9. Determination of thermal conductivity of a good conductor by Forbe's method.
10. Determination of thermal conductivity of a bad conductor by Lee's disc method.
11. Determination of solar cell characteristics.

L – 45; P – 30; TOTAL HOURS – 75

6. Godfrey Boyle, “Renewable Energy: Power for sustainable future”, 2nd edition, Oxford University Press, UK, 2009.

OUTCOMES:

At the end of the course, students will be able to

- understand the different types of crystal structures
- apply the concept of ultrasonic principle in engineering and medical field
- calculate thermal conductivities of good and bad conductors
- differentiate the various laser systems and its applications in engineering and medical field
- apply the principle of fibre optics for communication and sensor applications
- formulate wave mechanics principle for applications in electron microscopy
- Correlate the different renewable energy sources for societal needs.
- To complement the knowledge acquired in the theory class.
- To correlate the experimental results for application.

CHC1181	CHEMISTRY	L	T	P	C
		3	0	2	4

OBJECTIVES:

The students should be conversant with

- the basic problems like hardness, alkalinity, dissolved oxygen associated with the water used for domestic and industrial purpose and treatment process involved.
- the synthesis, properties and applications of nanomaterials.
- the importance of renewable energy sources like solar, wind, biogas, biomass, geothermal, ocean and their limitations.
- the basic analytical techniques like UV-Visible, FT-IR, NMR, AAS, AES, Circular Dichroism and XRD etc.
- photochemistry concepts related to physical processes and chemical reactions induced by photon absorption and their applications.
- basic principles of electrochemistry, cell construction and evaluation and to understand general methodologies for construction & design of electrochemical cell

MODULE I WATER TECHNOLOGY 9

Impurities present in water, hardness : types of hardness, demerits of hard water in boilers, estimation of hardness by EDTA method (problems) – alkalinity : estimation of alkalinity (problems) – dissolved oxygen: estimation of dissolved oxygen – conditioning methods : external treatment method: – lime soda and zeolite process (principle only), Ion exchange process – Internal treatment : colloidal, carbonate, phosphate and calgon methods – drinking water: standards (BIS), treatment of domestic water {screening, sedimentation, coagulation, filtration, disinfection }– desalination: electrodialysis, reverse osmosis.

MODULE II NANOCHEMISTRY 6

Introduction – distinction between molecules, bulk materials and nanoparticles – classification based on dimension with examples – synthesis (top-down and bottom-up approach} : sol-gel, thermolysis (hydrothermal and solvothermal), electrodeposition, chemical vapour deposition, laser ablation – properties and applications (electronic, magnetic and catalytic) – risk factors and future perspectives.

MODULE III ENERGY SOURCES 8

Energy: past, today, and future – a brief history of energy consumption – present energy scenario of conventional and renewable energy sources – renewable energy : needs of renewable energy, advantages and limitations of renewable energy – solar energy: basics, solar energy in the past , photovoltaic, advantages and disadvantages – bioenergy: conversion, bio degradation, biogas generation, biomass gasifier, factors affecting biogas generation, advantages and disadvantages – geothermal energy: geothermal resources (hot dry rock and magma resources, natural and artificial), advantages and disadvantages – wind energy: wind resources, wind turbines, advantages and disadvantages – ocean energy: wave energy, wave energy conversion devices, ocean thermal energy, advantages and disadvantages.

MODULE IV PHOTOCHEMISTRY 7

Introduction: absorption and emission, chromophores, auxochromes – laws of photochemistry : Grotthus-Draper law, Stark Einstein law – quantum yield (problems) –photo physical processes : fluorescence and phosphorescence - Jablonski diagram (electronic states and transitions) – quenching, annihilation – photosensitization: principle and applications – chemiluminescence, bioluminescence.

MODULE V ANALYTICAL TECHNIQUES 7

Spectroscopy: electromagnetic radiation and spectrum – types of transitions – types of spectra (atomic and molecular with their chemical usefulness) – Beer-Lamberts law (problems) – principles, instrumentation and applications of: Colourimetry – UV-Vis spectrophotometer – atomic absorption spectroscopy – atomic emission spectroscopy – principles and applications of: IR, NMR, mass and X-ray diffraction analysis.

MODULE VI ELECTROCHEMISTRY 8

Electrochemistry - types of electrodes (principle and working) : gas (SHE), metal/metal ion electrode, metal-metal insoluble salt (calomel electrode), ion-selective (glass electrode and fluoride ion selective electrode) – Electrolytic and galvanic cells, construction of cell, EMF measurement and applications (problems), standard cell (Weston-cadmium), reversible and irreversible cell, concentration cell. Determination of fluoride ion using fluoride ion selective electrode – Chemically modified electrodes (CMEs) : concept, approaches and applications.

PRACTICALS

1. Estimation of hardness in given water sample.
2. Estimation of the alkalinity of the given water sample.
3. Estimation of strong acid by conductometry.
4. Estimation of Fe^{2+} present in the given sample by potentiometry.
5. Verification of Beer-Lamberts law and estimation of Cu^{2+} present in unknown sample.
6. Estimation of sodium and potassium present in the given sample by flame photometry.
7. Determination of molecular weight and degree of polymerisation of a polymer by viscosity method.
8. Synthesis of thermosetting polymer.

7. Principles of molecular photochemistry: An introduction, Nicholas J. Turro, V.Ramamurthy and Juan C. Scaiano, University Science Books, Sausalito, CA, 2009.

OUTCOMES:

The students will be able to

- solve problems related to hardness, alkalinity, dissolved oxygen associated with the water and describe the treatment processes.
- classify nanomaterials and apply the nanochemistry approach to synthesize the

nanomaterials.

- explain the principle and enumerate the advantages and disadvantages of various renewable energy sources.
- state the principle and illustrate the instrumentation of various analytical techniques.
- apply the concepts of photochemistry to elaborate various photo-physical and photochemical reactions.
- construct a electrochemical cell and describe the various types of electrodes and determine the fluoride content.

GEC 1101 ENGINEERING GRAPHICS L T P C

2 0 2 3

OBJECTIVES:

- To introduce the students of all engineering programs, the basic concepts of engineering drawing, which is the basic communication medium for all engineers
- To provide practical exposure on important aspects like drawing analytic curves, orthographic projections, section of solids, development of surfaces, isometric projection, perspective projection and free hand drawing.
- To introduce computerized drafting.

MODULE I BASICS AND ENGINEERING CURVES 10

Drawing instruments, dimensioning, BIS conventions, types of lines, simple geometric constructions.

Conic sections: ellipse, parabola, hyperbola.

Special curves: cycloid, epicycloid, hypocycloid and involutes.

MODULE II ORTHOGRAPHIC PROJECTION 8

Orthographic projection – first angle, second angle, third angle and fourth angle projections –setup - assumptions, principle. Free hand sketching of orthographic views of simple machine parts as per first angle projection. Orthographic projection of points in all quadrants. Some commands and demonstration of drafting packages.

MODULE III PROJECTION OF STRAIGHT LINES AND PLANES 10

Projection of straight lines in first quadrant – true length and true inclinations – Rotating line and trapezoidal methods –traces of straight line.

Projection of plane lamina in first quadrant and its traces

MODULE IV PROJECTION OF SOLIDS 10

Projection of solids in first quadrant: Axis inclined to one reference plane only- prism, pyramid, cone, cylinder – change of position and auxiliary projection methods.

MODULE V SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES 12

Section of solids: prism, pyramid, cone, cylinder, and sphere – sectional view – true

shape of section Solids in simple position and cutting plane inclined to one reference plane only.

Development of surface of truncated solids: prism, pyramid, cone cylinder – frustum of cone, pyramid and simple sheet metal parts.

MODULE VI PICTORIAL PROJECTIONS 10

Isometric projection: Isometric scale – isometric axes- iso sheet - Isometric projection and view of prism, pyramid, cylinder, cone, frustums, truncated solids and simple products

Perspective projection: station point – vanishing point – Perspective projection and views of prism, pyramid, cylinder and frustums by Visual ray method.

L – 30; P – 30; TOTAL HOURS – 60

TEXT BOOKS:

1. N.D. Bhatt, 'Engineering Drawing' Charotar Publishing house, 53rd Edtion, (2014)

REFERENCES:

2. Venugopal. K, and V. Prabhu Raja, Engineering Graphics, New Age International (P) Ltd., Publication, Chennai. (2011)

OUTCOMES:

- Students should be able to read the specifications and standards of technical drawing and able to draw conic sections and special curves.
- Students should be able to understand the insight of orthographic projection and to draw the various views of orthographic projection of a point and various components.
- Students should be able to draw the orthographic views of straight lines and plane figures.
- Students should be able to draw the orthographic views of simple solids.
- Students should be able to draw the sections of solids and development of solid surfaces.
- Students should be able to draw the isometric and perspective projection of simple solids and components.

GEC 1102 ENGINEERING DESIGN L T P C

2 0 0 2

OBJECTIVES:

- To understand the role of design in Engineering
- To understand the basic design concepts
- To understand the role of innovation in design

MODULE I DESIGN AS A CENTRAL ACTIVITY IN ENGINEERING 08

Product design – products and processes – product design methodology Design of systems; Software design

MODULE II NEED ANALYSIS AND CONCEPT DEVELOPMENT 07

Voice of customers – product specification - need analysis Bench marking Product architecture – concept generation and evaluation;

MODULE III CASE STUDIES IN ENGINEERING DESIGN 08

Product design – process design; system design; software design -Ergonomics – usability

MODULE IV INNOVATION AND DESIGN 07

Role of innovation in Engineering – incremental changes and systemic changes; scientific approach to driving innovation – case studies.

TOTAL HOURS – 30

REFERENCES:

5. Navi Radjou, Jaideep Prabhu and Simone Ahuja, “Jugaad Innovation”, Published

by Random House India, 2012.

OUTCOMES:

The students will be able to

- Apply the basic knowledge of design in engineering products / process / service.
- Analyse the problems and give innovative solutions.
- Correlate the basic knowledge of design in the real world problems.
- Apply innovative approaches to engineering design.

GEC1103	BASIC ENGINEERING PRACTICES LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To provide a practical exposure to basic engineering practices like carpentry, fitting, plumbing, welding and making of simple electrical and electronic circuits
- To have an understanding on the use of various tools, instruments and methods
- To enable the students to appreciate the practical difficulties and safety issues

CIVIL ENGINEERING PRACTICE

1. Study of plumbing in general household and industrial systems
2. Making a small window frame with Lap and Mortise & Tenon Joints
3. Introduction to power tools

MECHANICAL ENGINEERING PRACTICE

1. Fabrication of a small Table frame with Butt, Lap and Fillet Joints
2. Machining of a simple component like a table weight using lathe
3. Mold preparation for simple component

ELECTRICAL ENGINEERING PRACTICE

1. Comparison of incandescent, Fluorescent, CFL and LED lamps.
2. Study of Protection Circuits (small relay, fuse, MCB, HRC, MCCB, ECCB).
3. Familiarization of households Electrical Gadgets (Iron Box, Wet Grinder).
4. Understanding of Domestic and Industrial wiring.
5. Earthing and its significance.
6. Troubleshooting in Electrical Circuits.
7. Study of inverter fed UPS/Emergency lamp

ELECTRONICS ENGINEERING PRACTICE

1. Identifications symbolic representation of active and passive electronic components
2. Soldering and tracing of electronic circuits and checking its continuity
3. Assembling of A.C. to D.C, D.C to A.C. Circuits in bread Board and Mini project.

TOTAL HOURS – 30

OUTCOMES:

Upon the completion of the course, students should be able to

- Appreciate the practical skills needed even in making of simple objects, assemblies and circuits
- Attend minor defects especially in items used in day to day life
- Aware of the safety aspects involved in using tools and instruments

GEC 1104 COMPUTER PROGRAMMING I

L	T	P	C
1	0	2	2

OBJECTIVES:

- To identify the hardware and software components of the computer.
- To know the basic concept of operating system and get knowledge about different operating systems.
- To learn various database concepts and operations
- To develop efficient algorithms for solving a problem.
- To implement the algorithms in C language.
- To use arrays in solving problems.

MODULE I COMPUTER FUNDAMENTALS **7**

Introduction -. Number System - Planning the computer program - Computer Software - Basic operating system concepts - Database Operations

MODULE II PROGRAMMING IN C **8**

Introduction to C Programming Language – Operators - Control statements -Iterative statements - Arrays.

LIST OF EXPERIMENTS:

1. Computer organization –Hardware in a typical computer Identification – Booting- error messages and what it means
2. Types of Operating systems – Windows and Linux
3. Structure of a basic program - Hello world program – Debugging it
4. Data types: Type conversions
5. Input / Output: Formatted functions – Unformatted functions – Library functions
6. Properties of operators – Priority of operators – Arithmetic relational logical and bitwise operators
7. If – if else- nested if else- goto- switch case – nested switch case – for loops – nested for loops – while loop – do-while loop – break and continue statement
8. Arrays – Operation with arrays
9. Sorting and searching.

L – 15; P – 30; TOTAL HOURS – 45

REFERENCES:

1. Ashok N Kamthane, “Computer Programming”, Pearson Education, 2nd Edition, ISBN 13: 9788131704370, 2012
2. Paul J. Deitel, Deitel & Associates, “C How to Program”, Pearson Education, 7th Edition, ISBN-13: 978-0132990448, 2012

OUTCOMES:

Students who complete this course will be able to

- Recognize Modular design, logic flow, data abstraction
- Analyze the working of the programming constructs, functions, and I/O.
- Write down programs for sorting and searching algorithms
- Write down programs developing cycle for different applications
- Debug the programs and solve some practical problems in programming
- Develop programs using arrays.

SEMESTER II

MAC 1281	**ADVANCED CALCULUS**	**L**	**T**	**P**	**C**
		3	**1**	**0**	**4**

OBJECTIVES:

The aims of this course are to

- train the students in solving problems using multiple integration.
- provide knowledge in using special functions to find out the area and volume of a region.
- acquire knowledge in tangent and normal vectors.
- gain knowledge in finding the areas of a curve and surface using vector integration.
- learn about the analytic functions and their properties along with bilinear transformation.
- know complex integration using Cauchy's theorems.

MODULE I MULTIPLE INTEGRATION AND ITS APPLICATIONS **8+2**

Multiple integrals– Cartesian and Polar coordinates – change of order of integration – Multiple integral to compute area and volume.

MODULE II TRANSFORMATION OF COORDINATES AND SPECIAL FUNCTIONS **7+3**

Change of variables between Cartesian, polar, cylindrical and spherical coordinates - Beta and Gamma functions – Properties and applications.

MODULE III VECTOR DIFFERENTIATION **7+3**

Operations on vectors – Scalar Product, Vector Product, Projection of Vectors - Angle between two vectors - Gradient, divergence and curl

MODULE IV VECTOR INTEGRATION **8+2**

Line, surface and volume integrals – Green's Theorem, Gauss Divergence Theorem and Stokes Theorem (statement only) – verification and evaluation of integrals.

MODULE V ANALYTIC FUNCTION 8+2

Analytic function - Necessary and Sufficient condition (statement only) – Cauchy-Riemann equations in polar coordinates - properties of analytic function – determination of analytic function – conformal mapping (w = z+a, az and 1/z) and bilinear transformation.

MODULE VI COMPLEX INTEGRATION 7+3

Statement and application of Cauchy's integral theorem – Cauchy's integral formula – Taylor's series and Laurent's series expansion – singularities - classification – residues - Cauchy's residue theorem – contour integration – Unit circle and semi circular contours (excluding poles on the real axis).

L – 45; T – 15; TOTAL HOURS – 60

6. Venkataraman, M.K., "Engineering Mathematics", Volume 2, 2nd edition, National Publishing Co., Chennai, 2003.

7. James Stewart ".Calculus" (7^{th} edition),Brooks/Cole cengage learning,UK.

OUTCOMES:

After completing the course, student will be able to

- compute the area and volume using multiple integrals.
- apply special functions to solve integration problems.
- apply differentiation in scalar and vector fields.
- find area and volume of a region using vector integration.
- verify analyticity, conformity and bilinearity of complex functions.
- evaluate complex integrals.

GEC 1211	BASIC ENGINEERING MECHANICS	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To impart knowledge about the basic laws of statics and dynamics and their applications in problem solving
- To acquaint both with scalar and vector approaches for representing forces and moments acting on particles and rigid bodies and their equilibrium
- To give on exposure on inertial properties of surfaces and solids
- To provide an understanding on the concept of work energy principle, friction, kinematics of motion and their relationship

MODULE I VECTOR APPROACH TO MECHANICS 07

Introduction - Units and Dimensions- Vectors – Vectorial representation of forces and moments –Vector Algebra and its Physical relevance in Mechanics - Laws of Mechanics – Parallelogram and triangular Law of forces -Lame's theorem, Coplanar Forces – Resolution and Composition of forces- Equilibrium of a particle.

MODULE II EQUILIBRIUM OF PARTICLE 06

Forces in space - Equilibrium of a particle in space - Equivalent systems of forces – Principle of transmissibility – Single equivalent force

MODULE III EQUILIBRIUM OF RIGID BODY 06

Free body diagram – Types of supports and their reactions – requirements of stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis –Vectorial representation of moments and couples – Scalar components of a moment –Varignon's theorem - Equilibrium of Rigid bodies in two dimensions - Examples

MODULE IV PROPERTIES OF SURFACES 08

Determination of Areas – First moment of area and the Centroid of sections – Rectangle, circle, triangle from integration – T section, I section, Angle section, Hollow section by using standard formula – second and product moments of plane area – Physical relevance - Rectangle, triangle, circle from integration - T section, I section, Angle section, Hollow section by using standard formula – Parallel axis theorem and perpendicular axis theorem – Polar moment of inertia- Mass moment of

Area

MODULE V FRICTION 08

Introduction to friction- types of friction- Laws of Coloumb friction- Frictional force – simple contact friction – Rolling resistance –ladder friction

MODULE VI LAWS OF MOTION 10

Review of laws of motion – Newton's law – Work Energy Equation of particles– Impulse and Momentum – Impact of elastic bodies.

L – 45; T – 15; TOTAL HOURS – 60

REFERENCES:

1. Beer, F.P and Johnston Jr. E.R, "Vector Mechanics for Engineers, Dynamics & Statics", Third SI Metric Edition, Tata McGraw-Hill International Edition, 2001.

3. Irving H. Shames, Engineering Mechanics – Statics and Dynamics, IV Edition Pearson Education Asia Pvt. Ltd., 2003.

OUTCOMES:

On completion of this course students should be able

- Analyse and resolve forces, moments and solve problems using various principles and laws of Mechanics
- Apply the concept of equilibrium to particles and solve problems
- Apply the concept of equilibrium to rigid bodies and solve problems
- Analyse and determine the properties of surfaces
- Analyse and evaluate the fractional forces between the bodies
- Apply the laws of motion in solving dynamics problems

GEC 1212	ENVIRONMENTAL STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

The student will be conversant with the

- various natural resources, availability, utilisation and its current scenario
- different ecosystems, energy transfer, values, threats and conservation of biodiversity
- levels of different pollutants and its impact and the causes and effects of natural disasters
- impacts of human population, impact assessment, human rights and environmental acts and sustainable development

MODULE I NATURAL RESOURCES **8**

Land resources: land degradation, soil erosion and desertification - Forest resources: use and over-exploitation, deforestation - Water resources: use and over-utilisation of surface and ground water, conflicts over water (inter-state and international), dams (benefits and problems), water conservation (rainwater harvesting and watershed management) - Mineral resources: use and exploitation, environmental effects of extracting and using mineral resources, mining - Food resources: world food problems, changes in land use by agriculture and overgrazing, modern agriculture and its effects, fertilizer and pesticide problems, water logging and salinity - Energy resources: increasing energy needs, renewable and non-renewable, use of alternate energy sources.

MODULE II ECOSYSTEM AND BIODIVERSITY **8**

Ecosystem- energy flow in the ecosystem - food chains, food webs and ecological pyramids - characteristics, structure and function of (a) Terrestrial ecosystems (forest, grassland, desert) and (b) Aquatic fresh water ecosystems (pond, lake, river) (c) Aquatic salt water ecosystems (ocean, estuary) - ecological succession.

Biodiversity - genetic, species and ecosystem diversity – hot-spots of biodiversity – biogeographic classification of India - endangered, endemic, extinct and invasive species of India - red data book - values of biodiversity: consumptive, productive, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - conservation of biodiversity: in-situ and ex-situ conservation of biodiversity

MODULE III ENVIRONMENTAL POLLUTION AND NATURAL DISASTER **8**

Definition, cause, effects and control measures of (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards - ill-effects of fireworks and upkeep of clean environment - solid waste management: types (urban, industrial, biomedical and electronic wastes), collection, processing and disposal (incineration, composting and land-fill) - natural disaster and management: flood, cyclone, drought, landslide, avalanche, volcanic eruptions, earthquake and tsunami.

MODULE IV HUMAN POPULATION, HEALTH AND SOCIAL ISSUES **6**

Population and population growth, population variation among nations, population explosion, family welfare programme.

Human health: air-borne, water borne diseases, infectious diseases, risks due to chemicals in food and environment.

Sustainable development - environmental legislation and laws: water act, air act, wildlife protection act, forest conservation act, environment protection act - environmental impact assessment, steps in EIA - human rights - women and child welfare.

Case studies related to current situation

TOTAL HOURS – 30

TEXT BOOKS:

1. Erach Bharucha, Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education for University Grants Commission, Orient Blackswan Pvt Ltd, Hyderabad, India, 2013.

3. Miller T.G. Jr., Environmental Science, Wadsworth Publishing Co. Boston, USA, 2016.

OUTCOMES:

The student will be able to

- predict the scenario of various natural resources and suggest remedies to curb the exploitation of these resources.
- identify food chain and web and its role in various ecosystems, assess the impacts on biodiversity and provide solutions to conserve it.
- analyse the impacts of pollutants in the environment and propose suitable method to alleviate the pollutants and the natural disasters.
- assess on the impact of human population and the health related issues and the ethics to be followed for sustainable life.

GEC 1213	COMPUTER PROGRAMMING II	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To provide knowledge about the benefits of Object Oriented Programming over Procedure oriented programming.
- To learn various File operations
- To expose fundamental concepts of object-oriented programming in classes, invoking methods and functions.
- To prepare students to get full use of code reusability using object oriented programming.
- To implement the basic concepts of object oriented programming using C++concepts.
- To focus on solving problems based on analyzing, designing and implementing programs in C and C++.

MODULE I PROGRAMMING IN C 7

Functions - Storage Classes - Structures and Unions – Pointers -Self Referential Structures and Linked Lists - File Processing.

MODULE II PROGRAMMING IN C++ 8

Programming in C++ - Overview of OOP in C – Inheritance - Polymorphism - Type Casting – Exceptions.

LIST OF EXPERIMENTS:

1. Functions
2. One dimensional arrays, Pointers
3. Recursion
4. Multi dimensional arrays, Linked lists.
5. Operating on Files.
6. Simple C++ program with Control statements.
7. Getting input from user console.
8. Classes, Object and Constructors.
9. Method overloading.
10. Inheritance

L – 15; P – 30; TOTAL HOURS – 45

OUTCOMES:

Students who complete this course will be able to

- Develop efficient algorithms for solving problems
- Handle files in C
- Use simple data structures like arrays and linked lists in solving problems.
- Write simple programs using concepts of object oriented programming.
- Implement algorithms in C++ Language.
- Demonstrate the Object Oriented Programming concepts applied in networking, web development and Database applications.

AEC 1211	INTRODUCTION TO AERONAUTICAL ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the overview of Aeronautical Engineering covering various disciplines including aerodynamics, propulsion, performance, stability & control, materials and structures.

MODULE I AVIATION HISTORY AND AIRPLANE ANATOMY 8

Ornithopters, Lighter-than-Air Craft, Heavier- than-Aircraft, Wright Brothers and their flyer , Developments during and after the World Wars I and II , Developments in Jet transport and military aviation, Airplane configurations, components of airplanes, functions.

MODULE II BASIC AERODYNAMICS 10

Standard Atmosphere, Aerodynamics forces and Moments, Air speed, Mach Number, Reynold's Number, Airfoil Aerodynamics, Wing Aerodynamics and Drag Polar.

MODULE III PROPULSION 7

Production of thrust - Propeller Momentum theory, Jet Momentum; Types of engines, Engine components, Specific fuel consumption, Power.

MODULE IV AIRPLANE PERFORMANCE, STABILITY & CONTROL 7

Coordinate systems, Equations of motion, degrees of freedom, pitch, roll ,yaw, rate of climb, absolute & service ceiling, Range, maximum endurance, glide, descent, Principles of stability and control.

MODULE V AIRCRAFT MATERIALS AND STRUCTURES 7

Development of aircraft structures, Stress, strain, stress-strain diagram, Monocoque and semi-monocoque structures – Wing, fuselage, importance of fatigue, Materials used in aircraft.

MODULE VI AIRCRAFT INSTRUMENTS AND SYSTEMS 6

Air data instruments, Gyro instruments, Fly-by-wire system, ILS, Auto-Pilot, CVR,

Flight data recorder.

TOTAL HOURS – 45

TEXT BOOKS:

1. Anderson, J.D., “Introduction to Flight”, McGraw-Hill, 1995
2. Richard S. Shevell, Fundamentals of Flight, Pearson Education, 2006

REFERENCES:

1. Kermode, A. C., Flight without formulae, McGraw-Hill, 1997
2. B. W. McCormick, Aerodynamics, Aeronautics and Flight Mechanics, John Wiley & Sons, 1995.

OUTCOMES:

Students will be able to

- Identify and relate various components of aircraft and their functions.
- Estimate the aerodynamic forces on airplanes and understand their effects on aircraft structures.
- Differentiate between various types of engines and the need for thrust.
- Solve basic problems on aircraft motion and control.
- Identify different structural elements and materials used in aircraft.
- Gain knowledge about the instruments and systems required for the safe operation of airplanes.

AEC 1212	AIRCRAFT COMPONENT MODELING AND DRAFTING LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To train the students to draft basic aircraft components using modeling packages.

LIST OF EXPERIMENTS

1. Design of riveted joints (Lap joint).
2. Design of riveted joints (Butt joint with single and double straps).
3. Design of welded joints.
4. Layout of typical wing structure.
5. Layout of typical fuselage structure.
6. Computer aided modeling of typical aircraft wing.
7. Computer aided modeling of typical fuselage structure.
8. Computer aided modeling of landing gear
9. Three view diagram of a typical aircraft
10. Layout of control systems

TOTAL HOURS –45

REFERENCES:

1. Basant Agarwal. “Engineering graphics”, first Edition, Tata McGraw Hill, 2012.
2. Frederick Ernest Giesecke, Henry C. Spencer “Technical Drawing with Engineering Graphics” Prentice Hall, 2012
3. CATIA Software tutorial manual

OUTCOMES:

Students will be able to,

- Gain hands-on experience in drafting aircraft components and structures using computer-aided modeling.
- Gain knowledge and experience in drawing the layout of aircraft & control systems using computer-aided modeling.

AEC 1213	AIRCRAFT STRUCTURE REPAIR LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To train the students to draft basic aircraft components using modeling packages.

LIST OF EXPERIMENTS

1. Design of riveted joints (Lap joint).
2. Design of riveted joints (Butt joint with single and double straps).
3. Design of welded joints.
4. Layout of typical wing structure.
5. Layout of typical fuselage structure.
6. Computer aided modeling of typical aircraft wing.
7. Computer aided modeling of typical fuselage structure.
8. Computer aided modeling of landing gear
9. Three view diagram of a typical aircraft
10. Layout of control systems

TOTAL HOURS – 45

REFERENCES:

1. Basant Agarwal. “Engineering graphics”, first Edition, Tata McGraw Hill, 2012.
2. Frederick Ernest Giesecke, Henry C. Spencer “Technical Drawing with Engineering Graphics” Prentice Hall, 2012
3. CATIA Software tutorial manual.

OUTCOMES:

Students will be able to,

- Gain hands-on experience in drafting aircraft components and structures using computer-aided modeling.
- Gain knowledge and experience in drawing the layout of aircraft & control systems using computer-aided modeling.

SEMESTER – III

MAC 2181	PARTIAL DIFFERENTIAL EQUATIONS AND TRANSFORMS	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- Familiarize In Solving Partial Differential Equation Of First, Second And Higher Orders.
- Introduce Basics And Engineering Applications Of Fourier Series, Laplace Transform, Fourier Transform And Z- Transform.

MODULE I PARTIAL DIFFERENTIAL EQUATIONS 8+2

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

MODULE II FOURIER SERIES 8+2

Fourier Series and Dirichlet's conditions - General Fourier series - Half range Fourier series - Parseval's identity - Harmonic Analysis.

MODULE III FOURIER TRANSFORMS 7+3

Fourier integral theorem (without proof) - Fourier transform pair - Fourier Inverse Transform – Properties - Convolution theorem - Parseval's identity.

MODULE IV APPLICATIONS OF FOURIER SERIES AND FOURIER TRANSFORMS 7+3

Applications of Fourier series and Fourier Transform to solution of PDEs having constant coefficients with special reference to Heat & Wave equations, Discrete & point Spectrum and Single pulse.

MODULE V LAPLACE TRANSFORM 8+2

Introduction to Laplace transform - Existence of Laplace Transform - Properties of Laplace Transforms - Initial & Final Value Theorems - Inverse Laplace Transform - Convolution Theorem – Circuits to signal square wave: Integral equations with unrepeated complex factors – Damped forced vibrations: repeated complex factors –

Resonance - Solution of differential equations

MODULE VI Z – TRANSFORM 7+3

Introduction and Definition of Z-transform - Properties of Z- Transform - Convolution Theorem of Z-Transform - Inverse Z–transform - Convolution Theorem of Inverse Z-Transform - Formation of difference equations - Solving Difference Equations using Z-Transform.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Kreyszig .E., “Advanced Engineering Mathematics“, 10th edition, John Wiley and Sons (Asia) Pvt Ltd., Singapore, 2001.
2. Grewal B.S., “Higher Engineering Mathematics”, 42nd edition, Khanna Publishers, New Delhi, 2012.
3. Ramana, B.V, “Higher Engineering Mathematics” Tata Mc Graw Hill Publishing Co. New Delhi, 2006.

REFERENCES:

1. Veerarajan.T., “Engineering Mathematics“, 5th edition, Tata Mc Graw Hill Publishing Co. New Delhi, 2012.
2. Peter V. O'Neil, “Advanced Engineering Mathematics**”**, 7th edition, Cengage Learning, 2011.
3. Dennis G. Zill, Warren S. Wright, “Advanced Engineering Mathematics”, 4th edition, Jones and Bartlett publishers, Sudbury, 2011.
4. Alan Jeffrey, “Advanced Engineering Mathematics”, Academic Press, USA, 2002.

OUTCOMES:

After completing the course, student will be able to

- Solve The Partial Differential Equations.
- Derive A Fourier Series Of A Given Periodic Function By Evaluating Fourier Coefficients.
- Apply Integral Expressions For The Forward And Inverse Fourier Transform To A Range Of Non-Periodic Waveforms.
- Solve Wave Equation And Heat Flow Equation.
- Solve Ordinary Differential Equations Using Laplace Transform.
- Solve Difference Equation Using Z-Transform.

ENC 2181 ORAL COMMUNICATION L T P C
0 0 2 1

OBJECTIVES:

- To expose students to a range of professional contexts through podcasts for learning appropriate expressions.
- To train them in making poster presentations.
- To enable them to make effective business presentations.
- To help them learn persuasive and negotiation skills.
- To train them to debate on issues of current relevance
- To train them to participate in group discussions on current affairs

MODULE I **4**

Orientation to the Importance of Oral Communication -– Verbal and non-verbal communication -Paralinguistic features.

One-minute presentations (using Audacity/Voicethread) – Just a minute (JAM) on random topics

MODULE II **4**

Negotiating and persuading through effective arguments – to arrive at a conclusion (pair-work)

Understanding Negotiation, persuasion and marketing skills through Podcasts

Listening to short conversations and monologues for understanding real life conversations

MODULE III **4**

Making Poster presentations on current issues

Understanding nuances of making effective presentations (TED Videos)

MODULE IV **6**

Deliberation on social and scientific issues – Debates (focus on rebuttal skills and deconstructing arguments)

Viewing videos on debates (NDTV Discussions)

MODULE V **6**

Discussing social issues or current affairs in groups

Viewing group discussions and listening for specific information

MODULE VI **6**

Making full length presentation (through Voicethread) with the focus on one’s career plans

and prospects (discipline specific)

Listening to interviews for understanding speakers' perception (on industry related issues)

P – 30; Total Hours –30

REFERENCES:

1. Hancock, Mark (2012). *English Pronunciation in Use*. Cambridge University Press, UK.
2. Anderson, Kenneth & et.al (2007). *Study Speaking: A Course in Spoken English for Academic Purposes* (Second Edition). Cambridge University Press, UK.

