in MS Excel for linear regression analysis.
- To understand the importance of SQL in Data Analytics.
- To know the importance of SQL in Data mining models.

MODULE I **9**

Introduction to data analytics, MS Excel as tool for data analytics, basic data analytics operations in MS Excel like sort, filter, conditional filtering, charts, pivot tables, tables, what-if analysis, solver, analysis toolpak.

MODULE II **9**

Binary classification in MS Excel, AUC (Area under the receiver operating characteristic (ROC) curve, information measures using entropy, linear regression, basics of macros and VBA in excel.

MODULE III **9**

Data analytics using SQL, , basic data analytics operations in SQL like sort, filter, conditional filtering, charts, pivot tables, tables, what-if analysis, solver, analysis toolpak.

MODULE IV **9**

Data mining models in SQL, association rules in SQL, linear regression in SQL, AUC and RoC in SQL. Unstructured data analysis in SQL

MODULE V **9**

Advance topics of data analytics using excel like power pivot table, power query for

data, importing data using excel. Industry use cases from data science like market basket analysis.

LIST OF PROGRAMS:

1. Implement Binary classification in MS Excel,
2. Implement AUC (Area under the receiver operating characteristic (ROC) curve in Excel
3. Explore information measures using entropy in Excel
4. Implement linear regression in Excel
5. Explore and implement basic macros in Excel
6. Explore and implement various options of VBA in excel.
7. Implement basic data analytics operations in SQL like sort, filter, conditional filtering, charts, pivot tables, tables, what-if analysis, solver, analysis toolpak.
8. Implement association rules in SQL
9. Implement linear regression in SQL
10. Implement AUC and RoC in SQL

TEXT BOOKS:

1. Data Analysis Using SQL and Excel, 2nd Edition by Gordon S. Linoff (2015), Wiley publication.
2. Microsoft Business Intelligence Tools for Excel Analysts 1st Edition by Michael Alexander, Jared Decker and Bernard Wehbe.

REFERENCES:

3. Learning SQL: Master SQL Fundamentals 2nd Edition by Alan Beaulieu
4. Head First SQL: Your Brain on SQL -- A Learner's Guide by Lynn Beighley (2007)

OUTCOMES:

- After completing this course, students will be able to do data analytics using MS Excel and SQL.

- In this course, you will learn how to perform data analysis using Excel's most popular features. You will learn how to create pivot tables from a range with rows and columns in Excel.
- Pivots are used in many different industries by millions of users who share the goal of reporting the performance of companies and organizations.
- In addition, Excel formulas can be used to aggregate data to create meaningful reports.
- To complement, pivot charts and slicers can be used together to visualize data and create easy to use dashboards.

CAC3123 **MACHINE LEARNING ALGORITHMS** **L T P C**

3 0 0 3

OBJECTIVES:

- To understand the basic concepts of statistical learning methods and models.
- To understand the importance of supervised learning in multivariate data sets.
- To understand the estimation procedure for multiple regression coefficients
- To understand the assumptions in estimating regression coefficients using OLS method.
- To understand the importance of supervised learning in classifying class labels for prediction.
- To understand the different algorithms related to classification techniques.
- To understand the concepts of hypothesis testing in model coefficients.

MODULE I **9**

Introduction to Machine Learning

Introduction to machine learning, types of learning, Learning Input-Output Functions, Designing a learning system, perspectives and issues in machine learning. Basic algorithms methods, Inferring Rudimentary Rules, Simple Probabilistic Modelling, Divide and Conquer: Constructing Decision Trees, Covering Algorithms: Constructing Rules, Mining Association Rules, Linear Models, Instance-based Learning, Clustering, Multi-Instance Learning.

MODULE II **9**

Supervised Learning Algorithms

Supervised Machine Learning Algorithms, working of supervised machine learning algorithm, Naive Bayes algorithm, decision tree, Support Vector Machines, KNN, Random Forest algorithm.

MODULE III **9**

Unsupervised Learning Algorithms

Unsupervised Machine Learning Algorithms, working of unsupervised machine learning algorithm, clustering, neural networks, Blind Signal Separation Techniques like Principal Component Analysis, Singular Value Decomposition.

MODULE IV **9**

Reinforcement Learning Algorithms

Reinforcement Machine Learning Algorithms, working of reinforcement machine learning algorithm, Finite Markov Decision Processes, Dynamic Programming, Monte Carlo Methods,

MODULE V **9**

Machine Learning Use-cases

Machine learning in business, Use cases of machine learning implementation in various industry domains: Banking, Finance, Retail, Healthcare, Manufacturing, E-commerce, Human Resource.

TEXT BOOKS:

1. Machine Learning by Tom M. Mitchell. 2014 Reprint. McGraw-Hill Science
2. Data Mining: Practical Machine Learning Tools and Techniques by Ian H Witten, Eibe Frank, Mark A Hall, Christopher J Pal. Third Edition. Morgan Kaufmann Series in Data Management Systems
3. Reinforcement Learning: An Introduction by Richard S Sutton and Andrew G. Barto. (2016). MIT Press.

REFERENCES:

1. Understanding Machine Learning: From Theory To Algorithms by Shai Shalev-Shwartz (2015).
2. Simpler: Using Machine Learning Algorithms in R by Darrin Thomas (2017)

OUTCOMES:

- Understand the difference between continuous class label and discrete class label classification methods.
- Predict the continuous class variable using linear regression analysis.
- Predict the binary class variable using decision tree and random forest.

- Understand the importance of Logistic regression and its application in business.
- Understand the important concepts of neural networks and its prediction techniques.
- Apply the assessment method to find the better fit model for classification techniques.

CAC3221	PROJECT AND VIVA VOCE	L	T	P	C
		0	0	0	16

The students will undertake a project as part of their final semester. The students can do independent projects or can take up projects in groups of two or more depending on the complexity of the project. The maximum group size will be four and in case of team projects there should be a clear delineation of the responsibilities and work done by each project member. The projects must be approved by the mentor assigned to the student. The mentors will counsel the students for choosing the topic for the projects and together they will come up with the objectives and the process of the project. From there, the student takes over and works on the project.

If the student chooses to undertake an industry project, then the topic should be informed to the mentor, and the student should appear for intermediate valuations. Prior to undertaking this project the students undergo a bridge course.

Bridge Course:

The bridge course ensures that all the students have the correct prerequisite knowledge before their industry interface. The purpose of a bridge course is to prepare for a healthy interaction with industry and to meet their expectations. It would be difficult to establish standards without appropriate backgrounds and therefore to bridge this gap, students are put through a week mandatory classroom participation where faculty and other experts will give adequate inputs in application based subjects, IT and soft skills.

The Project:

Each student will be allotted a Faculty Guide and an Industry Guide during the internship/project work. Students need to maintain a Project Diary and update the project progress, work reports in the project diary. Every student must submit a detailed project report as per the provided template. In the case of team projects, a single copy of these items must be submitted but each team member will be required to submit an individual report detailing their own contribution to the project.

Each student/group should be allotted a supervisor and periodic internal review shall be conducted which is evaluated by panel of examiners.

Project Evaluation Guidelines:

The Project evaluator(s) verify and validate the information presented in the project report.

The break-up of marks would be as follows:

1. Internal Evaluation
2. External Assessment
3. Viva Voce

Internal Evaluation:

Internal Evaluator of project needs to evaluate Internal Project work based on the following criteria:

- Project Scope , Objectives and Deliverables
- Research Work, Understanding of concepts
- Output of Results and Proper Documentation
- Interim Reports and Presentations– Twice during the course of the project

External Evaluation:

The Project evaluator(s) perform the External Assessment based on the following criteria.

- Understanding of the Project Concept
- Delivery Skill
- The Final Project Report
- Originality and Novelty

The Final Project Report Details:

- The report should have an excel sheet that documents the work of every project member

Viva Voce

- Handling questions
- Clarity and Communication Skill

Marking Scheme:

1. **Internal Evaluation:** 35% of Total Marks
2. **External Evaluation:** 50% of Total Marks
3. **Viva Voce:** 15 % of Total Marks

For e.g., If the total mark for the project is 100, then

- ❖ Internal Evaluation = 35 marks

The break-up of marks is shown below:-

- Interim Evaluation 1: 10 marks
- Interim Evaluation 2: 10 marks
- Understanding of concepts: 5 marks
- Programming technique: 5 marks
- Execution of code : 5 marks

- ❖ External Evaluation = 50 marks

The break-up of marks is shown below:-

- Project Report: 15 marks
- Explanation of project working: 10 marks
- Execution of code: 10 marks – (if done in industry, a stand-alone module can be reprogrammed and submitted. Error rectification etc. can be included by the evaluator)
- Participation in coding: 15 marks

- ❖ Viva Voce = 15 marks

The break-up of marks is shown below: -

- Questions related to project: 10 marks
- Questions related to technology: 5 marks

The Project evaluator(s) verifies and validates the information presented in the project report.

ELECTIVE - I

CACX40 INTERNET OF THINGS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the concept of “Internet of Things” to the students.
- To understand the basic ecosystems and landscape in IoT.
- To understand the real time use cases in IoT
- To know the different domains, where IoT plays a crucial role.

MODULE I **9**

Introduction to IoT: What is IoT, IoT architecture, Characteristics of IOT systems, Prevalent IoT architectures, IoT applications, Overview of different technologies involved for IoT realization.

MODULE II **9**

History of IoT: The transition from mainframes and personal computing, Planet lab and origins of distributed computing; Robotics, AI and Cyber Computing Infrastructure; M2M communications; P2P networks; Universal identification and RFID; Autonomic computing, Pervasive computing, Ubiquitous computing; Wireless Sensor Networks; The emergence of IoT.

MODULE III **9**

IOT state of the art: The IoT ecosystem and landscape; IOT business models and its usage in various domains; Technology Enablers for IOT – Mobility, Analytics, Cloud and Social Media; IOT platforms; Security; Test methodologies; Regulations and Risks.

MODULE IV **9**

IoT Characteristics and use cases: Consumer and enterprise use cases

MODULE V **9**

IoT DOMAINS: Smart Home, Smart Buildings, smart cities, IoT in telecommunications, smart manufacturing, IoT in environment monitoring, smart vehicles, IoT in healthcare, smart farming, IoT in enterprises, smart transportation, smart energy, smart retail and logistics

TEXT BOOKS:

1. Vijay Madisetti, Arshdeep Bahga "Internet of things, A hands-on-approach" 2014
2. Jean-Philippe Vasseur & Adam Dunkels "Interconnecting smart objects with IP", Morgan Kaufmann Publishers, 2010

REFERENCES:

1. Cuno Pfister, "Getting Started with the Internet of Things" , Maker Media Inc, 2011
2. Adrian Mcewen and Hakim, "Designing the Internet of Things", Wiley publication, 2013

OUTCOMES:

- After the completion of this course, students will be able to explore IoT as the framework to link things across the globe.
- They will be able to talk about various business use cases that may be implemented in IoT.
- IoT provides the scale of data that machines require in order to learn.
- IoT will accelerate dematerialization by enabling us to work smarter.
- Student will be knowing the Consumer and enterprise use cases.
- Student can able to Apply effective techniques to create IoT based projects

CACX10 **ARTIFICIAL INTELLIGENCE**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the importance and basic concepts of Artificial Intelligence.
- To know the important artificial intelligence algorithms in analysis.
- To understand the importance of knowledge representation in Artificial intelligence.
- To know the basic concepts of machine learning in Artificial intelligence.

MODULE I **9**

Overview: foundations, scope, problems, and approaches of AI. Intelligent agents: reactive, deliberative, goal-driven, utility-driven, and learning agents, Artificial Intelligence programming techniques

MODULE II **9**

Problem-solving through Search: forward and backward, state-space, blind, heuristic, problem-reduction, A, A*, AO*, minimax, constraint propagation, neural, stochastic, and evolutionary search algorithms, sample applications.

MODULE III **9**

Knowledge Representation and Reasoning: ontologies, foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space; predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

MODULE IV **9**

Planning: planning as search, partial order planning, construction and use of planning graphs, Representing and Reasoning with Uncertain Knowledge: probability, connection to logic, independence, Bayes rule, bayesian networks, probabilistic inference, sample applications.

MODULE V **9**

Decision-Making: basics of utility theory, decision theory, sequential decision problems, elementary game theory, sample applications. Machine Learning and

Knowledge Acquisition: learning from memorization, examples, explanation, and exploration. Learning nearest neighbor, naive Bayes, and decision tree classifiers, Q-learning for learning action policies, applications.

TEXT BOOKS:

1. Artificial Intelligence: A Modern Approach, 3rd Edition, by Stuart Russell and Peter Norvig.
2. Luger, G. F., & Stubblefield, W. A., Artificial Intelligence - Structures and Strategies for Complex Problem Solving. New York, NY: Addison Wesley, 5th edition (2005).

REFERENCES:

1. Nilsson, N. J., Principles of Artificial Intelligence. Palo Alto, CA: Tioga (1981).
2. Rich, E., & Knight, K., Artificial Intelligence. New York: McGraw-Hill (1991).

OUTCOMES:

- After completing this course, students will be able to explore artificial intelligence in day to day life.
- Student will be able to identify problems that are amenable to solution by AI methods, and which AI methods may be suited to solving a given problem.
- Student will be able to formalize a given problem in the language/framework of different AI methods.
- Implement basic AI algorithms Design and perform an empirical evaluation of different algorithms on a problem formalization
- Student can state the conclusions that the evaluation supports.
- Student will know about the virtual assistant is an exciting development in the field.

CACX16 **MOBILE COMPUTING** **L T P C**

3 0 0 3

OBJECTIVES:

- Usage of mobile devices have increased exponentially over the past decade. Most of the people have more than one mobile devices.
- The introduction of Smart Phones have created a new revolution in the telecommunication industry.

MODULE I: Mobile Network Architecture **9**

Wireless Communication Principles, Network Evolution, Radio Communication, Analog and Digital Communication, Computer Network, OSI Model, Mobile Network OSI layer functions, Mobile Network Protocol Layers, Telephony Networks, PSTN, Telecommunication Networks, Fixed Networks, Mobile Networks, Cellular Network Concepts, Cellular Networks, Cells and Base Stations, Frequency and Interface in Cells, Mobile Network Architecture, Wireless Network Generations, GSM, GPRS.

MODULE II: Mobile Device Architecture **9**

Mobile Phone Evolution, Mobile Handset Characteristics, Bluetooth , Display, Keypad, Camera, Mobile Handset Categories, Handset Components, Handset Design, Handset hardware architecture, Elements inside a Mobile Handset, Hardware Architecture Evolution, Hardware architectural trends, CPU and Memory, Internal storage, Handset Power Requirements, Power Management, Introduction and Definition to the SIM, Functions and usage of the SIM, Phones without SIMs, Key Handset software components, Device Drivers.

MODULE III: Mobile Application Development **9**

Mobile Application Development Paradigm, Mobile Programming Tools, Mobile Application Evolution, Thin Client, Fat Client, Future of Mobile App Development, Mobile Client Server App Architecture, Mobile App Programming in different languages, Mobile Programming best practices, Pros and Cons of Mobile Web App, SIM based Mobile App Development, SIM as a Platform, SIM as Service

Differentiator, Evolution of Mobile Services, Types of Mobile Services, App Server, Mobile Context of AS, AS Deployment Architecture, App Server Layers.

MODULE IV: Mobile Web Application **9**

World Wide Web, Web Application, Web Application Architecture, Web Server, Web Server Features, Web Application Server, Mobile Internet Access, Mobile Web browser Evolution, Mobile Web Development Approaches, Dynamic Content, RSS, Feed, Mobile Advertising Motivation, Dynamic Mobile Advertising, Web Service Architecture, Users on the Go, Best Development Practices.

MODULE V: Mobile Operating System **9**

Introduction to Mobile Operating Systems and why they are needed, Open Platforms, Mobile OS Features, Symbian, BlackBerry, Android, iOS, Windows, Tizen, Ubuntu, etc.

TEXT BOOKS:

1. Wireless and Mobile Network Architectures by Yi-Bang Lin and Imrich Chlamtac, Wiley-India, 2008
2. Mobile Networks Architecture by Andre Perez, Wiley, March 2012
3. Mobile Computing – Technology, Application & Service Creation by Asoke. K Talukder, Roopa R. Yavagal, Asoke K. Talukder, Tata McGraw-Hill, 2005
4. GSM - Architecture, Protocols and Services by Jörg Eberspächer, Hans-JoergV ögel, Christian Bettstetter, Christian Hartmann John Wiley & Sons, Dec-2008
5. Mobile Handset Design by Sajal K. Das, John Wiley and Sons, 2010
6. Smart Phone and Next Generation Mobile Computing by Pei Zheng and Lionel M. Ni., Morgan Kaufmann, 2006.

REFERENCES:

1. Professional Mobile Application Development by Jeff McWherter, Scott Gowell, 2012
2. Mobile Computing Principles: Designing and Developing Mobile Applications by Reza B'Far, Cambridge University, 2005
3. Mobile Applications: Architecture, Design, and Development by Valentino Lee, Heather Schneider and Robbie Schell, Pearson Education, 2004
4. Mobile Web Development by Nirav Mehta, Packt Publishing, 2008
5. Next Generation Wireless Applications: Creating Mobile Applications in a Web 2.0 and Mobile 2.0 World by Paul Golding, John Wiley & Sons, 2008
6. Head First Mobile Web by Lyza Danger Gardner, Jason Grigsby, 2011

OUTCOMES:

- Students will learn the basics of mobile networks.
- They will be able to understand the different concepts needed for the proper functioning of a mobile device.
- They will be able to identify different types of applications, the importance of mobile operating system and features of the same.
- The student can able to understand the rise in demand of mobile phones have led telecommunication companies to delve into newer technologies and standards.
- They will able to understand the basics of mobile network, device and their architecture.
- Student can able to know the course explains about the importance, features, functions and types of mobile operating systems.

ELECTIVE-II

CACX41 **PYTHON PROGRAMMING** **L T P C**

3 1 0 4

OBJECTIVES:

- To understand the basic concepts of python programming with values and varibles.
- To know the basic arithmetic operators used in Python Programming.
- To understand why Python is a useful scripting language for developers
- To understand the important functions in python programming
- To know the data structures and its usage in python programming.

MODULE I **9**

Introduction to Python Programming, development tools, values and variables, integer values, variables and assignment, identifiers, floating point types, control codes with strings, user input, Eval function, print function

MODULE II **9**

Expression and arithmetic, operator precedence and associativity, comments and errors, syntax errors, run time errors, logic errors, arithmetic operators

MODULE III **9**

Conditional execution, Boolean expressions, simple if statement, if/else, compound Boolean expressions, nested conditions, decision statements, conditional expressions. Iterations, while statement, definite vs indefinite loops, nested loops, abnormal loop termination

MODULE IV **9**

Functions, standard mathematics functions, time function, random function, importing function, writing own functions, parameter passing, custom function vs standard functions. Global variables, default variables, recursion, reusable functions, functions as data.

MODULE V **9**

Lists, List assignment, list bounds, slicing, list and functions, prime generation with list, sorting, flexible sorting, search, linear search, binary search, list permutation, random permutation, objects, string objects, list objects, custom types - geometric, handling exceptions.

LIST OF PROGRAMS

Part A

1. Write a Python program to check whether two strings are equal or not.
2. Write a Python program to display reverse string.
3. Write a Python program to find the sum of digits of a given number.
4. Write a Python program to display a multiplication table.
5. Write a Python program to display all prime numbers between 1 to 1t000.
6. Write a Python program to insert element in existing array.
7. Write a Python program to sort existing array.
8. Write a Python program to create object for Tree Set and Stack and use all methods.
9. Write a Python program to check all math class functions.

1. Write a program to execute any Windows 95 application (Like notepad, calculator etc)
2. Write a program to find out total memory, free memory and free memory after executing garbage Collector (gc).

TEXT BOOKS:

1. LEARNING TO PROGRAM WITH PYTHON by Richard L. Halterman.(2011)
2. Guttag, John. Introduction to Computation and Programming Using Python. Spring 2013 edition. MIT Press, 2013.

REFERENCES:

1. Programming Python, 4th Edition by Mark Lutz (2010) O'Reilly Media
2. Python Cookbook, 3rd Edition: Recipes for Mastering Python 3, by David Beazley and Brian K. Jones, on O'Reilly Atlas (2013)

OUTCOMES:

- After completing this course, students will be able to apply various features and components of Python programming in the field of data science.
- Student will learn how to design and program Python applications.
- Student will learn how to use lists, tuples, and dictionaries in Python programs.
- Student will learn how to identify Python object types.
- Student will learn how to use indexing and slicing to access data in Python programs.
- Student will define the structure and components of a Python program.
- Student will learn how to write loops and decision statements in Python

Elective – II

CACX42 **JAVA PROGRAMMING** **L T P C**
3 1 0 4

OBJECTIVES:

- Object oriented programming is the most proven technique for developing reliable programs.
- It helps in increased productivity, reusability of code, decrease in the development time, and reduces cost of production to an extent. The cost of maintaining such systems have also considerably decreased.
- There are many languages which used the object oriented concepts and techniques. Some of them are C++, Java, Smalltalk, Objective-C, etc. Java is a purely object oriented language.
- Systems/applications created using java programming language reduces the need for developing and maintain complex and space consuming applications.

MODULE I: Introduction **9**

History, Overview of Java, Object Oriented Programming, A simple Program, Two control statements - if statement, for loop, using Blocks of codes, Lexical issues - White space, identifiers, Literals, comments, separators, Java Key words. Data types: Integers, Floating point, characters, Boolean, A closer look at Literals, Variables, Type conversion and casting, Automatic type promotion in Expressions Arrays. **Operators:** Arithmetic operators, The Bit wise operators, Relational Operators, Boolean Logical operators, Assignment Operator, Operator Precedence. Control Statements: Selection Statements - if, Switch: Iteration Statements - While, Do-while, for Nested loops, Jump statements.

MODULE II: Classes: **9**

Class Fundamentals, Declaring objects, Assigning object reference variables, Methods, constructors, “this” keyword, finalize ( ) method A stack class, Over loading methods, using objects as parameters, Argument passing, Returning objects, Recursion, Access control, Introducing final, understanding static,

Introducing Nested and Inner classes, Using command line arguments. Inheritance: Inheritance basics, Using super, method overriding, Dynamic method Dispatch, using abstract classes, using final with Inheritance.

MODULE III: Packages. 9

Definition, Access protection importing packages, Interfaces: Definition implementing interfaces. Exception Handling: Fundamental, Exception types, Using try and catch, Multiple catch clauses, Nested try Statements, throw, throws, finally, Java's Built - in exception, using Exceptions.

MODULE IV: Multithreaded Programming. 9

The Java thread model, The main thread, Creating a thread, Creating multiple thread, Creating a thread, Creating multiple threads, Using isalive() and Join(), Thread - Priorities, Synchronization, Inter thread communication, suspending, resuming and stopping threads, using multi threading. 1/0 basics, Reading control input, writing control output, Reading and Writing files, Applet Fundamentals, the AWT package,AWT Event handling concepts The transient and volatile modifiers, using instance of using assert.

MODULE V: JAVA Database Connectivity (JDBC) 9

Database connectivity: JDBC architecture, JDBC Drivers, the JDBC API: loading a driver, connecting to a database, Creating and executing JDBC statements, Handling SQL exceptions, Accessing result sets: Types of result sets, Methods of result set interface. An example JDBC application to query a database

TEXT BOOKS:

1. The complete reference Java –2: V Edition By Herbert Schildt Pub. TMH.

REFERENCES:

1. SAMS teach yourself Java – 2: 3rd Edition by Rogers Cedenhead and Leura Lemay Pub. Pearson Education.

OUTCOMES:

- Students will learn how to write Programs using Java
- Student will learn Java has a lot of advantages of being simple, robust, platform independent, etc. Nowadays java is also found in the mobile phones.
- Student will focuses on the concepts of object oriented programming language and the different constructs for creating applications in java.
- Student will able to learn the object oriented concepts which helps in the field of programming, management of data, etc.
- Student will get help of Java programming which helps to explore object oriented nature of the language and the multi-platform versatility offered by it.

LIST OF PROGRAMS: **15**

1. Write a program to check whether two strings are equal or not.

2. Write a program to display reverse string.

3. Write a program to find the sum of digits of a given number.

4. Write a program to display a multiplication table.

5. Write a program to display all prime numbers between 1 to 1t000.

6. Write a program to insert element in existing array.

7. Write a program to sort existing array.

8. Write a program to create object for Tree Set and Stack and use all methods.

9. Write a program to check all math class functions.

1. Write a program to execute any Windows 95 application (Like notepad, calculator etc)
2. Write a program to find out total memory, free memory and free memory after executing garbage Collector (gc).

3. Write a program to copy a file to another file using Java to package classes. Get the file names at run time and if the target file is existed then ask confirmation to overwrite and take necessary actions.
4. Write a program to get file name at runtime and display number f lines and words in that file.
5. Write a program to list files in the current working directory depending upon a given pattern.
6. Create a textfileld that allows only numeric value and in specified length.
7. Create a Frame with 2 labels, at runtime display x and y command-ordinate of mouse pointer in the labels.

CACX43 **DATA VISUALIZATION** **L T P C**

3 1 0 4

OBJECTIVES:

- To know the importance of data visualization in data science reports.
- To understand uni, bi and multidimensional data visualization techniques.
- To know the important libraries in data visualization tools.
- To know important visualization tools like tableau.
- To understand the importance of use cases of data visualization.

MODULE I **9**

Introduction to data visualization, importance of data visualization in data science, seven stages of visualizing data -- acquire, parse, filter, mine, represent, refine, and interact.

MODULE II **9**

Classifying data visualization – explanatory, exploratory and hybrid, three perspectives of data visualization - the designer, the reader, and the data—shape what you create.

MODULE III **9**

Data visualization using R, data visualization libraries, features of libraries, ggplot library for data visualization.

MODULE IV **9**

Data visualization using Tableau, features of Tableau public version, configuration of Tableau, various libraries of Tableau.

MODULE V **9**

Visualization best practices, data science use cases for data visualization.

TEXT BOOKS:

1. Data Points: Visualization That Means Something by Nathan Yau . John Wiley & Sons (2013)

2. Beautiful Visualization: Looking at Data through the Eyes of Experts by Julie Steele and Noah Iliinsky .

REFERENCES:

1. Storytelling with Data: A Data Visualization Guide for Business Professionals by Cole Nussbaumer Knaflic (2014)
2. ggplot2: Elegant Graphics for Data Analysis by Hadley Wickham (2009)
3. Designing Data Visualizations: Representing Informational Relationships by Noah Iliinsky, Julie Steele (2011)

OUTCOMES:

- After completing this course, students will be able to visualize data through seven stages of data analysis process.
- They will be able to do explanatory, exploratory and hybrid types of data visualization.
- Student will understand various stages of visualizing data
- Student will able analyze features of libraries, ggplot library for data visualization.
- Student will learn the data science use cases for data visualization

Elective-III

CACX44	DATA SCIENCE PROJECT	L T P C 3 0 0 3

OBJECTIVES:

- To understand and learn various project management life cycles.
- To understand the difference between ETL and Data Science model.
- To know the important software for data science analysis.
- To know the importance of data visualization techniques in analytics reports.

MODULE I

Introduction to project management, various project management life cycles, SDLC, waterfall model, various aspects of managing a data science project.

MODULE II

Comparison of ETL project Vs Data Science, modeling data science project. Managing structured, unstructured and semi-structured data for data science project.

MODULE III

Analytics tools for data science project, comparing open source and proprietary tools.

MODULE IV

Choosing a proper data visualization tool for data science project. Working with open source tools for data visualization.

MODULE V

Various stake holders of data science project, preparing project report for CXO level people. Report presentation and closure activities of a data science project.

TEXT BOOKS:

1. Real life scenarios
2. Industry inputs from SMEs

OUTCOMES:

- After completing this course, students will be able to apply various tools and techniques to execute a data science project.
- Student will able to do project on various project management life cycles, SDLC.
- Student will be able to learn semi-structured data for data science project
- Student can able to do Analytics tools for data science project
- Student will able to do open source tools for data visualization.

CACX45 **SOFTWARE ENGINEERING** **L T P C**
3 0 0 3

OBJECTIVES:

- Software engineering incorporates various accepted methodologies to design software. This subject gives a detailed description of the entire process of developing a software project and also the issues associated after development.
- This course covers the introductory concepts of software engineering and its design.

MODULE I: Software Product and Process **9**

Introduction – S/W Engineering Paradigm – Verification – Validation – Life Cycle Models – System Engineering – Computer Based System – Business Process Engineering, Overview – Product Engineering Overview.

MODULE II: Software Requirements **9**

Functional and Non-Functional – Software Document – Requirement Engineering Process – Feasibility Studies – Software Prototyping – Prototyping in the Software Process – Data – Functional and Behavioral Models – Structured Analysis and Data Dictionary.

MODULE III: Analysis, Design Concepts and Principles **9**

Systems Engineering - Analysis Concepts - Design Process And Concepts – Modular Design – Design Heuristic – Architectural Design – Data Design – User Interface Design – Real Time Software Design – System Design – Real Time Executives – Data Acquisition System – Monitoring And Control System.

MODULE IV: Testing **9**

Taxonomy Of Software Testing – Types Of S/W Test – Black Box Testing – Testing Boundary Conditions – Structural Testing – Test Coverage Criteria Based On Data Flow Mechanisms – Regression Testing – Unit Testing –

Integration Testing – Validation Testing – System Testing And Debugging – Software Implementation Techniques

MODULE V: Software Project Management **9**

Measures And Measurements – ZIPF's Law – Software Cost Estimation – Function Point Models – COCOMO Model – Delphi Method – Scheduling – Earned Value Analysis – Error Tracking – Software Configuration Management – Program Evolution Dynamics – Software Maintenance – Project Planning – Project Scheduling– Risk Management – CASE Tools

TEXT BOOKS:

1. Ian Sommerville, "Software engineering", Seventh Edition, Pearson Education Asia, 2007

REFERENCES:

2. Roger S. Pressman, "Software Engineering – A practitioner's Approach", Sixth Edition, McGraw-Hill International Edition, 2005

OUTCOMES:

- Learners will develop knowledge about Software Development Life Cycle, which is very essential for any Software Developer to design and develop any application or software.
- This course also includes modules on Software testing which forms an essential part of SDLC
- Students are ability to apply knowledge of mathematics, science, and engineering
- Students are ability to design and conduct experiments, as well as to analyze and interpret data.
- Students are ability to function on multi-disciplinary teams.
- Students are ability to analyze, design, verify, validate, implement, apply, and maintain software system.

CACX46 **AGILE METHODOLOGY** **L T P C**

3 0 0 3

OBJECTIVES:

- To understand the important basic concepts of agile methodology.
- To know the importance of agile values and principles.
- To understand the foundations of agile delivery methods and XP and AM.
- To know the agile project development phases and identifying scope of agile project.

MODULE I

Introduction to Disciplined Agile Delivery, Context Counts--The Agile Scaling Model, Disciplined Agile Delivery (DAD) Process Framework, People First approach, Learning Oriented approach, A Hybrid Process Framework, Goal-Driven Delivery Lifecycle, Enterprise Aware

MODULE II

Introduction to Agile and Lean, Toward a Disciplined Agile Manifesto, Disciplined Agile Values, Disciplined Agile Principles, Lean Principles.

MODULE III

Foundations of Disciplined Agile Delivery, the Terminology Tar Pit, Scrum, Extreme Programming (XP), Agile Modeling (AM), Agile Data, Lean Software Development.

MODULE IV

People first approach, Roles, Rights, and Responsibilities, The Rights of Everyone, The Responsibilities of Everyone, The DAD Roles, Forming Disciplined Agile Delivery Teams.

MODULE V

Initiating a Disciplined Agile Delivery Project, the Inception Phase, Identifying a Project Vision, Identifying the Initial Scope, Identifying an Initial Technical Strategy, Initial Release Planning, Forming the Work Environment.

TEXT BOOKS:

1. S.W. Ambler, M. Lines, Disciplined Agile Delivery: A Practitioner's Guide to Agile Software Delivery in the Enterprise, IBM Press, 2012.
2. K. Beck, Test Driven Development: By Example, Addison-Wesley, 2002.
3. K. Beck, C. Andres, Extreme Programming Explained: Embrace Change, 2nd Edition, Addison-Wesley, 2004.

REFERENCES:

1. M. Cohn, Succeeding with Agile: Software Development Using Scrum, Addison-Wesley, 2010.
2. K.S. Rubin, Essential Scrum: A Practical Guide to the Most Popular Agile Process, Addison-Wesley, 2012.

OUTCOMES:

- After completing this course, students will be able to apply various features and components of agile methodology in the field of data science.
- Student will able to understand the most impactful change has come from defining new roles within the R&D department.
- Student will able analyze the teams rely less on up-front requirements and documentation than on face-to-face conversations.
- Student can identify the agile development accelerates the delivery of initial business value.
- Student can go through a process of continuous planning and feedback, is able to ensure that value is continuing to be maximized throughout the development process.

B.ARCH SYLLABUS

REGULATIONS: 2016

VISION AND MISSION OF THE DEPARTMENT OF ARCHITECTURE

VISION

Crescent School of Architecture aims to emphasis on Curiosity, Innovation and Discovery in the field of Architecture that will connect with the profession and strives for Global standards through collaborative innovation and passion for enquiry.

MISSION

- To create opportMODULE ies for innovative academic experience which brings together academics and professional practice.
- To provide academic climate for students to understand, enquire, reflect, grow and contribute to succeed in a rapidly changing society.
- To pursue excellence in learning through contemporary foundation of liberal learning that celebrates diversity and complexity that instills empowerment on social responsibility.
- To achieve excellence in all its endeavors to face global challenges.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):

Bachelor of Architecture curriculum is designed to prepare the graduates having aptitude and knowledge,

- To enable a successful professional and technical career.
- To provide high quality education to assume professional roles in architecture by offering sound knowledge in theories and applications in the field of Architecture.
- Engage in life-long learning to keep themselves abreast of new developments.
- To grow as a creative problem solvers in architectural industry.
- To put into practice and inspire high ethical values and technical standards.
- To evolve a professional capable of vision, innovation and competence keeping in view the human value system.

PROGRAMME OUTCOME (PO):

These outcomes are directly related to the profession of Architecture ,the way in which they are practiced and the knowledge components necessary for such a practice. The following list of outcomes represents the minimum learning outputs expected. The programme will produce graduates who have,

- Ability to apply creativity, innovations, develop competence in design development towards appropriate technology.
- Ability to conceptualize and coordinate designs, addressing social, cultural, environmental and technological aspects of architecture.
- Ability to analyze and apply theoretical knowledge to achieve design solutions.
- Ability to understand ethical and professional responsibilities.
- Ability to apply and integrate computer technology in design process and products.
- Ability to understand real life situation of architectural practice.
- Ability to apply visual and verbal communication skills at various stages of architectural design and project delivery process.
- Ability to work collaboratively with teams of architects and various interdisciplinary teams.
- A commitment to quality with ethical values, timelessness in architecture with continuous improvement.

CURRICULUM AND SYLLABUS FOR B. Arch
(Ten Semesters / Full Time)
CURRICULUM

SEMESTER I

S.No	Course Code	Course Name	Lecture	Studio/ Practical	Credit
Theory					
1	ARC B 1101	History of Built Environment – I	3	0	3
2	ARC B 1102	Theory of Architecture	3	0	3
Theory cum Studio					
3	ARC B 1103	Architectural Representations	1	3	3
4	ARC B 1104	Building Materials & Construction - I	2	3	4
5	ARC B 1105	Skill Development – I	1	1	2
Studio					
6	ARC B 1106	Architectural Design Studio – I	0	9	6
7	ARC B 1107	Allied Design Studio - I	1	5	4
			Total Credit		**25**

SEMESTER II

S.No	Course Code	Course Name	Lecture	Studio/ Practical	Credit
Theory					
1	ARC B 1201	Theory & Principles of Design	3	0	3
2	ARC B 1202	Environmental Studies	3	0	3
3	ARC B 1203	Theory and Design of Structures - I	3	0	3
Theory cum Studio					
5	ARC B 1204	Building Materials & Construction - II	1	4	4
6	ARC B 1205	Skill Development – II	1	1	2
Studio					
6	ARC B 1206	Architectural Design Studio– II	0	12 to 14	6
7	ARC B 1207	Allied Design Studio - II	0	3	4
			Total Credit		**25**

SEMESTER III

S.No	Course Code	Course Name	Lecture	Studio/ Practical	Credit
Theory					
1	ARC B 2301	History of Built Environment - II	3	0	3
2	ARC B 2302	Climatic Design	3	0	3
3	ARC B 2303	Theory and Design of Structures - II	3	0	3
Theory cum Studio					
4	ARCB 2304	Building Materials & Construction - III	2	4	4
Studio					
5	ARC B 2306	Architectural Design Studio – III	0	14 to16	8
6	ARC B 2307	Allied Design Studio – III & Computer Graphics	0	3	4
			Total Credit		**25**

SEMESTER IV

S.No	Course Code	Course Name	Lecture	Studio/ Practical	Credit
Theory					
1	ARC B 2401	History of Built Environment - III	3	0	3
2	ARC B 2402	Building Services - I	3	0	3
3	ARC B 2403	Structural &Construction Systems –I	3	0	3
4	ARC B 2405	Site Planning &Analysis	3	0	3
Theory cum Studio					
5	ARC B 2404	Building Materials & Construction -IV	2	4	4
Studio					
6	ARC B 2406	Architectural Design Studio – IV	0	14 to 16	8
			Total Credit		**24**

SEMESTER V

S.No	Course Code	Course Name	Lecture	Studio/ Practical	Credit
Theory					
1	ARC B 3501	History of Built Environment - IV	3	0	3
2	ARC B 3502	Building Services – II	3	0	3
3	ARC B 3503	Structural &Construction Systems II	3	0	3
4	ARC B XXXX	Elective – I	3	0	3
Theory cum Studio					
5	ARC B 3504	Building Materials & Construction -V	2	4	4

Studio					
6	ARC B 3506	Architectural Design Studio – V	0	16	8
	LEED GA	Stage I (Non Credit Course)			
			Total Credit		**24**

SEMESTER VI

S.No	Course Code	Course Name	Lecture	Studio/ Practical	Credit
Theory					
1	AR B 3601	Contemporary Built Environment	3	0	3
2	AR B 3602	Structural &Construction Systems III	3	0	3
3	AR B 3603	Estimation and Specification	3	0	3
4	AR B XXXX	Elective – II	3	0	3
Theory cum Studio					
5	AR B 3605	Architectural Acoustics & Detailing	2	4	4
Studio					
6	AR B 3606	Architectural Design – VI	0	16	8
			Total Credit		**24**

SEMESTER VII
PRACTICAL TRAINING

S.No	Course Code	Course Name	Lecture	Studio/ Practical	Credit
1	AR B 4701	Practical Training –I	-	-	10
			Total Credit		**10**

SEMESTER VIII

S.No	Course Code	Course Name	Lecture	Studio/ Practical	Credit
Theory					
1	AR B 4801	Professional Ethics & Practice - I	3	0	3
2	AR B 4802	Advanced Structures	3	0	3
3	AR B 4803	Green & Sustainable Design	3	0	3
4	AR B 4804	Research Methods	3	0	3
5	AR B XXXX	Elective – III	3	0	3
Studio					
6	AR B 4806	Architectural Design -VII	0	16	9
			Total Credit		**24**

SEMESTER IX

S.No	Course Code	Course Name	Lecture	Studio/ Practical	Credit
Theory					
1	AR B 5901	Professional Ethics & Practice-II	3	0	3
2	AR B 5902	Human Settlement Planning	3	0	3
3	AR B 5903	Urban Design	3	0	3
4	AR B XXXX	Elective -IV	3	0	3
Studio					
5	AR B 5904	Dissertation	3	0	3
6	AR B 5906	Urban Design Studio - VIII	0	16	9
			Total Credit		**24**

SEMESTER X

S.No	Course Code	Course Name	Lecture	Studio/ Practical	Credit
Theory					
1	AR B 5101	LEED AP – STAGE II	3	0	3
2	AR B XXXX	Elective -V	3	0	3
Studio					
3	AR B 5106	Architectural Thesis	0	28	14
			Total Credit		**20**

LIST OF ELECTIVES

LIST OF BASIC ELECTIVES:

1. Interior Design (Theory)
2. Art Appreciation
3. Landscape Architecture
4. Energy Efficient Architecture
5. Digital Art
6. Vernacular Architecture

LIST OF ADVANCED ELECTIVES:

1. Urban Housing
2. Architectural Conservation
3. Earthquake resistant Buildings
4. Architectural Management
5. Construction Technology
6. Safety systems and Building Automation

SEMESTER I

ARC B 1101 HISTORY OF BUILT ENVIRONMENT - I 3 0 3

AIM:

To provide knowledge about the development of architecture in India where religion played a major role in the Indian architecture styles apart from the cultural and contextual factors.

OBJECTIVES:

- To enlighten the origin of architecture in India.
- To discover the genesis of aesthetic phenomena with respect to the human needs and aspirations, time, place and culture and other factors.
- To distinguish the differences in various era which includes Ancient India, Buddhist & Jain periods, South & North Indian architecture styles.
- To know the sequence and innovations in architecture over a period of time.
- To study and analyze the architecture production of antiquity.

MODULE : I ANCIENT INDIA 9

Indus Valley Civilization: culture and pattern of settlement.- Aryan civilization – theories and debates of origin origins of early Hinduism - Vedic culture - Vedic village and rudimentary forms of bamboo and wooden construction - origins of Buddhism and Jainism

MODULE : II BUDDHIST ARCHITECTURE 9

Evolution of Buddhism, Buddhist thought, art and culture - Hinayana and Mahayana Buddhism - Evolution of building typologies- the stupa, vihara and the chaitya hall.

Architectural production during Ashoka's rule - Ashokan Pillar, Sarnath - rock cut caves at Barabar - Sanchi Stupa- Rock cut architecture in Ajanta and Ellora - Viharas at Karli - Rani gumpha, Udaigiri – Takti Bahai, Gandhara.

MODULE : III EVOLUTION OF HINDU TEMPLE ARCHITECTURE

Evolution of temple form - meaning, symbolism, ritual and social importar categories of temple - elements of temple architecture - early shrines of Chalukyan periods. Tigawa temple - Durga temple, Aihole - Virupaksha templ

Kailasanatha temple, Ellora.

MODULE : IV TEMPLE ARCHITECTURE - SOUTHERN INDIA **9**

Dravidian Order - evolution and form of Gopuram.

Rock cut productions under Pallavas: Shore temple, Mahabalipuram and Kailasanatha temple.

Chola Architecture: Brihadeeswara, Gangaikonda Cholapuram and Darasuram temples – Temple gateways of Madurai

Temple architecture of temple towns: Madurai, Srirangam and Kanchipuram. Hoysala architecture: Belur and Halebid

MODULE : V TEMPLE ARCHITECTURE - NORTHERN INDIA **9**

Indo-Aryan style: Temple architecture of Gujarat, Orissa, Madhyapradesh and Rajasthan - their salient features. Lingaraja Temple, Bhuvaneswar Sun temple, Konarak. - Somnatha temple, Gujarat - Surya kund, Modhera – Khajuraho Madhyapradesh - Dilwara temple, Mt. Abu

TOTAL SESSIONS: 45

REQUIRED READINGS:

1. Percy Brown, “Indian Architecture (Buddhist and Hindu Period)”, Taraporevala and Sons, Bombay, 1983.
2. Satish Grover, “The Architecture of India (Buddhist and Hindu Period)”, Vikas Publishing Housing Pvt. Ltd., New Delhi, 2003.
3. Christoper Tadgell, “The History of Architecture in India from the Dawn of civilization to the end of the Raj”, Longmon Group U.K.Ltd., London, 1990.

REFERENCES:

1. A.Volwahsen, “Living Architecture India (Buddhist and Hindu)”, Oxford and IBM, London, 1969.
2. George Michell, “The Hindu Temple”, BI Pub., Bombay, 1977.
3. Stella Kramrisch, “The Hindu Temple”
4. K.V. Soundarajan, “Art and Architecture of South India “
5. George Michell Ed, “Temple Towns of Tamil Nadu”
6. Dasgupta, “History of Indian Philosophy”

7. http://www.greatbuildings.com/gbc-types/styles/hindu.htmlB.Arch31
8. http://ramm.hubpages.com/hub/EVOLUTION-OF-INDIAN-TEMPLE-ARCHITECTURE5.

OUTCOMES:

- Have a comprehensive knowledge about the development of Aryan and Mauryan civilization and identify different building materials & techniques used by them.
- Have a comprehensive knowledge about the rock cut and stone architecture of Dravidian period and trace later developments in South India.
- Have a comprehensive knowledge about the development of Buddhist architecture.
- Articulate knowledge on the evolution of Hindu temple during the Gupta and Chalukyan period
- Express different plan forms of the Indo Aryan temple with the aid of sketches.

ARC B 1102 THEORY OF ARCHITECTURE 3 0 3

AIM:

To introduce the various facets of architecture and its influencing factors. Thereby, convey the concepts, themes, conception, views of Architectural thought process.

OBJECTIVES:

- To comprehend the concepts of architecture.
- To understand and analyze the principal elements of Architecture.
- To identify and examine the thought process involved in design.

MODULE I INTRODUCTION TO ARCHITECTURE 8

Definitions of Architecture - Origin of Architecture – Architecture as a discipline – Context for architecture as satisfying human needs - Functional, aesthetic and psychological - Outline of components and aspects of architectural form-site, structure, materials, services, use, circulation, expression, character, experience – Introduction to the formal vocabulary of architecture and Gestalt ideas of visual perception.

MODULE II ELEMENTS OF ARCHITECTURE 7

Understanding fundamental elements such as point, line, plane, form and space, shape, pattern, light, color, surface and texture with reference to the evolution of architectural form and space.

MODULE III ELEMENTS OF ARCHITECTURE – FORM 9

Understanding perceptual effects of specific geometric forms such as sphere, cube, pyramid, cylinder and cone and its sections as well as their derivatives with respect to the evolution of architectural form and space.

MODULE IV ELEMENTS OF ARCHITECTURE – SPACE 9

Understanding perceptual effects of specific configuration of architectural spaces – Enclosure – Internal and External, Continuous spaces – Spatial relationship and its types, Spatial organisation: Centralized, Linear, Radial Clustered, Grid – built form and open space relationships.

MODULE V PRINCIPLES OF ARCHITECTURE 12

Understanding fundamental principles such as proportion, scale, balance, symmetry/asymmetry, rhythm, axis, hierarchy, datum, MODULE y, harmony, dominance, climax – Movement with reference to the architectural form and space – detailed study of relationship between architectural form and circulation – Types of circulation – Building approach and entrance, path configuration and form, path space relationship, orientation.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. Francis D.K.Ching, "Architecture-Form, Space and Order", 3rd ed. John Wiley, 2007

REFERENCES :

1. Ching, Frank (Francis D.K.), "Architectural Graphics", Van Nostrand Reinhold, New York 2003, ISBN 0471209066
2. Ching, Frank (Francis D.K.), "Drawing: A Creative Process", Van Nostrand Reinhold, New York 1990.
3. Simon Unwin, "Analysing Architecture", Rouledge, London, 2003.
4. V.S.Pramar, "Design Fundamentals in Architecture", Somaiya Publications Private Ltd.,

OUTCOMES:

- A thorough understanding on the definition of architecture and the elements of architecture.
- An exposure to the principles of architecture and applications of the same in buildings.
- Recognize the relation between of form and space and translate it into design
- Develop a design vocabulary for the various aspects of aesthetic components in design and actively apply them.

ARC B 1103 ARCHITECTURAL REPRESENTATION 1 3 3

AIM:

To develop the requisite level of proficiency in drawing which is seen as a primary communication tool in the practice of architecture and train the students in the fundamental techniques of Architectural Drawing and Free Hand Drawing. Besides, develop presentation skills, visual expression, representation, imaginative thinking and creativity through hands on working exercises with various mediums and materials.

OBJECTIVES:

- To introduce drafting procedures, graphic codes, symbols and architectural lettering.
- To enable the students learn architectural scales and their application to real objects and drawings.
- To expose the students to different projections like Orthographic, Isometric, axonometric and oblique projections.
- To understand and employ various mediums and technique of representation as it relates to art and architecture.

MODULE I –INTRODUCTION TO ARCHITECTURAL DRAWING 12

Construction of lines, line value, line types, types of lines. Line thickness. Dimension lines. Architectural and stencil lettering in varying heights and thickness and dimensioning. Types of scales, Study of scales, their use in practice and construction of Plain and Diagonal scale. Applications of scales to enlarge or to reduce the objects in drawing.

MODULE II: MEASURED DRAWING 18

Introduction to fundamentals of measured drawing, line value, lettering, drawing representation, format for presentation methods. Understanding of different scales and their uses in practice - Drawings to scale. Technique of measuring buildings and their detailing in terms of construction and ornamentation. Examples of Measured drawing of simple objects: Furniture, Class room plan, Doors, Windows, Entrance Gate, building etc.

NOTE: Exercise shall be aimed at taking the measurement of their class room/ bedroom/living room along with the furniture and drawing it to scale.

MODULE III –ARCHITECTURAL REPESEANTATION & SYMBOLS 10

Architectural representations of trees, hedges, foliage, human figure in different postures, vehicles, furniture etc. their integration to presentation drawings. Representation of building elements, openings, materials, accessories etc. terminology and abbreviation used in architectural presentation

MODULE IV – SECTIONS OF SOLIDS 15

Introduction to sections of solids - cube, prism, pyramids, cones, cylinders etc. with relation to architectural drawings and buildings. Identifying the various materials used in architectural construction and their mode of architectural representation – brick, stone, sand, steel, wood, glass, reinforcement.

NOTE: Exercise must be aimed at drawing sections of their measured drawing exercise and representing the architectural materials in their measured drawing exercise.

MODULE V - GRAPHICS 15

Isometric View: Isometric Views of Objects, building components such as Steps, Canopy etc.

Axonometric view: Axonometric view of objects, interior view of rooms etc. Exercises must involve developing a view of their measured room.

Bird's eye view,& normal eye view for the following:Cityscape, Seascape, Wildscape, Skyscape, Street views and Heritage areas.

Sketching of Historic or new built up structures of Architectural importance using different mediums.

NOTE: Exercises must involve developing a view of a building component.

TOTAL SESSIONS : 60

TEXT BOOKS:

1. I.H.Morris – Geometrical drawing for Art Students. Orient Longman – Madras 1982

2. Albert. O. Halse – Architectural Rendering Techniques McGraw-Hill Book Co. New York 1972.

3. M.S.Kumar, "Engineering drawing", DD Publications, Chennai - 600048- 2005

4. Francis D.K.Ching & Steven P Juroszek, "Design drawing", John Willey & Sons,USA, 1998

REFERENCES:

1. George K.Stegman, Harry J.Stegman, Architectural Drafting Printed in USA by American Technical Society, 1966.
2. Francis Ching, Architectural Graphics, Van Nostrand Rein Hold Company, New York, 1964.
3. C.Leslie Martin, Architectural Graphics, The Macmillan Company, New York, 1964.
4. Alwyn Cranshaw, Learn to paint with Water colours, Acrylic colours, Boats and Harbours, Sketch, Still life, landscapes, William Collins Sons and Co. Ltd., London, 1981.
5. Tokyo Musashino Academy of Art - Introduction to Pencil Drawing, Graphic - Shaw Publishing Co. Ltd., Japan, 1991.
6. Robert S.Oliver, The Complete Sketch, Van Nostrand Reinhold, New York, 1989.
7. http://www.cs.brown.edu
8. http://www.dtcc.edu/ - document, project info – Arch.dwg.

OUTCOMES:

- An understanding on the concepts of architectural drawing as well as representation skills are imparted.
- An understanding on the building representation in 2D and 3D among students in addition to preparation of measured drawing.
- To sensitize students to express skills in architecture through art.

ARC B 1104 BUILDING MATERIALS AND CONSTRUCTION- I 2 3 4

AIM:

This course is a combination of lecture & studio classes aimed at developing the students to understand various building materials and its construction techniques.

METHODOLOGY:

The course is visualized as having three essential components,

- A lecture course in materials and methods of construction.
- A construction studio wherein principles and practices shall be applied to the production of meaningful details.
- Site visits to gain knowledge about construction details.

OBJECTIVES:

- To introduce the students to building materials, their properties and application in building construction, along with the construction of some basic components of a building.
- To introduce the different components of a building and its functions.
- To inform the properties, characteristics and use of bamboo, palm, straw, etc. and methods of preservation and treatment.
- To sensitize the students to the use of these naturally occurring materials in the context of creating a green architecture and learn the application by doing relevant details of construction and drawings also.
- To encourage students to study both in classrooms & also at worksite in order to get the practical exposure.

MODULE : I INTRODUCTION TO BUILDING MATERIALS & CONSTRUCTION

12

Introduction to the buildings elements –substructure and superstructure. Understanding the elements and the role of each building element: Foundations, plinths, openings, lintels, roof, and parapet.

Introduction to Building construction drawings and building detail models.

Introduction to the natural materials buildings made up of - rocks, stone, soil, bamboo, straw bales. Understanding their usage.

NOTE: Students must submit a case study example to understand and identify materials used in the building and their method of construction etc.

MODULE : II ROCKS AND STONE **18**

Classification of rocks. Sources, Seasoning, Quarrying of stones, Dressing. Various types of stones used for construction. Characteristics of stones. Common building stones and their uses. Selection of stones. Testing of stones. Various stone finishes like dressing, polishing. Deterioration of stones. Preservation of stones. Durability. Stone veneering, Artificial stones. Stone for wall treatment.

Drawings of types of masonry - random rubble and ashlar.Drawings of stone foundation, lintel, sill, cavity walls, flooring, arches (semi-circular & segmental), corbel.

NOTE: Studio exercises must focus on understanding, identifying and developing working drawings of the usage of stone (Ashlar, rubble etc.,) for building components including detailing of arches, corbels, coping, sills, lintels, corbels, arches, cladding in small scale buildings like classrooms, snack bar and commMODULE y hall and understanding the same through case studies.

MODULE III SOIL

18

Sand - properties, uses and bulking of sand. Types of soils, Soil formation, grain size distribution, classification system. Characteristics of core, Principles of Soil Stabilization, Types of Stabilizers, Earth techniques & types, Treatment of soil.

Mud architecture: through the ages, advantages & disadvantages, Requirements and Types of mud wall building and surface protection. Detailing of walls, roofs, flooring and foundations using soils (rammed earth, compressed blocks).

NOTE: Design exercises must focus on using soil for building components including detailing of arches, walls, door and window openings in small scale buildings like classrooms, snack bar and commMODULE y hall and understanding of the same through case studies.

MODULE : IV BAMBOO **18**

Bamboo – Bamboo as plant classification, species, geographical distribution, Anatomy of Bamboo. Properties, strength, processing, harvesting, working of Bamboo tools – Treatment and preservation of Bamboo and uses of Bamboo.Cane, gate, coir, coconut - Growth, Form, Shape, Leaves, Flowering, Propagation Roofing materials – Thatch, grass, Bamboo, reeds – Basics – Case studies and applications.

NOTE: Design and Construction Techniques using bamboo for building components for small scale buildings like snack bar, tree house including detailing of doors and windows, arches, barrel walls, weave structures and understanding of the same through case studies

MODULE V: STRAW BALES **9**

Straw as a building material. Physical aspects - Basics, Fire, moisture, insects and pests proof. Plastering straw bale walls, straw bale roof.

NOTE: Design Exercises must focus on using straw bales for building components - foundations systems, Roofing options, plastering, door and window detailing for small scale buildings and understanding of the same through case studies.

TOTAL SESSIONS : 75

TEXT BOOKS:

1. S.C.Rangwala , "Engineering Materials", Charotar Publishing House - Anand 2007
2. Dr.Bala Gopal, "Building Design and Civil Engineering Drawing", Spades Publishers & Distributors, 2008
3. Dr.B.C.Punmia, "Building Construction" Laxmi Publications, 2008.
4. P.C. Varghese, Building Materials, Prentice Hall of India put Ltd New Delhi 110001, 2005.

REFERENCES

1. W.B.Mckay , "Building Construction", Vol. 1,2,3- Longmans U.K 1992.
2. R.J.S.Spencke and D.J.Cook, "Building Materials in Developing Countries", John Wiley and Sons, 1983.
3. HUDCO "All you want to know about soil stabilized mud blocks", HUD Pub., New Delhi, 1989.
4. D Narayanamurty, MODULE ed Nations Department of Economic and Social Affairs," Use of bamboo and reeds in construction", UNO Publications,1972.
5. http://www.baboo-Flooring.com
6. http://ag.avizona.edu/SWES
7. http://www/angelfite.com/in
8. http://www.idrc.ca/library/documents/104800/chapz-e.html
9. http://www/angelfite.com/inz/granite

OUTCOMES:

- Students get sensitized about the need for using ecological materials to create green architecture which will adapt itself to the surrounding environment.
- Students learn about materials, uses of materials, properties characteristics, methods of preservation, treatment and methods of construction.
- Students learn about constructing a building using mind, Bamboo, Straw bale, stone through drawing as well as doing a literature or live case study.
- Students are requested to submit drawing plates consisting of plan, elevation and section along with sketches and details showing method of construction.

ARC B 1105 SKILL DEVELOPMENTS – I 1 1 2

AIM:

To supplement additional course work and advance knowledge in the subjects offered in the semester.

OBJECTIVES

- The primary objective of this course is for communication skill development and technical writing.
- The course is aimed at providing the students with language skills which is an inescapable tool for the young technocrats to break geographical boundaries and step into global world.

COURSE CONTENT:

Seminars, Tutorials/ additional classes for any course, Guest Lectures, putting up Exhibitions, Workshops, participating in Architectural Competitions or conducting Site Visits or Study Tours.

MODULE I : INTRODUCTION 6

Skimming, scanning, inferring, predicting and responding to content - Guessing the meaning of words from contexts - Note making and vocabulary extension.

MODULE II: VOCABULARY DEVELOPMENT 6

Listening and understanding recorded, structured talks and classroom lectures - Comprehending the matter - understanding the links between different parts of speech - practice in note taking.

MODULE III: COMMUNICATION 6

Features of an effective speech-Practice in speaking fluently - Dialogue practice- simple social exchanges - short extempore talks.

MODULE IV: COMPREHENSION 6

Effective sentences-cohesive paragraphs - clear and concise writing - Introduction to technical writing-Definition, Description, Instruction - Summary Writing practice.

MODULE V – RESOURCE UTILIZATION **6**

Use of library - Role of Bibliography, Table of contents, Index etc.-use of Dictionary.

TOTAL SESSIONS : 30

TEXT BOOKS:

1. Jajatilake, C.I.V. and S. Sivasegaram, “Technical Report Writing”. Tata Mc Graw Hill Publishing Corporation Ltd., New Delhi 1979

2. Sasikumar.V. and P.V. Damija “ “Spoken English”. Tata McGraw Hill Publishing Corporation Ltd., New Delhi, 1997

REFERENCES:

1. “How to Rad Fast and Better”. Reader’s Digest, 1983

2. Stanton Nicky,”Mastering Communicaiton”. Mc Millan Master Series, London, 1996

OUTCOMES:

- Students get the ability to apply visual and verbal communication skills at various stages of architectural design and project delivery process.
- Students gains self confidence to get into the global world.

ARC B 1106 ARCHITECTURAL DESIGN STUDIO – I 0 9 6

AIM:

To introduce the meaning of "design" and relate it to "architecture" through an understanding of basic elements of architecture, the principles of design and analysis of design elements. Thereby, sensitize students to be more observant to their surroundings and promote it as a basic creative instinct in the students.

OBJECTIVES:

- To understand the elements and principles of Basic Design as the building blocks of creative design through exercises that will develop the originality, expression, skill and creative thinking.
- To enable the understanding of 3 D Composition which will help generation of a form from a two dimensional / abstract idea?
- To enable the understanding of the relationship between design and architecture which focus on understanding a building form analytically.

COURSE OUTLINE:

The course shall be conducted by giving a number of exercises in the form of design studios, seminars and creative workshops that are aimed at teaching the following:

i. Elements and Principles of Visual Composition using point, line, shape.
ii. Exploring color schemes and their application in a visual composition and in Architectural forms and spaces.
iii. Study of texture and schemes of texture both applied and stimulated and their application
iv. Study of linear and Planar forms using simple material like Mount Board, metal foil, box boards, wire string, thermocol etc.
v. Study of Solids and voids to evolve sculptural forms and spaces and explore the play of light and shade and application of color.
vi. Study of fluid and plastic forms using easily mouldable materials like clay, plaster of paris etc.
vii. Analytical appraisal of building form in terms of visual character, play of light and shade, solids and voids etc.
viii. Application of Basic design through design of simple architectural elements like entrance gates, walls, courtyards, porches, etc.

TOTAL SESSIONS: 200

REQUIRED READINGS

1. Owen Cappleman & Michael Jack Jordon, Foundations in Architecture: An Amotated Anthology of Beginning Design Project, Van Nostrand Reinhold New York, 1993.
2. Charles Wallschlacgerm & Cynthia Busic-Snyder, Basic Visual Concepts and Principles for Artists, Architects and Designers, Mc Graw Hill, New York 1992.

REFERENCES

1. V.S.Pramar, Design fundamentals in Architecture, Somaiya Publications Pvt. Ltd., New Nelhi, 1973.
2. Francis D.K.Ching - Architecture - Form Space and Order Van Nostrand Reinhold Co., (Canaa), 1979.
3. John W.Mills - The Technique of Sculpture, B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London, 1966.
4. Elda Fezei, Henny Moore, Hamlyn, London, New York, Sydney, Toronto, 1972.
5. C.Lawrence Bunchy - Acrylic for Sculpture and Design, 450, West 33rd Street, New York, N.Y.10001, 1972.

OUTCOMES:

- An understanding of the qualities of different elements as well as their composite fusions.
- An ability to engage and combine the elements of design in spontaneous as well as intentionally in order to create desired qualities and effects.

AR C B 1107 ALLIED DESIGN STUDIO - I 1 5 4

To teach students the schemes/ subjects which are allied to Architectural design studio course. Output from this course will be in the form of projects.

AIM:

This course is aimed to understand the Visual & aesthetic qualities of Art and relating these to Architectural Design situation. Thereby, provide knowledge of various visual arts and its importance. It further aims at developing the freehand drawing and rendering skills in different medium and using it as tool of expressing ideas visually.

OBJECTIVES:

- Development of student's vision regarding 3-D forms (models and sculptures) in different materials for specific themes/expressions to develop creative/ imaginative thinking.
- To develop Visual practices, visual compositions using real world materials Similarity & self-similarity understanding diversity Natural & artificial forms/colors/textures; inherent/applied.
- Develop skills to understanding various tools, processes and material.
- Impart a good foundation in design through hands-on experience in designing simple two dimensional and three dimensional compositions.

NOTE: Exercises involved in Architectural Design studio need to be taken up as part of Allied design studio work wherein the Artist has to guide and teach the students in executing the exercises involved using the required tools and mediums.

MODULE I : FUNDAMENTALS 13

Introduction to different instruments, Instrument handling. Tabletop cutting, joining, and shaping Materials and media installations assembly, etc. Introduction to the fundamentals of drawing/ drafting.

MODULE II: ORGANIZATION OF SHAPES 18

Organization of shapes; Family of shapes: developing various shapes from a given geometric shape - working out composition with such developed shapes.

Expressing a given theme combining different geometric shapes; expressing

a design/pattern.

MODULE III - REPESEANTATION MEDIUM AND TECHNIQUES 15

Understanding the usage of different media like, water soluble color pencil, pen and ink, oil pastels, dry crayons etc and analyzing various campus buildings designed by internationally famous architects in terms of Depth, light, Shade, Etc.,

Understanding the various techniques in representing Indoor objects – still Life – Furniture, Equipment – Outdoor objects: Natural Forms/ Built Forms.

Understanding variety in Forms. Sketching Human Form: Anatomy and Expressions.

MODULE IV: EXPRESSION OF DESIGN 18

Development of geometric pattern by division to express them with the use of colors to expressing a given theme through design exercises.

MODULE V: MODEL MAKING 18

Introduction to various mediums/materials such as POP, wire/ matchstick, soap, clay, wood etc.

Concepts of model making - Additive model; Subtractive model out of a given geometric form. Models with linear members such as match sticks, reeds, etc. to understand geometric form and structure.

TOTAL SESSIONS: 75

TEXT BOOKS :

1. Albert O.Halse, Architectural Rendering. A techniques of contemporary – presentation McGraw Hill Book Company, New York, 1972.
2. Mulick Milind, Water colour, Jyotsna Prakasan, Mumbai 2002.
3. Jim Legitt, "Drawing Shortcuts", John Wiley & sons Inc, 2010.
4. Farey; A. Cyril, Architectural Drawing perspective and Rendering – A Hand Book for students and draftsmen.

REFERENCES:

1. Webb, Frank, "The Artist guide to Composition, "David & Charles, U.K., 1994.
2. Moivahuntly, "The artist drawing book", David & Charles, U.K., 1994.
3. Drawing a Creative Process", Ching Francis, Van Nostrand Reinhold, New York, 1990.
4. Arundell (Jan) Exploring sculpture, Mills and Boon, London/Charles, T.

Brand Ford Company, U.S.A.

COURSE OUTCOMES:

- Model making involving basic design principles & exposure to different mediums & materials of models.
- Develop skills to understanding various tools, processes and material.
- To develop visual practices, visual compositions using real world materials Similarity & self-similarity understanding diversity Natural & artificial forms/colors/textures; inherent/applied.

SEMESTER II

ARC B 1201 THEORY AND PRINCIPLES OF DESIGN 3 0 3

AIM:

To provide an understanding of architectural design process and apply the same to the process of architectural design. Thereby, impart knowledge about the various processes in architectural design.

OBJECTIVES:

- To introduce factors that lending meaning to architecture, expression, communication.
- To introduce the aspects of style, character and architectural movements
- To understand the generation of individual meaning in architecture through study of philosophies/theories and exemplary works of architects
- To introduce thorough case studies, tools for representing, analyzing and interpreting architecture.
- To actually learn to represent, analyze and interpret the architectural experience holistically through live case studies.

MODULE I MEANING IN ARCHITECTURE 6

Architecture as a vehicle of expressing, symbolism and communication- Illustrative examples

MODULE II ARCHITECTURAL CHARACTER 9

Ideas of character, style, architectural movement: Illustrative examples across various periods in history.

MODULE III WORKS OF ARCHITECTS 12

Role of individual architects in the generation of architectural form, through study of exemplary works, architectural inspirations, philosophies, ideologies and theories of architects.

MODULE IV ANALYZING ARCHITECTURE 9

Introduction to modes of understanding architecture in totality in terms of the various aspects studied before in the subject – understanding how case studies have used representational, analytic and interpretational tools

MODULE V EXPERIENCING ARCHITECTURE **9**

Understanding architecture in totality in terms of the various aspects studied in this course firsthand experience, analysis and interpretation of building

TOTAL SESSIONS: 45

TEXT BOOKS :

1. Bryan Lawson – How Designers Think – Architectural Press London, 1980.

2. Paul Alan Johnson – Theory of Architecture – concepts, Themes, and Practices.

3. Christopher Alexander – Pattern language – Oxford university press – 2003.

REFERENCES :

1. Christopher Jones – Design Methods

2. Edward De Bona – Lateral Thinking

3. Tom Heath – Methods in Architecture – John Wiley and sons – N.Y. 1984.

OUTCOMES:

- An understanding the meaning of character and style of buildings with examples.
- An exposure to students on ideologies and philosophies of architectures of contemporary architects through examples.
- An exposure to analysis and experience of architecture through case studies.

ARC B 1202 ENVIRONMENTAL STUDIES 3 0 3

AIM

To sensitize the students to understand the diversities and complexities in natural environments and the need for intervention in the context of global warming and climate change.

OBJECTIVES

- To provide an overview of natural resources, various ecosystems & its characteristics and conservation of biodiversity
- To create an awareness about impact of human activities such as pollution and its consequences.
- To stress the importance of environmental protection and sustainable development.

METHODOLOGY:

Visit to a local area to document environmental asserts-river/ forest/ grassland/ hill/ mountain.

Visit to a local polluted site - Urban/ Rural/ Industrial/ Agricultural. Study of common plants, insects, birds. Study of simple ecosystem-pond, river, hill slopes, etc. (Field work Equal to 5 lecture hours)

MODULE I INTRODUCTION TO OF ENVIRONMENTALSTUDIES 9

Definition, Scope and importance; Need for public awareness

MODULE II RENEWABLE AND NON-RENWABLE RESOURCES 9

Natural resources and associated problems: Forest resources, Water resources: Mineral resources:. Food resources:. Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies. Land resources: Role of an individual in conservation of natural resources equitable use of resources for sustainable lifestyles

9

MODULE III ECOSYSTEMS AND ENVIRONMENTAL POLLUTION

Structure and function of an ecosystem Procedures, consumers and decomposers Energy flow in the ecosystem. Ecological succession

Food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystem:

Causes, effects and control measures of: Air pollution Water pollution Marine pollution, Noise pollution Thermal pollution nuclear pollution

Soil waste Management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: Floods, earthquake, cyclone and landslides.

MODULE IV SOCIAL ISSUES AND THE ENVIRONMENT 9

From unsustainable to sustainable development urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and re habitation of people; its problem and concerns. Case studies. Environmental ethics: Issues and possible solutions. Climate changes, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.

MODULE V HUMAN POPULATION AND THE ENVIRONMENT 9

Population growth, variation among nations. Environment and human health. Human rights. Value education. Role of information Technology in Environment and human health. Case studies.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. Miller T.G. Jr., “Environmental Sciences”, Wadsworth Publishing Co. (TB)
2. Cunningham, W.P. Cooper, T.H. Gorhani, E & Hepworth, M.T., “Environmental Encyclopedia”, Jaico Publ. House, Mumbai, 2001

REFERENCES:

1. Hawkins.R.E, “Encyclopedia of Indian Natural History”, Bombay Natural History Sdociety, Bombay (R).
2. Heywood, V.H & Watson, R.T. “Global Biodiversity Assesment” Cambridge Univ. Press, 1995
3. McKinney, M.L & Schoch, R.M., “Environmental Science System & Solutions”,

Web enhanced edition., 1996

4. Trivedi R.K., “Handbook of Environmental Laws, Rules, Guidelines, Compliances and Standards”, Vol I and II, Enviro Media (R).

OUTCOMES:

- The students would have understood the effects of the existing natural resources and the need for preserving them.
- Knowledge on the functions of several of ecosystems will help the students to design the processes that are eco friendly.
- Knowledge on the different types of pollution will help the young minds to device effective control measures to reduce rate of pollution.
- Educating on the various aspects of population explosion will create awareness on population control for effective utilization of the resources and the need to explore new alternate energy resources for a healthy environment.

ARC B 1203 THEORY AND DESIGN OF STRUCTURES– I 3 0 3

AIM:

To make Students to understand the behavior of structural system, material and geometric properties of structural sections.

OBJECTIVES:

- To study the effect of action of forces on a body and the concept of equilibrium of the body through exercises
- To determine the internal forces induced in truss member due to external loads by working out problems
- To calculate the sectural properties (centroid, moment of inertia, section modulus and radius of gyration) for various sections by working out problems
- To study the Stress - strain behaviors of steel and to drive the relationship between elastic constant and solving problems
- To study the structural properties of various material

MODULE I FORCES 9

Definition - Coplanar - Concurrent - Non-Concurrent - Parallel Forces - Triangular and Parallelogram Law of Forces - Equilibrium of Forces - Conditions for Static Equilibrium - Concept of Transfer of Forces in Beams, Cables,-Determinate and indeterminate structures.

MODULE II PLANE TRUSSES 9

Introduction to Determinate and Indeterminate plane trusses - Analysis of simply supported and cantilevered by method of joints

MODULE III PROPERTIES OF SECTIONS AND SOLIDS 9

Area - Centroid - C.G of Various Sections (Including Cutout Holes) - Moment of Inertia - Parallel & Perpendicular Axis Theorem - Moment of Inertia of Various Sections - Section Modulus.

MODULE IV ELASTIC PROPERTIES 9

Definition -Stress, Strain - Tensile, Compressive & Shear - Linear & Lateral Strain - Poisson's ratio - Stress Strain Curve for Mild Steel & High Tensile Steel - E,K,G and their Relationships - Application to Uniform Section

MODULE V TYPICAL STRUCTURAL MATERIALS & CONTEMPORARY ADVANCEMENT **9**

Introduction to type, Structural properties and Application of: stone - timber - bricks - other metals-concrete - composite - glass – paper

TOTAL SESSIONS: 45

TEXT BOOKS:

1. R.K. Bansal, "A text book on Strength of Materials", Lakshmi Publications, Delhi 1998

REFERENCES:

1. Junnarkar, "Mechanics of Structures" (Vol - I), 21st edition, Charotar publishing house India, 1995
2. Bansal.R.K., "Strength of Materials", Laxmi Publications Pvt Limited, India, 1990.
3. Rajput.R.K., "Strength of Materials", S.Chand &Co, New Delhi, 1996.
4. Punmia.P.C., "Strength of materials and Theory of structures", Vol 1, Laxmi publications, Delhi, 1994.
5. Ramamrutham, "Strength of Materials", Dhanpatrai & Sons, Delhi, 1990.

OUTCOMES:

- The students would have understood the structural properties of various materials.
- Knowledge on the functions and effects of forces on a body and the concept of equilibrium of the body through exercises.
- An exposure to structural properties and applications of different materials used in the building industry.

ARC B 1204 BUILDING MATERIALS AND CONSTRUCTION – II 1 4 4

AIM:

This course is a combination of lecture & studio classes aimed at developing the students understanding of materials their properties and construction techniques, for appropriate application.

OBJECTIVES:

To expose the students to TIMBER and its construction techniques, and to enable them to represent the different building components through relevant drawings.

METHODOLOGY:

The course is visualized as having three essential components viz..,

- A lecture course in materials and methods of construction
- A construction studio wherein principles and practices shall be applied to the production of meaningful details
- Preparation of working details and drawings
- Site visits to gain knowledge about construction details.

MODULE – I: TIMBER 9

Softwood and Hardwood - Secondary Timber - Physical properties and uses - Defects, Conversion, Seasoning, Decay and preservation of timber - Fire retardant treatment, anti-termite treatment.

MODULE – II TIMBER AND ALIED PRODUCTS 9

Industrial timbers - plywood, block board, particle board, fiber boards. uses - current developments.

Timber board –Plywoods – Block Boards - Particles Boards – Hard Boards - Veneers. Eco Friendly Boards – Eco Boards, Soft Boards, Nuwood, and Laminates

MODULE – III USAGE OF TIMBER AND ALIED PRODUCTS

9

Timber in Doors and Windows - Fully panelled single and double shutter doors of various types and sizes, fully glazed window and ventilators details of joints. Fixed glass and timber louvered windows.Drawings of timber joinery for

Windows, doors, ventilators. Timber partitions,

Timber in Floors – Single, double and framed floors with joints between joist with wall plate, joist with beam and sub beam with main beam, strutting of joists, use of templates, for support. Timber Boarded and parquette Floors for gymnasia and dance halls, Wall lining in soft board timber etc. for offices.

Staircases – Trade and riser and relation between them, single, double (Dog legged and open well) Timber staircases - Designed staircase -timber trusses - Lean to - close couple - Kingpost - Queen Pot - Trusses.

timber built-in-furniture - Detailing and fittings for physically handicapped.Exercises involving the above through drawing and case studies.

MODULE – IV PAINTS AND VARNISHES **3**

Paints and Varnishes – Composition, properties and uses of ordinary paints.Varnishes and wood preservatives, method of painting of timber.

MODULE – V: BAMBOO **9**

Bamboo -plant classification, species & geographical distribution -Bamboo : Anatomy, Properties, strength, working of Bamboo tools - Treatment and preservation of Bamboo and uses of Bamboo. Cane, gate, coir, coconut - Growth, Form, Shape, Leaves, Flowering, Propagation.

TOTAL SESSIONS : 45

TEXT BOOKS:

1. W.B. Mickay, “Building construction Vol 1,2 and 3”, Longmans, UK 2005.
2. R.Chudley, ”Building Construction Handbook”, Elsevier/Butterworth-Heinemann2006.
3. S.C.Rangwala, “Engineering materials”, Charotar Publishing, 2011.
4. S.P.Arora & S.P.Bindra, “Text book of Building Construction”, Ganpat Rai Publications (P) Ltd, New Delhi, 2013
5. B.C. Punmia, “Building Construction”, 2005
6. P.C. Varghese, “Building Materials”, Prentice Hall of India put Ltd New Delhi 110001, 2005

REFERENCES:

1. Don A.Watson, “Construction Materials and Processes”, McGraw Hill Co.,1992.
2. Alanwerth, “Materials”, The Mitchell Pub.Co.Ltd., London,1986.
3. http://www.ibex-ibex-intl.com

4. http://www.inika.com/chitra
5. http://www.routbdge.com
6. http://www.venturaindia.com

OUTCOMES:

- The students would gain comprehensive knowledge about timber and its allied products with its application in interior and exterior.
- An exposure to thorough details of bamboo and its treatment.
- The students would gain knowledge about paints and varnishes and its application on timber.

ARC B 1205 SKILL DEVELOPMENT – II 1 1 2

AIM:

To supplement additional course work and advances knowledge in the subjects offered in that semester.

OBJECTIVES:

- The primary objective of this course is for communication skill development and technical writing. The course is aimed at providing the students with language wherewithal which is an inescapable tool for the young technocrats to break geographical boundaries and step into global world.

COURSE CONTENT:

Seminars, Tutorials/ additional classes for any course, Guest Lectures, putting up Exhibitions, Workshops, participating in Architectural Competitions or conducting Site Visits or Study Tours.

TOTAL SESSIONS: 30

TEXT BOOKS:

1. Eric H. Glendinning & Beverly Holmstrom, "Study reading - A course in reading Skills for academic purposes", Cambridge University Press,1992.
2. John Kirkman, “Good style - writing for science and technology", E&FN Spon, an Imprint of Chapman & Hall, 1992.

REFERENCES:

1. “How to Rad Fast and Better”. Reader’s Digest, 1983
2. Stanton Nicky,”Mastering Communicaiton”. Mc Millan Master Series, London, 1996

OUTCOMES:

- Students gets the ability to apply visual and verbal communication skills at various stages of architectural design and project delivery process.
- Students gains self confidence to get into the global world.

ARC B 1206 ARCHITECTURAL DESIGN STUDIO- II 0 14 6

AIM:

To enable the conceptualization of form, space and structure through creative thinking and to initiate architectural design process deriving from first principles.

OBJECTIVES:

- To involve students in a design project(s) that will involve simple space planning and the understanding of the functional aspects of good design.
- To involve students in a small scale building project(s) which will sensitize them to intelligent planning that is responsive to the environmental context.
- To involve students in building case study by choosing appropriate examples to enable them to formulate and concretize their concepts and architectural program.
- To engage in discussion and analytical thinking by the conduct of seminars/ workshops.
- To enable the presentation of concepts through various modes and techniques that will move constantly between 2D representation and 3D modeling.

CONTENT:

Scale and Complexity: projects involving small span, single space, single use spaces with simple movement, predominantly horizontal, as well as simple function public buildings of small scale; passive energy

Areas of focus/ concern:

- architectural form and space
- aesthetic and psychological experience of form and space in terms of scale, colour, light, texture, etc.,24
- function and need: user requirements, anthropometrics, space standards, circulation
- image and symbolism

Typology/ project: shop, exhibition pavilion, children’s environment, snack bar, residence, petrol bunk, fire station,etc.,

TOTAL SESSIONS: 225

TEXT BOOKS:

1. De. Chiara and Callender, "Time-saver Standards for Building Types", McGraw-

Hill Co., New York, 1973.
2. The Handbook of Building Types., NEUFERT ARCHITECTS DATA, New International edition, second international edition. BSP Professional Books. Oxford (1980) Blackwell scientific Publications.
3. Time - Saver Standards for Architectural Design Data, seventh edition. The reference of architectural fundamentals McGraw hill international edition, architectural series (1998).
4. Ed.By.Quentin Pickard RIBA "The Architects' Hand Book", Bladewell Science Ltd., 2002

REFERENCES:

1. Handbook on Building Construction Practices (Excluding Electrical Work). Bureau of Indian Standards, New Delhi, 1997
2. National Building book of India 2005, Bureau of Indian Standards, New Delhi
3. Macmillan Encyclopedia architects, Vol II, The free press, London, 1982
4. A visual dictionary of Architecture, Francis D.K.Ching, John wiley & Sons, Inc. 1997
5. www.design basics.com/-(on house type - Americans)
6. http://www.geosystems.gatech.edu/ - (on detail design method)
7. http://www.c.s.berkely.edu/ - (on bubble diagram builder with interaction)
8. http://www.plannet.com/resources.htme - (on resource info)

OUTCOMES:

- Students gets the ability to understand and design small scale building projects.
- They will able to solve the design problem functionally.
- Gain knowledge about the design process and its various faces to solve a design problem.
- Enable to express the ideas in the form of 2D representation and 3D modelling.

ARC B 1207 ALLIED DESIGN STUDIO - II 0 3 4

AIM:

To teach students the schemes/ subjects which are allied to Architectural design studio course. Impart a good foundation in design through hands-on experience in designing simple two dimensional and three dimensional compositions. Output from this course will be in the form of projects.

OBJECTIVES:

- Development of student's vision regarding 3-D forms (models and sculptures) in different materials for specific themes/expressions to develop creative/ imaginative thinking.
- To develop Visual practices, visual compositions using real world materials Similarity & self-similarity understanding diversity Natural & artificial forms/colors/textures; inherent/applied

MODULE I: INTRODUCTION TO MACHINERY TOOLS 40

Building skills studio work culture; instruments, tabletop; cutting, joining, shaping Materials and media installations assembly. Understanding & creating awareness on environmental impacts on the nature by the daily use materials by exploring lateral thinking to use the recycling materials in to usable models and create a new product.

Introduction to carpenter’s tools, Wood working machines, use of different kinds of wood, Sawing, Planning and Shaping of wood, Making of selected joinery used in construction work, polishing of wood. Demonstration and practical lesson on soldering, brazing, forging and gas welding. Demonstration of foundry shop practice-introduction to molder’s tools, preparation of moulding sand.

Introduction to machine tools with demonstration of cutting, drilling, grinding, slotting, shaping, bending etc. Names and uses of different kinds of fitter’s tools and measuring instruments, care and maintenance, practice in chipping, filling, scraping and fitting.

MODULE : II WORKSHOP 35

Basic, design, graphic design, product design, furniture design, model making.

Use of hand tools and materials in carpentry, Glass models, masonry and model making involving basic design principles & exposure to different mediums & materials of model - making which involves making three dimensional sculptures involving the basic platonic solids and abstract sculptures using various techniques/ materials such as POP, wire/ matchstick, soap, clay, etc

TOTAL SESSIONS : 75

TEXT BOOKS:

1. Arundell (Jan), Exploring Sculpture, Mills and Boon, London/Charles T.Branford Company, USA, 1972.
2. John W.Mills, The Technique of Sculpture, B.T.Batsford Ltd., New York Reinhold Publishing Corpn., London, 1966.

2. http://www.geosystems.gatech.edu/ - (on detail design method)
3. http://www.c.s.berkely.edu/ - (on bubble diagram builder with interaction)

OUTCOMES:

- Model making involving basic design principles & exposure to different mediums & materials of models.
- Develop skills to understanding various tools, processes and material.
- To develop visual practices, visual compositions using real world materials Similarity & self-similarity understanding diversity Natural & artificial forms/colors/textures; inherent/applied.

SEMESTER - III

ARC B 2301 HISTORY OF BUILT ENVIRONMENT - II 3 0 3

AIM:

The course outline shall follow a chronological study of architecture as it develops over the following Islamic periods: from Imperial to Mughal Architecture.

OBJECTIVES:

- To understand the different layers of history, i.e. Islamic rule in India.
- To introduce the students in diverse planning of Mosques in chronological order (till contemporary)
- To trace out the changes in history of art, culture and architecture in different states. (Example, provincial style in Gujarat, Malwa, Deccan, etc...)
- To understand the fruition of Historical structures involved in and around India.
- To figure out, the basic concepts involved in city planning, this influenced the modern town planning thus arriving the term "Urbanism" in history. (e.g. FatehpurSikri, Tughlaquabad, Mandu)
- To understand the concepts involved in setting up the Mughal garden (tomb and pleasure gardens) in formal landscape.

MODULE I INTRODUCTION TO ISLAMIC ARCHITECTURE 9

Brief History of Islam in terms of birth, spread across countries and principles - Influences on Islamic Architecture - Evolution of building types in terms of forms and functions - the mosque, the tomb, andMinaret, the madarasa, the palace, the caravanserai, vernacular architecture, the market - important.

MODULE II PRINCIPLES AND ELEMENTS 9

Principles, elements and character of Islamic architecture in terms of structure materials and methods of Construction, elements of decoration, colour, geometry, light - important examples to illustrate development of Islamic architecture.

MODULE III ISLAMIC ARCHITECTURE IN INDIA- DELHI OR IMPERIAL STYLE 9

Brief history of development and classification, different styles and regions.Development of architectural style during the rule of the Slave, Khilji, Tuqlaq, Sayyid and Lodhi Dynasties important examples for each period.

MODULE IV PROVINCIAL STYLE 9

Development of the provincial styles in different regions - Punjab, Jaunpur, Bengal, Gujarat, and Malwa, the Deccan (Bijapur, Golconda, Bidar and Gulbarga) - important examples for each style.

MODULE V MUGHAL STYLE 9

Development of the Mughal style under the different rulers - Babur, Shershah, Humayun, Akbar, Jahangir, Shahjahan, Aurangazeb - important examples - development of the Mughal garden - important examples.

TOTAL SESSIONS: 45

TEXT BOOK

9. http://www.ets.uidaho.edu/arch499/nonwest/Islam1.html
10. http://indiagateway.com/culture/architecture.html

OUTCOMES:

The students should be able to:

- Identify and discuss the finer points and nuances of Islamic architecture and its influence on the development of Architectural sciences and styles.
- Provide an understanding on the various styles and the ruler patrons who influenced the development of this style of architecture.
- Realize the techniques and wonders behind various Islamic architectural and landscaping elements and principles and re-interpret them in today's context.
- Discuss the impact of colonialism and the wealth of architectural legacy the period introduced in India
- Critically evaluate historical principles and methods and impart that learning to create informed and relevant current architectural solutions that are meaningful and rooted in our historic and traditional knowledge and wealth.

ARC B 2302 CLIMATIC DESIGN 3 0 3

AIM:

To enable the understanding of the technical basis of the environment that exists in or around a building and to integrate the requirements of climate in building and in relation to building functions.

OBJECTIVES:

- To study human heat balance and comfort.
- To familiarize students with the design and settings for buildings for daylight and factors that influence temperature.
- To inform about the air pattern around buildings and the effect of wind on design of buildings
- To expose the students to the various design strategies for building in different types of climatic zones.

MODULE I CLIMATE AND HUMAN COMFORT 9

Factors that determine climate of a place - Components of Climate - Climate classifications for building designers in tropics - Climate characteristics. Human body heat balance – Body heat balance - Effects of climatic factors on human body heat loss - Effective temperature - & Comfort zone, Human thermal comfort - Thermal comfort factors and indices.

MODULE II DESIGN OF SOLAR SHADING DEVICES 9

Movement of sun - Locating the position of sun - Sun path diagram - Overhead period-Solar shading -Shadow angles - Design of appropriate shading devices

MODULE III HEAT FLOW THROUGH BUILDING ENVELOPE CONCEPTS 9

The transfer of heat through solids - Definitions - Conductivity, Resistivity, Specific heat, Conductance, Resistance and Thermal capacity - Surface resistance and air cavities- Air to air transmittance (U value) - Time lag and decrement

MODULE IV IMPACT OF AIR MOVEMENT DUE TO NATURAL AND BUILT FORMS 9

The wind - The effects of topography on wind patterns - Air currents around the building - Air movement through the buildings - Layout planning for air movement – Wind rose- Wind shadow- Ventilation controls and their applications in buildings- Thermally induced air currents. The use of fans - Thermally induced air currents - Stack effect, Venturi effect - Use of court yard.

MODULE V CLIMATE AND DESIGN OF BUILDINGS 9

Design strategies in warm humid climates, hot humid climates, hot and dry climates and cold climates - Climate responsive design exercises. Analysis of case studies, vernacular expression.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. Koenigsberger and others, "Manual of Tropical Housing and Building" - Part I - Climate design, Orient Longman, Madras, India, 1993.
2. Bureau of Indian Standards IS 3792, "Hand book on Functional requirements of buildings other than industrial buildings", (Part I - IV), Manakbhavan, 9, Bahadur Shah Zafar Marg, New Delhi - 110002, 1987

REFERENCES:

1. Martin Evans, "Housing Climate and Comfort", Architectural Press, London, 1980
2. B. Givoni, Man, "Climate and Architecture", Architectural Sciences Series - Applied Science Publishers Ltd., London, 1981
3. B. Givoni, "Passive and Low Energy Cooling of building", Van Nortrand Reinhold New York, USA, 1994
4. Galloe, Salam and Sayigh A.M.M., "Architecture, Comfort and Energy", Elsevier Science Ltd., Oxford, U.K, 1998

COURSE OUTCOMES:

- Have a broad knowledge of climate and human and building interactions with details regarding the movement of the sun and its effect.
- Be aware of the physics of heat transfer through materials and building elements.
- Be familiar with the dynamics of air-movements in and around buildings.
- Be able to place this specialized knowledge in the context of the design of

buildings and the wider subject

- Be able to critically evaluate the wider implications of how human beings interact with their environment
- To be able to think in an innovative and creative way
- Be able to address particular practical issues such as designing of shading devices based on sun path diagram.

ARC B 2303 THEORYAND DESIGN OF STRUCTURES- II 3 0 3

AIM:

To sensitize the students to understand the diversities and complexities in natural environments and the need for intervention in the context of global warming and climate change.

OBJECTIVES

- Understanding of basic theories and principles of structural analysis
- Understanding of properties of materials relevant to structural analysis.
- Understanding of behavior of structural elements under various conditions.

SESSIONAL WORK : • Testing of various materials such as brick cement, sand etc. in the workshop. • Seminars on soils, foundations and frame structures and documentation of the same. • Plates on soil aspects.

MODULE I. BEHAVIOUR OF STRUCTURAL ELEMENTS 9

Understanding and identifications of location of forces, bending moment and bending stress in fixed beams, over hanging beams, continuous beams, portal frames etc

Deflection in simply supported beams and cantilevers with distributed and point loads. Columns and struts-short and long columns, slenderness ratio etc. Combined bending and direct stresses , axial and eccentric loads effect of eccentricity, e. g. masonry wall , chimney.

Fixed beams simple support and fixed support, advantages and disadvantages. Determination of positive and negative bending moments in fixed beams. (confine the loading to point and UDL covering full span only).

Continuous beams – negative and positive bending moments in continuous beams covering two or more spans of uniform section and simple loading by moment distribution method. Symmetrical Portal frames.Strain Energy.

MODULE II. FOUNDATION DESIGN - SOIL ASPECTS 9

Importance of the subject.Types of soils and their properties. • Methods of compaction and consolidation.

Void ratio, porosity, bulk density, moisture content, degree of saturation, liquid limit, plastic limit. Etc.Test for assessing load bearing capacity of soil.

Soil properties and characteristics relevant to the design of foundations.Criteria for selection of foundation type for different soil

conditions. Effect of water level , settlement of soil.Failure of foundation systems.Improvement of soil properties. • Design procedure for simple load bearing foundations.

MODULE III PLANE TRUSSES **9**

Introduction to Determinate and Indeterminate plane trusses - Analysis of simply supported and cantilevered by method of joints

MODULE IV TYPICAL STRUCTURAL MATERIALS & CONTEMPORARY ADVANCEMENT **9**

Introduction to type, Structural properties and Application of: stone - timber - bricks - other metals-concrete - composite - glass – paper.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. R.K. Bansal, "A text book on Strength of Materials", Lakshmi Publications, Delhi 1998

REFERENCES:

1. Junnarkar, "Mechanics of Structures" (Vol - I), 21st edition, Charotar publishing house India, 1995
2. Bansal.R.K., "Strength of Materials", Laxmi Publications Pvt Limited, India, 1990.
3. Rajput.R.K., "Strength of Materials", S.Chand &Co, New Delhi, 1996.
4. Punmia.P.C., "Strength of materials and Theory of structures", Vol 1, Laxmi publications, Delhi, 1994.
5. Ramamrutham, "Strength of Materials", Dhanpatrai & Sons, Delhi, 1990.

COURSE OUTCOMES:

- Study the effect of action of forces on a body and the concept of equilibrium of the body through exercises
- Study the Stress - strain behaviors of steel and to drive the relationship between elastic constant and solving problems
- Study the structural properties of various material

ARC B 2304 BUILDING MATERIALS AND CONSTRUCTION – II 2 4 4

AIM:

The course is designed to facilitate the students with construction practices pertaining to Concrete, for appropriate application.

OBJECTIVES:

- To develop an awareness about the various ingredients and composition in concrete.
- To understand the importance and use concrete in construction, through drawings.
- To expose the students to the importance and use of concrete in the modern Construction industry.
- To familiarize the students with the modern building products and their application through drawings.

MODULE I CONCRETE TECHNOLOGY 15

Cement - Composition, strength, properties, manufacture, test and types. Sand - Composition, strength, properties, manufacture, M-Sand test and types.

MODULE II COARSE AGGREGATE 15

Coarse aggregate - Composition, strength, properties, Extraction, test and types. Water - cement ratio, workability, curing, water-proofing, gMODULE ing, Special concrete, Manufacture, contruction of formwork, Integration of steel in concrete, Joints in concrete, Concrete finishes.

MODULE III TYPES OF CONCRETE AGGREGATES & CONCRETE 15

Lightweight aggregate , High density concrete , Aerated Concrete, No-Fines Concrete, Polymer concrete, Reinforced Cement Concrete, Pre-Stressed Concrete, Ready - mixed & under water concreting - Exercise involving the same.

MODULE IV CONCRETE IN CONSTRUCTION 15

Framed Structures, Foundations, Footings, Concrete Floors,Walls&Partitions,Concrete lintels, Arches, Sunshades, Concrete Slabs, Concrete beams &Columns, Concrete Staircases - Historical overview,

sculptural

MODULE V R. C. C. CONSTRUCTION 15

Frame construction, advantages over load bearing construction, study of column grid, detailing of R. C. C. work with reinforcement for slabs, beams, columns, footing, staircases (ordinary and spiral).

TOTAL SESSIONS: 75

TEXT BOOKS:

1. Dr.B.C.Punmia, "Building Construction", Firewall Media , 2005.
2. Francis D.K.Ching, "Building Construction Illustrated" ,John Wiley & Sons Inc, 2002.

3. Alan Banc, "Stairs, Steps and Ramps", Butter worth Heinemann Ltd., 1996
4. M.S.Shetty, "Concrete Technology-Theory and Practice", S.Chand & Co. Ltd., New Delhi, 2005.
5. W.B.Mckay , "Building Construction" , Longmans, UK, 1981
6. Economy/companies/construction/concrete/materials
7. http://www.easyads.co.2a/yellow/india/construct
8. http://www.concrete.t.v-tokyo.ac.ip
9. www.larsentoubro.com
10. www.dalmiacement.com/index.html

COURSE OUTCOMES:

- The students will able to design medium and large span low rise structure, of RCC
- They can design RCC stair case of appropriate form and structural system.
- Incorporate structural glazing /curtain wall in the architectural design of buildings.

ARC B 2306 ARCHITECTURAL DESIGN III 0 16 8

AIM:

The aim of the course is to emphasis and evolves the methodology for architectural design with reference to the previous knowledge of function and aesthetics. The design should highlight clear approach to the design with concept, Analysis, Synthesis and clarity of details (like barrier free design considerations), along with architectural expression with use of appropriate graphic presentation techniques.

OBJECTIVES:

- To foster understanding about land and landforms and the elements of built space.
- Experimentation with shapes and forms to evolve sensitivity to built volumes.
- Focus on studying patterns in horizontal circulation in built areas, with creativity.

CONTENT:

The projects would address the study of built form and its relationship to the site, surroundings and climatic setting. Design proposals to address sensitivity to climatic and physical settings. The design problem would induce students to experiment with built and open spaces.

Design of a simple building for public activity in a non urban setting, or a situation without urban regulatory controls.

AREAS OF FOCUS/ CONCERN:

- architectural form and space
- aesthetic and psychological experience of form and space in terms of scale, colour, light, texture, etc.,
- function and need: user requirements, anthropometrics, space standards, circulation
- image and symbolism

TYPOLOGY/ PROJECT:

Residential buildings, Institutional buildings: banks, nursery or primary schools, primary health centers etc.

TOTAL SESSIONS: 225

TEXT BOOKS:

1. Joseph De Chiara, Julius Panero, Martin Zelnik, "Time Saver Standards for Interior Design and Space Planning", McGraw Hill, 2001.
2. Ernst, "Neuferts Architects Data", Blackwell, 2002
3. Ramsey et al, "Architectural Graphic Standards", Wiley 2000

REFERENCES:

1. De Chiara and Callender,"Time Saver Standards Building Types", McGraw Hill Co., 2ND Edition, 1980.
2. Andrew Alpern, "Handbook of Specialty Elements in Architecture", McGraw Hill Book Co., 1982.
3. Mark Karlen, "Space Planning Basics", John Wiley & Sons Inc, 2009.

COURSE OUTCOMES:

- Students gets the ability to understand and design small and medium scale building projects.
- They will able to solve the design problem functionally and aesthetically.
- Gain knowledge about the design process and its various faces to solve a design problem.
- Solve design solution and present in the form of drawing.
- Enable to express the ideas in the form of 2D representation and 3D modelling.

ARC B 2307 ALLIED DESIGN STUDIO - III &COMPUTER GRAPHICS 0 3 4

AIM:

To teach students the schemes/ subjects which are allied to Architectural design studio course. Also to impart a good foundation in design through hands-on experience in designing simple two dimensional and three dimensional compositions. Output from this course will be in the form of projects.

OBJECTIVES:

- Development of student's vision regarding 3-D forms (models and sculptures) in different materials for specific themes/expressions to develop creative/ imaginative thinking.

To intricuse to the students basics of computer education. Sessional work shall consist of presenting a design programme / projects done under graphics II on CAD

MODULE – 1 **30**

It deals with computer fundamentals which are necessary to be efficient with the computer. It deals with basic word processing and spread sheet function with emphasis on application like generation of letters, preparation of report etc. The course then goes on to teach graphic application other than CAD for fast and attractive presentation of themes and ideas.

MODULE - II **30**

Fundamental understanding of the computers to be expose to the extensively technical subject of the CAD. It is expected that the student before going to the second stage would have gone through fundamentals of the Architectural course.. They are now ready to embarge on a more detailed study on the intricacies of architectural. They are expected to apply their basic knowledge and convert same in to a creative output. At this stage visualization of their design is much easier and would help them to identify various error that may have possibly crept in.

MODULE – III **15**

3 D Design and design concept on this software.

TOTAL SESSIONS: 75

TEXT BOOKS:

1. Sham Tickoo, "Autocad 2009; A Problem Solving Approach" Autodesk Press; 1

edition (July 18, 2008)

2. Sham Tickoo, "3D Max Design, 2009: A tutorial Approach", CADCIM Technologies (November 15, 2008)

REFERENCES:

1. AutoCAD reference manual - Autodesk UNC, 1998.
2. AutoCAD architectural users guide - Autodesk Inc., 1998.
3. Elements of Architecture, Rob Krier , Van Nostrand Rein Hold
4. Architectural colour, Pokter
5. Form and Function and Design, Paul Jacquess Grills
6. Principles of three dimensional design , Wang Wucius , Van Nostrand Rein Hold
7. Principles of Two dimensional design, Wang Wucius, Van nostrand Rein hold.
8. Access by design, George A. Covington & Bruce Hannan , Van Nostrand Rein hold 1996.
9. Design through Discovery, Majore Elliot Bevin, Half Rinehart and Wintan, Newyork 1977.
10. Visual thinking for Architects & Engineers , Ron Kasprisin & James Pettinari - Van Nostrand Rein Hold 1995.
11. http://www.sln.fi.edu/-Computer drafting
12. http://www.ccollege.hccs.cc.tx.us/-Comp.graphic

OUTCOMES:

The students should be able to:

- Work on systems with ease of the software understanding the performance of the hardware relatively.
- Create architectural drawings required for their presentations with precision and accuracy. Revising them without spending much time.
- Work at large scale of drawings in terms of Size or complexity in details or levels of a built form.
- Create independent 3d from or convert 2d diagram in to 3d form.

SEMESTER - IV

ARC B 2401 HISTORY OF BUILT ENVIRONMENT - III 3 0 3

AIM:

The course outlines the planning, construction, function and aesthetics of historical buildings and an appreciation of architectural style as a product of the time, place and culture in the western world which creates knowledge about the art & architecture of the European, & Middle eastern cultures, which have served as the cradle of human civilization is a prime requisite for a student of architecture.

OBJECTIVES:

- To understand the evolution of Medieval history with respect to place and culture.
- To analyse the basic planning of churches (basilican and centralized concept)
- To trace out the changes in history of art, culture and architecture in different countries.(say example, Gothic ,Romanesque architecture in Italy,France and England)
- To explore, and recognise from key examples, the principal architectural styles applied to the design of churches and cathedrals in Italy.
- To study and understand how art aimed at discussing philosophical themes, social, and aesthetic currents.

MODULE I EARLY CHRISTIAN - BYZANTINE ARCHITECTURE 9

Birth and spread of Christianity - early Christian worship. Evolution of church forms. Development of the dome &pendentive in Byzantium.

Typical Church planning - 1.Basilican concept: St. Clement, Rome; St. Peters Rome, - 2.Centralized plan concept: S, Vitale, Ravenna; S. Hagia Sophia, Constantinople; St. Marks, Venice.

MODULE II MEDIEVAL ARCHITECTUIRE - ROMANESQUE 9

Formation of guilds - Factors influencing Romanesque architecture - Outline of architecture character in Italy, France and England -Examples: Pisa group, Italy; Abbaye aux Hommes, Caen; Tower of London.

MODULE III GOTHIC ARCHITECTURE 9

French gothic - Religious and social influences - Evolution of vaulting and development of structural systems -Outline of Architectural character - Examples: Notre Dame, Paris.

English gothic -Development of English gothic vaulting - Outline of Architectural character in England and Italy - Examples: Westminister Abbey, Hampton Court Palace, London; Doges Palace, Venice; Milan Cathedral.

MODULE IV RENAISSANCE ARCHITECTURE 9

Italian Renaissance - The idea of rebirth and revival of art - Outline of the Architecture during the early Renaissance, High Renaissance and Baroque Periods - Features of a typical Renaissance palace, eg. Palazzo Ricardi.

Study of the contribution of the following architects: Brunelleschi, Michaelangelo, Andrea Palladio, Example - St. Peter Rome,Villacapra in Vicenza

MODULE V FRENCH AND ENGLISH RENAISSANCE 9

Architectural character in the classical & Rococo period - Example - Chateau de Chambord, Louvre,Paris -Domestic British architecture- Study of the works Sir Christopher Wren,& Inigo Jones, Example - St. Paul's Cathedral, London. Banqueting House, Whitehall.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. Sir Banister Fletcher's a History of Architecture, Authors :Sir Banister Fletcher, Dan Cruickshank.
2. Early Christian and Byzantine Architecture by Richard Krautheimer
3. Gothic Architecture,Volume 19 of Pelican History of Art,Yale University Press Pelican History of Art, AuthorPaul Frank Edition2.
4. Renaissance Architecture: The Great Ages of World Architecture,Author Bates Lowry Publisher Literary Licensing, LLC, 2011
5. Renaissance Paris: Architecture and Growth, 1475-1600, By David Thomson.

REFERENCES:

1. Yatin Bandya, "Concepts of Space in Traditional Indian Arch", Mapin, 2005.
2. Mitchell, George (1996) "The Hindu Temple, University of Chicago Press.
3. Spiro Kostof , "A History of Architecture : Setting and Rituals", Oxford University

Press, London, 2005 (digitized - 2007).
4. Pier Luigi Nervi, "History of World Architecture Series". Harry N.Abrame Inc. Publication, New York, 1972.
5. Meaning in Western Architecture - Christian Norberg-Schulz-Rizzoli, New York, 1974.

COURSE OUTCOMES:

- The students can articulate knowledge on the construction of religious and civic buildings with grammar.
- They have a comprehensive knowledge about the development of Gothic Period in France and express the synthesis of aesthetics and structure with the aid of sketches.
- They can articulate knowledge on the architectural character of Gothic style of buildings in Europe and express them with sketches of plans, elevations and sections.
- They have a comprehensive knowledge about the philosophy of Renaissance and how they influenced architecture in England and France.

ARC B 2402 BUILDING SERVICES - I 3 0 3

AIM:

The course is designed to facilitate the students with building services that supports the functioning of a building in the area of water supply and sewerage.

OBJECTIVE:

- Introduction to fundamentals of all types of services required in a building.
- Learning about various equipment and fittings available in the market.
- Preparing basic design layout of various services and typical details.

SESSIONAL WORK : • Application of above studies in preparing design layout and details, in the design done in current term

MODULE I WATER SUPPLY, DRAINAGE AND SANITATION 9

Pipes and fittings, materials, size and classification. • Different types of taps, toilet and kitchen fittings. • Connection of lines to fittings.

Under ground, overhead and internal storage tanks and supply lines. • Pumping mechanisms.

Design layout of water supply for a residence and apartment block, and calculation of supply requirements based on standards.

Introduction to sanitation and its importance. • Planning and layout of sanitary fittings in residences. • Drainage system for residences. • Waste water drainage-traps of various types details and use.

Rain water disposal and roof drain. • Sewers details of construction , inspection chambers, trap chambers. • Septic tanks.

MODULE II ELECTRICAL SERVICES 9

General distribution of electric power in towns and cities. • Electrical wiring system – different materials employed and methods of wiring. • Different electrical gadgets and fittings.

Switch board, distribution board, mains, fuse, meter, circuit breaker etc. • Single phase and Three phase distribution and circuits. • Basic electrical layout for a residence.

Earthing for electricity appliances. • Electrical installations for services such as air-conditioning systems, lifts, escalators, pumps etc.

Artificial lighting , design principles, illumination levels.Types of lamps and

fittings used. • Application of lighting system for shops, showrooms, offices, lecture halls, class rooms, stage, auditoriums etc.

MODULE III RENEWABLE ENERGY 9

Solar Energy - Solar panels, Photovoltaic cells, Conversion of solar energy into electricity Advantages and disadvantages of solar energy, Active solar heating, Passive solar heating, Passive cooling techniques in buildings, Status of solar energy in India.

Wind Energy - Conversion of wind energy into electricity, Uses of wind energy, Status of wind energy in India.

MODULE IV ELEVATORS & ESCALATORS AND CHUTES 9

Types of Lifts - Basic dimension, Traffic analysis, Round trip time, lift pit, machine room, types, lift operation, arrangement of lifts, quality & quantity of service

Escalators - basic dimension, Characteristics, arrangement and disposition- Conveyors and Walkways, Chutes.

MODULE V SPACE PLANNING 9

Space requirements - Detail of a Septic tank and sump, Rain water harvesting, Toilet detail, Kitchen plumbing details - Terrace drainage,Drainage layout of a building.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. Handbook for Buildinsg Engineers in Metric Systems, NBC, New Delhi, 1998.
2. Philips Lighting in Architectural Design, McGraw Hill, New York, 1998.
3. R.G.Hopkinson and J.D.Kay, The Lighting of Buildings, Faber and Faber, London, 1998
4. Hopkinson, R.G., "Architectural Physics - Lighting", London. 1998
5. Basic Electrical Engineering, V.K.Mehta, S.Chand and Company Ltd., New Delhi, 1998.
6. G.M. Fair, J.C. Geyer and D.Okin, "Water and Waste water engineering", Volume II, John Wiley & Sons, Inc. New York, 1968

REFERENCES:

1. "Manual on sewerage and sewerage treatment", CPHEEO - Ministry of works

and housing, New Delhi, 1980.
2. S.C.Rangwala, "Water supply and sanitary engineering", Charotar publishing house, Anand, Lecture notes compiled by Chaman.L.Gupta, 1989
3. G.S. Birdie & J.S. Birdie, "Water Supply and Sanitary Engineering".

OUTCOMES:

- The students may exposed to electrical services and power distribution system inside & outside buildings.
- They get to know about importance of lighting in both indoor & outdoor spaces.
- The students obtain knowledge about various vertical transportation systems.
- It enlighten the importance of services in space planning.
- The students were trained to do electrical and plumbing layouts for the buildings.

ARC B 2403 STRUCTURAL AND CONSTRUCTION SYSTEMS - I 3 0 3

AIM:

The focus is to study the concept of shear force and bending moment in beam section, deflection of beams and theory of columns and to know the concept of indeterminate structure.

OBJECTIVE:

- To enable a student to understand the basic concepts of shear force and bending moment acting on beams subjected to various loading conditions through exercise
- To determine stress in beams and strength of sections by working out problems.
- To Calculate deflection of beams
- To study the theory of columns by working out problems
- To understand the concept of inter determinate structure and its analysis

MODULE I SHEAR FORCE & BENDING MOMENTS 9

Definition - Relation between Loading, Shear Force & Bending Moment - Simply Supported and, Cantilever Beams Subjected to Concentrated, UDL, and their Combinations.

MODULE II STRESSES IN BEAMS 9

Theory of simple bending - Bending and shear stress distribution - strength of sections - stress distribution diagrams

MODULE III DEFLECTION OF BEAMS 9

Slope and deflection at a section - Double Integration and Macaulay's method for simply supported & cantilever beams with distributed and point loads

MODULE IV THEORY OF COLUMNS 9

Short - Long Column - Euler's Method & its Limitations - Derivation of Euler's Formula - Slenderness ratio - Rankin's formula for column, effect of eccentric loading.

MODULE VSTATICALLY INDETERMINATE BEAMS 9

Introduction - Determination of degree of statically in determinacy for beams

and frames - concept of Analysis (No problems)

TOTAL SESSIONS: 45

TEXT BOOKS:

1. R.K. Bansal," A Text Book on Strength of Materials", Laxmi Publications, New Delhi, 1994.
2. B.C. Punmia, SMTS-I, "Strength of Materials", Laxmi Publications, New Delhi, 1994.

REFERENCES :

1. M.M. Ratwani & V.N. Vazirani, "Analysis of Structures", Vol. 1, Khanna Publishers - Delhi, 1987.
2. Timoshenko, S.P. and D.H. Young, "Elements of Strength of Materials", Fifth edition, East West Press, 1993.
3. A.R. Jain and B.K.Jain,"Theory and analysis of structures", Vol. 1, Nemchand and Bros, Roorkee, 1987.
4. R.K. Rajput "Strength of Materials", S.Chand & Company Ltd., New Delhi, 1996.

OUTCOMES:

- The students learn about shear stress force and bending moment.
- They may also understand the behavior of long and short columns
- The students study to find the load bearing capacity of beams and columns in a building .

ARC B 2405 SITE PLANNING AND ANALYSIS 3 0 3

AIM:

To provide an understanding of site as an element of design, its characteristics, issues and challenges, and integrate design at various scales.

OBJECTIVES

- Sensitize the students about various types of surveys, instruments used and details of survey records.
- To understand the complex relationship between topography, hydrology, vegetation and climate.
- To enable the understanding of Contour, slope analysis, grading and topography as key factors.
- To enable and analysis of site through various techniques that influences design
- Understanding of survey and analysis for effective application in large scale campus and planning projects.

MODULE I INTRODUCTION 9

Definition of plot, site, land and region as per Act - MODULE s of measurements linear and superficial scales - reconnaissance survey - importance - Field survey - revenue records - Equipments used like compass, plane table, (Theory only)

MODULE II SITE ANALYSIS 9

Importance of site Analysis - On site and off site factors - Natural - cultural and aesthetic factors, - topography, hydrology, soils, vegetation, climate, surface drainage, accessibility, size and shape, infrastructure availability - sources of water supply - means of disposal - site analysis diagram.

MODULE III GRADING AND MICRO CLIMATE 9

Contours, intervals and layers - slope analysis, watersheds, - grading process - grading criteria - consideration for function and aesthetics.

Definition of micro climate - contributory factors - land forms, vegetation, water bodies, density of built environment as modifiers.

MODULE IV DETAILED ANALYSIS 9

Hydrology and irrigation system - Soils and bearing capacity aesthetic and

visual characteristics - sieve maps - matrix analysis - composite analysis - sewage and storm water disposal.

MODULE 5 PLANNING AND LAYOUT 9

Traffic on to and from site - vehicular and pedestrian circulation - hierarchical distribution of road network - road widths and carrying capacity - PCU - turning radii - intersections geometry - parking lay out - campus and regional levels.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. KEVIN LYNCH, "SITE PLANNING", MIT PRESS, CAMBRIDGE MA, 1987.
2. B.C. Punmiya, "Surveying", Vol-I, Standard Book, 1983.
3. UDPFI, guidelines, T and C.P.O, New Delhi, 2005.

REFERENCES:

1. Joseph De. Chiarra and Lee Coppleman, Planning Design Criteria Van Nostrand Reinhold Co., New York
2. Beer R, Environmental Planning for Site Development, Turner, Landscape Planning and Environmental Impact Design.

COURSE OUTCOMES:

- The students gain the knowledge about the usage and principles of various surveying instruments.
- They can understand the complex relationship between topography, hydrology, vegetation and climate.
- They can easily analysis the site through various techniques that influences design.

ARC B 2404 BUILDING TECHNOLOGY - IV 2 4 4

AIM:

To enable the students understand that Ferrous, Non-Ferrous metals and glass are equally important in construction industry by studying their properties, applications, uses and current trends in terms of theory and through drawings, sketches and field visits.

OBJECTIVES:

- To comprehend the progressive achievements from cast- iron to steel by identifying the types, properties and current developments from cast-iron to steel. (Theory)
- To understand in detail through working drawings, the types of sections in steel joints' application in foundation, columns, beams and trusses and basic on concept of space frames.
- To comprehend how Non - Ferrous metals are used in construction industry by learning their properties and applications. (Theory)
- To understand in detail through working drawings, the various types of aluminum doors, windows, ventilators, partitions and roofing system as applied in construction industry.
- To recognize through basic theoretical knowledge the composition of glass, manufacturing, types and application in construction industry.

MODULE I NON FERROUS METALS 9

Introduction AluminIum and AluminIum Alloys brief study on properties and uses Aluminum products extrusions, foils, castings, sheets, etc. brief study of other non ferrous metals like copper, bronze, brass, tin and lead, properties and uses current developments.

MODULE II CONSTRUCTION USING NON FERROUS METALS 9

Aluminum doors - Openable, Sliding, Pivoted. Aluminum windows - Openable, Sliding, Fixed, Pivoted.

Aluminum ventilators - Top hung, Bottom hung, Pivoted, Louvered, and Fixed. Aluminum partitions, False ceiling, Handrails

Aluminum roofing - North-light glazing bar, Aluminum roofing sheets.

Use of other nonferrous metals like copper, bronze, brass, etc. in architectural construction.

MODULE III GLASS **9**

Brief study on structural glazing, Glass façade, MODULE ized glazing, Frameless glasses – Spider glazing, Fin glazing, Glass canopy, Glass Entrance doors, Partitions, Staircases, etc., Curtain Walls – Curtain walls in glass, aluminum, precast concrete MODULE s etc. for buildings like laboratories, offices, cinemas etc. Patent Glazing - Patent glazing for skylights, lanterns, north light trusses etc

MODULE IV PLASTIC PRODUCTS **9**

Primary plastic building products -for walls, partitions and roofs - design and construction details.Secondary building products- for windows, doors, roof lights, domes, and handrails- design and construction details. UPVC doors & windows.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. W.B. Mckay,"Building Construction", Vol.1, 2, 3, Longmans, U.K.,1981.
2. B.C.Punmia, "Building Construction", Lakshmi Publications Pvt. Ltd., N.Delhi.

REFERENCES:

1. Don A.Watson, "Construction Materials and Processes", McGraw Hill Co., 1972.
2. Alanwerth, "Materials", The Mitchell Pub. Co. Ltd., London,1986.
3. R.Chudleu, "Building Construction Handbook", British Library Cataloguing in Publication Data, London, 1990.
4. S.C. Rangawala, "Engineering Materials", Charotar Pub. House, Anand, 1997.

COURSE OUTCOMES:

- The students understand the properties and uses of ferrous and non ferrous materials.
- They aware of the progressive achievements of glass, plastics,, aluminium , its application in construction industry and present developments.
- They can learn the drafting and representation details of aluminium doors, windows, roofing and its uses in building industry.
- They can gain the knowledge of glass, plastics details and its uses in building industry.

ARC B 2406 ARCHITECTURAL DESIGN STUDIO IV 0 16 8

AIM:

To create a holistic understanding of the socio-cultural, geographic and economic aspects that shape the built environment as well as to expose the students towards the design of simple commMODULE y oriented buildings.

OBJECTIVES:

- To make a comprehensive study of a rural settlement that is an exemplar of collective design evolved organically over a period of time.
- To expose the students on the methodology of conducting various surveys covering, physical, visual characteristics and demographic aspects.
- To understand the vernacular / traditional architecture involving local materials and construction techniques.
- To emphasise on the importance of designing built form and open spaces that meet the aspirations of the commMODULE y.
- To enable the presentation of concepts through 2D and 3D presentation including sketches and model.

CONTENT:

Scale and Complexity: Projects involving public and commMODULE y oriented buildings -multi room, single use, small span, multiple storied, horizontal and vertical movement; active cum passive energy; comprehensive analysis of rural settlement in a hierarchical manner.

AREA OF CONCERN/ FOCUS:

- rural settlements and architecture
- commMODULE y oriented design
- simple public buildings (not more than Ground+ 2 floors)

TYPOLOGIES/ PROJECTS:

Rural projects that involve studies and design at settlement and building level- noon meal centre, market, primary health centre; department store, higher secondary school, campus students centre

TOTAL SESSIONS: 225

TEXT BOOKS:

1. Joseph De Chiara, Michael J Crosbie, "Time Saver Standards for Building Types", McGraw Hill Professional 2001.
2. Julius Panero, Martin Zelnik, "Human Dimension and Interior Space", Whitney Library of Design, 1975
3. Joseph De Chiara, Julius Panero, Martin Zelnik, "Time Saver Standards for Interior Design and Space Planning", McGraw Hill 2001.
4. Ernst Neuferts, "Architects Data", Blackwell 2002
5. Ramsey et al, "Architectural Graphic Standards", Wiley 2000

REFERENCES:

1. Richard P. Dober, Campus Planning
2. Kanvinde, Campus Planning in India
3. Kevin Lynch, Site planning, MIT Press, Cambridge, 1967
4. Sam F. Miller, Design Process: A Primer for Architectural and Interior Design, Van Nostrand Reinhold, 1995

OUTCOMES:

- Students gets the ability to understand and design large scale building projects.
- They will able to solve the design problem functionally and aesthetically.
- Gain knowledge about the design process and its various faces to solve a design problem in horizontal and vertical manner.
- Enable to express the ideas in the form of 2D representation and 3D modelling.

SEMESTER - V

ARC B 3501 HISTORY OF BUILT ENVIRONMENT - IV 3 0 3

AIM:

To expose the students to the origin, development and spread of modern architecture in the Western world as well the architectural production of colonialism in India. To expose to students the knowledge about impact of industrialization, invention of new materials, revolutionary thinking and philosophies of architects, emerging schools of thought, and contributions made by architects.

OBJECTIVES:

- To study modern architecture as evolving from specific aspects of movements like Arts & Crafts Movement, Art Nouveau Movement, and the pioneers of the movement.
- Discuss and independently reflect on the concept of various other philosophies like futurism, expressionism, brutalism, constructivism, and the pioneers of these philosophies through study of selected works of them.
- To acquaint students to understand the Bauhaus school of thought, contributions by leading architects like Le Corbusier, Mies Van -der - Rohe, Alvar Aalto etc through study of selected examples.
- To study the further trajectories of modern architecture in the post WWII period.
- To create an overall understanding of the architectural developments in India influenced by colonial rule - Analysis of case studies.

MODULE I LEADING TO A NEW ARCHITECTURE 9

Beginnings of modernity -Origin and development of Neo Classicism- Structural Neo classicists: Laugier, Soufflot, Schinkel, Labrouste - Romantic Neo classicists: Ledoux , Boulle, Durand, Jefferson- Industrialization and its impact-Urbanization in Europe and America- split of design education into architecture and engineering streams- Emergent new building / space types- Growing need for mass housing- Development of Industrial material and construction technologies- concrete, glass and steel- structural engineering, standardization-Industrial exhibitions- Chicago School and skyscraper development.

MODULE II REVIEWING INDUSTRIALISATION 9

Opposition to industrial arts and production - Arts and Crafts in Europe and America: Morris, Webb- Art Nouveau: Horta, Van De Velde, Gaudi, Guimard,

Mackintosh - Vienna secession: Hoffman, Olbrich- Wright's early works

MODULE III MODERN ARCHITECTURE: DEVELOPMENT AND INSTITUTIONALISATION 9

Adolf Loos and critique of ornamentation- Raumplan: Peter Behrens - Werkbund - Modern architecture and art - Expressionism: Mendelsohn, Taut, Polzeig- Futurism- Constructivism, Cubism - Suprematism- De-Stijl Bauhaus-Gropius, Meyer and Mies -CIAM I to X and its role in canonizing architecture-growth of International Style Ideas and works of Gropius, Le Corbusier, Aalto, Mies, later works of Wright

MODULE IV MODERN ARCHITECTURE: LATER DIRECTIONS 9

Post WW II developments and spread of international style - Later works of Corbusier: Brasilia, MODULE e- Works of later modernists: Louis Kahn, Paul Rudolph, Eero Saarinen

MODULE V COLONIAL ARCHITECTURE IN INDIA 9

Colonialism and its impact- early colonial architecture: forts, bungalows, cantonments - Stylistic transformations: Neo- classicism, Gothic Revival and Indo Saracenic - PWD and institutionalization of architecture - Building of New Delhi showcasing imperial power.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. Kenneth Frampton, "Modern Architecture: A Critical History", Thames & Hudson, London, 1994
2. Catherine Slessor ,"Contemporary Architecture", Images Publishing, 2003.
3. Leonardo Benevolo, "History of Modern Architecture", 2 Vols. Routledge & Keganpaul, London, 1971
4. Miki Desai et. al., "Architecture and independence", Oxford University Press, 2000

REFERENCES:

1. Thomas Metcalf, "An imperial Vision", Faber & Faber/ Electa, 1980.
2. Christian Norburg Schulz., "Meaning in Western Architecture", Studio Vista.
3. Xiangbiao Zhao, "Global Architecture", Hong Kong Scientific and cultural Publishing - 2008.
4. Sigfried Giedion, "Space Time and Architecture: The Growth of a New Tradition", Harvard University Press, 1978.

OUTCOMES:

- Students gain knowledge about different concept of various other philosophies like futurism, expressionism, brutalism, constructivism, and the pioneers of these philosophies through study of selected works of them.
- They obtain overall understanding of the architectural developments in India influenced by colonial rule - Analysis of case studies.
- They also gain comprehensive knowledge of modern architecture using many movements.

ARC B 3502 BUILDING SERVICES - II 3 0 3

AIM:

The course is designed to facilitate the students with building services that supports the functioning of a building in the area of air conditioning and fire safety systems.

OBJECTIVES:

- To introduce the students to the various concepts of air conditioning.
- To expose the students to the indoor & outdoor components in air conditioning.
- To understand the importance and functioning of fire safety systems.
- To enlighten the importance of services in space planning.

MODULE I INTRODUCTION TO AIR CONDITIONING 9

Introduction to A/C conditions - basic of refrigeration systems - components of refrigeration system - compressor, condenser - control devices, evaporator - filters cooling tower - Vapour compression cycle - Concepts of cooling, , transmission heat load - internal heat gain - concepts of zoning - room air distribution - types of outlets.

MODULE II AIR CONDITIONING SYSTEMS AND ITS APPLICATIONS 9

Air conditioning system for small buildings - window types, evaporative cooler, packaged terminal MODULE s and through the wall MODULE s split system b) Systems for large building - Chilled water plant - All Air system, variable air volume, All water system Configuring/ sizing of mechanical equipment, equipment spaces and sizes for chiller plant, cooling tower, Fan room, Circulation Pumps, Pipes, ducts.

MODULE III FIRE SAFETY: DESIGN AND GENERAL GUIDELINES 9

Principles of fire behavior, Fire safety design principles _ NBC Planning considerations in buildings - Non- Combustible materials, egress systems, Exit Access - Distance between exits, exterior corridors - Maximum travel distance, Doors, Smoke proof enclosures . General guidelines for egress design for Auditoriums, concert halls, theatres, other building types, window egress, accessibility for disabled- NBC guidelines - lifts lobbies, stairways, ramp design,

fire escapes and A/C, electrical systems.

MODULE IV FIRE DETECTION AND FIRE FIGHTING INSTALLATION 9

Heat smoke detectors - sprinkler systems, Fire fighting pump and water requirements, storage - wet risers, Dry rises, Fire extinguishers & cabinets, Fire protection system - CO2 & Halon system, Fire alarm system, snorkel ladder.

MODULE V SPACE PLANNING & FACILITY MANAGEMENT 9

Space requirements -Space planning for various air conditioning components both indoor & outdoor MODULE s. space requirements for the different fire fighting equipments.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. Steve Doty & Wayne C. Turner, (2009), "Energy Management Handbook", Seventh Edition, The Fairmont Pres, USA.
2. Ibrahim Dincer & Marc. A. Roren, (2007), "Exergy - Energy, Environment and Sustainable Development", Elsevier, USA.
3. William H.Severns and Julian R.Fellows, Air-conditioning and Refrigeration, John Wiley and Sons, London, 1988.

REFERENCES:

1. William H.Severns and Julian R Fellows, "Air conditioning and Refrigeration", John Wiley and Sons, London, 1988
2. "Fire Safety: National Building Code of India" published by Bureau of Indian Standard, 1983
3. A.F.C. Sherratt, "Air conditioning and Energy conservation", The Architectural Press, London, 1980
4. Andrew H Buchanan, "Design for fire safety", John Wiley & Sons Ltd., New York.

OUTCOMES:

- The students are exposed to the various concepts of air conditioning.
- Students understands the concept of building automation, safety, security and controls systems integrated to building managements systems.
- They can able to learn the use of energy in construction industry, explore energy conservation and energy efficient techniques in current trend.
  Impart knowledge on fire safety, security and fire fighting system

ARC B 3503 STRUCTURAL AND CONSTRUCTION SYSTEMS - II 3 0 3

AIM:

To facilitate the design of Reinforced concrete beams, slabs, column, and foundations by limit state method.

OBJECTIVE:

- To study the limit state design of beams
- To study the limit state design of slabs
- To study the limit state design of columns
- To study the limit state design of foundations
- To study R.C.C Arches

MODULE I LIMIT STATE DESIGN OF BEAMS 9

Concept of Elastic method, Ultimate load method and limit state method - Advantages of limit state method over other methods

Estimation of loads on beams - transfer of load from slab to beam - design of singly, doubly reinforced - design of simply supported beams - Design of continuous beams using codal coefficients - detailing - use of SP - 16 for the design.

MODULE II LIMIT STATE DESIGN OF SLABS 9

Behavior of one way slab and two way- design of one way slab and two way slab by direct design method as per BIS code.

MODULE III LIMIT STATE DESIGN OF COLUMNS 9

Estimation of loads on columns - load transfer from slab and beams to columns - long and short columns - rectangular and circular columns - columns subjected to uni-axial and bi-axial bending - design of columns using column interaction diagrams - use of SP - 16 - detailing.

MODULE IV LIMIT STATE DESIGN OF FOUNDATION 9

Types of R.C.C. foundation - individual, combined, strip footing - Design of individual column footings - Rectangular sloped footing - design of combined footings.

MODULE V R.C.C ARCHES 9

R.C.C Arches - Introduction, types & Analysis of Two & three Hinged Arches -

Introduction to shells &Folded plates - structural Action

TOTAL SESSIONS: 45

TEXT BOOKS:

1. S.N. Sinha, Reinforced Concrete Design - Tata McGraw Hill Publishing Co. Ltd.,New Delhi,1998.
2. Shah, Reinforced Concrete, Vol. 1 and 2 - Charotar Publishing House, Anand, 1998.

REFERENCES:

1. P. Dayaratnam, Design of Reinforced Concrete Structures, Oxford and IBH Publishing Co.,1983.
2. C. Sinha and S.K. Roy, Fundamentals of Reinforced Concrete, S.Chand & Co., New Delhi, 1983.
3. Dr. B.C. Punmia, Reinforced Concrete Structures, Vol, 1 & 2 Laxmi publication, Delhi, 1994.
4. IS 456:2000, Indian Standard, Plain and Reinforced Concrete - Code of Practice, Bureau of Indian Standards.
5. S. Unnikrishnan Pillai and Devados Menon, Reinforced Concrete Design - Tata McGraw Hill Publishing Co. Ltd., New Delhi, 1999.

OUTCOMES:

- The students would have understood the different types of limit state design of beams and columns.
- Knowledge on the functions and effects of limit state design of slabs and foundation.
- An exposure to structural properties and applications of R.C.C arches used in the building industry.

ARC B 3504 BUILDING CONSTRUCTION AND TECHNOLOGY 2 4 4

AIM:

To study the various materials and construction techniques used for moisture protection, thermal protection, sound protection and protective finishes in buildings.

OBJECTIVES:

- To learn and apply the knowledge of materials and techniques for Moisture control in producing construction details for moisture protection of basements, roofs, plinths and terraces.
- To identify the different types of swimming pools and producing construction details with various fixtures for swimming pools
- To understand and apply the knowledge of materials and techniques for Thermal protection in producing construction details for thermal protection of spaces in various climatic zones.
- To understand and apply the knowledge of materials and techniques for Sound protection in producing construction details for acoustic protection of spaces in auditoriums, recording studios and theatres.
- To discern and analyze various protective and decorative coatings applied in buildings concentrating on current developments,

MODULE I MOISTURE PROTECTION 15

Introduction about damp proofing & water proofing - causes & effects of dampness - types of dampness - Various materials used for damp proofing & water proofing - Various methods of damp proofing - Drawings of construction detail and applications of damp & water proofing under various situations - Basement floors, terraces etc. Types of pools, Construction Details

MODULE II THERMAL PROTECTION 15

Introduction about thermal insulation - Heat transfer and heat gain by materials - vapour barrier- Commonly used insulation materials in buildings - Drawings of construction details and material applications of floors, walls and roofs in various situations - e.g. Cold storage, Air conditioned office spaces

MODULE III SOUND PROTECTION 15

Introduction about sound protection - basic forms of absorbents - types of absorbent materials, properties and uses, Commonly used sound insulation materials in buildings - Drawings of construction details and material

applications of floors, walls and roofs in various situations - e.g. Conference hall, Auditoriums, Recording studios

MODULE IV PROTECTIVE **15**

Paints - ingredients, types, applications, properties and uses in buildings - painting on different surfaces - defects of painting - special purpose paints - bituminous, luminous, fire retardant and resisting paints - properties,

MODULE V DECORATIVE COATINGS **15**

uses and applications of varnishes, lacquers and wall putty- Current development and specifications - Introduction, different types, properties, uses and applications of shellac - properties, uses and applications polyurethane, enamel, plastic acrylic emulsion.

TOTAL SESSIONS: 75

TEXT BOOKS:

1. Francis.D.K.Ching. Building Construction Illustrated (II ed.). New Jersey: John Wiley & Sons - 2008.
2. Lyons, A. Materials for Architects and Builders. Butterworth Heinemann Ltd - 2010.
3. P.C.Varghese. Building Materials. New Delhi: Prentice-Hall of India Pvt Ltd. 2005.
4. Punmia, B., Jain, A. K., & Jain, A. K. Building Construction. New Delhi: Firewall Media. 2005.

REFERENCES:

1. D.K.Doran, "Construction Materials Reference Book", Oxford: Butterworth Heinemann Ltd. 1995.
2. Simmons, H. L. "Olin's Construction: Principles, Materials and Methods", New Jersey: John Wiley & Sons. Inc. 2011.

OUTCOMES:

- Understand present practices and materials for damp & water proofing including in basements, swimming pools, terraces etc.
- Understand the causes for heat gain & heat loss how effectively the insulation helps in keeping the comfortable heat levels in buildings.
- Understand major defects and possible rectification is understood. The commonly

used acoustic treatments with the thrust on recording studio & auditorium

Recognize to differentiate various types of decorative coatings and its properties

ARC B 3506 ARCHITECTURAL DESIG 0 16 8

AIM:

At the intermediate stage to graduate the student further on design of buildings involving technology, structural clarity and Building Services in terms of lighting, ventilation, Movement, fire safety, security, water supply, sewage etc. and to make them hands on in computer presentation skills.

OBJECTIVES:

- To make the student understand the complexity, functioning and salient features of the Design project through organizing field visit, train them to document and present the findings.

DESIGN STUDIO

Small complexes - concept of multi planning and circulation analysis - grouping of buildings

Involving services integration, Design and detailing for movement of physically handicapped and

Elderly persons within and around buildings.

Examples: office buildings such as Bank corporate offices, BPO Centers, School of Management, film institute, Art Centre, Museums.

TOTAL SESSIONS: 225

TEXT BOOKS:

1. S. Macmillan, "Designing Better Buildings" . Routledge, 2003.
2. Digital Workflows in Architecture: Design - Assembly - Industry / Scott Marble-2012
3. Masterpieces: Office Architecture + Design Lara Menzel - 2009
4. National Building Code and Bureau of Indian standard publications.2005
5. De. Chiara and Callender, "Time-saver Standards for Building Types", McGraw-Hill Co., New York, 1973.
6. The Handbook of Building Types., NEUFERT ARCHITECTS DATA, New International edition, second international edition. BSP Professional Books. Oxford (1980) Blackwell scientific Publications.
7. Time - Saver Standards for Architectural Design Data, seventh edition. The reference of architectural fundamentals McGraw hill international edition, architectural series (1998).
8. Ed.By.Quentin Pickard RIBA "The Architects' Hand Book", Bladewell Science

Ltd., 2002

REFERENCES:

1. Digital workflows in architecture: Design - Assembly - Industry / Scott Marble
2. http://www.archdaily.com/category/institutional-architecture/
3. http://www.thehub.net.au/%7Emorrisqc/architext
4. http://www.archinet.co.uk/
5. http://archinform.de/start.en.htm

OUTCOMES:

- Work on multi planning and mass problems involving building technology
- Use computer for drawing and presentation skills using appropriate software. They will able to solve the design problem functionally

SEMESTER - VI

AR B 3601 CONTEMPORARY BUILT ENVIRONMENT 3 0 3

AIM:

To expose the students to the diverse postmodern directions in architecture in the Western world from the 1960s onwards as well as the architectural production in India from the end of colonial rule to the contemporary period.

OBJECTIVES:

1. To study the different postmodern directions in architecture and the evolution of new approaches.
2. To appreciate contemporary architectural trends.
3. To comprehend the ideas and philosophies of architects and architectural styles.
4. To understand the emerging architectural trends through the works of pioneering architects and to explore about alternative building technology practiced by various architects.
5. Lectures and site visits to acquaint students with sites and buildings in relevance to the course taught.

MODULE I INTRODUCTION 9

A brief introduction in critiquing Modernism, Conditions of Post Modernity, Various Post Modern directions / movements in architecture in different parts of the Western world and their role in defining Modern architecture such as Post Modernity, Impressionism, Expressionism, Art Nouveau, Surrealism, Abstract Expressionism, Cubism etc.

MODULE IITRENDS IN CONTEMPORARY BUILT ENVIRONMENT 9

Trends in Contemporary Architecture – Introduction and brief understanding and appreciation and comparison of contemporary trends in Indian and Western Architecture focusing on understandings, appreciations, ideas and directions through examples – a broad spectrum

MODULE III DEVELOPMENTS IN CONTEMPORARY ARCHITECTURE 9

Contemporary Architecture to be studied as development of built forms and

ornamentation, structural solutions, construction methods, plan and building façade organization in relation to aesthetic/religious/social philosophy and environmental factors. The study can focus on the general trends and or with specific examples of relevance.

MODULE IVCONTEMPORARY TRENDS IN INDIA 9

Trends in Architecture in India after Independence.Influence of Le Corbusier and Louis.I. Khan. Studies of the ideas and works of B.V. Doshi, Charles Correa, Raj Rewal, J.A.Stein, AchyutKanvinde, AnantRaje, Uttam Jain, Hasmukh Patel, Laurie Baker, Chandravarkar& Thacker, Hafeez Contractor, Nari Gandhi, ShirishBeri, Romi Khosla, RanjitSabiki, Anil Laul, Shashi Bhooshan, Jaisim, Bimal Patel etc

MODULE V CONTEMPORARY DIRECTIONS IN OTHER PARTS OF THE COUNTRY 9

Studies of the ideas and works of Robert Stern, Charles Moore, GoefferyBawa, Michael Graves, Richard Meyer, Aldo Rossi, Frank Gehry, Rob Krier, Hassan Fathy, Renzo Piano, Richard Rogers, Norman Foster, Tado Ando etc

Note:

The architectural styles and buildings to be discussed in context of their period, geographical/climatic conditions, economic and political conditions, social and religious customs, construction and technology, building material and structure.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. Bill Risebero, "Modern Architecture and Design", MIT Press ,1985.
2. Kenneth Frampton, "Modern Architecture: A Critical History", Tahmes and Hudson, London, 1994.
3. James Steele, "The Complete Architecture of Balakrishna Doshi", Thames and Hudson,1998.
4. "McMillan's Encyclopedia of Architecture" ,Macmillan Publications,1990.

REFERENCES:

- Thomas Metcalf, "An Imperial Vision", Oxford University Press,2002.
- Manfredo Taferi/Franceso dal co., "Modern Architecture", Faber and Faber/Electa, 1986.
- Sigfried Giedion, "Space Time and Architecture: The Growth of a New

Tradition", Havard University Press, 1978.

- Aldo Rossi, "The Architecture of the City", MIT Press, Massachusetts, 1982.
- Charles Jencks, "The Language of Post Modern Architecture", Rizzoli, 1984.
- Christopher Alexander, "Pattern Language", Oxford University Press, 1977.
- Jon Lang,Madhavi Desai , "Architecture & Independence - India 1880 to 1980" paper bags,Oxford India 1997.
- Derek Avery, "Modern Architecture", Chaucer Press ,London , 2003.
- Robert Venturi, Complexity and Contradiction in Architecture, 1977.
- Michael Hays ed., Architecture Theory since 1968, CBA, 1999
- William Jr. Curtis, Balkrishna Doshi, An Architecture for India, Rizzoli
- Brian Brace Taylor, Geoffrey Bawa, Thames & Hudson

OUTCOMES:

- Obtain considerable knowledge on the progress of architectural philosophies globally over the past century and discuss current trends and theories knowledgably.
- Independently research trends in architecture and form critical opinions on differing ideologies and schools of thought.

Understanding of the architectural commMODULE y developments in the country after independence and sharing a common vision of architectural thoughts that shared by numerous notable architects

AR B 3602 STRUCTURAL AND CONSTRUCTION SYSTEMS III 3 0 3

AIM:

To enable the design of timber and steel structural member in a building

OBJECTIVE:

- To Introduce the design of various timber components in a buildings
- To enable the understanding of types and efficiency and strength, advantage and disadvantage of rivet and welded joints in steel.
- To enable the design of tension member and column, in a building under various condition

MODULE I TIMBER STRUCTURES - BEAMS, COLUMNS AND ROOF TRUSSES 9

Properties, strength and types of timber used as structural components in timber construction - Permissible stresses in timber -. Types of Timber Roof Trusses used for small spans.

MODULE II STEEL STRUCTURES 9

Introduction Properties of Indian standard rolled steel section - Use of IS 800 and steel tables - Permissible and stresses in tension, compression and shear. Connections: Welded and riveted connections - Types of failure

MODULE III TENSION MEMBERS 9

Steel structures - Tension members - Design of single angle and double angle sections in tension

MODULE IV COMPRESSION MEMBER 9

Steel structures - compression members - Design of compression members - Slenderness ratio - Design of simple and compound sections - Design of lacings and battens.

MODULE V BEAMS 9

Principal beams - allowable stresses - General specifications - Design of laterally supported beams.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. Ramachandra .S, "Design of steel structures" Vol. I, Standard publication, New Delhi, 1992
2. Vazirani .V.N, and Ratwani .M.M, "Steel structures", Khanna Publications, New Delhi,1995

REFERENCES:

1. Arya. A.S, Ajamani .J.L, "Design of Steel Structures", Nem Chand and Bros, Roorkee, 1999
2. Duggal, "Design of Steel structures", Tata McGraw Hill Company, New Delhi, 2000
3. Lin. T.R, and Scalzi .J.B, "Design of Steel structures", Bressler Weley Eastern Pvt. Ltd., New Delhi, 1960
4. Dayaratnam. P, "Design of Steel Structures", Wheelers Publishing Company Co. Ltd, 1990
5. "Handbook of Typified Designs for Structures" with steel roof trusses, SP 38 (S&T) - 1987, BIS, New Delhi

OUTCOMES:

- The students learn the properties of structural components of timber and its uses in construction industry.
- Understand the need for steel structure, and the concept of abstract and detailed Design of steel Structure.
- Calculate the stability of tension and compression members.
- Design steel column and beams for the various Support Condition with suitable bearing loads.

AR B 3603 ESTIMATION AND SPECIFICATION 3 0 3

AIM

- To equip students with the necessary technical knowledge for calculating estimates with specifications and costing for varoius scale projects.

OBJECTIVE

- To enable understanding of methods of preparation of estimates and assesment of quantities.
- To enable writing and understanding of specification for different building typologies.
- A holistic understanding of costing and budgeting of design projects.
- Small scale projects to be undertaken to understand costing principles and terms.
- Final costingexercise to be carried out where students can undertake the costing of their studio design project

MODULE I SPECIFICATIONS 9

Necessity of specification, importance of specification, - How to write specification, - Types ofSpecification, -Principles of Specification writing, - Important aspects of the design of specification– sources of information – Classification of Specification.

MODULE I SPECIFICATION WRITING 9

Brief Specification for 1 st class, 2nd class, 3rd class building. Detailed specification for earthworkexcavation, plain cement concrete, Reinforced concrete, first class and second class brickwork,Damp proof course, ceramic tiles/marble flooring and dadoo, woodwork for doors, windowsframes and shutters, cement plastering, painting & weathering course in terrace.

MODULE III ESTIMATION 9

Types & purpose, Approximate estimate of buildings – Bill of quality, factors to be considered, -principles of measurement and billing, contingencies, measurement of basic materials like brick,wood, concrete and MODULE of measurement for various items of work – abstract of an estimate.

MODULE IVDETAILED ESTIMATE 9

Deriving detailed quantity estimates for various items of work of a building. Like

earthworkexcavation, brick work, plain cement concrete, Reinforced cement concrete works, wood work,iron works, plastering, painting, flooring, weathering course for a single storied building.

MODULE V CURRENT TRENDS **9**

Methods of contracting and its link to specification drafting - the Business Environment and thestructure in practice.Valuation, depreciation and its implications – Case studies.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. Dutta, "Estimating and Costing", S.Dutta and Co., Lucknow
2. S.C.Rangwala, "Elements of Estimating and Costing", Charoter Publishing House, India.

REFERENCE BOOKS:

1. W.H.King and D.M.R.Esson, "Specification and Quantities for Civil Engineers", The English University Press Ltd.
2. T.N.Building Practice, Vol.1, Civil, Govt. Publication.
3. P.W.D. Standard specifications, Govt. Publication

OUTCOMES:

- Understand the need for estimation, and the concept of abstract and detailed estimates.
- Prepare BOQ and know to control cost and budget within the norms and standards.

Acquaint themselves about the various financial agencies and institutions

AR B 3605 ARCHITECTURAL ACOUSTICS AND DETAILING 2 4 4

AIM:

The course is designed to facilitate practical knowledge to the students to integrate sound control in relation to building functions and as a determinant of built form with emphasis on the application to architecture.

OBJECTIVE:

- To understand the science behind acoustical design.
- To expose students to understand noise control and sound transmission and absorption.
- To familiarize the students with the basic principles of acoustic design for spaces and building types.
- To provide practical exposure through case studies and working drawings.
- To develop the knowledge and skill required for understanding acoustics in buildings and its integration with architectural design.

MODULE I INTRODUCTION TO ACOUSTICS 15

Nature of sound, Transverse and longitudinal waves, Simple Harmonic motion, wave characteristics, properties of sound, behavior of sound in enclosures, reflection of sound, echoes, dispersion, sound shadows

MODULE II SOUND TRANSMISSION 15

Outdoor noise levels, acceptable indoor noise levels, sonometer, determinate of density of a given building material, absorption co-efficient and measurements, choice of absorption material, resonance, reverberation, echo, exercises involving reverberation time and absorptionco-efficient.

MODULE III NOISE CONTROL AND SOUND ABSORBTION 15

Types of noises, transmission of noise. Noise reduction: Sound isolation, transmission loss TL, TL for walls, sound leaks indoors, noise reduction between rooms, Construction details for noise reduction. Noise reduction and built form, Noise reduction through landscapes elements, landuse planning for noise control.

MODULE IVACOUSTICAL CONSIDERATIONS 15

Acoustical Considerations and design criteria - Site selection, shape,

volume,treatment for interior surfaces, basic principles in designing reinforcement systems for different building types. Walls/partitions, floors/ceilings, window/doors, insulating fittings andgadjets,machine mountingand insulation of machinery.

MODULE V ACOUSTICS AND BUILDING DESIGN **15**

Acoustic design process for different types of buildings. Detailed acoustic design for different building typologies – Small, Large Public areas and Outdoor complex areas in relations the design project dealt in Architectural Design VI. Case studies of relevant building with a report containing drawings and calculations of reverberation time etc needs to be carried out.

TOTAL SESSIONS: 75

TEXT BOOKS:

1. David Eagan "Concepts in Architectural Acoustics".
2. Neufert Architects'Data Third Edition.

REFERENCES:

1. Frederick .S, "Building Engineering and systems Design", Merritt James Ambrose.
2. Dr.V.Narasimhan, " An Introduction to Building Physics", Kabeer Printing Works, Chennai-5, 1974.

OUTCOMES:

- The students are exposed to the basics of acoustics and it relation with the buildings and its integration with architectural design.
- Able to work on acoustical Design brief for design project dealt in Architectural Design VI like Lecture Halls, Classrooms, Conference room, Theatres and Auditoriums.

AR B 3606 ARCHITECTURAL DESIGNSTUDIO VI 0 16 8

AIM:

To explore the design and form of building typologies that are the result of pressure on urban lands with a thrust on issues like urban land economics, technology and ecology.

OBJECTIVES:

- To create an awareness with regard to the design of green buildings and sustainable architecture.
- To inculcate the importance of services integration and construction in spatial planning in the context of design of High-rise buildings and service intensive buildings.
- To highlight on the importance of High rise buildings as elements of identity in urban areas and urban design principles that govern their design.
- To explore computer aided presentation techniques involving 2D and 3D drawings, walk through and models as required.

CONTENT:

- Scale and Complexity: Advanced and complex problems involving large scale Multi-storeyed buildings and complexes for Residential/ Commercial/ Institutional/ Mixed-Use in an urban context with focus on visual characteristics, service integration and sustainable practices.

AREAS OF FOCUS/ ISSUES:

- Sustainable building practices, green issues, alternative energy
- Intelligent building techniques and service integration
- Architectural Detailing
- Advanced building practices

TYPOLOGY/ PROJECT:

Office building, multi-use centre, convention center, multiplex, corporate complex, health care and hospitality building, etc.

TOTAL SESSIONS: 225

TEXT BOOKS:

1. De. Chiara and Callender, "Time-saver Standards for Building Types", McGraw-Hill Co., New York, 1973.
2. The Handbook of Building Types., NEUFERT ARCHITECTS DATA, New

International edition, second international edition. BSP Professional Books. Oxford (1980) Blackwell scientific Publications.

3. Time - Saver Standards for Architectural Design Data, seventh edition. The reference of architectural fundamentals McGraw hill international edition, architectural series (1998).
4. Ed.By.Quentin Pickard RIBA "The Architects' Hand Book", Bladewell Science Ltd., 2002

REFERENCES:

1. Handbook on Building Construction Practices (Excluding Electrical Work). Bureau of Indian Standards, New Delhi, 1997
2. National Building book of India 2005, Bureau of Indian Standards, New Delhi
3. Macmillan Encyclopedia architects, Vol II, The free press, London, 1982
4. A visual dictionary of Architecture, Francis D.K.Ching, John wiley & Sons, Inc. 1997

OUTCOMES:

- Work on multi planning and mass problems involving building technology
  Use computer for drawing and presentation skills using appropriate software

SEMESTER - VII

AR B 4701 PRACTICAL TRAINING (July to November) 10 Credits

AIM:

To provide adequate knowledge on the practice of Architectural Profession to learn the administration, managerial and professional skills and demonstrate the same in future architectural design study.

OBJECTIVES:

The training in seventh semester focusses on learning the relationship between theoretical knowledge and Practical realisation through works of renowned architects. It lays emphasis on understanding the evolution of project from conception, design development, design approval from local body, and planning authorities, preparation of details, tendering and implementation at site.

The architect / firm / institution may train the student on the following:

- Study of Nationally, Internationally famous architects of contemporary period and analyzing the relationship between their philosophy and design to be evaluated by the architect / firm.
- Preparation of drawings for approval of local body and planning authority, procedures, norms and standards.
- Detailed working drawings & service Drawings, BOQ, contract & tender document for various building components and elements.
- Understanding materials and specification recommended by the architect for a project.
- Learning the importance, procedures, and safety regulation during site inspection from the architect at site.
- Develop ability to understand and interpret drawings and clarifications required at site.
- Discussion with clients & other consultants.
- Any other input that the architect/firm/ institutions feel necessary.

Note:

The progress of training shall be assessed internally through monthly confidential reports (in the prescribed format) from the employer and a portfolio of work done by the student through an (external) Viva - Voce examinations.

TOTAL SESSIONS: 100 Days

OUTCOMES:

The students should be able to:

- Know what is happening in the field or in actual practice
- Go to various construction sites, learn and experience
- Understand the system of working and management in the office.

The choice of the place of training shall be Architectural Firms, Organizations, Development Authorities, etc. which are headed by architects.

SEMESTER - VIII

AR B 4801 PROFESSIONAL ETHICS & PRACTICE - I 3 0 3

AIM:

To provide the students a general understanding of the architectural profession and the importance of ethics in professional practice

OBJECTIVES:

- To give an introduction to the students about the architectural profession.
- To enable the students to grasp the elementary issues concerning professional practice.
- To teach the students about the importance of code of conduct and ethics in professional practice.
- To expose the students some of the important legislation which have a bearing on the practice of architectural profession.

MODULE I INTRODUCTION TO THE ARCHITECTURAL PROFESSION

Importance of Architectural Profession - Role of Architects in Society - Alternatives open on entering the profession - Registration of Architects - Architect's office and its management (location, organization structure, responsibility towards employees, consultants and associates, elementary accounts, tax liabilities).

MODULE II PROFESSIONAL ETHICS AND CODE OF CONDU(

Role of Indian Institute of Architects - Architects Act 1972 (intent, objectives, provisions with regard to architectural practice) - Council of Architecture (role and functions) importance of ethics in professional practice (Council of Architecture guide lines) - Code of conduct for architects as prescribed by Council of Architecture, pMODULE ive action for professional misconduct of an architect.

MODULE III ARCHITECT'S SERVICES & SCALE OF FEES

Mode of engaging an architect - Comprehensive services, partial services and specialized services - Scope of work of an architect - Schedule of services - Scale of fees (Council of Architecture norms) - Mode of payment - Terms and conditions of engagement.

MODULE IV ARCHITECTURAL COMPETITION

Importance of Architectural competitions - Types of competitions (open, limited, ideas competition) - Single and two stage competitions - Council of Architecture guidelines for conducting Architectural competitions -International Competitions (case studies).

MODULE V LEGAL ASPECTS & LEGISLATION 9

Copy rights and patenting - (provisions of copy right acts in India and abroad, cop right in architectural profession) - Easement - (meaning, types of casements, acquisition, extinction and protection) - Development Regulations in Second master plan for Chennai Metropolitan Area, Chennai Corporation Building rules 1972 - The Panchayat rules 1940 - Persons with Disabilities Act (provisions, responsibilities of architect and local body on creating barrier free environment).

TOTAL SESSIONS: 45

REQUIRED READING:

1. Architects Act 1972 and Amendments , upto 2002.
2. David chapel, "The Architect in Practice" , Wiley,Blackwell Pub, 2010.
3. Publications of Council of Architecture-Architects (Professional conduct) Regulations 1989, Architectural Competition guidelines
4. Roshan Namavati, "Professional practice", Lakhani Book Depot, Mumbai 1984.

REFERENCES:

1. J.J.Scott, "Architect's Practice", Butterworth, London 1985.
2. Ar. V.S. Apte, "Architectural Practice and Procedure", Padmaja Bhide, Pune, 2008.
3. Development Regulations of Second Master Plan for Chennai Metropolitan Area, 2026.
4. Chennai City Corporation Building Rules 1972.
5. Persons with Disabilities Act.
6. T.N.D.M. Buildings rules, 1972.

OUTCOMES:

- Get a proper understanding of the role played by an architect. Various types services that an architect can provide to this society

- Role of COA with regards to architect fees for different types of services will enable the students to understand the architect/client and contractor relationship.
- The important role played by the COA & IIA in the matters of conducting competitions.
- The important acts and building bylaws gives a guidance for proper built environment and value of the heritage building.
  The urban art commissions are functioning well at Delhi and other important cities in India for better architectural control and thereby preserving the importance of heritage valued building

AR B 4802 ADVANCED STRUCTURES 3 0 3

AIM:

To impart knowledge on the recent and advanced concepts / developments in structural forms and systems

OBJECTIVES:

- To understand the recent developments in structural forms.
- To increase the student's ability to identify the structural forms suitable for architectural expression.
- The students are expected to analyze and understand the nature of stresses that are developed in the major elements of advanced types of structures.

MODULE I THEORY BEHIND STRUCTURAL FORMS 9

Construction and form, Structure and Form Equilibrium under simple tension or compression, the catenary and the arch, the simply supported beam, the domical shell.

MODULE II STRUCTURE AND ARCHITECTURE 9

Relation between structure and architecture, Geometry of form and structural function, Aesthetic theories of the expression of structural function in architectural form.

MODULE IIISTRUCTURAL ELEMENTS 9

Structural elements: Beams and slabs Arches and catenaries; vaults, domes and curved membranes; Trusses, Portal frames and space frames

MODULE IVSTRUCTURAL SYSTEMS I 9

Structural Systems: single and double layer grids; braced domes, ribbed domes, plate type domes, Network domes, Lamella domes, Geodesic domes, Grid domes. Braced and folded structures

MODULE VSTRUCTURAL SYSTEMS II 9

Space frames: Folded plates, shells, cyclonical shells, Hyperbolic paraboloids, freeforms. Cable structures: Simply curved suspended roofs, combination of cables and struts.

TOTAL SESSIONS: 45

TEXTBOOKS

1. Sinha .N.C and Roy .S.K, *Fundamentals of Reinforced Concrete*, S.Chand &

Co. Ltd., New Delhi, 2001
2. Ramamruthm .S and Narayanan .R, *Reinforced Concrete Structures*, Dhanpat Rai Publications, New Delhi,1997
3. Bryan Stafford and Alex Coull, *Tall Building Structures, Analysis and Design* John Wiley & Sons, New York, 1991

REFERENCE BOOKS

1. Bandyopadhyay .J.N, Thin Shell *Structures Classical and Modern Analysis*, New Age International Publishers, New Delhi, 1998 Ramaswamy .G.S, *Design of Construction of Concrete* Shell Roofs, McGraw Hill Publishing Company, New York, 1986
2. Krishna Raju .N, *Pre Stressed Concrete*, Tata McGraw Hill Publishing Company Ltd., New Delhi, 1988
3. Taranath .B.S, *Structural Analysis and Design of Tall Buildings*, McGraw Hill, New York, 1988.
4. Frei Otto - Tensile structures Volume 1, Pneumatic structures, Volume 2, cable structures .The MIT press, London.2008
5. Tall Building structures - Analysis & Design - Bryan Stafford smith. John wiley.
6. Structural system for tall buildings - Council on tall buildings and urban habitat - Mc GrawHill.2007
7. Pneumatic structures, Thomas Herzog - Crosby Lockwood staples, London.
8. Maintenance and Rehabilitation of RC structures by Derison Allen, Longman Publication limited, 2001.

OUTCOMES:

- The students get familiar with the basic concepts and developments in advanced structures.
- They can also learn about the structural elements in different forms of arches vaults, domes and its expression in architectural form.

  To introduce the basic concepts of Space Frames, Shells and folded plates and cable structures

AR B 4803 GREEN AND SUSTAINABLE DESIGN 3 0 3

AIM:

The course focuses on developing an understanding regarding environmental sustainability and environmentally responsible green buildings. It addresses the design concerns in architecture to develop resource-efficient buildings that have minimum adverse impact on the natural environment

OBJECTIVES:

- To understand the importance of environmentally and ecologically sensitive architecture
- To integrate sustainable planning and building principles in architectural design.
- To get introduced to agencies that work for green and sustainable architectural developments.

MODULE I INTRODUTION 9

Concepts of sustainability, Sustainable Development, Green field development: Brown field development, Principles of conservation - synergy with nature, Sustainable planning & Design, Sustainable approach to site planning and design - site inventories- relationships between site factors - development impacts from one area of the site on the other areas, Intro to Environmental Design & Planning. Sick Building Syndrome

MODULE II SUSTAINABLE CONSTRUCTION 9

Sustainable Construction, Three Dimensions. Properties, Uses and Examples of - Primary, secondary and Tertiary Sustainable Materials, Techniques of sustainable construction - technologies and design synthesis and construction methods: solar water heating panels; photovoltaic cells etc.

MODULE IIIRECYCLING AND REUSE 9

Reuse - Waste prevention, Pre building, Post building stages, Construction and Demolition recycling- Conservation of natural and building resources- types of wastes. Sourcing and recycling of building materials. Elimination of waste and minimize pollution - various Decomposing methods -environmental monitoring and testing during construction- Design facility within social and environmental thresholds-Case study of local natural body that is polluted and suitable design system to rehabilitate the same.

MODULE IV BUILDING INFRASTRUCTURE 9

Active Energy Systems in buildings, Utilities andservices,building automation. Electro-mechanical systems, lifts and transportation, captivepower plant and equipment, operation & maintenance

MODULE V RATING SYSTEMS 9

Introduction to building rating systems: building auditing, points system,components, and weight age, agencies and institutions like -LEED, BREEAM, Green Star, HQE Rating system, IGBC, GBC, TERI GRIHA etc, and Discussion of green buildings in the contexts with case examples.

TOTAL SESSIONS: 45

TEXT BOOKS

1. Bose B.C., "Integrated approach to sustainable Development". Publishers: Rajat Publications, Delhi, 2007
2. Laurie Baker's, "Chamoli Earthquake hand book", Publishers: Costford, centre of science and technology for rura development, 2000.

REFERENCES:

1. Fuller Moore, "Environmental control systems Heating, Cooling, Lighting". Publisher MC.Graw Hill, Newyork, 1992
2. Caring A.Langston Grace K.C.Ding, "Sustainable practices in built environment", 2nd Edition, Publishers: Butterworth-Heinmann Linacre House Jordanhill Oxford, 2001
3. Trivedi.R.N. Environmental Sciences, Publishers:Anmol Publications Pvt Ltd, New Delhi, 1997

OUTCOMES:

- The students are exposed to integrate sustainable planning and building principles in architectural design.
- Have a comprehensive knowledge on the evolution and impact of environmental aspects and sustainable issues.
- Be equipped to handle the architectural design process from the studies, analysis, interpretation and design in accordance to the case studies done on the green building concepts.
- Have a knowledge on the Government policies and actions towards the Sustainable society and the latest technologies involved in the Building process

Have knowledge on the organic and sustainable Building materials used in the design and execution

AR B 4804 RESEARCH METHODS 3 0 3

AIM:

The course provides students with a framework to understand some emerging concepts in architecture and projects of design complexity and equip the student with adequate architectural research methods for the realization of dissertation writing and thesis concept. During the course of study, the subject of the thesis is developed and the project articulated.

OBJECTIVES:

- To impart knowledge to students, on the tools and methods needed to handle a design project of reasonable complexity individually
- The skills required to collect, assimilate and synthesis data relevant to handle a research topics and design thesis project independently.

MODULE I INTRODUTION 9

Introduction to research methods, Types of research, Difference between design studio, dissertation and design thesis, Selection of topics for dissertation, architectural design thesis. Research topicsbased on building typologies, preparation of synopsis, Methodology of research

MODULE II RESEARCH IN ARCHITECTURE 9

Emerging concepts in architecture due changes in social, economic, technological variables. Review of design projects related to real world instances and relevant to commMODULE y at large. Review of projects of design complexity, involving themes, subthemes and architectural expression.

MODULE IIITOOLS AND METHODS 9

Scientific methods of research with special emphasis on architectural research methods. Architectural enquiry visual, observations, questionnaire formats of enquiry, Literature Review and case studies. Data analysis techniques interpretation of data.

MODULE IV PRESENTATION 9

Formats for presentation of data, case studies and analysis. Formats for presentation of thesis design- media appropriate in the architectural profession such as two dimensional drawing, physical models, three dimensional computer

models.

MODULE V REPORT WRITING 9

Techniques in report writing, presentation of contextualinformation relevant to interpretation of the data collected and design; reportingthe design development from concept to design solution, explain the relation ofthe design to existing knowledge on the topic in the form of coherently writtenreport.

TOTAL SESSIONS: 45

TEXT BOOK:

1. Linda N. Groat and David Wang, "Architectural Research Methods",2nd Edition. Publishers: John Wikey & Sons.,Inc.,Hoboken, New Jersey.

REFERENCES:

1. http://rp.design.umn.edu/resources/documents/ArchGraphStand15.pdf
2. Robert Sommer & Barbara Sommer (2002) A Practical Guide to Behavioral Research: Tools and Techniques. New York: The Oxford University Press.
3. John W. Creswell (2003) Research Design: Qualitative, Quantitative, and Mixed Method Approaches. 2nd Edition. Thousand Oaks, CA: Sage Publications.

OUTCOMES:

- The students have a comprehensive knowledge on the tools and methods of research and provide a way to frame the reports in a proper way.
- They gain knowledge to present their research and contents in a professional way.
- They also secure lots of skills required to collect, assimilate and synthesis data relevant to handle a research topics and design thesis project independently

AR B 4806 ARCHITECTURAL DESIGN- VII 0 16 9

AIM:

To enable the students to design large scale building projects in an urban environment with emphasis on advanced building services and systems, urban development regulations, building by-laws and architectural controls.

OBJECTIVES:

- To develop skills for comprehensive understanding and dealing with Architecture of a group of buildings, inter connected with elements of urban design.
- Resolution of project to integrate complexity of urban dimensions and architectural language.
- Methods of space programming, analysis, evaluation of design criteria and concepts for large projects.

CONTENT:

Detailed study of methodology for design conception, development and detailing –with special emphasis on site planning, services, HVAC systems and architectural detailing

AREA OF FOCUS / ISSUES:

- Design problem shall consider the above and planning shall deal with the masses in relation to conservation of spaces, transportation and multiple activities.
- Design must establish linkages with urban structure, urban continuity, movement structure, landscaping, people and vehicular movement's system design, economics, architectural aesthetics and details.

TYPOLOGY/ PROJECT-

Railway Station, Inter State / Regional Bus Terminus, Airport, Star Category Hotel, Sports Stadium, Large scale Exhibitions etc.

TOTAL SESSIONS: 225

TEXT BOOKS:

1. De. Chiara and Callender, "Time-saver Standards for Building Types", McGraw-Hill Co., New York, 1973.
2. The Handbook of Building Types., NEUFERT ARCHITECTS DATA, New International edition, second international edition. BSP Professional Books.

Oxford (1980) Blackwell scientific Publications.

3. Ed.By.Quentin Pickard RIBA "The Architects' Hand Book", Bladewell Science Ltd., 2002

REFERENCES:

1. S. Macmillan, 'Designing better buildings' - Routledge,2003
2. Handbook on Building Construction Practices (Excluding Electrical Work). Bureau of Indian Standards, New Delhi, 1997
3. National Building book of India 2005, Bureau of Indian Standards, New Delhi

OUTCOMES:

- Design advanced and complex problem comprising of group and multi stories structures and infrastructures.
- Use computer for drawing and presentation skills using appropriate software. Have solve the design problems in functional and aesthetical way

SEMESTER IX

AR B 5901 PROFESSIONAL ETHICS PRACTICE - II 3 0 3

AIM:

To expose the students to advanced issues concerning architectural practice such as Tendering, Contracting including alternative practices in project execution, Arbitration and Project management and to enable them to understand the implications of globalisation on architectural practice.

OBJECTIVES:

- To further the students understanding of the professional practice.
- To enable the students to grasp the advanced issues concerning professional practice such as tendering, contracting including alternative practices in project execution, arbitration and project management.
- To expose the students to the implications of globalisation on professional practice with particular reference to WTO and GATS.
- To expose the students on some of the important legislations concerning architectural practice in India as well as International laws.

CONTENT:

MODULE I TENDER 9

Types of Tenders-Open and closed tenders-Conditions of tender-Tender documents-Tender notice-Concept of EMD-Submission of tender-Tender scrutiny-Tender analysis Recommendations- E tendering (advantages, procedure, conditions).

MODULE II CONTRACT & ARBITRATION 9

Contents of Contract document (Articles of Agreement, Terms and Conditions of Contract, Important clauses - Appendix) - Arbitration (Definition, Advantages of arbitration, Sole and joint arbitrators, Role of umpires, Award, Conduct of arbitration proceedings) - Arbitration clause in contract agreement (role of architect, excepted matters) - case studies.

MODULE III NEW TRENDS IN PROJECT FORMULATION AND EXECUTION 9

Turn key offer (Expression of interest, Request for Proposal Document, Conditions for inviting turnkey offer, finalisation of the bidder) - Current

practices in Project execution [Build operate and Transfer (BOT), Build Operate Lease and Transfer (BOLT) and Build Operate and Own (BOO) and others - case studies.

MODULE IV IMPLICATIONS OF GLOBALISATION IN ARCHITECTURAL PRACTICE 9

Globalisation (meaning, advantages) - WTO and GATS and their relevance to architectural profession in India - Pre-requisites for Indian architects to work in other countries - Preparedness and infrastructure requirements for global practice - Entry of foreign architects in India (views for and against) - Information Technology and its impact on architectural practice.

MODULE V EMERGING SPECIALISATIONS FOR AN ARCHITECT 9

Construction management (Role, function, and responsibilities of a construction manager) -Project management (Concept, Objectives, Planning, Scheduling, Controlling and Role and Responsibilities of project manager) - Suitability of architect as construction / project manager -Programme evaluation review Techniques (event, activity, dummy network rules, graphical guidelines for network - PERT network).

TOTAL SESSIONS: 45

TEXT BOOKS:

1. Ar. V.S. Apte, "Architectural Practice and Procedure", Padmaja Bhide, Pune, 2008.
2. Architects Act 1972.
3. Dr. B.C. Punmiya and K.K. Khandelwal , "Project Planning and Control with PERT / CPM", Laxmi Publications, New Delhi, 1987.
4. Arbitration Act.
5. WTO and GATT guidelines.

REFERENCES:

1. Architects Act 1972.
2. Publications of Handbook on Professional practice by IIA. - 2003
3. Publications of Council of Architecture-Architects (Professional conduct) Regulations 2005. Architectural Competition guidelines
4. Roshan Namavati, Professional practice, Lakhani Book Depot, Mumbai 1984

OUTCOMES:

- Understand the properly and its implications to the owner of the property
- The issues regarding tenders architects and client role towards the contract.
- The role played by various agencies within the contractual clauses. Duties of sub contractor payments, etc.
- Disputes between client and contractor areas of disputes likely to arise - Arbitral award to be final & binding.
  Learn about the laws regarding environment along with the building norms which are already available

AR B 5902 HUMAN SETTLEMENT PLANNING 3 0 3

AIM:

To familiarize with the evolution, pattern of human settlements & the process for the improvement of human living environment and also its relevance in architecture

OBJECTIVES:

- To enable the students to comprehend the evolution of settlements, its elements & classifications.
- To understand the various levels of planning, planning principles & the process over a period of time
- To outline the scope and content of Urban planning, Urban renewal and Regional planning and the various plans to be prepared.
- To enable students to understand how planning activities are regulated in the state at various levels.