4. Dhanavel,S.P (2015). *English and Soft Skills*. Orient Blackswan, Chennai.
5. Whitby, Norman (2014). *Business Benchmark: Pre-Intermediate to Intermediate.* Cambridge University Press, UK.

OUTCOMES:

On completion of the course, students will be able to

- Listen to business conversations and do related tasks.
- Deliver effective poster presentations.
- Make effective business presentations.
- Use persuasive and negotiating skills for justifying arguments.
- Participate effectively in debates.
- Speak English intelligibly, fluently and accurately in group discussions.

AEC 2101 **SOLID MECHANICS**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To give brief descriptions on the behavior of materials subjected to axial, bending, and torsional loads and predicting the failure of materials.

MODULE I AXIAL LOADING **7**

Stress and Strain, Hooke's law, Stress- Strain Diagrams for different engg., Materials, elastic constants, thermal stresses, problems on bars.

MODULE II BEAMS **10**

Statically indeterminate beams, Shear Force diagrams and Bending moment diagrams, Bending Stress and Shear stresses in beam sections, Constant Strength Beam, composite beams.

MODULE III DEFLECTION OF BEAMS **8**

Double integration method, Macauly's methods, Moment Area Method, Conjugate Beam Method, principle of superposition.

MODULE IV TORSION –SPRINGS – COLUMNS **8**

Torsion of solid and hollow circular shaft, Shear Stress variation, Power transmissions in shaft, open and closed coil helical springs, Stresses in helical springs, Euler's Column curve, Columns with different end conditions.

MODULE V PRINCIPAL STRESSES **5**

Principle Stress and Strains, Mohr's circle.

MODULE VI BIAXIAL STRESSES **7**

Stresses in thin-walled pressure vessels – combined bending, torsion and axial loading of circular shafts

Total Hours : 45

TEXT BOOKS:

1. James M Gere & Barry J. Goodno, Mechanics of Materials, Cenage Learning, 7th Edition, 2009.

2. R.K.Rajput, “Strenth of Materials:Mechanics of Solid”, Fourth edition, S.Chand Limited, 2007.

REFERENCES:

1. C.T. Sun, “Mechanics of Aircraft Structures”, Second Edition, John Wiley & Sons. 2006.
2. R.C. Hibbeler, “Structural Analysis”, Fifth Edition, Prentice-Hall, 2002.
3. B.C.Punmia, Ashok Kumar Jain, Arun Kumar Jain, “Mechanics of Materials”, Firewall media, 2002.
4. Craig, R.R., 1996, Mechanics of Materials, John Wiley & Sons, New York.
5. R.S.Khurmi, “Strength of Materials”, Twenty third Edition, S.Chand Limited, 2007

LEARNING OUTCOMES:

The students will be able to

- Predict the behavior of bars under various loadings.
- Calculate the bending and shear stress and the deflection of beams under various loadings.
- Calculate the deflection of beams under various loadings.
- Give a theoretical design of shaft for the required working conditions and predictions of the response of the springs and columns subjected to various loads.
- Predict the response of the structural elements subjected to combined loading using the theoretical and the graphical method.
- Predict the load bearing capacity of pressure vessels.

AEC 2102	THERMODYNAMICS	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To provide an introduction to the basic concepts of thermodynamics, energy interactions, engine cycles and applications of thermodynamics. The course will also serve as a foundation for aircraft propulsion.

MODULE I FUNDAMENTAL CONCEPT 10

History and relevance of thermodynamics to engineering applications - Basic concepts: system-boundary and surroundings, property, state, equilibrium and state postulate, process, path and cycle - Zeroth law of thermodynamics, Thermal equation of state, Ideal Gas laws - Work transfer, Heat transfer – Modes of heat transfer.

MODULE II FIRST LAW OF THERMODYNAMICS 10

First law – Classical formulation of first law - concept of energy and its various forms, internal energy, enthalpy, specific heats at constant pressure and volume – First Law of thermodynamics for closed systems and open systems – Steady flow energy equation – Examples of steady flow processes and steady flow devices.

MODULE III SECOND LAW OF THERMODYNAMICS 10

Statements of second law – Thermal reservoir, Heat engines, refrigerators and Heat pumps - Reversible and irreversible processes, Carnot Cycle – Carnot theorem - Absolute thermodynamic temperature scale - Clausius inequality. Concept of Entropy - Tds relations - Increase of entropy principle – isentropic process, Perpetual motion machines - Availability and second law efficiency.

MODULE IV GAS AND VAPOUR POWER CYCLES 12

Ideal cycles - Otto, Diesel, Dual, Brayton cycles – efficiency – workdone - mep – Properties of Steam - Properties gas and vapour mixtures - Rankine cycle - Numerical problems.

MODULE V REFRIGERATION AND AIR-CONDITIONING 10

Principle of Refrigeration – Vapour compression & Vapour absorption types – Coefficient of performance, Properties of refrigerants, Psychrometrics – Relative Humidity – WBT/DBT - Principle of Air conditioning – Types.

MODULE VI AIR COMPRESSOR 8

Air compressor – Various types of compressors (descriptive treatment only) - working principle of reciprocating type air compressor, work of compression - minimum workdone equation - Isothermal efficiency – multistage compression and inter-cooling.

Total Hours : 60

TEXT BOOKS:

1. Yunus A. Cengal, “Thermodynamics an Engineering Approach”, 8th Edition, Tata McGraw-Hill Co. Ltd., 2014.
2. Nag P. K., “Engineering Thermodynamics”, 6th Edition, Tata McGraw-Hills Co., Ltd., 2017.

REFERENCES:

1. Mayhew, A. and Rogers, B., “Engineering Thermodynamics”, E.L.B.S. Edition, Longman Green & Co. Ltd., London, 1990.
2. Saad, M.A., “Thermodynamics for Engineers”, Prentice-Hall of India Pvt. Ltd., 1989
3. Reynolds, “Thermodynamics”, Int. Student Edition, McGraw-Hill Book Co., Ltd., 1990
4. Kroes Michael J; Wild Thomas W, “Aircraft Powerplants” 7th Edition, Tata McGraw-Hill, 2007.
5. Hill Philip, Peterson Carl, “Mechanics and Thermodynamics of Propulsion”, Addison Wesly, 2nd Edition, 2009.
6. J.D.Mattingly, “Elements of Propulsion - Gas Turbines and Rockets”, AIAA Education series, 2006

COURSE OUTCOMES:

Students will able to

- Identify and relate various properties and thermodynamic system.
- Apply an appropriate formulation of the first law to relate energy, heat and work.
- Evaluate entropy changes in a wide range of processes and determine the reversibility or irreversibility of a process from such calculations.
- Employ temperature-entropy diagrams to analyze the gas and vapour power

cycles.

- Calculate cooling load for refrigeration and air-conditioning systems.
- Determine work input for an air compressor with a given set of operating parameters.

AEC 2103	FLUID MECHANICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the properties of fluids and the Governing equations representing the fluid flow problems. To introduce the concepts of dimensional analysis and its applications. To provide the basic knowledge of the working principles of pumps and turbines.

MODULE I FLUID PROPERTIES AND CLASSIFICATION 7

Introduction - Definitions, units and dimensions, Mass, density, Specific Volume, Specific Weight Relative density, Viscosity, Newton's law of viscosity, Compressibility, Vapor pressure, surface tension, Capillarity, Center of pressure, Thermodynamics properties of fluid, Types of fluid.

MODULE II FLUID STATICS AND PRESSURE MEASURING DEVICES 7

Fluid statics: concept of fluid static pressure, hydrostatic pressure distribution, hydrostatic forces on plane and curved surfaces, Buoyancy and stability, Pressure ;absolute and gauge pressures - pressure measuring devices, different types of manometers and pressure gauges.

MODULE III KINEMATICS OF FLUID AND GOVERNING EQUATIONS 8

Lagrangian and Eulerian approaches- Acceleration field, material derivative, concept of control volume, control surface, fundamentals of flow visualization, and types of flow. Governing equations; mass momentum and energy conservation.

MODULE IV INTERNAL FLOWS 7

Reynolds number regimes, Internal versus external viscous flow, Head loss-friction factor, Laminar fully developed pipe flow, turbulent pipe flow, flow in non circular ducts, and minor losses in pipe system, fluid meters.

MODULE V DIMENSIONAL ANALYSIS AND FLOW PAST IMMERSED BODIES 7

Dimensional homogeneity, dimensional analysis and similarity Buckingham pi theorem. Reynolds number and geometry effects, momentum integral estimation, the

boundary layer equations, the flat- plate boundary layer, flow separation, external flows.

MODULE VI TURBOMACHINERY 9

Introduction and classification; The centrifugal pumps- performance curve and matching pump to piping system, pump cavitations and net positive suction head, pump in series and parallel, dynamic pump centrifugal pump and axial pump. Turbine; positive- displacement turbine, dynamic turbine, impulse turbine, Reaction turbine, turbine scaling laws.

Total Hours : 45

TEXT BOOKS:

1. Yunus A.Cengel and John M. Cimbala, “Fluid mechanics”, McGraw Hill 2006.

REFERENCES:

1. Frank M. White, “Fluid mechanics”, Tata McGraw Hill 2008.
2. Ira M. Cohen and P. K. Kundu, “Fluid Mechanics”, Academic Press, 2002.

LEARNING OUTCOMES:

Students will be able to:

- Understand the properties of fluid flows and the governing equations.
- Understand the various types of flows and basics of fluid machinery.
- Understand the importance of dimensional analysis.

EIC 2181 BASIC ELECTRICAL & ELECTRONICS ENGG L T P C

3 0 0 3

OBJECTIVES:

- To gain the basic knowledge on electrical circuits and machines.
- To acquaint the students to semiconductor devices and their applications
- To introduce some knowledge about the display system and its applications.
- To introduce the basic knowledge of microprocessor and its application in digital computing.

MODULE I ELECTRICAL CIRCUITS & MEASURMENTS 7

Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits – Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase Balanced Circuits - Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

MODULE II ELECTRICAL MACHINES 8

Construction, Principle of Operation, Basic Equations and Applications of DC Generators - DC Motors - Single Phase Transformer - single phase induction Motor.

MODULE III SEMI CONDUCTOR DEVICES AND APPLICATIONS 8

Introduction to Semi conductor - PN Junction diode - Zener Diode - Transistor - BJT and FET - Silicon Controlled Rectifier, Diac and Triac - Half wave and full wave Rectifier - Filter - Ripple Factor - Regulators- Principle and Types of Transistor Amplifiers.

MODULE IV LINEAR AND DIGITAL ICS 8

Number representation - Binary, Octal and Hexadecimal Number Systems - Logic families and Logic Gates - Half and full Adder - Multiplexers - Demultiplexers - Decoders - Encoders - Flip-flops - Registers - Counters IC Technology - Fabrication of Linear and Digital IC's - D/A and A/D converters - Comparison between Analog and Digital systems

MODULE V FUNDAMENTALS OF DISPLAYS TECHNOLOGIES 7

Display technologies: Construction, Working and principle of CRT - LED - LCD - EL

- Plasma panel Display - Types of Display generations - Raster and strokes - Aspect Ratio -Standard of definition SD, HD, ULD & 3D - Touch panel principles - Types of colour display formats - PAL, NTSC, SECAM.

MODULE VI FUNDAMENTALS OF DIGITAL COMPUTER 7

Digital computer – Memories- Microprocessor basics- Intel 8085 microprocessor - Simple programs using 8085.

Total Hours : 45

TEXT BOOKS:

1.V.K. Mehta, “Principles of Electronics”, 2nd Edition, S. Chand & Co., New Delhi, 2002.

2.Muthusubramanian R, Salivahanan S and Muraleedharan K A, “Basic Electrical, Electronics and Computer Engineering”,Tata McGraw Hill, Second Edition, (2006).

3. N. Mittle “Basic Electrical Engineering”,Tata McGraw Hill Edition, New Delhi, 1990.

4. Goankar R.S, “Microprocessors, Programming to Architecture 8085”, 5th Edition, Penram International publishing Pvt. Ltd., New Delhi, 2002.

REFERENCES:

1. Mehta V K, “Principles of Electronics”, S.Chand & Company Ltd, (1994).
2. Mahmood Nahvi and Joseph A. Edminister, “Electric Circuits”, Schaum’ Outline Series, McGrawHill, (2002).
3. Jacob Millman & Christos C. Halkias, “Electronic Devices and Circuits” TMH, 1991.

OUTCOMES:

Students will be able to

- Demonstrate the ability to design a system using various electrical and semiconductor devices.

- Keep abreast knowledge of latest digital technology and design of various digital logic circuits.
- Demonstrate the fundamental understanding of the display devices and various broadcasting methods
- To understand the various display techniques in aircraft modern display systems.
- Describe the communication protocol and modulation techniques followed in various modern communication systems.
- To get basic knowledge of digital computer system and its processing units.

AEC 2104	THERMODYNAMICS LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To carry out experiments to evaluate the working of different thermodynamic systems and understand heat transfer mechanisms.

LIST OF EXPERIMENTS:

1. Valve timing of a 4 - stroke engine
2. Port timing of a 2 - stroke engine.
3. Performance test on a 4-stroke diesel engine
4. Performance test on a 4-stroke petrol engine.
5. Determination of the viscosity coefficient of a given liquid
6. COP test on a vapour compression refrigeration test rig
7. COP test on a vapour compression air-conditioning test rig
8. Determination of Thermal Resistance of a Composite wall.
9. Determination of effectiveness of a parallel flow & counter flow heat exchangers
10. Performance test on 2-stage air compressor.

Total Hours : 45

OUTCOMES:

Student will be able to

- Understand the thermodynamic cycles involved in 2 and 4 stroke engines.
- Evaluate the performance of refrigeration and air- conditioning systems.
- Evaluate the effectiveness of a parallel flow & counter flow heat exchangers.
- Evaluate the performance of a 4-stroke petrol & diesel engine

AEC 2105	FLUID MECHANICS LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

This course introduces fluid mechanics applications and measurements.

LIST OF EXPERIMENTS:

1. Comparison of coefficients of discharge of given Orifice meter and Venturimeter.
2. Calibration of Rotameter
3. Impact of jet on flat and curved vanes
4. Verification of Bernoulli's equation
5. Determination of friction factor for the given set of pipes.
6. Performance test on a jet pump.
7. Performance study of Centrifugal pump / Submersible pump
8. Determination of maximum efficiency for the given Reciprocating pump.
9. Characteristic curves of Gear pump / Vane pump
10. Determination of the maximum power at constant speed / constant load for an Impulse

    turbine.

11. Performance characteristics of Reaction turbine.

Total Hours : 45

OUTCOMES:

On completing this course the student will be able to:

- Measure fluid flow through ducts and in open channels, selecting appropriate methods of Measurements.
- Conduct designed experiments, analyze and evaluate data.
- Apply dimensional analysis techniques in fluid mechanics problems.
- Evaluate the performance of centrifugal pumps, turbines and compressors.

EIC 2181 ELECTRICAL & ELECTRONICS ENGG. LAB L T P C
0 0 3 1

OBJECTIVES:

- To acquaint the students to semiconductor devices and their applications.
- To introduce the basic methods of designing the digital circuits and provide the fundamental
- concepts used in the design of digital systems.
- To introduce some knowledge about the microprocessor and its programming.

LIST OF EXPERIMENTS

1. Static characteristics of PN junction diode
2. Static characteristics of zener diode
3. Design of full wave, half wave rectifiers.
4. Study of logic gates
5. Design of half adder and full adder.
6. Design of SR and JK flipflop using gates
7. Design of T and D flipflop using gates.
8. Introduction to Arithmetic and logical programs using 8085 microprocessor
9. Saw tooth wave generation using oscilloscope
10. Triangular wave generation using oscilloscope

Total Hours : 60

REFERENCES:

1. V.K. Mehta, “Principles of Electronics”, 2nd Edition, S. Chand & Co., New Delhi, 2002.
2. Goankar R.S, “Microprocessors, Programming to Architecture 8085”, 5th Edition, Penram International publishing Pvt. Ltd., New Delhi, 2002.

OUTCOMES:

Students will be able to

- Demonstrate the ability to design a system using various semiconductor devices.
- Keep abreast of the latest digital technology and design of various digital logic circuits.
- Demonstrate the fundamental understanding of the operation of the

microprocessor and its interfacing devices

- Apply the programming techniques in developing the assembly language program for microprocessor application.

SEMESTER – IV

ENC 2282	**WRITTEN COMMUNICATION**	**L**	**T**	**P**	**C**
		0	**0**	**2**	**1**

OBJECTIVES:

- To help students identify content specific vocabulary and learn its usage.
- To expose them to reading for specific purposes, especially in professional contexts.
- To expose them to the process of different kinds of formal writing.
- To help them learn corporate correspondence for different purposes.
- To train them in preparing effective applications with résumé
- To make them write different types of reports.

MODULE I **4**

Introduction - process of writing – Fundamentals of academic and professional writing – Understanding short, real world notices, messages, etc.

MODULE II **4**

Reading industry related texts (ex. Manufacturing, textile, hospitality sector etc.) for specific information. Writing Instructions and recommendations

MODULE III **6**

Understanding format and conventions of writing email, memo, fax, agenda and minutes of the meeting. Writing email, memo, fax, agenda and minutes of the meeting for various purposes (industry specific)

MODULE IV **6**

Viewing letter of application and Résumé, letter calling for an interview, letter of inquiry and Promotional letter. Writing Functional résumé and letter of application using Edmodo,

MODULE V **6**

Viewing a Video and reading a case study (industry specific) – collaborative writing using Edmodo –reading and information transfer

Writing reports- Survey, feasibility and progress – exposure to discipline specific reports

MODULE VI **4**

Writing Statement of purpose (Higher Education)-- Justifying and writing about one's preparedness for job (Statement of Purpose highlighting strengths and weaknesses) – Peer evaluation skills through Edmodo.

P- 30; Total Hours –30

REFERENCES:

5. Macknish, C. (2010). *Academic and Professional Writing for Teachers*. McGraw-Hill Education. USA.
6. Whitby, Norman (2014). *Business Benchmark: Pre-Intermediate to Intermediate.* Cambridge University Press, UK.

OUTCOMES:

On completion of the course, the students will have the ability to

- Identify content specific vocabulary and also use them in appropriate contexts.
- Demonstrate reading skills with reference to business related texts.
- Draft professional documents by using the three stages of writing.
- Create different types of documents for various corporate correspondences.
- Write effective letter of applications, résumé and statement of purpose.
- Write business related reports efficiently.

AEC 2211 LOW SPEED AERODYNAMICS L T P C
3 0 0 3

OBJECTIVES:

- To introduce the basic aerodynamic concepts like circulation, vorticity and irrotationality.
- To understand the concepts of superposition of elementary flows for linear incompressible flow.
- To introduce the concept of classical thin airfoil theory and Prandtl's lifting line theory for wings.
- Introduce the basics of viscous flow.

MODULE I FUNDAMENTAL EQUATIONS OF AERODYNAMICS 6

Continuity, momentum and energy equations, Differential equations for streamline, angular velocity, Vortices, circulation. Stream Function, Potential Function, Equi-potential Lines, Elementary Flows and their combinations

MODULE II FUNDAMENTALS OF INVISCID INCOMPRESSIBLE FLOW 8

Bernoulli's equation, incompressible flow in a duct, pitot tube, pressure coefficient, governing equation for irrotational incompressible flow, elementary flow, ideal Flow over a circular cylinder, D'Alembert's Paradox, lifting flow over a cylinder, Kutta Jonkowski Theorem, Real flow over smooth and rough cylinder, method of source panels.

MODULE III INCOMPRESSIBLE FLOW OVER AIRFOILS 9

Airfoil nomenclature, airfoil characteristics, Kutta condition, circulation and vorticity, circulation and lift, Kutta-Joukowski transformation and its applications, Karman Trefftz Profiles, Thin Airfoil theory and its applications, vortex panel method.

MODULE IV INCOMPRESSIBLE FLOW OVER FINITE WINGS 10

Downwash and induced drag, Vortex Filament, Biot-Savart Law, Helmholtz theorems, Bound Vortex and trailing Vortex, Horse Shoe Vortex, Prandtl's Lifting Line Theory, lift and induced drag coefficients for elliptic lift distribution, effect of aspect ratio, non-

linear lifting-line method, lifting surface theory, vortex lattice method.

MODULE V INCOMPRESSIBLE LAMINAR BOUNDARY LAYER 6

Laminar incompressible boundary layer, boundary layer equations, flat plate boundary layer, Blasius solution, effect of pressure gradient, similarity in boundary layer, Karman Integral relation, laminar separation.

MODULE VI TURBULENT BOUNDARY LAYER 6

Turbulent boundary layer on a flat plate, effect of pressure gradient, Prandtl's mixing length hypothesis, free shear layers.

Total Hours –45

TEXT BOOKS:

1. Turbulent boundary layer on a flat plate, effect of pressure gradient, Prandtl's mixing length hypothesis, free shear layers.
2.

REFERENCES:

1. Houghton, E.L., and Caruthers, N.B., Aerodynamics for Engineering students, Edward Arnold Publishers Ltd., London, 1989.
2. Katz and Plotkin, Low Speed Aerodynamics, Cambridge Univ. Press, 2002
3. Milne Thomson, L.H., Theoretical Aerodynamics, Macmillan, 1985
4. John J Bertin., Aerodynamics for Engineers, Pearson Education Inc, 2002

OUTCOMES:

Students shall be able to

- Understand the capability and limitations of potential flow theory
- Estimate the force coefficients of airfoils and wings
- Perform simple viscous flow calculations.

AEC 2212 AIRCRAFT STRUCTURAL MECHANICS

L	T	P	C
3	1	0	4

OBJECTIVES:

To Study different types of structural members of aircraft subjected to various types of loading and support conditions.

MODULE I LOADS AND STRUCTURAL COMPONENTS OF AIRCRAFT **6**

V-n Diagram, Different structural members of aircraft, loads taken by the components general definitions.

MODULE II STATICALLY DETERMINATE STRUCTURES **12**

Plane truss analysis, method of joints, method of sections, 3D trusses.

MODULE III STATICALLY IN DETERMINATE STRUCTURES **12**

Propped Cantilever beams, Fixed-Fixed beams, Clapeyron's 3 moment theorem, moment distribution method, Maxwell's reciprocal theorem.

MODULE IV COLUMNS **10**

Inelastic buckling, Effect of initial curvature, Eccentric loading on columns, South well plot, Use of energy methods in column, Beam-columns

MODULE V ENERGY METHODS **10**

Strain energy due to gradual loading (axial, bending, torsion, Shear), impact loading, Castigliano's theorems, Unit load and Dummy load methods, application of energy methods to frames, beams, trusses and rings.

MODULE VI FAILURE **10**

Maximum principle Stress theory, Maximum principle Strain theory, shear stress theory, distortion energy theory, octahedral shear stress theory.

Total Hours –60

TEXT BOOKS:

1. James M Gere & Barry J. Goodno, Mechanics of Materials, Cenage Learning, 7th Edition, 2009.
2. Aircraft Structures for Engg. Students, THG Megson, Elsevier (BH), 2007.

REFERENCES:

1. C.T. Sun, “Mechanics of Aircraft Structures”, Second Edition, John Wiley & Sons. 2006.
2. R.C. Hibbeler, “Structural Analysis”, Fifth Edition, Prentice-Hall, 2002.
3. B.C.Punmia, Ashok Kumar Jain, Arun Kumar Jain, “Mechanics of Materials”, Firewall media, 2002.
4. Craig, R.R., 1996, Mechanics of Materials, John Wiley & Sons, New York.

6. R.K.Rajput, “ Strength of Materials:Mechanics of Solid”, Fourth edition, S.Chand Limited, 2007

LEARNING OUTCOMES:

Students will be able to

- Identify and relate different kinds of load factors experienced in aircraft flight.
- Estimate the load bearing capability of different structural members used in the construction of aircraft.
- Extend the concepts of solid mechanics to in-determinate structural problems.
- Give a theoretical design ofcolumns subjected to various loads.
- Obtain theoretical predictions of structural behavior using energy methods.
- Acquire knowledge on failure theories and to predict the values of the stress at which the structure fails.

AEC 2213	AIR BREATHING PROPULSION	L	T	P	C
		3	0	0	3

OBJECTIVES:

To introduce the fundamentals of air breathing propulsion and the working principles of air breathing engine components.

MODULE I FUNDAMENTALS OF AERO ENGINES 9

Gas turbine Engine development for Aircraft propulsion - Working of Gas turbine engines - the thrust equation and other performance parameters – Factors affecting thrust - Variants of Aircraft jet engines: Turboprop, Turbofan, Turbojet and Turboshaft - Performance characteristics and analysis, Ideal and Real Brayton cycles - analysis, Methods of thrust Augmentation.

MODULE II PISTON ENGINES & PROPELLER THEORY 6

IC engines for aircraft application, performance parameters of IC engines, supercharging of

aircraft IC engines - Propeller fundamentals, propeller aerodynamic theories.

MODULE III SUBSONIC & SUPERSONIC INTAKES 9

Internal flow and stall in subsonic intakes – Boundary layer separation – Major features of external flow near a subsonic intake - Relation between minimum area ratio and external deceleration ratio – Supersonic inlet flows - Starting problems in supersonic inlets - Shock swallowing methods - Modes of inlet operation.

MODULE IV COMBUSTION SYSTEMS 7

Classification of combustion chamber - Factors affecting combustion chamber performance and design - Aerodynamic pressure losses, Combustion Efficiency, combustion Intensity. Fuel Injectors, Flame stabilization, Flame holders, Flame tube cooling - Combustion instability. Numerical Problems.

MODULE V NOZZLES 7

Isentropic flow through nozzles - Choking – Area-velocity relation, Types - Effect of back

pressure on convergent and converging-diverging nozzles - over-expanded and under-expanded nozzle exit flows, Nozzle efficiency – Losses in nozzles - Fixed and variable geometry nozzles – Ejector and Variable area nozzles, Thrust vector control, Thrust reversal.

MODULE VI RAMJET& SCRAMJET PROPULSION 7

Working principle of ramjet engine – ramjet performance – sample ramjet design calculations – introduction to scramjet – preliminary concepts in supersonic combustion – integral ram-rocket - numerical problems.

Total Hours –45

TEXT BOOKS:

1. Saravanamuttoo, H.I.H., Rogers, G.F.C., Cohen H., Paul Straznicky, "Gas Turbine Theory", 6th Edition, Pearson Education Canada, 2008.
2. Hill Philip, Peterson Carl, "Mechanics and Thermodynamics of Propulsion", Addison Wesly, 1992.

REFERENCES:

1. Kroes Michael J, Wild Thomas W, "Aircraft Powerplants", 7th Edition, Tata McGraw Hill, 2010.
2. Mattingly J. D., "Elements of Gas Turbine Propulsion", Tata McGraw Hill, 2005.
3. El-Sayed Ahmed, "Aircraft Propulsion and gas turbine engines", Taylor and Francis (CRC press), 2008.
4. Rolls Royce Jet Engine", 3rd Edition, 1983.
5. Roy Bhaskar, "Aircraft Propulsion", Elsevier (India), 2008.

OUTCOMES:

Students will be able to

- Get perspective of different types of jet engines used in aircraft.
- Apply design concepts in propeller blade design.

- Learn engineering features of subsonic and supersonic intakes of jet engines.
- Acquire basic knowledge on combustion systems used in jet engines.
- Apply the basic design features of exhaust nozzles.
- Acquire knowledge of ramjet & scramjet propulsion systems.

AEC 2214	AIRCRAFT SYSTEMS & INSTRUMENTS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart knowledge of the hydraulic and pneumatic systems components and its operation.
- To introduce the basic knowledge of flight control system and its types.
- To acquaint the students to basic engine components and their applications
- To introduce some knowledge about the cabin comfort system and its applications.

To gain the basic knowledge of navigational instruments to the students.

MODULE I AIRCRAFT SYSTEMS 8

Hydraulic systems – Study of typical workable systems – components – hydraulic systems controllers – modes of operation – pneumatic systems – working principles – typical pneumatic power system – brake system – components, landing gear systems – classification – shock absorbers– retractive mechanism.

MODULE II AIRPLANE CONTROL SYSTEMS 7

Conventional Systems – power assisted and fully powered flight controls – power actuated systems – engine control systems – push pull rod system – operating principles – modern control systems – digital fly by wire systems – auto pilot system, active control technology

MODULE III ENGINE SYSTEMS 8

Fuel systems – piston and jet engines – components – multi-engine fuel systems, lubricating systems – piston and jet engines – starting and ignition systems – piston and jet engines.

MODULE IV AIR CONDITIONING AND PRESSURIZING SYSTEM 7

Basic air cycle systems – vapour cycle systems, boot-strap air cycle system – evaporative vapour cycle systems – evaporation air cycle systems – oxygen systems – fire protection systems, deicing and anti icing system.

MODULE V AIRCRAFT INSTRUMENTS 8

Flight instruments and navigation instruments – accelerometers, air speed indicators – mach meters – altimeters – gyroscopic instruments– principles and operation – study

of various types of engine instruments – tachometers – temperature gauges – pressure gauge – operation and principles.

MODULE VI MODERN AIRCRAFT SYSTEMS 7

Auto pilot system - Digital fly by wire systems - Side stick intelligent flight control system active control Technology - Electronic instrument display, EADI, EHSI - communication and Instrument landing system.

Total Hours –45

TEXT BOOKS:

1. Mekinley, J.L. and R.D. Bent, “Aircraft Power Plants”, McGraw Hill 1993.
2. Pallet, E.H.J, “Aircraft Instruments & Principles”, Pitman & Co 1993.

REFERENCES:

1. Treager, S., “Gas Turbine Technology”, McGraw Hill 1997.
2. Mckinley, J.L. and Bent R.D. “Aircraft Maintenance & Repair”, McGraw Hill,1993.
3. Handbooks of Airframe and Power plant Mechanics, US dept. of Transportation, Federal, Aviation Administration, The English Book Store, New Delhi, 1995

OUTCOMES:

Students will be able to

- Demonstrate the ability to design a various system using pneumatic and hydraulic components.
- Keep abreast knowledge on various flight control system and its recent advancements.
- Demonstrate the fundamental understanding of the operation of engine auxiliary systems.
- To understand the various cabin comfort system used in aircraft modern display systems.
- Describe principle behind the operation of various vital parameter displays and its uses in effective conduct of the flight.
- To get basic knowledge of modern aircraft system which helps in understanding the aircraft navigation system better.

AEC 2215	SOLID MECHANICS LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

To provide training in testing and evaluation of mechanical properties of the materials like hardness, fatigue strength, tensile strength, flexural strength, rigidity modulus etc.

LIST OF EXPERIMENTS:

1. Hardness test - a) Vickers b) Brinell c) Rockwell

2. Tension test

3. Torsion test

4. Impact test – a) Izod b) Charpy

5. Double shear strength test

6. Determination of stiffness and rigidity modulus on open coil spring

7. Determination of stiffness and rigidity modulus on closed coil spring

8. Determination of Young's modulus of a beam

9. Microstructure study of heat treated materials.

10. Study of stress-strain curves for various engineering materials

Total Hours –45

OUTCOMES:

Student will be able to

• Evaluate the mechanical properties of materials and compare it with theoretical models

• understand the fracture pattern of different specimen.

AEC 2216	AIRCRAFT SYSTEMS & INSTRUMENTS LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To train the students to assess the Aircraft Systems and carryout maintenan practices.
- To aware the students about the safety precautions to be followed before certifying t airworthiness of an aircraft.
- To familiarize about various systems in aircraft required to maintain airwort condition.

LIST OF EXPERIMENTS

1. Aircraft “Jacking Up” procedure.
2. Aircraft “Leveling” procedure.
3. Control system “Rigging check” procedure.
4. Aircraft “Symmetry Check” procedure.
5. “Flow test” to assess of filter element clogging.
6. “Pressure test” to assess hydraulic External/ Internal Leakage.
7. “Test of Brake System” and “Bleeding of Brake System”.
8. “Pressure test” procedure on fuel system component.
9. “Break Torque Load Test” on wheel brake units.
10. Maintenance and rectification of snags in hydraulic and fuel systems.

Total Hours – 45

LEARNING OUTCOMES:

Students will able to

- Understand the procedure required to handle an aircraft before testing its systems.
- Identify the snags in aircraft hydraulic and fuel systems and their rectifications.
- Understand the working of various aircraft systems.

AEC 2217	PROPULSION LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

To carryout experiments to study the functions of aircraft engine components, basics of heat transfer, combustion and engine exhaust characteristics.

LIST OF EXPERIMENTS:

1. Study of an aircraft piston engine. (Includes study of assembly of sub systems, various Components, their functions and operating principles)
2. Study of an aircraft jet engine (Includes study of assembly of sub systems, various Components, their functions and operating principles)
3. Study of forced convective heat transfer over a flat plate.
4. Study of free convective heat transfer over a flat plate.
5. Study of performance of a propeller.
6. Study of free jet.
7. Study of wall jet.
8. Determination of spray characteristics of injector.
9. Study of propellant mixing and casting process.
10. Determination of calorific value of fuels

Total Hours – 45

OUTCOMES:

Students will able to

• Understand the principles of heat transfer.

• Evaluate the performance of a typical propeller.

• Evaluate the heat of combustion of typical aviation fuels.

• Evaluate the spray characteristics of injector.

SEMESTER -V

MSC 3181	LEADERSHIP & CEO TRAINING	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims at

- Bringing about positive transformation in students' attitude.
- Building unique leadership competencies that would ensure successful transition of students across all career stages.
- Sensitizing students to identify their strengths & weakness and training them to deal with it
- Assisting students in enhancing their expressive ability and inducing a high level of self confidence to manage both business and emotions
- Training students to become more adaptable and flexible to changing business environment

MODULE I Introduction to Leadership 12

Leadership concept - meaning, definitions, importance of leadership, leadership traits. Leadership functions- general functions, listening, observing, managing and decision making. Components of leadership - leaders, followers and situation. Leadership theories – Trait theory, Skills theory, Style theory, Situational theory, Transformational theory, Transactional theory, Path Goal Theory and LMX. Assessing emotional intelligence and exploring the capabilities and inherent traits.through psychometric tests - Multi factor leadership questionnaire and personal reflections

MODULE II Leadership Style and Communication 08

Leadership styles-visionary, Coaching, Affiliative, Democratic, Pacesetting Commanding, Transformational, Transactional. Autocratic, Participative, Laissez-Faire Leader versus Managers. Leadership communication - Rationale, tactic, assertive, formal, informal, communication in crisis- leadership and negotiations, Leadership Presentations-convincing and impressive style

MODULE III Leadership Roles 08

Facets of leadership- Leader as an individual – personality and leadership, values, attitudes and ethics of a leader. **Leader as a relationship builder**- empowering

people to meet higher order needs, initiating organization wide motivational programs, involvement with all stakeholders- focusing on organization growth. **Leader as an inspirer**- motivation and leadership, recognizing and appreciating contributions, empowering others to lead **Leader as an innovator** –leader's role in shaping culture and values in an organization. **Leader as a Liaison- Leader as team player**

MODULE IV Leadership Challenges and Strategies 09

Challenges in leadership: Perception of organization culture and values, interpreting the power dynamics in the organization, establishing work life balance. Bad leadership – Reasons and impact.-Case Study of Marissa Mayer-Yahoo.Inc Organizational transformation through efficient leaders-Case study of Apple Inc. Blue Ocean Leadership-Steps to Blue ocean Leadership-Four Pillars of Blue Ocean leadership-Blue Ocean leadership grid.

MODULE V Leadership and CEO Training 08

Leader as a CEO: Traits of a successful CEO, Key responsibilities of a CEO, the path to be a CEO ,Training on Board Room Discussions, Meeting the CEO –Live sessions with industry CEO's. Requirements of Leadership: - Cognitive skills, Interpersonal skills, Business skills, Strategic skills. Role of Emotional Intelligence in taking up key-positions in the organization.

MODULE VI Teaching Pedagogy:

Nurturing – Based on the identified strengths and weaknesses, training will be given to enhance the strengths and overcome the weakness.

Assessment - Continuous evaluation will be effected through group discussions, oratory assignments and situational enactments. Pre-and post-training assessment through peer reviews and faculty feedback.

Sustained development – Training will be imparted for self-development and monitoring of leadership skills to ensure sustained applicability of the skills learnt.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Andrew J DuBrin. "Leadership: Research Findings, Practice, and Skills", 8th Edition, South-Western College Pub, 2015.
2. Yukl G , "Leadership in Organisations", 8th Edition, Pearson Education, 2013.

3. Richard L Daft , “Leadership”, 5th Edition, South Western Cengage Learning 2012.
4. Stephen P. Robbins and Timothy A. Judge. “Organizational Behaviour”, 15th Edition, New Delhi: Pearson, 2013.
5. Fred Luthans, “Organizational Behavior, An Evidence Based Approach”, 12th Edition, New Delhi: McGraw Hill Education, 2013.
6. Emotional Intelligence, Why it can matter no more than IQ by Daniel Goleman (include a book) **Publisher:** Bloomsbury Publishing India Private Limited; Latest edition (2017)
7. Primal Leadership: Unleashing the Power of Emotional Intelligence by Prof Daniel Goleman , Richard Boyatzis and McKee ,Harvard Business Review Press

REFERENCES:

1. Jim Collins, (2001). “Good To Great: Why Some Companies Make the Leap...And Others Don't”, Random House Publishers India Pvt.Ltd, New Delhi
2. George, B. with Sims, P. True North: Discover Your Authentic Leadership, The Times Group Books; First edition (1 October 2015)
3. Kim, W. C., & Mauborgne, R. A. (2014). Blue ocean strategy, expanded edition: How to create uncontested market space and make the competition irrelevant. Harvard business review Press.
4. Leadership Wisdom by Robin Sharma Jaico Publishing House;

OUTCOMES:

The students will be able to

- Explore through self-introspection one’s own leadership style, their strength and weakness
- Gain self confidence to lead a team in the organization
- Realize the role of leadership in making or breaking of an organization
- Acquire the practice of self introspection and development of leadership competencies thorough continuous efforts
- Manage their own emotions as well as other resulting in successful relationship building with all stakeholders

ENC 3181	COMMUNICATION AND SOFT SKILLS - I CAREER CHOICE	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To create awareness of industrial trends and market demands.
- To encourage students to explore career opportunities in an industry and evaluate themselves in relation to industry preparedness

MODULE I **6**

Knowledge about specific industry-Discussion with industry experts --Self evaluating career prospects through survey questionnaire (based on his/her eligibility for taking up a job (industry preparedness)

MODULE II **6**

. Knowing case studies of industries(pertaining to students' choice of career)- Reading and discussing about job markets-goal setting, working on creativity.

MODULE III **4**

SWOC analysis and discussing outcomes--exploring mini projects or case studies of latest industries.

MODULE IV **6**

Writing statement of purpose pertaining to career choice---- Outcomes

MODULE V **8**

Project or case study presentations (Presentation in pairs) -mini project report or case study report.

Total Hours – 30

REFERENCES:

1. Brown,D.(2002). Career Choice and Development. Wiley,J. & Sons.USA
2. Lore,N.(1998). The Pathfinder: How to Choose or Change Your Career for a Lifetime of Satisfaction and Success. Simon & Schuster.USA.
3. Shell, G.R.(2013). *Springboard Launching your Personal Search for Success.Portfolio.USA.*

OUTCOMES:

After the completion of the course, students would be able to

- Speak about their career choice.
- Self evaluate their strengths and weaknesses and speak about it.
- Make effective presentations on case studies or relating to projects.
- Write the statement of purpose relating to their career choice.

AEC 3101 DESIGN OF COMPRESSORS & TURBINES L T P C
2 0 0 2

OBJECTIVES:

To introduce the fundamentals of aircraft compressors & turbine and analysis their design aspects

MODULE I COMPRESSORS 12

Centrifugal Compressors - Principle of operation – work done and pressure rise - slip factor, velocity diagrams, diffuser vane design considerations, Concept of Surging, choking, prewhirl, rotating stall, Performance characteristics.

Axial Compressors - Basic operation - Elementary theory – Velocity triangles – Work and compression, Design parameters - Flow coefficient - loading coefficient - Degree of reaction - diffusion factor, Cascade Analysis nomenclature - Loss and Blade performance estimation, Free vortex theory, Compressor blade design, Single and multi-stage axial compressor characteristics – Performance characteristics.

MODULE II AIRCRAFT ENGINE TURBINES 12

Axial Turbines - Elementary theory – vortex theory – choice of blade profile, pitch and chord, Turbine stage - Turbine blade 2D (cascade analysis), Work done - degree of reaction - stage design, Losses, efficiency and performance, Rotor blade and disc stresses, Multi-staging of turbine, Turbine cooling technology, Overall turbine performance. Radial flow turbines: Radial turbine Aerodynamics and thermodynamics, Losses in radial turbine and efficiency

MODULE III AIRCRAFT ENGINE SIZING & MATCHING 6

Aircraft Engine Component matching: Intake-Compressor Matching, Turbine Nozzle matching, Compressor – Turbine matching: Single and multi-spool. Free turbine and unducted Fan/Propeller Matching.

Total Hours : 30

TEXT BOOKS:

1. Cohen, H., Rogers, G.F.C. and Saravanamuttoo, H.I.H., “Gas Turbine Theory”, Pearson Education Ltd., 2009.
2. Hill, P.G. & Peterson, C.R. “Mechanics & Thermodynamics of Propulsion”, Pearson Education Inc., 2010

REFERENCES:

1. Mattingly J. D., “Elements of Gas Turbine Propulsion”, Tata McGraw Hill, 2005
2. Kroes Michael J, Wild Thomas W, “Aircraft Powerplants”, 7th Edition, Tata McGraw Hill, 2010.
3. El-Sayed Ahmed, “Aircraft Propulsion and gas turbine engines, Taylor and Francis (CRC press), 2008.
4. “Rolls Royce Jet Engine”, Third Edition, 1983.
5. Roy Bhaskar, “Aircraft Propulsion”, Elsevier (India), 2008

OUTCOMES:

Students will be able to

- Design aircraft compressor blades for single and multi-stage compressors.
- Design aircraft turbine blade profiles for gas turbines
- Interpret the performance characteristics of both compressor and turbines
- Understand the matching of components and the parameters characterizing the engine performance.

AEC 3102	AIRCRAFT STRUCTURAL ANALYSIS	L	T	P	C
		3	1	0	4

OBJECTIVES:

To introduce the analysis of various structural components under different loading conditions and the fundamentals of elasticity.

MODULE I UNSYMMETRICAL BENDING OF BEAMS 8

(CROSS SECTIONS)

Bending Stresses in beams of unsymmetrical sections, bending of sections with skew loads, Structural Idealization, bending stress in the wing box.

MODULE II SHEAR FLOW IN OPEN SECTIONS 10

Thin walled beams, concept of shear flow, shear centre, elastic axis,With one axis of symmetry, with wall effective and ineffective in bending, unsymmetrical beam sections.

MODULE III SHEAR FLOW IN CLOSED SECTIONS 10

Bredt – Batho formula, single and multi – cell structures. Shear flow in single & multicell structures under torsion, Shear flow in single and multicell under bending with walls effective and ineffective.

MODULE IV BUCKLING OF PLATES 12

Rectangular sheets under compression, local buckling stress of thin walled sections, crippling stresses by Needham's and Gerard's methods, thin walled column strength. Sheet stiffener panels, Effective width, inter rivet and sheet wrinkling failures.

MODULE V STRESS ANALYSIS IN WING AND FUSELAGE 10

Procedure – Shear and bending moment distribution of wings and fuselage, thin webbed beam. Shear resistant web beams, Tension field web beams (Wagner's).

MODULE VI BASICS OF ELASTICITY 10

Definitions, equations of equilibrium, strain displacement relationships, Stress

– Strain relationship, Compatibility equations

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. THG Megson, “Aircraft Structures for Engineering Students”, 4th Edition, Elsevier (BH) 2007.
2. Elmer Franklin Bruhn, “Analysis and Design of Flight Vehicle Structures”, S.R. Jacobs, 1973.

REFERENCES:

1. David J Peery, Jamal J Azar, “Aircraft Structures”, 2nd Edition, McGraw Hill,1982.
2. R.M Rivello, “Theory and Analysis of Flight Structures”, Illustrated Edition, McGraw Hill, 1969.
3. B. Donaldson, “Analysis of Aircraft Structures: An Introduction”, Cambridge University Press.

OUTCOMES:

Students will be able to

- Analyze the structural members of aircraft under different loading conditions.
- Carry out stress analysis on thin walled Structures such as wing and fuselage under different loading conditions.
- Obtain analytical solutions for the Buckling of finite plates.
- Differentiate between theory of elasticity and solid mechanics approaches in solving aircraft structural problems.

AEC 3103	HIGH SPEED AERODYNAMICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the effect of compressibility at high speed flows.
- To understand the basics of shock and expansion waves at supersonic flows.
- To introduce the compressible flow theories to assess the flow over airfoils and wings.

MODULE I ONE DIMENSIONAL COMPRESSIBLE FLOW E 10

Energy, momentum, continuity and state equations, velocity of sound, adiabatic steady state flow equations, flow through converging, diverging passages, performance under various back pressures.

MODULE II NORMAL SHOCK WAVES 6

Prandtl equation and Rankine – Hugonoit relation, normal shock equations, pitot static tube, corrections for subsonic and supersonic flows

MODULE III OBLIQUE SHOCKS AND EXPANSION WAVES 10

Oblique shocks and corresponding equations, hodograph and pressure turning angle, shock polars, flow past wedges and concave corners, strong, weak and detached shocks, Rayleigh and Fanno Flow. Flow past convex corners, expansion hodograph, reflection and interaction of shocks and expansion, waves, families of shocks, methods of characteristics, two dimensional supersonic nozzle contours.

MODULE IV DIFFERENTIAL EQUATIONS OF MOTION FOR STEADY COMPRESSIBLE FLOWS 13

Small perturbation potential theory, solutions for supersonic flows, Mach waves and Mach angles, Prandtl-Glauert affine transformation relations for subsonic flows, linearised two dimensional supersonic flow theory, lift, drag pitching moment and center of pressure of supersonic profiles

MODULE V AIRFOIL IN HIGH SPEED FLOWS 9

Lower and upper critical Mach numbers, lift and drag divergence, shock induced separation, characteristics of swept wings, effects of thickness, camber and aspect ratio of wings, transonic area rule, tip effects.

MODULE VI HIGH SPEED WIND TUNNELS 12

Blow down, in draft and induction tunnel layouts and their design features, transonic, supersonic and hypersonic tunnels and their peculiarities, helium and gun tunnels, shock tubes, optical methods of flow visualization.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. John D. Anderson, Jr.,"Fundamentals of Aerodynamics", Tata McGraw-Hill Publishing Co. Ltd., New Delhi, 2007.
2. Liepmann, H. W and Roshko, A., "Elements of Gas dynamics", Dover Publication, 2002.
3. Pope, A. and Goin, L., "High Speed Wind Tunnel Testing", John Wiley, 1985

REFERENCES:

1. McCormick. B. W., "Aerodynamics, Aeronautics and Flight Mechanics", John Wiley & Sons, Inc., UK, 1995.
2. Anderson Jr., D., "Modern compressible flow", McGraw-Hill Book Co., New York 2003

OUTCOMES:

Students will be able to

- Apply airfoil theory to predict airfoil performance.
- Analyse wing performance at high speed flight.
- Model 2-D supersonic flows.
- Gain understanding on high speed wind tunnel facilities and testing.

AEC 3104	AERODYNAMICS LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To introduce the basics of Wind Tunnels and their Applications for the study of flow around different configurations and evaluation of aerodynamic forces and moments.

LIST OF EXPERIMENTS:

1. Calibration of subsonic wind tunnel.
2. Pressure distribution over smooth and rough cylinder.
3. Pressure distribution over symmetric airfoils.
4. Pressure distribution over cambered airfoils & thin airfoils
5. Force measurement using wind tunnel balance.
6. Flow over a flat plate at different angles of incidence
7. Flow visualization studies in low speed flows over cylinders
8. Flow visualization studies in low speed flows over airfoil with different angle of incidence
9. Calibration of supersonic wind tunnel.
10. Supersonic flow visualization with Schlieren system.

Total Hours – 45

OUTCOMES:

Students will be able to

- Measure flow velocity, lift and drag coefficients using wind tunnels.
- Understand the dependence of airfoil pressure distribution on the lift coefficient.
- Use the flow visualization techniques to visualize compressible and incompressible
  flows.

AEC 3105 AIRCRAFT STRUCTURAL ANALYSIS LAB

L	T	P	C
0	0	3	1

OBJECTIVES:

- To carryout experiments to study the load-deflection characteristics of beams and the response of structural members under various loading conditions.

LIST OF EXPERIMENTS:

1. Determination of Young's Modulus for the given material (statically determinate beam) and verify Maxwell's reciprocal theorem for the same using extensometers
2. Determination of Young's Modulus for the given material (statically indeterminate beam) and verify Maxwell's reciprocal theorem for the same using extensometers.
3. Southwell – plot.
4. Unsymmetrical bending of beams
5. Determination of Shear center for Closed and Open Section.
6. Constant Strength Beam
7. Beam with combined loading.
8. Calibration of photo-elastic material and determination of Stresses in circular discs and beams.
9. Vibrations of beams
10. Wagner's beam.

Total Hours – 45

OUTCOMES:

Students will be able to

- Evaluate the material properties of aircraft structural members.
- Obtain experimental results of static and dynamic structural responses and compare with that of theoretical values.
- Determine the stress pattern for different cross sections using photo-elastic apparatus.

SEMESTER - VI

MSC 4181	**SOCIAL ENTREPRENEURSHIP**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

1. To be able to understand the field of social entrepreneurship and Social problems
2. To be able to describe and understand the traits of social entrepreneurs
3. To recognize the social business opportunities
4. To synthesize the resource mobilization ways for social entrepreneurship
5. To understand the social entrepreneurship models
6. To recognize the impact of social entrepreneurship on societies.

MODULE I INTRODUCTION TO SOCIAL ENTREPRENEURSHIP 7

Introduction - Emergence and Development of Social Entrepreneurship. Social Problems in India: An Overview. Social Development: The Indian Scenario. Emergence of Social Entrepreneurs and Sustainable Solutions to Social Problem. Characteristics and Context of Social Entrepreneurship .The Role of Social Entrepreneurship in Societies & Economies.

MODULE II SOCIAL ENTREPRENEURSHIP: DRIVERS AND CHALLENGES 7

The Drivers of Social Entrepreneurship. Elements of the Social Entrepreneurial Personality. Challenges of financial constraints. Challenge to attract and cultivate talented workers. Challenge of evaluation of social entrepreneur impact. Challenge of scaling and its impact. Cases

MODULE III SOCIAL ENTREPRENEURSHIP: OPPORTUNITY RECOGNITION 7

Opportunity Recognition and Planning Process. Opportunities for Social Entrepreneurs. The Nature of Social Entrepreneurial Opportunities. Social Problems into Opportunities. Idea development and conceptualization of social problem. Cases

MODULE IV RESOURCE MOBILIZATION FOR SOCIAL VENTURE 8

Resources at Initial Stage. Social Network as a role of Social Capital. Team and Collective Efforts. Need and Determination of Important Resources. Resource of Knowledge, Skills and Abilities. overview of venture capital and angel investment. Cases

MODULE V **BUSINESS MODELS AND BUSINESS PLAN FOR SOCIAL ENTERPRISES** **8**

Design Principles of Social Entrepreneurship Business Models , Evaluation of the Root Cause of a Societal Problem. Developing business plan for social ventures. Developing an investor presentation. Feasibility study and report. How to start a business - Procedures for registration of small scale industry

MODULE VI **THE IMPACT OF SOCIAL ENTREPRENEURSHIP ON SOCIETIES AND CASES** **8**

Static Impact of Social Entrepreneurship. Impact of Charitable NGOs vs. Social Entrepreneurship, Impact of For-Profit Companies vs. Social Entrepreneurship. Social entrepreneurship report preparation by students.

Case Study of Social Entrepreneurs

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Social Entrepreneurship : New models of sustainable social change” . Alex Nicholls, Oxford University Press 2006
2. The Process of social value creation : A multiple case study on Social Entrepreneurship in India , Archana Singh Springer 2016
3. “Social Entrepreneurship and social business” Christine K Volkmann, Springer Gabler 2012
4. “Social Entrepreneurship” Manuel London ,Routlege, 2010.

OUTCOMES:

The students can able to

1. Conceptualize social entrepreneurship in terms of a theoretical framework between changing social values and institutions
2. Think and communicate about social values
3. Learn about practical models of social change to launch, lead, manage, and evaluate a social venture
4. Analyze funding needs and sources for the social venture
5. Experience the ideas can be critically and collaboratively examined prior to commitment.

ENC 3281 COMMUNICATION AND SOFT SKILLS - II L T P C

CONFIDENCE BUILDING 0 0 2 1

OBJECTIVES:

- To develop professional skills like work ethics, analytical skills, presentation skills etc.
- To train them in problem solving skills and leadership skills pertaining to industries.
- To train them in team building skills.
- To train in setting up career goals

MODULE I **6**

Brief about Multinational companies- Analysing work ethics of multinational companies and small industries- discussing as pairs-Knowledge about etiquette (different types)

MODULE II **6**

Visit to an Industry and prepare reports --Critically reading of industry specific journal articles and write ups-- preparing reports.

MODULE III **4**

Analysing problem solving situations in industries (relating to application of core subject to specific jobs) and discussing about them- working on a sample case

MODULE IV **6**

Developing Leadership in team projects-- debating about various aspects of leadership: for example, responsibility and reliability-time management

MODULE V **8**

Team building skills-- group discussions pertaining to industries-- presenting career goals. -- preparing for interviews- interpersonal skills

Total Hours – 30

REFERENCES:

1. Covey,S.R. (2004). The 7Habits of Highly Effective People: Powerful Lessons in Personal Change. Free Press.UK
2. Fine, P.M.& Alice Olins. (2016).Step up: Confidence, Success and Your Stellar Career in 10 Minutes a Day. Vermilion.UK
3. Pai, A. (1993).How to Develop Self-Confidence. Amazon.com
4. Wentz,F.H.(2012). Soft skills training: A Workbook to Develop Skills for Employment. Amazon.com

OUTCOMES:

After completing the course students would be able to

- Exhibit critical reading skills through review of industry specific articles.
- Provide solutions to problem based situations.
- Exhibit leadership qualities by debating over industry specific issues.
- Participate in group discussions confidently.
- Present their career goals.

AEC 3211	ROCKET PROPULSIOn	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce different types of propellants for rocket propulsion and the study of system performance.

MODULE I CLASSIFICATION AND FUNDAMENTAL OF ROCKET PROPULSION 7

Duct Jet Propulsion, Rocket Propulsion, Applications of Rocket Propulsion Thrust, Exhaust Velocity, Energy and Efficiencies, Typical Performance Values, Nozzle Configurations, Nozzle performance parameters.

MODULE II LIQUID PROPELLANT ROCKET ENGINE FUNDAMENTALS 7

Propellants, Propellant Feed Systems, Gas Pressure Feed Systems, Propellant Tanks, Tank Pressurization, Turbopump Feed Systems and Engine Cycles, Flow and Pressure Balance

MODULE III LIQUID PROPELLANTS AND COMBUSTION 8

Propellant Properties, Liquid Oxidizers, Liquid Fuels, Liquid Monopropellants, Gelled Propellants, Gaseous Propellants, Safety and Environmental Concerns, Thrust Chambers, Injectors, Injectors flow characteristics, Combustion Process, Combustion Instability.

MODULE IV SOLID PROPELLANT ROCKET FUNDAMENTALS 7

Propellant Burning Rate, Basic Performance Relations, Propellant Grain and Grain Configuration, Propellant Grain Stress and Strain.

MODULE V SOLID PROPELLANTS AND COMBUSTION 9

Classification, Propellant Characteristics, Hazards, Propellant Ingredients, Other Propellant

Categories Liners, Insulators, and Inhibitors, Combustion of Solid Propellants,

Physical and

Chemical Processes, Ignition Process, Extinction or Thrust Termination, Combustion Instability

MODULE VI THRUST VECTOR CONTROL 7

TVC Mechanisms with a Single Nozzle, TVC with Multiple Thrust Chambers or Nozzles Testing Integration with Vehicle, Attitude Control and Side Maneuvers with Solid Propellant Rocket Motors

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. George P. Sutton, Oscar Biblarz, “Rocket Propulsion Elements”, 7th Edition, John-Wiley

& Sons, Ltd., 2001.

REFERENCES:

1. R. Humble, G. Henry, and W. Larson, “Space Propulsion Analysis and Design”, McGraw-Hill, New York, 1995.
2. Hill, Philip and Carl Peterson, “Mechanics and Thermodynamics of Propulsion”, Prentice Hall, 1991.

OUTCOMES:

Students will be able to

- Apply thermodynamic relations for rocket engines and nozzles for the evaluation of engine performance
- Understand the ballistics properties of propellants and combustion kinetics.
- Understand the mechanisms involved in thrust vector control.

AEC 3212	FLIGHT DYNAMICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the study of performance and stability characteristics of aircraft under various operating conditions and atmospheric disturbances.
-

MODULE I DRAG ON THE AIRPLANE 7

Forces and moments acting on a flight vehicle , equation of motion of a rigid flight vehicle , different types of drag , drag polar of vehicles from low speed to high speeds , variation of thrust, power and SFC with velocity and altitudes for air breathing engines and rockets , power available and power required curves.

MODULE II AIRCRAFT PERFORMANCE 8

Performance of airplane in level flight, maximum speed in level flight , conditions for minimum drag and power required , range and endurance , climbing and gliding flight- maximum rate of climb and steepest angle of climb, minimum rate of sink and shallowest angle of glide, Turning performance -Turning rate turn radius, Bank angle, Limitations of pull up and push over, V-n diagram and load factor.

MODULE III STATIC LONGITUDINAL STABILITYAND CONTROL 8

Degree of freedom of rigid bodies in space , Static and dynamic stability– static longitudinal stability , stick fixed stability , basic equilibrium equation , stability criterion , effects of fuselage and nacelle , influence of CG location , power effects , stick fixed neutral point , stick free stability, Hinge moment coefficient , stick free neutral points, symmetric maneuvers , stick force gradients , aerodynamic balancing.

MODULE IV DIRECTIONAL STABILITY AND CONTROL 7

Static directional stability rudder fixed – directional control, Stick free directional stability adverse yaw effects –slip stream rotation –crosswind during takeoff and landing, spinning, Anti symmetric power.

MODULE V LATERAL STABILITY AND CONTROL 6

Dihedral effect –estimation of airplane dihedral effect–effects of wing sweeps, flaps,

power on dihedral effect, lateral control – Aileron control forces, aileron levers.

MODULE VI DYNAMIC STABILITY 9

Equation of longitudinal motion –Evaluation of stability derivatives –solution of equation of motion (stick fixed case),solution of equation of motion (stick free case) –lateral dynamics – lateral degrees of freedom, characteristics motion of the airplane with control locked., Evaluation of stability derivatives, response to aileron control , response to aileron with adverse yaw, dynamic lateral stability rudder free, aileron free.

L – 45; T – 15; Total Hours –45

TEXT BOOKS:

1. Anderson, J.D., “Aircraft performance and design”, McGraw Hill, 1995.
2. Perkins, C.D., and Hage, R.E., “Airplane Performance stability and Control”, John Wiley & Son, Inc, New York, 2011.

REFERENCES:

1. Nelson, R.C. “Flight Stability and Automatic Control”, McGraw Hill Book Co., 1998.

OUTCOMES:

Students will be able to

- Have a broad understanding of the performance of aircraft during climb, cruise, descent and landing.
- Evaluate and understand the V-n diagram.
- Calculate the basic design parameters such as range and endurance
- Analyze the static and dynamic stability of aircraft.

AEC 3213	AIRCRAFT MATERIALS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce types of materials used in aircraft, their characteristics and applications.

MODULE I INTRODUCTION TO AIRCRAFT MATERIALS 7

General properties of materials, definition of terms, requirements of aircraft materials, testing of aircraft materials, inspection methods, application and trends in usage in aircraft structures and engines, introduction to smart materials and nanomaterials; selection of materials for use in aircraft.

MODULE II AIRCRAFT METAL ALLOYS 6

Aluminum alloys, magnesium alloys, titanium alloys, plain carbon and low carbon steels, corrosion and heat resistant steels, maraging steels, copper alloys,Producibility and surface treatments aspects for each of the above

MODULE III AIRCRAFT SUPERALLOYS AND CORROSION 7

General introduction to superalloys, nickel based superalloys, cobalt based superalloys,and iron based superalloys, manufacturing processes associated with superalloys, heat treatment and surface treatment of superalloys. Knowledge of the various methods used for removal of corrosion from common aircraft metals and methods employed to prevent corrosion.

MODULE IV COMPOSITE MATERIALS 8

Definition and comparison of composites with conventional monolithic materials, reinforcing fibers and matrix materials, carbon-carbon composites production, , inter metallic matrix composites, ablative composites based on polymers, ceramic matrix, metal matrix composites based on aluminum, magnesium, titanium and nickel based composites for engines.

MODULE V POLYMERIC MATERIALS, CERAMICS&GLASS 9

Knowledge and identification of physical characteristics of commonly used polymeric

material: plastics and its categories, properties and applications; commonly used ceramic, glass and transparent plastics, properties and applications, adhesives and sealants and their applications in aircraft.

MODULE VI AIRCRAFT WOOD, RUBBER, FABRICS & DOPE AND PAINT **8**

Classification and properties of wood, seasoning of wood, aircraft woods, their properties and applications, joining processes for wood, plywood; characteristics and definition of terminologies pertaining to aircraft fabrics and their applications, purpose of doping and commonly used dopes; purpose of painting, types of aircraft paints, aircraft painting process.

L – 45; T – 15; Total Hours – 45

TEXT BOOKS:

1. Kenneth. G.Budinski& Michael .K. Budinski, “Engineering material properties and selection”,Prentice Hall publications, 2010.

REFERENCES:

1. F.C Campbell,” Manufacturing technology for aerospace structural materials”, Elsevier publication.

OUTCOMES:

Students will be able to

- Understand the properties of materials used in various parts of aircraft.
- Classify the materials based on the structures and its properties.
- Understand the importance of surface treatment/coating and its process.

EC 3214	AIRCRAFT DESIGN PROJECT - I	L	T	P	C
		1	0	3	2

OBJECTIVES:

- To train the students on preliminary aircraft design work using suitable procedures to evolve the basic configuration design.

1. Comparative configuration study of different types of airplanes
2. Comparative study on specification and performance details of aircraft
3. Preparation of comparative data sheets
4. Work sheet layout procedures
5. Comparative graphs preparation and selection of main parameters for the design
6. Preliminary weight estimations, selection of main parameters,
7. Power plant selection, Aerofoil selection, Wing tail and control surfaces
8. Preparation of layouts of balance diagram and three view drawings
9. Drag estimation
10. Detailed performance calculations and stability estimates

Total Hours – 45

OUTCOMES:

Students will be able to

- Identify information requirements and sources for aircraft design and evaluation.
- Apply the fundamental principles of Aerodynamics, Flight performance & stability and

propulsion to evolve the configuration of an aircraft.

- Learn to work as a team to achieve the goal.
- Apply cognitive design skills to generic design problems.

SEMESTER - VII

		L	T	P	C
AEC 4101	**AVIONICS (LAB INTEGRATED)**	**3**	**0**	**3**	**4**

OBJECTIVES:

- To introduce the basic concepts of avionics systems utilized in Aircraft.

MODULE I INTRODUCTION 7

Need for avionics in civil and military aircraft and space systems – integrated avionics and weapon systems – typical avionics subsystems, design, technologies.

MODULE II PRINCIPLE OF DIGITAL SYSTEMS 7

Digital computer –Digital number system- number systems and codes-fundamentals of logic and combinational logic circuits- Digital arithmetic-interfacing with analogue systems- Microprocessor basics- intel 8085,8086 microprocessor- Memories.

MODULE III DIGITAL AVIONICS ARCHITECTURE: 8

Avionics system architecture – salient features and application of Data buses – MIL-STD-1553B – ARINC 429 –ARINC 629.

MODULE IV FLIGHT DECKS AND COCKPITS: 8

Control and display technologies: CRT, LED, LCD, EL and plasma panel – Touch screen – direct voice input (DVI)- civil and military cockpits: MFDS, HUD, MFK, HOTAS.

MODULE V AVIONICS SYSTEM (AIR DATA INSTRUMENTS & POWER PLANTS INSTRUMENTS) 8

Air data instruments- Airspeed, altitude, vertical speed indicators- Angle of attack measurements- Pressure measurements- Temperature measurements, fuel quantity measurement, engine power and control instruments- measurements of RPM, EPR, fuel flow, engine vibration.