MODULE I INTRODUCTION TO THE CONCEPT OF HUMAN SETTLEMENTS **9**

Elements of human settlements context and contain - Meaning and Examples - Nature, Man, Society, shells and Network: Their sub elements, characteristics, functionaries / potentials, major aspects in spatial planning.

Classification of human settlements: Classification based on population, functions, locations, Municipal status.

MODULE II FORMS OF HUMAN SETTLEMENTS **9**

Growth and decay of human settlements: Factors influencing the growth and decay, History of settlement studies (Ancient Classical, medieval, Renaissance industrial) Structure and Form of Human settlements - Linear, Non-linear & circular, examples and their functional characteristics of Indian and European towns and cities.

MODULE III PLANNING CONCEPTS **9**

Contribution to planning thoughts & their relevance to Indian planning practice - Patric Geddes, Ebenezer Howard, CA Perry, Le Corbusier, Doxiadis - Principles and concepts with case studies.

9

MODULE IV URBAN AND REGIONAL PLANNING

Aim, objective, scope and content of Regional plan, Master plan, zonal plan, planned MODULE development (PUD) and urban renewal plan - Redevelopment, rehabilitation and conservation - Case - studies.

MODULE V LOCAL GOVERNANCE 9

Objectives, Functions, Responsibilities and Organizational structure of: (i) Village Panchayats (ii) Municipalities (iii) Corporations and (iv) Urban Development Authorities.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. C.L.Doxiadis, Ekistics, "An Introduction to the Science of Human Settlements", Hutchinson, London, 1968.
2. Gallion Arthur B & Eisna Simon, "The Urban Pattern: City Planning and Housing", Cbs, 2005.
3. John Ratchiffe, An Introduction to Town and Country Planning, Random House.

REFERENCES:

1. L.R. Kadiyali, "Traffic Engineering and Transport Planning", Khanna Publishers, New. Delhi, 2000.
2. Government of India, "Report of the National Commission on Urbanisation", 1988.
3. Andro D.Thomas, "Housing and Urban Renewal", George Allen and Unwin, Sydney, 1986.
4. Rodwin, Lloyd, "Shelter, Settlements and Development" (Hemel Hempstead, MODULE ed Kingdom, Unwin Hyman Ltd.), 1987.
5. Ministry of Urban Affairs and Employment, Government of India, New Delhi, 'Urban Development Plans: Formulation & Implementation' - Guidelines - 1996.
6. Madras Metropolitan Development Authority, 'Master Plan for Madras Metropolitan Area, Second Master Plan - 1995
7. Centre for Human Settlements, Anna University, Chennai 'Development Plan for Uthokottai Taluk, Cheyyur Taluk, 1999.
8. http://www.jadavpur.edu/academics/centers_human.htm
9. http://www.virtualref.com/uncrd/558.htm
10. http://www.unescap.org/huset/m_land/index.htm

11. http://www.esa.un.org/subindex/prviewsites.asp?termcode=GH.05
12. http://www.abuildnet.com
13. http://www.buildernews.com/

OUTCOMES:

- Have a comprehensive knowledge about the history of human settlements
- Have a complete knowledge about the various planning thoughts proposed by the scholars and its successful effects
- Understand and analysis the various housing conditions of the people and the road geometries of our cities.
- Understanding the scope and content of Urban planning, Urban renewal and Regional planning and the various plans to be prepared.

- Look at the role and activities of the various nodal agencies who regulate the city growth in our state.
  Examine the various futuristic models proposed by the scholars at present

AR B 5903 URBAN DESIGN 3 0 3

AIM:

The overall aim of the course is to help students formulate an understanding of the urban forms and spaces. City planning history and theory will be examined. The contemporary needs of the society and the role of spaces will be dealt along with the need for design development and control.

OBJECTIVE:

To understand the fundamental concepts and theories of urban design and apply them in their design projects.

MODULE I INTRODUCTION- EVOLUTION AND UNDERTANDING OF THE CONCEPT OF URBAN DESIGN 9

Evolution of urban design as a discipline – Need for urban design –different realms attacched to urban design- urban design theories and key personalities and there contribution to urban design (Gordon Cullen and Kevin Lynch)

MODULE II ELEMENTS AND APPROCHES OF URBAN DESIGN 9

Urban scale, Mass and Space; Understanding components of urban fabric; Making a Visual survey; Understanding the various urban spaces in the city and their hierarchy. Special focus on streets; Expressive quality of built forms, spaces in public domain

MODULE III CONCEPTS AND TECHNIQUES IN URBAN DESIGN 9

Concets and theories of William H whyte ;spacemaking and placemaking concepts of GHEL architects (case study : Copenhagen) .understandinf different terms involved in urban Design. Current trends in urban design

MODULE IV RENEWAL, REDEVELOPMENT AND FORMULATING URBAN DESIGN POLICIES 9

Understanding urban renewal and the need for it, Scope, challenge and Implementation methods; Public participation; Townscape policies and urban design guidelines for new developments- Case studies. A brief Analysis of urban spaces in history - in the Western world (Greek, Roman, Medieval and Renaissance towns) and the Eastern world (Vedic, temple towns, medieval and Islamic towns) ; Relevance of the historical concepts in the present context ; Critical analysis of some Indian cities like New Delhi, Chandigarh etc

MODULE V URBAN DESIGN EXERCISE 9

Conducting an urban design survey, Analysis of data, Formulating urban design guidelines and drawings for an area - practical problem solving. The first part of the urban design project could deal with the Identification and documentation of areas such as riverfronts, beach fronts, market areas, bazaars or commercial & residential districts with, its surrounding areas. And second part would be to solve and provide appropriate and relevant solutions for the same.

TOTAL SESSIONS: 45

TEXT BOOKS:

1. Gordon Cullen, "The Concise townscape", The Architectural press
2. Kevin Lynch, "Image of the city"
3. Cliff Moughtin, "Urban design - Ornament and decoration", Bath Press
4. Cliff Moughtin, "Urban design - street and square", Bath Press
5. Paul Zucker , "Town and square"
6. Arthur B Gallion, "The urban pattern", CBS publishers
7. Raymond J Curran , "Architecture and the urban experience", Van Nostrand Reinhold Company
8. Christopher Alexander, "Pattern language"
9. Christopher Alexander, "The timeless way of building"

REFERENCE READINGS:

1. Rangwala, "Town Planning", Charotar publishing house
2. David Gosling, "Concepts of Urban design ", Academy editions
3. Spiro Kostof, "City shaped" , Bulfinch Press
4. Paul D. Speriregon, "Architecture of town and cities", The MIT press
5. Johnathan Barnet, "An introduction to Urban design", Harper& Row Publishers
6. Arthur B. Gallion and Simon Eisner, "The Urban Pattern - City planning and Design", Van Nostrand Reinhold Company.

OUTCOMES:

- Have a comprehensive knowledge on the evolution of urban planning and its relation today.

  Be equipped to handle the urban design studio project at a town/city, region

level from the studies, analysis, interpretation and design in accordance to the jurisprudence

AR B 5904 DISSERTATION 3 0 3

AIM:

The overall aim of the course is to prepare the students for formal report writing systematically on a particular topic related to architecture.

OBJECTIVE:

- To Widen and enrich the literature pertaining to the topic of interest
- To Prepare for their thesis

CONTENT:

As a fully, comprehensively, learnedly written essay is considered as a prelude to Architectural Thesis in the tenth semester. The course offers an opportMODULE y to relook at architecture either as a subject or profession. Concentrating on an issue of interest to the student as it relates to built environment, dissertation is primarily textual.

Alternatively the topic may consider philosophy and contribution of an architect, historical perspectives, typological changes in material, technology, essays and writings of architects, design process, development and others. Dissertation involves a field of observation, reflection of thoughts, abstraction and exposition of ideas. The Dissertation should state its objectives, followed by exhaustive documentation, arguments and may result in a hypothesis.

Students shall submit a proposal in about 1500 words (5 To 6 pages). Stating the topic to be explored and the scope. At the end of the semester (Eighth) a well written report is to be submitted which is about 15,000 words in the prescribed format. The student must be able to present and defend during evaluation.

TOTAL SESSIONS: 90

TEXT BOOKS:

1. Ian Border, Kurt Rueiden, the Dissertation, an Architectural students Hand Book, - Architectural press - 2000.

REFERENCES :

1. Linda grand and David Wang, Architectural Research Method - John Wiley Sons, 2002.

OUTCOMES:

- Impart indepth knowledge on selected topics on their interest through wide literature study.
- Focus and orient for the thesis

AR B 5906 URBAN DESIGN STUDIO 0 16 9

AIM:

To delve into the perpetuity and dynamics of urban form with a gist on the interrelationships between the disciplines of architecture and the art of creating and shaping cities and towns

OBJECTIVES:

- To understand the psychological process and aspects of the urban environment as well as their interrelationships.
- To figure out larger scale groups of buildings, streets and public spaces, etc. to make the urban areas functional, attractive, and sustainable.
- To understand urban design as a tool for making connections between people and places, movement and urban form, nature and the built fabric.
- To take design decisions in a comprehensive manner understanding their implications in the larger context.

CONTENT:

Scale and Complexity: projects involving the urban context and architecture in the urban context with an emphasis on understanding interdependencies and formulating appropriate design directions.

AREAS OF FOCUS/ ISSUES:

- exploration of relationship between building and larger context
- contemporary processes in design
- appropriate architecture
- addressing issues in urban areas - transportation, sustainability, heritage, sprawl, place making, identity, collective memory
- Mixed use programming

Typology/ project: those involving large scale urban interventions as well as large scale projects which have impact on the urban context- revitalization and renewal of urban fragments, evolving guidelines for heritage areas, adaptive reuse, urban waterfront development, transportation nodes, new commMODULE ies, multi-use urban complexes.

TOTAL SESSIONS: 225

TEXT BOOKS:

1. S. Macmillan, "Designing Better Buildings" . Routledge, 2003.

2. Digital Workflows in Architecture: Design - Assembly - Industry / Scott Marble- 2012
3. Masterpieces: Office Architecture + Design Lara Menzel - 2009
4. National Building Code and Bureau of Indian standard publications.2005

REFERENCES:

Digital Workflows in Architecture: Design - Assembly - Industry / Scott Marble

1. http://www.archdaily.com/category/institutional-architecture/
2. http://www.thehub.net.au/%7Emorrisqc/architext
3. http://www.archinet.co.uk/
4. http://archinform.de/start.en.htm

OUTCOMES:

- The students can able to design larger scale groups of buildings, streets and public spaces, etc. to make the urban areas functional, attractive, and sustainable.
- They also understand the psychological process and aspects of the urban environment as well as their interrelationships.

Use computer for drawing and presentation skills using appropriate software

SEMESTER - X

AR B 5106 ARCHITECTURAL THESIS 0 28 14

AIM:

The overall aim of the thesis is to test whether a student has acquired the requisite skill and competence in architecture before becoming a fully fledged architect.

OBJECTIVE:

The entire 5 years of architectural design crown in the thesis Project to arouse students to involve in individual research and methodology. This is to train them in handling projects independently.

TOPICS OF STUDY

The main areas of study and research can include advanced architectural design, contemporary design processes, urban design including urban-infill, rural settlements,environmental design, conservation and heritage precincts, landscape design, housing and topics related to construction technology. However, the specific thrust should be architectural design of built environment.

METHOD OF SUBMISSION

The Thesis Project shall be submitted in the form of portfolio of drawings, project report in prescribed format, models, slides and soft copy reports.

TOTAL SESSIONS: 364

TEXT BOOKS & REFERENCES:

As per requirement of Topic and as suggested by the supervisor of Thesis.

OUTCOMES:

- The students can handle large scale design problems
- Manage the profession at ease.

The students can able to come out with comprehensive design solutions

REGULATIONS 2016

CURRICULUM AND SYLLABI

B.Sc

Computer Science

VISION AND MISSION OF THE INSTITUTION

VISION

B.S. Abdur Rahman Crescent Institute of Science and Technology aspires to be a leader in Education, Training and Research in Engineering, Science, Technology and Management and to play a vital role in the Socio-Economic progress of the Country.

MISSION

- To blossom into an internationally renowned Institution
- To empower the youth through quality education and to provide professional leadership
- To achieve excellence in all its endeavors to face global challenges
- To provide excellent teaching and research ambience
- To network with global institutions of Excellence, Business, Industry and Research Organizations
- To contribute to the knowledge base through Scientific enquiry, Applied research and Innovation

VISION AND MISSION OF THE DEPARTMENT OF COMPUTER APPLICATIONS

VISION

Aspires to provide quality education in the field of computer applications with state of the art computational facilities and undertake quality research in collaboration with industries and universities to produce committed professionals and academicians to meet the needs of the industries and society.

MISSION

The Department of Computer Applications, endeavors

- To disseminate knowledge through education and training of graduates in the field of computer applications.
- To focus on teaching - learning, research and consultancy to promote excellence in computer applications.
- To foster graduates with opportunities required to explore, create and face challenges of IT related industries.
- To equip the graduates with the necessary skills in communication, team work and leadership qualities to meet the needs of the IT related sector globally.
- To disseminate the outcome of projects and research work undertaken by the department through appropriate measures for the benefit of society and industry.

PROGRAMME EDUCATIONAL OBJECTIVES:

The students of B.Sc Computer science Programme would be able to

- Communicate computing concepts and solutions to bridge the gap between industry and academic institution.
- Utilize their knowledge of computing principles to develop solutions to current and future computing problems.
- Understand professional, ethical, legal, security, and social issues and responsibilities.
- Use current techniques, skills, and tools necessary for computing practices
- apply design and development principles in the construction of software systems of varying complexity.

PROGRAMME OUTCOMES:

On successful completion of the programme, the graduates will have

- Have knowledge of computing and mathematics appropriate to the discipline
- Identify analyze a problem and define the computing requirements appropriate to its solution;
- Have use current techniques, skills, and tools necessary for computing practices;
- Be prepared for career in Information Technology oriented business or industry for graduate study in technical fields.

ENC1181 **GENERAL ENGLISH – I** **L T P C**

4 1 0 4

OBJECTIVES:

- To help the students acquire efficiency in Spoken English through role plays.
- To enable them to make Presentation effectively.
- To develop reading skills among students through extensive readers.
- To orient them in writing letters.
- To train them in appreciating and interpreting English literature.

MODULE I **7**

Oral and Written Communication – implications in real life and workplace situations
Essential English Grammar - 1-6 units

MODULE II **8**

One–minute Presentations (JAM) on concrete and abstract topics that test their creative thinking (ii) Prepared p and extempore presentations
Short Story; O Henry - “Robe of Peace” (Extensive Reading)

MODULE III **8**

Role-Play – establishing a point of view - convincing someone on social issues such as preservation of water, fuel, protection of environment, gender discrimination.
Poetry: William Shakespeare - “All the World’s a Stage”

MODULE IV **8**

Letter Writing- Letter of Invitation & Permission Developing story from hints- Short Story: John Galsworthy - “Quality” (Extensive Reading)

MODULE V **8**

Précis Writing- Writing instructions and recommendations Reading Comprehension: Short Story**--**Rudyard Kipling – “The Miracle of Puran Bhagat”(Extensive Reading)
Written correspondence - - e-mail writing Prose : Education, Employment, Unemployment

MODULE VI **6**

Written correspondence - - e-mail writing
Prose : Education, Employment, Unemployment

TOTAL HOURS – 45

7. Murphy, Raymond. Essential English Grammar. New Delhi: Cambridge University Press, 2009.
8. Seshadri, K G Ed. Stories for Colleges. Chennai: Macmillan India Ltd, 2003.

OUTCOMES:

Students would be able to

- Actively take part in role plays
- Make effective presentation s
- Read and comprehend various texts.
- Write letters without making mistakes.
- Analyse literary texts.

MAC1187	ALGEBRA, CALCULUS AND TRIGONOMETRY	L	T	P	C
		3	1	0	4

OBJECTIVES:

The course is aimed at

- Developing the skills of students in applying basic concepts in chosen topics of mathematics that are imperative for effective understanding of application oriented topics.
- Laying the foundation for learning concepts of Differentiation, Integration and Trigonometry.

MODULE I MATRICES **(9+3)**

Symmetric – Skew-Symmetric - Orthogonal and Unitary matrices - Rank of a Matrix -Consistency - Characteristic equation - Eigenvalues and Eigenvectors - properties -Cayley Hamilton’s Theorem (proof not needed) - Simple applications.

MODULE II THEORY OF EQUATIONS **(9+3)**

Partial Fractions - Theory of equations- Polynomial Equations with real Coefficients -Irrational roots - Complex roots - Symmetric functions of roots - Transformation of equation by increasing or decreasing roots by a constant - Reciprocal equations.

MODULE III DIFFERENTIAL CALCULUS **(9+3)**

Rules of differentiation - Derivative of implicit function - Successive differentiation nth derivatives - Leibnitz theorem (without proof) and applications - maxima and minima of functions of two variables - Partial differentiation - Euler’s Theorem.

MODULE IV INTEGRAL CALCULUS **(9+3)**

Integration of rational functions - algebraic expressions involving only one irrational quantity- rational functions of sinx and cosx - Trigonometric substitutions - Bernoulli's formula for integration by parts - reduction formulae - properties of definite integral -Evaluation of double and triple integrals.

MODULE V TRIGONOMETRY **(9+3)**

De Moivre's theorem and its application - Circular and Hyperbolic functions – Inverse circular and hyperbolic functions - Expansion of trigonometric functions in terms of power and multiples - Separation of real and imaginary parts of logarithmic -trigonometric and inverse trigonometric functions - Summation of series including C+iS method.

TOTAL HOURS – 60

TEXT BOOKS:

1. Narayanan, S. and Manicavachagom Pillay, T.K. (2015) Calculus Vol. I,II &III S.Viswanathan (Printers & publishers) Pvt. Ltd., Chennai.

3. Kandasamy P, K. Thilagavathi and K. Gunavathy- Allied Mathematics aper-I, First semester, 1/e, S. Chand & Co., New Delhi, 2003

REFERENCES:

1. Stewart J - Single Variable Calculus (4th edition) Brooks / Cole, Cenage Learning 2010.
2. Tom M. Apostol - Calculus, Vol. I (second edition) John Wiley and Sons, Inc., Jan 2007.
3. Burnside W.S. and A.W. Panton - The Theory of Equations, Dublin University Press, 1954.
4. MacDuffee, C.C. - Theory of Equations, John Wiley & Sons Inc., 1954.
5. Ushri Dutta, A.S.Muktibodh and S.D. Mohagaonkar: Algebra and Trigonometry, PHI India, 2006.

OUTCOMES:

On completion of the course the students will be able to

- solve eigenvalue and eigenvector problems
- classify and solve polynomial equations of different types.
- differentiate different types of functions.
- integrate rational and trigonometric functions and to evaluate definite integrals (double and triple).
- demonstrate the application of Demoivre's theorem and find the sum of series of trigonometric functions.

CAC1151	COMPUTER FUNDAMENTALS &ORGANIZATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The basic knowledge of how a computer works is very important for any fresh networking or operating system professional.
- The functional knowledge of a computers working and its main building parts are paramount.
- The computers of today may come with variety of features but the basic working principles remain the same.
- Students will explore the fundamentals of organization of a computer and the principles and building units of a computer (its hardware).
- Also, they will be introduced to the basics of networking and MS Office

MODULE I GENERAL FEATURES OF A COMPUTER **9**

General features of a computer, Generation of computers, Personal computer, workstation, mainframe computer and super computers. Computer applications – data processing, information processing, commercial, office automation, industry and engineering, healthcare, education, graphics and multimedia.

MODULE II COMPUTER ORGANIZATION **9**

Computer organization, central processing unit, computer memory – primary memory and secondary memory, Secondary storage devices – Magnetic and optical media, Input and output units, OMR, OCR, MICR, scanner, mouse, modem.

MODULE III COMPUTER HARDWARE AND SOFTWARE **9**

Computer hardware and software, Machine language and high level language, Application software, computer program, operating system, Computer virus, antivirus and computer security, Elements of MS DOS and Windows OS, Computer arithmetic, Binary, octal and hexadecimal number systems, Algorithm and flowcharts, illustrations, elements of a database and its applications, Basic Gates (Demorgans theorems, duality theorem, NOR, NAND, XOR, XNOR gates), Boolean expressions and logic diagrams, Types of Boolean expressions

MODULE IV MS OFFICE 9

Word processing and electronic spread sheet, An overview of MSWORD, MSEXCEL and MSPOWERPOINT

MODULE V INTRODUCTION TO NETWORKING 9

Network of computers, Types of networks, LAN, Intranet and Internet, Internet applications, World Wide Web, E-mail, browsing and searching, search engines, multimedia applications

TOTAL HOURS – 45

TEXT BOOKS

1. M. Morris Mano and Michael D.Ciletti, "Digital Design with an introduction to the Verilog HDL", Pearson Education, Fifth Edition, ISBN-13: 978-0-13-277420-8, 2012.
2.

REFERENCES

1. Charles H.Roth, Jr., Kinney," Fundamentals of Logic Design", Brooks Publications, Seventh Edition,. ISBN-13 :978 -1-133-62848-4,2013
2. Ashok N Kamthane, "Computer Programming", Pearson Education, 2nd Edition, ISBN 13: 9788131704370, 2012

OUTCOMES:

- Students will get in-depth knowledge about the general features of a computer.
- Student which will allow introduce them to various features of computer,
- Understand the computer concepts on which they can base their learning and design.
- Student will be able to understand the basic MS- office.
- To get a better knowledge on networking aspects
- An insight to the different software and hardware components of a computer will take them a step ahead in terms of what they can accomplish from their learning.

CAC1152	PROBLEM SOLVING TECHNIQUES AND PROGRAMMING IN C	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of the course are as follows

- This course is designed to provide a comprehensive study of the C programming language. It stresses the strengths of C, which provide students with the means of writing efficient, maintainable, and portable code.
- To learn and acquire art of computer programming.
- Programming language for solving a problem
- To gain experience about structured programming
- To understand various features in C

MODULE I INTRODUCTION TO COMPUTER PROBLEM SOLVING 9

Problem Solving Process - Hierarchy charts to plan the program design - Algorithms - Iterative versus recursive style - Modular Programming - Structured Programming - Algorithm representation using Psuedocode, Algorithm Testing, brief introduction to Efficiency of Algorithms - Data Verification v/s Validation – Module design – Cohesion – Coupling – Fan-in – Fan-out concepts

MODULE II FUNDAMENTAL ALGORITHMS FOR PROBLEM SOLVING 9

Algorithms for Exchanging the values – Counting – Factorial Computation – some trigonometric functions computation as a sum of series – Base Conversion of numbers – Factoring Methods – Array Techniques – Sorting Algorithms - Bubble, Selection, Insertion, Merge Sort, Quick Sort–Sequential and Binary Search Algorithms. Algorithms for implementing numerical methods such as Newton Raphson and RungaKutta Methods.

MODULE III INTRODUCTION TO 'C' 9

Overview of C – Constants, Variables and Data Types; Operators and Expressions; Managing Input/Output Operations – Formatted I/O; Decision Making – Branching - IF, Nested IF – Switch – goto; Looping- While, do, for statements

MODULE IV ARRAYS, FUNCTIONS, STRUCTURES AND UNIONS 9

Arrays – static, dynamic and multi-dimensional arrays - Character arrays and Strings – String handling Functions - User defined Functions – Recursion; Structures and Unions – Array of Structures – Structures and Functions

MODULE V POINTERS AND FILE MANAGEMENT 9

Pointers– Declaration, Accessing a variable, character strings, pointers to functions and structures; File Management in ‘C’ any programming language; Dynamic Memory allocation– Linked Lists; Preprocessor Directives; Storage Classes, Command-line Arguments, multi-file programs and use of make utility.

TOTAL HOURS – 45

TEXT BOOKS:

1. Jeri R. Hanly and Eliot B. Koffman “Problem Solving and Program Design in C” Pearson Education, VII Edition, 2012
2. R.G.Dromey "How to Solve it by Computer ", PHI, 2006.

REFERENCES:

1. Paul J. Deitel, Deitel & Associates, “C How to Program”, Pearson Education, 7th Edition, ISBN-13: 978-0132990448, 2012
2. E.Balagurusamy " Programming in ANSI C " , Sixth Edition, 2004

OUTCOMES:

At the completion of this course, the student will able to

- Study, analyze, understand logical structure and compare various programming methodologies of a computer program, and different construct to develop a program in ‘C’ language
- Write small programs related to simple/ moderate mathematical, and logical problems in ‘C’.
- Study, analyze and understand simple data structures, use of pointers, memory allocation and data handling through files in ‘C’.

CAC1153	INTRODUCTION TO LINUX	L	T	P	C
		3	0	0	3

OBJECTIVES:

At the end of this course the learner is expected:

- To gain knowledge on the basic Linux commands.
- To have a hands on experience in open office
- To have clear understanding in open source softwares

MODULE I - INTRODUCTION TO LINUX 9

What Is Linux? -The Problems with Windows -The Benefits of Linux - Proprietary Software and the GPL- GNU and Linux Together- Different Flavors of Linux- Who Uses Linux?- Understanding How Linux Differs from Windows- Using Ubuntu

MODULE II BASH SHELL 9

What Is the BASH Shell? -Working with Files-Listing Files-Copying Files and Directories -Moving Files and Directories -Deleting Files and Directories -Changing and Creating Directories-Real Files and Virtual Files. -Users and File Permissions - The File System Explained -File Searches -Using the find Command -Using the locate Command -Using the whereis Command-File Size and Free Space -Viewing File Sizes -Finding Out the Amount of Free Space.

MODULE III INITIALIZATION 9

Linux kernel and kernel initialization - system initialization – hardware support - boot loaders.

MODULE IV DEVICE HANDLING 9

Device driver basics - module utilities - file systems - MTD subsystems – busybox.

MODULE V DEVELOPMENT TOOLS 9

Embedded development environment - GNU debugger - tracing & profiling tools - binary utilities - kernel debugging - debugging embedded Linux applications - porting Linux - Linux and real time - SDRAM interface.

TOTAL HOURS – 45

TEXT BOOKS:

1. Keir Thomas and Andy Channelle with Jaime Sicam (2009), “Beginning Ubuntu
2. Karim Yaghmour, Jon Masters, Gillad Ben Yossef, Philippe Gerum, “Building

embedded Linux systems", O'Reilly, 2008.

REFERENCES:

1. Christopher Hallinan, "Embedded Linux Primer: A practical real world approach", Prentice Hall, 2007.
2. Craig Hollabaugh, "Embedded Linux: Hardware, software and Interfacing", Pearson Education, 2002.

OUTCOMES:

Students are provided learning experiences that enable them to:

- Use Linux desktop and GNU tool chain with Eclipse IDE.
- Cross compile Linux kernel and port it to target board.
- Add applications and write customized application for the Linux kernel in the target board.

CAC1154	PROBLEM SOLVING TECHNIQUES AND PROGRAMMING IN C LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

The aims of the course are as follows

- To make the student learn C programming language.
- To teach the student to write programs in C to solve the problems.
- To introduce the student to simple linear and non linear data structures such as lists, stacks, queues, trees and graphs and use the efficient for problem solving

LIST OF PROGRAMS

1. Write a C program to find the sum of individual digits of a positive integer.
2. Write a C program to generate all the prime numbers between 1 and n, where n is a value supplied by the user.
3. Write a C program to calculate the following Sum:

   $Sum=1+x^2/2! +x^4/4!+x^6/6!+x^8/8!+x^{10}/10!$
4. Write a C program to find the roots of a quadratic equation.
5. Write C programs that use both recursive and non-recursive functions
   i) To find the factorial of a given integer.
   ii) To find the GCD (greatest common divisor)of two given integers.
   iii) To solve Towers of Hanoi problem.
6. Write a C program, which takes two integer operands and one operator form the user, performs the operation and then prints the result. (Consider the operators +,-,*,/,% and use Switch Statement)
7. Write a C program to find both the larges and smallest number in a list of integers.
8. Write a C program that uses functions to perform the following:
   i)Addition of Two Matrices
   ii)Multiplication of Two Matrices
9. Write a C program that uses functions to perform the following operations:
   i)To insert a sub-string in to given main string from a given position.
   ii)To delete n Characters from a given position in a given string.
10. Write a C program to determine if the given string is a palindrome or not
11. Write a C program that displays the position or index in the string S where the string T begins, or - 1 if S doesn't contain T.
12. Write a C program to count the lines, words and characters in a given text and C program to generate Pascal's triangle.

13. Write a C program to construct a pyramid of numbers.
14. 2's complement of a number is obtained by scanning it from right to left and complementing all the bits after the first appearance of a 1. Thus 2's complement of 11100 is 00100. Write a C program to find the 2's complement of a binary number.
15. Write a C program to convert a Roman numeral to its decimal equivalent.
16. Write a C program that uses functions to perform the following operations:
    i) Reading a complex number
    ii) Writing a complex number
    iii) Addition of two complex numbers
    iv) Multiplication of two complex numbers

TOTAL HOURS :45

TEXT BOOKS:

1. Reema Thareja, Computer Fundamentals and Programming in C, Oxford Press, 2012

REFERENCES:

1. Programming in C by Pradip Dey, Manas Ghosh 2nd edition Oxford University Press.
2. E.Balaguruswamy, Programming in ANSI C 5th Edition McGraw-Hill

OUTCOMES:

At the completion of this course, the student will able to

- Able to write, compile and debug programs in C language.
- Able to use different data types in a computer program.
- Able to design programs involving decision structures, loops and functions.
- Able to understand the dynamics of memory by the use of pointers.
- Able to use different data structures and create/update basic data files.

CAC1155	LINUX LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

The main objective of this course is to

- Learn and get familiar with the Unix operating system through Red hat
- Linux. UNIX basic commands working and their purpose will be defined.

LIST OF PROGRAMS

1. Write programs using the following system calls of UNIX operating system: fork, exec, getpid, exit, wait, close, stat, opendir, readdir
2. Write programs using the I/O system calls of UNIX operating system (open, read, write, etc)
3. Write C programs to simulate UNIX commands like ls, grep, etc.
4. Given the list of processes, their CPU burst times and arrival times, display/print the Gantt chart for FCFS and SJF. For each of the scheduling policies, compute and print the average waiting time and average turnaround time.
5. Given the list of processes, their CPU burst times and arrival times, display/print the Gantt chart for Priority and Round robin. For each of the scheduling policies,
6. compute and print the average waiting time and average turnaround time.

TOTAL HOURS –30

TEXT BOOKS:

1. The Design of Unix Operating System, Maurice J. Bach, Pearson Education, 2010

REFERENCES:

1. Advance UNIX, a Programmer’s Guide, S. Prata, BPB Publications, and New Delhi, 2011
2. Unix Concepts and Applications, Sumitabh Das, 2010

OUTCOMES:

- To use Linux desktop and GNU tool chain with Eclipse IDE.
- Cross compile Linux kernel and port it to target board.
- Add applications and write customized application for the Linux kernel in the target board.

SEMESTER II

ENC1283	GENERAL ENGLISH-II	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To prepare students for Interviews and Group Discussions
- To train them in writing official letters, resume' writing and reports.
- To train them in analysing different genre of literature.

MODULE I **7**

Filling Money Order Challan and Bank Challan
Short Story :G.K.Chesterton – The Hammer of God (Extensive Reading)
Essential English Grammar – 7-12 units

MODULE II **8**

Brainstorming – Think, pair and share activity
Poetry **:** Walt Whitman- I Celebrate Myself

MODULE III **8**

Dialogue Writing- Discussion etiquette -Assigning different roles in a GD (Note-taker, Manager, Leader and Reporter)
Prose**:** Environment

MODULE IV **8**

Interview skills- SWOT Analysis
Letter Writing- Letter to the Editor- Letter of Application and CV

MODULE V **8**

Report Writing- feasibility report and survey report
Short Story : Katherine Mansfield—A Cup of Tea (Extensive Reading)

MODULE VI **6**

Technical reports –Writing a technical report – format and content

TOTAL HOURS – 45

9. Seshadri, K G Ed. **Stories for Colleges.** Chennai: Macmillan India Ltd, 2003.

OUTCOMES:

Students would be able to

- Take part in group discussions and interviews with confidence.
- Write official letters, their application letter with CV and reports.
- Analyse various genre of literature.

MAC1288 PROBABILITY AND STATISTICS L T P C
3 1 0 4

OBJECTIVES:

- To impart knowledge about the basic concepts of probability in solving application oriented problems
- To provide an understanding on the concepts of statistics

Recap Introduction to Probability (4)

Sample space - events - algebraic operations on events - definition of probability - Conditional probability - addition and multiplication theorems of probability – Baye's theorem.

MODULE I RANDOM VARIABLES AND DISTRIBUTION FUNCTIONS (10+3)

Discrete and continuous random variables - distribution function and its properties - probability mass function and probability density function - discrete and continuous probability distributions - Binomial, Geometric, Poisson, Uniform, Exponential and Normal distributions.

MODULE II MOMENTS AND MOMENT GENERATING FUNCTIONS (8+3)

Expectation of a random variable – probability generating function – properties - moment generating function.

MODULE III TWO DIMENSIONAL RANDOM VARIABLES (6+3)

Joint, marginal and conditional distribution functions - independence of random variables.

MODULE IV DESCRIPTIVE STATISTICS (8+3)

Types of data - primary and secondary data - classification and representation of data -formation of frequency distribution - various measures of central tendency, dispersion - and their merits and demerits - concept of skewness and kurtosis.

MODULE V CORRELATION AND CURVE FITTING (9+3)

Correlation coefficient and regression - rank correlation - curve fitting by least square methods - fitting a straight line, parabola, power curve and exponential curves. (no derivation, numerical problems only)

TOTAL HOURS – 60

TEXT BOOKS:

4. Mood A.M., F.A. Graybill and D.C. Boes, Introduction to Theory of Statistics McGraw Hill Book Co., 1974.
5. Sheldon M. Ross, Introduction to Probability and Statistics for Engineers and Scientists, Fourth Edition, Elsevier.

OUTCOMES:

On completion of the course the students will be able to

- solve basic problems in probability and fundamentals of statistics.
- solve problems using standard probability distributions.
- find the marginal and conditional distributions of two dimensional random
- variables.
- calculate rank correlation and fitting curves for the given data.
- use method of moments and moment generating functions.

CAC1251	OPERATING SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To gain knowledge about operating system, memory management and scheduling concepts and to study about the basics of OS, process management, Synchronization, memory management and File management.

MODULE I INTRODUCTION: 9

What is an operating system – operating system concepts – system calls – operating system structure

MODULE II PROCESSES AND THREADS 9

Process – Inter process communication – Scheduling; Deadlocks: Resources – Introduction to deadlocks – Deadlock detection and recovery – deadlock avoidance – Deadlock Prevention.

MODULE III MEMORY MANAGEMENT: 9

Basic memory management – Swapping – Virtual Memory – Page replacement algorithms – Implementation Issues – Segmentation.

MODULE IV INPUT / OUTPUT: 9

Principles of I/O hardware – Principles of I/O software – I/O software layers – Disks – Character oriented terminals – Graphical user interfaces – Network terminals.

MODULE V FILE SYSTEMS: 9

Files – Directories – File System Implementation – Example file systems – Case study 1: Unix and Linux; Case Study 2 : Windows 2000.

TOTAL HOURS – 45

TEXT BOOKS:

1. Abraham Silberschatz and P. B. Galvin - Operating system concepts - Addison Wesley Publication, Eighth Edition.,2012

REFERENCES:

1. Stalling William, Operating Systems: Internals and Design Principles, 7th

Edition, Prentice Hall, 2011.
2. Dietel et al, Operating Systems, 3rd Edition, Pearson Education, 2004.
3. A.S. Tanenbaum, Modern Operating Systems, 3rd Edition, Prentice Hall, 2007.

OUTCOMES:

At the completion of this course, students will be able to

- Demonstrate understanding of the concepts, structure and design of operating
- Systems Demonstrate understanding of operating system design and its impact on application system design and performance
- Demonstrate competence in recognizing and using operating system features.

CAC1252	OOPS WITH C++	L	T	P	C
		3	0	0	3

OBJECTIVES:

The aim of the course is to

- Understand the concepts of classes and object
- Define classes for a given situation and instantiate objects for specific problem solving.
- Reuse available classes after modifications if possible
- Possess skill in object oriented thought process

MODULE I INTRODUCTION TO OBJECT ORIENTED PROGRAMMING 9

Concept of Object orientation – comparison with procedural and structured programming – Classes and objects – data Abstraction, encapsulation, dynamic binding, message passing. Advantages of object orientation -Basic data types and declarations.

MODULE II CLASSES AND OBJECTS 9

Classes and objects in C++, access modifiers, static members, friend functions, Constructors and Destructors, polymorphism, Operator Overloading and type conversion

MODULE III INHERITANCE 9

Inheritance - parent and child classes, private, public and protected inheritance, multiple inheritances and multi-level inheritance, Virtual base classes. new and delete operators, objects.

MODULE IV POLYMORPHISM AND EXCEPTION HANDLING 9

Binding & Polymorphism: Early binding, Late Binding, Pointers to derived class objects, virtual functions, Pure virtual functions, exception handling in C++: try, throw and catch.

MODULE V FILE STREAM CLASSES AND TEMPLATES 9

Study of File stream classes in C++. Templates – class and function templates, Templates versus macros, String objects in C++, Standard Template Library in C++ .

TOTAL HOURS – 45

TEXT BOOKS:

1. Bjarne Stroustrup, “ Programming: Principles and Practice Using C++ “, Addison Wesley, 2nd edition, ISBN-13: 978-0321992789, 2014.

REFERENCES:

1. Bjarne Stroustrup," The C++ Programming Language", Addison Wesley, 4 th edition, ISBN-13: 978-0321563842, 2013.
2. Herbert Schildt, "C++ The Complete Reference", Tata McGraw Hill fourth Edition, 2003

OUTCOMES:

After completion of this course, the students would be able to

- Understand concepts of objects and their significance in real world
- Learn to co-relate relationship among different entities involved in a system
- Develop software in terms of objects, associations, and integrity constraints
- Identify, understand and analyze various sample development models
- Design classes and inheritances
- Real life problem formulation in terms of objects and classes
- Data handling through files

CAC1253	DATA STRUCTURES USING C	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the fundamental concepts of data structure
- To understand the basic operations of stacks and queues for real time scenario
- To comprehend the significance of sorting algorithms
- To demonstrate the understanding of various searching algorithms

MODULE I INTRODUCTION TO DATA STRUCTURES 9

Definition, Classification of data structures : primitive and non primitive. Operations on data structures. Dynamic memory allocation and pointers: Definition Accessing the address of a variable, Declaring and initializing pointers. Accessing a variable through its pointer. Meaning of static and dynamic memory allocation. Memory allocation functions: malloc, calloc, free and realloc.

MODULE II INTRODUCTION TO STACK AND QUEUE 9

Stack – Definition, Array representation of stack, Operations on stack: Infix, prefix and postfix notations- Conversion of an arithmetic expression from Infix to postfix. Applications of stacks. Queue - Definition, Array representation of queue, Types of queue: Simple queue, circular queue, double ended queue (deque) priority queue, operations on all types of Queues

MODULE III LINKED LISTS 9

Definition, Components of Linked List, Representation of Linked List, Advantages and Disadvantages of Linked List. Types of Linked List: Singly Linked Lists – Doubly Linked Lists – Circular List – Representing Stacks and Queues in C using Arrays and Linked Lists, Infix to Postfix Conversion, Postfix Expression Evaluation. Applications of Linked Lists.

MODULE IV TREES 9

Trees – Binary Trees - Terminology – Representation – Traversals – Graphs – Terminology – Representation – Graph Traversals (DFS & BFS).

MODULE V SEARCHING AND SORTING 9

Searching - Linear Search Methods - Binary Search Methods, Sorting - Bubble Sort, Selection Sort, Insertion Sort, Quick Sort, Merge Sort.

TOTAL HOURS – 45

TEXT BOOKS:

1. Narasimha Karumanchi, "Data Structures and Algorithms Made Easy: Data Structure and Algorithmic Puzzles", 2nd Edition, Create Space Independent Publishing Platform, 2011.
2. Ashok N. Kamthane, "Introduction to Data Structures in C", 2nd Edition, Wiley Publications, 2008.

REFERENCES:

1. Classic Data Structures, D. Samanta, PHI Learning , New Delhi 2011
2. Data Structure made simple, Sathish Jain, Shashi Singh, BPB Publications, New Delhi 2006

OUTCOMES:

On completion of this course, students will be able to

- Describe common applications for arrays
- Apply Stack and Queue data structures for real time applications
- Analyse, evaluate and choose appropriate abstract data types and algorithms to solve particular problems

CAC1254	OOPS WITH C++ LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

- Understand and solve logical & mathematical problems through C++ language
- Strengthen knowledge of a procedural programming language.
- Design and develop solutions to intermediate level problems
- Develop their skills in software development using a procedural language
- Get programming in skill the object oriented technology with the usage of C++.

LIST OF PROGRAMS

1. Creation of classes and use of different types of functions.
2. Programs using Constructor and Destructor
3. Count the number of objects created for a class using static member function.
4. Write programs using function overloading and operator overloading.
5. Programs using inheritance.
6. Program using friend functions.
7. Program using virtual function.
8. Program using exception handling mechanism.
9. Programs using files.
10. Programs using function templates.

TEXT BOOKS

1. Bjarne Stroustrup, " Programming: Principles and Practice Using C++ ", Addison Wesley, 2nd edition, ISBN-13: 978-0321992789, 2014.

REFERENCES:

1. Bjarne Stroustrup," The C++ Programming Language", Addison Wesley, 4 th edition, ISBN-13: 978-0321563842, 2013.
2. Herbert Schildt, "C++ The Complete Reference", Tata McGraw Hill Edition, 2003

OUTCOMES:

- After completion of this course, the students would be able to Create classes and objects in C++
- Implement inheritance, polymorphism and object relationship in C++

- Design methods and procedure
- Manipulate data through file in C++
- Debug and test software.
- Develop a minor software in C++ language

CAC1255	DATA STRUCTURES USING C LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

The objective of this course is to teach the students to

- Be familiar with writing recursive methods
- Implement stack and queue using array
- Implement circular queue using array
- Implement singly linked list and doubly linked list using dynamic variables and pointers
- Implement quick sort, selection sort, insertion sort and bubble sort techniques to sort a given list of integers.
- Implementation of binary search method for a given list of integers

LIST OF PROGRAMS

1. Write a C program to demonstrate the working of stack of size N using an array. The operations to be supported are 1. PUSH 2. POP 3. DISPLAY. The program should print appropriate messages for STACK overflow and Under flow.
2. Write a C program to simulate the working of an ordinary Queue using an array. Provide the operations QINSERT, QDELETE and QDISPLAY. Check the Queue status for empty and full.
3. Write a C program to simulate the working of an Circular Queue using an array. Provide the operations CQINSERT, CQDELETE and CQDISPLAY. Check the Circular Queue status for empty and full.
4. Using dynamic variables and pointers Write a C program to construct a singly linked list consisting of the following information in each node; Roll – No (Integer), Name (Character string). The operations to be supported are :
    - Inserting a node in the front of the list
    - Deleting the node based on Roll – No
    - Searching a node based on Roll-No
    - Displaying all the nodes in the list
5. Write a C program to implement doubly linked list
6. Write a C program to sort a list of N elements of integer type using quick sort Algorithm
7. Write a C program to sort a list of N elements using Bubble sort Technique

8. Write a C program to search for an element in an array using Binary search
9. Write a C program to implement insertion sort method to sort a given list of integers in descending order.
10. Write a C program to implement selection sort method to sort a given list of integers in descending order.

TOTAL HOURS –30

TEXTBOOKS:

1. Magnifying Data Structures, Aprita Gopal , First Edition , PHI Learning, New Delhi Data Structures in C, Horowitz, Sahni, Anderson-Freed, Universities Press
2. Narasimha Karumanchi, "Data Structures and Algorithms Made Easy: Data Structure and Algorithmic Puzzles", 2nd Edition, Create Space Independent Publishing Platform, 2011.

REFERENCES:

1. Ashok N. Kamthane, "Introduction to Data Structures in C", 2nd Edition, Wiley Publications, 2008.
2. DataStructures Using C - A.S.Tanenbaum, Y. Langsam, and M.J. Augenstein, PHI/Pearson education.

OUTCOMES:

The completion of this course the students will be able to

- Write and demonstrate recursive methods
- Implement stack and queue and evaluate various operations involved in it
- Implement and execute circular queue using array
- Develop an application using singly linked list and doubly linked list
- Implement and analyze various searching techniques and sorting techniques

CAC1256	ENVIRONMENTAL STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

To impart knowledge on

- Various natural resources, availability, utilization and its current scenario.
- Different ecosystems, energy transfer.
- Values, threats and conservation of biodiversity.
- Levels of different pollutants and its impact and the causes and effects of natural disasters

MODULE I NATURAL RESOURCES 8

Land resources: land degradation, soil erosion and desertification - Forest resources: use and over-exploitation, deforestation - Water resources: use and over-utilisation of surface and ground water, water conservation (rainwater harvesting and watershed management) - Food resources: world food problems, changes in land use by agriculture and overgrazing, modern agriculture and its effects - Energy resources: increasing energy needs, renewable and non-renewable, use of alternate energy sources.

MODULE II ECOSYSTEM 8

Ecosystem- energy flow in the ecosystem - food chains, food webs and ecological pyramids - characteristics, structure and function of (a) Terrestrial ecosystems (forest, grassland, desert) and (b) Aquatic fresh water ecosystems (pond, lake, river) (c) Aquatic salt water ecosystems (ocean, estuary) - ecological succession.

MODULE III BIODIVERSITY AND ITS CONSERVATION 8

Biodiversity - genetic, species and ecosystem diversity – hot-spots of biodiversity – bio geographic classification of India - endangered, endemic, extinct and invasive species of India - red data book - values of biodiversity: consumptive, productive, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - conservation of biodiversity: in-situ and ex-situ conservation of biodiversity

MODULE IV ENVIRONMENTAL POLLUTION AND NATURAL DISASTER 6

Definition, cause, effects and control measures of (a) air pollution (b) water pollution

(c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards - ill-effects of fireworks and upkeep of clean environment - solid waste management: types (urban, industrial, biomedical and electronic wastes), collection, processing and disposal (incineration, composting and land-fill).

Natural disaster and management: flood, cyclone, drought, landslide, earthquake and tsunami.

Case studies related to current situation.

TOTAL HOURS – 30

TEXT BOOKS:

1. Erach Bharucha, Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education for University Grants Commission, Orient Blackswan Pvt Ltd, Hyderabad, India, 2013.
2. Benny Joseph, Environmental Studies, Tata McGraw-Hill Education, India, 2009.
3. Ravikrishnan A, Environmental Science and Engineering, Sri Krishna Publications, Tamil Nadu, India, 2015.
4. Raman Sivakumar, Introduction to Environmental Science and Engineering, McGraw Hill Education, India, 2009.
5. Venugopala Rao P, Principles of Environmental Science and Engineering, Prentice Hall India Learning Private Limited; India, 2006.
6. Anubha Kaushik and Kaushik C.P., Environmental Science and Engineering, New Age International Pvt Ltd., New Delhi, India, 2009.
7. Rajah G, Basic Environmental Studies, Margham Publications, Chennai, 2016.

REFERENCE BOOKS:

2. Miller T.G. Jr., Environmental Science, Wadsworth Publishing Co. Boston, USA, 2016.

OUTCOMES:

At the end of the course the student will be able to

- Predict the scenario of various natural resources and suggest remedies to curb the exploitation of these resources.

- Identify food chain and web and its role in various ecosystems.
- Assess the impacts on biodiversity and provide solutions to conserve it.
- Analyze the impacts of pollutants in the environment and propose suitable method to alleviate the pollutants and the natural disasters.

SEMESTER III

CAC2151	**DATABASE MANAGEMENT SYSTEMS**	**L**	**T**	**P**	**C**
		3	**1**	**0**	**4**

OBJECTIVES:

The aim of the course is to

- Provide an introduction to the management of database systems.
- Understand the fundamentals of relational systems including data models, database architectures, and database manipulations.

MODULE I INTRODUCTION 12

Database Systems vs. File Systems - View of Data - Data Models- Database Languages -Transaction Management - Database Systems Structure - History of Database Systems - Database Systems Applications - Entity Relationship Model.

MODULE II RELATIONAL DATABASES 12

SQL - Basic Structure - Set Operations - Complex Queries - Joined Queries - DDL-Embedded SQL-Dynamic SQL-Other SQL Functions-Query by Example- Integrity and Security of searching-Relational Database Design.

MODULE III DATA STORAGE AND INDEXING 12

Storage & File Structure - Disks-RAID-File Organization - Indexing &Hashing- B+ TREE-B Tree-Static Hashing-Dynamic Hashing-Multiple Key Access.

MODULE IV QUERY EVALUATION & OPTIMIZATION 12

Query Processing-Selection Operation-Sorting-Join Operation-Evaluation of Expressions

MODULE V QUERY OPTIMIZATION 12

Query Optimization Overview - Transformation of Relational Expressions -Estimating Statistics of Expression Results - Choice of Evaluation Plans

Total Hours –60

TEXT BOOK:

1. Elmasri and Navathe, "Fundamentals of Database Systems", 6th Edition, Addison-Wesley, 2011

REFERENCES:

1. Raghu Ramakrishnan & Johannesgerhrke, “Data Base Management Systems”, Mc Graw Hill International Edition, 2000.
2. C.J. Date, A. Kannan, S. Swamynathan, "An Introduction to Database Systems", 8th Edition, Pearson Education, 2006.

OUTCOMES:

At the conclusion of the course, the student will be able to:

- Understand terms related to database design and management.
- Understand the objectives of data and information management.
- Develop physical data models for relational database management systems.
- Implement relational databases using a RDBMS retrieve data using SQL.

CAC2152 DIGITAL ELECTRONICS L T P C

3 0 0 3

OBJECTIVES:

The main objective of the Course Digital Electronics is the students will learn

- through the basic understanding of Boolean Algebra and Number systems,
- introduces the student to the fundamentals of combination logic design and then to sequential circuits(both synchronous and asynchronous)
- Understandings in Flip Flops, Multiplexers, ADC and DAC

MODULE I NUMBER SYSTEMS 9

Number Systems and Codes Decimal, binary, octal, hex numbers, conversion from one to another- codes, BCD, excess 3 , gray codes conversion from one to another - Error detection codes.

MODULE II BOOLEAN ALGEBRA AND THEOREMS 9

Boolean Algebra and Theorems : Basic, Universal logic gates - Boolean theorems - sum of products , products of sums expressions , simplification by Karnaugh Map method, simplification based on basic Boolean theorems - don't care conditions.

MODULE III COMBINATIONAL DIGITAL CIRCUITS 9

Combinational Digital Circuits Arithmetic Building blocks , Basic Adders and subtractors, BCD adders - Data of processing circuits, multiplexers, demulitiplexers, encoders, decoders - TTL, CMOS digital logic families.

MODULE IV SEQUENTIAL DIGITAL CIRCUITS 9

Sequential Digital Circuits : Flip-flops , RS, Clocked SR, JK, D, T, master-slave types-shift registers, ring counters - ripple counters - synchronous counters, timer IC 555, applications.

MODULE V DAC AND ADC 9

DAC and ADC : Parameters, Accuracy, resolution - DAC, variable resister network, R-2R ladder network types - ADC, counting continuous, successive approximation, dual - slope types - comparison of various types of DAC and ADC.

Total Hours –45

TEXT BOOKS:

1. M. Morris Mano and Michael D.Ciletti, "Digital Design with an introduction to the Verilog HDL", 5th Edition, Pearson Education, 2012.

REFERENCES:

1. Donald D. Givone, "Digital Principles and Design", 13th reprint, Tata McGraw Hill, 2003.
2. S.P. Bali, Solved Problems in Digital Electronic, Sigma Series, Tata McGraw-Hill,(2005)

OUTCOMES:

A student who successfully fulfills the course requirements will have demonstrated:

- An ability to understand basic parameters of a logic Gates.
- An ability to analyze and design a CMOS logic inverter.
- An ability to analyze a TTL and ECL logic inverter.
- An ability to understand the operation of latch circuit and flip-flop circuits.
- An ability to understand the operation of different types of semiconductor memories.

CAC2153	COMPUTER NETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES:

This course provides a comprehensive introduction to

- Understand the underlying Network model and Communication principles.
- Switching techniques and Multiplexing approaches
- knowledge in Internetworking Devices

MODULE I NETWORK FUNDAMENTALS

A communications model - Data Communications - Data Communications Networking - computer communication architecture - standards Data Transmission - Concepts and terminology - Analog and Digital - Transmission - Transmission Impairments - Transmission media.

MODULE II PHYSICAL LAYER

Data encoding - Digital data Digital signals ,Digital data Analog signals,, Analog data Analog signals Data Communications Interface : Asynchronous and synchronous Transmission - Line configuration - Interfacing.

MODULE III DATA LINK LAYER

Data link control: Flow controls - Error Detection - Error Control - High Level Data Link Control (HDLC) - MULTIPLEXING - Frequency Division multiplexing - Synchronous time - Division multiplexing - Statistical time division multiplexing.

MODULE IV NETWORK LAYER

Circuit switching: Circuit switching networks switching concepts - Routing in circuit switched networks - Packet switching principles - Routing in packet switching - Congestion control.

MODULE V HIGH PERFORMANCE NETWORKS

Frame relay: Frame relay Protocol Architecture - Frame relay call control user data transfer - Networks functions - Congestion control, ASYNCHRONOUS TRANSFER MODE (ATM) Protocol Architecture – ATM logical connection - ATM Cells – Transmission of ATM cells - ATM adaption layer - Traffic and congestion control.

TOTAL HOURS – 45

TEXT BOOKS:

1. Larry L. Peterson and Bruce S. Davie, "Computer Networks: A Systems Approach", 4th Edition, Elsevier, 2007.

2. Forouzan: Introduction to Data Communication & Networking, McGraw-Hill, 2007.

REFERENCES:

1. Andrew S. Tanenbaum, "Computer Networks", 4 th Edition, Prentice-Hall of India, 2003.

2. James F. Kurose and Keith W. Ross, "Computer Networking: A Top-Down Approach Featuring the Internet", 3rd Edition, Pearson Education, 2006.

OUTCOMES:

Upon completion of the subject, students will be able to

Explain the importance of data communications and the Internet in supporting business communications and daily activities.

- Understand how communication works in data networks and the Internet.
- Recognize the different internetworking devices and their functions.
- Explain the role of protocols in networking.
- Analyze the services and features of the various layers of data networks

CAC2154 FUNDAMENTALS OF ALGORITHMS

L	T	P	C
3	0	0	3

OBJECTIVES:

The aim of the course is to

- introduce mathematical aspects and analysis of algorithms
- analyze sorting and searching algorithms
- study various algorithmic techniques
- devise correct and efficient algorithms for solving a given problem
- explain the NP-Completeness and deal with NP-complete problems

MODULE I INTRODUCTION **9**

Notion of an Algorithm – Fundamentals of Algorithmic Problem Solving – Important Problem Types – Fundamentals of the Analysis of Algorithm Efficiency – Analysis Framework – Asymptotic Notations and its properties – Mathematical analysis for Recursive algorithm and Non-recursive algorithms.

MODULE II DIVIDE-AND-CONQUER **9**

Brute Force – Closest-Pair and Convex-Hull Problems-Exhaustive Search – Traveling Salesman Problem – Knapsack Problem – Assignment problem. Divide and conquer methodology – Merge sort – Quick sort – Binary search – Multiplication of Large Integers – Strassen's Matrix Multiplication.

MODULE III DYNAMIC PROGRAMMING AND GREEDY TECHNIQUE **9**

Computing a Binomial Coefficient – Warshall's and Floyd' algorithm – Optimal Binary Search Trees – Knapsack Problem and Memory functions. Greedy Technique– Prim's algorithm- Kruskal's Algorithm- Dijkstra's Algorithm.

MODULE IV BACKTRACKING **9**

Backtracking – N-Queens problem – Hamiltonian circuit problem – Subset sum problem

MODULE V BRANCH AND BOUND **9**

Branch and bound – Assignment problem – Knapsack problem – Traveling salesman problem.

TOTAL HOURS –45

TEXT BOOKS:

1. Baase,S., Gelder,A.V., Computer Algorithms: Introduction To Design And Analysis, 3rd Edition, Pearson India.
2. Anany Levitin, Introduction to the Design and Analysis of Algorithms, 3rd Edition, Pearson Education.

REFERENCES:

1. Thomas H. Cormen, Charles E. Leiserson, Ronal L. Rivest, Clifford Stein, Introduction to Algorithms, 2ndEdition, PHI, 2006.
2. Introduction to the Design and Analysis of Algorithms A Strategic Approach, R.C.T. Lee, S.S. Tseng, R.C. Chang & Y.T.Tsai, TMH, 2005.

OUTCOMES:

At the completion of this course, students will be able to

- Ability to decide the appropriate data type and data structure for a given problem.
- Ability to select the best algorithm to solve a problem by considering various problem characteristics, such as the data size, the type of operations, etc.
- understand NP-Completeness and deal with NP-complete problems.

CAC2155 MULTIMEDIA AND ITS APPLICATIONS L T P C

3 0 0 3

OBJECTIVES:

- Understand the Flash/Animate working environment and its terminology.
- Explore and implement the different types of animation Flash/Animate supports.
- Learn how to import and use sound and sound effects in animation programs.
- To edit images in Photoshop

MODULE I -INTRODUCTION 9

What is multimedia: Definitions - Where to use Multimedia - Introduction to making Multimedia- The stages of a Project - What You Need – Multimedia Skills and Training: Basic Tools :Text Editing and Word Processing Tools - Painting and Drawing Tools - 3- D Modeling and Animation Tools - Image Editing Tools - Sound Editing Tools - Animation, Video and Digital Movie Tools - Helpful Accessories

MODULE II VECTOR AND RASTER GRAPHICS 9

Adding multimedia to the web-Raster image editing software Introduction -Image Basics -File Formats -GIF -JPEG -Color Palette –Color models-Layers -Creating new Images - Brushes –Grids and guides-Gradients -Scaling Images -Moving and Merging Layers - Tool Palette -Dialogs -masking –Filters –Adding text to images – Designing icons and background images.

MODULE III IMAGE HANDLING 9

Introduction –Creating Simple Vector graphics –Creating banners -Images -Working with layers –Tweening -Motion guide –Masking –Frame by Frame animation –Onion Skin Effect –Creating special effects -Text effects and animation –Action scripts.

MODULE IV ANIMATIONS AND INTERACTION 9

Creating clippings - Animations with sound effects -Adding audio or Video - Windows Media Player ActiveX Control -Real Player ActiveX control- web site with a particular theme using all the utilities -Graphics -Animations and Interaction

.

MODULE V PROJECT PLANNING 9

Estimating -Designing - Producing - Content and Talent- Acquiring Content - Using content created by others - Using Content created for a Project - Using

Talent Delivering: Testing - Preparing for Delivery - Compact Disc Technology - Wrapping It Up - Delivering on the World Wide Web.

TOTAL HOURS –45

TEXT BOOKS:

1. Richard Schrand, Photoshop 6 Visual Jumpstart, Adobe Press 2000.(II)
2. James L. Mohles, Flash 5.0 Graphics, Animation & Interaction, Macromedia 2000. (III&IV)
3. Tay Vaughan, Multimedia: Making It Work, Fourth Edition - Tata McGraw Hill Edition, 1999.(I&V)

REFERENCES:

1. Tay Vaughan , "Multimedia:Making It Work,8th Edition", McGraw Hill, 2010.
2.John F Koegelbuford, Multimedia Systems Addison Wesley - First Indian Reprint, 2000.

OUTCOMES:

On completion of the course, Students will be able to

- Create Flash/Animate banners for websites that will capture and hold viewers attention
- Create animated photo galleries.
- Incorporate audio and video and learn how to edit it within Flash/Animate.
- Design icons and background images.

CAC2156	DATABASE MANAGEMENT SYSTEMS LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

The aim of the course is

- to learn SQL (Structured Query Language) which would provide functionality to:
- to learn how to create tables which are fundamental storage blocks of data.
- to learn how to place constraints on data that is entered on tables to ensure data integrity.
- to learn how to add, change and remove data from tables.
- to learn how to select a subset of the data you want to see from the collection of tables and data.
- to learn how to combine table and group multiple rows of data in table. to learn PL/SQL which would provide the ability to do iterative
- programming at database level to:
- to write programming blocks with conditional structure, assignment structure, loop structure, etc.
- use exception Handling, Transaction oriented programs, Stored procedures, functions, packages, etc.

LIST OF PROGRAMS

1. Execute a single line and group functions for a table.
2. Execute DCL and TCL Commands.
3. Create and manipulate various DB objects for a table.
4. Create views, partitions and locks for a particular DB.
5. Write PL/SQL procedure for an application using exception handling.
6. Write PL/SQL procedure for an application using cursors.
7. Write a DBMS program to prepare reports for an application using functions.
8. Write a PL/SQL block for transaction operations of a typical application using package.
9. Design and develop an application using any front end and back end tool (make use of ER diagram and DFD).

Typical Applications – Banking, Electricity Billing, Library Operation)

TOTAL HOURS –30

OUTCOMES

At the end of this course, a student will be able to

- Use in real time business activities.
- create and do manipulation on database in any domain.
- work with table by using PL/SQL Program.
- get a clear idea about database transaction activities.

TEXTBOOK:

1.Ramez Elmasri and Shamkant B. Navathe, “Fundamentals of Database Systems”, Fifth Edition, Pearson Education, 2008.

REFERENCES:

1.Abraham Silberschatz, Henry F. Korth and S. Sudharshan, “Database System Concepts”, Sixth Edition, Tata Mc Graw Hill, 2011.

2. C.J.Date, A.Kannan and S.Swamynathan, “An Introduction to Database Systems”, Eighth Edition, Pearson Education, 2006.

CAC2157	MULTIMEDIA LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- Expose students to various interactive multimedia based software such as Flash
- Gain a working knowledge of all the Adobe Flash/Animate tools and their functions.

LIST OF PROGRAMS

Exercises Using Flash

1. Drawing a Semi Circle by snap tool, spokes on a wheel.
2. Placing a text along a curved path .
3. Changing on objects shape using shape tweening, text tweening.
4. Application using buttons, animating the button
5. Tweening a using the shape hints, motion tweening
6. An application to show the masking effect in Flash
7. Slide show presentation(minimum 5 slides)
8. Creating smudge effect for an image
9. Usage of textbox, dynamic text box, buttons with action scripts.

Exercises Using Photoshop

1. Working with the clone stamp tool , custom shape
2. Using the sponge Tool
3. Removing an element from an image
4. Creating an edge mask
5. Applying Transformations
6. Correcting brightness and contrast

TOTAL HOURS – 30

TEXT BOOKS:

1.Richard Schrand, Photoshop 6 Visual Jumpstart, Adobe Press 2000.

2. James L. Mohles, Flash 5.0 Graphics, Animation & Interaction, Macromedia 2000

REFERENCES:

1. John F Koegelbuford, Multimedia Systems Addison Wesley - First Indian Reprint, 2000.

2. Walter Worth John, A - Multimedia Technologies and Applications, Ellis Horwood Ltd., London,1991.

OUTCOMES:

On completion of the course, Students will be able to

- Draw simple images prepare them for animation and add motion.
- Animate a sequence with a soundtrack.

CAC2158	COMMUNICATION SKILLS	L	T	P	C
		0	0	4	2

OBJECTIVES:

The aim of the course is to

- enable the students to speak English with correct accent and pronunciation.
- interact effectively in real life situations and in workplace.
- develop the writing ability of students by providing them the required practice.
- improve the written communication skill so as to write reports, letters etc.

MODULE I

Introduction to Communication-Need for Effective Communication. The Process of Communication:Levels of communication- Flow of communication- Use of language in communication- Communication networks- Significance of technical communication.

MODULE II

Barriers to Communication:Types of barriers- Miscommunication- Noise- Overcoming measures. Listening Skills:Listening as an active skill- Types of Listeners- Listening for general content- Listening to fill up information- Intensive Listening- Listening for specific information-Developing effective listening skills- Barriers to effective listening skills.

MODULE III

Reading Skills :Previewing techniques- Skimming- Scanning- Understanding the gist of an argument-Identifying the topic sentence- Inferring lexical and contextual meaningrecognizing coherence and sequencing of sentences- Improving comprehension skills. Writing Skills:Sentence formation- Use of appropriate diction- Paragraph and Essay Writing- Coherence and Cohesion.

MODULE IV

Technical Writing:Differences between technical and literary style, Elements of styleCommon Errors. Letter Writing: Formal, informal and demi-official letters- business letters. Job Application :Cover letter, Differences between bio-data, CV and Resume. Group Discussion:Differences between group discussion and debate; Ensuring success in group discussions.

MODULE V

Non-verbal Communication and Body Language: Forms of non-verbal

communicationInterpreting body-language cues- Kinesics- Proxemics- Chronemics- Effective use of body language. Interview Skills:Types of Interviews- Ensuring success in job interviewsAppropriate use of non-verbal communication. Presentation Skills:Oral presentation and public speaking skills- business presentations

TOTAL HOURS –20

TEXT BOOKS:

1.Deparment of English,Anna University,Mindscapes,English for Technologists & Engineers,Orient Longman Pvt.Ltd,Chennai :2012.

2.M.Ashraf Rizvi,,Effective Technical Communication,Tata McGraw Hill Publishing Company Ltd,New Delhi,2009.

REFERENCES:

1. Sangeetha Sharma,Binod Mishra,'Communication Skills for Engineers & Scientists,PHI,Learning Pvt Ltd,New Delhi,2009.
2. Sumant S,Technical English, 2nd Edition,McGraw-Hill Education Pvt Ltd,2008.

OUTCOMES:

This course will enable students to use „good" English and perform the following
Gather ideas and information, to organise ideas relevantly and coherently.

- Engage in debates.
- Participate in group discussions.
- Make oral presentations.
- Write formal letters.
- Transfer information from non-verbal to verbal texts and vice versa.
- Take part in social and professional communication.

SEMESTER IV

CAC2251	PROGRAMMING IN JAVA	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aim of the course is to

- Learn the fundamentals of the capabilities of Java and to introduce encapsulation, polymorphism, and the Java language mechanism (classes and objects) to implement it.
- Develop Java computer programs that perform various problem-solving algorithms.
- Develop the programming skills to use the Java object oriented programming methodology to produce quality computer based solutions to real problems.

MODULE I INTRODUCTION TO JAVA 12

The Confidentiality, Integrity & Availability (CIA) Triad, Cryptographic concepts, methodologies &practices, Symmetric& Asymmetric cryptography, public& private keys, Cryptographic algorithms and uses, Construction& use of Digital signatures

MODULE II CLASS AND INHERITANCE 12

The Java Class- Inheritance, Deriving Classes, Method Over-riding, Method Overloading, Access Modifiers, Abstract Class and Method, Interfaces, Packages, Imports and Class Path.

MODULE III THREADS AND EXCEPTION HANDLING 12

Exception Handling, The Try-Catch Statement, Catching more than one Exception, Generating Exceptions, Threads: Introduction, Creating Threads in Applications-Thread Priority

MODULE IV : INPUT STREAM CLASSES 12

IO Packages, Java Input Stream Classes, Java Output Stream Classes, File Class.

MODULE V APPLETS AND AWT PACKAGES 12

Creating an Executable Applet, Applets Life Cycle, AWT and Graphic methods, Fonts, Loading and Viewing Images, Loading and Playing Sound, Event Handling, Layouts

TOTAL HOURS –60

TEXT BOOKS:

1. Hortsmann & Cornell, "Core Java Advance Features VOL II", 9th Edition,

Pearson Education, 2013.

REFERENCES:

1. Patrick Naughton, "Complete Reference: JAVA 2", 8th Edition, Tata McGrawHill, 2011.
2. Andrew Lee Rubinger, Bill Burke "Enterprise JavaBeans 3.1", 6th Edition, O'Reilly Publishers, 2010.

OUTCOMES:

Upon completion of this course, students would be able to:

- Develop Java computer programs that perform various problem-solving algorithms.
- Improve the programming skills in Object Oriented language.
- Understand the concept of OOP as well as the purpose and usage principles of inheritance,
- Develop programs using the Java Collection API as well as the Java standard class library

CAC2252 COMPUTER SECURITY L T P C

3 0 0 3

OBJECTIVES:

- To provide the student with a foundation covering computer security issues
- To determine appropriate mechanisms for protecting Computer systems.
- To help organizations increase awareness of security policies and procedures.

MODULE I INTRODUCTION 8

Physical Security – Viruses – Worms – Trojan Horses –Principles of Computer Security

MODULE II IDENTITY THEFT AND PRIVACY 9

Identity Theft- Shredding – Internet Cookies –Phishing – Homograph Threat – Privacy Issues- Trust.

MODULE III ELEMENTS OF CRYPTOGRAPHY 10

Principles of Cryptography - Modular Arithmetic - Integrity Check Functions - Kirchoff's Principle – Monoalphabetic -Polyalphabetic Cipher – One Time Pad – Key distribution Problem – Diffie Hellman Key Merkle Keys- Public Key Cryptography – RSA – SSL - Digital Signatures – Encryption - Strength of Mechanisms –Performance.

MODULE IV DATABASE SECURITY 9

Introduction - Relational Databases- Access Control - Statistical Database Security – Integration with the Operating System – Privacy

MODULE V COMMUNICATION AND WEB SECURITY 9

Basics of authentication, tokens, certificate-based and biometric authentication, Protocol Design Principles - IP Security - IPsec and Network Address Translation- SSL/TLS – Xtensible Authentication Protocol - Web Services Security.

TOTAL HOURS –45

TEXT BOOK:

1.Chuck Easttom, "Computer Security Fundamentals", 2nd Edition, Pearson Education, 2012.

REFERENCES:

1. Christof Paar, Jan Pelzl, Bart Preneel, "Understanding Cryptography: A Textbook for

Students and Practitioners", 1st Edition, Springer, 2010

2. Bruce Schneider, "Applied Cryptography Protocols, Algorithms, and Source Code in C", 2nd Edition, John Wiley & Sons, 2007.

OUTCOMES:

Students who complete this course will be able to

- identify fundamental concepts of computer security.
- use the World Wide Web to know the latest security alerts and information.
- compare and contrast types of malicious code, including worms, Trojan horses, and viruses.

CAC2253	SOFTWARE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

The aims of the course are as follows

- to define software engineering and explain its importance
- to discuss the concepts of software products and software processes
- to solve problems in a team environment through effective use of written and oral communication skills.
- to practice the lifelong learning needed in order to keep current as new issues emerge.
- to develop software in at least one application domain.

MODULE I INTRODUCTION 9

Definition of software and software engineering – Software myths –Software Engineering paradigms: Linear Sequential Model & Prototyping Model Software Project Management – Software Metrics – Software Cost Estimation – Software Project Planning.

MODULE II SOFTWARE REQUIREMENT ANALYSIS 9

Software Risks – Software Configuration Management System Analysis – Modeling the System Architecture – System Specification –Fundamentals of Requirement Analysis – Software Prototyping – Prototyping methods and tools specification – Software requirements Specifications

MODULE III STRUCTURED ANALYSIS 9

Introduction – the elements of the analysis model – data objects, attributes and relationships – Cardinality and Modality – ERD – DFD – Classical Analysis Methods : DSSD, JSD, SADT.

MODULE IV SOFTWARE DESIGN 9

Software Design and Software Engineering – Design and Software Quality – Evolution of Software Design – Design Principles. Design Concepts, Abstraction, Refinement, Modularity – Effective Modular Design, Functional Independence, Cohesion, Coupling.

MODULE V SOFTWARE TESTING METHODS 9

Software Testing Fundamentals – White Box Testing – Black Box Testing – Debugging – Software Quality: McCall's Quality Factors

TOTAL HOURS – 45

TEXT BOOKS:

1. Stephen Withal, "Software Requirement Patterns", 3rd Edition, Microsoft Press, 2011.

REFERENCES:

1. Karl & Joy Beatty," Software Requirements", 3rd Edition, Microsoft Press, 2012..
2. S.K.Kataria, Rajiv Chopra, "Object Oriented Software Engineering", 3rd Edition, 2013.

OUTCOMES:

At the completion of this course students will be able to

- understand and apply foundations of software engineering practice and process within production constraints.
- get an awareness of current industry standards and practices.
- understand and apply principles of project management for single- paired, and team processes.
- have strong oral and written communication skills to help students in preparing good quality documentation.

CAC2254	INFORMATION STORAGE AND MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce advanced Storage System, Backup and Security Managements.
- The Concept of Cloud Computing, Virtualization and other related services.
- To Explain Storage networking Technologies
  Security in cloud Environment and cloud Service management activities

MODULE I STORAGE SYSTEM

Introduction to Information Storage, virtualization, and cloud computing, Data center environment, RAID, Intelligent Storage system

MODULE II STORAGE NETWORKING TECHNOLOGIES

Fibre Channel Storage Area Network (FC SAN), IP SAN and Fibre Channel over Ethernet (FCoE), Network Attached Storage (NAS), Object based and Unified Storage

MODULE III BACKUP. REPLICATION AND ARCHIVE

Introduction to Business Continuity, Backup and Archive, Local Replication, Remote Replication

MODULE IV CLOUD COMPUTING

Cloud Computing, benefits, characteristics, deployment models, and Services, cloud challenges and migration considerations

MODULE V SECURING AND MANAGING STORAGE INFRASTRUCTURE

Securing the Information Infrastructure, framework and domains of storage security, security Implementation at storage networking, security in virtualized and cloud environments, Managing the Information Infrastructure, infrastructure monitoring and management, information lifecycle management (ILM), cloud service management activities

TOTAL HOURS –45

TEXTBOOK:

1.G. Somasundaram, Alok Shrivastava, Information Storage and Management - Storing, Managing, and Protecting Digital Information EMC Education Services,2012.

REFERENCE:

1. John W.Rittinghouse and James F.Ransome, “Cloud Computing: Implementation, Management, and Security”, CRC Press, 2010.

OUTCOMES:

Upon completion of the subject, students will be able to

- A working understanding of the Storage, Backup, virtualization, and cloud computing
- Acquire knowledge in different technologies of Storage System and Backup System
- An awareness of Security in Cloud and cloud service management activities

CAC2255 PROGRAMMING IN JAVA LAB

L	T	P	C
0	0	4	2

OBJECTIVES

The aim of the course is to

- Develop the programming skills using the object oriented programming methodology to produce quality computer based solutions to real problems.
- Utilize the advance features of Java technology.
- Work with collection API and develop fast programs.
- Develop good multithreaded programs.

LIST OF EXERCISES

1. Programs using basic data types, operators and control structures.
2. Class definitions and usage involving variety of constructors and finalizes
3. Programs involving various kinds of inheritances,
4. Program to demonstrate creation and handling of packages, their imports and Class Path.
5. Programs involving a variety of Exception Handling situations
6. Program involving creating and handling threads in applications and applets.
7. Program to demonstrate AWT/Swing graphic methods
8. Program for Loading and Viewing Images, Loading and Playing Sound
9. Programs to demonstrate various Layouts
10. Programs to demonstrate event handling

TOTAL HOURS –30

TEXT BOOKS:

1. Patrick Naughton, "Complete Reference: JAVA 2", 8th Edition, Tata McGrawHill, 2011.

REFERENCES:

1. Keyur shah, “Gateway to Java Programmer Sun Certification”, Tata McGraw Hill 2002.
2. Herbert Schildt, The Complete Reference – Java 2 , 4th Edition, Tata McGraw Hill, 2007

OUTCOMES:

After completion of this course, the students would be able to

- Understand Java and object-oriented programming language concepts.

- Write, debug, and document well-structured Java applications
- Implement Java classes from specifications
- Effectively create and use objects from predefined class libraries
- Understand the behavior of primitive data types, object references, and arrays
- Implement interfaces, inheritance, and polymorphism as programming techniques
- Apply exceptions handling

CAC2256	SOFT SKILLS AND PERSONALITY DEVELOPMENT	L	T	P	C
		0	0	4	2

OBJECTIVES:

This course is designed to

- provide attitude Control and Personal Self Esteem Improvement
- interview Motivation effective Answering and Maintaining Fluent Communication
- positive Body Language
- effective Resume Creation
- leadership Skills, Team Player Skills

MODULE I INTRODUCTION 4

Awareness of Real World Industry and Situations - Conscious Self-Awareness - Practical Visualizations - Neuro- Linguistic Programming Basics

MODULE II MOTIVATION 4

Developing Self Esteem and Self Motivation - Confident Goal Setting - Positive Attitude Development and Positive Thinking - Developing Inner Achievement Mindset.

MODULE III LEADERSHIP SKILLS 4

Types of Leadership - Leadership Process and Thinking - Innovative Thinking - Role of Competency, Discipline, Planning and Ethics - Creating Cooperation and Trust in Team Building Process – Mentoring.

MODULE IV EFFECTIVE COMMUNICATION I 4

Eliminating Stage Fright - Increasing Fluency - Increasing Focus while Listening - How to communicate as a Follower - How to communicate as a Leader - Assertive and Polite Communication

MODULE V EFFECTIVE COMMUNICATION II 4

Fluency with increased vocabulary - Group Discussion Etiquette - Advanced Group Discussions - Giving a positive Body Language - Interviews: Clear Speaking - Interviews: Handling Pressure

TOTAL HOURS –20

REFERENCES:

1. Charles Faulkner and Steve Andreas, "NLP: The New Technology of Achievement", Harper Paperbacks publishers, 1996.
2. Sarvesh Gulati, "Corporate Soft Skills" , Rupa and Co publishers.

3. P.K.Dutt, G. Rajeevan and C. L. N. Prakash, “A Course in Communication Skills”, Cambridge University Press, India 2007.

OUTCOMES:

By the end of this course students will be able to develop the following:

Awareness of Real World Industry and Situations

- Role of Competency, Discipline, Planning and Ethics
- Advanced Group Discussions
- Giving a positive Body Language
- Interviews: Clear Speaking

SEMESTER V

		L	T	P	C
CAC3151	**C# AND .NET PROGRAMMING**	**3**	**1**	**0**	**4**

OBJECTIVES:

To enable the students to learn and develop Web and Windows application for the .NET platform.

MODULE I INTRODUCTION 12

Vision and goals of .NET, Building blocks of .Net, overview of .Net applications- .Net evolution- The .Net Framework Architecture- Intermediate Language(IL)- Common Language Runtime (CLR)- JIT Compilation- Common Type System (CTS)- Common Language System (CLS)- Assemblies- IL Disassembler (ILdasm.exe)- Namespaces. C# features Working with methods- understanding method structure- calling a method- understanding parameter types- overloading methods- virtual methods- overriding methods.

MODULE II C# CLASSES 12

Constants- fields- methods- properties- events- indexers- operators- constructors- destructors- static modifiers. Class Inheritance Compiling with multiple classes- virtual and override methods- abstract methods- sealed classes- Boxing and Unboxing- Working with namespaces- Understanding interfaces- handling exceptions.

MODULE III WINDOWS APPLICATIONS 12

Understanding Windows Forms Architecture- Windows controls: Common- Containers- Menus and Tool strips- Data- Reporting. Adding and using windows controls to the form.

MODULE IV DATABASE PROGRAMMING WITH ADO.NET II 12

Understanding the Dataset classes and their relatives- Understanding OLEDB and SQL Server Support- Understanding common database operations using ADO.NET – Operations that don’t return rows- Data operations that return single- row entities- data operations that affect single-row entities- data operations returning sets of rows- data operations affecting sets of rows- operations that return hierarchical data.

MODULE V CREATING WEB APPLICATIONS WITH WEB FORMS 12

[Asp.NET]Difference between ASP and ASP.Net- Defining a web application- ASP.NET architecture- ASP.net web forms- Code behind model- Validation controls in ASP.NET- Server controls and data binding- Grid view- data repeater- data list- Data binding in ASP.NET- Data source controls- sqldata source- Data controls – grid view and details view- Login controls.

TOTAL HOURS –45

TEXT BOOKS:

1. Jeff Ferguson, Brian Patterson, Jason Beres ,C# Programming Bible , Wiley Publishing Inc., Reprint 2006.

1. Jeff Prosise, Programming .Net, 2nd Edition, WP Publishers & Distributors Pvt. Ltd, 2009.
2. Kevin Hoffman & Jeff Gabriel, Professional .Net Framework, 1st Edition, Wrox Press Publishers, 2006.

OUTCOMES:

- Upon successful completion of the course, the students would be able to
- Update the students with the latest technologies thereby make them fit for the industry
- Make the students aware of a new development platform for internet and distributed applications
- Simplify application development and deployment

SEMESTER I

		L	T	P	C
IA C 1101	**BASIC DESIGN – I**	**0**	**0**	**11**	**6**

OBJECTIVES:

Basic Design studio aims at

- Allowing the students to develop the observational, analytical, inference & visualization skills by involving in design problems.
- Offers the transition phase for the students in which they can explore the potential creativity through design exercises.
- The phase of realization of the practical design exercise, by which they explore creating appealing harmonious interior Environment.

PHASE I: 60

- Elements and Principles –Exercises related to the same.
- Exploring color schemes and their application in a visual composition and in architectural forms and spaces.
- Study of texture and schemes of texture both applied and stimulated and their application.
- Study of linear and planar forms using simple material like mount Board, metal foil, box boards, wire string, thermocol etc.
- Study of Solids and voids to evolve sculptural forms and spaces and explore the play of light and shade and application of color.
- Analytical appraisal of building form in terms of visual character, play of light and shade, solids and voids etc.

PHASE II 65

- Application of Basic design through design of simple architectural elements.
- Introduction to Design principles & ordering systems through exercises in product Designs. E.g. Pen Holder, Book Shelves, etc.,
- Focus on understanding physical dimensions through exercises in ergonomics and anthropometric. E.g. Small scale furniture design.
- Exercises to explore the translation of verbal (adjective & verbs) to visual through compositions both in two and three dimensions.

PHASE III **55**

- Materials, Built forms and expressions.
- Understanding of built environments and its determinants.
  Single space design exercises- Typology of single room/User/Utility area E.g. Living area ,Bedroom, Toilet, Kiosk Design, etc.,
- Man and his basic living activity- Body, Activity & Enclosure.

TOTAL HOURS – 180

TEXT BOOKS:

1. Paul Zelanski& Mary Pat Fisher, "Design principles & Problems" , 2nd Ed, Thomson & Wadsworth,USA,1996
2. Owen Cappleman& Michael Jack Kordan, "Foundations in Architecture: An Annotated Anthology of beginning design projects", Van Nostrand Reinhold, New York.
3. Paul Laseau, "Graphic Thinking For Architects and Designers", John Wiley & Sons, New York, 2001.
4. Francis D.K.Ching, "Architecture - Form Space and Order", Van Nostrand Reinhold Co., (Canada), 1979.

REFERENCES:

1. John W.Mills, “The Technique of Sculpture", B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London,1966.
2. C.Lawrence Bunchy, "Acrylic for Sculpture and Design", 450,West 33rd Street,New York,N.Y.10001,1972.
3. Charles Wallschlaeger&SynthiaBusic Snyder, "Basic Visual Concepts & Principles for artists, architects & designers", McGraw hill, USA, 1992.
4. Exner V., Pressel D., “Basics Spatial Design”, Birkhanser, 2009.

OUTCOMES:

- To understand various design elements and principles and applying them in two-dimensional and three-dimensional compositions.
- To understand the creative process, develop techniques and methods of creative problem solving.
- To equip the students to understand about the various anthropometric aspects, human factors & other design criteria involved in the design through small scale furniture.
- To produce the best possible solution within given limits of time.
- To acquire the knowledge of colors schemes and textures.
- To acquire a basic knowledge of art terminology to express their ideas verbally.
- To familiarize the students with design principles and ordering system through 3D modeling and the product designs.
- To develop understanding of the scale, function and options existing when designing small-scale spaces in residences such as toilets, kitchens, living, bedrooms etc.
- Increase awareness of the creative process.

IA C 1102	ALLIED DESIGN STUDIO- I	L	T	P	C
		2	0	4	4

OBJECTIVES:

Allied Design Studio aims to provide the students with the knowledge of the basic understanding of materials in Interior Design. The studio also focuses on two dimensional and three dimensional geometry and its representations through drawing.

PHASE I CONSTRUCTION TECHNIQUES & REPRESENTATIONS 50

- Exercises involve the understanding and representation of principles of geometry, orthographic projections of points, lines, and planes and solids sections of simple and complex solids and the development of the surfaces of solids.
- Exercises that helps the students to familiarize with drawing materials and equipments. Significance of precision and accuracy in technical drawings is dealt.
- Understanding of use of bricks in buildings and interiors.

PHASE II BRICKS IN BUILDING CONSTRUCTION 25

- Understanding of components of buildings through wall sections.
- Brick bonding - English and Flemish: L- junction, T- junction, intersections. Stretcher and header bond. Rat-trap bond, Creative bonding. Piers and foundations.

TOTAL HOURS – 75

1. I.H. Morris, Geometrical Drawing for Art Students, Orient Longman Chennai.
2. Ralph W. Liebing "Architectural Working Drawing", John Wiley & Sons. Inc - 2000.
3. Morgan, "Elements of structure".

OUTCOMES:

- To equip the students with various tools of drafting.
- To acquire the knowledge of basic and complex projections.
- To familiarize the students in two dimensional and three dimensional geometry and its representations through drawing.
- To develop understanding of the scale and proportion.
- To attain the knowledge on the components of building.
- To gain the technical knowledge of bricks and its bonding in buildings and interiors.

IA C 1103 **WORKSHOP- I**

L	T	P	C
1	0	4	3

OBJECTIVES:

- Workshop aims at the development of model making skills of the students to communicate and develop ideas through model making techniques.
- Not restricted to any specific medium, the course offers the platform for the students to explore their mode of model making techniques.

COURSE CONTENTS:

PHASE I **30**

- Understand material and tools by making objects which allow students to explore forms, surfaces, textures, and patterns i.e. elements and principles of design.
- Model making- Tools, materials, Techniques of Model- making. Importance of scaled models, as they are the most effective and instant way of completely communicating a concept in spite of advances in computerization.

PHASE II **30**

- This subject teaches the students to properly comprehend the three dimensional in its aesthetic and functional totality.
- Connecting with the Basic Design Studio –I exercises. The models for the end products of design can be made through the techniques learned in this workshop.

TOTAL HOURS –60

TEXT BOOKS:

1. Paul Zelanski& Mary Pat Fisher, "Design principles & Problems" , 2nd Ed, Thomson & Wadsworth,USA,1996
2. Owen Cappleman& Michael Jack Kordan, "Foundations in Architecture: An Annotated Anthology of beginning design projects", Van Nostrand Reinhold, New York.

REFERENCES:

1. Charles Wallschlaeger&SynthiaBusic Snyder, "Basic Visual Concepts & Principles for artists, architects & designers", McGraw hill, USA, 1992.
2. John W.Mills, " The Technique of Sculpture", B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London,1966.

OUTCOMES:

- The students will be made to understand the materials and tools by making objects which allow them to explore forms, surfaces, textures, and patterns i.e. elements and principles of design.
- The students will be made familiar with Model making- Tools, materials and techniques of Model- making.
- Importance of scaled models.
- This subject teaches the students to properly comprehend the three dimensional in its aesthetic and functional totality.
- Connecting with the Basic Design Studio –I exercises. The models for the end products of Design can be made through the techniques learned in this workshop.

IA C 1104 INTEGRATED DESIGN STUDIO - I

L	T	P	C
1	0	4	3

OBJECTIVES:

The phase I of the course explores the use of free hand sketching and drawing as tools of visual representation. It uses geometrical analysis of objects as a means to understand shapes and proportions, as well as aspects like opacity, transparency, shades and shadows, and light and depth. Students develop skills in observation and recording through drawing with different media like pencil, pen, dry pastels and water colors.

The phase II of the course explores the use of digital media as a tool for both designing & creation. The course aims to make the students proficient in digital skills by constant practice in the various updated software. It introduces the students to the basics of software, and techniques of two dimensional drawings and representation.

COURSE CONTENTS:

PHASE I **30**

- Exercises to understand color wheels & color theory.
- Free hand Sketching.
- Understanding & representing the quality of various materials- opacity, transparency, shades and shadows, and light and depth.
- Exercises to explore various medium of presentations- pencil, pen, crayons and water colors, etc.,
- Exercise to improve the skills of observation through the recording of different types of spaces with respect to their scale, volume, form, materials and finishes.

PHASE II **30**

- Understanding the use of drawing tools, object editing, drawing objects and filing and setting drawing units, scales, lettering etc. Setting up of drawing of various simple objects with complete text and dimensioning.
- Transparent overlays, hatching utilities, assigned color and line type, use of multi-line, style, block, symbol library, manipulation for accurate drawings, incorporating the above mentioned utilities.

- Introduction to tools of productivity – Blocks. Understanding concepts of view port, concept of object linking and editing session.
- Introduction to basic presentation tools- PowerPoint techniques, communication tools.

TOTAL HOURS –60

TEXT BOOKS:

1. Jim Legitt, "Drawing Shortcuts", John Wiley & sons Inc, 2010.
2. Webb, Frank, “The Artist guide to Composition”, David & Charles, U.K., 1994.
3. Ching Francis, “Drawing a Creative Process”, Van Nostrand Reinhold, New York, 1990.
4. Alan Swann, “Graphic Design School”, Harper Collins, 1991.

REFERENCES:

1. Moivahuntly, "The artist drawing book", David & Charles, U.K., 1994.
2. Drawing a Creative Process", Ching Francis, Van Nostrand Reinhold, New York, 1990.
3. Arundell (Jan) Exploring sculpture, Mills and Boon, London/Charles, T. Brand Ford Company, U.S.A.
4. The art of drawing trees, heads, colours, mixing, drawing, landscape and painting, water colour, oil colour, etc. – The Grumbacher Library Books, New York, 1996.
5. Caldwell peter, “Pen and Ink Sketching”, B.T. Bats ford Ltd., London, 1995.

OUTCOMES:

- Enhances the skills of free hand sketching and provides an understanding on visual perception, principles and systems of order that inform two- and three-dimensional design, architectural composition.
- To familiarize the students with the concepts of 3D modeling.
- To enable them to experiment with forms, mapping, rendering and presentation techniques.
- To equip the students with various tools of sketching and rendering like pencils, pens, different medium of colors, etc.

- To practice and extend the ability to think visually and to communicate concepts, design solutions and arguments clearly and concisely through visual, verbal and written means.
- To attain the knowledge of quality of various materials- opacity, transparency, shades and shadows, and light and depth

IA C 1105	SKILL DEVELOPMENT	L	T	P	C
		2	0	0	2

OBJECTIVES:

The primary objective of this course is to improve communication skill development and technical writing.

The course is aimed at providing the students with language skills which is an inescapable tool for the young technocrats to break geographical boundaries and step into global world.

COURSE CONTENT

PHASE I **15**

- Seminars, guest lectures, putting up exhibitions, workshops, participating in architectural competitions or conducting site visits or study tours.
- INTRODUCTION: Skimming, scanning, inferring, predicting and responding to content - Guessing the meaning of words from contexts - Note making and vocabulary extension.
- VOCABULARY DEVELOPMENT: Listening and understanding recorded, structured talks and classroom lectures - Comprehending the matter - understanding the links between different parts of speech - practice in note taking.

PHASE II **15**

- COMMUNICATION: Features of an effective speech-Practice in speaking fluently - Dialogue practice- simple social exchanges - short extempore talks.
- COMPREHENSION: Effective sentences-cohesive paragraphs - clear and concise writing - Introduction to technical writing - Definition, Description, Instruction - Summary Writing practice.
- RESOURCE UTILIZATION: Use of library - Role of Bibliography, Table of contents, Index etc. - use of Dictionary.

TOTAL HOURS –30

OUTCOMES:

- Seminars, Guest Lectures, putting up Exhibitions, Workshops, participating in Architectural Competitions or conducting Site Visits or Study Tours.

- INTRODUCTION: Skimming, scanning, inferring, predicting and responding to content - Guessing the meaning of words from contexts - Note making and vocabulary extension.
- VOCABULARY DEVELOPMENT: Listening and understanding recorded, structured talks and classroom lectures - Comprehending the matter - understanding the links between different parts of speech - practice in note taking.
- COMMUNICATION: Features of an effective speech-Practice in speaking fluently - Dialogue practice- simple social exchanges - short extempore talks.
- COMPREHENSION: Effective sentences-cohesive paragraphs - clear and concise writing - Introduction to technical writing - Definition, Description, Instruction - Summary writing practice.
- RESOURCE UTILIZATION: Use of library - Role of Bibliography, Table of contents, Index etc. - use of dictionary.

IA C 1106	THEORY OF DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The course aims to provide the basic theories and principles needed for the students while handling the design exercises.
- They are equipped with the knowledge of theories applied in the conception and development of design.
- The theoretical approach is to be interwoven with the design processes.

COURSE CONTENT:

PHASE I **15**

- Space – definition; Interior space – spatial qualities: form, scale, outlook; structuring space with interior design elements; spatial form; spatial dimension; height of space; spatial transitions – openings within wall planes, doorways, windows, stairways.
- Point, line, volume, shape, texture, color & form – in relation to light, pattern etc. and application of the same in designing interiors.

PHASE II **15**

- Ratio; proportions – golden section; relationships; scale; balance, symmetry, harmony; unity; variety; rhythm; emphasis.
- Definition, theory of standard dimension based on human figures for activities, functions, circulation, furniture design, spatial requirements etc.
- Study of Ergonomics, Design of furniture for Living, Dining, Kitchen, Office etc.

PHASE III **15**

- Design process – Analysis, synthesis, design evaluation;
- Design criteria – function and purpose, utility and economy, form and style;
- Human factors - human dimensions, distance zones, activity relationships;
- Fitting the space – plan arrangements, function, aesthetics.

TOTAL HOURS – 45

TEXT BOOKS:

1. Ching, Frank (Francis D.K.), "Architecture: Form, Space & Order", Van Nostrand Reinhold, New York. Hoboken 2007; ISBN 0471752169
2. Ching, Frank (Francis D.K.), "Drawing: A Creative Process", Van Nostrand Reinhold, New York 1990.
3. Simon Unwin, "Analysing Architecture", Rouledge, London, 2003.
4. V.S.Pramar, "Design Fundamentals in Architecture", Somaiya Publications Private Ltd.,

REFERENCES:

1. YatinPandya,"Elements of Space making", Mapin 2007.
2. Leland M.Roth, "Understanding Architecture: Its Experience History and Meaning", Craftsman house, 1994.
3. Peter von Meiss, "Elements of architecture – from form to place", Spon Press 1977.
4. Rudolf Arnheim, "The dynamics of architectural form", University of California Press, 1977.
5. NeilsPrak, "The language of Architecture", Mounton& Co., 1968.
6. . Paul Alan Johnson, "The Theory of Architecture – Concepts and themes", Van Nostrand Reinhold Co., New York, 1994.

OUTCOMES:

- The students will be taught about Space – definition; Interior space – spatial qualities: form, scale, outlook; structuring space with interior design elements; spatial form; spatial dimension; height of space; spatial transitions – openings within wall planes, doorways, windows, stairways.
- Application of the design principles like Point, line, volume, shape, texture, color & Form – in relation to light, pattern etc. in designing interiors.
- The will be encouraged to use Ratio; proportions – golden section; relationships; scale; balance, symmetry, harmony; unity; variety; rhythm; emphasis in basic design and workshop exercises.
- Definition and theory of standard dimension based on human figures for activities, functions, circulation, furniture design, spatial requirements etc. Study of Ergonomics Design of Furniture for Living, Dining, Kitchen, Office etc. will be brought in use through the workshop's model making exercises.

SEMESTER II

		L	T	P	C
IA C 1201	**INTERIOR DESIGN STUDIO - I**	**0**	**0**	**11**	**6**

OBJECTIVES:

- Interior Design studio- I facilitate the students to design spatial interventions in response to physical and visual attributes of a given site context.
- To understand the basic structural systems.
- To comprehend the services pertaining the design projects.
- As continued from the Basic Design - Phase II, the students explore creating appealing harmonious environment.

COURSE CONTENTS

PHASE I **70**

- Multi space design exercises- E.g. Types of Residence.
- Exercise to involve the development of services along with the design problem.

PHASE II **50**

- Site planning and analysis
- Contextual exploration of materials and usage.

PHASE III **60**

- Working of the basic structural systems.
- Working drawings with respect to the plumbing, electrical details.

TOTAL HOURS – 180

TEXT BOOKS:

1. Joseph De Chiara, Michael J Crosbie, Time Saver Standards for Building Types, McGraw Hill Professional 2001.
2. Julius Panero, Martin Zelnik, Human Dimension and Interior Space, Whitney Library of Design, 1975
3. Joseph De Chiara, Julius Panero, Martin Zelnik, Time Saver Standards for Interior Design and Space Planning, McGraw Hill 2001.
4. Ernst Neuferts Architects Data, Blackwell 2002

REFERENCES:

1. Hideaki Hareguchi, A Comparative analysis of 20thcentury houses, Academy Editions, 1988
2. Robert Powell, Tropical Asian House, Select Books, 1996
3. Terence Conran, The Essential House Book, Conran Octopus, 1994
4. Sam F. Miller, Design Process: A Primer for Architectural and Interior Design, Van Nostrand Reinhold, 1995.

OUTCOMES:

- The students will be able to comprehend to physical and visual attributes of a given site context.
- The students will be able to familiarize themselves with the structural systems of the projects.
- The students will be able to comprehend the services pertaining the design projects.

IA C 1202	ALLIED DESIGN STUDIO- II	L	T	P	C
		2	0	3	4

OBJECTIVES:

- Allied Design Studio aims to provide the students with the knowledge of the basic understanding of materials in Interior Design.
- This studio focuses on Doors, windows, ventilators- materials, types, construction details.
- To study about the various recent developments in Industry.

COURSE CONTENT

PHASE I **25**

- Introduction to the openings in spaces.
- Doors- types of doors- fully panelled single and double shutter doors of various types and sizes. Drawings of timber joinery for Doors with respect to material: Details of Aluminum doors - Open able, sliding, pivoted, glass entrance doors, UPVC doors.

PHASE II **25**

- Windows- fully glazed window, fixed glass and timber louvered windows. Drawings of timber joinery for windows.With respect to material: Details of Aluminum windows - openable, sliding, fixed, pivoted.

PHASE III **25**

- Ventilators- Drawings of timber joinery for ventilators, Aluminum ventilators - Top hung, bottom hung, pivoted, louvered.
- Study of various other recent developments regarding openings in spaces.

TOTAL HOURS –75

TEXT BOOKS:

1. W.B. Mickay, “Building construction Vol 1,2 and 3”, Longmans, UK 2005.
2. R.Chudley, ”Building Construction Handbook”, Elsevier/Butterworth-Heinemann2006.
3. S.C.Rangwala, “Engineering materials”, Charotar Publishing, 2011.
4. S.P.Arora&S.P.Bindra, “Text book of Building Construction”, GanpatRai Publications (P) Ltd, New Delhi, 2013
5. B.C. Punmia, “Building Construction”, 2005
6. P.C. Varghese, “Building Materials”, Prentice Hall of India put Ltd New Delhi 110001, 2005.

REFERENCES:

1. Don A.Watson, “Construction Materials and Processes”, McGraw Hill Co.,1992.
2. Alanwerth, “Materials”, The Mitchell Pub.Co.Ltd., London,1986

OUTCOMES:

- The students will be equipped with the knowledge of the basic understanding of materials in Interior Design.
- The students can comprehend the details and techniques of doors, windows, ventilators- materials, types, and construction details.
- To familiarize with various recent developments regarding the opening in spaces.

IA C 1203	WORKSHOP- II	L	T	P	C
		1	0	3	3

OBJECTIVES:

- Workshop II aim at the development of model making skills of the students to communicate and develop ideas through model making techniques.
- Not restricted to any specific medium, the course offers the platform for the students to explore their mode of model making techniques.

COURSE CONTENT:

PHASE I **25**

- Exercises related to model making.
- Understand material and tools by making objects which allow students to explore forms, surfaces, textures, and patterns i.e. elements and principles of design.
- Exploration of the model making techniques in the recent development of the Industry.

PHASE I **35**

- Textile Printing- Basic Knowledge of the fabric as interior element.
- Woodwork & Carpentry.
- Glass painting.

TOTAL HOURS – 60

TEXT BOOKS:

1. Owen Cappleman& Michael Jack Kordan, "Foundations in Architecture: An Annotated Anthology of beginning design projects", Van Nostrand Reinhold, New York.
2. John W.Mills, " The Technique of Sculpture", B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London,1966.
3. C.Lawrence Bunchy, "Acrylic for Sculpture and Design", 450,West 33rd Street,New York,N.Y.10001,1972.

REFERENCES:

1. Charles Wallschlaeger&SynthiaBusic Snyder, "Basic Visual Concepts & Principles for artists, architects & designers", McGraw hill, USA, 1992.
2. John W.Mills, " The Technique of Sculpture", B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London,1966.

OUTCOMES:

- The students will be able to communicate and develop ideas through model making techniques.
- The students will be equipped with the various recent model making techniques in the industry.

IA C 1204 INTEGRATED DESIGN STUDIO-II L T P C

1 0 4 3

OBJECTIVES:

- The course explores the use of digital media as a tool for both designing & creation. The course aims to make the students proficient in digital skills by constant practice in the various updated software.
- It introduces the students to the basics of three dimensional form explorations.

COURSE CONTENT

PHASE I 30

- Introduction to 3D software- tools of productivity, rendering techniques.
- Understanding the use of drawing tools, object editing, drawing objects, filing and setting drawing units, scales, limits that size and dimensioning, lettering.
- Setting up of drawing of various simple objects with complete text and dimensioning.
- Layout - way to use the fundamental drawing, editing and navigation tools to put together quick presentations.
- Leverage templates, including custom title blocks, document settings.

PHASE II 30

- Ways to light your model and add realistic reflections and finishes in shade light.
- Advance command programming – Transparent overlays, hatching utilities, assigned color and line type, use of multi-line, style, block, symbol library, manipulation for accurate drawings, incorporating the above mentioned utilities.
- Introduction to tools of productivity – Blocks. Understanding concepts of view port, concept of object linking and editing session.

TOTAL HOURS – 60

TEXT BOOKS:

1. Watt, “Fundamentals of Three-Dimensional Computer Graphics”, Addison Wesley, Massachusetts, 1989.
2. Aouad, “Computer Aided Design guide for Architecture, Engineering and construction”, Spon process, 2012.

REFERENCES:

1. Ralph Grabowski, “The Illustrated AutoCAD 2002 Quick Reference”, 1 st edition, CengageLearing, 2001.
2. Sham tikoo, “Autocad 2000: A Problem-Solving Approach”,.DelmarCengage Learning, 1999.
3. Fiorello. J. A., “CAD for Interiors beyond the basics”, Wiley publications, 2011.

OUTCOMES:

- The students becomes equipped with the exploration of digital media as a tool for both designing & Creation.
- The students become proficient in digital skills by constant practice in the various updated software.
- The students are introduced with the basics of three dimensional form explorations.

IA C 1205 HISTORY OF INTERIOR DESIGN - I

L	T	P	C
3	0	0	3

OBJECTIVE:

- The course aim to provide a brief overview of the development of Interior Architecture through various historical phases that is explained through various examples.

COURSE CONTENT:

- EARLY CLASSICAL PERIOD: Prehistoric Cave paintings – primitive designs-Interiors during Egyptian, Greek, Roman, Gothic, Early Christian & Renaissance Periods.
- MIDDLE AGES: Interiors in Romanesque, Gothic, and Renaissance periods.
- COLONIAL PERIOD: Colonial, Victorian designs, Arts & Crafts movement, Art Nouveau.
- PROJECTS: Projects based on historical styles in Interiors & assignments.

PHASE I **25**

- EARLY CLASSICAL PERIOD: Prehistoric Cave paintings – primitive designs-Interiors during Egyptian, Greek, Roman, Gothic, Early Christian & Renaissance Periods.
- MIDDLE AGES: Interiors in Romanesque, Gothic, and renaissance periods.

PHASE II **20**

- COLONIAL Period: Colonial, Victorian designs, Arts & Crafts movement, Art Nouveau.
- PROJECTS: Projects based on historical styles in Interiors & assignments.

TOTAL HOURS – 45

TEXT BOOKS:

1. Sir Banister Fletcher, A History of Architecture, University of London, The Antholone Press, 1996.
2. Spiro Kostof - A History of Architecture - Setting and Rituals, Oxford University Press, London, 1985.

3. Henri Stelerlin - The Pharaohs - PlerreTerrail - 2001.
4. G.K.Hiraskar, Great Ages of World Architecture, DhanpatRai& Sons, Delhi

REFERENCES:

1. Marco Bussagli - Rome Art and Architecture - Konemann - 2004.
2. S.Lloyd and H.W.Muller, History of World Architecture - Series, Faber and Faber Ltd., London, 1986
3. Gosta, E. Samdstrp, Man the Builder, Mc.Graw Hill Book Company, New York, 1970

OUTCOMES:

- The students become aware of the development of Interior Architecture through various historical phases that is explained through various examples.
- The students are exposed to various inspirations/ techniques/ design details of the historical examples.

IA C X01	VERNACULAR DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The course aims in conveying traditional architecture built in various cultural and geographical regions of India with an emphasis on spatial types, use, materials, construction and building process.
- It also aims to explore the various approaches, definition, concepts and typologies of the vernacular designs of a region for better understanding, comprehension and interpretation.
- It also explores the role of indigenous materials and climate in the elements, ornamentation, layout and character of residential and public buildings.

COURSE CONTENT

PHASE I **20**

- Definition of Vernacular designs: Importance and factors determining the character of vernacular designs. Approaches and concepts used - aesthetic, anthropology, architectural, geographical, spatial, ecological, behavioral and developmental.

PHASE II **25**

- Cultural aspects, symbolism, color, art, materials of construction and construction techniques of Northern India, Gujarat, Kerala & Tamil Nadu. Examples related to the same.
- Contemporary projects by various nationally & internationally acclaimed Designers using vernacular elements & characters.

TOTAL HOURS – 45

TEXT BOOKS:

1. Minakshi, J., &Khulbushan, J. (1992.). Mud Architecture of the Indian Desert. Ahmedabad: Aadi Centre.
2. Randhawa, T. S. (1999). The Indian courtyard house. Prakash Books.

REFERENCES:

1. G.H.R.Tillotsum. (1989). The tradition of Indian Architecture Continuity, Controversy Change since 1850. New Delhi: Oxford University Press.
2. Meenakshi, M., Muthiah, S., Visalakshi, R., & Muthuraman, V. (2006). The Chettiar Heritage. Chennai: Chettiar Heritage.
3. Oliver, P. (1998). Encyclopedia of Vernacular Architecture of the World. Cambridge: Cambridge University Press.
4. V.S.Pramar. (1989). Haveli - Wooden Houses & Mansions of Gujarat. Ahmedabad: Mapin Publishing Pvt. Ltd.

OUTCOMES:

- The students understand traditional architecture built in various cultural and geographical regions of India with an emphasis on spatial types, use, materials, construction and building process.
- The students explore the various approaches, definition, concepts and typologies of the vernacular designs of a region for better understanding, comprehension and interpretation.
- The students also explores the role of indigenous materials and climate in the elements, ornamentation, layout and character of residential and public buildings.

IA C X02	ENERGY EFFICIENT DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- A growing worldwide concern for the conservation of energy & environment has led to energy efficient designs; renewable nature sources of energy (solar energy etc.) and utilizing materials that least pollute the environment.
- This course attempts to make the students understand about built environments responses to natural heating and cooling and thereby understanding principles to be implemented when designing spaces.

COURSE CONTENT:

PHASE I **10**

- Introduction to energy efficient designs and need for the day.
- Solar geometry and shading - Thermal comfort - Heat Transfer - Conservation - Day lighting - Water Heating and Photo voltaic system.

PHASE II **15**

- Passive Solar heating: General principles - Direct Gain - Thermal storage wall - Sunspace - Convective air loop - related examples.
- Passive Cooling Techniques: General principles - Ventilation - Radiation - Evaporation and Dehumidification, - Mass effect - related examples.

PHASE III **20**

- Site Planning & Developments: Land form - vegetation type and pattern - water bodies - open spaces and built spaces - urbanscape - design strategies.
- Contemporary projects by various nationally & internationally acclaimed Designers using energy efficient concepts and techniques.

TOTAL HOURS – 45

TEXT BOOKS:

1. Fuller Moore, Environmental Control Systems, McGraw Hill Inc., New Delhi, 1997.
2. Climatically Responsive Energy Efficient Architecture, PLEA/SPA, New Delhi - 1998.

REFERENCES:

1. A.Konya, Design Primer for Hot Climates, Architectual Press, London, 1988.
2. Ms.Sudha, N.K.Bansal and M.A.S.Malik - Solar Passive Building - Pergamon.
4. V.Gupta - Energy and Habitat - Wiley Eastern Limited, New Delhi.

OUTCOMES:

- The students are exposed to the growing worldwide concern for the conservation of energy & environment has led to energy efficient designs; renewable nature sources of energy (solar energy etc.) and utilizing materials that least pollute the environment.
- The students understand about built environments responses to natural heating and cooling and thereby understanding principles to be implemented when designing spaces.

SEMESTER III

IA C 2301	INTERIOR DESIGN STUDIO - III	L	T	P	C
		0	0	12	6

OBJECTIVES:

- This studio course involves generation of small-scale interior environment through research, analysis, conceptualization and design.
- The projects include exercises in spatial planning as a response to function.
- Exercises undertake organization of products/objects to explore circulation and transactions with material exploration.

COURSE CONTENT:

- The projects that help the students to identity the design process through various methods of concept development.
- Water supply & sanitation, lighting & electrical aspects of design of interiors need will be emphasized along with the design process.
- Project Typology: Shops, Cafeteria, Primary healthcare centers, Clinics, Schools, Boutiques, etc.,
- Working Drawings for the design is to be taught to the students.

TOTAL HOURS – 225

TEXT BOOKS:

1. Joseph De Chiara, Julius Panero, Martin Zelnik, "Time Saver Standards for Interior Design and Space Planning", McGraw Hill, 2001.
2. Ernst, "Neuferts Architects Data", Blackwell, 2002
3. Ramsey et al, "Architectural Graphic Standards", Wiley 2000

REFERENCES:

1. De Chiara and Callender,"Time Saver Standards Building Types", McGraw Hill Co., 2ND Edition, 1980.
2. Andrew Alpern, "Handbook of Specialty Elements in Architecture", McGraw Hill Book Co., 1982.
3. Mark Karlen, "Space Planning Basics", John Wiley & Sons Inc, 2009.

OUTCOMES:

- Students get the ability to understand and design small and medium scale building projects.
- They will able to solve the design problem functionally and aesthetically.
- Gain knowledge about the design process and its various faces to solve a design problem.
- Solve design solution and present in the form of drawing.
- Enable to express the ideas in the form of 2D representation and 3D modeling and views.

IA C 2302 ALLIED DESIGN STUDIO- III: Construction Techniques & Representations- III

L	T	P	C
2	0	3	4

OBJECTIVES:

- Allied Design Studio is to provide the students with the knowledge of the basic understanding of materials in Interior Design.
- To develop an awareness about the various ingredients and composition in concrete.
- To understand the importance and use concrete in construction, through drawings.
- To expose the students to the importance and use of concrete in the modern Construction industry.
- To familiarize the students with the modern building products and their application through drawings.

COURSE CONTENT:

PHASE I: 30

- Focus on the Representation of technical details for the process of construction in a drawing.
- The materials used, elements required, techniques of installation, designing the services in interior spaces and elements with step by step actualization on site.

PHASE II: 45

- Cement - Composition, strength, properties, Sand - Composition, strength, properties, M-Sand test and types.
- Coarse aggregate - Composition, strength, properties, Extraction, test and types. Water - cement ratio, workability, curing, water-proofing, guniting, Special concrete, construction of formwork, Integration of steel in concrete, Joints in concrete, concrete finishes.
- Lightweight aggregate , High density concrete , Aerated Concrete, No-Fines Concrete, Polymer concrete, Reinforced Cement Concrete, Pre-Stressed Concrete, Ready - mixed & under water concreting - Exercise involving the same.
- Framed Structures, Foundations, Footings, Concrete Floors, Walls & Partitions, Concrete lintels, Arches, Sunshades, Concrete Slabs, Concrete beams &Columns, Concrete Staircases.

TOTAL HOURS – 75

TEXT BOOKS:

1. Dr.B.C.Punmia, "Building Construction", Firewall Media, 2005.
2. Francis D.K.Ching, "Building Construction Illustrated", John Wiley & Sons Inc, 2002.
3. T.D Ahuja and G.S. Birdie, "Fundamentals of Building Construction", Dhanpat Rai Publishing Company Pvt. Ltd., New Delhi, 1996
4. R.M. Davis, "Plastics in Building Construction", Battersea College of Technology, Blackie, London, 1966
5. Barry, "Introduction to Construction of Buildings" Vol. 3, Blackwell Publishing Ltd., Oxford, 2005

REFERENCES:

1. W.B.Mckay , "Building Construction", Vol. 1,2,3- Longmans U.K 1992.
2. S.C.Rangwala, "Engineering Materials", Charotar Publishing House, India, 1997.
3. Alan Banc, "Stairs, Steps and Ramps", Butter worth Heinemann Ltd., 1996
4. M.S.Shetty, "Concrete Technology-Theory and Practice", S.Chand & Co. Ltd., New Delhi, 2005.
5. W.B.Mckay , "Building Construction" , Longmans, UK, 1981
6. Economy/companies/construction/concrete/materials
7. http://www.easyads.co.2a/yellow/india/construct
8. http://www.concrete.t.v-tokyo.ac.ip
9. www.larsentoubro.com
10. www.dalmiacement.com/index.html

OUTCOMES:

- The students will able to design medium and large span low rise structure, of RCC.
- They can design RCC stair case of appropriate form and structural system.
- The students will get knowledge about concrete structures.

IA C 2303 WORKSHOP III: Furniture Design - I

L	T	P	C
1	0	3	3

OBJECTIVES:

- This workshop focuses on understanding furniture design from the perspective of its evolution in history, the development of design styles, as well as the pragmatic aspects of ergonomics and comfort.
- Exercises involve appreciating classic pieces of furniture, understanding ergonomics through experience, and applying that understanding to the design of a rudimentary piece of furniture.

COURSE CONTENT:

PHASE I: THE BASICS OF FURNITURE CONSTRUCTION & TOOLS 20

- Measurement and measurement systems, Furniture Construction: Drawers, Cadenza, dining chairs, sofa, settee, cots detail.
- Preparation for finishing, Furniture Materials Specifying timber finishes etc.

PHASE II: 20

- Fabrication techniques - stapling, gluing.
- Furniture Joinery - screw joinery, nail joinery, Mortise & tenon joints, Dovetail joints, Dowel joints, Edge joints.
- Preparation of block models of furniture using wood, boards, leather, fabric, thermacol, clay, soap/wax etc.

PHASE III: 20

- Developing of a particular furniture type.
- Identifying the furniture & activity.
- Define the material & Aesthetics aspects.
- Furniture - the design data to ergonomics.

TOTAL HOURS – 60

TEXT BOOKS:

1. Interior Design, John F. Pile, Harry N.Abrams Inc Publishers, New York.
2. Interior Design Course, Mary Gilliat Coyran, Octopus Ltd., London.
3. The Encyclopaedia of Funriture, Joseph Aronson, Crwon Publishers, New York

REFERENCES:

1. Interior Design & Decoration, Sherril Whiton, Prentice Hall.
2. Interior Design, Francis D.K. Ching, John Wiley & Sons, New York.
3. Office Furniture, Susan S.Szenasy, Facts on file Inc, New York
4. Time Saver Standards for Interior Design, Joseph De Chiara, McGraw Hill, New York.

OUTCOMES:

- Students get the ability to understand and design furniture from the perspective of its evolution in history.
- They will able to solve the design problem functionally and aesthetically.
- Gain knowledge about the pragmatic aspects of ergonomics and comfort.
- Students get the ability to understanding to the design of a rudimentary piece of furniture.

IA C 2304	INTEGRATED DESIGN STUDIO - II BUILDING SERVICES - I	L 1	T 0	P 3	C 3

OBJECTIVES:

- To expose the students to the basic principles of water supply and sanitation, electrical and lighting.
- To understand the need and applications of water supply and sanitation in buildings.
- To exposure various fixtures and fittings, water supply and sanitary installations at work sites.
- Preparing basic design layout of various services and typical details. .

COURSE CONTENT:

PHASE I: WATER SUPPLY AND SANITATION 30

- House-service design, tube well, pumping of water, types of pumps, cisterns for storage, Different types of taps, toilet and kitchen fittings, Connection of lines to fittings, Underground, overhead and internal storage tanks and supply lines.
- Design layout of water supply and calculation of supply requirements based on standards.
- Introduction to sanitation and its importance, Planning and layout of sanitary fittings, Drainage system, Septic tanks, Layout, Principles of drainage, Trap type, materials and functions, Design of Septic tanks and soak pits, Ventilation of house drains, Sinks, bath tub, water closets, flushing cisterns, urinals, wash basins, bidet, shower panel etc.
- Preparation of plumbing layout of a single storey building & working drawings of various fittings and fixtures of water supply and sanitary installations.

PHASE II: LIGHTING AND ELECTRICAL 15

- Electrical wiring system – different materials employed and methods of wiring.
- Different electrical gadgets and fittings, Switch board, distribution board, mains, fuse, meter, circuit breaker etc,
- Basic electrical layout for a residence, Earthing for electricity appliances, Electrical installations for services such as air-conditioning systems, lifts, escalators, pumps etc.

PHASE III:

LIGHTING **15**

- Artificial lighting , design principles, illumination levels, Types of lamps and fittings used, Application of lighting system for shops, showrooms, offices, lecture halls, class rooms, stage, auditoriums etc - Study of projects based on different lighting concepts used in interiors.

TOTAL HOURS – 60

TEXT BOOKS:

1. Handbook for Buildinsg Engineers in Metric Systems, NBC, New Delhi, 1998.
2. Philips Lighting in Architectural Design, McGraw Hill, New York, 1998.
3. R.G.Hopkinson and J.D.Kay, The Lighting of Buildings, Faber and Faber, London, 1998
4. Hopkinson, R.G., "Architectural Physics - Lighting", London. 1998
5. Basic Electrical Engineering, V.K.Mehta, S.Chand and Company Ltd., New Delhi, 1998.
6. G.M. Fair, J.C. Geyer and D.Okin, "Water and Waste water engineering", Volume II, John Wiley & Sons, Inc. New York, 1968

REFERENCES:

1. "Manual on sewerage and sewerage treatment", CPHEEO - Ministry of works and housing, New Delhi, 1980.
2. S.C.Rangwala, "Water supply and sanitary engineering", Charotar publishing house, Anand, Lecture notes compiled by Chaman.L.Gupta, 1989
3. G.S. Birdie & J.S. Birdie, "Water Supply and Sanitary Engineering".

OUTCOMES:

- The students may expose to electrical services and power distribution system inside & outside buildings.
- They get to know about importance of lighting in indoor spaces.
- The students obtain knowledge about various vertical transportation systems.
- It enlightens the importance of services in interior space planning.
- The students were trained to do electrical and plumbing layouts for the buildings.

IA C 2305 ESTIMATION AND COSTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To enable a student to understand estimation and specification.
- To provide the student adequate knowledge to prepare the Estimate & find the cost of overall project of works.
- To equip the students to prepare the Estimate in order to foresee the cost of the work or to implement an interior design project & also to monitor / control project cost.
- To acquaint students with methodology of writing specifications with reference to building trades, materials, workmanship and performance of different items of work and introducing the students to specifications as an integral part of contract document for building projects.

COURSE CONTENT:

PHASE I: INTRODUCTION TO ESTIMATION 10

- Estimation – definition, purpose, types of estimate, and procedure for Estimating the cost of work in order to implement an interior design project or to make products related to interior design like furniture, artifacts etc.

PHASE II: RATE ANALYSIS & ESTIMATION FORMAT 15

- Rate Analysis – definition, method of preparation, quantity & labour estimate for woodwork, steelwork, Aluminum work, glass & its rate for different, thickness & sections, finishing (enamel paint, duco paints, melamine, DU coats, Hand polishing, veneering and laminating) for walls & ceilings.
- Electrical & plumbing products, wiring, ducting etc., and laying of tiles & wall paneling in the estimate format of the project.

PHASE III: DETAILED ESTIMATE 10

- Detailed Estimate – data required, factors to be considered, methodology of preparation, abstract of Estimate, contingencies, labour charges, bill of quantities, different methods of estimate for interior design works, methods of measurement of works.

PHASE IV: INTRODUCTION TO SPECIFICATION **10**

- Specification – Definition, purpose, procedure for writing specification for the purpose of calling tenders, types of specification.
- Specification for different item related to interior design project – woodwork for furniture window frames & pelmets, partitions etc also of materials like steel aluminum glass of various kind.
- Wall paneling & false ceiling of materials like aluminum, steel, wood, electrical, plumbing, air conditioning & fire fighting equipments.

TOTAL HOURS – 45

TEXT BOOKS:

1. Indian Standard Specifications.
2. C.P.W.D. Specifications and schedule of rate analysis.
3. Specification Writing for Architects and Engineers. By Donald A.Watson.

REFERENCES:

1. Specification Writing for Architects and Surveyors by Arthur J Wilils.
1. Professional Practice by R.H.Namavati.
2. Estimating and Costing by Rangawala and B.N.Sutta.
3. Civil Engineering Contracts and Estimates by B.S.PatIl.
4. I .S.I.Handbook of measurements of building Works

OUTCOMES:

- Provide an understanding on estimation and specification
- The students get knowledge to prepare the Estimate & find the cost of overall project of works.
- Students get the ability to prepare the Estimate in order to foresee the cost of the work or to implement an interior design project & also to monitor / control project cost.
- Students get the ability to understand the methodology of writing specifications.
- The students get knowledge of specifications as an integral part of contract document for building projects.

IA C X03 STRATEGIES FOR INNOVATION IN DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- This course involves the innovation of latest technologies for interior design.
- To understand the need and applications of latest trends and concepts in current developments in interior.

COURSE CONTENT:

PHASE I:

- Concepts and Technologies - Current trends and concepts in interior Architecture- Advanced new material.
- Produce innovative design with the use of latest trends, technology, concepts, etc.
- Study of latest materials and current developments in interiors.

TOTAL HOURS – 45

TEXT BOOKS:

1. Brown, R. & Farrelly, L. (2012). Materials and Interior Design.
2. Bigelli, C. (2008).Materials for Interior Environments.
3. Bowers, H. Interior Materials and Surfaces: The Complete Guide.

REFERENCES:

1. Graphic Guide to Frame Construction (1991) Thallon, R. Newtown: The Taunton Press, Inc

OUTCOMES:

- Students get the ability to understand latest technologies for interior design.
- Gain knowledge about the latest trends and concepts in current developments in interior.
- To understand the need and applications of current trends and materials.
- The students get the knowledge about current development for interiors.

IA C X04 LANDSCAPE DESIGN IN INTERIORS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To study the concepts of interior landscaping and their application in the design of interior spaces.
- To develop an understanding about the design of interior landscape with special emphasis on the choice and care of plant materials used in the interior spaces.
- To study about the various landscaping elements and their application in interior spaces.

COURSE CONTENT:

PHASE I: INTERIOR LANDSCAPING 5

- Definition, classification of plants, indoor plants and their functions, layout & components, Floriculture –commercial, ornamental, Selection of plants & pest control.

PHASE II: PHYSICAL REQUIREMENTS OF PLANTS 10

- Physical requirements of plants – light, temperature, water, planting medium, soil separator, weight of plants, acclimatization & maintenance.
- Techniques to meet physical requirements.

PHASE III: INTERIOR LANDSCAPING ELEMENTS & PRINCIPLES 10

- Various interior landscaping elements – water bodies - pools, fountains, cascades Plants, rocks, artifacts, paving & lighting, Design guidelines- plant texture & color, plant height, plant spacing.
- Vertical landscaping, Zen garden, Japanese landscaping

.

PHASE IV: ROOF AND DECK LANDSCAPE 10

- Protection of the integrity of the roof and structure, provisions for drainage, light weight planting medium, irrigation, selection of materials, water proofing, provision for utilities and maintenance.

PHASE V: EXERCISE ON INTERIOR LANDSCAPE **10**

- Courtyard design
- An outdoor room design
- Terrace garden

TOTAL HOURS – 45

TEXT BOOKS:

1. Time saver standards for landscape architecture.
2. Planting design by Theodore D.Walker,VNR Publications New York.
3. Landscaping Principles and Practices by Jack E.Ingels,Delmar Publishers.

REFERENCES:

1. Time Saver Standards Design Data -Chiava. J. & Callender. J.
2. Construction and material handbook – P.N.Khanna
3. Garden structures – wiles Richard raphic Guide to Frame Construction (1991) Thallon, R. Newtown: The Taunton Press, Inc

OUTCOMES:

- Students get the ability to understand the concepts of interior landscaping and their application in the design of interior spaces.
- Gain knowledge about the design of interior landscape and care of plant materials used in the interior spaces.
- Enable to express the ideas of the various landscaping elements and their application in interior spaces.

SEMESTER IV

IA C 2401	**INTERIOR DESIGN STUDIO- III**	**L**	**T**	**P**	**C**
		0	**0**	**12**	**6**

OBJECTIVES:

- This studio attempts to interpret the correlation of public place and the ideas of collective presence in a civic world.
- It focuses on understanding organizations of different types and development of language that is appropriate to the public realm.
- The course concentrates on three stages of work spaces with an emphasis on planning office spaces.
- The main aim is to develop visually literate students who are proficient at analytical thinking, conceptualization and the problem-inquiry, solution cycle.
- The course also examines the connection between abstract design principles and the physical and visual environments.

COURSE CONTENT:

- The projects help the students to identity the design process through various methods of concept development.
- HVAC- Heating Ventilation Air Conditioning aspects of design of interiors need will be emphasized along with the design process.
- Project Typology: Commercial and hospitality typology: Banquet halls, Restaurants, Hotel designs.
- Working Drawings for the design is to be taught to the students for the typology of the designs.

TOTAL HOURS – 225

TEXT BOOKS:

1. Joseph De Chiara, Julius Panero, Martin Zelnik, "Time Saver Standards for Interior Design and Space Planning", McGraw Hill, 2001.
2. Ernst, "Neuferts Architects Data", Blackwell, 2002
3. Ramsey et al, "Architectural Graphic Standards", Wiley 2000

REFERENCES:

1. Andrew Alpern, "Handbook of Specialty Elements in Architecture", McGraw Hill Book Co., 1982.
2. Mark Karlen, "Space Planning Basics", John Wiley & Sons Inc, 2009.
3. Reclamation-Managing water in the west, U.S. Department of the Interior Bureau of Reclamation Denver, Colorado, September 2006
4. https://energy.gov/sites/prod/files/2013/12/f5/sustainable_guide_ch5.pdf

OUTCOMES:

- Students get the ability to understand and design medium scale building projects.
- Students get proficient at analytical thinking, conceptualization and the problem-inquiry, solution cycle.
- They can able to understand organizations of different types and development of language that is appropriate to the public realm.
- Gain knowledge about the design process and its various faces to solve a design problem.
- Solve design solution and present in the form of drawing.
- Enable to express the ideas in the form of 2D representation and 3D modeling and views

IA C 2402	ALLIED DESIGN STUDIO- IV: Construction Techniques & Representations- IV	L 2	T 0	P 3	C 4

OBJECTIVES:

- Allied Design Studio aims to provide the students with the knowledge of the basic understanding of materials in Interior Design.
- This studio also focuses on two dimensional and three dimensional geometry and its representations through drawing.
- Understanding of materials used in Buildings and interiors.
- Representations of components of buildings.
- The materials used, elements required, techniques of installation, designing the services in interior spaces and elements with step by step actualization on site.

COURSE CONTENT:

PHASE I: FERROUS METALS 10

- Properties and used of cast iron, wrought iron and steel-anticorrosive measures for steel-mechanical and heat treatment of steel-market forms of steel-structural steel, stainless steel, steel alloys - properties and uses - current developments.

PHASE II: CONSTRUCTION USING STEEL 10

- Steel staircases and handrails, balusters - Doors and windows open able - Sliding or collapsible gates, rolling shutters. - Steel in furniture and other interior uses.

PHASE III: NON FERROUS METALS 15

- Introduction Aluminum and Aluminum Alloys brief study on properties and uses Aluminum products extrusions, foils, castings, sheets, etc.
- Brief study of other non ferrous metals like copper, bronze, brass, tin and lead, properties and uses current developments.

PHASE IV: CONSTRUCTION USING NON FERROUS METALS 25

- Aluminum doors - Open able, Sliding, Pivoted. Aluminum windows - Openable, Sliding, Fixed, Pivoted.

- Aluminum ventilators - Top hung, Bottom hung, Pivoted, Louvered, and Fixed. Aluminum partitions, False ceiling, Handrails Aluminum roofing - North-light glazing bar, Aluminum roofing sheets. Use of other nonferrous metals like copper, bronze, brass, etc. in architectural construction.

PHASE V: GLASS 15

- Brief study on structural glazing, Glass façade, unitized glazing, Frameless glasses – Spider glazing, Fin glazing, Glass canopy, Glass Entrance doors, Partitions, Staircases, etc.,
- Use of glass in interiors

TOTAL HOURS – 75

TEXT BOOKS:

1. W.B. Mckay,"Building Construction", Vol.1, 2, 3, Longmans, U.K.,1981.
2. B.C.Punmia, "Building Construction", Lakshmi Publications Pvt. Ltd., N.Delhi.

REFERENCES:

1. Don A.Watson, "Construction Materials and Processes", McGraw Hill Co., 1972.
2. Alanwerth, "Materials", The Mitchell Pub. Co. Ltd., London,1986.
3. R.Chudleu, "Building Construction Handbook", British Library Cataloguing in Publication Data, London, 1990.
4. S.C. Rangawala, "Engineering Materials", Charotar Pub. House, Anand, 1997.

OUTCOMES:

- The students understand the properties and uses of ferrous and non ferrous materials.
- They aware of the progressive achievements of glass, plastics,, aluminium , its application in construction industry and present developments.
- They can learn the drafting and representation details of aluminium doors, windows, roofing and its uses in building industry.
- They can gain the knowledge of glass, plastics details and its uses in building industry.

IA C 2403 WORKSHOP IV: FURNITURE DESIGN –II

L	T	P	C
1	0	3	3

OBJECTIVES:

- This studio, through exercises and a design problem, attempts to understand the relationship of form, materials and development of dimensions in the design of furniture with reference to space.
- A critical understanding of the evolution of form in furniture involving these specifics further develops the critical appreciation of furniture pieces.

COURSE CONTENT:

PHASE I: 30

- The workshop develops from Furniture design I, which focuses on the development of furniture as integral part of Interior architecture.
- False ceiling – wall paneling.

PHASE II: 30

- Designing and detailing of Multiuse furniture design.
- Exercises evolve from being basic to more evolved design typology- Residential furniture- Eg: living room furniture , kitchen furniture, etc

TOTAL HOURS – 60

TEXT BOOKS:

1. Design After Modernism : Furniture and Interiors 1970 -2010, Judith Gura, New York, 2012.
2. Le Corbusier: Furniture and Interiors 1905-1965, Arthur Ruegg, Scheidegger & Spiess, Zurich, Switzerland,2012.
3. Donald Judd Furniture : Retrospective, Donald Judd, Museum Boymans-van Beuningen, Rotterdam, 1993, English, Dutch, German.

REFERENCES:

1. History of Modern Furniture Design, Daniela Karasova, Arbor Vitae, Prague, 2013.
2. Carrier and company positively chic interiors by Jesse Carrier and Mara Miller.
3. Furniture Design and Construction for the interior designer, by Christopher Natale,2009

4. Time Saver Standards for Interior Design, Joseph De Chiara, McGraw Hill, New York.

OUTCOMES:

- The students understand the relationship of form, materials and development of dimensions in the design of furniture with reference to space.
- They will get proficiency in the evolution of form in furniture.

IA C 2404	INTEGRATED DESIGN STUDIO - III DIGITAL TECHNOLOGY	L T P C 1 0 3 3

OBJECTIVES:

- Through a project the student is taught video, image and vector editing using editing software.
- To enable the creation of interactive patterns by introducing scripting.
- To enable synchronization of sound with patterns generated.
- To enable presentation using voice over and production of CD rooms.

COURSE CONTENT:

PHASE I: VIDEO EDITING, IMAGE EDITING & VECTOR EDITING 25

- **Tools:** Importing avis and mpegs, sequencing, cutting trimming, decrease and increase the speed of the movie, filters, transitions, output settings, saving the output with the help of video editing software like ADOBE PREMIERE.
- Image editing (pixel image types) using tools, Vector characters, bizer and grip editing, transform, fill types, text formatting, colour overlays, etc in Adobe Photoshop

PHASE II: OVERLAPPING TECHNIQUE (2D ANIMATION WITH MOVIE) 25

- **Project:** Import Movie file in the editing software like premiere and overlap the 2D Animation film created using Flash.
- Synchronize the sound and create a perfect blend of AVI and 2D Animation film.

PHASE III: SPACE GENERATION 25

- **Project:** Students would identify a metaphor (literature, movies, and music albums) and create spaces using the same.
- The proposal must be discussed with course faculty prior to presentation.

TOTAL HOURS – 75

TEXT BOOKS:

1. Photoshop 7 Bible Professional Edition, Wiley John & Son INC, New York, DekeMcClelland.
2. Flash Web Design, The Art of Motion Graph, Curtis Hillman, New Riders Publishing, Indianapolis, IN. U.S.A, 2000

REFERENCES:

1. M.E. Morris, and R.J. Hinrichs, Web Page Design, Prentice Hall, 1996.
2. Mark Von Wodtke, Mind over Media : Creative Thinking Skills for Electronic Media, McGrawhill, New York, 1993

OUTCOMES:

- The students can able to produce a good quality video using the software.
- They can acquire knowledge about scripting.
- Can prepare presentations using voice over and production of CD rooms.

IA C 2405 HISTORY OF INTERIOR ARCHITECTURE- II

L	T	P	C
3	0	0	3

OBJECTIVES:

- To study the different postmodern directions in architecture and the evolution of new approaches.
- To appreciate contemporary architectural trends.
- To study about interiors of china and Japan.
- To comprehended the styles and decorations of different states in India.

COURSE CONTENT:

PHASE I: RECENT MOVEMENTS 15

- Design movements such as Late Modernism, High Technology, Post Modernism, and De Constructivism, Minimalism, etc

PHASE II: ASIAN MOVEMENTS 10

- Interiors in China, Japan & the Islamic World – Influences of Pre Columbian

PHASE III: INDIAN TRADITIONAL DESIGNS 20

- Traditional Styles of design & decorations of homes & accessories across the states in India including Rajasthan, Gujarat, Andhra, Tamil Nadu, Kerala, Madhya Pradesh etc

TOTAL HOURS – 45

TEXT BOOKS:

1. Bill Risebero, "Modern Architecture and Design", MIT Press ,1985.
2. Kenneth Frampton, "Modern Architecture: A Critical History", Tahmes and Hudson, London, 1994.
3. Interior Design, John F. Pile, Harry Abrams Inc.

REFERENCES:

1. Manfredo Taferi/Franceso dal co., "Modern Architecture", Faber and Faber/Electa, 1986.
2. Charles Jencks, "The Language of Post Modern Architecture", Rizzoli, 1984.
3. Interior Design Course, Mary Gilliat Coyran, Octopus Ltd., London.

4. Interior Design, Francis D.K. Ching, John Wiley & Sons, New York
5. Time Saver Standards for Interior Design, Joseph De Chiara, McGraw Hill, New York.
6. Publications on Traditional Arts & Crafts of India, Ministry of Handicrafts Development, Government of India.

OUTCOMES:

- Enlighten the students with various interior design trends across the world
- Understanding the efforts and practices of famous architecture and their influence on the architecture and Interior design
- Highlight the traditional practices of designing and decoration followed in various states of India.

IA C X05 ADVANCED BUILDING SERVICES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand a built environments responses to natural heating and cooling and thereby understanding principles to be implemented when designing spaces.

COURSE CONTENT:

PHASE I: 15

Location and site level planning, Water efficiency - indoor water reuse and use reduction, Optimum energy performance - HVAC, lighting, etc

PHASE II: 10

- Renewable and reuse of material and resources - storage and collection of recyclable.

PHASE III: 20

- Constructions and demolishing of waste management planning, Building Product Disclosure and Optimization, indoor environment quality - thermal comfort, interior lighting, daylight, etc.

TOTAL HOURS – 45

TEXT BOOKS:

3. Fuller Moore, Environmental Control Systems, McGraw Hill Inc., New Delhi, 1997.
4. Climatically Responsive Energy Efficient Architecture, PLEA/SPA, New Delhi - 1998.

REFERENCES:

1. V.Gupta - Energy and Habitat - Wiley Eastern Limited, New Delhi.
2. Donald Watson, "Climatic Building Design- Energy Efficient Building Principles and Practice",McGraw-Hill,1993.
3. Energy Conservation Building Code

OUTCOMES:

- They also acquire a good understanding of the role of site planning strategies, vegetation types and water bodies in energy efficient architecture.
- They can be able to place this specialized knowledge in the context of the design of buildings and the wider environment.
- They can be able to critically analyze the implications of energy efficient architectural design in a given specific context and the wider environmental context.
- They can also be able to think in an innovative and creative way

IA C X06 ADVANCED BUILDING ENERGY EFFICIENCY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand a built environments responses to natural heating and cooling and thereby understanding principles to be implemented when designing spaces.

COURSE CONTENT:

PHASE I: 15

Location and site level planning, Water efficiency - indoor water reuse and use reduction, Optimum energy performance - HVAC, lighting, etc.

PHASE II: 10

- Renewable and reuse of material and resources - storage and collection of recyclable.

PHASE III: 20

- Constructions and demolishing of waste management planning, Building Product Disclosure and Optimization, indoor environment quality - thermal comfort, interior lighting, daylight, etc.

TOTAL HOURS – 45

TEXT BOOKS:

5. Fuller Moore, Environmental Control Systems, McGraw Hill Inc., New Delhi, 1997.
6. Climatically Responsive Energy Efficient Architecture, PLEA/SPA, New Delhi - 1998.

REFERENCES:

4. V.Gupta - Energy and Habitat - Wiley Eastern Limited, New Delhi.
5. Donald Watson, "Climatic Building Design- Energy Efficient Building Principles and Practice",McGraw-Hill,1993.
6. Energy Conservation Building Code

OUTCOMES:

- They also acquire a good understanding of the role of site planning strategies, vegetation types and water bodies in energy efficient architecture.
- They can be able to place this specialized knowledge in the context of the design of buildings and the wider environment.
- They can be able to critically analyze the implications of energy efficient architectural design in a given specific context and the wider environmental context.
- They can also be able to think in an innovative and creative way

SEMESTER V

		L	T	P	C
IA C 3501	**INTERIOR DESIGN STUDIO- IV**	**0**	**0**	**17**	**8**

OBJECTIVES:

- The course concentrates on larger scale spaces with an emphasis on planning commercial spaces.
- The main aim is to develop visually literate students who are proficient at analytical thinking, conceptualization and the problem-inquiry, solution cycle. The course also examines the connection between abstract design principles and the physical and visual environments.

COURSE CONTENT:

- The projects help the students to integrate services to achieve functional space without the compromise on interior aesthetics.
- Project Typology: Commercial and public building interiors: Showroom, Office Space, Hotel Interiors, Auditorium etc.
- Working Drawings for the design is to be taught to the students for the typology of the designs.
- Spatial and service standards for commercial and hospitality – integration of interior design schemes– contemporary interior schemes to integrate new concepts in lighting and materials.

TOTAL HOURS – 225

TEXT BOOKS:

1. Joseph De Chiara, Julius Panero, Martin Zelnik, "Time Saver Standards for Interior Design and Space Planning", McGraw Hill, 2001.
2. Robert Rengel, Shaping Interior Space, Fairchild Books & Visuals ,2002
3. Ernst, "Neuferts Architects Data", Blackwell, 2002
4. Ramsey et al, "Architectural Graphic Standards", Wiley 2000

REFERENCES:

1. Designs for 20th century Interiors – Fiona Leolie, VH Publications, London.
2. Interior Design; The New Freedom, Barbaralec Diamonstein, Rizzoli International Publications, New York, 1982.
3. National Building code of India 2005 – Bureau of Indian Standards.
4. Worldwide Interiors – International Federation of Interior Architects & Designers, Rikuyo-Sha, Japan, 1987.

5. Peter templeton & Saunders – Detailing for architectural acoustics – Architectural press, 1994.

OUTCOMES:

- Students get proficient at analytical thinking, conceptualization and the problem-inquiry, solution cycle.
- They can able to understand organizations of different types and development of language that is appropriate to the public realm.
- They gain knowledge on MEP services.
- To familiarize the students with the basic principles of acoustic design and working towards the practical approach in treating interior spaces based on the usage.

		L	T	P	C
IA C 3502	**ALLIED DESIGN STUDIO- V: Construction Techniques & Representations- V**	**2**	**0**	**4**	**4**

OBJECTIVES:

- Allied Design Studio aims in elevating the material knowledge acquired to next level by educating on the various finishes available in the industry.
- Understanding of materials and its various finishes used in buildings and interiors.
- The course focuses on applied materials understanding with the idea of non-engineering materials, their finishes, applications, techniques and processes.
- To gather knowledge on interior fittings and its various brands.

COURSE CONTENT:

PHASE I: SURFACE FINISHES - WALLS 20

- Types of wall coverings – wall cladding & wall panelling. Materials - Natural and faux, Installation technique.
- Types of wall finishes – based on climate and its exposure, durability, cost.

PHASE II: SURFACE FINISHES – FLOOR COVERINGS 20

- Types of Flooring, Flooring for different building typology, Flooring material – size, thickness and laying on site.
- Types of floor finishes based on their usage.

PHASE III: SURFACE FINISHES – FALSE CEILING 20

- False ceiling- materials, finishes and its fixing details.

PHASE IV: FITTINGS - HARDWARE 15

- Types of Kitchen and Toilet fittings – various brands.
- Door and Window coverings.
- Types of hardware and other related accessories – fixing details.

TOTAL HOURS – 75

TEXT BOOKS:

1. W.B. Mckay,"Building Construction", Vol.1, 2, 3, Longmans, U.K.,1981.

2. B.C.Punmia, "Building Construction", Lakshmi Publications Pvt. Ltd., N.Delhi.

REFERENCES:

1. Don A.Watson, "Construction Materials and Processes", McGraw Hill Co., 1972.
2. Alanwerth, "Materials", The Mitchell Pub. Co. Ltd., London,1986.

3. R.Chudleu, "Building Construction Handbook", British Library Cataloguing in Publication Data, London, 1990.

4. S.C. Rangwala, "Engineering Materials", Charotar Pub. House, Anand, 1997.

OUTCOMES:

- The students gain knowledge on various materials and its finished used in interiors.

- The students gain technical knowledge on various wall, floor and ceiling installation.
- Practical knowledge on material properties – durability, cost etc.
- Information on different brands – fixtures and fittings.

IA C 3503	WORKSHOP – V: Furniture Design- III	L	T	P	C
		1	0	4	3

OBJECTIVES:

- This studio attempts to understand the relationship of form with combination of materials and design of furniture with reference to space.
- A critical understanding of the manufacturing processes.
- It focuses on understanding furniture design from the perspective of its evolution in history, the development of design styles, with respect to various designers.

COURSE CONTENT:

PHASE I: MODULAR APPROACH TO FURNITURE DESIGN 15

- Combination of various materials in furniture design, their hardware and applications. Cost criteria of furniture design based on the material and finishes.
- Study of several modular systems available for different functions in the market.

PHASE II: FURNITURE DESIGN APPROACH 15

- Analysing manufacturing processes most frequently adopted in furniture design such as injection moulding, investment casting, sheet metal work, die casting, vacuum - forming etc.
- Study of different types of moulded or casted furniture available for different functions in the market.

PHASE III: STUDY ON DESIGNERS – FURNITURE 10

- Furniture designers and movements for various types of furniture. Charles & Ray Eames, Eero Saarinen,Jean Prouve,Paul Mccobb,Ettore Sottass,Knoll,Jens Risom etc.

TOTAL HOURS – 45

REFERENCES:

- Carol Stangler, The crafts and art of Bamboo, Rev. updated edition, Lark books, 2009.
- Peter Korn, Wood working Basics : Mastering the essentials of craftsmanship, Taunton , 2003
- Materials for Interior Environments, Corky Bingelli, John wiley and sons, 2007.
- Kilmer, Working Drawings & Details for Interiors, John Wiley & Sons., 2009

- Jim Postell, Furniture Design, Wiley publishers, 2007.
- Robbie. G. Blakemore, History of Interior Design and Furniture: From Ancient Egypt to Nineteenth-Century Europe, Wiley publishers, 2005.

OUTCOMES:

- Exploration of appropriate materials and the social and spatial impact of the furniture will be addressed.
- Gain knowledge on the manufacturing methods and techniques according to the current trends in the industry.
- Experimenting on the ideas of famous designers and applying it to the current needs with a new style.

IA C 3504 INTEGRATED DESIGN STUDIO - V L T P C
BUILDING SERVICES - III 1 0 4 3

OBJECTIVES:

- To expose students to understand noise control and sound transmission and absorption to increase the quality of the interior space.
- To familiarize the students with the basic principles of acoustic design for various interior spaces.
- To develop the practical knowledge and skills required for understanding acoustics and integrating with interior design.

COURSE CONTENT:

PHASE I:

INTRODUCTION TO ACOUSTICS 20

- Nature of sound, Transverse and longitudinal waves.
- Properties of sound, behavior of sound in enclosures, reflection of sound, echoes, dispersion, sound shadows.

PHASE II:

SOUND TRANSMISSION, NOISE CONTROL AND SOUND ABSORBTION 20

- Building material, absorption co-efficient and measurements, choice of absorption material, resonance, reverberation, echo, exercises involving reverberation time and absorption co-efficient.
- Noise reduction: Sound isolation, transmission loss TL, TL for walls, sound leaks indoors, noise reduction between rooms, Construction details for noise reduction.

PHASE III:

ACOUSTICAL CONSIDERATION 20

- Acoustical Considerations and design criteria - Room shape, volume, treatment for interior surfaces and elements of audio visual setting. Walls/partitions, floors/ceilings, window/doors insulation techniques and acoustical treatments.

- Acoustic design process for different types of interiors.

TOTAL HOURS – 60

REFERENCES:

1. Frederick .S, "Building Engineering and systems Design", Merritt James Ambrose.
2. David Eagan "Concepts in Architectural Acoustics".
3. Dr.V.Narasimhan, " An Introduction to Building Physics", Kabeer Printing Works, Chennai-5, 1974.
4. Neufert Architects'Data Third Edition.

OUTCOMES:

- To make the students understand the science behind acoustical design.
- To familiarize the students with various interior elements which lend to better hearing conditions.
- To familiarize the students with the basic principles of acoustic design and working towards the practical approach in treating interior spaces based on the usage.

IA C X07 ADVANCED PRODUCT DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the importance of design of products and accessories in the design of interiors.
- To analyze on past and current trends and to arrive at solutions for future.
- Hand skilled products and manufacturing techniques using latest technologies.

COURSE CONTENT:

PHASE I NEED OF PRODUCT DESIGN 10

- Role of products and accessories in interiors and the integration of accessories in interior design.
- Design methods in product and accessories design with an emphasis on functionality, ergonomics, aesthetics, multiple usages etc.

PHASE II PRODUCT DESIGN – STYLES 10

- Development of decorative accessories from the past to present.
- Technological advances and the influences on their design.

PHASE III DESIGN APPROACH 10

- Strategies for evolving design with integration of technical complexities and influences.
- Innovative design and application to multi products and multi materials in manufacturing interior products and lifestyle accessories.

PHASE IV MATERIAL AND DETAILING 15

- Study of materials and processes adopted in accessories design.
- Orientation to Indian as well as global context of interiors, trends and market.
- A detailed study involving all the design aspects of any of the following lifestyle accessories: luminaire design, glassware, lighting fixtures, textiles, mirrors, wall decors etc.

TOTAL HOURS – 45

REFERENCES:

1. Laura Slack, What is product Design? Roto Vision publishers, 2008
2. Treena Crochet and David Vleck, Designer's Guide to Decorative Accessories, Prentice Hall, Ist edition, 2008.
3. Michael Ashby, Kara Johnson, Materials and Design: The Art and Science of material selection in product design, Butter Worth Heinemann, 1st edition, 2002.
4. Karl. T. Ulrich, Steven D. Eppinger, Product Design and Development, McGraw-Hill Education Singapore; 4th edition, 2007
5. William Lidwell, Kritina Holden, Jill Butler ,Universal principles of Design, Rockport publishers, 2008.

OUTCOMES:

- To familiarize on various interior products available on market.
- To understand the need of products to enhance the design of interiors.
- To gain knowledge on manufacturing techniques adopted in the industry.

IA C X08 ADVANCED LIGHTING DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the importance of design of products and accessories in the design of interiors.
- To analyze on past and current trends and to arrive at solutions for future.
- Hand skilled products and manufacturing techniques using latest technologies.

COURSE CONTENT:

PHASE I INTRODUCTION TO DAY LIGHTING 10

- Nature of light – Wavelength, intensity, Flux, illumination and luminance, visual efficiency, sources of light, day light factor concept, day lighting requirements.

PHASE II ARTIFICIAL LIGHTING 15

- Different types of lights in interior and exterior - task lighting, special purpose lighting.
- Electric lamps – incandescent, fluorescent, sodium vapour, mercury, halogen and neon.
- Guidelines for lighting design and Calculation of artificial lighting.

PHASE III LUMINARES & FIXTURES 15

- Different luminaries for lighting, lighting control system.
- Impact of lighting, fixture types - free standing or portable, fixed, light fixture control.
- Lighting accessories- switches, sockets, fused connection units, lamp holders, ceiling roses etc.

TOTAL HOURS – 45

REFERENCES:

1. Gary Gordon, Interior lighting for designers, John Wiley & Sons Inc.
2. Interior lighting for Designers, Third edition – Gary Gordon & Jamco L. Nuckolls – John Wiley & Sons, New York, 1995.

OUTCOMES:

- To familiarize on various interior products available on market.
- To understand the need of products to enhance the design of interiors.
- To gain knowledge on manufacturing techniques adopted in the industry.

REGULATIONS, CURRICULAM AND SYLLABUS

M.B.A

MANAGEMENT STUDIES

(As approved by the 9th Academic Council)

JULY 2016

B.S.ABDUR RAHMAN UNIVERSITY
B.S.ABDUR RAHMAN INSTITUTE OF SCIENCE & TECHNOLOGY
(Estd.u/s 3 of the UGC Act, 1956)
(FORMERLY B.S.ABDUR RAHMAN CRESCENT ENGINEERING COLLEGE)
Seethakathi Estate, G.S.T. Road, Vandalur, Chennai - 600 048.

CURRICULUM & SYLLABI FOR M.B.A (MANAGEMENT STUDIES)

CURRICULUM

Sl. No.	Course Code	Course Title	L	T	P	C
		TRIMESTER I				
1	MSC6101	Management Concepts	**3**	**0**	**0**	**2**
2	MSC6102	Entrepreneurship Development	**2**	**0**	**2**	**2**
3	MSC6103	Managerial Economics	**3**	**0**	**0**	**2**
4	MSC6104	Quantitative Methods in Business I	**3**	**0**	**0**	**2**
5	MSC6105	Communication Skills	**2**	**0**	**2**	**2**
6	MSC6106	Financial Accounting	**3**	**0**	**0**	**2**
Career Oriented Practicals						
7	MSC6107	Computers and Business Application Lab	**0**	**0**	**3**	**1**
		Total Credit (Trimester I)				**13**
		TRIMESTER II				
1	MSC6201	Organizational Behaviour	**3**	**0**	**0**	**2**
2	MSC6202	Legal Aspects of Business	**3**	**0**	**0**	**2**
3	MSC6203	Economic Environment of Business	**3**	**0**	**0**	**2**
4	MSC6204	Quantitative Methods in Business II	**3**	**0**	**0**	**2**
5	MSC6205	Management and Cost Accounting	**3**	**0**	**0**	**2**
6	MSC6206	Marketing Management – I	**3**	**0**	**0**	**2**
Career Oriented Practicals						
7	MSC6207	Written Analysis and Communication	**0**	**0**	**3**	**1**
8	MSC6208	Current Affairs in Business	**0**	**0**	**3**	**1**
		Total Credit (Trimester II)				**14**

Sl. No.	Course Code	Course Title	L	T	P	C
		TRIMESTER III				
1	MSC6301	Management Information System	**3**	**0**	**0**	**2**
2	MSC6302	Financial Management	**3**	**0**	**0**	**2**
3	MSC6303	Marketing Management – II	**3**	**0**	**0**	**2**
4	MSC6304	Human Resources Management	**3**	**0**	**0**	**2**
5	MSC6305	Production and Operations Management	**3**	**0**	**0**	**2**
6	MSC6306	Research Methodology for Management	**3**	**0**	**0**	**2**
Career Oriented Practicals						
7	MSC6307	Psychometrics and Corporate Connect Lab	**0**	**0**	**3**	**1**
8	MSC6308	Data Analysis Lab	**0**	**0**	**3**	**1**
		Total Credit (Trimester III)				**14**

Students are to undergo summer internship after the end-term examination of III trimester. Details are given in regulation.

		TRIMESTER IV				
1	MSC7101	International Business Management	**2**	**0**	**0**	**1**
2	MSC7102	Introduction to Enterprise Resources Planning	**2**	**0**	**0**	**1**
3		Program Electives				**10**
Career Oriented Practicals						
4	MSC7103	Integrated Management Cases	**0**	**0**	**3**	**1**
5	MSC7104	Summer Internship*				**2**
		Total Credit (Trimester IV)				**15**

* Though summer internship is mentioned in the IV trimester, students have to undergo summer internship in a business organisation after the end-term examination of III trimester. Details are given in regulation.

Sl. No.	Course Code	Course Title	L	T	P	C

8	MSCY068	System Simulation and Modelling	**3**	**0**	**0**	**2**
		ISLAMIC BANKING AND FINANCE				
1	MSCY076	Introduction of Islamic Economics	**3**	**0**	**0**	**2**
2	MSCY077	Fundamentals of Islamic Finance	**3**	**0**	**0**	**2**
3	MSCY078	Islamic Insurance (Takaful)	**3**	**0**	**0**	**2**
4	MSCY079	Islamic Bonds (Sukuk)	**3**	**0**	**0**	**2**

Sl. No.	Course Code	Course Title	L	T	P	C
5	MSCY080	Islamic Asset and Fund Management	**3**	**0**	**0**	**2**
6	MSCY081	Islamic Banking Products and Services	**3**	**0**	**0**	**2**
		ENTREPRENEURSHIP				
1	MSCY086	Entrepreneurship, Family Enterprises & Successful Ventures	**3**	**0**	**0**	**2**
2	MSCY087	Financial Institutions and Funding for Entrepreneurs	**3**	**0**	**0**	**2**
3	MSCY088	Marketing for Entrepreneurs	**3**	**0**	**0**	**2**
4	MSCY089	New Venture and Project Preparation	**3**	**0**	**0**	**2**

TRIMESTER I

MSC 6101	MANAGEMENT CONCEPTS	L	T	P	C
		3	0	0	2

OBJECTIVES:

The objectives of the course are to

- Provide insight into various functions and principles of management
- Introduce planning and decision-making techniques
- Familiarize the students with organizing and staffing activities practised in business
- Give inputs on directing and controlling functions in organizations
- Create awareness about ethical aspects in functional areas of management

MODULE I NATURE AND FUNCTIONS OF MANAGEMENT 06

Management - definition, nature, functions, levels - An overview of approaches to Management / Schools of Management thought - Types/Forms of Business Organization

MODULE II PLANNING 06

Planning: purposes, premises, steps, types/hierarchy - Management by Objectives - Management by Exception - Decision making: Importance, process.

MODULE III ORGANIZING AND STAFFING 05

Organizing: definition, process - Span of Management - Departmentalization - Organization Structure - Authority - Delegation and Decentralization - Staffing: Objectives, functions.

MODULE IV DIRECTING AND CONTROLLING 07

Directing: meaning, requirements of effective direction - Motivation: definition, types of motives, overview of theories - Leadership: definition, styles, overview of theories - Communication: types, process, barriers, principles of effective communication- Controlling: purposes, process, types, and techniques.

MODULE V ETHICS IN MANAGEMENT 06

Definition of ethics, values, moral obligations, CSR and Corporate Governance,- Major sources of ethical values in Business- Principles of ethical conduct- Factors Influencing Managerial Ethics, Marketing, Finance, HR, System: Definition and

Broad Function Performed-Overview and practical examples in the following: Ethics in Marketing, advertising and Product safety, Accounting Ethics-, Ethics in HR, Ethical practices in occupational health & safety, Ethics and CSR, Cyberspace ethics

Total Hours: 30

REFERENCES:

1. Tripathy P. C. and Reddy P. N., “Principles of Management”, 5th Edition, Tata McGraw Hill, 2012.
2. Harold Koontz & Heinz Weihrich, “Essentials of Management”, Tata McGraw Hill, 8th Edition, 2009.

OUTCOMES:

At the end of this course, the student will be able to:

- Prepare different types of functional plans and take suitable managerial decisions
- Develop organizational charts and explain staffing process.
- Choose the right ways and means to motivate and lead teams
- Apply appropriate control techniques
- Identify/ adopt ethical practices in various functional areas

MSC 6102	ENTREPRENEURSHIP DEVELOPMENT	L	T	P	C
		2	0	2	2

OBJECTIVES:

This course would help the students to:

- Realize the skills required to be an entrepreneur
- Identify the business opportunity
- Create a business model
- Acquaint the students with challenges of starting new ventures and enable them to investigate, comprehend and internalize the process of setting up a business.
- Locate market attractiveness based on the interaction with the entrepreneur

THEORY

MODULE I INTRODUCTION TO ENTREPRENEURSHIP 07

Entrepreneurship: Knowledge and skills requirement - Characteristic of successful entrepreneurs - Entrepreneurship process - Factors impacting emergence of entrepreneurship - Managerial vs. Entrepreneurial approach and emergence of entrepreneurship - Need for achievement.

MODULE II STARTING THE VENTURE 07

Generating business idea - Innovation and creativity for driving entrepreneurship - Creating value to customers - Sources of new ideas, methods of generating ideas, creative problem solving, opportunity recognition - Environmental scanning, competitor and industry analysis - Understanding risk and strategies to handle risk.

MODULE III FUNDAMENTALS OF MANAGEMENT 06

Forms of ownership - Basics of Marketing - Sources of Funds - Creative Means of Funding.

PRACTICAL

MODULE IV HISTORICAL PERSPECTIVE 08

Analysis of successful and unsuccessful Entrepreneurs through Case Studies.

MODULE V PROJECT 12

Meeting with an Entrepreneur and Preparation of Report and Presentation - A Project based on a Business Idea to be prepared.

T: 20, P: 20, Total Hours: 40

WEBSITES:

1. www.ediindia.org
2. www.niesbud.nic.in
3. http://nenglobal.org

OUTCOMES:

Upon successful completion of this course, a student will be able to:

- Turn out to be an expert to recognize a business opportunity that fits the individual.
- Demonstrate the ability to provide a self-analysis in the context of an entrepreneurial career
- Construct an appropriate business model.
- Develop a well-presented business plan.
- Express the ability to find an attractive market that can be reached economically.

MSC 6103 MANAGERIAL ECONOMICS

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course are to enable the students to:

- Introduce students to the fundamentals of economics relevant from managerial perspective
- Familiarize students with the importance of economic approaches in managerial decision making
- Study about the application of economic theory into practical business
- Study about the economic tools and analyses that help make better business decisions and forward planning
- Understand about the functioning of the economy in its broader sense

MODULE I INTRODUCTION 06

Definition - Nature - Scope and uses of Managerial Economics - Basic Principles of Managerial Economics.

MODULE II LAW OF DEMAND AND SUPPLY 06

Demand: Definition - Characteristics - Demand Schedule - Law of demand - factors influencing demand and exceptions to law of demand. Supply: Definition – Characteristics - Supply Schedule - Law of supply - factors influencing supply Market Equilibrium.

MODULE III ELASTICITY OF DEMAND AND SUPPLY 06

Meaning - Definition and Importance of elasticity - Methods of measuring - Determinants of elasticity - Price, Income and Cross elasticity of demand - Advertisement elasticity of demand. Demand Forecasting: Meaning and different techniques of forecasting.

MODULE IV ANALYSIS OF COSTS AND MARKET FORMS 06

Opportunity cost, implicit & explicit cost, economic cost, incremental and marginal cost, direct & indirect cost, fixed & variable cost - Production Function and Returns to Scale. Market Forms - Price & Output determination in Perfect Competition, Monopoly, price discrimination, Monopolistic Competition and Oligopoly.

MODULE V PRICING AND PROFITS 06

Pricing - Objectives and types of pricing - Profit - accounting vs. economic profit, gross vs. net profit, importance of profit.

Total Hours: 30

REFERENCES:

1. Geetika, Piyali Ghosh and Purba Roy Choudhury, “Managerial Economics”, McGraw Hill, 2nd Edition, 2011.
2. N. Gregory Mankiw, “Economics: Principles and Applications”, Cengage Learning, 6th Indian Edition, 2009.

OUTCOMES:

Students will be able to:

- understand basic concepts of economics applied in managerial decision making
- Analyze the demand and supply conditions and assess the position of a company
- Analyze real-world business problems with a systematic theoretical framework.
- Demonstrate mastery of theories of demand, supply, consumption, production, cost and market structures
- Design competition strategies, including costing, pricing, product differentiation, and market environment according to the natures of products and the structures of the markets.
- Make optimal business decisions by integrating the concepts of economics, mathematics and statistics.
- Calculate demand function, supply function, equilibrium price and quantity, production function, cost function and profit function and apply them analytically in decision making.

MSC 6104 QUANTITATIVE METHODS IN BUSINESS - I

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn the fundamental measures of central tendency and probability distribution
- Gain knowledge on estimating the business situations for better decision making
- Hypothesize the business environment and interpret the results
- Gain insight into the non-parametric tests such as Chi-Square, F-Test and Anova
- Learn the application of other statistical tools like correlation, regression, etc.

MODULE I FUNDAMENTALS & DISTRIBUTION 06

Measures of central tendency and dispersion: Mean, Mode, Median, Standard Deviation Distributions: Applications of Binomial distribution - Applications of Poisson distribution- Applications of Normal distribution

MODULE II ESTIMATION 06

Definition of central limit theorem and concepts - Point and Interval estimates - Application of Estimation: Point and Interval estimates for population parameter (mean) of large sample - Application of Estimation: Point and Interval estimates for population parameter (mean) of small samples.

MODULE III TESTING OF HYPOTHESIS 05

Hypothesis testing: Introduction - Large sample tests (Z-test): One sample test for mean, two samples test for mean - Small sample tests (t-test): one sample test for mean, two (independent) samples test for mean

MODULE IV CHI - SQUARE, F TEST AND ANOVA 06

Chi square test: one-way (test of independence only), Chi square test: two-way (test of independence only), F test - ANOVA: one-way, F test - ANOVA: two-way - Application in business decisions

MODULE V CORRELATION, REGRESSION AND TIME SERIES ANALYSIS 07

Simple linear Correlation- Rank Correlation - Simple linear Regression - Time series analysis: Methods of Semi-average, Weighted average, Moving averages, Least squares, Ratio–to–trend - Application in business decisions

Total Hours: 30

REFERENCES:

1. Levin R.I., Rubin D.S., Rastogi, S. and Siddiqui, M.H. “Statistics for Management”, 7th edition, Prentice Hall of India, New Delhi, 2014.
2. Srivastava, T. N. and Shailaja, R. “Statistics for Management”, 2nd Edition, Tata Mc Graw Hill, New Delhi, 2012.
3. Anderson D.R., Sweeney D.J. and Williams T.A., “Statistics for Business and Economics”, 11th edition, Thomson (South – Western) Asia, Singapore, 2012.

OUTCOMES:

On completion of the course, the students will be able to:

- Recognize and apply probability distributions, and assess if underlying assumptions for the distribution seem applicable in business areas.
- Perform basic statistical calculations and graphical analyses in all the areas of business decision making.
- Analyze research questions based on statistical data and draw relevant conclusions
- Apply the non-parametric tests such as Chi-Square, F-Test and Anova for better interpretation
- Analyze time series data and apply relevant statistical tools like correlation, regression, etc to arrive at conclusions.

MSC6105	COMMUNICATION SKILLS	L	T	P	C
		2	0	2	2

OBJECTIVES:

The objectives of the course are to enable the students to:

- Introduce the dynamics of communication in the business world
- Enhance written communication skills
- Illustrate proper business etiquettes
- Provide practical sessions in spoken English
- Provide practical sessions in listening skills

THEORY

MODULE I INTRODUCTION 06

Introduction, Communication Process, Essentials and advantages of various business communications and correspondences, Barriers to communication

MODULE II BUSINESS CORRESPONDENCE – WRITTEN 08

Creating, organizing and perfecting business messages, Letters – General Correspondence, Sales, Complaints, Letter of application and Resume, Job application Letters, Resignation, Memos, Minutes, Agendas, Enquiries, Orders, Circulars, Product review, writing a Blog,

MODULE III BUSINESS REPORTS AND ETIQIUETTES 06

Basics of report writing, structure of reports, types of reports. Purpose, Scope, Style, Contents, Visual aids in Business and Project reports, feasibility reports, reports proposals. Non-verbal etiquettes – Business cards, e-mail Etiquettes, Virtual Meetings.

PRACTICAL

MODULE IV BUSINESS CORRESPONDENCE – ORAL 10

Interactive communication – Discussions, Debates, etc Business Presentation, Management Meeting.

MODULE V LISTENING COMPREHENSION 10

Listening and typing – Listening and sequencing of sentences – Filling in the blanks - Listening and answering questions.

T: 20, P: 20, Total Hours: **40**

REFERENCES:

1. P. Subba Rao, B. Anitakar and Hinabandu, “Business Communication”, Cengage Learning, 2012.
2. Raymond V. Lesikar, John & Pettit and Mary E. Flatley, “Basic Business Communication”, Tata McGraw Hill, 2005.
3. M. Ashraf Rizvi, “Effective Technical Communication”, Tata McGraw Hill, 2005.
4. Asha Kaul, “Business Communication”, Prentice Hall of India, 2009.

OUTCOMES:

At the end of the course, the students should be able to:

- Outline the dynamics of business communication.
- Write business correspondence.
- Be familiar with the business etiquettes
- Make business presentation.
- Enhance their listening abilities.

MSC 6106 FINANCIAL ACCOUNTING

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course are to enable the students to:

- To understand the basics of accounting principles and concepts
- To prepare final accounts to ascertain profit or loss of an organization
- To appreciate the importance of cash book in an organization
- To identify the reasons for preparing bank reconciliation statement

MODULE I INTRODUCTION 02

Financial Accounting - Meaning - Objectives - Users of financial accounting - Role of accountant - Limitation of Financial Accounting.

MODULE II ACCOUNTING PRINCIPLES AND ACCOUNTING SYSTEMS 06

Accounting Principles - Accounting concepts and accounting conventions - Accounting systems - meaning of cash system of accounting and mercantile system of accounting - single entry system - Double entry system - meaning and advantages.

MODULE III ACCOUNTING PROCESS AND DEPRECIATION 12

Types of accounting, Debit and credit rules of accounting - accounting equation - Journal entries - Ledger - Trial balance - preparation of trial balance - Depreciation - meaning - need for providing depreciation.

MODULE IV FINANCIAL STATEMENT 07

Financial statement - meaning - advantage and limitations of financial statement - Preparation of trading account - Profit and loss account - balance sheet with adjustment. Revised Schedule VI of International Financial Reporting Standards (IFRS).

MODULE V CASH BOOK AND BANK RECONCILIATION STATEMENT 03

Cash book - meaning and preparation of cash book. Bank Reconciliation statement - meaning and importance of bank reconciliation - causes of difference - preparation of bank reconciliation statement.

Total Hours: 30

REFERENCES:

1. S.N.Maheshwari, “Accounting for Management”, Sultan Chand & Sons, New Delhi, 2009.
2. T.S Reddy and A. Murthy, ”Financial Accounting”, Margham Publications, Chennai, 2009.
3. KL Nagarajan, N. Vinayakam , PL. Mani, ”Principles of Accountancy,” S. Chand and Company Ltd, 2008.

OUTCOMES:

At the end of the course, the students will be able to:

- Maintain accounting records in a systematic manner
- Ascertain profit or loss of an organization by preparing trading and profit & loss account.
- Depict the financial position of an organization by preparing balance sheet
- Prepare cash books with single column and double columns.
- Set right the differences between cash book and pass book using bank reconciliation statement.