MODULE VI AVIONICS SYSTEMS(COMMUNICATION & NAVIGATIO INSTRUMENTS) 8

Communications systems- Navigation systems – flight control systems – radar –

electronic warfare – utility systems reliability and maintainability –certification.

Total Hours – 45

TEXT BOOKS:

1. Spitzer, C.R. “Digital Avionics Systems”, McGraw Hill, 1993.
2. Gaokar, R.S., “Microprocessors Architecture-Programming and Applications”, Wiley and Sons Ltd., New Delhi, 1990.
3. Pallet, E.H.J., “Aircraft Instruments & integrated systems”, Longman Scientific and Technical, McGraw Hill, 1992.

REFERENCES:

1. Middleton, D.H., Ed., “Avionics systems, Longman Scientific and Technical”, Longman Group UK Ltd., England, 1989.
2. Brain Kendal, “Manual of Avionics”, 3rd Edition, The English Book House, New Delhi,

OUTCOMES:

Students will be able to,

- Understand the basic principles, theory and operation of modern avionics systems
- Implement various modern avionic systems for both civil and military aircraft.
- Understand the principles of various avionics systems like navigation, communication and electronic warfare.

AEC 4102	FINITE ELEMENT METHOD	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the concept of finite element analysis of structural components.

MODULE I INTRODUCTION 6

Basic steps in fem, Solution of differential equations using weighted residual methods, Rayleigh and Ritz Method, Convergence criteria of finite element method.

MODULE II DISCRETE ELEMENTS 8

1 D elements, Bar elements (both Mechanical and thermal Loading), Beam element, Use of local and natural coordinates, Truss Analysis.

MODULE III CONTINUUM ELEMENTS 10

Constant and linear strain triangular elements, Plane stress, Plane strain, Axisymmetric problems.

MODULE IV ISOPARAMETRIC ELEMENTS 7

Mapping of Elements, shape function for quadrilateral elements, stiffness matrix, consistent load vector, Serendipity elements, Gaussian integration.

MODULE V FIELD PROBLEMS 6

Heat transfer problems, steady state fin problems, torsion problems, Flow Field Problems.

MODULE VI VIBRATION ANALYSIS 8

Single degree of Freedom , Multiple degrees of Freedom System, Transverse vibrations of strings, Longitudinal, Lateral and Torsional vibrations.

Total Hours –60

TEXT BOOKS:

1. J.N. Reddy, “An Introduction to Finite Element Method”, 3rd Edition, Tata McGraw Hill, 2006.
2. Chandrupatla and Belegundu, “Introduction to Finite Elements in Engineering”, 4th Edition(revised), Pearson Education, 2011.

REFERENCES:

1. Seshu. P., “Textbook of Finite Element Analysis”, Illustrated Reprint, Prentice Hall of India Learning Pvt Ltd., 2003.
2. R. D. Cook., “Concepts and Applications of Finite Element Analysis”, 2nd Edition, Wiley, 1981.
3. David V. Hutton., “Fundamentals of Finite Element Analysis”, Tata McGraw Hill, 2005.
4. S.S. Rao, “Finite Element Analysis”, 4th Edition, Elsevier Butterworth Heinemann, 2011
5. O. C. Zienkiewicz and Y.K. Cheung., “The Finite Element Method: Its Basis and Fundamentals”, 6th Edition (Reprint), Butterworth Heinemann, 2005.
6. G Lakshmi Narasiah., “Finite Element Analysis”, Illustrated Edition, B S publications, 2009.

OUTCOMES:

Students will be able to

- Apply weighted residual methods to solve differential equations.
- Obtain finite element equations for and 1D and 2D problems and apply the same to solve the structural problems.
- Understand Mapping of elements and formulate Shape functions for different types of elements.
- Obtain finite element equations and solve field problems involving fluid flow and heat transfer.

AEC 4104	AIRCRAFT DESIGN PROJECT - II	L	T	P	C
		1	0	3	2

OBJECTIVES:

- To introduce the detailed design procedure to be adapted for the design of selected type of aircraft

Each student is assigned with work in continuation of the design project – I. The following sequence is to be carried out.

1. V-n diagram for the design study
2. Gust and maneuverability envelopes
3. Critical loading performance and final V-n graph calculation
4. Structural design study – theory approach
5. Load estimation of wings
6. Load estimation of fuselage.
7. Balancing and maneuvering loads on tail plane, aileron and rudder loads.
8. Detailed structural layouts
9. Design of some components of wings, fuselage
10. Preparation of a detailed design report with CAD drawings.

Total Hours –45

OUTCOMES:

Students ill be able to

- Finalize the V-n diagram of the selected aircraft
- Estimate the limiting loads on the aircraft during flight
- Apply suitable design methods and design structural elements/ systems for a given aircraft
- Prepare CAD drawings of the designed aircraft.

AEC 4105	CFD-STRUCTURAL ANALYSIS LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To familiarize the students with the application of CFD/ CSM codes and their applications in aeronautics.
- To train the students to compute the flow features and stress distributions over aircraft components.

LIST OF EXPERIMENTS

CFD Analysis of

(i) Flow over an airfoil
(ii) Flow over a cone cylinder fuselage configuration
(iii) Free jet flow

Computational Structural Analysis of

(i) Wing spar
(ii) Fuselage bulkhead

Total Hours –45

OUTCOMES:

Students will be able to

- Identify suitable computational domains, boundary conditions for simple flow problems
- Select the appropriate meshing techniques and suitable solver for the flow problems
- Simulate the flow around various configurations and interpret the results obtained
- Analyse the structural response of different Aircraft structural components for various
  loads.

PROFESSIONAL ELECTIVES

		L	T	P	C
AECX02	**HYPERSONIC AERODYNAMICS**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To introduce the basic concepts of hypersonic flows and their effects on flight vehicles

MODULE I FUNDAMENTALS OF HYPERSONIC AERODYNAMICS 7

Introduction to hypersonic aerodynamics, differences between hypersonic aerodynamics and supersonic aerodynamics, concept of thin shock layers, hypersonic flight paths, hypersonic Similarity parameters, shock wave and expansion wave relations of inviscid hypersonic flows.

MODULE II SIMPLE SOLUTION METHODS FOR HYPERSONIC INVISCID FLOWS 8

Local surface inclination methods, Newtonian theory, modified Newtonian law, tangent wedge and tangent cone methods, shock expansion methods, approximate theory-thin shock layer theory.

MODULE III VISCOUS HYPERSONIC FLOW THEORY 7

Boundary layer equation for hypersonic flow-hypersonic boundary layers, self-similar and non self-similar boundary layers, solution methods for non self-similar boundary layers aerodynamic heating.

MODULE IV VISCOUS INTERACTIONS IN HYPERSONIC FLOWS 7

Introduction to the concept of viscous interaction in hypersonic flows, strong and weak viscous interactions, hypersonic viscous interaction similarity parameter, introduction to shock wave boundary layer interactions.

MODULE V INTRODUCTION TO HIGH TEMPERATURE EFFECTS 8

Nature of high temperature flows, chemical effects in air-real and perfect gases-Gibb's free energy and entropy-chemically reacting mixtures-recombination and dissociation.

MODULE VI EXPERIMENTAL FACILITIES FOR HYPERSONIC FLOWS **8**

Impulse facilities, hypersonic wind tunnels, shock tunnels, gun tunnels, and heat transfer measurements.

Total Hours – 45

TEXT BOOKS:

1. John. D. Anderson. Jr., “Hypersonic and High Temperature Gas Dyanmics”, McGraw hill Series, New York, 1996.

REFERENCES:

1. John. D. Anderson. Jr ., “Modern compressible flow with historical perspective”, McGraw Hill Publishing Company, New York, 1996.
2. John. T Bertin, “Hypersonic Aerothermodynamics”, published by AIAA Inc.,Washington.D.C., 1994.

OUTCOMES:

Students will be able to:

- Understand the procedure to solve inviscid and viscous hypersonic flow problems.
- Understand high temperature effects in hypersonic aerodynamics.
- Familiar with the experimental setups used for simulating hypersonic flows.

AECX06	THEORY OF ELASTICITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the theoretical concepts of material behavior with elastic properties.

MODULE I ANALYSIS OF STRESS 7

Definitions, stress tensors, notations and sign conventions for stress, equations of equilibrium, principle stresses in three dimensions, Saint Venant's principle, problems.

MODULE II ANALYSIS OF STRAIN 7

Strain – displacement relations, stress – strain relations, Lame's constant – cubical dilation, compressibility of material, bulk modulus, shear modulus, compatibility equations for stresses and strains, problems.

MODULE III PLANE STRESS AND PLANE STRAIN PROBLEMS 9

Airy's stress function, bi-harmonic equations, polynomial solutions, simple two-dimensional problems in cartesian coordinates like bending of cantilever and simply supported beams, etc.

MODULE IV POLAR COORDINATES 7

Equations of equilibrium, strain displacement relations, stress-strain relations, problems axi-symmetric Equilibrium and strain displacement relations.

MODULE V STRESS CONCENTRATION 7

Stress due to concentrated load, stress distribution near concentrated load acting on beam, Kirsch and Boussinesque problems.

MODULE VI TORSION 8

Navier's theory, St. Venant's theory, Prandtl's theory on torsion, the semi-inverse method and applications to shafts of circular, elliptical, equilateral triangular and

rectangular sections.

Total Hours – 45

TEXT BOOKS:

Timoshenko, S., and Goodie, T.N., “Theory of Elasticity”, Tata McGraw Hill, 2010.

REFERENCES:

1. Enrico Volterra & J.H. Caines, “Advanced Strength of Materials”, Prentice Hall, New Jersey, 1991.
2. Wang, C.T., ‘Applied Elasticity”, McGraw Hill Co., New York, 1993.
3. Atkin, R. J., & Fox, N., “An Introduction to the theory of Elasticity”, Dover publication, 2005.
4. Ansel C. Ugural and Fenter S. K., “Advanced strength and applied elasticity”, prentice hall, 2003.

OUTCOMES:

Students will be able to

- Evaluate the state of stress and strain.
- Solve theory of elasticity problems using numerical methods.

AECX07	FATIGUE AND FRACTURE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the mechanisms involved in failure of components due to fatigue and fracture.

MODULE I PLANE ELASTICITY 6

In plane and out of plane problems, Airy's Stress Function, Plates with circular and elliptical hole.

MODULE II PHYSICAL ASPECTS OF FATIGUE 5

Phase in fatigue life, Crack initiation, Crack growth , Final Fracture, Dislocations, Fatigue fracture surfaces.

MODULE III FATIGUE OF STRUCTURES 10

S.N. curves , Endurance limits, Effect of mean stress, Goodman, Gerber and Soderberg relations and diagrams, Notches and stress concentrations, Neuber's stress concentration factors, Plastic stress concentration factors, Notched S.N. curves.

MODULE IV STATISTICAL ASPECTS OF FATIGUE BEHAVIOR 8

Low cycle and high cycle fatigue, Coffin - Manson's relation, Transition life, cyclic strain hardening and softening, Analysis of load histories, Cycle counting techniques , Cumulative damage, Miner's theory , Other theories.

MODULE V FRACTURE MECHANICS 10

Strength of cracked bodies, Potential energy and surface energy, Griffith's theory, Irwin - Orwin extension of Griffith's theory to ductile materials, stress analysis of cracked bodies, Effect of thickness on fracture toughness, stress intensity factors for typical geometries.

MODULE VI FATIGUE AND FRACTURE DESIGN AND TESTING 6

Safe life and fail safe design philosophies, Importance of Fracture Mechanics in aerospace structures – Application to composite materials and structures.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Prashant Kumar, “Elements of Fracture Mechanics”, Tata McGraw Hill, New Delhi, India, 2009.
2. Barrois W, Ripley, E.L., “Fatigue of Aircraft Structure”, Pegamon press. Oxford, 1983.

REFERENCES:

1. K. R.Y.Simha, “Fracture Mechanics for Modern Engineering Design”, Universities Press (India) Limited, 2001
2. D.Broek, “Elementary Engineering Fracture Mechanics”, Kluwer Academic Publishers, Dordrecht, 1986.
3. T.L.Anderson, “Fracture Mechanics - Fundamentals and Applications”, 3rd Edition, Taylor and Francis Group, 2005.
4. Suresh. S., “Fatigue of Materials” , 2nd Edition, Cambridge University Press, 1998

OUTCOMES:

Students will be able to

- Understand the fundamental principles and assumptions involved in the basic analysis of Fatigue and Fracture of Structures.
- Evaluate the structures from the view of fatigue and fracture mechanics.

AECX14	BEHAVIOR OF MATERIALS AT HIGH TEMPERATURES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the effect of high temperatures on the behavior of materials and material properties

MODULE I CREEP 12

Factors influencing functional life of components at elevated temperatures, definition of creep curve, various stages of creep, metallurgical factors influencing various stages, effect of stress, temperature and strain rate, Design of transient creep time, hardening, strain hardening, expressions of rupture life of creep, ductile and brittle materials, Monkman-Grant relationship.

MODULE II FRACTURE 9

Various types of fracture, brittle to ductile from low temperature to high temperature, cleavage fracture, and ductile fracture due to micro void coalescence-diffusion controlled void growth; fracture maps for different alloys and oxides.

MODULE III OXIDATION 5

Oxidation, Pilling, Bedworth ratio, kinetic laws of oxidation, defect structure and control of oxidation by alloy additions,

MODULE IV HOT CORROSION 7

Hot gas corrosion deposit, modified hot gas corrosion, fluxing mechanisms, effect of alloying elements on hot corrosion, interaction of hot corrosion and creep, methods to combat hot corrosion.

MODULE V SUPERALLOYS 7

Iron base, Nickel base and Cobalt base super alloys, composition control, solid solution strengthening, precipitation hardening by gamma prime, grain boundary strengthening, TCP phase, embrittlement, solidification of single crystals, Intermetallics, high temperature ceramics.

MODULE VI ABLATION 5

Ablative materials, Applications, Advantages and Disadvantages, Ablative heat

transfer.

Total Hours –45

TEXT BOOKS:

1. Hertzberg R. W., “Deformation and Fracture Mechanics of Engineering materials”, 4th Edition, John Wiley, USA, 1996.
2. Courtney T.H, “Mechanical Behavior of Materials”, McGraw-Hill, USA, 1990.

REFERENCES:

1. Bressers. J., “Creep and Fatigue in High Temperature Alloys”, Applied Science, 1981.
2. Raj. R., “Flow and Fracture at Elevated Temperatures”, American Society for Metals, USA, 1985.
3. Boyle J.T, Spencer J, “Stress Analysis for Creep”, Butterworths, UK, 1983.
4. McLean D., “Directionally Solidified Materials for High Temperature Service”, The Metals Society, USA, 1985.

OUTCOMES:

Students will be able to

- Understand the failure mechanisms and the cause of surface defects of materials under high temperatures.
- Gain knowledge on Super alloys and their need in high temperature areas.
- Acquire knowledge about ablation and their importance in aeronautical applications.

		L	T	P	C
AECX15	**HEAT TRANSFER**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To introduce the heat transfer principles and the behavior of thermal systems.
- To expose students to the governing differential and algebraic equations associated with thermal systems.
- To expose students to the heat transfer applications in Aerospace industries.

MODULE I FUNDAMENTALS AND HEAT CONDUCTION 10

conduction – convection – radiation, Steady and unsteady state heat conduction in solids - effect of variation of thermal conductivity on heat transfer in solids, conduction with heat generation, heat transfer problems in infinite and semi infinite solids, critical radius of insulation- extended surfaces, application of numerical techniques.

MODULE II FREE CONVECTION 8

Basic equations, boundary layer concept, dimensional analysis, Laminar boundary layer equation, free convection in atmosphere free convection on a vertical flat plate, integral method, empirical relation in free convection –external flows.

MODULE III FORCED CONVECTION 6

Forced convection, laminar and turbulent convective heat transfer analysis in flows between parallel plates, over a flat plate and in a circular pipe. empirical relations - numerical techniques in problem solving.

MODULE IV RADIATIVE HEAT TRANSFER 7

Concept of black body-Intensity of radiation-Laws of black body radiation-radiation from non black surfaces, real surfaces, radiation between surfaces, radiation shape factors, radiation shields.

MODULE V HEAT EXCHANGERS 6

Types-overall heat transfer coefficient- LMTD- NTU method of heat exchanger analysis

MODULE VI HEAT TRANSFER PROBLEMS IN AEROSPACE 8

ENGINEERING

Heat transfer problems in gas turbine combustion chambers - rocket thrust chambers - aerodynamic heating - ablative heat transfer.

Total Hours –45

TEXT BOOKS:

1. Yunus A. Cengel., “Heat Transfer – A practical approach”, 2nd Edition, Tata McGraw-Hill, 2002.
2. Incropera. F.P.and Dewitt.D.P., “Introduction to Heat Transfer”, John Wiley and Sons, 2002.

REFERENCES:

1. Lienhard, J.H., “A Heat Transfer Text Book”, Dover publication, 2011.
2. Holman, J.P. “Heat Transfer”, 6th Edition, McGraw-Hill Book Co., Inc., New York, 1991.
3. Sachdeva, R.C., “Fundamentals of Engineering Heat & Mass Transfer”, New Age International, New Delhi, 2011.

OUTCOMES:

Students will be able to

- Understand the equations governing conduction, convection and radiation problems.
- Apply suitable governing equation to solve the heat transfer problems
- Apply the knowledge base gain to solve simple heat transfer problems experienced by flight vehicles.

AECX16	ADVANCED PROPULSION SYSTEM	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the concepts of advanced propulsion systems applied for propelling flight vehicles within and beyond atmosphere

MODULE I PROPULSION FUNDAMENTALS AND OVERVIEW OF GAS DYNAMICS 6

Operational Envelopes, standard atmosphere, Air-breathing Engines Overview, Aircraft performance, Rocket Engines, H-K diagram, Normal shock wave, Flow with heat addition, flow with friction

MODULE II RAMJET ENGINES AND AIR AUGMENTED ROCKETS 6

Ideal and Actual Ramjet engine cycle analysis - Preliminary performance calculations – Diffuser design and hypersonic inlets – combustor and nozzle design – Air augmented rockets – Engines with supersonic combustion

MODULE III SCRAMJET PROPULSION SYSTEMS 11

Ramjet and Scramjet engine cycle analysis, Fundamental considerations of hypersonic air breathing vehicles – Preliminary concepts in engine airframe integration – calculation of propulsion flow path – flowpath integration – Various types of supersonic combustors – fundamental requirements of supersonic combustors – Mixing of fuel jets in supersonic cross flow – performance estimation of supersonic combustors.

MODULE IV NUCLEAR PROPULSION SYSTEMS 8

Fission propulsion, Radioisotope Nuclear Rocket, Fusion propulsion, Antimatter propulsion

Nuclear rocket engine design and performance – nuclear rocket reactors – nuclear

rocket nozzles – nuclear rocket engine control, Fission propulsion, Fusion propulsion, radioisotope propulsion – basic thruster configurations – thruster technology – heat source development – nozzle development – nozzle performance of radioisotope propulsion systems.

MODULE V ELECTRIC PROPULSION SYSTEMS 8

Basic concepts in electric propulsion, Power requirements and rocket efficiency, Electrothermal thrusters – Resistojet, Arcjet, Solar/Laser/Microwave thermal propulsion, Electrostatic thrusters – Hall Thruster, Field emission thruster, Colloid thruster, Large accelerated plasma Propulsion – current and future trends, Fundamentals of ion propulsion – performance analysis – electrical thrust devices – Ion rocket engine, Electromagnetic thrusters – MPD thruster, PPT, VASIMR, Induced spacecraft Interactions

MODULE VI ADVANCED PROPULSION CONCEPTS 6

Concepts of Micropropulsion – chemical propulsion, electrical propulsion, Propellantless propulsion – Tethers, Propellantless electric/nuclear propulsion, Photon Rocket, Beamed Energy Earth-to-Orbit Propulsion, Solar sails, Magnetic sails, Breakthrough propulsion

Total Hours –60

TEXT BOOKS:

1. Martin Tajmar, “Advance space Propulsion systems”, 1st Edition, Springer; Softcover reprint of the original, 2003.

2. William H. Heiser and David T. Pratt, “Hypersonic Airbreathing propulsion”, AIAA Education Series, 2001.

3. Corin Segal, “The scramjet engine – Processes and characteristics”, Cambridge University Press, 2009

REFERENCES:

1. Curran E.T., S. N. B. Murthy, Paul Zarchan (Editor-in-Chief), “Scramjet

Propulsion", Progress in Aeronautics and Astronautics, Volume 189, AIAA, 2001
2. G.P. Sutton, "Rocket Propulsion Elements", John Wiley & Sons Inc., New York, 1998.
3. Fortescue and Stark, "Spacecraft Systems Engineering", 1999.
4. Cumpsty, "Jet propulsion, Cambridge", University Press, 2003.

OUTCOMES:

Students will be able to

- Understand the principle and working of ramjet and scramjet engines
- Understand the concepts and applications of electric and nuclear propulsion systems
- Gain knowledge about the future propulsion systems.

		L	T	P	C
AECX19	**AIR TRAFFIC CONTROL AND AERODROME DESIGN**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To introduce the procedures of for air traffic services and navigations

MODULE I BASIC CONCEPTS 9

Objectives of ATS - parts of ATC service – scope and provision of ATCs – VFR & IFR operations – classification of ATS air spaces – varies kinds of separation– altimeter setting procedures – establishment, designation and identification of units providing ATS – division of responsibility of control.

MODULE II AIR TRAFFIC SERVICES 9

Area control service, assignment of cruising levels minimum flight altitude ATS routes and significant points – RNAV and RNP – vertical, lateral and longitudinal separations based on time / distance –ATC clearances – flight plans – position report

MODULE III FLIGHTINFORMATION ALERTING SERVICES, COORDINATION 5

Radar service, basic radar terminology – identification procedures using primary / secondary radar – performance checks use of radar in area and approach control services

MODULE IV EMERGENCY PROCEDURES AND RULES OF THE AIR 5

Glide path assurance control and co-ordination between radar / non radar control – emergencies – flight information and advisory service – alerting service– co-ordination and emergency procedures – rules of the air

MODULE V AERODROME DATA, PHYSICAL CHARACTERISTICS AND OBSTACLE RESTRICTION 9

Aerodrome data - basic terminology – aerodrome reference code – aerodrome reference point – aerodrome elevation – aerodrome reference temperature – instrument runway, physical characteristics; length of primary / secondary runway –

width of runways – minimum distance between parallel runways etc. – obstacles restriction.

MODULE VI **VISUAL AIDS FOR NAVIGATION, VISUAL AIDSFOR DENOTING OBSTACLES EMERGENCY AND OTHER SERVICES** **8**

Visual aids for navigation wind direction indicator – landing direction indicator – location and characteristics of signal area – markings, general requirements – various markings – lights, general requirements – aerodrome beacon, identification beacon – simple approach lighting system and various lighting systems – VASI & PAPI - visual aids for denoting obstacles; object to be marked and lighter – emergency and other services.

Total Hours –60

TEXT BOOKS:

1. “AIP (India) Vol. I & II”, The English Book Store, 17-1, Connaught Circus, New Delhi.

REFERENCES:

1. “Aircraft Manual (India) Volume I”, latest Edition – The English Book Store, 17-1, Connaught Circus, New Delhi.
2. “PANS – RAC – ICAO DOC 4444”, Latest Edition, The English Book Store, 17-1, Connaught Circus, New Delhi.

OUTCOMES:

Students will be able to

- Understand various Air Traffic Services and the navigation aids for aircraft landing
- Plan layouts of Aerodromes.

		L	T	P	C
AECX20	**AVIATION RULES AND REGULATION**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To introduce the civil aviation regulations followed by Directorate General of Civil Aviation.

MODULE I **C.A.R SERIES 'A' - PROCEDURE FOR CIVIL AIR WORTHINESS QUIRMENTS AND RESPONSIBILITY OPERATORS VIS-À-VIS AIR WORTHINESS DIRECTORATE** **8**

Responsibilities of operators / owners; procedure of CAR issue, amendments etc., objectives and targets of airworthiness directorate; airworthiness regulations and safety oversight of engineering activities of operators. C.A.R. SERIES 'B' - ISSUE APPROVAL OF COCKPIT CHECK LIST, MEL, CDL: Deficiency list (MEL & CDL); preparation and use of cockpit check list and emergency list.

MODULE II **C.A.R. SERIES 'C' - DEFECT RECORDING, MONITORING, INVESTIGATION AND REPORTING** **7**

Defect recording, reporting, investigation, rectification and analysis; flight report;reporting and rectification of defects observed on aircraft; analytical study of in-fight readings & recordings; maintenance control by reliability method. C.A.R. SERIES 'D' - AND AIRCRAFT MAINTENANCE PROGRAMMES: reliability programme (engines); aircraft maintenance programme & their approval; on condition maintenance of reciprocating engines; TBO - revision programme; maintenance of fuel and oil uplift and consumption records - light aircraft engines; fixing routine maintenance Total Hours and component tbos - initial & revisions.

MODULE III **C.A.R. SERIES 'E' - APPROVAL OF ORGANISATIONS:** **10**

Approval of organizations in categories A, B, C, D, E, F, & G; requirements of infrastructure at stations other than parent base. C.A.R. SERIES 'F' - AIR WORTHINESS AND CONTINUED AIR WORTHINESS: Procedure relating to

registration of aircraft; procedure for issue / revalidation of type certificate of aircraft and its engines / propeller; issue / revalidation of certificate of airworthiness; requirements for renewal of certificate of airworthiness.

MODULE IV C.A.R. SERIES 'L' - AIRCRAFT MAINTENANCE ENGINEE LICENSING 8

Issue of AME licence, its classification and experience requirements, complete Series 'L'. C.A.R. SERIES 'M' MANDATORY MODIFICATIONS AND INSPECTIONS: mandatory modifications / inspections.

MODULE V C.A.R. SERIES 'T' - FLIGHT TESTING OF AIRCRAFT 6

Flight testing of (series) aircraft for issue of C of A; fight testing of aircraft for which C or A had been previously issued. C.A.R. SERIES 'X' – MISCELLANEOUS

REQUIREMENTS: Registration Markings of aircraft; weight and balance control of an aircraft; provision of first aid kits & physician's kit in an aircraft; use furnishing materials in an aircraft; concessions

MODULE VI AIRCRAFT DOCUMENTS PROCEDURE AND PERMITS 6

Aircraft log books; document to be carried on board on indian registered aircraft; procedure for issue of taxy permit; procedure for issue of type approval of aircraft components and equipment including instruments.

Total Hours –45

REFERENCES:

1. " Aircraft Manual (India) ", Volume - Latest Edition, The English Book Store, 17-1, Connaught Circus, New Delhi.
2. " Civil Aviation Requirements with latest Amendment (Section 2 Airworthiness) ", Published by DGCA, The English Book Store, 17-1, Connaught Circus,New Delhi.
3. " Aeronautical Information Circulars (relating to Airworthiness) ", from DGCA.

4. " Advisory Circulars ", form DGCA. as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Honesty – Moral Leadership – Sample Cod e of Conduct

OUTCOMES:

Students will be able to

- Understand the maintenance requirement for airworthiness of aircraft and systems.
- Gain knowledge of the procedure followed for airworthiness certificate.

Physics Elective Courses
(To be offered in II Semester)

PHCX 01	FUNDAMENTALS OF ENGINEERING MATERIALS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To help students to acquire the properties and applications of conducting and semiconducting materials.
- To familiarize students with basic ideas about the properties of dielectric and magnetic materials and their applications.
- To familiarize students with basic knowledge of nanomaterials and its electrical, electronic, mechanical and magnetic properties.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I CONDUCTING AND SEMICONDUCTING MATERIALS 7

Conductors: properties, Fermi distribution function, Fermi energy in metals- density of states- conducting polymers-properties-applications, semiconductors: intrinsic and extrinsic semiconductors-carrier concentration, conductivity and energy band gap, semiconducting polymers- properties- applications.

MODULE II DIELECTRIC MATERIALS 8

Polarization- dielectric constant – electronic, ionic, orientational and space charge polarization – frequency and temperature dependence of polarisation – Internal field - Clausius Mosotti relation - dielectric loss – dielectric breakdown – applications of dielectric materials (capacitors and transformers) – Pyroelectricity, Piezoelectricity, ferroelectricity and applications in Ferroelectric Random Access Memory (FeRAM) - multiferroic materials and its applications.

MODULE III MAGNETIC MATERIALS 7

Origin of magnetism-magnetic moment, susceptibility, permeability – Bohr magneton – Dia, Para and Ferro magnetism –Spontaneous magnetization- Domain theory – Hysteresis – soft and hard magnetic materials – antiferromagnetic materials – Ferrites and its application - Giant Magneto-resistance effect (GMR) - Magnetic resonance imaging(MRI).

MODULE IV NANOMATERIALS 8

Properties of nanomaterials – size effect on thermal, electrical, electronic, mechanical,

optical and magnetic properties – quantum confinement – classification of nanomaterials – quantum well, quantum wire, quantum dot - nanoporous materials - carbon nanotubes, graphene - nanocomposites – applications of nano materials.

PRACTICALS

1. Determination of energy band gap of a semiconductor.
2. Determination of resistivity of metals by four point probe method.
3. Determination of dielectric constant of dielectric material.
4. Determination of time constant of a capacitor using RC circuit.
5. Determination of paramagnetic susceptibility of given liquid.
6. Determination of hysteresis loss in a transformer using BH curve.
7. Analysis of size effect on the absorption spectrum of nanomaterials.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. William D. Callister, “Material Science and Engineering”, Wiley Publications, 2006.
2. Raghavan, V., “Materials Science and Engineering”, 5th edition, Printice Hall of India Pvt Ltd. New Delhi, 2004.

6. Pradeep. T., “Textbook of Nanoscience and Nanotechnology”, McGraw Hill Education (India) Private Limited, New York, 2012.

OUTCOMES:

On completion of this course, the student will be able to

- apply the concepts of conducting and semiconducting materials for solid state devices.
- comprehend the significance of properties of dielectric magnetic materials and derive these properties from synthesized materials.
- differentiate between the properties of the nanomaterials compared to bulk materials.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 02	HEAT AND THERMODYNAMICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To familiarize students with basic concepts of heat.
- To help students acquire the fundamentals of heat conduction and radiation.
- To enable students acquaint with the basics of thermodynamic concepts.
- To make students understand the fundamentals of heat based experiments.

MODULE I CONCEPTS OF HEAT **10**

Definition of temperature, thermal and thermodynamic equilibrium - relationship between temperature and kinetic energy - definition of solid, liquid, gas - Introduction to phase transitions, critical and triple points- definition of heat capacity, mechanical equivalent of heat -Joule's calorimeter- latent heat- microscopic model of ideal gas - equation of state, internal energy, equipartition theorem- equation of state for non-ideal gases.

MODULE II CONDUCTION AND RADIATION **10**

Thermal conductivity – rectilinear flow of heat – thermal conductivity of a good conductor – Forbe’s method – thermal conductivity of a bad conductor – Lee’s disc method – conduction of heat through compound media - radiation – Planck’s law of blackbody radiation – Wien’s law – Stefan’s law – Newton’s law of cooling from Stefan’s law – Solar constant – Pyrometry.

MODULE III FUNDAMENTALS OF THERMODYNAMICS **10**

Thermodynamic equilibrium – zeroth law of thermodynamics – first law of thermodynamics – Reversible and irreversible processes – second law of thermodynamics - Heat engine – Carnot’s engine – Carnot’s theorem – Internal combustion engines – petrol and diesel engines (qualitative) – Entropy and available energy – temperature – entropy diagram for Carnot’s cycle - Third Law of thermodynamics (qualitative).

PRACTICALS

1. Determination of mechanical equivalent of heat by Joule’s calorimeter.
2. Relation between temperature of a body and time by plotting a cooling curve-Newton’s law of cooling.

3. Determination of specific heat capacity of liquid by cooling.
4. Determination of thermal conductivity of a good conductor-Forbe's method
5. Determination of thermal conductivity of a bad conductor-Lee's disc method

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur. D.S, “Heat & Thermodynamics”, S.Chand & Co., 2009.
2. Brijlal & Subramaniam, “Heat and Thermodynamics”, S.Chand & Co, Delhi, 2010.
3. Gupta. A.B and Roy. H, “Thermal Physics”, Books and Allied Ltd., 2002.
4. Sharma. J.K and Sarkar. K.K, “Thermodynamics and statistical Physics”, Himalaya Publishing House, 1988.

OUTCOMES:

On completion of this course, the student will be able to

- understand the concepts of heat and its properties.
- comprehend the ideas governing the conduction and radiation processes.
- apply the knowledge of laws of thermodynamics in thermodynamic systems.
- perform heat based experiments and determine its various properties.