MSC 6107	COMPUTERS & BUSINESS APPLICATION LAB	L	T	P	C
		0	0	3	1

OBJECTIVES

The objectives of the course will be to enable the students to:

- Learn various methods of analyzing the business data for decision making
- Get acquainted with a working knowledge of Microsoft office Excel, SPSS and Google Apps.
- Be familiar on the techniques of presenting the analyzed data in a logical structure
- Acquire basic knowledge of working online using collaborative productivity tools
- Obtain up-to-date knowledge about scheduling and planning organizational routines.

LIST OF PRACTICAL EXERCISES

Exercise No.	Exercise Topic List (Excel, SPSS & Google Apps)
1	Creation of basic spreadsheet by entering text, numbers, and simple formulas
2	Keyboard shortcuts and paste special
3	Formatting of cells and columns (freeze and unfreezing, hide, merge)
4	Usage of functions to create a spreadsheet to perform "what if?" calculations
5	Creation of different types of charts
6	Sorting data and print portions of a worksheet
7	Special Formats and Exporting Exercise to word document
8	Demonstration of basic cost analysis using Excel
9	Linking worksheets into one and to link several worksheets to a master worksheet
10	Creation and analysis of Pivot table and chart
11	Steps in analysing data with SPSS: Organizing data, Stages in Data Analysis
12	Statistical Analysis Exercise to calculate descriptive statistics
13	Preparing Descriptive Statistics, Preparing graph of the data
14	Hypothesis Testing for a Single Population
15	Hypothesis Testing to compare Two Populations mean

Exercise No.	Exercise Topic List (Excel, SPSS & Google Apps)
16	Chi-square test for goodness of fit
17	Google Drive: Introduction to cloud tools
18	Google Docs – Translation and collaboration techniques: Creating resume using add-ons
19	Google Sheets – Accessibility, Permission setting, Clipboard exercises
20	Google Sheets – Protected ranges and sheets, Script editor and add-ons
21	Google Slides – Layout setting and inserting media
22	Google Forms – Creating a vacation responder form for RSVP
23	Google Calendar – Online and mobile app integration: Creating reminders and inviting people to events

Total Hours: 30

PEDAGOGY / METHODOLOGY FOR CLASS

This course is based on the lab sessions for all of the exercises (topics) listed above. Main pedagogy for this lab would be demonstration.

ASSESSMENT COMPONENTS / METHODS

1. Lab exercises
2. Maintenance of lab record (Duly printed and signed by faculty)
3. Mid trimester and end trimester exams

OUTCOMES

After studying the course, the students would:

- Apply the different methods of business analysis for any demanding situations in organizations
- Gain insight to capture and handle the business data in an efficient manner
- Make a better interpretation of the analysis results and present them using the latest technologies
- Use the various productivity apps for effective balancing of work routines and deadlines
- Access online collaborative working platforms with ease and understanding
- Utilize real-time synchronized data without data duplication

TRIMESTER II

MSC 6201	ORGANIZATIONAL BEHAVIOUR	L	T	P	C
		3	0	0	2

OBJECTIVES:

The specific objective of the course is to:

- Understand the basic concepts in the field of organizational behavior.
- Impart knowledge about individual, group and organization dynamics to facilitate suitable behavior manifestation
- Help imbibe OB implication in the management of human resources.
- Examine the shifting context of organizations

MODULE I INTRODUCTION TO ORGANIZATIONAL BEHAVIOUR 05

Definition - Evolution of Organization Behavior - Industrial Revolution, Scientific Management, Hawthorne Studies, Human Relations Movement, Scope, Challenges and Approaches to Organization Behaviour

MODULE II INDIVIDUAL BEHAVIOUR DIMENSION 06

Mars Model of Individual Behaviour-Personality: Theories - Perception: Meaning, Perceptual Process - Values: Types, Work Attitude - Learning: Meaning, Theories - Work Motivation: Job Enrichment, Job Design, Job Satisfaction, Relating Motivation Theory to Job and Personality Types

MODULE III GROUP BEHAVIOUR DIMENSION 07

Foundations of Group behaviour: Types of Group, Stages of Group Development, Group Values- Decision Making and Consensus Building: Decision Making Styles, Consensus Competencies, Empowered and Self-Managed Teams - Leadership: Concept, Theories, Styles - Conflict: Causes, Types, Conflict Management Styles

MODULE IV ORGANIZATIONAL DIMENSION 07

Organisational Structure: Determinants, Existing and Emerging Organizational Designs - Communication: Communication Effectiveness, Dynamics in Communication - Organisational Culture and Climate: Concept, Creating and Sustaining Culture, Categories of Organizational Climate-Organization Development: Reasons for Change, Resistance to Change, Change Process, Change Management Models-Lewin's three stage framework, Hussey's Easier

Approach to change management, Organization Development Intervention Techniques.

MODULE V THE CHANGING MILIEU OF ORGANIZATIONS 05

Changing Profiles of Employees and Customers, Globalization: Threats and Opportunities-Information Technology: Benefits and Limitation-Generation and Behaviour-Diversity: Bases of Diversity, Promoting Diversity-Concerns for OB: Employee Retention, Employee Engagement, Employee Productivity, Talent Management, Work-Life Stress, Social Responsibility and Ethics: Competitive Strategy and CSR

Total Hours: 30

REFERENCES:

1. Stephen P. Robbins and Timothy A. Judge. Organizational Behaviour, 15th Edition, New Delhi: Pearson, 2013.
2. Fred Luthans, Organizational Behavior, An Evidence Based Approach, 12th Edition, New Delhi: McGraw Hill Education, 2013.
3. Udai Pareek. Understanding Organizational Behaviour, 3rd Edition, New Delhi: Oxford University Press, 2011.
4. Mirza S. Saiyadain (Editor). Organizational Behaviour, New Delhi: Tata McGraw Hill, 2010.

OUTCOMES:

The students will be able to

5. apply various approaches of organisational behaviour in handling different behaviour situations in organisations.
6. understand clearly their own personality dimensions and that of other individuals and fine tune on theirs.
7. adapt to different work environment. Will help them to synergize their team spirit. It would also help them in managing conflicts.
8. The course would facilitate the students to communicate effectively in organisations. Understand the need for change and cope up intellectually with continuous changes.
9. It would facilitate application of their OB knowledge in the management of recent issues, problems and challenges related to people, organisation and behaviour.

MSC 6202 LEGAL ASPECTS OF BUSINESS

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course is to create an awareness in the students about

- The various acts relating to Indian contract, agency, sale of goods & negotiable instruments
- Important provisions in Company law and industrial law
- Various acts under industrial law
- Consumer protection act, Cyber laws and Right to information act

MODULE I MERCANTILE AND COMMERCIAL LAW 17

The Indian Contract Act 1872 - Contract - Meaning and Essentials - Classification of contracts - Essential elements of contract - Performance of contracts - Quasi contracts - Breach of contract and its remedies Agency - Nature of agency - How created, Agent's authority and liability of principal and third party: Rights and duties of principal, agents and Third party, liability of principal or agents, termination of agency.

The Sale of Goods Act 1930 - Sales contract - Transfer of title and risk of loss - conditions and Warranties - Performance of sales contracts - Rights of an unpaid seller.

Negotiable instruments Act 1881- Nature and requisites of negotiable instruments - Transfer of negotiable instruments and liability of parties, enforcement of secondary liability, holder in due course - Crossing of cheques - Discharge of negotiable instruments.

MODULE II COMPANY LAW 05

Major principles - Nature and types of companies, Formation, Memorandum and Articles of Association, Prospectus, Power, duties and liabilities of Directors, winding up of companies, Corporate Governance.

.

MODULE III INDUSTRIAL LAW 02

Overview of Factories act – Payment of Wages Act – Payment of Bonus Act – Industrial Disputes act - Workmen compensation act.

MODULE IV CONSUMER PROTECTION ACT-19860 02

Rights of Consumer - Complaint - Procedure for filing Complaint - Remedial process.

MODULE V INFORMATION TECHNOLOGY ACT 2002 & RIGHT TO INFORMATION ACT 04

Important Provisions of Cyber Laws – Remedies - Important Provisions of Right to Information Act

Total Hours: 30

REFERENCES:

1. Kapoor N. D., “Elements of mercantile law”, Sultan Chand and company, New Delhi, 2007.
2. Kapoor N. D., “Business Law”, Sultan Chand and Company, New Delhi, 2011.
3. Pillai, R. S. N and Bagavathi, “Legal Aspects of Business”, S. Chand and Company Ltd., New Delhi, 2011.

OUTCOMES:

On successful completion of the course, the student would:

- Analyze various cases relating to contracts of sale & agency to take suitable decisions.
- Realize the practical implications of using negotiable instruments.
- Differentiate various forms of company & its related provisions.
- Identify, differentiate and apply suitably under various acts of industrial law.
- Understand the importance of powerful tools such RTI, IT act and Consumer protection act and apply in appropriate situations.

MSC 6203 ECONOMIC ENVIRONMENT OF BUSINESS

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course are to:

- Provide the students with a fundamental knowledge of the macro-economic issues on the basis of which policy decisions can be analysed and business decisions can be made
- Make students acquainted with emerging issues of business at national and international level in view of new economic policies especially under privatization liberalization and globalization.
- Exposes students to an overview of an exchange based economy and draws out the relationship between crucial macroeconomic variables like level of income, employment, money supply, inflation, growth, investment, forex etc.
- Provide a comprehension of changing business environment resulting from monetary and fiscal policies and different economic policies introduced by the government
- Facilitate students to understand and analyse the effects of recent macro economic events and financial crises impacted the economy locally and globally

MODULE I BUSINESS ENVIRONMENT 06

Introduction, Economic and Non - Economic Environment, External Macro Environment - Social, Political, Legal, Technological, Demographic, Natural and Ecological Environment. Internal Environment.

MODULE II CIRCULAR FLOW OF INCOME AND NATIOANAL INCOME 06

Circular flow of Income: Meaning, Concepts of National Income: GNP, GDP, NNP, National Income, Personal Income and Disposable Income, Per Capita Income. Nominal GDP Vs Real GDP, Market Price Vs Factor Cost, Measurement of National Income: Value added Method, Income Method, and Expenditure Method. Growth and Development - Human Development Index (HDI).

MODULE III DEMAND FOR AND SUPPLY OF MONEY 06

Concept of Money Supply and its measurement - Measures of Money Supply - M0, M1, M2, M3, and M4. Factors determining Money Supply: RBI'S Analysis. An Overview of the functions of Central Bank and Commercial Banks.

MODULE IV UNEMPLOYMENT AND INFLATION 06

Unemployment - Measurement and Interpretation. Business Cycle - phases and features. Inflation - Meaning, characteristics, types, effects and anti-inflationary measures. Fiscal and Monetary Measures, Measurement of Inflation: Price Indices - WPI, CPI etc., Public Deficit: Various Concepts, Deficit Financing, Taxation and Subsidies: Types and its effects.

MODULE V EXTERNAL SECTOR 06

Balance of Payment, Its Constituents (Current A/c & Capital A/c), Foreign Exchange Market and Exchange Rate, Financial System: Crisis and Reform**.**

Total Hours: 30

REFERENCES:

1. C. Rangarajan and B.H.Dholakia, “Principles of Macroeconomics”, McGraw Hill, 2012, 38th Edition.
2. D. N. Dwivedi, “Macroeconomics Theory and Policy”, McGraw Hill, 2012, 6th Edition.
3. Pailwar and Veena Keshav, “Environment of Business”, 3rd Edition, PHI Learning, New Delhi, 2012.
4. H. L. Ahuja, “Economic Environment of Business” (Macro Eco.Analysis), 7th Edition, S. Chand Publishing, New Delhi.
5. Justin Paul and Parul Gupta, “Economic Environment and Policies for Business”, Tata McGraw Hill.

OUTCOMES:

Students will be able to:

- Demonstrate an advance understanding of major macro economic aspects like national income, money supply, employment etc to appreciate and analyze functioning of economy
- To acquaint with application of macro-economic principles to appreciate internal and external factors affecting business
- Understand various dimensions of macro economic variables in analyzing effects on business
- Critically analyze and interpret current events relating to globalization and international business and particularly impact of liberalization and privatization producing challenge to local economy and businesses.

- Explain as how economic, political, social and other issues impact business and how RBI and government decision with respect to monetary and fiscal policy greatly affect the business

MSC 6204 QUANTITATIVE METHODS IN BUSINESS - II

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn to formulate Linear Programming Problem to optimize cost and profit in a constrained environment
- Learn to optimize cost and profit with respect to transportation and resource allocation business situations
- Familiar with different types of business environment and the appropriate technique to be used for decision making
- Aware of a project environment and learn the techniques of project management
- Gain knowledge on job sequencing and equipment replacement models for decision making

MODULE I INTRODUCTION TO OPERATIONS RESEARCH AND LINEAR PROGRAMMING (LP) 06

Introduction to Applications of Operations Research in Functional Areas of Management - Linear Programming Formulation - Solution by Graphical Method - Solution by Simplex Method

MODULE II TRANSPORTATION AND ASSIGNMENT PROBLEM 06

Transportation Problem (Minimizing and Maximizing Cases) - Formulation - Balanced and Unbalanced Cases - Initial Basic Feasible Solution by N-W Corner Rule, Least Cost and Vogel's Approximation Method - Check for Optimality - Solution by MODI Method - Assignment Problem (Minimizing and Maximizing Cases) - Formulation - Balanced and Unbalanced Cases - Solution by Hungarian Method - Traveling Salesman Problem

MODULE III DECISION THEORY AND QUEUING THEORY 06

Decision Making under Risk - Decision Making under Uncertainty - Decision Tree Analysis - Queuing System - Single Server Model problems

MODULE IV PROJECT MANAGEMENT 06

Network construction - PERT - CPM - Computation of project completion time - Critical path - Floats.

MODULE V JOB SEQUENCING AND REPLACEMENT MODELS 06

Job sequencing: Problems using Johnson's algorithm (n-jobs 2-machines, n-jobs 3 -machines, n-jobs m-machines and 2-jobs n-machines) - Replacement Models -Individual Replacement Model - Group Replacement Model.

Total Hours: 30

REFERENCES:

1. Sharma, J.K. "Operations Research", Macmillan India, 3rd Edition, New Delhi, 2011
2. Hamdy. A. Taha. "Operations Research: An Introduction", Pearson Education, 9th Edition, New Delhi, 2014.
3. Natarajan, A. M. "Operations Research", Pearson Education, 2nd Edition, New Delhi.

OUTCOMES:

On completion of the course, the students will be able to:

- Formulate Linear Programming Problem to optimize cost and profit in a constrained business environment
- Optimize cost and profit with respect to transportation and resource allocation in business environment
- Appreciate different types of decision-making environment and apply relevant OR technique for effective decision making
- Estimate the project completion time for various projects by applying CPM and PERT techniques
- Make decisions regarding sequencing jobs and replacing equipments based on time and cost

MSC 6205 MANAGEMENT AND COST ACCOUNTING

L	T	P	C
3	0	0	2

OBJECTIVES:

- To understand the functions of management accounting and cost accounting
- To analyse the company's performance using Ratio analysis, fund flow and cash flow statements.
- To prepare different types of Budgets
- To plan the profit
- To know the recent developments in management and cost accounting

MODULE I INTRODUCTION 03

Management Accounting - meaning - functions - scope and limitations of Management accounting . Cost Accounting - Meaning , importance and limitations of cost accounting. Differences among Management accounting, Cost accounting and Financial accounting.

MODULE II RATIO ANALYSIS, FUND FLOW AND CASH FLOW STATEMENT 08

Ratio analysis - meaning, managerial uses, classification and limitations of ratios. Calculation of liquidity, profitability, turn over ratios. Fund flow and Cash flow statement - Need, importance, and difference between Fund flow and Cash flow statement.

MODULE III BUDGETARY CONTROL 06

Budgetary control - Need, importance, limitations and successful implementation of budgetary control. Classification of budget - preparation of Fixed and Flexible budget. Zero base budgeting - uses and limitations.

MODULE IV MARGINAL COSTING AND PROFIT PLANNING 09

Marginal Costing - Meaning, importance and applications of Marginal costing. Break Even Point Analysis - Meaning, assumptions and limitations.

MODULE V RECENT DEVELOPMENTS IN MANAGEMENT & COST ACCOUNTING 04

Recent developments in Management and Cost accounting (Theory only): Introduction to Inflation Accounting, Human Resource Accounting, Responsibility Accounting, Activity Based Costing and Target Costing.

Total Hours: 30

REFERENCES:

1. M.A.Sahaf, “Management Accounting”, Vikas Publishing House Pvt.Ltd.,New Delhi, 2010.
2. S.K.Maheshwari and S.N.Maheshwari, “A textbook of accounting for management”, Vikas Publishing House Pvt. Ltd., New Delhi, 2009.
3. Colin Drury, “Cost and Management Accounting”, Cengage Learning India Pvt.Ltd., New Delhi, 2012.

OUTCOMES:

At the end of the course, the students will be able to:

- Identify the role of management accounting and cost accounting
- Analyse the company’s performance using Ratio analysis, fund flow and cash flow statements.
- Prepare different types of Budgets
- Plan the profit for the organisation
- Distinguish the different costing methods

MSC 6206 MARKETING MANAGEMENT – I

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Familiarize with the fundamentals and core concepts of marketing
- Know about consumers and the factors that has an impact on their purchasing behaviour
- Gain insight into consumer decision making process and models
- Learn the bases of market segmentation
- Identify the strategies of differentiation, targeting and positioning

MODULE I INTRODUCTION 06

Marketing: definition, evolution, concepts, values, process, organization structure - Marketing mix for products and services - Impact of business environment on marketing. Recent trends in marketing: Online marketing / web enabled marketing, digital marketing, B2B and B2C marketing, relationship marketing, Marketing ethics

MODULE II CONSUMER AS AN INDIVIDUAL 06

Definition and purpose of Consumer behaviour studies-Consumer needs and motivation: nature- types- applications; Personality and CB - Consumer diversity - Consumer Perception theories and application to CB -Theories of learning and application - Basic CB models of attitude - Attitude change.

MODULE III CONSUMER DECISION PROCESS & POST-PURCHASE BEHAVIOUR 06

Innovation diffusion - Consumer decision making process - Models of consumer decision process: Shiffman, Howard-Sheth and Engel-Kollat-Blackwell models - Post-purchase behaviour - Consumer dissonance.

MODULE IV MARKET SEGMENTATION 06

Segmentation: Objectives, approaches, Bases - Characteristics of effective segmentation - Patterns of segmentation - Market segmentation procedure - Requirements for effective segmentation.

MODULE V DIFFERENTIATING - TARGETING- POSITIONING 06

Differentiating market offerings- Purposes- Tools for competitive differentiation- Types and number of differences to promote; Market Targeting- Factors for

evaluating and selecting market segments for targeting; Product positioning- Purposes- Principles - Positioning strategies - Perceptual mapping.

Total Hours: 30

REFERENCES:

1. Philip Kotler, “Marketing Management”, Prentice Hall of India P. (Ltd.), New Delhi, 2012.
2. William J. Stanton, “Marketing Management”, McGraw Hill Publishing, 1992.
3. M.Govindarajan, “Marketing Management” Prentice Hall of India, New Delhi 2014.

6. Leon G. Schiffman and Leslie Lazar Kanuk, “Consumer Behaviour”, Pearson Education, New Delhi, 2002.

OUTCOMES:

On successfully completing this program the student will be able to:

- Recognize and apply the knowledge of marketing concepts
- Analyze the dynamics of consumer behavior and the impact of various factors
- Identify the phases in consumer decision- making process and buying behaviour
- Choose the right base for segmenting a market
- Design strategies to differentiate, target and position the products

MSC 6207	WRITTEN ANALYSIS & COMMUNICATION	L	T	P	C
		0	0	3	1

OBJECTIVES:

The course would help the students to:

- Understand the contents of the given case
- Analyse the situations in the case
- Identify solution / decision to be taken

LIST OF EXERCISES:

1. Training the students on the following nine steps of problem solving and decision making:
    - Identification of problem
    - Establishment of problem
    - Development of objectives
    - Identification of alternative solutions
    - Determination of various criteria
    - Evaluation of all the alternatives against all the criteria
    - Ranking of the evaluated alternatives
    - Decision based on the alternatives
    - Developing contingency plan
2. After learning the above steps, giving exercises on:
    - general mini-cases
    - functional area based mini-cases
    - integrated functional area mini-cases

Total periods: 30

PEDAGOGY / METHODOLOGY FOR CLASS

1) Lectures
2) Participative learning
3) Guided training
4) Group Discussion

ASSESSMENT COMPONENTS / METHODS

Assessment pattern would be based on the following components:

1) Quality of analysis
2) Students' Participation
3) Timely submission

4) Attendance, etc.

OUTCOMES:

Students who complete this course will be able to:

- Analyze live situations as and when they would face in their organizations
- Start using the case tactic tools for efficient management
- Take an appropriate decisions for any given organizational situation / problem
- Be equipped to relate the successive cases with business practices
- Be familiar with the function of management and apply the same in their Business.
- Think systematically and logically develop alternative solutions

MSC 6208	CURRENT AFFAIRS IN BUSINESS	L	T	P	C
		0	0	3	1

OBJECTIVES:

The objectives of this lab course would be to:

- Enable the students get familiarized with the trends and developments in the business world
- Make them understand the drivers of changes in business scenario
- Provide opportunity to get knowledge on local, national and international environment of business
- Make the students role of government and society in business

LIST OF EXERCISES:

1. Industry profile
   (e.g., Automobiles, Textiles, Information Technology, Retailing, Banking, Manufacturing, Telecom, etc.) For such industries:
2. Company Locations
3. CEOs / Boards of various Companies
4. Entry / Exit of Companies
5. Mergers, Acquisitions, Take-Overs, etc.
6. Products / brands launched by companies
7. Successful Entrepreneurs
8. Government Policies, Regulations and Impact on Business
9. Inflation / Deflation
10. Stock Market
11. Comparison of Global and National Business Scenario
12. Financial Institutions & Regulatory Bodies

Total periods: 30

PEDAGOGY / METHODOLOGY FOR CLASS

A suitable mix of the following:

1) Participative learning
2) Guided training
3) Group Discussion
4) Presentation

(Throughout this course students will keep them updated with business affairs appearing in sources such as: newspapers, business magazines, television

channels, etc. This means that the students need to make it a habit to read the newspaper on daily basis and search the archives as well)

ASSESSMENT COMPONENTS / METHODS

Assessment pattern would be based on the following components:

1) Quality of presentation
2) Students' participation
3) Timely submission of presentation material
4) Quiz
5) Assignment
6) Attendance, etc.

OUTCOMES:

Students who complete this course would:

- Have updated knowledge on business affairs in a variety of industries
- Be able to analyse the dynamics of happenings in companies and business environment
- Be equipped to relate the current business practices with the subsequent courses offered in the degree programme
- appreciate the knowledge of current affairs in managing Enterprises
- Assess the different issues in business to reduce the impact in business
- Comprehend the impact of government and society on business

TRIMESTER III

MSC 6301	MANAGEMENT INFORMATION SYSTEMS	L	T	P	C
		3	0	0	2

OBJECTIVES:

The objectives of the course will be to enable the students to:

- Learn the concept of IS and their functionality in a business enterprise
- Know the need for an IS framework and its importance as a survival tool
- Acquire insight about e-commerce, M-commerce (Apps and service providers)
- Build up knowledge about the various structured methodologies which are used for planning, system design and development
- Familiarize with managing the workings of a digital firm

MODULE I INFORMATION SYSTEMS IN BUSINESS 06

Definition, Introduction to Information and Business Intelligence, Personal and Organizational Dimensions of Information – IT as A Key Resource in Business – Computer Hardware and Software - Categories of Computers by Size – Intellectual and Physical Interfaces – Porter's Five Forces Model – The Value Chain – SCM, CRM and BI.

MODULE II INTERNET TECHNOLOGIES, DATABASE MANAGEMENT SYSTEM 06

Introduction to World Wide Web, Websites, Addresses and Pages – Using Web Browser Software – Search Engines – Internet Technologies – Communications Software – The Relational Database Model – Database Management System Tools – Data Warehouses – Data Mining – Ownership over Information – Clean Data Vs Dirty Data.

MODULE III ARTIFICIAL INTELLIGENCE AND DECISION SUPPORT SYSTEM 06

Decision Support System – Components of Decision Support System – Geographical Information Systems - Artificial Intelligence – Expert Systems – Neural Networks – Fuzzy Logic – Genetic Algorithms – Intelligent Agents – Multi-Agent Systems and Agent Based Modelling.

MODULE IV THREATS TO INTELLECTUAL PROPERTY AND COMPUTER CRIME 06

Introduction to Identity Theft – Guidelines for Ethical Computer System Usage – Intellectual Property Threats – Cyber Crime Laws and Security Guidelines – Precautions On Data Protection – Computer Crime – Computer Forensics – Methods of Hiding Data Recovery and Interpretation.

MODULE V EMERGING TRENDS IN TECHNOLOGY FOR MANAGEMENT 06

Introduction to SaaS – Cloud Computing – IT Personalization Management – VoIP – Automatic Speech Recognition – Virtual Reality – CAVE – Biometrics – Digital Cash - Wearable Technology – Multi – Sate CPU's – Holographic Storage Devices – RFID – Ethics and Privacy Concerns in IT.

Total Hours: 30

4. James AN O' Brien, 'Management Information Systems', Tata McGraw Hill, New Delhi, 2008.

OUTCOMES

After studying the course, the students would:

- Comprehend the latest technologies in IS (Information Systems) and relate their impact in organization
- Start using the various IS tools for efficient management
- Gain advantage of utilizing the mobile and android wear apps for scheduling
- Improve on using cyber security measures to avoid data theft and detection
- Utilize the recent developments in the field of system analysis, design and development such as agile development
- Use latest trends in digital enterprise management such as SCRUM

MSC 6302 FINANCIAL MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course are to enable the students to:

- Understand the functions of financial management
- Know the concept of Time value of money and its impact in investment decision using Capital budgeting techniques
- Understand and apply the methods of finding costs involved in different sources of financing
- Understand and apply the concept of leverage on Earnings per share
- Provide an overview of Working capital management and its components

MODULE I INTRODUCTION 04

Financial Management - meaning, definition, objectives, scope and functions. Overview of Islamic Finance, Financial System, Sources of financing.

MODULE II INVESTMENT DECISIONS 09

Time value of money, Capital budgeting - Meaning and importance. Capital budgeting techniques - Pay Back Period , Accounting Rate of Return , Net Present Value , Internal Rate of Return and Profitability Index method. Capital Rationing.

MODULE III FINANCING DECISIONS - COST OF CAPITAL 08

Cost of capital - meaning and importance . Cost of capital - Equity, preference , debt (before tax and after tax) , retained earnings , weighted average cost of capital (book value and market value as weights).

MODULE IV LEVERAGES 05

Leverages - EBIT-EPS Calculation for different capital structure - operating, financial and combined leverages.

MODULE V LIQUIDITY DECISIONS 04

Working capital management - meaning, concepts, need for working capital, determinants of working capital. Cash management - meaning of cash, motives for holding cash. Meaning and importance of receivables management and Inventory management.

Total Hours: 30

5. M Y. Khan and P.K Jain, “Financial Management - Text, Problems and Cases,” Tata Mc Graw Hill Education Pvt. Ltd., 3rd reprint, 2012.

OUTCOMES:

At the end of the course, the students would be able to:

- Understand the functions of financial management and apply the same in their work spot.
- Apply the concept of Time value of money in Capital budgeting decisions and evaluate different projects using techniques of capital budgeting.
- Assess the cost of different sources of financing to minimize the cost involved in raising capital.
- Find the impact of leverage on Earnings per share
- Manage working capital of the business .

MSC 6303 MARKETING MANAGEMENT – II

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Provide conceptual insight into the elements of marketing mix
- Gain knowledge about the various concepts related to product and pricing
- Know about the distribution channels and their importance
- Learn about the promotional mix tools
- Familiar with the marketing strategies related to the 4Ps and competition

MODULE I PRODUCT & PRICING 06

Elements of marketing mix - Product: definition, levels, hierarchy, systems & mix, map - Product line decisions - New product development stages – Product planning - Product life cycle and Strategies - Packaging - labeling - branding: types of brands - Pricing: objectives, strategies, methods.

MODULE II PLACE (DISTRIBUTION) 06

Marketing channel: importance, functions, flows, levels, characteristics - Selection, design and management of channel members.

MODULE III PROMOTION 06

Promotion Mix: elements / promotion tools - integrated communication model - Communication process - Steps in developing effective communication - Setting promotion budget and promotion mix - Basics of advertising, sales promotion, personal selling and public relations.

MODULE IV STRATEGIC MARKETING 06

Plan, strategy and Tactics- strategic marketing and marketing management- Product- market strategies: Ansoff's Matrix -Ten principles of strategy- Michael Porter's generic strategies.

MODULE V COMPETITIVE MARKETING STRATEGIES 06

Competitive Marketing Strategies: strategies for market leader, challenger,follower and niche markets - Designing and Selecting Strategies - Porter'sfive forces theory for competition analysis - Market entry and withdrawal strategies.

5. V.S. Ramaswamy and S. Namakumari, "Marketing Management", 3rd Edition, Macmillan, New Delhi, 2011.

OUTCOMES:

On successfully completing this program the student will be able to:

- Identify products and services suitable to target markets
- Choose appropriate pricing techniques
- Suggest channels for distribution of the products
- Decide promotional tool mix for various products/organizations
- Design marketing mix strategies for various competitive situations

MSC 6304 HUMAN RESOURCES MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The specific objective of the course is to:

- Provide knowledge about the basic fundamentals of HRM.
- Discuss the various functional components of HRM
- Facilitate awareness building on Economics of Human Resources and HRP
- Stay updated with the contemporary practices in HRM.

MODULE I FUNDAMENTALS OF HRM AND HRIS 06

HRM: Evolution of HRM, Differences between HRM and Human Resource Development, Objectives and Scope of HRM, Functions of Human Resource Manager, HR Model by David Ulrich, Human Resource Information System

MODULE II ECONOMICS OF HUMAN RESOURCES AND HRP 06

Demand and Supply of Labour, Labour Market Equilibrium: Wage determination, Investment in Human Capital, Employment Contracts, Labour Unions and Collective Action, Labour Mobility, Discrimination in the Labour Market. Human Resource Planning: Objective, Process, Factors affecting HRP, Job analysis, HRP Models, HR Forecasting Methods.

MODULE III RECRUITMENT AND SELECTION 06

Difference between Recruitment and Selection, Selection Process, Types of Selection Test, Recruitment Source, Constraint on Recruitment Efforts- Recruitment Alternatives: Temporary Help Service, Employee Leasing, Independent Contractors, Placement, Induction and Socialization

MODULE IV PERFORMACE APPRAISAL AND TRAINING 06

Performance Appraisal: Definition, Performance Appraisal Process, Methods, Differences between Performance Appraisal and Performance Management, Performance Appraisal Benefits, Appraisal Errors, Appraisal Outcome- Training: Definition, Benefits of Training, On the Job and Off the Job Training Methods

MODULE V THE CONTEMPORARY PRACTICES IN HRM 06

Compensation and Reward Management, Performance-Related Pay, Competency Mapping, Balance Score Card, Knowledge Transfer, Work-Life Mentoring,

Employer Branding, Talent Management: Process, lifecycle, Talent planning, acquisition, engagement and retention. Talent poaching.

Total Hours: 30

REFERENCES:

5. Saiyadain, M.S. “Human Resource Management”, 4th edition, New Delhi: Tata McGraw Hill, 2009.

OUTCOMES:

The students would be able to

- match roles and responsibilities associated with different functional areas of HRM.
- develop HR Policies and carry out Human Resources Planning effectively in organisations.
- suggest suitable recruitment and selection methods for the organisations
- develop simple performance appraisal templates for appraising employees performance and design appropriate training program modules for different jobs..
- participate in discussions confidently.

MSC 6305	PRODUCTION AND OPERATIONS MANAGEMENT	L	T	P	C
		3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn the concepts of Production and Operations Management and other contemporary issues
- Gain knowledge on location and layout decisions, and demand forecasting.
- Gain insight into Production Planning and Control and Maintenance Management
- Get acquainted with work study procedure
- Learn the techniques of materials management and inventory control

MODULE I INTRODUCTION 04

Production Management: Definition - Production System -Production and Operations Management: Characteristics of modern production and operations function - Recent trends - Elements of operations strategies - Building operations strategies on competitive priorities.

MODULE II LOCATION, LAYOUT AND FORECASTING 07

Capacity Planning - Types of capacity - Forecasting - Qualitative and Quantitative - Facility Location: Steps - Factors to be considered - Problem on Break-Even Analysis for single plant location - Plant layout: Principles of good lay out - Factors to be considered - Types of Lay out - merits and demerits

MODULE III PRODUCTION PLANNING AND CONTROL 06

Aggregate Planning - Master Production Schedule - Materials Requirement Planning (MRP) - Resource requirement planning - shop floor planning - routing - dispatching -loading - scheduling - progress reporting - expediting - Maintenance Management: Objectives - Meaning and Characteristics of various types of maintenance - Preventive Vs. Breakdown maintenance

MODULE IV DESIGN OF WORK SYSTEMS 06

Work Study: Method study - Objectives - Steps (brief theory only) - Principles of Motion Economy -Work Measurement - Time study: Objectives - Stop Watch Method of Time Study - Problems on Standard Time Calculation

MODULE V INVENTORY MANAGEMENT AND CONTROL 07

Materials Management - Objectives - Sub-functions - Types of Inventory - Need for Inventory - Inventory Costs - Economic Order Quantity (EOQ) - Basic Inventory Models (problems on purchase and manufacturing models - without shortage) - Reorder level - Safety Stock - Selective Inventory Control - ABC Analysis

Total Hours: 30

REFERENCES:

1. Panneerselvam, R. “Production and Operations Management”, Prentice Hall of India, 3rd Edition, New Delhi, 2012.
2. Gaither Norman. “Operations Management : Concepts, Techniques & Applications”, Cengage Learning, 9th Edition, New Delhi, 2002.
3. Aswathappa, K. and Shridhara Bhat, K. “Production and Operations Management”, Himalaya Publishing House, 2nd Edition, 2011.

OUTCOMES:

After completing the course, the students will be able to:

- Appreciate basic production and operation management concepts
- Forecast demand and make better location and layout decisions
- Plan and control production and maintenance in an organization
- Standardize jobs by applying work study procedure.
- Manage materials flow and inventory in an organization

MSC 6306	RESEARCH METHODOLOGY FOR MANAGEMENT	L	T	P	C
		3	0	0	2

OBJECTIVES:

- To acquaint the students with research, its terminologies and its process.
- To introduce research designs and types best suited for investigating different types of research problems
- To familiarize with the issues and trends in business research with practical inputs.
  To inculcate positive attitude and sprit toward the research

MODULE I INTRODUCTION TO RESEARCH 06

Meaning of Business research - Objectives of research - Types of research and research process - An overview of Formulation of Research Problem, Theoretical frame work and Hypotheses development

MODULE II RESEARCH DESIGN 06

Research design - Introduction - Types of research design - Sampling - Sample size -Probability and non probability sampling.

MODULE III DATA AND METHOD OF DATA COLLECTION 06

Introduction - Primary and secondary - Primary data source and secondary data source-Collection and preparation of data - Questionnaire and interview methods and guidelines for constructing a questionnaire.

MODULE IV DATA PROCESSING AND ANALYSIS 06

Preparation of data - Editing - Coding - Validation - Presentation of data and basic analysis of data.

MODULE V RESEARCH REPORT 06

Introduction to report writing - Format of report writing - Classification of the section of report.

Total Hours: 30

5. T. N. Srivastava and Shailaja Rego, “Business Research Methodology”, 2nd Edition, Tata McGraw Hill, New Delhi, 2011.

OUTCOMES:

On completion of the course the students will be able to:

- comprehend the research context with theoretical frame work and Hypotheses
- design a research proposal
- prepare and perform research surveys and collect data
  Perform suitable data anlysis
  write a research report.

MSC 6307	PSYCHOMETRICS & CORPORATE CONNECT LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To bring about holistic transformation in a student.
- To equip them for campus placement
- To hone their human skills for effective corporate adaptability
- To facilitate smooth balancing of Professional and Personal Life.

LIST OF EXERCISES ON:

1. Self-Introspection
2. Barriers and Filters of Communication
3. Managing Emotions
4. Developing Assertiveness and Self-Confidence
5. Team Work and Team Styles
6. Yoga and Meditation
7. Corporate Dressing and Grooming
8. Personality Types and Positive Attitude
9. Stress Interview
10. Time Management

Total periods: 30

PEDAGOGY / METHODOLOGY FOR CLASS

1. Debates/Discussions
2. Games and Activity.
3. Role Play
4. Case study
5. Psychometric Tests
6. Brain Storming
7. Demonstrations
8. Documentary Videos

ASSESSMENT COMPONENTS / METHODS

1. Review of exercises
2. Quiz/Puzzles
3. Interview
4. Observation

OUTCOMES:

Students who complete this course will be able to:

- Face campus interview more confidently
- Adapt to corporate expectations
- Handle difficult people and situations
- Manage their emotions and display appropriate behavior
- Handle stressful situations in personal and professional life .

MSC 6308 DATA ANALYSIS LAB

L	T	P	C
0	0	3	1

OBJECTIVES:

- To read and do statistical analysis in time series data
- To build statistical models in time series data
- To statistically analyze the relations among time series data

LIST OF EXERCISES:

1. Descriptive data analysis and interpretations
2. Test for stationarity and interpretations
3. Estimating a regression model and interpretations
4. Test for long run relationship and interpretations
5. Test for short run relationship and interpretations

Total periods: 30

PEDAGOGY / METHODOLOGY FOR CLASS

i. Related theory and reason behind the exercise
ii. Hands on demo and practice in the lab

ASSESSMENT COMPONENTS / METHODS

i. Report on the day's exercise and practice exercise
ii. End term practical exam

OUTCOMES:

Students who complete this course will be able to:

- describe the time series data
- check whether the data is suitable for doing time series analysis
- Identify the Short term relationship between various time series data
- Identify the long term relationship between various time series data
- Verify the goodness of fit in a model

MSC 7101 INTERNATIONAL BUSINESS MANAGEMENT

L	T	P	C
2	0	0	1

OBJECTIVES:

The objectives of the course would be

- To give an indication of Stages of Internationalization of Business and modes of entry
- To be familiar with the challenges of Global Sourcing in international Business
- To endow with knowledge on export, import procedure and documentation

MODULE I INTRODUCTION TO INTERNATIONAL BUSINESS 05

International Business - Reason for going Global, Entry and Stages of Internationalization of Business - Global Challenges- international business environment – An overview of GATT, WTO, IMF and World Bank.

MODULE II GLOBAL BUSINESS AND SOURCING STRATEGIES 05

Introduction to Global sourcing - sourcing strategies – sourcing structure - Need for global competitiveness – Regional and global trade block - Challenges for global business

MODULE III EXPORT, IMPORT PROCEDURE AND DOCUMENTATION 05

Export-Import Transaction-Documentation, shipping and incoterms, Methods of payments in exporting & importing, cost and sources of Export-Import Financing, Export Promotion Schemes.

Total Hours: 15

REFERENCES:

1. P. Subba Rao, “International Business Text and Cases”, 3rd revised enlarged edition, Himalaya Publishing House, Mumbai, 2013.
2. S.Tamer and Gary Knight, “International Business”, First edition, Pearson India 2009.
3. Charles W.I. Hill and Arun Kumar Jain, “International Business”, 6th Edition, Tata McGraw Hill, New Delhi, 2010.
4. John D. Daniels, Prashant Salwan, Daniel P. Sullivan and Lee H. Radebaugh, “International Business: Environments and Operations”, 12th Edition , Pearson India, 2010.

6. Rakesh Mohan Joshi, “International Business”, Oxford University Press, New Delhi, 2009.
7. Vyuptakesh Sharan, “International Business”, 3rd Edition, Pearson Education in South Asia, New Delhi, 2011.

OUTCOMES:

After completing the course, the students will be able to

- Recognize the Internationalization of Business and modes of entry
- Formulate Sourcing strategies
- Operate on export, import procedure and documentation

MSC 7102	INTRODUCTION TO ENTERPRISE RESOURCES PLANNING	L	T	P	C
		2	0	0	1

OBJECTIVES:

The course will enable the students:

- To introduce the concept of ERP and its functionality in a business enterprise
- To focus on applying ERP to all aspects of business
- To understand the strategies of ERP package selection

MODULE I ERP AND ENTERPRISE APPLICATIONS 05

Definition, need for an Enterprise Resource Planning System - History of ERP Systems –-Quantifiable Benefits of ERP - ERP Implementation, Lifecycle - Methodologies and Strategies for ERP Implementation .

MODULE II ERP INVESTMENT, SELECTION & CONFIGURATION 05

Benefits from A ERP Implementation - ERP Consulting Partner Selection - Onshore and in ERP Package Selection Process and Methods. ERP Solution Configuration - Final Preparations and Training of Personnel for Live Implementation.

.**MODULE III INTRODUCTION TO ERP FUNCTIONAL MODULES 05**

Overview of functional ERP modules – Human Resources – Finance – Marketing – Production – Benefits and limitations of use of ERP modules in organisations

Total Hours: 15

REFERENCES:

1. Ray, R. (2011). Enterprise Resource Planning - Text & Cases. New Delhi (India): Mcgraw-Hill Pub.
2. Leon, A. (2008). ERP demystified. New Delhi: Tata-McGraw-Hill.
3. Jaiswal, M., & Vanapalli, G. (2005). Textbook of enterprise resource planning. Delhi: Macmillan.

5. Garg, V. K., & Venkitakrishnan, N. K. (2004). Enterprise resource planning: Concepts and practice (2nd ed.). New Delhi: Prentice-Hall of India Private Limited.

OUTCOMES:

At the end of the course the student will be able to

- Recognize the various functionalities in Enterprise Resource Planning
- Develop a specific methodology on proper selection of ERP package for a organisation
- Identify modules of ERP based on their use, benefit and limitations.

MSC 7103	INTEGRATED MANAGEMENT CASES	L	T	P	C
		0	0	3	1

OBJECTIVES:

The course would help the students to:

- Understand the contents of the given case and identify the industry/actual problem
- Analyze the situations in the case using various foundation and functional area concepts
- Identify solution / decision to be taken

PEDAGOGY / METHODOLOGY FOR CLASS

Industry experts train the students on problem solving and decision making for real time/ developed cases, using the following 9 steps.

The students are to be trained on linking various concepts and techniques in the foundation and functional area courses, particularly for steps (iv),(v) and (vi)

1. Identification of problem
2. Establishment of problem
3. Development of objectives
4. Identification of alternative solutions
5. Determination of various criteria
6. Evaluation of all the alternatives against all the criteria
7. Ranking of the evaluated alternatives
8. Decision based on the alternatives
9. Developing contingency plan

Total Hours: 30

ASSESSMENT COMPONENTS / METHODS

Assessment would be based on the following components:

1. Ability to interpret / identify issues in case
2. Clarity in thought process
3. Logical thinking
4. Ability to relate with concepts / techniques learnt

OUTCOMES:

Students will be able to

- Comprehend the steps involved in rational decision making
- Apply managerial skills.
- Analyse risk and uncertainty in business scenario and suggest suitable decisions.
- Solve the problem with suitable solution.
- Develop contingency plan.

TRIMESTER V

MSC 7201	STRATEGIC MANAGEMENT	L	T	P	C
		3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Impart conceptual knowledge on strategies, process and management of strategies
- Lay the basics of environmental appraisal through environmental, industry and competitive analysis
- Learn different types and levels of strategies
- understand the various factors influencing the choice of strategies
- Provide various approaches and strategies for implementation and control

MODULE I INTRODUCTION 06

Strategy - Nature and purpose of business policy - Definition - levels of operations - Process of strategic management - Strategic Intent Meaning – Hierarchy – Vision - Mission.

MODULE II ENVIRONMENT APPRAISAL 06

External environment scanning (ETOP- PEST Analysis) - Appraisal of internal environment SWOT audit - Competitive advantage- core competency - Industry analysis- Competition analysis.

MODULE III STRATEGY FORMULATION 06

Levels and choices in strategy - Grand strategies - Stability strategies - Expansion strategies - Retrenchment strategies - Combination strategies - Business level strategies: Porter’s Generic business strategy model - Business ethics: need and importance, organizational values and culture, corporate governance, corporate social responsibility.

MODULE IV STRATEGIC ANALYSIS & CHOICE ACTIVITATING STRATEGY 06

Process of making choice - Subjective factors influencing choice - Contingency strategies - Pyramid of strategy implementation - Project implementation - Procedural implementation - Resource allocation.

MODULE V IMPLEMENTATION & CONTROL 06

Various approaches to implementation of strategy - Change Management Strategies- Matching organization structure with strategy - 7S model for implementation- strategic evaluation- Strategic control process - Du Pont's control model - Balanced score card - M.Porter's approach for Globalization - Future of Strategic Management

Total Hours: 30

REFERENCES:

1. Thomas L. Wheelen and J. David hunger, "Concepts in strategic management and Business policy toward global sustainability", Pearson education, 13th Edition, 2013.
2. Azhar Kazmi, "Business Policy & Strategic Management", Tata McGraw Hill, 3rd Edition, 2008.
3. L. M. Prasad, "Strategic Management", Sultan Chand & Sons, 2008.
4. Michael E. Porter, "Competitive Strategy: Techniques for Analyzing Industries and Competitors", Simon, New Edition, 2010.

OUTCOMES:

On successfully completing this program the student will be able to:

- Define and explain various terminologies associated with strategic management
- Analyze the environments to identify the core competencies of the firm
- Appraise the resources and capabilities of the firm to confer sustainable competitive advantage and formulate strategies
- Exhibit the ability to think critically with relevance to various situations and formulate strategic decisions through real world scenarios
- Develop the ability to identify strategic issues and design appropriate course of action

MSC 7202 SALES NEGOTIATION LAB

L	T	P	C
0	0	3	1

OBJECTIVES:

The objectives of this lab course would be to make the students

- Learn the concepts of selling and negotiation
- Gain insight into consumer perception and expectation of products
- Familiarize with different aspects of sales negotiation process
- Get trained in overcoming barriers and winning sales
- Acquire knowledge on the ethical aspects of a negotiation

LIST OF EXERCISES:

Exercises involving a judicious combination of the following aspects/ stages of negotiation:

1. Pre-negotiation - Preparation, information sharing
2. Understanding consumer motivation
3. Opening for negotiation
4. Negotiation process - involving product, pricing, promotional schemes
5. Negotiation strategies (win-win / lose-win, etc)
6. Arriving Agreement
7. Overcoming barriers & break-down that create roadblocks
8. Ethical aspects
9. Communication & listening Skills for negotiations
10. Persuasive skills
11. Handling intimidation
12. Closing

Total periods: 30

PEDAGOGY / METHODOLOGY FOR CLASS

A suitable mix of the following:

1. Role plays
2. Participative learning
3. Guided training
4. Group Discussion

ASSESSMENT COMPONENTS / METODS

Assessment pattern would be based on the following components:

1. Quality of role plays

2. Students' participation
3. Quiz
4. Assignment
5. Attendance, etc.

OUTCOMES:

After doing the course, the students will be able to:

- Apply the concepts of selling and negotiation in the selling process
- Relate consumer perception and expectation aspects in the negotiation
- Negotiate deals confidently addressing the different components of negotiation
- Identify and eliminate the barriers of negotiation
- Adhere to the ethical aspects of selling and negotiation

ELECTIVES - MARKETING MANAGEMENT

MSCY 001 RETAIL MARKETING	L	T	P	C
	3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn the concept of retailing, retail formats and recent developments in retail industry
- Gain knowledge of different dimensions of retail strategy
- Know the importance of store management and visual merchandising
- Identify customer services in retailing and understand services retailing
- Familiar with the growing e-tailing industry in India

MODULE I INTRODUCTION 06

Introduction to Retailing - Role and functions of Retailer - Retailer characteristics- Theories of Retail Development - Unorganized Vs. Organized Retailing - Retail Formats - Multi Channel Retailing - Indian Retail Scenario - Current State, Issues, Potential and Future Direction

MODULE II RETAIL STRATEGY 06

Understanding the Retail Customer- Dimensions of Retail Strategy - Retail Location- Store Site Selection - Retail Pricing - Retail Merchandising - Category Management - Role of Private Label Brands - Retail Communication

MODULE III RETAIL STORE MANAGEMENT 06

Retail Store Space Management - Store Layout and Design - Exterior and Interior Store Design Elements - Store Atmospherics - Visual Merchandising in Retail

MODULE IV CUSTOMER SERVICE & SERVICES RETAILING 06

Customer Service in Retailing - Gathering Customer Information - Significance of POS - Encouraging Loyalty - Retailing in the Service Sector - Retail Banking - Retail Insurance - Other Financial Services Retailing - Health Services Retailing - Retailing in the Hospitality Industry - Measuring Retail Service Quality.

MODULE V E- TAILING 06

Introduction - Role of Technology in Satisfying Market Demand - Structure and Developments in E- Tailing - Factors Influencing the Growth of E-Tailing - Features

of E- Tailing - Comparison of Conventional Retailing and E-Tailing - Customer Experience and Future of E- Tailing.

Total Hours: 30

REFERENCES:

1. Swapna Pradhan, “Retailing Management - Text and Cases”, Tata McGraw Hill, 4th Edition, New Delhi, 2012
2. Chetan Bajaj, Rajnish Tuli & Nidhi V. Srivastava, “Retail Management”, Oxford Higher Education, 3rd Edition, New Delhi, 2005.

4. David Gilbert, “Retail Marketing Management”, Pearson Education, 1st Edition, 2006.

OUTCOMES:

On successfully completing this program the student will be able to**:**

- Apply the concepts of retailing in their job for better performance
- Appropriately combine the dimensions of retail strategies to increase retail sales
- Manage the operations of a retail store effectively
- Select and implement the right customer service activity to attract and retain customers
- Recognize and adapt to the recent developments in retail industry

MSCY 002 SERVICES MARKETING

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn various concepts and fundamentals of services marketing
- Gain insight into customer perception and expectation of services
- Acquire knowledge necessary for designing of services
- Familiarize with the various aspects of delivering services
- Gain knowledge in the process of developing and implementing marketing strategies for different services

MODULE I INTRODUCTION 06

Definition of Service and Service Marketing - Evolution of Service Sector - Reasons for growth of Services - Types of Service Sector - Distinguishing characteristics of Services - Tangibility Spectrum - Goods vs Services and Marketing implications - Classification of Services - Marketing mix for Services - Service quality: Introduction to Gaps Model and SERVQUAL Dimensions

MODULE II SERVICE CUSTOMER 06

Customer Expectation of Services - Customer Perception of services - Segmenting Service Markets: Characteristics and Bases - Strategies for building Service Customer Relationships - Service Recovery

MODULE III SERVICE DESIGN 06

Service Life Cycle Stages - Steps in New Service Development - Types of Service Standards - Service Process - Service Blueprinting - Physical Evidence and Service scape - Tools for differentiating Services - Methods of Pricing Services

MODULE IV SERVICE DELIVERY 06

People in Services: Roles of Employees and Customers - Distributing Services: Channel Functions, Factors for Channel Selection - Promotional Mix for Services: Advertising Media for various Services, Steps in Personal Selling of Services, Sales Promotion Tools for Services

MODULE V MARKETING STRATEGIES FOR DIFFERENT SERVICES 06

Formulating Service Marketing Strategies for Health, Hospitality, Tourism, Financial, Information Technology, Educational, Entertainment and Logistics Services.

Total Hours: 30

REFERENCES:

1. Halen Woodroffe, “Services Marketing”, McMillan Publishing Co., New Delhi, 2003.
2. Valarie Zeithaml and Mary Jo Bitner, “Services Marketing”, Tata McGraw Hill, 2002.
3. Ramamohana Rao, “Services Marketing”, Pearson Education, 2005.
4. Jha, “Services Marketing”, Himalaya Publishing House, 2002.

OUTCOMES:

On successfully completing this program the student will be able to:

- Apply the concepts of services marketing in real time business situations
- Identify the expectations and perceptions of a customer towards services
- Design services according to market needs and wants
- Choose the appropriate distribution channel for delivering services
- Formulate appropriate marketing strategies needed for different services

MSCY 003	MARKETING COMMUNICATIONS AND MEDIA MANAGEMENT	L	T	P	C
		3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn the concepts of advertising as a form of communication
- Gain knowledge on the basics of designing and execution of advertisements
- Learn to select suitable media and design media planning
- Acquire knowledge on the aspects media management
- Get insight into the concept, role and types of sales promotion tools

MODULE I INTRODUCTION 06

Integrated Marketing Communication and its role -; Advertisement - Concept and Definition - Advertisement objectives - Advertising Agency: Types - selection and remuneration - Client - Agency Relationship- The changing marketing communication environment- Marketing and New technology- New Trends in Marketing communication.

MODULE II DESIGN AND EXECUTION OF ADVERTISEMENTS 06

Advertisement brief - creative process - Message development - Different types of advertisements - Layout - Design - Appeal - Copy structure - BTL and ATL - Advertisement media: types.

MODULE III MEDIA PLANNING AND SELECTION 06

Introduction to different media- comparison of their advantages and disadvantages; Media planning-functions –process- Media planning for Consumer and Industrial goods;

Media selection-buying TV space / Airtime / radio slot; buying magazines space/ Newspaper space.

MODULE IV MEDIA MANAGEMENT 06

Selection of media vehicles based on Reach, Frequency, Cost efficiency, Circulation, Pass-along rate (Print); Media Timing – Flight, pulsing, Media scheduling, comparing- and evaluation of continuity of media options; Deciding on the most suitable media – mix- buying and negotiating the most appropriate media.

MODULE V SALES PROMOTION 06

Sales promotion: objectives, scope - Sales promotion categories: consumer-oriented, channel-oriented, company-oriented - Designing of sales promotion

techniques - Integrated promotion - Measuring the effectiveness of sales promotion - Methods of on-line sales promotions**.**

Total Hours: 30

REFERENCES:

5. S.A. Chunawala, “Advertisement & Promotion Management”, Himalaya Publishing, 2007.
6. `Chaturvedi B.K., “Media Management”, Global Vision Pub House, 2009

OUTCOMES:

On successfully completing this program the student will be able to:

- Apply the knowledge of advertising for promoting products
- Interact with the advertising agencies to design and execute suitable advertisements
- Select the right media and design media plans for effective implementation
- Manage any media related aspects and issues
- Recognize the different sales promotional tools applied in real time marketing situations

MSCY 004 CONSUMER BEHAVIOUR

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Gain conceptual knowledge on consumer behavior and research
- Learn various models and theories related to consumer behavior
- Get an insight into consumer behaviour in their social and cultural environments
- Know the process and models of consumer decision making
- Aware of related aspects of consumerism and consumer behaviour

MODULE I INTRODUCTION 0**6**

Consumer Behaviour : Concept and Need for studying - Objectives of consumer research - Consumer Research process - Approaches to the study of consumer behaviour.

MODULE II CONSUMER AS AN INDIVIDUAL 06

Consumer needs and motivation: nature, types, applications - Values and life style - Personality and CB - Consumer diversity - Consumer Perception theories and application to CB -Theories of learning and application - Basic CB models of attitude - Attitude change.

MODULE III CONSUMERS IN THEIR SOCIAL & CULTURAL ENVIRONMENT 06

Group: types, reference group, opinion leader & applications to CB - Family & family cycle - Family decision making - Influence of social class, culture and sub-culture, cross cultural aspects on CB.

MODULE IV CONSUMER DECISION PROCESS & POST-PURCHASE BEHAVIOUR 06

Innovation diffusion - Consumer decision making process - Models of consumer decision process: Shiffman, Howard-Sheth and Engel-Kollat-Blackwell models - Post-purchase behaviour - Consumer dissonance.

MODULE V RELATED ASPECTS 06

Consumerism - Consumer protection - Online consumer behaviour - Overview of Organizational Buyer Behaviour

Total Hours: 30

REFERENCES:

3. K. K. Srivastava, “Consumer Behaviour in Indian Context”, Golgotia Publishing Co., New Delhi, 2002.

OUTCOMES:

At the end of the course the students will be able to:

- Analyze factors related to consumer behaviour and their purchase decisions
- Interpret the psychological behaviour of consumers as an individual using the models and theories
- Relate social and cultural environments to the consumer buying behaviour
- Apply the models of consumer decision making to identify the factors underlying consumer buying behaviour
- Identify consumer related aspects like consumer protection, online buying behaviour, etc.

MSCY 005 PRODUCT AND BRAND MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course will be to make the students:

- Learn the concept and various terms related to a product
- Gain knowledge on new product development stages
- Get insight into product brand and related concepts
- Get an overview of brands from consumer perspective
- Learn about the impact of brands and managing the brands

MODULE I INTRODUCTION 06

New Product: definition, concepts, design, process - Product standardization and simplification.

MODULE II NEW PRODUCT DEVELOPMENT STAGES 06

NPD: approaches, process - Idea generation, screening & evaluation - Concept development, evaluation & testing - Markeing-strategy development - Business /Commercial analysis - Product development - Proto-type testing - Market testing - Test Marketing - Product Launch and Control - Commercialisation - Post-launch tracking and control.

MODULE III BRAND CONCEPTS 06

Concepts of Brands - Evolution - Perspectives - Brand Names and Associations - Brand Planning - Perspectives, Levels, PRIZMS - Brand Image - Brand Culture - Brand Systems - Roles - Types of brands.

MODULE IV BRAND AND CONSUMER PERSPECTIVE 06

Brand and Consumers - Buying Decision - Making and Building Brand for Superiority and Success - Need and Techniques: Brand Positioning, Brand Repositioning - Brand personality - Brand Ambassador - Brand strategies: Brand Extensions, contractions & elimination.

MODULE V BRAND IMPACT 06

Managing brand performance over the product life cycle - Brand Values - Brand loyalty - Product and Brand Failures - Commoditization of Brand - Keeping Brand Alive: Creating and Maintaining - Measuring Brand Equity - Brand Vitalization - Methods of Brand Valuation.

Total Hours: 30

REFERENCES:

1. Ramanuj Majumdar, “Product Management in India”, Prentice Hall of India, 2002.
2. Donald R. Lehmann and Russel S. Winer, “Product Management”, Tata McGraw Hill, 2005.

5. Kevin Lane Keller, “Strategic Brand Management”, Pearson Education, 2003.
6. S. Ramesh Kumar, “Managing Indian Brands”, Vikas publishing House (P) Ltd., 2002.

OUTCOMES:

On successful completion of the program, the students will be able to:

- Recognize the need for new product development
- Identify the phases in designing and development of a product
- Appreciate the need and importance of branding a product
- Develop a new brand or reposition an existing brand from consumer perspective
- Measure the impact of a brand on the product/organization performance

MSCY 006 INDUSTRIAL MARKETING

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the subject will be to make the student:

- Get an overview of the various dimensions of industrial marketing
- Learn the buying behavior of industrial organizations
- Gain conceptual insight into segmentation, targeting and positioning from industrial perspective
- Learn to formulate product and distribution strategies
- Gain knowledge on designing the pricing and marketing communications

MODULE I DIMENSIONS OF INDUSTRIAL MARKETING 06

Nature of Industrial Marketing - Definition - Industrial vs Consumer marketing - Types of Industrial Customers - Characteristics of business markets - Classification of Industrial products - Industrial Marketing Environment and Strategies

MODULE II ORGANISATIONAL BUYING AND BUYER BEHAVIOUR 06

Nature of Industrial buying - Buy grid model: Buying situations, Buy Phases, Marketing strategies in various buying situations and phases - Buying centres: Buying centre roles - Webster and Wind model - Sheth model

MODULE III INDUSTRIAL MARKETING RESEARCH & S-T-P STRATEGIES 06

Marketing research process - Comparison between industrial and consumer research Industrial market Segmentation: Bases, Macro and Micro variables - Target marketing - Industrial product positioning.

MODULE IV INDUSTRIAL PRODUCT STRATEGIES & CHANNEL DECISION 06

Developing Product Strategies - Industrial Product life cycle analysis and strategies - Stages of new product development - Industrial marketing channels - Choosing right distributor - Marketing logistics: Warehouse Location and functions, Modes of Physical distribution and Transportation

MODULE V INDUSTRIAL MARKETING COMMUNICATION AND PRICING 06

Training and Compensating industrial sales people - Industrial advertising media - Sales promotion methods and strategies - Industrial pricing: Factors influencing,

Pricing strategies and policies - Commercial terms and conditions in industrial markets.

Total Hours: 30

REFERENCES:

2. Krishna K. Havaldar, “Industrial Marketing,” Tata McGraw Hill, New Delhi, 2002.
3. Alexander Hill, et. al., “Industrial marketing”, AITBS, 2000

OUTCOMES:

On successful completion of the course the student will be able to:

- Recognize the characteristics of industrial consumers
- Apply various models to understand organizational buying behaviour
- Formulate strategies for segmenting, targeting and positioning industrial products
- Choose the appropriate channel for distributing industrial products
- Formulate appropriate pricing and promotional strategies for industrial products

MSCY 007	CUSTOMER RELATIONSHIP MANAGEMENT AND MARKETING	L	T	P	C
		3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn the fundamentals of customer relationship management and marketing
- Get a deeper insight into customer attributes and their loyalty
- Learn theories and strategies associated with relationship marketing
- Gain insight into the impact of technology in managing customers
- Get an overview on the implementation and measurement practices of CRM

MODULE I BASICS OF CRM / RM BASICS 06

Customer Relationship Management (CRM): Definition, Purpose, Evolution - Schools of thought on CRM -Types of CRM - Levels of CRM -Relationship Marketing (RM) - Trust and belonging - Personal touch.

MODULE II CUSTOMER DIMENSION 06

Types of customers - Customer value: concept, types, LTV - Identifying external information sources - Customer intelligence - Customer Loyalty: meaning & categories - Loyalty ladder - Loyalty schemes - Loyalty programs - Loyalty cards - Loyalty based segmentation - Principles of trust, commitment, involvement - Customer retention: significance, factors, retention strategies, effects.

MODULE III RELATIONSHIP MARKETING AND STRATEGIES 06

Transaction Marketing vs Relationship Marketing - Bucket theory - Relationship partners - Close versus distant relationship - Relationships to brands and objects - Theories of RM - Nordic School Perspective - Six markets model - Relationship Life Cycle - Bonding for Customer Relationship / Relationship Marketing Strategies - Return on Relationships (RoR).

MODULE IV CONTACT TECHNOLOGIES AND STRATEGIES 06

Technology to manage customer contacts - Analytical CRM: Role of IT in building, maintaining & enhancing relationships - Overview of customer data management technologies - Data warehousing, mining, analyzing - Online/e-CRM relationships - Operational CRM: call centre and front desk technologies.

MODULE V CRM / RM: IMPLEMENTATION, MEASUREMENT AND ISSUES 06

CRM implementation: Planning, Roadmap, Building blocks - Frame work for building RM strategy - Voice of customer - Reasons for customer defection - Customer actions after product/service failure - Recovery strategies - CRM/RM measurement and metrics for CRM.

Total Hours: 30

3. Godson, M. (2009). Relationship Marketing, New York: Oxford University Press.

OUTCOMES:

On successful completion of the course, the students would be able to:

- Apply the concepts of customer relationship management and marketing in organizations
- Identify customer attributes and understand behavioural intentions
- Design appropriate relationship strategies by applying theories of relationship marketing
- Tap and handle information technology to manage customer data and maintain customer relationship
- Implement customer relationship practices and design metrics to measure.

MSCY 008 RURAL MARKETING

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Aware of the role and importance of rural marketing in India
- Gain insight into rural consumer buying behavior and underlying factors
- Learn to match the expectations of rural customers with the right price and product mix
- Gain knowledge to design the appropriate promotion strategies for rural markets
- Learn to choose the suitable channel to distribute products in a rural market

MODULE I INDIAN RURAL ECONOMY 06

Overview – Dimensions – Policies – Program – Reform - Role of Rural marketing in India - Development in the last few decades - Relevance and importance in the emerging scenario - future directions

MODULE II RURAL MARKETING 06

Definition - Nature-scope and attractiveness-Features - Rural Vs urban marketing - potential and changing pattern of rural marketing - Significance - limitations - Rural consumer Behavior - Influencing factors - changing trends.

MODULE III RURAL MARKET & PRODUCT SELECTION 06

Market Selection - Attractiveness of the market – Segmentation - concepts, Degree, guidelines, Targeting and positioning - Competitive marketing strategies, Product Selection - Selecting the right product-matching the expectations - Product mix - Pricing strategies-Objectives, concepts, significance and pricing policies

MODULE IV PROMOTION STRATEGIES 06

Promotion mix for Rural markets - Differences in Rural and urban communication Marketing communication mix - Communication objectives, Target audience characteristics, Designing the mix strategy, selection of Media , Execution and Evaluation of effectiveness, Impact of Information technology on rural communication

MODULE V DISTRIBUTION STRATEGIES 06

Channels of Distribution-distribution patterns of old and new channels-innovative means and approaches for rural market coverage

Total Hours: 30

REFERENCES:

1. Krishnamacharyalu C.S.G and Lalitha Ramakrishna, “Rural Marketing - Text and Cases”, Pearson Education, 2002
2. Ram Kishen, “New Perspectives in rural and agricultural Marketing”, Jaico Publishing House, Mumbai, 2005
3. Gopalsamy T. P., “Rural Marketing”, Wheeler Publishing, 2004.
4. Ramanaacharyalu, “Rural Marketing”, Pearson education, 2005.

OUTCOMES:

At the end of the program the student will be able to

- Analyze rural customer markets
- Identify the rural consumer buying behaviour and the influencing factors
- Formulate product and pricing strategies to meet the expectations of rural customers
- Design the appropriate promotion strategies for rural markets
- Choose the suitable channel to distribute products in a rural market

MSCY 009 SALES AND DISTRIBUTION MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn the concepts of selling and salesmanship
- Gain knowledge on different aspects of sales planning
- Get trained on the process of selling and managing sales force
- Aware of the structure and operation of the distribution channels
- Gain knowledge on designing and managing channels

MODULE I INTRODUCTION 06

Selling and Salesmanship: Definition, evolution, importance - Selling vs Marketing - Qualities of good salesperson - Roles and duties of sales officer - Career and positions in selling - Sales organization - Theories on selling - Types of selling

MODULE II SALES PLANNING 06

Personal selling Objectives - Sales forecasting - Sales budget - Sales quotas - Sales territories.

MODULE III PERSONAL SELLING PROCESS & SALES FORCE MANAGEMENT 06

Personal selling process: prospecting, pre-approach, appointment, demonstration, sales talk & demo, handling sales resistance, negotiating, closing - Overview of the functions of sales force management: recruiting, training, motivating and compensating salespersons - Sales expenses - sales contests - Sales ethics.

MODULE IV DISTRIBUTION CHANNELS: STRUCTURE AND OPERATION 06

Distribution channels: need, functions, types, selection - Channel institutions - VMS & HMS - Wholesaling: definition, need, classification, functions, strategies - Retailing: definition, need, types, formats, functions, strategies - Agents and other middlemen - Overview of the functions of physical distribution management.

MODULE V DESIGNING AND MANAGING CHANNELS 06

Designing channel systems - Channel management: conflict handling, performance and evaluation.

Total Hours: 30

REFERENCES:

3. Tapan K. Panda and Sunil Sahadev. (2012). Sales and Distribution Management, New Delhi: Oxford University Press.

OUTCOMES:

On successful completion of the course the student will be able to:

- Apply the concepts of selling and salesmanship in the selling process
- Arrive at a realistic and executable sales plan
- Handle the various aspects of selling process effectively
- Select the appropriate intermediaries for physical distribution
- Design and manage the distribution channel for better performance

CSC6121 DIGITAL MARKETING

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn the role and significance of digital marketing within a larger marketing strategy
- Gain knowledge in designing digital marketing strategies
- Learn to evaluate and implement a comprehensive digital marketing plan
- Get insight into various web marketing tools and techniques
- Get acquainted with social media and other digital marketing platforms

MODULE I DIGITAL MARKETING FUNDAMENTALS 06

Introduction to Digital Marketing - Online marketplace analysis: Micro-Environment, The Internet Macro-Environment

MODULE II DIGITAL STRATEGY DEVELOPMENT 06

Digital marketing strategy - The Internet and the Marketing Mix - Relationship Marketing using Digital Platforms

MODULE III DIGITAL MARKETING: IMPLEMENTATION & PRACTICE 06

Delivering the online customer experience - Campaign planning for digital media - Marketing communications using digital media channels - Evaluation and improvement of digital channel performance - Web Analytics - Business-to-consumer digital marketing practice - Business-to-business digital marketing practice

MODULE IV WEB MARKETING TOOLS AND TECHNIQUES 06

Web Marketing (E-commerce, Affiliate Marketing, promotional or informative web sites) - Online Advertising - Display Advertising - Email Marketing - Search Engine Optimization (SEO) and Search Engine Marketing (SEM) - Pay per click - Cost per impression - Video & Audio Marketing (Podcasting).

MODULE V SOCIAL MEDIA, CONTENT AND MOBILE MARKETING 06

Social Media Marketing - Micro Blogging - Content Marketing - Mobile Marketing - Mobile Apps - Other Digital Marketing platforms.

Total Hours: 30

REFERENCES:

1. Dave Chaffey and Fiona Ellis-Chadwick, “Digital Marketing: Strategy, Implementation and Practice”, Pearson Education, 5th Edition, 2012
2. Glen Urban, “Digital Marketing Strategy: Text and Cases”, Prentice Hall, 1st Edition, 2004.
3. Jed Alpert, “The Mobile Marketing Revolution: How your brand can have a one-to-one conversation with everyone”, Tata McGraw Hill, 1st edition, 2012.

OUTCOMES:

On successful completion of the course the student will be able to:

- Apply digital marketing concepts to market various products
- Formulate strategies for digital marketing of products
- Evaluate and implement a comprehensive digital marketing campaign
- Explore and choose appropriate web marketing tools and techniques to market products
- Design content for social media marketing and other digital marketing platforms

ELECTIVES - FINANCIAL MANAGEMENT

MSCY 016	SECURITY MARKET AND ANALYSIS	L	T	P	C
		3	0	0	2

OBJECTIVES:

The objective of the course would be to

- make an awareness on the different types of investment instruments and its valuation
- sensitize about the stock market
- give an exposure to stock market trading
- provide knowledge on the technical & fundamental analysis on the financial instruments

MODULE I INVESTMENT SETTING 04

Financial Markets- Financial Assets/Instruments – Investment Objectives- Risk and Return - Analysis of different types of Risks and Return – Measures of Return and Risk- Determinants of Required Rate of Return- Risk free rate and factors influencing the risk free rate - Risk Premium

MODULE II CAPITAL MARKET 04

Organization and Function of Equity Market, , Bond Market, Mutual Funds market and derivatives market- Primary market and Secondary Market, functions and Trading mechanism, Investor protection, Roles and Responsibilities of SEBI in Capital Market.

MODULE III VALUATION 06

Valuation of Equity Shares: Theory of Valuation - Alternative Valuation - Bond Valuation- Computing Bond Yields. Calculation of future bond prices, Yield curve, Determination of interest rates.

MODULE IV EFFICIENT MARKET HYPOTHESIS 04

Efficient Market Concept - Different forms of Efficiency- Random walk theory- Challenges to the Efficient Market Hypothesis

MODULE V FUNDAMENTAL & TECHNICAL ANALYSIS 10

Fundamental Analysis: Economic Analysis - Macro economic activity and security Markets - Economic Series and Stock Prices - Industry Analysis: Business Cycle

and Industry Sectors - Evaluating the industry life cycle - Analysis of Industry Competition Estimation of Industry Rates of Return. Company Analysis - Firm Competitive Strategies - SWOT Analysis. Analysis of Growth and Value Companies Financial Statement Analysis Major Financial Statements. Computation and Analysis of Financial Ratios. Technical Analysis: Assumptions, Advantages and Challenges – Technical Trading Rules and Indicators - Technical Analysis of Equity Markets

Total Hours: 30

REFERENCES:

1. Donald E. Fischer & Ronald J.Jordan, “Security Analysis and Portfolio Management“, 8th Edition, Prentice Hall of India (P) Ltd, 2008.
2. V.A. Avadhani, “Security Analysis and Portfolio Management” 10th Edition, Himalaya Publishing House, 2011.

OUTCOMES:

Students would be able to

- Identify different types of investment instruments and its valuation
- Trade in stock market
- Test the market for its level of efficiency
- Do technical analysis on the financial market instruments
- Do fundamental analysis on the financial performance of firms

MSCY 017 FINANCIAL SERVICES

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course are to enable the students to:

- Provide an overview of the financial services sector
- Understand the concept of hire purchasing and leasing
- Appreciate the functions of merchant banking and depository services
- Identify the different types of mutual funds and the importance of credit rating
- Create awareness about various fund based services

MODULE I INTRODUCTION 02

Introduction to Financial Services: Objectives - Importance - Nature - Scope - fund based - fee based services

MODULE II HIRE PURCHASE & LEASING 09

Hire Purchase: Meaning - features - Rights - Legal, Taxation and Accounting aspects of HP. Leasing: Meaning - features - types/forms - accounting frame work- Tax implication

MODULE III MERCHANT BANKING AND DEPOSITORY SERVICES 09

Merchant banking services - capital issue management - pricing of issue - marketing of issues - SEBI - Securities Appellate Tribunal. Concept of Depository: Function - Pros & Cons -Functioning - Role of NSDL, CSDL.

MODULE IV MUTUAL FUNDS AND CREDIT RATING 03

Mutual funds: meaning, definition, objectives, advantages and types of Mutual Funds. Credit rating: definition, advantages, process and limitations - country, Business, SME, Personal.

MODULE V FUND BASED FINANCIAL SERVICES 07

Factoring: definition, functions of a factor, types. Bills discounting: concept, types of bill of exchange - Consumer finance - Chit Funds. - Real estate finance - reverse mortgaging - Venture capital financing - process - stages. Micro finance - SRO (Self Regulated Organisation) - standard and principles - scale - micro credit**.**

Total Hours: 30

REFERENCES:

2. M.Y. Khan, “Financial Services”; Tata McGraw-Hill Education, 2004
3. Machiraju, “Indian Financial System”; Vikas Publishing House, 2nd Edition, 2002.

OUTCOMES:

Students would be able to

- find the range and diversity of financial services.
- apply the concepts and procedure involved in hire purchasing and leasing in the practical scenario.
- make use of merchant banking and avail depository services as and when they require.
- take investment decision relating to different type of mutual fund based on the credit rating information.
- utilize fund based services in real life scenario.

MSCY 018 INTERNATIONAL FINANCIAL MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students understand

- the importance of International Finance
- Foreign Exchange Market
- Exchange rate determination and forecasting
- Foreign trade financing
- Capital budgeting for multinational corporations

MODULE I INTRODUCTION 04

Multinational financial Management - objectives of MNCs - difference between domestic and International Financial Management - Reasons for increasing importance of International Finance - challenges and opportunities before an MNC.

MODULE II MARKET FOR FOREIGN EXCHANGE 06

Definition of foreign exchange market and the exchange rate - quotations at the foreign exchange market - spot market - forward market - settlement of transactions in the international market. Foreign Exchange Management Act (FEMA). Indian Forex Market - structure - exchange rate fixation.

MODULE III EXCHANGE RATE DETERMINATION AND FORECASTING 08

Theories of exchange rate determination. The need and importance for forecasting exchange rates - forecasting techniques - technical forecasting - fundamental forecasting - limitations of fundamental forecasting - market based forecasting.

MODULE IV FINANCING FOREIGN TRADE 06

Problems faced by developing countries for promoting trade. International Commercial Terms (INCOTERMS) - Credit risk - management of credit risk - Letter of Credit - types of credit to exporters. International trade financing in India - pre shipment and post shipment credits - EXIM Bank - ECGC. Capital and current account transactions

MODULE V CAPITAL BUDGETING FOR MULTINATIONAL CORPORATIONS 06

Input for multinational capital Budgeting - complexities of multinational capital budgeting exercise - factors to be considered in multinational capital budgeting. Foreign exchange exposure.

Total Hours: 30

REFERENCES:

1. Alan C.Shapiro, “Multinational Financial Management”, Wiley John Wiley & Sons Inc.,2005
2. A.K Seth, “International Financial Management,” Galgotia Publishing Company. New Delhi, 2004.
3. Jeff Madura ,“International Financial Management” Thomson Learning, 2005.
4. Reid W. Clich, Joshua D Coval, “ International Financial Management” Prentice Hall, 2004.

OUTCOMES:

At the end of this course, the students would be able to:

- Identify the importance of International Financial Management
- Perform settlement of transactions in the international markets
- Forecast exchange rates
- Manage the credit risks involved in international trade
- Analyse different projects using capital budgeting techniques for multinational corporations

MSCY 019 STRATEGIC FINANCIAL MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course are to enable the students to:

- Know the determinants of fixed and working capital in an industry and causes and remedies of over and under capitalisation
- Understand how risk can be minimized by using risk adjusted techniques in capital budgeting
- Understand and apply the concept of point of indifference in capital budgeting decisions
- Know the theories behind capital structure
- Get an overview about the dividend theories

MODULE I INTRODUCTION 04

Financial Planning - meaning, principles and steps. Fixed and working capital - meaning and determinants. Over and under capitalisation - meaning, causes and remedies.

MODULE II INVESTMENT DECISIONS-RISK ANALYSIS IN CAPITAL BUDGETING 10

Appraisal of risky investments - pay back period method, risk adjusted discount rate method, certainty equivalent method , sensitivity analysis, probability technique, decision tree approach, and simulation technique.

MODULE III FINANCING DECISIONS - POINT OF INDIFFERENCE 03

Capital structure - meaning and determinants. Point of indifference - optimum capital structure.

MODULE IV FINANCING DECISIONS - CAPITAL STRUCTURE THEORIES 07

Capital structure theories - meaning and general assumptions, Net income approach, Net operating income approach, Modigiliani and Miller approach, Arbitrage process.

MODULE V DIVIDEND DECISIONS 06

Dividend - meaning and types of dividend, types of dividend policy, determinants of dividend policy. Dividend theories - Walter's Model, Gordon's Model, Modigliani and Miller's Hypothesis.

Total Hours: 30

REFERENCES:

3. M Y. Khan and P.K Jain, "Financial Management - Text, Problems and Cases," Tata Mc Graw Hill Education Pvt. Ltd., 3rd reprint, 2012.

OUTCOMES:

At the end of the course, the students would be able to:

- Ascertain the determinants of fixed and working capital requirements for a particular type of industry.
- Minimize the risk in company's projects by using risk adjusted techniques of capital budgeting.
- Find the level of Earnings before Interest and tax at which point of indifference occur for two different companies in a sector having two different capital structures.
- Prove or disprove the theories of capital structure.
- Prove or disprove the theories of dividend policies.

MSCY 020 FINANCIAL REENGINEERING

L	T	P	C
3	0	0	2

OBJECTIVES

The objectives of the course is to make the students aware of

- Process and forms of financial reengineering
- Turnaround strategies involved in coporate restructuring
- Importance Strategic cost management in financial restructuring
- Different Sources of short and long term funds
- Role of financial institutions in Financial reengineering

MODULE I INTRODUCTION 04

Financial reengineering - meaning- definition - scope - importance. Process of financial reengineering.

MODULE II CORPORATE RESTRUCTURING & TURN AROUND STRATEGIES 08

Corporate sickness - meaning - symptoms - causes - rehabilitation of sick units - problems faced by banks in rehabilitation of sick units. Turn around strategies : Mergers & Acquisition - legal aspects - financial framework.

MODULE III FINANCIAL RESTRUCTURING & STRATEGIC COST MANAGEMENT 08

Debt and Equity Restructuring, Asset Restructuring - Cost Management - objectives of cost management system -The concept of Economic Value Addition - Market Value Addition.

MODULE IV SOURCES AND COST OF CAPITAL 06

Flexibility of Capital Structure - Long term sources - equity - debentures - preference shares - long-term loans - FOREX based sources - Short term sources - Commercial paper, Inter corporate investment, public deposits. Cost of capital- equity capital - preference capital - debenture - weighted average cost of capital.

MODULE V ROLE OF FINANCIAL INSTITUTIONS IN FINANCIAL REENGINEERING 04

Role of Development Financial Institutions - Industrial Development Bank of India - Industrial Finance Corporation of India- SIDBI, Board for Industrial and Financial

Reconstruction (BIFR). Venture capital financing - meaning - special features - stages of financing - exit from venture capital investment.

Total Hours: 30

REFERENCES:

4. R. C. Sekhar and A. V. Rajagopalan, “Management Accounting”, Oxford University Press, 2013.

OUTCOMES:

At the end of the course, the students will be able to

- Differentiate different forms of financial reengineering
- Identify sick unit and apply turnaround strategies to rehabilitate sick units
- Apply strategic cost management concepts in financial restructuring
- select appropriate financial institution for short and long term sources of funds.
- Appreciate the role of financial institution in the process of financial reengineering.

MSCY 021 DERIVATIVES MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course are to enable the students to:

- Understand the Concept of derivatives, its types and instruments.
- Understand the markets where these instruments are traded, its mechanism & the underlying strategies
- Understand the range and diversity of derivatives market and how they relate to the needs

MODULE I DERIVATIVES - INTRODUCTION 06

Introduction - Types of derivatives - Markets - Distinction between markets - Economic functions of derivatives market - Role of derivatives market - Advantages of derivatives market -Downsides in derivatives market

MODULE II DERIVATIVES INSTRUMENTS 06

Futures and forwards - Mechanics of the market - Margin requirements - settlement of Index Futures contract- price quotations -Stock index futures - Nifty futures - Sensex futures contract Options **-** Types of options contract -- Mechanics of the market- price quotations- margin system - stock index and stock options - Swaps **-** Mechanics of the market - Interest rate swaps - currency swaps -price quotations -financial intermediary

MODULE III PRICING & VALUATION I 06

Pricing of futures and forwards - Assumptions - hedging with futures - Hedging strategies - Hedge ratio. Valuation of interest rate swaps and currency swaps - credit risk

MODULE IV PRICING & VALUATION II 06

Assumptions in option price analysis - Factors affecting option prices - Put-call parity - Options pricing & options pay off - Models - Hedging and Arbitration opportunities

MODULE V DERIVATIVE MARKET IN INDIA 06

Need for Derivative Markets in India - Evolution of Derivative Markets in India - Derivatives Instruments Traded in India - Effect of derivative market in India - Participants in Indian derivatives market - Regulations - Factors contributing to the

growth of Derivative market in India - Institutional frame work of Derivatives market in India - requirements for a successful Derivatives Market

Total Hours: 30

REFERENCES:

4. Don M. Chance, Robert Edwin Brooks, An Introduction to Derivatives and Risk Management, South-Western Cengage Learning, 2013
5. S. Kevin, Commodity And Financial Derivatives, PHI Learning Pvt. Ltd.,2010.

OUTCOMES:

The students would be able to

- Realize the range and diversity of derivative instruments available
- calculate the price of option derivatives
- mitigate the risk through Forwards and futures instruments
- mitigate the risk through options instruments
- Comprehend the current market situations

MSCY 022 RISK MANAGEMENT AND INSURANCE

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students aware of

- Types of risk and benefits of risk management
- Various risk identification and evaluation techniques
- Different methods of risk reduction methods
- Different types of insurance policies
- Insurance accounting

MODULE I INTRODUCTION 04

Introduction to Risk Management - Nature of risk - terms and definitions. Organizing for Risk Management- Objectives of Risk Management- Scope of Risk Management- legal, financial and social benefits of managing risk.

MODULE II CLASSIFICATION AND CONTROL 05

Classifications of risk - Financial - Strategic - Operational - Market Risk. Enterprise Risk Management - Risk and opportunity - Influences and benefits of a risk management programme - Potential consequences of failing to manage risk.

MODULE III RISK MANAGEMENT PROCESS 06

Risk drivers - Internal and external influences on an organization - Risk Measurement and Pooling - Pooling and Diversification - Risk Control and Treatment - Risk avoidance - Risk reduction - Risk Retention - Risk analysis techniques - Barriers in the risk analysis process.

MODULE IV INTRODUCTION TO INSURANCE 07

Meaning- Nature, Types of Insurance- Emerging scenario - Principles of insurance- Functions of insurance - Reinsurance and double insurance - Profile of Insurance companies in India. Procedures for taking life, fire, marine insurance policy - Procedure for Settlement of claims- IRDA Act.

MODULE V MATHEMATICAL BASIS OF INSURANCE 08

Under Insurance - Premium calculation - Insurance accounting.

Total Hours: 30

REFERENCES:

1. Alka Mittal, Gupta S.L. “Principles of Insurance and Risk Management”, Sultan Chand and Sons, 2010.
2. James T.Gleason, “Risk; The New Management Imperative in Finance”, Jaico Publishing House, 2004.
3. Anand Ganguly, “Insurance Management”, New Age International, 2004.

OUTCOMES:

At the end of this course, the students would be able to

- Identify different types of risk
- Apply risk identification and evaluation techniques in the organization
- Suitably take decisions to avoid and reduce risk in the organization
- Develop enterprise risk management plan and choose appropriate insurance policy for the enterprise.
- Estimate the actual claim of stock using insurance accounting

MSCY 023 BANKING MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course is to make the students understand

- The different classification of Banks and their functions
- Banking practices and Capital adequacy norms in Banks
- Different instruments used in banking operations
- Bank lending and customer protection
- Technological developments in banking.

MODULE I INTRODUCTION 04

Origin of banks. Definition and classification of banks. Functions of Central bank and Commercial bank, RBI Act 1934.

MODULE II BANKING PRACTICES AND CAPITAL ADEQUACY NORMS 08

Banker and Customer, Bank deposits - Types, Procedure for opening a bank account - KYC norms in India, Anti money Laundering, Reserve requirements. Capital adequacy in Banks - Basel I, Basel II and Basel III norms. CAMELS rating of banks, Credit risk - Market risk - Operational risk.

MODULE III BANKING INSTRUMENTS 05

Cheques - Forms, Types of crossing, Endorsement, Bank Draft, Traveller's cheque, e-cheque, Credit, debit and smart cards.

MODULE IV BANK LENDING AND CUSTOMER PROTECTION 07

Forms of bank lending, Principles of sound lending, Security for bank advances, Modes of securing advances, Banking Ombudsman Scheme - Customer Protection Act - SARFAESI Act 2002.

MODULE V DIGITAL BANKING 06

Technological developments in Indian banking - Core Banking Services (CBS), e - banking, Anywhere Anytime - banking, Electronic Clearing Service (ECS), Electronic Fund Transfer (EFT) System, Real Time Gross Settlement (RTGS), Automated Teller Machines (ATM), Internet banking and Mobile banking, Indian Financial Network (INFINET)

Total Hours: 30

REFERENCES:

1. Clifford Gomez “Banking and finance”, PHI Learning Pvt. Ltd., New Delhi, 2011.

4. Sundharam and Varshney “Banking -Theory, Law and Practices” ,Sultan Chand & sons, New Delhi,2008.

OUTCOMES:

At the end of this course, the students would be able to

- Identify the different classification of banks and their functions.
- Appreciate Banking practices and capital adequacy norms in banks.
- Use the different instruments in banking operations.
- Identify the lending norms and the Banking Ombudsman Scheme available for customer protection.
- Use the different technological developments in banking operations.

MSCY 024 PORTFOLIO MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objective of the course would be to make the students understand:

- The process of investment & its alternatives through various informations
- Capital asset pricing model, multi factor model, and optimal portfolio selection model
- The techniques in portfolio construction
- The behaviour of investors and the stock returns.

MODULE I PORTFOLIO MANAGEMENT 06

MEANING: Investment, Speculation and Gambling, Investment objectives and investment process, Investment alternatives, Investment information - Measurement of Expected Risk and Return of Portfolio - Alternative Measures of Risk - Markowitz Portfolio Theory - The Efficient Frontier and Investor Utility

MODULE II CAPITAL ASSET PRICING MODEL 06

Overview of Capital Market Theory-Market Portfolio - Capital Asset Pricing Model-Assumptions- Security Market Line and Capital Market Line - Zero beta Model

MODULE III MULTI FACTOR MODELS 06

Arbitrage Pricing Theory (APT) Security Valuation and APT - Empirical Tests of APT- Estimating Risk in a Multi-factor Setting.

MODULE IV OPTIMAL PORTFOLIO SELECTION MODELS 06

Markowitz Theory - Sharpe's Single - Index Model - Lagrange Multiplier Theory.

MODULE V EQUITY PORTFOLIO MANAGEMENT STRATEGY 06

Passive vs. Active Management - Passive Equity Portfolio Management Strategy-Index Portfolio Construction Techniques - Tracking Error, Methods of Index Portfolio Investment. Fundamental Active Strategies - Technical Strategies - Market Anomalies - Value vs. Growth Investments - Investor Behavior and Stock Returns

Total Hours: 30

REFERENCES:

1. Dhanesh Kumar Khatri “Security Analysis and Portfolio Management (Paperback) 2012
2. Dhanesh Kumar Khatri “Investment Management and Security Analysis”: 2nd Edition Paperback - 2012
3. Prasanna Chandra “Investment Analysis and Portfolio Management (Paperback) 2012

OUTCOMES:

Students would be able to

- Identify the factors which affect the investor behaviour while constructing portfolios
- Construct a portfolio using Capital Asset Pricing Model
- Construct a portfolio using Multi Factor Models
- Select an optimal portfolio model
- Select a strategy for portfolio management

ELECTIVES - HUMAN RESOURCE MANAGEMENT

		L	T	P	C
MSCY 031	**MANAGERIAL BEHAVIOUR AND EFFECTIVENESS**	**3**	**0**	**0**	**2**

OBJECTIVES:

The course would:

- Provide inputs on the various dimensions of Managerial Job
- Create awareness concerning the importance of Professionalism
- Facilitate learning of techniques adopted by industries to measure managerial effectiveness
- Help in building emotional intelligence of students to function effectively in the corporate world.
- Help in updating knowledge about the emerging horizon for managers

MODULE I DIMENSIONS OF MANAGERIAL JOB 06

Managerial Job Dimensions: Theory proposed by Peter Drucker, Henry Fayol, Mintzberg, Fred Luthans - Managerial Skill Set: Art of Delegation; Time Management, Decision Making, Job - behaviour skills, Listening skills, Socializing, Optimizing skills - Gender - leadership myths: Benefits of Androgynous Management-Managerial behaviour models: SHL corporate leadership model-case studies.

MODULE II MANAGERS ROLE IN PROFESSIONALISM 06

Professionalism: Importance of Professionalism; Key elements of Professionalism, Managers role in managing awareness, Developing intellectual discipline, Professional discipline- Creativity and Innovation-Brain Storming, Synectics, Innovation and Entrepreneurship-Professional goals across career stages: Relationship between Age-creativity, Age-performance, Age-motivation, Career Management - case studies.

MODULE III MEASURING MANAGERIAL EFFECTIVENESS 06

Introduction to Measuring Managerial Effectiveness- the Person, Process, and Product Approach; Global measures of managerial effectiveness; Current Industrial and Government practices in the management of managerial effectiveness - case studies.

MODULE IV EMOTIONAL INTELLIGENCE FOR MANAGERS 06

Definition, Elements of Emotional Intelligence, Emotional Intelligence and Eustress, Issues linked to low Emotional Intelligence, Role of Emotional Intelligence in building team spirit; Personality and emotional Intelligence; Managing simple and complex emotions, Psychological capital - exercises.

MODULE V EMERGING HORIZONS FOR MANAGERS 06

Recent Issues and Challenges for Managers - Discussion and Presentation.

Total Hours: 30

REFERENCES:

1. Peter. F. Drucker, The Effective Executive, New York: Harper Collins, 2007.
2. Haider Yasmeen, Managerial Behavior and Effectiveness, Course Material, Chennai: Centre for Distance Education, Anna University, 2007
3. Watts, S.H. Managing Technical People, Delhi: Pearson Education,2007
4. Daniel Goleman, Emotional Intelligence, New York: Bantam Dell, 2006.

OUTCOMES:

After completing the course the students will be able to

- have a panoromic understanding of managerial job dimensions. which inturn will help them to analyze and suggest suitable managerial styles for different corporate situations .
- augment the professional skills and the course facilitates career escalation
- list the various global methods of measuring managerial effectiveness and that understanding will help them to enhance their own effectiveness.
- match their personality traits with those expected for career enhancement. They would be able to work accordingly towards personality transformation.
- comment and propose solutions for any issues pertaining managers.

MSCY 032	HUMAN RESOURCE ACCOUNTING AND AUDIT	L	T	P	C
		3	0	0	2

OBJECTIVES:

The specific objectives of the course are to make the students:

- Learn the basics and importance of HR Accounting and Audit
- Equip with the necessary skills and techniques required for managerial function of HRD Audit.
- Elaborate the various methods/tools and process of auditing the various areas of Human Resource

MODULE I INTRODUCTION 07

Introduction, HR as asset, Definition of Human Resource Accounting and Auditing, Human Resource Accounting - concepts, methods and Applications, Human Resource Accounting Vs Other Accounting. Human Capital – Introduction, Types – Intellectual Capital, Social Capital, Emotional Capital and Spiritual Capital, Conventional and Modern approaches for Human Capital Measurement, Issues in Human Capital Measurement

MODULE II HUMAN RESOURCE COST AND RETURN ON INVESTMENT 07

Human Resource Cost - Monetary Value Approach, Non Monetary Value based approach, Investment in employees - Human Resource Development, Development of HR ROI through high performance employees, Measurement of Group Value.

MODULE III HUMAN RESOURCE ACCOUNTING SYSTEM AND SCORE CARD 06

Developing Human Resource Accounting System, Implementation of Human Resource Accounting System, Integration with Other Accounting system, HR Score Card - constituents, instrument in HR Audit, Human Resource Accounting Software

MODULE IV HUMAN RESOURCE AUDIT 05

Role of Human Resource Audit in Business Environment, HR Audit - Objectives, Concepts, Benefits, Importance, HR Quality Policy Formulation – ISO 9000, Standard, Setting Audit goals, Defining audit team, Areas of HR Audit, Methodology and Instruments of HR Audit, Audit Process and Issues in HR Audit

MODULE V HUMAN RESOURCE AUDIT REPORT 05

Purpose of HR Audit Report, Preparation of Report Design, Use of HR audit report for Business Environment, Recent Advancement in Human Resource Audit and Accounting

TOTAL HOURS: 30

REFERENCES:

1. Eric. G. Flamholtz, "Human Resource Accounting" (3rd edition), USA, Kluwer Academic Publishers, 1999.
2. T.V. Rao, "HRD Audit", New Delhi, Sage Publications, 1999.
3. John McConnell, "Auditing your Human Resources Department" (2nd edition), New York, AMA's publishing division, 2011

OUTCOMES:

At the end of the course the students should be able to:

- distinguish between human resource accounting and other accounting.
- identify the human resource cost using different approaches of cost calculation.
- Design human resource accounting system for the organizations.
- Develop HR audit process
- Prepare audit report to improve the business environment.

MSCY 033	PERFORMANCE MANAGEMENT AND TRAINING	L	T	P	C
		3	0	0	2

OBJECTIVES:

The course would focus on:

- Developing knowledge about Strategic Performance Management System
- Understanding the three stages of SPM Cycle
- The Importance of Training need Analysis
- The Methodology applied for Evaluation of Training
- Creating awareness about the future trends in Training and Development

MODULE I STRATEGIC PERFORMANCE MANAGEMENT 05

Strategic Performance Management: Definition, Process, Benefits, Strategic Performance Management Development Cycle, Feasibility Analysis for SPM-Case Studies.

MODULE II STRATEGIC PERFORMANCE MANAGEMENT DEVELOPMENT CYCLE 07

Designing a Strategic Management Model - Responsibility Structure, Parenting Style, Strategic Objectives, Strategic Action Plans, Designing a Strategic Reporting Model - Critical Success Factors and Key Performance Indicators, Performance Measurement Pyramid, Result and Effort Indicators, Balanced Scorecard, Designing Performance Driven Behavioural Model - Organizational Performance - Driven Behaviour; Individual Performance - Driven Behaviour; Strategic Alignment.

MODULE III TRAINING NEED ASSESSMENT 06

Importance of Need Assessment, Methods used in Need Assessment, Need Assessment Process-Organizational Analysis; Person Analysis and Task Analysis, Competency Models

MODULE IV TRAINING EVALUATION 06

Reasons for Evaluating Training, Formative Evaluation; Summative Evaluation; Evaluation Process; Evaluating Outcome, Cognitive Outcome, Behavioural Outcome, Affective Outcome, Kirkpatrick's Four Level Framework of Evaluation Criteria, Determining Return on Investment; Measuring Human Capital and Training Activity**.**

MODULE V FUTURE OF TRAINING AND DEVELOPMENT 06

Challenges in Career Management, Cross-Cultural Preparation, Life-Long Learning, Self-Learning and Action/Outcome Based Training Program, Managing Dysfunctional Behaviors, Technology and Multimedia in Training-Discussion.

Total Hours: 30

REFERENCES:

1. Andre de Wal. “Strategic Performance Management”, New York: Palgrave Macmillan, 2007.
2. Raymond, A and Amitabh Deo. “Employee Training and Development”, New Delhi: Tata Mc Graw Hill, 2012
3. Topomoy Deb. “Training and Development, Concepts and Applications”, New Delhi: Ane Books India, 2008.
4. Irwin L. Goldstein. “Training in Organizations”, New Delhi: Cengage Learning, 2012.

OUTCOMES:

The students will be able to

- Use the feasibility analysis tool, to evaluate whether the organisation is ready to go in for strategic performance management system.
- Identify the type of Parenting Style followed by different business organizations. Formulate critical success factor and key performance indicators in their job environment.
- Design and schedule the training programme
- Measure Cognitive, Behavioral and Affective outcome of a training program.
- Discuss and comment on the technology oriented training programmes and action/outcome based training programmes.

MSCY 034	INDUSTRIAL RELATIONS AND LABOUR LEGISLATION	L	T	P	C
		3	0	0	2

OBJECTIVES:

The objectives of the course are:

- To provide information on the present scenario of industrial relations.
- To make students be aware about the causes and issues relating to Industrial conflicts and the way to resolve
- To get familiarize with the various social security and welfare measures in both statutory and non statutory practices in the industry
- To provide information about the industrial safety and preventive measures.
- To give an insight about the key labour laws

MODULE I HISTORY AND EVOLUTION OF INDUSTRIAL RELATIONSAND TRADE UNION MOVEMENT IN INDIA 04

Issues and Challenges in sustaining Cordial Industrial Relations (IR), Changing Role and Responsibilities of the Management, Union and Employees in the Stable IR. Trade Union Act- 1926, relevance and scope for improvement

MODULE II INDUSTRIAL CONFLICTS &THEIR RESOLUTION 08

Causes of Conflicts, Need for Managing and Resolution of Conflicts, Grievance Redressal Machinery as a tool for Resolving Conflict. Collective Bargaining - Industrial Disputes Act -- 1947, Manifestations of Conflicts such as Strike, Lock out, Go Slow and other Work Stoppage - Their Impacts and Resolution .

MODULE III SOCIAL SECURITY BENEFITS AND WELFARE MEASURES 06

Purposes of Various Statutory and Non Statutory Welfare Benefits. Present Trends and Practices in Extending Welfare Benefits under Settlements, Employee Provident Fund and Miscellaneous Act, 1952, The Employees state Insurance Act 1948,Payment of Gratuity Act 1972, Minimum Wages Act 1948,The Maternity Benefit Act 1961. Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013.

MODULE IV INDUSTRIAL SAFETY, HEALTH AND ENVIRONMENT 05

Accident Prevention - Education and Enforcement, Relevant Provisions and Factories Act, 1948and The Workmen's Compensation Act, 1923

MODULE V LABOUR LEGISLATIONS 07

History and Development of Labour Legislations, Uniqueness and complexities in the evolution of Indian Labour Laws. Key Labour Legislations: Industrial Establishment (Standing Orders) Act 1946. Contract Labour Regulation and Abolition Act 1970, Payment of Wages Act 1936,Child Labour Prevention and Regulation Act,1986,Equal Remuneration Act 1976, Migrant Workmen Act, 1979.

Total Hours: 30

REFERNCES:

1. C.B. Memoria, Sathish Mamoria and S.V.Gankar. Dynamics of Industrial Relations, Himalaya Publishing House, 3rd revised, 2012.
2. N.D. Kapoor Elements of Mercantile Law, Sultand Chand & Sons, 34th Reprint, 2013.
3. ArunMonappa, RanjeetNambudiri and PatturajaSelvaraj. Industrial Relations and Labour Laws, Tata McGraw Hill, 2nd Edition 2012.
4. P.N.Singh and Neeraj Kumar Employee Relations Management, Pearson, New Delhi, 2011.
5. S.K. Puri, Labour & Industrial Law, Allahabad Law Agency, New Delhi, 10th Edition, 2011.

OUTCOMES:

At the end of the course the students be should able to:

- Identify the contemporary aspects of industrial relations
- Choose the best machinery for industrial dispute settlement
- Analyze the various welfare and industrial safety measures
- List the various safety provisions to avoid accidents.
- Differentiate and apply the concepts of labour laws.

MSCY 035	ORGANISATIONAL STRUCTURE AND DESIGN	L	T	P	C
		3	0	0	2

OBJECTIVES:

The specific objectives of the course are to make the students:

- Learn how organizational goals are determined and organizational structures are framed.
- Discuss major organizational designs adopted in Multinational Companies and to know why organizations are continually being redesigned.
- To explore the effectiveness of the process of structuring and designing on the productivity and satisfaction of the employees.

MODULE I INTRODUCTION TO ORGANIZATIONS STRUCTURE AND DESIGN 07

Introduction, The evolution of Organization Theory, Organization life cycle – Models of Transformation, Organizational structure - Characteristics, Organization Design and Development - Design options; Challenges of Organizational Design, Organization Culture and Change, Features of organization; Basic - Open System model of Organization

MODULE II ORGANIZATIONAL GOALS 05

Definition, Official Vs Operative goal, Competing Goals, Benefits of organizational goals, Key Result Areas - Peter Drucker; Goal Formulation - Cyert March Approach, Coalition and Organizational goals, Side Payment, Organizational Slack, Means End Hierarchy; Goal Adaption and Change.

MODULE III DESIGNING ORGANISATIONAL STRUCTURE 05

Challenges of Design - Differentiation and Integration, Centralization and Decentralization, Standardization and Mutual Adjustment, Mechanistic and Organic Structure; Designing Organizational Structure – Authority, Control, Principles of Bureaucracy; Types of Organization Structure

MODULE IV ORGANISATION STRUCTURE: STRATEGY AND TECHNOLOGY 05

Strategy - Formulation, Implementation, Evaluation, Social System model, Rational System model, Leadership and Empowerment, Building a Learning Organization; Definition of Technology, Theories of Technology, Designing structure according to technology, Joan Woodward’s technology type, Perrows Technology Typology, Thompson: Technological Uncertainty, Impact of IT in Technological Design.

MODULE V ORGANISATION AND ITS ENVIRONMENT 04

Definition of Environment, Domain, Task Environment, Environment Design options, Theories of Environment- Resource Dependence Theory, Transaction Cost Theory, Continuance Theory, Pathological Syndromes, Population Ecology Theory, Strategic Choice Theory, Organizational System in Global Environment.

MODULE VI MANAGING ORGANIZATION EFFICIENTLY 04

Definition, Efficiency and Effectiveness, Approaches to effectiveness - Goal Approach, System Resource Approach, Stake Holder Approach, Business Process Re-engineering, Success and Failures in Organizational design, Creating a Modern Organization – Management and Leadership Challenges.

Total Hours: 30

REFERENCES:

1. Mirza .S. Saiyadain and Poornima Gupta, “Organization Structure and Design- An Indian Perspective”, New Delhi: MacMillan India Ltd, 2009.
2. Gareth.R.Jones and Mary Mathew, “Organizational Thoery, Design and Change” (6th edition), Noida: Pearson India Education Services Pvt.Ltd, 2015.
3. Stephen.P. Robbins and Mary Mathew, “Organization Theory”, New Delhi, Prentice Hall, 2009
4. Arthur G. Bedeian and Raymond F. Zammuto, “Organisations - Theory and Design”**,** Orlando: The Dryden press international edition, 1990
5. Subba Rao. P, “Management and Organisation Behaviouor” (1st edition), Mumbai: Himalaya Publishing house, 2004.

OUTCOMES:

At the end of the course the students should be able to:

- Draw open system model for organizations.
- Develop official and operative goals for organizations using key result areas.
- Draw structure of an organization by analyzing the strategy adopted.
- Design organization according to technology.
- Scan environment as an important ingredient of structuring the organization.
- Develop measures of effectiveness for the organization

MSCY 036	STRATEGIC HUMAN RESOURCE MANAGEMENT	L	T	P	C
		3	0	0	2

OBJECTIVES:

The objectives of the course are to make the students:

- Identify Strategic role of Human Resource Management in organizations.
- To generate new HR strategies to meet recent business needs.
- Learn Human Resource Information Systems and its importance in taking strategic decisions.

MODULE I INTRODUCTION TO STRATEGIC HUMAN RESOURCE MANAGEMENT 06

Definition, Objectives, Investment perspective of Human Resource Management – Traditional and Non Traditional Approaches, Roles of Strategic HR manager , Challenges in Strategic Human Resource Management; Models of strategy - Industrial Organisation Model, Resource Based Model; Process of Strategic Management

MODULE II THE EVOLVING/ STRATEGIC ROLE OF HUMAN RESOURCE MANAGEMENT 06

Difference between Strategic HRM and Traditional HRM, Linking the People with the Strategic needs of Business- 5P model; SHRM and Business Strategy; Strategic Fit, Strategic HRM model, Barriers and Outcome of Strategic HRM. Strategic Renewal - Downsizing, mergers and acquisitions, restructuring, Evaluating and Measuring the Impact of Strategic contributions on traditional HR areas

MODULE III STRATEGIES FOR HUMAN RESOURCE FUNCTIONS 06

Employee Resourcing strategy - Employer Branding, Contest recruiting, E-Recruiting, virtual hiring, Job Design strategies , Strategies for Managing Performance - High Performance Work Systems, Strategic Human Resource Development - Job Design strategies, Aggregate Planning, Talent Pipeline, Succession planning, Virtual Learning, Strategic Compensation Management.

MODULE IV TRENDS IN STRATEGIC HUMAN RESOURCE MANAGEMENT 06

Diversity Management, Cross Cultural Management, Employee Retention Strategies - Dual Career Couples, Work Life Balance, telecommuting, Flexi hours, Work from home policy, Executive education, Employee Empowerment, Job

Enrichment, Employee Assistance Programs, Autonomous Work Teams- Quality Circles, HR Metrics and Business Performance, Corporate Social Responsibility.

MODULE V HUMAN RESOURCE INFORMATION SYSTEM 06

Definition, Human Resource Information System - Life Cycle, Planning and Designing, Cost Benefit Value analysis, Pre Implementation and Implementation Stage of HRIS, Tools in HRIS development, HRIS Applications and Limitations.

Total Hours: 30

REFERENCES:

1. Jeffrey A.Mello, Strategic Human Resource Management (2nd edition), NewDelhi, Thompson Publication, 2003.
2. Michael J. Kavanagh, Mohan Thite. Human Resource Information Systems: Basics, Applications, and Future Directions, New Delhi, Sage Publications, 2009
3. Saiyadin, M.S. Human Resource Management (3rd edition), New Delhi, Tata McGraw hill, 2003.

OUTCOMES:

At the end of the course the students should be able to:

- Explain the strategic management models and process.
- Differentiate strategic and traditional HRM and frame HR strategies form business startegy.
- Develop talent management strategies for organization.
- Strategically manage diversified workforce.
- Plan and design Human Resource Information System for organizations.

MSY 037	INTERNATIONAL HUMAN RESOURCES MANAGEMENT AND ORGANISATIONAL BEHAVIOUR	L	T	P	C
		3	0	0	2

OBJECTIVES:

The course would facilitate the students to

- Learn the concept of IHRM and OB
- Be familiar with the global culture and identify the strategy to manage workforce diversity in multinational organization system
- Relate the importance of motivating employees while managing international workforce
- Identify the challenges facing the global business today with respect to human resource planning, compensation and performance management
- Explain the reason for success and failures in global assignments.

MODULE I INTRODUCTION 06

Defining IHRM – Differences between domestic HRM and IHRM – Variables that Moderate the Differences – Overview of international dimensions of OB – Exploring how cultural differences affects organization – International Organizational behavior challenges for management– Introduction on Expatriates, Non-expatriates and Inpatriates

MODULE II DIMENSIONS OF IHRM IN DIFFERENT CULTURAL BACKGROUND 06

Global staffing alternatives - Selecting and evaluating international employees, – Understanding differences in employee attitude and behaviour - Managing diversity and ethical issues in an international context – Corporate culture, Regional & national cultures, Industry specific culture and reasons for differences– Reasons for Expatriate Failure – Female Expatriates –– Dual Career Practices

MODULE III INTERNATIONAL COMPENSATION PRACTICES: MOTIVATING DIVERSITY 06

Objective of International Compensation – Key Components of an International Compensation Program – Approaches to International Compensation – Rewarding and motivating international employees – Patterns in Complexity, Challenges and Choices.

MODULE IV PERFORMANCE MANAGEMENT IN INTERNATIONAL CONTEXT 06

Performance Management of International Employees – Performance Appraisal of International Employees – Performance Culture of Different Countries-Case studies.

MODULE V INTERNATIONAL HUMAN RESOURCE MANAGEMENT TRENDS 06

Managing multicultural teams– Communicating effectively across culture – Effective leadership in a multicultural environment - Global Career Path – Reasons for accepting or rejecting Global Assignments-Role of IT in Human Resource Networking across Globe.

Total Hours: 30

REFERENCES:

1. Peter J Dowling, Marion Festing and Allen D Engle, International Human Resource Management, Cengage Learning, 2008.
2. K. Ashwathappa and Sadhana Das, International Human Resource Management, Mc. Graw Hill Companies, 2007.
3. Tony Edwards and Chris Rees, International Human Resource Management, Pearson Education, 2005.
4. Dean McFarlin and Paul Sweeney, International Organizational Behavior: Transcending Borders and Cultures, Routledge, 1st Edition, 2012.
5. Nancy J. Adler and Allison Gundersen, International Dimensions of Organizational Behavior, Cengage Learning, 5th Edition, 2007.

OUTCOMES:

At the end of the course the students would be able to:

- Analyze the importance of OB in IHRM
- Evaluate the impact of global culture in managing workforce in multinational organization system.
- Adopt the best strategy to motivate the international workforce.
- Critically analyze the impact of contemporary issues and global imperatives on human resource planning, compensation and performance management.
- Examine success and failure in global assignments.

MSCY 038	NEGOTIATION SKILLS AND CONFLICT MANAGEMENT	L	T	P	C
		3	0	0	2

OBJECTIVES:

The course would focus on:

- Identification of process by which negotiation situations emerge
- Creating knowledge about the dynamics and scope of negotiation situations
- Developing sensitivity towards the behaviour and feelings of negotiating members
- Helping students to resolve organization conflict

MODULE I INTRODUCTION TO NEGOTIATION 06

Meaning of negotiation, Negotiation process, Assumptions in negotiation, Model of Negotiation, Characteristics of effective negotiators, Skills required to negotiating effectively.

MODULE II PLANNING FOR NEGOTIATION 06

Game plan-Pre negotiation planning, During negotiation behaviour, Negotiation dance, Influence mechanism, Post negotiation under taking. National Styles of Negotiation-French, Japanese, Chinese and Americans

MODULE III PERCEPTION AND LISTENING 06

Characteristics of object of perception, Characteristics of perceiver, Freudian Theory. Overcoming perceptual problem, feedback, listening barriers, Benefits of active listening, Ethics in Negotiation, Key Factors Affecting Individual and Group Negotiation

MODULE IV CONFLICT RESOLUTION 06

Nature of conflict, Condition for cooperation, competition and conflict. Conflict management strategies: Avoidance, accommodation, Compromise, Collaboration, Competition.

MODULE V DISTRIBUTIVE AND INTEGRATIVE BARGAINING 06

Distributive Bargaining: Characteristics of distributive bargaining, distributive tactics, Ethics in distributive bargaining, Trust in negotiation, Persuasion, integrative bargaining: Characteristics, Approaches, Difficulty, and Importance. Third Party Intervention - conciliation, arbitration, adjudication, collective bargaining

Total Hours: 30

REFERENCES:

1. Mirza S. Saiyadain. Negotiation, New Delhi: McMillan 2012
2. Dean G. Pruitt. Negotiation Behaviour, New York: Academia Press, 1981
3. Roy J. Lewicki and Joseph A. Liflerer. Negotiation, Illinois, Irwin: Home wood, 1985.

OUTCOMES:

After completing the course the students would be able to

- effectively follow the negotiation process and understand the ethics of negotiation.
- list the skills required for an effective negotiation.
- plan their negotiation strategy keeping in mind the characteristic of their adversaries.
- understand the National Styles of negotiation.
- enhance their listening and perceptual ability for better negotiation
- take appropriate decision regarding the strategies to be adopted for conflict resolution
- practice integrative as against distributive systems of negotiation and will be able to negotiate salary judiciously at the time of job interview.

ELECTIVE - SYSTEMS MANAGEMENT

		L	T	P	C
MSCY 046	**BUSINESS ANALYSIS AND SYSTEMS DEVELOPMENT**	**3**	**0**	**0**	**2**

OBJECTIVES:

The objectives of the course will be to enable the students to:

- Get a “hands on” exposure to the field of ongoing business analysis through the software modules
- Gain a detailed understanding of Data flow diagrams, objects, class, Business models
- Understand the overall link(relationship) between requirement specifications and technologies
- Comprehend the issues, standards, socio-ethical implications, and best practices relating to system development
- Analyze and design a project / case study topic based on business and technical perspectives of their own selection.

MODULE I OVERVIEW OF A BUSINESS ANALYST: ROLES AND RESPONSIBILITIES 06

Definition, Introduction and Overview of The BA’s Activities Throughout the System Development Lifecycle. Roles and Responsibilities of A BA – Models and Methods of SDLC - Initiation Phase – Discovery Phase – Construction Phase – Final V & V Phase – Closeout Phase.

MODULE II FUNDAMENTALS OF BUSINESS ANALYSIS AND DEVELOPMENT 06

Fundamentals of Business Analysis – Objectives – All Links in Chain of Reasoning – Process Rules – Data Rules, Drivers Module – Objectives Module – Project Solution & Scope - Scope of The BA Role – Stakeholders – Context – Scope – User Definitions.

MODULE III THE BUSINESS ANALYST TOOLKIT 06

The BA Toolkit – Introduction to All Activity and Network Diagrams Block Diagram – Swimlane Diagram - Business Process Diagram – ER diagram - Use Cases – Activity Modelling – Conceptual Data Modelling – Key Modelling Elements – Generating Alternative Design Strategies – Selecting Best Alternative Strategy.

MODULE IV REQUIREMENTS ANALYSIS AND PROCESS MODELING 06

Identifying Requirements, Risk Analysis and Business Requirement Document Templates – Business Requirements Development Table of Contents – Business Cases, Actors, Procedures – Post Implementation Follow-ups - Business and Functional Requirements - Process Modeling – Data Usage Rules – Process Execution, Dependency and Non-Functional Components.

MODULE V FUNCTIONAL DECOMPOSITION – DATA MODELING 06

Business Process Modelling Notations – BPNM Basics, Types – Connectors – Pools, Lanes and Message Flows – Gateways and Information Flow – Process Decomposition - Data Modelling – Components – Relationships and Attributes – Lab Practical Exercises.

Total Hours: 30

REFERENCES:

1. Howard Podeswa, “The Business Analyst's Handbook”, Course Technology PTR, 2008
2. Smart BA Professional training program material
3. Enterprise Architect 11 software training material
4. Jeffrey A. Hoffer, Joey F. George, Joseph S. Valacich, “Modern System Analysis and Design”, Pearson – Prentice Hall, 2007.

OUTCOMES:

After studying the course, the students would:

- Be familiar with using software like Bizagi, Enterprise Architect and Drawlite
- Design practical DFD models for business processes in the industry
- Utilize the recent developments in the field of system analysis, design and development such as agile development and SCRUM
- Recognize the major areas of study which include concepts of system analysis
- Design and incorporate the different life cycle models for project
- Identify KPI’s and link those processes in the data model

MSCY 047 DATABASE MANAGEMENT SYSTEMS

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course will be to enable the students to:

- Get introduced to the fundamentals of Database Management Systems.
- Comprehend the working of a relational model
- Recognize the structure and operations of different types of database designs
- Impart further knowledge about the objected oriented model
- Realise the imminent security issues coupled with database management.

MODULE I INTRODUCTION TO DBMS 06

Database Systems – Definition – Components – Advantages Over the File System – Objectives - Evolution

MODULE II MODELS 06

DBMS Architecture – Associations – Relationships – Mapping between Abstractions – Generalization – Classifications – Conceptual Data modeling – File Organization – Data Structure – Data Models: HDBMS, NDBMS, RDBMS, OODBMS

MODULE III DATABASE DESIGN 06

Relational Data Model – Relational Algebra – ER Diagrams – Data Dictionary – Normalization – Boyce Codd Normal Forms – Integrity – Relational Database Languages – Database Administration – File Structures and Indexing

MODULE IV OBJECT MODELLING 06

Object Oriented Concepts – Structure – Models and Databases – Object Oriented Life Cycle modeling – Objects, Classes, Patterns – Object Interaction modeling – Object Oriented Design - UML

MODULE V OPERATIONS AND MANAGEMENT 06

Client / Server and Databases - Data Warehousing - Query Processing - Concurrency Management - Heterogeneous and Homogenous Systems - Distributed Databases - Controls - Atomicity - Recovery - Security - Back-Up and Recovery

Total Hours: 30

REFERENCES:

1. Ramez Elmasri and Shamkant B. Navathe, “Fundamentals of Database Systems”, Fifth Edition, Pearson Education, 2008.
2. Abraham Silberschatz, Henry F. Korth and S. Sudharshan, “Database System Concepts”, Sixth Edition, Tata Mc Graw Hill, 2011.
3. C.J. Date, A. Kannan and S. Swamynathan, “An Introduction to Database Systems”, Eighth Edition, Pearson Education, 2006.
4. AtulKahate, “Introduction to Database Management Systems”, Pearson Education, New Delhi, 2006.
5. Raghu Ramakrishnan, “Database Management Systems”, Fourth Edition, Tata Mc Graw Hill, 2010.
6. Rob Cornell, “Database Systems Design and Implementation”, Cengage Learning, 2011.

OUTCOMES:

After studying the course, the students would:

- Differentiate database systems from file systems
- Utilize the Relational modelfor preservation of information
- Relate the practical applications of the different types of databases used in business
- Use the OOD concepts to record information in synchronous manner
- Use basic data visualization tools such as ER diagrams, design security concepts etc.
- Take necessary security measures to preserve confidentiality while working with databases

MSCY 048 E-COMMERCE TECHNOLOGY

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course will be to enable the students to:

- Expose the concept of electronic commerce and related technology
- Develop business requirements for technological infrastructure support needed for e-commerce
- Apply electronic and mobile commerce to conventional businesses
- Comprehend use of e-payment systems and security infrastructure in electronic commerce
- Gain insight in global e-commerce security requirments

MODULE I INTRODUCTION 06

Overview of Electronic Commerce – Driving force of Electronic Commerce – benefits, limitations and impact of electronic commerce - Types of EC Business Models - General Framework - Growth of E-Commerce

MODULE II TECHNOLOGY INFRASTRUCTURE 06

Internet - Introduction to Key Technology Concepts: Intranet, WWW, Concepts of Search Engines, Intelligent Agents, Forums, Chats, Streaming Media, Cookies - Approach to Building E-Commerce Site: Software, Hardware, Tools.

MODULE III BUSINESS APPLICATIONS IN E-COMMERCE & M-COMMERCE 06

E-Marketplaces - Retailing in E-commerce - Market Research - Advertising in E-commerce - Exchanges - Auctions - B2B E-Commerce - E-Procurement - E-Collaborations. Mobile Commerce - Characteristics of M-Commerce - Drivers of M-Commerce - Introduction to M-Commerce technology.

MODULE IV E-COMMERCE PAYMENTS AND SECURITY 06

E-Payment Systems - Principles of e-fund transfer, credit and debit card usage, E-check and unified payment systems - E-Billing presentment and payment - Security Threats: Malicious Code, Phishing, Hacking, Cybervandalism, Credit card Fraud, Spoofing, DOS, Sniffing, Insider Jobs - Technology Solutions - Encryption: Symmetric Key, Public Key, Digital Signatures, Digital Envelops, Digital Certificates.

MODULE V GLOBAL E-COMMERCE Strategy AND SOCIAL NETWORKS 06

Overview of electronic commerce strategies – electronic commerce for small and medium enterprises – relevance of social media – virtual communities – impact of social networks, Weblogs, RSS, Podcasting, Wikis, Internet Telephony, Video Conferencing

Total Hours: 30

REFERENCES:

1. Turban, E., King, D., Lee, J., & Liang, T. P. (2012). *Electronic commerce 2010: A Managerial Perspective* (6th ed.). New Delhi: Pearson Education.
2. Laudon, K. C., & Traver, C. G. (2011). *E-commerce: Business, technology, society*. New Delhi: Pearson.
3. Joseph, P. T. (2012). *E-commerce: An Indian perspective*. New Delhi: Prentice-Hall of India

OUTCOMES:

After completion of the course will enable the student in

- Identifying EC business models based on various business needs.
- Recognizing the technological requirements for developing a e-business platform.
- Establishing business know how's of the various business applications of electronic and mobile commerce alike.
- Categorize and classify the payment system and their use to relevant e-commerce companies
- Synchronize e-commerce business models with current global e-commerce strategy

MSCY 049	STRATEGIC INFORMATION TECHNOLOGY FOR MANAGEMENT	L	T	P	C
		3	0	0	2

OBJECTIVES:

The objectives of the course will be to enable the students to:

- Identify the concepts of the various technologies and methods used for business intelligence
- Learn the effective application sof information systems in business
- Get familiarized to other types of information mining such as text and document mining
- Appreciate the dynamics of social media and analytics
- Acquire fundamental knowledge about role of cloud technology in big data framework

MODULE I UNDERSTANDING IT FOR ORGANIZATIONAL ADVANTAGE 06

Definition, Introduction to Information systems after 2010 - Positioning of IT Systems in Organizations - Information Systems Concepts – Strategic Planning Models – Measuring Business Performance – Types of Information Systems – Supply Chain and Logistics Support - IT Infrastructures – Cloud Computing Concepts.

MODULE II DATA AND NETWORK INFRASTRUCTURE 06

Data, Text and Document Management – File Management Systems – Databases – DBMS Concept – Data Warehouses – Data Marts and Data Centre's – Enterprise Content Management – Introduction to Network Management – Business Networks - Wireless Broadband Networks – Network Management – Portals and Mobility.

MODULE III MOBILE COMPUTING AND WEB 2.0 06

Mobile Computing Technology – Mobile Financial Services – Digital Wallet – Mobile Shopping, Entertainment And Advertising – Location Based Services And Commerce - Mobile Enterprise Applications – Web 2.0 And Social Media – Virtual Communities – Social Networking Services – Enterprise 2.0 Tools – Social Media Objectives And Metrics.

MODULE IV BUSINESS INTELLIGENCE AND DECISION SUPPORT 06

Identifying Business Intelligence – BI Architecture – BI Analytics and Reporting – Data Visualization – Data, Text and Web Mining Concepts – Decision Making Processes – Decision Support Systems – Mobile Intelligence and BI.

MODULE V BUSINESS PROCESS MANAGEMENT 06

Business Process Management (BPM) – Service-Oriented Architecture (SOA) – Software Architecture – Information System Design – IT Project Management – Information Systems Development.

Total Hours: 30

REFERENCES:

1. Turban and Volonino, “Information Technology for Management”, John Wiley & Sons, 8th Edition.
2. James A O’Brien, George M Marakas and Ramesh Behl, ’Management Information Systems’ McGraw Hill Education, 10th Indian edition.

OUTCOMES:

After studying the course, the students would:

- Relate to the journey of data and its relative impact on business
- Acquire an understanding of how organizations use BI to sustain their competitive advantage
- Be able to analyze the importance of development of disruptive technology
- Realize the importance of calibrating data for competitive advantage
- Learn the Extraction, Transformation and Load process of data from social media
- Use analytics and cloud tools for business reports

MSCY 050 PROJECT MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course will be to make the students

- Gain insight in successful IT project management and the impact of quality considerations
- Familiarize project management methodologies - tools and techniques, supplemented with examples from case studies and case analysis exercises.
- Appreciate the benefits of good project management
- Apply project management methodologies across the key knowledge areas
- Get trained in project risk and communication

MODULE I INTRODUCTION 06

Project - Project Management (PM) - Areas of Expertise - Project Management Context - Project Life Cycle and Organization - Introduction to PM Process Groups: Initiating - Planning - Executing - Monitoring & Control - Closing.

MODULE II PROJECT INTEGRATION MANAGEMENT 06

Introduction to Project Integration Management: Project Charter - Scope Statements - Directing and Managing Project Execution - Monitoring and Controlling Project Work - Integrated Change Control - Closing Projects.

MODULE III PROJECT SCOPE, TIME AND COST MANAGEMENT 06

Introduction to Project Scope Management: Scope Planning - Scope Definition - Developing WBS - WBS Dictionary - Scope Baseline - Scope Verification - Scope Control - Introduction to Project Time Management: Activity Definition & Sequencing - Resource Estimation - Duration Estimation - Schedule Development and Control - Introduction to Project Cost Management: Basic Principles of Cost Management - Cost Estimating, - Budgeting and Control.

MODULE IV PROJECT QUALITY AND PROCUREMENT 06

Introduction to Project Quality Management: Quality Planning - Quality Assurance - Quality Control - Flowchart - Histogram - Pareto Analysis - Ishikawa Diagram - Introduction to Project Procure Management: Planning Purchases - Planning Contracts - Selecting Sellers - Administrating and Closing Contracts.

MODULE V PROJECT HR, RISK & COMMUNICATION MANAGEMENT 06

Introduction to Project HR Management: HR Planning - Acquiring Project Team - Developing & Managing Project Team - Introduction to Project Risk Management: Risk Management Planning - Risk Identification. - Qualitative and Quantitative Risk Analysis - Response - Monitoring and Control - Introduction to Project Communication Management: Communication Planning - Information Distribution - Performance Distribution - Managing Stakeholders.

Total Hours: 30

REFERENCES:

1. Kathy Schwalbe, Information Technology Project Management", Course Technology, 2008.
2. Bob Hughes, Mike Cotterrel "Software Project Management", Tata McGraw-Hill, 2009.

OUTCOMES:

At the end of the course the student will be able to

- Identify the processes involved in every knowledge area of project management and match the process with project management process groups
- Use various inputs and tools and techniques to deliver real life project ouputs
- Analytically estimate resources required for a project
- Design templates for any activity and sequence them logically using appropriate techniques
- Distinguish and relate concepts to practical environment.

MSCY 051 WEB TECHNOLOGIES

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course will be to make the students understand:

- Understand the fundamental concepts of a wireless computer system
- Learn about system administration and security protocols
- Apply the knowledge to network monitoring, machine - to - machine communications, quantify the value of a network such as social media
- Analyze and design a project based on business and technical perspectives
- Gain insight to managing Ethernet connections

MODULE I INTRODUCTION TO DIGITAL COMMUNICATION 06

Definition, Introduction to Digital Communication - Concept of The Internet of Things (IoT) - Machine-To-Machine Communication (M2M) - Computing Varieties - Key Trends in Technology - Moore's Law - Security in The Cloud - Data Encryption - Public Key Cryptography.

MODULE II TECHNOLOGY ECO-SYSTEM AND CDP 06

Introduction and Concept of Technological Eco System - Connected Device Platform (CDP) - Application Enablement Platform (AEP) - Data Acquisition - Methods and Challenges in Acquiring Data - Recent System Lockdowns - Smart Services -Collaborations Over Cloud.

MODULE III CONNECTED ECO-SYSTEM: M2M & OEM 06

Concept of Application Domains - Core Application Domains of Cloud and IoT - Use Cases in M2M - OEM Definition and Advantages - Value Chain - Challenges in Connected Eco System

MODULE IV ECONOMIC TRENDS AND SECURE NETWORKS 06

Identifying Macro Economic Trends in IoT - Economic Assessment of Social Networks - Metcalfe's Law - Wireless Network Platforms - Mobile Virtual Network Operators (MVNO) - Security Vitals in Network Connections

MODULE V NETWORK MANAGEMENT 06

Definition of Network Management - Network Management Concepts - Collusion Detection - Jam Code - Managing Ethernet Connections - Data Packet Transfers - Connected Devices Management.

Total Hours: 30

REFERENCES:

1. Michal Zalewski, “Silence on the Wire: A Field Guide to Passive Reconnaissance and Indirect Attacks”, No Starch Press; 1 edition (April 15, 2005)
2. Daniel Kellmereit and Daniel Obodovski, “The Silent Intelligence: The Internet of Things”, DnD Ventures; 1 edition (April, 2013)

OUTCOMES:

At the end of the course the student will be able to

- Gather business requirements for organizations looking to implement IT system
- Scrutinize administration and security protocols based on their optimality
- Quantify the value of a network such as social media and other network systems based on business and technical perspectives.
- Build basic projects in a web based ecosystem
- Correlate basic network knowledge and its relevance in web technologies.

MSCY 052 BIG DATA IN MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course will be to enable the students to:

- Get fundamental information about big data and its components
- Learn the power of big data analytics framework in managing business corporations.
- Know about the components required in creating a Big Data Platform
- Identify the various phases involved in developing a Big Data strategy within an organization
- Examine the technological feasibility for selecting the big data wave

MODULE I INTRODUCTION TO BIG DATA 06

Evolution of Data management - Waves of Managing Data - Managing big data - Building a Successful Big Data Management Architecture - Traditional and advanced analytics - Defining Structured Data - Defining Unstructured Data - Integrating data types into a big data environment

MODULE II TECHNOLOGY COMPONENTS OF BIG DATA 06

Distributed Computing - Big Data Stack - Layers (0 - 4) - Big Data Analytics and Applications - Virtualization - Cloud Deployment

MODULE III BIG DATA MANAGEMENT 06

Operational Databases - Non-Linear Databases - Document Databases - Columnar Databases - Spatial Databases - Polyglot Persistence - MapReduce Fundamentals - Introduction to HadoopDistributedFileSystem(HDFS)

MODULE IV ANALYTICS AND BIG DATA - I 06

Big Data Analytics and Traditional Data Warehouses - Deployment Models - Appliance Model - Cloud Model - Modifying BI to Handle Big Data

MODULE V ANALYTICS AND BIG DATA - II 06

Text Analytics - Analysis and Extraction Taxonomies - Social Media Analytics - Text Analytics - Customized Approaches for Big Data Analysis - Big Data Analysis Framework

Total Hours: 30

REFERENCES:

1. Marr, Bernard. “Big Data: Using SMART big data, analytics and metrics to make better decisions and improve performance.” John Wiley & Sons, 2015.
2. Pries, Kim H., and Robert Dunnigan. “Big Data Analytics: A practical guide for managers.”, CRC Press, 2015.
3. Hurwitz, Judith, Alan Nugent, Fern Halper, and Marcia Kaufman. “Big data for dummies”, John Wiley & Sons, 2013.

OUTCOMES:

After studying the course, the students would:

- Be able to relate the concept of Big Data and its pertinent role in the corporate world
- Outline the components requited to set up a functional Big Data Platform
- Simplify the various phases of development involved in a Big Data strategy within an organization
- Analyse and perform calculations for requiring technology infrastructure to plan a big data wave.
- Enhance decision making with knowledge of data insights with big data analytics
- Possess in-depth understanding of the wide range of fundamental algorithms used for managing big data.

MSCY 053	APPLICATION OF ENTERPRISE RESOURCE PLANNING	L	T	P	C
		3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Identify various concerns / issues during ERP implementation at different stages such as pre and post implementation.
- Appreciate the functionality of different ERP modules
- Gain knowledge the use of ERP in industries
- Get trained Live ERP
- Gain insight to ERP industrial needs

MODULE I ERP IMPLEMENTATION AND CONTROL 06

Project Scoping – Implementation of project plan – Managing requirements – Requirement gathering process – Business Process Reengineering – Introduction to Business Process Modeling - Gaps Identifications – Bridge of the gap

MODULE II LIVE ERP AND SUPPORT 06

Types of ERP security issues – Authorizations – Data Migration – Cutover planning and go live preparation – Training environment – Training delivery – Training evaluation – Success/Failure of ERP implementation – Application support – Vendor support strategies

MODULE III ERP FUNCTIONAL MODULES – I 06

Human Resource Management – Financial Management – Procurement – Inventory Management – Supplier Relationship Management – Production Planning

MODULE IV ERP FUNCTIONAL MODULES – II 06

Sales and Service – Supply Chain and Logistics Planning – Customer Relationship Management – Quality Management – Maintenance Management – Product Lifecycle Management

MODULE V ERP FOR INDUSTRIES 06

ERP for petroleum, oil and gas companies – auto industry – pharma industry – FMCG industry – Mining industry – retail industry – healthcare – educational institutions – telecom – banks insurance and utility companies.

Total Hours: 30

REFERENCES:

1. Ray, R. (2011). *Enterprise Resource Planning - Text & Cases*. New Delhi (India): Mcgraw-Hill Pub.
2. Leon, A. (2008). *ERP demystified*. New Delhi: Tata-McGraw-Hill.

5. Garg, V. K., & Venkitakrishnan, N. K. (2004). *Enterprise resource planning: Concepts and practice* (2nd ed.). New Delhi: Prentice-Hall of India Private Limited.

OUTCOMES:

At the end of the course the student will be able to

- Recognize the various functionalities in Enterprise Resource Planning
- Create a robust method of requirements gathering during the process of ERP implementation
- Maintaining vendor relationship for successful implementation of the ERP system
- Identify the importance of different ERP functional modules and its relevance in present day businesses.
- Categorize ERP packages/modules/solutions customized across various manufacturing and service industries.

ELECTIVES -OPERATIONS MANAGEMENT

MSCY 061	SUPPLY CHAIN MANAGEMENT	L	T	P	C
		3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn the various decision phases in supply chain management
- Aware of the supply chain drivers and design a distribution network
- Gain insight into aggregate plan and balancing demand and inventory in supply chain
- Get trained in sourcing and choice of transportation in supply chain
- Familiar with the information technology components in supply chain

MODULE I INTRODUCTION TO SUPPLY CHAIN 06

Understanding Supply Chain - Decision Phases - Supply Chain Performance - Competitive and Supply Chain Strategies - Achieving Strategic Fit - Expanding Strategic Scope.

MODULE II SUPPLY CHAIN DRIVERS AND DESIGN 06

Drivers of Supply Chain performance - Designing Distribution Network - Network Design in the Supply Chain - Network Design in an Uncertain Environment.

MODULE III AGGREGATE PLANNING AND MANAGING SUPPLY, DEMAND AND INVENTORY 06

Aggregate Planning in a Supply Chain: Role - Managing Supply - Managing Demand in Supply Chain - Cycle and Safety Inventory in Supply Chain - Level of Product Availability.

MODULE IV SOURCING AND TRANSPORTATION 06

Sourcing decision in Supply Chain - Third and Fourth Party Logistics Providers - Supplier Scoring and Assessment - Transportation in a Supply Chain - Risk and Trade-offs in Transportation Design.

MODULE V INFORMATION TECHNOLOGY IN A SUPPLY CHAIN 06

Information Technology in a Supply Chain - CRM, ISCM, SRM in Supply Chain - Over view of Recent Trends in Supply Chain: e-SRM, e-LRM, e-SCM.

Total Hours: 30

REFERENCES:

5. David Frederick Ross, “Introduction to e-Supply Chain Management: Engaging Technology to Build Market-Winning Business Partnerships”, CRC Press, 2002.

OUTCOMES:

On completion of the course, the student will be able to:

- Identify the phases for measuring the performance of supply chain
- Choose the appropriate distribution network designed for different products
- Estimate aggregate planning cost and find the right strategy for balancing demand and inventory
- Tap the best source and choose the best mode of transportation in supply chain
- Handle the appropriate information technology models for supply chain management

MSCY 062 TOTAL QUALITY MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn the framework of total quality management
- Aware of the various philosophies of quality management
- Gain insight into statistical process control
- Get trained in tools and techniques of quality management
- Familiar with various quality management systems

MODULE I INTRODUCTION 06

Defining Quality - Dimensions of Quality - TQM Framework - TQM Culture - Leadership - Quality Council - Customer Focus - Customer Perception of Quality - Translating Needs into Requirements - Employee Involvement.

MODULE II PRINCIPLES AND PHILOSOPHIES OF QUALITY MANAGEMENT 06

Overview of the contributions of Deming, Juran, Feiganbaum, Crosby, Ishikawa and Taguchi - Quality Circle - 5S Principles - 8D Methodology.

MODULE III STATISTICAL PROCESS CONTROL 06

Meaning and significance of Statistical Process Control (SPC) - Construction of Control Charts for Variables and Attributes - Process Capability - meaning, significance and measurement - Six Sigma.

MODULE IV TOOLS AND TECHNIQUES FOR QUALITY MANAGEMENT 06

Quality Function Deployment (QFD) - Voice of customer - Information Organization - House of quality (HOQ) - Failure Mode Effect Analysis (FMEA) - FMEA stages - Seven QC Tools - Benchmarking - POKA YOKE.

MODULE V QUALITY MANAGEMENT SYSTEMS 06

Quality Management Systems - Introduction to IS/ISO 9004:2008 - Documentation - Quality Audits - Environmental Management System - ISO 14000 series - Concepts of ISO 14001.

Total Hours: 30

REFERENCES:

1. Dale H.Besterfield, Carol Besterfield - Michna, Glen H. Besterfield, Mary Besterfield - Sacre, Hermant - Urdhwareshe and Rashmi Urdhwareshe. “Total Quality Management”, 3rd Edition, Pearson Education, New Delhi, 2011.
2. Shridhara Bhat, K. “Total Quality Management - Text and Cases”, Himalaya Publishing House, 1st Edition, New Delhi, 2002.

OUTCOMES:

On completion of the course, the student will be able to:

- Identify the culture and framework required for implementing total quality management
- Implement the appropriate quality management principles and philosophies
- Formulate the right strategy for applying statistical process control
- Tap the tools and techniques of quality management to improve quality
- Identity the quality management systems essential for industries

MSCY 063 INTEGRATED MATERIALS MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Know the importance of materials and integration of material management functions in an organization
- Learn the essentials and techniques of materials planning and inventory management
- Gain knowledge on purchasing procedure and related issues
- Familiar with store management activities and store keeping documents
- Learn the techniques of inventory control to reduce inventory cost

MODULE I INTRODUCTION 04

Materials - Importance - Need and Functions of Materials management - Integrated Materials Management: meaning - importance - benefits - Various types of organization structure for Materials Management - Associated costs in materials management.

MODULE II MATERIAL PLANNING AND INVENTORY MANAGEMENT 08

Material Requirement Planning - Bill of Materials - MRP-1 - Materials Budget: meaning, objectives- Meaning of Economic order quantity - Basic inventory models: Purchase and manufacturing models - Meaning of minimum, maximum, lead time, reorder point, safety stock - Quantity discount model - Meaning of Review systems: P and Q systems - MRP-II and ERP

MODULE III PURCHASING 06

Importance - Functions - Organization for purchasing - Centralized vs. Decentralized purchasing -Six Rs - Ethics in purchasing - Legal aspects in purchasing - Purchasing cycle - Source selection: Source of information - Single source and Multi source - Evaluation - Vendor rating - Selection Methods - Ordering Systems - e-SRM.

MODULE IV STORES MANAGEMENT 06

Storekeeping: Objectives - Responsibilities - Importance - Functions - Stores organization - Location of store house - Centralized and Decentralized stores - Layout - Types of stores - Methods of storing - Store room equipments - Principles of storing goods - Material Identification - Codification - Bar Code Technology -

RFID - - Safety in stores -Stores Ledger - Kardex System - Automation in material handling and storing.

MODULE V INVENTORY CONTROL 06

Purpose of inventory - Types of inventory - Need and objectives of scientific inventory control - 2 bin system - Visual control system - Stock verification procedure - Obsolete, surplus and scrap control - Selective inventory controls: ABC, XYZ, HML, VED, FSN, SOS, SDE, GOLF - Ratios used in Evaluation of materials management - Inventory turnover ratio - Role of IT in Materials Management

Total Hours: 30

REFERENCES:

1. Gopalakrishnan, P. and Abid Haleem. “Handbook of Materials Management”, Eastern Economy Edition, 2nd Edition, New Delhi, 2015.
2. Gopalakrishnan & Sundaresan, “Material management: An Integrated Approach”, Prentice- hall of India private limited, New Delhi, 2005.
3. A.K. Datta, “Materials Management: Procedures Text and Cases”, Prentice-Hall of India private limited, New Delhi, 2003.
4. Varma, M.M. “Materials Management”, Sultan Chand & Sons, 2004.
4. Gopalakrishnan, “Purchasing and Materials Management”, Tata McGraw Hill, New Delhi, 2010

OUTCOMES:

After completing the course, the students will be able to:

- Appreciate the significance of managing materials in an integrated manner
- Manage the inventory by prior planning and applying the appropriate inventory model
- Execute the purchasing of materials through proper sourcing, negotiation and evaluating vendors.
- Manage stores related activities and maintain the documents pertaining to stores
- Reduce the cost of inventory by applying various techniques for Inventory Control.

MSCY 064 LEAN SIX SIGMA

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn the basic concepts of Lean and Six Sigma.
- Identify and measure the critical aspects of an existing process
- Analyze the existing process with appropriate tools and techniques
- Improve and control the process quality applying various control techniques
- Evaluate the outcome of six sigma project implementation

MODULE I LEAN & SIX SIGMA BACKGROUND AND FUNDAMENTALS 06

Six Sigma - Lean Manufacturing and Six Sigma- Six Sigma and Process Tolerance - Six Sigma Capability - Six Sigma Need Assessments - Implications Of Quality Levels - Cost of Poor Quality (COPQ).

MODULE II SIX SIGMA IMPLEMENTATION - DEFINE AND MEASURE 06

Overview of DMAIC and DMADV - Tools for definition - IPO diagram, SIPOC diagram, Flow diagram, CTQ Tree, Project Charter - Tools for measurement - Check sheets, Histograms, Run Charts, Scatter Diagrams, Cause and effect diagram, Pareto charts, Control charts, Flow process charts, Process Capability Measurement.

MODULE III ANALYZE 06

Tools for analysis - Process Mapping, Regression analysis, RU/CS analysis, SWOT, PESTLE, Five Whys, interrelationship diagram, overall equipment effectiveness, TRIZ
innovative problem solving

MODULE III IMPROVE AND CONTROL 06

Tools for improvement - Affinity diagram, Normal group technique, SMED, 5S, mistake proofing, Value stream Mapping, forced field analysis - Tools for control - Gantt chart, Activity network diagram, Radar chart, PDCA cycle, Milestone tracker diagram, Earned value management

MODULE V EVALUATION AND CONTINUOUS IMPROVEMENT METHODS 06

Evaluation strategy - the economics of six sigma quality, Return on six Sigma (ROSS), ROI, poor project estimates - continuous improvement - lean manufacturing - value, customer focus, Perfection, focus on waste, overproduction - waiting, inventory in process (IIP), processing waste, transportation, motion, making defective products, underutilizing people - Kaizen

Total Hours: 30

REFERENCES:

1. Kastle, Bill; Rowlands, David and George, Michael. “What is Lean Six Sigma”, McGraw - Hill Education, 2005.
2. Keller, Paul and Pyzdek, Thomas. “The Six Sigma Handbook”, McGraw-Hill, 4th Edition, 2014.
3. Forrest W. Breyfogle, III, James M. Cupello and Becki Meadows. “Managing Six Sigma: A Practical Guide to Understanding, Assessing, and Implementing the Strategy That Yields Bottom-Line Success”, John Wiley & Sons, 2000.
4. James P. Womack and Daniel T. Jones. “Lean Thinking: Banish Waste And Create Wealth In Your Corporation”, Simon and Schuster, 2003.

OUTCOMES:

On completion of the course, the students would be able to:

- Learn the basic concepts of Lean and Six Sigma.
- Identify and measure the critical aspects of an existing process
- Analyze the existing process with appropriate tools and techniques
- Improve and control the process quality applying various control techniques
- Evaluate the outcome of six sigma project implementation

MSCY 065 LOGISTICS MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Identify of the role of logistics in adding value to the final product
- Gain knowledge on warehouse operations and materials handling
- Manage the functions of transportation and packaging
- Evaluate the performance of logistics functions
- Aware of the latest developments in the field of logistics

MODULE I INTRODUCTION 06

Definition and Scope of Logistics - Functions & Objectives - Customer Value Chain - Service Phases and attributes - Value added logistics services - Role of logistics in Competitive strategy - Customer Service.

MODULE II WAREHOUSING AND MATERIALS HANDLING 06

Warehousing Functions - Types - Site Selection - Decision Model - Layout Design - Costing - Virtual Warehouse - Material Handling Equipment and Systems - Role of Material Handling in Logistics - Automated Material Handling - Material Storage Systems - Principles - Benefits - Methods - ASRS.

MODULE III TRANSPORTATION AND PACKAGING 06

Transportation System - Evolution - Infrastructure and Networks - Freight Management - Vehicle Routing - Containerization - Forms for Inbound and out bound logistics-Modal Characteristics - Inter-Modal Operators and Transport Economies - Packaging - Design considerations - Material and Cost - Packaging as Unitization - Consumer and Industrial Packaging.

MODULE IV PERFORMANCE MEASUREMENT AND COSTS 06

Performance Measurement - Need - System - Levels and Dimensions - Internal and External Performance Measurement - Logistics Audit - Total Logistics Cost - Concept - Accounting Methods - Cost - Identification - Time Frame and Formatting.

MODULE V CURRENT TRENDS 06

Logistics Information Systems - Need - Characteristics and Design - E Logistics - Structure and Operation - Logistics Resource Management - e-LRM - Automatic Identification Technologies - Warehouse Simulation - Reverse Logistics - Scope -

Design and as a Competitive Tool - Global Logistics - Operational and Strategic Issues - Ocean and Air Transportation - Strategic Logistics Planning.

Total Hours: 30

REFERENCES:

1. Bowersox, D. and Closs, D. “Logistical Management: The Integrated Supply Chain Process”, Tata McGraw Hill, 1st Edition, New Delhi, 2010.
2. Vinod V. Sople. “Logistics Management”, Pearson Education, 3rd Edition, New Delhi, 2012.

OUTCOMES:

After completing this course, the students will be able to

- Appreciate the role of logistics in adding value to the final product
- Bring about changes in the material handling and warehousing practices of an organization
- Effectively manage the transportation and packaging related activities
- Evaluate the performance of logistic functions in an organization
- Execute logistics desires of a company from a global perspective

MSCY 066 SERVICES OPERATIONS MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Gain knowledge on the role of services in an economy
- Learn to design and develop new services based on market needs
- Recognize the dimensions of service quality and its implications
- Gain insight into various models applied in the management of service organizations
- Learn to apply tools and techniques in service operations management

MODULE I INTRODUCTION 06

Services - Importance and role in economy - Distinctive characteristics - Nature of services - Service classification - Service Package - Service Strategy - Internet strategies - Service Environment.

MODULE II SERVICE DESIGN 06

New Service Development - Designing the Service delivery system - Service Blue-printing - Managing Service Experience - Front-office and Back-office Interface - Servicescape - Implication for Service Design - Vehicle Routing and Scheduling

MODULE III SERVICE QUALITY 06

Service Quality - Dimensions - Gap Model - SERVQUAL instrument - Complaint management - Walk-through Audit - Service Recovery - Service Guarantees - Service Encounter - Service Feedback - Analysis and Enhancement.

MODULE IV OPERATING SERVICES 06

Service operational planning and control - Process Analysis - Process Simulation - Service Facility Location - Capacity Management in Services - Queuing models - Waiting Lines - Yield management.

MODULE V TOOLS AND TECHNIQUES 06

Inventory Management in Services - Retail Discounting Model - Newsvendor Model - Productivity and Performance measurement - Data Envelopment Analysis (DEA) - Scoring System - Technology in Services

Total Hours: 30

REFERENCES:

1. James A Fitzsimmons and Mona J Fitzsimmons. “Service Management: Operations, Strategy, Information Technology”, Tata McGraw Hill, 7th Edition, New Delhi, 2014.
2. Metters Richard D. “Successful Service Operations Management”, Cengage Learning, 2nd Edition, New Delhi, 2012.
3. Robert Johnston and Graham Clark. “Service Operations Management: Improving Service Delivery”, Pearson Education, 2nd Edition, New Delhi, 2008.
4. J. Nevan Wright, Peter Race. “The Management of Service Operations”, Thomson, 2nd Edition, 2005

OUTCOMES:

On completion of the course, the students would be:

- Appreciate the role of services in an economy
- Equipped with theoretical knowledge for designing a new service.
- Able to measure and improve the quality of service delivery.
- Able to manage the operations of a service organization with a strategic insight
- Able to choose the right tools and techniques to measure the efficiency and effectiveness of service delivery

MSCY 067 PRODUCT DESIGN

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn methods and tools used for product design
- Gain knowledge for planning the product development stages
- Aware of the role of multiple functions in designing and developing a new product
- Gain insight to various industrial design and robust design products
- Learn the about Intellectual Property Rights (IPR) and Patent Laws

MODULE I INTRODUCTION 06

Defining Product - Types of Products - Product Development - Characteristics - Duration and Cost - Challenges - Development Process - Generic Process - Adapting to Product Types - Evaluation - Decay Curve - Cost Expenditure Curve-

MODULE II PRODUCT PLANNING 06

Product Planning Process - Steps - Product Life Cycle - Technology Life Cycle - Understanding Customer Needs - Disruptive Technologies - Product Specification - Concept Generation - Activity - Steps - Brain Storming

MODULE III PRODUCT CONCEPT 06

Concept Selection - Importance - Methodology - Concept Screening - Concept Scoring - Concept Testing - Product Architecture - Definition - Modularity - Implication - Establishment - Delayed Differentiation - Platform Planning.

MODULE IV INDUSTRIAL DESIGN AND DESIGN TOOLS 06

Industrial Design - Design for Manufacturing - Value Engineering - Ergonomics - Prototyping - Robust Design - Collaborative Product Development- Product Development Economics.

MODULE V PATENTS 06

Defining Intellectual Property and Patents - Patent Searches and Application - Patent Ownership and Transfer - Patent Infringement - New Developments and International Patent Law.

Total Hours: 30

REFERENCES

1. Karl Ulrich, Steven Eppinger and Anita Goyal, “Product Design and Development”, Tata McGraw Hill, 4th Edition, New Delhi, 2009.

4. Randy J. Hunt. “Product Design for the Web: Principles of Designing and Releasing Web Products”, Pearson Education, 1st Edition, 2014.

OUTCOMES:

On completion of the course, the students would be:

- Appreciate and recognize the use of appropriate product development method
- Able to convert the identified concepts in to new product
- Equipped with the knowledge and confidence of designing a new product
- Able to identify the requirements of robust design for existing product
- Able to choose and implement Intellectual Property Rights (IPR) and Patent Laws

MSCY 068 SYSTEM SIMULATION AND MODELLING

L	T	P	C
3	0	0	2

OBJECTIVES:

The objectives of the course would be to make the students

- Learn the design manufacturing simulation models using common simulation software.
- Gain knowledge for evaluate and interpret alternative system designs
- Appreciate the technical reports documenting systems design alternatives and recommendations
- Gain insight for suggestions to implement new or improved manufacturing systems.
- Learn simulation modeling to an industrial problem, utilizing experimental design techniques.

MODULE I INTRODUCTION 06

Systems - Modeling - General Systems Theory - Concept of Simulation - Simulation as a Decision Making Tool - Types of Simulation.

MODULE II RANDOM NUMBERS 06

Pseudo Random Numbers - Methods of Generating Random Varieties - Discrete and Continuous Distributions - Testing of Random Numbers.

MODULE III DESIGN OF SIMULATION EXPERIMENTS 06

Problem Formulation - Data Collection and Reduction - Time Flow Mechanism - Key Variables - Logic Flow Chart - Starting Condition - Run Size - Experimental Design Consideration - Output Analysis and Interpretation Validation.

MODULE IV SIMULATION LANGUAGES 06

Simulation Languages - Study of GPSS and Applications.

MODULE V CASE STUDIES/MINI PROJECT 06

Development of Simulation Models using the Simulation Language studied for Systems - Queuing Systems - Production Systems - Inventory Systems - Maintenance and Replacement Systems - Investment Analysis and Network.

Total Hours: 30

REFERENCES:

1. Jerry Banks, John S. Carson II, Barry L. Nelson, David M. Nicol, Saumil Shah and P. Shahabudeen. “Discrete Event System Simulation: (VTU)”, Pearson Education, 4th Edition, New Delhi, 2011.

5. Zaven A. Karian and Edward J. Dudewicz, “Modern Statistical, Systems, and GPSS Simulation”, CRC Press, Washington D C, 1999.

OUTCOMES:

On completion of the course, the students would be able to:

- Present and demonstrate simulation results from a group project using appropriate visualization output.
- Design functions using modeling software and mathematical based toolboxes to simulate processes within a chosen model in a company.
- Develop high level block diagram designs of key technology physical systems using appropriate modeling environments which would be implemented in the industry.
- Demonstrate awareness of environmental issues in a selected model by incorporating appropriate input factors
- Equipped with converting any business problem in to a system format and find a solution

ELECTIVES - ISLAMIC BANKING AND FINANCE

MSCY 076	INTRODUCTION TO ISLAMIC ECONOMICS	L	T	P	C
		3	0	0	2

OBJECTIVES:

To make the students understand

- nature and basic features of Islamic economics
- Islamic critique of conventional economic thought and processes
- ethical character of Islamic Economics
- economic perspective of shariah prohibited business activities
- system of Islamic wealth distribution and its application

MODULE I INTRODUCTION 06

Islamic Economics: Definition, Nature, Essentials; Conventional Vs Islamic Economics; A Critical Review of Different Economic Systems; Capitalism Vs Socialism and Islamic Economic System.

MODULE II PRINCIPLES OF ISLAMIC ECONOMICS 06

Prohibition of Riba, Bank Interest and rationale of its prohibition; Prohibition of Gharar (ambiguity) and Maysir (Gambling); Competition, Cooperation and their relative scope; Risk sharing Verses Risk shifting; Economic Stability and the Role of abolition of interest.

MODULE III ISLAMIC CONSUMER/ PRODUCER BEHAVIOUR 06

Consumer Behaviour: Self interest with ethical constraints; Producer Behaviour: Theory of Firm; The possibility of taking Social goods into consideration; Public Sector Policy goals with Environmental Protection.

MODULE IV WEALTH DISTRIBUTION 06

Income and Wealth Distribution under Islamic System; Objectives; Sources of Public Revenue in Islam; Means of Distribution of Wealth: Zakah and Waqf institutions and their economics aspects.

MODULE V ISLAMIC COPERATION AND INSTITUTIONS 06

International Islamic Cooperation**;** Institutional Infrastructure supporting Islamic Finance**;** Role of Islamic Development Bank in Economic Cooperation and Development.

Total Hours: 30

REFERENCES:

1. Islamic Economics by Umar Chapra - CEPT Publications
2. An Introduction to Islamic Economics by Akram Khan
3. Fundamentals of Islamic Economic System By Dr. Muhammad Sharif Chaudhry

OUTCOMES:

After successful completion of the course, students will be able to:

- Differentiate between Islamic Economic System and other conventional economic systems;
- Explain the Prohibition of riba (interest) and its rationale from economics perspective;
- Appreciate and analyze various Islamic proscription/ prohibitions and their justification from economics points of view;
- Demonstrate an understanding of Islamic ethics of business, values and prescription;
- Demonstrate a comprehension of consumer and producer behaviour from Islamic perspective, ethical and moral dimensions, inclusiveness and sustainability.
- Assess the causes of inequitable distribution of wealth and measures to counter provided by Islamic system of wealth distribution

MSCY 077	FUNDAMENTALS OF ISLAMIC FINANCE	L	T	P	C
		3	0	0	2

OBJECTIVES:

To make the students understand

- basic concepts, *shari'ah* principles and guidelines on financial transaction
- foundation and characteristics of Islamic Finance
- major prohibition in Islamic finance
- Islamic law of contract and the prerequisite conditions for validity of contract
- various aspects of *'fiqh-al muamilat'* applied to resolve contemporary issues of finance and business transactions

MODULE I INTRODUCTION TO SOURCES OF ISLAMIC LAW (SHARI'AH) 06

Shariah & Fiqh : Definition and Concept; Sources of Shari'ah: Quran, Sunnah, Ijma, Qiyas; Objectives of Shariah; Concept of Ijtihad and the necessary conditions; Principles of Fiqh: Introduction and importance.

MODULE II MAJOR PROHIBITIONS IN ISLAMIC FINANCE 06

Riba(Interest): Definition and Classification; Gharar (Ambiguity/ Uncertainty): Definition and Classification; Maysir & Qimar (Gambling): Definition and Classification.

MODULE III ISLAMIC LAW OF CONTRACTS 06

Principles of Islamic Business; Contract: Definition and Classification; Aqd (contract), Wad (Promise), Muwa'adah/ Mu'ahida (Bilateral Promise); Elements of Contract and conditions for its Validity.

MODULE IV

CLASSIFICATION OF CONTRACTS (Unilateral & Bilateral) 06

Contract of Exchange (Sale Contracts); Contract of Partnership (Mudarabaha, Musharakah); Contract of Trust/ Safe Custody (Wadi'ah, Amanah) Contract of Security (Kafalah, Rahn, Hawalah), Contract of Usufruct utilization (Ijarah), Other Contracts: Wakalah, Jo'alah etc.

MODULE V PRINCIPLES OF ISLAMIC FINANCIAL SYSTEM 06

Islamic Finance: Definition, Concept, Foundation, Features, Objectives; Islamic Finance Vs Conventional Finance; A Breif introduction of Islamic Financial Instruments: Mudarabha, Musharakah, Murabaha, Salam, Istisna and Ijarah.

Total Hours: 30

REFERENCES:

1. An Introduction to Islamic Banking & Finance- Abdel Fattah M.Farah
2. Certified to Islamic banker (CeIB) program - Islamic-finance.com.
3. Meezan's Bank's Guide to Islamic Bank

OUTCOMES:

Students will be able to:

- Understand ethical underpinning of Islamic Finance
- Develop an appropriate level of understanding of the main principles of Islamic finance
- Develop a good understanding of sources of *shari'ah* (Islamic Laws)
- Demonstrate a broad understanding of major prohibitions in Islamic Finance like *Riba, Gharar, Maysir* and *Qimar* etc.
- Explain the basic legal principles of Islamic commercial contracts and know their applications in investment and financing;
- Assess the nature and characteristics of different types of contracts, their applications and implication in business transaction

MSCY 078 ISLAMIC INSURANCE (TAKAFUL)

L	T	P	C
3	0	0	2

OBJECTIVES:

To make the students understand

- *shari'ah* concern and reservation on conventional insurance
- basic concept of Takaful and its distinguishing features
- structure and development of Takaful products and market
- various models of Takaful used by Takaful companies worldwide
- technical aspects of Islamic Insurance (Takaful) and its application in global marketplace

MODULE I INTRODUCTION 06

Takaful (Islamic Insurance): Definition, Concept, Principles & Unique Characteristics**;** Major goals of the Takaful system**;** The origins of Takaful: Historical background; Takaful System in Islamic Era: Al-Aqilah, Diyah, Tabarru'/donation.

Comparison of Takaful with Conventional Insurance; Issues of Riba, Gharar, Maysir & Qimar (interest, ambiguity & gambling elements) in Conventional Insurance; Risk sharing versus transfer; Takaful versus Mutual Insurance: similarities/differences.

MODULE III SHARIAH ELEMENTS/PRINCIPLES IN TAKAFUL 06

Shariah Mechanism of Takaful; Definitions & Concept of Waqf, Wakalah, Hiba & Tabarru', which are used in Takaful System; Shari'ah Ruling and Principles applied to Takaful, Prohibited Elements.

MODULE IV TAKAFUL MODELS, TYPE & STRUCTURES 06

Structure and operation of Takaful**;** Different Models of Takaful e.g. Wakalah Model, Waqf Model, Modaraba Model, Hybrid Model, and Surplus Distribution mechanism in all models**;** Type and Products of Takaful Business: General Takaful (General Insurance)**,** Family Takaful (Life Insurance).

MODULE V TAKAFUL PRODUCTS & RISK MANAGEMENT IN ISLAM 06

BancaTakaful, Re-Takaful, Micro Takaful etc.; Risk Management from an Islamic Perspective, Key Objectives of Risk Management Specific to Takaful; Risks associated with Takaful claims and their mitigation.

Total Hours: 30

REFERENCES:

1. Islamic Insurance: A Modern Approach to Islamic Banking by Aly Khorshid
2. "What's Takaful": A Guide To Islamic Insurance by Khaled Kassar
3. Islamic and Modern Insurance (Principles and Practices) by Ma'sum Billah
4. The Islamic Insurance: Theory and Practice by A S Mulhim & A Mohammed Sabbagh

OUTCOMES:

Students will be able to:

- Demonstrate an understanding of nature and principle of Islamic insurance, Shariah framework of Islamic insurance;
- Explain Takaful and its rationale as an alternative to conventional insurance
- Explain why traditional insurance is prohibited from the Shariah point of view;
- Discuss the main features of Islamic insurance vis-à-vis conventional insurance;
- Explain the operational framework of Islamic insurance including the different Takaful used for underwriting and managing the investments of the Takaful fund
- Explain the application of ethical considerations of Islamic insurance practice and their impact on underwriting policy and practice.

MSCY 079 ISLAMIC BONDS (SUKUK)

L	T	P	C
3	0	0	2

OBJECTIVES:

To make the students understand

- concept of securitization in accordance with Shariah principles
- shariah concern on process of conventional securitization
- nature of sukuk and how they differ from conventional bonds
- types of Sukuk (sovereign & corporate) and their investment features
- how to structure sukuk transactions and its application to raise fund for short and long term investment projects

MODULE I INTRODUCTION 06

Sukuk (Islamic Securities): Definition, Concept, Classification and Fundamentals; Origin of Sukuk and development in Islamic Finance; Features & Characteristics; Sukuk Vs Conventional Debt Securities (Bonds); Return (Profit) in Sukuk, Common Use & Benefits.

MODULE II ISLAMIC SECURITIZATION 06

Securitization Principle; Benefits of Securitization; Islamic securitization and overcollateralization; Limitations (Shariah Concern).

MODULE III SUKUK STRUCTURING - I 06

The Basic Sukuk Issuance Process; Application of Islamic and Conventional Financial Concept for issuance of sukuk; AAOIFI Standards: Range of Sukuk Structures Permitted by AAOIFI.

MODULE IV SUKUK STRUCTURING - II (Types) 06

Musharakah Sukuk, Mudarabah Sukuk, Ijarah Sukuk, Murabahah Sukuk, Salam Sukuk, Istisna Sukuk, Hybrid Sukuk, Others.

MODULE V CAPITAL MARKET CONSIDERATIONS RELATING TO SUKUK 06

Rating the Issue & Distribution; Sukuk trading and secondary markets; Sovereign and Corporate Sukuk: For Open Market Operation, liquidity management and balance sheet management.

Total Hours: 30

REFERENCES:

1. Islamic Bonds: Your Guide to Issuing, Structuring and Investing in Sukuk by Nathif J. Adam and Abdulkader Thomas
2. Sukuk and Islamic Capital Markets: A Practical Guide by Rahail Ali - Hogan Lovells
3. Sukuk by Abdulkader S. Thomas

OUTCOMES:

Students will be able to:

- Evaluate the differences between conventional and Islamic securities
- Apply various types of sukuk structure like Ijarah sukuk, Salam sukuk, Istisna sukuk etc.
- Know the differences between managing Sukuk and managing conventional securities
- Demonstrate an understanding of Securitization Principle and its benefits; Islamic securitization and overcollateralization, Limitations (Shariah Concern)
- Understand the basic processes involved in the issuance of Sukuk
- Know the AAOIFI Sukuk standards

MSCY 080 ISLAMIC ASSET & FUND MANAGEMENT

L	T	P	C
3	0	0	2

OBJECTIVES:

To make the students understand

- Critique of conventional capital market
- Islamic Financial Market Structure
- Nature and distinguishing features of Islamic Capital Market
- Concept of venture capital, investment funds, units trusts, REITs and its application in accordance with Islamic Finance principle

MODULE I INTRODUCTION 06

The Capital Market: Definition, Nature, Functions and Objectives; A Brief Overview of the Capital Market in India; Risk Return Principle in Islam: Cost of Capital, Choice between Capital and Debt Financing-Agency Problem; Shari'ah Principles for Capital Market.

MODULE II ISLAMIC STOCK AND WEALTH MANAGEMENT 06

Equity Shares and Equity Funds; Business and Structure of Islamic Enterprise: Indebtedness of the Enterprise, Earnings from Impermissible Activities, Cash and Receivables / Payables.

MODULE III NORMS FOR SHARI'AH SCREENING IN CAPITAL MKT 06

Business Screening and Sharia'h Screening; AAOIFI; Dow Jones Islamic Investment Criteria; Securities Exchange Commission (SEC) Malaysia Norms; FTSE; S & P and MSCI, NCB, DFM and TASIS India.

MODULE IV CRITICAL ASSESSMENT OF ISLAMIC SCREENING NORMS 06

Screening Norms Relating to Nature of Business; Screening Norms Relating to Financial Ratios; Suitability of Market Cap; Dividend Purification and Zakah.

MODULE IV ISLAMIC REAL ESTATE AND PROJECT FINANCING 06

Characteristics of Real Estate; Islamic REITS; Islamic Mutual Funds and Mudaraba Certificates.

Total Hours: 30

REFERENCES:

1. Islamic Capital Markets: Theory and Practice By Noureddine Krichene
2. Islamic Asset Management By Natalie Schoon
3. Contemporary Islamic Finance: Innovations, Applications and Best Practices by Karen Hunt-Ahmed (Chapter on Islamic Mutual Funds)

OUTCOMES:

Students will be able to:

- Examine the structure of capital market, shares/ bonds and the operations of investment funds from shariah perspective
- Critically reflect upon and assess the similarities and differences between Islamic and conventional capital market
- apply the Islamic stock selection process through the Industry and Financial Screens
- Critically assess various screening norms used by different shariah index providers and institutions;
- Know the functions of the various components of an Islamic mutual fund structure
- Evaluate both structural and stock-specific problem of shariah compliance in capital market

MSCY 081	ISLAMIC BANKING PRODUCTS AND SERVICES	L	T	P	C
		3	0	0	2

OBJECTIVES:

- To explain the concepts, theories, the origins and development of Islamic banking products
- To familiarize the students with basic functioning of Islamic banks
- To expose the students to a wider range of Islamic financing instruments used by Islamic Banks and get an advanced understanding of these financing techniques
- To introduce the students Islamic credit card structure based on various Islamic contracts
- To provide basic understanding of working of Islamic banks and financial institutions

MODULE I DEPOSIT PRODUCTS IN ISLAMIC BANKS 06

Islamic Banks Deposits: Current Account, Saving Account, Investment Deposit Account: General Investment Deposit Account, Special Investment Deposit Account; Deposit Management.

MODULE II CARD PRODUCTS IN ISLAMIC BANKS 06

Islamic Credit Cards in the market: Bai-al Ina Credit Card Structure, Tawarruq Credit Card Structure, Ijarah Credit Card Structure, Ujrah Credit Card Structure, Kafalah Credit Card Structure; Islamic Covered Card.

MODULE III ISLAMIC MODES OF FINANCING - I 06

Equity Based Products: Musharakah, Mudarabah; Deferred sale Financing - Bai Muajjal & Murabahah; Advance Sale Financing Product - Salam & Parallel Salam.

MODULE IV ISLAMIC MODES OF FINANCING - II 06

Financing Asset under Construction: Istisna & Parallel istisna; Lease Based Product - Ijarah & Ijarah Muntahiyah Bit-Tamleek; Services Based Products: Wakalah (Agency) & Kafalah (Guarantee); Bai- al ‘Inah & Twarruq : Financing for liquidity Management.

MODULE V OTHER MISCELLANEOUS SERVICES & ACTIVITIES 06

Letters of Credit; Cheque Payment System; Sarf (Foreign Exchange) & Hawalah (Remittance); Bai Istijrar (supply Contract) and Ujrah (fee); Bai- al Dain (Debt Trading); Qard-e Hasanah (Intrest- free Loan); Others.