PHCX 03	INTRODUCTION TO NANOSCIENCE AND TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To acquire basic knowledge about the nanomaterials and applications.
- To learn about the synthesis and imaging techniques of nanomaterials.
- To gain the basic concepts of fabrication techniques.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I NANOMATERIALS AND APPLICATIONS **10**

Properties of nanomaterials – size effect on thermal, electrical, electronic, mechanical, optical and magnetic properties – quantum confinement – classification of nanomaterials – quantum well, quantum wire, quantum dot - nanoporous materials - zeolite, mesoporous materials, carbon nanotubes, grapheme - nanocomposites - applications (qualitative): Molecular electronics-nanoelectronics – nanophotonics - single electron transistor-drug delivery.

MODULE II SYNTHESIS AND IMAGING TECHNIQUES **12**

Top-down and bottom up approaches – mechanical alloying and mechanical ball milling - sol-gel approach - hydrothermal method - precipitation method - spray pyrolysis - spin coating-self assembled monolayer (SAM) - Chemical vapour deposition method – Physical vapour deposition method: laser ablation method, sputtering method.

Optical microscopy – Phase contrast and interference microscopy – confocal microscopy - high resolution Scanning electron microscope (HRSEM) - high resolution Transmission electron microscope (HRTEM) - Atomic force microscope - Scanning Tunnelling microscope (STM).

MODULE III NANOFABRICATION **8**

Photolithgraphy - electron beam lithography - X-ray and Ion beam lithography - nanoimprint lithography - soft lithograpy - nanoelectromechnical systems (NEMS) - nanoindentation principles.

PRACTICALS

1. Synthesis of nanomaterials by sol-gel method.

2. Synthesis of nanomaterials by hydrothermal method.
3. Synthesis of nanomaterials by solid state reaction method.
4. Synthesis of nanomaterials by chemical bath deposition method.
5. Synthesis of nanomaterials by co-precipitation method.
6. Synthesis of nano thin films by spray pyrolysis method.
7. Synthesis of nano thin films by pulsed laser deposition (PLD) method.
8. Analysis of size effect on the absorption spectrum of nanomaterials.
9. SEM characterization of nanomaterials.
10. AFM characterization of nano thin films.
11. Phase confirmation by XRD.

L – 30; P – 30; TOTAL HOURS – 60

6. Bandyopadhyay A.K., “Nano Materials”, New Age International Publishers, New Delhi, 2008.

OUTCOMES:

At the end of the course, the students will be able to

- understand the importance and basic concepts of the nanomaterials.
- comprehend the imaging techniques for nanomaterials.
- illustrate the various nanofabrication techniques.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 04 LASERS AND THEIR APPLICATIONS

L	T	P	C
2	0	2	3

OBJECTIVES:

- To recognize the fundamentals of laser and its characteristics.
- To comprehend and compare the different laser systems.
- To apply lasers in metrology and material processing.
- To understand the working of laser instrumentation.
- To correlate the experimental results for applications.

MODULE I LASER THEORY **8**

Spontaneous and stimulated emission - Population inversion – Einstein's A & B coefficients - Threshold condition – super-radiance Laser – Three level and four level laser systems -conditions for CW and pulsed laser action. Q-Switching - experimental methods - cavity dumping - Mode locking - experimental methods - Spatial and Temporal coherence.

MODULE II DIFFERENT LASER SYSTEMS **8**

Laser systems – General description - Laser structure - excitation mechanism - Different laser systems- He-Ne laser, Carbon-dioxide laser - Excimer laser – Free electron laser- Alexandrite laser - Ti-Sapphire laser – Semiconductor diode laser - Diode pumped solid state laser - Pulsed-CW dye laser- Fibre laser.

MODULE III METROLOGICAL AND MATERIAL PROCESSING APPLICATIONS **8**

CW and Pulsed laser beam characteristics and its measurements - Beam focusing effects - spot size - Power and Energy density Measurements - Distance measurement - Interferometric techniques - LIDARS - different experimental arrangements - Pollution monitoring by remote sensing - Laser gyroscope - Laser welding, drilling, machining and cutting - Laser surface treatment - Laser vapour deposition – Biophotonic applications.

MODULE IV LASER INSTRUMENTATION **7**

Laser for measurement of length, current and voltage – Laser Doppler Velocimetry - Holography and speckle in displacement and deformation measurements - Laser for communication with fiber optics as channel.

PRACTICALS

1. Tuning of Dye Laser using DFDL Arrangement
2. Determination of Brewster Angle using He-Ne laser
3. Study of transversely Pumped Dye Lasers
4. Study of longitudinally Pumped Dye Lasers
5. Determination of power and wavelength using Distributed Feedback Dye Laser (DFDL)
6. Determination of fibre optic losses using semiconductor laser.
7. Bandgap determination of a semiconductor diode.

L – 30; P – 30; TOTAL HOURS – 60

6. William M.Steen, ”Laser Material Processing”, Springer-Verlag, Berlin, Third Edn., 2005.

OUTCOMES:

At the end of the course, the students will be able

- To complement the knowledge acquired in the theory class.
- To work with dye lasers for tunability of laser wavelength.
- To measure the loss of information involved in fibre optic communication.
- To correlate the results for application.

PHCX 05	MATERIALS SCIENCE	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To gain basic knowledge in conducting and semiconducting materials and their properties.
- To provide basic understanding of properties and applications of dielectric materials.
- To impart knowledge on magnetic and optical materials and their properties & applications.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I CONDUCTING AND SEMICONDUCTING MATERIALS 10

Quantum free electron theory of metals and its importance - Energy distribution of electrons in metals - Fermi distribution function - Density of energy states and carrier concentration in metals - Fermi energy – Classification of solids into conductors, semiconductors and insulators on the basis of Band theory – Introduction to Elemental and Compound semiconductors - Carrier concentration derivation for Intrinsic semiconductors - Density of electrons in conduction band & Density of holes in valence band- intrinsic carrier concentration - Fermi energy & Variation of Fermi energy level with temperature - Mobility and electrical conductivity - Band gap determination.

MODULE II DIELECTRIC MATERIALS 7

Introduction to dielectric materials & basic definitions – Electronic, Ionic, Orientation & Space charge polarizations - Total polarization – Frequency and temperature dependence of polarization - Internal field in a dielectric material - Deduction of Clausius - Mosotti's relation - dielectric loss & loss tangent – Different types of dielectric breakdown – Applications of dielectric materials : Capacitors and Transformers.

MODULE III MAGNETIC MATERIALS 6

Introduction to magnetic materials & origin of magnetic moment - Different types of

magnetic materials and their properties - Ferromagnetism & Domain theory of ferromagnetism - Hysteresis, Soft and Hard magnetic materials - Antiferromagnetic materials - Ferrites and its applications – Applications of magnetic materials : Data storage.

MODULE IV OPTICAL MATERIALS 7

Optical properties of semiconductors - Direct and Indirect bandgap semiconductors – Traps, recombination centre, color center and exciton – Luminescence : Fluorescence and Phosphorescence - Liquid crystal display : twisted nematic crystal display – Applications of Optical materials - Optical Sources : light emitting diode and laser diode - Photo detectors : PIN photodiode and Avalanche Photodiode - Pyroelectric devices - Electro optic effect : Kerr effect and Faraday effect.

PRACTICALS

1. Resistivity measurement of a semiconductor using four point probe method.
2. Determination of band gap of a semiconductor diode.
3. Determination of Hall coefficient of a given semiconductor material.
4. Determination of dielectric constant of a given non-polar liquid.
5. Determination of magnetic susceptibility of a given paramagnetic liquid using Quincke's method.
6. Determination of energy loss of a given transformer core using hysteresis method.
7. To study the I-V characteristics of a photodiode.

L – 30; P – 30; TOTAL HOURS – 60

5. Raghavan. V, ''Materials Science and Engineering'', Prentice Hall of India, 5th Edition, 2004.

OUTCOMES:

On the completion of this course, the students will be able to

- Gain knowledge about fundamentals of conducting and semiconducting materials.
- Understand concepts and applications of Dielectric and Magnetic materials.
- Familiarize Optical materials and their applications in Engineering and Medical fields.
- Complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 06	NON-DESTRUCTIVE TESTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To study the process and applications of ultrasonic inspection method.
- To understand the basic concepts of radiographic inspection method.
- To acquire the knowledge about the various surface Non-Destructive Testing (NDT) techniques.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I ULTRASONIC INSPECTION METHOD **10**

Ultrasonic Testing - Principle of operations - types of sound waves - types of Transducers - transmission and pulse-echo method - straight beam and angle beam, instrumentation - calibration methods - ultrasonic testing technique- data representation, A Scan, B-scan, C-scan. Phased Array Ultrasound, Time of Flight. Diffraction - thickness determination - advantages, disadvantages and applications.

MODULE II RADIOGRAPHIC INSPECTION METHOD **10**

Radiographic testing – Principle - Interaction of X-ray with matter - X-ray radiography - method of generation-industrial radiography inspection techniques – Equipment - Exposure charts - Types of films – Fluoroscopy - Xero-Radiography – Limitations - Gamma radiography - Equipment, radiation sources - method of generation - film processing - interpretations of radiography - safety in industrial radiography.

MODULE III SURFACE NDT TECHNIQUES **10**

Liquid Penetrant Testing – Principles, Characteristics and types of liquid penetrants – developers - advantages and disadvantages of various methods - Inspection Procedure and Interpretation of results. Applications of Liquid Penetrant testing.

Magnetic Particle Testing - Principle-magnetizing technique - procedure –equipment - Interpretation and evaluation of test indications - applications and limitations - demagnetization.

PRACTICALS

1. Inspection of welds using solvent removable visible dye penetrant.
2. Inspection of welds using solvent removable fluorescent dye penetrant.

3. Inspection on non magnetic materials by eddy current method.
4. Inspection on magnetic materials by eddy current method.
5. Inspection of welds by Eddy current Testing.
6. Inspection of welds by Magnetic Particle Testing - Dry method.
7. Inspection of welds by Magnetic Particle Testing - Wet method.
8. Ultrasonic flaw detector - Inspection of defects.
9. Demonstration of Radiographic inspection.

L – 30; P – 30; TOTAL HOURS – 60

5. Charles J., Hellier, “Handbook of Nondestructive evaluation”, McGraw Hill, New York, 2001.

OUTCOMES:

Upon completion of this course, the students will be able to

- illustrate the ultrasonic inspection methods of NDT.
- understand the basic concept of radiographic inspection method.
- test the surfaces by the various surface NDT techniques.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 07	PROPERTIES OF MATTER AND ACOUSTICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand principles and properties of elasticity.
- To understand the basic concepts and application of viscosity.
- To analysis acoustic of building.
- To know about photoelasticity and its applications.

MODULE I ELASTICITY **8**

Stress and strain - Hooke's Law of elasticity - Elastic moduli - Stress-Strain Diagram - Poisson's Ratio - Relation between elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Expression for bending moment - Cantilever–Expression for depression - Uniform bending and Non-uniform bending of beams (theory & experiment) - I form Girders (qualitative treatment) and applications.

MODULE II VISCOSITY **8**

Viscosity- Newton’s formula for viscous flow - Streamline and turbulent motion - Reynolds number - Poiseuille's formula - Determination of coefficient of viscosity- factors affecting viscosity - capillary flow method - Stoke's formula- viscosity of highly viscous liquids – Stoke’s method - Lubricants and its applications –viscosity measurements - Viscometer - Variation of Viscosity with Temperature.

MODULE III ACOUSTICS OF BUILDING **7**

Basic requirement for the acoustically good halls - Reverberation and time of reverberation – Sabine’s formula for reverberation time - Absorption coefficient and its measurement -Transmission of sound and transmission loss - Factors affecting the architectural acoustics and their remedy-sound absorbing materials - vibration and noise control systems for buildings.

MODULE IV PHOTOELASTICITY **7**

Polarization - double refraction - Theory of Plane, Circularly and Elliptically polarized light - Quarter wave plate and half wave plate - photo elasticity - Theory of photo-elasticity - Stress optic relations - model materials - analysis techniques - Photo elastic bench - Three dimensional photo elasticity - Digital photo elasticity - Photo elastic

coatings.

PRACTICALS

1. Determination of viscosity of liquid by Poiseuille's method.
2. Determination of viscosity of liquid by Stoke's method.
3. Analysis of stress by photo elastic method.
4. Verification of Hooke's law by spring method.
5. Determination of Young's modulus of the cantilever beam.
6. Determination of rigidity modulus by static torsion method.
7. Visit to acoustically good auditorium and identifying the sound absorbing materials in the auditorium.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur D.S., "Elements of Properties of Matter", S.Chand & Co, Delhi, 2009.
2. Gaur R.K., Gupta S.L.,"Engineering Physics", Dhanpat Rai Publishers, 2010.

4. Smith C.J.," General Properties of Matter", Orient & Longman,1960.
5. Kenneth G. Budinski and Michel K., Budinski, "Engineering Materials Properties and Selection", Pearson, Singapore, 2002.

OUTCOMES:

Upon completion of this course, the students will be able to

- understand the basic concepts of the elasticity of materials.
- comprehend the concepts of viscosity of liquid and measurement.
- demonstrate the acoustical aspects of building and its importance in construction.
- apply the fundamental concept of photo elasticity for the stress analysis of the object.

PHCX 08	PROPERTIES OF MATTER AND NONDESTRUCTIVE TESTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To impart knowledge about the principles and properties of elasticity.
- To learn the laws governing the dynamic of rigid bodies.
- To acquire the knowledge of the various techniques of Non-Destructive Testing (NDT) of materials.
- To understand the principle and basic concept of low temperature applications.

MODULE I ELASTICITY **8**

Stress and strain - Hooke's Law of elasticity - Elastic moduli - Stress-Strain Diagram - Poisson's Ratio - Relation between elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Expression for bending moment- Cantilever–Expression for depression - Uniform Bending and Non-uniform bending of beams (theory & experiment) - I form Girders (qualitative treatment) and applications.

MODULE II DYNAMICS OF RIGID BODIES **8**

Rigid bodies - angular acceleration - Torque on a particle - angular momentum - law of conservation of angular momentum - moment of inertia and its significance - Theorem of parallel and perpendicular axis - moment of inertia of a thin uniform bar - moment of inertia of a rectangular lamina - moment of inertia of uniform circular disc - Moment of inertia of hollow and solid cylinders – flywheel
(qualitative) - kinetic energy of rotating body – Routh rule.

MODULE III NDT TECHNIQUES **6**

Ultrasonic Testing- types of Transducers-transmission and pulse-echo method- Radiographic testing- Principle-Interaction of X-ray with matter-X-ray radiography-method of generation-industrial radiography inspection techniques- Liquid Penetrant Testing**-** Inspection Procedure and Interpretation of results.

MODULE IV LOW TEMPERATURE PHYSICS **8**

Definition of Refrigeration and Air-Conditioning - Types of **Refrigeration Systems-**

Applications- Comfort Air Conditioning, Industrial Refrigeration, Food processing and food chain - **Cryogenic treatment - Low temperature properties of engineering materials: Mechanical properties, Thermal properties, Electrical properties.**

PRACTICALS

1. Verification of Hooke's law by spring method.
2. Determination of Young's modulus of the beam by bending method.
3. Inspection of welds using solvent removable visible dye penetrant.
   Inspection of welds using solvent removable fluorescence dye penetrant.
5. Inspection of welds by Magnetic Particle Testing.
6. Determination of moment of inertia of the disc by torsion pendulum method.
7. Determination of moment of inertia of the disc by static torsion method.
8. Demonstration of working of flywheel.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur D.S.,"Elements of Properties of Matter", S.Chand & Co, Delhi, 2009.
2. Brijlal & Subramaniam," Properties of Matter", Eurasia Publishing Co, Delhi, 2002.

7. Charles J., Hellier.," Handbook of Nondestructive evaluation", McGraw Hill, New York, 2001.

OUTCOMES:

Upon completion of this course, the students will be able to

- understand the basic of concept of elasticity of materials.
- comprehend the basic concepts of motion of rigid bodies and its applications.
- demonstrate the various NDT techniques and its importance.
- know the low temperature systems and its applications.

PHCX 09	SEMICONDUCTOR PHYSICS AND OPTOELECTRONICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand the Physics of Semiconductor devices.
- To make the students learn the fundamentals of Photoluminous - semiconductors, Optoelectronic devices, Optical modulators/detectors.
- To make them understand the technology behind latest Display devices like LCD, Plasma and LED Panels.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I PHYSICS OF SEMICONDUCTORS **8**

Elemental and compound semiconductors – Drift and diffusion current - Intrinsic semiconductors – Carrier concentration (derivation) – Fermi energy – Variation of Fermi energy level with temperature – Mobility and electrical conductivity – Band gap determination – Extrinsic semiconductors – Carrier concentration in n-type and p-type semiconductor (derivation) – Variation of Fermi level with temperature and impurity concentration – Variation of Electrical conductivity with temperature – Hall effect – Experiment and applications of Hall effect.

MODULE II OPTOELECTRONIC DEVICES **7**

Light Emitting Diodes (LED) – power and efficiency - double hetero LED - LED structure - LED characteristics - White LED – Applications. Liquid crystal displays – Dynamic scattering and Twisted nematic display, Semiconductor Lasers, Homojunction and Heterojunction laser diodes - Optical processes in semiconductor lasers.

MODULE III OPTICAL MODULATORS **7**

Modulation of light – birefringence –Modulation Techniques - Electro optic effect – Electro optic materials –Types of Electro optic Modulators : Kerr and Pockel modulators –- Magneto optic effect - Magneto optic Modulators – Acousto Optic modulators.

MODULE IV OPTICAL DETECTORS **8**

Photo detectors - photodiodes - phototransistors - noise characteristics - PIN diode – Avalanche Photodiode (APD) characteristics - APD design of detector arrays – Charged Couple Device - Solar cells - Materials and design considerations, Thin film

solar cells, amorphous silicon solar cells.

PRACTICALS

1. Resistivity measurement of a semiconductor using four point probe method.
2. Determination of band gap of a semiconductor diode.
3. Determination of Hall coefficient of a given semiconductor material.
4. Determination of the wavelength of a given laser source using diffraction grating.
5. Determination of Planck's constant using LED.
6. To study the I-V characteristics of photodiode and phototransistor.
7. To study the characteristics of a solar cell.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Arumugam. M, "Physics II", Anuradha Publishers, 5th Edition, 2005.
2. Sze. S.M., "Semiconductor Devices – Physics and Technology", 2nd edn. John Wiley, 2002.
3. Wilson & J.F.B. Hawkes, "Optoelectronics – An Introduction", Prentice Hall, India, 1996.

6. Palanisamy P.K., "Semiconductor physics and optoelectronics" Scitech Publications, 2003.

OUTCOMES:

On completion of this course, the student will be able to

- understand the principles of Physics behind semiconductor devices.
- choose the correct semiconductors for electronic devices and display.
- differentiate the working principle of LED and Diode Laser.
- apply the knowledge of modulation of light for different types of optical modulators.
- select suitable photodetectors for different types of applications.
- complement the knowledge acquired in the theory class and correlate the results for applications.

Chemistry Elective Courses
(To be offered II Semester)

CHCX01	ANALYTICAL INSTRUMENTATION	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the student conversant with

- principles, instrumentation and applications of different electroanalytical techniques
- different chromatographic techniques
- principles, instrumentation and applications of various types of absorption and emission spectroscopy
- different thermal analytical methods and their applications

MODULE I ELECTROANALYTICAL TECHNIQUES **7**

Principle and applications: conductometric titrations – potentiometrIc titrations, ion-selective electrodes and pH-metry – coulometry – voltammetry - polarography, amperometric titrations.

MODULE II CHROMATOGRAPHY **8**

Basic concepts of chromatography – paper chromatography – column chromatography – thin layer chromatography – gas chromatography – high performance liquid chromatography – gel permeation chromatography.

MODULE III SPECTROSCOPY **8**

Absorption spectroscopy (principle, instrumentation and applications): Colorimetric analysis – UV-Visible spectroscopy – FTIR spectroscopy - Emission Spectroscopy (principle, instrumentation and applications): fluorescence, phosphorescence and chemiluminescence – Atomic absorption spectroscopy – flame emission spectroscopy.

MODULE IV THERMAL ANALYSIS **7**

Principle, instrumentation and applications: Thermo gravimetric analysis – Differential thermal analysis – Differential scanning calorimetry

PRACTICALS

1. Conductometric titrations: acid-base and precipitation titrations

2. Potentiometric titrations
3. Determination of pH of the unknown solution
4. Estimation of alkali metals using flame emission spectroscopy
5. Estimation of metal ions of coloured solutions using colorimetric analysis
6. Separation of compounds using gas chromatography
7. Separation of compounds using high performance liquid chromatography
8. Analysis of the given sample and interpretation of the data using IR, UV-Visible spectroscopy
9. Demonstration of TGA/DTA and DSC and interpretation of data.

L – 30; P – 30; TOTAL HOURS – 60

6. Settle F. (Editor), Handbook of Instrumental Techniques for Analytical Chemistry, Pearson Education, Singapore, 2004.

OUTCOMES:

The student will be able to

- state the principle and applications of various electro-analytical techniques
- identify the right separation method for a given sample using different chromatographic techniques
- explain the principle, instrumentation & applications of various spectroscopic methods and also to interpret the data
- elaborate the principle, instrumentation and applications of various thermal analytical techniques and interpret the data.

CHCX02	CORROSION AND ITS CONTROL	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with the

- Basic concepts, principles and factors affecting corrosion
- Types and mechanism of corrosion
- Control measures of corrosion by material selection, proper design and by applying organic coatings
- Control of corrosion by applying inorganic coating

MODULE I BASIC CONCEPTS OF CORROSION 8

Corrosion – causes and impacts of corrosion – mechanism of corrosion: Dry corrosion- oxidation corrosion - corrosion by other gases – Pilling-Bedworth rule- Corrosion by hydrogen: hydrogen blistering, hydrogen embritttlement, decarburization and hydrogen attack – corrosion of silver and copper by sulphur compounds – liquid metal corrosion (embritttlement or cracking) – Wet corrosion : hydrogen evolution – presence and absence of oxygen and absorption of oxygen – difference between dry and wet corrosion-factors influencing corrosion-polarization-passivity-emf series and galvanic series- corrosion current -rate of corrosion.

MODULE II FORMS OF CORROSION 7

Forms of corrosion-conditions for electrochemical corrosion –galvanic corrosion – differential aeration corrosion: pitting, water line, wire fencing, crevice and filiform corrosion – stress corrosion – Intergranular corrosion- erosion corrosion – soil corrosion – microbiological corrosion- fretting corrosion- corrosion in composites.

MODULE III CORROSION CONTROL AND ORGANIC COATINGS 8

Corrosion control – selection of materials and designing- cathodic protection – sacrificial anode and impressed current cathodic protection – corrosion inhibitors: anodic, cathodic and vapour phase inhibitors.

Organic protective coatings – paints: constituents – functions – varnishes : types-constituents – functions – lacquers : constituents – functions –enamels-constituents – functions – special paints : fire retardant, water repellant, heat resistant, temperature indicating and luminous paints.

MODULE IV INORGANIC COATINGS 7

Treatment of metal surface-inorganic coatings- classification- metallic coatings : anodic and cathodic coatings-hot dipping : galvanizing and tinning- electroplating—electroless plating – cementation (diffusion) : sherardizing, calorizing and chromizing – metal cladding-metal spraying – non metallic coatings (chemical conversion coatings) : phosphate, chromate, oxide coatings and anodizing – comparison of anodic and cathodic protection.

PRACTICALS

1. Determination and comparison of rate of corrosion of metals in the presence of acid, base and neutral medium by weight loss method.
2. Determination of rate of corrosion of iron in the presence of various acids by weight loss method.
3. Determination of rate of corrosion of iron in the presence and absence of anodic Inhibitor by weight loss method.
4. Determination of rate of corrosion of iron in the presence and absence of cathodic Inhibitor by weight loss method.
5. Electroplating of base metal with copper.
6. Electrolessplating of base metal with copper
7. Chemical conversion coatings such as chromate and phosphate coatings.
8. Demonstration on the study of rate of corrosion by using cyclic voltametry.

L – 30; P – 30; TOTAL HOURS – 60

4. S. Banerjee, A.K. Tyagi, Functional Materials- Preparation, Processing and Applications, ELSEVIER Publications, London ; Waltham, MA : 2011

OUTCOMES:

Students will be able to

- explain the mechanism, compare and enumerate the factors affecting

corrosion

- describe and identify the place and types for a given situation.
- choose and elaborate the suitable organic coating method for a given real time situation.
- apply a suitable metallic coating for a given situation

CHCX03	ELECTRICAL MATERIALS AND BATTERIES	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with

- preparation, properties and applications of plastics used in electrical and electronic applications
- properties and uses of electrical engineering materials
- classification and description of different types of batteries.
- classification and types of fuel cells

MODULE I POLYMERS FOR ELECTRICAL AND ELECTRONIC APPLICATIONS **8**

Preparation, properties and applications **:** polyethylene, polypropylene, EPDM, Nylon-6,6, PVC, PTFE, polycarbonates, ABS, phenol formaldehyde, urea formaldehyde, epoxy resins – polymer blends and alloys.

MODULE II ELECTRICAL ENGINEERING MATERIALS **7**

Conductors: Silver, Copper, Gold, Aluminum – Semiconductors: Germanium, Silicon, Gallium Arsenic – Insulating Materials: Rubbers, Mica, Plastics, Ceramics, Insulating papers – Magnetic Materials: ferromagnetic materials, paramagnetic materials, diamagnetic materials, antiferromagnetic materials, ferrites

MODULE III BATTERIES **7**

Electrochemical and electrolytic cell – batteries: types (primary, secondary and flow cell) – primary batteries: dry cells, alkaline batteries – secondary batteries: nickel-cadmium cell – lead acid storage cell, lithium battery: primary and secondary type – solar cell – dye sensitized solar cell.

MODULE IV FUEL CELLS **8**

Difference between batteries and fuel cells - chemistry of fuel cells - types of fuel cell (based on temperature and electrolyte) – principle, characteristic features, advantages, disadvantages and applications of polymer electrolyte membrane or proton exchange membrane fuel cell (PEMFC), direct methanol fuel cell (DMFC), alkaline fuel cell (AFC), phosphoric acid fuel cell (PAFC), molten carbonate fuel cell (MCFC) and solid oxide

fuel cells (SOFC).

PRACTICALS

1. Free radical polymerization of styrene.
2. Free radical polymerization of PMMA.
3. Preparation of phenol-formaldehyde.
4. Preparation of urea-formaldehyde.
5. Synthesis of epoxy resin.
6. Demonstration of mechanical properties of insulating materials using UTM
7. Demonstration of electrical properties of insulating materials
8. Construction of batteries using natural resources
9. Measurement of EMF for different batteries.

L – 30; P – 30; TOTAL HOURS – 60

7. B. Viswanathan and M. Aulice Scibioh, Fuel Cells: Principles and Applications, Taylor and Francis Group, 2007.

OUTCOMES:

The student will be able to

- summarise the preparation, properties and applications of plastics used in electrical and electronic applications
- enumerate the properties and uses of electrical engineering materials
- illustrate various types of batteries with the aid of a diagram
- classify the fuel cells and elaborate the different types of fuel cells.

CHCX04	ENGINEERING MATERIALS	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with

- properties and uses of different types of refractories and abrasives
- adhesives, cements and lime, setting of cements and their chemical behaviors.
- types, properties and uses of lubricants.
- various types of composite materials.

MODULE I REFRACTORIES AND ABRASIVES **8**

Introduction refractory: -classification - based on chemical nature- characteristic and selection of good refractory - general manufacture of refractory- preparation properties and uses of: silica refractory - magnesite refractory - zirconia refractory, properties of refractories: refractoriness - refractoriness under load - thermal spalling - porosity and dimensional stability, Cermets - super refractory.

Abrasives : introduction - Moh's scale - natural abrasives: diamond – corundum – emery - garnet and quartz, synthetic abrasives: preparation properties and uses: carborundum (silicon carbide)– alundum - boron (norbide) carbide

MODULE II ADHESIVES AND BINDING MATERIALS **7**

Introduction - classification of adhesives –advantage –limitation of adhesive bonding – development of adhesive- factors influencing adhesive action: chemical and physical, application techniques of adhesive – Lime: classification – manufacture - setting and hardening, Gypsum: -Manufacture and properties and uses - Cement : chemical composition- Manufacture – setting and hardening – concrete – weathering of cement and concrete and its prevention- special cements: high alumina cement - sorel cement - white portland cement – water proof cement.

MODULE III LUBRICANTS **7**

Introduction –functions of lubricant- mechanism of lubrication - classification of lubricant – liquid lubricant: vegetable and animal oils – mineral oils, semisolid: grease(calcium, lithium, aluminium) – petroleum jelly, solid lubricant: graphite - molybdenum disulphide, Properties of lubricant: viscosity - viscosity index - flash point and fire point - cloud point and pour point – oiliness - aniline point - carbon residue.

MODULE IV COMPOSITE MATERIALS 7

Introduction – advantageous characteristics of composites, applications of composites, main constituent of composites, types and applications of composites: RCC fibre-reinforced plastics (glass , carbon and aramid) - particulate composite - metal matrix composite - layered composites - failures in fibre-reinforced composites, ceramic matrix composites (CMC) – properties and applications.

PRACTICALS

1. Preparation of refractory bricks
2. Preparation of abrasive papers/cloth
3. Preparation of simple adhesives
4. Estimation of alkalinity in cements
5. Determination of cloud point and pour point
6. Determination of flash point and fire point
7. Preparation of fibre-reinforced composite

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. P.C Jain & Monica Jain, Engineering Chemistry Dhanpatrai Publishing Company (P) Ltd., New Delhi (2013).
2. B.Sivasnakar, “Engineering Chemistry”, Tata McGrow-Hill Publication Limited, New Delhi, second reprint 2008.
3. Engineering Chemistry, Wiley India Editorial Team, Willey India Publisher, New Delhi, 2011.
4. S S Umare & S S Dara, A text Book of Engineering Chemistry, S. Chand& Company Ltd, New Delhi, 2014.

OUTCOMES:

The student will be able to

- classify and describe the manufacture the refractories and enumerate the properties and uses of abrasive materials.
- elaborate the manufacture, properties and uses of various adhesives and binding materials.
- classify lubricants and describe the properties and uses of them
- enumerate the properties and uses of various composite materials.

CHCX05	FUELS AND COMBUSTION	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the students conversant with the

- three types of fuels available and the different processes involved in it.
- analysis of fuel characteristics and manufacture of fuels
- calculations involved in calorific values and minimum air requirement for complete combustion.
- classification, functions, mechanism and properties of lubricants.

MODULE I SOLID FUELS **7**

Characteristics of good fuel. Solid fuel – Wood, Coal – Ranking of coal – selection of coal. Analysis of coal – Proximate analysis. Pulverized coal – Metallurgical coke – Carbonization of coal – types. Manufacture of metallurgical coke – Beehive oven and Otto Hoffman's by-product oven methods.

MODULE II LIQUID AND GASEOUS FUELS **8**

Liquid fuel: Petroleum: Refining of petroleum, Liquid fuels derived from petroleum – Cracking: Thermal (Liquid and Vapour phase) – Catalytic (fixed bed and moving bed cracking – Synthetic petrol: Fischer-Tropsch method– Knocking in petrol and diesel engine: octane number and antiknocking – cetane number and improvement of cetane number – biodiesel (trans-esterification) – Gaseous fuels: Compressed natural gas (CNG) – LPG – oil gas – producer gas – water (blue) gas – biogas.

MODULE III COMBUSTION **8**

Calorific value: Gross and net caloric value – Bomb Calorimeter, Gas calorimeter - Definition of combustion – calculation of minimum requirement of air (problems) – theoretical calculation of calorific values (Dulong's formula), Gross and net calorific values ((problems) – Analysis of flue gas: Orsat's gas analysis method, explosive range, Ignition temperature. Introduction to air pollution from IC (Internal combustion) engines, photochemical smog, primary and secondary pollutants.

MODULE IV LUBRICANTS **7**

Friction and wear – lubricants: definition, functions and mechanism of lubrication

(thick film and thin film) –classification: liquid lubricants: animal and vegetable origin, mineral oil, blended oils, lubricating emulsions and silicones – properties of lubricating oils: viscosity and viscosity index; Flash and fire-point, Cloud and pour point, oiliness, emulsification number, volatility, carbon residue, aniline point – semisolid lubricant: greases and waxes – solid lubricant: graphite and molybdenum disulphide –nanolubricants.