Total Hours: 30

REFERENCES:

1. An introduction to Islamic finance By M. Taqi Usmani
2. Understanding Islamic Finance By Muhammad Ayub

OUTCOMES:

Students will be able to:

- Differentiate between conventional and Islamic finance products
- Demonstrate an understanding of resource mobilization and resource utilization of Islamic Banks
- Appreciate and apply various Islamic financing techniques used by modern Islamic banks like Mudarabah, Musharaka, Diminishing Musharaka, Murabaha, Ijara, Salam and Istisna etc.
- Know the operating structures and organisational forms adopted by Islamic financial institutions:
- Know the regulatory and standard setting bodies overseeing Islamic finance and banking:
- Grasp the functioning of debt-like and equity-like Islamic finance techniques

ELECTIVES – ENTREPRENEURSHIP

		L	T	P	C
MSCY 086	**ENTREPRENEURSHIP, FAMILY ENTERPRISES & SUCCESSFUL VENTURES**	**3**	**0**	**0**	**2**

OBJECTIVES:

- Small Business & Entrepreneurship students gain knowledge and skills to better prepare them to perform as an owner or manager in small business
- Graduates will possess a solid understanding of family business management and will be able to translate this knowledge into practice.
- Ability to appraise the Reasons for initial breakdown and steps to overcome crisis.
- Understanding of starting and building new firms, and how to manage ventures, and starting up.

MODULE I THE ENTREPRENEURIAL MIND 06

Crafting a Personal Entrepreneurial Strategy - Three Principles for Achieving entrepreneurial greatness, six dominant themes, core and Desirable Entrepreneurial Attributes. Women entrepreneurs and rural entrepreneurship.

MODULE II FAMILY BUSINESS 06

Importance of family business, Characteristics, Responsibility and the right of share holder in family business and strategies for improving the capability of family business.

MODULE III INSTITUTIONAL SUPPORT FOR ENTREPRENEURS 06

Need for institution support, Identifying institution support- MSME, NSIC, SIDO, SSID, SSICS, SISI, DICS, industrial estates and TCOS.

MODULE IV FACTOR AFFECTING ENTREPRENEURIAL GROWTH 06

Economic factor, Social factor factors, Psychological factors, Political factor and government actions.

MODULE V SUCCESS OF A NEW BUSINESS 06

Reasons for initial Failure & Visible Problems for Business, steps to overcome problem Strategic Management for Business enterprises.

Total Hours: 30

REFERENCES:

4. Lall, Madhurima, and Shikha Sahai, Entrepreneurship, Excel Book, New Delhi.2008.
5. Charantimath, Poornima, Entrepreneurship Development and Small Business Enterprises, Pearson Education, New Delhi. 2005.

OUTCOMES:

On completion of course the student will be able to

- Ability to recognize a business opportunity that fits the individual student:
- Demonstrate the ability to provide a self-analysis in the context of an entrepreneurial career
- Demonstrate the ability to find an attractive market that can be reached economically
- Awareness of institution and their formalities for entrepreneurial development.
- Articulate an effective elevator pitches to gain support for the venture.

MSCY 087	FINANCIAL INSTITUTIONS AND FUNDING FOR ENTREPRENEURS	L	T	P	C
		3	0	0	2

OBJECTIVES:

- This course is intended for Entrepreneurs to Recognize a financing options.
- Appreciate the difference between venture capital, private equity, early stage and traditional financing sources.
- Aware of Taxation Benefit and tax holidays for rural entrepreneurs
- Ability to understand the causes and consequences of industrial sickness.

MODULE I FINANCING OF ENTERPRISE 06

Need for financial Planning, Sources of finance- Commercial banks, NBFC, small business grants, venture capital, angel investor and PE funds.

MODULE II WORKING CAPITAL MANAGEMENT FOR ENTERPRISE 06

Working Capital-Meaning, Significance, assessment of working capital, factors determining the requirement of working capital, sources and management of working capital.

MODULE III INSTITUTIONAL FINANCE TO ENTREPRENEURS 06

IDBI, IFCI, ICICI, IRBI, LIC, SFC'S, SIDC, Small Industrial Bank of India, Export-Import Bank of India (EXIM Bank).

.

MODULE IV TAXATION BENEFITS FOR ENTREPRENEURS 06

Need for tax benefits, tax holidays, tax concession for small-scale industry in rural areas and tax concession for small-scale industry in backward areas.

MODULE V INDUSTRIAL SICKNESS 06

Industrial Sickness- Concepts, Signal and Symptom of Industrial Sickness, Magnitude and Causes and Consequences of Industrial Sickness.

Total Hours: 30

REFERENCES:

1. Jeffry A. Timmons and Stephen Spinelli, "New venture creation", seventh Edition, Tata- McGraw-Hill education private limited, New Delhi 2009.

4. Lall, Madhurima, and Shikha Sahai, Entrepreneurship, Excel Book, New Delhi.2008.
5. Charantimath, Poornima, Entrepreneurship Development and Small Business Enterprises, Pearson Education, New Delhi. 2005.

OUTCOMES:

On completion of course

- Student will able to identify the sources of funding for his enterprises
- Exhibit the ability to provide a self-analysis in the framework of an entrepreneurial career
- Display the ability to find an attractive market that can be reached economically
- Demonstrate the understanding of how to launch the individual's entrepreneurial career:
- Craft appropriate a business practices that suits the business to avail tax benefits.

MSCY 088 MARKETING FOR ENTREPRENEURS

L	T	P	C
3	0	0	2

OBJECTIVES:

- To better prepare them to perform about the marketing challenges in an entrepreneurial firm
- Understand the core concepts of Entrepreneurship and Marketing
- Apply creativity and innovation to generate new pricing tactics in marketing
- Ability to Design a marketing plan to incorporate artistic marketing tactics.

MODULE I INTRODUCTION TO ENTREPRENEURIAL MARKETING 06

Entrepreneurial Marketing- Introduction, analysis of definition, Entrepreneurial Marketing vs Traditional Marketing, Entrepreneurial Marketing competencies.

MODULE II DIMENSION OF ENTREPRENEURIAL MARKETING 06

Marketing task, Dimensions of entrepreneurial marketing, types of markets, Market segmentation, target market and positioning.

MODULE III ENTREPRENEURIAL PRICING STRATEGY 06

Setting the Price- steps in setting the price, The Three Cs Model for Price Setting, Different types of pricing techniques.

MODULE IV ENTREPRENEURIAL PROMOTION APPROACH 06

Advertising, sales promotion, Personal selling, Major Consumer-Promotion Tools, Major Trade-Promotion Tools and public relations, cause marketing.

MODULE V ENTREPRENEURIAL CHANNEL TACTIC 06

Channel management decisions, Types of Channel-Direct to customer, retailer, sales agent, own store, selling through Self Help Group

Total Hours: 30

REFERENCES:

1. Philip Kotler, Marketing Management, Millennium Edition, by Pearson Custom Publishing 2002.

4. Rashmi Bansal Poor Little Rich Slum published by Westland, India, 2012.
5. Srinivasan, Case Studies in marketing Indian context, sixth edition PHI learning private Limited 2014.

OUTCOMES:

On completion of course

- Build Entrepreneurial marketing competencies
- Develop a marketing plan for an entrepreneurial idea.
- Create appropriate a channel strategy to promote the product..
- Develop an attractive new or improved product or service idea into a product offering
- Ability to formulate sound marketing strategies to give the product or service offering the support it needs to succeed in the marketplace

MSCY 089	NEW VENTURE AND PROJECT PREPARATION	L	T	P	C
		3	0	0	2

OBJECTIVES:

- To examine how the entrepreneurial revolution in the United States is beginning to have a profound impact on the rest of world.
- Ability to differentiate between an idea and an opportunity.
- Capacity to screen the new venture opportunity by screening exercise.
- Apply innovation to generate new project identification and implementation.

MODULE I AMERICA'S ENTRPRENEURIAL REVOLUTION 06

Entrepreneurship-new venture formation, entrepreneurial revolution and Americas self made millionaires and building an entrepreneurial society.

MODULE II NEW VENTURE OPPURTUNITY 06

New venture opportunity, Creating, Shaping, Recognizing, To Think Big Enough, Opportunity through zoom lens. Transforming caterpillars into butterflies, When is an Idea an opportunity.

MODULE III NEW VENTURE OPPORTUNITIES AND SCREENING 06

New venture, Quick Screen, VOSE- Venture Opportunities Screening Exercises with twelve Exercises' and Case Newland Medical technologies.

MODULE IV PROJECT IDENTIFICATION & APPRAISAL 06

Project Identification, Project Selection, Project Formulation of Project Report, Content of project report and Project appraisal- concepts and methods and Project implementation

MODULE V GOVERNMENT OF INDIA INITIATIVE 06

Start up India and stand up India, digital India and make in India and skill India mission and a study on India's hot spot of startup – Koramangla.

Total Hours: 30

VISION AND MISSION OF THE DEPARTMENT OF COMPUTER APPLICATIONS

VISION

Aspires to provide quality education in the field of computer applications with state of the art computational facilities and undertake quality research in collaboration with industries and universities to produce committed professionals and academicians to meet the needs of the industries and society.

MISSION

The Department of Computer Applications, endeavors

- To disseminate knowledge through education and training of graduates in the field of computer applications.
- To focus on teaching - learning, research and consultancy to promote excellence in computer applications.
- To foster graduates with opportunities required to explore, create and face challenges of IT related industries.
- To equip the graduates with the necessary skills in communication, team work and leadership qualities to meet the needs of the IT related sector globally.
- To disseminate the outcome of projects and research work undertaken by the department through appropriate measures for the benefit of society and industry.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

MASTER OF COMPUTER APPLICATIONS

PROGRAMME EDUCATIONAL OBJECTIVES:

PEO-1: To provide students with a solid foundation in mathematics and computing fundamentals required to analyze and solve computing problems and also to pursue research and higher studies.

PEO-2: To provide technical knowledge in various programming languages and train them to comprehend, analyze, design and create innovative computing solutions for real time problems.

PEO-3: To prepare the students for a prolific career in IT and inculcate an urge for self learning by providing an ambient environment to improve personality , excellence, leadership and spiritual values in all activities throughout the career.

PEO-4: To foster and provide a social environment which moulds the students to become professionally enriched with communication, technical and innovative skills to meet the dynamic needs of industry and society.

PROGRAMME OUTCOMES:

On completion of the programme the graduates will be able to

PO1: Apply the knowledge of computing fundamentals and mathematical concepts in computer programming.

PO2: Identify, formulate, analyze and implement mathematics and technical skills to solve real time problems.

PO3: Design and develop the software to meet out the customer and industry needs.

PO4: Pursue Research based and industry oriented projects to provide valid conclusions for complex problems.

PO5: Use latest software and tools for solving problems and satisfy the dynamic needs of industry and society.

PO6: Become a software professional with social responsibilities and ethical values.

PO7: Solve societal and environmentally sensitive problems in professional manner.

PO8: Demonstrate knowledge of professional and ethical responsibilities.

PO9: Function as individual member or leader of team and able to manage projects in the software development process.

PO10: Comprehend, write effective reports and communicate their innovations and idea in an effective way.

PO11: Adapt self-learning using their learning abilities.

PO12: Develop as Entrepreneur in the software domain through innovative approach and excel in placement activities.

PO13: Understand and apply foundations of software engineering practice and process within production constraints.

PO14: The ability to employ modern computer languages, environments, and platforms in creating innovative career paths to be an entrepreneur, and a zest for higher studies.

SEMESTER I

MAC6185 DISCRETE MATHEMATICS

L	T	P	C
3	1	0	4

OBJECTIVES:

- Acquire knowledge on Set theory, Logical connectives and normal forms.
- To familiarize students with applications of Formal language and Algebraic Theory to Computer Science problems
- Compute problems on Permutations and Combinations, Algebraic structures, logical connectives, truth tables, normal forms.
- Analyze and derive conclusion on Proofs by contradiction, kernal of homomorphism, Cosets and Lagrange's theorem, Normal subgroups, Rings and Fields

MODULE I FUNDAMENTAL STRUCTURES 12

Set theory:- Relationships between sets - Operations on sets - Set identities - Principle of inclusion and exclusion - Minsets Relations – Binary relations - Partial orderings - Equivalence relations. Functions:– Properties of functions - Composition of functions – Inverse functions - Permutation functions.

MODULE II LOGIC 12

Prepositional, logic – Logical connectives – Truth tables – Normal forms (conjunctive and disjunctive) - Predicate logic - Universal and existential quantifiers - Proof techniques – direct and indirect – Proof by contradiction – Mathematical Induction.

MODULE III COMBINATORICS 12

Basics of counting – Counting arguments – Pigeonhole principle - Permutations and Combinations - Recursion and Recurrence relations – Generating functions.

MODULE IV ALGEBRAIC STRUCTURES 12

Introduction- Properties of an algebraic systems –Morphisms – Semigroups – Monoids – Sub semigroups and Submonoids –Groups-Order of a group – order of an element-permutation groups-subgroups –cyclic groups.

MODULE V MORPHISMS ON ALGEBRAIC STRUCTURES 12

Morphisms of groups – kernal of homomorphism - Cosets and Lagrange's theorem – Normal subgroups – Rings and Fields.

Total Hours: 60

5. Michael Sipser, "Introduction to Theory of Computation", 3rd edition, Cengage Learning, 2012.

OUTCOMES:

On completion of this course, students will be able to

- model Physical Problems to Mathematical problems
- solve modeled problems using set theory, connectives and Permutation and combinations.
- critique solution derived using proofs by contradictions, homomorphisms and groups, Normal subgroups, Rings and Fields.
- construct, organize and conclude problems on algebraic structures, logical connectives, normal forms.
- apply the acquired knowledge to solve problems on Finite state machines, deterministic and Non- deterministic finite state, Formal Languages, Classes of Grammars

CAC6101 PROGRAMMING IN C AND C++

L	T	P	C
3	0	0	3

OBJECTIVES:

- To gain experience about structured programming
- To understand various features in C
- Teach the syntax and semantics of C language as well as data types offered by the language.
- Develop the programming ability in students using the programming constructs Loop, functions, arrays, structures and unions.
- Identify and practice the object-oriented programming concepts and techniques
- Practice the use of C++ classes and class libraries
- Develop applications using Object Oriented Programming concepts

MODULE I INTRODUCTION TO C LANGUAGE 09

Overview of C – Constants, Variables and Data Types – Operators and Expressions – Managing Input / Output Operations – Formatted I/O – Decision Making - Branching –- IF, Nested IF – Switch – goto - Looping- While, do, for statements.

MODULE II ARRAYS, FUNCTIONS, STRUCTURES AND UNIONS 09

Arrays – dynamic and multi-dimensional arrays - Character arrays and Strings – String handling Functions - User defined Functions – Categories of Functions – Recursion - Structures and Unions – Array of Structures – Structures and Functions.

MODULE III POINTERS AND FILE MANAGEMENT 09

Pointers – Declaration, Accessing a variable, character strings, pointers to functions and structures - File Management in C – Dynamic Memory allocation

MODULE IV OBJECT RIENTEDCONCEPTS 09

Overview of C++-Classes and Objects-Friend Functions-Friend Classes-Inline function-Static Members – Arrays – Pointers – References - Dynamic Allocation - Function Overloading-constructor Overloading - Copy Constructors - Default Argument

MODULE V INHERITANCE AND EXCEPTION HANDLING 09

Operator Overloading-Member Operator Overloading-Overloading new and delete-Inheritance-Base Class-Access Control-Virtual Functions-Pure Virtual Functions-Templates-Generic Functions-Applying Generic Functions-Generic Classes-Exception Handling-C++ I/O Streams-File I/O

Total Hours: 45

TEXT BOOKS:

1. R.G.Dromey “How to Solve it by Computer”, PHI, 1998
2. E.Balagurusamy “Programming in ANSI C”, Tata McGraw Hill, 2004.
3. Robert Lafore. “Waite Groups OOP in Turbo C++”, Galgotia Publications, 2001.
4. Stanley, B.Lippman,JoveLagrie, “C++Primer”, 3rd Edition, Addison Wesley,1998.

OUTCOMES:

On completion of this course, students will be able to

- design, implement, test and debug programs using different data types, arrays, decision making statement and loops.
- solve simple, moderate, mathematical, logical and business problems in ‘C’.
- differentiate structure and union in the aspect of memory management.
- list the features of object-oriented programming language
- apply various object oriented features like inheritance, data abstraction, encapsulation and polymorphism to solve various computing problems using C++ language.

CAC6102 COMPUTER ORAGANISATION

L	T	P	C
3	0	0	3

OBJECTIVES

- To impart the knowledge in the field of digital electronics
- To impart knowledge about the various components of a computer and its internals.
- To design and realize the functionality of the computer hardware with basic gates and other components using combinational and sequential logic.
- To understand the importance of the hardware-software interface

MODULE I LOGIC CIRCUITS 09

Logic functions – synthesis of logic functions – Minimizations of logic - Synthesis with NAND and NOR gates - Implementation of Logic gates - Flip-flops – Registers and shift registers – counters – decoders – Multiplexers – PLDs – sequential circuits. Basic Structure of Computers: Functional Units - Basic operational concepts – Bus structures – performance – Multi processors and Multi computers: Functional Units – Basic operational concepts – Bus structures – performance – Multiprocessors and Multi computers – Historical Perspective.

MODULE II MACHINE INSTRUCTIONS AND PROGRAMS 09

Numbers, Arithmetic operations and characters – Memory locations and address, operations – instructions and instruction, sequencing – addressing modes - assembly language – basic input/output operations – subroutines – encoding of Machine instructions. Instructions – Assembly language –O/I operations – Registers and addressing – Instructions language – program flow control – I/O operations - logic instructions of 6300 and Intel Pentium.

MODULE III INPUT / OUTPUT ORGANIZATION 09

Accessing I/O Devices – Interrupts – direct memory access – buses 240-interface circuits – Standard I/O Interfaces.

MODULE IV MEMORY SYSTEM 09

Concepts – semiconductor RAM memories – Readonly memories – cache memories – performance considerations – virtual memories management requirements – secondary storage Arithmetic: Addition and subtraction of signel members – design of fast adders – multiplication of positive members – signed operand multiplication – fast multiplication – integer division – floating point numbers and operations.

MODULE V BASIC PROCESSING UNIT 09

Concepts – execution of a complete instruction – Multiple – Bus organization – hardware control – microprogrammed control. Pipelining: Concepts – Data hazards – instruction hazards – influence on Instruction sets - data path and control constructions – supers cal operation- ultra SPARC II – Performance considerations.

Total Hours: 45

TEXT BOOKS:

1. Hamacher C, Vranesic Z, and Zaky S. Computer Organization, 5th edition, McGraw – Hill, 2002.

REFERENCE BOOKS:

1. Stallings W, Computer Organization and Architecture, 6th edition. Parson Education, 2003.
2. Mano M.M. Computer System Architecture, 3rd edition. PHI, 1993.
3. Yarbrough JM, Digital Logic – Applications and Design, Thomas Lernig, 1997.
4. Heuring VP, and Jordan HF, Computer Systems Design and Architecture, Pearson

OUTCOMES

On completion of this course, students will be able to

- solve basic binary math operations using the computer.
- demonstrate programming proficiency using the various addressing modes and data transfer instructions of the target computer.
- apply knowledge of the processor’s internal registers and operations by use of a PC based microprocessor simulator.
- write assembly language programs and run their program on the training boards.
- design electrical circuitry to the processor I/O ports in order to interface the processor to external devices.
- write assembly language programs and download the machine code that will provide solutions to the real - world control problems.

CAC6103 DATABASE MANAGEMENT SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- Provide an introduction to the management of database systems.
- Understand the fundamentals of relational systems including data models, database architectures and database manipulations.
- To teach how to construct simple and moderately advanced database queries using structured Query Language.
- To teach the concept of a database transaction, handling deadlocks, paging, concurrency control, backup and recovery systems.
- explore the origins of NoSQL databases and the characteristics that distinguish them from traditional relational database management systems.

MODULE I INTRODUCTION 09

Database Systems vs. File Systems - View of Data - Data Models-Database Languages -Transaction Management - Database Systems Structure - History of Database Systems - Database Systems Applications - Entity Relationship Model.

MODULE II RELATIONAL DATABASES 09

SQL - Basic Structure - Set Operations - Complex Queries - Joined Queries - DDL-Embedded SQL-Dynamic SQL-Other SQL Functions-Query by Example-Integrity and Security of searching-Relational Database Design.

MODULE III DATA STORAGE AND INDEXING 09

Storage & File Structure - Disks-RAID-File Organization - Indexing &Hashing- B+ TREE-B Tree-Static Hashing-Dynamic Hashing-Multiple Key Access.

MODULE IV QUERY EVALUATION & OPTIMIZATION 09

Query Processing-Selection Operation-Sorting-Join Operation-Evaluation of Expressions-Query Optimization.

MODULE V TRANSACTION MANAGEMENT 09

Transaction Concept-Static Implementation-Concurrency Control-Protocols-Deadlock Handling-Recovery Systems-Recovery with Concurrent Transactions - Shadow Paging-Buffer Management-Case Studies-Oracle-Microsoft SQL Server-NoSQL-Characteristics-major types of NoSQL databases-NoSQL Database-as-a-Service for Web and mobile applications

Total Hours: 45

TEXT BOOK:

1. Abraham Silberschatz, HentryF.Korth and S.Sudharssan, “Database System Concepts”, 4th Edition, Tata McGraw Hill, 2002.

REFERENCES:

2. Raghu Ramakrishnan & Johannes Gerhrke, “Data Base Management Systems”, McGraw Hill International Edition, 2000.

OUTCOMES:

On completion of this course, students will be able to

- describe the concepts of data storage and indexing, transaction management, query evaluations and optimization techniques.
- list the importance of DBMS and differentiate how DBMS is better than traditional File Processing Systems.
- analyze the basic structure of Database and recognize the different views of the database.
- formulate data retrieval queries in SQL for real time scenario.
- construct and normalize conceptual data models
- handle the deadlocks that occurs in the system.
- list the differences between a relational database and a non-relational (NoSQL) database

CAC6104 COMPUTER NETWORKS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide students with enough knowledge in networking, various types of networks and its applications.
- To describe the issues of data link protocols including encoding, framing, and error detection.
- To learn various switching and routing techniques
- To acquire essential knowledge about layer architecture of data communication.
- To learn the technologies of Software Defined Networking (SDN), Network Functions Virtualization (NFV)

MODULE I INTRODUCTION 09

Building a network – Requirements – Network Architecture – OSI – Internet – Direct Link Networks – Hardware building blocks – Framing – Error detection – Reliable transmission.

MODULE II NETWORK FUNDAMENTALS 09

LAN Technology – LAN Architecture – BUS/Tree – Ring – Star – Ethernet – Token Rings – Wireless.

MODULE III NETWORK LAYER 09

Packet Switching – Switching and Forwarding – Bridges and LAN switches – Internetworking – Simple Internetworking – Routing.

MODULE IV TRANSPORT LAYER 09

Reliable Byte Stream (TCP) – Simple Demultiplexer (UDP) – TCP Congestion Control – Congestion Avoidance Mechanisms.

MODULE V PRESENTATION LAYER and APPLICATIONS 09

Presentation formatting – Data compression – Cryptographic Algorithms: RSA - DES –– Applications – Domain Name Service – Email - SMTP – MIME – HTTP – SNMP-Introduction to Software Defined Networking(SDN) and Network Functions Virtualization(NFV)- SDN Fundamentals

Total Hours: 45

TEXT BOOK:

1. Larry L. Peterson & Bruce S. Davie, “Computer Networks - A systems Approach”, 2nd Edition, Harcourt Asia/Morgan Kaufmann, 2000.

REFERENCES:

1. James F. Kurose and Keith W. Ross, “Computer Networking - A Top Down Approach featuring the Internet”, 1st Edition, Addison Wesley Publishing Company, 2001.
2. William Stallings, “Data and Computer Communications”, 5th Edition, PHI, 1997.
3. Andrew S. Tanenbaum, “Computer Networks”, Tata Mcgraw Hill, 3rd Edition, 2001.

OUTCOMES:

At the end of the course, the students will be able to

- identify and describe the layers of the OSI and TCP/IP.
- list the applications of network
- make effective use of networking topologies
- illustrate how networks work in practice
- identify the requirements for different network architecture
- evaluate the performance of each of the protocols.
- Summarize the features of an emerging paradigm software defined networking(SDN) in computer networking.

CAC6105 C AND C++ PROGRAMMING LAB

L	T	P	C
0	0	4	2

OBJECTIVES:

- Brief on Data Types, Operators, Statements, Loops, Functions, Array, Pointers, Structures.
- Make the students write programs using various programming constructs.
- Understand and solve logical & mathematical problems through C++ language.
- Design and develop solutions to intermediate level problems.
- Develop their skills in software development using a procedural language.
- Get programming skill in object oriented technology with the usage of C++.

List of Programs

1. **Display the following:**
   i. Floyd's triangle
   ii. Pascal Triangle
2. **Generate the following series of numbers:**
   i. Armstrong numbers between 1 to 100
   ii. Prime numbers between 1 to 50
   iii. Fibonacci series up to N numbers
3. **Manipulate the strings with following operations.**
   i. Concatenating two strings
   ii. Reversing the string
   iii. Finding the substring
   iv. Replacing a string
   v. Finding length of the string
4. **Find the summation of the following series:**
   i. Sine
   ii. Cosine
   iii. Exponential
5. **Create the sales report for M sales person and N products using two dimensional array.**
6. **Simulate following Banking operations using functions.**
   i. Deposit
   ii. Withdrawal
   iii. Balance Enquiry

7. **Implement using recursion**
   i. Find the solution of Towers of Hanoi problem using recursion.
   ii. Fibonacci number generation.
   iii. Factorial
8. **Generate Student mark sheets using structures.**
9. **Create a collection of books using arrays of structures and do the following:**
   i. Search a book with title and author name
   ii. Sorts the books on title.
10. **Programs using Constructor and Destructor.**
11. **Creation of classes and use of different types of functions.**
12. **Count the number of objects created for a class using static member function.**
13. **Write programs using function overloading and operator overloading.**
14. **Programs using inheritance.**
15. **Program using friend functions.**
16. **Program using virtual function.**
17. **Write a program using exception handling mechanism.**
18. **Programs using files.**
19. **Programs using function templates.**

OUTCOMES:

On completion of this course, students will be able to

- design and debug programs involving different data types, decision structures and loops.
- apply the in-built functions and customized functions for solving the problems.
- handle the exceptions that raise in the program.
- write, read and manipulate the data stored in files to deal with various real time problems
- work in a team to analyze engineering problems and develop C++programs for solving these problems.
- reuse the code and write the classes which work like built-in types

CAC6106 DBMS LAB

L	T	P	C
0	0	4	2

OBJECTIVES:

- Learn how to create tables which are fundamental storage blocks of data.
- Learn how to place constraints on data that is entered on tables to ensure data integrity.
- Learn how to add, change and remove data from tables.
- Learn how to select a subset of the data you want to see from the collection of tables and data.
- Learn how to combine table and group multiple rows of data in table.

List of Exercises

1. Execute a single line and group functions for a table.
2. Execute DCL and TCL Commands.
3. Create and manipulate various DB objects for a table.
4. Create views, partitions and locks for a particular DB.
5. Write PL/SQL procedure for an application using exception handling.
6. Write PL/SQL procedure for an application using cursors.
7. Write a DBMS program to prepare reports for an application using functions.
8. Write a PL/SQL block for transaction operations of a typical application using triggers.
9. Write a PL/SQL block for transaction operations of a typical application using package.
10. Design and develop an application using any front end and back end tool (make use of ER diagram and DFD).

Typical Applications – Banking, Electricity Billing, Library Operation, Pay roll, Insurance, Inventory, etc

OUTCOMES:

On completion of this course, students will be able to

- apply iterative programming at database level.
- write programming blocks with conditional structure, assignment structure, loop structure, etc.
- use exception Handling, Transaction oriented programs, Stored procedures, functions, packages, etc.
- implement cursors which would allow row wise access of data.
- use triggers which would allow you define pre and post actions when something change in the database tables.

SEMESTER II

		L	T	P	C
CAC6201	**COMPUTER GRAPHICS AND MULTIMEDIA SYSTEMS**	**3**	**0**	**1**	**4**

OBJECTIVES:

- develop an understanding and awareness of how issues such as content, information architecture, motion, sound, design, and technology merge to form effective and compelling interactive experiences for a wide range of audiences and end users.
- be familiar with various software programs used in the creation and implementation of multi-media (interactive, motion/animation, presentation, etc.).
- enable students to be practically sound in area of 2D, 3D and animation.
- develop real time multimedia applications with user friendly environment.

MODULE I INTRODUCTION 09

Overview of Graphics System - Bresenham technique – Line Drawing and Circle Drawing Algorithms - DDA - Line Clipping - Text Clipping.

MODULE II 2D TRANSFORMATIONS 09

Two dimensional transformations – Scaling and Rotations - Interactive Input methods - Polygons - Splines – Bezier Curves - Window view port mapping transformation.

MODULE III 3D TRANSFORMATIONS 09

3D Concepts - Projections – Parallel Projection - Perspective Projection – Visible Surface Detection Methods - Visualization and polygon rendering – Color models – XYZ-RGB-YIQ-CMY-HSV Models - animation – Key Frame systems - General animation functions - morphing.

MODULE IV OVERVIEW OF MULTIMEDIA 09

Multimedia hardware & software - Components of multimedia – Text, Image – Graphics – Audio – Video – Animation – Authoring.

MODULE V MULTIMEDIA SYSTEMS AND APPLICATIONS 09

Multimedia communication systems – Data base systems – Synchronization Issues – Presentation requirements – Applications – Video conferencing – Virtual reality – Interactive video – video on demand.

Total Hours: 45

GRAPHICS AND MULTIMEDIA LAB:

1. Write a program for Line drawing using Bresenham Algorithm.
2. Write a program for Line drawing using DDA Line Drawing Algorithm.
3. Write a program for Circle Drawing using Bresenham Circle Drawing Algorithms.
4. Write a program for Line Clipping using Cohen-Sutherland Line clipping algorithm.
5. Write a program for 2D Transformations like Translations and Scaling and Rotations.
6. Write a program for 3D Transformations like Translations and Scaling and Rotations.
7. Write a program for 3D Projections like Parallel, Perspective
8. Create Frame by Frame Animations using multimedia authoring tools.
9. Develop a presentation for a product using techniques like Guide Layer, masking and onion Skin using authoring tools.
10. Create a JPEG image which demonstrates the various features of an image editing tool.

Use various software programs used in the creation and implementation of multi-media (interactive, motion/animation, presentation, etc.)

TEXT BOOKS:

1. Hearn D and Baker M.P, “Computer graphics – C Version”, 2nd Edition, Pearson Education, 2004 (unit 1, 2 &3)
2. Ralf Steinmetz, Klarasteinmetz, “Multimedia Computing, Communications and Applications”, Pearson education, 2004 (unit 4 & 5)

REFERENCES:

1. Siamon J. Gibbs and Dionysios C. Tsichritzis, “Multimedia programming”, Addison Wesley, 1995.
2. John Villamil, Casanova and LeonyFernanadez, Eliar, “Multimedia Graphics”, PHI, 1998.

OUTCOMES:

On completion of this course, students will be able to

- attain the complete knowledge in graphics & multimedia domain.
- show their proficiency while working with Graphics and multimedia software's and tools.
- create interactive graphics applications in C++ using one or more graphics application programming interfaces.
- design and develop a user friendly multimedia application.
- write programs that demonstrate 2D and 3D transformations

CAC6202 SOFTWARE ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Assist the student in understanding the basic theory of software engineering
- Define software engineering and explain its importance
- Discuss the concepts of software products and software processes
- Solve problems in a team environment through effective use of written and oral communication skills.
- Practice the lifelong learning needed in order to keep current as new issues emerge.

MODULE I INTRODUCTION 09

Generic View of Process – Process Models-The Waterfall Model-Incremental Model-Evolutionary Model-Specialized Model-The Unified Process–Agile Process – Agile Models – Software Cost Estimation – Planning – Risk Analysis – Software Project Scheduling.

MODULE II REQUIREMENT ANALYSIS 09

System Engineering Hierarchy – System Modeling – Requirements Engineering: Tasks- Initiating The Process-Eliciting Requirements-Developing Use Cases-Negotiating Requirements-Validating Requirements – Building the Analysis Models: Concepts.

MODULE III SOFTWARE DESIGN 09

Design Concepts – Design Models – Pattern Based Design – Architectural Design – Component Level Design – Component – Class Based And Conventional Components Design – User Interface – Analysis And Design.

MODULE IV SOFTWARE TESTING 09

Software Testing – Strategies: Conventional - Object Oriented – Validation Testing – Criteria – Alpha – Beta Testing- System Testing – Recovery – Security – Stress – Performance - Testing Tactics – Testing Fundamentals-Black Box

MODULE V SCM AND QUALITY ASSURANCE 09

Software Configuration And Management-Features-SCM Process-Software Quality Concepts – Quality Assurance – Software Review–Technical Reviews –

Formal Approach To Software Quality Assurance – Reliability – Quality Standards – Software Quality Assurance Plan.

Total Hours: 45

TEXT BOOK :

1. Roger Pressman.S., “Software Engineering: A Practitioner's Approach”, 6th Edition, Mcgraw Hill, 2005.

REFERENCES :

1. P. Fleeger, “Software Engineering”, Prentice Hall, 1999.
2. Carlo Ghezzi, Mehdi Jazayari, Dino Mandrioli, “Fundamentals of Software Engineering”, Prentice Hall Of India 1991.
3. I. Sommerville, “Software Engineering”, 5th Edition: Addison Wesley, 1996.

OUTCOMES:

On completion of this course, students will be able to

- apply foundations of software engineering practice and process within production constraints.
- analyze, design, verify, validate, implement, apply, and maintain software systems
- justify the importance of cost estimation, scheduling and reviewing the progress of the software.
- apply different testing and debugging techniques and analyze their effectiveness.
- sketch the software project management concepts like cost estimation, scheduling and reviewing the progress.
- demonstrate different testing and debugging techniques and analyzing their effectiveness.

CAC6203	DATA STRUCTURES AND DESIGN AND ANALYSIS OF ALGORITHMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- to learn about different kinds of data structures that are suited to different kinds of applications
- to manage huge amounts of data efficiently,
- to understand the suitable applications of tree and graph data structure

MODULE I LINEAR STRUCTURES 09

Abstract Data Types(ADT) – List ADT–array-based implementation–linked list implementation–cursor-based linked lists–doubly-linked lists–applications of lists– Stack ADT–Queue ADT– circular queue implementation– Applications of stack sand queues

MODULE II TREE STRUCTURES 09

Tree ADT - tree traversals–left child right sibling data structures for general trees –Binary Tree ADT - expression trees– applications of trees–binary search tree ADT– AVL trees–binary heaps

MODULE III HASHING AND SETS 09

Hashing – Separate chaining –open addressing–rehashing –extendible hashing – Disjoint Set ADT–dynamic equivalence problem–smart union algorithms– path compression–applications of Sets

MODULE IV GRAPHS AND THEIR APPLICATIONS 09

Definitions – Topological sort–breadth-first traversal- shortest-path algorithms–minimum spanning tree– Prim's and Kruskal's algorithms–Depth-first traversal–biconnectivity–Euler circuits–applications of graphs.

MODULE V ALGORITHM DESIGN AND ANALYSIS 09

Introduction to algorithm design techniques: Greedy algorithms, Divide and conquer, Dynamic programming, backtracking, branch and bound, Randomized algorithms– Introduction to algorithm analysis: asymptotic notations, recurrences–Introduction to NP-complete problems

Total Hours: 45

TEXT BOOK:

1. Tanaenbaum A.S.,Langram Y. Augestein M.J “Data Structures using C” Pearson Education, 2004.

REFERENCES:

1. Robert Kruse & Clovis L. Tondo “Data Structures and Program Design in C”, Prentice Hall, 2nd edition, 1991.
2. Weiss “Data Structures and Algorithm Analysis in C”, Addison Wesley, 2nd Edition, 1997.
3. R.F.Gilberg, B.A.Forouzan, “Data Structures”, Second Edition, Thomson India Edition, 2005.
4. K.S.Easwarakumar, Object Oriented Data Structures using C++, Vikas
5. Publishing House pvt.Ltd., 2000.
6. SaraBaase and A.VanGelder, “Computer Algorithms”, Third Edition, Pearson Education, 2000.
7. T. H. Cormen, C. E. Leiserson, R. L. Rivest, and C. Stein, "Introduction to algorithms", Second Edition, Prentice Hall of India Ltd, 2001.

OUTCOMES:

At the completion of this course, the student will able to

- compare and contrast various sorting and searching techniques
- apply suitable shortest path algorithm in appropriate applications
- manage the storage by using proper storage management technique
- Identify the strengths and weaknesses of different data structures
- choose the appropriate data structure and algorithm design method for a specified application.
- determine which algorithm or data structure to use in different scenarios

CAC6204 OPERATING SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- Provide an overview of computer system and operating system
- Learn the scheduling mechanisms of operating systems
- Introduce the concepts of process management, memory management and storage management

MODULE I INTRODUCTION 07

Definition of OS-Mainframe System - Desktop Systems-Multi processor System-Distributed-Clustered-Real time Systems-Handheld Systems-Operating System Structure-System Components-Services-System Calls-System Programs-System Design and Implementation.

MODULE II PROCESS MANAGEMENT 08

Concepts-Process Scheduling-Operations on Processes-Co-operating Processes-Inter Process Communication-CPU Scheduling-Scheduling Concepts-Criteria-Scheduling Algorithms-Multiprocessor Scheduling-Real time Scheduling.

MODULE III PROCESS SYNCHRONIZATION 10

Critical Section-Synchronization Hardware-Semaphores-Problems of Synchronization-Critical Regions-Monitors-Deadlocks-Characterization-Handling Deadlocks-Deadlock Prevention-Avoidance-Detection-Deadlock Recovery.

MODULE IV MEMORY MANAGEMENT 10

Storage Hierarchy-Storage Management Strategies-Contiguous-Non Contigous Storage Allocation-Single User-Fixed Partition-Variable Partition - Swapping-Virtual Memory-Basic Concepts-Multilevel Organization-Block Mapping-Paging-Segmentation-Page Replacement Methods-Locality-Working Sets.

MODULE V I/O AND FILE SYSTEMS 10

Disk Scheduling-File Concepts-File System Structure-Access Methods- Directory Structure-Protection-Directory Implementation-Allocation Methods-Free Space Management-Case Study: Linux System.

Total Hours: 45

1. Milankovic M., Operating System Concepts and Design, 2nd Edition, McGraw Hill, 1992.
2. P.C.Bhatt, An Introduction to Operating Systems-Concepts and Practice, Prentice Hall of India, 2004.
3. H.M.Deitel, An Introduction to Operating Systems, 2nd Edition, Pearson Education, 2002.

OUTCOMES:

On completion of this course, students will be able to

- summarize the functions and objectives of operating systems
- evaluate the design issues associated with operating systems.
- compare and contrast scheduling mechanisms
- analyze the memory management issues.
- comprehend synchronization, deadlocks and multithreading.
- illustrate the file system structure.

CAC6205 DATA STRUCTURES AND ALGORITHMS LAB

L	T	P	C
0	0	4	2

OBJECTIVES:

- Introduce various algorithmic techniques to solve the problems
- study run-time efficiency of an algorithm
- design and implement operations on stacks, queues, trees and graphs
- design and implement algorithms for searching and sorting
- determine the Big-O of an algorithm

ALGORITHMS:

1. Apply the divide and Conquer technique to arrange a set of numbers using merge sort method.
2. Perform Strassen's matrix multiplication using divide and conquer method.
3. Solve the knapsack problem using greedy method.
4. Construct a minimum spanning tree using greedy method.
5. Construct optimal binary search trees using dynamic programming method of problem solving.
6. Find the solution for traveling salesperson problem using dynamic programming approach.
7. Perform graph traversals.
8. Implement the 8 Queens Problem using backtracking.
9. Implement knapsack problem using backtracking.
10. Find the solution of traveling salesperson problem using branch and bound technique.

DATA STRUCTURES:

1. Represent the given sparse matrix using one dimensional array and linked list.
2. Create a Stack and do the following operations using arrays and linked lists
   (i) Push (ii) Pop (iii) Peep
3. Create a Queue and do the following operations using arrays and linked lists
   (i) Add (ii) Remove
4. Implement the operations on singly linked list, doubly linked list and circular linked list.
5. Create a binary search tree and do the following traversals
   (i) In-order (ii) Pre order (iii) Post order

6. Implement the following operations on a binary search tree.
   (i) Insert a node (ii) Delete a node
7. Sort the given list of numbers using heap and quick sort.
8. Perform the following operations in a given graph
   (i) Depth first search (ii) Breadth first search
9. Find the shortest path in a given graph using Dijkstra algorithm

OUTCOMES:

On completion of this course, students will be able to

- analyze the complexity of a given algorithm.
- apply various data structure such as stacks, queues, trees , linked list and graphs to solve various computing problems
- compare, contrast, and choose appropriate algorithmic design techniques to provide solution to the problem.
- develop program that implements kruskal's algorithm, prims, binary search, all types of sorting, greedy algorithm and backtracking technique.
- construct optimal binary search tree using dynamic programming technique.
- find the solution for the n-queens problem and implement traveling salesman problem using dynamic programming.

CAC6206 COMMUNICATION SKILLS LABORATORY

L	T	P	C
0	0	2	2

OBJECTIVES:

- Enable the students to speak English with correct accent and pronunciation.
- Interact effectively in real life situations and in workplace.
- Develop the writing ability of students by providing them the required practice.
- Improve the written communication skill so as to write reports, letters etc.

MODULE I LANGUAGE FUNDAMENTALS 03

Tenses, Subject – Verb Agreement, Correction of Errors.

MODULE II ORAL COMMUNICATION 10

Oral practice – Introducing oneself, Conversations, Role-play - Activities based on real life situations and professional situations such as marketing, advertising, etc. Debating on a topic, Group Discussion, Oral Presentation, Non-verbal communication, Mock Interviews, Conducting meetings, Participating in meetings- Phonetics- Correct Pronunciation.

MODULE III WRITTEN COMMUNICATION 06

Writing a letter of application with resume - practical training - calling for quotations – placing an order – letter of complaint, Memoranda, Writing an email, Minutes - Report Writing - Project report - Writing a proposal.

MODULE IV LANGUAGE LABORATORY 06

Language fundamental practices - Listening Comprehension, Reading Comprehension, Listening to correct pronunciation, Accent, Viewing models of Presentations, Interviews, Group Discussions in the language lab and practice in the class room.

Total Hours: 25

7. R.K. Bansal, J.P. Harrison, “Spoken English”, Orient Longman, Mumbai (1999)
8. Grant Taylor, “English Conversation Practice” TataMCGraw Hill, New Delhi (1997).

OUTCOMES:

On completion of this course, students will be able to

- organise ideas relevantly and coherently.
- engage in debates.
- participate in group discussions and face interviews.
- write project and technical reports.
- write formal letters and deliver oral presentations
- take part in social and professional communication.

CAC6207 SEMINAR TOPICS

L	T	P	C
0	0	0	1

The student gives presentation on topics like:

- Social Networking
- Mobile Computing
- E-Business
- Human-Computer Interaction
- Cloud Computing
- Web of things
- Big Data
- xMax Technology
- Text mining
- Soft computing
- Plagiarism detection techniques.
- Ethical Hacking
- Surface Computer
- X-internet
- 4G broadband

SEMESTER III

CAC7101 OBJECT ORIENTED ANALYSIS AND DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- Describe basics of Object orientation and development methodologies
- Make the students to draw UML and other notations of object oriented paradigm and describe them
- to use UML and design patterns and framework in the processes
- Do object-oriented software testing and quality assurance

MODULE I INTRODUCTION 09

An overview – Object basics – Object state and properties – Behavior – Methods – Messages – Information hiding – Class hierarchy – Relationships – Associations – Aggregations- Identity – Dynamic binding – Persistence – Metaclasses – Object oriented system development life cycle.

MODULE II METHODOLOGY AND UML 09

Introduction – Survey – Rumbugh, Booch, Jacobson methods – Patterns – Frameworks – Unified approach – Unified modeling language – Static and Dynamic models – UML diagrams – Class diagram – Usecase diagrams – Dynamic modeling – Model organization – Extensibility.

MODULE III OBJECT ORIENTED ANALYSIS 09

Identifying Usecase – Business object analysis – Usecase driven object oriented analysis – Usecase model – Documentation – Classification – Identifying object, relationships, attributes, methods – Super-sub class – A part of relationships Identifying attributes and methods – Object responsibility.

MODULE IV OBJECT ORIENTED DESIGN 09

Design process – Axions – Colollaries – Designing classes – Class visibility – Refining attributes – Methods and protocols – Object storage and object interoperability – Databases – Object relational systems – Designing interface objects – Macro and Micro level processes – The purpose of a view layer interface.

MODULE V SOFTWARE QUALITY 09

Quality assurance – Testing strategies – Object orientation testing – Test cases– Test Plan – Debugging principles – Usability – Satisfaction – Usability testing – Satisfaction testing.

Total Hours: 45

TEXT BOOK :

1. Ali Bahrami, “Object Oriented System Development”, McGraw Hill International Edition, 1999.

REFERENCES:

1. Craig Larman, Applying UML and Patterns, 2nd Edition, Pearson, 2002.
2. Grady Booch, James Rumbaugh, Ivar Jacobson, “The Unified Modeling Language User Guide”, Addison Wesley Long man, 1999.
3. Bernd Bruegge, Allen H. Dutoit, Object Oriented Software Engineering using UML, Patterns and Java, Pearson 2004.

OUTCOMES:

On completion of this course, students will be able to

- describe basics of object orientation and development methodologies
- draw UML and other notations used in object oriented paradigm
- identify and apply object-oriented patterns and framework.
- test object oriented software and assure the quality.
- construct various UML models (including use case diagrams, class diagrams, interaction diagrams, state chart diagrams, activity diagrams, and implementation diagrams) using the appropriate notation.
- recognize the difference between various object relationships like inheritance, association, whole-part, and dependency relationships.

CAC7102 INTERNET AND JAVA PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- learn basic internet concepts, fighting against spam, conferencing on the internet, planning and creating website.
- learn the fundamentals of Java and to introduce encapsulation, polymorphism, and the Java language mechanism (classes and objects) to implement it.
- develop Java computer programs that perform various problem-solving algorithms.
- develop the programming skills to use the object oriented programming methodology to produce quality computer based solutions to real problems.
- work with collection of API and develop fast programs.

MODULE I BASIC INTERNET CONCEPTS 08

Connecting to the Internet – Domain Name System - Exchanging E-mail – Sending and Receiving Files - Fighting Spam, Sorting Mail and avoiding e-mail viruses – Chatting and Conferencing on the Internet – Online Chatting - Messaging – Usenet Newsgroup – Internet Relay chat (IRC) – Instant Messaging - Voice and Video Conferencing.

MODULE II WORLD WIDE WEB 08

Overview – Web Security, Privacy, and site-blocking – Audio and Video on the web – Creating and Maintaining the Web – Web site creation concepts – Web Page Editors – Optimizing Web Graphics – Web Audio Files – Forms, Interactivity, and Database-Driven Web sites – File Transfer and downloading– FTP – Peer to Peer – Downloading and Installing software.

MODULE III JAVA FUNDAMENTALS 08

Java features – Java Platform – Java Fundamentals – Expressions, Operators, and Control Structures – Classes, Packages and Interfaces – Exception Handling.

MODULE IV PACKAGES 12

AWT package – Layouts – Containers – Event Package – Event Model – Painting – Garbage Collection - Multithreading – Language Packages.

MODULE V ADVANCED JAVA PROGRAMMING 09

Utility Packages – Input Output Packages – Inner Classes – Java Database Connectivity - Servlets - RMI – Java Beans.

Total Hours: 45

TEXT BOOKS:

1. Margaret Levine Young, “Internet and WWW”, 2nd Edition, Tata McGraw Hill, 2002. (Unit 1 & 2)
2. Herbert Schildt, The Complete Reference – Java 2 , 4th Edition, Tata McGraw Hill, 2001. (Unit 3, 4 & 5)

REFERENCES:

1. Keyur shah, “Gateway to Java Programmer Sun Certification”, Tata McGraw Hill 2002.
2. Deitel&Deitel, Java How to Program, Prentice Hall 1999.

OUTCOMES:

On completion of this course, students will be able to

- list the various applications of internet and able to create , maintain and block the website.
- identify classes, objects, members of a class and the relationships among them needed for a specific problem.
- compare and contrast the interfaces and abstract classes.
- handle the exceptions and illustrate the life cycle of thread.
- update and retrieve the data from the databases using SQL
- develop distributed applications using RMI
- develop programs using the AWT packages and collection framework

MAC6186 RESOURCE MANAGEMENT TECHNIQUES

L	T	P	C
3	1	0	4

OBJECTIVES

- Constructing a mathematical representation of the problem under study.
- Deriving a solution using any of the appropriate mathematical models namely linear programming models, transportation and assignment models, integer programming models, scheduling by pert and cpm, queuing models.
- Analyze the alternatives and produce an optimal solution for the existing problem.

MODULE I LINEAR PROGRAMMING MODELS 12

Mathematical Formulation - Graphical Solution of linear programming models – Simplex method – Artificial variable Techniques- Variants of Simplex method.

MODULE II TRANSPORTATION AND ASSIGNMENT MODELS 12

Mathematical formulation of transportation problem- Methods for finding initial basic feasible solution – optimum solution - degeneracy – Mathematical formulation of assignment models – Hungarian Algorithm – Variants of the Assignment problem.

MODULE III INTEGER PROGRAMMING MODELS 12

Formulation – Gomory's IPP method – Gomory's mixed integer method – Branch and bound technique.

MODULE IV SCHEDULING BY PERT AND CPM 12

Network Construction – Critical Path Method – Project Evaluation and Review Technique – Resource Analysis in Network Scheduling.

MODULE V QUEUEING MODELS 12

Characteristics of Queuing Models – Poisson Queues - (M / M / 1) : (FIFO / ∞ /∞), (M / M / 1) : (FIFO / N / ∞), (M / M / C) : (FIFO / ∞ / ∞), (M / M / C) : (FIFO / N / 8) models.

L : 45, T : 15 Total Hours: 60

TEXT BOOK:

1. Taha H.A., “Operations Research: An Introduction” 7th Edition, Pearson Education, 2004.

REFERENCES:

1. A.M.Natarajan, P.Balasubramani, A.Tamilarasi, “Operations Research”, Pearson Education, Asia, 2005.
2. Prem Kumar Gupta, D.S. Hira, “Operations Research”, S.Chand& Company Ltd, New Delhi, 3rd Edition, 2003.

OUTCOMES:

On completion of this course, students will be able to

- construct a real world problem into a mathematical problem.
- identify the appropriate model to solve the problem.
- explore the alternative models and justify on the selected model for representation.
- analyze and provide a optimal solution.
- construct the network and analyze the resources in network scheduling

CAC7103 CASE TOOLS LABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES:

- learn the basics of OO analysis and design skills.
- be exposed to the UML design diagrams.
- learn to map design to code.
- be familiar with the various testing techniques

LIST OF EXERCISES

1. Design a UML diagram for Passport automation system.
2. Design a UML diagram for Stock Maintenance System.
3. Design a UML diagram for Online course reservation system.
4. Design a UML diagram for E-ticketing
5. Design a UML diagram for Library Management System
6. Design a UML diagram for Student Information System.
7. Design a UML diagram for Credit card processing.
8. Design a UML diagram for Exam Registration.
9. Design a UML diagram for e-book management system
10. Design a UML diagram for Recruitment system.

OUTCOMES*:*

At the end of the course, the student should be able to:

- design and implement projects using OO concepts.
- use the UML analysis and design diagrams.
- apply appropriate design patterns.
- create code from design.
- compare and contrast various testing techniques

CAC7104 PROGRAMMING IN JAVA

L	T	P	C
0	0	4	2

OBJECTIVES:

- to develop the programming skills using the object oriented programming
- methodology to produce quality computer based solutions to real problems.
- to utilize the advance features of Java technology.
- demonstrate the use of Application Programming Interface (API) and develop programs
- to develop good multithreaded programs

JAVA PROGRAMMING:

1. Program to illustrate the use of overloading and overriding.
2. Program to implement the concept of inheritance.
3. Program to illustrate the use of multi-threading.
4. Program to implement the concept of Interfaces and packages.
5. Generate the program using exceptions handling mechanism.
6. Implement the file operations.
7. Program using Applets.
8. Program to handle Mouse Events, Keyboard Events and work with GUI components.
9. Program using JDBC.

OUTCOMES:

On completion of this course, students will be able to

- apply basic control structures, arrays, looping statement and various class libraries in developing program.
- write Java programs using object-oriented programming techniques inheritance, polymorphism, interface, constructors and abstract class.
- create package for real time applications like bank transaction, employee processing etc.
- construct multithreaded programs and handle exceptions
- write programs using graphical user interface (GUI) components and various event handling methods.
- implement file operations and connect with database using JDBC.

CAC7105 PROGRAMMING LANGUAGES

L	T	P	C
0	0	0	1

OBJECTIVES:

- To gain experience about structured programming.
- To help students to understand the implementation of C language.
- To understand various features in C.
- To impart knowledge on object oriented features like inheritance, data abstraction, encapsulation and polymorphism to solve various computing problems.

MODULE I FUNDAMENTALS OF C LANGUAGE 03

Structures of 'C' Programming-Character set-C Tokens- Keywords- Identifiers-Variables- Constant- Data Types-Comments-Types of operators.

MODULE II CONTROL STRUCTURES 03

Decision making structures-If, If-else, Nested If-else, Switch; Loop Control structures: While, Do while, for, Nested for loop.

MODULE III ARRAYS, FUNCTIONS AND POINTERS 03

Arrays – dynamic and multi-dimensional arrays- Basic types of function – Recursion –- Pointers – Declaration, Accessing a variable, character strings.

MODULE IV OBJECT ORIENTED CONCEPTS 03

Overview of C++-Classes and Objects-Overloading-Constructor-Inheritance-Default argument

MODULE V EXCEPTION HANDLING AND TEMPLATES 03

Exception Handling, Virtual Function-Templates- C++ I/O Streams-File I/O

Total Hours: 15

TEXT BOOKS:

1. K R Venugopal, S R Prasad, Mastering in C. Tata McGraw Hill Publishing Company Limited, 2nd reprint 2007.

REFERENCES:

1. Yeshwantkanetkar, Let us C, Sixth Edition, BPB Publication 2005
2. Herbert Schildt, Turbo C: The Complete Reference, Mc Graw-Hill,1998,ISBN: 9780078813467
3. HM Deitel and PJ Deitel “C++ How to Program”, Seventh Edition, 2010, Prentice Hall
4. E Balagurusamy, “Object oriented Programming with C++”, Third edition, 2006, Tata McGraw Hill

OUTCOMES

On completion of this course, students will be able to

- solve the given problem using the syntactical structures of C language
- develop, execute and document computerized solution for various problems using the features of C language
- develop programs using single and multi-dimensional arrays.
- apply inheritance, data abstraction, encapsulation and polymorphism to solve various computing problems.
- handle the exception and work with files.

SEMESTER - IV

CAC7201	ADVANCED WEB DESIGN AND DEVELOPMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To make use of the Internet related technologies.
- To analyse advantages and use of different types of CSS.
- To design static and interactive web pages by embedding Java Script code in HTML and Use Java Script to validate user input.
- To teach the importance of functional programming to improve web applications
- To Know how to embed media—such as audio or video—into a web page
- To apply the basics of PHP and connect with MySQL database.

MODULE I INTRODUCTION TO WWW 09

Introduction to Network, Internet and Intranet, Application and Services, Internet Addressing – IP, DNS, URL. Elements of Web – Web Page, Web Site, Web Client & Server. Web Languages – HTML/DHTML, JavaScript, PHP, XML.

MODULE II BUILDING WEB BASED APPLICATION USING HTML 09

Html Document Structure, Various HTML Tags – Document Tag, Text Formatting Tag, Link Tag, List Tag, Image Tag, Table Tag, Line Breaks, Frame, Frameset, HTML Forms.

MODULE III CASCADING STYLE SHEET 09

Introduction to Style sheet, Types of Style sheet, concept of class & ID, Different CSS Property-.Background Property- Font property- Text -Dimensions-Combinators- Borders-Margins-Padding-Box Model.

MODULE IV CLIENT-SIDE SCRIPTING LANGUAGE 09

Concept and types of Scripting language, Introduction to Javascript, How to develop Javascript, Operators, Conditional Structure & Looping Structure, Dialog Boxes, Arrays, User Define Function, Javascript Function keyword, Function Expression, Constructor, Self Invoking Functions, Built-in Functions (String, Math, Date, Array), Built-in Object (window, screen ,location, history, Navigator),DOM, Forms, Objects and its events- Functional Programming.

MODULE V PHP COMPONENTS 09

Introduction to PHP, Basic PHP syntax: PHP tags, PHP statements and whitespace, comments, Operators, Conditional and Looping Structure, User Define Functions, Arrays. GET and POST Methods. GD Library, Cookies, Session, Server Variables, Database Connectivity with MySQL, PHP My Admin, Regular Expression, PHP with OOP (Class, constructor, inheritance), PHP with AJAX – Introduction-Sending Email using PHP.

Total Hours: 45

TEXT BOOKS:

1. Developing Web Application, Wiley India Publication, Ralph Moseley, Wiley India, 2007.

REFERENCE BOOKS:

1. Beginning PHP5, Apache, Mysql Web Development, Wrox, Elizabeth Naramore, Michael K. Glass, 2005.
2. PHP Bible, Wiley Publication, Tim Converse, Joyce Park, 2002.
3. Web Enabled Commercial Application Development Using HTML, DHTML, PERL, Java Script, BPB Publications, Ivan Bayross, 2005.
4. Beginning Ajax, Wrox, Chris Ullman, Lucinda Dykes, 2007.
5. Beginning JavaScript 2nd Edition, Wrox, Nicholas C. Zakas, 2004.

OUTCOMES:

On completion of this course, students will be able to

- differentiate web and website and summarize the importance of web languages in the development of website.
- apply JavaScript, HTML and CSS3 effectively to create interactive and dynamic websites
- build web applications using PHP and submit the form using GET or POST method.
- create layout in websites using Div tags and incorporate pre-designed elements into them.
- develop server side code using PHP and able to connect and manipulate the MySQL database.

CAC7202 XML AND WEB SERVICES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To describe the role of XML in enterprises.
- To teach the importance of various supporting technologies in XML.
- To describe the role of SOAP in building web services, the basics of the SOAP protocol, and the structure of a SOAP document.
- To impart knowledge on UDDI registries and WSDL in creating web-services clients.
- To cover the basics of XML, Schemas, WSDL, and Web Services concepts.

MODULE I INTRODUCTION 09

Role Of XML – XML and The Web – XML Language Basics – SOAP – Web Services – Revolutions Of XML – Service Oriented Architecture (SOA).

MODULE II XML TECHNOLOGY 09

XML – Name Spaces – Structuring With Schemas and DTD – Presentation Techniques – Transformation – XML Infrastructure.

MODULE III SOAP 09

Overview of SOAP – HTTP – XML-RPC – SOAP: Protocol – Message Structure– Intermediaries – Actors – Design Patterns and Faults – SOAP with Attachments.

MODULE IV WEB SERVICES 09

Overview – Architecture – Key Technologies - UDDI – WSDL – ebXML – SOAP And Web Services In E-Com – Overview of .NET and J2EE.

MODULE V XML SECURITY 09

Security Overview – Canonicalization – XML Security Framework – XML Encryption – XML Digital Signature – XKMS Structure – Guidelines for Signing XML Documents – XML In Practice.

Total Hours: 45

TEXT BOOK:

1. Frank. P. Coyle, XML, Web Services and The Data Revolution, Pearson Education, 2002.

REFERENCES:

1. Ramesh Nagappan, Robert Skoczylas and Rima Patel Sriganesh, “Developing Java Web Services”, Wiley Publishing Inc., 2004.
2. Sandeep Chatterjee, James Webber, “Developing Enterprise Web Services”, Pearson Education, 2004.
3. McGovern, et al., “Java Web Services Architecture”, Morgan Kaufmann Publishers, 2005.

OUTCOMES:

On completion of this course, students will be able to

- list the importance of XML
- differentiate the various technologies of XML and their working.
- assess the role played by SOAP and web services
- recognize the need for XML security.
- build effective XML documents.
- build DTD documents to validate XML.
- build Schema documents to validate XML.

CAC7203 MOBILE COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To describe the basics of wireless medium access, satellite system and broadcast systems.
- To explain the architectures and protocols of various wireless telecommunications systems (GSM, DECT, TETRA) and compare them.
- To outline the basics of satellite system
- To classify and discuss the various wireless LAN technologies like ieee 802.11, Bluetooth, etc., and identify the related research issues in wireless LAN.
- To illustrate the routing and transport issues in mobile networks and demonstrate the existing solutions
- To express wireless application layer protocol(WAP)

MODULE I INTRODUCTION 09

Medium Access Control : Motivation for Specialized MAC- SDMA- FDMA- TDMA- CDMA- Comparison of Access mechanisms – Tele communications : GSM- DECT- TETRA – UMTS- IMT-200 – Satellite Systems: Basics- Routing- Localization- Handover- Broadcast Systems: Overview – Cyclic Repetition of Data- Digital Audio Broadcasting – Digital Video Broadcasting.

MODULE II WIRELESS NETWORKS 09

Wireless LAN: Infrared Vs Radio Transmission – Infrastructure Networks- Ad hoc Networks- IEEE 802.11 – HIPERLAN – Bluetooth- Wireless ATM: Working Group- Services- Reference Model – Functions – Radio Access Layer – Handover- Location Management- Addressing Mobile Quality of Service- Access Point Control Protocol.

MODULE III MOBILE NETWORK LAYER 09

Mobile IP : Goals – Assumptions and Requirement – Entities – IP packet Delivery- Agent Advertisement and Discovery – Registration – Tunneling and Encapsulation – Optimization – Reverse Tunneling – IPv6 – DHCP- Ad hoc Networks.

MODULE IV MOBILE TRANSPORT LAYER 09

Traditional TCP- Indirect TCP- Snooping TCP- Mobile TCP- Fast retransmit/ Fast Recovery- Transmission/ Timeout Freezing – Selective Retransmission- Transaction Oriented TCP

MODULE V WAP 09

Architecture – Datagram Protocol- Transport Layer Security – Transaction Protocol- Session Protocol- Application Environment-Wireless Telephony Application

Total Hours: 45

TEXT BOOK :

1. J.Schiller, Mobile Communication, Addison Wesley, 2000.

REFERENCES :

1. William C.Y.Lee, Mobile Communication Design Fundamentals, John Wiley, 1993.
2. William Stallings, Wireless Communication and Networks, Pearson Education, 2003.
3. Singhal, WAP-Wireless Application Protocol, Pearson Education, 2003.

OUTCOMES:

On completion of this course, students will be able to

- express the issues in wireless medium access control and illustrate existing solutions
- Illustrate the fundamentals of satellite system and broadcast system
- discuss the architectures and working principles of wireless telecommunications systems(GSM, DECT,TETRA)
- classify and discuss the various wireless LAN technologies like IEEE 802.11, Bluetooth, etc., and identify the related research issues in wireless LAN.
- identify the issues in mobile routing, transport and application layers and demonstrate the existing solutions

CAC7204 WEB DESIGN AND DEVELOPMENT LAB

L	T	P	C
0	0	4	2

OBJECTIVES:

- To provide the student with the fundamental knowledge and skills to become a proficient web programmer
- Impart the knowledge of developing static and dynamic web page using HTML, CSS and JavaScript.
- To learn how to perform validation using JavaScript
- To impart designing online application and access database using MYSQL

LIST OF LAB EXERCISES

1. Design the static web page using frames, links and tables for any application.
2. Creation of HTML pages using ordered list, unordered list , definition list and hotspots
3. Create webpage to embed audio and video.
4. Usage of internal and external CSS along with HTML pages
5. Develop web pages using Background property, Font property, Dimensions, Box model, Combinators and Borders in CSS
6. Client side Programming
    i. Java script for displaying date and comparing two dates
    ii. Form Validation including text field, radio buttons, check boxes, list box and other controls
    iii. Design a digital clock
    iv. Develop Simple calculator
7. Developing online applications such as shopping, railway/air/bus, education using HTML, CSS, Javascript and PHP
8. Develop programs using control structures and arrays in PHP
9. Any online application using PHP and submit the form using GET or POST method.
10. Database connectivity in PHP

OUTCOMES:

On completion of this course, students will be able to

- build XML data file and validate using DTD and XML schema
- design and development applications using XML ,DOM and DSO
- design and implementation of Web forms and Web services.
- to design static and dynamic web pages
- to solve problem related to web based applications

CAC7205 XML AND WEB SERVICES LAB

L	T	P	C
0	0	4	2

OBJECTIVES:

- to provide the knowledge necessary to build and validate XML.
- to equip the students with XML, a core technology in Web Services.
- a background in the underlying technologies.
- to cover the basics of XML, Schemas, WSDL, and Web Services concepts

LAB EXCERCISES:

1. Create an XML document to store an address book.
2. Create an XML document to store information about books and create the DTD files.
3. Create an XML schema for the book's XML document from exercise.
4. Create an XML document to store resumes for a job web site and create the DTD file.
5. Present the book's XML document using cascading style sheets (CSS).
6. Write an XSLT program to extract book titles, authors, publications, book rating from the book's XML document and use formatting.
7. Use Microsoft DOM to navigate and extract information from the book's XML document.
8. Use Microsoft DSO to connect HTML form or VB form to the book's XML document and display the information.
9. Create a web service for temperature conversion with appropriate client program.
10. Create a web service for currency conversion (at five currencies) with appropriate client program.

OUTCOMES:

On completion of this course, students will be able to

- build effective XML documents.
- build DTD documents to validate XML.
- build Schema documents to validate XML.
- describe services using WSDL.
- build and consume Web services.
- Specify the role of web services in commercial applications.
- understand the principles of web service provision.
- understand the use of Java for implementing web services.

CAC7206	SOFT SKILLS AND PERSONALITY DEVELOPMENT	L	T	P	C
		0	0	2	1

OBJECTIVES:

- Attitude Control and Quick Personal Self Esteem Improvement
- Interview Motivation and Developing Personal Confidence using NLP
- Effective Answering and Maintaining Fluent Communication
- Positive Body Language
- Effective Resume Creation
- Leadership Skills, Team Player Skills and Career Plan to HR

MODULE I MOTIVATION 05

Awareness of Real World Industry and Situations - Conscious Self-Awareness - Practical Visualizations - Neuro- Linguistic Programming Basics - Developing Self Esteem and Self Motivation - Confident Goal Setting - Positive Attitude Development and Positive Thinking - Developing Inner Achievement Mindset.

MODULE II LEADERSHIP SKILLS 04

Types of Leadership - Leadership Process and Thinking - Innovative Thinking - Role of Competency, Discipline, Planning and Ethics - Creating Cooperation and Trust in Team Building Process – Mentoring.

MODULE III EFFECTIVE COMMUNICATION I 04

Eliminating Stage Fright - Increasing Fluency - Increasing Focus while Listening - How to communicate as a Follower - How to communicate as a Leader - Assertive and Polite Communication.

MODULE IV EFFECTIVE COMMUNICATION II 05

Fluency with increased vocabulary - Group Discussion Etiquette - Advanced Group Discussions - Giving a positive Body Language - Interviews: Clear Speaking - Interviews: Handling Pressure.

Total Hours: 18

REFERENCES :

1. Charles Faulkner and Steve Andreas, "NLP: The New Technology of Achievement", Harper Paperbacks publishers, 1996.
2. Sarvesh Gulati, "Corporate Soft Skills", Rupa and Co publishers.
3. P.K.Dutt, G.Rajeevan and C.L.N. Prakash, “A Course in Communication Skills”, Cambridge University Press, India 2007.

OUTCOMES:

On completion of this course, students will be able to

- understand the significance of soft skills in the working environment
- communicate effectively and present their concepts in a more confident manner.
- engage in debates and participate in group discussions.
- recognize the different leadership styles
- take part in social and professional communication.
- develop self-motivation, raised aspirations and belief in one's own abilities, defining and committing to achieving one's goals

SEMESTER V

CAC8101 MOBILE APPLICATION DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge on mobile app paradigm, IOS components and services.
- To impart knowledge on controls and gestures , creating universal applications run on iPhone and iPad
- To teach how to Install and use appropriate tools for Android development, including IDE, device emulator, and profiling tools.
- Design and develop mobile app using android

MODULE I INTRODUCTION TO IOS 08

Why IOS-The mobile App paradigm-Introduction to Xcode-main characteristics of mobile apps - Differences between mobile apps and desktop apps- How iOS is tailored to a mobile platform -IOS components and services- IPhone architecture-COCOA touch classes-interface builder.

MODULE II APPLICATION DEVELOPMENT IN iPHONE 09

Controls and Gestures-Advance controllers Programming-Navigation based Application development- create Universal applications that run on both iPhone and iPad-Core Animation- Core Graphics APIs to do simple drawing- Handle touch events- Create and present editable tables of data – using UI TableView-accessing user photos and camera within an application.

MODULE III INTRODUCTION TO ANDROID ARCHITECTURE 09

Introduction- History- Features- Android Architecture-setting up Android Application Environment-SDK- Application Environment and Tools, Android SDK. Programming paradigms and Application Components – Activity-Manifest File- Content providers, Broadcast receivers, Services-Interacting with UI-Persisting data using SQLite-packaging and deployment

MODULE IV USER INTERFACE DESIGN 10

Views &View Groups, Views : Button, Text Field, Radio Button, Toggle Button, Checkbox, Spinner, Image View, Image switcher, Event Handling, Listeners, Layouts : Linear, Relative- List View- Grid View-Table View- Web View- Adapters-Menus, Action Bars, Notifications : Status, Toasts and Dialogs, Styles and

Themes, Creating Custom Widgets, Focus, Touch Mode, Screen Orientation. Designing for Tablets – Working with tablets: Developing for the Honeycomb and Ice Cream Sandwich platforms, Manipulating objects with drag and drop-Localization, Localization Strategies, Testing Localized Applications, Publishing Localized Applications-Data Access and Storage- SQLite Databases

MODULE V NATIVE CAPABILITIES AND TESTING 09

Android Media API: Playing audio/video, Media recording. Sensors - how sensors work, listening to sensor readings. Bluetooth. Maps & Location: Android Communications: GPS, Working with Location Manager, Working with Google Maps extensions, Maps via intent and Map Activity, Location based Services. Location Updates, location-based services (LBS), Location Providers- Testing and Commercializing Applications - Basics of Testing- Debugging using DDMS-getting your app on the app store

Total Hours: 45

TEXT BOOKS:

1. Professional Android 4 Development by Reto Meier, John Wiley and Sons, 2012.
2. Android in Action, Third Edition, by W. Frank Ableson, RobiSen, Chris King, C. Enrique Ortiz, 2012.

REFERENCES:

1. Android Application Development Cookbook, by Wei-Meng Lee, John Wiley and Sons, 2013.
2. Beginning Android 4, by Grant Allen, Apress, 2011.

OUTCOMES:

On completion of this course, students will be able to

- List the differences between mobile apps and desktop apps
- create Universal applications that run on both iPhone and iPad
- Handle touch events, work with Table View and access user photos and camera through an application.
- use the development tools in the Android development environment
- apply the Java programming language to build Android apps
- develop UI-rich apps using all the major UI components
- Implement the design using Android SDK
- Deploy mobile applications in Android and iPone marketplace for distribution

CAC7206	ESSENTIALS OF MANAGEMENT FOR COMPUTER PROFESSIONALS NT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- learn various functions and principles of management
- apply planning techniques and decision making process in IT/ITES profession
- get acquainted with organizing and staffing activities applicable to computer profession
- know the art of directing and controlling in typical IT job environment
- derive inputs about individual and group behavior as well as organization dynamics
- learn the various functional areas of management
- get acquainted with information systems management

MODULE I BASICS OF MANAGEMENT: PLANNING AND ORGANIZING 07

Management: definition, functions, schools of thought/ contributions by experts, role of managers – Planning: definition, process, purpose, types – MBO – MBE – Decision making in IT environment: steps, types of decision – Organizing: meaning, organizational charts – Departmentation: objectives, bases, forming departments in IT enterprises – Centralization and decentralization – Delegation of authority

MODULE II STAFFING, DIRECTING AND CONTROLLING 08

Staffing: definition, sub-functions – Directing: leadership theories and styles – Motivation: concepts, types of motives, applications in software jobs – Communication: types, process, barriers to effective communication – Controlling: process, effective control, types, techniques

MODULE III INDIVIDUAL AND GROUP BEHAVIOUR 10

Personality types – Factors influencing personality – Perception: definition, process – Attitude: components, measurement in IT employees – Learning theories – Motivation theories, motivating software employees – Group behavior: reasons for group formation, types of group in IT organizations – Group decision making techniques – Power and Politics in Organization – Types of conflict and resolution methods in software organizations

MODULE IV ORGANIZATION SYSTEM AND DYNAMICS 05

Organizational culture, sub-culture, cross-culture/ international culture in software industry – Definition of QWL – Work stress: causes, effects & coping strategies – Organizational change in software environment: reasons, resistance & overcoming strategies

MODULE V FUNCTIONAL AREAS OF MANAGEMENT 09

Human resource management: functions - Roles of HR manager - Selection procedure – Types of production – Overview of production management functions – Broad functions of materials management - Purchasing procedure – Stock control methods – Concept of supply chain – Meaning of profit and loss account statement – Balance sheet – Types of costs – Break-even analysis – Marketing: concept, mix – Product life cycle - Stages of new product development – Pricing methods – Types of advertising media – Overview of personal selling process – Channel functions – Promotion methods – Enterprise Resource Planning

MODULE VI MANAGEMENT INFORMATION SYSTEM 06

Management Information System: definition, components – Information needs - Types of information – Systems concept – Elements of systems – Information gathering – Steps involved in system analysis and design – Tools – implementation

TOTAL: 45

REFERENCES

1. Harold Koontz & Heinz Weihrich “Essentials of Management”, Tata McGraw,Hill, 2008.
2. Stephen Robbins, "Organizational Behaviour", Prentice Hall of India, 2014
3. Prasad L.M, “ Principles of Management”, Sultan Chand & Sons , Edition 2006.
4. Tripathy P.C and Reddy P.N, “ Principles of Management”, Tata McGraw,Hill, 2010.
5. Aswathappa, "Organizational Behaviour", Himalya Publications, 2010
6. Fred Luthans, "Organizational Behaviour", McGrawHill, 2009.
7. Bhushan Y.K., “Fundamentals of Business Organization and Management”, Sultan Chand & Co., 2003

OUTCOMES:

After studying the course, the students would be able to:

- perform / adopt appropriate functions and principles of management in their jobs
- make decisions using suitable planning techniques in their activities
- organize the activities & carry out staffing functions in the job situations
- communicate effectively, motivate their subordinates and also exhibit right leadership style in their IT/ITES profession
- recognize individual, group and organization dynamics to demonstrate suitable behaviour in the job-routine
- use inputs on MIS to relate to functional areas of management

CAC8102 INTERNET OF THINGS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the fundamentals of Internet of Things.
- To build a small low cost embedded system using Arduino / Raspberry Pi or equivalent boards.
- To apply the concept of Internet of Things in the real world scenario

MODULE I FUNDAMENTALS OF IOT 09

Introduction-Characteristics-Physical design - Protocols – Logical design – Enabling technologies – IoT Levels – Domain Specific IoTs – IoTvs M2M.

MODULE II IOT DESIGN METHODOLOGY 09

IoT systems management – IoT Design Methodology – Specifications Integration and Application Development.

MODULE III BUILDING IOT WITH RASPBERRY PI 09

Physical device – Raspberry Pi Interfaces – Programming – APIs / Packages – Web services

MODULE IV BUILDING IOT WITH GALILEO/ARDUINO 09

Intel Galileo Gen2 with Arduino- Interfaces - Arduino IDE – Programming - APIs and Hacks

MODULE V CASE STUDIES and ADVANCED TOPICS 09

Various Real time applications of IoT- Connecting IoT to cloud – Cloud Storage for Iot – Data Analytics for IoT – Software & Management Tools for IoT

Total Hours:45

REFERENCES:

1. ArshdeepBahga, Vijay Madisetti, “Internet of Things – A hands-on approach”, Universities Press, 2015.
2. Manoel Carlos Ramon, “Intel® Galileo and Intel® Galileo Gen 2: API Features and Arduino Projects for Linux Programmers”, Apress, 2014.
3. Marco Schwartz, “Internet of Things with the Arduino Yun”, Packt Publishing, 2014.

OUTCOMES:

Upon the completion of the course the student should be able to

- Design a portable IoT using Arduino/ equivalent boards and relevant protocols.
- Develop web services to access/control IoT devices
- Deploy an IoT application and connect to the cloud
- Analyze applications of IoT in real time scenario
- Summarize the characteristics of IoT and differentiate physical and logical design.

CAC8103 MOBILE APPLICATION DEVELOPMENT LAB

L	T	P	C
0	0	4	2

OBJECTIVES:

- Understand the mobile programming aspects, design and implementation on android platforms.
- Develop mobile applications for the Android operating system using basic and advanced phone features.
- Deploy applications to the Android marketplace for distribution

List of Exercises: (Implementation using Android / IOS)

1. Display Hello World.
2. Add two Edit Text. When a number is entered in Edit Text 1, the square of that number should be displayed in Edit Text 2.
3. Add an Edit Text and a button. When the button is clicked, the text inputted in Edit Text should be retrieved and displayed back to the user.
4. Add two Edit Text and a button. When the button is clicked, the text inputted in Edit Text 1 should be retrieved and displayed in Edit Text 2.
5. Program a calculator.
6. Create a Module convertor for height.
7. Create a Module convertor for height and weight in the same application. Selection of height/weight can be done using a spinner.
8. Add a spinner. When the spinner is selected, there should be three options (e.g., android, java, testing). When you click on each option, it should go to another page containing some other components. Each of these pages should have a “back” button, which on pressing will take you back to the page with the spinner.
9. Create applications to include Action Bar, Menus, Dialogs and Notifications
10. Create a user login form and registration form. First time users have to register through the registration form and the details should be stored in the database. Then they can login using the login page.
11. Create a camera application, where you can click a picture and then save it as the wallpaper.
12. Create a media player which plays an mp3 song.
13. Create a media recorder which will record the sound.
14. Testing applications

OUTCOMES:

On completion of this course, students will be able to

- Describe the components and structure of a mobile development frameworks (Android SDK and Eclipse Android Development Tools (ADT)) and learn how and when to apply the different components to develop a working system.
- Design, implement and deploy mobile applications using an appropriate software development environment.

CAC8104 MINI PROJECT

L	T	P	C
0	0	4	2

Develop the applications like:

1. Online railway reservation system
2. Payroll processing application
3. Hospital management system
4. Automating the banking process
5. Hotel Reservation system
6. Library management system
7. Attendance Management system
8. Text editor
9. Grocery Shopping
10. Create an E-Book of your choice

Software required:

Languages: C/C++/Java/JSDK/Web browser.

- Any front end tool (like VB, VC++, Developer 2000, Android SDK) etc
- Any backend tool (Oracle, MS-Access, SQL) etc.
- Open source software
- Framework (.Net)
- Any CASE tool

ELECTIVES

CACY001 MANAGEMENT INFORMATION SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the basic principles of Computer based Information System support the management in the various arena in the business units.
- To get an insight into the various organizational structures, culture and power.
- To provide an understanding of the Information Systems (IS) management framework of E-business. To focus on best practices, tools and models to implement an effective management system.
- To provide insights on how to develop and implement enterprise-wide IT strategies, initiatives and programs.
- To explore MIS subsystems and technologies including hardware, software and networking.

MODULE I SYSTEM CONCEPTS 07

Definition – Computer based user machine system – Integrated system – Need for a database – Utilization of models – Evolution – Subsystems – Organizational subsystems – Activities subsystems.

MODULE II ORGANIZATIONAL STRUCTURE 09

Basic model – Hierarchical – Specialization – Formalization – Centralization – Modifications of basic organizational structure – Project organization – Lateral relations – Matrix organization – Organizational culture and power organizational change.

MODULE III STRUCTURE OF MIS 10

Operating elements – Physical components – Processing functions – outputs– MIS support for decision making – Structured programmable decisions – Unstructured non-programmable decisions – MIS structure based on management activity and organizational functions – Synthesis of MIS structure

MODULE IV SYSTEM SUPPORT 10

Data representation – Communication network – Distributed systems – Logical data concepts – Physical storage devices – File organizations – Data base

organization – Transaction processing.

MODULE V DEVELOPMENT AND MANAGEMENT 09

A contingency approach to choosing an application – Developing strategy – Lifecycle definition stage – Lifecycle development stage – Lifecycle installation and operation stage – Project management.

Total Hours: 45

TEXT BOOK:

1. Gordon B. Davis, Margrethe H. Olson, Management Information Systems: Conceptual foundations, Structure and development –2nd Edition – Tata-McGraw hill International book company, 2000.

REFERENCES :

1. E.Wainright Martin, Carol V. Brown, Danial W. DeHayes, Jeffrey A. Hoffer, William C. Perkins, “Managing Information Technology” 3rd Edition, Prentice Hall International edition 1999.
2. Harold Koontz, Heinz Weihrich, “Essentials of Management”, 5th Edition, Tata McGraw Hill 1998.

OUTCOMES:

On completion of this course, students will be able to

- describe the various components of Computer based Information system suitable for the business organization.
- compare, contrast, and choose appropriate hardware, software, database and networking suitable for the organizational Information system.
- Distinguish and analyze ethical problems that occur in business and society
- Apply leadership skills and competencies in business situations
- Illustrate how current technologies and decision-support tools can be utilized to the advantage of business operations.
- develop various types of Information system suitable for organizational levels and various functional units in the organization.

CACY002 ACCOUNTING AND FINANCIAL MANAGEMENT

L	T	P	C
3	1	0	4

OBJECTIVES:

- finance has rightly been termed as the “Master Key” providing access to all resources required for running business activities. Hence efficient management of business enterprises is closely linked with the efficient management of their finances. In view of the growing importance of the finance function, Financial Management and Accounting plays an important role in any organization.

MODULE I FINANCIAL ACCOUNTING 12

Meaning and Scope of Accounting - Principles - Concepts-Conventions-accounting Standards - Final Accounts-Trial Balance-Trading Account-Profit and Loss Account-Balance Sheet.

MODULE II COST ACCOUNTING 12

Meaning-Objectives-Elements of Cost-Cost Sheet-Marginal Costing and Cost Volume Profit Analysis- Break Even Analysis-Applications-Limitations.

MODULE III MANAGEMENT ACCOUNTING 12

Budgets and Budgetary Control-Meaning-Types-Sales Budget-Production Budget- Budget-Flexible Budgeting-Cash Budget- Computerized Accounting - Accounting Ratios Analysis-Funds Flow Analysis-Cash Flow Analysis.

MODULE IV INVESTMENT DECISION 12

Objectives and Functions of Financial Management - Foreign exchange (Forex) - Risk - Return Relationship -Time Value of Money Concepts-Capital Budgeting-Methods of Appraisal.

MODULE V FINANCING DECISION AND WORKING CAPITAL MANAGEMENT 12

Capital Structure-Factors Affecting Capital Structure-Dividend Policy-Types of Dividend Policy- Concepts of Working Capital-Working Capital Policies-Factors affecting Working Capital-Estimation of Working Capital Requirements

Total Hours: 60

TEXTBOOKS:

1. S.N.Maheswari, “Financial and Management Accounting”, Sultan Chand & Sons, 2003.
2. I.M.Pandey, “Financial Management”, Vikas Publications, 4th Reprint, 2002.

REFERENCES:

1. S.P.Iyengar, “Cost and Management Accounting”, Sultan Chand & Co.
2. I.M.Pandey, “Elements of Management Accounting” Vikas Publishing House, 1999.

OUTCOMES:

On completion of this course, students will be able to

- prepare final accounts of a concern to find out the profit or loss
- List the objectives and functions of Financial Management
- analyze the firm by applying various ratios.
- Perform Computerized Accounting, Accounting Ratios Analysis, Funds Flow Analysis and Cash Flow Analysis
- analyze the factors affecting a capital structure, working capital and dividends.

CACY003 E - COMMERCE

L	T	P	C
3	0	0	3

OBJECTIVES:

The aim of this course is to make the students understand

- the scope of E-Commerce in the realm of modern business.
- the technologies used to develop and deliver E-Commerce applications.
- the marketing methods used in E-Commerce
- the legal and regulatory framework in which e-commerce must operate.

MODULE I INTRODUCTION 06

Networks and Commercial Transactions - Internet and Other Novelties - Electronic Transactions Today - Commercial Transactions - Establishing Trust - Internet Environment - Internet Advantage - World Wide Web.

MODULE II SECURITY TECHNOLOGIES 09

Why Internet Is Unsecure - Internet Security Holes - Cryptography : Objective Codes and Ciphers - Breaking Encryption Schemes - Data Encryption Standard - Trusted Key Distribution and Verification - Cryptographic Applications Encryption - Digital Signature – Nonrepudiation and Message Integrity.

MODULE III ELECTRONIC PAYMENT METHODS 09

Traditional Transactions : Updating - Offline and Online Transactions - Secure Web Servers - Required Facilities - Digital Currencies and Payment Systems - Protocols for the Public Transport - Security Protocols - SET - Credit Card Business Basics.

MODULE IV ELECTRONIC COMMERCE PROVIDERS 09

Online Commerce Options - Functions and Features - Payment Systems : Electronic, Digital and Virtual Internet Payment System - Account Setup and Costs - Virtual Transaction Process - InfoHaus - Security Considerations – CyberCash: Model - Security - Customer Protection - Client Application - Selling through CyberCash.

MODULE V ONLINE COMMERCE ENVIRONMENTS 12

Servers and Commercial Environments - Payment Methods - Server Market Orientation - Netscape Commerce Server - Microsoft Internet Servers - Digital Currencies -DigiCash-Using Ecash-Ecash Client Software and Implementation -

Smart Cards - The Chip - Electronic Data Interchange - Internet Strategies, Techniques and Tools.

Total Hours: 45

TEXT BOOK:

1. Pete Loshin, “Electronic Commerce”, 4th Edition, Firewall media, An imprint of laxmi publications Pvt. Ltd., New Delhi, 2004.

REFERENCES :

1. Jeffrey F.Rayport and Bernard J. Jaworski, “Introduction to E-Commerce”, 2nd Edition, Tata Mc-Graw Hill Pvt., Ltd., 2003.
2. Greenstein, “Electronic Commerce”, Tata Mc-Graw Hill Pvt., Ltd., 2000.

OUTCOMES:

On completion of this course, students will be able to

- understand E-Commerce concepts and terminology
- process management decisions that are involved in launching, operating and managing business activity on the World Wide Web.
- use critical thinking, problem-solving, and decision-making skills in evaluating e-commerce technologies;
- design (plan) a simple e-commerce web site;
- distinguish various electronics payment methods.

CACY004 BUSINESS PROCESSES

L	T	P	C
3	0	0	3

OBJECTIVES:

To develop a business process strategy to meet stakeholder needs.

- to analyse, improve, design and develop processes to meet stakeholder needs.
- to align technology, organisation, and facilities with the business process strategy and design
- to apply their knowledge to manage process projects effectively.
- to identify, clarify and manage business benefits arising from process change

MODULE I ORGANIZATIONAL STRUCTURE 09

Introduction – Nature of Organizations – Types of Business Organizations – Organizational Structures – Formalization – Departmentation – Span of Management – Organizational Relationships – Centralization – Organizational Culture – Forms and Outcomes – IT industry and Organizational Structures – Case Studies: Organizational Improvement - Case Studies.

MODULE II ORGANIZATIONAL OUTCOMES 09

Introduction – Nature of Power in Organizations – Outcomes of Power Relationships – Leadership – Decision Making – Communication – Organizations and Change- Structure and Management of Change in Indian Organizations – Organizational Environments – Inter-Organizational Relationships - Case Studies

MODULE III BUSINESS PROCESS RE-ENGINEERING (BPR) 09

Introduction – Emergence of BPR – What is BPR – Framework for Reengineering – Reengineering Methodology – Advantages – Success Factors – Failure Factors – Justifying Path to Reengineering – Planning Reengineering Projects – Setting Up for Reengineering – Information Analysis – Futuristic State Design and Validation - Case Studies

MODULE IV BPR AND IT INDUSTRY 09

Introduction – Integration of Business with Computers – Management Perceptions – Empowering People through IT – Managing Change – BPR Rediscovering Indian Paradigm – Case Studies.

MODULE V E-BUSINESS PROCESS 09

Introduction – Linking Business with Modern Technology – Trends driving E-Business – E-Business Patterns – New Era of Cross-functional Integrated Apps – Knowledge Management and Information Technology – Case studies.

Total Hours: 45

TEXTBOOKS :

1. Richard H.Hall, Organizations-Structures, Processes and Outcomes", Pearson Education, 2004.
2. M.S.Jayaramanet. Al, "Business Process Reengineering", Tata McGraw Hill Publications, 2001.
3. Ravi Kalakota and Marcia Robinson, "E-Business; Roadmap for Success; Pearson Education, 2000.

REFERENCES :

1. Gareth Jones, "Organizational Theory, Design and Change", Pearson Education, 4th Edition, 2004.
2. Dave Chaffey, "E-business and E-Commerce" Pearson Education, 2nd Edition, 2003.

OUTCOMES:

On completion of this course, students will be able to

- form the organizational structure
- improve leadership quality
- analyze, improve, design and develop processes to meet stakeholder needs
- align technology, organization, and facilities with the business process strategy and design
- apply their knowledge to manage projects effectively.
- identify, clarify and manage business benefits arising from process change.

CACY005 GRID COMPUTING

L	T	P	C
3	0	0	3

Objective:

- to provide insight into the architectural implications of Grid Computing
- to provide students with awareness of current issues in skills utilizing current grid tools and technologies.
- identifying the weakness of existing tools and technologies and proposing potential areas for improvement.
- Justify the applicability, non-applicability of Grid technologies for a specific Application

MODULE I INTRODUCTION 09

Grid Computing values and risks – History of Grid computing – Grid computing model and protocols – overview of types of Grids.

MODULE II TYPES OF GRIDS 09

Desktop Grids : Background – Definition – Challenges – Technology – Suitability– Grid server and practical uses; Clusters and Cluster Grids; HPC Grids; Scientific in sight – application and Architecture – HPC application development environment and HPC Grids; Data Grids; Alternatives to Data Grid – Data Grid architecture.

MODULE III ARCHITECTURE AND MANAGEMENT 09

The open Grid services Architecture – Analogy – Evolution – Overview – Building on the OGSA platform – implementing OGSA based Grids – Creating and Managing services – Services and the Grid – Service Discovery – Tools and Toolkits – Universal Description Discovery and Integration (UDDI)

MODULE IV NATIVE PROGRAMMING AND SOFTWARE APPLICATIONS 09

Desktop supercomputing – parallel computing – parallel programming paradigms – problems of current parallel programming paradigms – Desktop supercomputing programming paradigms – parallelizing existing applications -– Grid enabling software applications – Needs of the Grid users – methods of Grid deployment – Requirements for Grid enabling software – Grid enabling software applications.

MODULE V APPLICATIONS,SERVICES AND ENVIRONMENTS 09

Application integration – application classification – Grid requirements – Integrating Applications with Middleware platforms – Grid enabling Network services – managing Grid environments – Managing Grids – Management reporting – Monitoring – Data catalogs and replica management – portals – Different application areas of Grid computing.

Total Hours: 45

TEXT BOOK:

1. Ahmar Abbas, “Grid Computing, A Practical Guide to Technology and Applications”, Firewall media , 2004.

REFERENCES :

1. Joshy Joseph, Craig Fellenstein, “Grid Computing”, Pearson Education, 2004. Foster, “Grid Blue print foe new computing”.

OUTCOMES:

On completion of this course, students will be able to

- summarize the key concepts of Grid computing.
- sketch the architecture of open grid services.
- list the needs of grid users and build computer grids.
- gain a basic knowledge of Data management and transfer in Grid environments and Resource management.
- prepare for any upcoming Grid deployments and be able to get started with a potentially available Grid setup.
- list the applications of grid computing

CACY006 CLOUD COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES

- To understand the current trend and basics of cloud computing.
- To learn cloud services from different providers.
- To understand the collaboration of cloud services.
- To expose various ways to collaborate the cloud service online.

MODULE I UNDERSTANDING CLOUD COMPUTING 09

Cloud Computing – History of Cloud Computing – Cloud Architecture – Cloud Storage – Why Cloud Computing Matters – Advantages of Cloud Computing – Disadvantages of Cloud Computing – Companies in the Cloud Today – Cloud Services.

MODULE II DEVELOPING CLOUD SERVICES 09

Web-Based Application – Pros and Cons of Cloud Service Development – Types of Cloud Service Development – Software as a Service – Platform as a Service – Web Services – On-Demand Computing – Discovering Cloud Services Development Services and Tools – Amazon Ec2 – Google App Engine – IBM Clouds.

MODULE III CLOUD COMPUTING FOR EVERYONE 09

Centralizing Email Communications – Collaborating on Schedules – Collaborating on To-Do Lists – Collaborating Contact Lists – Cloud Computing for the Community – Collaborating on Group Projects and Events – Cloud Computing for the Corporation.

MODULE IV USING CLOUD SERVICES 09

Collaborating on Calendars, Schedules and Task Management – Exploring Online Scheduling - Applications – Exploring Online Planning and Task Management – Collaborating on Event Management – Collaborating on Contact Management – Collaborating on Project Management – Collaborating on Word Processing - Collaborating on Databases – Storing and Sharing Files.

MODULE V OTHER WAYS TO COLLABORATE ONLINE 09

Collaborating via Web-Based Communication Tools – Evaluating Web Mail Services – Evaluating Web Conference Tools – Collaborating via Social

Networks and Groupware – Collaborating via Blogs and Wikis.

Total Hours: 45

REFERENCES:

1. Michael Miller, Cloud Computing: Web-Based Applications That Change the Way You Work and Collaborate Online, Que Publishing, August 2008.
2. Kumar Saurabh, “Cloud Computing – Insights into New Era Infrastructure”, Wiley Indian Edition, 2011.
3. Haley Beard, Cloud Computing Best Practices for Managing and Measuring Processes for On- demand Computing, Applications and Data Centers in the Cloud with SLAs, Emereo Pty Limited, July 2008.

OUTCOMES:

On completion of this course, students will be able to

- Understand the systems, protocols to support cloud computing.
- Identify the architecture and infrastructure of cloud computing.
- Design applications by integrating cloud services.

CACY007 UNIX AND NETWORK PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Learn and get familiar with the UNIX operating system and UNIX process environment. The creation, communication and execution of process are studied with well defined examples through this course.
- Infer the inter-process communication between similar and different process through standard mechanisms such as pipes, message queue etc.,
- Provide a broad knowledge on client server communication using socket across a network for reliable network programming.

MODULE I INTRODUCTION & FILE SYSTEM 09

Overview of UNIX OS - File I/O – File Descriptors – File sharing - Files and directories – File types - File access permissions – File systems – Symbolic links - Standard I/O library – Streams and file objects – Buffering - System data files and information - Password file – Group file – Login accounting – system identification.

MODULE II PROCESSES 09

Environment of a UNIX process – Process termination – command line arguments - Process control – Process identifiers - Process relationships terminal logins – Signals -threads.

MODULE III INTERPROCESS COMMUNICATION 09

Introduction - Message passing (SVR4)- pipes – FIFO – message queues - Synchronization (SVR4) – Mutexes – condition variables – read – write locks– file locking – record locking – semaphores –Shared memory (SVR4).

MODULE IV SOCKETS 09

Introduction – transport layer – socket introduction - TCP sockets – UDP sockets - raw sockets – Socket options - I/O multiplexing - Name and address conversions.

MODULE V APPLICATIONS 09

Debugging techniques - TCP echo client server - UDP echo client server - Ping - Trace route - Client server applications like file transfer and chat.

Total Hours: 45

TEXT BOOKS :

1. W.Richard Stevens, Advanced programming in the UNIX environment, Addison Wesley, 1999. (Unit 1,2 & 3)
2. W. Stevens, Bill Fenner, Andrew Rudoff, “Unix Network Programming”, Volume 1, The Sockets Networking API, 3rd Edition, Pearson education, Nov 2003. (unit 4 & 5)

REFERENCES :

1. MeetaGandhi,TilakShetty and Rajiv Shah – The ‘C’ Odyssey Unix –The open Boundless C ,1st Edition, BPB Publications 1992.

OUTCOMES:

On completion of this course, students will be able to

- attain the complete knowledge in network communication in UNIX platform.
- list the different types of networking and their functionality
- summarize the broad knowledge on network details of a system which is configured as UNIX supported components.
- develop a socket programming for effective client-server communication across a network.

CACY008 MULTIMEDIA SYSTEMS AND ALGORITHMS

L	T	P	C
3	0	0	3

OBJECTIVES

- learn the basic definitions of algorithmic complexity, and how to analyze the complexity of algorithms.
- learn basic algorithmic tools used to design efficient algorithms.
- learn how to design efficient algorithms and to recognize situations where this is not possible.
- understand the linear and non linear data structures available in solving problems
- know about the sorting and searching techniques and its efficiencies
- get a clear idea about the various algorithm design techniques
- Use the data structures and algorithms in real time applications
- analyze the efficiency of algorithm•

MODULE I INTRODUCTION 09

Definition - CD-ROM and multimedia-Multimedia applications: business - schools - homes - public places and virtual reality. Introduction to making of multimedia: hardware - software - creativity - and organization.

MODULE II MULTIMEDIA TOOLS 09

Macintosh and windows production platforms - 3-d modeling and animation - image-editing tools - sound editing tools - animation - video - and digital movie tools - linking multimedia objects - office suites - word processors - spread sheets - databases - presentation tools. Authoring tools - Card and Page-based authoring tools - Icon Based authoring tools - time based authoring tools - object oriented authoring tools - cross platform-authoring tools

MODULE III MULTIMEDIA AND THE INTERNET 09

Internet fundamentals: Internetworking – Connections – Internet services – The World Wide Web – Tools for the World Wide Web: Web serves – Web browsers – Web page makers and Site builders – Plug-ins and Delivery vehicles – Beyond HTML

MODULE IV ALGORITHM OVERVIEW 09

Introduction Overview of Graphics System – Bresenham technique – Line Drawing and Circle Drawing Algorithms – DDA – Line Clipping – Text Clipping.

MODULE V 2D AND 3D TRANSFORMATIONS 09

Two dimensional transformations – Scaling and Rotations – Interactive Input methods – Polygons – Splines – Bezier Curves Window view port mapping transformation – 3D Concepts – Projections.

Total Hours: 45

TEXTBOOKS:

1. Multimedia: Making It Work – Tay Vaughan (Unit 1, Unit 2 and Unit 3)
2. Hearn D and Baker M.P, “Computer graphics – C Version”, 2nd Edition, Pearson Education, 2004 (Unit 4 and 5)

REFERENCE BOOKS:

1. Multimedia System Design – K. Andleigh and K. Thakkrar
2. Multimedia: Computing, Communication & Application – Ralf stein Metz and Klara Nahrstsedt
3. Advanced multimedia programming – Steve Rimmer
4. Multimedia Literacy – Fred T. Hofstetter MGHill

OUTCOMES:

On completion of this course, students will be able to

- Possess the knowledges of creativity skills with support of multimedia tools
- Gain hands – on experience in image, sound and video editing and in some aspects of multimedia authoring tools
- Design an interactive website for information services
- Analyze and evaluate various algorithms to draw geometrical shapes
- Attain the complete knowledge in graphics & multimedia domain
- Show their proficiency while working with Graphics and multimedia software and tools.

CACY009 NETWORK SECURITY

L	T	P	C
3	0	0	3

OBJECTIVE:

- to impart knowledge on building networks, network layer and software defined networking
- to understand how network security is conceptualized and carried out
- to analyze both early and contemporary threats to network security
- to articulate informed opinion about issues related to network security
- to appreciate the challenges of network security

MODULE I INTRODUCTION 09

Building a network-Network Architecture-Network fundamentals-Network layer Overview on Software Defined Networking.

MODULE II ATTACKS AND PUBLIC KEY ENCRYPTION 09

Attacks- Services-Mechanisms-Conventional Encryption , Classical And RSA - Elliptic Curve Cryptography - Number Theory Concepts

MODULE III MESSAGE AUTHENTICATION 09

Hash Functions - Digest Functions - Digital Signatures – Authentication Protocols.

MODULE IV NETWORK SECURITY PRACTICE 09

Authentication, Applications - Electronic Mail Security - IP Security – Web Security.

MODULE V SYSTEM SECURITY 09

Intruders – Viruses – Worms – Firewalls Design Principles – Trusted Systems.

Total Hours: 45

TEXT BOOK :

1. Stallings, Cryptography & Network Security - Principles & Practice, Prentice Hall, 3rd Edition 2002.

REFERENCES:

1. Bruce, Schneier, Applied Cryptography, 2nd Edition, Toha Wiley & Sons, 1996.

2. Man Young Rhee, “Internet Security”, Wiley, 2003.
3. Pfleeger&Pfleeger, “Security in Computing”, Pearson Education, 3rd Edition, 2003.

OUTCOMES:

On completion of this course, students will be able to

- master information security governance, and related legal and regulatory issues,
- master understanding external and internal threats to an organization
- summarize the basics of network security and attacks.
- compare various public and private key encryption algorithms.
- illustrate Message Authentication functions and protocols
- identify the virus and worms
- list the firewalls design principles

CACY010 MICROPROCESSORS AND APPLICATIONS

L	T	P	C
3	0	0	3

OBJECTIVES:

- Introduce features and technology of microprocessor based systems
- gain assembly language programming, interfacing of memory and peripheral devices
- gain knowledge about the architecture, instruction set, programming, addressing mode interfacing and applications of INTEL 8085, INTEL 8086 and INTEL 80386.

MODULE I INTRODUCTION TO 8085 MICRO PROCESSOR 09

Evolution of the Microprocessor - INTEL 8085- Introduction- Register Architecture - Memory Addressing - 8085 Addressing Modes -8085 Instruction Set -Timing Methods 8085 Pins and Signals -8085 Instruction Timing and Execution – Interrupts-DMA- Serial port-8085 Based System Design.

MODULE II INTRODUCTION TO 8086 MICROPROCESSOR 09

Introduction -8086 Architecture -8086 Addressing Modes -8086 Instruction Set – Data Movement Instructions Arithmetic and Logic Instructions – Program Control Instructions.

MODULE III 8086 MICROPROCESSOR INTERFACING 09

System Design Using 8086- Basic System concepts-Bus Cycle - Address and data bus concepts- interfacing with memories-RAM - EPROM - DRAMs - Programmed I/O : 8086-Based Microcomputer.

MODULE IV 80386 AND PENTIUM MICRO PROCESSORS 09

Introduction to Intel 80386- Basic Programming model - Memory Organisation - I/O Space - 80386 pins and signals- Bus transfer techniques - 80386 Modes – Introduction to Intel Pentium Microprocessor: Block diagram and Registers.

MODULE V PERIPHERAL INTERFACING 09

Keyboard Display Interface-Hex key and display interface to 8085, 8279 Keyboard display controller chip- Printer Interface: LR 7040 Printer interface using 8295 printer controller-CRT controller interface: CRT Fundamentals, 8275 CRT Controller- Coprocessors.

Total Hours: 45

TEXT BOOK :

1. Mohamed Rafiquzzaman “Introduction to Microprocessors and Microcomputer- Based System Design” 2nd edition, CRC Press,1995.

REFERENCES:

1. Walter A.Triebel, AvtarSingh,“the 8088and8086 Microprocessors Programming, Interfacing, Software, Hardware and Applications”, Prentice Hall of India Pvt. Ltd., 2002.
2. Barry B.Brey, ”The INTEL microprocessors 8086/8088, 80186, 80286, 80386 and 80486 Architecture, Programming and Interfacing,” Prentice Hall of India, 2001.

OUTCOMES:

On completion of this course, students will be able to

- identify different types of memory and describe how each is used
- list microprocessor instruction groups and classify machine instructions accordingly
- develop a program in assembly language for the INTEL 8085 and INTEL 8086.
- analyze (trace) the execution of assembly code programs
- design interfacing logic to connect external devices to microprocessor.
- design and develop a microprocessor based system for specific applications.

CACY011 TCP/IP PROTOCOL SUITE

L	T	P	C
3	0	0	3

OBJECTIVES:

- to design, build and test a small TCP/IP Network, comprising of three sub networks and two routers.
- to trace and rectify faults on the network.

MODULE I INTRODUCTION 10

Standards – Internet – History- OSI model – Protocol suite – Addressing – Transmission media – Local Area and Wide Area Networks – Switching – Connecting devices – IP addressing.

MODULE II INTERNET PROTOCOL 10

Sub netting – Super netting – IP packets – Delivery – Routing – Routing model– Routing table – Datagram – Fragmentation – Checksum – IP Design – ARP – RARP – Internet control message protocol – Internet group management protocol.

MODULE III TRANSMISSION CONTROL PROTOCOL 08

User Datagram protocol – UDP operation – Use – UDP design – TCP services– Flow control – Error control – TCP operation and design – connection – Transition diagram – Congestion control.

MODULE IV APPLICATION LAYER AND CLIENT SERVER MODEL 08

Concurrency – BOOTP – DHCP – Domain name system – Name space – Distribution – Resolution – Messages – Telnet – Rlogin – Network Virtual Terminal – Character Set – Controlling the server – Remote login.

MODULE V APPLICATION PROTOCOLS 09

File Transfer Protocol – Connections – Communication – Simple Mail Transfer Protocol – Simple Network Management Protocol – Hyper Text Transfer Protocol – Transaction – Request and Response messages.

Total Hours: 45

TEXT BOOK :

1. Behrouz A. Forouzan, “TCP/IP Protocol Suite”, Tata McGraw Hill Edition 2000.

REFERENCE :

1. Douglas E. Comer, David L. Stevens, “Internetworking with TCP/IP – Volume I, II and III”, Prentice - Hall of India Pvt. Ltd., 2nd Edition 1994.

OUTCOMES:

At the end of the course the student will be able to:

- identify the needs and the purpose of each of the protocols at each layer
- use and configure each of the common applications used with TCP/IP
- configure a router using static routing and RIP
- Control the server and place request to the server with the support of protocols
- examine a TCP/IP trace at all levels, and diagnose network problems

CACY012 ADHOC NETWORKS

L	T	P	C
3	0	0	3

OBJECTIVES:

- Understand the fundamental concepts of infrastructureless wireless network
- Learn and analyze the different types of ad hoc routing protocols.
- Impart knowledge on Providing QoS in Ad Hoc Wireless Networks

MODULE I INTRODUCTION 09

Introduction-Fundamentals of Wireless Communication Technology - The Electromagnetic Spectrum - Radio Propagation Mechanisms - Characteristics of the Wireless Channel - IEEE 802.11a,b Standard – Origin Of Ad hoc: Packet Radio Networks - Technical Challenges - Architecture of PRNETs - Components of Packet Radios – Ad hoc Wireless Networks -What Is an Ad Hoc Network? Heterogeneity in Mobile Devices - Wireless Sensor Networks - Traffic Profiles - Types of Ad hoc Mobile Communications - Types of Mobile Host Movements - Challenges Facing Ad Hoc Mobile Networks-Ad hoc wireless Internet.

MODULE II ADHOC ROUTING PROTOCOLS 09

Introduction - Issues in Designing a Routing Protocol for Ad Hoc Wireless Networks - Classifications of Routing Protocols -Table-Driven Routing Protocols - Destination Sequenced Distance Vector (DSDV) - Wireless Routing Protocol (WRP) - Cluster Switch Gateway Routing (CSGR) - Source-Initiated On-Demand Approaches - Ad Hoc On-Demand Distance Vector Routing (AODV) - Dynamic Source Routing (DSR) -Temporally Ordered Routing Algorithm (TORA) - Signal Stability Routing (SSR) -Location-Aided Routing (LAR) - Power-Aware Routing (PAR) - Zone Routing Protocol (ZRP)

MODULE III MULTICASTROUTING IN ADHOC NETWORKS 09

Introduction - Issues in Designing a Multicast Routing Protocol - Operation of Multicast Routing Protocols - An Architecture Reference Model for Multicast Routing Protocols -Classifications of Multicast Routing Protocols - Tree-Based Multicast Routing Protocols- Mesh-Based Multicast Routing Protocols Summary of Tree-and Mesh-Based Protocols - Energy-Efficient Multicasting - Multicasting with Quality of Service Guarantees - Application-Dependent Multicast Routing - Comparisons of Multicast Routing Protocols

MODULE IV TRANSPORT LAYER, SECURITY PROTOCOLS 09

Introduction - Issues in Designing a Transport Layer Protocol for Ad Hoc Wireless Networks - Design Goals of a Transport Layer Protocol for Ad Hoc Wireless Networks -Classification of Transport Layer Solutions - TCP Over Ad Hoc Wireless Networks -Other Transport Layer Protocols for Ad Hoc Wireless Networks - Security in Ad Hoc Wireless Networks - Network Security Requirements - Issues and Challenges in Security Provisioning - Network Security Attacks - Key Management - Secure Routing in Ad Hoc Wireless Networks.

MODULE V QoS AND ENERGY MANAGEMENT 09

Introduction - Issues and Challenges in Providing QoS in Ad Hoc Wireless Networks -Classifications of QoS Solutions - MAC Layer Solutions - Network Layer Solutions - QoS Frameworks for Ad Hoc Wireless Networks Energy Management in Ad Hoc Wireless Networks –Introduction - Need for Energy Management in Ad Hoc Wireless Networks - Classification of Energy Management Schemes - Battery Management Schemes - Transmission Power Management Schemes - System Power Management Schemes.

Total Hours: 45

TEXT BOOK :

1. C. Siva Ram Murthy and B.S. Manoj “Ad Hoc Wireless Networks: Architectures and Protocols”, Prentice Hall PTR, 2004.

REFERENCES:

1. C.K. Toh, Ad Hoc Mobile Wireless Networks: Protocols and Systems, Prentice Hall PTR, 2001.
2. Charles E. Perkins, Ad Hoc Networking, Addison Wesley, 2000.

OUTCOMES:

At the end of this course students will be able to

- evaluate the performance of different ad hoc routing protocols
- analyze the issues in designing routing and transport protocols
- compare and contrast various routing, transport and security protocols.
- list the issues and challenges in Providing QoS in Ad Hoc Wireless network.
- classify the QoS solutions and energy management schemes

CACY013 DIGITAL IMAGE PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- to cover the basic theory and algorithms that are widely used in digital image processing.
- to expose students with current technologies and issues that are specific to image processing systems.
- to develop hands-on experience in using computers to process images
- to develop critical thinking about shortcomings of the state of the art in image processing.

MODULE I DIGITAL IMAGE FUNDAMENTALS 09

Image formation, Image transforms – fourier transforms, Walsh, Hadamard, Discrete cosine, Hotelling transforms.

MODULE II IMAGE ENHANCEMENT & RESTORATION 09

Histogram modification techniques - Image smoothening - Image Sharpening - Image Restoration - Degradation Model – Noise models - Spatial filtering – Frequency domain filtering.

MODULE III IMAGE COMPRESSION & SEGMENTATION 09

Compression Models - Elements of information theory - Error free Compression -Image segmentation –Detection of discontinuities - Edge linking and boundary detection - Thresholding – Region based segmentation - Morphology.

MODULE IV REPRESENTATION AND DESCRIPTION 09

Representation schemes- Boundary descriptors- Regional descriptors - Relational Descriptors.

MODULE V OBJECT RECOGNITION AND INTERPRETATION 09

Patterns and pattern classes - Decision-Theoretic methods - Structural methods.

Total Hours: 45

TEXT BOOK:

1. Gonzalez.R.C& Woods. R.E., Digital Image Processing, II Ed., Pearson Education, 2002.

REFERENCES:

1. Anil Jain.K, Fundamentals of Digital image Processing, Prentice Hall of India, 1989.
2. Sid Ahmed, Image Processing, McGraw Hill, New York, 1995.

OUTCOMES:

On completion of this course, students will be able to

- describe how digital images are represented,
- manipulate, encode and process, with emphasis on algorithm design, implementation and performance evaluation.
- analyze various techniques and mention the strength and weakness.
- develop small programs to perform image processing tasks.
- understand the design & specification of multi-dimensional digital filters for image processing applications
- gain proficiency in using simulation and design software tools, such as those found in Matlab

CACY014 PROBABILITY AND STATISTICS

L	T	P	C
3	1	0	4

OBJECTIVES:

- Knowledge about the basic concepts of one dimensional and two dimensional Random Variables.
- Knowledge on various probability axioms and theorems, probability distributions.
- To apply Estimation theory, Correlation, Regression and testing of hypothesis for real life problems.
- To enable the students to apply the concepts of multivariate normal distribution and principle components analysis and evaluate on the results

MODULE I ONE DIMENSIONAL RANDOM VARIABLES 12

Random variables - Probability function – Moments – Moment generating functions and their properties – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions – Functions of a Random Variable.

MODULE II TWO DIMENSIONAL RANDOM VARIABLES 12

Joint distributions – Marginal and Conditional distributions – Functions of two dimensional random variables – Regression Curve – Correlation.

MODULE III ESTIMATION THEORY 12

Unbiased Estimators – Method of Moments – Maximum Likelihood Estimation - Curve fitting by Principle of least squares – Regression Lines.

MODULE IV TESTING OF HYPOTHESES 12

Sampling distributions - Type I and Type II errors - Testsbased on Normal, t, Chi-Square and F distributions for testing of mean, variance and proportions – Tests for Independence of attributes and Goodness of fit.

MODULE V MULTIVARIATE ANALYSIS 12

Random Vectors and Matrices - Mean vectors and Covariance matrices - Multivariate Normal density and its properties - Principal components Population principal components - Principal components from standardized variables.

Total Hours: 60

REFERENCES:

1. Jay L. Devore, “Probability and Statistics for Engineering and the Sciences”, Thomson and Duxbury, 2002.
2. Richard Johnson. “Miller & Freund’s Probability and Statistics for Engineer”, Prentice – Hall, Seventh Edition, 2007.
3. Richard A. Johnson and Dean W. Wichern, “Applied Multivariate Statistical Analysis”, Pearson Education, Asia, Fifth Edition, 2002.
4. Gupta S.C. and Kapoor V.K. “Fundamentals of Mathematical Statistics”, Sultan and Sons, 2001.
5. Dallas E Johnson, “Applied Multivariate Methods for Data Analysis”, Thomson and Duxbury press, 1998.

OUTCOMES:

On completion of this course, students will be able to

- apply fundamental concepts in Exploratory data analysis
- demonstrate an understanding of the basic concepts of probability and random variables
- analyze and choose among the probability distributions for application to a specific real life problem
- apply inferential methods relating to the means of Normal Distributions.
- demonstrate an appreciation of one—way analysis of variance (ANOVA)
- interpret and analyze data that may be displayed in a two—way table

CACY015 SOFTWARE QUALITY MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the fundamental concepts of software quality management.
- To acquire the knowledge in quality analysis tools and techniques.
- To have the exposure on software quality assurance, quality measures and quality control.
- To introduce philosophies and strategies to quality related issues

MODULE I INTRODUCTION 09

Software Process assessment overview - Assessment phases - Assessment principles - Assessment conduct -Implementation consideration - Quality management - Quality assurance plan - Considerations – Verification and Validation.

MODULE II CONFIGURATION MANAGEMENT 09

Need for configuration Management - Software product nomenclature - configuration management functions - Baselines - Responsibilities - Need for automated tools - plan – SCM support functions - The requirement phase Design control - The implementation phase - Test phase - SCM Tools - Configuration accounting and audit.

MODULE III SOFTWARE STANDARDS AND INSPECTION 09

Definitions - Reason for software standards - Benefits - Establishing standards - Guidelines - Types of reviews - Inspection of objectives - Basic inspection principles - The conduct of inspection - Inspection training.

MODULE IV TESTING AND MANAGING SOFTWARE QUALITY 09

Testing: principles - Types - Planning - Development - Execution and reporting– Tools and methods - Real Time testing - quality management paradigm - Quality motivation – Measurement criteria - Establishing a software quality program - Estimating software quality.

MODULE V DEFECT PREVENTION 09

Principles of software defect prevention - Process changes for defect prevention - Defect prevention considerations - Managements role - Framework for software

process change - Managing resistance to software process change - Case studies.

Total Hours: 45

TEXT BOOK :

1. Watts S. Humphrey, Managing the software process, Addison Wesley, 1999.

REFERENCES :

1. TsumS.Chow, Software Quality Assurance a Practical Approach, IEEE Computer Society press, 1985.
2. Richard E. Fairley, Software Engineering - A Practitioner's approach, McGraw Hill, 1982.

OUTCOMES:

At the end of this course, the students will be able to

- describe the various practices available to manage a software system.
- understand software quality management problems, general solutions, technologies and standards.
- compare and contrast product quality and process quality.
- apply product and process quality control techniques.
- define, implement, and apply software (process) metrics apply software quality management to software and software development processes

CACY016 EMBEDDED SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide a clear understanding on the basic concepts, building blocks for Embedded System
- To teach the fundamentals of processes and scheduling policies.
- To teach how to program embedded systems in assembly language and C
- To introduce on Embedded Process development Environment

MODULE I EMBEDDED COMPUTING 09

Challenges of Embedded Systems – Embedded system design process. Embedded processors – 8051 Microcontroller, ARM processor – Architecture, Instruction sets and programming.

MODULE II MEMORY AND INPUT / OUTPUT MANAGEMENT 09

Programming Input and Output – Memory system mechanisms – Memory and I/O devices and interfacing – Interrupts handling.

MODULE III PROCESSES AND OPERATING SYSTEMS 09

Multiple tasks and processes – Context switching – Scheduling policies – Inter process communication mechanisms – Performance issues.

MODULE IV EMBEDDED SOFTWARE 09

Programming embedded systems in assembly and C – Meeting real time constraints –Multi-state systems and function sequences. Embedded software development tools –Emulators and debuggers.

MODULE V EMBEDDED SYSTEM DEVELOPMENT 09

Design issues and techniques – Case studies – Complete design of example embedded systems.

Total Hours: 45

TEXT BOOKS

1. Wayne Wolf, “Computers as Components: Principles of Embedded Computer System Design”, Elsevier, 2006.
2. Michael J. Pont, “Embedded C”, Pearson Education , 2007.

REFERENCES:

1. Steve Heath, “Embedded System Design”, Elsevier, 2005.
2. Muhammed Ali Mazidi, Janice GillispieMazidi and Rolin D. McKinlay, “The 8051Microcontroller and Embedded Systems”, Pearson Education, Second edition, 2007.

OUTCOMES:

On completion of this course, students will be able to

- get exposure with different families and architectures of Embedded System tools such as Microcontrollers, DSPs, FPGAs etc.
- analyze real-time scheduling algorithms and identify design flaws
- design any embedded system (h/ w or s/w or both) based on any of the above tools
- become highly proficient in Embedded Software particularly in real-time programming with Industry standard RTOS such as VxWorks and RT Linux.

CACY017 BUSINESS INTELLIGENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- To give an overview of business and project planning.
- To introduce and explain the complexity of business intelligence decision support projects
- To present a step-by-step guide for the entire Business Intelligence project life cycle
- To impart knowledge of a complete development lifecycle including activities, deliverables, roles, risks, responsibilities, Do's and Don'ts, entry and exit criteria for a successful Business Intelligence (BI) decision support implementation.

MODULE I STAGES AND STEPS 09

Stages and Steps: Guide to the development steps- Business Intelligence (BI) Definition – BI Decision Support Initiatives – Development Approaches – Engineering Stages and Development Steps – Parallel Development Tracks – BI Project Team Structure – Business Case Assessment: Business Justification – Business Drivers – Business Analyst Issues – Cost-Benefit Analysis – Risk Assessment – Business Case Assessment Activities.

MODULE II ENTERPRISE INFRASTRUCTURE EVALUATION 09

Enterprise Infrastructure Evaluation: Technical Infrastructure Evaluation – The Hardware Platform – The Middleware Platform – The DBMS Platform – Technical Infrastructure Evaluation Activities – Deliverables Resulting from these Activities - Roles and Risks involved in these activities. Nontechnical Infrastructure Evaluation – The Effects of Stovepipe Development – The need for Nontechnical Infrastructure Evaluation -Enterprise architecture and Enterprise Standards - Nontechnical Infrastructure Evaluation Activities – Deliverables Resulting from these Activities - Roles and Risks involved in these activities.

MODULE III PROJECT PLANNING 09

Project Planning – Managing, Defining, Planning the BI Project - Project Planning Activities – Deliverables Roles and Risks - Project Requirements Definition – General Business and Project-Specific Requirements – TheInterviewing Process – Project Requirements and Deliverables – Roles and Risks involved - Data Analysis – Business-Focused Data Analysis – Top-Down Logical Data Modeling – Bottom-Up Source Data Analysis - Data Cleansing, Activities, Deliverables,

Roles and Risks - Application Prototyping– Purposes, Best Practices, Types – Building Successful Prototypes – Applications, Deliverables, Roles and Risks – Meta Data Repository Analysis.

MODULE IV DATABASE DESIGN 09

Database Design – Differences, Logical and Physical Database Design and Activities – Deliverables, Roles and Risks - Extract/Transform/Load (ETL) Design – Implementation Strategies – Preparing for the ETL Process – Designing the Extract, Transformation, Load Programs and ETL Process Flow – Evaluating ETL Tools - ETL Design Activities – Deliverables, Roles and Risks – Meta Data Repository Design – Extract/Transform/Load Development.

MODULE V APPLICATION DEVELOPMENT 09

Application Development – Online analytical Processing Tools – Multidimensional Analysis Factors – Online Analytical Processing Architecture – Development Environments – Application Development Activities – Deliverables, Roles and Risks - Data Mining – Meta Data Repository Development.

Total Hours: 45

TEXT BOOK:

1. Business Intelligence Roadmap: The Complete Project Lifecycle for Decision Support Applications, Larissa T. Moss, ShakuAtre, Addison Wesley Publications, 2003.

REFERENCE:

1. Business Intelligence Strategy – A practical Guide for Achieving BI Excellence, John Boyer, Bill Frank, Brian Green Tracy Harris and Kay Van De Vanter, First Edition, IBM Corporation, 2010.

OUTCOMES:

On completion of this course, students will be able to

- describe the infrastructure components of BI decision support system.
- build prototype for developing a successful project
- evaluate enterprise infrastructure
- define, compare and implement physical and logical database design
- determine number of resources required, type of resources in terms of both technical and human and could be able to recognize the components that impairs the success of BI decision support application.

CACY018 SOFTWARE TESTING

L	T	P	C
3	0	0	3

OBJECTIVES

- Fundamentals of testing
- Role of Testing in Software Development Lifecycle
- Various techniques of testing
- Tools for testing.

MODULE I FUNDAMENTALS OF TESTING 09

Human and errors, Testing and Debugging, Software Quality, Requirement Behavior and Correctness, Fundamentals of Test Process, Psychology of Testing, General Principles of Testing, Test Metrics.

MODULE II ROLE OF TESTING IN SDLC 09

Review of software development models (Waterfall Models, Spiral Model, W Model, V Model) Agile Methodology and Its Impact on testing, Test Levels (Unit, Component, Module, Integration, System, Acceptance, Generic)

MODULE III APPROACHES TO TESTING 09

Black Box Testing- Equivalence Class Partitioning, Boundary Value Analysis, State Transition Test, Cause Effect Graphing and Decision Table Technique and Used Case Testing and Advanced black box techniques: White Box Testing- Statement Coverage, Branch Coverage, Test of Conditions, Path Coverage, Advanced White Box Techniques, Instrumentation and Tool Support Gray Box Testing, Intuitive and Experience Based Testing.

MODULE IV TEST ORGANIZATION 09

Test Organization: Test teams, tasks and Qualifications: Test Planning : Quality Assurance Plan, Test Plan, Prioritization Plan, Test Exit Criteria: Cost and economy Aspects: Test Strategies: Preventive versus Reactive Approach, Analytical versus heuristic Approach Test Activity Management, Incident Management, Configuration Management Test Progress Monitoring and Control: Specialized Testing: Performance, Load, Stress & Security Testing.

MODULE V TESTING TOOLS 09

Automation of Test Execution, Requirement tracker, High Level Review Types of test Tools: Tools for test management and Control, Test Specification, Static

Testing, Dynamic Testing, Non functional testing.

Total Hours: 45

REFERENCES:

1. Software Testing Foundations, Andreas Spillner, Tilo Linz, Hans Schaefer, Shoff Publishers and Distributors.
2. Software Testing: Principles and Practices by Srinivasan D and Gopalswamy R, Pearson Ed, 2006.
3. Foundations of Software Testing by Aditya P. Mathur – Pearson Education custom edition 2000.
4. Testing Object Oriented Systems: models, patterns and tools, Robert V Binder, Addison Wesley, 1996.
5. Software Engineering – A practitioner's approach by Roger S. Pressman, 5th Edition, McGraw Hill.
6. The art of software testing by GJ Myers, Wiley.

OUTCOMES

On completion of this course, students will be able to

- recognize the need for testing
- review various software development models like Waterfall Models, Spiral Model, W Model and V Model
- perform various testing like black box testing, white box testing, gray box testing and Experience Based Testing
- describe the various testing techniques
- work with various test tools
- apply the testing techniques in commercial environment

CACY019 CONTENT MANAGEMENT SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES

- To impart knowledge in installing CMS and how CMS differ from website builder
- Provide knowledge on the core modules, using Smarty to build templates with own functionality
- To train the students in using an open source content management (CMS) tool – Joomla!, A powerful and robust tool.

MODULE I **09**

Content Management System (CMS) – Introduction - Getting Started - CMS versus website builder – Creating Pages and Navigation.

MODULE II **09**

Design and Layout - Using Core modules – Users and Permissions – Using Third-party Modules – Creating Own Functionality.

MODULE III **09**

E-commerce workshop - Advanced Use of CMS - Administration and Trouble Shooting.

MODULE IV **09**

Introduction to dynamic web pages and development tools for dynamic content– Downloading tools for dynamic content – Downloading and Installing a content Management System (Joomla!) – Administration elements of a Content Management System – Organizing Content.

MODULE V **09**

Basic elements: pages, menus and navigation – incorporate components, modules, plug-ins and languages – Case Studies: Marketing strategies and planning for websites – Design and create a school website, restaurant website, blog site, Securing Content Management System.

Total Hours: 45

TEXT BOOKS:

1. CMS Made simple 1.5, Sofia Hauschildt, 2010
2. Joomla! 1.5: A User's Guide – Barrie M. North Second Edition, Prentice Hall.

OUTCOMES:

On completion of this course, students will be able to

- install CMS made simple (CMSMS), Converting other website templates to work with CMSMS
- add a e-commerce functionality and a discussion of users and permissions.
- develop a successful website powered by Joomla
- list the advanced use of CMS
- incorporate components , modules, plug-ins and languages.

CACY020 ADVANCED PROGRAMMING TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- Comprehend the concepts of C and C++
- Obtain the knowledge on advanced Java programming concepts like interface, threads, Swings etc.
- Apply java programming concepts in writing network programs
- Apply and analyze issues in enterprise applications development.

MODULE I **9**

Fundamentals of C Programming – Control Statements – String - Arrays - Functions - Pointers - Structures - File Structures - File Handling.

MODULE II **09**

C++ Overview - Functions and Variables - Classes in C++ - Operator Overloading - Storage Management - Inheritance - Polymorphism - Exceptions- Templates.

MODULE III **09**

JAVA FUNDAMENTALS : Java I/O streaming – filter and pipe streams – Byte Code interpretation - Threading –Swing - Remote method Invocation – activation models – RMI custom sockets – Object Serialization – RMI – IIOP implementation – CORBA – IDL technology – Naming Services – CORBA programming Models - JAR file creation.

MODULE IV MULTI-TIER APPLICATION DEVELOPMENT **09**

Server side programming – servlets – Java Server Pages - Applet to Applet communication – applet to Servlet communication - JDBC – Applications on databases – Multimedia streaming applications – Java Media Framework.

MODULE V ENTERPRISE APPLICATIONS **09**

Server Side Component Architecture – Introduction to J2EE – Session Beans– Entity Beans – Persistent Entity Beans .

Total Hours: 45

TEXT BOOKS:

1. Elliotte Rusty Harold, “ Java Network Programming”, O’Reilly publishers, 2000.

2. Ed Roman, “Mastering Enterprise Java Beans”, John Wiley & Sons Inc., 1999.
3. Hortsmann& Cornell, “CORE JAVA 2 ADVANCED FEATURES, VOL II”, Pearson Education, 2002.

REFERENCES:

1. Web reference: http://java.sun.com.
2. Patrick Naughton, “COMPLETE REFERENCE: JAVA2”, Tata McGraw-Hill, 2003.

OUTCOMES:

On completion of this course, students will be able to

- apply the basic and advanced concepts of programming languages such as C, C++ and Java in developing application.
- connect the java application with backend database and manipulate the data stored in the database.
- invoke and execute the methods of the remote object using RMI
- summarize various Enterprise JavaBean (EJB) concepts including entity beans, session beans, bean managed persistence (BMP), and container managed persistence (CMP)
- perform database queries and updates using JDBC.

CACY021 INFORMATION AND STORAGE MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES

- Describe and apply storage technologies
- Identify leading storage technologies that provide cost-effective IT solutions for medium to large scale businesses and data centers
- Describe important storage technologies' features such as availability, replication, scalability and performance
- Discuss the types of storage virtualization
- Understand logical and physical components of a storage infrastructure

MODULE I INTRODUCTION TO STORAGE TECHNOLOGY 09

Data creation and The value of data to a business, Information Life cycle, Challenges in data storage and data management, Solutions available for data storage, Core elements of a Data Center infrastructure, role of each element in supporting business activities.

MODULE II STORAGE SYSTEMS ARCHITECTURE 09

Hardware and software components of the host environment, Key protocols **-** Physical --logical components of a connectivity environment -Major physical components- logical constructs of a physical disk- access characteristics- performance Implications- Concept of RAID and its components, Different RAID levels -high-level architecture and working of an intelligent storage system

MODULE III INTRODUCTION TO NETWORKED STORAGE 09

Evolution of networked storage, Architecture, components, and topologies of FC-SAN, NAS, and IP-SAN, Benefits of the different networked storage options, Understand the need for long-term archiving solutions and describe how CAS fulfill the need, Understand the appropriateness of the different networked storage options for different application environments.

MODULE IV MONITORING & MANAGING DATA CENTER 09

Differentiate between business continuity (BC) and disaster recovery (DR), RTO and RPO, Identification of single points of failure in a storage infrastructure - solutions to mitigate these failures-Architecture of backup/recovery -recovery topologies-replication technologies-ensuring information availability and business continuity-Remote replication technologies-providing disaster recovery-

business continuity capabilities-Key areas to monitor in a data center -Key metrics to monitor storage infrastructure.

MODULE V SECURING STORAGE AND STORAGE VIRTUALIZATION 09

Information Security, Critical security attributes for information systems, Storage security domains, Analyze the common threats in each domain. Storage Virtualization: Forms, Configurations and Challenges. Types of Storage Virtualization: Block-level and File-Level.

Total Hours: 45

REFERENCES

1. G.Somasundaram, AlokShrivastava, EMC Education Series, " Information Storage and Management", Wiley, Publishing Inc., 2011.
2. Robert Spalding, "Storage Networks: The Complete Reference",TataMcGrawHill,Osborne, 2003.
3. Marc Farley, "Building Storage Networks",TataMcGraw Hill, Osborne. 2001.
4. MeetaGupta, Storage Area Network Fundamentals, Pearson Education Limited, 2002

OUTCOMES

After completion of this course, the students would be able to

- have a general knowledge of the different types of storage media for digital data.
- understand computer terminology as it applies to data storage.
- differentiate between different types of data storage systems.
- select different data storage types appropriate for various GIS system data.
- recognize the differences between the data in a GIS system and the real world it represents.
- recognize the importance of data design in a GIS system.

CACY022 SEMANTIC WEB

L	T	P	C
3	0	0	3

OBJECTIVES

- understand the need of semantic web in web services
- know the methods to discover, classify and build ontology for more reasonable results in searching
- build and implement a small ontology that is semantically descriptive of chosen problem domain
- implement applications that can access, use and manipulate the ontology

MODULE I INTRODUCTION 09

Introduction to the Syntactic web and Semantic Web – Evolution of the Web – The visual and syntactic web – Levels of Semantics – Metadata for web information - The semantic web architecture and technologies –Contrasting Semantic with Conventional Technologies –Semantic Modeling - Potential of semantic web solutions and challenges of adoption

MODULE II ONTOLOGICAL ENGINEERING 09

Ontologies – Taxonomies –Topic Maps – Classifying Ontologies – Terminological aspects: concepts, terms, relations between them – Complex Objects – Subclasses and Sub-properties definitions – Upper Ontologies – Quality – Uses - Types of terminological resources for ontology building – Methods and methodologies for building ontologies – Multilingual Ontologies -Ontology Development process and Life cycle – Methods for Ontology Learning – Ontology Evolution – Versioning

MODULE III STRUCTURING AND DESCRIBING WEB RESOURCES 09

Structured Web Documents - XML – Structuring – Namespaces – Addressing – Querying – Processing - RDF – RDF Data Model – Serialization Formats- RDF Vocabulary –Inferencing - RDFS – basic Idea – Classes – Properties- Utility Properties – RDFS Modeling for Combinations and Patterns- Transitivity

MODULE IV WEB ONTOLOGY LANGUAGE 09

OWL – Sub-Languages – Basic Notions -Classes- Defining and Using Properties – Domain and Range – Describing Properties - Data Types – Counting and Sets- Negative Property Assertions – Advanced Class Description – Equivalence – Owl Logic.

MODULE V SEMANTIC WEB TOOLS AND APPLICATIONS 09

Development Tools for Semantic Web – Jena Framework – SPARL –Querying semantic web - Semantic Wikis - Semantic Web Services – Modeling and aggregating social network data - Ontological representation of social relationships, Aggregating and reasoning with social network data

Total Hours: 45

REFERENCE BOOKS:

1. Michael C.Daconta, Leo J. Obart and Kevin J Smith, “Semantic Web – A guide to the future of XML, Web Services and Knowledge Management”,Wiley Publishers, 2003. Liyang Yu, “A Developer's Guide to the Semantic Web”, Springer, First Edition, 2011
2. John Hebeler, Matthew Fisher, Ryan Blace and Andrew Perez-Lopez, “Semantic Web Programming”,Wiley, First Edition, 2009.

4. Robert M. Colomb, “Ontology and the Semantic Web”, Volume 156 Frontiers in Artificial Intelligence and Applications (Frontier in Artificial Intelligence and Applications), IOS Press, 2007.
5. Dean Allemang and James Hendler, “Semantic Web for the Working Ontologist: Effective Modeling in RDFS and OWL, Morgan Kaufmann”, Second Edition, 2011.
6. Michael C. Daconta, Leo J. Obrst and Kevin T. Smith, “The Semantic Web: A Guide to the Future of XML,Web Services, and Knowledge Management”,Wiley, First Edition 2003

OUTCOMES:

On completion of this course, students will be able to

- comprehend the semantic web basics and sketch the architecture diagram of semantic web.
- identify the component technologies of the Semantic Web and explain their roles.
- represent data from a chosen problem in XML with appropriate semantic tags obtained or derived from the ontology
- illustrate the semantic relationships among these data elements using Resource Description Framework (RDF)

- List the limitations of semantic web technologies and aware of the services it can and cannot deliver
- discover the capabilities and limitations of semantic web technology for social networks

CACY023 HEALTHCARE ANALYTICS

L	T	P	C
3	0	0	3

OBJECTIVES

- to know about creating and maintaining health care information systems
- to understand the basic concepts of health care system.
- to understand IT governance and assessment of health care information system

MODULE I INTRODUCTION 09

Introduction to health care information – Health care data quality – Health care information regulations, laws and standards.

MODULE II HEALTH CARE INFORMATION SYSTEMS 09

History and evolution of health care information systems – Current and emerging use of clinical information systems – system acquisition – System implementation and support.

MODULE III INFORMATION TECHNOLOGY 09

Information architecture and technologies that support health care information systems – Health care information system standards – Security of health care information systems.

MODULE IV MANAGEMENT OF IT CHALLENGES 09

Organizing information technology services – IT alignment and strategic planning – IT governance and management.

MODULE V IT INITIATIVES 09

Management's role in major IT initiatives – Assessing and achieving value in health care information systems. Case study

Total Hours: 45

TEXT BOOKS:

1. Karen A Wager, Frances Wickham Lee, John P Glaser, " Managing Health Care Information Systems: A Practical Approach for Health Care Executives", John Wiley, 2 nd edition 2009.

2. Marion J. Ball, Charlotte Weaver, Joan Kiel ,"Healthcare Information Management Systems: Cases, Strategies, and Solutions", Springer, 2010, 3 rd edition
3. Rudi Van De Velde and Patrice Degoulet, "Clinical Information Sytems: A Componenet based approach", Springer 2005.

REFERENCE BOOKS

1. Kevin Beaver, Healthcare Information Systems, Second edition Best Practices, CRC Press, 2002
2. Marion J. Ball Healthcare Information Management Systems: A Practical Guide Springer-Verlag GmbH, 1995

OUTCOMES:

On completion of this course, students will be able to

- Identify, Analyze the computing requirements of a problem and Solve them using computing principles.
- Design and Evaluate a computer based system, components and process to meet the specific needs of applications.
- Use current techniques and tools necessary for complex computing practices.
- Use suitable architecture or platform on design and implementation with respect to performance
- Develop and integrate effectively system based components into user environment.
- Apply the understanding of management principles with computing knowledge to manage the projects in multidisciplinary environments.

CACY024 PYTHON PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES

- establish proficiency in fundamentals of writing Python scripts
- learn the concepts of file I/O and handling of errors and exceptions
- discover the features of python structures and flow control
- use and manipulate several core data structures: Lists, Dictionaries, Tuples, and Strings.

MODULE I INTRODUCTION TO PYTHON 09

Python Overview- Environment Setup- Basic Syntax- Python Identifiers- Reserved Words- Lines and Indentation- Comments- Variable Types- Basic Operators- Decision Making-Loops.

MODULE II BUILT IN FUNCTIONS 09

Python - Numbers – Math Functions-Strings - Special Operators- Formatting Operator- Built-in String Methods- Lists –List operations and Functions- Tuples – Basic Tuple operations and Functions -Dictionary –Adding-updating-Deleting-Built in Functions and Methods.

MODULE III DATE AND TIME FUNCTIONS 09

Date & Time – Getting current Time-Formatted Time-Time Tuple-Time Module-Calendar Module- Functions –Defining Functions-Calling Functions-Types of Function Arguments- Anonymous Functions-Modules - import Statement-Namespaces and Scoping.

MODULE IV FILES AND EXCEPTIONS 09

Files I/O -Printing to the Screen- Reading Keyboard Input- Opening and Closing Files- Reading and Writing Files- Renaming and Deleting Files- Directories in Python- Exceptions-Except Clause.

MODULE V ADVANCED PHYTHON 09

Advanced Python - Classes/Objects - Creating Classes and Instance Objects - Built-In Class Attributes- Class Inheritance- Overloading Methods- -Reg Expressions - Regular Expression Modifiers and Patterns- Database Access - Sending Email .

Total Hours: 45

TEXTBOOKS

1. Vernon L. Ceder ," The Quick Python Book “, 2nd Edition, Manning Publications, Jan 2010.
2. Python In A Day: Learn The Basics, Learn It Quick, Start Coding Fast (In A Day Books) (Volume 1) by Richard Wagstaff
3. Python Programming: An Introduction to Computer Science– December, 2003 by John Zelle

OUTCOMES

On Completion of the course the students will be able to

- List the string and math built in functions.
- Handle the file-system with python scripts
- Classify and Design functions, modules and classes.
- Demonstrate the use of the built-in data structures 'list' and 'dictionary'.
- Perform file operations like open, create ,read, write and close the file.
- Create class, inherit the class, overload the methods and handle regular expressions.

CACY025 ENTERPRISE RESOURCE PLANNING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To describe the concept of ERP and the ERP model
- To explain how ERP is used to integrate business processes and analyze a process
- To impart the key technological considerations and infrastructure concerns in ERP implementation
- To describe project organizational considerations define the project management tools and resources needed to implement an ERP system

MODULE I INTRODUCTION TO ERP 09

Integrated Management Information Seamless Integration – Supply Chain Management – Integrated Data Model – Benefits of ERP – Business Engineering and ERP – Definition of Business Engineering – Principle of Business Engineering – Business Engineering with Information Technology.

MODULE II BUSINESS MODELLING FOR ERP 09

Building the Business Model – ERP Implementation – An Overview – Role of Consultant, Vendors and Users, Customisation – Precautions – ERP Post Implementation Options-ERP Implementation Technology –Guidelines for ERP Implementation.

MODULE III ERP AND THE COMPETITIVE ADVANTAGE 09

ERP domain MPGPRO – IFS/Avalon – Industrial and Financial Systems – Baan IV SAP-Market Dynamics and Dynamic Strategy.

MODULE IV COMMERCIAL ERP PACKAGE 09

Description – Multi-Client Server Solution – Open Technology – User Interface-Application Integration.

MODULE V ARCHITECTURE 09

Basic Architectural Concepts – The System Control Interfaces – Services – Presentation Interface – Database Interface.

Total Hours: 45

TEXT BOOK:

1. Vinod Kumar Garg and N.K.Venkita Krishnan, “Enterprise Resource Planning – Concepts and Practice”, PHI, 1998.

REFERENCE:

1. Jose Antonio Fernandz, The SAP R/3 Handbook, TMH, 1998.

OUTCOMES:

On completion of this course, students will be able to

- List the steps and activities in the ERP life cycle;
- articulate the challenges associated with post-implementation and management of ERP systems.
- evaluate the progress of an ongoing ERP implementation project.
- apply modern software including Oracle ERP system to plan and manage resources in organizations.
- examine systematically the planning mechanisms in an enterprise
- identify all components in an ERP system and the relationships among the components;

CACY026 SOFTWARE PROJECT MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the concepts of Software project management.
- To know the techniques in developing Quality Software Products
- To manage the Software Product Development

MODULE I INTRODUCTION 09

Introduction to Competencies - Product Development Techniques - Management Skills - Product Development Life Cycle - Software Development Process and models-The SEI CMM - International Organization for Standardization.

MODULE II DOMAIN PROCESSES 09

Managing Domain Processes - Project Selection Models - Project Portfolio Management - Financial Processes - Selecting a Project Team - Goal and Scope of the Software Project - Project Planning -Creating the Work Breakdown Structure - Approaches to Building a WBS -Project Milestones - Work Packages - Building a WBS for Software.

MODULE III SOFTWARE DEVELOPMENT 09

Tasks and Activities - Software Size and Reuse Estimating - The SEI CMM - Problems and Risks - Cost Estimation - Effort Measures - COCOMO: A Regression Model - COCOMO II - SLIM: A Mathematical Model - Organizational Planning - Project Roles and Skills Needed.

MODULE IV SCHEDULING ACTIVITIES 09

Project Management Resource Activities - Organizational Form and Structure - Software Development Dependencies - Brainstorming - Scheduling Fundamentals - PERT and CPM - Leveling Resource Assignments - Map the Schedule to a Real Calendar - Critical Chain Scheduling.

MODULE V QUALITY ASSURANCE 09

Quality: Requirements – The SEI CMM - Guidelines - Challenges - Quality Function Deployment - Building the Software Quality Assurance - Plan - Software Configuration Management: Principles - Requirements - Planning and Organizing - Tools - Benefits - Legal Issues in Software - Case Study.

Total Hours: 45

TEXT BOOK :

1. Robert T. Futrell, Donald F. Shafer, Linda I. Safer, “Quality Software Project Management”, Pearson Education, Asia, 2002.

REFERENCES :

1. PankajJalote, “Software Project Management in Practice”, Addison Wesley, 2002.
2. Hughes, “Software Project Management, 3/E”, Tata McGraw-Hill, 2004.

OUTCOMES:

On completion of this course, students will be able to

- gain Knowledge to develop Quality Software Products.
- plan, organize and manage the various resources effectively to achieve.
- specific target in a software organization.
- list the tasks and activities involved in the software development.
- differentiate PERT and CPM in project management.
- handle Software projects effectively

CACY027 DATA MINING AND DATA WAREHOUSING

L	T	P	C
3	01	0	3

OBJECTIVES:

- Provide an overview of data mining and warehousing.
- Introduce data mining techniques
- Offer adequate knowledge to work with data warehouse
- Learn the techniques that can be applied to numerous applications

MODULE I: INTRODUCTION **09**

Databases - Data Mining Functionalities - Steps In Data Mining Process - Architecture of a Typical Data Mining Systems – Classification of Data Mining Systems - Overview of Data Mining Techniques. Data Preprocessing: Data Cleaning – Integration – Reduction – Transformation and Discretization.

MODULE II: ASSOCIATION RULES **09**

Mining Frequent Patterns, Associations and Correlations: Basic Concepts – Frequent Itemset Mining Methods. Classification and Prediction: Issues Regarding Classification and Prediction-Classification by Decision Tree Induction-Bayesian Classification-Other Classification Methods-Prediction

MODULE III: CLUSTERING **09**

Clusters Analysis: Types of Data In Cluster Analysis- Categorization of Major Clustering Methods: Partitioning Methods: k-Means, k-Medoids – Hierarchical Methods: BIRCH, Chameleon – Density based Methods: DBSCAN, OPTICS, Grid based Methods: STING and CLIQUE

MODULE IV: DATA WAREHOUSING **09**

Data Warehouse: Basic Concepts – Data Warehouse Modeling – Data Warehouse Design and Usage – Data Warehouse Implementation.

MODULE V: APPLICATIONS **09**

Social Impacts of Data Mining - Data Mining for Financial Data, Retail and Telecommunications, Science and Engineering, Mining WWW, Mining Text Database – Mining Spatial Databases – Tools - An Introduction to DB Miner - Case Studies

Total Hours: 45

TEXT BOOK :

1. Jiawei Han, MichelineKamber, "Data Mining: Concepts and Techniques", Morgan Kaufmann Publishers, 2002.

REFERENCES :

1. Alex Berson,Stephen J. Smith, “Data Warehousing, Data Mining,& OLAP”, Tata McGraw- Hill, 2004.
2. UsamaM.Fayyad, Gregory Piatetsky - Shapiro, Padhrai Smyth and RamasamyUthurusamy, "Advances In Knowledge Discovery and Data Mining", The M.I.T Press, 1996.
3. Ralph Kimball, "The Data Warehouse Life Cycle Toolkit", John Wiley & Sons Inc., 1998.
4. Sean Kelly, "Data Warehousing In Action", John Wiley & Sons Inc., 1997.

OUTCOMES:

On completion of this course students will be able to:

- recognize the key areas and issues in data mining
- make more effective use of data stored in databases.
- apply association rules, clustering and classification techniques to the dataset to demonstrate some interesting rules or predict interesting pattern from that.
- compare database and data warehouse.
- manage the data mining development process in an individual or team context
- plan, design and deploy the necessary data mining technologies to support a software system

CACY028 UNIX INTERNALS

L	T	P	C
3	0	0	3

OBJECTIVES:

- Provide an in-depth knowledge of the UNIX operating system's internal features and their operation.
- describes the data structures, their relationships and the major algorithms used to manage System, processes, system calls, interrupts and exceptions, virtual memory and file systems.

MODULE I INTRODUCTION TO UNIX 09

Unix operating system - History - System structure –Users Perspective- OS Services- Hardware-Architecture- System Concepts- Kernel data structures– System Administration – Buffer Cache- Heaters – Structure of the Buffer Pool- Scenarios-Reading and writing Disk Blocks.

MODULE II FILE SYSTEMS 09

INODES - Structure of a regular file- Directories – Conversion of a path name to an INODE - Super Block- INODE assignment – Disk Blocks- System calls for the file system.

MODULE III PROCESSES 09

Process States and Transitions – Layout of System Memory – Context of a Process – Manipulation of the process address space – Sleep – Process Control – Creation – Signals – Awaiting process termination – The Shell – System Boot and Init Process – Process Scheduling and Time – System calls for time – Clock.

MODULE IV MEMORY MANAGEMENT 09

Swapping – Segmentation - Demand Paging – Driver Interfaces – Disk Drivers – Terminal Drivers - Streams.

MODULE V INTERPROCESS COMMUNICATION 09

Process Tracing – System V IPC – Network Communications - Sockets – Problem of Multiprocessor Systems – Solution with Master and Slave Processors – Semaphores – Distributed Unix Systems – Satellite Processors-– Newcastle connection – Transparent distributed file systems – System Calls.

Total Hours: 45

TEXT BOOK :

1. Bach M.J., The Design of the Unix Operating System, Prentice Hall India, 1986.

REFERENCES :

1. Goodheart B., Cox.J., The Magic Garden Explained, Prentice Hall India, 1994.
2. Leffler S.J., Mckusick M.K., Karels M.J and Quarterman J.S., The Design and Implementation of the 4.3 BSD Unix Operating System. Addison Wesley, 1998.

OUTCOMES:

On completion of this course, students will be able to

- work with the basic functioning of UNIX operating systems.
- write shell programming and convert path name to an INODE.
- analyze the buffers and kernel representation, to understand the UNIX system structure and system calls .
- compare the various memory management techniques like Swapping , Segmentation and Demand Paging.

CACY029 ADVANCED DATABASES

L	T	P	C
3	0	0	3

OBJECTIVES:

- use concepts and DBMS features learned previously
- be familiar with data modeling and able to apply the techniques to medium complexity problems
- be proficient with basic SQL and familiar with advanced usage
- be exposed to database administration
- be familiar with OBDC and Web site use of databases

MODULE I RELATIONAL DATABASES 09

Relational Model - Querying - Storage Structures - Query Processing - Normalization.

MODULE II OBJECT ORIENTED DATABASES 09

Introduction to Object Oriented Data Bases - Approaches - Modeling and Design - Persistence - Transaction - Concurrency - Recovery - Database Administration.

MODULE III EMERGING SYSTEMS 09

Enhanced Data Models - Client/Server Model - Data Warehousing and Data Mining - Web Databases – Mobile Databases.

MODULE IV CURRENT ISSUES 09

Rules - Knowledge Bases - Active and Deductive Databases - Distributed Databases and Parallel databases.

MODULE V DATABASE DESIGN ISSUES 09

Security - Integrity - Consistency - Database Tuning - Optimization and Research Issues.

Total Hours: 45

TEXT BOOK :

1. R. Elmasri and S.B. Navathe, Fundamentals of Database Systems, Addison Wesley, 2000.

REFERENCES :

1. Gary W. Hanson and James V. Hanson, Database Management and Design, Prentice Hall of India Pvt Ltd, 1999.
2. Alex Benson, Stephen Smith and Kurt Thearling, Building Data Mining Applications for CRM, Tata McGraw-Hill, 2000.

OUTCOMES:

On completion of this course, students will be able to

- discuss the concepts of transaction management.
- design high-quality relational databases and database applications.
- develop skills in advanced visual & conceptual modeling and database design.
- translate complex conceptual data models into logical and physical database designs.

CACY030 SOFTWARE QUALITY ASSURANCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the fundamental concepts of quality assurance, SQA activities and SQA metrics.
- To get an insight into the various quality control tools.
- To explore the guidelines prescribed by the various quality standards like CMMI.
- To investigate the techniques and tools for Software testing.

MODULE I CONCEPTS 09

Concepts of Quality Control, Quality Assurance, Quality Management - Total Quality Management; Cost of Quality; QC tools - 7 QC Tools and Modern Tools; Other related topics - Business Process Re-engineering –Zero Defect, Six Sigma, Quality Function Deployment, Benchmarking, Statistical process control.

MODULE II SOFTWARE ENGINEERING CONCEPTS 09

Software Engineering Principles, Software Project Management, Software Process, Project and Product Metrics, Risk Management, Software Quality Assurance; Statistical Quality Assurance - Software Reliability, Muse Model; Software Configuration Management; Software Testing; CASE (Computer Aided Software Engineering).

MODULE III QUALITY ASSURANCE MODELS 09

Models for Quality Assurance-ISO-9000 - Series, CMM, SPICE, Malcolm Baldrige Award.

MODULE IV SOFTWARE QUALITY ASSURANCE RELATED TOPICS 09

Software Process - Definition and implementation; internal Auditing and Assessments; Software testing -Concepts, Tools, Reviews, Inspections & Walk thoughts; P-CMM.

MODULE V FUTURE TRENDS 09

PSP and TSP, CMMI, OO Methodology, Clean-room software engineering, Defect injection and prevention.

Total Hours: 45

TEXT BOOK :

1. Watts Humphery, “Managing Software Process", Addison - Wesley, 1998.

REFERENCES:

1. Philip B Crosby, "Quality is Free: The Art of Making Quality Certain", Mass Market, 1992.
2. Roger Pressman, “Software Engineering ", Sixth Edition, McGraw Hill, 2005.

OUTCOMES:

At the end of this course, the students will be able to

- apply software quality control tools.
- identify the software quality attributes and explore the quality standards.
- apply software testing techniques and identify the inputs and deliverables of testing.
- evaluate how new technologies impact software quality assurance and the system’s development life cycle.

CACY031 SERVICE ORIENTED ARCHITECTURE

L	T	P	C
3	01	0	3

OBJECTIVES:

- To gain understanding of the basic principles of service orientation
- To learn service oriented analysis techniques
- To interpret technology underlying the service design
- To learn advanced concepts such as service composition, orchestration and Choreography
- To know about various WS specification standards
- To introduce the fundamentals and issues relating to Service Oriented Architecture
- To bring out the importance of service orientation and web services.

MODULE I INTRODUCTION 09

Roots of SOA – Characteristics of SOA - Comparing SOA to client-server and distributed internet architectures – Anatomy of SOA- How components in an SOA interrelate - Principles of service orientation.

MODULE II SERVICE LAYER 09

Web services – Service descriptions – Messaging with SOAP –Message exchange Patterns – Coordination –Atomic Transactions – Business activities – Orchestration –Choreography - Service layer abstraction – Application Service Layer – Business Service Layer – Orchestration Service Layer.

MODULE III SERVICE ORIENTED ANALYSIS AND DESIGN 09

Service oriented analysis – Business-centric SOA – Deriving business services-service modeling - Service Oriented Design – WSDL basics – SOAP basics – SOA composition guidelines – Entity-centric business service design – Application service design – Task centric business service design.

MODULE IV TECHNOLOGIES AND DESIGN FOR SOA 09

SOA platform basics – SOA support in J2EE – Java API for XML-based web services (JAX-WS) - Java architecture for XML binding (JAXB) – Java API for XML Registries (JAXR) - Java API for XML based RPC (JAX-RPC)- Web Services Interoperability Technologies (WSIT) - SOA support in .NET – Common Language Runtime - ASP.NET web forms – ASP.NET web services – Web Services Enhancements (WSE).

MODULE V SERVICE DESIGN AND SECURITY 09

Service design-guidelines- WS-BPEL language basics – WS-Coordination overview – WS -Choreography, WS-Policy, WS Security-WSOA platform-SOA support in J2EEand .NET.

Total Hours: 45

TEXT BOOK:

1. Thomas Erl, “Service-Oriented Architecture: Concepts, Technology, and Design”, Pearson Education, 2005.

REFERENCES:

1. Thomas Erl, “SOA Principles of Service Design “(The Prentice Hall Service-Oriented Computing Series from Thomas Erl), 2005.
2. Newcomer, Lomow, “Understanding SOA with Web Services”, Pearson Education, 2005.
3. SandeepChatterjee, James Webber, “Developing Enterprise Web Services, An Architect’s Guide”, Pearson Education, 2005.
4. Dan Woods and Thomas Mattern, “ Enterprise SOA Designing IT for Business Innovation” O’REILLY, First Edition, 2006.

OUTCOMES:

On completion of this course, students will be able to

- recall the principles of service orientation.
- differentiate service composition, orchestration and Choreography.
- develop ASP.NET web services.
- apply the tools and technique for Service Oriented Architecture.
- build an SOA platform supported by J2EE and .NET

CACY032 C# AND .NET FRAMEWORKS

L	T	P	C
3	0	0	3

LEARNING OBJECTIVES:

- Teach the fundamental skills that are required to design and develop object-oriented applications
- Train the students to program in C# and develop .NET applications using C#.
- Access data using ADO.NET
- Utilize XML in the .NET environment to create Web Service-based applications and components

MODULE I INTRODUCTION TO C# 09

Introducing C#, Understanding .NET, overview of C#, Literals, Variables, Data Types, Operators, checked and unchecked operators, Expressions, Branching, Looping, Methods, implicit and explicit casting, Constant, Arrays, Array Class, Array List, String, String Builder, Structure, Enumerations, boxing and unboxing.

MODULE II OBJECT ORIENTED ASPECTS OF C# 09

Class, Objects, Constructors and its types, inheritance, properties, indexers, index overloading, polymorphism, sealed class and methods, interface, abstract class, abstract and interface, operator overloading, delegates, events, errors and exception, Threading.

MODULE III APPLICATION DEVELOPMENT ON .NET 09

Building windows application, Creating our own window forms with events and controls, menu creation, inheriting window forms, SDI and MDI application, Dialog Box(Modal and Modeless), accessing data with ADO.NET, DataSet, typed dataset, Data Adapter, updating database using stored procedures, SQL Server with ADO.NET, handling exceptions, validating controls, windows application configuration.

MODULE IV WEB BASED APPLICATION DEVELOPMENT ON .NET 09

Programming web application with web forms, ASP.NET introduction, working with XML and .NET, Creating Virtual Directory and Web Application, session management techniques, web.config, web services, passing datasets, returning datasets from web services, handling transaction, handling exceptions, returning exceptions from SQL Server.

MODULE V CLR AND .NET FRAMEWORK 09

Assemblies, Versoning, Attributes, reflection, viewing meta data, type discovery, reflection on type, marshalling, remoting, security in .NET

Total Hours: 45

TEXT BOOKS:

1. S. ThamaraiSelvi and R. Murugesan “A Textbook on C# “, Pearson Education, 2003.
2. Stephen C. Perry “ Core C# and .NET”, Pearson Education, 2006.

REFERENCES:

1. Jesse Liberty, “Programming C#”, Second Edition, O’Reilly Press, 2002.
2. Robinson et al, “Professional C#”, Fifth Edition, Wrox Press, 2002.
3. Herbert Schildt, “The Complete Reference: C#”, Tata McGraw Hill, 2004.
4. Andrew Troelsen, “C# and the .NET Platform”, A! Press, 2003.
5. Thuan Thai and Hoang Q. Lam, “.NET Framework Essentials”, Second Edition, O’Reilly, 2002.

OUTCOMES:

On completion of this course, students will be able to

- List the major elements of the .NET frame work
- Analyze the basic structure of a C# application
- design, run and debug simple C# console applications
- implement methods, classes, encapsulation, constructors, overloading, inheritance and polymorphism to develop C# programs
- Design and develop windows and web based applications on .NET
- Access data from database with ADO.NET

CACY033 PHP PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- to learn how to build good web applications using PHP language.
- to install PHP and work with arrays and regular experiment.
- to handle the exceptions and file operations.

MODULE I INTRODUCTION TO PHP 09

PHP installation and Introduction, Syntax, Variables-Data types- Operators and expressions-Decisions and Loops-Function- Arrays with attributes-Creating and String- String related Library functions- Regular Expression.

MODULE II ADVANCED PHP 09

Introduction to OOPS- Class- methods- Constructors and Destructors, Access Modifiers-Inheritance-Abstract class-Interface-Error and Exceptional Handling-File Handling-PHP date and time.

MODULE III PHP FORMS AND IMAGES 09

Form Handling –PHP Interactive Forms-PHP GET & POST-Form Validation-PHP Form sanitization-PHP Form URL/E-mail –Basics of Computer Graphics-Creating Image-Manipulating Image-Using Text in Image-Watermarks to Image

MODULE IV PHP WITH MYSQL AND CMS 09

Database Basics-My SQL Create-database operation-Executing Query-Joins-Order By-Group By-Advantages of a CMS, Different types of CMS, Examples , Drupal -- Installation – Content Management, Structure – Site Building – Modules – Theming.

MODULE V PHP APPLICATION FRAMEWORKS 09

Web Development Frameworks – Introduction – Yii – Model View Controller –Yii PHP framework– PHP XML Parsers-PHP XML Expat-PHP XML DOM-PHP Mail.

Total Hours: 45

TEXT BOOK:

1. Kevin Tatroe, Peter MacIntyre,RasmusLerdorf, “Programming PHP”, Creating Dynamic Web Pages, O'Reilly Media, 3rd Edition, 2013.

REFERENCES:

1. http://php.net
2. http://www.tutorialspoint.com/php/index.html

OUTCOMES:

On completion of this course, students will be able to

- Design a web project to use real-time processing capabilities to interact with a database.
- test and debug a php application
- apply the Model View controller pattern for web applications
- pass information from client browser to web server for transaction processing
- able to send email directly from a script
- work with Yii , a high-performance PHP framework for developing Web 2.0 applications.

CACY034 ONLINE COMPUTER ADVERTISING

L	T	P	C
3	0	0	3

OBJECTIVES

- provide an understanding of the Internet as an advertising and the process of selling an online ad program
- know the trends and issues concerning the current and evolving forms of Internet-based advertising and brand communication media;
- provide an overview of the processes and elements considered in the Conceptualizing and production of integrated brand communication campaigns
- Learn how online ads are priced and delivered, along with key measurement metrics

MODULE I ONLINE ADVERTISING 09

Internet advertising- Definition-Advantage-Players in the Internet advertising Industry-Online A d models-Advertising via email-web-testing-buttons-text links-sponsorships-push technology-Interstitials-screensavers-bookmarks-cursors-Undervalued web space

MODULE II TARGETING APPROACHES 09

A Unique Element in Online Advertising-Demographic Targeting -Contextual Targeting-Behavioral Targeting-Geographic Targeting -Affinity Targeting -Purchase-Based Category Targeting-Key Considerations in Online Targeting -Direct Email-Banner advertising-Mini-page-Direct response piece-Loyalty programs-coupons-free samples-trials-contests and games

MODULE III DISPLAY ADVERTISEMENT ONLINE 09

Standard Online Advertising Formats-Creative Factors That Influence Display Advertising -Effectiveness-Rich Media Advertising on Broadband-Online Video AdvertisingOnline Advertising Reach and Frequency Concepts-Strategies for Managing Online Reach and Frequency- Frequency of Online Advertising-Reach and Site Visiting-Winning Strategies in Online Advertising -Generate Leads and Acquire Customers-Generate Brand Preference to Stimulate Sales -Brand Growth, Rewards, and Loyalty

MODULE IV WEB MEASUREMENT 09

Terminology –Log Analysis-Web measurement Tools-Problems with Web measurement -Ad Management-Ad Management for Publishers –Advertisers –

Targeting –Content and context-Registration Information-Database Mining-Profiling and Personalization-Pricing Online Ads-Pricing Models-Trends in pricing

MODULE V BUYING AND SELLING ONLINE ADS 09

Buying Online Ads-Determine campaign goals-Site selection process –Paying for Media buys-Pricing for buys-Allocating campaign budget -Selling Online Advertising-Preparing site's infrastructure-Monitoring and measuring traffic-Ad modelsAd management-Auditing-Media kit- selling strategies-Sales Staff

Total Hours: 45

Text Books

1. Joe Plummer, Steve Rappaport, Taddy Hall, and Robert Barocci, The Online Advertising Playbook, John Wiley & Sons, Inc. (Hoboken, New Jersey), 2007
2. RobbinZeff and Brad Aronson (ZA book from here on), *Advertising on the Internet,* 2nd edition, John Wiley & Sons, Inc. (New York, NY), 1999.

OUTCOMES

Students who complete this course will be able to

- explore and discuss the important issues in the Internet brand communications in general and advertising.
- develop, promote, and manage Internet-based integrated communication campaigns
- list the problems with web measurement
- Identify the steps involved in digital campaign planning

CACY035 WEB MINING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide students with a sound basis in Web data mining tasks and techniques.
- To ensure that students are able to implement and to use some of the important Web mining algorithms.
- To evaluate Web Mining techniques in their workplace.

MODULE I INTRODUCTION TO WEB INTELLIGENCE 09

Historical Perspective - Towards Intelligent Web - Knowledge Web Mining- Building Better Web sites using Intelligent Technologies - Benefits of Intelligent Web

MODULEII WEB USAGE MINING 09

Introduction to Web Mining- Web usage Mining - Web Log Processing -Analyzing Web Logs- Web Usage Mining Applications

MODULE III WEB CONTENT MINING 09

Introduction- Data Collections - Search Engines - Robot Exclusion - - Personalization of Web Content - Multimedia Information Retrieval

MODULE IV WEB STRUCTURE MINING 09

Introduction - Modeling Web Topology - Other Approaches to Studying the Web-Link Structure

MODULE V WEB MINING APPLICATIONS 09

Data integration for e-commerce - Web personalization - Web content and structure mining- Web data warehousing - Review of tools, applications, and systems

Total Hours: 45

TEXTBOOKS:

1. Data Mining Techniques for Marketing, Sales, and Customer Relationship Management, Third Edition, by Michael Berry and Gordon Linoff, John Wiley, 2011

2. Data Mining: Practical Machine Learning Tools and Techniques, by Ian Witten and Eibe Frank, 3rd Ed., Morgan Kaufmann, 2011
3. Web Data Mining: Exploring Hyperlinks, Content, and Usage Data, by Bing Liu, 2nd Edition, , Springer, 2011
4. Building an Intelligent Web: Theory & Practice, R. Akerkar& P. Lingras; Jones & Bartlett, 2007.
5. Mining the Web, Discovering Knowledge from Hypertext Data, Soumen Chakrabarti, Morgan Kaufmann Publishers, 2003

OUTCOMES:

Students who complete this course will be able to

- index search engines and rank web documents.
- Identify the different components of a page that can be used for mining.
- conduct business intelligence from online resources.
- apply Web Mining strategies and algorithms in their workplace or research careers.
- analyze social media data using appropriate web mining techniques
- modify an existing search engine to make it personalized.

CACY036 DIGITAL MARKETING

L	T	P	C
3	0	0	3

OBJECTIVES

- to learn how to take a systematic approach to develop a Digital Marketing strategies
- to designing an online marketing strategy integrated with overall marketing objectives
- to learn to use email marketing as an effective marketing channel
- to learn all the essentials of mobile marketing

MODULE 1 DIGITAL MARKETING BASICS 08

introduction to marketing-digital marketing and its principles-digital marketing wins over traditional marketing- CPR, CPM, PPC, CPC, SEO, SEM-UNDERSTANDING various Social channels- Digital Marketing Process-Increasing Visibility- Visitors Engagement-- Bringing Targeted Traffic- Converting Traffic into Leads- Retention -Performance Evaluation.

MODULE II BUILDING WEBSITE AND SEARCH ENGINE OPTIMIZATION 10

Internet- web – websites-domain names-web server- web hosting- Planning and conceptualizing a website- Building website using CMS in class-SEO-SERP-Google Keyword Planner tool- Google Operator- Content optimization & planning- On page Optimization- Off page Optimization-Local SEO- Google Webmaster Tools

MODULE III ONLINE DISPLAY ADVERTISING AND ECOMMERCE MARKETING 09

Online advertising-display advertising**-** Banner ads- Rich Media ads- Pop ups and Pop under ads- Contextual advertising- Payment Modules- Online advertising platforms- Ecommerce- Top Ecommerce websites- Ecommerce scenario in India- marketing strategy- Mobile Marketing and Social Media- Using tools to create mobile websites- Content Marketing on mobile- SMS marketing-Uploading mobile app in Android and iOS

MODULE IV CONTENT MARKETING 09

Content Marketing- steps in strategy building process- Optimizing content for search engines- authority blog- monetizing authority blog- unique ways to write magnetic headlines- Case study on content marketing.

MODULE V ONLINE REPUTATION MANAGEMENT 09

Online reputation management- ORM scenario- Online reputation management Commandments- positive brand image online- tools for monitoring online reputation- overcome negative online reputation-Case Study

Total Hours : 45

4. Leon G.Schiffman –Consumer Behavior
5. Chaffey Et Al E marketing Excellence: Planning and Optimizing your digital marketing , 4Ed
6. Alan CharlesworthDigital Marketing: A Practical Approach

OUTCOMES:

At the end of this course the students will be able to

- List the advantages of digital marketing over traditional marketing.
- Summarize how they can use digital marketing is used to increase sales and grow their business
- Work with digital marketing tool kit
- Become familiar with the elements of the digital marketing plan
- reach online target market and develop basic digital marketing objectives
- collect, process, and analyze consumer data to make informed marketing decisions
- develop marketing strategies based on product, price, place and promotion objectives.