PRACTICALS

1. Testing of fuels - proximate analysis (moisture, volatile matter, ash content and fixed carbon present in coal, coke, charcoal etc)
2. Ash content and carbon residue test
3. Biodiesel synthesis by trans-esterification method (from coconut, groundnut, mustard oil, palm oil)
4. Determination of calorific value of a solid fuel using Bomb calorimeter (coal, charcoal, coke etc)
5. Determination of calorific value of a liquid fuel using Bomb calorimeter (petrol, diesel, biodiesel etc)
6. Determination of cloud point and pour point of a lubricant
7. Determination of flash and fire point of diesel.
8. Aniline Point of diesel
9. Viscosity Index of lubricants and Fuels by Viscometer
10. Flue gas analysis by Orsat's gas analysis method – Demonstration
11. Working of internal combustion engine – Demonstration

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Jain P.C and Renuka Jain, Physical Chemistry for Engineers, Dhanpat Rai and Sons, New Delhi, 2001.
2. Engineering Chemistry, Wiley India Editorial Team, Willey India Publisher, New Delhi, 2011.

4. J.B. Heywood, Internal Combustion Engine Fundamentals, McGraw Hill International Editions, 1989.
5. Bahl B.S., Tuli and Arun Bahl, Essentials of Physical Chemistry, S. Chand and Company Ltd., New Delhi, 2004.

OUTCOMES:

The students will be able to

- compare and contrast the solid, liquid and gaseous fuels and also describe the processes involved in liquid and gaseous fuels.
- analyse the fuel properties such as moisture, votalite matter, ash content, calorific value etc
- calculate minimum air required for complete combustion and calorific values of fuels.
- categorize different lubricants into three types, explain the preparation and determine their properties.

CHCX06	FUNDAMENTALS OF PHYSICAL CHEMISTRY	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students will be conversant with the

- various thermodynamic terms and relate the laws of thermodynamics in chemical processes
- molecularity and order of reaction and derive the rate constant for different order of reactions
- basics of adsorption of different materials and propose mechanisms and surface area measurement
- conditions for equilibrium and learn different components at equilibrium

MODULE I BASIC THERMODYNAMICS **8**

Introduction - Thermodynamic terms - Thermodynamic equilibrium and processes - 1st law of thermodynamics: internal energy, enthalpy, heat capacity, isothermal and adiabatic expansion, Joule-Thomson effect - Zeroth law of thermodynamics: absolute temperature - 2nd law of thermodynamics: - spontaneous and cyclic process, Entropy in isothermal, isobaric and isochoric processes, work and free energy function, Maxwell's relation - 3rd law of thermodynamics

MODULE II CHEMICAL KINETICS **8**

Rate of chemical reaction - order and molecularity of a reaction - Rate constant - kinetics of opposing, parallel and consecutive and chain reactions - isotope effects - effect of temperature on reaction rate - collision theory - absolute reaction rate theory - kinetics in enzyme catalysis

MODULE III SURFACE SCIENCE AND CATALYSIS **8**

Adsorption - adsorption isotherms - uni and bimolecular adsorption reactions - parahydrogen conversion - factors affecting adsorption – Langmuir adsorption isotherm - Hinshelwood mechanism and *Eley-Rideal* mechanism with example - adsorption of gases on solids and surface area measurement by BET method - Terms in catalysis - homogeneous and heterogeneous and enzyme catalysis with example

MODULE IV PHASE RULE **6**

Terms involved - Conditions for equilibrium - application of phase rule to water, lead-

silver system, freezing mixtures, thermal analysis: cooling curves.

PRACTICALS

1. Determination of the heat capacity of benzoic acid, internal energy of combustion of camphor using Bomb calorimeter. Calculation of enthalpy of combustion and formation for camphor.
2. Determination of adsorption isotherm of (i) acetic acid on charcoal (ii) oxalic acid on charcoal.
3. *Kineticsoffirst and second order reactions.*
4. Phase rule experiments with organic compounds: (i) naphthalene and p-dichloro benzene (ii) naphthalene and diphenyl (iii) m-dinitrobenzenzene and p-nitro toluene.

L – 30; P – 30; TOTAL HOURS – 60

6. Puri B.R., Sharma L.R. and Pathania M.S., Principles of Physical Chemistry, 47th Edition, Vishal Publishing Co. India, 2016.

OUTCOMES:

The student will be able to

- calculate entropy, enthalpy and free energy change for different chemical processes
- calculate the rate constant for any chemical and biochemical processes
- differentiate the adsorption processes and calculate the surface area and predict the suitability of catalysts for different chemical processes
- predict the equilibrium conditions for water, alloys, freezing mixtures and draw the thermal curves for phase transition

CHCX07	GREEN TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make students conversant with the

- basic principles of green chemistry and green technology.
- wastes that causes hazards to human health
- chemicals that harms our environment
- need for green processes in various industries

MODULE I GREEN CHEMISTRY PROTOCOL **7**

Need – Significance – 12 Principles with examples – R4 model – Life cycle analysis – sustainable and cleaner production - Green Technology: definition, examples: CFC free refrigerants, green building, energy, 3D printers, nanotechnology – Awards for Green chemistry – organization promoting green chemistry.

MODULE II WASTE & WASTE MINIMISATION **8**

Source of wastes: domestic, industrial, medical, nuclear, e-waste; problems; prevention – economy of waste disposal – Waste minimization techniques: general waste treatment and recycling – alternate waste water treatment technologies: hybrid process – Green computing: goals, green cloud, green ICT - Pollution statistics from various industries (Industrial case studies).

MODULE III GREEN SYNTHESIS **7**

Introduction - Solvent free reactions - green reagents, green solvents in synthesis - microwave and ultrasound assisted reactions – supercritical fluid extraction – green oxidation and photochemical reactions – catalyst and biocatalysts.

MODULE IV GREEN INDUSTRIAL PROCESSES **8**

Polymer industry: biodegradable polymer - textile industry: greener approaches of dyeing, waste disposal – ecofriendly agrochemicals: biofertilizers, biopesticides – Pharmaceutical industry: atom economy, reduction of toxicity, use of biocatalyst, zero waste disposal – Leather industry: greener process in tanning, crusting, surface coating – ecofriendly batteries & fuel cells.

PRACTICALS

1. Synthesis of an ionic liquids (Ex: imidazolium) and testing the solubility of organic

chemicals.

2. Green bromination of stilbene (using pyridine hydrobromide).
3. Green synthesis: Photocatalytic reactions, solvent-free organic reaction – Aldol; green oxidation, green reduction.
4. Microwave assisted chemical reaction. (synthesis of aspirin, pinacol-pinacolone reaction, etc).
5. Comparison of conventional reaction with microwave assisted reactions (atom economy, solvent, etc) [Ex: aldehyde and ketones with hydrazines to give hydrazones].
6. Diels-Alder reaction in eucalyptus oil (green process).

L – 30; P – 30; TOTAL HOURS – 60

4. Rashmi Sanghi, M. M. Srivastava, Green chemistry, Narosa publishers, New Delhi, 2003.

OUTCOMES:

The students will be able to

- outline the principles and implications of green chemistry.
- comprehend the potential risks of waste generated and analyse the threats to human and environment.
- integrate information into design of molecules to avoid/eliminate toxic solvents & reagents or reduce toxic products.
- identify various alternate greener technologies for various industries.

CHCX08	ORGANIC CHEMISTRY OF BIOMOLECULES	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make students conversant with the

- basic concepts in organic chemistry
- types and structure of carbohydrates and lipids
- formation of different structures of proteins from amino acid
- structure of nucleic acids

MODULE I BASIC CONCEPTS IN ORGANIC CHEMISTRY **8**

Classification and IUPAC nomenclature of organic compounds – stereochemistry – optical, stereo and geometrical isomerism – types of reagents: electrophiles and nucleophiles – types of reactions: addition, substitution, elimination and rearrangement reactions.

MODULE II CARBOHYDRATES, LIPIDS AND VITAMINS **7**

Structure and functions of carbohydrates: mono, di, oligo and polysaccharides – lipids: phospholipids, glycolipids, sphingolipids – cholesterol – steroids – Structure, functions and deficiency disorders of fat soluble vitamins: A, D, E & K - Water soluble vitamins B & C: Thiamine, riboflavin, pantothenic acid, niacin, pyridoxine, biotin, cobalamine, folic acid and ascorbic acid.

MODULE III AMINO ACIDS, PEPTIDES AND PROTEINS **7**

Aminoacids: classification, properties - peptides – polypeptides – proteins: primary, secondary, tertiary and quaternary structure – glycoproteins – lipoproteins – Enzymes: classification and functions

MODULE IV NUCLEIC ACIDS **8**

Nucleic acids – importance - structure of purines and pyrimidines – nucleotides – polynucleotides - RNA – types & structure - DNA – phosphodiester bonds – chemical, helical structure and functions – DNA replication – gene modification.

PRACTICALS

1. Qualitative tests to identify carbohydrates.

2. Quantitative estimation of carbohydrates.
3. Separation of sugars – TLC and/or paper chromatography.
4. Quantitative estimation of lipids.
5. Separation of amino acids – TLC and/or paper chromatography.
6. Quantitative estimation of proteins by Lowry's method.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. V. K. Ahluwalia, Organic Reaction Mechanism, Narosa Publishers, New Delhi, 2002.
2. Johnson Arthur T., Biology for Engineers, CRC Press, Finland, 2011.
3. Jain P.C and Renuka Jain, Physical Chemistry for Engineers, Dhanpat Rai and Sons, New Delhi. 2001.
4. David L. Nelson, Michael M. Cox, Lehninger Principles of biochemistry, Macmillan press, London, 2010

OUTCOMES:

The students will be able to

- classify organic compounds and explain the mechanism of various organic reactions.
- draw the structures and enumerate the functions of carbohydrate, lipids and vitamins.
- correlate the relationship among amino acids, peptides and proteins.
- recognize the role of nucleic acid in the formation of RNA & DNA and differentiate DNA & RNA using their structure and function.

CHCX09	POLYMER SCIENCE AND TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the student conversant with the

- basic concepts of polymers, classification, types of polymerization and molecular weight & its distribution
- preparation, properties and applications of thermoplastics and introduction to biodegradable polymers
- properties and applications of thermosets, elastomers and FRP
- different types of moulding techniques

MODULE I BASIC CONCEPTS OF POLYMERS **8**

Definitions: monomer, polymer, functionality, degree of polymerization – classification of polymers: source, structure, application, thermal processing behavior (thermoplastics and thermosets), composition and structure (addition and condensation), mechanism (chain growth and step-wise growth) – copolymer: types – Definition –nomenclature of polymers – tacticity – types of polymerization : free radical, cationic and anionic polymerization (concepts only) – average molecular weight of polymer: number, weight – molecular weight distribution (problems)

MODULE II THERMOPLASTICS AND BIODEGRADABLE POLYMERS **8**

Preparation, properties and applications : LDPE, HDPE, polypropylene, PVC, PTFE, PET, polyamides (Nylon-6 and Nylon 6,6) and polycarbonates – polymer blends and alloys – basics of biodegradable polymers.

MODULE III THERMOSET RESINS, ELASTOMERS AND FRP **7**

Thermoset resins : phenolic resins, amino resins (urea and melamine formaldehyde), epoxy resins, unsaturated polyesters – polyurethanes – elastomers : vulcanization of natural rubber, diene based elastomers –fibre reinforced plastics: glass, aramid and carbon.

MODULE IV MOULDING TECHNIQUES 7

Moulding constituents**:** functions – moulding techniques**:** compression, injection, extrusion (single screw), blow moulding, thermoforming, (mechanical and vacuum forming), lamination.

PRACTICALS

1. Determination of molecular weight and degree of polymerization using Oswald's viscometer.
2. Free radical polymerization of styrene.
3. Free radical polymerization of PMMA.
4. Preparation of phenol-formaldehyde.
5. Preparation of urea-formaldehyde.
6. Synthesis of epoxy resin.
7. Synthesis of unsaturated polyester.
8. Preparation of FRP laminates.
9. Demonstration of injection moulding, compression moulding and blow moulding.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Billmeyer F.N., Text Book of Polymer Science, 3rd Edition, John Wiley and Sons, New York, 1994.
2. George Odian, Principles of Polymerisation, 3rd Edition, McGraw Hill Book Company, New York, 1991.

6. Gowarikar V.R., Viswanathan N.V and Jayadev Sreedhar, Polymer Science, Wiley Eastern Limited, Madras, 1981.

OUTCOMES:

The student will be able to

- classify various polymers, name the polymers and types of polymerization

reactions, calculate molecular weight of polymers,

- summarise preparation, properties and applications of thermoplastics and give examples of biodegradable polymers
- elaborate the properties and applications of thermosets, elastomers and FRP
- select the appropriate moulding technique for a given polymer, based on the application

Maths Elective Courses

(to be offered in IV

Semester)

MACX 01	**DISCRETE MATHEMATICS AND GRAPH THEORY**	**L**	**T**	**P**	**C**
		3	**1**	**0**	**4**

OBJECTIVES:

The aims of this course are to

- introduce Logical and Mathematical ability to deal with abstraction.
- familiarize the basic mathematical ideas and terminologies used in computer science.
- translate real life situations into diagrammatic representations.

MODULE I PROPOSITIONAL CALCULUS 8

Propositions – Logical connectives – Compound propositions – Conditional and biconditional propositions – Truth tables – Tautologies and contradictions – Contrapositive – Logical equivalences and implications – DeMorgan's Laws – Normal forms – Principal conjunctive and disjunctive normal forms – Rules of inference – Arguments – Validity of arguments.

MODULE II PREDICATE CALCULUS 7+3

Predicates – Statement function – Variables – Free and bound variables – Quantifiers – Universe of discourse – Logical equivalences and implications for quantified statements – Theory of inference – The rules of universal specification and generalization – Validity of arguments.

MODULE III FUNCTIONS 7+3

Functions – Classification of functions –– Composition of functions – Inverse functions – Binary and n–ary operations – Characteristic function of a set – Hashing functions – Recursive functions – Permutation functions.

MODULE IV ALGEBRAIC SYSTEMS 8+2

Groups, Cyclic Groups, Subgroups, Cosets, Lagrange's theorem, Normal subgroups – Codes and group codes – Basic notions of error correlation – Error recovery in group codes.

MODULE V GRAPH THEORY 7+3

Graphs – incidence and degree – subgraphs – isomorphism – complement of a graph – operations on graphs

MODULE VI PATH AND CIRCUIT 8+2

Walks, trails and paths – Eulerian graphs – Konigsburg bridge problem - Hamiltonian graphs

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1 Trembly J.P and Manohar R, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 30th Reprint 2011.

2 Kenneth H.Rosen, “Discrete Mathematics and its Applications:, 7th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, Special Indian Edition, 2011.

3 C.L.Liu, D.P.Mohapatra, “Elements of Discrete Mathematics”, 4th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 2012.

OUTCOMES:

At the end of the course, student will be able to

- use the concepts of propositional calculus.
- use the concepts of predicate calculus.
- identify types of functions and their importance.
- decode and encode the messages using group theory concepts.
- apply the basic concepts of graph theory.
- represent some real life situations into diagrammatic representation.

MACX 02 PROBABLITY AND STATISTICS L T P C
3 1 0 4

OBJECTIVES:

The aims of this course are to impart the

- knowledge of the theory of probability and random variables
- techniques to carry out probability calculations and identifying probability distributions
- application of statistical inference in practical data analysis

MODULE I BASICS OF PROBABILITY AND STATISTICS 8+2

Sample space, events- axioms of probability and interpretation – Addition, multiplication rules – conditional probability, Independent events - Total probability – Baye's theorem - Descriptive Statistics.

MODULE II ONE DIMENSIONAL RANDOM VARIABLE AND PROBABILITY DISTRIBUTION FUNCTIONS 7+3

Discrete random variable –continuous random variable – Expectation - probability distribution - Moment generating function – Binomial, Poisson, Geometric, Uniform (continuous), Exponential and Normal distributions.

MODULE III TWO DIMENSIONAL RANDOM VARIABLES 8+2

Joint, marginal, conditional probability distributions –covariance, correlation - transformation of random variables.

MODULE IV SAMPLING AND ESTIMATION 7+3

Sampling distributions – basic knowledge on Random , simple random , stratified and cluster samplings – Test of Hypotheses - concepts- Point estimation and Interval estimation.

MODULE V THEORY OF INFERENCE 8+2

Large sample tests – test for single and difference on proportions, single mean, difference of means, difference of variances – confidence intervals. Small sample tests – Student's t test, F test and Chi square test on theory of goodness of fit and analyses of independence of attributes.

MODULE VI DESIGN OF EXPERIMENTS 7+3

Analysis of variance – one way classification – two way classification – Completely

Randomised Block Designs – Randomised Block Design – Latin square designs - Interpretations - case studies.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. T.Veerarajan, “Probability and Statistics”, Tata McGraw-Hill Education, 2008.
2. Miller, I., Miller, M.,Freund, J. E., “Mathematical statistics”, 7th Edition, Prentice Hall International, 1999.
3. S.P.Gupta, “Applied Statistics”, Sultan Chand & Sons

REFERENCES:

1. S.M.Ross, “Introduction to Probability and Statistics for Engineers and Scientists” Fifth Edition, Elesvier.
2. S.C.Gupta and V.K.Kapoor, “Fundamentals of Mathematical Statistics” First edition, Sultan Chand and Sons.
3. Arora and Arora, “Comphrensive Statistical Methods”, S. Chand, 2007

OUTCOMES:

On completion of the course, students will be able to

- do basic problems on probability and descriptive statistics.
- derive the probability mass / density function of a random variable.
- calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.
- calculate point and interval estimates.
- apply some large sample tests and small sample tests.
- carry out the data collection representation analysis and implications and the importance of inferences.

MACX 03	RANDOM PROCESSES	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of the course are to

- acquire the knowledge of the theory of probability and random variables
- study discrete and continuous probability distributions.
- demonstrate the techniques of two dimensional random variables and its distributions.
- introduce the random process, stationarity, Markov process and the study of correlation function and spectral analysis.

MODULE I Basics of Probability 7+3

Sample space, events- axioms of probability and interpretation – Addition, multiplication rules – conditional probability, Independent events - Total probability – Baye's theorem - Tchebychev's inequality.

MODULE II One dimensional Random variable and Probability Distribution functions 7+3

Discrete random variable –continuous random variable – Expectation - probability distribution - Moment generating function – Binomial, Poisson, Geometric, Uniform (continuous), Exponential and Normal distributions.

MODULE III Two dimensional random variables 7+3

Joint, marginal, conditional probability distributions - covariance, correlation and regression lines - transformation of random variables.

MODULE IV RANDOM PROCESSES 8+2

Classification of Random process - Stationary process - WSS and SSS processes - Poisson process – Markov Chain and transition probabilities.

MODULE V CORRELATION FUNCTIONS 8+2

Autocorrelation function and its properties - Cross Correlation function and its properties - Linear system with random inputs – Ergodicity.

MODULE VI SPECTRAL DENSITY 8+2

Power spectral Density Function - Properties - System in the form of convolution - Unit Impulse Response of the System – Weiner-Khinchine Theorem - Cross Power

Density Spectrum.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Veerarajan T., “Probability, Statistics and Random Processes”, Tata McGraw Hill,3rd edition, 2008.
2. Papoulis, “Probability, Random Variables and Stochastic Processes”, 4th Edition, Tata McGraw Hill Company, 2002.
3. S.M.Ross, “Introduction to Probability and Statistics for Engineers and Scientists” Fifth Edition, Elesvier

REFERENCES:

1. Scott L. Miller,Donald G. Childers, Probability and Random Processes, Academic Press,2009.
2. Trivedi K S, “ Probability and Statistics with reliability, Queueing and Computer Science Applications”,Prentice Hall of India,New Delhi,2nd revised edition, 2002

OUTCOMES:

On completion of the course, students will be able to

- do basic problems on probability.
- derive the probability mass / density function of a random variable.
- calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.
- identify and study the different random processes.
- compute correlation functions and related identities.
- compute power spectral density functions and apply Weiner-Khinchine formula.

MACX 04 APPLIED NUMERICAL METHODS L T P C
3 1 0 4

OBJECTIVES:

The aims of the course are to

- introduce basic computational methods for analyzing problems that arise in engineering and physical sciences.
- acquire knowledge about approximation theory and convergence analysis associated with numerical computation.

MODULE I NUMERICAL SOLUTIONS OF EQUATIONS 7+3

Bisection method - Regula Falsi method – Secant method - Fixed point iteration method - Newton's Raphson method –Gauss Elimination method - Gauss-Jordon method – Gauss Jacobi method - Gauss-Seidel method.

MODULE II INTERPOLATION 8+2

Finite difference operators – Gregory Newton's forward and backward interpolations – Cubic spline interpolation - Lagrange interpolation - Newton's divided difference formula.

MODULE III NUMERICAL DIFFERENTIATION AND INTEGRATION 8+2

Numerical differentiation using Newton's forward and backward formulae – Numerical integration : Trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Gaussian Two Point and Three Point Quadrature formulae – Double integrals using Trapezoidal and Simpson's 1/3 rule.

MODULE IV INITIAL VALUE PROBLEMS FOR FIRST ORDER ORDINARY DIFFERENTIAL EQUATIONS 7+3

Numerical solutions by Taylor's Series method, Euler's method, Modified Euler's Method - Runge – Kutta Method of fourth order – Milne's and Adam's Bashforth Predictor and Corrector methods

MODULE V INITIAL AND BOUNDARY VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 8+2

Numerical solutions by Taylor's Series method - Runge – Kutta Method of fourth order of second order ODE. Finite difference methods.

MODULE VI BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS **7+3**

Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace equation.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Grewal, B.S., “Numerical methods in Engineering and Science”, 7th edition, Khanna
   Publishers, 2007.
2. C.F.Gerald, P.O.Wheatley, “Applied Numerical Analysis” ,Pearson Education, New Delhi, 2002.

REFERENCES:

1. Chapra S.C, Canale R.P. “Numerical Methods for Engineers”, 5th Ed., McGraw Hill, 2006.
2. M.K.Jain, S.R.K.Iyengar, R.K.Jain, “Numerical methods for Scientific and Engineering Computation”, New Age International Publishers, New Delhi, 2003

OUTCOMES:

At the end of this course, students will be able to

- solve algebraic, transcendental and system of equations.
- apply interpolation techniques.
- carry out numerical differentiation and integration using different methods.
- solve first order ODE using single and multi step methods.
- solve second order ODE, initial and boundary value problems.
- solve the boundary value problems in PDE.

Maths Elective Courses
(To be offered in VI Semester)

MACX 05	MATHEMATICAL PROGRAMMING	L	T	P	C
		2	0	0	2

OBJECTIVES:

The aims of the course are to

- acquire knowledge and training in optimization techniques.
- obtain knowledge about optimization in utilization of resources.
- understand and apply operations research techniques to industrial operations.

MODULE I LINEAR PROGRAMMING PROBLEM 10

Linear programming – formulation of the problem - graphical interpretation of optimality - Simplex method – to obtain basic feasible solution – types of linear programming solution – complications and their resolution.

MODULE II ADVANCED LINEAR PROGRAMMING PROBLEMS 8

Artificial variable - Big M method – Two phase method – alternative optimal solution – unbounded solution - Duality – primal dual relationships.

MODULE III TRANSPORTATION PROBLEM 7

Transportation problems – Initial basic feasible solutions, MODI method, Unbalanced transportation problem, Degeneracy in transportation models,.

MODULE IV ASSIGNMENT PROBLEM 5

Assignment problem – Minimization and Maximization type of problems by Hungarian method.

Total Hours –30

TEXT BOOKS:

1. Hamdy A Taha, “Operations Research - An introduction”, 8th edition, Phil Pearson, 2007.
2. Winston.W.L., “Operations Research”, 4th edition, Thompson-Brooks/Cole, 2003.

REFERENCES:

1. Wayne.L. Winston, “Operations Research Applications and Algorithms”,

4th edition, Thomson learning, 2007.

2. Frederick. S. Hiller and Gerald J Lieberman, “Operations Research Concepts and Cases”, 8th edition (SIE), Tata McGraw – Hill Pub. Co. Ltd., New Delhi, 2006.
3. A. Ravindran, D. T. Phillips and J. J. Solberg, "Operations Research: Principles and Practice", 2nd edition, John Wiley & Sons, New York, 1992.
4. Robertazzi. T.G., “Computer networks and systems-Queuing theory and performance evaluation”, 3rd edition, Springer, 2002.

OUTCOMES:

At the end of the course, students will be able to

- formulate industrial problems as mathematical programming problems.
- solve linear programming problems by different methods.
- solve transportation problems by different methods.
- solve assignment problems by Hungarian method.

MACX 06	STATISTICAL METHODS FOR DATA ANALYSIS	L	T	P	C
		2	0	0	2

OBJECTIVES:

The aim of the course is to

- introduce statistical quality control tools.

MODULE I TESTS OF HYPOTHESES AND STATISTICAL INFERENCES 8

Small sample tests – Student's ' t ' test for single mean , difference of means, paired t test – F test for difference of variances – Chi square test on theory of goodness of fit and analyses of independence of attributes.

MODULE II DESIGN OF EXPERIMENTS 7

Analysis of variance – one way classification – two way classification – Completely Randomised Block Designs – Randomised Block Design – Latin square designs - Statistical analysis -Interpretations - case studies.

MODULE III STATISTICAL QUALITY CONTROL-I 8

Quality improvement and statistics –Statistical quality control- statistical process control – control charts – design of control charts –analysis of patterns on control charts - X bar chart, R chart and S chart.

MODULE IV STATISTICAL QUALITY CONTROL-II 7

Process and product control – attribute charts – P, np and C charts – control charts performance.

Total Hours –30

TEXT BOOKS:

1. Douglas C.Montgomery, George C. Runger "Applied Statistics and probability for Engineers" V Edition – John Wiley & Sons Inc.
2. Miller, I., Miller, M., Freund, J. E. "Mathematical statistics" 7th Edition. Prentice Hall International, 1999.

REFERENCES:

1. Dekking, F.M., Kraaikamp, C., Lopuhaä, H.P., Meester, L.E. "A Modern Introduction to Probability and Statistics" Springer, 2nd Edition.
2. Chin Long chiang "Statistical Methods of Analysis "World Scientific Books,

2003.
3. S.C.Gupta and V.K. Kapoor, “Mathematical Statistics” , Sultan Chand publications.
4. Veerarajan “Fundamentals of Mathematical Statistics” I Edition, Yes Dee Publishing Pvt. Ltd., 2017.

OUTCOMES:

On completion of the course, students will be able to

- develop and test hypothesis for different statistical tests
- design an experiment and case study the experiment with different data.
- analyze the industrial data using quality control design tools statistically.
- analyze the industrial data using process and product control tools statistically.

MACX 07 NUMERICAL METHODS FOR INTEGRATION AND DIFFERENTIAL EQUATIONS

L	T	P	C
2	0	0	2

OBJECTIVES:

- This course aims to solve numerically integral and differential equations.

MODULE I NUMERICAL INTEGRATION **8**

Numerical integration by trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Two Point and Three point Gaussian quadrature formulae.

MODULE II NUMERICAL DOUBLE INTEGRATION **6**

Double integrals using trapezoidal and Simpson's 1/3 rules

MODULE III NUMERICAL SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS **8**

Milne's Predictor and Corrector Method – Adam's Predictor-Corrector Method - Finite difference methods for two – point Boundary Value problems for Ordinary Differential Equations.

MODULE IV BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS **8**

Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace and Poisson equations

Total Hours –30

TEXT BOOKS:

1. M.K.Jain, S.R.K.Iyengar, R.K.Jain, "Numerical methods for Scientific and Engineering Computation", New Age International Publishers, New Delhi, 2003.
2. Grewal, B.S., "Numerical methods in Engineering and Science" 7th edition, Khanna Publishers, 2007

REFERENCES:

1. C.F.Gerald, P.O.Wheatley, "Applied Numerical Analysis" Pearson Education, New Delhi 2002.
2. P.Dechaumphai, N. Wansophark, "Numerical Methods in Engineering", Narosa Publications, 2012.

OUTCOMES:

At the end of the course students will be able to

- solve the integration by numerical methods.
- solve the double integration by numerical methods
- find numerical solution of ordinary differential equations in engineering problems.
- find numerical solution of partial differential equations in engineering problems.

MACX 08 MATHEMATICAL MODELLING L T P C
3 0 0 3

OBJECTIVES:

The aims of the course are to

- provide basic idea of formation and use of Mathematical models for different purposes.
- determine the extent to which models are able to replicate real-world phenomena under different conditions

MODULE I PRINCIPLES OF MATHEMATICAL MODELING 7

Mathematics as a modelling language - Classification of models - Building, studying, testing and using models - Black and white box models – Difference equations

MODULE II PHENOMENOLOGICAL MODELS 7

Linear, Multiple linear and nonlinear regression - Neural networks - Fuzzy model - Stability and higher dimensional systems

MODULE III MECHANISTIC MODELS –I 8

Setting up ODE models – Initial and Boundary value problems - Numerical solutions - Fitting ODE to data - Applications

L T P C
2 0 0 2

MODULE IV MECHANISTIC MODELS –II 8

Linear and nonlinear equations - Elliptic, parabolic and hyperbolic equations - Closed form solutions - Finite difference and finite element methods

Total Hours –30

TEXT BOOKS:

1. G . Ledder , “Calculus, modelling , probability and dynamic systems”, Springer 2013
2. Kei Velten, “Mathematical modelling and simulation”, J. Wiley and sons,2009

REFERENCES:

1. Michael D Alder, “An introduction to Mathematical modelling”, Heaven for Books.com
2. Alfio Quarteroni, “Mathematical models in science and engineering”, Notices of AMS
3. J.N. Kapur, “Mathematical models in Biology and Medicine”, Affiliated East-

West Press Private Limited, New Delhi, 1992.

OUTCOMES:

On completion of the course, the students will be able to

- identify the relationship between real world and mathematical models
- Classify the data and choose the appropriate model
- Distinguish between linear and nonlinear models
- identify the relationship between empirical and mechanistic models

MACX 09 **GRAPH THEORY** **L T P C**

3 0 0 3

OBJECTIVES:

The aims of this course are to

- represent the real life situations diagrammatically.
- appraise different methods to find solutions to graph theory problems.

MODULE I INTRODUCTION TO GRAPH THEORY 8

Graphs - finite and infinite graphs - Incident and degree-isolated vertex, pendent vertex and null vertex.

MODULE II PATH AND CIRCUIT 8

Isomorphism – sub graphs-walks, paths and circuits – connected and disconnected graphs- Euler graphs – operation on a graph.

MODULE III TREES AND FUNDAMENTAL CIRCUITS 7

Trees- some properties of trees- pendent vertices in a tree – rooted binary tree-spanning trees-fundamental circuits.

MODULE IV CUT SETS AND CUT VERTICES

Cut sets – some properties of cut sets- fundamental circuits and cut sets-network flows.

Total Hours –30

TEXT BOOKS:

1. NARSINGH DEO, Graph theory with applications to Engineering and Computer Science, Prentice Hall INC, New Delhi,
2. J.A. Pondy and U.S.R. Murthy, North Holland, Oxford, New York Graph theory with applications

REFERENCES:

1. Trembly J.P and Manohar R, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 30th Reprint 2011
2. Kenneth H.Rosen, “Discrete Mathematics and its Applications”, 7th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, Special Indian Edition, 2011

3. Md. Saidur Rahman, “Basic graph theory”, Springer, 2017

OUTCOMES:

At the end of the course, students will be able to

- demonstrate the basic concepts of Graph theory.
- explore connected and disconnected graphs.
- identify the real life problems with trees and circuits.
- bring out the cut set properties and network flows properties.

Humanities Elective I

(To be offered in III Semester)

SSCXO1	**FUNDAMENTALS OF ECONOMICS**	**L**	**T**	**P**	**C**
		2	**0**	**0**	**2**

OBJECTIVES:

- To identify and present the basic concepts of demand, supply and equilibrium.
- To explain and discuss the types and concepts of national income and inflation.
- To illustrate the fundamental concepts of money, banking and public finance.
- To apprise the students about Indian economy and the role of engineers in economic development.

MODULE I DEMAND AND SUPPLY ANALYSIS 8

Classification of economy – open and closed economy, Demand - Types of demand - Determinants of demand – Law of Demand - Demand elasticity - Supply - Determinants of Supply – Law of Supply - Supply elasticity - Pricing strategies.