CACY037 BIG DATA AND ITS ANALYTICS

L	T	P	C
3	0	0	3

OBJECTIVES

- bring together several key technologies used in manipulating, storing, and analyzing big data.
- Make the student understand details of Hadoop.
- introduce tools that provide SQL-like access to unstructured data.

MODULE I INTRODUCTION TO BIG DATA 09

Big Data and its Importance – Four V's of Big Data – Drivers for Big Data – Introduction to Big Data Analytics – Big Data Analytics applications.

MODULE II BIG DATA TECHNOLOGIES 09

Hadoop's Parallel World – Data discovery – Open source technology for Big Data Analytics – cloud and Big Data –Predictive Analytics – Mobile Business Intelligence and Big Data – Crowd Sourcing Analytics – Inter- and Trans-Firewall Analytics - Information Management.

MODULE III PROCESSING BIG DATA 09

Integrating disparate data stores - Mapping data to the programming framework - Connecting and extracting data from storage - Transforming data for processing - Subdividing data in preparation for Hadoop Map Reduce.

MODULE IV HADOOP MAP REDUCE 08

Employing Hadoop Map Reduce - Creating the components of Hadoop Map Reduce jobs - Distributing data processing across server farms –Executing Hadoop Map Reduce jobs - Monitoring the progress of job flows - The Building Blocks of Hadoop Map Reduce - Distinguishing Hadoop daemons - Investigating the Hadoop Distributed File System Selecting appropriate execution modes: local, pseudo-distributed, fully distributed.

MODULE V ADVANCED ANALYTICS PLATFORM 10

Real-Time Architecture – Orchestration and Synthesis Using Analytics Engines – Discovery using Data at Rest – Implementation of Big Data Analytics – Big Data Convergence – Analytics Business Maturity Model- Installing and Running Pig – Comparison with Databases – Pig Latin – User- Define Functions – Data Processing Operators – Installing and Running Hive – Hive QL – Tables.

Total Hours : 45

4. Tom White, “Hadoop: The Definitive Guide”, 3rd Edition, O’reilly, 2012.

OUTCOMES:

On Completion of the course the students will be able to

- categorize and Summarize Big Data and its importance.
- manage Big Data and analyze Big Data.
- apply tools and techniques to analyze Big Data.
- Analyze the big data analytic techniques for useful business applications.
- Work with big data platform

CACY038 INFORMATION RETRIEVAL

L	T	P	C
3	0	0	3

OBJECTIVES:

- Learn the information retrieval models.
- Be familiar with Web Search Engine.
- expose to Link Analysis.
- Understand Hadoop and Map Reduce.
- Learn document text mining techniques. .

MODULE I INTRODUCTION 09

Introduction -History of IR- Components of IR – Issues –Open source Search engine Frameworks – The impact of the web on IR – The role of artificial intelligence (AI) in IR – IR Versus Web Search – Components of a Search engine-Characterizing the web.

MODULE II INFORMATION RETRIEVAL 09

Boolean and vector-space retrieval models- Term weighting – TF-IDF weighting-cosine similarity – Preprocessing – Inverted indices – efficient processing with sparse vectors – Language Model based IR – Probabilistic IR –Latent Semantic Indexing – Relevance feedback and query expansion.

MODULE III WEB SEARCH ENGINE – INTRODUCTION AND CRAWLING 09

Web search overview, web structure, the user, paid placement, search engine optimization/ spam. Web size measurement – search engine optimization/spam – Web Search Architectures – crawling – meta-crawlers- Focused Crawling – web indexes –- Near-duplicate detection – Index Compression – XML retrieval.

MODULE IV WEB SEARCH – LINK ANALYSIS AND SPECIALIZED SEARCH 09

Link Analysis –hubs and authorities – Page Rank and HITS algorithms - Searching and Ranking – Relevance Scoring and ranking for Web – Similarity – Hadoop& Map Reduce – Evaluation – Personalized search – Collaborative filtering and content-based recommendation of documents and products – handling “invisible” Web – Snippet generation, Summarization, Question Answering, Cross- Lingual Retrieval.

MODULE V DOCUMENT TEXT MINING 09

Information filtering; organization and relevance feedback – Text Mining -Text classification and clustering – Categorization algorithms: naive Bayes; decision trees; and nearest neighbor – Clustering algorithms: agglomerative clustering; k-means; expectation maximization (EM).

Total Hours: 45

3. Manu Konchady, “Building Search Applications: Lucene, Ling Pipe”, and First Edition, Gate Mustru Publishing, 2008

OUTCOMES:

On Completion of the course the students will be able to

- Apply information retrieval models.
- Design Web Search Engine.
- Use Link Analysis.
- Use Hadoop and Map Reduce.
- Apply document text mining techniques.

CACY039 SOCIAL MEDIA ANALYSI

L	T	P	C
3	0	0	3

OBJECTIVES:

- give an overview of social networks and its importance.
- understand the social network concepts and various methods of analysis.
- expose and train on various tools and techniques for analyzing and visualizing social media networks.

MODULE I INTRODUCTION TO SOCIAL NETWORKS and SNA 08

Connected World – Networks: Actors, Relations and Attributes - Networks as Information Maps - Networks as Conduits – Leaders and Followers – Psychological foundations of social networks – Basic building Blocks – Brief history of Social Network Analysis.

MODULE II NETWORK CONCEPTS 08

Individual Members of the Network – Sociological Questions about Relationships – Whole Social Networks- Distributions – Multiplexity – Roles and Positions – Network Segmentation – Graph Theory – Notations for Social Network Data

MODULE III SOCIAL NETWORK ANALYSIS FUNDAMENTALS 09

Points, Lines and Density – Centrality and Centralization – Components, Cores and Cliques – Positions, Roles and Clusters – Dimensions and Displays.

MODULE IV METHODS OF SOCIAL NETWORK ANALYSIS 10

Graphs – Matrices – Relationship Measures – Centrality and Prestiges – Cliques – Structural Equivalence – Visual Displays – Book models – Network Position Measures – Logit Models – Affiliation networks – Lattices- Levels of Analysis

MODULE V TOOLS AND TECHNOLOGIES 10

Twitter Analytics – Facebook Analytics – Google+ Analytics – Google+ Ripples – R for Social Network Analysis – Pajek – Network Visualization Tools – Analyzing Social Media Networks with NodeXL.

Total Hours: 45

REFERENCES:

1. Charles Kadushin, “Understanding Social Networks: Theories, Concepts, and Findings”, Oxford University Press, USA, 2011.

2. David Knoke, Song Yang, “Social Network Analysis”, 2nd Edition, SAGE Publications, 2007.
3. Christina Prell , “Social Network Analysis: History, Theory and Methodology”, 1st Edition, SAGE Publications Ltd, 2012.

OUTCOMES:

On Completion of the course the students will be able to

- understand the theories and concepts of social networks.
- analyze the social networks by applying various methods of analysis, tools and techniques.
- Use advanced network analysis software to generate visualizations and perform empirical investigations of network data.
- Plan and execute network analytical computations

CACY040 HUMAN COMPUTER INTERACTION

L	T	P	C
3	0	0	3

OBJECTIVES

- Determine the need for computers and evaluate the use of computers,
- identify the stages in software engineering that need to be modified for effectiveness of interacting with computers,
- discover the various models that can be used for designing systems, evaluate the design techniques by applying the apt statistical approach, and design dialogue for representation to computers

MODULE I DESIGN PROCESS 09

Introduction : Importance of user Interface – definition, importance of good design. Benefits of good design. Need for Interaction – Models –– Paradigms – Designing of Interactive systems – Usability –– Interaction design basics – Complexity of design Human interaction with computers, importance of human characteristics human consideration, Human interaction speeds

MODULE II DESIGN AND EVALUATION OF INTERACTIVE SYSTEMS 09

The graphical user interface – popularity of graphics, the concept of direct manipulation, graphical system, Characteristics, - Principles of user interface. Design rules – maximum usability – Principles – Standards and guidelines – design patterns –

MODULE III Software tools AND Components 09

Programming Tools – Windowing systems – Interaction tool kit –Evaluation techniques – evaluation design – Evaluating implementations – Observational Methods ,text and messages, Icons– Multimedia, colors, uses problems, choosing colors.

MODULE IV MODELS 09

Universal design principles – Multimodal systems – User Support – Presentation and Implementation Issues – types – requirements – approaches – Cognitive model – Hierarchical model – Linguistic model – physical and device models – Socio-technical models – Communication and Collaboration models – Task models – Task analysis and design

MODULE V EXPERIMENTAL DESIGN AND STATISTICAL ANALYSIS OF HCI 09

Basic Design structure – Single independent variable – multiple independent variable – factorial design – split-plot design – random errors – experimental procedure – Statistical analysis – T tests – Analysis of Variance test – Regression – Chi-Square test – Survey – Probabilistic sampling – Non-probabilistic sampling – developing survey questions

Total Hours: 45

TEXT BOOKS:

1. Alan Dix, Janet Finlay, Gregory Abowd, Russell Beale Human Computer Interaction, 3rd Edition Prentice Hall, 2004.
2. Jonathan Lazar Jinjuan Heidi Feng, Harry Hochheiser, Research Methods in Human Computer Interaction, Wiley, 2010. REFERENCE:.
3. The essential guide to user interface design, Wilbert O Galitz, Wiley DreamaTech.

REFERENCES

1. Human – Computer Interaction. ALAN DIX, JANET FINCAY, GRE GORYD, ABOWD, RUSSELL EALG, PEARSON.
2. Interaction Design PRECE, ROGERS, SHARPS. Wiley Dreamtech, 3. User Interface Design, SorenLauesen , Pearson Education.

OUTCOMES

On completion of this course, students will be able to

- Explain Computer components functions regarding interaction with human
- Demonstrate Understanding of Interaction between the human and computer components.
- Implement Interaction design basics
- Use HCI in the software process
- Apply Design rules
- Use Evaluation techniques

CACY041 BIO-INFORMATICS

L	T	P	C
3	0	0	3

OBJECTIVES:

The aim of the course is to

- improve the programming skills of the student
- let the students know the recent evolution in biological science.

MODULE I INTRODUCTION 09

Introduction to molecular biology – the genetic material – gene structure – protein structure – chemical bonds – molecular biology tools – genomic information content

MODULE II ALIGNMENTS 09

Data searches – simple alignments – gaps – scoring matrices – dynamic programming – global and local alignments – database searches – multiple sequence alignments Patterns for substitutions – estimating substitution numbers – evolutionary rates – molecular clocks – evolution in organelles

MODULE III PHYLOGENETICS 09

Phylogenetics – history and advantages – phylogenetic trees – distance matrix methods – maximum likelihood approaches – multiple sequence alignments – Parsimony – ancestral sequences – strategies for faster searches – consensus trees – tree confidence – comparison of phylogenetic methods – molecular phylogenies

MODULE IV GENR STRUCTURE 09

Genomics – prokaryotic genomes: prokaryotic gene structure – GC content – genedensity – eukaryotic genomes: gene structure – open reading frames – GC content – gene expression – transposition – repeated elements – gene density

MODULE V PROTIENS AND PREDICTION 09

Amino acids – polypeptide composition – secondary structure – tertiary and quaternary structure – algorithms for modeling protein folding – structure prediction – predicting RNA secondary structures Proteomics – protein classification – experimental techniques – inhibitors and drug designing and screening – NMR structures – empirical methods and prediction techniques – post-translational modification prediction

Total Hours : 45

3. Vittal R. Srinivas, “Bioinformatics – A Modern Approach”, Prentice-Hall of India Pvt.Ltd., 2005.

OUTCOMES:

On completion of this course, students will be able to

- develop bioinformatics tools with programming skills.
- apply computational based solutions for biological perspectives.
- pursue higher education in this field.
- practice life-long learning of applied biological science.

CURRICULUM AND SYLLABI

VISION AND MISSION OF THE DEPARTMENT OF MECHANICAL ENGINEERING

VISION

To excel in providing quality education and training through Undergraduate and Postgraduate programmes and carryout quality research in the field of Mechanical Engineering.

MISSION

- To provide a good learning experience through appropriate design of curriculum and syllabi that facilitates students to gain thorough understanding of the fundamental concepts and applications in Mechanical Engineering
- To equip students to solve challenging problems in Mechanical Engineering and related areas taking in to account their impact on the society
- To facilitate students to develop good communication, leadership and managerial skills through team approach in conducting experiments and projects
- To pursue academic and collaborative research activities with industry and other research institutions ensuring high quality in publications and other research outputs

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

M. Tech. (CAD – CAM)

PROGRAMME EDUCATIONAL OBJECTIVES

- To provide a holistic approach in learning through well designed courses involving fundamental concepts and state-of-the-art techniques in the field of CAD – CAM
- To equip the graduates, with knowledge and skill to undertake design, analysis, evaluation of systems, processes and components
- To supplement course work through seminars, workshops, case studies and through paper presentation
- To inculcate research culture by way of solving typical problems, Project works from real life situation and innovative assignments
- To develop team spirit, problem solving skill and appreciation for ethical and social relevance of the technologies used

PROGRAMME OUTCOMES

On completion of programme, the graduates will

- have sound conceptual knowledge and skill in the area of design and manufacturing
- be able to design, analyse and manufacture real life systems and components
- have capability to use latest software in the area of computer aided engineering for modelling, analysis and manufacture
- be able to undertake academic and applied research and address open ended problems
- have the ability to discharge professional, social & economic responsibilities ethically

SEMESTER I

MAC6182	DIFFERENTIAL EQUATIONS AND NUMERICAL METHODS	L	T	P	C
		3	1	0	4

COURSE EDUCATIONAL OBJECTIVES:

The aim of this course is to

- Familiarize the students with boundary value problems of partial differential equations in engineering.
- Expose the students to variational problems, numerical integration techniques and conformal mapping.

MODULE I ONE DIMENSIONAL WAVE AND HEAT EQUATIONS 10+03

Laplace transformation for one dimensional wave equation – displacements in a line string – longitudinal vibration of an elastic bar – Fourier transformation for one dimensional heat conduction problems in infinite and semi-infinite rods.

MODULE II CALCULUS OF VARIATIONS 10+03

Variation and its properties – Euler's equation – functional dependant on first and higher order derivatives – functional dependant on functions of several independent variables – variational problems with moving boundaries – Isoperimetric Problems – Ritz and Kantorovich methods.

ODULE III NUMERICAL INTEGRATION 07+03)

Newton - Cotes formula - Trapezoidal, Simpson's one third and three eighth rules - Gauss Quadrature formulae.

MODULE IV NUMERICAL SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS 09+03

Solution of Laplace and Poisson equations on a region by Liebmann's method - diffusion equation by the explicit and Crank Nicolson - implicit methods - stability and convergence criterion - solution of wave equation by explicit scheme.

MODULE V CONFORMAL MAPPING AND APPLICATIONS 09+03

The Schwarz – Christoffel transformation – transformation of boundaries in parametric form – physical applications – fluid flow and heat flow problems.

L – 45; T – 15; Total Hours: 60

TEXT BOOKS:

1. Curtis F. Gerald and Patrick O. Wheatley, Applied Numerical Analysis, 7th edition, Pearson Publications, USA, 2004.
2. S.K. Gupta, Numerical methods for Engineers, New Age Intl. Publishers (Earlier: Wiley Eastern, New Delhi), 1995,Second Edition, 2010 (from IITB).
3. Sankar Rao, Introduction to Partial Differential Equations, PHI Learning Pvt. Ltd., 2010.

REFERENCES:

1. Sneddon, I.N., “Elements of Partial Differential Equations”, Mc Graw-Hill, 1986.
2. Gupta, A.S., “Calculus of Variations with Applications”, Prentice Hall of India Pvt. Ltd, New Delhi, 1997.
3. Kreyszig, E., “Advanced Engineering Mathematics”, 8th Edition, John Wiley & Sons, Inc., Singapore, 2002.
4. L.E. Elsgolts, “Differential equations and calculus of variations”, University Press of the Pacific, 2003.

COURSE OUTCOMES:

At the end of the course students will be able to solve

- Problems using the concepts of Laplace transform
- Problems using the concepts of Fourier transform.
- Problems on calculus of variation.
- Problems on Conformal mapping.
- Heat flow problems of one and two dimensional conditions using numerical methods.

MEC6101 APPLIED MATERIALS ENGINERING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To study the elastic and plastic behaviour of engineering materials
- To understand the fracture behaviour of engineering materials
- To gain the knowledge on selection of materials for specific applications
- To select the modern materials and identify their applications
- To suggest suitable non-metallic materials for various engineering applications

MODULE I ELASTIC AND PLASTIC BEHAVIOUR 12

Elasticity in metals and polymers - Anelastic and visco-elastic behaviour – Mechanism of plastic deformation and non metallic shear strength of perfect and real crystals – Strengthening mechanisms - work hardening, solid solutioning, grain boundary strengthening, poly phase mixture, precipitation, particle, fiber and dispersion strengthening - Effect of temperature, strain and strain rate on plastic behaviour – Super plasticity – Deformation of non crystalline materials.

MODULE II FRACTURE BEHAVIOUR 15

Griffith's theory, stress intensity factor and fracture toughness – Toughening mechanisms – Ductile, brittle transition in steel – High temperature fracture, creep – Larson Miller parameter – Deformation and fracture mechanism maps – Fatigue, low and high cycle fatigue test, crack initiation and propagation mechanisms and Paris law - Effect of surface and metallurgical parameters on fatigue – Fracture of non metallic materials – Failure analysis, sources of failure, procedure of failure analysis.

MODULE III SELECTION OF MATERIALS 08

Motivation for selection, cost basis and service requirements – Selection for mechanical properties, strength, toughness, fatigue and creep – Selection for surface durability corrosion and wear resistance – Relationship between materials selection and processing – Case studies in materials selection with relevance to aero, auto, marine, machinery and nuclear applications – Computer aided materials selection.

MODULE IV MODERN METALLIC MATERIALS 05

Dual phase steels, High strength low alloy (HSLA) steel, Transformation induced

plasticity (TRIP) Steel, Maraging steel, Nitrogen steel – Intermetallics, Ni and Ti aluminides – Smart materials, Shape memory alloys – Metallic glass and Nano crystalline materials.

MODULE V NON METALLIC MATERIALS 05

Polymeric materials – Formation of polymer structure – Production techniques of fibers, foams, adhesives and coating – structure, properties and applications of engineering polymers – Advanced structural ceramics, WC, TiC, TaC, Al_2O_3, SiC, Si_3N_4 CBN and Diamond – properties, processing and applications.

Total Hours: 45

REFERENCES:

1. George E. Dieter, Mechanical Metallurgy, McGraw Hill, 1988.
2. Thomas H. Courtney, Mechanical Behaviour of Materials, (2nd edition), McGraw Hill, 2000.
3. Charles, J.A., Crane, F.A.A. and Fumess, J.A.G., Selection and use of engineering materials, (3rd edition), Butterworth-Heiremann, 2001.

5. ASM Hand book, Vol.11, Failure Analysis and Prevention, (10th Edition), ASM, 2002.
6. Ashby M.F., Material Selection in Mechanical Design, 3rd Edition, Butter Worth 2005.

COURSE OUTCOMES:

Students should be able to

- Describe the elastic and plastic behaviour of engineering materials
- Interpret the fracture behavior of engineering materials
- Use the suitable materials for specific applications
- Choose the modern materials for appropriate applications
- Employ the non- metallic materials for various engineering applications

MEC6102	COMPUTER GRAPHICS AND GEOMETRIC MODELLING	L	T	P	C
		3	0	2	4

COURSE EDUCATIONAL OBJECTIVES:

- To acquire knowledge for generating high quality images of massive geometric models in a short time.
- To learn about the concepts of complex curves and surface models
- To learn the concepts of solid modelling and current trends in modelling
- To understand the surface visualization, models presentation and communication techniques.
- To acquire knowledge on the applications of CAD

MODULE I IMAGE GENERATION AND MANIPULATION 09+06

Overview of display devices and systems – generation of primitives; line, circle, ellipse generation algorithms – 2D & 3D transformation –viewing transformation – projections.

Practice on Develop 3D models to realizing the transformation and projections.

MODULE I I MODELLING OF CURVES AND SURFACES 09+06

Curves: Parametric representation – Analytic curves; synthetic curves – Bicubic, Bezier, B-spline, NURBS; Surfaces: surface patches – Bicubic – Bezier – B-spline – Coons patch, Sweep surfaces; continuity conditions; manipulation of curves & surfaces.

Practice on Models with free form curves and surfaces (bike petrol tank, car body).

MODULE II MODELLING OF SOLIDS 09+06

Constructive Solid Geometry (CSG) – Boundary Models – Sweeping; Other methods of solid modeling; Constraint based modeling – parametric – variational; Feature based modeling; Data associativity; features of Solid modeling packages – current trends in modeling.

Practice on

1. Simple constrain based models to appreciate their advantages.
2. Realization of Data associativity principles (Edit part model and realize the change in drawing).
3. Parametric modeling of Bolt – Nut assembly, Flange, Gears.

MODULE IV IMAGE ENHANCEMENT AND GRAPHICS STANDARDS 09+06

Clipping-Hidden line/surface removal- shading and rendering; Graphic standards – Computing shades – Data exchange standards – Data Communication Standards

Practice on

1. Shading and rendering of real life products.
2. Hidden line/Surface removal of machine components.
3. Data exchange between CAD and CAE software.

MODULE V COLLABORATIVE ENGINEERING AND APPLICATIONS 09+06

Collaborative design – Product Lifecycle Management; Mass property calculation - Assembly modeling – Mesh generation techniques - Animation Techniques – Tool path generation

Practice on

1. Mass property calculation for complex models.
2. Assembly modeling.

L: 45, P: 30, Total Hours: 75

REFERENCES:

1. Ibrahim Zeid, CAD / CAM- Theory and Practice, Mc Graw Hill International Edition, 1998.
2. Chris Mc Mahon and Jimmie Browne, CAD CAM – Principles, Practice and Manufacturing Management, 2nd edition, Pearson Education Asia LN, 2005.
3. Donald Hearn and Pauline Baker, Computer Graphics Printice Hall Inc.

COURSE OUTCOMES:

Students would be able to

- Generate high quality images of massive geometric models in a short time.
- Realize the concepts of analytic and synthetic curve/surface generation, and develop physical models to represent them.
- Acquire knowledge on the development of solid models including the current techniques in the industry.
- Prepare the components for visual presentation and exchange the models between CAD/CAE software.
- Realize the applications of CAD

MEC6103 ADVANCED FINITE ELEMENT ANALYSIS

L	T	P	C
2	1	1	4

COURSE EDUCATIONAL OBJECTIVES:

- To introduce the mathematical and physical principles underlying the Finite Element Method (FEM).
- To uncover iso-parametric formulation and its importance
- Top describe the elementary concepts of plate bending behaviour and theory.
- To introduce time dependent finite element procedure
- To introduce error norms and convergence rates

MODULE I REVIEW OF 1D FEM 12

Historical background - Concept of finite element method - Finite element formulation based on weighted residual method and stationary of a functional - Review of static analysis using 1D element – Bar, truss, Beam element.

Practice on FEA analysis of Machine elements under static loads

MODULE II 2D & 3D FEM 12

Triangular, quadrilateral, tetrahedral element, Lower order and higher order element, Iso-parametric formulation, Static structural and thermal analysis applications.

Practice on FEA analysis of Heat transfer – steady state and transient

MODULE III BENDING OF PLATES & SHELLS 12

Bending of plate and shells - Thin (Kirchoff) and Thick (Mindlin) plate elements – Finite Element Formulation of Plate and Shell Elements – Applications and Examples.

Practice on FEA analysis of Modal analysis, Harmonic analysis

MODULE IV STRUCTURAL DYNAMICS 12

Dynamical equations of motion, Consistent and Lumped Mass Matrices, Damping matrices, Vibration Analysis, Eigenvalue problems and solution techniques, Transient dynamical and structural dynamical problems, Explicit and implicit schemes of integrations, Stability issues.

Practice on FEA analysis of Plate bending analysis

MODULE V ERROR ESTIMATES AND ADAPTIVE REFINEMENT 12

Classification of errors – Error tests - Convergence rates- Mesh revision and Gradient Recovery – Adaptive meshing - h refinement with adaptivity – adaptive refinement.

Practice on FEA analysis of Error estimation and convergence tests

Total Hours: 60

7. S.S. Rao, Finite Element Analysis, 2002 Edition.
8. David V Hutton “Fundamentals of Finite Element Analysis”. McGraw-Hill International Edition, 2004.

COURSE OUTCOMES:

Students will be able to

- Solve static structural problem by functional approximation and finite element method.
- Solve structural and thermal problems involving complex geometries.
- Model and analyse structures such as pressure vessel, automobile parts and chimney stacks.
- Perform Modal analysis, Harmonic analysis and transient analysis.
- Enhance the skills of interpreting results

MEC6104 RAPID PROTOTYPING

L	T	P	C
2	0	0	2

COURSE EDUCATIONAL OBJECTIVES:

- To learn the fundamentals of rapid prototyping and automated fabrication.
- To acquire knowledge on the generation of suitable CAD models.
- To study the current rapid prototyping fabrication technologies, the use of secondary processing and the impact of these technologies.
- To understand the various rapid prototyping fabrication technologies, their underlying material science and the application of this technology on society.

MODULE I INTRODUCTION 05

Introduction to RP –Technology- Description -Definition to RP -Overview of RP - Benefits and Application.

MODULE II RPT FILE GENERATION 08

RP Processes: Process overviews, STL file Generation, File Verification & Repair, Build File Creation, Part Construction, Part Cleaning and finishing, Process Strength & limitations.

MODULE III LIQUID BASED AND SOLID BASED RAPID PROTOTYPING SYSTEMS 08

Classes of RP systems: 3D Printers, Enterprise Prototyping centers, Direct digital tooling, Direct digital manufacturing, system classification, Stereo lithography, SL with photo polymerization, Selective Laser Sintering, Fused deposition modeling, Laminated object manufacturing, Laser powder forming. Prototype properties: Material, color, dimensional accuracy, stability, surface finish, machine-ability, environmental resistance, operational properties

MODULE IV RAPID PROTOTYPING APPLICATIONS 09

RP Applications: Design, Concept Models, Form & fit checking, Ergonomic Studies, Functional testing, Requesting Price quotes, CAD data verification, Rapid Tooling, rapid manufacturing, Science & Medicine, Archeology, Paleontology & forensic Science, miniaturization

Total Hours: 30

5. Peter D. Hilton, Hilton / Jacobs, Paul F. Jacobs, Rapid Tooling: Technologies and Industrial Applications, CRC press, 2000.

COURSE OUTCOMES:

The students will

- Identify the currently available rapid prototyping systems, their fundamental operating principles and their characteristics
- Demonstrate complementary, secondary fabrication processes commonly used with the above rapid prototyping systems
- Select the appropriate fabrication technology or technologies for a given prototyping task

SEMESTER II

GEC6201	RESEARCH METHODOLOGY FOR ENGINEERS	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To provide a perspective on research to the scholars
- To educate on the research conceptions for designing the research
- To impart knowledge on statistical techniques for hypothesis construction
- To gain knowledge on methods of data analysis and interpretation
- To learn about the effective communication of research finding

MODULE I RESEARCH PROBLEM FORMULATION 07

Research – objectives – types, Research process, Solving engineering problems, Identification of research topic, Formulation of research problem, Literature survey and review.

MODULE II HYPOTHESIS FORMULATION 08

Research design – meaning and need – basic concepts, Different research designs, Experimental design – principle – important experimental designs, Design of experimental setup, Mathematical modeling, Simulation – validation and experimentation, Dimensional analysis and similitude.

MODULE III STATISTICAL TECHNIQUES 12

Statistics in research – concept of probability – popular distributions –Hypothesis testing- sample design- Design of experiments – factorial designs -– orthogonal arrays- ANOM - ANOVA - Multivariate analysis - Use of optimization techniques – traditional methods – evolutionary optimization techniques –Transportation model.

MODULE IV STATISTICAL ANALYSIS OF DATA 10

Research Data analysis – interpretation of results – correlation with scientific facts- Accuracy and precision – error analysis, limitations - Curve fitting, Correlation and regression.

MODULE V RESEARCH REPORT 08

Purpose of written report – audience, synopsis writing, preparing papers for International journals, Thesis writing – organization of contents – style of writing – graphs and charts – referencing, Oral presentation and defense, Ethics in

research, Patenting, Intellectual Property Rights.

Total Hours: 45

11. Scheffer. R.L. and James T. Mc Clave, Probability and Statistics for Engineers, PWS – Kent Publishers Co., Boston, USA, 1990.

COURSE OUTCOMES:

Students should be able to

- Formulate the research problem
- Design and Analyse the research methodology
- Construct and optimize the research hypothesis
- Analyse and interpret the data
- Report the research findings

MEC6201 INTEGRATED PRODUCT DESIGN

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To provide and learn the scientific approach to product design that integrates technical, human and business concerns
- To understand the tools and methods of concept development with focus on the front end processes of new product development
- To learn and enable the student to architecture the geometrical layout of product
- To create awareness and role of industrial design, integration of computerized tools and quality design
- To gain knowledge on multiple functional areas like design for manufacturing and assembly, product development economics, prototyping and intellectual property that makes confidence and capability to create an own new product

MODULE I INTRODUCTION 08

Strategic importance of integrated product design - product life cycle - characteristics and challenges of product development - a generic product development process - the front end processes - the variants of generic product development process - concept of concurrent engineering - integration of customer, designer, material supplier, process planner and competitor - plan for products - understanding the market opportunity - understanding and identifying customer needs - establishing product specifications - competitive benchmarking analysis - house of quality.

MODULE II CONCEPT GENERATION, SELECTION AND TESTING 10

Need for creative thinking and innovation - creativity and problem solving - activities of concept generation - clarify the problem - search externally and internally - explore systematically - reflect on the solutions and process - concept selection - concept screening - concept scoring - concept testing - protocol of concept testing.

MODULE III PRODUCT ARCHITECTURE 08

Concept embodiment design - product architecture - types of modular architecture - implications of the architecture - product change - variety - component standardization - product performance - manufacturability - product development management - establishing the product architecture - related system level design issues - portfolio architecture

MODULE IV INDUSTRIAL DESIGN 08

Integrated process design - integrating CAE, CAD and CAM tools - need for industrial design - impact - industrial design process - management of design process - technology driven and user driven products - assessing the quality of industrial design - robust design.

MODULE V ECONOMICS AND IMPLEMENTATION OF DESIGN 11

Design for 'X' (DFX) - environment - strength - manufacturing and assembly - estimation of manufacturing cost - reducing the cost of components, assembly and supporting production - prototyping - principles of prototyping - planning for prototypes - rapid prototyping - 3D printers - toy design - product development economics - introduction to patents and intellectual property

Total Hours: 45

5. G.Pahl, and W. Beitz, "Engineering Design – A Systematic Approach", Springer- Verlag, 1996

COURSE OUTCOMES:

Upon satisfactory completion of the course, the student will be able to:

- Identify the role and integration of customer, marketing, finance, design and production in creating a new product
- Apply structured approach to generate the concepts, selection and testing
- Construct the geometrical layout of product in architecture way
- Describe the industrial design and quality of product design
- Demonstrate the physical model preparation and analyze the cost reduction techniques
- Effectively communicate the solutions of engineering or societal context

MEC6202 ADVANCED METROLOGY AND NDT

L	T	P	C
3	0	2	4

COURSE EDUCATIONAL OBJECTIVES:

- To train the students in recent measurement systems
- To educate the students on laser based measuring instruments usage
- To gain knowledge in liquid penetrant and magnetic particle test
- To impart knowledge in radiography and its applications
- To perceive ultrasonic and acoustic emission techniques

MODULE I MEASURING MACHINES 15

Tool Maker's microscope - Coordinate measuring machine (CMM)- Universal measuring machine - Machine vision technology -Microprocessors in metrology- Nano-metrology -Measurement system analysis.

Practices on Tool Makers Microscope- - Machine vision technology and surface roughness measurement- CMM

MODULE II LASER METROLOGY 12

Precision instruments based on laser-Principles- laser interferometer-application in linear, angular measurements and machine tool metrology- need, constructional features – types, applications – computer aided inspection.

Practices on measuring the quality using linear measuring Instruments

MODULE III LIQUID PENETRANT AND MAGNETIC PARTICLE TESTS 12

Characteristics of liquid penetrates - Different washable systems – Developers - Applications - Methods of production of magnetic fields - Principles of operation of magnetic particle test - Applications - Advantages and limitations.

Practices on Liquid Penetrant and Magnetic Particle Tests

MODULE IV RADIOGRAPHY 12

Sources of ray-x-ray production - Properties of gamma and x rays – Film characteristics - Exposure charts - Contrasts - Operational characteristics of x ray equipment - Applications.

MODULE V ULTRASONIC AND ACOUSTIC EMISSION TECHNIQUES 09

Production of ultrasonic waves - Different types of waves – General characteristics of waves - Pulse echo method - A, B, C scans - Principles of acoustic emission

techniques - Advantages and limitations – Instrumentation and applications.

Total Hours: 60

3. American Society for Metals, Metals Hand Book, Vol. II, 1976.
4. I. G. Scott, Basic Acoustic Emission, CRC Press, 1991.

COURSE OUTCOMES:

Students should be able to

- Measure various engineering specifications using recent measurement system
- Use advanced measurement tools such as CMM
- Adopt liquid penetrant and magnetic particle test for engineering applications
- Execute radiography techniques
- Perform ultrasonic and acoustic emission techniques

MEC6203 FLEXIBLE MANUFACTURING SYSTEMS

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the swiftness and flexibility of changes in the manufacturing technology.
- To learn the FMS components and its layouts.
- To understand the tool magazines in FMS
- To acquire knowledge on suitable material handling systems used in FM cell.
- To acquire knowledge about the software used in FMS.

MODULE I INTRODUCTION TO FMS 09

Evolution of Manufacturing systems, Definition, Objective and Need, Components, Merits, Demerits and Applications Flexibility in Pull and Push type.

MODULE II LAYOUTS OF FMS 09

Layouts and their Salient features, Single line, dual line, loop, ladder, robot centre type etc. Group Technology.

MODULE III PROCESSING STATIONS 09

Salient features Machining Centers, Turning Centre, Coordinate measuring machine (CMM), Washing/Deburring station.

MODULE IV MATERIAL HANDLING SYSTEM 09

An introduction, Conveyor, Robots, Automated Guided Vehicle (AGV), Automated Storage Retrieval System (ASRS)s.

MODULE V COMPUTER SOFTWARE, SIMULATION AND DATABASE OF FMS 09

System issues, Types of software, specification and selection, Trends, Application of simulation, Software, Manufacturing data systems, data flow, CAD/CAM considerations, Planning FMS database; Typical case studies-future prospects.

.

Total Hours: 45

REFERENCES:

1. William W Luggen, “Flexible Manufacturing Cells and System” Prentice Hall of Inc New Jersey, 1991.

3. John E Lenz “Flexible Manufacturing” marcel Dekker Inc Newyork, 1989.
4. Groover, M.P “Automation, Production Systems and Computer Integrated Manufacturing”, Prentice Hall of India Pvt Ltd. New Delhi 2009.

COURSE OUTCOMES:

The students will be able to

- Classify and differentiate FMS with other manufacturing systems including job-shop and mass production systems.
- Comprehend the FMS components and layouts and plan the FMS layouts.
- Illustrate the tool management in FMS.
- Explain processing stations and material handling systems used in FMS environments.
- Analyze FMS using simulation and analytical techniques

MEC6204 DESIGN PROJECT

L	T	P	C
0	0	2	1

The main objective is to inculcate problem based learning and to promote team spirit. Students will be asked to take a real world problem in CAD / CAM and solve it by designing a system or/ and simulate in the CAM software. Students will work in groups.

SEMESTER III

MEC7102	NON LINEAR FINITE ELEMENT ANALYSIS	L	T	P	C
		1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To introduce nonlinear FEA analysis procedures considering geometric, material nonlinearity.
- Designed to broaden the class of physical problems such as beam, plates, shells, contact and impact nonlinearity solved by FEA method.

.

MODULE I NON LINEAR FININTE ELEMENT BASICS 07

Basic Nonlinear Continuum Mechanics of Solids, Total and Updated Lagrangian Approaches – Non linear bending of beams - Nonlinear Plates and Shells, Time-dependent Deformation of Shells.

MODULE II NON LINEAR FINITE ELEMENTS OF SOLIDS 08

Material Nonlinearities, Geometric Nonlinearities, Nonlinear Elasticity, Plasticity, Viscoplasticity, Viscoelasticity, Stability, bifurcation and nonlinear buckling, Contact and impact nonlinearity.

Total Hours: 15

REFERENCES:

1. Cook R. D., Finite Element Modelling for Stress Analysis, John Wiley and
2. Sons Inc, 1995
3. Reddy, J. N., An Introduction to Nonlinear Finite Element Analysis, Oxford
4. University Press, Oxford, UK, 2004.
5. E.A. de Souza Neto, D. Peric and D.R.J. Owen: Computational Methods for Plasticity: Theory and Applications, Wiley, 2008

COURSE OUTCOMES:

The students will be able to

- Decide whether or not a nonlinear analysis is necessary.
- Explain the different steps of a nonlinear finite element analysis.
- Perform nonlinear FEA of real engineering problems such that a drop test or sheet metal forming.
- Interpret the results of a nonlinear analysis.

MEC7103 INDUSTRY INTERNSHIP

L	T	P	C
0	0	0	1

Students must undergo two weeks industrial training preferably in the industries relevant to CAD/ CAM to gain practical experience.

MEC7101 PROJECT WORK - PHASE I

L	T	P	C
0	0	12	6

The main objective is to promote project based learning.

(Refer to clause 3.15 of B.S. Abdur Rahman University regulations)

SEMESTER IV

		L	T	P	C
MEC7101	**PROJECT WORK - PHASE II**	**0**	**0**	**36**	**18**

This is in continuation with Phase I. The main objective is to promote project based learning.

(Refer to clause 3.15 of B.S. Abdur Rahman University regulations)

PROFESSIONAL ELECTIVES ON CAD

MECY001	ADVANCED MECHANISMS DESIGN AND SIMULATION	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To familiarize basics concepts of mechanism design.
- To provide knowledge in the kinematic analysis of simpler mechanisms.
- To introduce concepts and theories for complex mechanism design.
- To learn the art of synthesis of mechanism.
- To realize the importance of special purpose mechanism.

MODULE I INTRODUCTION 09

Review of fundamentals of kinematics-classifications of mechanisms-components of mechanisms – mobility analysis – formation of one D.O.F. multi loop kinematic chains, Network formula – Gross motion concepts-Basic kinematic structures of serial and parallel robot manipulators-Compliant mechanisms-Equivalent mechanisms.

MODULE II KINEMATIC ANALYSIS 09

Position Analysis – Vector loop equations for four bar, slider crank, inverted slider crank, geared five bar and six bar linkages. Analytical methods for velocity and acceleration Analysis– four bar linkage jerk analysis. Plane complex mechanisms-auxiliary point method. Spatial RSSR mechanism-Denavit-Hardenberg Parameters – Forward and inverse kinematics of robot manipulators.

MODULE III PATH CURVATURE THEORY, COUPLER CURVE 09

Fixed and moving centrodes, inflection points and inflection circle. Euler Savary equation, graphical constructions – cubic of stationary curvature. Four bar coupler curve-cusp-crunode-coupler driven six-bar mechanisms-straight line mechanisms.

MODULE IV SYNTHESIS OF FOUR BAR MECHANISMS 09

Type synthesis – Number synthesis – Associated Linkage Concept. Dimensional synthesis – function generation, path generation, motion generation. Graphical methods-Pole technique-inversion technique-point position reduction-two, three and four position synthesis of four- bar mechanisms. Analytical methods-Freudenstein’s Equation-Bloch’s Synthesis.

MODULE V SYNTHESIS OF COUPLER CURVE BASED MECHANISMS & CAM MECHANISMS 09

Cognate Linkages-parallel motion Linkages. Design of six bar mechanisms-single dwell-double dwell-double stroke. Geared five bar mechanism-multi-dwell. Cam Mechanisms- determination of optimum size of cams. Mechanism defects. Study and use of Mechanism using Simulation Soft-ware packages. Students should design and fabricate a mechanism model as term project.

Total Hours: 45

REFERENCES:

5. Kenneth J, Waldron, Gary L. Kinzel, “Kinematics, Dynamics and Design of Machinery”, John Wiley-sons, 1999.
6. Ramamurti, V., “Mechanics of Machines”, Narosa, 2005.

COURSE OUTCOMES:

Students will be able to

- Understand the fundamentals of kinematics and network formula.
- Perform displacement analysis, velocity and acceleration for planar mechanisms
- Apply path curvature theory to design complex mechanism.
- Synthesize a mechanism for a motion and function generation
- Design and fabricate simple mechanisms for single dwell , double dwell period

MECY002 ADVANCED STRENGTH OF MATERIALS

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the stress strain relations and location of shear centers.
- To study and analyze stress and deflections in curved beams.
- To understand the stresses in flat plates.
- To study and analyze torsional stresses in thin walled tubes and non-circular sections.
- To understand the stresses in rotary sections and contacts.

MODULE I ELASTICITY 09

Stress-Strain relations and general equations of elasticity in Cartesian, Polar and curvilinear coordinates, differential equations of equilibrium-compatibility-boundary conditions-representation of three-dimensional stress of a tension generalized Hooke's law - St. Venant's principle - plane stress - Airy's stress function. Energy methods.

MODULE II SHEAR CENTER AND UNSYMMETRICAL BENDING 10

Location of shear center for various thin sections - shear flows. Stresses and deflections in beams subjected to unsymmetrical loading-kern of a section.

MODULE III CURVED FLEXIBLE MEMBERS AND STRESSES IN FLAT PLATES 10

Circumference and radial stresses – deflections - curved beam with restrained ends - closed ring subjected to concentrated load and uniform load - chain links and crane hooks. Solution of rectangular plates – pure bending of plates – deflection – uniformly distributed load – various end conditions.

MODULE IV TORSION OF NON-CIRCULAR SECTIONS 07

Torsion of rectangular cross section - St. Venants theory - elastic membrane analogy - Prandtl's stress function - torsional stress in hollow thin walled Stress

MODULE V STRESSES IN ROTARY SECTIONS AND CONTACT STRESSES 09

Radial and tangential stresses in solid disc and ring of uniform thickness and varying thickness allowable speeds. Methods of computing contact stress-deflection of bodies in point and line contact applications.

Total Hours: 45

REFERENCES:

1. Arthur P Boresi, Richard J. Schmidt, “Advanced mechanics of materials”, John Wiley, 2002.
2. Timoshenko and Goodier, "Theory of Elasticity", McGraw Hill.
3. Robert D. Cook, Warren C. Young, "Advanced Mechanics of Materials", Mc millan pub. Co., 1985.
4. Srinath. L.S., “Advanced Mechanics of solids”, Tata McGraw Hill, 1992.
5. Ryder G H ,Strength of Materials Macmillan, India Ltd, 2007

COURSE OUTCOMES:

Students will be able to

- Analyze two and three dimensional complex stress problems.
- Compute stresses and deflections in beams subjected to unsymmetrical loading.
- Critique stresses in curved beams and flat plates.
- Analyze and solve torsion of non-circular sections.
- Evaluate problems arising from stresses in rotary sections and contact applications

MECY003 ADVANCED TOOL DESIGN

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To learn tool design methods and techniques of manufacturing dies and its accessories.
- To acquire knowledge on different materials available for cutting tools and necessary heat treatment procedures to get the required properties.
- To acquire knowledge in selecting suitable materials for calibrating and inspecting gauges.
- To learn to design fixtures for various machining and metal forming operations.
- To acquire knowledge on designing fixtures and cutting tools for NC machine tools.

MODULE I TOOL DESIGN METHODS 05

Introduction – The Design Procedure – Statement of the problem – The Needs Analysis –Research and Ideation – Tentative Design Solutions – The Finished Design – Drafting and Design Techniques in Tooling drawings – Screws and Dowels – Hole location – Jig-boring practice –Installation of Drill Bushings – Punch and Die Manufacture – Electro-discharge machining –Electro-discharge machining for cavity.

MODULE II TOOLING MATERIALS AND HEAT TREATMENT 09

Introduction – Properties of Materials – Ferrous Tooling Materials – Tool steels – Cast Iron – Mild, or low-carbon Steel – Nonmetallic Tooling Materials – Nonferrous Tooling Materials – Metal cutting Tools – Single-point cutting tools – Milling cutters – Drills and Drilling – Reamer classification –Taps – Tap classification- the selection of carbide cutting tools – Determining the insert thickness for carbide tools.

MODULE III DESIGN OF DRILL JIGS 09

Introduction – Fixed Gages – Gage Tolerances – The selection of material for Gages – Indicating Gages – Automatic gages – Principles of location – Locating methods and devices – Principles of clamping – Drill jigs – Chip formation in drilling – General considerations in the design of drill jigs – Drill bushings – Methods of construction – Drill jigs and modern manufacturing.

MODULE IV DESIGN OF FIXTURES AND DIES 14

Introduction – Fixtures and economics – Types of Fixtures – Vise Fixtures – Milling Fixtures –Boring Fixtures – Broaching Fixtures – Lathe Fixtures – Grinding Fixtures – Types of Die construction – Die-design fundamentals – Blanking and Piercing die construction – Pilots – Strippers and pressure pads Presswork materials – Strip layout – Short-run tooling for Piercing – Bending dies – Forming dies – Drawing operations.

MODULE V TOOL DESIGN FOR NUMERICALLY CONTROLLED MACHINE TOOLS 08

Introduction – The need for numerical control – A basic explanation of numeric control – Numerical control systems in use today – Fixture design for numerically controlled machine tools – Cutting tools for numerical control – Tool holding methods for numerical control – Automatic tool changers and tool positioners – Tool presetting – Introduction – General explanation of the Brown and sharp machine – tooling for Automatic screw machines.

Total Hours: 45

1. Cyrll Donaldson, George H.LeCain, V.C. Goold, “Tool Design”, Tata McGraw Hill Publishing Company Ltd., 2000.
2. Prakash Hiralal Joshi, “Tooling data”, Wheeler Publishing, 2000.

COURSE OUTCOMES:

Students will be able to

- Summarize tool design methods and punch and die manufacturing techniques
- Judge in selecting materials for cutting tools and identify their nomenclature.
- Identify the materials for gauges and to make them with the available technology
- Design fixtures for milling, boring, lathe, grinding and welding
- Design and analyse fixtures and cutting tools for NC machine tools

MECY004 COMPUTATIONAL FLUID DYNAMICS

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the equations describing fluid flow and numerical solutions to these equation.
- To teach the concepts of conduction of heat through solids in steady and transient state.
- To learn the methods to solve the governing equations of an incompressible fluid flow.
- To apply computational method to solve convection heat transfer.
- To introduce different turbulence models for accurate prediction of fluid flow.

MODULE I GOVERNING DIFFERENTIAL EQUATION AND FINITE DIFFERENCE METHOD 10

Classification, Initial and Boundary conditions – Initial and Boundary Value problems – Finite difference method, Central, Forward, Backward difference, Uniform and non-uniform Grids, Numerical Errors, Grid Independence Test.

MODULE II CONDUCTION HEAT TRANSFER 10

Steady one dimensional conduction, two and three dimensional steady state problems, Transient one dimensional problem, Two-dimensional Transient Problems.

MODULE III INCOMPRESSIBLE FLUID FLOW 10

Governing Equations, Stream Function – Verticity method, Determination of pressure for viscous flow, SIMPLE Procedure of Patankar and Spalding, Computation of Boundary layer flow, finite difference approach.

MODULE IV CONVECTION HEAT TRANSFER AND FEM 10

Steady One-Dimensional and Two-Dimensional Convection – diffusion, unsteady one-dimensional convection – diffusion, Unsteady two-dimensional convection – Diffusion – Introduction to finite element method – solution of steady heat conduction by FEM – Incompressible flow – simulation by FEM.

MODULE V TURBULENCE MODELS 05

Algebraic Models – One equation model, K – ε Models, Standard and High and Low Reynolds number models, Prediction of fluid flow and heat transfer using

standard codes.

Total Hours: 45

COURSE OUTCOMES:

Students will be able to

- solve heat conduction problems numerically.
- describe the methods of discretize a partial differential equation
- understand standard algorithms applied for solving incompressible fluid flow
- apply FEM to solve a convection heat transfer problem
- choose the best turbulence model for the flow analysis encounters turbulence.

MECY005 COMPUTER AIDED PROCESS PLANNING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To provide basic knowledge on process planning in a manufacturing cycle
- To impart knowledge on geometrical representation of part design
- To provide knowledge on process planning methodology
- To inculcate systematic process planning using computers
- To provide knowledge on integration of various process planning systems

MODULE I INTRODUCTION 09

The Place of Process Planning in the Manufacturing cycle - Process Planning and Production Planning – Process Planning and Concurrent Engineering, CAPP, Group Technology.

MODULE II PART DESIGN REPRESENTATION 09

Design Drafting - Dimensioning - Conventional tolerance - Geometric tolerance - CAD - input / output devices - topology - Geometric transformation - Perspective transformation - Data structure - Geometric modelling for process planning - GT coding - The optiz system - The MICLASS system.

MODULE III PROCESS ENGINEERING AND PROCESS PLANNING 09

Experienced, based planning - Decision table and decision trees - Process capability analysis - Process Planning - Variant process planning - Generative approach - Forward and Backward planning, Input format, Al.

MODULE IV COMPUTER AIDED PROCESS PLANNING SYSTEMS 09

Logical Design of a Process Planning - Implementation considerations - manufacturing system components, production Volume, No. of production families - CAM-I, CAPP, MIPLAN, APPAS, AUTOPLAN and PRO, CPPP.

MODULE V AN INTERGRADED PROCESS PLANNING SYSTEMS 09

Totally integrated process planning systems - An Overview - Modulus structure - Data Structure, operation - Report Generation, Expert process planning.

Total Hours: 45

REFERENCES:

1. Gideon Halevi and Roland D. Weill, “Principles of Process Planning ", A logical approach, Chapman & Hall, 1995.
2. Tien-Chien Chang, Richard A.Wysk, "An Introduction to automated process planning systems ", Prentice Hall, 1985.

4. Nanua Singh, “Systems Approach to Computer Integrated Design and Manufacturing ", John Wiley & Sons, 1996.
5. Rao, “Computer Aided Manufacturing ", Tata McGraw Hill Publishing Co., 2000.

COURSE OUTCOMES:

At the end of the course students will be able to

- Analyse process planning in a manufacturing cycle
- Analyse and model the geometrical representation of parts
- Analyse the methodology on processes and their planning
- Designing the process planning systems
- Analyse and design the advanced process planning systems

MECY006	DESIGN OF HYDRAULIC & PNEUMATIC SYSTEMS	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To learn the various hydraulic power system and their components.
- To understand the various components of fluid power system.
- To understand the designing of various hydraulic power circuits for a particular application.
- To acquire knowledge on the similarities between hydraulic and pneumatic power and to design various pneumatic circuits for industrial application.
- To understand the electro-hydraulic and electro-pneumatic circuits and their maintenance.

MODULE I OIL HYDRAULIC SYSTEMS AND ACTUATORS 05

Hydraulic Power Generators - Selection and specification of pumps, pump characteristics. Hydraulic actuators - Linear and Rotary Actuators - selection, specification and characteristics.

MODULE II CONTROL AND REGULATION ELEMENTS 10

Pressure, direction and flow control valves - relief valves, non return and safety valves – actuation systems.

MODULE III HYDRAULIC CIRCUITS 08

Reciprocation, quick return, sequencing, synchronizing circuits - accumulator circuits – industrial circuits –Hydraulic press circuits - milling machine, grinding, planning, copying, forklift, and earth mover circuits - design and selection of components - safety and emergency manuals.

MODULE IV PNEUMATIC SYSTEMS AND CIRCUITS 15

Pneumatic fundamentals - control elements, position and pressure sensing - logic circuits - switching circuits - fringe conditions modules and their integration - sequential circuits – cascade methods - mapping methods – step counter method - compound circuit design – combination circuit design.

MODULE V INSTALLATION, MAINTENANCE AND SPECIAL CIRCUITS 07

Pneumatic equipments - selection of components - design calculations - application - fault finding –hydro pneumatic circuits - use of microprocessors for

sequencing - PLC, Low cost automation - Robotic circuits.

Total Hours: 45

5. Majumdar, “Oil Hydraulics Systems: Principles and Maintenance” Tata McGraw Hill, 2004
6. Majumdar, “Pneumatic system : Principles and Maintenance” Tata McGrawHill, 2004.

COURSE OUTCOMES:

- Students will be able to classify the various fluid power system and their applications.
- Students will be able to illustrate important components of fluid power used in power packs.
- Students will be able to design and analyze fluid power circuits for a specific application.
- Students will be able to summarize the modern controls for fluid power system and their maintenance.

MECY007 DESIGN OF MATERIAL HANDLING EQUIPMENT

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To acquire knowledge of different material handling equipment and its selection.
- To learn the different types of hoist and its accessories.
- To understand the various drives of hoisting gear.
- To gain knowledge on variety of conveyors for specific applications.
- To obtain a basic understanding of vertical transportation.

MODULE I MATERIALS HANDLING EQUIPMENT 05

Types, selection and applications

MODULE II DESIGN OF HOISTS 10

Design of hoisting elements: Welded and roller chains - Hemp and wire ropes - Design of ropes, pulleys, pulley systems, sprockets and drums, Load handling attachments. Design of forged hooks and eye hooks – crane grabs - lifting magnets - Grabbing attachments - Design of arresting gear - Brakes: shoe, band and cone types.

MODULE III DRIVES OF HOISTING GEAR 10

Hand and power drives - Traveling gear - Rail traveling mechanism - cantilever and monorail cranes - slewing, jib and luffing gear - cogwheel drive - selecting the motor ratings.

MODULE IV CONVEYORS 10

Types - description - design and applications of Belt conveyors, apron conveyors and escalators Pneumatic conveyors, Screw conveyors and vibratory conveyors.

MODULE V ELEVATORS 10

Bucket elevators: design - loading and bucket arrangements - Cage elevators - shaft way, guides, counter weights, hoisting machine, safety devices - Design of fork lift trucks.

Total Hours: 45

6. Lingaiah. K. and Narayana Iyengar, “Machine Design Data Hand Book”, Vol.1 & 2, Suma Publishers, Bangalore, 1983

COURSE OUTCOMES:

At the end of the course students will be able to

- Analyse various material handling equipment
- Designing of hoists for material handling
- Analyse and design typical drives and gears for hoists
- Analyse and select various conveyor systems for material transfer
- Analyse the components and accessories of elevators for material handling

MECY008	INDUSTRIAL ROBOTICS AND FLEXIBLE AUTOMATION	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To provide basic knowledge on kinematics of robots
- To impart knowledge on various drives and controls for robotics
- To provide in knowledge on typical sensors and their applications in robotics
- To impart detailed knowledge on various automation systems in robotics
- To provide knowledge on robot programming

MODULE I INTRODUCTION AND ROBOT KINEMATICS 10

Definition need and scope of Industrial robots – Robot anatomy – Work volume – Precision movement – End effectors – Sensors. Robot Kinematics – Direct and inverse kinematics – Robot trajectories – Control of robot manipulators – Robot dynamics – Methods for orientation and location of objects.

MODULE II ROBOT DRIVES AND CONTROL 09

Controlling the Robot motion – Position and velocity sensing devices – Design of drive systems – Hydraulic and Pneumatic drives – Linear and rotary actuators and control valves – Electro hydraulic servo valves, electric drives – Motors – Designing of end effectors – Vacuum, magnetic and air operated grippers.

MODULE III ROBOT SENSORS 09

Transducers and Sensors – Sensors in Robot – Tactile sensor – Proximity and range sensors – Sensing joint forces – Robotic vision system – Image Grabbing – Image processing and analysis – Image segmentation – Pattern recognition – Training of vision system.

MODULE IV ROBOT FOR FLEXIBLE AUTOMATION 09

Robot work cell design and control – Safety in Robotics – Robot cell layouts – Multiple Robots and machine interference – Robot cycle time analysis. Industrial application of robots.

MODULE V ROBOT PROGRAMMING, AI & EXPERT SYSTEMS 08

Methods of Robot Programming – Characteristics of task level languages lead through programming methods – Motion interpolation. Artificial intelligence – Basics – Goals of artificial intelligence – AI techniques – problem representation in

AI – Problem reduction and solution techniques - Application of AI and KBES in Robots.

Total Hours: 45

7. Timothy Jordanides et al, “Expert Systems and Robotics”, Springer –Verlag, New York, May 1991.

COURSE OUTCOMES:

At the end of the course students will be able to

- Analyse kinematically the operation of robots
- Analyse and design various drives and controls for robotics
- Analyse and identify typical sensors in robotics as per their applications
- Analyse and identify suitable automation systems in robotics
- Analyse and Programming for intelligent robots

MECY009 MECHANICAL VIBRATIONS

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand how to apply theory of vibration to engineering problems and appreciate the importance of vibrations in mechanical design of machine parts that operates in vibratory conditions.
- To obtain linear vibratory models of dynamic systems with changing complexities (SDOF, MDOF)
- To familiarize the methods of controlling vibrations.
- To understand the methods of obtaining solution for a vibratory continuous systems.
- To learn the techniques for vibration isolation and balancing of masses.

MODULE I FUNDAMENTALS OF VIBRATION 08

Review of Single degree system - Response to arbitrary periodic exicitations - Duhamel's Integral – Impulse Response function - Virtual work - Lagrange's equation - Single degree freedom forced vibration with elastically coupled viscous dampers - System Identification from frequency response - Transient Vibration – Laplace transformation formulation.

MODULE II TWO - DEGREE FREEDOM SYSTEMS 08

Free vibration of spring - coupled system - mass coupled system - Bending vibration of two degree of freedom system - forced vibration - Vibration Absorber - Vibration isolation.

MODULE III MULTI-DEGREE FREEDOM SYSTEM 12

Normal mode of vibration - Flexibility Matrix and Stiffness matrix - Eigen values and Eigen vectors – orthogonal properties - Modal matrix-Modal Analysis - Forced Vibration by matrix inversion - Modal damping in forced vibration - Numerical methods for fundamental frequencies

MODULE IV VIBRATION OF CONTINUOUS SYSTEMS 08

Systems governed by wave equations - Vibration of strings - vibration of rods - Euler Equation for Beams -Effect of Rotary inertia and shear deformation - Vibration of plates.

MODULE V VIBRATION MEASURMENT AND CONTROL 09

Measurement of vibration, free and forced tests, FFT analyzer, Modal analysis, methods of vibration control, excitation reduction at source, balancing of rigid rotors, field balancing, detuning and decoupling,

Total Hours: 45

REFERENCES:

1. Thomson W T, "Theory of Vibration with Applications", Prentice Hall of India, 1997.
2. Singiresu S Rao "Mechanical Vibrations", Prentice Hall, 2010
3. Ashok Kumar Mallik, "Principles of Vibration Control", Affiliated East-West Press Pvt. Ltd, 1990.

COURSE OUTCOMES:

At the end of the course students will be able to

- To write the basic equations of motion of vibratory systems.
- To predict Eigen values and Eigen vectors of two -degrees of freedom systems.
- To apply numerical methods to solve a multi degree freedom subjected to different types of excitation.
- To obtain solution for a continuous system.
- To measure and process vibration signals and employ methods of vibration control.

MECY010 OPTIMIZATION TECHNIQUES IN DESIGN

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To provide basic knowledge on optimization requirements
- To impart knowledge on various types optimization techniques
- To provide in knowledge on multi objective optimization
- To impart detailed knowledge on various static applications of optimization
- To provide knowledge on dynamic applications of optimization

MODULE I INTRODUCTION 05

General Characteristics of mechanical elements, adequate and optimum design, principles of optimization, formulation of objective function, design constraints – Classification of optimization problem.

MODULE II OPTIMIZATION TECHNIQUES 10

Single variable and multivariable optimization, Techniques of unconstrained minimization – Golden section, Random, pattern and gradient search methods – Interpolation methods; Optimization with equality and inequality constraints.

MODULE III MULTI OBJECTIVE OPTIMIZATION 10

Direct methods – Indirect methods using penalty functions, Lagrange multipliers; Geometric programming and stochastic programming; Multi objective optimization, Genetic algorithms and Simulated Annealing techniques.

MODULE IV STATIC APPLICATIONS 10

Structural applications – Design of simple truss members. Design applications – Design of simple axial, transverse loaded members for minimum cost, maximum weight – Design of shafts and torsionall loaded members – Design of springs.

MODULE V DYNAMIC APPLICATIONS 10

Dynamic Applications – Optimum design of single, two degree of freedom systems, vibration absorbers. Application in Mechanisms – Optimum design of simple linkage mechanisms.

Total Hours: 45

REFERENCES:

1. Johnson Ray, C., “Optimum design of mechanical elements”, Wiley, John & Sons, 1990.
2. Goldberg, D.E., “Genetic algorithms in search, optimization and machine”, Barnen, Addison-Wesley, New York, 1989.
3. Kalyanamoy Deb, “Optimization for Engineering design algorithms and Examples”, Prentice Hall of India Pvt. 1995.

COURSE OUTCOMES:

At the end of the course students will be able to

- Analyse the need of optimization
- Analyse and identify suitable optimization technique
- Analyse multi objective optimization
- Analyse the various static applications of optimization
- Analyse the various dynamic applications of optimization

MECY011 TRIBOLOGY

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the basic theories of tribology in industrial systems that experience friction and wear.
- To acquire knowledge on the methods to reduce the friction for engineering surface by the use of lubricants.
- To learn the basics of hydrodynamic theory of lubrication.
- To understand Hertz contact and rough surface contact and design methods of rolling bearings.
- To familiarize with the methods of testing friction and wear.

MODULE I SURFACES, FRICTION AND WEAR 08

Topography of Surfaces – Surface features – Surface interaction – Theory of Friction – Sliding and Rolling Friction, Friction properties of metallic and non-metallic materials – friction in extreme conditions – wear, types of wear – mechanism of wear – wear resistance materials – surface treatment – Surface modifications – surface coatings.

MODULE II LUBRICATION THEORY 08

Lubricants and their physical properties lubricants standards – Lubrication Regimes Hydrodynamic lubrication – Reynolds Equation, Thermal, inertia and turbulent effects – Elasto hydrodynamic and plasto hydrodynamic and magneto hydrodynamic lubrication – Hydro static lubrication – Gas lubrication.

MODULE III DESIGN OF FLUID FILM BEARINGS 12

Design and performance analysis of thrust and journal bearings – Full, partial, fixed and pivoted journal bearings design – lubricant flow and delivery – power loss, Heat and temperature rotating loads and dynamic loads in journal bearings – special bearings – Hydrostatic Bearing design.

MODULE IV ROLLING ELEMENT BEARINGS 10

Geometry and kinematics – Materials and manufacturing processes – contact stresses – Hertzian stress equation – Load divisions – Stresses and deflection – Axial loads and rotational effects, Bearing life capacity and variable loads – ISO standards – Oil films and their effects – Rolling Bearings Failures

MODULE V TRIBO MEASUREMENT IN INSTRUMENTATION 07

Surface Topography measurements – Electron microscope and friction and wear measurements – Laser method – instrumentation - International standards – bearings performance measurements – bearing vibration measurement.

Total Hours: 45

REFERENCES:

1. Cameron, A. “Basic Lubrication Theory”, Ellis Herward Ltd., OK, 1981
2. Hulling, J. (Editor) – “Principles of Tribology “, Macmillian – 1984.
3. Williams J.A. “Engineering Tribology”, Oxford Univ. Press, 1994.
4. Neale, M.J. “Tribology Hand Book”, Butterworth Heinemann, 1995.

COURSE OUTCOMES:

At the end of the course students will be able to

- Have a comprehensive, systematic and integrated knowledge of the principles of friction and wear.
- Have a clear picture about lubrication mechanism and how to apply them to the practical engineering problem.
- Design an efficient and robust tribological system such as hydrodynamic bearing and dry sliding bearings for the needs of a specific application.
- Explain Hertz contact and rough surface contact and design methods of rolling bearing.
- Asses and select suitable methods to measure friction and wear under different sliding conditions.

MECY012 MECHANICS OF COMPOSITE MATERIALS

L	T	P	C
2	0	0	2

COURSE EDUCATIONAL OBJECTIVES:

- To understand the constitutive equations of composite materials and learn mechanical behavior at micro and macro level.
- To learn the mechanical behavior of layered composites compared to isotropic materials.
- To calculate stresses and strains in composites.
- To understand mechanical behavior of composites due to variation in temperature and moisture.

MODULE I INTRODUCTION, LAMINA CONSTITUTIVE EQUATIONS 10

Lamina Constitutive Equations: Lamina Assumptions–Macroscopic Viewpoint. Generalized Hooke's Law. Reduction to Homogeneous Orthotropic Lamina–Isotropic limit case, Orthotropic Stiffness matrix (Qij), Definition of stress and Moment Resultants. Strain Displacement relations. Basic Assumptions of Laminated anisotropic plates. Laminate Constitutive Equations–Coupling Interactions, Balanced Laminates, Symmetric Laminates, Angle Ply Laminates, Cross Ply Laminates. Laminate Structural Moduli. Evaluation of Lamina Properties from Laminate Tests. Quasi-Isotropic Laminates. Determination of Lamina stresses within Laminates.

MODULE II LAMINA STRENGTH ANALYSIS AND ANALYSIS OF LAMINATED FLAT PLATES 10

Introduction- Maximum Stress and Strain Criteria. Von- Misses Yield criterion for Isotropic Materials. Generalized Hill's Criterion for Anisotropic materials. Tsai-Hill's Failure Criterion for Composites. Tensor Polynomial (Tsai-Wu) Failure criterion. Prediction of laminate Failure Equilibrium Equations of Motion. Energy Formulations. Static Bending Analysis. Buckling Analysis. Free Vibrations– Natural Frequencies

MODULE III THERMAL ANALYSIS 10

Assumption of Constant Co-efficient of Thermal Expansion (C.T.E.)-Modification of Hooke's Law. Modification of Laminate Constitutive Equations. Orthotropic Lamina C.T.E's. C.T.E's for special Laminate Configurations – Unidirectional, Off-axis, Symmetric Balanced Laminates, Zero C.T.E laminates, Thermally Quasi - Isotropic Laminates

Total Hours: 30

9. Chung, Deborah D.L., “Composite Materials: Science and Applications”, Ane Books Pvt. Ltd./Springer, New Delhi, 1st Indian Reprint, 2009

COURSE OUTCOMES:

At the end of this course, the students will be able to

- Apply constitutive equations of composite materials and understand mechanical behavior at micro and macro level.
- Explain the specifics of mechanical behavior of layered composites compared to isotropic materials.
- Determine stresses and strains in composites.
- Analyze mechanical behavior of composites due to variation in temperature and moisture.

MECY013	GEOMETRIC DIMENSIONING AND TOLERANCING	L	T	P	C
		1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To teach the principles of geometric product definition
- To educate the students on types of tolerances.

MODULE I INTRODUCTION 05

Introduction to limits fits and tolerances – GDNT definitions and importance -Datum reference frame – Feature control frame - MMC & LMC – General Rules – Datum System.

MODULE II PRINCIPLES OF MEASUREMENT FOR GEOMETRIC CHARACTERISTICS 10

Geometric characteristic symbols and meanings – Form tolerances – Profile tolerances – Location tolerances – Runout tolerances – Orientation tolerances – True position theory – Dimensional and tolerance schemes

Total Hours: 15

REFERENCES

1. ASME Y – 14.5
2. Rao Ming, Harry Peck, “Designing for Manufacture” , Pitman Publications, London, 1983.
3. Krulikowski. A, “Fundamentals of Geomtric Dimensioning and Tolerancing”, Delmar Publishers – New York, 1997
4. Spotts. M.F, “Dimensioning and Tolerance for Quality Production”, Prentice Hall Inc., New Jersey, 1983.
5. Oliver R Wade, “Tolerance Control in Design and Manufacturing”, Industrial Press Inc., New York, 2008.

COURSE OUTCOMES:

Students should be able to

- Analyze situations and proceed to the logical end to solve product’s geometric definitions in order to function and be cost effective.
- Totally consider function, manufacturing process and inspection methods in order to guarantee function with reduction in manufacturing and inspection cost.

PROFESSIONAL ELECTIVES ON CAM

		L	T	P	C
MECY014	**ADVANCES IN MANUFACTURING TECHNOLOGY**	**3**	**0**	**0**	**3**

COURSE EDUCATIONAL OBJECTIVES:

- To understand the wear mechanism in cutting tools and to predict its life.
- To learn the special machining process in creating holes and finishing it.
- To assess the principle and mechanism of metal removal of various unconventional machining processes.
- To understand the concept of various micro fabrication technology
- To explore the current scope, potential, limitations and implications of intelligent systems.

MODULE I METAL CUTTING AND TOOL MATERIALS 12

Orthogonal and oblique cutting - Types of tool wear, Abrasion, Diffusion, Oxidation, Fatigue and Adhesive wear - Prediction of tool life - Monitoring of tool wear, Cutting forces and vibration – Tool materials, Cemented carbide, Coated carbide, Cermets, Ceramic, CBN and PCD - Selection of machining parameters and Tools.

MODULE II SPECIAL MACHINING 09

Deep hole drilling - Gun drills - Gun boring - Trepanning - Honing - Lapping - Super finishing - Burnishing - Broaching - High speed machining.

MODULE III UNCONVENTIONAL MACHINING 09

Principles, processes, Various influencing parameters and Applications of Ultrasonic machining, Electro Discharge Machining, Electro Chemical Machining, Electron and Laser Beam Machining, Plasma Arc Machining and Water Jet Machining.

MODULE IV MICROFABRICATION 06

Wafer preparation – monolithic processing – moulding – Printed circuit board hybrid and multi-chip module technology –electronic material and processing– stereolithographic surface acoustic wave (SAW) devices, Surface Mount Technology.

MODULE V ARTIFICIAL INTELLIGENCE AND EXPERT SYSTEMS 09

Introduction - Pattern recognition - Control strategies - Heuristic search, Forward and Backward reasoning - Search algorithms - Game playing - Knowledge

representation - structural representation of knowledge – Expert systems in manufacturing.

Total Hours: 45

REFERENCES:

8. Pandey P.S. and Shah N. “Modern Manufacturing Processes ", 1980.
9. Sadasivan T.A. and Sarathy D. “Cutting tools for Productive Machining ", Widia (India) Limited, 1999.

COURSE OUTCOMES:

Students will be able

- To distinguish different materials used for cutting tools and to select the machining parameters for improving the tool life.
- To demonstrate various types of machining that can be carried out in special purpose machines.
- To identify the process parameters, their effect and applications of different processes.
- To realize the applications of Micro fabrication technology.
- To apply basic principles of AI in solutions that require problem solving, knowledge representation and learning

MECY015	CNC MACHINES AND COMPUTER AIDED MANUFACTURING	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To provide knowledge on basic concepts of computer aided manufacturing
- To impart knowledge on various components and structures of CNC machine tool
- To provide knowledge on various accessories of CNC machines
- To impart knowledge on programming involved in Computer Aided Manufacturing system
- To expose on various tools needed for CNC machines and maintenance of CNC machines

MODULE I INTRODUCTION TO CNC MACHINE TOOLS 07

Development of CNC Technology, principles, features, advantages, economic benefits, applications, CNC, DNC concept, classification of CNC Machine, types of control, CNC controllers, characteristics, interpolators.

MODULE II STRUCTURE OF CNC MACHINE TOOL 09

CNC Machine building, structural details, configuration and design, guideways - friction and anti friction and other types of guide ways, elements used to convert the rotary motion to a linear motion - Screw and nut, recirculating ball screw, planetary roller screw, recirculating roller screw, rack and pinion, torque transmission elements - gears, timing belts, flexible couplings, Bearings.

MODULE III DRIVES AND CONTROLS 09

Spindle drives - DC shunt motor, 3 phase AC induction motor, feed drives - stepper motor, servo principle, DC & AC servomotors. Open loop and closed loop control, Axis measuring system - synchro, synchro-resolver, gratings, moire fringe gratings, encoders, inductosyn, laser interferometer.

MODULE IV CNC PROGRAMMING 10

Coordinate system, structure of a part program, G & M Codes, Manual part programming for Fanuc, Heidenhain, Sinumeric control system, CAPP, APT part programming using CAD/CAM, Parametric Programming.

MODULE V TOOLING AND MAINTENANCE OF CNC 10

Cutting tool materials, carbide insets classification, qualified, semi qualified and preset tooling, tooling system for Machining centre and Turning centre, work

holding devices, maintenance of CNC Machines.

Total Hours: 45

9. Radhakrishnan, P. “Computer Numerical Control Machines ", New Central Book Agency, 1992.
10. Peter Smid, “CNC Programming Hand Book ", Industrial Press Inc., 2000.

COURSE OUTCOMES:

At the end of the course students will be able to

- Analyse CNC machines
- Design and analyse the structure of CNC machine tools
- Identify appropriate accessories for CNC machines based on requirements
- Part Programming for CNC machining
- Identify tools and maintenance methods of CNC machines

MECY016 POLYMERS AND COMPOSITES

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To learn various polymers and their applications
- To know about the various processing techniques of plastics used in industries.
- To understand the machining and joining of plastics.
- To learn the important fibers used in the composite materials and various commercial procedures used for manufacturing PMCs.
- To acquire knowledge on the manufacturing methods of MMCs.

MODULE I INTRODUCTION 05

Chemistry and Classification of Polymers - Properties of Thermo Plastics - Properties of Thermosetting Plastics - Applications - Merits and Demerits.

MODULE II PROCESSING OF PLASTICS 12

Extrusion - Injection Moulding - Blow Moulding - Compression and Transfer Moulding - Casting –Thermo Forming.

MODULE III MACHINING AND JOINING OF PLASTICS 07

General Machining properties of Plastics - Machining Parameters and Their effect - Joining of Plastics - Mechanical Fastners - Thermal bonding - Press Fitting.

MODULE IV COMPOSITE MATERIALS AND PROCESSING 12

Fibres - Glass, Boron, Carbon, Organic, Ceramic and Metallic Fibers - Matrix Materials - Polymers,Metals and Ceramics – Composites Processing- Open Mould Processes, Bag Moulding,Compression Moulding with BMC and SMC - Filament winding - Pultrusion - Centrifugal Casting -Injection Moulding - Application of PMC's.

MODULE V PROCESSING OF METAL MATRIX COMPOSITES 09

Solid State Fabrication Techniques - Diffusion Bonding - Powder Metallurgy Techniques – Plasma Spray, Chemical and Physical Vapour Deposition of Matrix on Fibres - Liquid State Fabrication Methods - Infiltration - Squeeze Casting - Rheo Casting –Application of MMCS.

Total Hours: 45

12. Mallick, P.K. and Newman, S. “Composite Materials Technology ", Hanser Publishers, 1990.

COURSE OUTCOMES:

At the end of the course students will be able to

- Explain different polymers and select a polymer for specific applications.
- Demonstrate different processing techniques of plastics.
- Evaluate the various techniques for shaping and joining of plastics.
- Compare variety of fibers used in PMCs and their fabrication techniques.
- Outline the techniques for manufacturing MMCs and identify their applications.

MECY017	PRECISION ENGINEERING AND NANO TECHNOLOGY	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To provide basic knowledge on Precision engineering materials
- To impart knowledge on various types of Precision machining techniques
- To provide in knowledge on precision machining tools
- To impart detailed knowledge on characterization of nano materials
- To provide knowledge on various applications of Nano materials

MODULE I MATERIALS FOR PRECISION ENGINEERING 08

Introduction – Accuracy and Precision– Need for high precision – concept of accuracy – tolerance an fits: system – Hole and shaft system – expects accuracy of a Manufacturing process – types of fits – Selective assembly. Materials-Diamond – types-single crystal- PCD – Natural-synthetic CBN - Ceramics – coated metals and non-metals–High– performance polymer – alloys – refractory metals: cutting tools – performance – components of instruments – Jewels – self Lubrication – smart materials – properties – testing – applications.

MODULE II PRECISION MACHINING AND ERRORS 12

Precision grinding: IC chip manufacturing- ELID process – aspherical surface generation Grinding wheel- Designer and selection of grinding wheel-High-speed grinding-High-speed milling-Micro machining – Diamond turning-MEMS – micro finishing process – surface roughness measures – concept and non-concept method – comparison of features with machining process. Static stiffness - influence on machining accuracy. Introduction – over all stiffness in a machine/instrument – errors due to variation of cutting forces – clamping forces – errors due to compliance while machining. Inaccuracy due to thermal effects: Heat sources –war dissipation – Geometry of thermal deformation-influence of forced iso-static dimensional wear of elements – instruments; Machining tools their influence an accuracy- error due to clamping and setting location.

MODULE III PRECISION MACHINE ELEMENTS 06

Introduction- guide ways- Drive systems; rolling element bearings-Principles, construction, classification, application etc., -Lubricated sliding bearings-construction – Principles etc.,- Hydrostatics bearings-types – aerostatic bearings – linear drive motors – magnetic bearings- applications-limitations - advantages.

MODULE IV NANOMATERIALS SYNTHESIS AND CHARACTERIZATION 10

Amorphous, crystalline, microcrystalline, quasi-crystalline and nano-crystalline materials. Historical development of nanomaterials – Issues in fabrication and characterization of nanomaterials Methods of production of Nanoparticles, Sol-gel synthesis, Inert gas condensation, High energy Ball milling, Plasma synthesis, Electro deposition and other techniques. Synthesis of Carbon Nanotubes – Solid carbon source based production techniques, Gaseous carbon source based production techniques - Growth mechanisms-Nano wires. Scanning Probe Microscopy (SPM), Transmission electron microscope, Scanning transmission electron microscope, Atomic force microscope, Scanning thermal microscopy Nano indentation.

MODULE V APPLICATIONS OF NANOMATERIALS 09

Applications in Mechanical, Electronics engineering industries – Use of nanomaterials in automobiles, aerospace, defense and medical applications – Metallic, polymeric, organic and ceramic nanomaterials. LIGA, Ion beam etching, Molecular manufacturing techniques – Nano machining techniques, Top/Bottom up Nano fabrication techniques - Sub micron lithographic technique, conventional film growth technique, Chemical etching, Quantum materials.

Total Hours: 45

7. Gregory Timp, “Nanotechnology”, Springer, India, 2005
8. Ahmed Busnaina, “Nanomanufacturing Handbook”, CRC Press, London, 2006.

COURSE OUTCOMES:

At the end of the course students will be able to

- Analyse and identify precision engineering materials
- Analyse various types of Precision machining techniques
- Analyse and identify precision machining tools for requirement
- Analyse the characterization of nano materials
- Analyse various applications of Nano materials

MECY018	MECHATRONICS FOR MANUFACTURING SYSTEMS	L	T	P	C
		2	0	0	2

COURSE EDUCATIONAL OBJECTIVES:

- To study the definition and application of mechatronics systems
- To choose appropriate sensors to be used in manufacturing technology
- To select the required actuator for an application

MODULE I MECHATRONICS AND ITS APPLICATION 08

Mechatronics definition - Systems- Measurement Systems - Control Systems - Traditional and Mechatronics design concepts - Case studies of Mechatronics systems - Pick and place Robot -Conveyor based material handling system - PC based CNC drilling machine – Mechatronic control in automated manufacturing

MODULE II SENSORS AND TRANSDUCERS 12

Introduction - Performance Terminology – Potentiometers - LVDT-Capacitance sensors – Strain gauges – Eddy current sensor – Hall effect sensor - Temperature sensors – Light sensors - Selection of sensors - Signal processing .

MODULE III ACTUATORS 10

Actuators – Mechanicsl – Electrical – Fluid Power – Piezoelectric –magnetostrictive – Shape memory alloy – applications – selection of actuators

Total Hours: 30

REFERENCES:

7. Bradley D.A, Dawson.D, Buru N.C and Loader A.J, “Mechatronics” Nelson

Thornes ltd, Eswar press, Indian print, 2004.

COURSE OUTCOMES:

At the end of the course, the student will be able to

- Explain the importance of mechatronics and its application in manufacturing systems
- Select suitable sensor and corresponding signal conditioning that is required
- Choose appropriate actuators for given manufacturing system

MECY019 NEWER MATERIALS

L	T	P	C
2	0	0	2

COURSE EDUCATIONAL OBJECTIVES:

- To learn the Physical Properties of various Smart Materials
- To acquire knowledge on synthesis of newer materials.
- To learn the techniques of characterization of newer materials.
- To acquire knowledge on applications of smart sensor, actuator and transducer technologies.

MODULE I SMART BEHAVIOURS AND MATERIALS 12

Piezoelectric, electrostrictive, magnetostrictive, pyroelectric, electrooptic, Piezomagnetism, Pyromagnetism, Piezoresitivity, Thermoelectricity, photon striction, Thermally and Magnetically activated Shape memory alloy, Superelastic, Viscoelastic, Thermochromic materials. Magneto rheological fluid: constitutive behaviour and its applications as damper, Behaviour of Electro active polymer and its use as artificial muscles.

MODULE II MATERIAL SYNTHESIS 06

Solid state reaction, sol-gel process.

MODULE III APPLICCATIONS 12

Impact Design and fabrication of devices and structures and their integration with system, Biomorphs / Moonies, Chip capacitor, Memory devices (FRAM), Sensor, actuator and transducers, Accelerometer, Gyroscopes, Ultrasonic Motor, Liquid Crystal display, Photonics, Structural Health Monitoring

Total Hours: 30

9. Kwang J. Kim & S. Tadokoro, Electroactive polymers for robotics applications, artificial muscles and sensors, Springer, 2007.

COURSE OUTCOMES:

At the end of this course, the students will be able to

- Summarize the properties of newer materials, their synthesis and characterization.
- Explain the development of actuators and sensors and their integration into a smart structure
- Demonstrate about application areas of smart materials

MECY020 AUTOMOTIVE MANUFACTURING

L	T	P	C
1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To impart knowledge on various machining processes of automotive components
- To gain knowledge on different forming processes

MODULE I MACHINING PROCESS 08

Machining of connecting rods - crank shafts - cam shafts - pistons - piston pins – piston rings – valves - front and rear axle housings - fly wheel - Honing of cylinder bores - Copy turning and profile grinding machines

MODULE II FORMING PROCESS 07

Powder injection molding - Production of aluminum MMC liners for engine blocks - Plasma spray coated engine blocks and valves - Recent developments in auto body panel forming –Squeeze Casting of pistons - aluminum composite brake rotors - Sinter diffusion bonded idler sprocket – gas injection molding of window channel – cast con process for auto parts

Total Hours: 15

TEXT BOOK

REFERENCES

1. Haslehurst.S.E., “Manufacturing Technology”, ELBS, London, 1990
2. Rusinoff, “Forging and Forming of metals”, D.B. Taraporevala Son & Co. Pvt Ltd., Mumbai, 1995.
3. Sabroff.A.M. & Others, “Forging Materials & Processes”, Reinhold Book Corporation, New York, 1988.
4. Upton, “Pressure Die Casting”, Pergamon Press, 1985.
5. High Velocity “Forming of Metals”, ASTME, prentice Hall of India (P) Ltd., New Delhi, 1990

COURSE OUTCOMES:

Students should be able to

- Execute various machining processes
- Apply suitable forming process for various automotive components

MECY021 VIRTUAL MANUFACTURING

L	T	P	C
1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To understand the fundamentals of virtual manufacturing
- To introduce different facets of virtual manufacturing

MODULE I FUNDAMENTALS OF VIRTUAL MANUFACTURING 08

Paradigms of VM: Design-centered VM, Production-centered VM and Control-centered VM. Generic VM Issues - relationships between VM, Virtual Prototyping, the Virtual Enterprise. Role of object oriented technology in VM - Integrated Simulation Method to Support Virtual Factory Engineering Application of Virtual Reality

MODULE II FACETS OF VIRTUAL MANUFCATURING 07

Dispersed Network Manufacturing - Virtual factory, enterprise collaborative modeling system - virtual manufacturing (VM) system - Web-based work flow management, collaborative product commerce - applications of multi-agent technology - e-supply chain management and tele-manufacturing

Total Hours: 15

TEXT BOOKS

1. Warim Ahmed Khan Abdul Raouz, Kari Chens, Virutal Manufacturing, Springer Series in Advanced Manufacturing.

REFERENCES

1. Crabb, C. H., The Virtual Engineer-21st Century Product Development, Society of Manufacturing Engineers, 1998.
2. Rao Ming, Qun Wang, Jianzhong Cha, Integrated Distributed Intelligent Systems in Manufacturing (Intelligent Manufacturing), Chapman & Hall 1993.
3. Prasant Banerjee, Virtual manufacturing a willey, I addition 2001.

COURSE OUTCOMES:

Students should be able to

- Describe the fundamentals of virtual manufacturing
- Explain different facets of virtual manufacturing

PROFESSIONAL ELECTIVES ON CAD / CAM MANAGEMENT

MECY022 DATA COMMUNICATION IN CAD/CAM

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To provide basic knowledge on various digital computers and microprocessors
- To impart knowledge on typical components of operating systems and environments
- To provide in depth knowledge on data communication systems
- To impart detailed knowledge on networking systems
- To provide knowledge on internet services and tools for communication

MODULE I DIGITAL COMPUTERS & MICRO PROCESSORS 09

Block diagram - register transfer language - arithmetic, logic and shift micro operations - instruction code - training and control instruction cycle - I/O and interrupt design of basic computer. Machine language - assembly language - assembler.

Registers ALU and Bus Systems - timing and control signals - machine cycle and timing diagram - functional block diagrams of 80 x 86 and modes of operation. Features of Pentium Processors.

MODULE II OPERATING SYSTEM & ENVIRONMENTS 09

Types - functions - UNIX & WINDOWS - Architecture - Graphical User Interfaces- Compilers - Analysis of the Source program - the phases of a compiler - cousins of the compiler, the grouping of phases - compiler construction tools.

MODULE III COMMUNICATION MODEL 09

Data communication and networking - protocols and architecture - data transmission concepts and terminology - guided transmission media - wireless transmission - data encoding - asynchronous and synchronous communication - base band interface standards RS232C, RS449 interface.

MODULE IV COMPUTER NETWORKS 09

Network structure - network architecture - the OSI reference model services network standardization – example - Managing remote systems in network – cloud computing- on demand computing- high performance computing- network file systems.

MODULE V INTERNET 09

Internet services - Protocols - intranet information services - mail based service - system and network requirements - Internet tools - Usenet - e-mail - IRC - www - FTP - Telnet.

Total Hours: 45

REFERENCES:

1. Morris Mano. M., “Computer System Architecture”, Prentice Hall of India, 1996.
2. Gaonkar R.S., “Microprocessor Architecture, Programming and Applications of 8085”, Penram International, 1997
3. Peterson J.L., Galvin P. and Silberschaz, A., “Operating Systems Concepts”, Addison Wesley, 1997.
4. Alfred V. Aho, Ravi Setjhi, Jeffrey D Ullman, “Compilers Principles Techniques and Tools”, Addison Wesley, 1986.
5. William Stallings, “Data of Computer Communications”, Prentice Hall of India, 1997.
6. Andrew S. Tanenbanum “Computer Networks”, Prentice Hall of India 3rd Edition, 1996.
7. Christian Crumlish, “The ABC's of the Internet”, BPB Publication, 1996.

COURSE OUTCOMES:

At the end of the course students will be able to

- Analyse various digital computers and microprocessors
- Describe and identify typical components of operating systems and environments
- Analyse and design necessary data communication system
- Incorporate various networking systems and remote computing
- Identify and select suitable internet services and tools for communication

MECY023 INDUSTRIAL SAFETY MANAGEMENT

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the fundamentals of safety management.
- To acquire knowledge on the occupational hazards in extreme cases.
- To learn the safety measures followed in the Industry.
- To acquire knowledge on the safety standards that must be maintained with regulatory requirements.
- To learn the various safety laws in the work place.

MODULE I SAFETY MANAGEMENT 09

Evaluation of modern safety concepts - Safety management functions - safety organization, safety department - safety committee, safety audit - performance measurements and motivation - employee participation in safety - safety and productivity.

MODULE II OPERATIONAL SAFETY 09

Hot metal Operation - Boiler, pressure vessels - heat treatment shop - gas furnace operation - electroplating-hot bending pipes - Safety in welding and cutting. Cold-metal Operation - Safety in Machine shop - Cold bending and chamfering of pipes - metal cutting - shot blasting, grinding, painting - power press and other machines.

MODULE III SAFETY MEASURES 09

Layout design and material handling - Use of electricity - Management of toxic gases and chemicals - Industrial fires and prevention - Road safety - highway and urban safety - Safety of sewage disposal and cleaning - Control of environmental pollution - Managing emergencies in Industries - planning, security and risk assessments, on- site and off site. Control of major industrial hazards.

MODULE IV ACCIDENT PREVENTION 09

Human side of safety - personal protective equipment - Causes and cost of accidents. Accident prevention programmes - Specific hazard control strategies - HAZOP - Training and development of employees - First Aid- Fire fighting devices - Accident reporting, investigation.

MODULE V SAFETY, HEALTH, WELFARE & LAWS 09

Safety and health standards - Industrial hygiene - occupational diseases prevention - Welfare facilities - History of legislations related to Safety-pressure

vessel act-Indian boiler act - The environmental protection act - Electricity act - Explosive act.

Total Hours: 45

REFERENCES:

1. John V. Grimaldi and Rollin H. Simonds, “Safety Management”, All India Travelers bookseller, New Delhi-1989.
2. Krishnan N.V., “Safety in Industry”, Jaico Publisher House, 1996.
3. Occupational Safety Manual BHEL.
4. Industrial safety and the law by P.M.C. Nair Publisher's, Trivandrum.
5. Managing emergencies in industries, Loss Prevention of India Ltd., Proceedings, 1999.
6. Singh, U.K. and Dewan, J.M., “Safety, Security and risk management”, APH Publishing Company, New Delhi, 1996.

COURSE OUTCOMES:

Students will be able to

- Demonstrate safety concepts practiced in Industry.
- Analyze the required safety precautions under worst operating conditions.
- Evaluate the possible safety prevention measures while handling hazardous substances.
- Demonstrate an understanding of work place injury prevention and incident investigations.
- Students are expected to have knowledge in the safety laws to be followed at various places of the workplace.

MECY024	INTEGRATED MANUFACTURING SYSTEMS AND MANAGEMENT	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the various manufacturing strategies and the role of CIM in management.
- To acquire knowledge to select a suitable process in order to minimize waiting time in a system.
- To understand the importance of location of plant and facilities.
- To gain knowledge on Inventory systems, MRP and information control systems.
- To learn to use computers to increase the productivity.

MODULE I FIELD OF MANUFACTURING MANAGEMENT 09

Introduction – Manufacturing Strategies and competitiveness-Meeting the competitive Project management-Product Life Cycle – Role of CIM in Modern Manufacturing Management.

MODULE II DESIGNING OF PRODUCTION PROCESSES 09

Process selection-Process flow Design – Operations Technology -Waiting line management-Computer simulation of waiting lines – Quality management.

MODULE III DESIGN OF FACILITIES AND JOBS 09

Capacity and Requirement planning – Strategies – Planning service capacity-JIT –Facility location and layout-Job Design and Work measurement. – Lean Manufacturing.

MODULE IV INVENTORY SYSTEMS AND MRP 09

Definition-Purposes of Inventory-Inventory models-Fixed order Quantity models and Fixed-time period models - MRP Systems-MRP system structures-Improvements in the MRP system-Advanced MRP-type systems.

MODULE V INFORMATION SYSTEM FOR MANUFACTURING 09

Parts oriented production information system - concepts and structure - computerized production scheduling, online production control systems, Computer based production management system, computerized manufacturing information system - case study.

Total Hours: 45

REFERENCES:

1. Chase, Aquilano and Jacobs, Production and Operations Management, , Tata McGraw Hill, eighth Edition.
2. Robert A. Olsen, Manufacturing management: a quantitative approach,International Textbook Co, 1968.
3. Chary S.N., Production and Operations Management, Tata McGraw-Hill, 3rd Edition 2006.
4. Jay Heizer, Barry Render Production and Operations Management: Strategic and Tactical Decisions, Business & Economics – 1996.
5. Jae K. Shim, Joel G. Siegel, Operations Management,- Business & Economics – 1999.

COURSE OUTCOMES:

Students will be able to

- Analyze the various strategies adopted in a Management.
- Simulate various queuing techniques to select a suitable process.
- Evaluate the importance of location of plant layout.
- Predict the importance of Inventory systems.
- Apply the use of computers in creating data base for production scheduling.

MECY025 MANUFACTURING INFORMATION SYSTEMS

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To provide basic knowledge on MRP and production organization
- To impart knowledge on various types and components of data
- To provide in knowledge on various approach of database design
- To impart detailed knowledge on various components of manufacturing organization
- To provide knowledge on Information management for manufacturing

MODULE I INTRODUCTION 05

The evolution of order policies, from MRP to MRP II, the role of Production organization, Operations control.

MODULE II DATABASE 07

Terminologies - Entities and attributes - Data models, schema and subschema - Data Independence – ER Diagram - Trends in database.

MODULE III DESIGNING DATABASE 13

Hierarchical model - Network approach - Relational Data model -concepts, principles, keys, relational operations - functional dependence -Normalisation, types - Query languages.

MODULE IV MANUFACTURING CONSIDERATION 10

The product and its structure, Inventory and process flow - Shop floor control - Data structure and procedure -various model - the order scheduling module, input / output analysis module the stock status database – the complete IOM database.

MODULE V INFORMATION SYSTEM FOR MANUFACTURING 10

Parts oriented production information system - concepts and structure - computerised production scheduling, online production control systems, Computer based production management system, computerised manufacturing information system - case study.

Total Hours: 45

REFERENCES:

1. Luca G. Sartori, “Manufacturing Information Systems”, Addison-Wesley Publishing Company, 1988.
2. Date. C.J., “An Introduction to Database systems”, Narosa Publishing House, 1997.
3. Orlicky. G., “Material Requirements Planning”, McGraw-Hill Publishing Co., 1975.
4. Kerr. R, “Knowledge based Manufacturing Management”, Addison-wesley, 1991.

COURSE OUTCOMES:

At the end of the course students will be able to

- Analyse on MRP and production organization
- Analyse various types and components of database
- Analyse various approaches and Design the database
- Analyse various components of manufacturing database organization
- Analyse the Information management for manufacturing

MECY026	RELIABILITY AND TOTAL PRODUCTIVE MAINTENANCE	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To provide knowledge on basic concepts of reliability and failure analysis
- To impart knowledge on various reliability assessment and monitoring techniques
- To provide in knowledge on approach to reliability improvement
- To impart detailed knowledge on basics and types of maintainability
- To provide knowledge on various maintainability issues and remedies

MODULE I RELIABILITY CONCEPT AND FAILURE DATA ANALYSIS 11

Reliability definition – Quality and Reliability– Reliability mathematics – Reliability functions – Hazard rate – Measures of Reliability – Design life –A priori and posteriori probabilities – Mortality of a component –Bath tub curve – Useful life. Failure Data Analysis-Data collection –Empirical methods: Ungrouped/Grouped, Complete/Censored data – Time to failure distributions: Exponential, Weibull – Hazard plotting – Goodness of fit tests.

MODULE II RELIABILITY ASSESSMENT AND MONITORING 09

Different configurations – Redundancy – m/n system – Complex systems: RBD – Baye's method – Cut and tie sets – Fault Tree Analysis – Standby system. Reliability Monitoring-Life testing methods: Failure terminated – Time terminated – Sequential Testing –Reliability growth monitoring – Reliability allocation – Software reliability.

MODULE III RELIABILITY IMPROVEMENT 06

Analysis of downtime – Repair time distribution – System MTTR – Maintainability prediction – Measures of maintainability – System Availability – Replacement theory.

MODULE IV MAINTENANCE MODELS 10

Maintenance definition – Maintenance objectives – Maintenance management – Functions of maintenance department – Tero technology – Maintenance costs. Maintenance policies – Imperfect maintenance – PM versus b/d maintenance – Optimal PM schedule and product characteristics – Inspection decisions: Maximizing profit – Minimizing downtime – Replacement models.

MODULE V MAINTENANCE LOGISTICS, QUALITY AND TPM 09

Maintenance staffing – Human factors –Resource requirements: Optimal size of service facility – Optimal repair effort – Maintenance planning and scheduling – Spares planning – Capital spare. Five Zero concept –FMECA – Maintainability prediction– Design for maintainability – Maintainability allocation – Reliability Centered Maintenance. TPM fundamentals – Chronic and sporadic losses – Six big losses – OEE as a measure – TPM pillars– Autonomous maintenance –TPM implementation.

Total Hours: 45

4. Bikas Badhury & S.K.Basu, “Tero Technology: Reliability Engineering and Maintenance Management”, Asian Books, 2003.
5. Seichi Nakajima, “Total Productive Maintenance”, Productivity Press, 1993.

COURSE OUTCOMES:

At the end of the course students will be able to

- Analyse reliability and failure in mechanical systems
- Assess reliability
- Analyse various monitoring and reliability improvement techniques
- Analyse the maintainability of equipment
- Analyse various maintainability issues and remedies

MECY027 PRODUCT LIFE CYCLE MANAGEMENT

L	T	P	C
1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To provide basic knowledge Product Life Cycle Management
- To provide in knowledge on PLM concepts
- To understand PLM strategy and assessment

MODULE I INTRODUCTION TO PRODUCT LIFE CYCLE MANAGEMENT (PLM) 05

Definition- PLM Lifecycle model-Threads of PLM-Need for PLM- Opportunities and benefits of PLM- Views, Components and Phases of PLM- PLM feasibility study-PLM visioning.

MODULE II PLM CONCEPTS AND PROCESSES 05

Characteristics of PLM- Environment driving PLM- PLM Elements- Drivers of PLM-Conceptualization- Design- Development-Validation- Production-, Support of PLM

MODULE III PLM STRATEGY AND ASSESSMENT 05

Strategy, Impact of strategy, implementing a PLM strategy, PLM initiatives to support corporate objectives. Infrastructure assessment, assessment of current systems and applications.

Total Hours: 15

REFERENCES:

1. Grieves, Michael. Product Lifecycle Management, McGraw-Hill, 2006.
2. Product Life Cycle Management - by Antti Saaksvuori, Anselmi Immonen, Springer, 1st Edition, 2003
3. Stark, John. Product Lifecycle Management: Paradigm for 21st Century Product Realisation, Springer-Verlag, 2004.
4. Team Center Engineering and Product Lifecycle Management Basics, by Stephen M. Samuel; Eric D. Weeks and Mark A. Kelley

COURSE OUTCOMES:

At the end of the course students will be able to

- Realize the importance of PLM in CAD/CAM
- Analyse and identify PLM processes
- Design and assess PLM strategy

GENERAL ELECTIVES

GECY101	PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

The objectives of the course would be to make the students

- Learn to e valuate and choose an optimal project and build a project profile.
- Attain knowledge on risk identification and risk analysis
- Gain insight into a project plan and components
- Familiar with various gamut of technical analysis for effective project implementation
- Learn to apply project management techniques to manage resources.

MODULE I INTRODUCTION & PROJECT INITIATION 09

Introduction to project and project management - projects in contemporary organization – The project life cycle - project initiation - project evaluation methods & techniques - project selection criteria - project profile.

MODULE II RISK ANALYSIS 09

Sources of risk: project specific - competitive - industry specific - market and international risk – perspectives of risk – risk analysis: sensitivity analysis - scenario analysis - breakeven analysis - simulation analysis - decision tree analysis – managing/mitigating risk – project selection under risk.

MODULE III PROJECT PLANNING & IMPLEMENTATION 09

Project planning – importance – functions - areas of planning - project objectives and policies - steps in planning process - WBS – capital requirements - budgeting and cost estimation - feasibility analysis - creation of project plan – project implementation: pre-requisites - forms of project organization

MODULE IV TECHNICAL ANALYSIS 09

Technical analysis for manufacturing/construction/infrastructure projects – process/technology - materials and inputs - product mix - plant capacity – plant location and site selection – plant layout - machinery and equipment – structures and civil works – schedule of project implementation – technical analysis for software projects.

MODULE V PROJECT MANAGEMENT TECHNIQUES 09

Project scheduling - network construction – estimation of project completion time – identification of critical path - PERT & CPM – crashing of project network - complexity of project scheduling with limited resources - resource allocation - resource leveling – resource smoothing – overview of project management software.

Total Hours: 45

REFERENCES:

1. Projects: Planning, Analysis, Financing, Implementation and Review, Prasanna Chandra, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2004.
2. Project Management and Control, Narendra Singh, Himalaya Publishing, New Delhi, 2015.
3. A Management Guide to PERT/CPM, Jerome, D. Weist and Ferdinand K. Levy, Prentice Hall of India, New Delhi, 1994.

OUTCOMES:

On successfully completing this course, the student will be able to:

- Evaluate & select a project as well as develop a project profile.
- Identify various risks associated with the project and manage it effectively.
- Prepare a detailed project plan addressing its components.
- Perform technical analysis for effective project implementation
- Apply project management techniques for maximizing resource utilization.

GECY102 SOCIETY, TECHNOLGY & SUSTAINABILITY

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- To understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

MODULE I TECHNOLOGY AND ITS IMPACTS 09

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life – Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT 09

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change.

MODULE III SOCIETY AND TECHNOLOGY 09

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of technology – Impact of technology on developer and consumers – Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE 09

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media

Technology – Information Systems Technology – Nanotechnology – Space Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY 09

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

Total Hours: 45

REFERENCES:

1. Volti Rudi, “Society and Technology Change”, 6th Edition, Worth publishers Inc, USA, 2009.
2. Arthur W.A, “The nature of Technology: What it is and how it evolves”, Free Press, NY, USA, 2009.

4. Martin A.A Abraham, “Sustainability Science and Engineering: Defining Principles”, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

COURSE OUTCOMES:

At the end of this course, the students will be able to

- Understand the benefits of modern technology for the well-being of human life.
- Connect sustainability concepts and technology to the real world challenges.
- Find pathway for sustainable society.

GECY103 ARTIFICIAL INTELLIGENCE

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- Expose the history and foundations of artificial intelligence.
- Showcase the complexity of working on real time problems underlying the need for intelligent approaches.
- Illustrate how heuristic approaches provide a good solution mechanism.
- Provide the mechanisms for simple knowledge representation and reasoning.
- Highlight the complexity in working with uncertain knowledge.
- Discuss the current and future applications of artificial intelligence.

MODULE I HISTORY AND FOUNDATIONS 08

History – Scope – Influence from life – Impact of computing domains - Agents in environments - Knowledge representation – Dimensions of Complexity – Sample application domains – Agent structure.

MODULE II SEARCH 10

Problem solving as search – State spaces – Uninformed Search – Heuristic search – Advanced search – Constraint satisfaction - Applications.

MODULE III KNOWLEDGE REPRESENTATION AND REASONING 10

Foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

MODULE IV REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE 08

Probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference, sample applications.

MODULE V CASE STUDY AND FUTURE APPLICATIONS 09

Design of a game / Solution for problem in student's domain. Natural Language processing, Robotics, Vehicular automation – Scale, Complexity, Behaviour – Controversies.

Total Hours: 45

TEXT BOOK:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2010.
2. David Poole, Alan Mackworth, Artificial Intelligence: Foundations of Computational Agents, Cambridge University Press, 2010.
3. Nils J. Nilsson, The Quest for Artificial Intelligence, Cambridge University Press, Online edition, 2013.
4. Keith Frankish, William M. Ramsey (eds) The Cambridge Handbook of Artificial Intelligence, Cambridge University Press, 2014.

COURSE OUTCOMES:

Students who complete this course will be able to

- Discuss the history, current applications, future challenges and the controversies in artificial intelligence.
- Apply principle of AI in the design of an agent and model its actions.
- Design a heuristic algorithm for search problems.
- Analyze and represent the fact using logic for a given scenario
- Represent uncertainty using probabilistic models
- Develop a simple game or solution using artificial intelligence techniques.

GECY104 GREEN COMPUTING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To focus on the necessity of green computing technology.
- To expose to various issues with information technology and sustainability.
- To attain knowledge on the technologies for enabling green cloud computing.
- To elaborate on the energy consumption issues
- To illustrate a Green and Virtual Data Center
- To develop into a Green IT Technologist.

MODULE I INTRODUCTION 08

Trends and Reasons to Go Green - IT Data Center Economic and Ecological Sustainment - The Growing Green Gap: Misdirected Messaging, Opportunities for Action - IT Data Center “Green” Myths and Realities - PCFE Trends, Issues, Drivers, and Related Factors - Green Computing and Your Reputation- Green Computing and Saving Money- Green Computing and the Environment

MODULE II CONSUMPTION ISSUES 10

Minimizing power usage – Cooling - Electric Power and Cooling Challenges - Electrical – Power -Supply and Demand Distribution - Determining Energy Usage - From Energy Avoidance to Efficiency - Energy Efficiency Incentives, Rebates, and Alternative Energy Sources - PCFE and Environmental Health and Safety Standards- Energy-exposed instruction sets- Power management in power-aware real-time systems.

MODULE III NEXT-GENERATION VIRTUAL DATA CENTERS 09

Data Center Virtualization - Virtualization beyond Consolidation - Enabling Transparency - Components of a Virtual Data Center - Datacenter Design and Redesign - Greening the Information Systems - Staying Green- Building a Green Device Portfolio- Green Servers and Data Centers- Saving Energy

MODULE IV TECHNOLOGIES FOR ENABLING GREEN AND VIRTUAL DATA CENTERS 08

Highly Effective Data Center Facilities and Habitats for Technology - Data Center Electrical Power and Energy Management - HVAC, Smoke and Fire Suppression

- Data Center Location - Virtual Data Centers Today and Tomorrow - Cloud Computing, Out-Sourced, and Managed Services.

MODULE V SERVERS AND FUTURE TRENDS OF GREEN COMPUTING 10

Server Issues and Challenges - Fundamentals of Physical Servers - Types, Categories, and Tiers of Servers - Clusters and Grids - Implementing a Green and Virtual Data Center - PCFE and Green Areas of Opportunity- 12 Green Computer Companies- What's in Green computer science-Green off the Grid aimed for data center energy evolution-Green Grid Consortium- Green Applications- Green Computing Making Great Impact On Research

Total Hours: 45

6. Marty Poniatowski, "Foundation of Green IT: Consolidation, Virtualization, Efficiency, and ROI in the Data Center", Printice Hall, ISBN: 9780-1-3704-375-0, 2009.

COURSE OUTCOMES:

Students who complete this course will be able to

- Demonstrate issues relating to a range of available technologies, systems and practices to support green computing.
- Select appropriate technologies that are aimed to reduce energy consumption.
- Address design issues needed to achieve an organizations' green

computing objectives.

- Analyze the functionality of Data Centers.
- Critically evaluate technologies and the environmental impact of computing resources for a given scenario.
- Compare the impact of Green Computing with other computing techniques.

GECY105 GAMING DESIGN

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To master event-based programming
- To learn resource management as it relates to rendering time, including level-of-detail and culling.
- To become familiar with the various components in a game or game engine.
- To explore leading open source game engine components.
- To become familiar of game physics.
- To be compatible with game animation.

MODULE I INTRODUCTION 09

Magic Words – What Skills Does a Game Designer Need? – The Most Important Skill -The Five Kinds of Listening-The Secret of the Gifted.

MODULE II THE DESIGNER CREATES AN EXPERIENCE 09

The Game Is Not the Experience -Is This Unique to Games? -Three Practical Approaches to Chasing Rainbows -Introspection: Powers, Perils, and Practice -Dissect Your Feelings -Defeating Heisenberg -Essential Experience.

MODULE III THE EXPERIENCE IN THE PLAYER MIND AND GAME MECHANICS 08

Modeling – Focus -Empathy – Imagination – Motivation – Space – Objects, Attributes, and States – Actions – Rules.

MODULE IV GAMES THROUGH AN INTERFACE 09

Breaking it Down – The Loop of Interaction – Channels of Information – Other Interface.

MODULE V BALANCED GAME MECHANICS 10

Balance – The Twelve Most Common Types of Game Balance – Game Balancing Methodologies - Balancing Game Economies.

Total Hours: 45

REFERENCES:

1. Jesse Schell, "The Art of Game Design: A Book of Lenses", 2nd Edition

ISBN-10: 1466598646, 2014.

2. Ashok Kumar, Jim Etheredge, Aaron Boudreaux, “Algorithmic and Architectural Gaming Design: Implementation and Development", 1st edition, Idea Group, U.S ISBN-10: 1466616342, 2012.

4. James M. Van Verth, Lars M. Bishop "Essential Mathematics for Games and Interactive Applications", Third Edition, A K Peters / CRC Press, ISBN-10: 1482250926, 2015.

COURSE OUTCOMES:

Students who complete this course will be able to

- Realize the basic history and genres of games
- Demonstrate an understanding of the overall game design process
- Explain the design tradeoffs inherent in game design
- Design and implement basic levels, models, and scripts for games
- Describe the mathematics and algorithms needed for game programming
- Design and implement a complete three-dimensional video game

GECY106 SOCIAL COMPUTING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To create original social applications, critically applying appropriate theories and effective practices in a reflective and creative manner.
- To critically analyze social software in terms of its technical, social, legal, ethical, and functional features or affordances.
- To encourage the development of effective communities through the design, use, and management of social software.
- To give students with a base of knowledge and advances for them to critically examine existing social computing services.
- To plan and execute a small-scale research project in social computing in a systematic fashion.
- To become familiar with the concept of computational thinking.

MODULE I BASIC CONCEPTS 09

Networks and Relations: Relations and Attributes, Analysis of Network Data, Interpretation of network data -New Social Learning – Four Changes that Shift Work - Development of Social Network Analysis: Sociometric analysis and graph theory, Interpersonal Configurations and Cliques – Analysing Relational Data.

MODULE II SOCIAL LINK 09

Individual Actors, Social Exchange Theory, Social Forces, Graph Structure, Agent Optimization Strategies in Networks – Hierarchy of Social Link Motivation- Social Context.

MODULE III SOCIAL MEDIA 08

Trends in Computing – Motivations for Social Computing – Social Media: Social relationships, Mobility and Social context – Human Computation – Computational Models- Business use of social Media.

MODULE IV SOCIAL INFORMATION FILTERING 09

Mobile Location Sharing – Location based social media analysis – Social Sharing and Social Filtering – Automated recommender Systems – Traditional and Social Recommender Systems.

MODULE V SOCIAL NETWORK STRATEGY 10

Application of Topic Models – Opinions and Sentiments – Recommendation Systems – Language Dynamics and influence in online communities – Psychometric analysis – Case Study: Social Network Strategies for surviving the zombie apocalypse.

Total Hours: 45

REFERENCES:

6. Jennifer Golbeck, “Analyzing the Social Web”, Elsevier Publication, 2013.
7. Huan Liu, John Salerno, Michael J. Young, “Social computing and Behavioral Modeling”, Springer Publication, 2009.

COURSE OUTCOMES:

Students who complete this course will be able to

- Realize the range of social computing applications and concepts.
- Analyze data left after in social media.
- Recognize and apply the concepts of computational models underlying social computing.
- Take out simple forms of social diagnostics, involving network and language models, applying existing analytic tools on social information.
- Evaluate emerging social computing applications, concepts, and techniques in terms of key principles.
- Design and prototype new social computing systems.

GECY107 SOFT COMPUTING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

The aim of the course is to

- Enumerate the strengths and weakness of soft computing
- Illustrate soft computing methods with other logic driven and statistical method driven approaches
- Focus on the basics of neural networks, fuzzy systems, and evolutionary computing
- Emphasize the role of euro-fuzzy and hybrid modeling methods
- Trace the basis and need for evolutionary computing and relate it with other soft computing approaches

MODULE I SOFT COMPUTING - BASICS 06

Soft computing – Hard Computing – Artificial Intelligence as the basis of soft computing – Relation with logic driven and statistical method driven approaches- Expert systems – Types of problems: Classification, Functional approximation, Optimizations – Modeling the problem – Machine Learning – Hazards of Soft Computing – Current and future areas of research

MODULE II ARTIFICIAL NEURAL NETWORK 12

Artificial Neuron – Multilayer perceptron – Supervised learning – Back propagation network –Types of Artificial Neural Network: Supervised Vs Un Supervised Network – Radial basis function Network – Self Organizing Maps – Recurrent Network – Hopfield Neural Network – Adaptive Resonance Theory – Issues in Artificial Neural Network – Applications

MODULE III FUZZY SYSTEMS 09

Fuzzy Logic – Membership functions – Operators – Fuzzy Inference systems – Other sets: Rough sets, Vague Sets – Fuzzy controllers - Applications

MODULE IV NEURO FUZZY SYSTEMS 09

Cooperative Neuro fuzzy systems – Neural network driven fuzzy reasoning – Hybrid Neuro fuzzy systems – Construction of Neuro Fuzzy systems: Structure Identification phase, Parameter learning phase – Applications

MODULE V EVOLUTIONARY COMPUTING 09

Overview of evolutionary computing – Genetic Algorithms and optimization –

Genetic Algorithm operators – Genetic algorithms with Neural/Fuzzy systems – Variants of Genetic Algorithms– Population based incremental learning – Evolutionary strategies and applications

Total Hours: 45

TEXTBOOKS:

1. Samir Roy, “Introduction to Soft Computing: Neuro-Fuzzy and Genetic Algorithms”, Pearson, 2013
2. Anupam Shukla, Ritu Tiwari and Rahul Kala, “Real life applications of Soft Computing”, CRC press, 2010.
3. Fakhreddine O. Karray, “Soft Computing and Intelligent Systems Design: Theory, Tools and Applications”, Pearson, 2009

COURSE OUTCOMES:

At the end of the course the students will be able to

- Enumerate the theoretical basis of soft computing
- Explain the fuzzy set theory
- Discuss the neural networks and supervised and unsupervised learning networks
- Demonstrate some applications of computational intelligence
- Apply the most appropriate soft computing algorithm for a given situation

GECY108 EMBEDDED SYSTEM PROGRAMMING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To introduce the design of embedded computing systems with its hardware and software architectures.
- To describe entire software development lifecycle and examine the various issues involved in developing software for embedded systems.
- To analyze the I/O programming and Embedded C coding techniques
- To equip students with the software development skills necessary for practitioners in the field of embedded systems.

MODULE I INTRODUCTION OF EMBEDDED SYSTEM 09

Embedded computing – characteristics and challenges – embedded system design process – Overview of Processors and hardware units in an embedded system – Compiling, Linking and locating – downloading and debugging – Emulators and simulators processor – External peripherals – Memory testing – Flash Memory.

MODULE II SOFTWARE TECHNOLOGY 09

Software Architectures, Software development Tools, Software Development Process Life Cycle and its Model, Software Analysis, Design and Maintenance.

MODULE III INPUT/OUTPUT PROGRAMMING 09

I/O Instructions, Synchronization, Transfer Rate & Latency, Polled Waiting Loops, Interrupt – Driven I/O, Writing ISR in Assembly and C, Non Maskable and Software Interrupts

MODULE IV DATA REPRESENTATION IN EMBEDDED SYSTEMS 09

Data representation, Twos complement, Fixed point and Floating Point Number Formats, Manipulating Bits in -Memory, I/O Ports, Low level programming in C, Primitive data types, Arrays, Functions, Recursive Functions, Pointers, Structures & Unions, Dynamic Memory Allocation, File handling, Linked lists, Queues, Stacks.

MODULE V EMBEDDED C 09

Embedded Systems programming in C – Binding & Running Embedded C program in Keil IDE – Dissecting the program - Building the hardware. Basic techniques for

reading & writing from I/O port pins – switch bounce - LED Interfacing using Embedded C.

Total Hours: 45

REFERENCES:

1. Marilyn Wolf, "Computers as components ", Elsevier, 2012.
2. Qing Li and Carolyn Yao, "Real-Time Concepts for Embedded Systems", CMP Books, 2003.
3. Daniel W. Lewis, "Fundamentals of embedded software where C and assembly meet", Pearson Education
4. Michael Bass, "Programming Embedded Systems in C and C++", Oreilly, 2003.

COURSE OUTCOMES:

On completion of this course the student will be able to

- Design the software and hardware components in embedded system
- Describe the software technology
- Use interrupt in effective manner
- Use keil IDE for programming
- Program using embedded C for specific microcontroller
- Design the embedded projects

GECY109 PRINCIPLES OF SUSTAINABLE DEVELOPMENT

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To impart knowledge in the concepts and dimensions of sustainable development.
- To gain knowledge on the framework for achieving sustainability.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 09

Environment and Development - Population poverty and Pollution – Global and Local environmental issues – Resource Degradation- Greenhouse gases – Desertification-industrialization – Social insecurity, Globalization and environment. History and emergence of the concept of sustainable development-Objectives of Sustainable Development.

MODULE II COMPONENTS AND DIMENSIONS OF SUSTAINABLE DEVELOPMENT 09

Components of Sustainability – Complexity of growth and equity – Social economic and environmental dimensions of sustainable development – Environment – Biodiversity – Natural – Resources – Ecosystem integrity – Clean air and water – Carrying capacity – Equity, Quality of Life, Prevention, Precaution – Preservation and Public Participation Structural and functional linking of developmental dimensions.

MODULE III FRAMEWORK FOR ACHIEVING SUSTAINABILITY 09

Operational guidelines – interconnected prerequisites for sustainable development Empowerment of Women, children, Youth, Indigenous People, Non-Governmental Organizations Local Authorities, Business and industry – Science and Technology for sustainable development – performance indicators of sustainability and assessment mechanism – Constraints and barriers for sustainable development.

MODULE IV SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 09

Demographic dynamics of sustainability – Policies for socio-economic development – Strategies for implementing eco-development programmes Sustainable development through trade – Economic growth – Action plan for implementing sustainable development – Urbanization and sustainable Cities – Sustainable Energy and Agriculture – sustainable livelihoods.

MODULE V SUSTAINABLE DEVELOPMENT AND INTERNATIONAL RESPONSE 09

Role of developed countries in the development of developing countries – international summits – Stockholm to Johannesburg – Rio principles – Agenda-Conventions – Agreements – Tokyo Declaration – Doubling statement – Tran boundary issues integrated approach for resources protection and management

Total Hours: 45

REFERENCES:

1. Sayer J. and Campbell, B., The Science of Sustainable Development: Local Livelihoods and the Global environment - Biological conservation restoration & Sustainability, Cambridge university Press, London, 2003.
2. M.K. Ghosh Roy. and Timberlake, Sustainable Development, Ane Books Pvt. Ltd, 2011.
3. Mackenthun K.M., Concepts in Environmental Management, Lewis Publications London, 1999.
4. APJ Abdul Kalam and Srijan Pal Singh, Target 3 Billion: Innovative Solutions Towards Sustainable Development, Penguin India, 2011

COURSE OUTCOMES:

At the end of the course the student will be able to

- Describe the concepts of sustainable development
- Define the components and dimensions of sustainable development
- Outline the Frame work for achieving sustainability.
- State the policies and strategies for implementing sustainable development for Socio economic programmes.
- Examine the role of developed countries in sustainable development.

GECY110	QUANTITATIVE TECHNIQUES IN MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart knowledge on

- Concepts of operations research
- Inventory control in production management
- Financial management of projects
- Decision theory and managerial economics

MODULE I OPERATIONS RESEARCH 09

Introduction to Operations research – Linear programming – Graphical and Simplex Methods, Duality and Post-Optimality Analysis – Transportation and Assignment Problems

MODULE II PRODUCTION MANAGEMENT 09

Inventory control, EOQ, Quantity Discounts, Safety Stock – Replacement Theory – PERT and CPM – Simulation Models – Quality Control.

MODULE III FINANCIAL MANAGEMENT 09

Working Capital Management – Compound Interest and Present Value methods – Discounted Cash Flow Techniques – Capital Budgeting.

MODULE IV DECISION THEORY 09

Decision Theory – Decision Rules – Decision making under conditions of certainty, risk and uncertainty – Decision trees – Utility Theory.

MODULE V MANAGERIAL ECONOMICS 09

Cost concepts – Break even Analysis – Pricing techniques – Game Theory applications.

Total Hours: 45

REFERENCES:

1. Vohra, N.D. , Quantitative Techniques in Management, Tata McGraw Hill Co., Ltd, New Delhi, 2009.
2. Seehroeder, R.G., Operations Management, McGraw Hill, USA, 2002.
3. Levin, R.I, Rubin, D.S., and Stinsonm J., Quantitative Approaches to Management, McGraw Hill Book Co., 2008.

4. Frank Harrison, E., The Managerial Decision Making Process, Houghton Miffin Co. Boston, 2005.
5. Hamdy A. Taha, Operations Research- An Introduction, Prentice Hall, 2002.

OUTCOME:

At the end of the course, the students will be able to

- Apply the concepts of operations research for various applications
- Create models for inventory control in production management
- Compute the cash flow for a project
- Choose a project using decision theory based on the risk criterion.
- Apply the concepts of managerial economics in construction management

GECY111 PROGRAMMING USING MATLAB & SIMULINK

L	T	P	C
1	0	2	2

COURSE EDUCATIONAL OBJECTIVES:

The aim of this course is to:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION TO MATLAB AND DATA PRESENTATION 10

Introduction to MATLAB-Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts- Making clear and compelling plots-Solving systems of linear equations numerically and symbolically.

Lab Experiments

1. Study of basic matrix operations and manipulations.
2. Numerical and symbolical solution of linear equations.

MODULE II ROOT FINDING AND MATLAB PLOT FUNCTION 10

Linearization and solving non-linear systems of equations- The Newton-Raphson method- Integers and rational numbers in different bases- Least squares regression -Curve fitting-Polynomial fitting and exponential fitting.

Lab Experiments

1. Solution of non linear equations using Newton-Raphson method.
2. Determination of polynomial fit and exponential fit for the given data.

MODULE III LINEAR AND NON-LINEAR DIFFERENTIAL EQUATIONS 13

Numerical integration and solving first order, ordinary differential equations (Euler's method and Runge-Kutta) - Use of ODE function in MATLAB- Converting second order and higher ODEs to systems of first order ODEs- Solving systems of higher order ODEs via Euler's method and Runge-Kutta) - Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations - Plot Function –Saving & Painting Plots.

Lab Experiments

1. Solution of fourth order linear differential equations using
    a. Trapezoidal Rule

b. Euler method

2. Solution of fourth order non-linear differential equations using
   a. Modified Euler method
   b. Runge – Kutta method

MODULE IV INTRODUCTION OF SIMULINK 12

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- - Representing a model as a subsystem- Programme specific Simulink demos.

Lab Experiments

1. Solution of fourth order non-linear differential equations using simulink.
2. Programme specific experiment based on simulink.

Total Hours (Including Practicals): 45

REFERENCE:

1. Griffiths D V and Smith I M, “Numerical Methods for Engineers”, Blackwell, 1991.
2. Laurene Fausett, “Applied Numerical Analysis Using MATLAB”, Pearson 2008.

4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB”, CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving, “Mathematical Exploration with MATLAB”, Cambridge University Press, 1999.

COURSE OUTCOMES:

At the end of this unit students will be able to:

- Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
- Write programs using first principles without automatic use of built-in ones.
- Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
- Be fluent in exploring Matlab’s capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
- Make use of Maltab visual capabilities for all engineering applications.

- An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECY112 JAVA PROGRAMMING

L	T	P	C
1	0	2	2

COURSE EDUCATIONAL OBJECTIVES:

- To learn the fundamentals of Java programming such as data types, variables and arrays.
- To study the syntax and necessity of decision making and iterative statements.
- To create a class and invoke the methods.
- To instigate programming in overloading of methods.
- To emphasize the concept of packages.
- To learn the exception handling routines.

MODULE I INTRODUCTION TO JAVA PROGRAMMING 08

History and Evolution of Java – Overview of Java – Data types, variables and arrays – Operators – Control statements.

MODULE II METHODS AND CLASSES 07

Class fundamentals – Declaring objects – Methods – Constructors – Garbage collection – Overloading methods – Constructor overloading – Access control – Inheritance – Packages - Exception handling.

L: 15, P: 30, Total Hours: 15

REFERENCES:

1. Herbert Schildt, “Java The Complete Reference”, 9th Edition, Oracle Press, 2014, ISBN: 978007180855-2.
2. Nicholas S. Williams, **“**Professional Java for Web Applications: Featuring WebSockets, Spring Framework, JPA Hibernate and Spring Security (WROX)”, John Wiley & Sons, 2014, ISBN: 978111865651-8.

4. Yashavant Kanetka**, “**Let Us Java”, 2nd Edition, BPB Publications, 2012**.**

COURSE OUTCOMES:

Students who complete this course will be able to

- Implement basic Java programming.
- Create a class and invoke methods for real world problems.

- Construct simple overloading of methods programs.
- Implement various types of inheritance concepts.
- Describe the access control mechanism.
- Handle exception thrown while implementing programming.

GECY113 PYTHON PROGRAMMING

L	T	P	C
1	0	2	2

COURSE EDUCATIONAL OBJECTIVES:

- To learn the list and records of python programming.
- To study the control statements and string functions of python.
- To instigate the fundamental python programming.
- To emphasize GUI in python.
- To integrate python with embedded systems.
- To implement programs in python.

MODULE I INTRODUCTION TO PYTHON PROGRAMMING 08

Installation and environment set up – syntax used in python – variable types – operators – Loops – decision making – string functions - formatted files - GUI basics.

MODULE II EMBEDDED PROGRAMMING USING PYTHON 07

Web interface – system tools – script execution context - Motion-triggered LEDs – Python - Arduino prototyping-storing and plotting Arduino data-Remote home monitoring system.

L: 15, P: 30, Total Hours: 15

5. Michael Barr, Anthony Massa, “Programming Embedded Systems”, 2nd Edition, O'Reilly Media, 2006.

COURSE OUTCOMES:

Students who complete this course will be able to

- Implement date and time function programming using python.

- Write formatted file programming.
- Construct simple python programs.
- Create web interface using python programming
- Develop embedded system with python programming.
- Build Arduino prototype using python programming.

GECY114 INTELLECTUAL PROPERTY RIGHTS (IPR)

L	T	P	C
1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To study about Intellectual property rights and its need
- To explore the patent procedure and related issues

MODULE I INTRODUCTION 07

Introduction and the need for intellectual property right (IPR) – IPR in India – Genesis and Development – IPR in abroad – Important examples of IPR – Copyrights, Trademarks, Patents, Designs, Utility Models, Trade Secrets and Geographical Indications – Industrial Designs

MODULE II PATENT 08

Concept of Patent – Product / Process Patents & Terminology – Duration of Patents – Law and Policy Consideration Elements of Patentability –- Patentable Subject Matter – Procedure for Filing of Patent Application and types of Applications – Procedure for Opposition – Revocation of Patents – Working of Patents- Patent Agent – Qualification and Registration Procedure – Patent databases and information system – Preparation of patent documents – Process for examination of patent application- Patent infringement – Recent developments in patent system

Total Hours: 15

8. Jatindra Kumar Das, Law of Copyright, PHI Learning, 2015

COURSE OUTCOMES:

Students should be able to

- Identify the various types of intellectual property and their value
- Apply the procedure to file a patent and to deal the related issues
- Search and extract relevant information from various intellectual database

VISION AND MISSION OF THE DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

VISION

The vision of the Department of Computer Science and engineering is to impart quality education, inculcate professionalism and enhance the problem solving skills of the students in the domain of Computer Science and Engineering with a focus to make them industry ready, involve in possible areas of research, to pursue and have continual professional growth.

MISSION

- To equip the students with strong fundamental concepts, analytical capability, programming and problem solving skills.
- To create an academic environment conducive for higher learning through faculty training, self learning, sound academic practices and research endeavors.
- To provide opportunities in order to promote organizational and leadership skills in students through various co-curricular and extra – curricular activities
- To make the students industry ready and to enhance their employability through training and internships.
- To improve department industry collaboration through interaction including participation in professional society activities, guest lecturers and industrial visit.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

M. Tech. (Computer Science and Engineering)

PROGRAMME EDUCATIONAL OBJECTIVES

- To provide advanced knowledge and skills in the field of Computer Science and Engineering.
- To provide essential skill sets needed for Software Development as per the Industry requirements.
- To instill confidence and provide necessary ambience to take up fundamental as well as applied Research in Computer related domains with social relevance.
- To impart required analytical skills and tools for solving problems with varied complexity.
- To hone necessary skills to effectively communicate, work as a team for a successful professional career.

PROGRAMME OUTCOMES

On completion of the programme the graduates will

- have the capability to design and develop computer based systems for different domains.
- be able to apply the knowledge of computing tools and techniques for solving real life problems encountered in Software Industries.
- be able to pursue quality research in areas of social relevance.
- be able to work as a team exhibiting effective managerial skills.

CURRICULUM & SYLLABI FOR
M. Tech. (Computer Science and Engineering)

CURRICULUM

Sl. No.	Course Code	Course Title	L	T	P	C
		SEMESTER I				
1	MAC6181	Applied Algebra and Discrete Algorithms	**3**	**1**	**0**	**4**
2	CSC6101	Advanced Computer Architecture	**3**	**1**	**0**	**4**
3	CSC6102	Algorithm Design and Implementation	**3**	**0**	**2**	**4**
4	CSC6103	Computer Networks and Management	**2**	**0**	**2**	**3**
5	CSC6104	Distributed Operating System	**3**	**0**	**0**	**3**
6	CSC6105	Advanced Software Engineering	**3**	**0**	**0**	**3**
7	CSC6106	Case Study 1	**0**	**0**	**2**	**1**
						22
		SEMESTER II				
1	GEC6201	Research Methodology For Engineers	**3**	**0**	**0**	**3**
2	CSC6201	Machine Learning Techniques	**2**	**0**	**2**	**3**
3	CSC6202	Applied Cryptography & Network Security	**3**	**0**	**2**	**4**
4		Professional Electives #				**9**
						19
		SEMESTER III				
1	CSC7102	Internship* / Term paper	**0**	**0**	**2**	**1**
2		Professional Electives ##				**9**
3		General Elective	**3**	**0**	**0**	**3**

Sl. No.	Course Code	Course Title	L	T	P	C
4	CSC7101	Project – Phase I	**0**	**0**	**12**	**6**
						13
		SEMESTER IV				
1	CSC7101	Project – Phase II	**0**	**0**	**36**	**18**
						6+18=24
		TOTAL CREDITS				**78**

- Student has to take a minimum of 9 credits from the list of Electives.

* - Internship must be taken after the completion of II semester examinations.

- Student has to take a minimum of 9 credits from the list of Electives.

PROFESSIONAL ELECTIVES

Sl. No.	Course Code	Course Title	L	T	P	C
		LIST OF ODD SEMESTER ELECTIVES				
1	CSCY101	Data warehousing and Data mining	**3**	**0**	**0**	**3**

SEMESTER I

MAC6181	APPLIED ALGEBRA AND DISCRETE ALGORITHMS	L	T	P	C
		3	1	0	4

OBJECTIVES :

The aim of this course is to

- Make the students familiarize on the concepts of mathematical induction and codes.
- Motivate the students to solve problems applying techniques of logic.
- To have a knowledge on the concepts of Formal languages and Automata theory.
- Familiarize students with basics of graph theory.
- Train the students in applying the basic concepts of Cryptography.

MODULE I INTEGERS, COMPUTER ALGEBRA AND CODES 09+03

Integers – computer algebra versus numerical analysis – sums and products – mathematical induction – Binary, Hexadecimal, ASCII, Morse, Braille, Two out of Five and Hollerith Codes.

MODULE II LOGIC 09+03

Propositional logic – logical connectives – truth tables – normal forms (conjunctive and disjunctive) – solving word problems - predicate logic - universal and existential quantifiers - proof techniques – direct and indirect – proof by contradiction – applications.

MODULE III MODELING, COMPUTATION AND LANGUAGES 09+03

Finite state machines - deterministic and non-deterministic finite state machines - classes of grammars - phrase structure grammar - context sensitive - context-free - regular grammars - formal languages - ambiguity - Turing machines.

MODULE IV GRAPH THEORY 09+03

Multigraphs - applications of graph theory - classes of graphs - subgraphs and morphisms - Hamilton circuits – planar graphs – shortest paths and spanning.

MODULE V CIPHERS 09+03

Cryptography - cryptanalysis - substitution and permutation ciphers – block cipher – the playfair cipher – unbreakable ciphers – applications.

L – 45; T – 15

TEXT BOOKS:

1. Hopcraft, J. E, R. Motwani and Ullman, J. D, 'Introduction to Automata theory, Languages and Computation', Narosa publishing House, 4th edition 2006.
2. Kenneth H. Rosen, "Discrete Mathematics and its Applications", 7th edition, Tata McGraw-Hill Publishing Company Limited, New Delhi, 2015.
3. J.P. Tremblay and R. Manohar, "Discrete Mathematical Structures with Applications to Computer Science", Tata McGraw Hill, 1997.

REFERENCES:

1. Juraj Hromkovic, Theoretical Computer Science: Introduction to Automata, Computability, Complexity, Algorithmics, Randomization, Communication and Cryptography, Springer, 2003.
2. Darel W. Hardy, Fred Richman, Carol L. Walker, Applied Algebra: Codes, Ciphers and Discrete Algorithms, Second Edition (Discrete Mathematics and Its Applications), CRC Press, Newyork, 2009.
3. David Gries and Fred B. Schneider, A Logical Approach to Discrete Math, Springer, 3rdEdition, 1993.

OUTCOMES:

At the end of the course students will be able to

- Authenticate the correctness of the given statement using mathematical induction.
- Test and analyze the logic of a program.
- Apply the concept of finite state machines and to generate languages.
- Analyze the types of graphs solve problems using the concepts of graph theory.
- Apply encryption and decryption techniques to send messages securely.

CSC6101 ADVANCED COMPUTER ARCHITECTURE

L	T	P	C
3	1	0	4

OBJECTIVES :

- To understand the functional requirements and their role in the system design
- To understand the various parameters that contribute to the performance of a computer system and the technology of achieving the best performance through these parameters
- To acquire essential knowledge to measure or predict system performance
- To understand how the memory hierarchy and optimization contribute to the performance of the system
- To understand the approaches in designing a new system through Instruction level parallel processing and to improve the Performance overcoming the hazards-meeting the functionality.
- To understand the data level parallel processing and Vector Processing for performance

MODULE I FUNDAMENTALS OF COMPUTER DESIGN 09+04

Functional Requirements and architecture - Measuring and reporting performance - Quantitative principles of computer design - Classifying instruction set architecture - Operands and operations for media and signal processing –Graphic processing - Encoding an instruction set - Example architecture - MIPS and TM32.

MODULE II MEMORY HIERARCHY DESIGN 09+03

Memory Hierarchy - Cache performance - Reducing cache miss penalty and miss rate - Reducing hit time - Main memory and performance - Memory technology and optimization-Virtual memory and Virtual Machine and protection.

MODULE III INSTRUCTION LEVEL PARALLELISM 09+03

Concepts of ILP - Pipelining and hazards –Compiler techniques for exposing ILP- Dynamic scheduling - Dynamic hardware prediction - Multiple issues - Hardware based speculation - Limitations of ILP - Case studies: lP6 Micro architecture. Compiler techniques for exposing ILP - Static branch prediction - Static multiple issues: VLIW - Advanced compiler support –Hardware VS software speculation.– Case study: Intel core i7 and ARM Cortex-A8

MODULE IV DATA-LEVEL PARALLELISM 09+02

Vector Architecture - SIMD Instruction Set Extensions for Multimedia - Graphic Processing Units- Detecting and Enhancing Loop Level Parallelism - Mobile verses Server GPUs - Case Studies

MODULE V THREAD LEVEL PARALLELISM 09+03

Centralized Symmetric and shared memory Multiprocessor architectures - Performance issues - Distributed Shared Memory architecture- Directory based architecture-Synchronization - Cache Coherence and memory consistency - Trends in processor design- Need for multi-core processor – difference between multiprocessor and multicore processor- Thread level processing – Simultaneous multi-threading.

L – 45; T – 15

5. B.Govindarajalu, “Computer Architecture and Organization”, Tata McGraw Hill Education Pvt. Ltd., 2010.

OUTCOMES :

Students who complete this course will be able to

- Suggest the requirements for a new instruction set, to meet the functional requirement and to contribute to performance.
- Test the performance of a computer system
- Analyze changes in performance with various configurations and Memory Hierarchy
- Analyze code for instruction level Parallel Processing and modify the code for out of order execution for better performance
- Modify the code to exploit SIMD architecture and improve the performance of the system.
- Analyze how multi-threading in multiple processors and multi-core processors will share the resources for performance.

CSC6102 ALGORITHM DESIGN AND IMPLEMENTATION

L	T	P	C
3	0	2	4

OBJECTIVES :

- To discuss various algorithm design techniques for developing algorithms.
- To study the basic techniques for designing algorithms, including the techniques of recursion, divide-and-conquer, and greedy.
- To provide the basic knowledge of computational complexity, approximation and randomized algorithms.
- To learn the advanced techniques for designing algorithms, including dynamic programming, network flow and problem reduction
- To illustrate the NP completeness and identify different NP complete problems.
- To determine the time and space complexity of simple algorithms and recursively defined algorithms.

MODULE I INTRODUCTION 09

Introduction and Motivation-Lower Bound-Asymptotic Notations-Mathematical Induction-Mathematical models-Formulating the Equations-Solving the equations-Homogeneous Linear Recurrence with Constant Coefficients-Non-homogeneous Equations-Transformations.

MODULE II GRAPH ALGORITHMS 09

Elementary Graph Algorithms Breadth-first search- Depth-first search - Topological sort- Minimum Spanning Trees -The algorithms of Kruskal and Prim - Single-Source Shortest Paths - The Bellman-Ford algorithm - Single-source shortest paths in directed acyclic graphs -Dijkstra's algorithm -All-Pairs Shortest Paths -The Floyd-Warshall algorithm -Johnson's algorithm for sparse graphs- Maximum Flow- Flow network- The Ford-Fulkerson method- Maximum bipartite matching-Push-relabel algorithms-The relabel-to-front algorithm.

MODULE III DIVIDE-AND-CONQUERANDRANDOMIZED ALGORITHMS 09

The maximum-sub array problem- Strassen's algorithm for matrix multiplication-The substitution method for solving recurrences-The recursion-tree method for solving recurrences-The master method for solving recurrences-Proof of the master theorem-The hiring problem- Indicator random variables-Randomized algorithms-Probabilistic analysis and further uses of indicator random variables.

MODULE IV MULTITHREADED AND NUMBER-THEORETIC ALGORITHMS 09

The basics of dynamic multithreading-Multithreaded matrix multiplication Multithreaded merge sort-Elementary number-theoretic notions- Greatest common divisor - Modular arithmetic -Solving modular linear equations - The Chinese remainder theorem - Powers of an element- The RSA public-key cryptosystem- Primality testing-Integer factorization .

MODULE V NP-COMPLETENESS AND APPROXIMATION ALGORITHMS 09

Polynomial time-Polynomial-time verification-NP-completeness and reducibility-NP-completeness proofs-NP-complete problems- Approximation Algorithms-The vertex-cover problem-The traveling-salesman problem-The set-covering problem-Randomization and linear programming-The subset-sum problem.

L – 45; P – 30

3. Mark Allen Weiss,” Data Structures and Algorithm Analysis in C++”, Addison-Wesley,3rd edition, ISBN: 978-0132847377,2013.

OUTCOMES :

Students who complete this course will be able to

- Prove the correctness of algorithms using inductive proofs and invariants.
- Analyze randomized algorithms with respect to expected running time, probability of error using tail inequalities
- Classify problems into different complexity classes corresponding to both deterministic and randomized algorithms
- Analyze approximation algorithms including algorithms that are PTAS and FPTAS.
- Implement both a greedy and a divide-and-conquer algorithm to solve problems.

- Design the techniques of proof by contradiction, mathematical induction and recurrence relation, and apply them to prove the correctness and to analyze the running time of algorithms.

CSC6103 COMPUTER NETWORKS AND MANAGEMENT

L	T	P	C
2	0	2	3

OBJECTIVES :

- To outline the basic concepts of computer networks
- To illustrate the operations of network traffic, congestion, controlling and Queuing delay models
- To compare different mechanism for quality of service and Internet protocols
- To describe the concept and architecture of network management
- To showcase the different network management protocols like SNMP and RMON
- To identify various network tools to simulate the working of connection oriented and connectionless networks.

MODULE I INTRODUCTION TO COMPUTER NETWORKS 09

Introduction – Reliable Transmission via Redundancy – Reliable transmission by retransmission - Routing and addressing – Link Layer Protocols and Technologies – Quality of Service overview

MODULE II TRANSMISSION CONTROL PROTOCOL (TCP) AND SWITCHING AND QUEUING DELAY MODELS 09

Introduction to UDP and TCP – User Datagram Protocol (UDP) – TCP and Reliable Byte Stream Service – Congestion Control – Fairness – Recent TCP Versions – TCP Wireless Links - Packet Switching in Routers - Queuing Model – Networks of Queues

MODULE III MECHANISMS FOR QUALITY OF SERVICE AND INTERNET PROTOCOLS 09

Queue Scheduling – Policing – Active Queue Management – MPLS - Internet Protocol Version (IPV6) – Routing Protocols – Address Translation Protocols – Domain Name System (DNS) – Network Management Protocols – Network Tools

MODULE IV NETWORK MANAGEMENT AND SNMP 09

Network Management : goals , Organization and Functions – Network Management Architecture and organization – Network Management perspective – NMS platform – Current Status & future of Network Management – SNMP V1 Network Management- Basic Foundation standards, Models and languages –

Organization and information Models - Communication and functional Models – SNMP V2 – SNPV3

MODULE V RMON, NETWORK MANAGEMENT TOOLS AND APPLICATIONS 09

Remote Monitoring – RMON SMI & MIB – RMON1-RMON2-ATM Remote Monitoring – A Case Study of Internet Traffic using RMON – Network Management Tools, Systems and Engineering – System utilities for Management – Network Statistics Measurement Systems – MIB Engineering – NMS Design – Network Management Applications

5. Douglas E Comer, “Internetworking with TCP/IP, Principles, Protocols and Architecture” 6th Edition, PHI, ISBN-13: 978-0136085300, 2014.

OUTCOMES :

Students who complete this course will be able to

- Describe the network services, protocols and architectures
- Identify the different congestion control techniques
- Develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery Etc.
- Apply SNMP and RMON for Managing Network.
- Access MIBS from devices using SNMP on a workstation
- Analyze and interpret the data provided by an NMS and take suitable actions

CSC6104 DISTRIBUTED OPERATING SYSTEM

L	T	P	C
3	0	0	3

OBJECTIVES :

- To obtain an in depth knowledge of the aspects of operating systems such as process management, scheduling, synchronization.
- To give an insight into remote procedure calls and distributed systems.
- To outline the distributed scheduling and shared memory concepts.
- To provide a concise overview of distributed resource management.
- To outline the approaches of fault recovery and the issues.
- To give an emphasis on the resource security and protection.

MODULE I PROCESS SYNCHRONISATION 09

Overview – synchronization mechanism-Critical Section Problems-Language mechanism for Synchronization -Process Deadlocks-Models of Deadlock and Resources-Graph Theoretic Model of a system state- Systems with single unit requests-consumable –reusable resources .

MODULE II DISTRIBUTED SYSTEMS 09

System architecture types-Distributed architecture systems -issues in distributed operating systems-communication networks-primitives-Theoretical Foundations-inherent limitation of distributed systems-Lamport's Logical clocks- distributed mutual exclusion: classification of mutual exclusion algorithms, Lamport's ,token based algorithm, Suzuki-Kasami's Broadcast algorithm, Raymond's Tree based algorithm, Distributed deadlock detection.

MODULE III DISTRIBUTED RESOURCE MANAGEMENT 09

Distributed File Systems – Architecture – Mechanisms – Design Issues - Distributed Shared Memory – Distributed Scheduling – Case Studies.

MODULE IV FAULT TOLERANCE AND RECOVERY 09

Classification of failures-Backward and forward error recovery – Basic approaches – Recovery in concurrent systems – Synchronous and Asynchronous check point and recovery – Fault tolerance- Issues-Atomic actions and committing-Commit protocols-voting protocols.

MODULE V SECURITY 09

Security Environment - Operating System Security - Controlling Access to Resources – Formal Models of Secure Systems - Cryptography as a Security Tool – Authentication-Exploiting Software – Attacks-Malware – Defenses.

OUTCOMES :

Students who complete this course will be able to

- Demonstrate operating system concepts such as scheduling and synchronization.
- Identify the design and implementation issues with distributed systems.
- Evaluate the scheduling requirements of distributed systems and find their solutions
- Identify the different approaches to fault recovery and the fault tolerance issues.
- Apply methods and tools for resource protection and security.
- Investigate different operating system principles, abstractions, algorithms and techniques.

CSC6105 ADVANCED SOFTWARE ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES :

- To expose students to social, legal and ethical issues for Software Engineers.
- To provide experience using an agile like process.
- To expose development of software systems of high quality.
- To demonstrate the necessary understanding of methods and techniques for software management.
- To accumulate knowledge of the analysis, design and management of large and complex software systems.
- To develop the ability to understand, design and implement such systems in the global market.

MODULE I INTRODUCTION 09

Professional Software Development – Software Engineering Ethics – Case Study – Software Process Models – Process Activities – Agile Process Development – Requirement Engineering – System Modeling – Architectural Design – Implementation – Testing.

MODULE II SYSTEM DEPENDABILITY AND SECURITY 09

Dependable Systems Dependability Properties – Sociotechnical Systems – Dependable Process – Formal Methods and Dependability – Reliability Engineering Reliability Requirements – Fault tolerant Architectures – Reliability Measurement – Safety Engineering – Security Engineering.

MODULE III ADVANCED SOFTWARE ENGINEERING 09

Software Reuse – Reuse Landscape – Application Framework Application System reuse – Component Based Software Engineering Componenets and Components models – CBSE Processes – Component composition – Distributed Software Management.

MODULE IV SOFTWARE ORIENTED SOFTWARE ENGINEERING 09

Service Oriented Architecture – RESTful services – Service Engineering – Service Composition – Systems Engineering – Systems of Systems – Real Time Software Engineering – Embedded System Design – Architectural Patterns for real-time Software – Time Analysis – Real-Time Operating Systems.

MODULE V SOFTWARE MANAGEMENT 09

Project Management – Project Planning – Software Pricing – Plan Driven development – Projevct Scheduling – Agile planning – Estimation Techniques – COCOMO Testing Modeling – Quality Management – Configuration management.

Theory : 45

3. Dogru, Ali H., Modern Software Engineering Concepts and Practices: Advanced Approaches: Advanced Approaches, IGI Global, ISBN: 978-1-60960-215-4, 2011.

OUTCOMES :

Students who complete this course will be able to

- Expose technical issues through a software development project.
- Analyze the impact of computing on individuals, organizations and society, including ethical, legal, security and global policy issues;
- Design models to reflect abstract architectures of software systems.
- Create and understand descriptions of SOA using high level UML models
- Apply the Software Engineering concepts to Software Projects in a real business environment.
- Evaluate research articles and thus be aware of the research front in software development.

SEMESTER II

GEC6201 RESEARCH METHODOLOGY FOR ENGINEERS

L	T	P	C
3	0	0	3

OBJECTIVES :

- To provide a perspective on research to the scholars
- To educate on the research conceptions for designing the research
- To impart knowledge on statistical techniques for hypothesis construction
- To gain knowledge on methods of data analysis and interpretation
- To learn about the effective communication of research finding

MODULE I RESEARCH PROBLEM FORMULATION 07

Research – objectives – types, Research process, Solving engineering problems, Identification of research topic, Formulation of research problem, Literature survey and review.

MODULE II HYPOTHESIS FORMULATION 08

Research design – meaning and need – basic concepts, Different research designs, Experimental design – principle – important experimental designs, Design of experimental setup, Mathematical modeling, Simulation – validation and experimentation, Dimensional analysis and similitude.

MODULE III STATISTICAL TECHNIQUES 12

Statistics in research – concept of probability – popular distributions –Hypothesis testing- sample design- Design of experiments – factorial designs -– orthogonal arrays- ANOM - ANOVA - Multivariate analysis - Use of optimization techniques – traditional methods – evolutionary optimization techniques –Transportation model.

MODULE IV STATISTICAL ANALYSIS OF DATA 10

Research Data analysis – interpretation of results – correlation with scientific facts- Accuracy and precision – error analysis, limitations - Curve fitting, Correlation and regression.

MODULE V RESEARCH REPORT 08

Purpose of written report – audience, synopsis writing, preparing papers for International journals, Thesis writing – organization of contents – style of writing –

graphs and charts – referencing, Oral presentation and defence, Ethics in research, Patenting, Intellectual Property Rights.

OUTCOMES :

Students who complete this course will be able to

- Formulate the research problem
- Design and Analyse the research methodology
- Construct and optimize the research hypothesis
- Analyse and interpret the data
- Report the research findings

CSC6201 MACHINE LEARNING TECHNIQUES

L	T	P	C
2	0	2	3

OBJECTIVES :

- To expose the applications of machine learning.
- To study the various algorithms related to supervised and unsupervised learning.
- To recognize the different types of machine learning models and how to use them.
- To learn the theoretical and practical aspects of probabilistic graphical models.
- To acquire the knowledge of various classification techniques.
- To learn the various neural network algorithms.

MODULE I INTRODUCTION TO MACHINE LEARNING 09

Introduction - examples of machine learning applications - Types of machine learning- Mathematical foundations of machine learning– Introduction to Parametric Models – Non-Parametric Models –Probability Basics.

MODULE II SUPERVISED LEARNING 09

Linear Models for Regression –Linear Basis Function Models - The Bias-Variance Decomposition - Bayesian Linear Regression - Bayesian Model Comparison - Limitations of Fixed Basis Functions - Linear Models for Classification – Discriminant Functions -Probabilistic Generative Models -Probabilistic Discriminative Models - Bayesian Logistic Regression. Neural Networks –Network Training - Feed-forward Network Functions – Back Propagation Network – Bayesian Neural Network.

MODULE III UNSUPERVISED LEARNING 09

Clustering- K-means - EM Algorithm- Mixtures of Gaussians - Dimensionality Reduction - Factor analysis - Principal Component Analysis - Probabilistic PCA - Independent components analysis - Singular Value Decomposition.

MODULE IV PROBABILISTIC GRAPHICAL MODELS 09

Graphical Models - Undirected graphical models - Markov Random Fields - Directed Graphical Models -Bayesian Networks - Conditional independence properties - Inference – Learning - Generalization - Hidden Markov Models - Conditional random fields.

MODULE V APPLICATIONS 09

Ranking: Priority Inbox - Ordering Email Messages by Priority - Writing a Priority Inbox - Spam Filtering - Analyzing Social Graphs - Social Network Analysis - Hacking Twitter Social Graph Data - Analyzing Twitter Networks – Case Study.

L-30; P-30

5. Ian H. Witten, Eibe Frank, Mark A. Hall, “Data Mining: Practical Machine Learning Tools and Techniques”, 3rd Edition, Morgan Kaufmann, 2011.

OUTCOMES :

Students who complete this course will be able to

- Describe the concepts and models of machine learning.
- Design and implement algorithms for supervised and unsupervised learning.
- Develop skills of using recent machine learning software for solving practical problems.
- Analyze the efficient clustering techniques for solving real world problems.
- Implement probabilistic discriminative and generative algorithms for an application and analyze the results.
- Apply the appropriate techniques in social network analysis and Web Security.

CSC6202	APPLIED CRYPTOGRAPHY AND NETWORK SECURITY	L	T	P	C
		3	0	2	4

OBJECTIVES :

The Student should

- Have a theoretical understanding of the principles underlying cryptography and cryptanalysis.
- Have a fundamental understanding of symmetric and asymmetric encryption, hashing, and digital signatures.
- Learn the basic concepts in networking and wireless security, applied cryptography, as well as ethical, legal, social and economic facets of security.
- Become familiar with the cryptographic techniques that provide information and network security.
- Be able to evaluate the security of communication systems, networks and protocols based on a multitude of security metrics.
- Provide an awareness of network security issues in emerging technologies.

MODULE I CRYPTOGRAPHY AND ENCRYPTION TECHNIQUES 09

Overview – Principles-Concepts –Symmetric and Asymmetric Encryption–AES – Block Cipher Operations– RSA Algorithm – Diffie Hellman Key Exchange

MODULE II DATA INTEGRITY ALGORITHMS AND MUTUAL TRUST 10

Hash Functions – SHA – Message Authentication Codes – Digital Signatures- Key Management and Distribution – X.509 Certificates – Kerberos

MODULE III NETWORK SECURITY 08

Vulnerabilities - Security Assessment, Analysis, and Assurance-Disaster Management – Access Control and Authentication – Authorization

MODULE IV WIRELESS NETWORK SECURITY 08

Wireless Security – Wireless LAN - Smart Phones – PDA – Bluetooth- Broadband Security

MODULE V SECURITY IN EMERGING TECHNOLOGIES 09

Next Generation Mobile Networks – Wireless Sensor Networks – Adhoc Networks – IP based Mobile Networks

L- 45; P-30

5. John R.Vacca , “Network and System Security”,2nd Edition, Elsevier Publishers, ISBN No.978-0124166899,2014.

OUTCOMES :

Students who complete this course should

- Have a technical understanding of the main cryptographic concepts and technologies available today.
- Explain the requirements and techniques for security management, including security policies, risk analysis, and physical threats and controls.
- Illustrate how cryptography and its application can maintain privacy and security in electronic communications and computer networks.
- Describe the vulnerabilities brought about by modern web-based application and services, and discuss countermeasures.
- Identify the appropriate procedures required to secure networks.
- Innovate techniques for enforcing computer and network security and developing secure e-commerce protocols.

PROFESSIONAL ELECTIVES
LIST OF ODD SEMESTER ELECTIVES

CSCY101 DATA WAREHOUSING AND DATA MINING

L	T	P	C
3	0	0	3

OBJECTIVES :

- To provide students with basic knowledge of tools used for data ware housing.
- To explore the technologies for storing and mining large databases.
- To assess the concepts and methods used for mining the data.
- To explore the strength and weakness of data mining algorithms.
- To expose the use of classification in data mining.
- To explain the application of data warehousing and data mining in real time scenario.

MODULE I INTRODUCTION 09

Data warehousing Components –Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools – Metadata – reporting – Query tools and Applications – Online Analytical Processing (OLAP) – OLAP and Multidimensional Data Analysis.

MODULE II DATA WAREHOUSING AND BUSINESS ANALYSIS 09

Data warehouse –Basic concept-Modeling-Data cube and OLAP, Design and Usage-Frame work, information Processing, Online Analytical Processing-Implementation-Data Generalization.

MODULE III MINING CONCEPTS AND METHODS 09

Mining Basic concepts- Market Basket Analysis-Frequent Itemset - Closed Itemset - Association rules-Mining Methods - Apriori Algorithm-Generating Association rules for Frequent item set-Pattern Mining – Pattern Evaluation Methods

MODULE IV CLASSIFICATION AND CLUSTER ANALYSIS 09

Basic concepts-Decision Tree Induction-Bayes Classification Methods Rule Based Classification-Model Evaluation and selection-Improving classification Accuracy-Cluster Analysis: - Types and Categorization - Partitioning , Hierarchical , Density, Grid, Constraint - and Model-Based Clustering Methods

MODULE V APPLICATION 09

Case study of the application of data mining in the following field: Financial Data Analysis, Retail Industry, Telecommunication Industry, Biological Data Analysis, Social Network, Scientific Applications, Intrusion Detection

Theory : 45

REFERENCES :

1. Jiawei Han & Micheline Kamber, “Data Mining – Concepts and Techniques”, 3rd Edition, ISBN 978-0-12-381479- Morgan Kaufmann Publishers, Elsevier, 2012.
2. Pang-Ning Tan, Michael Steinbach and Vipin Kumar, “Introduction to Data Mining”, 1st Edition, ISBN: 1-892095-02-5, Pearson education, 2006.

OUTCOMES :

Students who complete this course will be able to

- Distinguish between database and data warehouse.
- Design appropriate data warehouse multi-dimensional model.
- Perform basic data mining operations and apply standard data mining algorithms to solve real time problems
- Correlate data mining techniques to current scenarios in various fields and inculcate the ability to apply tools for mining and analysis.
- Review the various latest research activities going on in the field of Data Mining, thereby creating an interest for research.
- Able to mine the data and perform predictive analysis.

CSCY102 AGENT BASED INTELLIGENT SYSTEMS

L	T	P	C
1	0	2	2

OBJECTIVES :

- To provide basic knowledge of employing intelligent agents in solving complex problems.
- To give the awareness of the building blocks of agents and working of different types of agents.
- To analyze the reasons for uncertainty and ability to design agents to handle them.
- To study the employment of artificial intelligence in recent technologies.
- To represent knowledge in first order and predicate logic.
- To learn about machine learning and planning agent.

MODULE I INTRODUCTION 15

Introduction to Artificial Intelligence – Problem solving with AI – CSP - Representation of knowledge using Logic and Rules - Uncertain knowledge and reasoning – Probabilistic reasoning - Types of Agent - Multi Agent Planning - Multi Agent Based Learning - Architecture of expert system - Natural Language Processing – Fuzzy and hybrid Intelligence system –Cloud Computing and Intelligent Agents – Business Intelligence and Analytics – Big Data and Sensory Processing.

MODULE II INTELLIGENT AGENT 15

Problem Solving: Travelling Salesperson problem, Tower of Hanoi, Tic-Tac-Toe, Water Jug Problem. Creation of agents -Defining their behavior – Observe behavior. Visualization of agent based models - Creating Interface for Robots and Sensors.

L-15; P-30

REFERENCES :

4. ZiliZhang, Chengqi Zhang, “Agent-Based Hybrid Intelligent Systems: An Agent-Based Framework for Complex Problem Solving”, 1st Edition, Springer-Verlag New York, LLC , 2004.

COURSE OUTCOMES :

Students who complete this course will be able to

- Differentiate the types of agents and learn how to apply them in different problem based on requirements.
- Explore the scenarios of uncertainty and design planning agents to handle them.
- Ability to apply the tools in knowledge representation and reasoning for real-world problems.
- Apply Artificial Intelligence techniques in the cutting edge technologies such as cloud computing and Big data.
- Design knowledge based agents for challenging environment.
- Explain the basic knowledge representation, problem solving, and learning methods of Artificial Intelligence.

CSCY103 HUMAN COMPUTER INTERACTION

L	T	P	C
3	0	0	3

OBJECTIVES :

- To analyze an interface or device in terms of its usability.
- To define common terms in HCI (e.g. direct manipulation).
- To describe different interaction techniques, including their strengths and weaknesses.
- To use HCI software process.
- To explain Computer components functions regarding interaction with human
- To demonstrate Understanding of Interaction between the human and computer components.

MODULE I FOUNDATIONS 09

Human: Human memory – Emotion – Individual differences – Psychology and the design of interactive systems – Computer: Devices used for Text entry, display, virtual reality and 3D interactions – Positioning & pointing – physical controls, sensors and special devises – memory – processing and networks. Interactions: Models of interactions - Framework – interaction styles – context of interactions - elements of WIMP interface.

MODULE II INTERACTION DESIGN BASICS 09

Paradigms of interactions – process of design – HCI in software process - software life cycle – usability engineering – interactive design and prototyping – design rules: principles to support usability – standards – guidelines and rules for heuristics – HCI patterns – implantation support – evaluation technique – user support.

MODULE III IMPLEMENTATION AND EVALUATION 09

Elements of windowing systems – Toolkits – User interface systems – Goals of evaluation – evaluation through expert system, user participation – choosing evaluation method – universal design principles – multi-modal interaction – design focus – user support.

MODULE IV MODELS AND THEORIES-1 09

Cognitive models : Goals and task hierarchies – linguistic models – challenge of display based systems- physical and device models – cognitive architecture –

socio organizational issues and stakeholder requirements: organizational issues – capturing requirements.

MODULE V MODELS AND THEORIES-2 09

Communication and collaboration models: face to face communication – conversion – text based communication – group working – task analysis: task decomposition – knowledge based analysis – dialog notations and design - models of systems – models of rich interactions.

Theory : 45

REFERENCES :

3. Dix A, Human – Computer Interaction. Harlow, England: Prentice Hall, ISBN- 10:0130461091, 2004.

OUTCOMES :

Students who complete this course will be able to

- Prepare the basics of human and computational abilities and limitations.
- Formulate the basic theories, tools and techniques in HCI.
- Propose fundamental aspects of designing and evaluating interfaces.
- Practice a variety of simple methods for evaluating the quality of a user interface.
- Apply appropriate HCI techniques to design systems that are usable by people.
- Review various models used for HCI.

CSCY104 COGNITIVE SCIENCE

L	T	P	C
3	0	0	3

OBJECTIVES :

- To observe the beginning of cognitive science in the areas of linguistics and artificial intelligence.
- To identify the cognitive science as an interdisciplinary field.
- To develop the fundamental skills required for understanding theories, evidence and methods in cognitive science.
- To learn various approaches to artificial intelligence, and the computational modelling of cognitive processes.
- To study the functioning of artificial neurons.
- To gain knowledge in neuroscience and linguistics.

MODULE I INTRODUCTION TO COGNITIVE SCIENCE 09

The prehistory of cognitive science–Extending computational modeling to the brain -Language and micro worlds - Cognitive science and the integration challenge - Tackling the integration challenge–Information Processing Models of The Mind - The Organization of The Mind - Strategies for brain mapping.

MODULE II ARTIFICIAL NEURAL NETWORK AND MACHINE LEARNING 09

Applying the symbolic paradigm - Expert systems, machine learning, and the heuristic search hypothesis - machine learning algorithm - Neural networks and distributed information processing - Neural network models of cognitive processes - Architectures for intelligent agents.

MODULE III LINGUISTIC APPROACH 09

Linguistic Approach - Language and Cognitive Science - The Nature of Language - Language Use in Primates - Language Acquisition - Language Deprivation - Philosophy and Linguistics - Cognition and Linguistics - Neuroscience and Linguistics - Artificial Intelligence and Linguistics.

MODULE IV ARTIFICIAL INTELLIGENCE OPERATIONAL PERSPECTIVE 09

The Practical World of Artificial Intelligence - Approaches to the Design of Intelligent Agents - Machine Intelligence, Knowledge, and Machine Reasoning - Logical Reasoning - Inductive Reasoning – Robotics.

MODULE V APPLICATIONS 09

Cognitive neuroscience – Evolutionary psychology – Embodied, Embedded and Extended Cognition – Animal Cognition - Case Study.

Theory : 45

4. Mark F. Bear, Barry W. Connors, Michael A. Paradiso, “Neuroscience: Exploring the brain”, 4th Edition, Lippincott Williams and Wilkins Publication, 2016.

OUTCOMES :

Students who complete this course will be able to

- Define what is cognitive science and information processing of mind.
- Apply neural network algorithm for cognitive processes.
- Describe the relationship between cognitive science and linguistic approach.
- Design and implement intelligent agent.
- Apply the cognitive neuroscience to solve research problems.
- Relate cognitive science with artificial intelligence.

CSCY105 DEEP LEARNING

L	T	P	C
3	0	0	3

OBJECTIVES :

- To introduce the basic architecture and statistical approaches for spoken language processing.
- To illustrate how these models are applied to speech recognition and speaker verification.
- To provide knowledge on training the networks constructed based on the mathematical models.
- To introduce Deep Neural Network for modelling complex patterns of speech.
- To learn the fundamental issues in speech recognition.
- To provide an overview on advanced deep models for speech recognition.

MODULE I SPEECH TECHNOLGY 09

Introduction - Recognizing Speech – Reproducing Speech - Scope of Speech Technology – Human Factors - Automatic speech Recognition – Basic Architecture.

MODULE II TRANING NETWORK 09

Deep Neural Networks – Architecture – Parameter Estimation – Practical Considerations – Restricted Boltzman Techniques – Deep Belief Network – Discriminative Pretraining – Hybrid and Dropout Pretraining.

MODULE III NETWORK MODEL 09

DNN-HMM Hybrid System – Key components – Training and Decoding Speedup – Sequence Discriminative Training Criteria – Practical Considerations – Noise Estimation.

MODULE IV REPRESENTATION OF LEARNING NETWORK 09

Feature Representation Learning in Deep Neural Network – Fuse Deep Neural Network – Guassian Mixture Model systems – Adaptation of Deep Neural Networks.

MODULE V ADVANCED DEEP MODELS 09

Representation Sharing and Transfer – Multilingual and Cross Lingual Speech Recognition – Multiobjective Training of Neural Network for Speech Recognition –

Robust Speech Recognition Exploiting – Recurrent Neural Network – Related Models – Computational Network.

Theory : 45

REFERENCES :

3. Tuomas Virtanen, Rita Singh, Bhiksha Raj, “Techniques for Noise Robustness in Automatic Speech Recognition”, Wiley, ISBN: 978-1-119-97088-0, 2013.

OUTCOMES :

Students who complete this course will be able to

- Apply appropriate mathematical model for the processing the speech.
- Perform various decompositions and modifications of speech signals.
- Build a complete speech recognition system using the various techniques.
- Apply speech recognition system in areas like military, healthcare, etc.
- Resolve the issues in speech recognition using the various methods.
- Authenticate the identity of the speaker using deep neural network models.

CSCY106 COMPUTER VISION

L	T	P	C
3	0	0	3

OBJECTIVES :

- To give introduction on image data and analysis.
- To have knowledge on modern mathematics background.
- To provide information about cameras , coordinates and calibration.
- To learn about 3D shape reconstruction method.
- To know about stereo matching and feature detection.
- To gain knowledge on application areas.

MODULE I IMAGE DATA AND ANALYSIS 08

Introduction –Computer vision –Image Data - Images in Spatial domain-Images in frequency domain- Color and Color images – Image Analysis - Basic image topology-Geometric 2D Shape Analysis - Image value analysis

MODULE II IMAGE SEGMENTATION 09

Basic Example of Segmentation – Mean Shift Segmentation – Image segmentation as an optimization problem – Video segmentation and segment tracking – Camera – coordinates – camera calibration

MODULE III 3-D SHAPE RECONSTRUCTION 09

Cameras – Coordinates – Calibration – 3D shape Reconstruction – Surfaces – Structured Lighting

MODULE IV STEREO MATCHING AND FEATURE DETECTION 09

Stereo matching – Matching, Data cost and confidence – Dynamic programming matching – Third Eye technique – Feature Detection – Invariance, Features and Sets of features – Examples of features.

MODULE V USEFUL METHODS AND APPLICATIONS 09

Color spaces and segmentation – Binary morphology – 3D perception - Perspective analysis of images – Application scenarios – Industrial quality inspection – Safe Human Robot interaction – Lunar Remote sensing.

Theory : 45

5. Christian Wohler,"3D Computer Vision: Efficient Methods and Applications", 2nd edition, Springer Science & Business Media, ISBN-13: 978-1447141495, 2012.

OUTCOMES :

Students who complete this course will be able to

- Analyze the image data.
- Classify the different image segmentation
- Identify the cameras, coordinates and calibration in computer vision.
- Construct 3D shape stereo images.
- Illustrate stereo matching methods and feature detection.
- Apply concepts of computer vision in various fields.

CSCY107 STATISTICAL NATURAL LANGUAGE PROCESSING

L	T	P	C
2	0	2	3

OBJECTIVES :

- To learn the concepts of speech processing and synthesis
- To gain knowledge on syntax and semantics in NLP
- To explain various statistical methods for language processing.
- To describe the Machine translation approaches.
- To explore the language processing in real world application.
- To trace the statistical approaches used in natural language processing.

MODULE I WORD AND SPEECH 09

Regular Expressions and Automata - Words and Transducers - N-grams - Part-of-Speech Tagging - Hidden Markov and Maximum Entropy Models. Phonetics-Speech Synthesis - Automatic Speech Recognition - Speech Recognition: Advanced Topics - Computational Phonology

MODULE II SYNTAX, SEMANTICS AND PRAGMATICS 09

Formal Grammars of English - Syntactic Parsing - Statistical Parsing - Features and Unification - Language and Complexity - The Representation of Meaning - Computational Semantics - Lexical Semantics- Computational Lexical Semantics - Computational Discourse.

MODULE III N-GRAMS 09

N-grams Models of Syntax - Counting Words - Unsmoothed N-grams – Smoothing-Backoff - Deleted Interpolation – Entropy - English Word Classes - Tagsets for English - Part of Speech Tagging - Rule-Based Part of Speech Tagging - Stochastic Part of Speech Tagging - Transformation-Based Tagging.

MODULE IV STATISTICAL MACHINE TRANSLATION 09

Machine translation approaches – Statistical machine translation – Machine translation evaluation metrics – Semitic languages – Building phrase-based SMT systems.

MODULE V APPLICATION AND TECHNIQUES 09

Statistical Alignment and Machine Translation – Clustering – Information Retrieval – Text Categorization

L-30; P-30

4. Imed Zitouni, “Natural language processing of semantic language “, Springer, ISBN :97836424535588, 2014.

OUTCOMES :

Students who complete this course will be able to

- Identify the different linguistics components of given sentences.
- Build a tagger to semantically tag words using word tag.
- Implement a parser by providing suitable grammar and words.
- Analyse the statistical machine translation techniques.
- List the various applications of language processing.
- Gather knowledge on various statistical techniques in NLP.

CSCY108 COMPONENT BASED TECHNOLOGY

L	T	P	C
2	0	2	3

OBJECTIVES :

- To learn the basics of software components design.
- To provide knowledge on how a component is converted by the web service into a service.
- To portray the semantically relation between data and functions inside each component.
- To provide insight knowledge about the various fundamental properties of the components, technology, architecture and middleware.
- To recognize the use of various components based framework for a distributed environment.
- To give an idea that software should be componentized - built from prefabricate components

MODULE I INTRODUCTION 09

Introduction to Software Components - Software Language Engineering - Software Components - Initial Design Considerations - RPC – RMI- MOM - JNI – JAVA BEAN – EJB composing software components : Stateless Component Composition – Tools for Stateless components - CBSD Support - Tools – Debugging Components.

MODULE II BUILDING INFORMATION MODEL 09

CORBA: Exploring CORBA alternatives - Architecture overview - IDL - ORB - Building an application with CORBA - BIM 2.0 – SOA Pattern for Complex Models – IoT Software Platforms – Advanced SOA for BIM.

MODULE III COMPONENT REALIZATION CONCEPT 09

Big Picture MoCo Template - MoCo Execution Environment - MoCo Service Library - ExplorativePrototyping- MoCo Core API - ISA Architecture

MODULE IV WEB COMPONENTS 09

Web Component –Challenges – Web Component Architecture - UI Core Concepts –Basics – Z-Index – Building UI –Building Web Components – Widgets - Shadow DOM- Deploying Components with Polymer – Testing Web Components

MODULE V NET ENTITY FRAMEWORK 09

COM: Object Creation and Destruction Using .NET - Introduction to .NET - Overview of .NET Architecture - Marshalling – Remoting. Introduction - Entity Data Models-Operations - Querying EDMS with Entity SQL - Mapping Stored Procedures- Data Access with ADO.Net.

L-30; P-30

7. Jason Pritchard, "COM and CORBA Side by Side", Pearson Education 5th Edition, ISBN: 978-81-317-0913-9, 2009.

OUTCOMES :

Students who complete this course will be able to

- Apply the principles for building software systems from component based techniques.
- Create reusable widgets or components in web documents and web applications.
- Implement .Net components for the applications
- Develop or construct software by gluing together prefabricated components.
- Summarize the importance of component information model.
- Use the appropriate testing tools for testing the applications.

CSCY109 MOBILE COMPUTING

L	T	P	C
1	0	2	2

OBJECTIVES :

- To discuss about advanced learning in the field of wireless communication.
- To elaborate upon the basic concepts and principles in mobile computing.
- To expose the students to the concepts of wireless devices.
- To explain the structure and components for Mobile IP and Mobility Management
- To create awareness about various operating systems available for mobile computing
- To discuss various issues related to security of mobile computing environment

MODULE I INTRODUCTION 15

Mobile Computing- Networks- Application and Services supporting - Developing Mobile Computing Applications-Security in Mobile Computing Mobile Computing Architecture-GSM-Wireless Internet- Wireless Vehicular Networks-Architecture-Vehicular Applications-Standards-Challenges

MODULE II APPLICATION DEVELOPMENT 15

Three tier architecture -Model View Controller Architecture -Memory Management –Information Access Devices –PDAs and Smart Phones –Smart Cards and Embedded Controls –J2ME – Programming for CLDC –GUI in MIDP –Application Development ON Android and iPhone .

L-15; P-30

OUTCOMES :

Students who complete this course will be able to

- Acquire capability to work with heterogeneous networks.

- Apply the knowledge of various mobile operating systems like Android to develop mobile computing applications.
- Develop mobile computing applications by analyzing their requirements.
- Identify the security algorithms to be used for mobile computing environment.
- Analyze business practices in mobile computing applications and their technical feasibility.
- Comparatively evaluate deployment platforms for mobile computing applications.

CSCY110 DIGITAL IMAGE PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES :

- To describe digital image processing with respect to computer vision.
- To analyze digital images through programming tools.
- To theorize the background of image processing techniques.
- To gain knowledge on filters, edges and contours.
- To program with Image J software.
- To implement image processing techniques using java.

MODULE I IMAGE ANALYSIS 09

Digital image processing – Image formation and Sensing -Image representation-Digital image analysis-Segmentation-Line detection – Feature analysis and Pattern classification.

MODULE II PROGRAMMING WITH TOOLS 09

CVIP Software – Image data and file structures- Algorithm test and analysis tool-Application development- CVIP Feature Extraction and pattern classification tool.

MODULE III IMAGING SOFTWARE 09

Digital images - Programming with images-Types of digital images -Image acquisition- Image file formats - ImageJ software - Image J Overview.

MODULE IV FILTERS, EDGES AND CONTOURS 09

Linear filters-Non linear filters-Implementing filters-Gradient based edge detector-Simple edge detector-Canny Edge detector -Edge sharpening.

MODULE V PROGRAMMING IMAGEJ SOFTWARE 09

Point operations in ImageJ-Filter operations in Image J-Edge operations in Image J-Java implementation of Hough transform, filters- Advanced programming.

Theory : 45

REFERENCES :

1. Scott E Umbaugh, “Digital Image Processing and Analysis: Human and Computer Vision Applications with CVIP tools”, CRC Press, 2nd Edition, ISBN 1439802068, 2016.

2. Wilhelm Burger and Mark. J. Burge, "Digital image processing: An Algorithmic introduction using Java", 2nd Edition, Springer, ISBN: 978-1-4471-6683-2, 2016.

OUTCOMES :

Students who complete this course will be able to

- Describe various digital image formats.
- Write program through tools for analyzing images.
- Use of point and regional processing techniques.
- Apply filters in digital image processing.
- Illustrate the concepts of edges and contours.
- Implement image processing methodologies using the environment image software and java.

CSCY111 BIO INSPIRED ALGORITHMS

L	T	P	C
3	0	0	3

OBJECTIVES :

- To showcase the various Bio Inspired Models for Semantic Web.
- To comprehend the Evolutionary Learning and its Applications.
- To illustrate the concept of Evolutionary Algorithms.
- To explicate the Developmental and Artificial Immune Systems.
- To expose to Collective Systems such as Particle Swarm Optimization (PSO),Ant Colony Optimization (ACO) and Swarm Robotics.
- To explicate the Optimization Algorithms with application.

MODULE I BIO INSPIRED MODELS 09

Introduction - Semantic Web - Constituent Models - Artificial Neural Networks-Swarm Intelligence - Applications of Semantic Web - Neuro-Fuzzy systems for the Web Content Filtering – Applications.

MODULE II EVOLUTIONARY LEARNING 09

Hybrid Neural Systems – Genetic Algorithms - Introduction to Fuzzy Concepts – Fuzzy Inference Systems – Neural Fuzzy Approach – Hybrid Neural Network – Genetic Algorithm Approach - Applications.

MODULE III EVOLUTIONARY ALGORITHMS 09

Particle swarm optimization (PSO)– Ant Colony Optimization (ACO)–Swarm Robotics – Lion Optimization Algorithm - Ant Lion Optimization-Cockroach Swarm Optimization – Comparison of Firefly and Cockroach - Cuckoo Search - BColony Optimization - Bees Algorithm.

MODULE IV IMMUNE ALGORITHMS 09

Overview-Clonal Selection Algorithm - Negative Selection Algorithm - Artificial Immune Recognition System - Immune Network Algorithm –Dendritic Cell Algorithm.

MODULE V DNA COMPUTING 09

Need for DNA Computing-Structure of DNA- Operations on DNA Molecules-Adleman’s Experiment-Basics of Formal Language Theory.

Theory : 45

OUTCOMES :

Students who complete this course will be able to

- Apply the Bio Inspired Models in Semantic Web.
- Familiarize with the concepts of Fuzzy Networks and Genetic Algorithm with Applications.
- Design and Implement simple Bio-Inspired Algorithms.
- Acquire adequate knowledge in various Immune Algorithms.
- Get insight into biologically inspired as well as Traditional Machine Learning Methods for Search,Optimization and Classification.
- Acquire knowledge of using the Bio Inspired Models for Real World Applications.

ECCY009 INTERNET OF THINGS

L	T	P	C
3	0	0	3

OBJECTIVES :

- To introduce emerging technological options and platforms
- To explain the architecture of IoT
- To explore application development for mobile Platforms
- To Provide the appropriate IoT solutions and recommendations according to the applications used.

MODULE I THE IOT NETWORKING CORE 10

History of IoT, Review of Technologies involved in IoT Development, Internet/Web and Networking Basics -OSI Model, Data transfer referred with OSI Model, IP Addressing, Point to Point Data transfer, Point to Multi Point Data transfer & Network Topologies, Sub-netting, Network Topologies referred with Web, Introduction to Web Servers, Introduction to Cloud Computing. Basics of Big Data, Data Science.

MODULE II IOT ARCHITECTURE AND APPLICATIONS 09

Architecture: M2M – Machine to Machine, Web of Things, IoT protocol, Introduction to wireless and mobile networks, ZigBee, BLE mesh, WiFi, MQTT, LoRa-Machine Applications: Remote Monitoring & Sensing, Remote Controlling, Performance Analysis

MODULE III IOT PLATFORM OVERVIEW 09

Overview of IoT supported Hardware platforms such as: Raspberry pi, ARM Cortex Processors, Arduino and Intel Galileo boards. Network Fundamentals: Overview and working principle of Wired Networking equipment's – Router, Switches, Overview and working principle of Wireless Networking equipment's – Access Points, Hubs etc. Linux Network configuration Concepts: Networking configurations in Linux Accessing Hardware & Device Files interactions.

MODULE IV IOT APPLICATION DEVELOPMENT 09

Application Protocols-MQTT, REST/HTTP, CoAP, MySQL -Back-end Application -Design Apache for handling HTTP Requests, PHP & MySQL for data processing, MongoDB Object type Database, HTML, CSS &jQuery for UI Designing, JSON lib for data processing, Security & Privacy during development, Application Development for mobile Platforms: Overview of Android / IOS 10 25 47 /97 App Development tools

MODULE V CASE STUDY & ADVANCED IOT APPLICATIONS 08

IoT applications in home, infrastructures, buildings, security, Industries, Home appliances, other IoT electronic equipments. Use of Big Data and Visualization in IoT, Industry 4.0 concepts. Sensors and sensor Node and interfacing using any Embedded target boards

Theory : 45

REFERENCES :

7. Adelstein and S.K.S. Gupta, “Fundamentals of Mobile and Pervasive Computing,” McGraw Hill, 2009.

OUTCOMES :

Students who complete this course will be able to

- Articulate the main concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for state-of-the-art Internet of things
- Identify the architecture and infrastructure of IoT.
- Explain the core issues of IoT such as security, privacy, and interoperability
- Choose the appropriate technologies, algorithms, and approaches for the related issues.
- Identify problems, and explain, analyze, and evaluate various IoT solutions
- Attempt to generate new ideas and innovations in IoT.

ECC6121 ADVANCED EMBEDDED SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES :

- To explore Embedded system lifecycle
- To Introduce the occurrence of shared data problem in embedded systems
- To describe need for power management techniques in embedded systems
- To familiarize the debugging in embedded systems.

MODULE I EMBEDDED DESIGN LIFE CYCLE 09

Product specification – Hardware / Software partitioning – Detailed hardware and software design – Integration – Product testing – Selection Processes – Microprocessor Vs Micro Controller – Performance tools – Bench marking –RTOS Micro Controller – RTOS availability – Tool chain availability – Other issues in selection processes.

MODULE II EMBEDDED HARDWARE AND SOFTWARE 09

Review of basics in embedded hardware and software– Hardware software co design- Interrupts – Built interrupts – Interrupts basis – Shared data problems – Interrupt latency – Interrupt routines in an RTOS environment –Hard Real Time scheduling considerations - Embedded platform boot sequence.

MODULE III MEMORY AND INTERFACING 09

Memory: Memory write ability and storage performance – Memory types – composing memory – Advance RAM interfacing - communication basic – Microprocessor interfacing I/O addressing – Interrupts – Direct memory access– Arbitration -Multilevel bus architecture – Serial protocol – Parallel protocols – Wireless protocols

MODULE IV INTEGRATION AND TESTING OF EMBEDDED HARDWARE AND FIRMWARE 09

Integration of Hardware and Firmware-In system programming-The Integrated development environment-Debugging techniques- Host based debugging – Remote debugging – ROM emulators – Logic analyzer- Real time trace – Hardware break points – Overlay memory- Testing embedded software.

MODULE V POWER OPTIMIZATION TECHNIQUES IN EMBEDDED SYSTEMS 09

The power profile of an Embedded Computing Systems – Constant versus Dynamic power – A simple model of power efficiency –Advanced Configuration and Power Interface –ACPI system states- Case Study- power optimization techniques in wireless sensor networks.

Theory : 45

4. Peter Barry, Patrick Crowley, “Modern Embedded Computing” Morgan Kaufmann Publishers, 2012.

OUTCOMES :

Students who complete this course will be able to

- Analyze the quality principles and tools in embedded system during product development process
- Analyze the division of hardware/software in embedded systems.
- Develop the interrupt routines in RTOS environment
- Design energy efficient embedded systems
- Design interface circuit with processor and peripheral devices
- Test and debug the coding in embedded systems

LIST OF EVEN SEMESTER ELECTIVES

CSCY201	SOFTWARE TESTING AND QUALITY ASSURANCE	L	T	P	C
		3	0	0	3

OBJECTIVES :

- To elucidate the theoretical aspects of software testing.
- To demonstrate the testing design methods.
- To expose to various industrial practices on software testing and quality assurance strategies
- To explain the fundamental concepts of defect analysis
- To introduce the software quality metrics
- To develop into a software tester and quality controller

MODULE I FOUNDATIONS OF SOFTWARE TESTING 09

Software Testing Lifecycle - Software Quality Attributes - Software Specifications- Program Correctness and Verification- - Software Testing Taxonomy

MODULE II TEST DATA GENERATION 08

Testing Plan and Design -Test Generation Concepts - Functional Criteria- Structural Criteria- Failures, Errors, and Faults

MODULE III TEST DEPLOYMENT AND ANALYSIS 09

Test Oracle Design - Test Driver Design - Test Outcome Analysis - Metrics for Software Testing - Software Testing Tools - Test execution and reporting.

MODULE IV SOFTWARE QUALITY MANAGEMENT 10

Software Quality Concept-Defect Management- Risk Vulnerability and Threat Management- Software Quality Expectation- Software Quality Characteristics- Information Audit- Security Policy Document -Software Reliability and Process Improvement

MODULE V SOFTWARE QUALITY ENGINEERING APPLICATIONS 09

Software Quality Engineering- System and Software Quality Engineering Applications- Trustworthiness of IT Systems and Services- Case Studies

Theory : 45

REFERENCES :

2. Abu SayedMahfuz, “Software Quality Assurance: Integrating Testing, Security, and Audit”, CRC Press, Taylor and Francis Group, Auerbach Publications, ISBN 978-1-498-73553-7, 2016.
3. WitoldSuryn, “Software Quality Engineering: A Practitioner's Approach”, IEEE Computer Society Press, Jon Wiley & Sons Publications, ISBN: 978-1-118-83018-5, 2014.

OUTCOMES :

Students who complete this course will be able to

- Comprehend the types of Software Testing plans.
- Compare the different Software Testing design for the given data.
- Apply the various software testing strategies in industrial practices.
- Explore and use an appropriate testing tool for real time case studies.
- Analyze software quality attributes and ensure quality in IT Systems.
- Design and implement software quality engineering applications and take up a career as a professional software tester

CSCY202 MOBILE ADHOC NETWORKS

L	T	P	C
3	0	0	3

OBJECTIVES :

- To provide a broad overview of the state of wireless and mobile ad hoc networking.
- To discuss physical, networking and architectural issues of mobile ad hoc networks.
- To elaborate the functions of various routing protocols under unicast, multicast and transport layer protocols.
- To give a knowledge about issues in QoS, energy management of mobile ad hoc networks
- To learn the various security mechanism used in mobile adhoc networks.
- To study the current technology trends for the implementation and deployment of mobile ad hoc networks.

MODULE I INTRODUCTION 09

Introduction – Fundamentals of wireless communication technology – The Electromagnetic spectrum – Radio propagation mechanisms – Characteristics of the wireless channel – IEEE 802.11a,b standard – Origin of Ad hoc: Packet radio networks – Technical challenges – Architecture of PRNETs – Components of packet radios – Adhoc wireless networks – Heterogeneity in mobile devices– Wireless sensor networks – Traffic profiles – Types of Ad hoc mobile communications – Types of mobile host movements – Challenges facing Ad hoc mobile networks – Ad hoc wireless internet.

MODULE II ROUTING PROTOCOLS 09

Introduction – Issues in designing a routing protocol for Ad hoc wireless networks – Classifications of routing protocols – Table-Driven routing protocols– Destination Sequenced Distance Vector (DSDV) – Source-Initiated On-Demand approaches – Ad hoc On-Demand Distance Vector Routing (AODV)– Dynamic Source Routing (DSR) –Temporally Ordered Routing Algorithm (TORA) –Location–Aided Routing (LAR) – Power-Aware Routing (PAR) – Zone Routing Protocol (ZRP).

MODULE III MULTICASTING AND SECURITY PROTOCOLS 09

Introduction – Issues in designing a multicast routing protocol – Operation of multicast routing protocols –Classifications of multicast routing protocols – Tree-Based multicast routing protocols – Mesh-based multicast routing protocols. Security in Ad hoc wireless networks – Network security requirements – Issues

and challenges in security provisioning – Network security attacks – Key management – Secure routing in Ad hoc wireless networks.

MODULE IV TRANSPORT LAYER PROTOCOLS 09

Introduction – Issues in designing a transport layer protocol for Ad hoc wireless networks – Design goals of a transport layer protocol for Ad hoc wireless networks –Classification of transport layer solutions – TCP over Ad hoc wireless networks – Other transport layer protocols for Ad Hoc wireless networks.

MODULE V QOS AND ENERGY MANAGEMENT 09

Introduction – Issues and challenges in providing QoS in Ad hoc wireless networks –Classifications of QoS solutions – MAC layer solutions – Network layer solutions– Introduction – Need for energy management in Ad hoc wireless networks – Classification of energy management schemes – Battery management schemes – Transmission power management schemes – System power management schemes.

Theory : 45

REFERENCES :

2. Stefano Basagni, Marco Conti, Silvia Giordano and Ivan Stojmenovic “Mobile Ad Hoc Networking: The Cutting Edge Directions”, 2nd Edition, Wiley-IEEE Press, ISBN: 978-1-118-08728-2,2013.
3. Jonathan Loo, Jaime Lloret Mauri, Jesús Hamilton Ortiz, “Mobile Ad Hoc Networks: Current Status and Future Trends” CRC Press, ISBN 9781439856505 ,2012.

OUTCOMES :

Students who complete this course will be able to

- Assess the platform architectures that are suitable for Mobile Adhoc networks.
- Identify the issues in wireless networks and how they can be addressed.
- Examine the various security threats to ad hoc networks and propose the solutions.
- Analyze the issues in designing the multicasting and security protocols for Mobile Adhoc networks.

- Analyze the challenges in designing the routing and transport protocols for Mobile Adhoc networks.
- Implement the various schemes to improve the quality of service in mobile Adhoc networks

CSCY203	PERFORMANCE EVALUATION OF COMPUTER SYSTEMS AND NETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES :

- To explain the different metric for measuring the performance of the system.
- To familiarize with the importance of workloads and to predict the nature of future loads.
- To expose the students the importance of queuing theory.
- To design a petri net model for the given scenario.
- To describe the tools and techniques for test bed.
- To train the students on the basics of simulation modelling.

MODULE I INTRODUCTION 09

Need for performance evaluation - Role of performance evaluation - Performance evaluation methods - Performance metrics and evaluation criteria - CPU and I/O architectures - Distributed and network architectures-Secondary storage - Topologies - Computer architecture - Fundamental concepts and performance measures.

MODULE II PROBABILITY AND STOCHASTIC PROCESSES 09

Scheduling algorithms - Workloads - Random variables - Probability distributions - Densities - Expectation - Stochastic processes - Poisson process - Birth-Death process - Markov process.

MODULE III QUEUING THEORY 09

Queuing systems - Networks of queues - Estimating parameters and distributions - Computational methods - Simulation process - Time control - Systems and modelling.

MODULE IV PETRINETS AND SYSTEM PERFORMANCE 09

Petri nets - Classical Petri nets - Timed Petri nets - Priority-based Petri nets - Colored Petri nets - Generalized Petri nets - Tool selection - Validation of results - Performance metrics -Evaluation - Multiple server computer system analysis.

MODULE V ANALYSIS AND SIMULATION 09

OS components - System architecture - Workloads - Design - Simulation - Analysis - Database system performance - Computer networks components - Simulation

modelling of LAN-Stochastic Simulations - Monte Carlo Simulation Random Number Generators .

Theory : 45

REFERENCES :

2. Paul J. Fortier and Howard E. Michael, “Computer Systems Performance Evaluation and Prediction", 1st Edition, Elsevier Science, USA, ISBN 1-55558-260-5, 2013.

OUTCOMES :

Students who complete this course will be able to

- Carry out the performance analysis of their computer systems.
- Categorize the different queuing models
- Identify the algorithm for analysis of networks.
- Design a test bed for a given scenario
- Suggest a simulator for a particular problem.
- Design simulation model for the real time problem.

CSCY204 ADVANCED DATABASES

L	T	P	C
3	0	0	3

OBJECTIVES :

- To comprehend the different issues involved in the design and implementation of a database system
- To analyse the physical and logical database designs.
- To explore the database modelling, relational and object oriented models.
- To describe the techniques involved in the design of distributed databases.
- To recognize the various database techniques used in cloud and big data applications.

To develop an understanding of emerging DBMS for various applications

MODULE I ADVANCED SQL QUERIES AND DATABASE TUNING 08

Relational model conformity and Integrity- Advanced SQL programming- Query optimization- Concurrency control and Transaction management- Database performance tuning-Distributed relational systems -Security issues in Databases.

MODULE II THE EXTENDED ENTITY RELATIONSHIP MODEL AND OBJECT MODEL 09

The ER model-Motivation for complex data types-User defined abstract data types and structured types- Subclasses- Super classes- Inheritance-Specialization and Generalization-Constraints and characteristics of specialization and Generalization-Relationship types of degree higher than two.

MODULE III DISTRIBUTED DATABASES 10

Distributed Systems- Parallel Databases: I/O Parallelism -Inter and Intra Query Parallelism -Inter and Intra operation Parallelism- Design of Parallel Systems. Distributed Database Concepts- Distributed Data Storage -Distributed Transactions -Commit Protocols - Concurrency Control -Distributed Query Processing - Case Studies.

MODULE IV INTRODUCTION TO CLOUD DATABASES AND BIG DATA 09

Cloud Based Databases: Data Storage Systems on the Cloud- Cloud Storage Architectures-Cloud Data Models- Query Languages- Introduction to Big Data-Storage-Analysis. Batch computing models for Big Data computing- Key-value storage systems -- Scalable prediction models - Distributed file systems - Scalable data analytics-- Data models – Real time data stream analytics.

MODULE V EMERGING DATABASE MANAGEMENT SYSTEM TECHNOLOGIES 09

Object Oriented database concepts-Object Relational database concepts-Active database concepts; Temporal database concepts-Spatial database concepts and architecture- Deductive databases and Query processing- Mobile Databases-Geographic Information Systems. Multimedia Databases; Multidatabases - Native XML databases (NXD)-Genome Data management.

Theory : 45

4. Carlos Coronel and Steven Morris, “Database Systems: Design, Implementation, & Management”, Cengage Learning, 12th edition, ISBN-13: 9781305627482, 2016.

OUTCOMES :

Students who complete this course will be able to

- Define the terminology, features, classifications, and characteristics in database systems.
- Illustrate the design strategies, query processing techniques and algorithms for advanced databases.
- Analyze an information storage problem and derive at an appropriate data model for the problem.
- Assess the Database techniques for designing intelligent information retrieval system for any application.
- Describe the database techniques used in Cloud and Big data environment.
- Appraise the emerging technologies in Databases and propose suitable model for any given application

CSCY205 REAL TIME SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES :

- To focus on the basic concepts and architecture of Real Time Systems (RTS).
- To provide an overview on memory management issues in real time operating systems.
- To explain the software requirement specification for RTS
- To discuss programming languages for Real Time Systems.
- To elaborate on the issues and challenges involved in RTS design and development.
- To throw a light on future visions of RTS.

MODULE I REAL TIME SYSTEMS 08

Fundamentals – Hardware – Basic Processor Architecture – Memory technologies – Architectural Advancements – Peripheral Interfacing – Microprocessor Vs Microcontrollers – Distributed Real Time Architectures.

MODULE II REAL TIME OPERATING SYSTEMS 10

Pseudo kernels to operating systems – Theoretical Foundations of scheduling – system services for Application programs – Memory management issues – selecting Real Time Operating Systems – Coding of Real Time Software – Overview of programming languages for Real Time Systems – Automatic Code Generation – Compiler Optimizations of code.

MODULE III REQUIREMENTS ENGINEERING METHODOLOGIES 10

Requirements Engineering for Real Time Systems – Formal and Semi Formal Methods in System Specifications – Requirement Document – Case study in Software Requirements Specification

MODULE IV SOFTWARE DESIGN APPROACHES 10

Qualities of Real time systems – Software Engineering principles – Procedural Design Approach – Object Oriented Design Approach – Life Cycle Models – Case study in Designing Real Time Systems.

MODULE V PERFORMANCE ANALYSIS TECHNIQUES 07

Real Time Performance Analysis – Applications of Queuing Theory – Input/ Output Performance – Analysis of Memory Requirements – Future visions of on Real Time Systems.

Theory : 45

REFERENCES :

2. Giorgio C. Buttazzo, “Hard Real Time Computing Systems Predictable Scheduling Algorithms and applications”, 3rd Edition, Springer, ISBN: 978-1-4614-0675-4, 2011.

OUTCOMES :

Students who complete this course will be able to

- Analyze the various challenges associated with real time system and the techniques to manage them.
- Provide solutions for memory management issue in real time systems.
- Relate qualities of RTS for procedural design and object oriented design approach.
- Apply Formal and Semi Formal Methods in System Specifications.
- Compare and choose suitable software engineering approach for designing a Real Time System.
- Demonstrate Real Time Systems and its performance.

CSCY206 MULTICORE PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES :

- To expose the basic concepts of multi-core and parallel programming.
- To study about performance of various parallel programming models.
- To elucidate the importance of parallel programming in shared memory architecture
- To elaborate on memory hierarchy organization in Multicore Architecture.
- To focus on challenges in parallel and multi-threaded programming.
- To have knowledge on various parallel programming paradigms and solutions.

MODULE I PARALLEL PROGRAMMING 08

Introduction - Parallel Computing – Parallel Hardware – Parallel Software – Input and Output – Performance – Parallel program design example – writing and running parallel programs.

MODULE II MULTICORE ARCHITECTURE 10

Limits on Parallel Program Performance - Parallel Programming Models - Motivation for Memory Hierarchy - Basic Architectures of a Cache - Cache Performance - Prefetching - Cache Design in Multicore Architecture - Physical Cache Organization - Logical Cache Organization - Case Studies - Shared Memory Multiprocessors - The Cache Coherence Problem - Memory Consistency Problem - Synchronization Problem.

MODULE III DISTRIBUTED MEMORY PROGRAMMING WITH MPI 09

Compilation and execution - MPI programs - SPMD programs - Communication - Message matching - Trapezoidal Rule in MPI - Dealing with I/O – Collective Communication - Tree-structured communication - Collective Vs. Point-to-Point communications - MPI Derived Datatypes - Performance Evaluation of MPI Programs - Parallel Sorting Algorithm.

MODULE IV SHARED-MEMORY PROGRAMMING WITH PTHREADS 09

Starting, Running and Stopping the threads - Error checking - Matrix-Vector Multiplication - Critical Sections –Busy Waiting - Mutexes - Producer-Consumer Synchronization and Semaphores - Barriers and Condition Variables - Read-Write Locks - Caches, Cache Coherence, and False Sharing - Thread-Safety -Exercises - Programming Assignments.

MODULE V SHARED MEMORY PROGRAMMING WITH **OPENMP 09**

Compiling and running OpenMP programs - program and Error checking - The Trapezoidal Rule - Scope of Variables - The Reduction Clause -The parallel for Directive - More About Loops in OpenMP - Scheduling Loops -Producers and Consumers - Caches, Cache Coherence, and False Sharing - Thread-Safety - Exercises - Programming Assignments.

Theory : 45

REFERENCES :

2. Yan Sohilin, Fundamentals of Parallel Multicore Architecture, Chapman and Hall/CRC Computational Science November 24, 2015, ISBN 9781482211184, 2015 (MODULE II)
3. Darryl Gove, “Multicore Application Programming for Windows, Linux, and Oracle Solaris”, Pearson, ISBN-13: 978-0-321-71137-3, 2011.

OUTCOMES :

Students who complete this course will be able to

- Summarize the limitations in various parallel programming models.
- Compare and contrast programming for serial processors and parallel processors.
- Implement parallel programming system for Distributed Memory programming with MPI
- Implement parallel programming system for Shared Memory architecture using threads and open MP libraries.
- Analyze different problems in shared memory multiprocessors.
- Illustrate the design and performance issues in multicore architecture.

CSCY207 SOFTWARE PROJECT MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES :

- To provide tools and techniques for project monitoring.
- To evaluate and assess the projects in Software Project Management.
- To find the cost of the project using cost benefit evaluation techniques
- To produce an activity plan for a project
- To identify the factors that influence people's behaviour in a project environment.
- To improve group working and to select appropriate leadership styles.

MODULE I INTRODUCTION TO SOFTWARE PROJECT MANAGEMENT09

Project Definition – Contract Management – Activities covered By Software Project Management – Overview of Project Planning – Stepwise Project Planning

MODULE II PROJECT EVALUATION 09

Strategic Assessment – Technical Assessment – Cost Benefit Analysis –Cash Flow Forecasting – Cost Benefit Evaluation Techniques – Risk Evaluation.

MODULE III ACTIVITY PLANNING 09

Objectives – Project Schedule – Sequencing and Scheduling Activities –Network Planning Models – Forward Pass – Backward Pass – Activity Float – Shortening Project Duration – Activity on Arrow Networks – Risk Management – Nature Of Risk – Types Of Risk – Managing Risk – Hazard Identification – Hazard Analysis – Risk Planning And Control.

MODULE IV MONITORING AND CONTROL 09

Creating Framework – Collecting The Data – Visualizing Progress – Cost Monitoring – Earned Value – Prioritizing Monitoring – Getting Project Back To Target – Change Control – Managing Contracts – Introduction – Types Of Contract – Stages In Contract Placement – Typical Terms Of A Contract – Contract Management – Acceptance.

MODULE V MANAGING PEOPLE AND ORGANIZING TEAMS 09

Introduction – Understanding Behaviour – Organizational Behaviour: A Background – Selecting The Right Person For The Job – Instruction In The Best Methods – Motivation – The Oldham – Hackman Job Characteristics Model –

Working In Groups – Becoming A Team –Decision Making – Leadership – Organizational Structures – Stress –Health And Safety – Case Studies.

Theory : 45

5. S. A. Kelkar, “Software Project Management: A Concise Study”, 3rd edition, PHI learning pvt Ltd ,ISBN: 9788120347021, 2013.

OUTCOMES :

Students who complete this course will be able to

- Practice the process of project management and its application in delivering successful IT projects
- Evaluate a project to develop the scope of work, provide accurate cost estimates and to plan the various activities
- Use risk management analysis techniques that identify the factors that put a project at risk and to quantify the likely effect of risk on project timescales
- Identify the resources required for a project and to produce a work plan and resource Schedule
- Monitor the progress of a project and to assess the risk of slippage, revising targets or counteract drift
- Distinguish between the different types of project and follow the stages needed to negotiate an appropriate contract.

CSCY208 DEPENDABLE COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES :

- To expose the basic concept of dependable computing
- To explore the various error coding techniques used in dependable computing.
- To discuss the modelling tools used in dependable computing.
- To illustrate the countermeasure taken to deal with the impairment to dependability at the physical level.
- To showcase the importance of redundancy method to handle the fault.
- To discuss the issues at the architectural level when the subsystems interact.

MODULE I DEPENDABLE SYSTEMS 09

Dependable systems-Back ground and Motivation-Dependability attributes-combinational modelling –state space modelling.

MODULE II PHYSICAL IMPERFECTIONS 09

Physical imperfections-Defect Avoidance-Defeat Circumvention-Shielding and Hardening –Yield Enhancement.

MODULE III LOGICAL DEVIATIONS 09

Logical Deviations-Fault Testing-Fault Masking –Design for Testability-Replication and Voting.

MODULE IV ERRORS 09

Information Distortions-Error Detection-Error Correction-Self Checking Modules-Redundant Disk Array

MODULE V MALFUNCTIONS 09

Architectural Anomalies-Malfunction Diagnosis-Malfunction Tolerance –Standby Redundancy-Resilient Algorithms.

Theory : 45

REFERENCES :

1. Behrooz Parhami,”Dependable Computing, A Multilevel Approach”, TBD Publishers, 2015.

2. John Knight, “Fundamentals of Dependable Computing for Software Engineers”, ISBN 978143986255, 2012.

OUTCOMES :

Students who complete this course will be able to

- Identify the assessment component of dependability in computing systems.
- Suggest countermeasures to deal with impairments due to dependability at the physical level.
- Identify the logical level problem due to dependability and suggest solutions to solve them.
- Develop methods for detecting and correcting data path and control errors.
- Solve the technical problems that arise when the system interacts in a distributed system.
- Apply the redundancy algorithms for real time issues.

CSCY209 ADVANCED GRAPHICS PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES :

- To provide basics of computer graphics for advanced programming.
- To gain knowledge on motion and depth of graphics.
- To insight on features in advanced graphical effects.
- To focus on current, practical rendering methods used in games and other applications.
- To design program using Open GL tool box.
- To implement advanced animation through Open GL programming.

MODULE I MOTION AND DEPTH 09

Computer graphics –Display- Graphic file formats – Layering with depth - nimation – Camera and tilting - Illusion of depth- User interface.

MODULE II ADVANCED GRAPHICS 09

Particle systems- Creating effects – An Effect system – Optimization –GPU Programming – Pixel modification – Shader languages – Polish.

MODULE III 3D REAL TIME RENDERING 09

Graphics rendering pipeline – Transforms – Texturing – Advanced Shading – Global illumination – Non-photo realistic rendering - Graphics hardware.

MODULE IV 3D COMPUTER GRAPHICS PROGRAMMING 09

Open GL – Open GL Geometric primitives – Three Dimensions, Depth Buffer and Perspective projection – Drawing projects- Open GL tool box- Animation and Viewing.

MODULE V RENDERING PIPE LINE 09

Programming with Open GL - Advanced animation – Modeling in 3D space – Fixed functionality pipeline - Shaders and the programmable pipeline: Lift Off – Shaders and the programmable pipeline: Escape Velocity- Examples.

Total Hours : 45

REFERENCES :

3. Sumanta Guha,” Computer Graphics Through OpenGL: From Theory to Experiments”, 2nd Edition, CRC Press, ISBN 1498760597, 2015.

OUTCOMES :

Students who complete this course will be able to

- Explain the basics of computer graphics.
- Analyze the motion and depth of graphical design.
- Design advanced graphical effects and program it.
- Illustrate real time rendering methods for games and other applications.
- Use of the openGL Application Programming Interface (API) to code 3D scenes and animation, including games and movies
- Implement advanced animation and graphical effects for any application.

CSCY210 PERVASIVE COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES :

- To learn the basics of pervasive computing and systems
- To explain the role of pervasive networks and communications
- To provide exposure to latest technologies such as wearable computing and smart identification which relate to pervasive computing
- To illustrate architecture and protocols in pervasive computing and to identify the trends and latest development of the technologies in the area
- To design successful mobile and pervasive computing applications and services
- To give practical experience in the area through the design and execution of a modest research project

MODULE I INTRODUCTION 09

Prototyping – The Internet of Things: an Overview - Design Principles for Connected Devices- Internet Principles-Calm and Ambient Technology-Web Thinking for Connected Devices- Internet Principles- -DNS-Static IP address Assignment-Dynamic IP address Assignment-IPv6-MAC addresses-TCP and UDP Ports-An Example: HTTP Ports-Other Common Ports-Application Layer Protocols-HTTP-HTTPS-Encrypted HTTP-Other Application Layer Protocols.

MODULE II TOOLS AND TECHNOLOGIES 09

Pervasive Learning – Emerging Technologies and Systems for Pervasive Learning- Integration of Real-World Practice and Experience with Pervasive Learning- Nature of Pervasive Learning and Provision of Well-Being in Education-Service Management in Pervasive Computing Environments- Service Management in Pervasive Computing Environments- Techniques for Service Management in PvCE- Service Composition-Standards and Implementation of Pervasive Computing Applications.

MODULE III SECURITY AND PRIVACY 09

Security and Privacy in Pervasive Networks – Security Classics- Hardening Pervasive Networks- Privacy in Pervasive Networks- Understanding Wormhole Attacks in Pervasive Networks- A Wormhole Attack- Severity of a Wormhole Attack- Classification of Wormholes- Wormhole Attack Modes- Mitigating Wormhole Attacks- Discussion of Some Mitigating Solutions to Avoid Wormhole Attacks.

MODULE IV NETWORKING AND COMMUNICATION 09

Autonomic and Pervasive Networking – Ubiquitous/Pervasive Networks- Applying Autonomic Techniques to Ubiquitous/Pervasive Networks- Self-* (star) In Autonomic and Pervasive Networks- Autonomic and Pervasive Networking Challenges- An Adaptive Architecture of Service Component for Pervasive Computing- Motivation- An Overview of the Delaying Adaptation Tool- Case Study.

MODULE V QUALITY OF SERVICE 09

The Coverage Problem - Stochastic k-Coverage Protocol- Performance Evaluation of Pervasive Networks Based on WiMAX Networks- IEEE 802.16 Architecture and QoS Requirements- Proposed QoS Framework- Implementation Frameworks for Mobile and Pervasive Networks- Correlating Design to Implementations- Challenges for Implementation Frameworks- State of the Art in Implementation Frameworks

Theory : 45

REFERENCES :

OUTCOMES :

Students who complete this course will be able to

- Describe the concept of pervasive computing
- Design a basic architecture for a pervasive computing environment
- Analyze the role of sensors in Wireless networks
- Relate to current trends in pervasive computing and develop a sense of their practicality.
- Evaluate important issues and concerns on security and privacy
- Deploy the location and context information for application development

CSCY211 WEB TECHNOLOGY

L	T	P	C
1	0	2	2

OBJECTIVES :

- To provide an overview about the web related essential elements.
- To expose the construction and manipulation of web databases.
- To depict the technologies in building the web.
- To explicate the various scripting languages.
- To be familiar with markup languages used in web.
- To practice the programming aspects in building a web.

MODULE I INTRODUCTION TO WEB TECHNOLOGIES 15

Web Technology Architecture - Markup Languages – Inter Process Communication- Scripting languages- Database Connectivity – Client Side and Server Side programming - Web Security.

MODULE II DEVELOPING WEB APPLICATIONS 15

Client-Side Programming - Server-Side Programming - Creating Layout -Dynamic visuals to web application: building JSON Servlet and JQuery AJAX method - Integrating social website - Linking Dynamic Content from External Websites- Integrating E-commerce applications-Debugging and testing.

L-15; P-30

REFERENCES :

3. Sandeep Kumar Patel, “Developing Responsive Web Applications with AJAX and jQuery”, 1st edition, Packt publishing, ISBN: 978-1-78328-637-9, 2014.

OUTCOMES :

Students who complete this course will be able to

- Analyze a web page and identify its elements and attributes.
- Develop XML applications with DTD and style sheets for use with legacy browsers.

- Apply inter-process communication in web.
- Construct and manipulate web databases.
- Create a website and link it to social media.
- Build interactive web applications.

CSCY212 XML AND WEB SERVICES

L	T	P	C
1	0	2	2

OBJECTIVES :

- To edify evolution of web services and their architecture.
- To describe, discover &develop web services.
- To inculcate in-built programming skill needed to provide a web service.
- To incorporate comprehensive introduction to the programming tools required to build and maintain websites
- To facilitate how to build XML applications with DTD and style sheets.
- To practice the technologies in building the web services.

MODULE I INTRODUCTION 15

Introduction to XML-Name spaces –Schema - Web Services- Web Service Technologies- Web Services Architecture – SOAP – WSDL – UDDI – Standards - Service Coordination Protocols – Infrastructure- WS-Coordination – WS-Transaction – RosettaNet – xCBL – ebXML – WSCI-Service Composition-Exception Handling-Business Process Execution Language for Web Services.

MODULE II BUILDING WEB SERVICES 15

Introduction to ASP.NET Web API- Managing a Web API- Connecting Applications-Creating a Web API using Mobile Services- Creating Hybrid Services-Data services in Cloud: Data and Access Technologies- Creating Data Source for Web Application.

L-15; P-30

REFERENCES :

3. Alex Belotserkovskiy, Stephen Kaufman, Nikhil Sachdeva, “Building Web Services with Microsoft Azure”, first edition, Packt publishing, ISBN: 978-1-78439-8, 2015.

OUTCOMES :

Students who complete this course will be able to

- Create web based application with the suitable markup languages like XML or HTML
- Develop database driven web applications using various web designing tools.
- Build and consume web services.
- Develop web service enabled applications.
- Use SOAP, WSDL & UDDI.
- Construct, deploy and call web services using the existing web technologies.

CSCY213 MULTIMEDIA SYSTEMS

L	T	P	C
1	0	2	2

OBJECTIVES :

- To provide the basics of multimedia systems and processing of multimedia signals.
- To gain knowledge on multimedia tools and processes.
- To design multimedia systems in systematic approach.
- To produce information on user interface design.
- To identify the major applications of multimedia systems.
- To insight the research areas of multimedia systems.

MODULE I MULTIMEDIA DESIGN 15

Mathematical Transforms used for multimedia signal processing- Digital Audio, image and video formats- Storing and Transmission of Digital audio signals – Visual Communication – Page layout – User interface design – Web design.

MODULE II PROGRAMMING AND APPLICATIONS 15

Static Media - Text- Graphics-Photography-Time Based Media – Recording formats and Device settings – Audio production – Video production – Time based Editing- Interactive Multimedia- Digital Video Stabilization – Development of Architecture Information Archive and Multimedia formats for Digital E-libraries.

L-15; P-30

REFERENCES :

1. Srdjan Stankovic, Irena Orovic, Ervin Sejdic, “Multimedia Signals and Systems: Basic and Advanced Algorithm for Signal processing”, 2nd Edition, Springer , ISBN 978-3-319-23950-7, 2015 .

OUTCOMES :

Students who complete this course will be able to

- Construct mathematical transformations for multimedia signals.
- Analyse and process the multimedia signals such as images, audio, video.

- Acquire the basic concepts of multimedia tools and process in design.
- Illustrate design process of implementing multimedia systems.
- Use static and time based media in Multimedia system.
- Apply multimedia technology in various scenarios.

ITC6201 CLOUD COMPUTING TECHNOLOGIES

L	T	P	C
3	0	0	3

OBJECTIVES :

- To gain understanding of the basic concepts of cloud computing.
- To learn various types of cloud services, technologies and service providers.
- To know the design challenges of cloud infrastructure.
- To have knowledge about different programming models and cloud software.
- To understand the privacy and security issues in cloud environments.

MODULE I CLOUD COMPUTING BASICS 09

Introduction to Cloud Computing – Cloud computing reference model- Essential Characteristics - Benefits and challenges of cloud computing- Cloud Delivery Models - Deployment models -Cloud computing vendors .

MODULE II CLOUD COMPUTING TECHNOLOGY 08

Virtualization-Types of virtualization-Virtualization and cloud computing- Client-thin, thick, mobile clients- Cloud Providers and Consumers-Various Cloud Services- Accessing the Cloud- Frameworks- AJAX, Python- Web Hosting Services- Web Applications- Web API’s and Web Browsers.

MODULE III CLOUD INFRASTRUCTURE 10

Architectural Design of Compute and Storage Clouds – Layered Cloud Architecture Development– Design Challenges - Inter Cloud Resource Management – Resource Provisioning and Platform Deployment – Global Exchange of Cloud Resources.

MODULE IV PROGRAMMING MODEL 10

Map Reduce programming model - Map reduce and extensions - Relational operations – Parallel Efficiency of Map Reduce- Cloud File Systems - GFS and HDFS –Cloud platforms in Industry – Google App Engine, Amazon AWS- Cloud Software Environments -Eucalyptus, Open Nebula.

MODULE V SECURITY IN CLOUD 08

Cloud security fundamentals- Privacy and Security in cloud - Software-as-a-Service Security Risk Management – Security Monitoring – Security Architecture Design – Data Security – Application Security – Virtual Machine Security.

Theory : 45

REFERENCES :

6. Tim Malhar, S.Kumaraswammy, Shahed Latif ,”Cloud Security & Privacy”, O’Reilly media , 2009.

OUTCOMES :

On completion of the programme students will be able to:

- Articulate the main concepts, key technologies, strengths and limitations of cloud computing
- Identify the architecture, infrastructure and delivery models of cloud computing
- Discuss the cloud technologies including virtualization and web based technologies.
- Explain the cloud file systems and their applications in industry.
- Explain the core issues of cloud computing such as security, privacy and interoperability

LIST OF SINGLE CREDIT ELECTIVE COURSES

CSCY071 WIRELESS NETWORK PROGRAMMING

L	T	P	C
0.5	0	1	1

OBJECTIVES :

- To gain knowledge on the programming structure
- To learn the graph concepts
- To have an exposure on the implementation of sensor networks
- To address the programming models
- To gather knowledge on the link layer protocols
- To acquire information on the issues related to flooding

TOPICS

Data structures for sensor computing – general structure of programming – Importance of graph concepts in sensor programming-Programming challenges in sensor networks - structural characteristics and properties – sensor network stack – Synchronization-Programming with link layer protocols - ARQ protocol – transmitter role – naming and addressing – algorithms – flooding – tracking.

L – 8; P – 15

REFERENCES :

1. S. Sitharama Iyengar, Nandan Parameshwaran, Vir V. Phoha, N. Balakrishnan, Chuka D. Okoye, “Fundamentals of sensor network programming: applications and technology”, John Wiley & sons, ISBN 9780470890158, 2011.

OUTCOMES :

Students who complete this course will be able to

- Know the programming fundamentals of sensor computing
- Get familiarized with sensor network characteristics and stack
- Identify the programming models of sensor networks and issues related to it
- Implement the algorithms related to sensor concepts
- Know the issues related to flooding
- Explore the importance of graph concepts in network programming

CSCY072 CLOUD COMPUTING PROGRAMMING

L	T	P	C
0.5	0	1	1

OBJECTIVES :

- To explore the basic cloud architecture.
- To analyze the application need and design an infrastructure.
- To extend the cloud capacity understanding the different loop holes.
- To learn the implementation of cloud services
- To comprehend the Google web services
- To get expose to cloud security

TOPICS

Design a cloud environment in stimulator-resource management-energy management in stimulated environment-Abstraction and virtualization-capacity planning-Google web service-Amazon web service-Microsoft cloud service-Manage cloud-cloud security. Moving applications to cloud-cloud-based storage.

L – 8; P – 15

REFERENCES :

1. Barrie Sosinsky” Cloud Computing Bible”, Wiley India Pvt. Limited, ISBN: 978-0-470-90356-8, 2011.
2. Mark Chu-Carroll “Code in the Cloud: Programming Google App Engine” Pragmatic Bookshelf, ISBN: 1934356638,2011.

OUTCOMES :

Students who complete this course will be able to

- Design a cloud infrastructure based on different platforms.
- Compare the different cloud services provided by different cloud provider.
- Constitute the basic necessities when building an infrastructure for dynamic applications
- Illustrate the importance of energy management in stimulated environment
- Develop real time applications using cloud services
- Explore the issues in cloud security

CSCY073 BIG DATA PROGRAMMING

L	T	P	C
0.5	0	1	1

OBJECTIVES :

- To illustrate the fundamentals of programming in classes functions and invoking methods.
- To learn how to create a package and interfaces using programming tools.
- To solve the problem using Big Data programming tools.
- To gain the knowledge of designing Big data environment
- To explore the concepts of Map reduce.
- To learn the configuration of other tools supported for Big data

TOPICS

Meet hadoop – MapReduce – Hadoop File System-Configuration API – Configuring the Development Environment – Writing a unit test – Running on a cluster – tuning a job – Mapreduce work flows – how MapReduce Works

L – 8; P – 15

REFERENCES :

1. Tom White, "Hadoop: The Definitive Guide", 3rd Edition, O'Reilly, ISBN: 978-1-449-31152-0, 2012.

OUTCOMES :

Students who complete this course will be able to

- Design and analyze the real time problems using Hadoop.
- Create an environment to interact with users
- Configure the big data infrastructure.
- Demonstrate the concepts with processing tools.
- Develop a simple program for solving the problems using big data tools
- Apply Big data concepts into real world applications.

CSCY074 VISUAL SYSTEMS PROGRAMMING

L	T	P	C
0.5	0	1	1

OBJECTIVES :

- To introduce the concepts of visual programming.
- To explore the Visual Basic's Integrated Development Environment (IDE)
- To enable the students to develop programs and simple application using Visual C++
- To learn the basics of .NET Framework
- To become familiar with Windows Programming
- To get expose to Structured Query Language

TOPICS

Programming with Visual C++ 2008: The .NET Framework – Writing C++ Applications – Learning Windows Programming - Using the IDE-Windows Programming Basics –Using Windows Forms-The Document/View Concept in MFC – Creating MFC Applications. Working with Menus and Toolbars– Elements of a Menu –Drawing in a Window:– The Drawing Mechanism in Visual C++-Database Management with Microsoft ODBC – Structured Query Language – MFC ODBC classes – sample database applications – filter and sort strings – DAO concepts – displaying database records in scrolling view – Threading – VC++ Networking issues – Winsock – building a web client – Internet Information Server – ISAPI server extension.

L – 8; P – 15

REFERENCES :

1. Julian Templeman, "Microsoft Visual C++/CLI Step by Step", 1st Edition, Microsoft Press, ISBN: 978-0735675179, 2013.
2. Ivor Horton, "Beginning Visual C++", 1st Edition, Wroz, ISBN:978-0470500880, 2010.

OUTCOMES :

Students who complete this course will be able to

- Apply visual programming to software development by designing projects with menus and submenus
- Implement SDI and MDI applications using forms, dialogs, and other types of GUI components.

- Design and deploy applications using visual C++ programming
- Develop real time applications using Windows Programming
- Comprehend the issues relating to VC++ Networking
- Develop applications in the .NET Framework

CSCY075 OPEN SOURCE TOOLS

L	T	P	C
0.5	0	1	1

OBJECTIVES :

- To introduce to Open Source Ecosystem
- To create awareness on IPR issues, Licensing considerations
- To discuss concepts of Open Web and its role in Open Source Development
- To introduce varied open source tools for productivity and development
- To become familiar with data analytics
- To study about the significance of FOSS tools for personal use.

TOPICS

Open Source Eco-system-IPR and Open Source-Licensing: GNU GPL, LGPL, BSD, CPL, Creative Commons-Open Web-GitHub-FOSS Tools for Personal (Individual Use)-FOSS Tools for Small Teams (Limited Users)-FOSS Tools for Corporate Usage-Open Source Productivity and Development Tools in Vogue-Domain Specific Open Source Tools (Networking, Data Analytics, Software Engineering, Database Management etc)

L – 8; P – 15

REFERENCES :

1. Sandeep Koranne, “Handbook of Open Source Tools”, 1st Edition, Springer, 2011.

OUTCOMES :

Students who complete this course will be able to,

- Appreciate the significance of Open Source tools
- Comprehend the process, issues and considerations related to IPR, Licensing etc.
- Work with Open Web concepts, Github Environments etc
- Use varied Open Source tools for different productivity and development tasks
- Analyze domain specific Open Source tools
- Develop applications using FOSS tools

GENERAL ELECTIVES

GECY101	PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The objectives of the course would be to make the students

- Learn to e valuate and choose an optimal project and build a project profile.
- Attain knowledge on risk identification and risk analysis
- Gain insight into a project plan and components
- Familiar with various gamut of technical analysis for effective project implementation
- Learn to apply project management techniques to manage resources.

MODULE I INTRODUCTION & PROJECT INITIATION 09

Introduction to project and project management - projects in contemporary organization – The project life cycle - project initiation - project evaluation methods & techniques - project selection criteria - project profile.

MODULE II RISK ANALYSIS 09

Sources of risk: project specific - competitive - industry specific - market and international risk – perspectives of risk – risk analysis: sensitivity analysis - scenario analysis - breakeven analysis - simulation analysis - decision tree analysis – managing/mitigating risk – project selection under risk.

MODULE III PROJECT PLANNING & IMPLEMENTATION 09

Project planning – importance – functions - areas of planning - project objectives and policies - steps in planning process - WBS – capital requirements - budgeting and cost estimation - feasibility analysis - creation of project plan – project implementation: pre-requisites - forms of project organization

MODULE IV TECHNICAL ANALYSIS 09

Technical analysis for manufacturing/construction/infrastructure projects – process/technology - materials and inputs - product mix - plant capacity – plant location and site selection – plant layout - machinery and equipment – structures and civil works – schedule of project implementation – technical analysis for software projects.

MODULE V PROJECT MANAGEMENT TECHNIQUES 09

Project scheduling - network construction – estimation of project completion time – identification of critical path - PERT & CPM – crashing of project network - complexity of project scheduling with limited resources - resource allocation - resource leveling – resource smoothing – overview of project management software.

Total Hours: 45

REFERENCES:

1. Projects: Planning, Analysis, Financing, Implementation and Review, Prasanna Chandra, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2004.
2. Project Management and Control, Narendra Singh, Himalaya Publishing, New Delhi, 2015.
3. A Management Guide to PERT/CPM, Jerome, D. Weist and Ferdinand K. Levy, Prentice Hall of India, New Delhi, 1994.

OUTCOMES:

On successfully completing this course, the student will be able to:

- Evaluate & select a project as well as develop a project profile.
- Identify various risks associated with the project and manage it effectively.
- Prepare a detailed project plan addressing its components.
- Perform technical analysis for effective project implementation
- Apply project management techniques for maximizing resource utilization.

GECY102 SOCIETY, TECHNOLGY & SUSTAINABILITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- To understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

MODULE I TECHNOLOGY AND ITS IMPACTS 09

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life – Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT 09

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change.

MODULE III SOCIETY AND TECHNOLOGY 09

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of technology – Impact of technology on developer and consumers – Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE 09

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media

Technology – Information Systems Technology – Nanotechnology – Space Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY 09

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

Total Hours: 45

REFERENCES:

1. Volti Rudi, “Society and Technology Change”, 6th Edition, Worth publishers Inc, USA, 2009.
2. Arthur W.A, “The nature of Technology: What it is and how it evolves”, Free Press, NY, USA, 2009.
3. Winston M and Edelbach R, “Society, Ethics and Technology”, 3rd Edition, San Francisco, USA, 2005.
4. Martin A.A Abraham, “Sustainability Science and Engineering: Defining Principles”, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

OUTCOMES:

At the end of this course, the students will be able to

- Understand the benefits of modern technology for the well-being of human life.
- Connect sustainability concepts and technology to the real world challenges.
- Find pathway for sustainable society.

GECY103 ARTIFICIAL INTELLIGENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- Expose the history and foundations of artificial intelligence.
- Showcase the complexity of working on real time problems underlying the need for intelligent approaches.
- Illustrate how heuristic approaches provide a good solution mechanism.
- Provide the mechanisms for simple knowledge representation and reasoning.
- Highlight the complexity in working with uncertain knowledge.
- Discuss the current and future applications of artificial intelligence.

MODULE I HISTORY AND FOUNDATIONS 08

History – Scope – Influence from life – Impact of computing domains - Agents in environments - Knowledge representation – Dimensions of Complexity – Sample application domains – Agent structure.

MODULE II SEARCH 10

Problem solving as search – State spaces – Uninformed Search – Heuristic search – Advanced search – Constraint satisfaction - Applications.

MODULE III KNOWLEDGE REPRESENTATION AND REASONING 10

Foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

MODULE IV REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE 08

Probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference, sample applications.

MODULE V CASE STUDY AND FUTURE APPLICATIONS 09

Design of a game / Solution for problem in student's domain. Natural Language processing, Robotics, Vehicular automation – Scale, Complexity, Behaviour – Controversies.

Total Hours: 45

TEXT BOOK:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2010.
2. David Poole, Alan Mackworth, Artificial Intelligence: Foundations of Computational Agents, Cambridge University Press, 2010.
3. Nils J. Nilsson, The Quest for Artificial Intelligence, Cambridge University Press, Online edition, 2013.
4. Keith Frankish, William M. Ramsey (eds) The Cambridge Handbook of Artificial Intelligence, Cambridge University Press, 2014.

OUTCOMES:

Students who complete this course will be able to

- Discuss the history, current applications, future challenges and the controversies in artificial intelligence.
- Apply principle of AI in the design of an agent and model its actions.
- Design a heuristic algorithm for search problems.
- Analyze and represent the fact using logic for a given scenario
- Represent uncertainty using probabilistic models
- Develop a simple game or solution using artificial intelligence techniques.

GECY104 GREEN COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To focus on the necessity of green computing technology.
- To expose to various issues with information technology and sustainability.
- To attain knowledge on the technologies for enabling green cloud computing.
- To elaborate on the energy consumption issues
- To illustrate a Green and Virtual Data Center
- To develop into a Green IT Technologist.

MODULE I INTRODUCTION 08

Trends and Reasons to Go Green - IT Data Center Economic and Ecological Sustainment - The Growing Green Gap: Misdirected Messaging, Opportunities for Action - IT Data Center “Green” Myths and Realities - PCFE Trends, Issues, Drivers, and Related Factors - Green Computing and Your Reputation- Green Computing and Saving Money- Green Computing and the Environment

MODULE II CONSUMPTION ISSUES 10

Minimizing power usage – Cooling - Electric Power and Cooling Challenges - Electrical – Power -Supply and Demand Distribution - Determining Energy Usage - From Energy Avoidance to Efficiency - Energy Efficiency Incentives, Rebates, and Alternative Energy Sources - PCFE and Environmental Health and Safety Standards- Energy-exposed instruction sets- Power management in power-aware real-time systems.

MODULE III NEXT-GENERATION VIRTUAL DATA CENTERS 09

Data Center Virtualization - Virtualization beyond Consolidation - Enabling Transparency - Components of a Virtual Data Center - Datacenter Design and Redesign - Greening the Information Systems - Staying Green- Building a Green Device Portfolio- Green Servers and Data Centers- Saving Energy

MODULE IV TECHNOLOGIES FOR ENABLING GREEN AND VIRTUAL DATA CENTERS 08

Highly Effective Data Center Facilities and Habitats for Technology - Data Center Electrical Power and Energy Management - HVAC, Smoke and Fire Suppression

- Data Center Location - Virtual Data Centers Today and Tomorrow - Cloud Computing, Out-Sourced, and Managed Services.

MODULE V SERVERS AND FUTURE TRENDS OF GREEN COMPUTING 10

Server Issues and Challenges - Fundamentals of Physical Servers - Types, Categories, and Tiers of Servers - Clusters and Grids - Implementing a Green and Virtual Data Center - PCFE and Green Areas of Opportunity- 12 Green Computer Companies- What's in Green computer science-Green off the Grid aimed for data center energy evolution-Green Grid Consortium- Green Applications- Green Computing Making Great Impact On Research

Total Hours: 45

REFERENCES:

6. Marty Poniatowski, "Foundation of Green IT: Consolidation, Virtualization, Efficiency, and ROI in the Data Center", Printice Hall, ISBN: 9780-1-3704-375-0, 2009.

OUTCOMES:

Students who complete this course will be able to

- Demonstrate issues relating to a range of available technologies, systems and practices to support green computing.
- Select appropriate technologies that are aimed to reduce energy consumption.
- Address design issues needed to achieve an organizations' green

computing objectives.

- Analyze the functionality of Data Centers.
- Critically evaluate technologies and the environmental impact of computing resources for a given scenario.
- Compare the impact of Green Computing with other computing techniques.

GECY105 GAMING DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To master event-based programming
- To learn resource management as it relates to rendering time, including level-of-detail and culling.
- To become familiar with the various components in a game or game engine.
- To explore leading open source game engine components.
- To become familiar of game physics.
- To be compatible with game animation.

MODULE I INTRODUCTION 09

Magic Words – What Skills Does a Game Designer Need? – The Most Important Skill -The Five Kinds of Listening-The Secret of the Gifted.

MODULE II THE DESIGNER CREATES AN EXPERIENCE 09

The Game Is Not the Experience -Is This Unique to Games? -Three Practical Approaches to Chasing Rainbows -Introspection: Powers, Perils, and Practice -Dissect Your Feelings -Defeating Heisenberg -Essential Experience.

MODULE III THE EXPERIENCE IN THE PLAYER MIND AND GAME MECHANICS 08

Modeling – Focus -Empathy – Imagination – Motivation – Space – Objects, Attributes, and States – Actions – Rules.

MODULE IV GAMES THROUGH AN INTERFACE 09

Breaking it Down – The Loop of Interaction – Channels of Information – Other Interface.

MODULE V BALANCED GAME MECHANICS 10

Balance – The Twelve Most Common Types of Game Balance – Game Balancing Methodologies - Balancing Game Economies.

Total Hours: 45

ISBN-10: 1466598646, 2014.

2. Ashok Kumar, Jim Etheredge, Aaron Boudreaux, “Algorithmic and Architectural Gaming Design: Implementation and Development", 1st edition, Idea Group, U.S ISBN-10: 1466616342, 2012.
3. Katie Salen Tekinba, Melissa Gresalfi, Kylie Peppler, Rafi Santo, "Gaming the System - Designing with Gamestar Mechanic" MIT Press , ISBN-10: 026202781X, 2014.
4. James M. Van Verth, Lars M. Bishop "Essential Mathematics for Games and Interactive Applications", Third Edition, A K Peters / CRC Press, ISBN-10: 1482250926, 2015.

OUTCOMES:

Students who complete this course will be able to

- Realize the basic history and genres of games
- Demonstrate an understanding of the overall game design process
- Explain the design tradeoffs inherent in game design
- Design and implement basic levels, models, and scripts for games
- Describe the mathematics and algorithms needed for game programming
- Design and implement a complete three-dimensional video game

GECY106 SOCIAL COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To create original social applications, critically applying appropriate theories and effective practices in a reflective and creative manner.
- To critically analyze social software in terms of its technical, social, legal, ethical, and functional features or affordances.
- To encourage the development of effective communities through the design, use, and management of social software.
- To give students with a base of knowledge and advances for them to critically examine existing social computing services.
- To plan and execute a small-scale research project in social computing in a systematic fashion.
- To become familiar with the concept of computational thinking.

MODULE I BASIC CONCEPTS 09

Networks and Relations: Relations and Attributes, Analysis of Network Data, Interpretation of network data -New Social Learning – Four Changes that Shift Work - Development of Social Network Analysis: Sociometric analysis and graph theory, Interpersonal Configurations and Cliques – Analysing Relational Data.

MODULE II SOCIAL LINK 09

Individual Actors, Social Exchange Theory, Social Forces, Graph Structure, Agent Optimization Strategies in Networks – Hierarchy of Social Link Motivation- Social Context.

MODULE III SOCIAL MEDIA 08

Trends in Computing – Motivations for Social Computing – Social Media: Social relationships, Mobility and Social context – Human Computation – Computational Models- Business use of social Media.

MODULE IV SOCIAL INFORMATION FILTERING 09

Mobile Location Sharing – Location based social media analysis – Social Sharing and Social Filtering – Automated recommender Systems – Traditional and Social Recommender Systems.

MODULE V SOCIAL NETWORK STRATEGY 10

Application of Topic Models – Opinions and Sentiments – Recommendation Systems – Language Dynamics and influence in online communities – Psychometric analysis – Case Study: Social Network Strategies for surviving the zombie apocalypse.

Total Hours: 45

7. Huan Liu, John Salerno, Michael J. Young, “Social computing and Behavioral Modeling”, Springer Publication, 2009.

OUTCOMES:

Students who complete this course will be able to

- Realize the range of social computing applications and concepts.
- Analyze data left after in social media.
- Recognize and apply the concepts of computational models underlying social computing.
- Take out simple forms of social diagnostics, involving network and language models, applying existing analytic tools on social information.
- Evaluate emerging social computing applications, concepts, and techniques in terms of key principles.
- Design and prototype new social computing systems.

GECY107 SOFT COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

The aim of the course is to

- Enumerate the strengths and weakness of soft computing
- Illustrate soft computing methods with other logic driven and statistical method driven approaches
- Focus on the basics of neural networks, fuzzy systems, and evolutionary computing
- Emphasize the role of euro-fuzzy and hybrid modeling methods
- Trace the basis and need for evolutionary computing and relate it with other soft computing approaches

MODULE I SOFT COMPUTING - BASICS 06

Soft computing – Hard Computing – Artificial Intelligence as the basis of soft computing – Relation with logic driven and statistical method driven approaches- Expert systems – Types of problems: Classification, Functional approximation, Optimizations – Modeling the problem – Machine Learning – Hazards of Soft Computing – Current and future areas of research

MODULE II ARTIFICIAL NEURAL NETWORK 12

Artificial Neuron – Multilayer perceptron – Supervised learning – Back propagation network –Types of Artificial Neural Network: Supervised Vs Un Supervised Network – Radial basis function Network – Self Organizing Maps – Recurrent Network – Hopfield Neural Network – Adaptive Resonance Theory – Issues in Artificial Neural Network – Applications

MODULE III FUZZY SYSTEMS 09

Fuzzy Logic – Membership functions – Operators – Fuzzy Inference systems – Other sets: Rough sets, Vague Sets – Fuzzy controllers - Applications

MODULE IV NEURO FUZZY SYSTEMS 09

Cooperative Neuro fuzzy systems – Neural network driven fuzzy reasoning – Hybrid Neuro fuzzy systems – Construction of Neuro Fuzzy systems: Structure Identification phase, Parameter learning phase – Applications

MODULE V EVOLUTIONARY COMPUTING 09

Overview of evolutionary computing – Genetic Algorithms and optimization – Genetic Algorithm operators – Genetic algorithms with Neural/Fuzzy systems – Variants of Genetic Algorithms– Population based incremental learning – Evolutionary strategies and applications

Total Hours: 45

TEXTBOOKS:

1. Samir Roy, “Introduction to Soft Computing: Neuro-Fuzzy and Genetic Algorithms”, Pearson, 2013
2. Anupam Shukla, Ritu Tiwari and Rahul Kala, “Real life applications of Soft Computing”, CRC press, 2010.
3. Fakhreddine O. Karray, “Soft Computing and Intelligent Systems Design: Theory, Tools and Applications”, Pearson, 2009

OUTCOMES:

At the end of the course the students will be able to

- Enumerate the theoretical basis of soft computing
- Explain the fuzzy set theory
- Discuss the neural networks and supervised and unsupervised learning networks
- Demonstrate some applications of computational intelligence
- Apply the most appropriate soft computing algorithm for a given situation

GECY108 EMBEDDED SYSTEM PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the design of embedded computing systems with its hardware and software architectures.
- To describe entire software development lifecycle and examine the various issues involved in developing software for embedded systems.
- To analyze the I/O programming and Embedded C coding techniques
- To equip students with the software development skills necessary for practitioners in the field of embedded systems.

MODULE I INTRODUCTION OF EMBEDDED SYSTEM 09

Embedded computing – characteristics and challenges – embedded system design process – Overview of Processors and hardware units in an embedded system – Compiling, Linking and locating – downloading and debugging – Emulators and simulators processor – External peripherals – Memory testing – Flash Memory.

MODULE II SOFTWARE TECHNOLOGY 09

Software Architectures, Software development Tools, Software Development Process Life Cycle and its Model, Software Analysis, Design and Maintenance.

MODULE III INPUT/OUTPUT PROGRAMMING 09

I/O Instructions, Synchronization, Transfer Rate & Latency, Polled Waiting Loops, Interrupt – Driven I/O, Writing ISR in Assembly and C, Non Maskable and Software Interrupts

MODULE IV DATA REPRESENTATION IN EMBEDDED SYSTEMS 09

Data representation, Twos complement, Fixed point and Floating Point Number Formats, Manipulating Bits in -Memory, I/O Ports, Low level programming in C, Primitive data types, Arrays, Functions, Recursive Functions, Pointers, Structures & Unions, Dynamic Memory Allocation, File handling, Linked lists, Queues, Stacks.

MODULE V EMBEDDED C 09

Embedded Systems programming in C – Binding & Running Embedded C program in Keil IDE – Dissecting the program - Building the hardware. Basic techniques for

reading & writing from I/O port pins – switch bounce - LED Interfacing using Embedded C.

Total Hours: 45

REFERENCES:

1. Marilyn Wolf, "Computers as components ", Elsevier, 2012.
2. Qing Li and Carolyn Yao, "Real-Time Concepts for Embedded Systems", CMP Books, 2003.
3. Daniel W. Lewis, "Fundamentals of embedded software where C and assembly meet", Pearson Education
4. Michael Bass, "Programming Embedded Systems in C and C++", Oreilly, 2003.

OUTCOMES:

On completion of this course the student will be able to

- Design the software and hardware components in embedded system
- Describe the software technology
- Use interrupt in effective manner
- Use keil IDE for programming
- Program using embedded C for specific microcontroller
- Design the embedded projects

GECY109 PRINCIPLES OF SUSTAINABLE DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge in the concepts and dimensions of sustainable development.
- To gain knowledge on the framework for achieving sustainability.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 09

Environment and Development - Population poverty and Pollution – Global and Local environmental issues – Resource Degradation- Greenhouse gases – Desertification-industrialization – Social insecurity, Globalization and environment. History and emergence of the concept of sustainable development-Objectives of Sustainable Development.

MODULE II COMPONENTS AND DIMENSIONS OF SUSTAINABLE DEVELOPMENT 09

Components of Sustainability – Complexity of growth and equity – Social economic and environmental dimensions of sustainable development – Environment – Biodiversity – Natural – Resources – Ecosystem integrity – Clean air and water – Carrying capacity – Equity, Quality of Life, Prevention, Precaution – Preservation and Public Participation Structural and functional linking of developmental dimensions.

MODULE III FRAMEWORK FOR ACHIEVING SUSTAINABILITY 09

Operational guidelines – interconnected prerequisites for sustainable development Empowerment of Women, children, Youth, Indigenous People, Non-Governmental Organizations Local Authorities, Business and industry – Science and Technology for sustainable development – performance indicators of sustainability and assessment mechanism – Constraints and barriers for sustainable development.

MODULE IV SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 09

Demographic dynamics of sustainability – Policies for socio-economic development – Strategies for implementing eco-development programmes Sustainable development through trade – Economic growth – Action plan for implementing sustainable development – Urbanization and sustainable Cities – Sustainable Energy and Agriculture – sustainable livelihoods.

MODULE V SUSTAINABLE DEVELOPMENT AND INTERNATIONAL RESPONSE 09

Role of developed countries in the development of developing countries – international summits – Stockholm to Johannesburg – Rio principles – Agenda-Conventions – Agreements – Tokyo Declaration – Doubling statement – Tran boundary issues integrated approach for resources protection and management

Total Hours: 45

REFERENCES:

1. Sayer J. and Campbell, B., The Science of Sustainable Development: Local Livelihoods and the Global environment - Biological conservation restoration & Sustainability, Cambridge university Press, London, 2003.

3. Mackenthun K.M., Concepts in Environmental Management, Lewis Publications London, 1999.
4. APJ Abdul Kalam and Srijan Pal Singh, Target 3 Billion: Innovative Solutions Towards Sustainable Development, Penguin India, 2011

OUTCOMES:

At the end of the course the student will be able to

- Describe the concepts of sustainable development
- Define the components and dimensions of sustainable development
- Outline the Frame work for achieving sustainability.
- State the policies and strategies for implementing sustainable development for Socio economic programmes.
- Examine the role of developed countries in sustainable development.

GECY110	QUANTITATIVE TECHNIQUES IN MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart knowledge on

- Concepts of operations research
- Inventory control in production management
- Financial management of projects
- Decision theory and managerial economics

MODULE I OPERATIONS RESEARCH 09

Introduction to Operations research – Linear programming – Graphical and Simplex Methods, Duality and Post-Optimality Analysis – Transportation and Assignment Problems

MODULE II PRODUCTION MANAGEMENT 09

Inventory control, EOQ, Quantity Discounts, Safety Stock – Replacement Theory – PERT and CPM – Simulation Models – Quality Control.

MODULE III FINANCIAL MANAGEMENT 09

Working Capital Management – Compound Interest and Present Value methods – Discounted Cash Flow Techniques – Capital Budgeting.

MODULE IV DECISION THEORY 09

Decision Theory – Decision Rules – Decision making under conditions of certainty, risk and uncertainty – Decision trees – Utility Theory.

MODULE V MANAGERIAL ECONOMICS 09

Cost concepts – Break even Analysis – Pricing techniques – Game Theory applications.

Total Hours: 45

REFERENCES:

1. Vohra, N.D. , Quantitative Techniques in Management, Tata McGraw Hill Co., Ltd, New Delhi, 2009.
2. Seehroeder, R.G., Operations Management, McGraw Hill, USA, 2002.

4. Frank Harrison, E., The Managerial Decision Making Process, Houghton Miffin Co. Boston, 2005.
5. Hamdy A. Taha, Operations Research- An Introduction, Prentice Hall, 2002.

OUTCOME:

At the end of the course, the students will be able to

- Apply the concepts of operations research for various applications
- Create models for inventory control in production management
- Compute the cash flow for a project
- Choose a project using decision theory based on the risk criterion.
- Apply the concepts of managerial economics in construction management

GECY111 PROGRAMMING USING MATLAB & SIMULINK

L	T	P	C
1	0	2	2

OBJECTIVES:

The aim of this course is to:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION TO MATLAB AND DATA PRESENTATION 10

Introduction to MATLAB-Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts- Making clear and compelling plots-Solving systems of linear equations numerically and symbolically.

Lab Experiments

1. Study of basic matrix operations and manipulations.
2. Numerical and symbolical solution of linear equations.

MODULE II ROOT FINDING AND MATLAB PLOT FUNCTION 10

Linearization and solving non-linear systems of equations- The Newton-Raphson method- Integers and rational numbers in different bases- Least squares regression -Curve fitting-Polynomial fitting and exponential fitting.

Lab Experiments

1. Solution of non linear equations using Newton-Raphson method.
2. Determination of polynomial fit and exponential fit for the given data.

MODULE III LINEAR AND NON-LINEAR DIFFERENTIAL EQUATIONS 13

Numerical integration and solving first order, ordinary differential equations (Euler's method and Runge-Kutta) - Use of ODE function in MATLAB- Converting second order and higher ODEs to systems of first order ODEs- Solving systems of higher order ODEs via Euler's method and Runge-Kutta) - Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations - Plot Function –Saving & Painting Plots.

Lab Experiments

1. Solution of fourth order linear differential equations using
    a. Trapezoidal Rule

b. Euler method

2. Solution of fourth order non-linear differential equations using
    a. Modified Euler method
    b. Runge – Kutta method

MODULE IV INTRODUCTION OF SIMULINK 12

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- - Representing a model as a subsystem- Programme specific Simulink demos.

Lab Experiments

1. Solution of fourth order non-linear differential equations using simulink.
2. Programme specific experiment based on simulink.

Total Hours (Including Practicals): 45

REFERENCE:

1. Griffiths D V and Smith I M, “Numerical Methods for Engineers”, Blackwell, 1991.
2. Laurene Fausett, “Applied Numerical Analysis Using MATLAB”, Pearson 2008.
3. Moin P, “Fundamentals of Engineering Numerical Analysis”, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB”, CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving, “Mathematical Exploration with MATLAB”, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

- Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
- Write programs using first principles without automatic use of built-in ones.
- Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
- Be fluent in exploring Matlab’s capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
- Make use of Maltab visual capabilities for all engineering applications.

- An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECY112 JAVA PROGRAMMING

L	T	P	C
1	0	2	2

OBJECTIVES:

- To learn the fundamentals of Java programming such as data types, variables and arrays.
- To study the syntax and necessity of decision making and iterative statements.
- To create a class and invoke the methods.
- To instigate programming in overloading of methods.
- To emphasize the concept of packages.
- To learn the exception handling routines.

MODULE I INTRODUCTION TO JAVA PROGRAMMING 08

History and Evolution of Java – Overview of Java – Data types, variables and arrays – Operators – Control statements.

MODULE II METHODS AND CLASSES 07

Class fundamentals – Declaring objects – Methods – Constructors – Garbage collection – Overloading methods – Constructor overloading – Access control – Inheritance – Packages - Exception handling.

L: 15, P: 30, Total Hours: 15

REFERENCES:

1. Herbert Schildt, “Java The Complete Reference”, 9th Edition, Oracle Press, 2014, ISBN: 978007180855-2.
2. Nicholas S. Williams, **“**Professional Java for Web Applications: Featuring WebSockets, Spring Framework, JPA Hibernate and Spring Security (WROX)”, John Wiley & Sons, 2014, ISBN: 978111865651-8.

4. Yashavant Kanetka**, “**Let Us Java”, 2nd Edition, BPB Publications, 2012**.**

OUTCOMES:

Students who complete this course will be able to

- Implement basic Java programming.
- Create a class and invoke methods for real world problems.

- Construct simple overloading of methods programs.
- Implement various types of inheritance concepts.
- Describe the access control mechanism.
- Handle exception thrown while implementing programming.

GECY113 PYTHON PROGRAMMING

L	T	P	C
1	0	2	2

OBJECTIVES:

- To learn the list and records of python programming.
- To study the control statements and string functions of python.
- To instigate the fundamental python programming.
- To emphasize GUI in python.
- To integrate python with embedded systems.
- To implement programs in python.

MODULE I INTRODUCTION TO PYTHON PROGRAMMING 08

Installation and environment set up – syntax used in python – variable types – operators – Loops – decision making – string functions - formatted files - GUI basics.

MODULE II EMBEDDED PROGRAMMING USING PYTHON 07

Web interface – system tools – script execution context - Motion-triggered LEDs – Python - Arduino prototyping-storing and plotting Arduino data-Remote home monitoring system.

L: 15, P: 30, Total Hours: 15

5. Michael Barr, Anthony Massa, “Programming Embedded Systems”, 2nd Edition, O'Reilly Media, 2006.

OUTCOMES:

Students who complete this course will be able to

- Implement date and time function programming using python.

- Write formatted file programming.
- Construct simple python programs.
- Create web interface using python programming
- Develop embedded system with python programming.
- Build Arduino prototype using python programming.

GECY114 INTELLECTUAL PROPERTY RIGHTS (IPR)

L	T	P	C
1	0	0	1

OBJECTIVES:

- To study about Intellectual property rights and its need
- To explore the patent procedure and related issues

MODULE I INTRODUCTION 07

Introduction and the need for intellectual property right (IPR) – IPR in India – Genesis and Development – IPR in abroad – Important examples of IPR – Copyrights, Trademarks, Patents, Designs, Utility Models, Trade Secrets and Geographical Indications – Industrial Designs

MODULE II PATENT 08

Concept of Patent – Product / Process Patents & Terminology – Duration of Patents – Law and Policy Consideration Elements of Patentability –- Patentable Subject Matter – Procedure for Filing of Patent Application and types of Applications – Procedure for Opposition – Revocation of Patents – Working of Patents- Patent Agent – Qualification and Registration Procedure – Patent databases and information system – Preparation of patent documents – Process for examination of patent application- Patent infringement – Recent developments in patent system

Total Hours: 15

8. Jatindra Kumar Das, Law of Copyright, PHI Learning, 2015

COURSE OUTCOMES:

Students should be able to

- Identify the various types of intellectual property and their value
- Apply the procedure to file a patent and to deal the related issues
- Search and extract relevant information from various intellectual database

REGULATIONS, CURRICULAM AND SYLLABUS

M. TECH.
POWER SYSTEMS ENGINEERING

(As approved by the 9th Academic Council)

JULY 2016

B.S.ABDUR RAHMAN UNIVERSITY
B.S.ABDUR RAHMAN INSTITUTE OF SCIENCE & TECHNOLOGY
(Estd.u/s 3 of the UGC Act, 1956)
(FORMERLY B.S.ABDUR RAHMAN CRESCENT ENGINEERING COLLEGE)
Seethakathi Estate, G.S.T. Road, Vandalur, Chennai - 600 048.

VISION AND MISSION OF THE DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

VISION

To achieve excellence in the programs offered by the Department of Electrical and Electronics Engineering through quality teaching, holistic learning and innovative research

MISSION

- To offer Under Graduate, Post Graduate & Research programs of industrial and societal relevance
- To provide knowledge and skill in the Design and realization of Electrical and Electronic circuits and systems
- To impart necessary managerial and soft skills to face the industrial challenges
- To pursue academic and collaborative research with industry and research institutions in India and abroad
- To disseminate the outcome of research and projects through publications, seminars and workshops

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

PROGRAMME EDUCATIONAL OBJECTIVES

1. **Engineering knowledge**:
   Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis**:
   Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions**:
   Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems**:
   Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage**:
   Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society**:
   Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability**:
   Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics**:
   Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work**:
   Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication**:
    Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance**:
    Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning**:
    Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME OUTCOMES

(i) Ability to provide solutions for power system problems to meet global requirements
(ii) Have ability to apply various industrial power system software packages in the areas of planning and operation of power systems.
(iii) To have a substantial knowledge, in emerging areas such as deregulation of power system, smart grid and clean energy

CURRICULUM & SYLLABI FOR
M. Tech (Power Systems Engineering)

CURRICULUM
FOUR SEMESTERS / FULL TIME)

Sl. No.	Course Code	Course Title	L	T	P	C
		Semester I				
1	MAC6184	Probability, Matrix Theory and Linear Programming	**3**	**1**	**0**	**4**
2	EEC6101	System Theory	**3**	**0**	**0**	**3**
3	EEC6102	Advanced Power System Analysis	**3**	**1**	**0**	**4**
4	EEC6103	Power Distribution System	**3**	**0**	**0**	**3**
5	EEC6104	Power System Protection	**3**	**0**	**0**	**3**
6		Professional Elective#				**3#**
7	EEC6105	Power System Analysis & Protection Lab	**0**	**0**	**2**	**1**
8	EEC6106	Design / Simulation Project	**0**	**0**	**2**	**1**
		Total Credit (semester I)				**22**

Minimum of 3 credits

		Semester II				
1	EEC6211	Advanced Power system Operation and Control	**3**	**0**	**0**	**3**
2	EEC6212	Restructured Power Systems	**3**	**0**	**0**	**3**
3	CSB6101	Research Methodology	**3**	**1**	**0**	**4**
4		Professional Elective##				**9##**

SEMESTER I

MAC6184	PROBABILITY, MATRIX THEORY AND LINEAR PROGRAMMING	L	T	P	C
		3	1	0	4

(M.Tech. PSE, PED, VLSI, Communication, EIE & Structural)

OBJECTIVE:

The aim of this course is to

- provide a comprehensive introduction to the probability distributions used in engineering.
- familiarize students with advanced matrix theory and variation problems.
- expose the students to Operations Research using concepts of linear programming.

MODULE I PROBABILITY DISTRIBUTIONS 10+03

Axioms of probability – addition and multiplication theorem – conditional probability – total probability – random variables - moments – moments generating functions and their properties- Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

MODULE II TWO DIMENSIONAL RANDOM VARIABLES 08+03

Joint distributions - marginal and conditional distributions - functions of random variables - covariance - correlation and regression - Central limit theorem.

MODULE III ADVANCED MATRIX THEORY 09+03

Matrix norms - singular value decomposition - QR algorithm - pseudo inverse - least square approximations.

MODULE IV LINEAR PROGRAMMING 10+03

Formation - graphical method - simplex method - Big-M method - Two Phase method - transportation and assignment problems.

MODULE V CALCULUS OF VARIATIONS 08+03

Variation and its properties – Euler's equation – functional dependant on first and higher order derivatives – functional dependant on functions of several independent variables – variational problems with moving boundaries – isoperimetric problems – Ritz and Kantorovich methods.

L – 45; T – 15; Total – 60

4. David. J. Rader., “Deterministic Operations Research”, Wiley (2010).
5. Elsgolts, “Differential Equations and Calculus of Variations", University Press of the Pacific (2003).

OUTCOME:

At the end of the course students will be able to

- Solve problems using concept of standard, discrete and continuous distributions.
- Solve problems using one dimensional and two dimensional random variables.
- Find Eigen values and Eigen vectors of a higher order matrix.
- Solve problems of linear programming.
- Solve problems of calculus of variations by direct methods and using Euler’s formulae.

EEC6101 SYSTEM THEORY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide knowledge on state space approach, state feedback controllers and observers for different processes.
- To enhance knowledge on stability analysis of multivariable processes.
- To introduce nonlinear systems and its linearization methods.
- To evaluate Stability of Linear and Non Linear Systems.

MODULE I STATE SPACE APPROACH 08

Introduction to State Space Approach - System representation in state variable form – State transition equation – Methods of computing the state transition matrix.

MODULE II STATE FEEDBACK CONTROL AND STATE ESTIMATOR 08

Stability analysis - Controllability and Observability of linear time invariant systems - State Feedback – Output Feedback – Pole placement technique – Full order and Reduced Order Observers.

MODULE III STABILITY FOR LINEAR SYSTEMS 08

Introduction – Equilibrium points – Stability in the sense of Lyapunov - BIBO Stability – Stability of LTI systems – The direct method of Lyapunov and the Linear continuous time autonomous systems – Popov Stability Criterion.

MODULE IV NON-LINEAR SYSTEMS 06

Types of Non-Linearity – Typical Examples – Phase plane analysis (analytical and graphical methods) – Limit cycles – Equivalent Linearization.

MODULE V STABILITY FOR NON-LINEAR SYSTEMS 08

Equilibrium stability of non linear continuous time autonomous systems – Finding Lyapunov functions for nonlinear continuous time autonomous systems – Krasovskii and variable gradient method.

MODULE VI STABILITY FOR NON-LINEAR SYSTEMS USING DESCRIBING 07

Describing Function Analysis for Non Linear Systems, Describing Functions for different non-linear elements- backlash, deadzone, saturation and hysteresis.

Total Hours: 45

REFERENCES:

2. K.Ogata, “Modern Control Engineering”, Prentice Hall of India, 2002.
3. John .S.Bay, “Fundamentals of Linear State Space Systems”, Tata McGraw– Hill, 1999.
4. Z.Bubnicki, “Modern Control Theory”, Springer, 2005.

OUTCOMES:

At the end of the course, the students will have knowledge and achieve skills on the following:

- Implement state space approach for the process and obtain the solution.
- Design state feedback controller and observers.
- Perform stability analyses of the system using conventional mathematical approach
- Ability to analyze complex systems using mathematical models.
- Ability to analyze the stability of Linear Systems using Lyapnov and Popov Stability Criterions
- Ability to analyze the stability of Non-Linear Systems using novel techniques.

EEC6102 ADVANCED POWER SYSTEM ANALYSIS

L	T	P	C
3	1	0	4

OBJECTIVES:

- To provide the student the knowledge to use efficient numerical techniques suitable for computer application which are required for planning and operation of power system.
- To provide the student the knowledge and computational skills required to model and analyze large-scale power system under normal and abnormal operating conditions.

MODULE I SPARSE MATRICES IN POWER SYSTEMS 08

Sparse Matrix techniques for large scale power systems: Optimal ordering schemes for preserving sparsity. Flexible packed storage scheme for storing matrix as compact arrays - Factorization by Bifactorization and Gauss elimination methods; Repeat solution using Left and Right factors and L and U matrices.

MODULE II POWER FLOW ANALYSIS 08

Power flow equation in real and polar forms; Review of Newton's method for solution; Adjustment of P-V buses; Review of Fast Decoupled Power Flow method; Sensitivity factors for P-V bus adjustment; DC Power Flow,; Net Interchange power control in Multi-area power flow analysis.

MODULE III OPTIMAL POWER FLOW 07

Problem statement; Solution of Optimal Power Flow (OPF) - The gradient method, Newton's method, Linear Sensitivity Analysis; LP methods - With real power variables only - LP method with AC power flow variables and detailed cost functions; Security constrained Optimal Power Flow; Interior point algorithm; Bus Incremental costs. DC Optimal Power Flow (DCOPF)

MODULE IV SHORT CIRCUIT ANALYSIS 08

Fault calculations using sequence networks for different types of faults. Bus impedance matrix (ZBUS) construction using Building Algorithm for lines with mutual coupling; Simple numerical problems. Computer method for fault analysis using ZBUS and sequence components. Derivation of equations for bus voltages, fault current and line currents, both in sequence and phase domain using Thevenin's equivalent and ZBUS matrix for different faults.

MODULE V CONTINGENCY ANALYSIS 07

Introduction and concept of linear sensitivity factors– Generation outage and line outage Sensitivity factors - Analysis of multiple contingencies - Contingency ranking methods – Numerical examples

MODULE VI STABILITY ANALYSIS 07

Introduction, Numerical Integration Methods: Euler and Fourth Order Runge-Kutta methods, Algorithm for simulation with classical synchronous machine model; Factors influencing transient stability, implicit Integration methods and numerical stability. Small Signal Stability – Eigen value and participation factors for SMIB systems

Total Hours: 60

OUTCOMES:

At the end of the course, the student will be able to:

- Use the right solution technique to handle the solution technique while encountering sparse matrices in power system analysis.
- Perform load flow study and interpret the result effectively for power system

operational problems.

- Suggest optimal settings for power system operation by performing optimal power flow analysis.
- Perform short circuit studies and interpret the result for designing the circuit breaker and protection system in long term planning problem.
- Assess the steady state security of the power system for different contingencies.
- Perform transient stability study and interpret the result effectively for long term planning problem.

EEC6103 POWER DISTRIBUTION SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide knowledge about basics of distribution systems
- To provide knowledge about distribution feeders and substations
- To provide knowledge about analysis of distribution system
- To understand the protection devices and practices followed in distribution system
- To understand the concepts of reactive power compensation and voltage control in distribution system.

MODULE I INTRODUCTION TO DISTRIBUTION SYSTEMS 08

General, an overview of the role of computers in distribution system planning Load modeling and characteristics: definition of basic terms like demand factor, utilization factor, load factor, plant factor, diversity factor, coincidence factor, contribution factor and loss factor-Relationship between the load factor and loss factor - Classification of loads (Residential, Commercial, Agricultural and Industrial) and their characteristics.

MODULE II DISTRIBUTION FEEDERS AND SUBSTATIONS 08

Design consideration of Distribution feeders: Radial and loop types of primary feeders- voltage levels- feeder loading. Design practice of the secondary distribution system-Location of Substations: Rating of a Distribution Substation service area with primary feeder - benefits derived through optimal location of substations.

MODULE III SYSTEM ANALYSIS 08

Voltage drop and power loss calculations : Derivation forvolt-drop and power loss in lines- manual methods of solution for radial networks - three-phase balanced primary lines- non-three-phase primary lines.

MODULE IV PROTECTIVE DEVICES AND COORDINATION 08

Objectives of distribution system protection - types of common faults and procedure for fault calculation. Protective Devices: Principle of operation of fuses, circuit reclosers, line sectionalizer and circuit breakers-Coordination of protective devices : General coordination procedure.

MODULE V CAPACITIVE COMPENSATION FOR POWER FACTOR CONTROL 08

Different types of power capacitors, shunt and series capacitors, effect of shunt capacitors (Fixed and switched) - power factor correction, capacitor location. Economic justification - Procedure to determine the best capacitor location.

MODULE VI VOLTAGE CONTROL 05

Equipment for voltage control - effect of series capacitors - effect of AVR- line drop compensation.

Total Hours: 45

2. A.S.Pabla, “Electric Power Distribution”, Tata Mc Graw-Hill Publishing Company, 4th edition,1997.
3. V.Kamaraju, “Electrical Power Distribution Systems”, Tata Mc Graw Hill publication, 2009

OUTCOMES:

At the end of the course, the student is expected to achieve the following:

- Better understanding of basics of power distribution system
- Ability to design distribution feeders and substations
- Ability to perform voltage drop and power loss calculations
- Ability to do distribution system planning
- Ability to carry out reactive power compensation and voltage control in distribution system.
- Ability to perform fault calculations.

EEC6104	POWER SYSTEM PROTECTION	L	T	P	C
		3	0	0	3

OBJECTIVES:

A protection scheme for Power System is designed to continuously monitor the Power System to ensure maximum continuity of Electrical Supply, with minimum damage to Life, Equipment and Property. Hence, the course on Power System Protection aims at the following:

- Fault Characteristics of individual Power System elements
- Tripping characteristics of various protective relays and matching them
- Various schemes of protection employed in Generator and Transformer protection
- Significance of Over Current Protective Schemes
- Relays used for protection of Transmission lines.
- Protection of bus bars.

MODULE I GENERATOR PROTECTION 05

Introduction to Equipment Protection - Electrical circuit of the generator -Various faults and abnormal operating conditions - Rotor faults -Abnormal operating conditions; Numerical examples for typical generator protection schemes

MODULE II TRANSFORMER PROTECTION 08

Types of transformers - Phasor diagram for a three Phase transformer -Equivalent circuit of transformer - Types of faults in transformers - Over current protection - Percentage Differential Protection of Transformers - Inrush phenomenon - High resistance Ground Faults in Transformers – Inter turn faults in transformers - Incipient faults in transformers - Phenomenon of overfluxing in transformers - Transformer protection application chart - Numerical examples for typical transformer protection schemes

MODULE III BUSBAR PROTECTION 08

Introduction – Differential protection of busbars - External and internal fault - Actual behaviors of a protective CT - Circuit model of a saturated CT - External fault with one CT saturated :need for high impedance Busbar protection – Minimum internal fault that can be detected – Stability ratio of high impedance busbar differential scheme - Supervisory relay - Protection of three Phase busbars - Numerical example on design of high impedance bus bar differential scheme.

MODULE IV OVER CURRENT PROTECTION 08

Time - Current characteristics - Current setting - Time setting - Over current protective schemes - Reverse power or directional relay - Protection of parallel feeders - Protection of ring feeders - Earth fault and phase fault protection - Combined Earth fault and phase fault protection scheme - Phase fault protective scheme - Directional earth fault relays.

MODULE V DISTANCE PROTECTION OF TRANSMISSION LINES 08

Drawbacks of over Current protection – Introduction to distance Protection – Simple impedance relay – Reactance relay – Mho relay - comparison between distances relays.

Need for carrier aided protection – Various options for a carrier – Coupling and trapping the carrier into the desired line section – Unit type carrier aided directional comparison relaying – Carrier aided distance schemes – Phase comparison relaying.

MODULE VI NUMERICAL PROTECTION 08

Introduction – Block diagram of numerical relay - Sampling theorem - Correlation with a reference wave - Digital filtering - Numerical over Current protection – Numerical transformer differential protection. Numerical distance protection of transmission line.

Case study of a simulation software for solving a protection problem.

Total Hours: 45

REFERENCES:

1. Y.G. Paithankar and S.R Bhide, “Fundamentals of Power System Protection”, Prentice-Hall of India, 2010
2. Badri Ram and D.N. Vishwakarma, “Power System Protection and Switchgear”, Tata McGraw- Hill Publishing Company, 2011

4. J. Lewis Blackburn and Thomas J. Domin “Protection Relaying: Principles and Applications”, CRC press, 2014

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Fault Characteristics of Individual Power System elements.
- Various schemes employed in Generator and Transformer protection.
- Design of Busbar differential Scheme.
- Significance of Over Current Protective Schemes.
- Distance and Carrier Protection of Transmission lines.
- Numerical Protection.

EEC6105	POWER SYSTEM ANALYSIS & PROTECTION LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES

- To study and develop programs for steady state analysis of Power systems.
- To study and develop programs for transient analysis of SMIB systems.
- To understand the operation of power system protection relays through simulation.
- To understand the effects of energization of transmission lines and starting of induction motor on power systems.
- To get familiarized with both proprietary and open source power system simulation software such as MATLAB, Octave, Scilab, ETAP, PSCAD, CYME and OpenDSS.

LIST OF EXERCISES

1. Sparse matrix techniques and optimal ordering schemes using C.
2. Development of load flow analysis program by Newton-Raphson method using MATLAB
3. Development of transient stability program for single machine-infinite bus system using classical machine model using MATLAB.
4. Contingency analysis: Calculation of Generator shift factors and line outage distribution factors using MATLAB.
5. Development of Load flow analysis program by FDPF method using GNU OCTAVE.
6. Development of small signal stability program for single machine infinite bus system using classical machine model using Scilab.
7. Co-ordination of over-current and distance relays for radial line protection using ETAP.
8. Simulation of digital differential relay protection using MATLAB Simulink.
9. Analysis of switching surge using PSCAD/EMTDC: Energization of a long distributed parameter line.
10. Induction motor starting analysis using CYME.
11. Modeling of smart distribution networks using OpenDSS.

Total Hours: 30

COURSE OUTCOMES

At the end of the course, the student will be able to

- Handle sparse matrices effectively, while they are encountered in power system programming.
- Develop programs for power system steady state analysis using MATLAB / Octave / Scilab.
- Develop programs for transient simulation of SMIB systems.
- Model over-current, distance and differential relays in simulation software ETAP/Simulink.
- Simulate energization of transmission lines and perform induction motor starting analysis using power system simulation software PSCAD/CYME.
- Model distribution networks using the open source software Open DSS.

EEC6106	DESIGN / SIMULATION PROJECT	L	T	P	C
		0	0	2	1

OBJECTIVE:

- To identify the problems existing in power sector expose the students to the available tools and methodologies for solving a power system problem.

COURSE DESCRIPTION:

Design / Simulation project shall be carried out by each and every individual student under the supervision of a faculty of this department. The student shall meet the faculty periodically and attend the periodic reviews for evaluating the progress. There will be two reviews for continuous assessment and one final review and viva voce at the end of the semester. A report prepared according to approved guidelines and duly signed by the supervisor(s) and the Head of the Department shall be submitted to the course teacher.

Design / Simulation project may be chosen from, but not limited to, the following areas:

1) Distribution system optimization, planning and reliability
2) Flexible AC Transmission Systems
3) Forecasting and Management
4) Generation systems
5) Modeling and simulation
6) Power quality
7) Power system restructuring
8) Power systems protection
9) Smart grid technologies and applications
10) Renewable energy sources and technology
11) Distributed generation and micro grid
12) Power system dynamics and control
13) High voltage engineering
14) HVAC/DC and EHV transmission
15) Reactive power management
16) Micrigrid

Total Hours: 30

OUTCOMES:

At the end of the course, the student will be able to

- Identify a problem existing in the power industry.
- Obtain the mathematical model a power system or components of a power system under study.
- Analyze a problem analytically & practically and to suggest a viable solution.
- Use appropriate software tools for simulation and analysis.
- Critically evaluate and improve a published work.
- Effectively communicate the findings.

SEMESTER II

		L	T	P	C
EEC6211	**ADVANCED POWER SYSTEM OPERATION AND CONTROL**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To get an overview of system operation and control
- To become familiar with the preparatory work necessary for meeting the next day's operation such as load forecasting, unit commitment and generation scheduling.
- To review the basics of AGC and also study about the security of power systems.
- To understand the concepts of hydro thermal scheduling, SCADA and state estimation

MODULE I LOAD FORECASTING 08

Introduction – Estimation of Average and trend terms – Estimation of periodic components – Estimation of Stochastic components: Time series approach – Auto-Regressive Model, Auto-Regressive Moving – Average Models – Kalman Filtering Approach – On-line techniques for non stationary load prediction.

MODULE II UNIT COMMITMENT 07

Constraints in unit commitment – Spinning reserve – Thermal unit constraints – Other constraints – Solution using Priority List method, Dynamic programming method - Forward DP approach Lagrangian relaxation method – adjusting.

MODULE III GENERATION SCHEDULING 08

The Economic dispatch problem – Thermal system dispatching with network losses considered – The Lambda – iteration method – Gradient method of economic dispatch – Economic dispatch with Piecewise Linear cost functions – Transmission system effects – A two generator system – coordination equations – Incremental losses and penalty factors.

MODULE IV HYDROTHERMAL CO-ORDINATION 08

Introduction- Hydro electric plant models-Scheduling Problems-Short term hydro thermal scheduling problem-Gradient approach-Hydro units in series(Hydraulically coupled)-Pumped storage hydro scheduling with a iteration method – Pumped

storage hydro scheduling by a gradient method-Dynamic programming solution to hydro thermal scheduling problem.

MODULE V CONTROL OF POWER SYSTEMS 07

Review of AGC and reactive power control -System operating states by security control functions – Monitoring, evaluation of system state by contingency analysis – Corrective controls (Preventive, emergency and restorative) - Energy control center – SCADA system – Functions – monitoring, Data acquisition and controls – EMS system.

MODULE VI STATE ESTIMATION 07

Maximum likelihood Weighted Least Squares Estimation: - Concepts - Matrix formulation - Example for Weighted Least Squares state estimation; State estimation of an AC network: development of method – Typical results of state estimation on an AC network – State Estimation by Orthogonal Decomposition algorithm.

Total Hours: 45

REFERENCES:

4. A.K.Mahalanabis, D.P.Kothari. and S.I.Ahson., “Computer Aided Power System Analysis and Control”, Tata McGraw Hill publishing Ltd, 1984.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Ability to do optimal generation scheduling with and without transmission loss
- Ability to carry out real time unit commitment problem.
- Ability to carry out load forecasting using different techniques
- Better understanding of Automatic Generation Control and security of power systems
- Ability to carry out Hydro thermal co-ordination and state estimation.
- Better understanding of SCADA and Energy Management System

EEC6212 RESTRUCTURED POWER SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide the student a background on restructuring of power system which has taken place in many countries in the world including our country
- To provide insight on new trends in operation and control in deregulated power systems
- To highlight electric energy trading in the electricity market.

MODULE I OVERVIEW OF POWER SYSTEM RESTRUCTURING 08

Restructuring Models: PoolCo Model, Bilateral Contracts Model, Hybrid Model - Independent System Operator (ISO): The Role of ISO - Power Exchange(PX): Market Clearing Price (MCP) - Market operations: Day-ahead and Hour-Ahead Markets, Elastic and Inelastic Markets - Market Power - Stranded costs - Transmission Pricing: Contract Path Method, The MW-Mile Method - Congestion Pricing: Congestion Pricing Methods, Transmission Rights - Management of Inter-Zonal/Intra Zonal Congestion: Solution procedure, Formulation of Inter-Zonal Congestion Sub problem, Formulation of Intra- Zonal Congestion Sub problem.

MODULE II ELECTRIC UTILITY MARKETS IN THE UNITED STATES 08

California Markets: ISO, Generation, Power Exchange, Scheduling Coordinator, UDCs, Retailers and Customers, Day-ahead and Hour-Ahead Markets, Block forwards Market, Transmission Congestion Contracts(TCCs) - New York Market: Market operations - PJM interconnection - Ercot ISO - New England ISO - Midwest ISO: MISO's Functions, Transmission

Management, Transmission System Security, Congestion Management, Ancillary Services Coordination, Maintenance Schedule Coordination - Summary of functions of U.S. ISOs.

MODULE III OASIS: OPEN ACCESS SAME-TIME INFORMATION SYSTEM 08

FERC order 889 - Structure of OASIS: Functionality and Architecture of OASIS Types of information available on OASIS, Information requirement of OASIS, Users of OASIS - Transfer Capability on OASIS: Definitions, Transfer Capability Issues, ATC Calculation, TTC Calculation, TRM Calculation, CBM Calculation - Transmission Services - Methodologies to Calculate ATC - Experiences with OASIS in some Restructuring Models: PJM OASIS, ERCOT OASIS

MODULE IV ELECTRIC ENERGY TRADING 08

Essence of Electric Energy Trading - Energy Trading Framework: The Qualifying factors - Derivative Instruments of Energy Trading: Forward Contracts, Futures Contracts, Options, Swaps, Applications of Derivatives in Electric Energy Trading - Port Folio Management: Effect of Positions on Risk Management - Energy Trading Hubs - Brokers in Electricity Trading – Green Power Trading.

MODULE V SPECIAL COMPUTATIONAL TECHNIQUES 08

Formulation of D.C. Optimal Power Flow (DCOPF) model for- Assessment of Available Transfer Capability (ATC)- Assessment of Simultaneous ATC (SATC)- Congestion Management.-Solution of the above problems using the LP technique- Numerical examples for the above problems.

MODULE VI FREQUENCY RELATED ANCILLARY SERVICES AND ITS MARKET MODELS 05

General Configuration of AGC in a Deregulated Environment - Disco Participation Matrix- State Space Characterization of the Two-Area System in Deregulation - Market Models for Frequency related Ancillary Services - Regulation - Load following - frequency based pricing - Unsheduled Interchange - ABT .

Total Hours: 45

of Electricity", Kluwer Academic Publishers, 2002.

8. Rajesh Joseph Abraham, Automatic Generation Control : Traditional and Deregulated Environments", LAP Lambert Academic Publishing (1 September 2010).

OUTCOMES:

At the end of the course, the student is expected to:

- Perform the various steps of electricity trading operation such as market clearing and settlement for an exchange.
- Explain the operation of different electricity markets in United States.
- Compute transmission pricing and perform congestion Use and interpret the real time information available in an OASIS.
- Perform the various steps of trading such as forecasting of energy requirement and billing of supply offers / demand bids for GENCOS / DISCOS
- Compute the ATC and perform congestion management in restructured power systems.
- Carry out the various transformation process required for converting our present Indian power system into a restructured power system with competitive energy trading.

CSB6101	RESEARCH METHODOLOGY FOR ENGINEERS	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To make the students well versed in statistical methods used in engineering.
- To describe the steps involved in research process.
- To explain how to formalize research problems.
- To discuss clearly the approaches for research through some case studies.

MODULE I RESEARCH PROBLEM 08

The research problem – Sources of research problem – Information, how to deal with it – Criteria / characteristics of a good research problem – Errors in selecting a good research problem – Types of research – Nature and use of arguments.

MODULE II ANALYSIS OF VARIANCE 07

Anova – one way – two way classification – Collection of Secondary Latin square design – 2^2 factorial design.

MODULE III DESIGN OF EXPERIMENTS 08

Experimental factors – interaction of factors, Types of experimental design – blocking design – factorial – fractional factorial, Taguchi's orthogonal approach.

MODULE IV REGRESSION, CORRELETION AND CURVE FITTING 10

Regression analysis – simple linear regression – regression coefficient, multiple regression – multiple & partial correlation coefficient, curve fitting – graphical – least square – method testing of goodness of fit.

MODULE V TRANSPORTATION AND ASSIGMENT MODELS 06

Transportation Problem – Assignment Problem – Travelling Sales man. Problem.

MODULE VI CASE STUDIES 06

Presentation by students on their area of research.

Total Hours: 60

4. Richard A. Johnson, “Miller and Freund’s Probability and Statistics for Engineers”, 8th Edition, Pearson Education, Asia, 2011.

OUTCOMES:

Students who complete this course will be able to

- Identify the research problem.
- Become capable of analyzing the data using mathematical techniques.
- Learn to apply the statistical concepts in research.
- Demonstrate the different research methods applicable to a specific problem.

EEC6213	POWER SYSTEM DYNAMICS, CONTROL AND OPERATION LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES

- To model and analyze multi-machine power systems for small signal and transient stability.
- To incorporate models of FACTS devices in the steady state and dynamic analysis of power systems and understand their effects.
- To understand effects of wind energy conversion system in the transient stability of power systems.
- To understand the operation of Automatic Generation Control (AGC) in deregulated environment.
- To study and develop programmes for economic operation of the power systems.
- To develop programs for computation ATC and congestion management in deregulated environment
- To expose the students to simulation software such as Xcos, PSPICE, EUROSTAG and PSAT.

LIST OF EXERCISES

1. Economic Dispatch with line flow constraints using MATLAB.
2. Unit commitment: Dynamic programming using MATLAB.
3. Development of small signal stability program for multi machine power system using classical machine model using MATLAB.
4. Load flow analysis of two-bus system with STATCOM using MATLAB.
5. Small signal stability enhancement with TCSC in a SMIB system using MATLAB.
6. Simulation of Automatic Generation Control (AGC) in a multi-area deregulated power system using Scilab / Xcos.
7. Available Transfer Capability (ATC) calculation and congestion management by DCOPF method using GNU OCTAVE.
8. Transient stability analysis of power system with doubly fed induction generator using EUROSTAG.
9. Computation of harmonic indices generated by a rectifier feeding an R-L load using PSPICE
10. Transient analysis of single machine infinite bus system with STATCOM using MATLAB SIMULINK.
11. Transient stability analysis of multi-machine power system using PSAT.

Total Hours: 30

OUTCOMES

At the end of the course, the student will be able to

- Develop programs for small signal stability analysis of multi-machine systems.
- Prepare data and simulate multi-machines systems for transient stability.
- Incorporate models of FACTS devices in the dynamic simulations and steady state analysis of power systems.
- Use the software EUROSTAG for transient simulation of power systems with induction generators.
- Develop programs for unit commitment, economic dispatch for the economic operation of power systems, congestion management and automatic generation control in deregulated environment
- Simulate power electronic circuits using PSPICE and measure the harmonics generated by non-linear loads.

EEC6214	SELF LEARNING	L	T	P	C
		0	2	0	2

OBJECTIVE:

- To provide fundamental and advanced knowledge in the area of final year project work the student intends to do.
-

COURSE DESCRIPTION:

A student is expected to do the self learning course on his own, relating to the area of Project work. For discussion and interaction with the project supervisor, two hours per week is allocated. The course content and the materials for self learning course shall be decided by the student and the respective supervisor and the same will be approved by the Head of the Department. A broader choice will be given to the student so that a student is permitted to choose a course in the areas of his/her interest.

OUTCOMES:

At the end of the course, the student will be able to

- Narrow down the area of project work to focus on specific topic.
- Acquire sufficient fundamental and advanced knowledge to carry out the project work.

EEC 6125 INDUSTRIAL INTERNSHIP

L	T	P	C
0	0	*	**

* Minimum of 30 days Industrial Internship.

** Industrial internship will be undertaken during first year summer vacation. Two credits will be awarded in the 3rd semester.

OBJECTIVE:

- To provide fundamental and advanced knowledge in the area of final year project work the student intends to do.

COURSE DESCRIPTION:

1. To earn credits for this course, a minimum 30 days of industrial training, in a single slot, is mandatory. The course has to be undertaken during the first year summer vacation and the credits will be awarded in the third semester.
2. If the student is not able to complete the internship during the first year summer vacation, he/she can complete the course in a single slot between 2th and 4th semester vacation.
3. For effective implementation of the course Industry Internship, a teaching faculty is appointed as the coordinator by the Head of the department.
4. The students of EEE will be allowed to undergo training only in reputed companies/research labs/design centres. The co-ordinator identifies the companies related to core engineering for internship during second semester. He/she assists the students in every process of getting into the companies as an intern.
5. To enable the students to focus on the internship, no two students are allowed to be in the same site.
6. Interacting with the respective industries, where the students do their internship, the Coordinator continuously monitors the performance of the students during the internship.
7. After completion of the internship, the students are required to submit a detailed report and present what they had learned through the internship, in the form of posters. The students should submit the industry certificate at the time of giving the presentation.
8. The performance of the student will be evaluated by the industry as well as the University. Both the evaluations will be considered and aggregated to award the final grade. 50% weightage is given to the evaluation by the industry and remaining 50% weightage to the evaluation by the committee appointed by the Head of the Department.

9. The 50 % weightage of evaluation done at the department comprises of (a) 20/50 for viva-voce, (b) 20/50 for the Intern report and (c) 10 /50 for poster presentation.

OUTCOMES:

At the end of the course, the student will be able to

- Solve problems typically encountered by engineers in industry.
- Identify and address social, economic, and safety issues in an engineering problem and develop a solution that addresses this.
- Learn new concepts and apply them to the solution of engineering problems.
- Function effectively on a multidisciplinary team and interface effectively with other areas of the organization.
- Clearly communicate their ideas orally and in writing.
- Prepare for a lifelong productive career as an engineer.

SEMESTER III

EEC 6125	**PROJECT WORK**	**L**	**T**	**P**	**C**
	PHASE – I (SEMESTER III)	**0**	**0**	**12**	**6***
	PHASE – II (SEMESTER IV)	**0**	**0**	**36**	**18+6***

* Credits for Project work (Phase-I) of third semester will be accounted along with Project work (Phase-II) of fourth semester

OBJECTIVES:

- To enable a student to do an individual project work which may involve design, modelling, simulation and/or fabrication.
- To analyze a problem both theoretically and practically.
- To motivate the students to involve in research activities leading to innovative solutions for industrial and societal problems.

COURSE DESCRIPTION:

Project work shall be carried out by each and every individual student under the supervision of a faculty of this department. A student may however, in certain cases, be permitted to work for the project in association with other departments or in an Industrial/Research Organization, on the recommendation of the Head of the Department. In such cases, the project work shall be jointly supervised by a faculty of the Department and the faculty of the other department of the University or an Engineer / Scientist from the organization. The student shall meet the faculty periodically and attend the periodic reviews for evaluating the progress.

Project work will be carried out in two phases, Phase-I during the pre-final semester and Phase-2 during the final semester. Phase-I shall be pursued for a minimum of 12 periods per week and Phase – II in 36 periods per week. Credits for Phase I will be accounted along with Phase II in the final semester.

In each phase, there will be three reviews for continuous assessment and one final review and viva voce at the end of the semesters. The Project Report prepared according to approved guidelines and duly signed by the supervisor(s) and the Head of the Department shall be submitted to the concerned department.

OUTCOMES:

At the end of the course, the student will be able to

- Comprehend a problem thoroughly and provide an appropriate solution.
- Do a systematic literature survey.

- Derive a mathematical model for the system under study.
- Get proficiency over the software used for simulation and analysis.
- Present the findings of a research work in conferences and publish in journals.
- Identify and provide solution for the industrial and societal problems.

PROFESSIONAL ELECTIVES

		L	T	P	C
EECY001	**ELECTROMAGNETIC FIELD COMPUTATION AND MODELING**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To impart knowledge on Finite Element Analysis (FEA) of Electric machines and systems.
- To impart knowledge on mathematics of FEA.
- To impart knowledge on FEA software package.

MODULE I INTRODUCTION 06

Review of basic field theory – electric and magnetic fields – Maxwell's equations – Laplace, Poisson and Helmoltz equations – principle of energy conversion – force/torque calculation – Electro thermal formulation.

MODULE II SOLUTION OF FIELD EQUATIONS I 09

Limitations of the conventional design procedure, need for the field analysis based design, problem definition, solution by analytical methods-direct integration method – variable separable method – method of images, solution by numerical methods-Finite Difference Method.

MODULE III SOLUTION OF FIELD EQUATIONS II 09

Finite element method (FEM) – Differential/ integral functions – Variational method – Energy minimization – Discretisation – Shape functions –Stiffness matrix –1D and 2D planar and axial symmetry problem.

MODULE IV FIELD COMPUTATION FOR BASIC CONFIGURATIONS 07

Computation of electric and magnetic field intensities– Capacitance and Inductance – Force, Torque, Energy for basic configurations.

MODULE V BASIC EXERCISES IN FEA PACKAGES 06

Modeling – Pre-processing – A vector and flux plot calculations – deriving Other quantities in Post-processing.

MODULE VI DESIGN APPLICATIONS 08

Insulators- Bushings – Cylindrical magnetic actuators – Transformers – Rotating machines.

Total Hours: 45

REFERENCES:

6. User manuals of MAGNET, MAXWELL & ANSYS software.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Ability to find solutions for field equations
- Ability to perform field computation for basic configurations
- Ability to model and analyze electrical system through Finite Element techniques.
- Ability to analyze pre-processing and post processing in FEA packages
- Ability to design applications.

EECY002 POWER SYSTEM DYNAMICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To model and analyze the dynamics of power system with its synchronous machines, turbines and various controllers when subjected to small signal and large signal disturbances.
- To model and analyze SMIB for small-signal stability and transient stability with controllers.
- To assess power system stability in large-signal, small-signal sense and to design the system with enhanced stability.

MODULE I INTRODUCTION TO POWER SYSTEM STABILITY 03

Power system stability: Basic Concepts and Definitions - Classification of Power system Stability –Rotor angle stability-Voltage stability and Voltage collapse- Mid term and long term stability-Historical review of stability problem.

MODULE II SYNCHRONOUS MACHINE MODELLING 09

Schematic Diagram, Physical Description: armature and field structure, machines with multiple pole pairs, mmf waveforms, direct and quadrature axes, Mathematical Description of a Synchronous Machine: Basic equations of a synchronous machine: stator circuit equations, stator self, stator mutual and stator to rotor mutual inductances, dq0 Transformation: flux linkage and voltage equations for stator and rotor in dq0 coordinates, electrical power and torque, physical interpretation of dq0 transformation, Per Unit Representations: Lad-reciprocal per unit system and that from power-invariant form of Park's transformation; Equivalent Circuits for direct and quadrature axes, Steady state Analysis: Voltage, current and flux-linkage relationships, Phasor representation, Rotor angle, Steady-state equivalent circuit, Computation of steady-state values, Equations of Motion: Swing Equation, calculation of inertia constant, Representation in system studies, Synchronous Machine Representation in Stability Studies: Simplifications for large-scale studies : Neglect of stator terms and speed variations, Simplified model with amortisseurs neglected: two-axis model with amortisseur windings neglected, classical model.

MODULE III MODELLING OF EXCITATION AND SPEED GOVERNING SYSTEMS 09

Excitation System Requirements; Elements of an Excitation System; Types of Excitation System; Control and protective functions; IEEE (1992) block diagram for simulation of excitation systems. Turbine and Governing System Modeling: Functional Block Diagram of Power Generation and Control, Schematic of a hydroelectric plant, classical transfer function of a hydraulic turbine (no derivation), special characteristic of hydraulic turbine, electrical analogue of hydraulic turbine, Governor for Hydraulic Turbine: Requirement for a transient droop, Block diagram of governor with transient droop compensation, Steam turbine modeling: Single reheat tandem compounded type only and IEEE block diagram for dynamic simulation; generic speed governing system model for normal speed/load control function.

MODULE IV SMALL-SIGNAL STABILITY ANALYSIS WITHOUT CONTROLLERS 08

Rotor angle stability, The Stability Phenomena. Fundamental Concepts of Stability of Dynamic Systems: State-space representation, stability of dynamic system, Linearization, Eigen properties of the state matrix: Eigen values and eigenvectors, modal matrices, Eigen value and stability, mode shape and participation factor. Single-Machine Infinite Bus (SMIB) Configuration: Classical Machine Model stability analysis with numerical example, Effects of Field Circuit Dynamics: synchronous machine, network and linearised system equations, block diagram representation with K-constants; expression for K-constants (no derivation), effect of field flux variation on system stability: analysis with numerical example - Enhancement Of Small Signal Stability and its countermeasures.

MODULE V TRANSIENT STABILITY ANALYSIS 08

Review of numerical integration methods: Euler and Fourth Order Runge Kutta methods, Numerical stability and implicit methods, Simulation of Power System Dynamic response: Structure of Power system Model, Synchronous machine representation: equations of motion, rotor circuit equations, stator voltage equations, Thevenin's and Norton's equivalent circuits, Excitation system representation, Transmission network and load representation, Overall system equations and their solution: Partitioned - Explicit and Simultaneous implicit approaches, treatment of discontinuities, Simplified Transient Stability Simulation using implicit integration method.

MODULE VI VOLTAGE STABILITY ANALYSIS 08

Voltage and frequency controllers - Limiting devices affecting voltage stability - Voltage-reactive power characteristics of synchronous generators - Capability curves - Effect of machine limitation on deliverable power - Load Aspects - Voltage dependence of loads - Load restoration dynamics.

Total Hours: 45

REFERENCES:

1. P. Kundur, “Power System Stability and Control”, McGraw-Hill, 1993.
2. P.M Anderson and A.A Fouad, “Power System Control and Stability”, Iowa State University Press, Ames, Iowa, 1978.
3. IEEE Committee Report, “Dynamic Models for Steam and Hydro Turbines in Power System Studies”, IEEE Trans., Vol.PAS-92, pp:1904-1915, November/ December, 1973. on Turbine- Governor Model.
4. R.Ramanujam, “Power system dynamics, Analysis and Simulation”, Prentice Hall India Learning Pvt. Ltd., New Delhi, 2009.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- detailed model of the electrical and mechanical parts of a three phase synchronous machine, excitation system and turbine for dynamics studies.
- perform simple power system stability study on a small multi-machine power system model using commercial software AU POWER LAB, ETAP, CYME. Report and critically assess the results of the study.
- familiarize with different type of numerical integration algorithms used for transient stability analysis of power systems.
- mathematically model the electromechanical dynamics of a power system, to determine the transient stability limits under fault conditions.
- determine how the voltage profile across a large power network can be controlled to maintain voltage within stipulated limits throughout the network.
- assess power system stability and to design the system with enhanced stability.

EECY003 EHV POWER TRANSMISSION

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the need for long EHV & UHV transmission lines.
- To study calculation procedures to obtain line parameters, conductor voltage gradients and electric field produced in the vicinity of the line
- To study about the audible noise and radio interference caused by corona and methods to regulate them.

MODULE I INTRODUCTION 08

Indian Power Scenario - Power Scenario in Tamil Nadu - Conventional and non conventional methods of power generation details in India - Choice of economic voltage - standard transmission voltages - problems with long EHVAC lines - need for compensation - FACTS devices - HVDC transmission.

MODULE II LINE PARAMETERS 08

Types of conductors - bundled conductors - various line configurations of EHVAC lines - line resistance - Maxwell's potential coefficient matrix - Inductance and capacitance matrices of multi conductor untransposed / transposed lines - sequence inductances and capacitances - line parameters for modes of propagation in case of travelling wave propagation.

MODULE III LINE LOADINGS 08

Temperature rise of line conductors and current carrying capacity of lines - surge impedance loading - Power handling capacity of long lines - EHVAC and HVDC alternatives - Line loss - mechanical vibrations / oscillations of line conductors and their reduction.

MODULE IV VOLTAGE GRADIENT ON CONDUCTORS 06

Charge - potential relations for multi conductor lines - surface voltage gradients of bundled conductors - gradients factors and their use - distribution of voltage gradient on sub conductors of bundle - voltage gradients on conductors in the presence of ground wires on towers.

MODULE V EFFECTS OF CORONA 08

Corona Power loss and its comparison with leakage loss and line I^2R Loss - Audible noise generation and its characteristics - limits for audible noise - Day - Night

equivalent noise level - Radio Interference (RI) due to corona pulse generation and its properties - limits on RI fields.

MODULE VI EFFECT OF ELECTRIC FIELD PRODUCED BY EHV LINES 07

Effects of EHV lines on heavy vehicles - calculation of electric field of EHVAC lines - Effect of high fields on humans, animals and plants - measurement of electric fields - Induced voltages in unenergised circuit of a double circuit line - induced voltages in insulated ground wires - electromagnetic interference.

Total Hours: 45

1. Rakosh Das Begamudre, “Extra High Voltage AC Transmission engineering”, Second Edition, New Age International Pvt. Ltd, 2011.
2. Power engineer’s Hand book, Revised and Enlarged 6th Edition, TNEB Engineer’s Association, October 2002.
3. Microtran Power system Analysis Corporation, Microtran Reference Manual Vancouver Canada, (Website: www.microtran.com)

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Possess data about power scenario of India and major countries of the world, history of growth of electrical industry and its latest development.
- Ability to obtain line parameters for analysis with symmetrical and unsymmetrical power frequency operation and modes of operation with travelling wave propagation.
- Ability to obtain power carrying capacity of EHVAC and HVDC lines of various lengths.
- Work out voltage gradients od EHVAC and HVDC lines with bundled conductors analytically and by using pre-calculated charts.
- Ability to recognize the occurrence of corona and regulate its effects in the form of audible and radio noises.
- Calculate the voltage induced in neighboring lines and the electric fields produced by the EHVAC / HVDC lines and its effects on human beings , animals and plants.

EECY047	SPECIAL ELECTRICAL MACHINES AND CONTROLLERS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To impart knowledge on Construction, principle of operation and performance of switched reluctance motors.
- To understand the Construction, principle of operation and performance of SM.
- To impart knowledge on Construction, principle of operation and performance of AC commutator motors.
- To study about the Construction, principle of operation and performance of permanent magnet brushless D.C. motors and PMSM.
- To impart knowledge on Construction, principle of operation and performance of linear motors.
- To learn the softwares Magnet AND ANSYS for performance analysis of motor.

MODULE I SWITCHED RELUCTANCE MOTORS 07

Constructional features - principle of operation - Torque equation - Power controllers Characteristics and control - Microprocessor based controller.

MODULE II STEPPING MOTORS 07

Constructional features, principle of operation-modes of excitation torque, production in Variable Reluctance (VR) stepping motor- dynamic characteristics, Drive systems - circuit for open loop control- closed loop control of stepping motor.

MODULE III AC COMMUTATOR MOTORS 07

Principle of operation – Equivalent circuit – Phasor diagram – Performance of Repulsion motor and Universal motor

MODULE IV PERMANENT MAGNET MOTORS 07

Principle of operation – types – magnetic circuit analysis – EMF and Torque equations – Power Controllers – Motor characteristics and control of PMSM and BLDC motors.

MODULE V LINEAR MOTORS 07

Linear Induction motor (LIM) classification – construction – Principle of operation – Concept of current sheet – goodness factor – DC Linear motor (DCLM) types –

circuit equation , DCLM control applications ,Linear Synchronous motor(LSM) – Types - Performance equations – Applications.

MODULE VI CASE STUDY 10

Modeling and simulation – Switched Reluctance Machines – Permanent magnet BLDC Motor – PMSM – MAGNET 6.0, ANSYS software.

Total Hours: 45

4. Naser A and Boldea L,”Linear Electric Motors: Theory Design and Practical Applications”, Prentice Hall Inc., New Jersey 1987.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Talent in selection of motor for various application
- A thorough understanding of various special electric machines and their applications.
- Able to analyse any electric machine.
- Ability to model small power rating of motor for real time application
- Software knowledge in Magnet, ANSYS for electrical application.
- Able to present the rudiments of linear machines.

EECY0045 POWER QUALITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- The main objective of the course is to enhance the knowledge of the participants in the emerging area of power quality and several key issues related to its modeling, assessment and mitigation.
- The course will provide a platform to an in-depth discussion on the various challenges and their possible remedies with respect to maintaining power quality in electricity sector, which will benefit participants from academic and R & D institutions, professional engineers from utilities, industries and policy makers

MODULE I INTRODUCTION 06

Power Quality – Significance of power quality, Terms and Definitions (IEC Standards) – Transients, Voltage Imbalance, Waveform distortion, Power frequency variations, DC offset, Electric Noise, Voltage Fluctuation and Flicker Sources of Sags and Interruptions, Estimating Voltage Sag Performance - Solutions at the End-User Level.

MODULE II DISCRETE FREQUENCY DOMAIN ANALYSIS 08

Harmonics versus Transients -Harmonic Indexes -Harmonic Sources from Commercial Loads -Harmonic Sources from Industrial Loads - Time domain methods and Frequency domain methods: Laplace's, Fourier and Hartley transform – The Walsh Transform – Wavelet Transform- Harmonic Distortion - Voltage versus Current Distortion - Locating Harmonic Sources -System Response Characteristics -Effects of Harmonic

MODULE III FUNDAMENTALS OF HARMONICS 07

Harmonic Distortion Evaluations – End users, utility -Principles for Controlling Harmonics- Where to Control Harmonics - Harmonic Studies – Computer tools for harmonic analysis- Harmonic analyzer - Devices for Controlling Harmonic Distortion -Harmonic Filter Design

MODULE IV DISTRIBUTED GENERATION AND POWER QUALITY 08

Resurgence of DG-DG Technologies – Interfacing DG to the Utility System -Power Quality Issues - Operating Conflicts - DG on Distribution Networks - Sitting DG Distributed Generation - Interconnection Standards (IEC)

MODULE V POWER QUALITY MONITORING AND ANALYSIS 08

Monitoring considerations: Power line disturbance analyzer, power quality measurement equipment, harmonic / spectrum analyzer, flicker meters, disturbance analyzer. Analysis of power outages, Analysis of unbalance: Symmetrical components of phasor quantities, Instantaneous symmetrical components, Instantaneous real and reactive powers, Analysis of distortion: On–line extraction of fundamental sequence components from measured samples

MODULE VI GROUNDING 08

Impact of grounding on power quality- Terms and definitions, Reasons for grounding, problems associated with grounding- Problems with conductors and Connectors, Missing safety ground, Multiple neutral-to-ground connections, additional ground rods, ground loops - Solutions to wiring and grounding- Proper grounding practices, Ground electrode (rod), Service entrance connections, Panel board, Isolated ground, Separately derived systems, Grounding techniques for signal Reference, grounding for sensitive equipment

Total Hours: 45

6. Andreas Eberhard, “Power Quality”, Published by InTech, March 2011.
7. Surajit Chattopadhyay, Madhuchhanda Mitra,Samarjit Sengupta, “Electric Power Quality”, Springer, 2010.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Understand the power quality issues and its importance
- Evaluate the characteristics of power quality disturbances
- Know the power quality issues caused due to the insertion of DG

- Able to monitor the power quality parameters
- Identify the techniques to mitigate power quality disturbances
- Know the importance of grounding to improve power quality

EECY005	POWER SYSTEM PLANNING AND RELIABILITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

To impart knowledge on:

- Load forecasting in power systems.
- Basic probability theory and concepts of reliability analysis.
- Factors influencing the reliability of generation systems, transmission systems and distribution systems.
- Expansion planning.

MODULE I INTRODUCTION TO POWER SYSTEMS AND LOAD FORECASTING 08

A perspective: brief introduction to structure of power systems, growth of power system in India, present Indian power industry, GRID formation, concept of National GRID.Objectives of forecasting - Load growth patterns and their importance in planning - Load forecasting based on discounted multiple regression technique - Weather sensitive load forecasting - Determination of annual forecasting – Use of AI in load forecasting.

MODULE II INTRODUCTION TO RELIABILITY ANALYSIS 07

Review of probability distribution, binomial distribution and exponential distribution – Network modeling and evaluation of simple and complex systems – System reliability evaluation using probability distributions – Frequency and duration techniques. Reliability concepts: Meantime to failure – Series and parallel systems – MARKOV process – Recursive technique.

MODULE III GENERATION SYSTEM RELIABILITY ANALYSIS 08

Probabilistic generation and load models - Determination of reliability of isolated and interconnected generation systems – Energy transfer and off peak loading.

MODULE IV TRANSMISSION SYSTEM RELIABILITY ANALYSIS 07

Deterministic contingency analysis - Probabilistic load flow - Fuzzy load flow - Probabilistic transmission system reliability analysis - Determination of reliability indices like LOLP and expected value of demand not served.

MODULE V EXPANSION PLANNING 07

Basic concepts on expansion planning - Procedure followed to integrate transmission system planning, current practice in India - Capacitor placement problems in transmission systems and radial distribution systems.

MODULE VI DISTRIBUTION SYSTEM PLANNING AND RELIABILITY 08

Introduction, sub transmission lines and distribution substations - Design primary and secondary systems - Distribution system protection and coordination of protective devices. Distribution system reliability evaluation: Reliability analysis of radial systems with perfect and imperfect switching.

Total Hours : 45

7. B.R. Gupta, “Power Sytem Analysis and Design”, S.Chand, New Delhi, 2003.

OUTCOMES:

At the end of the course, the Students will be

- Able to carry out contingency analysis in transmission systems.
- Capable of applying the probabilistic methods for evaluating the reliability of generation and transmission system
- Able to design different model of system components in reliability studies
- Able to analyze advanced concepts of power system planning
- Able to design the expansion planning of power system
- Able to forecast the load using different regression models

EECY006	ADVANCED DIGITAL SIGNAL PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Provide the student with a broad, yet strong background in the traditional topics associated with processing of deterministic digital signals, e.g., discrete time transforms, linear filtering, spectrum estimation and linear prediction.
- Introduce the student to some of the more recent developments that promise to have a broad impact on digital signal processing, e.g., nonlinear filtering and adaptive filtering.
- To provide basics of multi rate DSP, Wavelets, multi resolution analysis and their interpretation and use
- To expose the students with basic DSP programming

MODULE I PARAMETRIC METHODS FOR POWER SPECTRUM ESTIMATION 08

Relationship between the auto correlation and the model parameters – The Yule – Walker method for the AR Model Parameters – The Burg Method for the AR Model parameters – unconstrained least-squares method for the AR Model parameters – sequential estimation methods for the AR Model parameters – selection of AR Model order.

MODULE II ADAPTIVE SIGNAL PROCESSING 08

FIR adaptive filters – steepest descent adaptive filter – LMS algorithm – convergence of LMS algorithms – Application: noise cancellation – channel equalization – adaptive recursive filters – recursive least squares.

MODULE III MULTIRATE SIGNAL PROCESSING 08

Decimation by a factor D – Interpolation by a factor I – Filter Design and implementation for sampling rate conversion: Direct form FIR filter structures – Polyphase filter structure.

MODULE IV SPEECH SIGNAL PROCESSING 08

Digital models for speech signal : Mechanism of speech production – model for vocal tract, radiation and excitation – complete model – time domain processing of speech signal:- Pitch period estimation – using autocorrelation function – Linear predictive Coding: Basic Principles – autocorrelation method – Durbin recursive solution.

MODULE V WAVELET TRANSFORMS 05

Fourier Transform : Its power and Limitations – Short Time Fourier Transform – The Gabor Transform - Discrete Time Fourier Transform and filter banks – Continuous Wavelet Transform – Wavelet Transform Ideal Case – Perfect Reconstruction Filter Banks and wavelets – Recursive multi-resolution decomposition – Haar Wavelet – Daubechies Wavelet.

MODULE VI DSP PROCESSORS 08

General and special purpose DSP Processors – Computer Architecture for signal processing – Havard Architecture – Pipelining – Hardware Multiply and Accumulate – Special Instructions – Replication – On-chip Memory Cache – Extended Parallelism – SIMD – VLIW and static super-scalar Processing – Brief study of TMS320C4X and ADSP 2106 processors.

Total Hours: 45

6. Stewen W. Smith, “Digital signal Processing Processing – A practical guide for Engineers and scientist”, Elsevier Science, 2003.

OUTCOMES:

- Have a more thorough understanding of the relationship between time and frequency domain interpretations and implementations of signal processing algorithms;
- Understand and be able to implement adaptive signal processing algorithms based on second order statistics;
- Students will have the ability to solve various types of practical problems in DSP
- Be familiar with some of the most important advanced signal processing

techniques,

- understand the multi-rate processing wavelet transform and time-frequency analysis techniques to solve real time process.
- Apply the above tools to real-world problems including spectral analysis, filter design, noise cancellation, signal compression, rate conversion, feature extraction, inverse problems.

EECY007 CONTROL SYSTEM DESIGN

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To have an exhaustive exposure to various methods of control system design.
- To study the basic control system design approaches.
- To study the Design in Discrete Domain and effect of sampling.
- To have good knowledge on State variable feedback.
- To study the Non - linear control system design with emphasis to sliding mode control.
- To impart knowledge in control system design through case studies.

MODULE I INTRODUCTION TO CONTROL SYSTEMS 08

Concept of control - Control system terminology, classification of Control Systems. Mathematical Models of Systems - Differential equations of electrical and mechanical system, transfer function of linear systems, block diagram models, signal flow graph.

MODULE II DESIGN OF FEEDBACK CONTROL SYSTEM 08

Approaches to system design - P, PI and PID Controllers - Compensators - Root Locus method - Phase lead, phase lag design using Bode diagram - Design Problems.

MODULE III DESIGN IN DISCRETE DOMAIN 08

Sample and Hold - Digital equivalents - Impulse and step invariant transformations - Methods of discretisation - Effect of sampling - Direct discrete design, Design Problems.

MODULE IV DESIGN USING STATE VARIABLE FEEDBACK 08

Controllability - Observability - Pole placement using state feedback - Ackerman's formula, Limitations of state variable feedback - Observers - Design Problems.

MODULE V NON - LINEAR CONTROL SYSTEM DESIGN 07

Concept of variable structure controller and sliding control - Implementation of switching control laws - Cascade designs - Partial state feedback design - Feedback linearization - Design Problems.

MODULE VI CASE STUDIES 06

Cruise control - Robotic arm - Process control application – Aircraft control- Ball and beam arrangement.

Total Hours: 45

6. Seborg D, Edgar T, Mellichamp, D and Doyle F, Process Dynamics and Control, 3rd Edition, Wiley, 2011.

OUTCOMES:

At the end of the course, the student will have knowledge on:

- The different phases that constitute the process of designing control system using the enumerate methods available.
- The feedback techniques and the choice of selecting the appropriate method for design of feedback control system.
- Establishing a quantitative foundation to the design and analysis of sampled data systems.
- The basis for applying the methods of state space in multivariable systems design.
- Non - linear control system design with emphasis to sliding mode control.
- The working tools and design the system given using the appropriate tools identified.

EECY008 HIGH VOLTAGE SWITCH GEAR

L	T	P	C
3	0	0	3

OBJECTIVES:

As Switch Gear is an important link in any Power System network, including Transmission and Distribution systems, this course aims to provide a holistic view of all the aspects of Switch Gear, including the following:

- Insulation clearance in the medium like Air, Oil, SF6, Vacuum etc.
- Various characteristics and phenomena of “Arc”
- Various types of Circuit Breakers and their applications
- The testing technique, short circuit calculation and rating of Circuit Breaker

MODULE I INSULATION OF SWITCHGEAR 08

Rated and tested voltage - co-ordination between inner and external insulation - Insulation clearances in air, oil SF6 and vacuum - bushing insulation - solid insulating materials – dielectric and mechanical strength consideration.

MODULE II CIRCUIT INTERRUPTION 08

Switchgear terminology – Arc characteristics – direct and alternating current interruption – arc quenching phenomena – computer simulation of arc models – transient re-striking voltage – RRRV – recovery voltage – current chopping – capacitive current breaking – auto re-closing.

MODULE III SHORT CIRCUIT CALCULATIONS AND RATING OF CIRCUIT BREAKERS 05

Types of faults in Power systems - short circuit current and short circuit MVA calculations for different types of faults-ratings of circuit breakers – symmetrical and asymmetrical ratings.

MODULE IV CIRCUIT BREAKERS 08

Classifications of circuit breakers-design, construction and operating principles of bulk oil, minimum oil, airblast, SF6 and vacuum circuit breakers – comparison of different types of circuit breakers.

MODULE V TESTING OF CIRCUIT BREAKERS 08

Type tests and routine tests – short circuit testing – synthetic testing of circuit breakers – recent advancements in high voltage circuit breakers – diagnosis.

MODULE VI DESIGN OF CIRCUIT BREAKERS 08

Basic data and specifications – Design of Arc extinguishing chamber – insulation design – Design of current carrying system – Thermal calculation.

Total Hours: 45

4. B.H.E.L., “Handbook of Switchgear” Tata McGraw Hill, 2007.

OUTCOMES:

At the successful completion of the course, the student is expected to possess knowledge and skill on the following:

- Various insulation medium and their characteristics
- Arc characteristics and arc extinction methods
- Rating of Circuit Breakers.
- Circuit breaks – their types, and applications
- Testing of Circuit Breakers.
- Design of Circuit Breakers

EECY009 OPTIMAL CONTROL AND FILTERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To give students a background in the historical trends in dynamicoptimization.
- To study the optimality problems persisting in control system.
- To impart knowledge in numerical methods for optimal control problems.
- To have a detail understanding on Dynamic programming including LQ control problems.
- To study the filters and estimation methods.

MODULE I OPTIMALITY PROBLEMS IN CONTROL THEORY 08

Concept of optimal control-Statement of optimal control problem - Problem formulation and forms of optimal Control - Selection of performance measures-Necessary conditions of optimal control.

MODULE II PONTRYAGIN'S MINIMUM PRINCIPLE 08

Minimum Time problem - Minimum Fuel problem - Minimum Energy problem - Singular intervals.

MODULE III NUMERICAL TECHNIQUES FOR OPTIMAL CONTROL PROBLEMS 08

Linear optimal regulator problem - Matrix Riccatti equation and solution method - Choiceof weighting matrices - Steady state properties of optimal regulator - Solution of Ricatti equation by negative exponential and interactive Methods - Numerical solution of 2-pointboundary value problem by Steepest Descent and Fletcher Powell Method.

MODULE IV DYNAMIC PROGRAMING AND LQ CONTROL PROBLEMS 08

Linear tracking problem – LQ, LQG and LQR problem - Computational procedureforsolving optimal control problems - Characteristics of dynamic programming solution -Dynamic programming application to discrete and continuous systems - Hamilton Jacobi Bellman equation.

MODULE V FILTERING & ESTIMATION 05

Filtering of Linear system – System noise smoothing and prediction -Gauss Markovdiscrete time model - Estimation criteria – Minimum variance estimation - Least square estimation - Recursive estimation.

MODULE VI KALMAN FILTER 08

Kalman Filter- Linear estimator property of Kalman Filter - Time invariance and asymptotic stability of Kalman filters - Discrete-time Kalman Filter- Implementation-sub-optimal steady-state Kalman Filter - Extended Kalman Filter-practical applications Optimal smoothing.

4. Frank L. Lewis, DragunaVrabie, Vassilis L. Syrmos, "Optimal Control", Wiley & Sons; IncHobkoken New Jersey, 2012.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- • Understand the basic background of dynamic optimization.
- • Understand the problems persisting in optimal control system.
- • Study numerical methods for optimal control problems.
- • Detail understanding on Dynamic programming including LQ control problems.
- • Understand the various filters and estimation methods.

EECY010	INDUSTRIAL POWER SYSTEM ANALYSIS AND DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To study and understand the calculations used with induction motor starting studies.
- To study and calculate the rating of capacitors for power factor correction studies.
- To study and understand and calculate harmonics indices in power quality studies
- To study and understand the phenomenon of Flicker
- To study the grounding grid calculations and to introduce computer analysis methods for ground grid calculations
- To study and understand the operation of recent power systems and smart grids.

MODULE I INDUCTION MOTOR STARTING STUDIES 05

Induction motor classification based on NEMA standards and enclosure – Starting methods – Voltage drop calculations - Calculation of Acceleration time - Evaluation Criteria- Motor starting with limited – capacity generators-Computer Aided Analysis.

MODULE II POWER FACTOR CORRECTION 08

System description and modeling-Acceptance Criteria-Frequency Scan analysis-Voltage Magnification-Sustained Overvoltage-Switching surge analysis-Back-to back switching – Capacitor for EHV applications – Capacitors for motor starting.

MODULE III HARMONICS ANALYSIS 08

Harmonics sources-system response to harmonics-System model for computer Aided analysis-Acceptance criteria-Harmonic Filters-Harmonic evaluation-Case study.

MODULE IV FLICKER ANALYSIS 08

Sources of flicker –Flicker analysis-Flicker Criteria-Data for flicker –Case study Arc Furnace Load-Minimizing the flicker effects.

MODULE V GROUND GRID ANALYSIS 08

Introduction-Acceptance criteria-Ground grid calculations-computer aided analysis –Improving the performance of the grounding grids.

MODULE VI RECENT TRENDS IN INDUSTRIAL POWER SYSTEMS 08

Overview of power system-Layout of power system-Generation, Transmission and Distribution- Comparison between utility & industrial power systems - Introduction to deregulated power system — introduction of smart grid.

Total Hours: 45

REFERENCES:

1. Ramaswamy Natrajan,"Computer –Adided Power system analysis",Marcel Dekker Inc.,2002.
2. Shoiab Khan, Sheeba Khan,"Industrial Power Systems,"CRC press,Taylor & Francis Group,2007

4. NPTEL material for deregulation of power system
5. Tony Flick and Justin Morehouse, "Securing the smart Grid-Next Generation Power Grid Security", Elsevier Publications, 2011.

OUTCOMES:

At the end of the course, the student is expected to possess the following.

- Ability to select an induction motor for a particular industrial application
- Capable of designing the rating of capacitor for power factor correction.
- To calculate the harmonics indices in power quality study.
- To be familiar with Flicker analysis
- To be familiar with grounding grids and calculations
- .Able to understand the operation of deregulated power system and smart grids

EECY011	HIGH VOLTAGE DIRECT CURRENT TRANSMISSION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To identify situations where HVDC is a better alternative
- To acquire knowledge of HVDC converters, system control and development of MTDC systems
- To perform power flow analysis in an integrated EHVAC - HVDC system.

MODULE I COMPARISON OF EHVAC AND HVDC SYSTEMS 07

Technical and economic problems in bulk power transmission over long distances using EHV / UHV AC lines - HVDC alternatives for transmission - Description of HVDC systems - its application - comparison of EHVAC and HVDC systems.

MODULE II ANALYSIS OF HVDC CONVERTERS 08

Planning of HVDC transmission - modern trends in HVDC transmission - DC breakers - U/G cable transmission - VSC based HVDC - pulse number - choice of converter configuration - simplified analysis of Graetz circuit - 6 pulse converter bridge characteristics - generation of harmonics and filtering.

MODULE III ANALYSIS AND CONTROL OF HVDC SYSTEMS 08

Twelve pulse converter characteristics - its advantages - detailed analysis of Converters - Principles of DC link control - converter / inverter control characteristics - system control hierarchy - firing angle control - current and extinction angle control - power control - higher level controllers.

MODULE IV MULTI TERMINAL HVDC SYSTEMS 07

Introduction to MTDC systems – potential applications of MTDC systems – Types of MTDC systems – Control and protection of MTDC systems – Detailed study about developments of MTDC systems.

MODULE V POWER FLOW ANALYSIS 08

Per unit system for DC quantities – modeling of DC links – solution of DC power flow – solution of AC – DC power flow – case studies

MODULE VI SIMULATION 07

System simulation – philosophy and tools – HVDC systems simulation: modeling of HVDC systems for digital simulation – dynamic interaction between DC and AC systems. Application in Wind Power generation.

Total Hours: 45

5. V.K. Sood, “HVDC and FACTS Controllers - Applications of Static Converters in power system”, Kluwer Academic Publishers, April 2004.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Identification of situations where HVDC transmission is a better alternative to EHVAC transmission
- The operation and control of converter/Inverter for power control
- The development and applications of MTDC systems
- Power flow analysis used for Integrated EHVAC-HVDC system
- Steady state performance simulation and analysis
- Analysis of HVDC controllers.

EECY012 WIND ENERGY CONVERSION SYSTEM

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the demand for electrical power generation from the renewable wind and fundamentals of wind power.
- To study and understand about the wind turbine components, power generation machinery, and its control systems.
- To simulate the wind turbine dynamic behavior when integrated to grid and in standalone operation.

MODULE I INTRODUCTION 08

Introduction-Historical Development and current status of Wind power-Generators and Power Electronics for wind turbines - Power System Impacts of Wind turbines-Wind speed estimation-wind speed measurements-Rayleigh distribution-Maximum Power obtainable-Bertz limit-Power coefficient –aerodynamics of Wind rotor-Blade element theory-aerodynamic efficiency-Wind energy Conversion System Components.

MODULE II WIND TURBINE 08

Types of Wind Turbine-Rotor design consideration-Tip speed ratio-blade profile-Power regulation-Yaw control –Pitch angle control-stall control-schemes for maximum power extraction.

MODULE III FIXED SPEED AND VARIABLE SPEED SYSTEMS 08

Fixed speed and variable speed wind turbine- Need of variable speed systems-Power-wind speed characteristics-Generation schemes with fixed and variable speed turbines-Comparison of different schemes.

MODULE IV MODELING AND SIMULATION OF FIXED SPEED AND VARIABLE SPEED WIND GENERATORS 08

Modeling of Fixed speed Induction generator-axes transformation-flux linkage equations-voltage equations-state equations-modeling of variable speed DFIG for Wind Energy Conversion Systems-Converter Control System- transient stability simulation of fixed speed induction generator using EUROSTAG 4.3-Doubly Fed Induction Generator(DFIG) modeling - controller modelling -modelling of DFIG in EUROSTAG - transient stability simulation of powersystems with induction generators using EUROSTAG 4.3.

MODULE V POWER ELECTRONICS IN WIND ENERGY CONVERSION SYSTEM 08

Induction generator-Controlled firing angle scheme with AC and DC side Capacitor-Scalar method-flux vector scheme-Control scheme for Synchronous generator with variable speed drive-Variable speed synchronous generator control with boost converter

MODULE VI GRID CONNECTED SYSTEMS 05

Stand alone and Grid Connected WECS system-Grid connection Issues- Impacts of wind power on Power System Stability-wind plant reactive power capability and its requirements-voltage Control and active power control -Storage technologies.

OUTCOMES:

At the end of the course, the student will be able to:

- recognize the need of renewable energy technologies and their role in the world energy demand.
- identify and mathematically model the wind turbine components, calculate the available wind power, predict mechanical loads based on design, and discuss the generation of electrical power.

- to numerically simulate the wind turbine dynamic system behavior with integration of component, and control for given real time application.
- mathematically model and simulate the transient and steady state performance of the stand-alone and grid connected wind generators using EUROSTAG, MATLAB, CYME packages.
- analyze the wind power integration issues and their mitigation techniques.
- indentify the present and the future energy storage technologies used for standalone operation and grid connected operation .

EECY013 APPLICATION OF MEMS TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To develop skills in the area of Micro fabrication and Micromachining techniques.
- To study about different types of micro sensors and their applications in various areas.

MODULE I MEMS: MICRO-FABRICATION, MATERIALS AND ELECTROMECHANICALCONCEPTS 08

Introduction to micro fabrication – Silicon and other material based fabrication processes – Concepts: Conductivity of semiconductors - Crystal planes and orientation-stress and strain- flexural beam bending analysis- Torsional deflections- Intrinsic stress - resonant frequency and quality factor.

MODULE II ELECTROSTATIC SENSORS AND ACTUATION 08

Principle, material, design and fabrication of parallel plate capacitors as electrostatic sensors and actuators - Applications.

MODULE III THERMAL SENSING AND ACTUATION 07

Principle, material, design and fabrication of thermal couples, thermal bimorph sensors, thermal resistor sensors-Applications.

MODULE IV PIEZOELECTRIC SENSING AND ACTUATION 07

Piezoelectric effect-cantilever piezo-electric actuator model-properties of piezoelectric materials-Applications.

MODULE V RF APPLICATIONS OF MEMS 09

Introduction – RF based communication system and RF Modules: Tuners, Resonators, Switch, Phase shifter – RF MEMS: Application Areas, Advantages of RF MEMS technology – RF MEMS Design scenarios: MEMS Inductors, Varactors, Tuner/Filter, Resonators, MEMS Switches, Phase Shifters.

MODULE VI CASE STUDIES 06

Piezoresistive sensors, Magnetic actuation, Micro fluidics applications, Medical applications, Optical MEMS.

Total Hours: 45

7. Vijay.K. Varadhan, K.J.Vinoy, K.A.Jose, “RF MEMS and their Applications”, John Wiley and Sons Ltd, 2003.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Ability to understand the operation of micro devices, micro systems and their applications.
- Ability to design the micro devices, micro systems using the MEMS fabrication process.
- Working principles of different micro sensors and applications.
- Execute a vibrant analysis on sensing and actuation mechanisms.
- Perform different case studies on various micro sensors.

EECY014 OUTDOOR INSULATORS

L	T	P	C
3	0	0	3

OBJECTIVES:

The course aims at giving a comprehensive knowledge on Outdoor Insulators, which are mainly used for Transmission and Distribution systems, including the following:

- Become familiar with different stresses encountered in the service of the insulator as well as the types and performance of Insulators.
- Able to connect the current area of Research in insulators including non-ceramic insulators
- Design and Manufacturing process of insulators can be understood
- The testing standards, selection and maintenance of insulators will also be made aware.

MODULE I INTRODUCTION 07

Overview – Important Definitions – Types of Outdoor Insulators – Uses of Outdoor Insulators – Stresses Encountered in Service – Electrical Performance – Mechanical Performance – Role of Insulators on Overall Power System Reliability – Shapes of Outdoor Insulators – Mechanical and Electrical Ratings of Insulators – Comparison of Porcelain, Glass and Composite Insulators – Life Expectancy.

MODULE II NONCERAMIC INSULATOR TECHNOLOGY 07

Introduction - Materials for Weathersheds / Housings – Shed Design – Insulator Core – Hardware – Establishing Equivalency to Porcelain/Glass – Manufacturing Changes and Quality Control (QC) – Un-standardization/ Propagation - Live-line Maintenance Handling, Cleaning and Packaging - Brittle Fracture – Water Drop Corona – Aging and Longevity – Grading Control Rings.

MODULE III DESIGN AND MANUFACTURE OF INSULATORS 08

Porcelain Insulators – Manufacture of Porcelain Insulators – The Porcelain Suspension Insulator – Porcelain Pin-type Insulators – Porcelain Multicone Insulators – Porcelain Long-rod and Post Insulators – Porcelain Insulators Glazes - Porcelain Insulator Hardware – Porcelain Insulator Cement – The Porcelain Dielectric.

Glass Insulators – The Glass Suspension Insulator – Glass Pin-type Insulators – Glass Multicone Post Insulators – Manufacture of Glass Insulators – Glass Insulator Hardware – Glass Insulator Cement – The Glass Dielectric.

Nonceramic Insulators - Nonceramic Suspension Insulator – Line Post Insulator –

Hollow Core Insulator – Manufacture of Nonceramic Insulators – The Composite Dielectric – Voltage Stress Control.

MODULE IV TESTING STANDARDS FOR INSULATORS 08

Need for Standards – Standards Producing Organizations – Insulator Standards – Classification of Porcelain / Glass Insulator Tests – Brief Description and Philosophy of Various Tests for Cap and Pin Porcelain/Glass Insulators – Summary of Standards for Porcelain/Glass Insulators – Standards of Nonceramic (Composite) Insulators – Classification of Tests, Philosophy and Brief Description – Standards for Nonceramic Insulators.

MODULE V DETECTING DEFECTIVE INSULATORS 07

Detecting defective porcelain insulators – principles involved – electrical methods – thermography. Detecting defective non ceramic insulators – detection prior to installation – detecting degraded insulator during service

MODULE VI SELECTION AND MAINTENANCE OF INSULATORS 08

Introduction – Cost and Weight – National Electricity Safety Code (NESC) – Basic Lightning Impulse Insulation Level (BIL) – Contamination Performance– Experience with Silicone Rubber Insulators in Salt Areas – Compaction – Grading Rings for Nonceramic Insulators.Maintenance of Insulators-Maintenance Inspection – Hotline washing – equivalent salt deposit

Total Hours: 45

6. EPRI, “Transmission Lines Reference Book – 345kV and above”, 1982
7. ANSI C 29.1, “Electrical Power Insulator – Test Methods”, 1992

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Various types of outdoor insulators and their characteristics
- Design, testing and maintenance of different types of insulators
- Selection and detection of defective Insulators
- Various standards used in Insulators testing
- Manufacturing Process of Insulators
- Maintenance and selection of Insulators.

EECY015 FLEXIBLE AC TRANSMISSION SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce students to the transmission challenges of modern electrical power systems
- To present the basic concepts, principles and operation of fast high power electronic controllers known as Flexible AC Transmission Systems (FACTS)
- To provide advanced knowledge and understanding of power electronics applications in power transmission systems
- To introduce the operating principles, control systems and modeling of different FACTS devices (SVC, SSSC, SR, TCSC, STATCOM, UPFC, IPFC, etc.)
- To understand the influence of measurement systems, network resonances and harmonic interactions on the performance of FACTS control systems
- To provide the techniques of FACTS controller design for enhancing power transfer, stability and damping, mitigating sub-synchronous resonances, preventing voltage instability, etc.
- To understand the interactions amongst various FACTS Controllers and techniques for their coordination and placement

MODULE I INTRODUCTION 08

Reactive power - uncompensated transmission lines - load compensation - system compensation - lossless distributed parameter lines -symmetrical lines - midpoint conditions of a symmetrical line case study passive compensation - shunt compensation -series compensation - effect on power-transfer capacity.

MODULE II STATIC VAR COMPENSATOR (SVC) 08

Voltage control by SVC - advantages of slope in dynamic characteristics - influence of svc on system voltage - design of SVC voltage regulator - modelling of SVC for power flow and transient stability.

MODULE III THYRISTOR CONTROLLED SERIES CAPACITOR (TCSC) 07

Operation of the TCSC - different modes of operation - modelling of TCSC - variable reactance model - modeling for power flow and stability studies. sub synchronous resonance- torsional interaction,- torsional torque - NGH damping schemes.

MODULE IV VOLTAGE SOURCE CONVERTER BASED FACTS CONTROLLERS 07

Static synchronous compensator (STATCOM) - principle of operation - V-I characteristics. SSSC-operation of SSSC and the control of power flow - modeling of SSSC in load flow and transient stability studies -UPFC and IPFC.

MODULE V CO-ORDINATION OF FACTS CONTROLLERS 07

Controller interactions - SVC - SVC interaction - co-ordination of multiple controllers using linear control techniques - control coordination using genetic algorithms.

MODULE VI APPLICATIONS OF FACTS CONTROLLERS 08

Applications of SVC - enhancement of transient stability - steady state power transfer - enhancement of power system damping - prevention of voltage instability. -applications of TCSC- improvement of the system stability limit - enhancement of system damping. applications of STATCOM- steady state power transfer- enhancement of transient stability - prevention of voltage instability - applications of SSSC – SSR mitigation.

Total Hours: 45

5. V.K.Sood, “HVDC and FACTS controllers - Applications of Static Converters in Power System”, Kluwer Academic Publishers, 2004.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Identify the needs of power systems and utility networks where installation of FACTS Controllers/Devices becomes essential

- Compute power transmission capability of a transmission system and apply reactive compensation methods for its improvement
- Comprehend the operating principles, control systems and modeling of different FACTS Controllers
- Understand the influence of measurement systems, network resonances and harmonic interactions on the performance of FACTS control systems
- Apply the techniques of FACTS controller design for enhancing power transfer, increasing stability, augmenting system damping, mitigating sub-synchronous resonances, preventing voltage instability, performing load compensation, etc.
- Analyze the interactions amongst various FACTS Controllers and Utilize techniques for the coordination of FACTS Devices within power systems

EECY016	ELECTRICAL TRANSIENTS IN POWER SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To model the transmission lines for transient analysis
- To study about the generation of switching and lightning transients, their propagation on the grid.
- To protect the station equipments against over voltages with proper insulation co-ordination

MODULE I LINE MODELLING 08

Line parameters - Bundled Conductors - Maxwell potential coefficient matrices for various line configurations - L and C calculations for lines - resistance and inductance of ground return using Carson's formulae - Line modeling for Power frequency and surge over voltages.

MODULE II POWER FREQUENCY OVER VOLTAGES 07

Symmetrical components for O/H lines and computation of sequence impedance - a, ß, O and Karrenbaur's transformations - over voltages caused by unsymmetrical line faults - over voltages due to Ferranti effect and load rejection.

MODULE III PROPAGATION OF TRAVELLING WAVES 07

Wave equation and its solution - Relation between voltage and current waves - velocity of travelling waves-reflection and refraction - behavior at line terminations - multiple reflections - lattice diagram - attenuation and distortion

MODULE IV MODAL ANALYSIS FOR MULTI CONDUCTOR LINES 07

Wave equation for multi conductor lines - general solution using modal analysis - significance of modal analysis - simple example of modal analysis – modes of propagation for a three conductor system.

MODULE V LIGHTNING AND SWITCHING OVER VOLTAGES 08

Lightning and switching over voltages - their influence on line transients -switching surges in capacitive circuits - switching surges in distributed parameter systems.

MODULE VI PROTECTION AND INSULATOR CO-ORDINATION 08

Protection against over voltages - shielding and non - shielding methods - back flashover - characteristics of surge arrestors - Location of surge arrestors –

substation earthing - Basic Insulation levels - insulation co-ordination in 220kV and 400kV systems - Specific examples - insulation co-ordination in HVDC systems.

Total Hours: 45

3. H.W. Dommel, “EMTP Theory Book”, Microtran Power System Analysis Corporation, Vancouver B.C.,1992.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Ability to distinguish between power frequency and surge over-voltages and Model the transmission lines accordingly.
- Analyse the propagation characteristics of voltage and current surges in
- Transmission lines and their terminations.
- Design insulation co-ordination schemes for 220kV and 400kV systems.
- Analyse and control power frequency over voltages due to unsymmetrical faults , Ferranti effect and load rectification.
- Analyse propagation in multi-conductor lines using modal analysis.

EECY017	HIGH VOLTAGE PULSE GENERATION, MEASUREMENT AND TESTING FOR LIFE SCIENCES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- As the application of High voltage electric Pulse in Life Science is getting increased attention among the researchers, this course aims to provide a comprehensive idea.
- By the end of the semester, a student will be able to as certain methods of High Voltage generated measures.
- Appreciate the significance NDT testing techniques.
- Role of Bioelectrics in life science
- Appreciate the significance Electro pulsed and electromagnetic in cancer treatment

MODULE I HIGH VOLTAGE GENERATION & MEASUREMENT 08

Generation of High Alternating Voltages – High Frequency A.C. High Voltages - Generation of Rectangular & Square Current Pulses - Measurements of High Alternating Voltages – Currents – High Power Frequency.

MODULE II NON DESTRUCTIVE TESTING TECHNIQUE 08

Measurement of Direct Current Resistivity – Dielectric constant and Loss Factor – Partial Discharge Measurement – Balance Detection Method – Calibration of Discharge Detectors – Discharge Detection in Power Cables.

MODULE III BIO ELECTRICS 08

Window effect of pulsed Electric field on Biological Cells – Biological Matter due to the Application of Ultra short High Voltage Pulses – Bio response to sub Nano second ultra high voltage pulsing – Effects of Steep pulsed Electric fields on human liver cancer cells – cortical anchoring on the stability of transmembrane Electropores.

MODULE IV CANCER TREATMENT 07

Preliminary procedures – partial – mastectomy and auxiliary dissection – Total mastectomy – Reconstruction and Prosthesis – Radiation Therapy – Systemic Therapy – Complementary and Alternative Treatments.

MODULE V ELECTROPORATION 07

Introduction – Effect of Electroporation – Frequency Response of Cells – Nano electroporation – Nano Second – Electroporation effects – Caspases – Calcium Bursts – Nano pulses – Nano Second pulse Generator.

MODULE VI ELECTROPORATORS 07

Introduction – Design of electroporator including Booster circuit and converter circuit – Design of clinical electroporator.

Total Hours: 45

OUTCOMES:

At the end of the course, the student is expected to possess knowledge on the following:

- Ability to impart knowledge on generation and measurement of high frequency AC voltages and currents.
- Ability to select an appropriate testing technique for high voltage apparatus.
- Ability to relate bioelectrics with high voltage applications.
- Ability to gain fundamental knowledge on various cancer treatments techniques.
- Application of Electroporation and Electroporators in Cancer Treatment

EECY018 SMART POWER GRID

L	T	P	C
3	0	0	3

OBJECTIVES :

- Introduce the fundamentals of smart grids.
- Introduce modeling of devices associated with smart grids.
- Introduce the different automation and networking standards.
- Introduce the concept of Wide area measuring systems and Phasor measurement units.(PMU)

MODULE I SMART GRID FUNDAMENTALS 09

Smart grid structure – Interactive grid – Micro grid – Distributed Resources modeling – communication infrastructure – sensing and Control devices – smart grid characteristics.

MODULE II COMPONENTS AND STANDARDS 09

Smart grid components – Metering – Virtual power plants- Benefits and cost elements – Pricing regulations – Networking Standards and integration – Analytics.

MODULE III AUTOMATION TECHNOLOGIES 09

Control centre systems – Data management principles – Smart Grid implementation standards and procedure – Advanced Metering Infrastructure – Outage management – Distribution and Substation automation .

MODULE IV WIDE AREA MEASUREMENT SYSTEMS AND PMU 06

Wide area measurement systems –Phasor Measurement Units- Optimal placement algorithm for PMUs. Smart grid experimentation plan for load forecasting.

MODULE V CASE STUDY I 06

Smart meters – Cloud computing and security issues - Forecasting – Coordination between cloud computing and Smart power grids – Development of power system models and control and communication software.

MODULE VI RECENT TRENDS IN SMART POWER GRIDS 06

Demand Response – concepts and models.Real time pricing models for practical applications-SCADA in smart grids.

Total Hours: 45

6. Mini . S. Thomas :Power System SCADA and Smart Grids.
7. Kenneth . C.Budka , Jayant G.Deshpande :Communication Networks for Smart Grids:Making Smart Grid Real , 2014

OUTCOMES:

At the end of the course the student is expected to possess knowledge and skills on the following :

- Ability to design and implement Smart Power Grid Power Systems
- Ability to apply the concept of demand response in Smart grids.
- Ability to apply Smart grid concepts to real applications.
- Ability to co ordinate between cloud computing and smart grids
- Ability to apply SCADA in smart power grids
- Ability to use PMUs for optimal placement in smart grids.

EECY019	DISTRIBUTED GENERATION AND MICROGRID	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart the importance of renewable based generation system to meet the growing demands
- To locate distributed generation system optimally in the distribution system network and to study its impacts

MODULE I INTRODUCTION 08

Microgrid basic concepts – architecture - operational conditions, Microgrid : merits and demerits - functionalities and variables in microgrid - issues in microgrid. Types of microgrid (LV microgrid, MV microgrid - DC microgrid, AC microgrid, hybrid) - Microgrid as part of smarter grid Modes of operation : grid connected mode - islanded mode - transition between grid connected mode and islanded mode.primary control strategy - secondary control strategy - Control of distribution generation - demand side management - Opportunities and risk of different market players

MODULE II DISTRIBUTED ENERGY RESOURCES AND STORAGE DEVICES 08

Distributed Energy Resources: solar – wind – CHP – MCHP – Microturbine - Diesel generators –geo thermal –working, characteristics and mathematical modeling, Storage devices-Batteries - fuel cells - super capacitors.

MODULE III DISTRIBUTED SYSTEM EXPANSION 08

Power flow, Short circuit and loss calculations- with and without distributed generation- Distribution system reliability analysis –Distribution system expansion planning – load characteristics – load forecasting – design concepts – optimal location of distributed generation – solution technique.

MODULE IV CONTROLLERS 08

Three phase converter - Three phase Voltage source Inverter (VSI) – Boost Converter – PWM Techniques - P-Q Control - Structure of the VSI PQ Controller - Power-Voltage (PV) Control Scheme - Frequency (Vf) Control Scheme - generation Control Based on Droop Concept - adaptive droop control, Phase locked loop for synchronization.

MODULE V PROTECTION ISSUES 07

Requirements of protection - issues in protection (LOM, Blinding of protection, unwanted islanding, lack of selectivity, failure of co-ordination between fuse and recloser) - challenges in protection scheme – Solutions for microgrid protection - digital relays- Adaptive protection scheme : centralized, decentralized–Multiagent based protection scheme – protection scheme based on variables

MODULE VI MICROGRID COMPONENTS 06

PMU basic concepts - International Electrotechnical Commission (IEC) 61850, 61850-7-420, 61850-8. Renewable Microgrid controller RMC 600. Microgrid pilots : KERI – CERTS - Intelligent Electronic Device (IED) - Microgrid Management system (MMS) - Static Transfer switch (STS) - RTU/ gateway - Smart metering – Sensing Devices.

Total Hours: 45

9. Eric Sorotomme, S.S. Venkata, Joydeep Mitra, " Microgrid protection using communication assisted digital relays" IEEE transaction on power delivery, vol.25, No.4, pp.2789-2796, 2010

Course Outcomes:

At the end of the course, the student will be able to

- Know the basic concepts with respect to microgrid
- Model the distributed generator for distribution network
- Optimally locate the distributed generator in the distribution system
- Address the Issues involved in microgrid protection
- Model controllers for distributed generator to interface it to the distribution system network

EECY020	REACTIVE POWER MANAGEMENT IN POWER SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To analyze the operation of AC voltage controllers and AC-DC converters.
- To understand the operating principles of power semiconductor devices.
- To understand the fundamental concepts of compensation.
- To understand the concepts of Demand side management.

MODULE I SINGLE-PHASE AND THREE PHASE AC-DC CONVERTERS 08

Single phase Half controlled and Fully controlled Converters with RL load– Evaluation of input power factor and harmonic factor-Continuous and Discontinuous load current- Three Phase ac-dc Converters- Half controlled and fully controlled Converters with RL load-Continuous and Discontinuous load current -three phase PWM-twelve pulse converters- numerical problems.