MODULE II NATIONAL INCOME AND INFLATION 7

Concepts of National income and measurement – Importance and difficulties of estimating National Income in India - Aggregate demand and aggregate supply, Macroeconomic equilibrium – meaning of inflation- types - causes and preventive measures

MODULE III MONEY, BANKING AND PUBLIC FINANCE 9

Money – Meaning, types, functions, importance - Commercial Banks - Central Bank - Monetary policy – meaning, objectives, Methods of Credit Control By RBI, Government Budget – Government revenue and Expenditures – Fiscal policy - Its objectives, instruments and limitations - Deficit Financing - The Fiscal Responsibility and Budget Management Act, 2003 (FRBMA) .

MODULE IV INDIAN ECONOMY AND THE ROLE OF ENGINEERS 6

Economic reforms – Liberalization, Privatization and Globalization - challenges and opportunities, Engineers – Engineers' contributions to the economic growth.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Dutt and Sundharam (2013), *Indian Economy*, S. Chand & Company Pvt. Ltd, New Delhi.
2. Hussain, Moon Moon (2015), *Economics for Engineers*, Himalaya Publishing House, New Delhi.

REFERENCES:

1. Cleaver Tony (2004), "*Economics: The Basics*", Routledge, London.
2. Mell Andrew and Walker Oliver (2014), "*The Rough Guide to Economics*", Rough Guide Ltd.

OUTCOMES:

On successful completion of this course,

- Students will have had exposure to the basic concepts of demand, supply and various pricing strategies.
- Students will have understood the macroeconomic concepts of national income and inflation.
- Students will be able to apply the knowledge of money, banking and public finance in their real life situations.
- Students will have an overview of the economic reforms introduced in Indian economy.

SSCXO2 PRINCIPLES OF SOCIOLOGY.

L	T	P	C
2	0	0	2

OBJECTIVES:

- To acquaint the students with Concepts and perspectives of Sociology
- To explain the reflection of society in Individuals and vice versa
- To describe the hierarchical arrangement of individuals and groups in society
- To explicate the dimensions, forms and factors of Social change.
- To examine the context, impact and agencies of Globalization

MODULE I THE FOUNDATIONAL CANON 8

Sociology-Definition, scope and importance; Major theoretical perspectives- Functionalism, Conflict Theorising and Interactionism; Elements of social formation- Society, Community, Groups and Association; Associative Social Process- Co-operation, Accommodation and Assimilation; Dissociative Social Process- Competition and Conflict.

MODULE II INDIVIDUAL AND SOCIETY 7

Culture-definition, characteristics, functions, types, cultural lag and civilization, Socialization – definition, process, stages, agencies and anticipatory socialization; Social Control- definition, characteristics, importance, types & agencies.

MODULE III SOCIAL INEQUALITY AND STRATIFICATION 7

Concepts- inequality, hierarchy, differentiation, Social Exclusion, and Social Stratification. Forms of Social Stratification- Caste, Class and Estate. Gender and Social Stratification- sex and gender, patriarchy, factors perpetuating gender stratification; Globalization and gender inequality

MODULE IV SOCIAL CHANGE AND GLOBALIZATION 8

Social Change-definition, nature, direction; Forms- evolution, development, progress and transformation; Factors of social change- demography, economy, technology, polity and culture. Globalization- definition, characteristics, historical and social context and Impact, agencies of globalization- IGOs, INGOs, Nation-State, MNEs and Media

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Giddens A. 1989. “Sociology” Cambridge: Polity Press.

2. Heald Haralambos, R.M(2014) . ‘‘Sociology Themes and Perspectives”, Oxford, New Delhi-92
3. Bhushan Vidya and D.R. Sachdeva (2012). ‘‘Fundamental of Sociology”, Pearson, Delhi.

REFERENCES:

1. Das Gupta, Samir and Paulomi Saha (2012), ‘‘An Introduction to Sociology”, Pearson, Delhi
2. Bottomore, T.B. 1972. *Sociology- A Guide to Literature and Problems*, New Delhi,

OUTCOMES:

On successful completion of this course,

- Students will have exposure to the fundamentals tenets of Sociology.
- Students will be trained to understand social reality with sociological perspective.
- Students will be oriented to constructively analyze human interactions, social relationship and social issues
- Students will gain exposure to the dynamics of human society with special reference to the contemporary trends of globalization.

SSCXO3	SOCIOLOGY OF INDIAN SOCIETY.	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To present a portrayal of the components of the Indian Social structure
- To describe the nature and contemporary structure of Indian social Institutions.
- To examine the causality and magnitude of social problem facing the contemporary India.
- To elucidate the processes forms and impact of change and development in Indian society

MODULE I INDIAN SOCIAL STRUCTURE 7

Unity and Diversity; Concepts of unity and diversity- racial, religious, ethnic and linguistic composition of India. Types of communities-rural, urban and tribal; Social backwardness- OBC, SC and ST; Indian minorities- religious, ethnic, linguistic and LGBT

MODULE II INDIAN SOCIAL INSTITUTIONS 7

Family- definition, types, characteristics, functions of family; Joint Family- definition features, utility, changes; Marriage- definition, characteristics, marriage as sacrament or contract. Caste- definition, principles, contemporary changes, dominant caste, caste -class interface.

MODULE III SOCIAL PROBLEMS IN INDIA 8

Social Problem-definition, nature, social disorganization; Population explosion-causes, effects, relationship with development; Child Labour- causes, magnitude and consequences; Unemployment-nature , types, causes and effects; Gender issues-social status of women, violence against women and women in work place; Contemporary issues- communalism, terrorism and corruption.

MODULE IV SOCIAL CHANGE AND DEVELOPMENT IN INDIA 8

Socio-cultural Change- Sanskritization, Westernization, Secularization, Modernization; Processes of Social change- Industrialization, Urbanization, Globalization; Development- definition, elements, role of government, industry and corporate sector. Technology and change- invention and innovation, impact of technology on social institutions, technology and development.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Sharma,K.L.2008. *Indian Social Structure and Change*. Jaipur: Rawat Publications,.
2. Shah, A.M. 1998. *The Family in India: Critical Essays*. New Delhi: Orient Longman,
3. Ahuja Ram. 1999. *Social problems in India*, Rawat Publication: New Delhi.
4. Ahuja Ram. 2014. *Society in India,*, Rawat Publication: New Delhi.

REFERENCES:

1. Jayapalan, N.(2001), **"**Indian Society and Social Institutions" Atlantic Publishers & Distri,
2. Atal, yogesh (2006), "Changing Indian Society" Rawat Publications, Jaipur

OUTCOMES:

On successful completion of this course,

- Students will gain an in-depth understanding of the social structure and social institutions that constitute society in India.
- Students will be sensitized to the various categories ,Inequalities and their challenges
- Students will be exposed to the social problems encountered in contemporary India.
- Students will gain knowledge about the various forms and trends of the social change.
- Students will become aware about the challenges in the path of progress of Indian society and realize relevance of their role in bringing about development

Humanities Elective II

(To be offered in IV Semester)

		L	T	P	C
SSCXO4	**ECONOMICS OF SUSTAINABLE DEVELOPMENT**	**2**	**0**	**0**	**2**

OBJECTIVES:

- To have an increased awareness on the concept and components of sustainable development.
- To develop the ability to demonstrate the need of sustainable development and international responses to environmental challenges.
- To have an insight into global environmental issues and sustainable globalization.
- To establish a clear understanding of the policy instruments of sustainable development.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 7

Evolution of the Concept – Rio Summit and sustainable development - various definitions of sustainable development - Components of sustainable development: Social, environmental and economic components.

MODULE II NEED FOR SUSTAINABLE DEVELOPMENT 8

Need for sustainability – Global environmental challenges: population growth, resource depletion, pollution, energy use, climate change, pollution, growing water scarcity, other urban problems, loss of biodiversity, hazardous wastes disposal.International responses to environmental challenges - Global policy such as Kyoto Protocol, Montreal Protocol, Basel Convention.

MODULE III GLOBALIZATION AND ENVIRONMENT SUSTAINABILITY 8

Impact of Globalization on sustainable development, Co - existence of globalization and Environment sustainability, Globalization and Global Governance.Green economy - Renewable energy, sustainable transport, sustainable construction, land and water management, waste management.

MODULE IV POLICIES FOR ACHIEVING SUSTAINABLE DEVELOPMENT 7

Principles of environmental policy for achieving sustainable development: precautionary principle and polluter pays principle – Business Charter for Sustainable Development.Policy instruments for sustainable development: direct regulation – market based pollution control instruments such as pollution tax, subsidy, pollution permits.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Anderson, David A (2010), "*Environmental Economics and Natural Resource Management*", Routledge, 3rd edition.
2. Karpagam M (1999), "*Environmental Economics: A Textbook*", Sterling Publishers Pvt. Ltd, New Delhi.

REFERENCES:

1. Karpagam M and Jaikumar Geetha (2010), "*Green Management Theory and Applications*", Ane Books Pvt. Ltd, New Delhi.
2. Sengupta Ramprasad (2004), "*Ecology and Economics: An Approach to Sustainable Development*", Oxford University Press, New Delhi.

OUTCOMES:

On successful completion of this course,

- The students will have understood the concepts and components of sustainable development.
- The students will have a holistic overview on the challenges of sustainable development and International responses to environmental challenges.
- The students will have gained knowledge on the global environment issues and demonstrate responsible globalization through global governance.
- The students will have developed awareness of the ethical, economic, social and political dimensions that influence sustainable development.

SSCXO5 INDUSTRIAL SOCIOLOGY L T P C

2 0 0 2

OBJECTIVES:

- To introduce sociological approaches and perspectives to understand the social relationship in manufacturing industries and corporate sector.
- To explain the structure and functions of industrial organizations.
- To elucidate the dynamics of organizational behavior, leadership and communication.
- To inculcate professional ethics and values to equip students to work in organizational settings.

MODULE I INTRODUCTION 8

Industrial Sociology- definition, scope and importance; Theoretical approaches- scientific management, human relations approach, theory of bureaucracy, Fordism and post-fordism; Production system- concept and characteristics of factory system, automation and rationalization; Industrial conflict- strike , lockout and trade unions.

MODULE II INDUSTRIAL ORGANIZATION 7

Formal organization- definition, features, utility; Informal organization- definition, characteristics, types and relevance; Structure of industrial organization- features and functions of line organization, characteristics and roles of staff organization, distinction;

Industrial hierarchy-white collar, blue collar, supervisors and managers.

MODULE III DYNAMICS OF INDUSTRIAL RELATIONS 8

Group dynamics- Definition, Group behaviour model, Group decision making process, group cohesiveness; Leadership- definitions, style and effective supervision; Communication- concepts, types, model barriers; Job satisfaction- nature, employee compensation and job satisfaction.

MODULE IV PROFESSIONAL ETHICS AND VALUES 7

Concepts- values- morals, and ethics, Integrity, work ethics , service learning - Civic Virtue - caring - Sharing - Honesty - Courage - Valuing Time - Co-operation - commitment - empathy - Self-Confidence - Environmental Ethics, Cyber issues - computer ethics, cyber crimes, plagiarism Ethical living-concept of harmony in life.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Narender Singh, Industrial Sociology, Tata McGraw Hill Education Pvt. Ltd., New Delhi, 2012.
2. Gisbert Pascal, Fundamentals of Industrial Sociology, Tata Mc. Graw Hill Publishing Co., New Delhi, 1972
3. Schneider Engeno. V, Industrial Sociology 2nd Edition, Mc. Graw Hill Publishing Co., New Delhi, 1979.

REFERENCES:

1. Robbins, Stephen, Organizational Behaviour , Prentice Hall of India PVT ltd new Delhi, 1985
2. Devis Keith , Human Behaviour at work place, Mc. Graw Hill Publishing Co., New Delhi,1984

OUTCOMES:

On successful completion of this course,

- Students will have acclimatized with sociological perspectives for dealing with social relationships in production and service organizations.
- Students will be familiar with structure of authority, roles and responsibility in organizational settings.
- Students will imbibe leadership, communication and behavioral acumen to govern organization
- Students will be sensitized to standards of desirable behavior to engage in industrial and corporate sector.

SSCXO6 LAW FOR ENGINEERS L T P C
2 0 0 2

OBJECTIVES:

- To understand the Constitution and Governance of our country.
- To apprise the students of human rights - local and international and redressal mechanism.
- To have an insight into the industrial, corporate and labour laws of our country.
- To establish a clear understanding about the importance of intellectual property related laws.

MODULE I INDIAN CONSTITUTION AND GOVERNANCE 8

Constitution – salient features, Preamble, Citizenship, Fundamental rights, Fundamental duties, Directive principles, Union executive, Legislature – Union – State and union territories – Election Commission – Election for parliament and state legislature, Judiciary- basic functioning of the Supreme Court and High Courts, Right to information Act 2005 – evolution – concept – practice.

MODULE II HUMAN RIGHTS 7

Human rights – meaning and significance, Covenant on civil and political rights, Covenant on Economic, Social and Cultural rights, UN mechanism and agencies, The Protection of Human Rights Act, 1993 – watch on human rights and enforcement.

MODULE III INDUSTRIAL, CORPORATE AND LABOUR LAWS 8

Corporate laws – meaning and scope, Companies Act 1956 – Indian Contract Act 1872 - Principles of Arbitration - Industrial Employment (Standing Orders) Act 1946 - Industrial Disputes Act 1947 - Workmen's Compensation Act 1923 - The Factories Act, 1948.

MODULE IV LAWS RELATED TO IPR 7

IPR – meaning and scope, International organization – WIPO – TRIPS, Major Indian IPR Acts – Copyright laws, Patent and Design Act, Trademarks Act, Trade Secret Act, Geographical Indicator.

REFERENCES:

1. Acts: Right to Information Act, Industrial Employees (standing order) Act, Factories Act, Workmen Compensate Act.

OUTCOMES:

On successful completion of this course,

- Students will `be able to apply the basic concepts of Indian Constitution, Governance and power in their real life situation.
- Students will have gained knowledge in human rights, cultural, social and political rights.
- Students will have synthesized knowledge about industrial, corporate and labour laws of our country.
- Students will have an overview of IPRs and laws related to Intellectual Property Rights.

General Elective Courses

Group I courses

(To be offered in V Semester)

		L	T	P	C
GECX101	**DISASTER MANAGEMENT**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To give an exposure to various environmental hazards and disasters: and various concepts and principles to manage disaster.
- To give exposure to various environmental policies & programs in India for disaster management

MODULE I ENVIRONMENTAL HAZARDS 7

Environmental hazards, Environmental Disasters and Environmental stress-Meaning and concepts. Vulnerability and disaster preparedness.

MODULE II NATURAL DISASTERS 7

Natural hazards and Disasters - Volcanic Eruption, Earthquakes, Tsunamis, Landslides, Cyclones, Lightning, Hailstorms, Floods, Droughts, Cold waves, Heat waves and Fire.

MODULE III MAN-MADE DISASTERS 7

Man induced hazards & Disasters - Soil Erosion, Chemical hazards, Population Explosion

MODULE IV DISASTER MANAGEMENT 8

Emerging approaches in Disaster Management- Preparing hazard zonation maps, Predictability / forecasting & warning, Preparing disaster preparedness plan, Land use zoning, Communication. Disaster resistant house construction, Population reduction in vulnerable areas, Awareness - Rescue training for search & operation at national & regional level - Immediate relief, Assessment surveys, Political, Administrative, Social, Economic, Environmental Aspects.

MODULE V NATURAL DISASTER REDUCTION & MANAGEMENT 8

Provision of Immediate relief measures to disaster affected people, Prediction of Hazards & Disasters, Measures of adjustment to natural hazards

MODULE VI ENVIRONMENTAL POLICIES & PROGRAMMES IN INDIA **8**

Regional survey of Land Subsidence, Coastal Disaster, Cyclonic Disaster & Disaster in Hills with particular reference to India. Ecological planning for sustainability & sustainable development in India, Sustainable rural development: A Remedy to Disasters, Role of Panchayats in Disaster mitigations, Environmental policies & programmes in India- Institutions & National Centers for Natural Disaster reduction, Environmental Legislations in India, Awareness, Conservation Movement, Education & training.

L – 45; Total Hours –45

REFERENCES:

2. Singh, R.B. (Ed.), “Environmental Geography”, Heritage Publishers, New Delhi,1990.
3. Savinder Singh, “Environmental Geography”, Prayag Pustak Bhawan,1997.
4. Kates, B.I. and White, G.F., “The Environment as Hazards”, Oxford University Press, New York, 1978.
5. Gupta, H.K., (Ed), “Disaster Management”, University Press, India, 2003.
6. Singh, R.B.,“Space Technology for Disaster Mitigation in India (INCED)”, University of Tokyo, 1994.
7. Bhandani, R.K., “An overview on Natural & Manmade Disaster & their Reduction”, IIPA Publication, CSIR, New Delhi, 1994.
8. Gupta, M.C., “Manuals on Natural Disaster management in India”, National Centre for Disaster Management, IIPA Publication, New Delhi, 2001.

OUTCOMES:

At the end of the course, the students will

- achieve sufficient knowledge on the disaster prevention strategy, early warning system, disaster preparedness, response and human resource development.
- be familiar with the National Policy on Disaster Management.

GECX102 TOTAL QUALITY MANAGEMENT L T P C
3 0 0 3

OBJECTIVES:

- To understand the various principles, practices of TQM to achieve quality.
- To get acquainted with the various statistical tools and approaches for quality control and continuous improvement.
- To get aware of the importance of ISO and Quality Systems.

MODULE I INTRODUCTION 8

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

MODULE II TQM PRINCIPLES 7

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits.

MODULE III TQM IMPROVEMENT PROCESS 8

Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership – Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures – Basic Concepts, Strategy, Performance Measure.

MODULE IV STATISTICAL PROCESS CONTROL (SPC) 8

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma, New seven Management tools.

MODULE V TQM TOOLS 7

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA.

MODULE VI QUALITY SYSTEMS 7

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System– Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 – Concept, Requirements and Benefits

L – 45; Total Hours –45

TEXT BOOKS:

1. Dale H.Besterfiled, et al., “Total Quality Management”, Pearson Education, Inc. 2003.

REFERENCES:

1. James R.Evans & William M.Lidsay, “The Management and Control of Quality”, 5th Edition, South-Western (Thomson Learning), 2002.
2. Feigenbaum.A.V., “Total Quality Management”, McGraw-Hill, 1991.
3. Oakland.J.S., “Total Quality Management”, Butterworth Hcinemann Ltd., Oxford, 1989.
4. Narayana V. and Sreenivasan. N.S., “Quality Management – Concepts and Tasks”, New Age International, 1996.
5. Zeiri, “Total Quality Management for Engineers”, Wood Head Publishers, 1991.

OUTCOMES:

The student should be able to

- apply the various statistical tools and approaches for Quality control.
- achieve continuous process improvement through TQM.

GECX103 ENERGY STUDIES L T P C
3 0 0 3

OBJECTIVES:

- To learn the growing demand, supply of energy on global and national levels and the need for renewable energy promotion.
- To understand the basic need for energy conservation and waste heat recovery.
- To learn the important aspects of energy audit and management.
- To get acquainted with the global environmental issues and carbon credits.

MODULE I GLOBAL AND NATIONAL ENERGY SCENARIO 7

Role of energy in economic development, various energy resources - overall energy demand and availability- Energy consumption in various sectors and its changing pattern - Exponential increase in energy consumption and projected future demands. Need for renewable energy.

MODULE II SOLAR ENERGY 8

Solar Radiation – Measurements of Solar Radiation - Flat Plate and Concentrating Collectors – Solar direct Thermal Applications – Solar thermal Power Generation - Fundamentals of Solar Photo Voltaic Conversion – Solar Cells – Solar PV Power Generation – Solar PV Applications.

MODULE III OTHER RENEWABLE ENERGY SOURCES 8

Power from wind – wind turbine working and types, solar thermal power plants – low medium and high power generation, power from wave , tidal, geothermal sources, OTEC system. MHD power plants – working, types, merits and demerits. Energy from biomass.

MODULE IV COGENERATION, WASTE HEAT RECOVERY AND COMBINED CYCLE PLANTS 8

Cogeneration principles- topping and bottoming cycles, role in process industries. Energy from wastes- waste heat recovery- heat recovery from industrial processes. Heat exchange systems – recuperative and regenerative heat exchangers – commercially available waste heat recovery devices. Combined cycle plants – concept, need and

advantages, different combinations and practical scope.

MODULE V ENERGY CONSERVATION AND MANAGEMENT 7

Need for energy conservation – use of energy efficient equipment. Energy conservation opportunities - in educational institutions, residential, transport, municipal, industrial and commercial sectors – concept of green building. Energy audit in industries – need, principle and advantages. Case studies.

MODULE VI GLOBAL ENERGY ISSUES AND CARBON CREDITS 7

Energy crisis, fossil consumption and its impact on environmental climate change. Energy treaties – Montreal and Kyoto protocols - Transition from carbon rich and nuclear to carbon free technologies, carbon foot print – credits – clean development mechanism.

L – 45; Total Hours –45

TEXT BOOKS:

1. S.S. Rao and B.B. Parulekar, “Energy Technology”, 3rd Edition, Khanna Publishers, New Delhi, 2011.
2. O. Callaghn. P.W., “Design and Management for Energy Conservation”, Pergamon Press, Oxford, 1981.

REFERENCES:

1. G.D. Rai, “Non Conventional Energy Sources”, Khanna Publishers, New Delhi, 2011.
2. Archie, W Culp. “Principles of Energy Conservation”, McGraw Hill, 1991.
3. D Patrick and S W Fardo, “Energy Management and Conservation”, PHI,1990
4. P. O’Callaghan: “Energy Management”, McGraw - Hill Book Company, 1993.
5. Kenney, W. F., “Energy Conservation in Process Industries”, Academic Press, 1983.

OUTCOMES:

The student should be able to

- Realize the global and national energy status and need to switch over to renewable energy technology.
- Energy audit and suggest methodologies for energy savings.
- Utilize the available resources in an optimal way.
- Concern about the global environmental issues & promote carbon credits.

GECX104 **ROBOTICS** **L T P C**
3 0 0 3

OBJECTIVES:

To learn about the robots, various components, of Robots, programming and their applications.

MODULE I **8**

Definition- Need - Application, Types of robots – Classifications – Configuration, work volume, control loops, controls and intelligence- basic parts - functions – specifications. of robot, degrees of freedoms, end effectors – types, selection

MODULE II ROBOT DRIVES AND CONTROL **8**

Controlling the Robot motion – Position and velocity sensing devices – Design of drive systems – Hydraulic and Pneumatic drives – Linear and rotary actuators and control valves – Electro hydraulic servo valves, electric drives – Motors – Designing of end effectors – Vacuum, magnetic and air operated grippers.

MODULE III ROBOT SENSORS **8**

Transducers and Sensors – Tactile sensor – Proximity and range sensors – Sensing joint forces – Robotic vision system – Image Representation - Image Grabbing –Image processing and analysis – Edge Enhancement – Contrast Stretching – Band Rationing - Image segmentation – Pattern recognition – Training of vision system.

MODULE IV ROBOT PROGRAMMING & AI TECHNIQUES **7**

Types of Programming – Teach pendant programming – Basic concepts in AI techniques – Concept of knowledge representations – Expert system and its components.

MODULE V ROBOTIC WORK CELLS AND APPLICATIONS OF ROBOTS **7**

Robotic cell layouts – Inter locks – Humanoid robots – Micro robots – Application of robots in surgery, Manufacturing industries, space and underwater.

MODULE VI ROBOT KINEMATICS AND DYNAMICS 7

Forward and inverse Kinematic equations, Denvit – Hartenbers representations Fundamental problems with D-H representation, differential motion and velocity
of frames - Dynamic equations for sing, double and multiple DOF robots – static force analysis of robots.

L – 45; Total Hours –45

REFERENCES:

1. Yoram Koren," Robotics for Engineers", Mc Graw-Hill, 1987.
2. Kozyrey, Yu, "Industrial Robots", MIR Publishers Moscow, 1985.
3. Richard. D, Klafter, Thomas, A, Chmielewski, Michael Negin, "Robotics Engineering – An Integrated Approach", Prentice-Hall of India Pvt. Ltd., 1984.
4. Deb, S.R. "Robotics Technology and Flexible Automation", Tata Mc Graw-Hill, 1994.
5. Mikell, P. Groover, Mitchell Weis, Roger, N. Nagel, Nicholas G. Odrey, "Industrial Robotics Technology, Programming and Applications", Mc Graw- Hill, Int. 1986.
6. Timothy Jordanides et al,"Expert Systems and Robotics", Springer – Verlag, New York, May 1991.

OUTCOMES:

Students would be able to

- Understand about the robots, its various components.
- Design Robots for industrial applications.
- Do programming for robots and apply them in real time applications.

GECX105 TRANSPORT MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the transport fleet and their related activities for minimizing operational cost.
- To understand the need of maintenance and its importance.
- To understand the functions and applications of various types of transport system.

MODULE I INTRODUCTION 7

Personnel management; objectives and functions of personnel management, psychology, sociology and their relevance to organization, personality problems. Selection process: job description, employment tests, interviewing, introduction to training objectives, advantages, methods of training, training procedure, psychological tests.

MODULE II ORGANISATION AND MANAGEMENT 7

Forms of Ownership – principle of Transport Management – Staff administration – Recruitment and Training – welfare – health and safety. Basic principles of supervising. Organizing time and people. Driver and mechanic hiring - Driver checklist - Lists for driver and mechanic - Trip leasing - Vehicle operation and types of operations.

MODULE III TRANSPORT SYSTEMS 9

Introduction to various transport systems. Advantages of motor transport. Principal function of administrative, traffic, secretarial and engineering divisions. chain of responsibility, forms of ownership by state, municipality, public body and private undertakings.

MODULE IV SCHEDULING AND FARE STRUCTURE 8

Principal features of operating costs for transport vehicles with examples of estimating the costs. Fare structure and method of drawing up of a fare table. Various types of fare collecting methods. Basic factors of bus scheduling. Problems on bus scheduling.

MODULE V MOTOR VEHICLE ACT 7

Traffic signs, fitness certificate, registration requirements, permit insurance, constructional regulations, description of vehicle-tankers, tippers, delivery vans, recovery vans, Power wagons and fire fighting vehicles. Spread over, running time, test for competence to drive.

MODULE VI MAINTENANCE 7

Preventive maintenance system in transport industry, tyre maintenance procedures. Causes for uneven tyre wear; remedies, maintenance procedure for better fuel economy, Design of bus depot layout.

L – 45; Total Hours –45

TEXT BOOKS:

1. John Duke, "Fleet Management", McGraw-Hill Co, USA, 1984.
2. Kitchin.L.D., "Bus Operation", III edition, Illiffee and Sons Co., London, 1992

REFERENCES:

1. Government Motor Vehicle Act, Publication on latest act to be used as on date.

OUTCOMES:

Upon completion of the course, students will

- Know about different aspects related to transport system and management.
- Features of scheduling, fixing the fares
- Know about the motor vehicle act and maintenance aspects of transport.

GECX106 CONTROL SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the system modeling and to derive their transfer function.
- To provide adequate knowledge of time response of systems and steady state error analysis.
- To accord basic knowledge in obtaining the open loop and closed–loop frequency responses of Control systems.

MODULE I BASIC CONCEPTS AND SYSTEM REPRESENTATION **8**

Control System - Basic elements in control systems – Open and closed loop systems – Electrical analogy of mechanical and thermal systems – Transfer function – Block diagram reduction techniques – Signal flow graphs.

MODULE II TIME RESPONSE ANALYSIS AND DESIGN **8**

Time response – Time domain specifications – Types of test input – First and Second order system - Type I and Type II System – Response - Error coefficients – Generalized error series – Steady state error – P, PI, PID modes of feedback control.

MODULE III FREQUENCY RESPONSE ANALYSIS AND DESIGN **7**

Performance specifications - correlation to time domain specifications - bode plots and polar plots – gain and phase margin – constant M and N circles and Nichols chart – all pass and non-minimum phase systems.

MODULE IV STABILITY **8**

Characteristics equation – Location of roots in s plane for stability – Routh Hurwitz criterion – Root locus construction – Effect of pole, zero addition – Gain margin and phase margin – Nyquist stability criterion.

MODULE V COMPENSATOR DESIGN **8**

Performance criteria – Lag, lead and lag-lead networks – Compensator design using bode plots and root locus technique.

MODULE VI CONTROL SYSTEM COMPONENTS AND APPLICATION OF CONTROL SYSTEMS **6**

Synchros – AC servomotors - DC Servo motors - Stepper motors - AC Tacho generator - DC Tacho generator - Typical applications of control system in industry.

L – 45; Total Hours –45

REFERENCES:

1. K. Ogata, “Modern Control Engineering”, 4th Edition, Pearson Education, New Delhi, 2003.
2. I.J. Nagrath & M. Gopal, “Control Systems Engineering”, New Age International Publishers, 2003.
3. C.J.Chesmond, “Basic Control System Technology”, Viva student edition, 1998.
4. I.J.Nagarath and M.Gopal, “Control System Engineering”, Wiley Eastern Ltd., Reprint, 1995.
5. R.C.Dorf and R.H.Bishop, “Modern Control Systems”, Addison-Wesley (MATLAB Reference), 1995.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Proper understanding of basics of Control Systems.
- Ability and skill to carry-out time domain and frequency domain analysis.
- Capable of determining stability of the system using Routh Hurwitz criterion, Root locus and Nyquist criterion.
- Ability to design lag, lead and lag lead compensator networks.

GECX107 INTRODUCTION TO VLSI DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- Basic concepts of HDL.
- Verilog language and its syntax constructs.
- Programmable Logic Devices and FPGAs
- MOS devices theory
- CMOS based combinational and sequential circuits

PREREQUISITES:

Fundamentals of Electronics

Basics knowledge in Digital Electronics.

MODULE I REVIEW OF BASIC DIGITAL SYSTEMS 7

Boolean algebra, Building blocks of combinational logic design-Adders, multiplexer, encoder, decoder, comparator, Latches & flip-flops, counters, shift registers.

MODULE II LOGIC DESIGN USING VERILOG HDL 8

Overview of Digital Design with Verilog HDL, Levels of Design Description, Concurrency, Hierarchical Modeling Concepts, Modules and Ports, Component instantiation Data flow and RTL, structural, gate level, switch level modeling and Behavioral Modeling.

MODULE III LANGUAGE CONSTRUCTS OF VERILOG HDL 7

Identifiers- gate primitives, gate delays, operators, timing controls, procedural assignments, conditional statements Variable types, arrays and tables, Tasks and functions, Test bench.

MODULE IV BUILDING BLOCKS OF DIGITAL VLSI SYSTEMS 8

HDL Design -Data Path Operations-Addition/Subtraction, Parity Generators, Comparators, Zero/One Detectors, Binary Counters, ALUs, Multiplication, Shifters, Memory Elements. Programmable logic elements and AND-OR arrays, FPGAs programming methods.

MODULE V TRANSISTOR THEORY 7

Introduction to MOS Transistors-NMOS & PMOS Characteristics, Current Equations, Complementary CMOS Inverter-DC Characteristics, Static Load MOS Inverters.

MODULE VI BASICS OF DIGITAL CMOS DESIGN 8

NMOS & PMOS Logic Gate, CMOS Logic Gate, Basic layout design of simple gate-stick diagram, CMOS Logic Structures-full adder, multiplexers.

Total Hours –45

TEXT BOOKS:

1. M.Morris Mano "Digital Design", 3rd Edition, Prentice Hall of India Pvt. Ltd New Delhi, 2003

REFERENCES:

1. Michael D. Ciletti“Advanced Digital Design with the Verilog HDL" (2nd Edition) Hardcover – January 31, 2010
2. J.Bhasker: Verilog HDL primer, BS publication, 2001.
3. J. P. Uyemura, "Introduction to VLSI Circuits and System", Wiley, 2002
4. Neil Weste and K. Eshragian, “Principles of CMOS VLSI Design: A System Perspective,” 2nd edition, Pearson Education (Asia) Pvt.Ltd., 2000
5. Douglas A Pucknell& Kamran Eshragian , “Basic VLSI Design” PHI 3rd Edition (original edition – 1994)

OUTCOMES:

At the end of the course the students will be able to

- Create basic Register Transfer Level (RTL) models for combinational circuits & Sequential circuits using Verilog HDL.
- Create basic behavioral models for combinational circuits & Sequential circuits using Verilog HDL.
- Describe the usage of Programmable Logic Devices and FPGAs.
- Describe MOS devices theory and inverter circuit DC characteristics
- Design the basic digital building blocks using MOS circuit.
- Apply VLSI design concepts based on the requirements to conduct experiments or projects

GECX108 PLANT ENGINEERING L T P C

3 0 0 4

OBJECTIVES:

- To provide in depth knowledge on Plant Engineering
- To introduce detail engineering and P&ID
- To learn about the support to Instrumentation from other disciplines
- To study about the Installation and commissioning

MODULE I INTRODUCTION OF PLANTS 7

General Project Cycle – Feed – Sales - Plant Description, Component / Areas of Plant, Plant Layout, Plant Interfaces, Plant Location

MODULE II ELEMENTS OF PLANT 8

Main Elements of a Plant, Process Flow Scheme (PFD – Process Flow Diagram) P&ID's, Plant Legend Finalization.