MODULE II MULTI LEVEL INVERTERS 08

Introduction, Multilevel Concept - Types of Multilevel Inverters- Diode-Clamped Multilevel Inverter- Principle of Operation, Features of Diode-Clamped Inverter- Flying-Capacitors Multilevel Inverter- Principle of Operation, Features of Flying-Capacitors Inverter- Features of Multilevel Inverters.

MODULE III LOAD COMPENSATION AND DEMAND SIDE MANAGEMENT 07

Objectives and specifications – reactive power characteristics – inductive and capacitive approximate biasing – Load compensator as a voltage regulator – phase balancing and power factor correction of unsymmetrical loads- Reactive power planning – objectives – Economics Planning capacitor placement – retrofitting of capacitor banks.

MODULE IV REACTIVE POWER COMPENSATION IN TRANSMISSION SYSTEM 07

Uncompensated line – types of compensation – Passive shunt and series and dynamic shunt compensation – examples-Characteristic time periods – passive shunt compensation – static compensations- series capacitor compensation – compensation using synchronous condensers – examples- Mathematical modelling.

MODULE V SERIES AND SHUNT COMPENSATION TECHNIQUE 08

Modeling and control of Thyristorised controlled series compensators. Static VAR Compensation - Basic concepts, Thyristor controlled reactor (TCR), Thyristors switched reactor (TSR), Thyristor switched capacitor (TSC)- Variable structure FACTS controllers for Power system transient stability, Non-linear variable structure control, Unified power flow, Unified Power Flow Control - Basics of STATCOM, its applications.

MODULE VI CASE STUDY 07

Reactive power compensation capability of a matrix converter-based FACTS device- Reactive Power Compensation in Single-Phase Operation of Microgrid- Practices of reactive power management and compensation- Transmission system reactive power compensation.

Total Hours: 45

Reference Books:

1. Reactive power control in Electric power systems by T.J.E.Miller, John Wiley and sons, 1982.
2. Power Electronics-Md.H.Rashid –Pearson Education Third Edition- First Indian Reprint- 2008
3. Power Electronics- Ned Mohan, Tore M.Undelan and William P.Robbins – John Wiley & Sons -2nd Edition.
4. R.Mohan Mathur, Rajiv K.Varma, “Thyristor – Based Facts Controllers for Electrical Transmission Systems”, IEEE press and John Wiley & Sons, Inc.
5. A.T.John, “Flexible A.C. Transmission Systems”, Institution of Electrical and Electronic Engineers (IEEE), 1999.
6. Reactive power Management by D.M.Tagare,Tata McGraw Hill, 2004.

OUTCOMES:

After Completion of this course students will be able to

- Analyze the operation of AC voltage controllers and AC-DC converters.
- Design the power factor correction converters.
- Analyze the load compensation in transmission systems.
- Analyze suitable compensation for AC transmission systems.
- To understand the concept of reactive power management and various method of control employed in power systems.
- To understand its performance under static and dynamic conditions.

EECY021	STATE ESTIMATION AND CONTINGENCY ANALYSIS IN SMART GRID	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the model, management and protection of smart grid systems.
- To understand the information systems used in smart grid.
- To grasp the limits of the power system operating states.
- To grasp the contingency analysis made in a transmission grid.
- To model the states in power system for state estimation.
- To analyse the states for observability.

MODULE I SMART GRID SYSTEMS 05

Smart Grid introduction, Major systems in Smart Grid a technical perspective: Smart infrastructure system, Smart management system, Smart protection system, benefits and requirements of smart grid, Microgrid, Grid to vehicle and vehicle to grid.

MODULE II SMART INFORMATION SYSTEMS 08

Smart Metering, Smart Monitoring and Measurement, Information Management, Smart Communication Subsystem, An Overview, Wireless Technologies, wired technologies

MODULE III CONTINGENCY ANALYSIS FOR POWER SYSTEMS 05

Contingency Analysis of Power System, Types of Violations, Low Voltage Violations, Line MVA Limits Violation, Instability Prediction.

MODULE IV CONTINGENCIES STUDY OF NIGERIAN TRANSMISSION GRID 09

Case Study of Nigeria's 330kV Transmission Grid, Power System Security, Algorithm of a typical Contingency Analysis, Line Loadability, Simulation, Phasor and PMU Functions, Phasor Measurement Unit, Typical PMU Applications.

MODULE V STATIC STATE ESTIMATION MODELS 09

Power System Static- State Estimation, Exact Model, Nature of problem, Modeling, General Theory, State Estimation, Detection, Identification, Initial Tests, Approximate Model: State Estimation using P- Delta, Contingency Evaluation: P-Delta, Reactive Power and Voltage Magnitude.

MODULE VI EQUATION FORMULATIONS AND OBSERVABILITY ANALYSIS 09

Use of Loop Equations in Power System Analysis, Loop and Nodal Formulations, Pre- compensation, Post-compensation. Mid-compensation, Load Flow Computation, Network Observability Problem, Conventional Observability Analysis, Linearized Measurement Model, Classification of Measurements, Observability Algorithm.

Total Hours: 45

Apparatus and Systems, Volume: PAS-89, Issue 1, 1970.

OUTCOMES:

- The model, management and protection of smart grid systems were understood.
- The information systems used in smart grid was gathered.
- The limits of the power system operating states were understood.
- The contingency analysis made in a transmission grid was understood.
- The state estimation modeling was understood.
- The analysis and observability of the states was done.

EECY049	SOLAR AND ENERGY STORAGE SYSTEM	L	T	P	C
		3	0	0	3

OBJECTIVES

- To Study about solar modules and PV system design and their applications
- To Deal with grid connected PV systems
- To Discuss about different energy storage systems

MODULE I INTRODUCTION 09

Characteristics of sunlight – semiconductors and P-N junctions –behavior of solar cells – cell properties – PV cell interconnection

MODULE II STAND ALONE PV SYSTEM 09

Solar modules – storage systems – power conditioning and regulation - protection – stand alone PV systems design – sizing

MODULE III GRID CONNECTED PV SYSTEMS 09

PV systems in buildings – design issues for central power stations – safety – Economic aspect – Efficiency and performance - International PV programs

MODULE IV POWER CONDITIONING SCHEMES 08

DC Power conditioning Converters - Maximum Power point tracking algorithms - AC Power conditioners Synchronized operation with grid supply - Harmonic problem – building integrated PV systems.

MODULE IV ENERGY STORAGE SYSTEMS 09

Impact of intermittent generation – Battery energy storage – solar thermal energy storage – pumped hydroelectric energy storage

MODULE V APPLICATIONS 09

Water pumping – battery chargers – solar car – direct-drive applications –Space – Telecommunications.

Total Hours : 45

TEXT BOOKS

1. Eduardo Lorenzo G. Araujo, Solar electricity engineering of photovoltaic systems, Progensa,1994. 2. Stuart R.Wenham, Martin A.Green, Muriel E. Watt and Richard Corkish, Applied Photovoltaics, 2007,Earthscan, UK.

2. Solar & Wind energy Technologies – McNeils, Frenkel, Desai, Wiley Eastern, 1990
3. Solar Energy – S.P. Sukhatme, Tata McGraw Hill,1987.

OUTCOMES:

Students will develop more understanding on solar energy storage systems:

- Students will develop basic knowledge on standalone PV system
- Students will understand the issues in grid connected PV systems
- Able to develop various power conditioning schemes for solar systems.
- Able to explain the Grid connected PV systems.
- Students will study about the modelling of different energy storage systems and their performances
- Students will attain more on different applications of solar energy

EECY050	FUNDAMENTALS OF GRID CONNECTED PHOTO-VOLTAIC POWER ELECTRONIC CONVERTER DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart knowledge on constructional details and characteristics of solar panel.
- To familiarize theoretical concepts and control strategies, for extraction of maximum power from the solar power and its synchronization with the grid.

MODULE I INTRODUCTION 04

Characteristics of sunlight – semiconductors and P-N junctions –behaviour of solar cells – cell properties – PV cell interconnection

MODULE II OVERVIEW OF PHOTO VOLTAIC SYSTEMS AND CONVERTERS 08

Grid connection standards, Solar Cell Characteristics, Solar panel and converter configurations, Converter topologies, Grid filter topologies, Temporary storage

MODULE III CONTROL OF PHOTO-VOLTAIC CONVERTERS 09

Maximum power utilization of photo voltaic power sources, DC-DC Converter Control, DC-AC Converter control, Harmonic compensation, Grid synchronization, Anti Islanding

MODULE IV POWER CONDITIONING SCHEMES 09

DC Power conditioning Converters - Maximum Power point tracking algorithms - AC Power conditioners Synchronized operation with grid supply - Harmonic problem – building integrated PV systems.

MODULE V SYSTEM DESCRIPTION, MODELLING AND OPTIMIZATION 09

Converter topology and control description, P&O Maximum Power Point Tracker optimization, Phase Locked Loop PI Regulator, Current Regulator, Voltage Controller , Complete control system model.

MODULE VI SIMULATIONS 06

DC-DC Converter, DC-AC Converter- PLL, Current control, Voltage control, The LCL filter.

Total Hours: 45

TEXT BOOK

1. Svein Erik Evju,Fundamentals of Grid Connected Photo-Voltaic Power Electronic Converter Design', Norwegian University of Science and Technology.

REFERENCES

1. Eduardo Lorenzo G. Araujo, Solar electricity engineering of photovoltaic systems, Progensa,1994.

4. Solar & Wind energy Technologies – McNeils, Frenkel, Desai, Wiley Eastern, 1990
5. Solar Energy – S.P. Sukhatme, Tata McGraw Hill,1987.

OUTCOMES:

- Will become familiar with the operation of the components of PV systems, including solar modules, power control components, and the balance of system components.
- Able to carry out a credible design of a grid-connected PV system.
- Able to model and design MPPT and controllers of grid tied inverters.
- Use of simulation software for energy yield estimation

EECY051 SOLAR POWER SYSTEM DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge, analyze and to design the modern semi-conductor devices and their applications in power Electronic controller for rectification, inversion, frequency conversion with improved performance.

MODULE I SOLAR POWER SYSTEM PHYSICS 07

Solar Cell Physics - Solar Cell Electronics - Types of Solar Cells Technologies - Concentrators - Solar Panel Arrays - Solar Power System Components.

MODULE II SOLAR POWER TECHNOLOGIES 08

Solar Power System Components - Crystalline Solar Photovoltaic Module Production - Amonix Megaconcentrators - Film Technologies - Solar Photovoltaic System Power Research and Development.

MODULE III SOLAR POWER SYSTEM DESIGN 09

Solar Power System Components and Materials - - Storage Battery Technologies - Solar Power System Wiring - Considerations for - Lightning Protection - Central Monitoring and Logging System Requirements - Ground-Mount and Roof-Mount Photovoltaic Module Installations - Shading Analysis and Solar Energy Performance Multiplier - Site Evaluation - Solar Power Design.

MODULE IV SOLAR POWER GENERATION PROJECT IMPLEMENTATION 07

Designing a Typical Residential Solar Power System - Example of Typical Solar Power System Design and Installation Plans for a Single Residential Unit - Commercial Applications -Small-Scale Solar Power Pumping Systems -Large-Capacity Solar Power Pumping Systems - Pump Operation Characteristics - Semitropic Open Field Single-Axis Tracking System PV Array

MODULE V ECONOMICS OF SOLAR POWER SYSTEMS 06

Current Preliminary Engineering Design - Meteorological Data - Energy Cost Factor - Project Cost Analysis - Feasibility Study Report.

MODULE VI PASSIVE SOLAR HEATING TECHNOLOGIES 08

Passive Solar Water Heating - Pool Heating - Concentrator Solar Technologies - Solar Cooling and Air Conditioning - Direct Solar Power Generation - Innovations

in Passive Solar Power Technology.

Total Hours: 45

REFERENCES:

6. D.M.Mitchell, DC-DC Switching Regulator Analysis McGraw-Hill Ryerson, Limited, 1988

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following

- Understand the characteristics of solar cell.
- Understand the constructional details of solar panel.
- Know about the monitoring and commissioning of solar panel
- Know about the solar pumping and mechanical tracking of solar power generation system.
- Cost analysis of solar power generation system.

EEC0Y22	POWER ELECTRONIC APPLICATIONS TO POWER SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To have a thorough understanding of the construction, theory and characteristics of the Devices like MOSFET, BJT's, IGBT's and SCR.
- To analysis and modeling of Inverters and converters.
- To study in detail about the Reactive power compensation and FACTS devices.
- To study about the definition and issues in power quality.

MODULE I INTRODUCTION 07

Basic Concept of Power Electronics, Different types of Power Electronic Devices - Diodes, Transistors, SCR, MOSFET, IGBT and GTO's.

MODULE II AC TO DC CONVERTERS 09

Single Phase and three phase bridge rectifiers, half controlled and Fully Controlled Converters With R, RL, AND RLE loads. Free Wheeling Diodes, Dual Converter, Sequence Control of Converters - inverter operation, Input Harmonics and Output Ripple, Smoothing Inductance - Power Factor Improvement effect of source impedance, Overlap, Inverter limit.

MODULE III DC TO AC CONVERTERS 09

General Topology of single Phase and three phase voltage source and current source inverters- Need for feedback diodes in anti parallel with switches - Multi Quadrant Chopper viewed as a Single phase inverter- Configuration of Single phase voltage source inverter: Half and Full bridge, Selection of Switching Frequency and Switching Device. Voltage Control and PWM strategies.

MODULE IV STATIC REACTIVE POWER COMPENSATION 08

Shunt Reactive Power Compensation - Fixed Capacitor Banks, Switched Capacitors, Static Reactor Compensator, Thyristor Controlled Shunt Reactors (TCR) - Thyristor Controlled Transformer- FACTS Technology-Applications of static thyristor Controlled Shunt Compensators for load compensation ,Static Var Systems for Voltage Control, Power Factor Control and Harmonic Control of Converter Fed Systems.

MODULE V POWER QUALITY 06

Power Quality - Terms and Definitions - Transients - Impulsive and Oscillatory Transients - Harmonic Distortion - Harmonic Indices - Total Harmonic Distortion - Total Demand Distortion- Locating Harmonic Sources Harmonic s from commercial and industrial Loads -Devices for Controlling Harmonics Passive and Active Filters -Harmonic Filter Design.

MODULE VI VOLTAGE SAGS AND HARMONICS 06

Sources of over voltages - Capacitor switching – lightning- Mitigation of voltage swells - surge arrester. Sources of sags and interruptions, estimating voltage sag performance, motor starting sags mitigation of voltage sags harmonics.

Total Hours: 45

10. M.H.J Bollen, ‘Understanding Power Quality Problems: Voltage Sags and Interruptions’, (New York: IEEE Press, 1999). (For Chapters 1, 2, 3 and 5)

OUTCOMES:

At the end of the course, the Students are expected to possess knowledge and achieve skills on the following:

- Ability to model and analyze Inverters & Converters.
- Ability to analyze custom power electronic devices.

- Basic understanding of the semiconductor devices like rectifiers, Thyristors and transistors.
- Understanding the principle of operation of FACTS devices.
- Knowing the issues like sag and harmonics in power quality.

EECY043 SCADA AND DCS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To give an in depth study of SCADA and PLC.
- To acquire knowledge of application of software automation blocks and DCS.
- To expose the students to the Micro SCADA techniques

MODULE I INTRODUCTION 06

Introduction to automation tools PLC, DCS, SCADA, Hybrid DCS/PLC.

MODULE II DCS PROJECT 08

Development of User Requirement Specifications - Functional Design Specifications for automation tool - GAMP, FDA.

MODULE III PROGRAMMABLE LOGIC CONTROLLERS 08

Introduction of Advanced PLC programming, Selection of processor, Input/ output MODULEs - Interfacing of Input/output devices, Operator Interface - OPC- study of SCADA software - Interfacing of PLC with SCADA software.

MODULE IV DCS 09

Introduction to architecture of different makes - DCS Specifications, configuration of DCS blocks for different applications - Interfacing of protocol based sensors - Actuators and PLC systems, Plant wide database management- Security and user access management - MES, ERP Interface.

MODULE V STUDY OF ADVANCE PROCESS CONTROL BLOCKS 09

Statistical Process Control - Model Predictive Control - Fuzzy Logic Based Control - Neural-Network Based Control Higher Level Operations: Control & Instrumentation for process optimization - Applications of the above techniques to the same standard units/processes.

MODULE VI MICRO SCADA FOR POWER ELECTRONICSYSTEMS 05

System concept –Hardware: Base computer - Workstations-Front ends-Peripherals Software Programming-Process Objects – Command Procedures – RTU Integration –Communication to Third Party Systems –Functional description:

process pictures- operation-Alarm handling-Event Handling- reports- Trends

Total Hours: 45

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Basics of SCADA & DCS.
- Appropriate knowledge and skills in Industrial automation systems with the use of DCS, PLCs, and SCADA.
- An ability to apply creativity in design of systems, components or processes appropriate to power electronic circuits.
- Ability to get a grip on micro SCADA for power electronics applications
- Ability to perform programming in SCADA and DCS.

EEC 6125	MODELING AND ANALYSIS OF ELECTRIC MACHINES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To give an in-depth input on generalized theory of electric machines.
- To impart knowledge on the Modeling aspects of reference frame theory and transformational variables of electrical machines using reference frame theory.
- To impart knowledge on Analysis of electric machines using the reference frame theory model.
- Prediction of torque and other related variables for static and dynamic analysis of electric machines.

MODULE I PRICIPLE OF ELECTOMAGNETIC ENERGY CONVERSION 07

Stored magnetic energy – Co-energy – flux-linkage vs current curves – Singly excited and Doubly excited systems – Force and Torque predictions.

MODULE II BASIC CONCEPTS OF ELECTRIC MACHINES 07

Generalized theory of electric machines – Concept of d-q model – Kron's Primitive Model – Airgap MMF, Per phase machine inductance, Voltage and Torque equations for DC machine and AC machines.

MODULE III MODELING AND ANALYSIS OF DC MACHINES 09

Static and Rotating reference frames and Transformation Relationships – R, L, M, V, I and T equations using direct and quadrature axes in: Modeling of separately excited DC machines – Modeling of DC series machines – Influence of brush shift.

MODULE IV REFERENCE FRAME THEORY FOR 3-PHASE INDUCTION MACHINES 09

Modeling of 3-phase symmetrical induction machines – V, I, L and T equations in actual variables and hypothetical variables – Rotor transformation – V, I, L and T equations in transformed machine.

MODULE V REFERENCE FRAME THEORY FOR 3-PHASE SYNCHRONOUS MACHINES 08

Modeling of Synchronous Machines – Determination of self inductances and mutual inductances – Transformation of self inductances and mutual inductances – Dynamic Modeling of AC machines.

MODULE VI MODELING OF SPECIAL ELECTRIC MACHINES 05

Modeling aspects of Magnetic Systems – Modeling Switched Reluctance Machines – Case Study (Modeling of DC and AC machines.)

Total Hours: 45

REFERENCES:

1. C.V. Jones, 'The Unified Theory of Electric Machines', Butterworth, London, 1967
2. R. Krishnan, 'Switched Reluctance Motor Drives', CRC Press.
3. MAGNET software rule book for Case study purpose.

OUTCOMES:

- Ability to understand the rudiments of electric machines for modeling and analysis.
- Ability to apply generalized machine theory for DC and AC machine modeling.
- Ability to apply Reference Frame theory for DC and AC machine modeling and analysis.
- Ability to model and analyze any new electric machine.
- Ability to use modeling software tools for machine modeling and analysis.

EEC 6126	ADVANCED POWER SEMICONDUCTOR DEVICES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the basics of devices selection.
- To understand the static and dynamic characteristics of power semiconductor devices
- To enable the students for the selection of devices for different power electronics applications
- To get the knowledge about the datasheet of power semiconductor Devices.
- To understand the control and firing circuit for different devices.
- Study about the thermal protection of the Devices

MODULE I INTRODUCTION 06

Power switching devices overview; Attributes of an ideal switch, application requirements, and circuit symbols. Power handling capability, Device selection strategy – On-state and switching losses -Power diodes - Types, forward and reverse characteristics, switching characteristics – rating.

MODULE II SILICON POWER ELECTRONIC SEMICONDUCTORS DEVICES and DRIVER CIRCUITS 10

Construction, static characteristics, switching characteristics and Gate characteristics of Thyristor – GTO – MOSFET- IGBTs – SIC – GAN – FCT – RCT. Converter grade and inverter grade SCR. High Speed Opto-Couplers – Zero Crossing Detectors - Optically Isolated High Voltage and High Current sensing circuits, Driver ICs**:** MOC series SCR , IR2XXX Series Full Bridge and Half Bridge MOSFET / IGBT Driver ICs.

,

MODULE III DATASHEET RATINGS FOR SEMICONDUCTOR DEVICES 09

Standards, Symbols and terms-Maximum ratings – Thermal Impedance and resistance-Component (type) designation system - Mechanical data –Safe Operating Area during switching and short circuit.

MODULE IV PROTECTION AND NOISE 07

Over voltage, Over current and gate protections and Design of snubber circuits - Noise generated due to switching-Common noise sources in SMPS-Noises Due to High frequency transformer-Measurement of Noise.

MODULE V THERMAL PROTECTION 07

Heat transfer – conduction, convection and radiation, Cooling – liquid cooling, vapour – phase cooling, Guidance for heat sink selection- heat sink types and design-Electrical analogy of thermal components– Mounting types.

MODULE VI CASE STUDY 06

Switching characteristics and VI characteristics of Thyristor – GTO – MOSFET-IGBTs – SIC – GAN. Design of drivers and Snubber Circuit.

Total Hours: 45

6. Dr.-Ing. Arendt Wintrich,Dr.-Ing. Ulrich Nicolai,Dr. techn. Werner Tursky,Univ.-Prof. Dr.-Ing. Tobias Reimann,Application Manual Power Semiconductors ,published by SEMIKRON International GmbH

OUTCOMES:

At the end of the course, the student will

- Understand the operation and characteristics of the semiconductor devices
- Understand the gate drive circuits and its necessity.
- Select suitable component for the particular application with the help of data sheet.
- Design protection circuit for the semiconductor devices.
- Design heat sinks for semiconductor devices

EEC6127 ANALYSIS OF POWER CONVERTERS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge, analyze and to design the power Electronic converters.
- To discuss in depth the main families of PWM strategies.
- To enable the students to design Power Factor Correction(PFC) controller.

MODULE I AC – DC CONVERTER 08

Circuits and operating principles: Analysis of Single phase and three phase controlled rectifiers with RLE loads - Input line current harmonics and power factor – Fourier Analysis of controlled rectifiers - Dual converters.

MODULE II PERFORMANCE CHARACTERISTICS OF PHASE CONTROLLED CONVERTERS 08

Performance parameters: Dc voltage ratio – input displacement angle – displacement factor - power factor – current distortion factor- Harmonic content of DC terminal voltage and input current - THD of Two quadrant converters and one quadrant converters - reduction of reactive loading of the supply by the Two quadrant converter by means of consecutive firing angle control.

MODULE III PHASE CONTROLLED CYCLOCONVERTER 08

Symmetrical - open delta - Ring connected cycloconverter circuits - Harmonic distortion in the output voltage – General Expression for Three pulse waveform for an arbitrary firing angle control method - Harmonic series of three and six pulse cycloconverters – cosine wave control method – Firing pulse generation: Functional schemes – End stop control : reverence voltage - clamp method – pulse isolating output stage.

MODULE IV AC – AC 08

Analysis of Single-phase and Three phase AC Voltage Controllers- Matrix converter - Bi-directional switch topologies, Modulation techniques for matrix converters, Concept of Direct AC-AC frequency Converter.

MODULE V ACTIVE FRONT END RECTIFIERS 08

Overview of Power Factor Correction Approaches - Unity power factor rectifiers - Resistor emulation principle –mathematical modeling – control schemes- Design of feedback compensators -front end rectifiers with real and reactive power control

– Phase shifter.

MODULE VI DUAL ACTIVE BRIDGE CONVERTER 07

Dual active bridge converter – circuit configuration – steady state analysis – steady state model of DC-DC DAB Converters - Steady-State Model for AC-AC DAB Converters - soft switching analysis – DAB for Solid state transformer.

6. D.M.Mitchell, DC-DC Switching Regulator Analysis McGraw-Hill Ryerson, Limited, 1988.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following

- Understand the concept of Converters, choppers, and AC voltage controllers.
- Select the suitable devices for the required applications in power Electronic controller for rectification, inversion, frequency conversion.
- Use these devices to Design controllers for the AC and DC drive systems.
- Provides a comprehensive overview of PFC circuits and details of operation and design considerations for commonly used PFC circuits.
- Able to learn more about advanced power electronics converters.

EEC 6235 SOLID STATE AC & DC DRIVES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the stable steady-state operation and transient dynamics of a motor-load system.
- To study and analyze the operation of the converter / chopper fed dc drive and to solve simple Problems.
- To study and understand the operation of both classical and modern induction motor drives.
- To understand the differences between synchronous motor drive and induction motor drive and
- to learn the basics of permanent magnet synchronous motor drives with converter.
- To analyze and design the current and speed controllers for a closed loop solid-state DC and AC motor drive and simulation using a software package

MODULE I FUNDAMENTAL OF DC AND AC MOTOR 06

Components of electrical Drives-electric machines, power converter, controllers-dynamics of electric drive - torque equation - equivalent values of drive parameters - components of load torques types of load - four quadrant operation of a motor– steady state stability– load equalization – classes of motor duty - determination of motor rating

MODULE II SENSORS FOR DRIVES 06

Hall Effect Sensors – Mechanical Sensors for speed and angular positions – Absolute Encoders – Incremental Encoders – Resolvers –

MODULE III CLOSED LOOP CONTROL POD DC AND AC DRIVES 09

Transient analysis of separately excited motor – converter control of dc motors – analysis of separately excited & series motor with 1 - phase and 3 - phase converters – dual converter – analysis of chopper controlled dc drives – converter ratings and closed loop control – transfer function of self, separately excited DC motors – linear transfer function model of power converters – sensing and feeds back elements – current and speed loops, P, PI and PID controllers – response comparison – simulation of converter and chopper fed DC drive.

MODULE IV SCALAR METHODS FOR IM DRIVES FROM STATOR SIDE 09

Stator voltage control of induction motor–torque-slip characteristics-operation with different types of loads – operation with unbalanced source voltages and single phasing – analysis of induction motor fed from non - sinusoidal voltage supply – stator frequency control - variable frequency operation – V/F control, controlled current and controlled slip operation – effect of harmonics and control of harmonics

MODULE V SCALAR METHODS FOR IM DRIVES FROM ROTOR SIDE 08

PWM inverter drives – multiquadrant drives – rotor resistance control – slip torque characteristic – torque equations, constant torque operation – slip power recovery scheme – torque equation – torque slip characteristics – power factor – methods of improving power factor – limited sub synchronous speed operation – super synchronous speed operation

MODULE VI SYNCHRONOUS MOTOR DRIVES 07

Principle of synchronous motor control – Introduction to CSI Single phase and three phase CSI – CSI fed synchronous machines – adjustable frequency operation of synchronous motors –voltage source inverter drive with open loop control – self controlled synchronous motor with electronic commutation – self controlled synchronous motor drive using load commutated thyristor inverter.

Total Hours: 45

7. Murphy and Turnbull, Power Electronic Control of AC motors, Pergamon Press, 1973.
8. Vedam Subrahmaniam, Electric Drives, TMH-2000.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Analyze the system considering the steady state and dynamic characteristics.
- Ability to design a closed loop control of AC and DC drives.
- Talent in selection of motor for various applications.
- Software knowledge in Matlab for drive application.
- Modeling AC,DC machines with appropriate loads
- Design a system with suitable parameters to control a drive system.

EECY23	ELECTRICAL INSULATION IN POWER APPARATUS AND SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES

- To expose the students to different insulating materials that could be used in high voltage technologies.
- To understand the breakdown mechanisms in various types of insulating materials.
- To understand the high voltage testing procedure for insulators.

MODULE I INSULATING MATERIALS IN HIGH VOLTAGE TECHNOLOGY 07

Requirement for insulating material - Properties and testing of insulating materials: Electrical properties, Thermal properties, Chemical Properties - Natural inorganic insulation materials, Synthetic inorganic insulation materials, Natural inorganic insulation materials, Synthetic organic insulating materials

MODULE II ELECTRIC FIELD AND BREAKDOWN VOLTAGE 06

Determination of electric fields, Maximum field strengths in geometrically similar configurations, Formulation for the calculation of the breakdown voltage, Fields in multi-dielectric, isotropic materials.

MODULE III BREAKDOWN MECHANISM IN GASES, SOLIDS AND LIQUIDS 09

Breakdown theory of gases: Charge carriers in gases, Classical gas laws, self sustaining discharges, Breakdown mechanism in strong inhomogeneous fields, Breakdown characteristics under transient voltages - Breakdown theory in solid insulating materials: Charge carriers at low field strengths, Intrinsic breakdown, Thermal breakdown, Partial discharge breakdown, Mechanism of failure in nanocomposite materials - Breakdown theory in Liquid insulation: Electric strength of technical configurations with insulating liquids, Theory of breakdown in liquid insulation

MODULE IV TESTING OF INSULATORS 08

High voltage testing procedures - statistical treatment of results - dynamic properties of dielectrics - Dielectric loss and capacitance measurements - Partial discharge measurements.

Total Hours: 30

REFERENCES

5. Dieter Kind, Hermann Karner, High voltage insulation technology, Translated from the German by Y. Narayana Rao, Friedr. Vieweg&Sohn, Braunschweig, 1985.

OUTCOMES

At the end of the course, the students will be able to

- Choose appropriate insulating material depending upon the application.
- Determine the electric fields and breakdown voltages in electric insulators.
- Explain the breakdown phenomena in gaseous, solid and liquid insulating materials.
- Use appropriate testing procedure to test the high voltage insulators.

EECY024 ENERGY AUDITING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To introduce the general concepts and methodologies of energy auditing.
- To understand the procedures and techniques involved in energy auditing
- To systematically explore the possibilities of energy saving.
- To expose the students to different instruments involved in energy auditing.

MOUDULE I GENERAL ASPECTS, METHODOLOGY AND APPROACH 09

General Philosophy and need of Energy Audit and Management. Definition and Objective of Energy Management, General Principles of Energy Management - Energy Audit: Need, Types - Understanding Energy Costs, Bench marking, Energy performance, Matching energy usage to requirements, Maximizing system efficiency, Optimizing the input energy requirements, Fuel and Energy substitution.

MODULE II PROCEDURES AND TECHNIQUES 08

Data gathering : Level of responsibilities, energy sources, control of energy and uses of energy get Facts, figures and impression about energy /fuel and system operations, Past and Present operating data, Special tests, Questionnaire for data gathering. Analytical Techniques: Incremental cost concept, mass and energy balancing techniques, inventory of Energy inputs and rejections, Heat transfer calculations, Evaluation of Electric load characteristics, process and energy system simulation.

MODULE III EVALUATION OF SAVING OPPORTUNITIES 07

Determining the savings in Rs, Noneconomic factors, Conservation opportunities, estimating cost of implementation. Energy Audit Reporting: The plant energy study report- Importance, contents, effective organization, report writing and presentation - Identification of losses, Improvements. Energy Balance sheet

MODULE IV ENERGY AUDIT INSTRUMENTS 06

Basic measurements – Electrical measurements, Light, Pressure, Temperature and heat flux, Velocity and Flow rate, Vibrations, etc. Instruments Used in Energy systems: Load and power factor measuring equipments, Wattmeter, flue gas analysis, Temperature and thermal loss measurements, air quality analysis.

Total Hours: 30

13. CRC Handbook of Energy Efficiency – CRC Press.

OUTCOMES:

At the end of the course, the students will be able to

- Demonstrate the importance of energy auditing.
- Use the right technique and procedure for energy auditing
- Explore the possibilities of reducing the losses and saving the energy systematically.
- Use appropriate instruments in the process of energy auditing.

EECY025 WIDE AREA MEASUREMENT SYSTEMS

L	T	P	C
2	0	0	2

OBJECTIVE:

- To understand the operating principle of wide area measurement systems and performance of phasor measurement units.

MODULE I MATHEMATICAL BACKGROUND 08

Phasor representation of sinusoids - Fourier series and Fourier transform and DFT Phasor representation - Phasor Estimation of Nominal Frequency Signals - Formulas for updating phasors - Nonrecursive updates - Recursive updates - Frequency Estimation

MODULE II SYNCHRO PAHSOR MEASUREMENTS 10

Need of Synchro phasor Measurements, Phasor Measurement Unit : Architecture, Functions, Optimal Placement of PMUs, phasor data concentrators and associated communication system. Visualization tools to enhance visibility and control within transmission system, PMU measurements and sampling rates State Estimation & observability by using PMU, phasor data use for real time operation, frequency stability monitoring and trending, power oscillation, voltage monitoring and trending. Alarming and setting system operating limits. Dynamic line rating and congestion management, outage restoration. Application of PMU for wide area monitoring and control.

MODULE III WIDE AREA MEASUREMENT SYSTEM 06

Architecture, Components of WAMS, GUI (Graphical User Interface), Applications: Voltage Stability Assessment, Frequency stability Assessment, Power Oscillation Assessment, Communication needs of WAMS, WAMPAC (Wide Area Monitoring Protection & Control), RAS (Remedial Action Scheme). Standards: IEEE 1344, IEEE C37.118 (2005), IEEE Standard C37.111-1999 (COMTRADE), IEC61850 GOOSE.

MODULE IV PERFORMANCE OF A GENERIC PMU 06

The global positioning system - Hierarchy for phasor measurement systems, - Functional requirements of PMUs - Transient Response of Phasor Measurement Units - of instrument transformers, filters, during electromagnetic transients - Transient response during power swings

Total Hours: 30

4. Dr. Arun G. Phadke, Dr. James S. Thorp,. "Computer Relaying for Power Systems", Wiley Publication, Second Edition.
5. Krzysztof Iniewski "SMART GRID Infrastructure & Networking", Tata McGraw Hill.

OUTCOMES:

Upon finishing the course, students are expected to,

- Model the phasor measurement system mathematically.
- Define and demonstrate the concept of Wide area measurement systems
- Use the wide area measurement systems for assessing power system oscillations and stability.
- Analyze the performance of a generic phasor measurement unit.

EECY026	POWER SYSTEM SIMULATION SOFTWARE	L	T	P	C
		0	0	2	1

OBJECTIVE:

- To expose the students to various proprietary and open source software for simulation of power systems.

COURSE DESCRIPTION:

Study of both proprietary and open source software for simulation of power systems:

PROPRIETARY SOFTWARE

- ETAP
- CYME
- PSCAD
- EUROSTAG

OPEN SOURCE SOFTWARE

- UWPFLOW
- PSAT
- InterPSS
- DCOPFJ
- OpenDSS
- MatDyn
- minpower
- Dome
- GridLAB-D
- OpenPMU

Assessment I: A presentation on the proprietary software available in the department and the latest open source software.

Assessment II: Comparative study by simulating the same problem over multiple software.

Semester End: Solving a given power system problem using any one of the software.

EECY027	SIMULATION OF POWER ELECTRONIC CIRCUITS	L	T	P	C
		0	0	2	1

OBJECTIVE:

- To expose the students to various proprietary and open source software for simulation of power electronic circuits.

COURSE DESCRIPTION:

Study of both proprietary and open source software for simulation of power electronic circuits:

PROPRIETARY SOFTWARE

- PSIM
- PSPICE
- FEADMOS
- VISSIM

OPEN SOURCE SOFTWARE

- PYTHON POWER ELECTRONICS
- ZenitPCB
- NgSpice
- LTSpice

Assessment I: A presentation on the proprietary software available in the department and the latest open source software.

Assessment II: Comparative study by simulating the same problem over multiple software.

Semester End: Solving a given power electronic circuit using any one of the software.

EECY028 ELECTRIC VEHICLES

L	T	P	C
1	0	0	1

History and development of on-road Electric Vehicles (EV). Different configurations of hybrid EVs with block diagram representation, merits & demerits of different configurations in view of vehicle efficiency and energy storage system. - Energy storage systems – Basics of EV batteries, specifications, power density, Energy density, Charging & Discharging cycle and recommended methodologies for charging. Recommended drives for EV and converter topology used in EVs.

Total Hours: 15

GENERAL ELECTIVES

GECY101 PROJECT MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

The objectives of the course would be to make the students

- Learn to evaluate and choose an optimal project and build a project profile.
- Attain knowledge on risk identification and risk analysis
- Gain insight into a project plan and components
- Familiar with various gamut of technical analysis for effective project implementation
- Learn to apply project management techniques to manage resources.

MODULE I INTRODUCTION & PROJECT INITIATION 09

Introduction to project and project management - projects in contemporary organization – The project life cycle - project initiation - project evaluation methods & techniques - project selection criteria - project profile.

MODULE II RISK ANALYSIS 09

Sources of risk: project specific - competitive - industry specific - market and international risk – perspectives of risk – risk analysis: sensitivity analysis - scenario analysis - breakeven analysis - simulation analysis - decision tree analysis – managing/mitigating risk – project selection under risk.

MODULE III PROJECT PLANNING & IMPLEMENTATION 09

Project planning – importance – functions - areas of planning - project objectives and policies - steps in planning process - WBS – capital requirements - budgeting and cost estimation - feasibility analysis - creation of project plan – project implementation: pre-requisites - forms of project organization

MODULE IV TECHNICAL ANALYSIS 09

Technical analysis for manufacturing/construction/infrastructure projects – process/technology - materials and inputs - product mix - plant capacity – plant location and site selection – plant layout - machinery and equipment – structures

and civil works – schedule of project implementation – technical analysis for software projects.

MODULE V PROJECT MANAGEMENT TECHNIQUES 09

Project scheduling - network construction – estimation of project completion time – identification of critical path - PERT & CPM – crashing of project network - complexity of project scheduling with limited resources - resource allocation - resource leveling – resource smoothing – overview of project management software.

Total Hours: 45

REFERENCES:

1. Projects: Planning, Analysis, Financing, Implementation and Review, Prasanna Chandra, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2004.
2. Project Management and Control, Narendra Singh, Himalaya Publishing, New Delhi, 2015.
3. A Management Guide to PERT/CPM, Jerome, D. Weist and Ferdinand K. Levy, Prentice Hall of India, New Delhi, 1994.

OUTCOMES:

On successfully completing this course, the student will be able to:

- Evaluate & select a project as well as develop a project profile.
- Identify various risks associated with the project and manage it effectively.
- Prepare a detailed project plan addressing its components.
- Perform technical analysis for effective project implementation
- Apply project management techniques for maximizing resource utilization.

GECY102 SOCIETY, TECHNOLGY & SUSTAINABILITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- Aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- Understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

MODULE I TECHNOLOGY AND ITS IMPACTS 09

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life – Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT 09

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change.

MODULE III SOCIETY AND TECHNOLOGY 09

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of technology – Impact of technology on developer and consumers – Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE 09

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media Technology – Information Systems Technology – Nanotechnology – Space Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY 09

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

Total Hours: 45

4. Martin A.A Abraham, “Sustainability Science and Engineering: Defining Principles”, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

OUTCOMES:

At the end of this course, the students will be able to

- Understand the benefits of modern technology for the well-being of human life.
- Connect sustainability concepts and technology to the real world challenges.
- Find pathway for sustainable society.

GECY103 ARTIFICIAL INTELLIGENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- Expose the history and foundations of artificial intelligence.
- Showcase the complexity of working on real time problems underlying the need for intelligent approaches.
- Illustrate how heuristic approaches provide a good solution mechanism.
- Provide the mechanisms for simple knowledge representation and reasoning.
- Highlight the complexity in working with uncertain knowledge.
- Discuss the current and future applications of artificial intelligence.

MODULE I HISTORY AND FOUNDATIONS 08

History – Scope – Influence from life – Impact of computing domains - Agents in environments - Knowledge representation – Dimensions of Complexity – Sample application domains – Agent structure.

MODULE II SEARCH 10

Problem solving as search – State spaces – Uninformed Search – Heuristic search – Advanced search – Constraint satisfaction - Applications.

MODULE III KNOWLEDGE REPRESENTATION AND REASONING 10

Foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

MODULE IV REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE 08

Probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference, sample applications.

MODULE V CASE STUDY AND FUTURE APPLICATIONS 09

Design of a game/Solution for problem in student's domain. Natural Language processing, Robotics, Vehicular automation – Scale, Complexity, Behaviour – Controversies.

Theory: 45

TEXT BOOK:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2010.
2. David Poole, Alan Mackworth, Artificial Intelligence: Foundations of Computational Agents, Cambridge University Press, 2010.
3. Nils J. Nilsson, The Quest for Artificial Intelligence, Cambridge University Press, Online edition, 2013.
4. Keith Frankish, William M. Ramsey (eds) The Cambridge Handbook of Artificial Intelligence, Cambridge University Press, 2014.

OUTCOMES:

Students who complete this course will be able to

- Discuss the history, current applications, future challenges and the controversies in artificial intelligence.
- Apply principle of AI in the design of an agent and model its actions.
- Design a heuristic algorithm for search problems.
- Analyze and represent the fact using logic for a given scenario
- Represent uncertainty using probabilistic models
- Develop a simple game or solution using artificial intelligence techniques.

GECY104 GREEN COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To focus on the necessity of green computing technology.
- To expose to various issues with information technology and sustainability.
- To attain knowledge on the technologies for enabling green cloud computing.
- To elaborate on the energy consumption issues
- To illustrate a Green and Virtual Data Center
- To develop into a Green IT Technologist.

MODULE I INTRODUCTION 08

Trends and Reasons to Go Green - IT Data Center Economic and Ecological Sustainment - The Growing Green Gap: Misdirected Messaging, Opportunities for Action - IT Data Center “Green” Myths and Realities - PCFE Trends, Issues, Drivers, and Related Factors - Green Computing and Your Reputation- Green Computing and Saving Money- Green Computing and the Environment

MODULE II CONSUMPTION ISSUES 10

Minimizing power usage – Cooling - Electric Power and Cooling Challenges - Electrical – Power -Supply and Demand Distribution - Determining Energy Usage - From Energy Avoidance to Efficiency - Energy Efficiency Incentives, Rebates, and Alternative Energy Sources - PCFE and Environmental Health and Safety Standards- Energy-exposed instruction sets- Power management in power-aware real-time systems.

MODULE III NEXT-GENERATION VIRTUAL DATA CENTERS 09

Data Center Virtualization - Virtualization beyond Consolidation - Enabling Transparency - Components of a Virtual Data Center - Datacenter Design and Redesign - Greening the Information Systems - Staying Green- Building a Green Device Portfolio- Green Servers and Data Centers- Saving Energy

MODULE IV TECHNOLOGIES FOR ENABLING GREEN AND VIRTUAL DATA CENTERS 08

Highly Effective Data Center Facilities and Habitats for Technology - Data Center Electrical Power and Energy Management - HVAC, Smoke and Fire Suppression - Data Center Location - Virtual Data Centers Today and Tomorrow - Cloud Computing, Out-Sourced, and Managed Services.

MODULE V SERVERS AND FUTURE TRENDS OF GREEN COMPUTING 10

Server Issues and Challenges - Fundamentals of Physical Servers - Types, Categories, and Tiers of Servers - Clusters and Grids - Implementing a Green and Virtual Data Center - PCFE and Green Areas of Opportunity- 12 Green Computer Companies- What's in Green computer science-Green off the Grid aimed for data center energy evolution-Green Grid Consortium- Green Applications- Green Computing Making Great Impact On Research

OUTCOMES:

Students who complete this course will be able to

- Demonstrate issues relating to a range of available technologies, systems and practices to support green computing.
- Select appropriate technologies that are aimed to reduce energy consumption.
- Address design issues needed to achieve an organizations' green computing objectives.
- Analyze the functionality of Data Centers.
- Critically evaluate technologies and the environmental impact of computing resources for a given scenario.
- Compare the impact of Green Computing with other computing techniques.

GECY105 GAMING DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To master event-based programming
- To learn resource management as it relates to rendering time, including level-of-detail and culling.
- To become familiar with the various components in a game or game engine.
- To explore leading open source game engine components.
- To become familiar of game physics.
- To be compatible with game animation.

MODULE I INTRODUCTION 09

Magic Words – What Skills Does a Game Designer Need? – The Most Important Skill -The Five Kinds of Listening-The Secret of the Gifted.

MODULE II THE DESIGNER CREATES AN EXPERIENCE 09

The Game Is Not the Experience -Is This Unique to Games? -Three Practical Approaches to Chasing Rainbows -Introspection: Powers, Perils, and Practice -Dissect Your Feelings -Defeating Heisenberg -Essential Experience.

MODULE III THE EXPERIENCE IN THE PLAYER MIND AND GAME MECHANICS 08

Modeling – Focus -Empathy – Imagination – Motivation – Space – Objects, Attributes, and States – Actions – Rules.

MODULE IV GAMES THROUGH AN INTERFACE 09

Breaking it Down – The Loop of Interaction – Channels of Information – Other Interface.

MODULE V BALANCED GAME MECHANICS 10

Balance – The Twelve Most Common Types of Game Balance – Game Balancing Methodologies - Balancing Game Economies.

Theory: 45

4. James M. Van Verth, Lars M. Bishop "Essential Mathematics for Games and Interactive Applications", Third Edition,A K Peters/CRC Press, ISBN-10: 1482250926, 2015.

OUTCOMES:

Students who complete this course will be able to

- Realize the basic history and genres of games
- Demonstrate an understanding of the overall game design process
- Explain the design tradeoffs inherent in game design
- Design and implement basic levels, models, and scripts for games
- Describe the mathematics and algorithms needed for game programming
- Design and implement a complete three-dimensional video game

GECY106 SOCIAL COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To create original social applications, critically applying appropriate theories and effective practices in a reflective and creative manner.
- To critically analyze social software in terms of its technical, social, legal, ethical, and functional features or affordances.
- To encourage the development of effective communities through the design, use, and management of social software.
- To give students with a base of knowledge and advances for them to critically examine existing social computing services.
- To plan and execute a small-scale research project in social computing in a systematic fashion.
- To become familiar with the concept of computational thinking.

MODULE I BASIC CONCEPTS 09

Networks and Relations: Relations and Attributes, Analysis of Network Data, Interpretation of network data -New Social Learning – Four Changes that Shift Work - Development of Social Network Analysis: Sociometric analysis and graph theory, Interpersonal Configurations and Cliques – Analysing Relational Data.

MODULE II SOCIAL LINK 09

Individual Actors, Social Exchange Theory, Social Forces, Graph Structure, Agent Optimization Strategies in Networks – Hierarchy of Social Link Motivation- Social Context.

MODULE III SOCIAL MEDIA 08

Trends in Computing – Motivations for Social Computing – Social Media: Social relationships, Mobility and Social context – Human Computation – Computational Models- Business use of social Media.

MODULE IV SOCIAL INFORMATION FILTERING 09

Mobile Location Sharing – Location based social media analysis – Social Sharing and Social Filtering – Automated recommender Systems – Traditional and Social Recommender Systems.

MODULE V SOCIAL NETWORK STRATEGY 10

Application of Topic Models – Opinions and Sentiments – Recommendation Systems – Language Dnamics and influence in online communities – Psychometric analysis – Case Study: Social Network Strategies for surviving the zombie apocalypse.

Theory: 45

6. Jennifer Golbeck, “Analyzing the Social Web”, Elsevier Publication, 2013.
7. Huan Liu, John Salerno, Michael J. Young, “Social computing and Behavioral Modeling”, Springer Publication, 2009.

OUTCOMES:

Students who complete this course will be able to

- Realize the range of social computing applications and concepts.
- Analyze data left after in social media.

- Recognize and apply the concepts of computational models underlying social computing.
- Take out simple forms of social diagnostics, involving network and language models, applying existing analytic tools on social information.
- Evaluate emerging social computing applications, concepts, and techniques in terms of key principles.
- Design and prototype new social computing systems.

GECY107 SOFT COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To become familiar with AI and neural networks that can learn from available examples and generalize to form appropriate rules for inferencing systems.
- To introduce the ideas of fuzzy sets, fuzzy logic and use of heuristics based on human experience.
- To provide the mathematical background for carrying out the optimization associated with neural network learning.
- To familiarize with genetic algorithms and other random search procedures useful while seeking global optimum in self-learning situations.
- To introduce case studies utilizing the above and illustrate the intelligent behavior of programs based on soft computing.

MODULE I INTRODUCTION 09

Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence : Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies. Knowledge representation issues, Prepositional and predicate logic, monotonic and non-monotonic reasoning, forward Reasoning, backward reasoning.

MODULE II INTRODUCTION TO NEURAL NETWROK 09

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb"s learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BPA, momentum, limitation, characteristics and application of EBPA.

MODULE III FUZZY LOGIC 09

Fuzzy set theory, Fuzzy set versus crisp set, crisp relation & fuzzy relations,

Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system: fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making & Applications of fuzzy logic.

MODULE IV GENETIC ALGORITHM 09

Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

MODULE V APPLICATION OF COMPUTATIONAL INTELLIGENCE 09

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency Prediction – Soft Computing for Color Recipe Prediction.

Total Hours: 45

5. Klir & Yuan, “Fuzzy sets & Fuzzy Logic: Theory & Application”, Prentice Hall of India Pub, 1995.
6. Kosko: “Neural Network & Fuzzy System”, PHI Publication, 1992.

OUTCOMES:

On completion of the programme students will be able to:

- Learn about soft computing techniques and their applications
- Analyze various neural network architectures and able to Understand perceptrons model

- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems.
- Apply genetic algorithms to combinatorial optimization problems.
- Evaluate and compare solutions by various soft computing approaches for a given problem.

GECY108 EMBEDED SYSTEM PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- This course provides an introduction to the design of embedded computing systems including their hardware and software architectures.
- Entire software development lifecycle and examine the various issues involved in developing software for embedded systems.
- To analyze the I/O programming and Embedded C coding techniques
- This course will equip students with the software development skills necessary for practitioners in the embedded systems field.

MODULE I INTRODUCTION OF EMBEDDED SYSTEM 09

Embedded computing - characteristics and challenges - embedded system design process-Overview of Processors and hardware units in an embedded system-Compiling, Linking and locating – downloading and debugging –Emulators and simulators processor – External peripherals – Memory testing – Flash Memory.

MODULE II SOFTWARE TECHNOLOGY 09

Software Architectures, Software development Tools, Software Development Process Life Cycle and its Model, Software Analysis, Design and Maintenance.

MODULE III INPUT/OUTPUT PROGRAMMING 09

I/O Instructions, Synchronization, Transfer Rate & Latency, Polled Waiting Loops, Interrupt – Driven I/O, Writing ISR in Assembly and C, Non Maskable and Software Interrupts

MODULE IV DATA REPRESENTATION IN EMBEDDED SYSTEMS 09

Data representation ,Twos complement, Fixed point and Floating Point Number Formats ,Manipulating Bits in -Memory, I/O Ports, Low level programming in C ,Primitive data types , Arrays, Functions ,Recursive Functions, Pointers, Structures & Unions ,Dynamic Memory Allocation ,File handling ,Linked lists, Queues, Stacks.

MODULE V EMBEDDED C 09

Embedded Systems programming in C – Binding & Running Embedded C program in Keil IDE – Dissecting the program -Building the hardware. Basic techniques for

reading & writing from I/O port pins – switch bounce - LED Interfacing using Embedded C.

Total Hours: 45

REFERENCES:

1. Marilyn Wolf, "Computers as components ", Elsevier, 2012.
2. Qing Li and Carolyn Yao, "Real-Time Concepts for Embedded Systems", CMP Books, 2003.
3. Daniel W. Lewis, "Fundamentals of embedded software where C and assembly meet", Pearson Education
4. Michael Bass, "Programming Embedded Systems in C and C++", Oreilly, 2003.

OUTCOMES:

On completion of this course the student will be able to

- Design the software and hardware components in embedded system
- Describe the software technology
- Use interrupt in effective manner
- Use keil IDE for programming
- Program using embedded C for specific microcontroller
- Design the embedded projects

GECY109 PRINCIPLES OF SUSTAINABLE DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge in the concepts and dimensions of sustainable development.
- To gain knowledge on the framework for achieving sustainability.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 09

Environment and Development - Population poverty and Pollution –Global and Local environmental issues –Resource Degradation- Greenhouse gases- Desertification-industrialization –Social insecurity, Globalization and environment. History and emergence of the concept of sustainable development-Objectives of Sustainable Development.

MODULE II COMPONENTS AND DIMENSIONS OF SUSTAINABLE DEVELOPMENT 09

Components of Sustainability –Complexity of growth and equity – Social economic and environmental dimensions of sustainable development – Environment- Biodiversity- Natural -Resources- Ecosystem integrity- Clean air and water- Carrying capacity- Equity, Quality of Life, Prevention, Precaution-Preservation and Public Participation Structural and functional linking of developmental dimensions.

MODULE III FRAMEWORK FOR ACHIEVING SUSTAINABILITY 09

Operational guidelines- interconnected prerequisites for sustainable development Empowerment of Women, children, Youth, Indigenous People, Non-Governmental Organizations Local Authorities, Business and industry-Science and Technology for sustainable development- performance indicators of sustainability and assessment mechanism- Constraints and barriers for sustainable development.

MODULE IV SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 09

Demographic dynamics of sustainability – Policies for socio-economic development -Strategies for implementing eco-development programmes Sustainable development through trade –Economic growth –Action plan for implementing sustainable development –Urbanization and sustainable Cities – Sustainable Energy and Agriculture –sustainable livelihoods.

MODULE V SUSTAINABLE DEVELOPMENT AND INTERNATIONAL RESPONSE 09

Role of developed countries in the development of developing countries – international summits – Stockholm to Johannesburg – Rio principles – Agenda-Conventions – Agreements – Tokyo Declaration – Doubling statement – Tran boundary issues integrated approach for resources protection and management

Total Hours: 45

REFERENCES:

1. Sayer J. and Campbell, B., The Science of Sustainable Development: Local Livelihoods and the Global environment - Biological conservation restoration & Sustainability, Cambridge university Press, London, 2003.

3. Mackenthun K.M., Concepts in Environmental Management, Lewis Publications London,1999.
4. APJ Abdul Kalam and Srijan Pal Singh, Target 3 Billion: Innovative Solutions Towards Sustainable Development, Penguin India, 2011

OUTCOMES:

At the end of the course the student will be able to

- Describe the concepts of sustainable development
- Define the components and dimensions of sustainable development
- Outline the Frame work for achieving sustainability.
- State the policies and strategies for implementing sustainable development for Socio economic programmes.
- Examine the role of developed countries in sustainable development.

GECY110	QUANTITATIVE TECHNIQUES IN MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart knowledge on

- operations research
- production management
- financial management
- decision theory and managerial economics

MODULE I OPERATIONS RESEARCH 09

Introduction to Operations research-Linear programming-Graphical and Simplex Methods, Duality and Post-Optimality Analysis-Transportation and Assignment Problems

MODULE II PRODUCTION MANAGEMENT 09

Inventory control, EOQ, Quantity Discounts, Safety Stock-Replacement Theory-PERT and CPM-Simulation Models-Quality Control.

MODULE III FINANCIAL MANAGEMENT 09

Working Capital Management-Compound Interest and Present Value methods-Discounted Cash Flow Techniques-Capital Budgeting.

MODULE IV DECISION THEORY 09

Decision Theory-Decision Rules-Decision making under conditions of certainity, risk and uncertainity-Decision trees-Utility Theory.

MODULE V MANAGERIAL ECONOMICS 09

Cost concepts-Break-even -Analysis-Pricing techniques-Game Theory applications.

Total Hours: 45

REFERENCES:

1. Vohra, N.D. , Quantitative Techniques in Management, Tata McGraw Hill Co., Ltd, New Delhi, 2009.

2. Seehroeder, R.G., Operations Management, McGraw Hill, USA, 2002.

4. Frank Harrison, E., The Managerial Decision Making Process, Houghton Miffin Co. Boston, 2005.

5. Hamdy A. Taha, Operations Research- An Introduction, Prentice Hall, 2002.

OUTCOME:

At the end of the course, the students will be able to

- Apply the concepts of operations research for various applications
- Create models for inventory control in production management
- Compute the cash flow for a project
- Choose a project using decision theory based on the risk criterion.
- Apply the concepts of managerial economics in construction management

GECY111 PROGRAMMING USING MATLAB & SIMULINK

L	T	P	C
1	0	2	2

OBJECTIVES:

The aim of this course is to:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION MATLAB DATA PRESENTATION 03+06

Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts-Making clear and compelling plots-Solving systems of linear equations numerically and symbolically- Least squares regression -Curve fitting.

MODULE II MATLAB PLOT FUNCTION 03+06

Introduction- Plot Function – Animation- 3D Plots-Customizing Plots – Plot Applications- Saving &Painting Plots.

MODULE III ROOT FINDING AND COMPUTER REPRESENTATION OF NUMBERS 03+06

Linearization and solving non-linear systems of equations- The Newton-Rapson method- Integers and rational numbers in different bases- Floating point numbers-Round off and errors in basic arithmetic-Significant digits when reporting results

MODULE IV ORDINARY DIFFERENTIAL EQUATIONS 03+06

Numerical integration and solving 1^{st} order, ordinary differential equations (Euler's method and Runge-Kutta) – Use of ODE function in MATLAB

MODULE V NON-LINEAR DIFFERENTIAL EQUATIONS 03+06

Converting 2^{nd} order and higher ODEs to systems of 1^{st} order ODEs- Solving systems of ODEs via Euler's method and Runge-Kutta) – Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations

MODULE VI INTRODUCTION OF SIMULINK 03+06

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- Modeling the solution of three equations with three unknowns- Representing a model as a subsystem-Simulink demos.

Total Hours: 45

REFERENCE:

1. Griffiths D V and Smith I M, Numerical Methods for Engineers, Blackwell, 1991.
2. Laurene Fausett, Applied Numerical Analysis Using MATLAB, Pearson 2008.
3. Moin P, Fundamentals of Engineering Numerical Analysis, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB. CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving, Mathematical Exploration with MATLAB, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

- Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
- Write programs using first principles without automatic use of built-in ones.
- Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
- Be fluent in exploring Matlab's capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
- Make use of Maltab visual capabilities for all engineering applications.
- An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECY112 JAVA PROGRAMMING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the fundamentals of Java programming such as data types, variables and arrays.
- To study the syntax and necessity of decision making and iterative statements.
- To create a class and invoke the methods.
- To instigate programming in overloading of methods.
- To emphasize the concept of packages.
- To learn the exception handling routines.

MODULE I INTRODUCTION TO JAVA PROGRAMMING 15

History and Evolution of Java – Overview of Java – Data types, variables and arrays – Operators – Control statements.

MODULE II METHODS AND CLASSES 15

Class fundamentals – Declaring objects – Methods – Constructors – Garbage collection – Overloading methods – Constructor overloading – Access control – Inheritance – Packages - Exception handling.

Total Hours: 30

REFERENCES:

1. Herbert Schildt, Java The Complete Reference, 9th Edition, Oracle Press, 2014, ISBN: 978007180855-2.
2. Nicholas S. Williams, Professional Java for Web Applications: Featuring WebSockets, Spring Framework, JPA Hibernate and Spring Security (WROX), John Wiley & Sons, 2014, ISBN:978111865651-8.

4. Yashavant Kanetka**,** Let Us Java, 2nd Edition, BPB Publications, 2012**.**

OUTCOMES:

Students to complete this course will be able to

- Implement basic Java programming.
- Create a class and invoke methods for real world problems.
- Construct simple overloading of methods programs.
- Implement various types of inheritance concepts.
- Describe the access control mechanism.

GECY113 PYTHON PROGRAMMING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the list and records of python programming.
- To study the control statements and string functions of python.
- To instigate the fundamental python programming.
- To emphasize GUI in python.
- To integrate python with embedded systems.
- To implement programs in python.

MODULE I INTRODUCTION TO PYTHON PROGRAMMING 15

Installation and environment set up – syntax used in python – variable types – operators – Loops – decision making – string functions - formatted files - GUI basics.

MODULE II EMBEDDED PROGRAMMING USING PYTHON 15

Web interface – system tools – script execution context - Motion-triggered LEDs-Python-arduino prototyping-storing and plotting arduino data-Remote home monitoring system.

Total Hours : 30

5. Michael Barr, Anthony Massa, “Programming Embedded Systems”, 2nd Edition, O'Reilly Media, 2006.

OUTCOMES:

Students to complete this course will be able to

- Implement date and time function programming using python.
- Write formatted file programming.
- Construct simple python programs.
- Create web interface using python programming
- Develop embedded system with python programming.
- Build arduino prototype using python programming.

GECY114 INTELLECTUAL PROPERTY RIGHTS (IPR)

L	T	P	C
1	0	0	1

OBJECTIVES:

- To study about Intellectual property rights and its need
- To explore the patent procedure and related issues

MODULE I INTRODUCTION 07

Introduction and the need for intellectual property right (IPR) – IPR in India – Genesis and Development – IPR in abroad – Important examples of IPR – Copyrights, Trademarks, Patents, Designs, Utility Models, Trade Secrets and Geographical Indications – Industrial Designs

MODULE II PATENT 08

Concept of Patent – Product / Process Patents & Terminology – Duration of Patents – Law and Policy Consideration Elements of Patentability –- Patentable Subject Matter – Procedure for Filing of Patent Application and types of Applications – Procedure for Opposition – Revocation of Patents – Working of Patents- Patent Agent – Qualification and Registration Procedure – Patent databases and information system – Preparation of patent documents – Process for examination of patent application- Patent infringement – Recent developments in patent system

Total Hours: 15

7. Deborah E. Bouchoux, Intellectual Property: The Law of Trademarks, Copyrights, Patents, and Trade Secrets, 2015
8. Jatindra Kumar Das, Law of Copyright, PHI Learning, 2015

COURSE OUTCOMES:

Students should be able to

- Identify the various types of intellectual property and their value
- Apply the procedure to file a patent and to deal the related issues
- Search and extract relevant information from various intellectual database

VISION AND MISSION OF THE DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

VISION

The Department of Electronics and Communication Engineering envisions to be a leader in providing state of the art education through excellence in teaching, training, and research in contemporary areas of Electronics and Communication Engineering and aspires to meet the global and socio economic challenges of the country.

MISSION

- The Department of Electronics and Communication Engineering, endeavors to produce globally competent Engineers prepared to face challenges of the society.
- To enable the students to formulate, design and solve problems in applied science and engineering.
- To provide excellent teaching and research environment using state of the art facilities.
- To provide adequate practical training to meet the requirement of the Electronics & communication industry.
- To train the students to take up leadership roles in their career or to pursue higher education and research.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

M. Tech. (COMMUNICATION SYSTEMS)

PROGRAMME EDUCATIONAL OBJECTIVES:

- To educate and train the graduates with knowledge and skills necessary to formulate, design and solve problems in communication systems, advanced radiation systems, signal processing, optical and computer networks.
- To provide knowledge in software and hardware tools for real time applications in RF system design, Wireless Communication, Signal Processing and Network design.
- To provide scope for Applied Research and innovation in the various domains of communication system, enabling the graduates to carry out research and development in Industry and Academia.
- To enhance communication and soft skills of students to make them work effectively as a team.

PROGRAMME OUTCOMES:

On completion of the program, the graduates will

- Have the ability to design and analyze different types of communication systems.
- Have the capability to develop real time applications in the area of RF system design, Wireless Communication, Signal Processing and Network design using software and hardware tools.
- Be able to undertake research projects and disseminate the knowledge to the society in the related domains of communication systems.
- Be able to communicate effectively and work as a team in their professional career.

CURRICULUM & SYLLABI FOR M.TECH. (COMMUNICATION SYSTEMS) (FOUR SEMESTERS / FULL TIME)

CURRICULUM

Sl. No.	Course Code	Course Title	L	T	P	C
		SEMESTER I				
1	MAC6184	Probability Matrix Theory & Linear Programming	**3**	**1**	**0**	**4**
2	ECC6101	Mobile Communication Networks and Modeling	**3**	**0**	**2**	**4**

		SEMESTER IV				
1	ECC7101	Project Work - Phase II	**0**	**0**	**36**	**18***
						18 + 6 = 24
						Total Credits: 75

* Credits for Project Work Phase I to be accounted along with Project Work Phase II in IV Semester

** Internship has to be carried out at the end of second semester during summer vacation

SEMESTER I

MAC 6184	PROBABILITY, MATRIX THEORY AND LINEAR PROGRAMMING	L	T	P	C
		3	1	0	4

OBJECTIVE:

The aim of this course is to

- provide a comprehensive introduction to the probability distributions used in engineering.
- familiarize students with advanced matrix theory and variational problems.
- expose the students to Operations Research using concepts of linear programming.

MODULE I PROBABILITY DISTRIBUTIONS 10+03

Axioms of probability – addition and multiplication theorem – conditional probability – total probability – random variables - moments – moments generating functions and their properties- Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

MODULE II TWO DIMENSIONAL RANDOM 08+03

Joint distributions - marginal and conditional distributions - functions of random variables - covariance - correlation and regression - Central limit theorem.

MODULE III ADVANCED MATRIX 09+03

Matrix norms - singular value decomposition - QR algorithm - pseudo inverse - least square approximations.

MODULE IV LINEAR PROGRAMMING 10+03

Formation - graphical method - simplex method - Big-M method - Two Phase method - transportation and assignment problems.

MODULE V CALCULUS OF VARIATIONS 08+03

Variation and its properties – Euler's equation – functional dependant on first and higher order derivatives – functional dependant on functions of several independent variables – variational problems with moving boundaries – isoperimetric problems – Ritz and Kantorovich methods.

L – 45; T – 15; Total – 60

TEXT BOOKS:

1. S.M.Ross, “A First Course in Probability”, 9th edition, Pearson Education, 2013.
2. Lewis.D.W., “Matrix Theory”, Allied Publishers, Chennai, 1995.
3. Taha, H.A., “Operations Research - An Introduction ", 10th edition, Pearson Prentice Hall, 2016.
4. A.S. Gupta, “Calculus of variations with applications”, PHI Pvt. Ltd, New Delhi, 2011.

REFERENCES:

1. H. Cramer., “Random Variables and Probability Distributions”, Cambridge University Press (2004).
2. Roger A. Horn, Charles R. Johnson, “Matrix Analysis”, Cambridge University Press; 2nd edition (2012).
3. Robert.J.Vanderbei., “Linear Programming: Foundations and Extensions”, Springer US(2014).
4. David. J. Rader., “Deterministic Operations Research”, Wiley (2010).
5. Elsgolts, “Differential Equations and Calculus of Variations", University Press of the Pacific (2003).

OUTCOMES:

At the end of the course students will be able to

- Solve problems using concept of standard, discrete and continuous distributions.
- Solve problems using one dimensional and two dimensional random variables.
- Find Eigen values and Eigen vectors of a higher order matrix.
- Solve problems of linear programming.
- Solve problems of calculus of variations by direct methods and using Euler’s formulae.

ECC6101 MOBILE COMMUNICATION NETWORKS AND MODELLING

L	T	P	C
3	0	2	4

OBJECTIVES:

- To define the principles used in the design of mobile communications networks.
- To learn the technical issues in the operation and management of mobile communications networks
- To discuss about various wireless local area networks
- To explain the security issues in wireless networks
- To introduce the propagation Models and Path Loss Estimation in Cellular Mobile Communication
- To analyze and evaluate the performance of mobile networks

MODULE I MOBILE COMMUNICATION NETWORKS 09

Review of 1G, 2G, 3G, 4G and 5G wireless networks, introduction to 3GPP cellular systems, medium access techniques, Mobile networks Elementary Principles of cellular Telephony Channel Division Techniques (TDMA, FDMA, CDMA), Cellular Coverage Methods, Network Planning and Resource Allocation, Network Dimensioning, Mobility Management Procedures.

Practical

Performance evaluation of CDMA System using simulation.

MODULE II PROPAGATION MODELS AND AIR PROTOCOL 09

Radio propagation models, error control techniques, handoff, power control, Soft handover, Forward link , Reverse link , common air protocols (AMPS, IS-95, IS-136, GSM, GPRS, EDGE, WCDMA, cdma2000, etc).

Practical

Simulation of Propagation Models and Path Loss. Estimation in Cellular Mobile Communication; Estimation of Received Bit Energy for Data Rates in Wireless Communication; Multipath Fading in Cellular Mobile Communication,

MODULE III MOBILE NETWORK ARCHITECTURE 09

General Architecture definition, Mobile Terminals (MT, SIM) Radio Section (BTS, BSC) Core Network (MSC, G-MSC, VLR, HLR, AuC) User and Control Plane Protocol Stack, MAP, Role of Signaling Interfaces, Network Entities Relation, The Physical Channel, The Logical Channels, Terminals, Call and Network Management Procedures.

Practical

Design of Cellular Mobile System

MODULE IV WIRELESS LOCAL AREA NETWORKS 09

Wireless Local Area Networks, General Characteristics of the Hyper LAN System, 802.11 Standard, Basic DCF access scheme DCF Access Scheme with Handshaking, PCF Access Scheme, The 802.11a Standard, Mobile Ad Hoc Networks, Wireless Sensor Networks, over view of Bluetooth technology.

MODULE V SECURITY ISSUES AND NETWORK SIMULATOR 09

Security in Wireless Networks, Secure routing, Key Pre-distribution and Management, Encryption and Authentication, Security in Group Communication, Trust Establishment and Management, Denial of Service Attacks, Energy-aware security mechanisms, Location verification, Security on Data fusion, Overview of Network Simulator.

Practical

Simulation of Security Algorithms;Simulator based performance analysis of wireless networks.

L – 45, P – 30; Total Hours :75

REFERENCES:

1. William Stallings, "Wireless Communications and Networks", Prentice Hall, 2002.
2. T.S. Rappaport, "Wireless Communications: Principles & Practice", Second Edition, Prentice Hall, 2002.
3. Leon-Garcia and I. Widjaja, "Communication Networks, Fundamental Concepts and Key Architectures", McGraw-Hill, 2000.

6. Holger Karl, Andreas Willing, “Protocols and Architectures for Wireless Sensor Networks” Wiley 2012.
7. William Stallings, “Cryptography and Network Security”, Pearson Education, 2004.

OUTCOMES:

At the end of the course the student will be able to

- Describe the architectures of mobile networks

- Compare various network management techniques
- Explain radio propagation Model in mobile networks
- Use simulation tools to design and validate the propagation Models and Path Loss Estimation in Cellular Mobile Communication
- Describe and analyze the performance of CDMA
- Analyze the security issues in Wireless Networks.

ECC6102 SATELLITE COMMUNICATION

L	T	P	C
3	0	0	3

OBJECTIVES:

The aim of this course is

- To describe the concept of orbits and spacecraft subsystems
- To design uplinks and down links with various multiple access techniques
- To list and choose the services of satellites for different application
- To discuss the functional details of VSAT, GPS and DTH system

MODULE I SATELLITE SUBSYSTEMS 09

Review of satellite orbital mechanics - satellite subsystem - altitude and orbit control system - telemetry tracking command and monitoring - power system - communication subsystem, satellite antennas.

MODULE II SATELLITE LINK DESIGN AND ERROR CONTROL FOR DIGITAL SATELLITE LINKS 09

Basic transmission - system noise temperature and G/T ratio - design of down links - satellite system using small earth station- uplink design - design of specified C/N - system design examples. Error detection and correction for digital satellite links - channel capacity - error control coding- performance of block error correction codes- convolutional codes, implementation of error detection on satellite links- concatenated coding and interleaving-turbo codes

MODULE III MULTIPLE ACCESS SCHEMES FOR SATELLITE COMMUNICATION 11

Frame structures of FDMA, TDMA and CDMA in Satellite communication - onboard processing - packet radio systems and protocols

MODULE IV VSAT & GPS SYSTEM 10

Overview of VSAT systems - network architecture- access control protocols-basic techniques, VSAT earth station Engineering - GPS Introduction - position location principles - Receivers and codes - satellite signal acquisition - GPS Signal Message - signal levels - timing accuracy - GPS receiver operation, GPS C/A code accuracy - differential GPS

MODULE V DTH 06

DTH system architecture – Satellite Architecture – Orbital Interference Limitation Difference among DTH systems- Current scenario in DTH

Total Hours: 45

References:

1. Timothy Pratt, Charles W Bostian, Jeremy E Allnut, “Satellite Communication” Wiley, Edition 2007.
2. Bruce R. Elbert, “The Satellite Communication Applications Hand Book”, Artech House Boston,1997.
3. Wilbur L. Pritchard, Hendri G. Suyderhood, Robert A.Nelson, “Satellite Communication Systems Engineering”, 2nd edition, Prentice Hall, New Jersey.1993.
4. Dennis Rody, “Satellite Communication”, 4th edition, Regents/Prentice Hall, Eaglewood Cliff, New Jersey, 2006.

OUTCOMES:

On completion of the course the student will be able to

- Define and discuss the orbital parameters, launching mechanism and various subsystems of spacecraft.
- Use the mathematical framework of satellite links to various types of satellites and its services
- Design and estimate the uplinks and down links with various multiple access techniques
- Analyze the services of satellites for various applications
- Estimate the performance measures of satellite link
- Assess the architecture of VSAT, GPS and DTH system to meet desired needs within realistic constraints.

ECC6103	ADVANCED DIGITAL COMMUNICATION TECHNIQUES	L	T	P	C
		3	0	2	4

OBJECTIVES:

To make the student understand

- concepts of coherent and non-coherent communications.
- the effects of communication over band limited and fading channels
- the concepts of various coding and spread spectrum techniques.

Prerequisites :

- Digital Communication
- Probability and Random Process
- Discrete time signal Processing
- Programming skills in Matlab/ Labview software

MODULE I POWER SPECTRUM AND COMMUNICATION OVER MEMORYLESS CHANNEL 09

Complex base band signal representation, PSD of a Synchronous Data Pulse Stream, PSD of random binary signals, Scalar and Vector communication over Memoryless Channel .

Practical

- Spectral estimation of random binary signals
- Performance evaluation of digital base band communication

MODULE II COHERENT AND NON-COHERENT COMMUNICATION 09

Coherent receivers, Optimum receivers in AWGN, IQ Modulation & Demodulation. Non-coherent receivers in Random Phase and Random Amplitude Channels, M-FSK receivers, Rayleigh and Rician channels. Detector: Optimum rule for ML and MAPDetection; Performance: Bit-error-rate, symbol error rate for coherent and non-coherent schemes.

Practical

- Generation of digitally modulated signals and their constellations
- DPSK – BER Performance analysis

MODULE III COMMUNICATION OVER BANDLIMITED CHANNELS 09

Pulse shape design for channels with ISI: Nyquistpulse,Partial response signaling (duobinary and modified duobinary pulses), demodulation; Channel with distortion:

Design of transmitting and receiving filters for a known channel and for time varying channel (equalization);Performance: Symbol by symbol detection and BER,CPM : CPFM,CPFSK, MSK and GMSK

Practical

- Performance evaluation IQ modulations : QPSK, QAM

MODULE IV BLOCK CODED DIGITAL COMMUNICATION 09

Architecture and performance of Binary block codes: Orthogonal, Bi- orthogonal and Transorthogonal. Linear block codes, cyclic codes. Shannon's channel coding theorem: Channel capacity, Matched filter. Concepts of TDMA, CDMA, OFDMA,FDD, TDD.

Practical

- Simulation of LBC and Cyclic codes
- Generation and detection of CDMA using various spreading codes

MODULE V CONVOLUTIONAL CODED DIGITAL COMMUNICATION 09

Representation of codes using Polynomial, State diagram, Tree diagram, and Trellis diagram .Decoding techniques using Maximum likelihood, Sequential and Threshold methods.Error probability performance for BPSK and Viterbi algorithm.Turbo Coding.

Practical

- Simulation of coding and decoding of Convolutional codes
- Error probability performance

6. Ian Glover, Peter Grant, "Digital Communications", Prentice Hall, 2003 Edition

7. Bernard Sklar – “Modern Digital Communication Technique – Fundamental & Applications”, Prentice Hall, 2001 Edition

OUTCOMES:

On completion of the course the student will be able to

- Summarize the concepts of coherent and non-coherent communication techniques
- Perform simulation experiments on various base band digital communication systems
- Evaluate theoretically bit/ symbol error probability analysis
- Apply the concepts of digital modulation schemes
- Design and develop various coding schemes for digital communication systems
- Assess and justify performance of band limited and coded digital communication systems

ECC6104 ADVANCED DIGITAL SIGNAL PROCESSING

L	T	P	C
3	1	0	4

OBJECTIVES:

Make the students to

- Describe the use of various transforms in digital signals & systems analysis.
- Estimate the spectrum of Discrete Random Signals.
- Model and design adaptive filters.
- Explain the concepts of multirate signal processing
- Choose the DSP processor for various applications

MODULE I TRANSFORMS AND THEIR APPLICATIONS 06

Review of Z Transform, Discrete Fourier Transform, Discrete Time Fourier Transform, Discrete Fourier series. Introduction to Discrete Wavelet Transform.Haarwavelet.Application of transforms to discrete signals.

MODULE II DISCRETE TIME RANDOM PROCESSES AND SPECTRUM ESTIMATION 09

Deterministic process – Stochastic (random) process – Auto correlation & auto covariance of random processes – Cross correlation of random variables – Ergodic random process – Gaussian random process – Stationary & WSS random process – Power spectrum – Parseval's theorem – Wiener-Khinchine theorem – Spectral factorization – Periodogram - Modified periodograms using Bartlett , Welch, Blackman &Tukey windows – AR, MA, ARMA model based spectral estimation – Yule-Walker Equations – Durbin's algorithm.

MODULE III SIGNAL MODELING AND OPTIMUM FILTERS 08

Least square method model – Prony's pole-zero model – Prony's all pole model – Levinson-Durbin's recursion – Lattice filters – Forward & backward linear prediction filters.

MODULE IV ADAPTIVE FILTERS 08

FIR adaptive filters – Steepest descent method - Widrow-Hoff LMS algorithm – Normalized LMS method – Adaptive channel equalization – Adaptive noise cancellation – IIR adaptive filters - RLS filters.

MODULE V MULTIRATE DIGITAL SIGNAL PROCESSING 08

Need for multirate sampling – Decimation – Interpolation - Poly-phase filters – Multistage implementation –Phase shifters – Sub-band coders – Trans multiplexers– Quadrature mirror filters.

MODULE VI DSP PROCESSORS 06

General and special purpose DSP Processors – Computer Architecture for signal processing – Havard Architecture – Pipelining – Hardware Multiply and Accumulate – Special Instructions – Replication – On-chip Memory Cache – Extended Parallelism – SIMD – VLIW and static super-scalar Processing – Brief study of TMS320C4X and ADSP 2106 processors.

Total Hours: 60

REFERENCES:

5. Andreas Antoniou, “Digital signal Processing Processing”, Tata McGraw Hill,second edition, 2008.
6. Stewen W. Smith, “Digital signal Processing Processing” –“ A practical guide for Engineers and scientist”, Elsevier Science, 2003

OUTCOMES:

The students will be able to,

- Apply various transforms in digital signals & systems analysis.
- Estimate the power spectrum of signals
- Design & analyze digital filters based on signal modeling
- Design & analyze the adaptive filters
- Implement multirate signal processing techniques.
- Summarize various DSP processorarchitectures.

SEMESTER II

GEC6201	RESEARCH METHODOLOGY FOR ENGINEERS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide a perspective on research to the scholars
- To educate on the research conceptions for designing the research
- To impart knowledge on statistical techniques for hypothesis construction
- To gain knowledge on methods of data analysis and interpretation
- To learn about the effective communication of research finding

MODULE I RESEARCH `PROBLEM FORMULATION 07

Research – objectives – types, Research process, Solving engineering problems, Identification of research topic, Formulation of research problem, Literature survey and review.

MODULE II HYPOTHESIS FORMULATION 08

Research design – meaning and need – basic concepts, Different research designs, Experimental design – principle – important experimental designs, Design of experimental setup, Mathematical modeling, Simulation – validation and experimentation, Dimensional analysis and similitude.

MODULE III STATISTICAL TECHNIQUES 12

Statistics in research – concept of probability – popular distributions –Hypothesis testing- sample design- Design of experiments – factorial designs -– orthogonal arrays- ANOM - ANOVA - Multivariate analysis - Use of optimization techniques – traditional methods – evolutionary optimization techniques –Transportation model.

MODULE IV STATISTICAL ANALYSIS OF DATA 10

Research Data analysis – interpretation of results – correlation with scientific facts- Accuracy and precision – error analysis, limitations - Curve fitting, Correlation and regression.

MODULE V RESEARCH REPORT 08

Purpose of written report – audience, synopsis writing, preparing papers for International journals, Thesis writing – organization of contents – style of writing –

graphs and charts – referencing, Oral presentation and defence, Ethics in research, Patenting, Intellectual Property Rights.

11. Scheffer. R.L. and James T. Mc Clave, Probability and Statistics for Engineers, PWS – Kent Publishers Co., Boston, USA, 1990.

OUTCOMES:

Students should be able to

- Formulate the research problem
- Design and Analyse the research methodology
- Construct and optimize the research hypothesis
- Analyse and interpret the data
- Report the research findings

ECC6201 OPTICAL NETWORKS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the evolution of optical network and their classification.
- To impart knowledge on optical components and network.
- Toexplain optical networks architecture and standards
- Discussthe issues in design and management of optical networks.

MODULE I INTRODUCTION TO OPTICAL NETWORKS 06

Telecommunication networks, First generation optical networks, Multiplexing techniques, Second generation optical networks, Optical layer, Transmission basics,Introduction to Li-Fi, VLC, optical wireless, optical attocell, Network evolution.

MODULE II OPTICAL COMPONENTS 12

Optical Components - Couplers, Isolators & Circulators, Multiplexers & Filters Optical Amplifiers, Switches, Wavelength Converters.

Transmission System Engineering- System model, Power penalty - transmitter, receiver, Opticalamplifiers, crosstalk, dispersion; Wavelength stabilization ; Overall design considerations.

MODULE III OPTICAL NETWORK ARCHITECTURES 09

WDM networks, SONET / SDH, Metropolitan-Area Networks, Layered Architecture; Broadcast and Select Networks- Topologies for Broadcast Networks, Media Access Control Protocols, Wavelength Routing Architecture.

MODULE IV WAVELENGTH ROUTING NETWORKS 09

WDM Network Elements; WDM Network Design - Cost tradeoffs, Virtual Topology Design, Routing and wavelength assignment, Statistical Dimensioning Models.

MODULE V NETWORK MANAGEMENT AND SURVIVABILITY 09

Control and Management – Network management functions, Configuration management, Performance management, Fault management, Optical safety, Service interface; network Survivability- Protection in SONET / SDH and IP Networks, Optical layer Protection, Interworking between layers.

Total Hours:45

4. John M. Senior, “Optical Fiber Communications –Principles and Practice”, Pearson Education, 2009.
5. Biswanath Mukherjee, “Optical Communication Networks”, McGraw-Hill, 1997.

OUTCOMES:

After successful completion of the course, student will be able to

- Explain the operation of various optical components applied in optical networks.
- Define the fundamental concepts of optical networks and characteristics.
- Describe the optical network protocols.
- Distinguish between physical and logical topologies of WDM optical networks.
- Analyze the need and methods of efficient routing in optical networks.
- Analyze the main functions of the optical network management

ECC6202 ADVANCED RADIATION SYSTEMS AND PRACTICE

L	T	P	C
3	0	2	4

OBJECTIVES:

- To impart knowledge of antenna fundamentals.
- To design microstrip antenna with its feed network.
- To analyze different types of antenna synthesis method
- To discuss the concepts of different aperture antenna.
- To design the suitable antenna systems using antenna simulator
- To impart knowledge of antenna measurement.

MODULE I ANTENNA FUNDAMENTALS 15

Antenna parameters, Radiation from surface and line current distributions, Fields radiated by an alternating current element and half wave dipole, monopole, loop antenna: Total power radiated and radiation resistance. Mobile phone antenna, Broadband antennas and matching techniques: BALUN transformer, polarization states, Introduction to Simulation tool for antenna design.

MODULE II MICRO STRIP ANTENNA 12

Design and implementation: Microstrip dipole, Rectangular patch, Circular patch and Ring antenna. Radiation analysis from cavity model. Input impedance, Microstrip array and feed network, Design of microstrip and meander lineantennausing simulation tool.

MODULE III ARRAY ANTENNA 12

Linear arrays, Two dimensional uniform array: Phased array, beam scanning, grating lobe, feed network, Pattern multiplication, TheDolph-Tschebyscheff Antenna Synthesis,Design Procedures for a Tschebyscheff Synthesis, Genetic Algorithm for antenna synthesis, Simulation of Array antenna, Antenna synthesis.Design of array antenna for Baseband control.

MODULE IV RADIATION FROM APERTURES 09

Duality and the Equivalence Principle, Far-field Radiation from Electric and Magnetic Surface Currents, Tapered Field Distribution in Rectangular Aperture, The H-Sectoral Horn, Universal Radiation Patterns and Directivity for the H-Sectoral and E-Sectoral Horns, Circular Apertures, Paraboloidal Reflectors, Prime Focus Parabolic Reflector and Cassegrain Reflector, Spillover ,Efficiency,Aperture Blockage, and other effects in parabolic antenna.Simulation of slot antenna.

MODULE V ANTENNA MEASUREMENTS 12

Measurements of Gain, Power, HPBW, Impedance and antenna factor. Experimentation of antenna parameters using Microwave test bench.

Total Hours 60

REFERENCES:

2. Constantine A. Ballanis, "Antenna Theory", John Wiley & Sons, second edition, 2003.
3. John D.Kraus and Ronald J. Marhefka, "Antennas for all applications", 3rd Edition Tata McGraw-Hill Book Company, 2006.
4. John D.Kraus, “Radio Astronomy” McGraw-Hill 1966

OUTCOMES:

Students will able to

- Describe and analyze the various antenna parameters and different impedance matching techniques.
- Compare the merits and demerits of various microwave patch antenna structures.
- Analyze the types of antenna arrays.
- Synthesize the antenna arrays
- Distinguish the apertures antennas.
- Design, fabricate the antenna and measure the various antennameasurements.

SEMESTER III

ECC7101 PROJECT WORK – PHASE I

L	T	P	C
0	0	12	6

OBJECTIVES :

- To improve the professional competency and research aptitude
- Aims to develop the work practice of students to apply theoretical and practical tools/techniques
- To solve real life problems related to industry and current research
- To improve the skills towards report/documentation preparation

GUIDELINES:

Project work can be a design project/experimental project and/or computer simulation project on any of the topics of communication systems. The project work is allotted individually on different topics. The students shall be encouraged to do their project work in the parent institute itself. If found essential (Industry oriented Projects), they may be permitted to continue their project outside the parent institute. Department will constitute an Evaluation Committee to review the project work. The Evaluation committee consists of at least three faculty members of which internal guide and another expert in the specified area of the project shall be two essential members.

The student is required to undertake the master research project phase 1 during the third semester and the same is continued in the 4thsemester (Phase 2). Phase 1 consist of preliminary thesis work, two reviews of the work and the submission of preliminary report. First review would highlight the topic, objectives, methodology and expected results. Second review evaluates the progress of the work, preliminary report and scope of the work which is to be completed in the 4th semester. The Evaluation committee consists of at least four faculty members of which internal guide and other experts in the specified area of the project shall be two essential members.

OUTCOME

At the end of the project work phase I the student will be able to

- learn the tool required for the design, analysis of their preliminary work
- Select the specific devicesfor different application alongwith justification
- Apply the practical knowledge while solving real time problems
- Incorporate cost effective and efficient project models
- Conclude the subject knowledge through proto type models
- Prepare an appropriate documentation

ECC7102 MINI PROJECT

L	T	P	C
0	0	3	1

OBJECTIVES :

- To improve the professional competency and research aptitude of students

GUIDELINES:

1. This mini project will help the students to develop the work practice to apply the design skills for solving real life problems.
2. The project can be an experimental project on any of the topics in electronics and communication.
3. The project work is allotted individually on different topics.
4. The students shall be encouraged to do their project in the parent institute itself.
5. Department will constitute an Evaluation Committee to review the project periodically.

OUTCOMES:

At the end of the project the student will be able to

- Design and analyze an electronic system
- Fabricate an electronic system/device in their area of interest
- Improve their presentation skills
- Improve the documentation skills

SEMESTER IV

ECC7101 PROJECT WORK – PHASE II

L	T	P	C
0	0	36	18

OBJECTIVES :

- To improve the professional competency and research aptitude
- Aims to develop the work practice of students to apply theoretical and practical tools/techniques
- To solve real life problems related to industry and current research
- To improve the skills towards report/documentation preparation

GUIDELINES:

Project work can be a design project/experimental project and/or computer simulation project on any of the topics of communication systems. The project work is allotted individually on different topics. The students shall be encouraged to do their project work in the parent institute itself. If found essential (Industry oriented Projects), they may be permitted to continue their project outside the parent institute. Department will constitute an Evaluation Committee to review the project work. The Evaluation committee consists of at least three faculty members of which internal guide and another expert in the specified area of the project shall be two essential members.

The student is required to undertake the master research project phase 1 during the third semester and the same is continued in the 4thsemester (Phase 2). Phase 1 consist of preliminary thesis work, two reviews of the work and the submission of preliminary report. First review would highlight the topic, objectives, methodology and expected results. Second review evaluates the progress of the work, preliminary report and scope of the work which is to be completed in the 4th semester. The Evaluation committee consists of at least four faculty members of which internal guide and other experts in the specified area of the project shall be two essential members.

OUTCOMES:

At the end of the project work phase I the student will be able to

- learn the tool required for the design, analysis of their preliminary work
- Select the specific devicesfor different application alongwith justification
- Apply the practical knowledge while solving real time problems
- Incorporate cost effective and efficient project models
- Conclude the subject knowledge through proto type models
- Prepare an appropriate documentation

PROFESSIONAL ELECTIVES

ECCY001 DIGITAL IMAGE PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Describe and explain basic principles of digital image processing;
- Design and implement algorithms that perform basic image processing
- Design and implement algorithms for advanced image analysis
- Assess the performance of image processing algorithms and systems.

MODULE I DIGITAL IMAGE FUNDAMENTALS 09

Elements of digital image processing systems, Basics of visual perception,Psycho, visual model, Color image fundamentals, Brightness, contrast, hue,saturation, GB,HSI models, Image sampling & quantization.

MODULE II IMAGE TRANSFORMS 09

2D discrete transforms, DFT, DCT, WHT, KLT, DWT, Simulation of 2D transformby 1D transform.

MODULE III IMAGE ENHANCEMENT, RESTORATION, SEGMENTATION & RECOGNITION 12

Histogram modification and specification techniques, Noise distributions, Low and High Pass filters, Color image enhancement, Image degradation model – Unconstrained and constrained restoration, Geometric transformations, Spatial transformations, Gray level interpolation, Image Segmentation & its types, Pattern and Pattern classes.

MODULE IV IMAGE COMPRESSION 08

Need for image compression, Vector Quantization, Run Length Encoding, Shiftcodes, Block Truncation Coding, DCT and Wavelet Transform coding, Simulation of basic concepts.

MODULE V IMAGE PROCESSING APPLICATIONS 07

Biometric identification, Satellite image processing, Industrial machine vision application, Neural Networks in image processing, Medical image processing and Motion Analysis, Augmented \ Virtual reality.

Total Hours : 45

7. Sonka,Hlavac,Boyle,Digital Image Processing and Computer Vision ,Cengage Learning,India Edition,2008
8. Madhuri A.Joshi, Digital Image Processing-An Algorithmic approach,Prentice Hall of India,2008

OUTCOMES:

At the completion of the course, students will be able to

- Acquire the knowledge of fundamental concepts of a digital image processing system
- Analyze 2D signals in the frequency domain through the various transforms.
- Describe various techniques for image enhancement and restoration.
- Recognize and apply suitable image segmentation techniques
- Identify and use of appropriate image compression techniques.
- Implement concepts of image processing using simulation technique.
- Apply suitable image processing techniques for various applications

ECCY002 ADVANCED MICROWAVE SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To describe the basic principles and advanced applications of Microwave Engineering.
- To introduce the concept of transmission lines and waveguides.
- To illustrate the concepts of microwave network analysis and impedance matching.
- To learn about various types of resonators.
- To describe the procedures to design different amplifiers, oscillators, filters and mixers.

MODULE I ELECTROMAGNETIC AND TRANSMISSION LINES THEORY 07

Introduction to microwave Engineering, Maxewell's Equations, Fields in media and boundary conditions, wave equations and basic plane wave solutions. Lumped element circuit model for a transmission line, field analysis of a transmission lines, terminated lossless transmission lines, smith chart, quarter wave transformers, generator and load mismatches, lossy transmission lines.

MODULE II TRANSMISSION LINES AND WAVEGUIDES 07

General solutions for TEM, TE and TM waves, Parallel plate, rectangular, circular waveguide, Coax line, surface waves on a grounded dielectric shield, strip line, microstrip line.

MODULE III MICROWAVE NETWORK ANALYSIS, IMPEDANCE MATCHING AND TUNING 08

Impedance and equivalent voltages and currents, impedance and admittance matrices, scattering matrices, ABCD matrix, Signal flow graphs, discontinuities and modal analysis, excitation of waveguides-electric and magnetic currents, aperture coupling. Matching with lumped elements, single stub, double stub tuning, quarter wave transformer.

MODULE IV MICROWAVE RESONATORS 08

Series and parallel resonance circuits, transmission line resonators, rectangular waveguide cavity resonator, circular waveguide cavity resonator, dielectric resonator, excitation of resonator, cavity perturbation.

MODULE V MICROWAVE FILTERS 08

Periodic structures, filter design by: Image parameter method, insertion loss method, filter transformation, filter implementation, LPF, coupled line filters, filters using coupled resonators

MODULE VI MICROWAVE AMPLIFIER, OSCILLATOR AND MIXER DESIGN 07

Two port power gains, stability, single stage transistor amplifier design, broadband transistor amplifier design, power amplifier, RF oscillators, Microwave Oscillator, oscillator phase noise, frequency multipliers, mixers.

Total Hours : 45

REFERENCES:

1. R.E.Collin, “Foundations of Microwave Engineering”, McGraw-Hill, 1992.
2. Ramo, Whinnery and Van Duzer, “Fields and Waves in Communication Electronics”, 3rd Edition, Wiley, 1997
3. David .M Pozar “Microwave and RF System Design” Wiley 2001 Edition.
4. Wayne Tomasi, “Advanced Microwave Communication Systems” PHI 2002, 2nd Edition.

OUTCOMES:

On completion of this course the student will be able to

- Understand the underlying principles of microwave theory.
- Understand the concept and derive different characteristics of various transmission lines waveguides.
- Describe various parameters of microwave networks.
- Analyze and design microwave filters and resonators.
- Understand the concept of amplifier stability, gain and noise figure and also able to Design microwave small signal and power amplifiers.
- Design microwave oscillators and mixer

ECCY003 COGNITIVE AND CO-OPERATIVE RADIO COMMUNICATIONS

L	T	P	C
3	0	0	3

OBJECTIVES:

- • To acquire knowledge on cooperative communications
- • To learn cooperation protocols and networking
- • To acquire knowledge on broadband cooperative communications
- • To understand cognitive radio networks

MODULE I COOPERATIVE COMMUNICATIONS 09

Cooperation protocols- Hierarchical cooperation; Cooperative communications with single Relay – System model, DF Protocol, AF protocol; Multi-node cooperative communications – system model and protocol description; Distributed space–time coding (DSTC) – Distributed space–frequency coding (DSFC); Relay selection- protocol, criterion.

MODULE II DIFFERENTIAL MODULATION AND COOPERATIVE NETWORKING 09

Differential modulations for DF cooperative communications – Differential modulation for AF cooperative communications; Cognitive multiple access via cooperation – System model, CCMA protocol; Content-aware cooperative multiple access – system model, protocol; Distributed cooperative routing – network model and transmission models, cooperation based routing algorithm; Source–channel coding with cooperation- joint source channel coding bit rate allocation, joint source channel coding with user cooperation, source channel cooperation tradeoff problem.

MODULE III BROADBAND COOPERATIVE COMMUNICATIONS 09

System model - Cooperative protocol and relay assignment scheme – Network lifetime maximization - system model, via cooperation - System model – Lifetime maximization by employing a cooperative node - Deploying relays to improve device lifetime.

MODULE IV COGNITIVE RADIOS AND NETWORKS 09

Cognitive Radios and Dynamic Spectrum Access - Fundamental Limits of Cognitive Radios -Mathematical Models Toward Networking Cognitive Radios; Network Coding for Cognitive Radio Relay Networks - Cognitive Radio Networks Architecture; Overview of Spectrum Sensing concept.

Total Hours : 45

REFERENCES:

1. K.J. Rayliu, A.K. Sadek, Weifeng Su & Andres Kwasinski, “Cooperative Communications and Networking”, Cambridge University Press, 2009.
2. Kwang-Cheng Chen and Ramjee Prasad, “Cognitive Radio Networks”, John Wiley & Sons, 2009.

OUTCOMES:

At the end of the course, the student will be able to

- List various protocols used in co-operative communications.
- Describe the network and transmission models of cooperative communications.
- Demonstrate the channel coding techniques for cooperative communications.
- Explain the concepts of broadband cooperative communications.
- Identify the applications of cooperative communications.
- Apply the concepts of cognitive radio and spectrum sensing for their research.

ECCY004 DIGITAL COMMUNICATION RECEIVERS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To analyze liner and non-linear modulation techniques
- Toexplain optimum receivers and functions
- To describe the fading channel characterization and diversity techniques
- To discuss the receiver synchronization concepts
- To explain adaptive Equalization concepts and algorithms

MODULE I REVIEW OF DIGITAL COMMUNICATION TECHNIQUES 09

Base band and band pass communication, signal space representation, linear and non- linear modulation techniques, and spectral characteristics of digital modulation.

MODULE II OPTIMUM RECEIVERS FOR AWGN CHANNEL 09

Correlation demodulator, matched filter, maximum likelihood sequence detector, Optimum receiver for CPM signals, M-ary orthogonal signals, envelope detectors for M-ary and correlated binary signals.

MODULE III RECEIVERS FOR FADING CHANNELS 09

Characterization of fading multiple channels, statistical models, slow fading, frequency selective fading, diversity technique, RAKE demodulator, coded waveform for fading channel.

MODULE IV SYNCHRONIZATION TECHNIQUES 09

Carrier and symbol synchronization, carrier phase estimation, PLL, Decision directed loops, symbol timing estimation, maximum likelihood and non-decision directed timing estimation, joint estimation.

MODULE V ADAPTIVE EQUALIZATION 9

Zero forcing algorithm, LMS algorithm, Adaptive decision feedback equalizer, and equalization of Trellis-coded signals, Kalman algorithm, blind equalizers, and stochastic gradient algorithm.

Total Hours : 45

REFERENCES:

1. Heinrich Meyr, Mare Moeneclacy and Stefan.A. Fechtel, “Digital Communication Receivers”, Vol I & II, John Wiley, New York, 1997
2. John. G. Proakis, “Digital Communication”, 4th ed., McGraw Hill, New York, 2001

4. Simon Marvin, “Digital Communication Over Fading channel; An unified approach to performance Analysis”, John Wiley, New York, 2000
5. Bernard Sklar, “Digital Communication Fundamentals and Applications, Prentice Hall,1998

OUTCOMES:

On completion of this course, the students will be able to:

- Describe the various Digital communication techniques.
- Distinguish the performance of receivers for various channels.
- Construct optimum receivers for communication over AWGN channel and
- fading channels
- Analyze the various synchronization and estimation techniques for receivers.
- Categorize the equalization algorithms based on applications.
- Design a proper receiver for given application.

ECCY005 ELECTROMAGNETIC INTERFERENCE AND COMPATIBILITY SYSTEM DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To know about EMI environment
- To introduce the concepts of electromagnetic interference coupling principles.
- To learn electromagnetic interference measurements and standards
- To learn about the techniques to control electromagnetic interferences
- To explain electromagnetic compatibility design of PCBS

MODULE I EMI ENVIRONMENT 07

EMI/EMC concepts and definitions, Sources of EMI, conducted and radiated EMI, Transient EMI, Time domain Vs Frequency domain EMI, Units of measurement parameters, Emission and immunity concepts, ESD.

MODULE II EMI COUPLING PRINCIPLES 08

Conducted, Radiated and Transient Coupling, Common Impedance Ground Coupling, Radiated Common Mode and Ground Loop Coupling, Radiated Differential Mode Coupling, Near Field Cable to Cable Coupling, Power Mains and Power Supply coupling.

MODULE III EMI/EMC STANDARDS AND MEASUREMENTS 10

Civilian standards, FCC, CISPR, IEC, EN, Military standards : MIL STD 461D/ 462, EMI Test Instruments /Systems, EMI Shielded Chamber, Open Area Test Site, TEM Cell - Sensors/Injectors/Couplers, Test beds for ESD and EFT, Military Test Method

MODULE IV EMI CONTROL TECHNIQUES 10

Shielding, Filtering, Grounding, Bonding, Isolation Transformer, Transient Suppressors, Cable Routing, Signal Control, Component Selection and Mounting.

MODULE V EMC DESIGN OF PCBs 10

PCB Traces, Cross Talk, Impedance Control, Power Distribution Decoupling, Zoning, Motherboard Designs and Propagation Delay Performance Models.

Total Hours : 45

REFERENCES:

1. Henry W.Ott, "Noise Reduction Techniques in Electronic Systems", John Wiley and Sons, NewYork. 1988.
2. C.R.Paul, “Introduction to Electromagnetic Compatibility”, John Wiley and Sons, Inc, 1992

4. Bernhard Keiser, "Principles of Electromagnetic Compatibility", Artech house, 3rd Ed, 1986.
5. R.Paul, “Introduction to EMC” Wiley 2006 2nd edition.

OUTCOMES:

On completion of this course the student will be able to:

- Describe the EMI Coupling Principles.
- Identify and describe the EMI Specifications.
- Identify the Standards and Limits.
- Understand the test methods and usage of test beds
- Describe the EMI Measurements and Control Techniques.
- Design EMC based PCBs.

ECCY006 ERROR CONTROL CODING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce modern coding techniques and coding Algebra.
- To study the behavior of codes in AWGN channel.
- To introduce the recent advancements in codes
- To develop a new code based on an application

MODULE I CODING AND ALGEBRA 09

Linear Block Codes: Generator and parity-check matrices, Minimum Distance, Sydrome decoding, Bounds on minimum distance. Cyclic Codes: Algebra-Finite fields- Groups, Fermat's Little theorem, Finite fields, Polynomials over fields, Polynomial Division. Polynomial factorization over a field, Irreducible polynomials, Existence and construction of fields of a given size.Examples of finite field construction, Binary BCH codes, RS codes.

MODULE II CODING IN AWGN CHANNELS 09

AWGN channel: Coding gain, Encoding and decoding in AWGN channels. BPSK modulation, Capacity, Coding gain, ML and MAP decoding for Repetition codes, Probability of decoding error, Channel Capacity, Capacity for various schemes, Eb/No, Coding Gain. Soft-versus hard-decision decoding .Convolutional Codes: Encoders, Trellis, Viterbi decoding, Recursive convolutional encoders.

MODULE III MODERN ITERATIVE CODING 09

Turbo codes: Encoders, interleavers, Puncturing. turbodecoder.Low-density Parity-check Codes (LDPC): Ensembles of LDPC codes, Gallager decoding algorithm for LDPC codes, LDPC Threshold. Message-passing decoders, and density evolution for AWGN channels.

MODULE IV RECENT DEVELOPMENTS IN TURBO CODES 09

Various interleavers, Nonsystematic Turbo codes, Turbo codes in 3G, Effect of Fast Correlation, Low complexity turbo decoder design, turbo codes and ARQ scheme, 3D Turbo codes

MODULE V ERROR CONTROL CODING – APPLICATIONS 09

Wireless Sensor Networks(WSN), low power WSN using ECC, Energy efficient WSN using ECC , Embedded WSN, ZIGBEE, WSN key Management. Embedded

Systems, Impact on Embedded system design

Total Hours :45

OUTCOMES:

On completion of this course, the students will be able to:

- Describe the modern coding techniques and basics of coding algebra.
- Explain the behavior of modern codes in AWGN Channel
- Employ the concept of convolutional codes in constructing a turbo coder.
- Analyze the performance of Turbo codes and LDPC.
- Develop a new design of channel coding.
- Recommend a channel coder based on the application.

ECCY007 GLOBAL TRACKING AND POSITIONING SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To know about history of GPS and various existing GPS Systems
- To learn about US based GPS System Segments
- To learn about various functionalities and techniques used in GPS
- To know about hindrances caused for GPS
- To acquire knowledge about various applications of GPS in various fields
- To learn about other constellations and augmentation systems

MODULE I INTRODUCTION TO TRACKING AND GPS SYSTEM 09

Basic concepts of GPS. Space segment, Control segment, user segment, History of GPS constellation, GPS measurement characteristics, selective availability(AS), ant spoofing (AS), GPS aided Geo-augmented navigation (GAGAN) architecture. Applications of Satellite and GPS for 3D position, Velocity, determination as function of time, Interdisciplinary application (eg,.Crystal dynamics, gravity field mapping, reference frame, atmospheric occultation)

MODULE II ORBITS AND REFERENCE SYSTEMS 09

Basics of satellite orbits and reference systems-Two-body problem, orbit elements, time system and time transfer using GPS, coordinate systems, GPS Orbit design, orbit determination problem, tracking networks, GPS force and measurement models for orbit determination, orbit broadcast ephemeris, precise GPS ephemeris, Tracking problems

MODULE III GPS MEASUREMENTS 09

GPS Observable-Measurement types (C/A Code, P-code, L1 and L2 frequencies for navigation, pseudo ranges), atmospheric delays(tropospheric and ionospheric), data format (RINEX), data combination (narrow/wide lane combinations, ionosphere-free combinations single, double, triple differences), undifferenced models, carrier phase Vs Integrated Doppler, integer biases, cycle slips, clock error.

MODULE IV PROCESSING TECHNIQUES 09

Pseudo range and carrier phase processing, ambiguity removal, Least square methods for state parameter determination, relation positioning, dilution of precision.

MODULE V OTHER CONSTELLATIONS AND AUGMENTATION SYSTEMS **09**

Other satellite navigation constellations GLONASS and Galileo IRNS System.Relative advantages of SBAS and GBAS, Wide area augmentation system (WAAS) architecture, GAGAN, EGNOS and MSAS.Local area augmentation system (LAAS) concept.

Total Hours : 45

REFERENCES:

4. G.S.Rao,”Global Navigation Satellite Systems”, McGraw-Hill Publications, New Delhi, 2010
5. Ahmed El-Rabbany, “Introduction to GPS,” Artech House, Boston, 2002.

OUTCOMES:

On completion of this course the student will be able to

- Understand the fundamental theory and concept of GPS
- Explain the satellite orbits and other navigational systems
- Explain various functionalities and techniques used in GPS
- Explain how a GPS receiver computes position and time from GPS signals.
- Describe the major error sources for GPS positioning projects.
- Analyze and compare different navigation systems

ECCY008 HIGH PERFORMANCE COMMUNICATION NETWORKS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explore various high speed network architectures and protocols
- To discuss various advanced network architecture
- To explain the fundamentals and protocol architecture of WiMax and LTE networks
- To learn about Traffic management for congestion control in networks

MODULE I PACKET SWITCHED NETWORKS 09

OSI and IP models, Ethernet (IEEE 802.3), Token ring (IEEE 802.5), Wireless LAN (IEEE 802.11) FDDI, DQDB, SMDS: Internetworking with SMDS

MODULE II ISDN AND BROADBAND ISDN` 09

ISDN, Overview, Interfaces and functions, Layers and services, Signaling System 7, Broadband ISDN architecture and Protocols.

MODULE III ATM AND FRAME RELAY 09

ATM: Main features-Addressing, Signaling and Routing, ATM header structure-Adaptation layer, management and control, ATM switching and transmission.
Frame Relay: Protocols and services, Congestion control, Internetworking with ATM, Internet and ATM, Frame relay via ATM.

MODULE IV ADVANCED NETWORK ARCHITECTURE 09

IP forwarding architectures overlay model, Multi Protocol Label Switching, Integrated services in the Internet, Resource Reservation Protocol, Differentiated services

MODULE V HIGH PERFORMANCE NETWORKS 09

WiMAX overview –WiMAX Physical Layer – MAC layer overview – Advanced Features for Performance Enhancement – LTE – Technologies for LTE – Network Architecture – Protocol Architecture

Total Hours : 45

7. StefaniaSesia, IssamToufik, Matthew Baker, “LTE – The UMTS Long Term Evolution”, Wiley, 2011.

OUTCOMES:

At the end of the course student will be able to

- Describe the fundamental concepts of packet switched networks.
- Distinguish various high speed network architectures and protocols
- Compare various advanced network architecture
- Describe the technologies used in wiMax and LTE
- Analyze the resource management techniques in advanced network architecture
- Asses various protocol architecture and services.

ECCY009 INTERNET OF THINGS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce emerging technological options and platforms
- To explain the architecture of IoT
- To explore application development for mobile Platforms
- To Provide the appropriate IoT solutions and recommendations according to the applications used.

MODULE I THE IoT NETWORKING CORE 10

History of IoT, Review of Technologies involved in IoT Development, Internet/Web and Networking Basics -OSI Model, Data transfer referred with OSI Model, IP Addressing, Point to Point Data transfer, Point to Multi Point Data transfer & Network Topologies, Sub-netting, Network Topologies referred with Web, Introduction to Web Servers, Introduction to Cloud Computing. Basics of Big Data, Data Science.

MODULE II IoT ARCHITECTURE AND APPLICATIONS 09

Architecture: M2M – Machine to Machine, Web of Things, IoT protocol, Introduction to wireless and mobile networks, ZigBee, BLE mesh, WiFi, MQTT, LoRa-Machine Applications: Remote Monitoring & Sensing, Remote Controlling, Performance Analysis

MODULE III IoT PLATFORM OVERVIEW 09

Overview of IoT supported Hardware platforms such as: Raspberry pi, ARM Cortex Processors, Arduino and Intel Galileo boards. Network Fundamentals: Overview and working principle of Wired Networking equipment's – Router, Switches, Overview and working principle of Wireless Networking equipment's – Access Points, Hubs etc. Linux Network configuration Concepts: Networking configurations in Linux Accessing Hardware & Device Files interactions.

MODULE IV IoT APPLICATION DEVELOPMENT 09

Application Protocols-MQTT, REST/HTTP, CoAP, MySQL -Back-end Application - Design Apache for handling HTTP Requests, PHP & MySQL for data processing, MongoDB Object type Database, HTML, CSS &jQuery for UI Designing, JSON lib for data processing, Security & Privacy during development, Application Development for mobile Platforms: Overview of Android / IOS 10 25 47 /97 App Development tools

MODULE V CASE STUDY & ADVANCED IOT APPLICATIONS 08

IoT applications in home, infrastructures, buildings, security, Industries, Home appliances, other IoT electronic equipments. Use of Big Data and Visualization in IoT, Industry 4.0 concepts. Sensors and sensor Node and interfacing using any Embedded target boards

OUTCOMES:

At the end of the course the student will be able to

- Articulate the main concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for state-of-the-art Internet of things
- Identify the architecture and infrastructure of IoT.
- Explain the core issues of IoT such as security, privacy, and interoperability
- Choose the appropriate technologies, algorithms, and approaches for the related issues.
- Identify problems, and explain, analyze, and evaluate various IoT solutions
- Attempt to generate new ideas and innovations in IoT.

ECCY010 INTERNET WORKING MULTIMEDIA

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explain Internet service models.
- To describe multimedia broadband networks.
- To describe different coding and compression techniques.
- To discuss multimedia standards.

MODULE I MULTIMEDIA NETWORKING 09

Digital sound, video and graphics, basic multimedia networking, multimedia characteristics, evolution of Internet services model, network requirements for audio/ video transform, multimedia coding and compression for text, image, audio and video.

MODULE II BROADBAND NETWORK TECHNOLOGY 09

Broadband services, ATM and IP, IPV6, High speed switching, resource reservation, Buffe management, traffic shaping, caching, scheduling, and policing, throughput, delay and jitter performance. Storage and media services, voice and video over IP, MPEG-2 over ATM/IP, indexing synchronization of requests, recording and remote control.

MODULE III RELIABLE TRANSPORT PROTOCOL AND APPLICATIONS 09

Multicast over shared media network, multicast routing and addressing, scaling multicast and NBMA networks, Reliable transport protocols, TCP adaptation algorithm, RTP, RTCP. MIME, Peer- to-Peer computing, shared application, video conferencing, centralized and distributed conference control, distributed virtual reality, light weight session philosophy.

MODULE IV MULTIMEDIA COMMUNICATION STANDARDS 09

Objective of MPEG- 7 standard, Functionalities and systems of MPEG-7, MPEG-21 MultimediaFramework Architecture - Content representation, Content Management and usage, Intellectualproperty management, Audio visual system-H322: Guaranteed QOS LAN systems; MPEG - 4 video Transport across internet.

MODULE V MULTIMEDIA COMMUNICATION ACROSS NETWORKS 09

Packet Audio/video in the network environment, video transport across Generic network Layered video coding, error Resilient video coding techniques, Scalable

Rate Control, Streaming video across Internet, Multimedia transport across ATM networks and IP network, Multimedia across wireless networks.

Total Hours : 45

REFERENCES:

4. K.R.Rao, Zoran S. Bojkovic and Dragorad A. Milovanovic, “Multimedia Communication systems”, PHI 2003.

OUTCOMES:

On completion of this course the student will be

- Describe the evolution of Internet service models.
- Analyze Multimedia broadband networks.
- Design Multimedia broadband networks.
- Differentiate various multimedia communication standards
- Apply different coding and compression techniques
- Analyze Multimedia communication across networks

ECCY011 MEDICAL IMAGE PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explain fundamental concepts of digital image processing
- Design and implement algorithms that perform basic image pre-processing
- To interpret medical images through various multimodal imaging sources
- To describe idea on image representation,analysis, classification, reconstruction, registration and visualization of medical images.

MODULE I IMAGE FUNDAMENTALS 09

Image perception, MTF of the visual system, Image fidelity criteria, Image model, Image sampling and quantization – two dimensional sampling theory, Image quantization, Optimum mean square quantizer, Image transforms – 2D-DFT and other transforms.

MODULE II IMAGE PREPROCESSING 09

Image enhancement, point operation, Histogram modeling, spatial operations, Transform operations, Image restoration, Image degradation model, Inverse and Weiner filtering. Image Compression, Spatial and Transform methods.

MODULE III MEDICAL IMAGE RECONSTRUCTION 09

Mathematical preliminaries and basic reconstruction methods, Imagereconstruction in CT scanners, MRI, functional MRI, Ultra sound imaging, 3DUltra sound imaging Nuclear Medicine Imaging Modalities-SPECT, PET,Molecular Imaging.

MODULE IV IMAGE ANALYSIS AND CLASSIFICATION 09

Image segmentation: pixel based, edge based, region based, segmentation. Image representation and analysis, Feature extraction and representation, Statistical, Shape, Texture, feature and image classification: Statistical, Rulebased, Neural Network approaches.

MODULE V IMAGE REGISTRATIONS AND VISUALIZATION 09

Rigid body visualization: Principal axis registration, Interactive principal axisregistration, Feature based registration, Elastic deformation based registration,Image visualization: 2D display methods, 3D display methods, virtual realitybased interactive visualization.

Total Hours : 45

7. Jerry L. Prince and Jonathan M.Links, “Medical Imaging Signals and Systems”, Pearson Education Inc. 2006.

OUTCOMES:

On completion of the course the student will be able to

- Explain the fundamental concepts of digital image processing
- Recognize & apply suitable image enhancement,compression and restoration techniques.
- Compare various imaging sources (i.e.,MRI,CT,SPECTetc)
- Solve Mathematical Preliminaries for image Reconstruction
- Describe various techniques for image analysis and classification
- Use appropriate image registration technique for various applications

ECCY012 MICROSTRIP ANTENNAS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To distinguish the properties and parameters of antenna such as radiation pattern, intensity, directivity, radiation pattern.
- To describe the response characterization of microstrip transmission lines, losses and substrate materials.
- To illustrate the basic concept of radiation mechanism and feeding techniques of microstrip patch antennas.
- To analyse and design of rectangular and circular microstrip antennas.

MODULE I BASIC ANTENNA CONCEPTS 09

Introduction- Definitions- Basic antenna Parameters - Radiation Intensity- Directivity- Directivity and Gain.Friis Transmission Formula- Duality of Antennas- Sources of Radiation.Antenna characteristics: Radiation pattern, Beam solid angle, Input impedance, Polarization, Bandwidth.

MODULE II MICROSTRIP TRANSMISSION LINES 09

Introduction - Microstrip Capacitance Evaluation - Characteristic Impedance - The Microstrip Line in free Space - Effective Relative Permittivity - Practical Microstrip Lines - Losses, Shielding, Substratematerials, Dispersion - Modes of Propagation.

MODULE III INTRODUCTION TO MICROSTRIP ANTENNA 09

Introduction – Definition - advantages, disadvantages of microstrip antenna - Radiation mechanism and radiated fields – Various configurations – Feeding techniques – Applicatios.

MODULE IV RECTANGULAR MICROSTRIP ANTENNAS 09

Models – Transmission Line Model Analysis – Design Considerations – Substrate Selection – Element width & Length – Radiation patterns and Radiation Resistance – losses & Q Factor – Bandwidth – Radiation efficiency – Polarisation- Antenna Ranges-Radiation Patterns

MODULE V CIRCULAR MICROSTRIP ANTENNAS 09

Analysis methods, Cavity model with feed, Model expansion model, Procedure to determine radius, Input impedance, Radiation pattern, Band width, Directivity,

Gain, Radiation resistance, Applications, Gain Measurements, Absolute Gain Measurement, Gain Transfer (Gain-Comparison).

Total Hours: 45

5. I.J. Bahl and P. Bhartia,” Microstrip Antennas”, Artech House, Inc.,1980

OUTCOMES:

On completion of this course the student will

- Describe the basic concepts of antenna properties and parameters.
- Analyze the radiation mechanism using transmission line.
- Design microstrip patch antenna with feed line technique.
- Analyze and design of various rectangular& circular microstrip antennas.
- Measure microstrip antenna parameters
- Estimate its performance measure

ECCY013 MICROWAVE INTEGRATED CIRCUITS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explain the different technologies of microwave integrated circuits.
- To design and analyze micro strip lines.
- To describe and analyze coupled microstrip
- To learn about active and passive microwave devices.

MODULE I TECHNOLOGY OF MICs **08**

MIC Technology – Thick film and Thin film technology, Hybrid MIC's - Monolithic MIC technology, Characteristics of Materials in MIC.

MODULE II ANALYSIS OF MICROSTRIP LINES **09**

Characteristics of planar transmission lines: strip line, micro strip, suspended and inverted micro strip lines, slot line and coplanar lines. Comparison of various MIC transmission media, coupled line and discontinuities.

MODULE III ANALYSIS OF COUPLED MICROSTRIP **10**

Basic properties of dividers and couplers: T junction power dividers, even and odd mode analysis, waveguide directional couplers, Bethe hole coupler, design of multihole couplers, quadrature hybrid, design of coupled line directional couplers and 180 degree hybrid.

MODULE IV PASSIVE DEVICES **09**

Design of lumped elements: inductors, capacitors and resistors. Ferromagnetic substrate for non-reciprocal devices: microstrip and latching circulators, Isolators and phase shifters, dielectric resonators, Introduction to RF MEMS.

MODULE V ACTIVE DEVICES **09**

BJT, HBT, GaAs FET, HEMT, gunn diode, varactor diodes, PIN diodes & their application in oscillator, mixer and amplifiers.

Total Hours : 45

7. Gupta.K.C and Amarjit Singh, “Microwave Integrated Circuits”- John Wiley & sons-Wiley Eastern Reprint, 1978.

OUTCOMES:

At the end of the course the student will be able to

- Understand the concepts of different technologies of MICs
- Design and analyze different types of micro strip line.
- Design and analyze coupled micro strip line.
- Design passive devices
- Design active devices
- Identify the microwave device for specific applications

ECCY014 MIMO SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce MIMO wireless communications
- To describe MIMO Architecture and physical modeling of MIMO channels
- To analyze MIMO channel capacity and information rates
- To Discuss Space time coding techniques
- To explain about MIMO receiver design

MODULE I INTRODUCTION TO MIMO SYSTEMS AND CHANNELS 09

Need for MIMO systems, MIMO wireless communications, MIMO channel and signal model, MIMO transceiver design.

MODULE II SPATIAL MULTIPLEXING AND CHANNEL MODELING 09

Multiplexing capability : Capacity via singular value decomposition – Physical modeling of MIMO channels: LOS - SIMO and MISO model, MIMO multipath channel model, degrees of freedom and diversity.

MODULE III CAPACITY AND INFORMATION RATES OF MIMO CHANNELS 09

Capacity of MIMO Channels, MIMO frequency selective channels, Single user MIMO, Multiuser MIMO

MODULE IV SPACE TIME CODING AND MIMO – OFDM 09

Space time coding principles,Alamouti scheme, optimal receiver for Alamouti and multiple receiver antennas, orthogonal STBC, Interpretation of MIMO FS channel,MIMO-OFDM,Space-Frequency coding.

MODULE V MULTI USER MIMO RECEIVER DESIGN 09

MIMO receivers for uncoded signals and coded signals, Multiple access MIMO systems, Multiuser detection in space time coded systems

Total Hours : 45

REFERENCES :

1. Andrea Goldsmith, “MIMO Wireless communications”, Cambrige university Press, 2005

2. Tolga M. Duman and Ali Ghrayeb, “Coding for MIMO communication systems”, John Wiley & sons, 2007
3. Davi Se, PramodViswanath, “Fundamentals of wireless communications”, Cambridge University press,2005
4. Theodore S.Rappaport, “Wireless communications: Principles and practice, Pearson Education”, 2002

OUTCOMES:

At the end of the course, the student will be able to

- Explain MMO wireless communications need and advantages
- Discuss MIMO channels and characteristics
- Assess Channel capacity and information rates
- Explain MIMO coding techniques
- Justify and design multiuser MIMO receivers
- Estimate capacity and information rates of MIMO channels

ECCY015 MULTIMEDIA COMPRESSION TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To discuss the different categories of multimedia data and the need for their compression.
- To learn the various techniques for multimedia data compression.

MODULE I INTRODUCTION 09

Basics of multimedia data types - Text, audio, image & video – Digital representation of multimedia data -Storage memory requirements for multimedia data –Meaning of data compression –Need for data compression –Lossy compression-Lossless compression-Data compression by source coding and line coding- Mid-tread and Mid-rise quantization-Quantization Error- Scalar and vector quantization –Evaluation of Compression Factor, RMSE &PSNR values.

MODULE II TEXT COMPRESSION 09

Need for lossless compression of text data –Source codes for text compression-Uniquely decodable codes - Kraft-McMillanineequivality- Code trees- Shannon-Fano code - Huffman code – Adaptive Huffman Code – Arithmetic code – Dictionary- based LZW code.

MODULE III AUDIO COMPRESSION 09

Lossy and lossless compression of audio data - μ-law and A-law compression-Differential coder –Jayantquantizer- Differential linear predictive coder- Adaptive differential linear predictive coder-Frequency domain filtering – Sub-band coder – MPEG perceptual audio coder.

MODULE IV IMAGE COMPRESSION 12

Lossless compression of image data – Differential coder - Differential linear predictive coder- Optimal Predictors- Optimal Quantizers – Context based compression – Lossy compression of image data- DCT based compression - Sub-band coding for image compression- Zigzag scanning of transform coefficients - JPEG- JPEG 2000 – JBIG -JBIG 2- Haar wavelet based compression- EZW & SPIHT coders -Fractal compression.

MODULE V VIDEO COMPRESSION 06

Video compression techniques and standards – MPEG Video Coding – Motion estimation and compensation techniques – H.261 Standard – DVI technology.

Total Hours : 45

REFERENCES:

1. Khalid Sayood: “Introduction to Data Compression”, Morgan Kauffman Harcourt, 4th Edition, 2012.
2. David Salomon: “Data Compression - The Complete Reference”, Springer Verlag New York Inc., 3rd Edition,2004.
3. FredHalsall: “Multimedia communications - Applications, Networks, Protocols& Standards”, Pearson Education, 2001.

OUTCOMES:

On completion of this course the graduates will be able to:

- Distinguish and describe the basic of multimedia compression techniques.
- Describe various compression techniques and apply them for text compression.
- Describe various compression techniques and apply them for audio compression.
- Describe various compression techniques and apply them for image compression.
- Describe various compression techniques and apply them for video compression.
- Estimate the compression factor, RMSE & PSNR parameters.

ECCY016 NETWORK SECURITY

L	T	P	C
3	0	0	3

OBJECTIVES:

The student will be able to,

- Understand security concepts, Ethics in Network Security.
- Understand security threats, and the security services and mechanisms to counter them.
- Ability to analyze performance of various cryptographic and cryptanalytic algorithms.
- Gain knowledge about the role of Firewalls and Intrusion Detection Systems.

MODULE I SYMMETRIC CIPHERS (TECHNIQUES AND STANDARDS) –I 09

Introduction – Services, Mechanisms and Attacks, OSI security Architecture, Model for network Security; Classical Encryption Techniques- Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor Machines, Stegnography; Block Ciphers and Data Encryption Standard Simplified DES, Block Cipher Principles, Data Encryption Standard, Strength of DES, Differential and Linear Crypt Analysis, Block Cipher Design Principles, Block Cipher Modes of Operation.

MODULE II SYMMETRIC CIPHERS (TECHNIQUES AND STANDARDS) – II 09

Advanced Encryption Standard- Evaluation Criteria for AES, AES Cipher; Contemporary Symmetric Ciphers- Triple DES, Blowfish, RC5, Characteristics of Advanced Symmetric Block Ciphers, RC4 Stream Cipher; Confidentiality using Symmetric Encryption- Placement of Encryption Function, Traffic Confidentiality, Key Distribution, and Random Number Generation.

MODULE III PUBLIC-KEY ENCRYPTION AND HASH FUNCTIONS 09

Public Key Cryptography and RSA- Principles of Public Key Cryptosystems, RSA Algorithm; Key Management and other public key cryptosystems- Key Management, Diffie-Hellman Key Exchange, Elliptic Curve arithmetic, Elliptic Curve Cryptography; Message Authentication and Hash Functions Authentication Requirements, Authentication Functions, Message Authentication Codes, Hash Functions and MACs; Hash Algorithms- MD5 Message Digest Algorithm; Secure Hash Algorithm, RIPEMD 160, HMAC; Digital Signatures and Authentication

Protocols - Digital Signatures, Authentication Protocols, Digital Signature Standards.

MODULE IV NETWORK SECURITY PRACTICE 09

Authentication Applications- Kerberos, X.509 Authentication Service; Electronic Mail Security- Pretty Good Privacy, S/MIME; IP Security- IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations; Web Security- Web Security Considerations, Secure Sockets Layer and Transport Layer Security, Secure Electronic Transaction.

MODULE V SYSTEM SECURITY 09

Intruders- Intruder Detection, Password Management; Malicious Software-Virus and Related Threats, Virus Counter Measures; Firewalls- Firewall Design Principles, Trusted Systems.

Total Hours : 45

REFERENCES:

1. William Stallings, “Cryptography and Network Security”, 3rd edition.Prentice Hall of India, New Delhi, 2004.
2. William Stallings, “Network Security Essentials”, 2rd edition.Prentice Hall of India, New Delhi, 2004.
3. Charlie Kaufman , “Network Security: Private Communication in Public World”, 2nd edition. Prentice Hall of India, New Delhi, 2004.

OUTCOMES:

On completion of the course the student will be able ,

- To identify common network security vulnerabilities/attacks; explain the foundations of network security;
- To identify the appropriate procedures required to secure networks;
- To evaluate the risks and threats to networked computers;
- To demonstrate detailed knowledge of the role of encryption to protect data;
- Get knowledge on development of security policies, standards and practices.
- To determine firewall requirements, and configure a firewall.

ECCY017 QoS IN ADHOC WIRELESS NETWORKS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explain the concepts of Ad-hoc networks.
- To discuss the Medium access protocol, network protocols, and QoS support protocols.
- To describe the issues, challenges and solution of QOS in Ad-hoc networks.

MODULE I INTRODUCTION 09

Introduction to Adhoc networks, definition, characteristics features, applications. Characteristics of wireless channel, Adhoc Mobility Models: Indoor and Outdoor models.

MODULE II MEDIUM ACCESS PROTOCOLS 09

MAC Protocols: design issues, goals and classification. Contention based Protocols- with reservation, scheduling algorithms, protocols using directional antennas. IEEE standards:-802.11a, 802.11g, 802.15. HIPERLAN.

MODULE III NETWORK PROTOCOLS 09

Routing Protocols: Design issues, goals and classification. Proactive vs. reactive routing, Unicast routing algorithms, Multicast routing algorithms, energy aware routing algorithm, Hierarchical Routing, QoS aware routing.

MODULE IV PROTOCOLS FOR QOS SUPPORT 09

RSVP Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms, Multiprotocol Label Switching, Operations, Label Stacking, Protocol details, RTP: Protocol Architecture, Data transfer Protocol, RTCP.

MODULE V QOS IN AD-HOC NETWORKS 09

Issues and challenges, Classification of QoSsolution : MAC layer solutions, Network layer solutions, QoS frameworks for Ad-Hoc Wireless networks, Energy management in Ad-hoc wireless networks, Need for energy management in Ad-hoc wireless networks.

Total Hours : 45

REFERENCES:

1. C. Siva Ram Murthy and B.S.Manoj "Ad Hoc Wireless Networks: Architectures and Protocols", Prentice Hall PTR,2004
2. C.K. Toh, Ad Hoc Mobile Wireless Networks: Protocols and Systems, Prentice Hall PTR ,2001
3. William Stallings, "High Speed Networks and Internet", Pearson Education, Second Edition, 2002. [Chapter- 4-6,8, 10, 12, 13, 17,18]

OUTCOMES:

On completion of the course the students will

- Describe the general concept of Ad-hoc networks.
- List various protocols of ad hoc wireless networks.
- Explain Medium Access Protocols and Routing Protocols
- Analyze the issues, challenges involved forQoS in Ad-hoc networks
- Provide solution of QoS in Ad-hoc networks
- Describe Issues and challenges in Ad-hoc networks

ECCY018 QUANTUM COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the basics of quantum mechanics.
- To develop the knowledge of quantum computation and quantum information.
- To introduce the quantum algorithms.
- To describe the quantum error correction techniques.

MODULE I INTRODUCTIONTO QUANTUM MECHANICS 10

Introduction to quantum computing- Power of quantum computing- Quantum information-Quantum Computers.The Superposition probability rule- A Photon coincidence experiment-Quantum mechanics-Hilbert space- linear operators tensor and outer products- Quantum states- Quantum operators- spectral decomposition of a quantum operators.

MODULE II QUBITS AND QUANTUM GATES 10

Qubits, blocks sphere representation- Rotation operation-the measurement of a single qubits- A pair of qubits-Qubits-physical implementation-Measurement of the spin-Qubit as polarized photon- Entanglement, Exchange of information-single qubit gates- two, three and multiple qubit gates- The Toffoli gates- Matrix representation of quantum gates and circuits.

MODULE III QUANTUM CIRCUITS 09

The No-Cloning theorem- Full adder circuits- Single and multiple qubit controlled operations-Universal quantum gate-State transformation-Quantum circuit for the Walsh-Hadamard transform- Mathematical models of quantum computer.

MODULE IV QUANTUM ALGORITHM 10

Introduction to quantum algorithms.Deutsch-Jozsa algorithm, Grover's quantum search algorithm, Simon's algorithm.Shor's quantum factorization algorithm.

MODULE V ERROR CORRECTION 06

Errors and correction for errors.Simple examples of error correcting codes in classical computation.Linearcodes.Quantum error correction and simple examples.Shor code.

Total Hours: 45

REFERENCES:

1. Dan C.Marinescu, Gabriela M.Marinescu ,“Approaching Quantum Computing”, , Pearson Education, 2008-09.
2. Vishal SahniLov K Grover ,“Quantum Computing”, , Tata McGraw-Hill Publishing Company Limited,2007.ISBN: 9780070657007

4. Eleanor G. Rieffel and Wolfgang H. Polak, “Quantum Computing: A Gentle Introduction”, The MIT Press Cambridge, Massachusetts London, England,2011.

OUTCOMES:

Upon successful completion of this course, students will be able to:

- Define the basics of Quantum mechanics.
- Use the mathematical framework of quantum computing to solve computational problems.
- Apply Quantum bit representation for quantum machines.
- Design and write simple algorithms for quantum machines.
- Analyze the quantum algorithms of quantum circuit and measurement-based quantum computing models.
- Describe simple error correction techniques.

ECCY019 RF SYSTEM DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To discuss the importance and issues involved in RF design.
- To introduce admittance transformation smith chart.
- To explain RF components and design techniques of filters, amplifiers and oscillators.
- To describe RF system module.
- To learn the design of RF amplifiers using transistors.

MODULE I RF ISSUES 09

Importance of RF design, Electromagnetic Spectrum, RF behavior of passive Components-resistors, capacitors and inductors, Chip components and Circuit .Board considerations, transmission line analysis.

MODULE II SMITH CHART AND SINGLE AND MULTI PORT NETWORKS 09

Reflection coefficient to load impedance, impedance transformation, admittance transformation, parallel and series connection.interconnecting networks, network properties and applications, scattering parameters-transformation on Z- and S-parameters, measurements of S-parameters.

MODULE III RF FILTER DESIGN 09

Reqiurement of filter, Basic resonator and filter configuration, types of filters, their realization and implementation, Coupled filter.Modeling of special filters.

MODULE IV ACTIVE RF COMPONENTS AND MATCHING NETWORKS 09

RF diodes, BJTs and FETs, Matching and Biasing Networks, discrete components based Impedance matching, Micro stripline based impedance matching networks, Operation of RF Amplifiers and biasing networks.

MODULE V RF AMPLIFIER DESIGNS USING SMITH CHART 09

Characteristics, Amplifier power relations, Stability considerations, Constant gain circles, noise figure circles, Constant VSWR circles, Low Noise circuits, modeling of amplifier circuits.

MODULE VI OSCILLATORS, MIXERS AND RF SYSTEMS 09

High frequency oscillator configuration, Basic characteristics of Mixers-types of mixers, Detector and demodulator circuits.Integrated model of RF systems.

Total Hours : 45

REFERENCES:

5. Roland E. Best, “Phase - Locked Loops: Design, Simulation and Applications”, McGraw Hill Publishers, 5th edition 2003.
6. http://ece.wpi.edu/books/EM_RF_lab/book.htm

OUTCOMES:

On completion of this course the student will be able to

- Understand the importance of RF design.
- Understand the concept of networks, their interconnections and applications
- Analyze the characteristics of amplifier circuits.
- Solve impedance matching for RF circuits.
- Design RF filters, Oscillators and mixers
- Design RF system module.

ECCY020 RF WIRELESS SYSTEMS AND STANDARDS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn and acquire knowledge on Wireless and RF standards
- To introduce 2G, 3G and 4G technologies and its spectrum
- To introduce the concepts of WLAN standards
- To know about the concepts of WIMAX and their standards
- To learn about UWB technology

MODULE I INTRODUCTION TO CELLULAR STANDARDS 09

2G GSM, Cell structure, Frequency Bands and Channels- Call processing, Identity numbers, Frame structure, Interfaces, GMSK modulation, Voice and data processing, GPRS, EDGE, EDGE+, CDMA signal processing, IS-2000 system, Frequency bands, Channel allocation, CDMA cell capacity, services provided by IS-2000, 1xEVDO signal processing and data services-3G UMTS signal processing, WCDMA, HSPA, HSPA+, Towards 4th G, LTE and LTE advanced.

MODULE II WIRELESS SYSTEMS 09

Advanced Mobile Phone Systems (AMPS), Characteristics – Operation – General Working of AMPS Phone System – Global System for Mobile Communication – Frequency Bands and Channels – Frames – Identity Numbers – Layers, Planes and Interfaces of GSM – International Mobile Telecommunications (IMT-2000) – Spectrum Allocation – Services provided by 3G Cellular Systems – Harmonized 3G Systems – Universal Mobile Telecommunications Systems (UMTS).

MODULE III THE IEEE 802.11 WLAN STANDARD 09

Introduction to IEEE 802.11 – General Description – Medium Access Control (MAC) – Physical Layer for IEEE 802.11 Wireless LANs; Radio systems – IR Systems Applications.

MODULE IV THE IEEE 802.16 WIMAX STANDARD 09

Introduction to IEEE 802.16 – General Description – Medium Access Co0ntrol (MAC) –Radio systems – Physical Layer- Evolution to 802.16m-Bluetooth, Zigbee, RFID

MODULE V RECENT ADVANCES 09

Introduction, Ultra Wide Band (UWB) Technology, Characteristics, Signal Propagation, Current Status and Applications, Advantages, Disadvantages, Challenges and Future Directions.

Total Hours : 45

REFERENCES:

1. Assuncion Santamaria, Francisco Lopez-Hernandez, “Wireless LAN Standards and Applications”, Artech House, 2001.
2. Dharma PrakashAgarwal and Qing- Anzeng, “Introduction to Wireless and Mobile Systems”, Vikas publishing House, New Delhi, 2004.
3. Neeli Prasad and Anand Prasad, “WLAN System & Wireless IP for Next Generation Communications”, Artec House, 2002.
4. Moray Rumney :” LTE and the Evolution to 4G Wireless”, Wiley, 2009

OUTCOMES:

On completion of this course the students will be able to:

- Understand the concepts of wireless systems
- Describe about various cellular standards
- Identify various IEEE wireless standards and their layers
- Gain knowledge on various modulation techniques used.
- Explain the latest technologies introduced in wireless systems
- Describe the 3G, 4G and UWB standards

ECCY021	SIMULATION OF COMMUNICATION SYSTEMS ANDNETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To describe modeling of signals and channels in communication system
- To estimate performance of communication system
- To define the concept of communication networks in terms of modeling
- To analyze the routing model for any communication network

MODULE I MODELLING OF COMMUNICATION SYSTEM 09

Model of speech and picture signals, Pseudo noise sequences, Non-linearsequences, Analog channel model, Noise and fading, Digital channel model-Gilbert model of bursty channels, HF, Troposcatter and satellite channels,Switched telephone channels, Analog and Digital communication systemmodels, Light wave system models.

MODULE II SIMULATION OF RANDOM VARIABLES AND RANDOM PROCESS 09

Univariate and multivariate models, Transformation of randomvariables,Bounds and approximation, Random process models-Markov andARMA Sequences, Sampling rate for simulation, Computer generation andtesting of random numbers.

MODULE III ESTIMATION OF PERFORMANCE MEASURES 09

Quality of an estimator, estimator for SNR, Probability density functions of analog communication system, BER of digital communication systems, MonteCarlo method and Importance of sampling method, Estimation of powerspectral density.

MODULE IV COMMUNICATION NETWORKS 09

Queuing models, M/M/1 and M/M/m queues, Little formula, Burke's theorem,M/G/1 queue, Embedded Markov chain analysis of TDM systems, Polling,Random access systems.

MODULE V NETWORK OF QUEUES 09

Queues in tandem, Store and forward communication networks, Capacityallocation, Congestion and flow chart, Routing model, Network layout andReliability.

Total Hours : 45

5. MC. Jeruchim, P.Balaban, S.Shanmugam, “Simulation of Communicationsystems- Modelling methodology and techniques”, Plenum publication, 2000.

OUTCOMES:

At the end of the course the student will be able to

- Analyze different modeling methods of communication channel
- Implement concepts of random models using simulation techniques
- Estimate communication channels by different performance measures
- Explain the concepts of communication networks
- Use appropriately the routing mechanism for different communication network
- Summarize the concepts of wide range of communication systems and networks

ECCY022 SPEECH AND AUDIO SIGNAL PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the speech and audio signal processing
- To discuss the speech mechanics, various analysis and synthesis methods
- To characterize speech , audio signals and hearing system.
- To introduce various algorithms for different applications.

MODULE I INTRODUCTION 05

Sources, propagation and environmental characteristics, audio sources, sampling, quantizing and compression. Human speech and hearing: speech generation, speech signal characteristics, the hearing system, hearing characteristics.

MODULE II MECHANICS OF SPEECH 07

Speech production mechanism, Nature of Speech signal, Discrete time modelling of Speech production, Representation of Speech signals, Classification of Speech Sounds, Phones, Phonemes, Phonetic and Phonemic alphabets, Articulatory features. Music production, Auditory perception, Anatomical pathways from the ear to the perception of sound, Peripheral auditory system, Psycho acoustics.

MODULE III TIME DOMAIN METHODS FOR SPEECH PROCESSING 07

Time domain parameters of Speech signal, Methods for extracting the parameters Energy, Average Magnitude, Zero crossing Rate, Silence Discrimination using ZCR and energy, Short Time Auto Correlation Function, Pitch period estimation using Auto Correlation Function.

MODULE IV FREQUENCY DOMAIN METHOD FOR SPEECH PROCESSING 08

Short Time Fourier analysis, Filter bank analysis, Formant extraction, Pitch Extraction, Analysis by Synthesis, Analysis synthesis systems, Phase vocoder, Channel Vocoder.omomorphic Speech Analysis: Cepstral analysis of Speech, Formant and Pitch Estimation – HomomorphicVocoders.

MODULE V LINEAR PREDICTIVE ANALYSIS OF SPEECH 09

Formulation of Linear Prediction problem in Time Domain, Basic Principle, Autocorrelation method, Covariance method, Solution of LPC equations, Cholesky method, Durbin’s Recursive algorithm, lattice formation and solutions, Comparison

of different methods, Application of LPC parameters, Pitch detection using LPC parameters, Formant analysis, VELP, CELP.

MODULE VI APPLICATION OF SPEECH & AUDIO SIGNAL PROCESSING 09

Algorithms: Dynamic time warping, K-means clustering and Vector quantization, Gaussian mixture modeling, hidden Markov modeling - Automatic Speech Recognition: Feature Extraction for ASR, Deterministic sequence recognition, Statistical Sequence recognition, Language models - Speaker identification and verification, Voice response system, Speech synthesis: basics of articulatory, source-filter, and concatenative synthesis, VOIP.

Total Hours : 45

REFERENCES:

1. Ben Gold and Nelson Morgan, “Speech and Audio Signal Processing”, John Wiley and Sons Inc., 2004.
2. L.R.Rabiner and R.W.Schaffer, “Digital Processing of Speech signals”, Prentice Hall 1978.

4. J.L.Flanagan, “Speech analysis: Synthesis and Perception”, Springer-Verlag, Berlin.
5. I.H.Witten, “Principles of Computer Speech”, Academic Press, 1982.

OUTCOMES:

At the end of the course, the student will be able to

- Explain speech signal, audio signal and hearing characteristics , mechanics and their generation
- Manipulate, visualize and analyze speech signals and use various processing methods
- Apply various decomposition techniques and modifiy the speech signals.
- Analyze speech and audio signals in time domain and frequency domain.
- Apply various algorithms for speech and audio processing and synthesizing.
- Characterize and justify various speech processing techniques for various applications

ECCY023 STATISTICAL SIGNAL PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the statistical signal processing techniques
- To study signal estimation parameters and methods
- To introduce various algorithms for signal analysis
- To discuss on spectral analysis of statisticl signals.

MODULE I REVIEW OF RANDOM VARIABLES 09

Vector-space representation of Random variables, Schwarz Inequality Orthogonality principle in estimation, Central Limit theorem, Random processes, wide-sense stationary processes, autocorrelation and autocovariance functions, Spectral representation of random signals, Wiener Khinchin theorem Properties of power spectral density, Gaussian Process and White noise process, Linear System with random input, Spectral factorization theorem and its importance, innovation process and whitening filter, .Random signal modelling: MA(q), AR(p) , ARMA(p,q) models.

MODULE II PARAMETER ESTIMATION THEORY 09

Principle of estimation and applications, non linear estimation, Properties of estimates, unbiased and consistent estimators, Minimum Variance Unbiased Estimates (MVUE), Cramer Rao bound, Efficient estimators; Criteria of estimation: the methods of maximum likelihood and its properties ;Baysean estimation : Mean square error and MMSE, Mean Absolute error, Hit and Miss cost function and MAP estimation.

MODULE III ESTIMATION OF SIGNAL IN PRESENCE OF WHITE GAUSSIAN NOISE 09

Linear Minimum Mean-Square Error (LMMSE) Filtering: Wiener Hoff Equation, FIR Wiener filter, Causal IIR Wiener filter, Noncausal IIR Wiener filter, Linear Prediction of Signals, Forward and Backward Predictions, Levinson Durbin Algorithm, Lattice filter realization of prediction error filters.

MODULE IV ADAPTIVE FILTERING 09

Principle and Application, Steepest Descent Algorithm Convergence characteristics; LMS algorithm, convergence, excess mean square error, Leaky LMS algorithm;Application of Adaptive filters ; RLS algorithm, derivation.

KalmanFiltering : State-space model and the optimal state estimation problem, discrete Kalman filter, continuous-time Kalman filter, extended Kalman filter.

MODULE V SPECTRAL ANALYSIS 09

Estimated autocorrelation function, periodogram, Averaging the periodogram (Bartlett Method), Welch modification, Blackman and Tukey method of smoothing periodogram, Parametric method, AR(p) spectral estimation and detection of Harmonic signals.

Total Hours : 45

REFERENCES :

5. S. M. Kay: “Modern Spectral Estimation”, Prentice Hall, 1987

OUTCOMES :

At the end of the course, the student will be able to

- Describe and summarize the techniques and concepts of Statistical signal processing
- Describe the criteria of estimation and applications
- Apply various estimation algorithms on statistical signals
- Analyse statistical signals using various filtering methods
- Carry out spectral analysis by different methods
- Justify and characterize the statistical signals.

ECCY024 VEHICULAR AD HOC NETWORKS (VANETs)

L	T	P	C
3	0	0	3

OBJECTIVES:

The student recognizes information, idea and principles of

- Vehicular networking and characteristics
- Congestion control mechanisms in Vehicular Ad hocNetworks
- Cluster based Routing Protocol for Vehicular Networks

MODULE I INTRODUCTION TO VANET 09

VANET characteristics and challenges, Layered architecture for VANETs-concepts and challenges, wireless technology- The IEEE 802 family, The IEEE 802.11 MAC foundations, IEEE 802.11 security, MAC in VANET, Physical layer of VANETs.

MODULE II CONGESTION CONTROL FOR SAFETY VANETs 09

Introduction to congestion control- Aspects of Congestion Control – The need for congestion control – Congestion control by means of transmit power control- Congestion control by means of rate control- Beaconing frequency, Data rate, Transmission power, Minimum contention window, physical carrier sense,Performance evaluation and modeling.

MODULE III CONVOY: CLUSTER-BASED ROUTING PROTOCOL FOR VEHICULARNETWORKS 09

Introduction to clustering or network partitioning, mobility based clustering in ad hoc networks, Clustering of VANETs for MAC and transport applications, CONVOY: a vehicle convoy formation protocol, Assessment of the convoy formation protocol.

MODULE IV GATEWAY SELECTION AND DATA SECURITY IN VEHICULAR NETWORKS 09

Clustering and gateway selection in VANET networks, Gateway selection in clustered VANET-LTE advanced hybrid network-Problem statement, LTE advanced standard, Challenges of Data Security in Vehicular Networks- Cryptographic Protocols- Privacy Protection Mechanisms- Implementation aspects.

MODULE V TRAFFIC SIGNAL CONTROL SYSTEMS AND CAR-TO-CAR COMMUNICATIONS 09

Classification of traffic signal control systems, static systems, Dynamic systems, traffic signal control and car-to-car communication, vehicular mobility modeling for VANET- Random Models- Traffic Models, Integration with Network Simulators.

Total Hours: 45

REFERENCES:

1. Andre-Luc Beylo, HoudaLabiod, “vehicular networks models and algorithms” wiley publications,2013.
2. Claudia campolo, antanellomolinaro, Riccardo scopigno, “VANET-standards solutions and research”, springer, 2015.

4. Hannes Hartenstein, Kenneth Laberteaux, “VANET Vehicular Applications and Inter-Networking Technologies”, John Wiley & Sons, 2010.

OUTCOMES:

On completion of the course students will be able to

- Develop VANET algorithms that can be designed and applied on VANET.
- Implement congestion control in VANET
- Examine the vulnerabilities of vehicular ad-hoc networks and the salient challenges.
- Design vehicular mobility modeling for VANET
- Implement security in Vehicular Networks
- Develop routing protocols for VANET

ECCY025 WIRELESS COMMUNICATION

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce current wireless systems and spectrum allocation
- To explain general ray tracing models and path loss models
- To impart knowledge on wireless channels and capacity
- To introduce MIMO systems, multiuser system, OFDM and broadband modulation
- To impart knowledge on multiuser systems .

MODULE I INTRODUCTION 09

Current wireless systems, Wireless spectrum and allocation to existing systems, radio propagation models, path loss calculation, ray tracing methods, empirical path loss models, discrete time and space time statistical channel models.

MODULE II CAPACITY AND DIVERSITYOF WIRELESS CHANNELS 09

Capacity in AWGN, capacity of flat fading channels, capacity of frequency selective fading channels. Receiver Diversity& Transmitter Diversity techniques.

MODULE III MULTIPLE ANTENNA SYSTEMS 09

Narrow band MIMO model, MIMO channel capacity, MIMO Diversity and beam forming, diversity multiplexing tradeoff, space time modulation and coding, Smart antennas.

MODULE IV MULTI CARRIER MODULATION 09

Data transmission using multiple carriers, Multi carrier modulation with overlapping subchannels. Mitigation of subcarrier fading, Discrete implementation of multicarrier systems, OFDM, PAPR.

MODULE V SPREAD SPECTRUM AND MULTI USER SYSTEMS 09

Spread spectrum principle – DSSS – FHSS , multiuser DSSS – spreading codes, downlink and uplink channels , multicarrier CDMA system and multi user FHSS systems. Multiuser channels - uplink and downlink channel capacity – Multiuser detection .

Total Hours: 45

3. Theodore S.Rappaport., “Wireless Communications”, 2nd Edition, Pearson Education, 2002.
4. Yong SooCho , “MIMO – OFDM wireless communications with MATLAB”, IEEE press, John Wiley publications, 2010.

OUTCOMES:

On completion of this course, student will be able to

- Describe ray tracing models and path loss models
- Characterize wireless channels and describe channel models
- Discuss MIMO narrow band model and transmission techniques with multiple antennas.
- Explain multi carrier modulation schemes
- Explore on broadband modulation and multiuser systems
- Discuss on wireless communication techniques

ECCY026 WIRELESS SENSOR NETWORKS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To make the students list the Wireless Sensor Network Architecture and its Applications
- To explain the physical layer design,
- To describe the MAC protocols and time synchronization algorithms
- To discuss various routing protocols, localization algorithms used for sensor network.
- To explain basics of sensor network programming and Internet of Things

MODULE I NODE ARCHITECTURE 07

Introduction to sensor network – Application – Difference between Adhoc and Sensor Network - Node architecture - Hardware components overview - Energy consumption of Sensor nodes - Operating Systems and Execution Environment - some examples of Sensor nodes.

MODULE II NETWORK ARCHITECTURE 07

Sensor Network Scenarios – Optimization goals- Design Principles –Gateway Concepts–Wireless Channel fundamentals - Physical layer and transceiver design considerations in Wireless Sensor Network

MODULE III MAC PROTOCOLS & TIME SYNCHRONIZATION 10

Fundamentals of MAC Protocols – Low duty cycle protocols – Contention based Protocols – schedule based protocols – IEEE 802.15.4 MAC – Address and name management in wireless sensor network. Need for time synchronization

MODULE IV LOCALIZATION & ROUTING PROTOCOLS 12

Properties of localization and positioning procedures – Range based Localization – Range free Localization Routing Metrics – Data Centric Routing – Proactive Routing - On Demand Routing – Hierarchical Routing – QoS based Routing Protocols

MODULE V SENSOR NETWORK PROGRAMMING and IoT 09

Challenges in sensor network programming – Node Centric programming – Dynamic programming – Sensor Network Simulators - Internet of Things (IoT): overview, Applications, potential & challenges, and architecture.

Total Hours : 45

REFERENCES:

4. “Adrian McEWen and Hakim Cassimalli, “Designing the Internet of Things” Wiley publications, November 2013.

OUTCOMES:

At the end of the course students will be able to

- Describe Wireless Sensor Network Architecture and its Applications
- Explain the physical layer design
- Compare the various MAC protocols and illustrate time synchronization algorithms
- Distinguish various routing protocols, localization algorithms used for sensor network.
- To describe the basics of sensor network programming and Internet of Things
- Analyze various Sensor Network Simulators

ECCY027 COMMUNICATION SYSTEM DESIGN AND ANALYSIS

L	T	P	C
2	0	2	3

OBJECTIVES:

- To introduce the concepts of software radio
- To discuss the design issues in software radio
- To address the practical issues in Signal generation and processing and RF design

MODULE I INTRODUCTION TO SOFTWARE RADIO 07

The need for Software Radios.Characteristics and benefits of a software Radio – Design principles of a Software Radio.

MODULE II RADIO FREQUENCY IMPLEMENTATION ISSUES 08

The Purpose of the RF Front-End. Dynamic Range-The Principal Challenge of Receiver Design-RF Receiver Front-End Topologies- Enhanced Flexibility of the RF Chain with Software Radios-Importance of the Components to Overall Performance- Transmitter Architectures - Noise and Distortion in the RF Chain. ADCand DAC Distortion.

MODULE III DIGITAL GENERATION OF SIGNALS 08

Introduction-Comparison of Direct Digital Synthesis with Analog Signal Synthesis-Approaches to Direct Digital Synthesis-Analysis of Spurious Signals-Spurious Components due to Periodic Jitter-Band pass Signal Generation – Performance of Direct Digital Synthesis Systems-Hybrid DDS-PLL Systems-Applications of direct Digital Synthesis-Generation of Random Sequences-ROM Compression Techniques.

MODULE IV RADIO FREQUENCY DESIGN 07

Baseband Signal Processing, Radios with intelligence, ADC and DAC architectures- Smart antennas, Adaptive techniques, Phased array antennas, Applying SDR principles to antenna systems, Smart antenna architectures

LIST OF LABORATORY EXPERIMENTS 15

1. Software Defined Radio Architecture
2. Pulse Shaping Filter and Matched filter
3. Channel detection, Estimation and Equalization
4. Frame Synchronization and Channel Synchronization
5. IQ Modulation and Complex FFT

6. Error Vector Magnitude and Modulation Error Ratio
7. RF Power and Power gain
8. Intermodulation Distortion
9. Adjacent Channel Power Ratio (ACPR)
10. Dynamic Range and Spurious Free Dynamic Range
11. BER Measurement and Calculation of E_b/N_0
12. Real-Time record and playback of Data Streams.

Total Hours: 60

7. Peter Kenington, “RF And Baseband Techniques for Software Defined Radio”. Artech House Publishers, 2005

OUTCOMES:

On completion of the course the student will be able to

- Discuss the concept and benefits of SDR
- Explain the issues in RF implementation of SDR
- Use the SDR with Analog and Digital Front End
- Analyze the various antenna structures to accommodate the needs of a SDR
- Choose SDR based on the application
- Evaluate the performance of SDR based communication system

ECCY028 ADAPTIVE SIGNAL PROCESSING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To introduce the concept of adaptive signal processing
- To explore the basics of adaptive filters
- To develop various adaptation algorithms
- To assess the adaptation algorithms in terms of convergence rate,computational complexity, robustness against noisy data.

MODULE I INTRODUCTION TO ADAPTIVE FILTERS 06

Adaptive filter structures, issues and examples.Applications of adaptive filters: Channel equalization, active noise control. Echo cancellation, beamforming.

MODULE II WIENER FILTER, SEARCH METHODS AND THE LMS ALGORITHM 06

Wiener FIR filter (real case), Steepest descent search and the kernel LMS algorithm,Extension of optimal filtering to complex valued input, Complex LMS algorithm.

MODULE III CONVERGENCE AND STABILITY ANALYSES 06

Convergence analysis of the kernel LMS algorithm,Learning curve and mean square error behavior, Weight error correlation matrix.,Dynamics of the steady state mean square error (SSMSE), Misadjustment and stability of excess MSE.

MODULE IV VARIANTS OF THE LMS ALGORITHM 06

The sign-LMS and the normalized LMS algorithm.,BlockLMS,Review of circular convolution: Overlap and save method, circular correlation. FFT based implementation of the block LMS Algorithm.

MODULE V CASE STUDY AND APPLICATION 06

Survey and comparison of various adaptive filtering methods with its significance. Application of adaptive algorithms applied to signals using simulation tool.

Total Hours: 30

REFERENCES

1. S. Haykin, Prentice Hall, Englewood Cliffs, “Adaptive Filter Theory”, NJ, Fourth Edition
2. B. Farhang-Boroujeny, “Adaptive Filters ,Theory and Applications”, John Wiley and Sons, 2013.

OUTCOMES:

At end of the course the student will be able to,

- Summarize the concept of adaptive signal processing
- Train the filter coefficients to track the target signal
- Assess various adaptation algorithms in signal processing
- Analyze the adaptation algorithms in terms of computational complexity, hardware complexity, numerical stability etc.
- Apply mathematical tools like random variables, stochastic processes and correlation structure -in signal processing.
- To apply particular adaptive algorithm based on the signal constrains

ECCY029 CLASSICAL AND ADVANCED TECHNIQUES FOR OPTIMIZATION

L	T	P	C
2	0	0	2

OBJECTIVES:

- To introduce the concepts of Linear and Non-Linear programming
- To familiarize modern optimization methods.

MODULE I LINEAR PROGRAMMING 05

Introduction to Linear Programming - Simplex method, Duality theory, Linear programming Algorithms. Transportation and Assignment Models.

MODULE II NONLINEAR PROGRAMMING 05

One-variable unconstrained and multivariable unconstrained optimization, Quadratic Programming

MODULE III DYNAMIC PROGRAMING 07

Dynamic programming, Network Optimization Models, Integer programming, Metaheuristics, Game Theory, Queueing Theory, Inventory Theory, Markov Decision Process.

MODULE IV MODERN METHODS OF OPTIMIZATION 07

Genetic algorithms, Simulated annealing, Particle swarm and ant-colony optimization, Fuzzy and Neural networks based methods.

MODULE V PRACTICAL ASPECTS OF OPTIMIZATION. 06

Reduction of size, sensitivity of optimum solution to problem parameters, multi-level optimization, multi-objective optimization.

Total Hours: 30

REFERENCES:

1. Singiresu S. Rao "Engineering Optimization Theory and Practice", 4th Edition, John Wiley 2009.
2. Frederick S. Hillier & Gerald J. Lieberman, "Introduction to Operations Research", 10th Edition McGraw Hill Education, 2015.

4. G. Hadley, “Linear Programming”, 1st Edition, Addison-Wesley, 1962.

5. David G. Luenberger, “Optimization by Vector Space Methods”, John Wiley & Sons, 1969.

OUTCOMES:

On completion of the course the student will be able to

- Recognize problems and associate it with suitable optimization methods
- Solve practical optimization problems using both linear and non-linear methods
- Analyze the engineering issues for optimization using classical methods like Queueing theory, inventory theory, Markov chain, and Metaheuristics.
- Apply modern optimization methods to engineering designs
- Develop new models using Fuzzy and Neural networks.
- Evaluate the optimization methods for various practical applications.

ECCY030 NETWORK ROUTING ALGORITHMS

L	T	P	C
2	0	0	2

OBJECTIVES:

- To understand the basics of Network Routing concepts.
- To create in-depth awareness of routing algorithms and protocols.
- To provide comprehensive details of routing in IP networks and in Ad-hoc networks.

MODULE I NETWORK ROUTING – AN INTRODUCTION 06

Network Routing: An Overview, Protocol Stack Architecture, Router Architecture, Network Topology Architecture, Public Switched Telephone Network, Communication Technologies.

MODULE II ROUTING ALGORITHMS - SHORTEST PATH AND WIDEST PATH 06

Bellman–Ford Algorithm and the Distance Vector Approach, Dijkstra's Algorithm, Comparison of the Bellman–Ford Algorithm and Dijkstra's Algorithm, Shortest Path Computation with Candidate Path Caching, Widest Path Computation with Candidate Path Caching, Widest Path Algorithm, kShortest Paths Algorithm.

MODULEIII ROUTING PROTOCOLS - FRAMEWORK AND PRINCIPLES 06

Routing Protocol and Algorithm, Routing Information Representation and Protocol Messages, Distance Vector Routing Protocol, Link State Routing Protocol, Path Vector Routing Protocol.

MODULE IV ROUTING IN IP NETWORKS 06

Routers, Networks, and Routing Information: Some Basics, Routing Information Protocol (RIP), Interior Gateway Routing Protocol (IGRP), Enhanced Interior Gateway Routing Protocol (EIGRP), OSPF: Protocol Features, Integrated IS-IS - Key Features, BGP: A Brief Overview.

MODULE V ROUTING IN AD HOC NETWORK 06

Introduction to Ad hoc Networks – Features/ Characteristics, Types and Applications, Limitations, Advantages and Disadvantages, Classification of Routing Protocols in Ad hoc Networks – Proactive Routing Protocols (DSDV,

OLSR), Reactive Routing Protocols (DSR, AODV), Hybrid Routing Protocols (ZRP).

Total Hours: 30

TEXT BOOK:

1. DeepankarMedhi and Karthikeyan Ramasamy, “Network Routing: Algorithms, Protocols, and Architectures”, Elsevier, 2007.

4. Dharma PrakashAgrawal and Carlos De MoraisCordeiro, “Adhoc and Sensor Networks – Theory and Applications”, World Scientific publication.

OUTCOMES:

At the completion of this course the students will be able to

- Define the fundamentals of Network Routing.
- Decide the routing protocol for any level of complex network design.
- Select the routing algorithm suitable for the network considered.
- Relate the routing algorithms for different types of network.
- Explain the feature of various routing protocols.
- Recommend the routing protocol for a given network.
- Perform the research in the routing platform.

ECCY031 PATTERN RECOGNITION TECHNIQUES AND APPLICATIONS

L	T	P	C
2	0	0	2

OBJECTIVES:

- To familiarize with classical and modern techniques for pattern reco gnition
- To compare various classifiers

COURSE PREREQUISITES:

- Familiarity with concepts digital image processing
- Fundamental knowledge in mathematics and numerical methods.

MODULE I REPRESENTATION OF PATTERNS 08

Data structures, representation of cluster, proximity measures and size, Feature extraction.

MODULE II CLASSIFIERS 08

Nearest neighbor Based Classifiers, Bayes Classifiers, Hidden Markov Models, Decision trees Supprot Vector Machines.

MODULE III COMBINATION OF CLASSIFIERS 07

Ensembles of Classifiers, Methods for combining Classifiers.

MODULE IV CLUSTERING 07

Hierarchical algorithms, Partitiona, Clustering, Clustering large Data sets.

Total Hours: 30

REFERENCES:

1. M. NarasimhaMurty& V. Susheela Devi, "Pattern Recognition - An Algorithmic Approach", Springer 2011.
2. Christopher M. Bishop, "Pattern Recognition and Machine Learning", Springer 2013.
3. J. P. Marques de Sa, "Pattern Recoanition - Concepts, Methods and Applications", Springer 2001

OUTCOMES:

On completion of the course the student will be able to

- Discuss the representation of cluster
- Apply the techniques for proximity measures

- Classify the pattern recognition methods for various applications.
- Summarize the methods used for representation of patterns
- Compare various classifiers for different applications
- Design pattern recognition methods using combination of classifiers.

ECCY032 RADIATION SYSTEMS FOR PERSONAL AREA NETWORK

L	T	P	C
2	0	0	2

OBJECTIVES:

- To List the various types of Printed Antennas
- To understand about Wearable Antennas
- To gain the knowledge about Active Integrated Antennas
- To apply the Reconfigurability function in Antenna Design
- To study about different array techniques

MODULE I INTRODUCTION TO WIRELESSS PAN AND PRINTED ANTENNAS 06

Introduction to IEEE 802.15, 15.1Bluetooth, IEEE 802.15.3A Ultra Wideband Wireless Pan, 15.4 Zigbee.Concepts of Printed Antennas, Broadband Microstrip Patch Antennas, Patch Antennas for Multiband Applications.

MODULE II WEARABLE ANTENNAS 06

Overview of Wearable Systems and its Characteristics, Antennas for Wearable Devices, DesignRequirements, Modeling and Characterization of Wearable Antennas, Domains of Operation, Compact Wearable Antenna for Healthcare Sensors.

MODULE III ACTIVE INTEGRATED ANTENNAS 06

Active Wearable Antenna Modules-Features, Electromagnetic Characterization of Fabrics and Flexible Foam Materials, Small-Band Inverse Planar Antenna,Resonator Method, Active Antenna Modules for Wearable Textile Systems.

MODULE IV RECONFIGURABLE ANTENNAS 06

Reconfigurable methodologies, Design Considerations for Reconfigurable systems, Reconfigurable Planar/printed antenna configurations, Active reconfigurable systems.

MODULE V ARRAY ANTENNAS 06

Linear and planar array fundamentals, Mutual Coupling in Arrays, Multidimensional Arrays, Switched beam and Phased Arrays, Array Feeding Techniques, Array optimization techniques.

Total Hours: 30

REFERENCES

6. Warren L Stutzman, Gary A.Thiele, “ Antenna Theory and Design”, 3rd edition, John Wiley & Sons, 2013.

OUTCOMES:

The students will be able

- To discuss the basics of PAN network
- To classify various types of Printed Antennas.
- To describe about Wearable Antennas
- To analyze different materials for Antennas
- To apply the reconfigurability function in any Antenna Design
- To optimize different array configurations.

ECCY033 BIO SIGNAL PROCESSING

L	T	P	C
1	0	0	1

OBJECTIVES:

- The basics of bio-signal and characteristics.
- The processing techniques of biomedical signals and parameter detection.
- Noise reduction in Bio signals.
- To expose the students with Simulation tools for bio signal processing.

MODULE I INTRODUCTION TO BIOMEDICAL SIGNALS 03

The origin of Bio signal - Typical waveforms -need of analyzing and classification.

MODULE II ANALYSIS OF PCG 03

PCG-Characteristics and analysis using NILABVIEW.

MODULE III ANALYSIS OF ECG 03

ECGsignalanalysis: parameters estimation-compression technique-MATLAB Simulation of analyzing ECG.

MODULE IV ANALYSIS OF EEG 03

EEG - artifacts in EEG & their characteristics and processing - EEG segmentation - MATLAB Simulation of analyzing ECG.

MODULE V ANALYSIS OF EMG 03

EMG - characteristics and analysis using NILABVIEW.

Total Hours:15

REFERENCES:

1. Leslie Cromwell, “Biomedical Instrumentation and measurement”, Prentice hall of India, NewDelhi, 2007.
2. D.C.Reddy, "Biomedical Signal Processing: Principles and techniques", Tata McGraw Hill, New Delhi, 2005

6. Khandpur R.S, “Handbook of Biomedical Instrumentation”, Tata McGraw-Hill, New Delhi, 2003.

OUTCOMES:

On completion of the course the students will

- Explain the bio signal characteristics.
- Simulate & analyze of PCG.
- Simulate & analyze of ECG.
- Simulate & analyze of EEG.
- Simulate & analyze of EMG.
- To program with simulation tools.

ECCY034 ULTRASONIC PRINCIPLES AND APPLICATIONS

L	T	P	C
1	0	0	1

OBJECTIVES:

Make the students to

- state the basics of ultrasonics signals and types.
- Infer the ultrasonic wave propagation techniques and parameter detection.
- Manipulate the measurement technique in ultrasonic signals..
- expose with Simulation tools for ultrasonic signal processing.

MODULE I ULTRASONIC TECHNOLOGIES AND APPLICATIONS 08

Ultrasonic – Inroduction-Types of ultrsonics – Ultrsonics in electronics - Ultrasonic Systems: Transmitters and Receivers. Elastic Wave Propagation, Velocity of Sound - Transmission through Thin Plates. Attenuation of an ultrasonic wave. Fundamental equations employed in Ultrasonic design-wave equation: plane wave general wave and plate wave. Design of Ultrasonic Transducers

MODULE II SATTERING OF SOUND AND ADVANCED TECHNIQUES 07

Comparition of electromagnetic and Acoustic Propagation – Scattering theory: Description of weak scattering, Plane wave incident by single particle, Sattering by many particles-numerical calculation. Sattering from bubbles, Particle sizing, Propagation in viscoelastic materials.Automation and computer tools.

Total Hours:15

REFERENCES:

1 Dale Ensminger and Leonard J. Bond, “Ultrasonic Fundamentals Technologies and Applications, CRC Press third edition.
2 Malcolm J.W.Povey, “Ultrasonic Techniques for Fluids Characterisation”, Academic Press, Claifornia.
3 J. David N. Cheeke, "Fundamentals and Applications of Ultrasonic Waves", CRC Press LLC, 2002
4 E. G. Richardson, **“**Ultrasonic Physics”, ELSEVIER Publishing Company

OUTCOMES:

On completion of the course the students will be able to

- Identify the type of ultrasonic signal.
- Describe the ultrasonic wave propagation and attenuation through transmission media.

- Interpret the fundamental wave equations of ultrasonic signal.
- Design ultrasonic transducers for palne wave and plate wave.
- Synthesize the electromagnetic, acoustic propagation and scattering of ultrasonic waves.
- Program with simulation tools.

ECCY060 SOFTWARE FOR EMBEDDED SYSTEMS

L	T	P	C
2	0	2	3

OBJECTIVES:

The objective of the course is to

- To know the basic conepts of C Programming.
- To Introduce the GNU C Programming Tool Chain in Linux.
- To understand embedded C and Embedded OS
- To introduce the phython language

MODULE I C PROGRAMMING CONCEPTS 09

Programming Style - Declarations and Expressions - Arrays, Qualifiers and Reading Numbers - Decision and Control Statements - Programming Process - More Control Statements - Variable Scope and Functions - C Preprocessor - Advanced Types - Simple Pointers - Debugging and Optimization.

Laboratory Practice:

Practice C language programs illustrating the language constructs in the module I using C compiler

MODULE II C PROGRAMMING TOOLCHAIN IN LINUX 09

Introduction to GCC - Debugging with GDB - The Make utility - GNU Configure and Build System - GNU Binary utilities - Profiling - using gprof - Memory Leak Detection with valgrind - Introduction to GNU C Library .

Laboratory Practice:

Practice C language programs using GCC compiler in Linux environment

MODULE III EMBEDDED C USING 8051 MICROCONTROLLER 09

Adding Structure to ‘C’ Code: Object oriented programming with C, Header files for Project and Port, Examples. Meeting Real-time constraints: Creating hardware delays - Need for timeout mechanism - Creating loop timeouts - Creating hardware timeouts.

Laboratory Practice:

Practice Embedded C language programs illustrating the language construct in the module III using C Keil µvision IDE

MODULE IV EMBEDDED OS 09

Creating embedded operating system: Basis of a simple embedded OS, Introduction to sEOS, Using Timer 0 and Timer 1, Portability issue, Alternative system architecture, Important design considerations when using sEOS.

Laboratory Practice:

Practice Embedded C language programs illustrating the language construct in the module IV using C Keil µvision IDE

MODULE V PYTHON PROGRAMMING 09

Basics of PYTHON Programming Syntax and Style – Python Objects– Dictionaries – comparison with C programming on Conditionals and Loops – Files – Input and Output – Errors and Exceptions – Functions – Modules – Classes and OOP – Execution Environment.

Laboratory Practice:

Practice basic Python language programs illustrating the language construct in the module V using Python interactive shell software

Total Hours :45

2. Steve Oualline, “Practical C Programming 3rd Edition”, O’Reilly Media, Inc, 2006.
3. Michael J Pont, “Embedded C”, Pearson Education, 2007.
4. Mark Lutz, “Learning Python Powerful OOPs”, O’reilly, 2011.

OUTCOMES:

At the end of the course students will be able to

- Write, compile and debug programs in C language.
- compile the program in linux operating system
- Develop program using embedded C
- Describe operating system in embedded system
- Program using phython language
- Design projects using embedded C and python language

MACY081 SIGNAL PROCESSING TECHNIQUES

L	T	P	C
3	1	0	4

OBJECTIVES:

- To impart knowledge on various mathematical transforms for signal processing applications.

MODULE I LAPLACE TRANSFORM FOR CONTINUOUS TIME SIGNALS 06+03

Analog and digital signals - Periodic and aperiodic signals – Spectrum estimation for bandwidth requirement – Laplace Transform – Spectrum estimation – Frequency filtering for spectrum modification – Inverse Laplace Transform – Modified spectrum to get filtered signal.

MODULE II Z -TRANSFORM FOR DISCRETE TIME SIGNALS 12+03

Sampling of continuous time signals for discrete time signals – Nyquist sampling rate - Need for discrete signals – Quantization for digital signal – Z-Transform – Spectrum estimation of discrete signals – Digital filters for spectrum modification – Inverse Z-Transform – Modified spectrum to get filtered signal – Impulse response of digital systems - Bilinear Transform for analog to digital conversion.

MODULE III DISCRETE FOURIER TRANSFORM FOR DISCRETE TIME SIGNALS 09+03

Discrete Fourier Transform – Comparison with Z-Transform – Discrete signals for spectrum estimation – Digital filters for spectrum modification – Inverse Discrete Fourier Transform to get filtered signals – Fast Fourier Transform with decimation in either time or frequency

MODULE IV DISCRETE COSINE TRANSFORM FOR DISCRETE TIME SIGNALS 09+03

One dimensional and two dimensional discrete Cosine transforms – comparison with discrete Fourier transform – image processing applications like filtering & compression – two dimensional transform implementation using successive one dimensional transform – application in JPEG standards – zig zag scanning of transform coefficients – inverse discrete Cosine transform – expansion of compressed images – calculation of compression parameters of CF, RMSE, PSNR &CQ.

MODULE V DISCRETE WAVELET TRANSFORM FOR DISCRETE TIME SIGNALS (09+03

Wavelet – Haar wavelet – one dimensional forward discrete wavelet transform – comparison with discrete Cosine transform - two dimensional transform implementation using successive one dimensional transform – Image processing applications like filtering & compression - application in JPEG 2000 standards – zig zag scanning of transform coefficients – inverse discrete wavelet transform – expansion of compressed images – calculation of compression parameters of CF, RMSE, PSNR & CQ.

1. Joel L.Schiff , “The Laplace Transform: Theory and Applications” – Springer – 1999.
2. Alexander D. Poularikas, “The Transforms and Applications Handbook” Chapter 6 on Z- Transforms - Boca Raton : CRC Press LLC - 2000.
3. D.Sundararajan, “The Discrete Fourier Transform: Theory”, Algorithm and Applications – World Scientific Publishers – 2001.
4. K.Rao and P.Yip, “Discrete Cosine Transform – Elsevier”, – 1990.
5. D.Sundararajan, “Discrete Wavelet Transform: A Signal Processing Approach”, Wiley – 2015.

OUTCOMES:

On completion of the course, the student will be able to apply

- Laplace transform for analog signal analysis.
- Z Transform for discrete signal analysis.
- Discrete Fourier Transform for discrete signal analysis.
- Discrete Cosine Transform for discrete signal analysis.
- Discrete Wavelet Transform for discrete signal analysis.
- The methods to calculate compression parameters.

GENERAL ELECTIVES

GECY101	PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The objectives of the course would be to make the students

- Learn to e valuate and choose an optimal project and build a project profile.
- Attain knowledge on risk identification and risk analysis
- Gain insight into a project plan and components
- Familiar with various gamut of technical analysis for effective project implementation
- Learn to apply project management techniques to manage resources.

MODULE I INTRODUCTION & PROJECT INITIATION 09

Introduction to project and project management - projects in contemporary organization – The project life cycle - project initiation - project evaluation methods & techniques - project selection criteria - project profile.

MODULE II RISK ANALYSIS 09

Sources of risk: project specific - competitive - industry specific - market and international risk – perspectives of risk – risk analysis: sensitivity analysis - scenario analysis - breakeven analysis - simulation analysis - decision tree analysis – managing/mitigating risk – project selection under risk.

MODULE III PROJECT PLANNING & IMPLEMENTATION 09

Project planning – importance – functions - areas of planning - project objectives and policies - steps in planning process - WBS – capital requirements - budgeting and cost estimation - feasibility analysis - creation of project plan – project implementation: pre-requisites - forms of project organization

MODULE IV TECHNICAL ANALYSIS 09

Technical analysis for manufacturing/construction/infrastructure projects – process/technology - materials and inputs - product mix - plant capacity – plant location and site selection – plant layout - machinery and equipment – structures and civil works – schedule of project implementation – technical analysis for software projects.

MODULE V PROJECT MANAGEMENT TECHNIQUES 09

Project scheduling - network construction – estimation of project completion time – identification of critical path - PERT & CPM – crashing of project network - complexity of project scheduling with limited resources - resource allocation - resource leveling – resource smoothing – overview of project management software.

Total Hours: 45

REFERENCES:

2. Project Management and Control, Narendra Singh, Himalaya Publishing, New Delhi, 2015.
3. A Management Guide to PERT/CPM, Jerome, D. Weist and Ferdinand K. Levy, Prentice Hall of India, New Delhi, 1994.

OUTCOMES:

On successfully completing this course, the student will be able to:

- Evaluate & select a project as well as develop a project profile.
- Identify various risks associated with the project and manage it effectively.
- Prepare a detailed project plan addressing its components.
- Perform technical analysis for effective project implementation
- Apply project management techniques for maximizing resource utilization.

GECY102 SOCIETY, TECHNOLGY & SUSTAINABILITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- To understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

MODULE I TECHNOLOGY AND ITS IMPACTS 09

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life – Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT 09

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change.

MODULE III SOCIETY AND TECHNOLOGY 09

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of technology – Impact of technology on developer and consumers – Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE 09

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media

Technology – Information Systems Technology – Nanotechnology – Space Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY 09

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

4. Martin A.A Abraham, “Sustainability Science and Engineering: Defining Principles”, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

OUTCOMES:

At the end of this course, the students will be able to

- Understand the benefits of modern technology for the well-being of human life.
- Connect sustainability concepts and technology to the real world challenges.
- Find pathway for sustainable society.

GECY103 ARTIFICIAL INTELLIGENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- Expose the history and foundations of artificial intelligence.
- Showcase the complexity of working on real time problems underlying the need for intelligent approaches.
- Illustrate how heuristic approaches provide a good solution mechanism.
- Provide the mechanisms for simple knowledge representation and reasoning.
- Highlight the complexity in working with uncertain knowledge.
- Discuss the current and future applications of artificial intelligence.

MODULE I HISTORY AND FOUNDATIONS 08

History – Scope – Influence from life – Impact of computing domains - Agents in environments - Knowledge representation – Dimensions of Complexity – Sample application domains – Agent structure.

MODULE II SEARCH 10

Problem solving as search – State spaces – Uninformed Search – Heuristic search – Advanced search – Constraint satisfaction - Applications.

MODULE III KNOWLEDGE REPRESENTATION AND REASONING 10

Foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

MODULE IV REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE 08

Probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference, sample applications.

MODULE V CASE STUDY AND FUTURE APPLICATIONS 09

Design of a game / Solution for problem in student's domain. Natural Language processing, Robotics, Vehicular automation – Scale, Complexity, Behaviour – Controversies.

Total Hours: 45

TEXT BOOK:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2010.
2. David Poole, Alan Mackworth, Artificial Intelligence: Foundations of Computational Agents, Cambridge University Press, 2010.
3. Nils J. Nilsson, The Quest for Artificial Intelligence, Cambridge University Press, Online edition, 2013.
4. Keith Frankish, William M. Ramsey (eds) The Cambridge Handbook of Artificial Intelligence, Cambridge University Press, 2014.

OUTCOMES:

Students who complete this course will be able to

- Discuss the history, current applications, future challenges and the controversies in artificial intelligence.
- Apply principle of AI in the design of an agent and model its actions.
- Design a heuristic algorithm for search problems.
- Analyze and represent the fact using logic for a given scenario
- Represent uncertainty using probabilistic models
- Develop a simple game or solution using artificial intelligence techniques.

GECY104 GREEN COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To focus on the necessity of green computing technology.
- To expose to various issues with information technology and sustainability.
- To attain knowledge on the technologies for enabling green cloud computing.
- To elaborate on the energy consumption issues
- To illustrate a Green and Virtual Data Center
- To develop into a Green IT Technologist.

MODULE I INTRODUCTION 08

Trends and Reasons to Go Green - IT Data Center Economic and Ecological Sustainment - The Growing Green Gap: Misdirected Messaging, Opportunities for Action - IT Data Center “Green” Myths and Realities - PCFE Trends, Issues, Drivers, and Related Factors - Green Computing and Your Reputation- Green Computing and Saving Money- Green Computing and the Environment

MODULE II CONSUMPTION ISSUES 10

Minimizing power usage – Cooling - Electric Power and Cooling Challenges - Electrical – Power -Supply and Demand Distribution - Determining Energy Usage - From Energy Avoidance to Efficiency - Energy Efficiency Incentives, Rebates, and Alternative Energy Sources - PCFE and Environmental Health and Safety Standards- Energy-exposed instruction sets- Power management in power-aware real-time systems.

MODULE III NEXT-GENERATION VIRTUAL DATA CENTERS 09

Data Center Virtualization - Virtualization beyond Consolidation - Enabling Transparency - Components of a Virtual Data Center - Datacenter Design and Redesign - Greening the Information Systems - Staying Green- Building a Green Device Portfolio- Green Servers and Data Centers- Saving Energy

MODULE IV TECHNOLOGIES FOR ENABLING GREEN AND VIRTUAL DATA CENTERS 08

Highly Effective Data Center Facilities and Habitats for Technology - Data Center Electrical Power and Energy Management - HVAC, Smoke and Fire Suppression

- Data Center Location - Virtual Data Centers Today and Tomorrow - Cloud Computing, Out-Sourced, and Managed Services.

MODULE V SERVERS AND FUTURE TRENDS OF GREEN COMPUTING 10

Server Issues and Challenges - Fundamentals of Physical Servers - Types, Categories, and Tiers of Servers - Clusters and Grids - Implementing a Green and Virtual Data Center - PCFE and Green Areas of Opportunity- 12 Green Computer Companies- What's in Green computer science-Green off the Grid aimed for data center energy evolution-Green Grid Consortium- Green Applications- Green Computing Making Great Impact On Research

Total Hours: 45

REFERENCES:

6. Marty Poniatowski, "Foundation of Green IT: Consolidation, Virtualization, Efficiency, and ROI in the Data Center", Printice Hall, ISBN: 9780-1-3704-375-0, 2009.

OUTCOMES:

Students who complete this course will be able to

- Demonstrate issues relating to a range of available technologies, systems and practices to support green computing.
- Select appropriate technologies that are aimed to reduce energy consumption.
- Address design issues needed to achieve an organizations' green

computing objectives.

- Analyze the functionality of Data Centers.
- Critically evaluate technologies and the environmental impact of computing resources for a given scenario.
- Compare the impact of Green Computing with other computing techniques.

GECY105 GAMING DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To master event-based programming
- To learn resource management as it relates to rendering time, including level-of-detail and culling.
- To become familiar with the various components in a game or game engine.
- To explore leading open source game engine components.
- To become familiar of game physics.
- To be compatible with game animation.

MODULE I INTRODUCTION 09

Magic Words – What Skills Does a Game Designer Need? – The Most Important Skill -The Five Kinds of Listening-The Secret of the Gifted.

MODULE II THE DESIGNER CREATES AN EXPERIENCE 09

The Game Is Not the Experience -Is This Unique to Games? -Three Practical Approaches to Chasing Rainbows -Introspection: Powers, Perils, and Practice -Dissect Your Feelings -Defeating Heisenberg -Essential Experience.

MODULE III THE EXPERIENCE IN THE PLAYER MIND AND GAME MECHANICS 08

Modeling – Focus -Empathy – Imagination – Motivation – Space – Objects, Attributes, and States – Actions – Rules.

MODULE IV GAMES THROUGH AN INTERFACE 09

Breaking it Down – The Loop of Interaction – Channels of Information – Other Interface.

MODULE V BALANCED GAME MECHANICS 10

Balance – The Twelve Most Common Types of Game Balance – Game Balancing Methodologies - Balancing Game Economies.

Total Hours: 45

REFERENCES:

1. Jesse Schell, "The Art of Game Design: A Book of Lenses", 2nd Edition

ISBN-10: 1466598646, 2014.

2. Ashok Kumar, Jim Etheredge, Aaron Boudreaux, “Algorithmic and Architectural Gaming Design: Implementation and Development", 1st edition, Idea Group, U.S ISBN-10: 1466616342, 2012.

4. James M. Van Verth, Lars M. Bishop "Essential Mathematics for Games and Interactive Applications", Third Edition, A K Peters / CRC Press, ISBN-10: 1482250926, 2015.

OUTCOMES:

Students who complete this course will be able to

- Realize the basic history and genres of games
- Demonstrate an understanding of the overall game design process
- Explain the design tradeoffs inherent in game design
- Design and implement basic levels, models, and scripts for games
- Describe the mathematics and algorithms needed for game programming
- Design and implement a complete three-dimensional video game

GECY106 SOCIAL COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To create original social applications, critically applying appropriate theories and effective practices in a reflective and creative manner.
- To critically analyze social software in terms of its technical, social, legal, ethical, and functional features or affordances.
- To encourage the development of effective communities through the design, use, and management of social software.
- To give students with a base of knowledge and advances for them to critically examine existing social computing services.
- To plan and execute a small-scale research project in social computing in a systematic fashion.
- To become familiar with the concept of computational thinking.

MODULE I BASIC CONCEPTS 09

Networks and Relations: Relations and Attributes, Analysis of Network Data, Interpretation of network data -New Social Learning – Four Changes that Shift Work - Development of Social Network Analysis: Sociometric analysis and graph theory, Interpersonal Configurations and Cliques – Analysing Relational Data.

MODULE II SOCIAL LINK 09

Individual Actors, Social Exchange Theory, Social Forces, Graph Structure, Agent Optimization Strategies in Networks – Hierarchy of Social Link Motivation- Social Context.

MODULE III SOCIAL MEDIA 08

Trends in Computing – Motivations for Social Computing – Social Media: Social relationships, Mobility and Social context – Human Computation – Computational Models- Business use of social Media.

MODULE IV SOCIAL INFORMATION FILTERING 09

Mobile Location Sharing – Location based social media analysis – Social Sharing and Social Filtering – Automated recommender Systems – Traditional and Social Recommender Systems.

MODULE V SOCIAL NETWORK STRATEGY 10

Application of Topic Models – Opinions and Sentiments – Recommendation Systems – Language Dynamics and influence in online communities – Psychometric analysis – Case Study: Social Network Strategies for surviving the zombie apocalypse.

Total Hours: 45

REFERENCES:

6. Jennifer Golbeck, “Analyzing the Social Web”, Elsevier Publication, 2013.
7. Huan Liu, John Salerno, Michael J. Young, “Social computing and Behavioral Modeling”, Springer Publication, 2009.

OUTCOMES:

Students who complete this course will be able to

- Realize the range of social computing applications and concepts.
- Analyze data left after in social media.
- Recognize and apply the concepts of computational models underlying social computing.
- Take out simple forms of social diagnostics, involving network and language models, applying existing analytic tools on social information.
- Evaluate emerging social computing applications, concepts, and techniques in terms of key principles.
- Design and prototype new social computing systems.

GECY107 SOFT COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

The aim of the course is to

- Enumerate the strengths and weakness of soft computing
- Illustrate soft computing methods with other logic driven and statistical method driven approaches
- Focus on the basics of neural networks, fuzzy systems, and evolutionary computing
- Emphasize the role of euro-fuzzy and hybrid modeling methods
- Trace the basis and need for evolutionary computing and relate it with other soft computing approaches

MODULE I SOFT COMPUTING - BASICS 06

Soft computing – Hard Computing – Artificial Intelligence as the basis of soft computing – Relation with logic driven and statistical method driven approaches- Expert systems – Types of problems: Classification, Functional approximation, Optimizations – Modeling the problem – Machine Learning – Hazards of Soft Computing – Current and future areas of research

MODULE II ARTIFICIAL NEURAL NETWORK 12

Artificial Neuron – Multilayer perceptron – Supervised learning – Back propagation network –Types of Artificial Neural Network: Supervised Vs Un Supervised Network – Radial basis function Network – Self Organizing Maps – Recurrent Network – Hopfield Neural Network – Adaptive Resonance Theory – Issues in Artificial Neural Network – Applications

MODULE III FUZZY SYSTEMS 09

Fuzzy Logic – Membership functions – Operators – Fuzzy Inference systems – Other sets: Rough sets, Vague Sets – Fuzzy controllers - Applications

MODULE IV NEURO FUZZY SYSTEMS 09

Cooperative Neuro fuzzy systems – Neural network driven fuzzy reasoning – Hybrid Neuro fuzzy systems – Construction of Neuro Fuzzy systems: Structure Identification phase, Parameter learning phase – Applications

MODULE V EVOLUTIONARY COMPUTING 09

Overview of evolutionary computing – Genetic Algorithms and optimization –

Genetic Algorithm operators – Genetic algorithms with Neural/Fuzzy systems – Variants of Genetic Algorithms– Population based incremental learning – Evolutionary strategies and applications

Total Hours: 45

TEXTBOOKS:

1. Samir Roy, “Introduction to Soft Computing: Neuro-Fuzzy and Genetic Algorithms”, Pearson, 2013
2. Anupam Shukla, Ritu Tiwari and Rahul Kala, “Real life applications of Soft Computing”, CRC press, 2010.
3. Fakhreddine O. Karray, “Soft Computing and Intelligent Systems Design: Theory, Tools and Applications”, Pearson, 2009

OUTCOMES:

At the end of the course the students will be able to

- Enumerate the theoretical basis of soft computing
- Explain the fuzzy set theory
- Discuss the neural networks and supervised and unsupervised learning networks
- Demonstrate some applications of computational intelligence
- Apply the most appropriate soft computing algorithm for a given situation

GECY108 EMBEDDED SYSTEM PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the design of embedded computing systems with its hardware and software architectures.
- To describe entire software development lifecycle and examine the various issues involved in developing software for embedded systems.
- To analyze the I/O programming and Embedded C coding techniques
- To equip students with the software development skills necessary for practitioners in the field of embedded systems.

MODULE I INTRODUCTION OF EMBEDDED SYSTEM 09

Embedded computing – characteristics and challenges – embedded system design process – Overview of Processors and hardware units in an embedded system – Compiling, Linking and locating – downloading and debugging – Emulators and simulators processor – External peripherals – Memory testing – Flash Memory.

MODULE II SOFTWARE TECHNOLOGY 09

Software Architectures, Software development Tools, Software Development Process Life Cycle and its Model, Software Analysis, Design and Maintenance.

MODULE III INPUT/OUTPUT PROGRAMMING 09

I/O Instructions, Synchronization, Transfer Rate & Latency, Polled Waiting Loops, Interrupt – Driven I/O, Writing ISR in Assembly and C, Non Maskable and Software Interrupts

MODULE IV DATA REPRESENTATION IN EMBEDDED SYSTEMS 09

Data representation, Twos complement, Fixed point and Floating Point Number Formats, Manipulating Bits in -Memory, I/O Ports, Low level programming in C, Primitive data types, Arrays, Functions, Recursive Functions, Pointers, Structures & Unions, Dynamic Memory Allocation, File handling, Linked lists, Queues, Stacks.

MODULE V EMBEDDED C 09

Embedded Systems programming in C – Binding & Running Embedded C program in Keil IDE – Dissecting the program - Building the hardware. Basic techniques for

reading & writing from I/O port pins – switch bounce - LED Interfacing using Embedded C.

Total Hours: 45

REFERENCES:

1. Marilyn Wolf, "Computers as components ", Elsevier, 2012.
2. Qing Li and Carolyn Yao, "Real-Time Concepts for Embedded Systems", CMP Books, 2003.
3. Daniel W. Lewis, "Fundamentals of embedded software where C and assembly meet", Pearson Education
4. Michael Bass, "Programming Embedded Systems in C and C++", Oreilly, 2003.

OUTCOMES:

On completion of this course the student will be able to

- Design the software and hardware components in embedded system
- Describe the software technology
- Use interrupt in effective manner
- Use keil IDE for programming
- Program using embedded C for specific microcontroller
- Design the embedded projects

GECY109 PRINCIPLES OF SUSTAINABLE DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge in the concepts and dimensions of sustainable development.
- To gain knowledge on the framework for achieving sustainability.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 09

Environment and Development - Population poverty and Pollution – Global and Local environmental issues – Resource Degradation- Greenhouse gases – Desertification-industrialization – Social insecurity, Globalization and environment. History and emergence of the concept of sustainable development-Objectives of Sustainable Development.

MODULE II COMPONENTS AND DIMENSIONS OF SUSTAINABLE DEVELOPMENT 09

Components of Sustainability – Complexity of growth and equity – Social economic and environmental dimensions of sustainable development – Environment – Biodiversity – Natural – Resources – Ecosystem integrity – Clean air and water – Carrying capacity – Equity, Quality of Life, Prevention, Precaution – Preservation and Public Participation Structural and functional linking of developmental dimensions.

MODULE III FRAMEWORK FOR ACHIEVING SUSTAINABILITY 09

Operational guidelines – interconnected prerequisites for sustainable development Empowerment of Women, children, Youth, Indigenous People, Non-Governmental Organizations Local Authorities, Business and industry – Science and Technology for sustainable development – performance indicators of sustainability and assessment mechanism – Constraints and barriers for sustainable development.

MODULE IV SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 09

Demographic dynamics of sustainability – Policies for socio-economic development – Strategies for implementing eco-development programmes Sustainable development through trade – Economic growth – Action plan for implementing sustainable development – Urbanization and sustainable Cities – Sustainable Energy and Agriculture – sustainable livelihoods.

MODULE V SUSTAINABLE DEVELOPMENT AND INTERNATIONAL RESPONSE 09

Role of developed countries in the development of developing countries – international summits – Stockholm to Johannesburg – Rio principles – Agenda-Conventions – Agreements – Tokyo Declaration – Doubling statement – Tran boundary issues integrated approach for resources protection and management

Total Hours: 45

REFERENCES:

1. Sayer J. and Campbell, B., The Science of Sustainable Development: Local Livelihoods and the Global environment - Biological conservation restoration & Sustainability, Cambridge university Press, London, 2003.
2. M.K. Ghosh Roy. and Timberlake, Sustainable Development, Ane Books Pvt. Ltd, 2011.
3. Mackenthun K.M., Concepts in Environmental Management, Lewis Publications London, 1999.
4. APJ Abdul Kalam and Srijan Pal Singh, Target 3 Billion: Innovative Solutions Towards Sustainable Development, Penguin India, 2011

OUTCOMES:

At the end of the course the student will be able to

- Describe the concepts of sustainable development
- Define the components and dimensions of sustainable development
- Outline the Frame work for achieving sustainability.
- State the policies and strategies for implementing sustainable development for Socio economic programmes.
- Examine the role of developed countries in sustainable development.

GECY110	QUANTITATIVE TECHNIQUES IN MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart knowledge on

- Concepts of operations research
- Inventory control in production management
- Financial management of projects
- Decision theory and managerial economics

MODULE I OPERATIONS RESEARCH 09

Introduction to Operations research – Linear programming – Graphical and Simplex Methods, Duality and Post-Optimality Analysis – Transportation and Assignment Problems

MODULE II PRODUCTION MANAGEMENT 09

Inventory control, EOQ, Quantity Discounts, Safety Stock – Replacement Theory – PERT and CPM – Simulation Models – Quality Control.

MODULE III FINANCIAL MANAGEMENT 09

Working Capital Management – Compound Interest and Present Value methods – Discounted Cash Flow Techniques – Capital Budgeting.

MODULE IV DECISION THEORY 09

Decision Theory – Decision Rules – Decision making under conditions of certainty, risk and uncertainty – Decision trees – Utility Theory.

MODULE V MANAGERIAL ECONOMICS 09

Cost concepts – Break even Analysis – Pricing techniques – Game Theory applications.

Total Hours: 45

REFERENCES:

1. Vohra, N.D. , Quantitative Techniques in Management, Tata McGraw Hill Co., Ltd, New Delhi, 2009.
2. Seehroeder, R.G., Operations Management, McGraw Hill, USA, 2002.
3. Levin, R.I, Rubin, D.S., and Stinsonm J., Quantitative Approaches to Management, McGraw Hill Book Co., 2008.

4. Frank Harrison, E., The Managerial Decision Making Process, Houghton Miffin Co. Boston, 2005.
5. Hamdy A. Taha, Operations Research- An Introduction, Prentice Hall, 2002.

OUTCOME:

At the end of the course, the students will be able to

- Apply the concepts of operations research for various applications
- Create models for inventory control in production management
- Compute the cash flow for a project
- Choose a project using decision theory based on the risk criterion.
- Apply the concepts of managerial economics in construction management

GECY111 PROGRAMMING USING MATLAB & SIMULINK

L	T	P	C
1	0	2	2

OBJECTIVES:

The aim of this course is to:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION TO MATLAB AND DATA PRESENTATION 10

Introduction to MATLAB-Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts- Making clear and compelling plots-Solving systems of linear equations numerically and symbolically.

Lab Experiments

1. Study of basic matrix operations and manipulations.
2. Numerical and symbolical solution of linear equations.

MODULE II ROOT FINDING AND MATLAB PLOT FUNCTION 10

Linearization and solving non-linear systems of equations- The Newton-Raphson method- Integers and rational numbers in different bases- Least squares regression -Curve fitting-Polynomial fitting and exponential fitting.

Lab Experiments

1. Solution of non linear equations using Newton-Raphson method.
2. Determination of polynomial fit and exponential fit for the given data.

MODULE III LINEAR AND NON-LINEAR DIFFERENTIAL EQUATIONS 13

Numerical integration and solving first order, ordinary differential equations (Euler's method and Runge-Kutta) - Use of ODE function in MATLAB- Converting second order and higher ODEs to systems of first order ODEs- Solving systems of higher order ODEs via Euler's method and Runge-Kutta) - Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations - Plot Function –Saving & Painting Plots.

Lab Experiments

1. Solution of fourth order linear differential equations using
    a. Trapezoidal Rule

b. Euler method

2. Solution of fourth order non-linear differential equations using
    a. Modified Euler method
    b. Runge – Kutta method

MODULE IV INTRODUCTION OF SIMULINK 12

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- - Representing a model as a subsystem- Programme specific Simulink demos.

Lab Experiments

1. Solution of fourth order non-linear differential equations using simulink.
2. Programme specific experiment based on simulink.

Total Hours (Including Practicals): 45

REFERENCE:

1. Griffiths D V and Smith I M, “Numerical Methods for Engineers”, Blackwell, 1991.
2. Laurene Fausett, “Applied Numerical Analysis Using MATLAB”, Pearson 2008.
3. Moin P, “Fundamentals of Engineering Numerical Analysis”, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB”, CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving, “Mathematical Exploration with MATLAB”, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

- Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
- Write programs using first principles without automatic use of built-in ones.
- Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
- Be fluent in exploring Matlab’s capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
- Make use of Maltab visual capabilities for all engineering applications.

- An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECY112 JAVA PROGRAMMING

L	T	P	C
1	0	2	2

OBJECTIVES:

- To learn the fundamentals of Java programming such as data types, variables and arrays.
- To study the syntax and necessity of decision making and iterative statements.
- To create a class and invoke the methods.
- To instigate programming in overloading of methods.
- To emphasize the concept of packages.
- To learn the exception handling routines.

MODULE I INTRODUCTION TO JAVA PROGRAMMING 08

History and Evolution of Java – Overview of Java – Data types, variables and arrays – Operators – Control statements.

MODULE II METHODS AND CLASSES 07

Class fundamentals – Declaring objects – Methods – Constructors – Garbage collection – Overloading methods – Constructor overloading – Access control – Inheritance – Packages - Exception handling.

L: 15, P: 30, Total Hours: 15

REFERENCES:

1. Herbert Schildt, “Java The Complete Reference”, 9th Edition, Oracle Press, 2014, ISBN: 978007180855-2.
2. Nicholas S. Williams, **“**Professional Java for Web Applications: Featuring WebSockets, Spring Framework, JPA Hibernate and Spring Security (WROX)”, John Wiley & Sons, 2014, ISBN: 978111865651-8.

4. Yashavant Kanetka**, “**Let Us Java”, 2nd Edition, BPB Publications, 2012**.**

OUTCOMES:

Students who complete this course will be able to

- Implement basic Java programming.
- Create a class and invoke methods for real world problems.

- Construct simple overloading of methods programs.
- Implement various types of inheritance concepts.
- Describe the access control mechanism.
- Handle exception thrown while implementing programming.

GECY113 PYTHON PROGRAMMING

L	T	P	C
1	0	2	2

OBJECTIVES:

- To learn the list and records of python programming.
- To study the control statements and string functions of python.
- To instigate the fundamental python programming.
- To emphasize GUI in python.
- To integrate python with embedded systems.
- To implement programs in python.

MODULE I INTRODUCTION TO PYTHON PROGRAMMING 08

Installation and environment set up – syntax used in python – variable types – operators – Loops – decision making – string functions - formatted files - GUI basics.

MODULE II EMBEDDED PROGRAMMING USING PYTHON 07

Web interface – system tools – script execution context - Motion-triggered LEDs – Python - Arduino prototyping-storing and plotting Arduino data-Remote home monitoring system.

L: 15, P: 30, Total Hours: 15

REFERENCES:

5. Michael Barr, Anthony Massa, “Programming Embedded Systems”, 2nd Edition, O'Reilly Media, 2006.

OUTCOMES:

Students who complete this course will be able to

- Implement date and time function programming using python.

- Write formatted file programming.
- Construct simple python programs.
- Create web interface using python programming
- Develop embedded system with python programming.
- Build Arduino prototype using python programming.

GECY114 INTELLECTUAL PROPERTY RIGHTS (IPR)

L	T	P	C
1	0	0	1

OBJECTIVES:

- To study about Intellectual property rights and its need
- To explore the patent procedure and related issues

MODULE I INTRODUCTION 07

Introduction and the need for intellectual property right (IPR) – IPR in India – Genesis and Development – IPR in abroad – Important examples of IPR – Copyrights, Trademarks, Patents, Designs, Utility Models, Trade Secrets and Geographical Indications – Industrial Designs

MODULE II PATENT 08

Concept of Patent – Product / Process Patents & Terminology – Duration of Patents – Law and Policy Consideration Elements of Patentability –- Patentable Subject Matter – Procedure for Filing of Patent Application and types of Applications – Procedure for Opposition – Revocation of Patents – Working of Patents- Patent Agent – Qualification and Registration Procedure – Patent databases and information system – Preparation of patent documents – Process for examination of patent application- Patent infringement – Recent developments in patent system

Total Hours: 15

COURSE OUTCOMES:

Students should be able to

- Identify the various types of intellectual property and their value
- Apply the procedure to file a patent and to deal the related issues
- Search and extract relevant information from various intellectual database

VISION AND MISSION OF THE DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

VISION

The Department of Electronics and Communication Engineering envisions to be a leader in providing state of the art education through excellence in teaching, training, and research in contemporary areas of Electronics and Communication Engineering and aspires to meet the global and socio economic challenges of the country.

MISSION

- The Department of Electronics and Communication Engineering endeavors to produce globally competent Engineers prepared to face challenges of the society.
- To enable the students to formulate, design and solve problems in applied science and engineering.
- To provide excellent teaching and research environment using state of the art facilities.
- To provide adequate practical training to meet the requirement of the Electronics & communication industry.
- To train the students to take up leadership roles in their career or to pursue higher education and research.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

PROGRAMME EDUCATIONAL OBJECTIVES:

The objective of the program is

PEO 1 To educate and train the graduates with knowledge and skills necessary to formulate, design and solve problems in Analog, Digital & Mixed Signal VLSI system design, VLSI Signal Processing, Real Time Embedded System design and Hardware Software Co-Design

PEO 2 To provide technical skills in software and hardware tools related to the design and implementation of integrated Circuits, System on Chip for real time applications

PEO 3 To provide scope for Applied Research and innovation in the various fields of VLSI and Embedded Systems, and enabling the students to work in the emerging areas

PEO 4 To enhance communication and soft skills of students to make them work effectively as a team

PROGRAM OUTCOMES:

The graduates will

PO1 Be able to analyze, design and implement Analog, Digital and Mixed Signal Circuits and real time embedded systems

PO2 Have in-depth knowledge and capability to use industry standard tools in the design and implementation of VLSI and real time Embedded Systems.

PO3 Be able to undertake research projects in related domains of VLSI and Embedded systems.

PO4 Possess the capability to communicate effectively and work as a team in the professional career

CURRICULUM & SYLLABI FOR

M. Tech. (VLSI &Embedded Systems)
(FOUR SEMESTERS / FULL TIME)

CURRICULUM

Sl. No.	Course Code	Course Title	L	T	P	C
		SEMESTER I				
1	MAC6184	Probability Matrix Theory & Linear Programming	**3**	**1**	**0**	**4**
2	ECC6121	Advanced Embedded System	**3**	**0**	**0**	**3**
3	ECC6122	Digital VLSI Design	**3**	**0**	**2**	**4**
4	ECC6123	Advanced Microcontroller architecture and Programming	**3**	**0**	**2**	**4**
5	ECC6124	Embedded System Lab	**0**	**0**	**2**	**1**
6		Professional Elective (Minimum of 3 credits to be earned)				**3**
						19
		SEMESTER II				
1	GEC6201	Research Methodology for Engineers	**3**	**0**	**0**	**3**
2	ECC6221	ASIC Design	**3**	**0**	**0**	**3**
3	ECC6222	Real Time Operating Systems	**3**	**0**	**0**	**3**
4	ECC6223	Analog Integrated Circuit Design	**3**	**0**	**2**	**4**
5	ECC6224	VLSI Physical Design Automation Lab	**0**	**0**	**2**	**1**

SEMESTER I

		L	T	P	C
MAC6184	**PROBABILITY, MATRIX THEORY AND LINEAR PROGRAMMING**	**3**	**1**	**0**	**4**

OBJECTIVE:

The aim of this course is to

- Provide a comprehensive introduction to the probability distributions used in engineering.
- Familiarize students with advanced matrix theory and variational problems.
- Expose the students to Operations Research using concepts of linear programming.

MODULE I PROBABILITY DISTRIBUTIONS (10+03)

Axioms of probability – addition and multiplication theorem – conditional probability – total probability – random variables - moments – moments generating functions and their properties- Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

MODULE II TWO DIMENSIONAL RANDOM VARIABLES (08+03)

Joint distributions - marginal and conditional distributions - functions of random variables - covariance - correlation and regression - Central limit theorem.

MODULE III ADVANCED MATRIX THEORY (09+03)

Matrix norms - singular value decomposition - QR algorithm - Pseudo inverse - Least square approximations.

MODULE IV LINEAR PROGRAMMING (10+03)

Formation - graphical method - simplex method - Big-M method - Two Phase method - transportation and assignment problems.

MODULE V CALCULUS OF VARIATIONS (08+03)

Variation and its properties – Euler's equation – functional dependant on first and higher order derivatives – functional dependant on functions of several independent variables – variational problems with moving boundaries – isoperimetric problems – Ritz and Kantorovich methods.

L – 45; T – 15; Total – 60

4. David. J. Rader., “Deterministic Operations Research”, Wiley (2010).
5. Elsgolts, “Differential Equations and Calculus of Variations", University Press of the Pacific (2003).

OUTCOMES:

At the end of the course students will be able to

- Solve problems using concept of standard, discrete and continuous distributions.
- Solve problems using one dimensional and two dimensional random variables.
- Find Eigen values and Eigen vectors of a higher order matrix.
- Solve problems of linear programming.
- Solve problems of calculus of variations by direct methods and using Euler’s formulae.

ECC6121 ADVANCED EMBEDDED SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explore Embedded system lifecycle
- To Introduce the occurrence of shared data problem in embedded systems
- To describe need for power management techniques in embedded systems
- To familiarize the debugging in embedded systems

MODULE I EMBEDDED DESIGN LIFE CYCLE 09

Product specification – Hardware / Software partitioning – Detailed hardware and software design – Integration – Product testing – Selection Processes – Microprocessor Vs Micro Controller – Performance tools – Bench marking –RTOS Micro Controller – RTOS availability – Tool chain availability – Other issues in selection processes..

MODULE II EMBEDDED HARDWARE AND SOFTWARE 09

Review of basics in embedded hardware and software– Hardware software co design- Interrupts – Built interrupts – Interrupts basis – Shared data problems – Interrupt latency – Interrupt routines in an RTOS environment – Hard Real Time scheduling considerations - Embedded platform boot sequence.

MODULE III MEMORY AND INTERFACING 09

Memory: Memory write ability and storage performance – Memory types – composing memory – Advance RAM interfacing - communication basic – Microprocessor interfacing I/O addressing – Interrupts – Direct memory access– Arbitration -Multilevel bus architecture – Serial protocol – Parallel protocols – Wireless protocols

MODULE IV INTEGRATION AND TESTING OF EMBEDDED HARDWARE AND FIRMWARE 09

Integration of Hardware and Firmware-In system programming-The Integrated development environment-Debugging techniques- Host based debugging – Remote debugging – ROM emulators – Logic analyzer- Real time trace – Hardware break points – Overlay memory- Testing embedded software

MODULE V POWER OPTIMIZATION TECHNIQUES IN EMBEDDED SYSTEMS 09

The power profile of an Embedded Computing Systems – Constant versus Dynamic power – A simple model of power efficiency – Advanced Configuration and Power Interface – ACPI system states- Case Study- power optimization techniques in wireless sensor networks.

Total Hours: 45

3. Frank Vahid and Tony Givargis ‘Embedded Systems Design: A Unified Hardware/Software Introduction’, John & Wiley Publications, 2002.
4. Peter Barry, Patrick Crowley, “Modern Embedded Computing” Morgan Kaufmann Publishers, 2012.

OUTCOMES:

On completion of program students will be able to

- Analyze the quality principles and tools in embedded system during product development process
- Analyze the division of hardware/software in embedded systems.
- Develop the interrupt routines in RTOS environment
- Design energy efficient embedded systems
- Design interface circuit with processor and peripheral devices
- Test and debug the coding in embedded systems

ECC6122 DIGITAL VLSI DESIGN

L	T	P	C
3	0	2	4

OBJECTIVES:

The objective of the course is

- To learn the fundamentals of digital CMOS VLSI design from the transistor up to the system level.
- To introduce the models for state-of-the-art VLSI components, fabrication steps, hierarchical design flow and semiconductor business economics.
- To design full custom digital integrated circuits

MODULE I MOS TRANSISTOR INTRODUCTION AND CMOS LOGIC 09+06

MOS Device Physics, MOS Models, MOS Device Design Equations Device Scaling & Short-channel effects Layout & Design Rules, CMOS Logic, CMOS Inverter - Static Characteristic, Dynamic Characteristic, Switch Models & Simple RC Models, Power, Energy, and Energy Delay parameters.

Laboratory Practice: Circuit Simulation of CMOS inverters -static and dynamic characteristics, CMOS NAND, NOR and XOR Gates.

MODULE II COMBINATIONAL, SEQUENTIAL AND DYNAMIC LOGIC CIRCUITS 11+06

Pass Transistors, Transmission Gates; Designing with transmission gates, Primitive Logic Gates; Complex Logic Circuits.SR Latch, clocked Latch and flip flop circuits, CMOS D-latch and edge triggered flip flop. Basic principle, non ideal effects, domino CMOS Logic, high performance dynamic CMOS Circuits, Clocking Issues, Two phase clocking.

Laboratory Practice: Circuit Simulation of Dynamic CMOS design- Domino and NORA logic – Flip flop -RS, D, JK, MS, T

MODULE III CMOS SUB SYSTEM DESIGN 09+06

Data path circuits, Architectures for Adders, Accumulators, Multipliers, Barrel Shifters, Speed and Area Tradeoffs, Memory Architectures, and Memory control circuits.

Laboratory Practice: Circuit Simulation of Arithmetic circuits in CMOS VLSI - Adders- multipliers- shifter –CMOS memory design - SRAM and DRAM

MODULE IV INTERCONNECT &TIMING METRICS 09+06

Interconnect Parameters – Capacitance, Resistance, and Inductance, Electrical Wire Models, Timing classification of Digital Systems, Synchronous Design, Self-Timed Circuit Design, Synchronizers and Arbiters, Clock Synthesis and Synchronization Using Phase-Locked Loop

Laboratory Practice: Circuit Simulation of the worst-case propagation delay of static and dynamic logic circuits

MODULE V SYSTEMS DESIGN AND DESIGN METHOD 07+06

Design Strategies CMOS Chip Design Options, Design Methods, Design Capture Tools, Design Verification Tools, Design Economics, Data Sheets, CMOS Testing -Manufacturing Test Principles, Design Strategies for Test, Chip Level Test Techniques, System Level Test Techniques, Layout Design for Improved Testability.

Laboratory Practice: Simulation and synthesis of Serial & Parallel adder using HDL Test bench and interpretation of synthesis report of EDA tools

L: 45, P:30 - Total Hours: 75

7. Sung Mo Kang &Yosuf Lederabic Law, “CMOS Digital Integrated Circuits: Analysis and Design”, McGraw-Hill (Third Edition)

OUTCOMES:

On completion of program students will be able to

- Describe the MOS transistor characteristics and simple device models
- Design, simulate and analyze CMOS inverter characteristics.
- Design, simulate and analyze static and dynamic logic circuits
- Evaluate the timing performance of digital circuits.
- Design and analyze data path architectures.
- Discuss the digital system design process and verification methods

ECC6123	ADVANCED MICROCONTROLLER ARCHITECTURE AND PROGRAMMING	L	T	P	C
		3	0	2	4

OBJECTIVES:

- To know Microcontroller based system design, applications.
- To teach I/O interface in system Design
- To learn about Design and programming of MSP 430 microcontroller
- To involve the students to Practice on Workbench /Software Tools/ Hardware Processor Boards with the supporting Peripherals

MODULE I 8051 MICROCONTROLLER ARCHITETURE 09+06

Architecture – memory organization – addressing modes – instruction set-I/O programming-Timer programming – Serial port programming-Interrupt programming

Laboratory Practice: Practice in 8051 microcontroller based assembly/C language programming-I/O programming -Timer Counter Programming – Serial Communication- practice in KEIL µvision IDE complier

MODULE II PIC MICROCONTROLLER ARCHITETURE 09+06

Architecture – memory organization – addressing modes – instruction set : arithmetic, logic instruction, branch, call, and time delay loop–I/O ports-bank switching, table processing, macros and modules.

Laboratory Practice: Practice on PIC Microcontroller based Assembly/C language programming – Arithmetic Programming- practice in MPLAB compiler

MODULE III PIC PROGRAMMING IN ASSEMBLY AND C 09+06

I/O programming-Timer programming – Serial port programming-Interrupt programming-ADC, DAC and Sensor interfacing- Flash and EEPROM memories-I2C bus-CCP and ECCP programming-Practice in MPLAB

Laboratory Practice: Practice on PIC Microcontroller based Assembly/C language programming – Timer Counter Programming – Serial Communication-Programming Interrupt - practice in MPLAB compiler

MODULE IV MSP430 architecture and programming 09+06

Architecture – CPU features – Memory structure - Addressing modes – Instruction sets Interrupts programming– Input and Output programming– On-chip peripherals– Hardware considerations – Flash memory – Low power design- Practice in IAR workbench

Laboratory Practice: Practice on MSP430 Microcontroller based Assembly/C language I/O programming – Timer Counter Programming – Serial Communication- Programming Interrupt - practice in IAR workbench compiler

MODULE V SYSTEM DESIGN – CASE STUDY 09+06

Interfacing LCD Display – Keypad Interfacing - Motor Control – Controlling DC/ AC appliances – Measurement of frequency - Stand-alone Data Acquisition System.

Laboratory Practice: Design a mini project using PIC or MSP430

L: 45, P: 30 - Total Hours: 75

REFERENCES:

3. Rajkamal, “Microcontrollers Architecture, Programming”, Interfacing, & System Design”,Pearson,2012
4. Chris Nagy, “Embedded systems design using the TI MSP430 series”, Elsevier 2003.

OUTCOMES:

On completion of the course the students will be able to

- Describe the architecture of PIC series of microcontroller
- Create ALP and C programs to develop applications using 8051 & PIC microcontroller
- Describe the architecture of MSP series of microcontroller
- Create ALP and C programs to develop applications using the MSP microcontroller
- Interface the internal and External IOs of PIC and MSP microcontroller.
- Use KEIL µvision IDE,IAR Embedded workbench and MPLAB IDE

ECC6124 EMBEDDED SYSTEMS LAB

L	T	P	C
0	0	2	1

OBJECTIVES:

- To gain knowledge in programming with software tools and microcontrollers with peripheral interfaces.
- To develop a program and simulate 8, 16 and 32 bit microcontrollers in both assembly and C programming.
- To learn programming with sensors
- To focus on the embedded system hardware development

LIST OF EXPERIMENTS

1. Design with 8 bit Microcontrollers 8051/PIC Microcontrollers- Assembly and C Programming: I/O Programming, Timers.
2. Interrupts, Serial port programming with 8051/PIC Microcontrollers- Assembly and C programming.
3. PWM Generation, Motor Control, ADC/DAC with 8051/PIC Microcontrollers- Assembly and C programming.
4. LCD and RTC Interfacing, Sensor Interfacing with 8051/PIC Microcontrollers- Assembly and C programming
5. Design with 16 bit processors: I/O programming, Timers, Interrupts, Serial Communication
6. Design with ARM Processors: I/O programming, ADC/DAC, Timers, Interrupts
7. Study of one type of Real Time Operating Systems (RTOS)
8. Mini-project

P: 30 - Total Hours:30

OUTCOMES:

On completion of program students will be able to

- Simulate simple application programs through Keil µ vision.
- Interface I/O ports, timers, seven segments LED, serial ports with 8051/ PIC Microcontrollers.
- Demonstrate programming with sensors
- Employ Assembly language and C programming to verify the stepper motor and real time clock interface.
- Develop a real time embedded applications using 8051and PIC Microcontrollers.
- Appraise a real time operating system.

SEMESTER II

GEC6201	RESEARCH METHODOLOGY FOR ENGINEERS	L	T	P	C
		3	0	0	3

OBJECTIVES:

The objective of the course is

- To provide a perspective on research to the scholars
- To educate on the research conceptions for designing the research
- To impart knowledge on statistical techniques for hypothesis construction
- To gain knowledge on methods of data analysis and interpretation
- To learn about the effective communication of research finding

MODULE I RESEARCH PROBLEM FORMULATION 07

Research – objectives – types, Research process, Solving engineering problems, Identification of research topic, Formulation of research problem, Literature survey and review.

MODULE II HYPOTHESIS FORMULATION 08

Research design – meaning and need – basic concepts, Different research designs, Experimental design – principle – important experimental designs, Design of experimental setup, Mathematical modeling, Simulation – validation and experimentation, Dimensional analysis and similitude.

MODULE III STATISTICAL TECHNIQUES 12

Statistics in research – concept of probability – popular distributions –Hypothesis testing- sample design- Design of experiments – factorial designs -– orthogonal arrays- ANOM - ANOVA - Multivariate analysis - Use of optimization techniques – traditional methods – evolutionary optimization techniques –Transportation model

MODULE IV STATISTICAL ANALYSIS OF DATA 10

Research Data analysis – interpretation of results – correlation with scientific facts- Accuracy and precision – error analysis, limitations - Curve fitting, Correlation and regression.

MODULE V RESEARCH REPORT 08

Purpose of written report – audience, synopsis writing, preparing papers for International journals, Thesis writing – organization of contents – style of writing – graphs and charts – referencing, Oral presentation and defence, Ethics in research, Patenting, Intellectual Property Rights

L: 45 - Total Hours: 45

11. Scheffer. R.L. and James T. Mc Clave, Probability and Statistics for Engineers, PWS – Kent Publishers Co., Boston, USA, 1990.

OUTCOMES:

Students should be able to

- Formulate the research problem
- Design and Analyse the research methodology
- Construct and optimize the research hypothesis
- Analyse and interpret the data
- Report the research findings

ECC6221 ASIC DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is to impart knowledge on

- The concept of structure and features of full custom and semicustom ASIC types.
- The fundamentals of digital logic design and the physical features of each ASIC.
- ASIC logic design, testing of physical design partitioning, floor planning, placement and routing.

MODULE I INTRODUCTION TO ASICs, ASIC LIBRARY DESIGN 09

Types of ASICs - Design flow - CMOS transistors, CMOS Design rules - Combinational Logic Cell – Sequential logic cell - Data path logic cell - Transistors as Resistors - Transistor Parasitic Capacitance- Logical effort –Library cell design.

MODULE II PROGRAMMABLE ASICs AND LOGIC CELLS 09

Anti fuse - static RAM - EPROM and EEPROM technology - PREP benchmarks - Actel ACT - Xilinx LCA –Altera FLEX - Altera MAX DC & AC inputs and outputs - Clock & Power inputs - Xilinx I/O blocks.

MODULE III INTERCONNECTS AND LOW LEVEL DESIGN LANGUAGES 09

Actel ACT -Xilinx LCA - Xilinx EPLD - Altera MAX 5000 and 7000 - Altera MAX 9000 - Altera FLEX –Design systems - Logic Synthesis - Half gate ASIC - Schematic entry - Low level design language .

MODULE IV LOGIC SYNTHESIS, SIMULATION AND TESTING 09

Verilog and logic synthesis - types of simulation -boundary scan test - fault simulation - automatic test pattern generation, Introduction to JTAG.

MODULE V PARTITIONING, FLOOR PLANNING, PLACEMENT & ROUTING 09

System partition - FPGA partitioning - partitioning methods - floor planning - placement - physical design flow –global routing - detailed routing - special routing - circuit extraction - DRC.

2. M.J.S .Smith, "Application Specific Integrated Circuits ", Addison -Wesley Longman Inc., 2003.
3. Keith Barr “ASIC Design in the Silicon Sandbox: A Complete Guide to Building Mixed-Signal Integrated Circuits”,McGrawHill,2006
4. Andrew Brown, "VLSI Circuits and Systems in Silicon", McGraw Hill, 1991

OUTCOMES:

At the end of the course the students will be able to

- Describe ASIC Design Flow and its Architecture.
- Describe the Logic Synthesis and Testing methodologies
- Architect ASIC library design
- Develop programmable ASIC logic cells
- Design I/O cells and interconnects
- Identify new developments in SOC

ECC6222 REAL TIME OPERATING SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is to

- Introduce the concepts of Operating systems and Real-time Operating Systems
- Impart knowledge on Resource management, time-constrained communication, scheduling and imprecise computations, real-time kernels and case studies.
- Compare various RTOS.

MODULE I REVIEW OF OPERATING SYSTEMS 09

Basic Principles - Operating System structures – System Calls – Files –Concurrent Execution & Interrupts- Processes – Design and Implementation of processes – Communication between processes-Process Scheduling.

MODULE II OVERVIEW OF RTOS 09

Real-time System: Hard versus Soft Real-time systems – examples-Difference between Traditional OS and RTOS. RTOS Kernel -RTOS Task and Task state Multitasking – Task Assignment, Task Priorities, Scheduling.

MODULE III IPC MECHANISMS 09

Intertask Communication & Synchronization – Definition of Context Switching, Critical Section – Re-entrant Functions, Deadlocks, Interprocess Communication (IPC) – IPC through Semaphores, Mutex, Mailboxes, and Message Queues.

MODULE IV REAL TIME MODELS AND LANGUAGES 09

Event Based – Process Based and Graph based Models – Real Time Languages – RT scheduling -Interrupt processing -Control Blocks – Memory Requirements.

MODULE V REAL TIME KERNEL AND RTOS APPLICATION 09

Principles – Design issues – Polled Loop Systems – RTOS Porting to a Target – Comparison and study of various RTOS like QNX – VX works – µC/OS-II – RT Linux Case studies-RTOS for fault Tolerant Applications – RTOS for Control Systems.

L: 45 - Total Hours: 45

3. Herma K., “Real Time Systems – Design for distributed Embedded Applications”, Kluwer Academic, 1997.
4. Charles Crowley, “Operating Systems-A Design Oriented approach” Tata McGraw Hill.

OUTCOMES:

After successful completion of the course, the students shall be able to

- Illustrate OS structure and explain process scheduling types.
- Compare the features of traditional OS and RTOS.
- Describe inter task communication and synchronization mechanisms.
- Analyze and design real time scheduling algorithms
- Select appropriate RTOS for the required application.
- Determine the common faults that occur in RTOS based embedded system.

ECC6223 ANALOG INTEGRATED CIRCUIT DESIGN

L	T	P	C
3	0	2	4

OBJECTIVES:

The objective of the course is to

- Introduce the principles of analog circuits and apply the techniques for the design of analog integrated circuit
- Analysis, design, and applications of modern analog circuits using CMOS technologies.
- Analysis of basic Multipliers, wave shaping circuits and basic operation of PLL.
- Implement a complete analog system.

MODULE I INTRODUCTION 09

Analog MOS transistor models Temperature effects and Noise in MOS transistor MOS resistors, characterization of resistive, capacitive elements and MOS devices. Passive and active CMOS current sink/ sources. Effects due to nonlinearity and mismatch in MOS circuits.

Laboratory Practice

Verification of MOS Device Characterization and parametric (PAR) analysis, Current Mirrors: Simple, cascode, feedback and low-voltage

MODULE II SINGLE STAGE CMOS AMPLIFIERS 09

Basics of single stage CMOS amplifiers - common Source, common gate and source follower. Frequency response of common Source, common gate and source follower.

Laboratory Practice

Simulation of Single stage Amplifiers-Diode connected, Current Mirror Load, PMOS with self biased load and self biased CMOS.

MODULE III CMOS DIFFERENTIAL AMPLIFIERS 09

CMOS Operational Amplifiers one stage and two stage gain boosting Common mode feedback (CMFB) Cascode and Folded cascade structures.

Laboratory Practice: Differential Amplifiers: Simple and cascode current mirrors.

MODULE IV HIGH PERFORMANCE OP-AMPS 09

High speed/ high frequency op-amps, micro power op-amps, low noise op-amps and low voltage op-amps. Current mirrors filter implementations. Supply

independent and temperature independent references Band gap references PTAT current generation and constant Gm biasing – CMOS comparators – Multipliers and wave shaping circuits .

Laboratory Practice

Operational Trans-conductance Amplifiers (OTA), Two stage OP-AMP.

MODULE V SWITCHED CAPACITOR CIRCUITS 09

First and Second Order Switched Capacitor Circuits, Switched Capacitor filters, CMOS oscillators, simple and charge pump CMOS PLLs non ideal effects in PLLs, Delay locked loops, frequency locked loops and applications, basics of CMOS data converters – Medium and high speed CMOS data converters, Over sampling converters.

Laboratory Practice

Verification of switched capacitor Integrators.

L:45, L:30 - Total Hours:75

REFERENCES

3. Philip Allen & Douglas Holberg, “CMOS Analog Circuit Design”, Oxford University Press, 2002.
4. Mohammed Ismail &Feiz, “Analog VLSI – Signal Information and Processing”, John Wiley and Sons.

OUTCOMES:

After successful completion of the course, the students shall be able to

- Characterize the MOSFET and perform parametric analysis for the simple MOS models.
- Analyze and design MOSFET based Amplifier circuits.
- Design and analyze band gap reference biasing sources.
- Design and analyze operational amplifier circuits
- Design and analyze switched capacitor based mixed signal circuits
- Use the Composer (schematic capture), Virtuoso (layout generation), Spectre HDL (circuit simulation), Diva tools (DRC, LVS, ERC, extraction) tools for designing analog integrated circuits.

ECC6224	VLSI PHYSICAL DESIGN AUTOMATION LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

The objective of the course is to

- Make the students capable to design FPGA based digital systems
- Analyze the performance of the digital systems using EDA Tools
- Impart hands-on experience on the VLSI physical design tools.

FPGA Based Experiments

1. Design Entry of Verilog examples using HDL languages sequential and concurrent statements.
2. Data path and Controller architecture Verilog examples of sequential & combinational circuits, Test vector generation.
3. Verilog examples for FPGA Implementation, I/O devices interfacing
4. Verilog examples illustrating Static and dynamic power Analysis-Xilinx ISE / Quartus
5. Verilog examples illustrating Static and dynamic Timing analysis procedures and constraints, Critical path considerations –. Xilinx ISE / Quartus
6. Designing FIR filter using Xilinx ISE System Generator and MATLAB simulink

ASIC Based Experiments

7. ASIC RTL realization using standard cell libraries- Cadence/Tanner/Mentor Graphics.
8. Static and dynamic power Analysis- Cadence/Tanner/Mentor Graphics.
9. Static and dynamic Timing analysis procedures and constraints.
10. Critical path considerations – Cadence/Tanner/Mentor Graphics.
11. Layout design, LVS, Back annotation- Cadence/TANNER/ Mentor Graphics

P: 30 - Total Hours:30

OUTCOMES:

After successful completion of the course, the students shall be able to

- Design digital circuits using verilog HDL
- Estimate and analyze the static and dynamic power of a digital system using EDA tools

- Estimate and analyze the timing performance of a digital system using EDA tools
- Develop digital systems meeting the functionality ,timing and power constraints using EDA tools
- Design layouts and schematic of digital circuit using EDA tools
- Work in projects involving the design of digital ICs

SEMESTER-III

		L	T	P	C
ECC7121	**PROJECT WORK – PHASE I**	**0**	**0**	**12**	**6**

OBJECTIVES :

- To improve the professional competency and research aptitude by touching the areas which otherwise not covered by theory or laboratory classes.
- The project work aims to develop the work practice of students
- To apply theoretical and practical tools/techniques to solve real life problems related to industry and current research.

GUIDELINES:

The project work can be a design project/experimental project and/or computer simulation project on any of the topics in electronics design related topics. The project work is allotted individually on different topics. The students shall be encouraged to do their project work in the parent institute itself. If found essential, they may be permitted to continue their project outside the parent institute. Department will constitute an Evaluation Committee to review the project work. The Evaluation committee consists of at least three faculty members of which internal guide and another expert in the specified area of the project shall be two essential members.

The student is required to undertake the master research project phase 1 during the third semester and the same is continued in the 4thsemester (Phase 2). Phase 1 consist of preliminary thesis work, two reviews of the work and the submission of preliminary report. First review would highlight the topic, objectives, methodology and expected results. Second review evaluates the progress of the work, preliminary report and scope of the work which is to be completed in the 4th semester. The Evaluation committee consists of at least four faculty members of which internal guide and other experts in the specified area of the project shall be two essential members.

OUTCOMES:

At the end of the project work phase I the student will be able to

- learn the tool required for the design, analysis of their preliminary work
- Select the specific devices for different application along with justification
- Apply the practical knowledge while solving real time problems
- Incorporate cost effective and efficient project models
- Conclude the subject knowledge through proto type models
- Prepare an appropriate documentation

ECC7122	MINI PROJECT	L	T	P	C
		0	0	2	1

OBJECTIVES :

- To improve the professional competency and research aptitude of students

GUIDELINES:

1. This mini project will help the students to develop the work practice to apply the design skills for solving real life problems.
2. The project can be an experimental project on any of the topics in electronics and communication.
3. The project work is allotted individually on different topics.
4. The students shall be encouraged to do their project in the parent institute itself.
5. Department will constitute an Evaluation Committee to review the project periodically.

OUTCOMES:

At the end of the project the student will be able to

- Design and analyze an electronic system
- Fabricate an electronic system/device in their area of interest
- Improve their presentation skills
- Improve the documentation skills

SEMESTER-IV

		L	T	P	C
ECB7121	**PROJECT WORK – PHASE II**	**0**	**0**	**36**	**18**

OBJECTIVES:

- To improve the professional competency and research aptitude by touching the areas which otherwise not covered by theory or laboratory classes.
- The project work aims to develop the work practice in students to apply theoretical and practical tools/techniques to solve real life problems related to industry and current research.

GUIDELINES:

The project work can be a design project/experimental project and/or computer simulation project on any of the topics in electronics design related topics. The project work is allotted individually on different topics. The students shall be encouraged to do their project work in the parent institute itself. If found essential, they may be permitted to continue their project outside the parent institute. Department will constitute an Evaluation Committee to review the project work. The Evaluation committee consists of at least three faculty members of which internal guide and another expert in the specified area of the project shall be two essential members.

The student is required to undertake the master research project phase 1 during the third semester and the same is continued in the 4thsemester (Phase 2). Phase 1 consist of preliminary thesis work, two reviews of the work and the submission of preliminary report. First review would highlight the topic, objectives, methodology and expected results. Second review evaluates the progress of the work, preliminary report and scope of the work which is to be completed in the 4th semester. The Evaluation committee consists of at least four faculty members of which internal guide and other experts in the specified area of the project shall be two essential members.

OUTCOMES:

- At the end of the project work student will be able to use the theoretical and practical tools/techniques to solve real life problems related to industry and current research problems.

PROFESSIONAL ELECTIVES

ECCY009	INTERNET OF THINGS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce emerging technological options and platforms
- To explain the architecture of IoT
- To explore application development for mobile Platforms
- To Provide the appropriate IoT solutions and recommendations according to the applications used.

MODULE I THE IOT NETWORKING CORE 10

History of IoT, Review of Technologies involved in IoT Development, Internet/Web and Networking Basics -OSI Model, Data transfer referred with OSI Model, IP Addressing, Point to Point Data transfer, Point to Multi Point Data transfer & Network Topologies, Sub-netting, Network Topologies referred with Web, Introduction to Web Servers, Introduction to Cloud Computing. Basics of Big Data, Data Science.

MODULE II IOT ARCHITECTURE AND APPLICATIONS 09

Architecture: M2M – Machine to Machine, Web of Things, IoT protocol, Introduction to wireless and mobile networks, ZigBee, BLE mesh, WiFi, MQTT, LoRa-Machine Applications: Remote Monitoring & Sensing, Remote Controlling, Performance Analysis

MODULE III IOT PLATFORM OVERVIEW 09

Overview of IoT supported Hardware platforms such as: Raspberry pi, ARM Cortex Processors, Arduino and Intel Galileo boards. Network Fundamentals: Overview and working principle of Wired Networking equipment's – Router, Switches, Overview and working principle of Wireless Networking equipment's – Access Points, Hubs etc. Linux Network configuration Concepts: Networking configurations in Linux Accessing Hardware & Device Files interactions.

MODULE IV IOT APPLICATION DEVELOPMENT 09

Application Protocols-MQTT, REST/HTTP, CoAP, MySQL -Back-end Application - Design Apache for handling HTTP Requests, PHP & MySQL for data processing, MongoDB Object type Database, HTML, CSS &jQuery for UI Designing, JSON lib for data processing, Security & Privacy during development, Application

Development for mobile Platforms: Overview of Android / IOS 10 25 47 /97 App Development tools

MODULE V CASE STUDY & ADVANCED IOT APPLICATIONS 08

IoT applications in home, infrastructures, buildings, security, Industries, Home appliances, other IoT electronic equipments. Use of Big Data and Visualization in IoT, Industry 4.0 concepts. Sensors and sensor Node and interfacing using any Embedded target boards

L:45, T:15 - Total Hours:60

8. Ronald L. Krutz, Russell Dean Vines “Cloud Security: A Comprehensive Guide to Secure Cloud Computing”, Wiley-India, 2010

OUTCOMES:

At the end of the course the student will be able to

- Articulate the main concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for state-of-the-art Internet of things
- Identify the architecture and infrastructure of IoT.
- Explain the core issues of IoT such as security, privacy, and interoperability
- Choose the appropriate technologies, algorithms, and approaches for the related issues.
- Identify problems, and explain, analyze, and evaluate various IoT solutions
- Attempt to generate new ideas and innovations in IoT.

ECCY040 ADVANCED DIGITAL SYSTEM DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide knowledge to design sequential and asynchronous sequential circuit.
- To introduce programmable logic devices and its application to circuit design
- To introduce the concepts involved in designing fault free circuits.

MODULE I SEQUENTIAL CIRCUIT DESIGN 09

Analysis of Clocked Synchronous Sequential Networks (CSSN) Modelling of CSSN – State Stable Assignment and Reduction – Design of CSSN – Design of Iterative Circuits, Design of Arithmetic circuits for Fast adder- Array Multiplier- Verilog design of clocked synchronous sequential circuits

MODULE II ASYNCHRONOUS SEQUENTIAL CIRCUIT DESIGN 09

Analysis of Asynchronous Sequential Circuit (ASC) – Flow Table Reduction – Races in ASC – State Assignment Problem and the Transition Table – Design of ASC using ASM charts – Derivation of SM charts, and Realization of SM charts.– Static and Dynamic Hazards – Essential Hazards – Designing vending Machine Controller – Mixed Operating Mode Asynchronous Circuits-Verilog design of Asynchronous sequential circuits

MODULE III DESIGNING WITH PROGRAMMABLE LOGIC DEVICES 09

ROM- Internal ROM structure – Implementation of Boolean functions using ROM-Design of Sequential circuits using ROM, PROM – Realization State machine using PLD, PAL, PLA, Programmable Gate Arrays, Programmable Logic sequencer, Field Programmable Gate Array Families. Verilog design of programmable logic devices

MODULE IV FAULT DIAGONOSIS AND TESTING 09

Fault detection and location, gate sensitivity, path sensitization, undetectable faults, bridging fault, two level circuit fault detection, Boolean difference -D algorithm - Tolerance techniques, compact testing technique; scan path testing, design for testability.

MODULE V SYSTEM DESIGN USING VERILOG 09

Hardware Modelling with Verilog HDL – Logic System, Data Types and Operators For Modelling in Verilog HDL - Behavioural Descriptions in Verilog HDL – HDL Based Synthesis – Synthesis of Finite State Machines– structural modeling – compilation and simulation of Verilog code –Test bench - Realization of combinational and sequential circuits using Verilog – Registers – counters – sequential machine – serial adder – Multiplier- Divider – Design of simple microprocessor

L:45 - Total Hours:45

5. S. Palnitkar, “Verilog HDL – A Guide to Digital Design and Synthesis”, Pearson , 2003.

OUTCOMES:

After successful completion of the course, the students will be able to

- To analyze clocked synchronous sequential circuits and design digital systems based on the given specifications.
- To analyze asynchronous sequential circuits and design digital systems based on the given specifications.
- To make state machines and ASM charts for the given design requirements.
- To select and use appropriate PLDs to realize digital systems based on the requirements.
- To perform fault diagnosis and testing in digital circuit
- To apply the digital system design principles and make projects based on the requirements.

ECCY041 CAD FOR VLSI CIRCUITS

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is to impart knowledge on

- The principles of operation of all the important modules that go into the construction of a complete VLSI CAD tool
- The standard cell based synthesis methodologies for digital VLSI.
- The floor planning and placement principles and related topics
- To use Computer Aided Design (CAD) VLSI design tools.

MODULE I VLSI DESIGN METHODOLOGIES 09

Introduction to VLSI Design methodologies - Review of Data structures and algorithms - Review of VLSI Design automation tools - Introduction to CAD tools - Evolution of Design Automation-Basic Transistor Fundamentals-CMOS realizations of basic gates - Modeling techniques, Types of CAD tools.

MODULE II PARTITIONING 09

Layout Compaction - Design rules - problem formulation - algorithms for constraint graph compaction - partitioning Classification of Partitioning Algorithms - Group Migration Algorithm, Simulated Annealing and Evolution, Other Partitioning Algorithms, Performance Driven Partitioning

MODULE III FLOOR PLANNING 09

Floor planning concepts - shape functions and floor plan sizing - Types of local routing problems - Area routing - channel routing - global routing - algorithms for global routing.

MODULE IV PLACEMENT 09

Problem Formulation, Classification of Placement Algorithms, Simulation Based Placement Algorithms, Partitioning Based Placement Algorithms, Other Placement Algorithms, Performance Driven Placement, Over-the-Cell Routing, Via Minimisation, Clock Routing, Power and Ground Routing

MODULE V MODELING AND SYNTHESIS 09

High level Synthesis - Hardware models - Internal representation - Allocation - assignment and scheduling - Simple scheduling algorithm - Assignment problem -

High level transformations. Introduction to Reconfigurable computing, FPGAs, the Altera Quartus II flow.

L:45 - Total Hours:45

REFERENCES

3. Samir Palnitkar, “Verilog HDL”, Second Edition, Pearson Education, 2004.
4. J.Bhaskar, “Verilog HDL Synthesis”, BS publications, 2001.

OUTCOMES:

On completion of the course the students will be able to

- Discuss the operation of complete VLSI CAD tool
- Perform high level synthesis
- Discuss floor planning concepts
- Design algorithms for placement and partitioning
- Develop hardware models and synthesis algorithms for VLSI CAD tools
- Use VLSI design automation tools

ECCY042 CMOS MIXED SIGNAL CIRCUIT DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is

- To know different mixed-signal circuit design methodologies.
- To acquire knowledge on design of sampling circuits and integrator.
- To discuss different design architectures in mixed signal mode.
- To gain knowledge on filter design in mixed signal mode.

MODULE I PLL AND SWITCHED CAPACITOR CIRCUITS 09

Characterization of a comparator, basic CMOS comparator design, analog multiplier design, PLL - simple PLL, charge-pump PLL, applications of PLL Switched Capacitor circuits - basic principles, some practical circuits such as switched capacitor integrator, biquad circuit, switched capacitor filter, switched capacitor amplifier, non-filtering applications of switched capacitor circuit such as programmable gate arrays, DAC and ADC, MOS comparators, modulators, rectifiers, detectors, oscillators.

MODULE II SAMPLING CIRCUITS 09

Sampling circuits: Basic sampling circuits for analog signal sampling, performance metrics of sampling circuits, different types of sampling switches. Sample-and-Hold Architectures: Open-loop & closed-loop architectures, openloop architecture with miller capacitance, multiplexed-input architectures, recycling architecture, switched capacitor architecture, current-mode architecture.

MODULE III DAC 09

Input/output characteristics of an ideal D/A converter, performance metrics of D/A converter, D/A converter in terms of voltage, current, and charge division or multiplication, switching functions to generate an analog output corresponding to a digital input. D/A converter architectures: Resistor-Ladder architectures, current-steering architectures.

MODULE IV ADC 09

Input/output characteristics and quantization error of an A/D converter, performance metrics of A/D converter. A/D converter architectures: Flash architectures, two-step architectures, interpolate and folding architectures,

pipelined architectures, Successive approximation architectures, interleaved architectures.

MODULE V FILTERS 09

Low Pass filters, active RC integrators, MOSFET-C integrators, transconductance-C integrator, discrete time integrators. Filtering topologies - bilinear transfer function and bi-quadratic transfer function.

L:45 - Total Hours:45

4. Gregorian, Temes, “Analog MOS Integrated Circuit for signal processing”, John Wiley & Sons, 1987.
5. Baker Li, Boyce, “CMOS: Circuit Design, layout and Simulation”, PHI, 2000.

OUTCOMES:

On completion of the course the students will be able to

- Describe the models for PLL circuits
- Summarize the low-voltage, low-power design techniques for mixed-signal CMOS ICs.
- Analyze CMOS based switched capacitor circuits.
- Design non-linear analog circuits and data converters.
- Design and analyze comparators, sample and hold circuits, switched capacitor circuits.
- To design and implement filters

ECCY043 CONTROL AREA NETWORK

L	T	P	C
3	0	0	3

OBJECTIVES:

The primary course objectives are

- To introduce the requirements of embedded networking
- To provide overview of CAN controller and its implementation.
- To explain CAN open configuration and its development tools.

MODULE I EMBEDDED NETWORK REQUIREMENTS 09

Embedded networking – code requirements – Communication requirements – Introduction to CAN open – CAN open standard – Object directory – Electronic Data Sheets & Device – Configuration files – Service Data Objectives – Network management CAN open messages – Device profile encoder.

MODULE II CAN OPEN 09

CAN open configuration – Evaluating system requirements choosing devices and tools – Configuring single devices – Overall network configuration – Network simulation – Network Commissioning – Advanced features and testing.

MODULE III CAN 09

Controller Area Network – Underlying Technology CAN Overview – Selecting a CAN Controller – CAN development tools.

MODULE IV IMPLEMENTATION OF CAN OPEN 09

Implementing CAN open Communication layout and requirements – Comparison of implementation methods – Micro CAN open – CAN open source code – Conformance test – Entire design life cycle, CAN Bus Analyzer.

MODULEV ISSUES 09

Physical layer – Data types – Object dictionary – Communication object identifiers – Emerging objects – Node states.

L: 45 - Total Hours:45

4. D.Paret, “Multiplexed Networks for Embedded Systems”, John Wiley & Sons, 2007

OUTCOMES:

On completion of the course the students will be able to

- Demonstrate embedded networking and its requirements.
- Describe CAN controller.
- Interpret the CAN message format.
- Determine system requirements for choosing devices and tools
- Implement CAN and discuss CAN issues.
- Explain different types of noise commonly found in embedded networks.

ECCY044 DISTRIBUTED EMBEDDED COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

The primary course objectives are

- The various hardware and software architectures used for distributed embedded computing.
- Distributed computing system models and Distributed databases.
- The infrastructure required to support an Internet connection, uses of common Internet protocols, and basic principles of the DNS.
- The distributed computing technologies.

MODULE I THE HARDWARE INFRASTRUCTURE 09

Broad Band Transmission facilities – Open Interconnection standards – Local Area Networks – wide Area Networks – Network management – Network Security – Cluster computers.

MODULE II INTERNET CONCEPTS 09

Capabilities and limitations of the internet – Interfacing Internet server applications to corporate databases HTML and XML Web page design and the use of active components.

MODULE III DISTRIBUTED COMPUTING USING JAVA 09

I/O streaming – Object serialization – Networking – Threading – RMI – multicasting – distributed databases – embedded java concepts – case studies.

MODULE IV EMBEDDED AGENT 09

Introduction to the embedded agents – Embedded agent design criteria – Behaviour based, Functionality based embedded agents – Agent co-ordination mechanisms and benchmarks embedded-agent. Case study: Mobile robots.

MODULE V EMBEDDED COMPUTING ARCHITECTURE 09

Synthesis of the information technologies of distributed embedded systems – analog/digital co-design – optimizing functional distribution in complex system design – validation and fast prototyping of multiprocessor system-on-chip – a new dynamic scheduling algorithm for real-time multiprocessor systems.

L:45 - Total Hours:45

4. Bernd Kleinjohann “Architecture and Design of Distributed Embedded Systems”, C-lab, Universitat Paderborn, Germany, Kluwer Academic Publishers, Boston, 2001.

OUTCOMES:

On completion of the course the students will able to

- Describe the hardware infra structure of distributed embedded system
- Elucidate the architecture of embedded web server
- Create JAVA constructs for distributed computing
- Designing and analyze high-performance Embedded system
- Analyze the performance of multiprocessor system on chip architecture
- Select suitable embedded architecture for distributed embedded system

ECCY045 EMBEDDED NETWORKING

L	T	P	C
3	0	0	3

OBJECTIVES:

The primary course objectives are

- To study the concepts of embedded networking
- To explore various bus architectures.
- To explore the fundamentals of embedded security.

MODULE I THE AUTOMOTIVE CAN BUS 09

Introduction-Concepts of Bus Access and arbitration – error processing and management – definition of the CAN protocol ISO 11898-1-error properties-detection and processing – framing, signal propagation-Bit synchronization-high speed CAN – low speed CAN-CAN components and development tools for CAN.

MODULE II UNIVERSAL SERIAL BUS 06

USB bus –Introduction –Speed Identification on the bus – USB States –USB bus communication: Packets –Data flow types –Enumeration –Descriptors –PIC 18 Microcontroller USB Interface –C Programs

MODULE III INDUSTRIAL NETWORKING PROTOCOL 09

LIN – Local Interconnect Network - Basic concept of the LIN 2.0 protocol - Fail-safe SBC – Gateways - Managing the application layers - Safe-by-Wire - Safe-by-Wire Plus - Audio-video buses - I2C Bus - D2B (Domestic digital) bus - MOST (Media oriented systems transport) bus - IEEE 1394 bus or 'FireWire'- profi bus

MODULE IV ETHERNET BASICS 06

Elements of a network – Inside Ethernet – Building a Network: Hardware options – Cables, Connections and network speed – Design choices: Selecting components –Ethernet Controllers – Using the internet in local and internet communications – Inside the Internet protocol.

MODULE V BLUETOOTH AND ZIGBEE 09

Bluetooth: Specifications- Bluetooth Radio- Type of Antenna, Antenna Parameters-Bluetooth Networking- Connection establishment procedure, Profile and usage model - Wireless networking, wireless network types, devices roles and states – IEEE 802.15.4 –Zigbee specifications- Zigbee stack protocol stack-PAN formation.

MODULE V IRF COMMUNICATION 06

Adhoc network, scatter net- GSM- Overview of IrDA, Home RF, Wireless LANs- IEEE 802.11x - NFC (near-field communication)- Wireless sensor networks – Introduction – Applications.

L: 45 - Total Hours:45

8. Shahin Farahani,"ZigBee Wireless Networks and Transceivers", Newnes Publications, 2008.

OUTCOMES:

On completion of the course the students will able to:

- Describe the components and significance of Embedded networking system
- Elucidate the principles of USB communications
- Create Embedded Ethernet controller
- Explain industrial networking protocols like I2C,D2B
- Use appropriate interfaces, protocols and buses in embedded systems
- Describe the architecture of Bluetooth and RF communication modules

ECCY046 EMBEDDED LINUX

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is

- To learn fundamentals of embedded linux.
- To familiarize the use of GNU tool chain.
- To develop embedded applications in linux platform.
- To interface peripheral devices in Linux platform.

MODULE I LINUX FUNDAMENTALS 09

Introduction - host-target development setup - hardware support -development languages and tools – RT Linux.

MODULE II KERNEL INITIALIZATION 09

Linux kernel and kernel initialization - system initialization – hardware support - boot loaders.

MODULE III DEVICE HANDLING 09

Device driver basics - module utilities - file systems - MTD subsystems –busy box

MODULE IV DEVELOPMENT TOOLS 09

Embedded development environment - GNU debugger - tracing & profiling tools - binary utilities - kernel debugging - debugging embedded Linux applications - porting Linux - Linux and real time - SDRAM interface.

MODULE V DEVICE APPLICATIONS 09

Asynchronous serial communication interface - parallel port interfacing -USB interfacing - memory I/O interfacing - using interrupts for timing.

L:45 - Total Hours:45

3. Mohamed Gad-el-Hak, editor," The MEMS Handbook", CRC press Baco Raton, 2000.
4. Tai Ran Hsu," MEMS & Micro systems Design and Manufacture" Tata McGraw Hill, New Delhi, 2002.

OUTCOMES

At the end of the course students will be able to

- Explain RT linux fundamentals
- Identify difference between RT linux and embedded linux versions
- Analyze kernel and system initialization and porting Linux
- Debug and develop embedded linux applications
- Interface peripheral devices in linux platform
- Explain device handling in linux OS.

ECCY047 HARDWARE-SOFTWARE CO-DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is to

- Introduce the basics of hardware software Co-design.
- Describe the modeling concepts in Co-design.
- Explain the applications of models.
- Apply object oriented techniques in Co-Design process.

MODULE I INTRODUCTION 09

Motivation hardware & software co-design, system design consideration, research scope & overviews Hardware Software back ground: Embedded systems, models of design representation, the virtual machine hierarchy, the performance3 modeling, Hardware Software development

MODULE II CO-DESIGN CONCEPTS 09

Functions, functional decomposition, virtual machines, Hardware Software partitioning, Hardware Software partitions, Hardware Software alterations, Hardware Software tradeoffs, co-design.

MODULE III METHODOLOGY FOR CO-DESIGN 09

Amount of unification, general consideration & basic philosophies, a framework for co-design Unified Representation for Hardware & Software: Benefits of unified representation, modeling concepts. An Abstract Hardware & Software Model: Requirement & applications of the models, models of Hardware Software system, an abstract Hardware Software models, generality of the model Performance Evaluation: Application of the abstract Hardware & Software model, examples of performance evaluation

MODULE IV OBJECT ORIENTED TECHNIQUES IN HARDWARE DESIGN 09

Motivation for object oriented technique, data types, modeling hardware components as classes, designing specialized components, data decomposition, and Processor example.

MODULE V SYSTEM ON CHIP 09

The System-on-Chip Concept, Four Design Principles in SoC Architecture, SoC Modeling in GEZEL. Applications: Trivium Crypto-Coprocessor, CORDIC Co-Processor.

L:45 - Total Hours:45

6. Peter Marwedel, G. Goosens, “Code Generation for Embedded Processors”, Kluwer Academic Publishers, 1995.
7. Ralf Niemann, Hardware/Software Co-Design for Data flow Dominated Embedded Systems, Springer, 1998

OUTCOMES:

At the end of the course students will be able to

- Describe the design methodologies used in the hardware software co-design
- Identify the core issues in co-design
- Describe the functions of co-design
- Assess the benefits of unified representation
- Evaluate the performance of the model
- Apply object oriented techniques in Hardware Design

ECCY048 IC PACKAGING AND INTERCONNECTS

L	T	P	C
3	0	0	3

OBJECTIVES:

- Outline packaging techniques and materials used for packaging.
- Understanding the assembly process in electronic design.
- Design PCB for various applications
- Testing and interconnections of electronic modules.

MODULE I PACKAGING TECHNIQUES 09

Introduction to packaging, Package design considerations, VLSI Assembly Techniques, Packaging fabrication technology, THM, Surface Mounting.

MODULE II SYSTEM ASSEMBLY 09

Design for Reliability – Fundamentals, Induced failures. IC Assembly – Purpose, Requirements, Technologies, Wire bonding, Tape Automated Bonding, Flip Chip, Wafer Level Packaging.

MODULE III INTERCONNECTS 09

Small, Intermediate and long interconnects in VLSI, Interconnect Parasitics: Resistance, Inductance and Capacitance. Interconnect RC Delays: Elmore Delay Calculation. Interconnect Models: Lumped RC Model, Distributed RC Model, Transmission line model. SPICE Wire Models: Distributed RC lines in SPICE, Transmission line models in SPICE.

MODULE IV CMOS REPEATER DRIVEN INTERCONNECTS 09

The Static Behavior-Switching Threshold, Noise Margins, The Dynamic Behavior-Computing the capacitances, Propagation Delay: First order Analysis, Propagation Delay from a Design perspective. Power, energy and Energy – Delay-Dynamic Power Consumption, Static Consumption, Transient analysis of repeater loaded interconnects and analysis of Power Consumption using SPICE

MODULE V ADVANCED INTERCONNECT TECHNIQUES 09

Reduced - swing Circuits, Current – mode Transmission Techniques, Clocking of high - speed systems, CNT and Optical Interconnects.

L: 45 - Total Hours:45

4. A.K. Goel, High-Speed VLSI Interconnections, Wiley Interscience, 2nd Edition, 2007.

OUTCOMES:

At the end of the course students will be able to

- Describe the different types IC packaging techniques
- Describe the multidisciplinary aspects of IC packaging like electrical, thermal, material, reliability and testability design.
- Model the interconnects inside the IC using suitable models
- Analyze the performance of the Interconnects using SPICE
- Analyze the performance of the CMOS driven interconnects.
- Describe the advanced Interconnect Techniques

ECCY049 LOW POWER VLSI DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

To impart knowledge on

- Power analysis used in CMOS devices.
- Various techniques to reduce the power consumption in VLSI Circuits.
- Various Low power Architectures.
- Algorithm and Architecture level methodologies on low power devices.

MODULE I DEVICE & TECHNOLOGY IMPACT ON LOW POWER 09

Need for low power VLSI chips, Sources of power dissipation on Digital Integrated circuits. Emerging Low power approaches. Physics of power dissipation in CMOS devices. Dynamic dissipation in CMOS, Transistor sizing & gate oxide thickness, Impact of technology Scaling, Technology & Device innovation.

MODULE II SIMULATION POWER ANALYSIS AND PROBABILISTIC POWER ANALYSIS 09

SPICE circuit simulators, gate level logic simulation, capacitive power estimation, static state power, gate level capacitance estimation, architecture level analysis, data correlation analysis in DSP systems. Monte Carlo simulation -Random logic signals, probability & frequency, probabilistic power analysis techniques, signal entropy.

MODULE III LOW POWER DESIGN 09

Circuit level: Power consumption in circuits. Flip Flops & Latches design, high capacitance nodes, low power digital cells library. Logic level: Gate reorganization, signal gating, logic encoding, state machine encoding, pre computation logic.

MODULE IV LOW POWER ARCHITECTURE SYSTEMS & CLOCK DISTRIBUTION 09

Power & performance management, switching activity reduction, parallel architecture with voltage reduction, flow graph transformation, low power arithmetic components, low power memory design, Power dissipation in clock distribution, single driver Vs distributed buffers, Zero skew Vs tolerable skew, chip and package co-design of clock network.

MODULE V ALGORITHM AND ARCHITECTURAL LEVEL METHODOLOGIES 09

Introduction, design flow, algorithmic level analysis and optimization, Architectural level estimation and synthesis.

L: 45 - Total Hours:45

6. Christian Piguet, “Low-power CMOS circuits: technology, logic design and CAD tools”, CRC Press, Taylor & Francis Group, 2006.

OUTCOMES:

After successful completion of the course, the students will be able to

- Describe the static and dynamic power dissipation in integrated chips.
- Estimate the power for simple models.
- Apply low power dissipation techniques in Clocking strategies and I/O circuits.
- Design low power arithmetic circuits and systems.
- Analyze design chips used for battery-powered systems and high-performance circuits not exceeding the power limits.
- Decide at which level of abstraction it is advantageous to implement low power techniques in a VLSI system design

ECCY050 MEMS SYSTEM DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is to

- Provide the basic of MEMS device fabrication
- Fulfill the need of electronic engineer who wants to create MEMS devices
- Introduce the concepts of MEMS Electronic Sensors, Optical and RF system

MODULE I INTRODUCTION TO MEMS 09

MEMS and Microsystems, Miniaturization, Typical products, Micro sensors, Micro actuation, MEMS with micro actuators, Micro accelerometers and Micro fluidics, MEMS materials, Micro fabrication.

MODULE II MECHANICS FOR MEMS DESIGN 09

Elasticity, Stress, strain and material properties, Bending of thin plates, Spring configurations, torsional deflection, Mechanical vibration, Resonance, Thermo mechanics - actuators, force and response time, Fracture and thin film mechanics.

MODULE III ELECTRO STATIC DESIGN 09

Electrostatics: basic theory, electro static instability. Surface tension, gap and finger pull up, Electro static actuators, Comb generators, gap closers, rotary motors, inch worms, Electromagnetic actuators. bistable actuators

MODULE IV CIRCUIT AND SYSTEM ISSUES 09

Electronic Interfaces, Feedback systems, Noise , Circuit and system issues, Case studies - Capacitive accelerometer, Peizo electric pressure sensor, Modelling of MEMS systems, CAD for MEMS.

MODULE V INTRODUCTION TO OPTICAL AND RF MEMS 09

Optical MEMS - System design basics - Gaussian optics, matrix operations, resolution. Case studies, MEMS scanners and retinal scanning display, Digital Micro mirror devices. RF MEMS - design basics, case study - Capacitive RF MEMS switch, performance issues.

4. Tai Ran Hsu," MEMS & Micro systems Design and Manufacture" Tata McGraw Hill, New Delhi, 2002.

OUTCOMES

At the end of the course students will be able to

- Describe the process of MEMS fabrication
- Describe the mechanisms followed to design MEMS devices
- Elucidate the methods to make electrostatic MEMS sensors
- Elucidate the methods to make MEMS based accelerometers
- Describe the MEMS based RF Switches
- Discuss the MEMS based optical scanners and sensors

ECCY051	OPTIMIZATION TECHNIQUES AND THEIR APPLICATIONS IN VLSI DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

The objective of the course is

- To introduce the concepts of statistical modeling and test generation patterns
- To describe and analyze placement and power estimation
- To discuss about various convex optimization techniques
- To gain knowledge in fundamentals of generic algorithms

MODULE I STATISTICAL MODELING 07

Modeling sources of variations, Monte Carlo techniques, Process variation modeling- Pelgrom's model, Principal component based modeling, Quad tree based modeling, Performance modeling-Response surface methodology, delay modeling, interconnect delay models.

MODULE II STATISTICAL PERFORMANCE, POWER AND YIELD ANALYSIS 07

Statistical timing analysis, parameter space techniques, Bayesian networks Leakage models, High level statistical analysis, Gate level statistical analysis, dynamic power, leakage power, temperature and power supply variations, High level yield estimation and gate level yield estimation.

MODULE III CONVEX OPTIMIZATION 08

Convex sets, convex functions, geometric programming, trade-off and sensitivity analysis, Generalized geometric programming, geometric programming applied to digital circuit gate sizing, Floor planning, wire sizing, Approximation and fitting-Monomial fitting, Max- monomial fitting, Posynomial fitting.

MODULE IV GENETIC ALGORITHM 08

Introduction, GA Technology-Steady State Algorithm-Fitness Scaling-Inversion GA for VLSI Design, Layout and Test automation- partitioning-automatic Placement, Routing technology, Mapping for FPGA- Automatic test generation- Partitioning algorithm Taxonomy-Multiway Partitioning Hybrid genetic-encoding- local improvement-WDFR-Comparison of Cas-Standard cell placement-GASP algorithm-unified algorithm.

MODULE V GENETIC ENCODING 07

Hybrid genetic-genetic encoding- Local Improvement - WDFR- Comparison of Gas- Standard cell Placement- GASP Algorithm- Unified Algorithm.

MODULE VI GA ROUTING PROCEDURES AND POWER ESTIMATION 08

Global routing-FPGA technology mapping-circuit generation-test generation in a GA frame work-test generation procedures. Power estimation-application of GA-Standard cell placement-GA for ATG-problem encoding- fitness function- GA vs Conventional algorithm.

3. Stephen Boyd, Lieven Vandenberghe “Convex Optimization”, Cambridge University Press, 2004.

OUTCOMES:

On completion of the course the students will be able to

- Apply Knowledge on basic optimization techniques.
- Select and implement appropriate formulations and algorithms.
- Develop the capability to analyze on various statistical methods in analyzing a Sample.
- Develop the capability to analyze the concepts of genetic algorithms and genetic encoding.
- Apply engineering tools and techniques to conduct engineering VLSI design.
- To adopt these techniques in solving problems in the real world.

ECCY052 PROGRAMMING VERILOG HDL

L	T	P	C
2	0	2	3

OBJECTIVES:

The primary course objectives is to

- Learn the hardware description language Verilog HDL.
- Learn the hardware description language Verilog AMS
- Become proficient in a design methodology that uses Verilog HDL to create and verify systems implemented using PLDs
- Strengthen and extend your understanding of the theory and fundamentals of digital system design.

MODULE I VERILOG HDL INTRODUCTION 06+06

Verilog as HDL, Levels of Design Description, Concurrency, Simulation and Synthesis, Language Constructs and Conventions, Keywords, Identifiers, White Space, Characters, Comments, Numbers, Strings, Logic Values, Strengths, Data Types, Scalars and Vectors, Parameters, Operators. Modeling at Dataflow Level, Continuous Assignment Structure, Delays Assignment to Vector, Operators

Laboratory Practice

Simulation of Verilog HDL programs illustrating the language constructs in the module I

MODULE II GATE LEVEL MODELING 06+06

Modeling at Gate Level, Gate Primitives, Tristate Gates, Array of Instances of Primitives, Design of Flip-Flops with Gate Primitives, Delay, Strengths and Construction Resolution, Net Types, Switch Level Modeling, Basic Transistor Switches, CMOS Switches, Bi-Directional Gates, Time Delays with Switch Primitives, Instantiation with 'Strengths' and 'Delays' Strength Contention with Trireg Nets.

Laboratory Practice

Simulation of Verilog HDL programs illustrating the language constructs in the module II

MODULE III BEHAVIORAL MODELING 06+06

Functional Bi-furcation, 'Intial' and ‘always’ Construct, 'Wait' Construct, Multiple ‘always’ Block, Designsat Behavioral Level, Blocking and Non-Blocking Assignments, The 'Case' Statement, Simulation Flow, 'If' an 'if-Else' Constructs, 'Assign- De-Assign' Constructs, 'Repeat' Construct, for loop, 'The Disable'

Construct, 'While Loop', Forever Loop, Parallel Blocks, Force-Release, Construct, Event. System Tasks, Functions and Compiler Directives, Path Delays, Module Parameters. System Tasks and Functions File Based Tasks and Functions, Computer Directives, Hierarchical Access, User Defined Primitives.

Laboratory Practice

Simulation of Verilog HDL programs illustrating the language constructs in the module III

MODULE IV SEQUENTIAL CIRCUIT DESCRIPTION 06+06

Basic Memory Components, Functional Register, Finite State Machine Coding, Sequential Synthesis. Components Test and Verification: Test Bench - Combinational Circuits Testing, Sequential Circuit Testing, Test Bench Techniques, Design Verification, Assetion Verification.

Laboratory Practice

Simulation of Verilog HDL programs illustrating the language constructs in the module IV

MODULEV VERILOG-AMS 06+06

Introduction to Verilog-AMS: Verilog Family of Languages Mixed Signal Simulators, Applications of Verilog-AMS, Analog Modeling. Language Reference: Basics, Data Types, Signals, Expressions, Analog Behavior.

Laboratory Practice

Simulation of Verilog AMS HDL programs illustrating the language constructs in the module V

L: 30, P: 30 - Total Hours:60

4. Advanced Digital Design with Verilog HDL - Michel D. Ciletti, PHI, 2009.
5. Kenneth S Kundert, Olaf Zinke, Designers Guide to Verilog AMS, Springer, 2004

OUTCOMES:

On completion of the course the students will be able to

- Differentiate sequential language and concurrent language

- Design and verify combinational logic circuits using Verilog HDL
- Design and verify sequential logic circuits using Verilog HDL
- Implement RTL models on FPGAs
- Model Analog circuits using Verilog AMS.
- Design digital and mixed signal systems using Verilog HDL

ECCY053 REAL TIME SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is

- To know the fundamentals of Real Time systems
- To know the concepts related to Scheduling and Programming Languages
- To describe of real time database and communication
- To understand fault tolerance and techniques

MODULE I INTRODUCTION TO REAL TIME SYSTEM 09

Introduction – characterizing real time system -Performance Measures for Real Time Systems – Estimating Program Run Times – Task Assignment and Scheduling.

MODULE II PROGRAMMING LANGUAGES AND TOOLS 09

Desired language characteristics – Data typing – Control structures – Facilitating Hierarchical Decomposition, Packages, Run time Error handling – Overloading and Generics – Multitasking – Timing Specifications – Programming Environments – Run time support.

MODULE III REAL TIME DATABASES 09

Basic Definition, Real time Vs General Purpose Databases, Main Memory Databases, Transaction priorities, Transaction Aborts, Concurrency control issues, Disk Scheduling Algorithms, Two – phase Approach to improve Predictability – Maintaining Serialization Consistency – Databases for Hard Real Time Systems.

MODULE IV REAL TIME COMMUNICATION 09

Communications media, Network Topologies, Protocols- contention based, Token based, Stop-and-Go multihop, Polled Bus, Hierarchical Round Robin Protocol, Deadline-Based Protocols, Fault Tolerant Routing.

MODULE V FAULT TOLERANT AND EVALUATION TECHNIQUES 09

Fault Tolerance Techniques – Fault Types – Fault Detection-Fault Error containment- Redundancy- Reliability Evaluation Techniques – Obtaining parameter values, Reliability models for Hardware Redundancy – Software error models.

L: 45 - Total Hours:45

REFERENCES

4. Peter D. Lawrence, “Real Time Micro Computer System Design – An Introduction”, McGraw Hill, 1988.
5. S.T. Allworth and R.N.Zobel, “Introduction to real time software design”, Macmillan

OUTCOMES:

At the end of the course students will be able to

- Describe the characteristics of real time system
- Apply scheduling algorithms based on application
- Analyze real-time systems designs
- Identify the fault tolerants in real time system
- Apply reliable evaluation techniques
- Design the real time systems

ECCY054 RECONFIGURABLE COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is

- To investigate the state-of-the-art in reconfigurable computing both from a hardware and software perspective.
- To make the students understand both how to architect a reconfigurable systems and how to apply them to solving challenging computational problems.
- To examine specific contemporary reconfigurable computing systems and to identify existing system limitations and to highlight opportunities for research in dynamic and partial configuration areas.
- To impart knowledge on the application development of reconfigurable systems.

MODULE I INTRODUCTION 09

Introduction, origin of reconfigurable computing, Reconfigurable computing architecture, Reconfigurable computing hardware, Logic—The Computational Fabric, The Array and Interconnect, Extending Logic, Configuration, Case Studies, Altera Stratix, Xilinx Virtex-II Pro.

MODULE II RECONFIGURABLE COMPUTING ARCHITECTURES AND SYSTEMS 09

Reconfigurable Processing Fabric Architectures, RPF Integration into Traditional Computing Systems, Reconfigurable computing systems, Early Systems, PAM, VCC, and Splash , Small-scale Reconfigurable Systems, Circuit Emulation, Accelerating Technology, Reconfigurable Supercomputing, Other System Issues, The Future of Reconfigurable Systems.

MODULE III PROGRAMMING RECONFIGURABLE SYSTEMS, COMPUTATION MODELS AND SYSTEM ARCHITECTURES 09

Computation Models -- Challenges, Common Primitives, Dataflow, Sequential Control, Data Parallel, Data-centric , Multi-threaded, Other Compute Models, System Architectures - Streaming Dataflow, Sequential Control, Bulk Synchronous Parallelism, Data Parallel, Cellular Automata, Multi-threaded, Hierarchical Composition.

MODULE IV FPGA DESIGN 09

FPGA Physical Design Tools -Technology mapping - Placement & routing - Register transfer (RT)/Logic Synthesis - Controller/Data path synthesis - Logic minimization.

MODULE V APPLICATION DEVELOPMENT 09

Implementing Applications with FPGAs, Strengths and Weaknesses of FPGAs, Application Characteristics and Performance, General Implementation Strategies for FPGA-based Systems, Implementing Arithmetic in FPGAs, Hardware/Software Partitioning.

L:45 - Total Hours:45

REFERENCES

4. P. Lysaght and W. Rosenstiel, “New Algorithms, Architectures and Applications for Reconfigurable Computing”, Springer, 2005.
5. W. Wolf, “FPGA Based System Design”, Prentice-Hall, 2004.

OUTCOMES:

After successful completion of the course, the students will be able to

- Describe various Reconfigurable Computing architectures systems
- Summarize the Programming model for Reconfigurable computing
- Design reconfigurable computing architectures on FPGA
- Apply Reconfigurable computing for hardware and software partitioning.
- Design and build an SOPC for a specific application.
- Develop arithmetic and complex digital architectures on FPGA

ECCY055 RF INTEGRATED CIRCUIT DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is to impart knowledge on

- The different RF transceiver architectures
- The methods of designing passive components in IC
- The design of LNA, Power amplifiers, PLL, Oscillators and frequency synthesizers

MODULE I TRANSCEIVER ARCHITECTURES 09

Introduction to MOSFET Physics, Noise: Thermal, shot, flicker, popcorn noise, Two port Noise theory, Noise Figure, THD, IP2, IP3, Sensitivity, SFDR, Phase noise - Specification distribution over a communication link, Homodyne Receiver, Heterodyne Receiver, Image reject, Low IF Receiver Architectures upconversion Transmitter.

MODULE II IMPEDANCE MATCHING AND AMPLIFIERS 09

S-parameters with Smith chart, Passive IC components, Impedance matching networks, Common Gate, Common Source Amplifiers, OC Time constants in bandwidth estimation and enhancement, High frequency amplifier design, Power match and Noise match, Single ended and Differential LNAs, Terminated with Resistors and Source Degeneration LNAs. MOSFET amplifier controlled by AGC.

MODULE III FEEDBACK SYSTEMS AND POWER AMPLIFIERS 09

Stability of feedback systems: Gain and phase margin, Root-locus techniques, Time and Frequency domain considerations , Compensation, General model – Class A, AB, B, C, D, E and F amplifiers, Power amplifier Linearisation Techniques, Efficiency boosting techniques, ACPR metric, Design considerations.

MODULE IV PLL AND FREQUENCY SYNTHESIZERS 09

Linearised Model, Noise properties, Phase detectors, Loop filters and Charge pumps, Integer- N frequency synthesizers, Direct Digital Frequency synthesizers.

MODULE V MIXERS AND OSCILLATORS 09

Mixer characteristics, Non-linear based mixers, Quadratic mixers, Multiplier based mixers, Single balanced and double balanced mixers, subsampling mixers,

Oscillators describing Functions, Colpitts oscillators, Resonators, Tuned Oscillators, Negative resistance oscillators, Phase noise.

L: 45 - Total Hours:45

2. B.Razavi, “RF Microelectronics”, Pearson Education, 1997.
3. Jan Crols, Michiel Steyaert, “CMOS Wireless Transceiver Design”, Kluwer Academic Publishers, 1997.
4. B.Razavi, “Design of Analog CMOS Integrated Circuits”, McGraw Hill, 2001.

OUTCOMES:

After successful completion of the course, the students will be able to

- Describe and select appropriate RF transceiver architectures based on the requirements.
- Describe the different topologies used to design passive components in IC
- Analyze Low Noise and power amplifier circuits and design the same based on the given requirements.
- Describe and analyze the performance of frequency synthesizers
- Analyze mixers and oscillator circuits and design the same based on the given requirements.
- Design the building blocks of RF transceiver system

ECCY056	RISC PROCESSOR ARCHITECTURE AND PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES:

The objective of the course is to

- Compare CISC and RISC processor architectures
- Understand AVR microcontroller architecture and memory organization
- Introduce MSP430 processor architecture and programming
- Familiarize ARM architecture ,application and programming

MODULE I AVR MICROCONTROLLER ARCHITECTURE 09

Architecture – memory organization – addressing modes – instruction set – programming techniques –Assembly language & C programming-Development Tools – Cross Compilers – Hardware Design Issues.

MODULE II MSP430 ARCHITECTURE AND PROGRAMMING 09

Architecture – CPU features – Memory structure - Interrupts – Input and Output– On-chip peripherals – Addressing modes – Instruction sets – Hardware considerations – Flash memory – Programming in Low power design.

MODULE III ARM ARCHITECTURE AND PROGRAMMING 09

ARM processor fundamentals – Registers – Pipeline – Exceptions – Interrupts– core extension- Instruction set – Thumb instruction set - 'C' programming –writing and optimising ARM assembly code – Instruction scheduling – Register allocation – conditional execution – Looping constraints.

MODULE IV ARM APPLICATION DEVELOPMENT 09

Exception Handling – Interrupts – Interrupt handling schemes- Firmware and boot loader – Example: Standalone - Embedded Operating Systems –Fundamental Components - Example Simple little Operating System.

MODULE V DESIGN WITH ARM MICROCONTROLLERS 09

Integrated development environment – Standard I/O Libraries - User Peripheral Devices – Application of ARM processor: Wireless Sensor Networks.

L: 45 - Total Hours:45

REFERENCES:

1. Dananjay V. Gadre “Programming and Customizing the AVR microcontroller”,McGrawHill 2001

4. Steve Furber, “ARM system on chip architecture”, Addison Wesley, 2000.

OUTCOMES

On completion of program students will be able to:

- Analyze the features of CISC and RISC processor architectures
- Develop simple application program using AVR microcontroller
- Integrate low power modes with embedded system application
- Implement scheduling mechanism in ARM processor.
- Use simple little operating system for suitable applications.
- Estimate energy consumption of ARM processor in wireless sensor network

ECCY057 SEMICONDUCTOR MEMORIES

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is

- To study the concepts of random access memory and nonvolatile memories.
- To learn the implementation methods and problems in designing and making semiconductor memories
- To understand different fault modeling and testing techniques.

MODULE I STATIC RANDOM ACCESS MEMORY TECHNOLOGY 09

Static Random Access Memories (SRAMs): SRAM Cell Structures-MOS SRAM Architecture-MOS SRAM Cell and Peripheral Circuit Operation-Bipolar SRAM Technologies-Silicon On Insulator (SOI) Technology-Advanced SRAM Architectures and Technologies-Application Specific SRAM

MODULE II DYNAMIC RANDOM ACCESS MEMORY TECHNOLOGY 09

Dynamic Random Access Memories (DRAMs): DRAM Technology Development-CMOS DRAMs-DRAMs Cell Theory and Advanced Cell Structures - BiCMOS, DRAMs-Soft Error Failures in DRAMs-Advanced DRAM Designs and Architecture-Application, Specific DRAMs.

MODULE III NONVOLATILE MEMORIES 09

Masked Read-Only Memories (ROMs)-High Density ROMs-Programmable Read-Only Memories (PROMs)-Bipolar PROMs-CMOS, PROMs-Erasable (UV) - Programmable Road-Only Memories (EPROMs)-Floating-Gate EPROM Cell-One-Time Programmable (OTP) EPROMs-Electrically Erasable PROMs (EEPROMs)-EEPROM Technology And Arcitecture - Nonvolatile SRAM-Flash Memories (EPROMs or EEPROM)-Advanced Flash Memory Architecture.

MODULE IV MEMORY FAULT MODELING, TESTING, AND MEMORY DESIGN FOR TESTABILITY AND FAULT TOLERANCE 09

RAM Fault Modeling, Electrical Testing, Pseudo Random Testing-Megabit DRAM Testing-Nonvolatile Memory Modeling and Testing-IDDQ Fault Modeling and Testing-Application Specific Memory Testing

MODULE V RELIABILITY AND RADIATION EFFECTS 09

General Reliability Issues-RAM Failure Modes and Mechanism-Nonvolatile Memory Reliability-Reliability Modeling and Failure Rate Prediction-Design for Reliability-Reliability Test Structures-Reliability Screening and Qualification. RAM Fault Modeling, Electrical Testing, Psuedo Random Testing-Megabit DRAM Testing-Nonvolatile Memory Modeling and Testing-IDDQ Fault Modeling and Testing-Application Specific Memory Testing.

L: 45 - Total Hours:45

2. Tegze P.Haraszti, “CMOS Memory Circuits”, Kluwer Academic publishers, 2001.
3. Betty Prince, “Emerging Memories: Technologies and Trends”, Kluwer Academic publishers, 2002.

OUTCOMES:

On completion of the course the students will be able to

- Discuss the advancements in the SRAM and DRAM based memory technologies
- Analyze and interpret the design parameters used to design memory cells
- Describe the advancements in non-volatile memory design techniques
- Use fault modeling techniques to test memories
- Select appropriate technique to test memory devices
- To use suitable memory devices based on the requirements

ECCY058 SIGNAL INTEGRITY FOR HIGH SPEED DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is

- Analysis of high speed circuits with signal behavior modeling
- Signaling and coding strategies to improve signal integrity in high-speed serial link.
- Analysis procedures for signal measurements.
- clock distributions and clock oscillators

MODULE I SIGNAL PROPAGATION ON TRANSMISSION LINES 07

Transmission line equations, wave solution, wave vs. circuits, initial wave, delay time, Characteristic impedance , wave propagation, reflection, and bounce diagrams Reactive terminations – L, C , static field maps of micro strip and strip line cross-sections, per unit length parameters.

MODULE II PRINTED CIRCUIT BOARDS 07

PCB layer stackups and layer/Cu thicknesses, cross-sectional analysis tools, Zo and Td equations for microstrip and stripline Reflection and terminations for logic gates, fan-out, logic switching, input impedance into a transmissionline section, reflection coefficient, skin-effect, dispersion.

MODULE III MULTI-CONDUCTOR TRANSMISSION LINES AND CROSS TALK 09

Multi-conductor transmission-lines, coupling physics, per MODULE length parameters, Near and far-end cross-talk, minimizing cross-talk (stipline and microstrip) Differential signalling, termination, balanced circuits ,S-parameters, Lossy and Lossles models.

MODULE IV NON-IDEAL EFFECTS 07

Non-ideal signal return paths – gaps, BGA fields, via transitions, Parasitic inductance and capacitance, Transmission line losses – Rs, tan d, routing parasitic, Common-mode current, differential-mode current, Connectors.

MODULE V POWER CONSIDERATIONS AND SYSTEM DESIGN 09

SSN/SSO, DC power bus design, layer stack up, SMT decoupling, Logic families, power consumption, and system power delivery, Logic families and speed Package

types and parasitic, SPICE, IBIS models, Bit streams, PRBS and filtering functions of link-path components, Eye diagrams, jitter, inter-symbol interference Bit-error rate, Timing analysis

MODULE VI CLOCK DISTRIBUTION AND CLOCK OSCILLATORS 6

Timing margin, Clock slew, low impedance drivers, terminations, Delay Adjustments, canceling parasitic capacitance, Clock jitter

L: 45 - Total Hours:45

REFERENCES

4. Eric Bogatin, Signal Integrity – Simplified, Prentice Hall PTR, 2003.

OUTCOMES:

On completion of the course the students will be able to

- Describe the signal behavior on high speed circuits such as cross talk in transmission lines
- Analyze the fundamentals of high speed signal propagation in circuits and cables.
- Summarize power consideration and timing analysis and other losses in system design
- Apply the measurement techniques in clock oscillators
- Determine where signal integrity issues
- Solve problems of poor digital signal integrity.

ECCY059 SOC DESIGN AND VERIFICATION

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is to

- Understand the System on Chip with its need, evolution, challenges, goals, superiority over system on board & stacked ICs in package.
- Analyze how the SoCs are designed in industrial environment using different design methodologies
- Analyze the on chip components interconnected in a SoC.
- Analyze and solve problems in traditional bus based communication architecture using network on chip.

MODULE I INTRODUCTION TO LOGIC GATES & COMBINATIONAL LOGIC NETWORKS 09

Introduction to logic gates & combinational logic networks, Combinational Logic Functions, Combinational Network Delay. Logic and interconnect Design. Power Optimization.

MODULE II SYSTEM ON CHIP DESIGN PROCESS 09

A canonical SoC Design, SoC Design flow waterfall vs spiral, topdown vs Bottomup. Specification requirement, Types of Specification , System Design process, System level design issues, Soft IP Vs Hard IP, Design for timing closure, Logic design issues Verification strategy, Onchip buses and interfaces, Low Power, Manufacturing test strategies.

MODULE III MACRO DESIGN PROCESS 09

Top level Macro Design, Macro Integration, Soft Macro productization, Developing hard macros, Design issues for hard macros, Design, System Integration with reusable macros.

MODULE IV SOC VERIFICATION 09

Verification technology options, Verification methodology, Verification languages, Verification approaches, and Verification plans. System level verification, Block level verification, Hardware/software co-verification and Static net list verification. Verification architecture, Verification components, Introduction to VMM, OVM and UVM.

MODULE V DESIGN OF COMMUNICATION ARCHITECTURES FOR SOCS 09

On chip communication architectures, System level analysis for designing communication, Design space exploration, Adaptive communication architectures, Communication architecture tuners, Communication architectures for energy/battery efficient systems. Introduction to bus functional models and bus functional model based verification.

L: 45 - Total Hours:45

5. A.A. Jerraya, W.Wolf “Multiprocessor Systemsonchips”, M K Publishers.
6. Dirk Jansen “The EDA HandBook”, Kluwer Academic Publishers.

OUTCOMES:

On completion of the course the students will be able to

- Describe CMOS VLSI Technologies along with performance parameters
- Analyze the top-down and bottom-up design flows, timing problems.
- Design and implement data path elements such as ALUs, Multipliers.
- Investigate various power optimization and timing issues related to complex digital systems
- Use techniques for designing MP SoCs and its performance.
- Illustrate the bus architectures of NOCs and routing.

ECCY060 SOFTWARE FOR EMBEDDED SYSTEMS

L	T	P	C
2	0	2	3

OBJECTIVES:

The objective of the course is

- To know the basic conepts of C Programming.
- To Introduce the GNU C Programming Tool Chain in Linux.
- To understand embedded C and Embedded OS
- To introduce the phython language

MODULE I C PROGRAMMING CONCEPTS 09

Programming Style - Declarations and Expressions - Arrays, Qualifiers and Reading Numbers - Decision and Control Statements - Programming Process - More Control Statements - Variable Scope and Functions - C Preprocessor - Advanced Types - Simple Pointers - Debugging and Optimization.

Laboratory Practice

Practice C language programs illustrating the language constructs in the module I using C compiler

MODULE II C PROGRAMMING TOOLCHAIN IN LINUX 09

Introduction to GCC - Debugging with GDB - The Make utility - GNU Configure and Build System - GNU Binary utilities - Profiling - using gprof - Memory Leak Detection with valgrind - Introduction to GNU C Library .

Laboratory Practice

Practice C language programs using GCC compiler in Linux environment

MODULE III EMBEDDED C USING 8051 MICROCONTROLLER 09

Adding Structure to ‘C’ Code: Object oriented programming with C, Header files for Project and Port, Examples. Meeting Real-time constraints: Creating hardware delays - Need for timeout mechanism - Creating loop timeouts - Creating hardware timeouts.

Laboratory Practice

Practice Embedded C language programs illustrating the language construct in the module III using C Keil µvision IDE

MODULE IV EMBEDDED OS 09

Creating embedded operating system: Basis of a simple embedded OS, Introduction to sEOS, Using Timer 0 and Timer 1, Portability issue, Alternative system architecture, Important design considerations when using sEOS.

Laboratory Practice

Practice Embedded C language programs illustrating the language construct in the module IV using C Keil µvision IDE

MODULE V PYTHON PROGRAMMING 09

Basics of PYTHON Programming Syntax and Style – Python Objects– Dictionaries – comparison with C programming on Conditionals and Loops – Files – Input and Output – Errors and Exceptions – Functions – Modules – Classes and OOP – Execution Environment.

Laboratory Practice

Practice basic Python language programs illustrating the language construct in the module V using Python interactive shell software

L: 45 - Total Hours: 45

REFERENCES:

3. Michael J Pont, “Embedded C”, Pearson Education, 2007.
4. Mark Lutz, “Learning Python Powerful OOPs”, O’reilly, 2011.

OUTCOMES

At the end of the course students will be able to

- Write, compile and debug programs in C language.
- compile the program in linux operating system
- Develop program using embedded C
- Describe operating system in embedded system
- Program using phython language
- Design projects using embedded C and python language

ECCY061 TESTING OF VLSI CIRCUITS

L	T	P	C
3	0	0	3

OBJECTIVES:

To impart knowledge on

- Automated and manual techniques for generating tests for faults in digital circuits and systems.
- Generation of test vectors for combinational and sequential circuits
- Fault diagnosis algorithms

MODULE I BASICS OF TESTING AND FAULT MODELING 09

Introduction to Testing - Faults in digital circuits - Modeling of faults - Logical Fault Models - Fault detection - Fault location - Fault dominance - Logic Simulation - Types of simulation - Delay models - Gate level Event-driven simulation.

MODULE II TEST GENERATION FOR COMBINATIONAL AND SEQUENTIAL CIRCUITS 09

SPICE circuit simulators, gate level logic simulation, capacitive power estimation, static state power, gate level capacitance estimation, architecture level analysis, data correlation analysis in DSP systems. Monte Carlo simulation -Random logic signals, probability & frequency, probabilistic power analysis techniques, signal entropy.

MODULE III DESIGN FOR TESTABILITY 09

Design for Testability - Ad-hoc design - Generic scan based design - Classical scan based design – System level DFT approaches.

MODULE IV SELF TEST AND TEST ALGORITHMS 09

Built-In Self-Test - Test pattern generation for BIST - Circular BIST - BIST Architectures - Testable Memory Design – Testing of Embedded RAMs.

MODULE V FAULT DIAGNOSIS 9

Logic Level Diagnosis - Fault Diagnosis for Combinational Circuits - Self-checking design - System Level Diagnosis.

L: 45 - Total Hours:45

REFERENCES

4. A.L. Crouch, "Design Test for Digital ICs and Embedded Core Systems", Prentice Hall International, 2002.

OUTCOMES:

After successful completion of the course, the students will be able to

- Detect faults in digital circuit using logicalfault models
- Generate test vectors using stuck at models for combinational circuits
- Design circuit with testability perspective
- Design test vector for sequential circuits
- Describe the architecture of built in self test and fault diagnosis.
- Diagnose faults in digital circuits at system level

ECCY062 VLSI DIGITAL SIGNAL PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is

- To learn a complete DSP system and fundamentals of pipelining and parallel processing on FIR filters
- To study the concepts of retiming, unfolding, transforms and rank order filters.
- To understand different fast convolution algorithms and pipelining/parallel processing techniques for IIR filters
- To study different bit level architectures and their complexities

MODULE I INTRODUCTION TO DSP SYSTEMS, PIPELINING AND PARALLEL PROCESSING OF FIR FILTERS 09

Introduction to DSP systems, Data flow and Dependence graphs - critical path, Loop bound, iteration bound, Longest path matrix algorithm, Pipelining and Parallel processing of FIR filters, Pipelining and Parallel processing for low power.

MODULE II RETIMING, ALGORITHMIC STRENGTH REDUCTION 09

Retiming – definitions and properties, Unfolding – an algorithm for unfolding, properties of unfolding, sample period reduction and parallel processing application, Algorithmic strength reduction in filters and transforms – 2-parallel FIR filter, 2-parallel fast FIR filter, DCT architecture, rank-order filters, Odd Even merge-sort architecture

MODULE III FAST CONVOLUTION, PIPELINING AND PARALLEL PROCESSING OF IIR FILTERS 09

Fast convolution – Cook-Toom algorithm, modified Cook-Toom algorithm, Pipelined and parallel recursive filters – Look-Ahead pipelining in first-order IIR filters, Look-Ahead pipelining with power-of-2 decomposition, Parallel processing of IIR filters, combined pipelining and parallel processing of IIR filters.

MODULE IV SCALING, ROUND-OFF NOISE, BIT-LEVEL ARITHMETIC ARCHITECTURES 09

Scaling and round-off noise – scaling operation, round-off noise, state variable description of digital filters, scaling and round-off noise computation, round-off noise in pipelined IIR filters, Bit-level arithmetic architectures – parallel multipliers

with sign extension, parallel carry-ripple and carry-save multipliers, Design of Lyon's bit-serial multipliers using Horner's rule, bit-serial FIR filter, CSD representation, CSD multiplication using Horner's rule for precision improvement.

MODULE V NUMERICAL STRENGTH REDUCTION, SYNCHRONOUS, WAVE AND ASYNCHRONOUS PIPELINING 09

Numerical strength reduction – sub expression elimination, multiple constant multiplication, iterative matching, synchronous pipelining and clocking styles, clock skew in edge-triggered single phase clocking, two-phase clocking, wave pipelining. Asynchronous pipelining bundled data versus dual rail protocol.

2. U. Meyer – Baese, "Digital Signal Processing with Field Programmable Gate Arrays", Springer, Second Edition, 2004.

OUTCOMES:

After successful completion of the course, the students will be able to

- Describe various algorithms that can be designed and applied on application specific VLSI architecture
- Design fast convolution algorithms and high speed multipliers to improve the efficiency of DSP processors
- Analyze different number representations, arithmetic based binary representations and complexities involved in it for easier numerical computations on processors
- Identify solution for any research queries on DSP processors.
- Develop advanced DSP filters and processors.
- Develop optimized DSP designs by employing the advantages of VLSI concepts.

ECCY063 WSN ARCHITECTURE AND PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is

- To understand the concepts of sensor networks.
- To understand the programming models of sensor node.
- To learn various algorithms in WSN
- To identify the operating system and processor used in particular sensor node.
- To do case study on WSN applications in surveillance and monitoring.

MODULE I INTRODUCTION TO WSN 09

Introduction to WSN-Challenges for WSNs - Characteristic requirements - Required mechanisms - Single-node architecture -Hardware components-Energy consumption of sensor nodes-Operating systems and execution environments

MODULE II NETWORK ARCHITECTURE 09

Sensor network scenarios- Optimization goals and figures of merit- Design principles for WSNs, Service interfaces of WSNs- Gateway concepts

MODULE III SENSOR NETWORK IMPLEMENTATION 09

Sensor Programming- Introduction to TinyOS Programming and fundamentals of Programming sensors using nesC - Algorithms for WSN – Techniques for Protocol Programming.

MODULE IV PROGRAMMING MODELS 09

An Introduction to the Concept of Cooperating Objects and Sensor Networks-System Architectures and Programming Models

MODULE V WSN APPLICATIONS 09

Case Studies- Wireless sensor networks for environmental monitoring, Wireless sensor networks with mobile nodes, Autonomous robotic teams for surveillance and monitoring, Inter-vehicle communication networks.

L: 45 - Total Hours:45

REFERENCES:

4. SeetharamanIyengar, Nandhan, “Fundamentals of Sensor Network Programming Applications and Technology”, John Wiley & Sons,Inc. 2008.

OUTCOMES

At the end of the course students will be able to

- Identify and relate the concepts and components of sensor architecture.
- To understand the programming models of sensor node.
- Choose various algorithms in WSN based on requirement
- Identify the operating system and processor used in particular sensor node.
- Understand usage of WSN in various applications like surveillance and monitoring.
- Implement the techniques for WSN programming

ECCY064 DSP SYSTEM DESIGN

L	T	P	C
2	0	0	2

OBJECTIVES:

The objective of the course is to

- State the basic of DSP processors and its types.
- Infer the architecture and peripherals of DSP processors
- Develop the coding skill for code composer studio and matlab tools
- Design DSP based system with advanced technologies.

MODULE I INTRODUCTION OF DSP PROCESSORS 07

Need for Special Digital Signal Processors, Processor trends: Von Newmann versus Harvard architecture, Architectures of superscalar, fixed and floating point processors, New Digital Signal Processing hardware trends, Selection of processors.

MODULE II DSP PROCESSOR ARCHITECTURE 07

Introduction to a popular DSP from Texas Instruments (TMS330C6000 Series), CPU Architecture, CPU Data Paths and Control, Internal Data / Program Memory. On chip peripherals: Timers - Multi channel buffered serial ports - Extended Direct Memory Access, Interrupts, Pipelining.

MODULE III DSK AND CODE COMPOSER STUDIO 08

Design aspects: Introduction to the C6713 DSK- Code Composer Studio IDE - Matlab and basic skills, FIR filter design techniques and tools, IIR filter design techniques and tools, Sampling, quantization and working with the AIC23 codec, Writing efficient code: optimizing compiler - effect of data types and memory map. TMS320C6713 Assembly language Programming: Instructions Set and Addressing Modes – Linear Assembly.

MODULE IV ADVANCED DSP PROCESSOR 08

Present trends: Current trend in Digital Signal Processors: DSP Controllers – Architecture of TMS320C28XX series DSP and its applications. Architecture trends of other Texas Instruments DSP processors, Analog Devices DS processors: Introduction to Sharc / Tiger Sharc / Blackfin series, Other major vendors in the DSP market and the latest trends.

L: 30 - Total Hours:30

10. John G Proakis, Dimitris G Manolakis Introduction to Digital Signal Processing, 1stEdition.

OUTCOMES:

At the end of the course students will be able to

- Familiarize with the needs of special digital signal processors.
- Get basic knowledge about the DSP processor architectures.
- Learn the design aspects of various DSP processors using different software tools.
- Acquire the current trends in digital signal processors with examples.
- Design trainer kit based on DSP processors and its interfacing techniques.
- Develop the DSP processor based system.

ECCY065 ELECTRONIC DESIGN AUTOMATION TOOLS

L	T	P	C
2	0	0	2

OBJECTIVES:

- To study the concepts of simulation and synthesis of HDLs.
- To understand the concepts of SPICE and circuit simulation using Spice.
- To study the concepts of S-edit and Layout design using S-edit.

MODULE I BASICS OF EDA 07

VLSI Design Automation tools-An overview of the features of practical CAD tools – Modelsim - Leonardo spectrum -Xilinx ISE - Quartus II - VLSI backend tools –IC Station, Cadence and Synopsis.

MODULE II SYNTHESIS OF HDLS 08

Logic synthesis in Verilog – Logic synthesis in VHDL - Finite State Machines synthesis in Verilog – Finite State Machines synthesis in VHDL - Memory synthesis in Verilog – Memory synthesis in VHDL - Performance driven synthesis.

MODULE III SIMULATION OF SPICE 07

Circuit description - DC circuit analysis- Transient analysis - AC circuit analysis - Advanced spice commands and analysis- Models for Semiconductor diodes - Models for Bipolar Junction Transistors - Models for Field Effect Transistors.

MODULE IV SCHEMATIC AND LAYOUT DESIGN 08

Creating a project- Drawing, Selecting and Editing objects -Creating a schematic - Creating a symbol - Importing and Exporting Net lists and Schematics - Simulation and Waveform probing.

L: 30 - TOTAL:30

REFERENCES

1. M.J.S.Smith, Application Specific Integrated Circuits, Pearson Education, 2008.
2. M.H.Rashid, Spice for Circuits and Electronics using Pspice, PHI 1995.
3. J.Bhaskar, Verilog Synthesis Primer, Prentice Hall, 1998.
4. J.Bhaskar, A Verilog Primer, Prentice Hall, 2005

OUTCOMES:

On completion of the course the students will be able to

- Explain basic definitions and overview of different tools.
- Understand how to solve simulation, Synthesis of HDLs.
- Select and implement appropriate formulations and algorithms from SPICE.
- Choose an appropriate method to design an S-edit.
- Learn the process of netlist and schematic creation.
- Study the basics of SPICE modeling of all types of transistors.

ECCY066 PROGRAMMING SYSTEM VERILOG

L	T	P	C
2	0	0	2

OBJECTIVES:

The objective of the course is to

- Learn the basics of functional verification languages
- Impart knowledge on the OOPS concepts
- Learn the system verilog language constructs and the functional verification procedures

MODULE I INTRODUCTION TO FUNCTIONAL VERIFICATION LANGUAGES 07

Introduction to System Verilog, System Verilog data types. System Verilog procedures, Interfaces and modports, System Verilog routines.

MODULE II INTRODUCTION TO OBJECT ORIENTED PROGRAMMING 07

Classes and Objects, Inheritance, Composition, Inheritance v/s composition, Virtual methods. Parameterized classes, Virtual interface, Using OOP for verification, System Verilog Verification Constructs.

MODULE III SYSTEM VERILOG ASSERTIONS 08

Introduction to assertion, Overview of properties and assertion, Basics of properties and sequences, Advanced properties and sequences, Assertions in design and formal verification, some guidelines in assertion writing.

MODULE IV COVERAGE DRIVEN VERIFICATION AND FUNCTIONAL COVERAGE IN SV 08

Coverage Driven Verification, Coverage Metrics, Code Coverage, Introduction to functional coverage, Functional coverage constructs, Assertion Coverage, Coverage measurement, Coverage Analysis SV and C interfacing: Direct Programming Interface (DPI)

L: 30 - Total Hours:30

REFERENCES

4. Bergeron, Janick “Writing Testbenches using System Verilog” 2006
5. Meyyappan Ramanathan “A Practical Guide for System Verilog Assertions”

OUTCOMES:

On completion of the course the student will be able to

- Describe the OOPS concepts
- Describe system verilog syntax and language construct
- Write basic system Verilog constructs to verify digital systems
- Develop assertion constructs to verify digital systems
- Use EDA tools for formal verification
- Write system verilogconstructs for convergence driven verification procedures

ECCY067 SENSORS LAB

L	T	P	C
0	0	2	1

OBJECTIVES:

The objective of the course is to

- Introduce different types of sensors
- Learn how to condition the sensor signal
- Study the operations of the sensors

LIST OF EXPERIMENTS

1. To study characteristics of photosensor and its applications.
2. To study the operation and measurement of thermocouple sensors and to estimate their response times.
3. To study the operation of piezoelectric sensors and its applications.
4. To study the operation of sound sensors and its applications.
5. To study the operation of force sensitivity sensors and analyze the parameters.

Labs incorporate implementation concerns involving interference, isolation, linearity, amplification, and grounding.

OUTCOMES:

At the end of the course students will be able to

- Design and build a temperature control system using analog hardware.
- Measure several sensors and choose one appropriate for the system they are designing and building.
- Measure the sensor output and do the appropriate conversions.
- Identify the sensor for specific application
- Analyze the behavior of the sensors
- Develop the embedded system based application

ECCY068	SCRIPTING LANGUAGE FOR VLSI DESIGN AUTOMATION	L	T	P	C
		1	0	0	1

OBJECTIVES:

The objective of the course is to

- Learn the fundamentals of scripting languages to operate the EDA tools
- Study the basic syntax constructs of PERL scripts

MODULE I OVERVIEW OF SCRIPTING LANGUAGES 05

Overview of Scripting Languages – PERL, CGI, VB Script, Java Script.

MODULE II PERL 10

PERL: Operators, Statements Pattern Matching etc. Data Structures, Modules, Objects, Tied Variables. Debugger Internal & Externals Portable Functions. Extensive Exercises for Programming in PERL.

L: 15 - Total Hours:15

REFERENCES

1. Randal L, Schwartz Tom Phoenix, “Learning PERL”, Oreilly Publications, 3rd Edn., 2000
2. Larry Wall, Tom Christiansen, John Orwant, “Programming PERL”, Oreilly Publications, 3rd Edn., 2000
3. Tom Christiansen, Nathan Torkington, “PERL Cookbook”, Oreilly Publications, 3rd Edn,2000

OUTCOMES:

On completion of the course the students will be able to

- Describe the fundamentals of scripting languages
- Write basic scripts to operate EDA tools
- Apply scripting language like PERL to improve EDA tool flow
- Create scripts to synthesize Digital circuits using CAD tools

EIC6212	INDUSTRIAL AUTOMATION USING PLC, DCS ANDSCADA	L	T	P	C
		3	0	2	4

OBJECTIVES:

- To introduce emerging technological options and platforms for industrial automation
- To explain the architecture of PLC, DCS AND SCADA
- To explore application development for industrial automation
- To provide the appropriate automation solutions and recommendations according to the applications.

MODULE I PROGRAMMABLE LOGIC CONTROLLER: HARDWARE AND BASICOPERATIONS 09

Hard relay logic, Evolution of Programmable logic controller (PLC), Hardware Components of PLC: Input / Output modules, power supplies, isolators, CPU, memory and programming devices. Generic Control system Architecture and IO Assignments, General PLC programming procedures, Developing fundamental ladder logic programs (as per IEC61131) for Boolean operations, PLC basic functions : Register basics, timer functions, counter functions.

MODULE II PROGRAMMABLE LOGIC CONTROLLERS: ADVANCED OPERATIONS, INSTALLATIONS AND TROUBLESHOOTING 09

Developing program control instructions, data manipulation instructions, math instructions, sequencer and shift register instructions, Functional block diagram, Analog control using PLC (PID control configuration, PLC installations and troubleshooting

MODULE III DISTRIBUTED CONTROL SYSTEM 07

Introduction to Distributed control system, DCS architectures, Comparison, Local Control Unit, Process interfacing issues, Operator interfaces - Low level and high level operator interfaces - Operator displays - Engineering interfaces - Low level and high level engineering interfaces, Latest trends and developments.

MODULE IV DATA ACQUISITION SYSTEMS 07

Computers in Process control – Data Loggers – Data acquisition systems (DAS) – Alarms – Direct Digital Control (DDC) - Characteristics of digital data – Controller software – Computer Process interface for Data Acquisition and control –

Supervisory Digital Control (SCADA) -introduction and brief history of SCADA – SCADA Hardware and software.

MODULE V NETWORKING **07**

Signal Conditioners and Its interfaces

LABORATORY: **21**

1. Development of Ladder program for simple on-off applications.
2. Development of Ladder program for Timing and counting applications.
3. Automatic control of level using PLC.
4. Automatic control of temperature using PLC.
5. Control of pressure loop using PLC.
6. Configuring Screens and Graphics (DCS).
7. Programming of HMI interfacing with PLC.
8. Tag Assignments to Field Devices in DCS.
9. DCS based PID control for level loop.
10. Communicate PLC with SCADA.

L: 39, P:21 - Total Hours:60

REFERENCES:

1. W. Bolton, "PLC", Elsevier Newnes 4 John W. Webb Ronald & Areis "PLC"
2. Clarke, G., Reynders, D. and Wright, E., "Practical Modern SCADA Protocols: DNP3, 60870.5 and Related Systems", Newnes, 1st Edition, 2004.
3. Petrezeulla," Programmable Controllers", Mc-Graw Hill, 1989.
4. Michael P.Lucas, "Distributed Control System", Van Nastrand Reinhold Company, New York, 1986.

OUTCOMES:

At the end of the course the student will be able to

- Articulate the main concepts, key technologies, strengths, and limitations of industrial automation
- Identify the architecture and infrastructure of PLC.
- Explain the core issues of PLC, DCS AND SCADA
- Choose the appropriate technologies, algorithms, and approaches for the related issues.
- Identify problems, and explain, analyze, and evaluate various automation solutions
- Attempt to generate new ideas and innovations in industrial automation.

MACY081 SIGNAL PROCESSING TECHNIQUES

L	T	P	C
3	1	0	4

OBJECTIVES:

- To impart knowledge on various mathematical transforms for signal processing applications.

MODULE I LAPLACE TRANSFORMATION FOR CONTINUOUS TIME SIGNALS 06+03

Analog and digital signals - Periodic and aperiodic signals – Spectrum estimation for bandwidth requirement – Laplace Transform – Spectrum estimation – Frequency filtering for spectrum modification – Inverse Laplace Transform – Modified spectrum to get filtered signal.

MODULE II Z -TRANSFORM FOR DISCRETE TIME SIGNALS 12+03

Sampling of continuous time signals for discrete time signals – Nyquist sampling rate - Need for discrete signals – Quantization for digital signal – Z-Transform – Spectrum estimation of discrete signals – Digital filters for spectrum modification – Inverse Z-Transform – Modified spectrum to get filtered signal – Impulse response of digital systems - Bilinear Transform for analog to digital conversion.

MODULE III DISCRETE FOURIER TRANSFORM FOR DISCRETE TIME SIGNALS 09+03

Discrete Fourier Transform – Comparison with Z-Transform – Discrete signals for spectrum estimation – Digital filters for spectrum modification – Inverse Discrete Fourier Transform to get filtered signals – Fast Fourier Transform with decimation in either time or frequency

MODULE IV DISCRETE COSINE TRANSFORM FOR DISCRETE TIME SIGNALS 09+03

One dimensional and two dimensional discrete Cosine transforms – comparison with discrete Fourier transform – image processing applications like filtering & compression – two dimensional transform implementation using successive one dimensional transform – application in JPEG standards – zig zag scanning of transform coefficients – inverse discrete Cosine transform – expansion of compressed images – calculation of compression parameters of CF,RMSE,PSNR &CQ.

MODULE V DISCRETE WAVELET TRANSFORM FOR DISCRETE TIME SIGNALS 09+03

Wavelet – Haar wavelet – one dimensional forward discrete wavelet transform – comparison with discrete Cosine transform - two dimensional transform implementation using successive one dimensional transform – Image processing applications like filtering & compression - application in JPEG 2000 standards – zig zag scanning of transform coefficients – inverse discrete wavelet transform – expansion of compressed images – calculation of compression parameters of CF,RMSE,PSNR &CQ.

L – 45; T – 15; - Total Hours– 60

REFERENCES:

4. K.Rao and P.Yip – Discrete Cosine Transform – Elsevier – 1990.
5. D.Sundararajan – Discrete Wavelet Transform: A Signal Processing Approach – Wiley – 2015.

OUTCOMES:

On completion of the course, the student will be able to apply

- Laplace transform for analog signal analysis.
- Z Transform for discrete signal analysis.
- Discrete Fourier Transform for discrete signal analysis.
- Discrete Cosine Transform for discrete signal analysis.
- Discrete Wavelet Transform for discrete signal analysis.
- Inverse Discrete Wavelet Transform for discrete signal analysis

GENERAL ELECTIVES

GECY101	PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The objectives of the course would be to make the students

- Learn to e valuate and choose an optimal project and build a project profile.
- Attain knowledge on risk identification and risk analysis
- Gain insight into a project plan and components
- Familiar with various gamut of technical analysis for effective project implementation
- Learn to apply project management techniques to manage resources.

MODULE I INTRODUCTION & PROJECT INITIATION 09

Introduction to project and project management - projects in contemporary organization – The project life cycle - project initiation - project evaluation methods & techniques - project selection criteria - project profile.

MODULE II RISK ANALYSIS 09

Sources of risk: project specific - competitive - industry specific - market and international risk – perspectives of risk – risk analysis: sensitivity analysis - scenario analysis - breakeven analysis - simulation analysis - decision tree analysis – managing/mitigating risk – project selection under risk.

MODULE III PROJECT PLANNING & IMPLEMENTATION 09

Project planning – importance – functions - areas of planning - project objectives and policies - steps in planning process - WBS – capital requirements - budgeting and cost estimation - feasibility analysis - creation of project plan – project implementation: pre-requisites - forms of project organization

MODULE IV TECHNICAL ANALYSIS 09

Technical analysis for manufacturing/construction/infrastructure projects – process/technology - materials and inputs - product mix - plant capacity – plant location and site selection – plant layout - machinery and equipment – structures and civil works – schedule of project implementation – technical analysis for software projects.

MODULE V PROJECT MANAGEMENT TECHNIQUES 09

Project scheduling - network construction – estimation of project completion time – identification of critical path - PERT & CPM – crashing of project network - complexity of project scheduling with limited resources - resource allocation - resource leveling – resource smoothing – overview of project management software.

Total Hours: 45

REFERENCES:

1. Projects: Planning, Analysis, Financing, Implementation and Review, Prasanna Chandra, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2004.
2. Project Management and Control, Narendra Singh, Himalaya Publishing, New Delhi, 2015.
3. A Management Guide to PERT/CPM, Jerome, D. Weist and Ferdinand K. Levy, Prentice Hall of India, New Delhi, 1994.

OUTCOMES:

On successfully completing this course, the student will be able to:

- Evaluate & select a project as well as develop a project profile.
- Identify various risks associated with the project and manage it effectively.
- Prepare a detailed project plan addressing its components.
- Perform technical analysis for effective project implementation
- Apply project management techniques for maximizing resource utilization.

GECY102 SOCIETY, TECHNOLGY & SUSTAINABILITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- To understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

MODULE I TECHNOLOGY AND ITS IMPACTS 09

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life – Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT 09

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change.

MODULE III SOCIETY AND TECHNOLOGY 09

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of technology – Impact of technology on developer and consumers – Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE 09

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media

Technology – Information Systems Technology – Nanotechnology – Space Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY 09

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

4. Martin A.A Abraham, “Sustainability Science and Engineering: Defining Principles”, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

OUTCOMES:

At the end of this course, the students will be able to

- Understand the benefits of modern technology for the well-being of human life.
- Connect sustainability concepts and technology to the real world challenges.
- Find pathway for sustainable society.

GECY103 ARTIFICIAL INTELLIGENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- Expose the history and foundations of artificial intelligence.
- Showcase the complexity of working on real time problems underlying the need for intelligent approaches.
- Illustrate how heuristic approaches provide a good solution mechanism.
- Provide the mechanisms for simple knowledge representation and reasoning.
- Highlight the complexity in working with uncertain knowledge.
- Discuss the current and future applications of artificial intelligence.

MODULE I HISTORY AND FOUNDATIONS 08

History – Scope – Influence from life – Impact of computing domains - Agents in environments - Knowledge representation – Dimensions of Complexity – Sample application domains – Agent structure.

MODULE II SEARCH 10

Problem solving as search – State spaces – Uninformed Search – Heuristic search – Advanced search – Constraint satisfaction - Applications.

MODULE III KNOWLEDGE REPRESENTATION AND REASONING 10

Foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

MODULE IV REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE 08

Probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference, sample applications.

MODULE V CASE STUDY AND FUTURE APPLICATIONS 09

Design of a game / Solution for problem in student's domain. Natural Language processing, Robotics, Vehicular automation – Scale, Complexity, Behaviour – Controversies.

Total Hours: 45

TEXT BOOK:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2010.
2. David Poole, Alan Mackworth, Artificial Intelligence: Foundations of Computational Agents, Cambridge University Press, 2010.
3. Nils J. Nilsson, The Quest for Artificial Intelligence, Cambridge University Press, Online edition, 2013.
4. Keith Frankish, William M. Ramsey (eds) The Cambridge Handbook of Artificial Intelligence, Cambridge University Press, 2014.

OUTCOMES:

Students who complete this course will be able to

- Discuss the history, current applications, future challenges and the controversies in artificial intelligence.
- Apply principle of AI in the design of an agent and model its actions.
- Design a heuristic algorithm for search problems.
- Analyze and represent the fact using logic for a given scenario
- Represent uncertainty using probabilistic models
- Develop a simple game or solution using artificial intelligence techniques.

GECY104 GREEN COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To focus on the necessity of green computing technology.
- To expose to various issues with information technology and sustainability.
- To attain knowledge on the technologies for enabling green cloud computing.
- To elaborate on the energy consumption issues
- To illustrate a Green and Virtual Data Center
- To develop into a Green IT Technologist.

MODULE I INTRODUCTION 08

Trends and Reasons to Go Green - IT Data Center Economic and Ecological Sustainment - The Growing Green Gap: Misdirected Messaging, Opportunities for Action - IT Data Center “Green” Myths and Realities - PCFE Trends, Issues, Drivers, and Related Factors - Green Computing and Your Reputation- Green Computing and Saving Money- Green Computing and the Environment

MODULE II CONSUMPTION ISSUES 10

Minimizing power usage – Cooling - Electric Power and Cooling Challenges - Electrical – Power -Supply and Demand Distribution - Determining Energy Usage - From Energy Avoidance to Efficiency - Energy Efficiency Incentives, Rebates, and Alternative Energy Sources - PCFE and Environmental Health and Safety Standards- Energy-exposed instruction sets- Power management in power-aware real-time systems.

MODULE III NEXT-GENERATION VIRTUAL DATA CENTERS 09

Data Center Virtualization - Virtualization beyond Consolidation - Enabling Transparency - Components of a Virtual Data Center - Datacenter Design and Redesign - Greening the Information Systems - Staying Green- Building a Green Device Portfolio- Green Servers and Data Centers- Saving Energy

MODULE IV TECHNOLOGIES FOR ENABLING GREEN AND VIRTUAL DATA CENTERS 08

Highly Effective Data Center Facilities and Habitats for Technology - Data Center Electrical Power and Energy Management - HVAC, Smoke and Fire Suppression

- Data Center Location - Virtual Data Centers Today and Tomorrow - Cloud Computing, Out-Sourced, and Managed Services.

MODULE V SERVERS AND FUTURE TRENDS OF GREEN COMPUTING 10

Server Issues and Challenges - Fundamentals of Physical Servers - Types, Categories, and Tiers of Servers - Clusters and Grids - Implementing a Green and Virtual Data Center - PCFE and Green Areas of Opportunity- 12 Green Computer Companies- What's in Green computer science-Green off the Grid aimed for data center energy evolution-Green Grid Consortium- Green Applications- Green Computing Making Great Impact On Research

Total Hours: 45

REFERENCES:

6. Marty Poniatowski, "Foundation of Green IT: Consolidation, Virtualization, Efficiency, and ROI in the Data Center", Printice Hall, ISBN: 9780-1-3704-375-0, 2009.

OUTCOMES:

Students who complete this course will be able to

- Demonstrate issues relating to a range of available technologies, systems and practices to support green computing.
- Select appropriate technologies that are aimed to reduce energy consumption.
- Address design issues needed to achieve an organizations' green

computing objectives.

- Analyze the functionality of Data Centers.
- Critically evaluate technologies and the environmental impact of computing resources for a given scenario.
- Compare the impact of Green Computing with other computing techniques.

GECY105 GAMING DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To master event-based programming
- To learn resource management as it relates to rendering time, including level-of-detail and culling.
- To become familiar with the various components in a game or game engine.
- To explore leading open source game engine components.
- To become familiar of game physics.
- To be compatible with game animation.

MODULE I INTRODUCTION 09

Magic Words – What Skills Does a Game Designer Need? – The Most Important Skill -The Five Kinds of Listening-The Secret of the Gifted.

MODULE II THE DESIGNER CREATES AN EXPERIENCE 09

The Game Is Not the Experience -Is This Unique to Games? -Three Practical Approaches to Chasing Rainbows -Introspection: Powers, Perils, and Practice -Dissect Your Feelings -Defeating Heisenberg -Essential Experience.

MODULE III THE EXPERIENCE IN THE PLAYER MIND AND GAME MECHANICS 08

Modeling – Focus -Empathy – Imagination – Motivation – Space – Objects, Attributes, and States – Actions – Rules.

MODULE IV GAMES THROUGH AN INTERFACE 09

Breaking it Down – The Loop of Interaction – Channels of Information – Other Interface.

MODULE V BALANCED GAME MECHANICS 10

Balance – The Twelve Most Common Types of Game Balance – Game Balancing Methodologies - Balancing Game Economies.

Total Hours: 45

REFERENCES:

1. Jesse Schell, "The Art of Game Design: A Book of Lenses", 2nd Edition

ISBN-10: 1466598646, 2014.

2. Ashok Kumar, Jim Etheredge, Aaron Boudreaux, “Algorithmic and Architectural Gaming Design: Implementation and Development", 1st edition, Idea Group, U.S ISBN-10: 1466616342, 2012.

4. James M. Van Verth, Lars M. Bishop "Essential Mathematics for Games and Interactive Applications", Third Edition, A K Peters / CRC Press, ISBN-10: 1482250926, 2015.

OUTCOMES:

Students who complete this course will be able to

- Realize the basic history and genres of games
- Demonstrate an understanding of the overall game design process
- Explain the design tradeoffs inherent in game design
- Design and implement basic levels, models, and scripts for games
- Describe the mathematics and algorithms needed for game programming
- Design and implement a complete three-dimensional video game

GECY106 SOCIAL COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To create original social applications, critically applying appropriate theories and effective practices in a reflective and creative manner.
- To critically analyze social software in terms of its technical, social, legal, ethical, and functional features or affordances.
- To encourage the development of effective communities through the design, use, and management of social software.
- To give students with a base of knowledge and advances for them to critically examine existing social computing services.
- To plan and execute a small-scale research project in social computing in a systematic fashion.
- To become familiar with the concept of computational thinking.

MODULE I BASIC CONCEPTS 09

Networks and Relations: Relations and Attributes, Analysis of Network Data, Interpretation of network data -New Social Learning – Four Changes that Shift Work - Development of Social Network Analysis: Sociometric analysis and graph theory, Interpersonal Configurations and Cliques – Analysing Relational Data.

MODULE II SOCIAL LINK 09

Individual Actors, Social Exchange Theory, Social Forces, Graph Structure, Agent Optimization Strategies in Networks – Hierarchy of Social Link Motivation- Social Context.

MODULE III SOCIAL MEDIA 08

Trends in Computing – Motivations for Social Computing – Social Media: Social relationships, Mobility and Social context – Human Computation – Computational Models- Business use of social Media.

MODULE IV SOCIAL INFORMATION FILTERING 09

Mobile Location Sharing – Location based social media analysis – Social Sharing and Social Filtering – Automated recommender Systems – Traditional and Social Recommender Systems.

MODULE V SOCIAL NETWORK STRATEGY 10

Application of Topic Models – Opinions and Sentiments – Recommendation Systems – Language Dynamics and influence in online communities – Psychometric analysis – Case Study: Social Network Strategies for surviving the zombie apocalypse.

Total Hours: 45

REFERENCES:

6. Jennifer Golbeck, “Analyzing the Social Web”, Elsevier Publication, 2013.
7. Huan Liu, John Salerno, Michael J. Young, “Social computing and Behavioral Modeling”, Springer Publication, 2009.

OUTCOMES:

Students who complete this course will be able to

- Realize the range of social computing applications and concepts.
- Analyze data left after in social media.
- Recognize and apply the concepts of computational models underlying social computing.
- Take out simple forms of social diagnostics, involving network and language models, applying existing analytic tools on social information.
- Evaluate emerging social computing applications, concepts, and techniques in terms of key principles.
- Design and prototype new social computing systems.

GECY107 SOFT COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

The aim of the course is to

- Enumerate the strengths and weakness of soft computing
- Illustrate soft computing methods with other logic driven and statistical method driven approaches
- Focus on the basics of neural networks, fuzzy systems, and evolutionary computing
- Emphasize the role of euro-fuzzy and hybrid modeling methods
- Trace the basis and need for evolutionary computing and relate it with other soft computing approaches

MODULE I SOFT COMPUTING - BASICS 06

Soft computing – Hard Computing – Artificial Intelligence as the basis of soft computing – Relation with logic driven and statistical method driven approaches- Expert systems – Types of problems: Classification, Functional approximation, Optimizations – Modeling the problem – Machine Learning – Hazards of Soft Computing – Current and future areas of research

MODULE II ARTIFICIAL NEURAL NETWORK 12

Artificial Neuron – Multilayer perceptron – Supervised learning – Back propagation network –Types of Artificial Neural Network: Supervised Vs Un Supervised Network – Radial basis function Network – Self Organizing Maps – Recurrent Network – Hopfield Neural Network – Adaptive Resonance Theory – Issues in Artificial Neural Network – Applications

MODULE III FUZZY SYSTEMS 09

Fuzzy Logic – Membership functions – Operators – Fuzzy Inference systems – Other sets: Rough sets, Vague Sets – Fuzzy controllers - Applications

MODULE IV NEURO FUZZY SYSTEMS 09

Cooperative Neuro fuzzy systems – Neural network driven fuzzy reasoning – Hybrid Neuro fuzzy systems – Construction of Neuro Fuzzy systems: Structure Identification phase, Parameter learning phase – Applications

MODULE V EVOLUTIONARY COMPUTING 09

Overview of evolutionary computing – Genetic Algorithms and optimization –

Genetic Algorithm operators – Genetic algorithms with Neural/Fuzzy systems – Variants of Genetic Algorithms– Population based incremental learning – Evolutionary strategies and applications

Total Hours: 45

TEXTBOOKS:

1. Samir Roy, “Introduction to Soft Computing: Neuro-Fuzzy and Genetic Algorithms”, Pearson, 2013
2. Anupam Shukla, Ritu Tiwari and Rahul Kala, “Real life applications of Soft Computing”, CRC press, 2010.
3. Fakhreddine O. Karray, “Soft Computing and Intelligent Systems Design: Theory, Tools and Applications”, Pearson, 2009

OUTCOMES:

At the end of the course the students will be able to

- Enumerate the theoretical basis of soft computing
- Explain the fuzzy set theory
- Discuss the neural networks and supervised and unsupervised learning networks
- Demonstrate some applications of computational intelligence
- Apply the most appropriate soft computing algorithm for a given situation

GECY108 EMBEDDED SYSTEM PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the design of embedded computing systems with its hardware and software architectures.
- To describe entire software development lifecycle and examine the various issues involved in developing software for embedded systems.
- To analyze the I/O programming and Embedded C coding techniques
- To equip students with the software development skills necessary for practitioners in the field of embedded systems.

MODULE I INTRODUCTION OF EMBEDDED SYSTEM 09

Embedded computing – characteristics and challenges – embedded system design process – Overview of Processors and hardware units in an embedded system – Compiling, Linking and locating – downloading and debugging – Emulators and simulators processor – External peripherals – Memory testing – Flash Memory.

MODULE II SOFTWARE TECHNOLOGY 09

Software Architectures, Software development Tools, Software Development Process Life Cycle and its Model, Software Analysis, Design and Maintenance.

MODULE III INPUT/OUTPUT PROGRAMMING 09

I/O Instructions, Synchronization, Transfer Rate & Latency, Polled Waiting Loops, Interrupt – Driven I/O, Writing ISR in Assembly and C, Non Maskable and Software Interrupts

MODULE IV DATA REPRESENTATION IN EMBEDDED SYSTEMS 09

Data representation, Twos complement, Fixed point and Floating Point Number Formats, Manipulating Bits in -Memory, I/O Ports, Low level programming in C, Primitive data types, Arrays, Functions, Recursive Functions, Pointers, Structures & Unions, Dynamic Memory Allocation, File handling, Linked lists, Queues, Stacks.

MODULE V EMBEDDED C 09

Embedded Systems programming in C – Binding & Running Embedded C program in Keil IDE – Dissecting the program - Building the hardware. Basic techniques for reading & writing from I/O port pins – switch bounce - LED Interfacing using Embedded C.

Total Hours: 45

REFERENCES:

1. Marilyn Wolf, "Computers as components ", Elsevier, 2012.
2. Qing Li and Carolyn Yao, "Real-Time Concepts for Embedded Systems", CMP Books, 2003.
3. Daniel W. Lewis, "Fundamentals of embedded software where C and assembly meet", Pearson Education
4. Michael Bass, "Programming Embedded Systems in C and C++", Oreilly, 2003.

OUTCOMES:

On completion of this course the student will be able to

- Design the software and hardware components in embedded system
- Describe the software technology
- Use interrupt in effective manner
- Use keil IDE for programming
- Program using embedded C for specific microcontroller
- Design the embedded projects

GECY109 PRINCIPLES OF SUSTAINABLE DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge in the concepts and dimensions of sustainable development.
- To gain knowledge on the framework for achieving sustainability.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 09

Environment and Development - Population poverty and Pollution – Global and Local environmental issues – Resource Degradation- Greenhouse gases – Desertification-industrialization – Social insecurity, Globalization and environment. History and emergence of the concept of sustainable development-Objectives of Sustainable Development.

MODULE II COMPONENTS AND DIMENSIONS OF SUSTAINABLE DEVELOPMENT 09

Components of Sustainability – Complexity of growth and equity – Social economic and environmental dimensions of sustainable development – Environment – Biodiversity – Natural – Resources – Ecosystem integrity – Clean air and water – Carrying capacity – Equity, Quality of Life, Prevention, Precaution – Preservation and Public Participation Structural and functional linking of developmental dimensions.

MODULE III FRAMEWORK FOR ACHIEVING SUSTAINABILITY 09

Operational guidelines – interconnected prerequisites for sustainable development Empowerment of Women, children, Youth, Indigenous People, Non-Governmental Organizations Local Authorities, Business and industry – Science and Technology for sustainable development – performance indicators of sustainability and assessment mechanism – Constraints and barriers for sustainable development.

MODULE IV SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 09

Demographic dynamics of sustainability – Policies for socio-economic development – Strategies for implementing eco-development programmes Sustainable development through trade – Economic growth – Action plan for implementing sustainable development – Urbanization and sustainable Cities – Sustainable Energy and Agriculture – sustainable livelihoods.

MODULE V SUSTAINABLE DEVELOPMENT AND INTERNATIONAL RESPONSE 09

Role of developed countries in the development of developing countries – international summits – Stockholm to Johannesburg – Rio principles – Agenda-Conventions – Agreements – Tokyo Declaration – Doubling statement – Tran boundary issues integrated approach for resources protection and management

Total Hours: 45

REFERENCES:

1. Sayer J. and Campbell, B., The Science of Sustainable Development: Local Livelihoods and the Global environment - Biological conservation restoration & Sustainability, Cambridge university Press, London, 2003.
2. M.K. Ghosh Roy. and Timberlake, Sustainable Development, Ane Books Pvt. Ltd, 2011.
3. Mackenthun K.M., Concepts in Environmental Management, Lewis Publications London, 1999.
4. APJ Abdul Kalam and Srijan Pal Singh, Target 3 Billion: Innovative Solutions Towards Sustainable Development, Penguin India, 2011

OUTCOMES:

At the end of the course the student will be able to

- Describe the concepts of sustainable development
- Define the components and dimensions of sustainable development
- Outline the Frame work for achieving sustainability.
- State the policies and strategies for implementing sustainable development for Socio economic programmes.
- Examine the role of developed countries in sustainable development.

GECY110	QUANTITATIVE TECHNIQUES IN MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart knowledge on

- Concepts of operations research
- Inventory control in production management
- Financial management of projects
- Decision theory and managerial economics

MODULE I OPERATIONS RESEARCH 09

Introduction to Operations research – Linear programming – Graphical and Simplex Methods, Duality and Post-Optimality Analysis – Transportation and Assignment Problems

MODULE II PRODUCTION MANAGEMENT 09

Inventory control, EOQ, Quantity Discounts, Safety Stock – Replacement Theory – PERT and CPM – Simulation Models – Quality Control.

MODULE III FINANCIAL MANAGEMENT 09

Working Capital Management – Compound Interest and Present Value methods – Discounted Cash Flow Techniques – Capital Budgeting.

MODULE IV DECISION THEORY 09

Decision Theory – Decision Rules – Decision making under conditions of certainty, risk and uncertainty – Decision trees – Utility Theory.

MODULE V MANAGERIAL ECONOMICS 09

Cost concepts – Break even Analysis – Pricing techniques – Game Theory applications.

Total Hours: 45

REFERENCES:

1. Vohra, N.D. , Quantitative Techniques in Management, Tata McGraw Hill Co., Ltd, New Delhi, 2009.
2. Seehroeder, R.G., Operations Management, McGraw Hill, USA, 2002.

4. Frank Harrison, E., The Managerial Decision Making Process, Houghton Miffin Co. Boston, 2005.
5. Hamdy A. Taha, Operations Research- An Introduction, Prentice Hall, 2002.

OUTCOME:

At the end of the course, the students will be able to

- Apply the concepts of operations research for various applications
- Create models for inventory control in production management
- Compute the cash flow for a project
- Choose a project using decision theory based on the risk criterion.
- Apply the concepts of managerial economics in construction management

GECY111 PROGRAMMING USING MATLAB & SIMULINK

L	T	P	C
1	0	2	2

OBJECTIVES:

The aim of this course is to:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION TO MATLAB AND DATA PRESENTATION 10

Introduction to MATLAB-Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts- Making clear and compelling plots-Solving systems of linear equations numerically and symbolically.

Lab Experiments

1. Study of basic matrix operations and manipulations.
2. Numerical and symbolical solution of linear equations.

MODULE II ROOT FINDING AND MATLAB PLOT FUNCTION 10

Linearization and solving non-linear systems of equations- The Newton-Raphson method- Integers and rational numbers in different bases- Least squares regression -Curve fitting-Polynomial fitting and exponential fitting.

Lab Experiments

1. Solution of non linear equations using Newton-Raphson method.
2. Determination of polynomial fit and exponential fit for the given data.

MODULE III LINEAR AND NON-LINEAR DIFFERENTIAL EQUATIONS 13

Numerical integration and solving first order, ordinary differential equations (Euler's method and Runge-Kutta) - Use of ODE function in MATLAB- Converting second order and higher ODEs to systems of first order ODEs- Solving systems of higher order ODEs via Euler's method and Runge-Kutta) - Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations - Plot Function –Saving & Painting Plots.

Lab Experiments

1. Solution of fourth order linear differential equations using
    a. Trapezoidal Rule

b. Euler method

2. Solution of fourth order non-linear differential equations using
    a. Modified Euler method
    b. Runge – Kutta method

MODULE IV INTRODUCTION OF SIMULINK 12

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- - Representing a model as a subsystem- Programme specific Simulink demos.

Lab Experiments

1. Solution of fourth order non-linear differential equations using simulink.
2. Programme specific experiment based on simulink.

Total Hours (Including Practicals): 45

REFERENCE:

1. Griffiths D V and Smith I M, “Numerical Methods for Engineers”, Blackwell, 1991.
2. Laurene Fausett, “Applied Numerical Analysis Using MATLAB”, Pearson 2008.
3. Moin P, “Fundamentals of Engineering Numerical Analysis”, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB”, CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving, “Mathematical Exploration with MATLAB”, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

- Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
- Write programs using first principles without automatic use of built-in ones.
- Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
- Be fluent in exploring Matlab’s capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
- Make use of Maltab visual capabilities for all engineering applications.

- An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECY112 JAVA PROGRAMMING

L	T	P	C
1	0	2	2

OBJECTIVES:

- To learn the fundamentals of Java programming such as data types, variables and arrays.
- To study the syntax and necessity of decision making and iterative statements.
- To create a class and invoke the methods.
- To instigate programming in overloading of methods.
- To emphasize the concept of packages.
- To learn the exception handling routines.

MODULE I INTRODUCTION TO JAVA PROGRAMMING 08

History and Evolution of Java – Overview of Java – Data types, variables and arrays – Operators – Control statements.

MODULE II METHODS AND CLASSES 07

Class fundamentals – Declaring objects – Methods – Constructors – Garbage collection – Overloading methods – Constructor overloading – Access control – Inheritance – Packages - Exception handling.

L: 15, P: 30, Total Hours: 15

4. Yashavant Kanetka**, “**Let Us Java”, 2nd Edition, BPB Publications, 2012**.**

OUTCOMES:

Students who complete this course will be able to

- Implement basic Java programming.
- Create a class and invoke methods for real world problems.

- Construct simple overloading of methods programs.
- Implement various types of inheritance concepts.
- Describe the access control mechanism.
- Handle exception thrown while implementing programming.

GECY113 PYTHON PROGRAMMING

L	T	P	C
1	0	2	2

OBJECTIVES:

- To learn the list and records of python programming.
- To study the control statements and string functions of python.
- To instigate the fundamental python programming.
- To emphasize GUI in python.
- To integrate python with embedded systems.
- To implement programs in python.

MODULE I INTRODUCTION TO PYTHON PROGRAMMING 08

Installation and environment set up – syntax used in python – variable types – operators – Loops – decision making – string functions - formatted files - GUI basics.

MODULE II EMBEDDED PROGRAMMING USING PYTHON 07

Web interface – system tools – script execution context - Motion-triggered LEDs – Python - Arduino prototyping-storing and plotting Arduino data-Remote home monitoring system.

L: 15, P: 30, Total Hours: 15

5. Michael Barr, Anthony Massa, “Programming Embedded Systems”, 2nd Edition, O'Reilly Media, 2006.

OUTCOMES:

Students who complete this course will be able to

- Implement date and time function programming using python.

- Write formatted file programming.
- Construct simple python programs.
- Create web interface using python programming
- Develop embedded system with python programming.
- Build Arduino prototype using python programming.

GECY114 INTELLECTUAL PROPERTY RIGHTS (IPR)

L	T	P	C
1	0	0	1

OBJECTIVES:

- To study about Intellectual property rights and its need
- To explore the patent procedure and related issues

MODULE I INTRODUCTION 07

Introduction and the need for intellectual property right (IPR) – IPR in India – Genesis and Development – IPR in abroad – Important examples of IPR – Copyrights, Trademarks, Patents, Designs, Utility Models, Trade Secrets and Geographical Indications – Industrial Designs

MODULE II PATENT 08

Concept of Patent – Product / Process Patents & Terminology – Duration of Patents – Law and Policy Consideration Elements of Patentability –- Patentable Subject Matter – Procedure for Filing of Patent Application and types of Applications – Procedure for Opposition – Revocation of Patents – Working of Patents- Patent Agent – Qualification and Registration Procedure – Patent databases and information system – Preparation of patent documents – Process for examination of patent application- Patent infringement – Recent developments in patent system

Total Hours: 15

8. Jatindra Kumar Das, Law of Copyright, PHI Learning, 2015

COURSE OUTCOMES:

Students should be able to

- Identify the various types of intellectual property and their value
- Apply the procedure to file a patent and to deal the related issues
- Search and extract relevant information from various intellectual database

REGULATIONS, CURRICULAM AND SYLLABUS

M. TECH. CONSTRUCTION ENGINEERING & PROJECT MANAGEMENT

(As approved by the 9th Academic Council)

JULY 2016

B.S.ABDUR RAHMAN UNIVERSITY

B.S.ABDUR RAHMAN INSTITUTE OF SCIENCE & TECHNOLOGY
(Estd.u/s 3 of the UGC Act, 1956)

(FORMERLY B.S.ABDUR RAHMAN CRESCENT ENGINEERING COLLEGE)
Seethakathi Estate, G.S.T. Road, Vandalur, Chennai - 600 048.

VISION & MISSION OF THE DEPARTMENT OF CIVIL ENGINEERING

VISION

To be a leading department for Education, Training and Research in Civil Engineering for a better future and overall socio-economic progress of the country in a sustainable manner.

MISSION

- To offer world class undergraduate, postgraduate and research programs of industrial and societal relevance in civil engineering.
- To nurture ethically strong civil engineers to address global challenges through quality education and application oriented research.
- To educate our students on design, construction, maintenance and advancements in civil engineering for providing solutions to the betterment of the society.
- To prepare competitive and responsible future citizens with good communication, leadership and managerial skills.
- To enrich and enhance the knowledge base for the best practices in various areas of civil & allied engineering through collaborations with Global Institutions of Excellence, Industries and Research organizations.
- To provide a healthy ambience for teaching, research, consultancy and extension activities.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

M.Tech (Construction Engineering & Project Management)

PROGRAMME EDUCATIONAL OBJECTIVES:

- To educate graduates the concepts and practices of management in the construction industry.
- To impart organizational and leadership qualities for effective management of construction projects with ethical responsibility.
- To equip the graduates with knowledge, research and practical skills in modern construction practices and techniques giving importance to sustainable development.
- To provide necessary knowledge and skills in accounting, financing, risk analysis and contracting.
- To train the graduates in the use of relevant software packages for planning, scheduling, executing and controlling of construction projects and inculcate an urge for lifelong learning.
- To function effectively with individual capabilities as well as with a collective strength as a professional team with good communication skills.

PROGRAMME OUTCOMES:

Construction Engineering and Project Management Graduates will be able to

- Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Use research –based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.

- Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