MODULE III DETAIL ENGINEERING 10

P& ID Development with PFD's, Major Discipline Involvement & Inter discipline Interaction, Major Instrumentation & Control Systems - Development Phase – Instrument List , I/O Count, Specification Sheets, Instrument Installation (Hook ups) , Control Philosophy – Detail Engineering.

MODULE IV SUPPORT FROM OTHER DISCIPLINE 8

Other Discipline Supports to Instrumentation – Plot Plan, Piping / Equipment Plan, Electrical Area Classification, Fire Hazardous Classification Telecommunication Systems - Control Network architecture.

MODULE V INSTALLATION AND COMMISSIONING 7

Plant Construction - Key Drawings for Construction Support Construction Activities, System Testing, Startup / Commissioning, Production.

MODULE VI CASE STUDIES 5

Case studies of Water Treatment Plant - Paper Industry – Power Plant etc

L – 45; Total Hours –45

REFERENCES:

1. Duncan C Richardson, Plant Equipment and Maintenance Engineering Handbook, McGraw-Hill Education: New York, Chicago, San Francisco, Athens, London, Madrid, Mexico City, Milan, New Delhi, Singapore, Sydney, Toronto, 2014 McGraw-Hill Education
2. Gabriel Salvendy, Handbook of Industrial Engineering – Technology and operations Management, John Wiley & Sons, 2001.
3. Robert C Rosaler , Standard Handbook of Plant Engineering, Mc Graw Hill third Edition, 2004
4. R. Keith Mobley, Plant Engineer's Handbook, Technology and Engineering, 2001.

OUTCOMES:

At the end of the course, the student will be able to

- Review and correct P&IDs
- Do installation and commissioning of new plants
- Apply plant engineering in design and maintenance of water treatment plant / power plant etc

GECX109	NETWORK SECURITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

The students should be able to

- Discuss the basic concepts of computer security, model and attacks
- Examine the major types of threats and the associated attacks
- Identify the encryption techniques in real time applications
- Understand the special requirements for wireless security and how authentication is implemented in wireless systems
- Understand the functions of Network Security Device Firewall and its types
- Interpret the various network intrusion such as computer viruses, network worms etc

MODULE I INTRODUCTION 6

Computer Security Concepts - The OSI Security Architecture - Security Attacks - Security Services - Security Mechanisms - A Model for Network Security - Standards – classical encryption techniques.

MODULE II SYMMETRIC ENCRYPTION AND MESSAGE CONFIDENTIALITY 7

Symmetric Encryption Principles - Symmetric Block Encryption Algorithms - Random and Pseudorandom Numbers - Stream Ciphers and RC4 - Cipher Block Modes of Operation

MODULE III PUBLIC KEY CRYPTOGRAPHY AND MESSAGE AUTHENTICATION 8

Approaches to Message Authentication - Secure Hash Functions - Message Authentication Codes - Public-Key Cryptography Principles - Public-Key Cryptography Algorithms - Digital Signatures

MODULE IV KEY DISTRIBUTION ,USER AUTHENTICATION AND TRANSPORT-LEVEL SECURITY 8

Symmetric Key Distribution Using Symmetric Encryption - Kerberos - Key Distribution Using Asymmetric Encryption - X.509 Certificates - Public-Key Infrastructure -Federated Identity Management - Web Security Considerations -

Secure Socket Layer and Transport Layer Security - Transport Layer Security

MODULE V WIRELESS NETWORK SECURITY, ELECTRONIC MAIL SECURITY AND IP SECURITY **8**

IEEE 802.11 Wireless LAN Overview -IEEE 802.11i Wireless LAN Security - Wireless Application Protocol Overview - Wireless Transport Layer Security - WAP End-to-End Security - Pretty Good Privacy - S/MIME – Domain Keys Identified Mail- IP Security Overview -IP Security Policy - Encapsulating Security Payload - Combining Security Associations - Internet Key Exchange - Cryptographic Suites

MODULE VI SYSTEM SECURITY **8**

Intruders -Intrusion Detection -Password Management - Types of Malicious Software - Viruses Virus Countermeasures – Worms - Distributed Denial of Service Attacks- The Need for Firewalls - Firewall Characteristics - Types of Firewalls - Firewall Basing - Firewall Location and Configurations

L – 45; Total Hours –45

REFERENCES:

2. William Stallings, "Cryptography and Network Security: Principles and Practice", Pearson, ISBN-13:978-0-273-79335-9,2013
3. Behrouz Forouzan, Debdeep Mukhopadhyay,Cryptography and network security (sie) 2nd edition, ISBN-13: 978-0070702080, 2016
4. Wikipedia, "Network Security and Management" , https://en.wikipedia.org/wiki/Book:Network Security and Management, 2014.
5. Nitesh Dhanjani, Justin Clarke, "Network Security Tools", O'Reilly Media, ISBN-13: 9780596007942, 2005.

OUTCOMES:

Students who complete this course will be able to

- Recognize the computer security concepts, architecture attacks and model
- Distinguish the symmetric and asymmetric encryption techniques
- Apply the cryptographic algorithms in different applications
- Express the network security designs using available secure solutions

such as PGP,SSL, IPSec, etc.

- Describe the firewalls principles and different types of firewalls applied in organization
- Identify abnormalities within the network caused by worms, viruses and Network related security treats**.**

GECX110	KNOWLEDGE MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course

- Focuses on positioning knowledge as a valuable commodity, embedded in products and in the tacit knowledge of highly mobile individual employees.
- Presents KM as a deliberate and systematic approach to cultivating and sharing an organization's knowledge base.
- Brings out the paradigm in terms of information technology and intellectual capital.

MODULE I KNOWLEDGE MANAGEMENT 6

KM Myths – KM Life Cycle – Understanding Knowledge – Knowledge, intelligence – Experience – Common Sense – Cognition and KM – Types of Knowledge – History of Knowledge Management - From Physical assets to Knowledge Assets – Expert knowledge – Human Thinking and Learning.

MODULE II KNOWLEDGE MANAGEMENT SYSTEMS AND MODELS 9

Challenges in Building KM Systems – Conventional Vs KM System Life Cycle (KMSLS) – Knowledge Creation and Knowledge Architecture – KM cycle - Different variants of KM cycle - KM models - Implications and practical implementations.

MODULE III CAPTURING KNOWLEDGE AND SHARING 9

Tacit knowledge capture - Explicit knowledge codification – Knowledge taxonomies - Knowledge sharing - Communities - Obstacles to knowledge capture and sharing.

MODULE IV KNOWLEDGE MANAGEMENT TOOLS 9

KM System tools – Neural Network – Association Rules – Classification Trees – Data Mining and Business Intelligence – Knowledge capture and creation tools - Content creation tools - Data mining and knowledge discovery – Content management tools - Knowledge sharing and dissemination tools – Group ware

and Collaboration tools - Intelligent filtering tools.

MODULE V KNOWLEDGE APPLICATION 6

KM at individual level - Knowledge workers - Task analysis and modeling - Knowledge application at group and organizational levels – Knowledge repositories - Knowledge reuse -Case study: e-learning.

MODULE VI VALUE OF KNOWLEDGE MANAGEMENT 6

KM return on investment and metrics - Benchmarking method – Balanced scorecard method - House of quality method - Results based assessment method - Measuring success - Future challenges for KM.

L – 45; Total Hours –45

TEXT BOOKS:

1. Elias M. Awad, Hassan M. Ghaziri, “Knowledge Management”, Prentice Hall, 2nd Edition, 2010.
2. Jay Liebowitz, “Handbooks on Knowledge Management”, 2nd Edition, 2012.
3. Irma Becerra-Fernandez, Rajiv Sabherwal, ”Knowledge Management: Systems and Processes”, 2010.

OUTCOMES:

Students who complete this course will be able to

- Describe the fundamental concepts in the study of knowledge and its creation, acquisition, representation, dissemination, use and re-use, and management.
- Explains the core concepts, methods, techniques, and tools for computer support of knowledge management.
- Critically evaluate current trends in knowledge management and apply it for e-learning

GECX111 CYBER SECURITY L T P C

3 0 0 3

OBJECTIVES:

- To understand the basics of Cyber Security Standards and Policies.
- To know the legal, ethical and professional issues in Cyber security.
- To understand Cyber Frauds and Abuse and its Security Measures.
- To know the technological aspects of Cyber Security.

MODULE I FUNDAMENTALS OF CYBER SECURITY 7

Security problem in computing – Cryptography Basics – History of Encryption – Modern Methods – Legitimate versus Fraudulent Encryption methods – Encryption used in Internet.

MODULE II CYBERCRIME AND CYBEROFFENSES 8

Cybercrime and Information Security – Cybercriminals – Classifications of Cybercrimes – Email Spoofing – Spamming – Cyber defamation – Internet Time Theft – Forgery – Web jacking – Hacking – Online Frauds – Software Piracy – Mail Bombs – Password Sniffing – Cyberoffenses – Categories – Planning the attacks – Cyberstalking – Cybercafe and Cybercrimes – Botnets.

MODULE III CYBERCRIME: MOBILE AND WIRELESS DEVICES 8

Proliferation of Mobile and Wireless Devices – Trends in Mobility – Credit card frauds in Mobile and Wireless Computing – Security Challenges – Authentication Service Security – Attacks on Mobile Phones.

MODULE IV TOOLS AND METHODS USED IN CYBERCRIME 8

Proxy Servers and Anonymizers – Phishing – Password Cracking – Keyloggers and Spywares – Virus and Worms – Trojan Horses and Backdoors – Steganography – DoS and DDoS Attacks.

MODULE V SECURITY POLICIES 7

Introduction - Defining User Policies – Passwords – Internet Use – Email Usage – Installing/ Uninstalling Software – Instant Messaging – Defining System Administrative Policies – Defining Access Control Developmental Policies Standards, Guidelines and Procedures – Basics of assessing a system

MODULE VI COMPUTER FORENSICS 7

General Guidelines – Finding Evidence on the PC - Finding Evidence in System Logs – Windows Logs – Linux Logs – Getting Back Deleted Files – Operating System Utilities – The Windows Registry.

L – 45; Total Hours –45

TEXT BOOKS:

1. Nina Godbole, Sunit Belapure, “Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives”, Wiley, 2011.

2. Chuck Easttom, “Computer Security Fundamentals”, 2nd Edition, Pearson Education, 2012.

REFERENCES:

1. Charles B. Pfleeger, Shari Lawrence Pfleeger, “Security in Computing”, 3rd Edition, Pearson Education, 2003.
2. William Stallings, “Cryptography and Network Security – Principles and Practices”, 3rd Edition, Pearson Education, 2003.
3. Atul Kahate, “Cryptography and Network Security”, Tata McGraw Hill, 2000.

OUTCOMES:

Upon completion of this course, students will be able to

- Explain the general security issues.
- Discuss various cybercrimes and offenses.
- Outline the occurrence of Cybercrime in mobile and wireless environment.
- Use relevant tools and methods in cybercrime
- Apply security policies in cyber forensics.
- Outline the strategies adopted in computer forensics.

GECX112 GENETIC ENGINEERING L T P C
4 0 0 4

OBJECTIVES:

The course aims to provide an advanced understanding of the core principles and topics of Cell and Organism reproduction and the Principles of heredity and their experimental basis, and to enable students to be able to apply these principles in assessment of pedigrees to identify genotypes and predict the mating outcomes.

MODULE I GENETICS AND ORGANISM 10

Genetics and human affairs, Genetics and Biology, Genes and Environment, Techniques of genetic analysis, The chromosome theory of heredity, Sex chromosomes, Sex linkage, The parallel behaviour of autosomal genes and chromosomes.

MODULE II MENDELISM AND LINKAGE 12

Mendel's laws of inheritance, Interaction of genes, Variations on dominance, Multiple alleles, Lethal alleles, Several genes affecting the same character, Penetrance and expressivity, Linkage- Basic eukaryotic chromosome mapping, The discovery of linkage, Recombination linkage symbolism, Linkage of genes on X chromosomes, Linkage maps, Examples of linkage maps.

MODULE III FINE STRUCTURE OF GENES 10

The concept of promoter, Coding sequence, Terminator, Induction of gene for expression. The concept of extranuclear genome in higher plants and animals, Overview of mitochondrial genome, Chloroplast genome.

MODULE IV RECOMBINATION IN BACTERIA AND VIRUSES 10

Conjugation recombination and mapping the E.coli chromosomes, Transformation, Transduction, Chromosome mapping. Population genetics: Darwin's revolution, Variation and its modulation, The effect of sexual reproduction on variation, The sources of variation, Selection quantitative genetics

MODULE V PRINCIPLES OF PLANT BREEDING 9

Objectives, Selfing and crossing techniques, Male sterility,Incompatability,

Hybrid vigour.

MODULE VI HUMAN GENOME PROJECT 9

Genetic diseases in humans, Genetics and society

L – 45; T – 15; Total Hours –60

REFERENCES:

1. In Introduction to genetic analysis, Griffiths, Miller, Suzuki, Lewontin and Gelbart, Freeman and Company.
2. Genetics, A.V.S.S. Sambamurty, Narosa Publishing House.
3. Concepts of Genetics, Klug & Cummings, Prientice Hall.
4. Molecular Cloning, Moniatisetal, Cold Spring Harbor Laboratory.

OUTCOMES:

At the end of the course students will be able to

- Describe the structure, function and replication of DNA as the genetic material
- Describe gene structure, expression and regulation
- Describe the chromosomal basis of inheritance and how alterations in chromosome number or structure may arise during mitosis and meiosis

GECX113	FUNDAMENTALS OF PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The students would gain knowledge on

- Technicalities attached to Project Management and Significance of Quality Consideration
- Project management methodologies – tools and techniques, supplemented with examples from case studies
- The importance of Efficient HR team and role of Communication in executing Projects.
- Managing Risks in Project Management

MODULE I INTRODUCTION TO PROJECT MANAGEMENT 9

Introduction to Project and Project Management-Project Management as a Career-Project Management Skill Sets-Project Scope Management: Project Charter, Scope Creep, Scope Validation, Scope Change Control-Type of Organization: Organization Structure-Influence of Organization Structure on Project, Project Stakeholders and Organizational Productivity.

MODULE II PROJECT MANAGEMENT PROCESS, TOOLS AND TECHNIQUES 8

Project life cycle-Initiation, Planning, Execution, Monitoring and Closing Phase; - Link between project management process, process groups and knowledge areas; Project management tools and techniques- Project Stakeholders description and mapping - Stakeholder Management Process

MODULE III PROJECT QUALITY, COST AND SCHEDULE MANAGEMENT 10

Triple constraints of project-quality, cost and schedule-Quality Planning, Quality Assurance and Quality Control, Process Control, Cost of Quality, Seven Tools of Quality Control- Cost Management: Cost Estimating Methods, Estimating Completion Cost, Earned Value Management, Budgeting, Life-Cycle Cost analysis- Project Time Management: Duration Estimation Method, FS/FF/SS/ SF Relations, Lead/Lag, Arrow Diagram Method and Precedence Diagram Method for Scheduling-Resource Allocation

MODULE IV PROJECT HR MANAGEMENT 5

Organizational Goals- (MBO/MBE/MBP)-Responsibility Assignment Matrix (RAM)-Types of Powers- Manage or Lead-Conflict management Techniques-Performance Evaluation Process-Motivation Theories and its Application for execution of Projects-Leadership Styles-Project Team Building-Project Staffing Constraints/Policies

MODULE V COMMUNICATION MANAGEMENT 5

Communication Management: Understanding Body languages of Project Personnel-Effective Communications- Interpersonal Skills for project Managers-PMIS-Communicating with the Customer-Communicating with Management- Formal vs. Informal Communications-Written, Verbal and Non-Verbal Communications.

MODULE VI PROJECT PROCUREMENT & RISK MANAGEMENT 8

Introduction to Project Procure Management: Soliciting RFQ/RFP-Contract Proposals-Contract Negotiation-Contract Closure-Risk Management: Defining risks-Risk management process-Risk identification-Qualitative and Quantitative Risk-Probability and Decision trees-Risk Response strategies / methods-Expected monetary value-Risk vs. life cycle phases

L – 45; Total Hours –45

REFERENCES:

1. Jack. R. Meredith, Samuel. J. Mantel & Scott. M. Shafer, Project Management in Practice, Fifth Edition, Bangalore: Wiley, 2015
2. Bob Hughes, Mike Cotterrel “Software Project Management”, Tata McGraw-Hill, 2009

OUTCOMES:

- Learners will be able to identify the Key Knowledge Areas and apply PM process in hypothetical project assignments given as continuous assessment.
- They would be able to suitably recognize tools and techniques required for various phases included in a project.
- They would also be able to manage scope, time, cost and other major components that would help them to execute the project efficiently.

GECX114 OPERATIONS RESEARCH L T P C
3 0 0 3

OBJECTIVES:

- To acquire knowledge and training in optimization techniques.
- To get knowledge about optimization in utilization of resources.
- To understand and apply operations research techniques to industrial operations

MODULE I LINEAR PROGRAMMING PROBLEM 8

Linear programming – formulation of the problem - graphical interpretation of optimality - Simplex method – to obtain basic feasible solution – types of linear programming solution – complications and their resolution.

MODULE II ARTIFICIAL VARIABLE AND TWO PHASE METHOD, DUALITY 6

Artificial variable - Big M method – Two phase method – alternative optimal solution – unbounded solution - Duality – primal dual relationships - rules of constructing the dual from primal.

MODULE III TRANSPORTATION PROBLEM & ASSIGNMENT PROBLE 8

Transportation problems – Initial basic feasible solutions, MODI method, Unbalance in transportation, Degeneracy in transportation models, Assignment problem – Minimization and Maximization type of problems by Hungarian method.

MODULE IV NETWORK AND SEQUENCING PROBLEMS 8

PERT and CPM – Network diagram – Fulkerson's rule - CPM Probability of achieving completion date – Crash time – Cost analysis. Sequencing N jobs through 2 machines and 3 machines.

MODULE V QUEUING THEORY & SIMULATION 7

Poisson arrivals and exponential service times – characteristics of Queuing models – single channel – Introduction to multi channel models – Random number generation – Monte Carlo Simulation.

MODULE VI INVENTORY CONTROL, REPLACEMENT MODELS AND GAME THEORY 8

Types of inventory- Inventory cost - EOQ - Deterministic inventory problems – Introduction to probabilistic models & system level inventory control - Replacement models – Replacement of items that deteriorate with time – value of money changing with time – not changing with time – Individual and group replacement policy - Game theory – simple games.

L – 45; Total Hours –45

TEXT BOOKS:

3. Hamdy ATaha, “Operations Research an introduction”, 8th edition, Phil Pearson, 2007.
4. Winston.W.L., “Operations Research”, 4th edition, Thompson-Brooks/Cole, 2003.

2. Frederick. S. Hiller and Gerald.J.Lieberman, “Operations Research concepts and cases”, 8th edition (SIE), Tata McGraw – Hill Pub. Co. Ltd., New Delhi, 2006.
3. A. Ravindran, D. T. Phillips and J. J. Solberg, "Operations Research:Principles and Practice", 2nd edition, John Wiley & Sons, New York, 1992.
4. Robertazzi. T.G., “Computer networks and systems-Queuing theory and performance evaluation”, 3rd edition, Springer, 2002.

OUTCOMES:

At the end of the course students will be able to

- solve linear programming problems
- solve transportation and assignment problems.
- solve network and sequencing problems.
- apply the operations research techniques to solve industrial problems.

GECX115 NANO TECHNOLOGY L T P C
3 0 0 3

OBJECTIVES:

- To introduce the basic concepts of Nanoscience relevant to the field of engineering.
- To provide an exposure about the importance of various synthesis method.
- To enrich the knowledge of students in various characterisation techniques.

MODULE I INTRODUCTION & CLASSIFICATION OF NANOMATERIALS 9

Definition - Origin of nanotechnology - Difference between bulk and nanomaterials- Top-down and bottom-up processes - Size dependent properties (magnetic, electronic,transport and optical), Classification based on dimensional property - 0D, 1D, 2D and 3D nanostructures – Kubo gap.

MODULE II TYPES OF NANOMATERIALS 9

Metal oxides and metal nano particles - Ceramic nano particles - Semi conducting quantum dots - Core-shell quantum dots - Nanocomposites - Micellar nanoparticles.

MODULE III PRODUCTION OF NANOPARTICLES 7

Sol-gel, hydrothermal, solvothermal, Plasma Arcing, Electro deposition, RF sputtering, Pulsed laser deposition, Chemical vapour, deposition.

MODULE IV CARBON BASED NANOMATERIALS 6

Carbon nanotubes: Single wall nanotubes (SWNT), Multiwall nanotubes (MWNT) - structures-carbon nanofibre, Fullerenes-Application of carbon nanotubes and Fullerenes.

MODULE V NANOPHOTONICS 7

Light and nanotechnology, Interaction of light and nanotechnology, Nanoholes and photons, nanoparticles and nanostructures; Nanostructured polymers, Photonic Crystals, Solar cells.

MODULE VI CHARACTERISATION TECHNIQUES 7

Basic principles of scanning Electron Microscopy (SEM), Atomic force microscopy (AFM), Scanning tunneling microscopy (STM), Scanning probe

microscopy (SPM) and Transmission electron microscopy (TEM), Particle size analyzer, Luminescence techniques.

L – 45; Total Hours –45

TEXT BOOKS:

1. Hari Singh Nalwa, “Handbook of Nanostructured Materials and Nanotechnology”, Academic Press, 2000.
2. Guozhong Cao, “Nanostructures and Nano materials-Synthesis, Properties and Applications”, Imperial College Press (2011).
3. Zhong Lin Wang, “Handbook of Nanophase and Nanomaterials (Vol 1 and II)”, Springer, 2002.
4. Mick Wilson, Kamali Kannangara, Geoff smith, “Nanotechnology: Basic Science and Emerging Technologies”, Overseas press, 2005.

REFERENCES:

1. A. Nabok, “Organic and Inorganic Nanostructures”, Artech House, 2005.
2. C.Dupas, P.Houdy, M.Lahmani, Nanoscience: “Nanotechnologies and Nanophysics”, Springer-Verlag Berlin Heidelberg, 2007.
3. Mick Wilson, Kamali Kannangara, Michells Simmons and Burkhard Raguse, “Nano Technology – Basic Science and Emerging Technologies”, 1st Edition, Overseas Press, New Delhi,2005.
4. M.S. Ramachandra Rao, Shubra SinghH, “Nanoscience and Nanotechnology: Fundamentals to Frontiers”, Wiley, 2013.

OUTCOMES:

At the end of this course, the students will be able to:

- Apply the knowledge of different types of nanomaterials for various engineering applications.
- Acquire the knowledge of various methods of production of nanomaterials.
- Familiarize with various characterization techniques.

GECX116	VEHICLE MAINTENANCE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To know about the various methods of maintaining procedure, vehicle insurance and basic problems in a vehicle.
- The student able to impart knowledge in maintaining of engine components and subsystems.
- The student able to impart knowledge in maintaining of transmission, driveline, steering, suspension, braking and wheels.
- The student able to impart **carefully maintaining their vehicle and can increase driving safety.**

MODULE I MAINTENANCE, WORKSHOP PRACTICES, SAFETY AND TOOLS **7**

Maintenance – Need, importance, primary and secondary functions, policies - classification of maintenance work - vehicle insurance - basic problem diagnosis. Automotive service procedures – workshop operations – workshop manual - vehicle identification. Safety – Personnel, machines and equipment, vehicles, fire safety - First aid. Basic tools – special service tools – measuring instruments – condition checking of seals, gaskets and sealants. Scheduled maintenance services – service intervals - Towing and recovering.

MODULE II ENGINE AND ENGINE SUBSYSTEM MAINTENANCE **8**

General Engine service- Dismantling of Engine components- Engine repair- working on the underside, front, top, ancillaries- Service of basic engine parts, cooling and lubricating system, fuel system, Intake and Exhaust system, electrical system - Electronic fuel injection and engine management service - fault diagnosis- servicing emission controls.

MODULE III TRANSMISSION AND DRIVELINE MAINTENANCE **8**

Clutch- general checks, adjustment and service- Dismantling, identifying, checking and reassembling transmission, transaxle- road testing- Removing and replacing propeller shaft, servicing of cross and yoke joint and constant velocity joints- Rear axle service points- removing axle shaft and bearings- servicing differential assemblies- fault diagnosis.

MODULE IV STEERING AND SUSPENSION MAINTENANCE 7

Maintenance and Service of Mc person strut, coil spring, leaf spring, shock absorbers. Dismantling and assembly procedures. Inspection, Maintenance and Service of steering linkage, steering column, Rack and pinion steering, Recirculating ball steering service- Worm type steering, and power steering system.

MODULE V BRAKE AND WHEEL MAINTENANCE 7

Inspection, Maintenance and Service of Hydraulic brake, Drum brake, Disc brake, parking brake. Bleeding of brakes. Wheel alignment and balance, removing and fitting of tyres, tyre wear and tyre rotation.

MODULE VI AUTO ELECTRICAL AND AIR CONDITIOING MAINTENANCE 8

Maintenance of batteries, starting system, charging system and body electrical -Fault diagnosis using Scan tools. Maintenance of air conditioning parts like compressor, condenser, expansion valve, evaporator - Replacement of hoses- Leak detection- AC Charging- Fault diagnosis Vehicle body repair like panel beating, tinkering, soldering, polishing, painting.

L – 45; Total Hours –45

TEXT BOOKS:

1. Ed May, "Automotive Mechanics Volume One" , Mc Graw Hill Publications, 2003
2. Ed May, "Automotive Mechanics Volume Two" , Mc Graw Hill Publications, 2003
3. Vehicle Service Manuals of reputed manufacturers
4. Vehicle maintenance and garage practice by Jigar A.Doshi Dhru U.Panchal,Jayesh P.Maniar. 2014
5. A Practical Approach to Motor Vehicle Engineering and Maintenance 3rd Edition by Allan Bonnick.

REFERENCES:

1. Bosch Automotive Handbook, Sixth Edition, 2004.
2. Advanced Automotive Fault Diagnosis by Tom Denton 2011.
3. Nissan Patrol Automotive Repair Manual: 1998-2014 by Haynes Manuals Inc.
4. Automobile electrical manual a comprehensive guide by Haynes manual car repair.

OUTCOMES:

On completion of the course student should be able to

- Prepare maintenance schedules and procedures with appropriate tools.
- Demonstrate the procedure and methods to repair and calibrate the engine.
- **Analyze the causes and remedies for fault in transmission and drive line systems.**
- **Analyze the causes and remedies of steering and suspension systems.**
- **Analyze the causes and remedies of brake system.**
- **Demonstrate the procedure for wheel alignment and wheel balanced.**

GECX117 FUNDAMENTALS OF DIGITAL IMAGE PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Describe and explain basic principles of digital image processing
- Design and implement algorithms that perform basic image processing
- Design and implement algorithms for advanced image analysis
- Assess the performance of image processing algorithms and systems

PRE-REQUISITES:

- Basic knowledge of transforms in Mathematics

MODULE I DIGITAL IMAGE FUNDAMENTALS 8

Elements of Image Processing System, Fundamentals steps in Digital Image Processing, Image Sampling & Quantization, Spatial and Gray Level Resolution.

MODULE II COLOR IMAGE PROCESSING 8

Fundamental of color image processing, color models- RGB, CMY, HIS, Pseudo color image processing

MODULE III IMAGE ENHANCEMENT 7

Basic gray level Transformations, Histogram Processing, Spatial Filtering

MODULE IV IMAGE TRANSFORMS 7

2D-DFT, DCT, Haar Transform, Fundamentals of 2D-wavelet transform, sub-band coding

MODULE V IMAGE SEGMENTATION AND RESTORATION 8

Point, line and edge detection methods ,Image Segmentation and its types, Restoration: Noise model, Inverse filter and Wiener filter.

MODULE VI IMAGE COMPRESSION 7

Fundamentals of redundancies, Basic Compression Methods: Huffman coding, Arithmetic coding, JPEG and MPEG Compression standards.

TOTAL HOURS 45

TEXT BOOKS

1. Gonzalez and Woods, "Digital Image Processing", 3rd Edition, Pearson Education, 2016.
2. Anil. K. Jain, "Fundamentals of Digital Image Processing"; 4th Edition, PHI, 2007

REFERENCES

1. Pratt William, "Digital Image Processing", John Wiley & Sons, 2007.
2. Arthur Weeks Jr., "Fundamentals of Digital Image Processing", PHI, 2006.

OUTCOMES:

On completion of the course, students will be able to

- Explain the fundamental concepts of digital image processing.
- Discuss about color image processing
- Recognize & apply various image enhancement techniques.
- Apply various transforms for image processing.
- Apply various techniques for image segmentation and restoration.
- Identify and use appropriate image compression techniques

Group II courses
(To be offered in VII Semester)

GECX201	GREEN DESIGN AND SUSTAINABILITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart knowledge to face challenges, the technology poses for water, energy, and climate change by implementing sustainable design.

MODULE I CONCEPTS OF SUSTAINABLE DEVELOPMENT 7

Objectives of Sustainable Development - Need for sustainable development-Environment and development linkages - Globalisation and environment-Population, poverty and pollution- global, regional and local environment issues-Green house gases and climate change.

MODULE II SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 8

Demographic dynamics of sustainability- Policies for socio economic development- Sustainable Development through trade- Economic growth- Action Plan for implementing sustainable development- Sustainable Energy and Agriculture.

MODULE III FRAME WORK FOR ACHIEVING SUSTAINBAILITY 7

Sustainability indicators- Hurdles to sustainability- Business and Industry – Science and Technology for Sustainable Development- Performance indicators of sustainability and assessment mechanism- Constraints and barriers of Sustainable Development.

MODULE IV GREEN BUILDINGS 8

Introduction to Green Building- Energy- Water- Materials and Resources - Sustainable Sites and Land Use - Indoor Environmental Quality- Life Cycle Assessment- Energy, water and materials efficiency.

MODULE V ENERGY CONSERVATION AND EFFICIENCY 7

Energy savings- Energy Audit- Requirements- Benefits of Energy conservation-Energy conservation measures for buildings- Energy wastage- impact to the environment.

MODULE VI GREEN BUILDINGS DESIGN 8

Elements of Green Buildings Design- Foundation, Electrical, Plumbing, flooring, Decking, roofing, insulation, wall coverings, windows, siding, doors and finishing, LEED certification for Green Buildings, Green Buildings for sustainability.

L – 45; Total Hours –45

TEXT BOOKS:

1. Kirby, J., Okeefe, P., and Timber lake, “Sustainable Development”, Earthscan Publication, London, 1995.

REFERENCES:

1. Charles Kibert, J., “Sustainable Construction: Green Building Design and Delivery”, 2nd Edition, John Wiley and sons, 2007.

OUTCOMES:

At the end of the course, the students will be able to

- Explain the relationship between sustainability and emergence of green building practices.
- Address the economic, environmental, and social concerns.

GECX202 APPROPRIATE TECHNOLOGY L T P C
3 0 0 3

OBJECTIVES:

- To impart students knowledge about the basics and applications of various appropriate technologies in the field of civil engineering.

MODULE I BASICS CONCEPTS 7

Back ground, Tools, Choices and Implications, Appropriate Technology Movement (an overview) - Basic design process, basic financial analysis-discounted cash flow, and energy fundamentals.

MODULE II APPROPRIATE TECHNOLOGY WITH REFERENCE TO BUILDING DESIGN 7

Appropriate Building Materials, Appropriate Energy Saving Techniques, Water Conservation (Indoor), Rain Water Harvesting.

MODULE III WATER, HEALTH AND SANITATION MANAGEMENT 7

Water Storage: Designing Dams and Pipelines, Appropriate Selection for Sanitation Technique, Sewerage, Communal Health and Waste Water Recycling.

MODULE IV WASTE MANAGEMENT 8

Types of Waste - Sources - Collections and On-Site Processing -Transferring Stations - Disposal Systems - Recycling.

MODULE V ENERGY EFFICIENT TECHNIQUES 8

Green building concepts-renewable energy sources- Solar – Steam and wind-Biofuels - Biogas – Electricity.

MODULE VI TECHNOLOGY POLICY 8

Government Policies- Energy Policy-Appropriate technology Development Centre-its function and responsibilities-Building policies-Case Studies.

L – 45; Total Hours –45

TEXT BOOKS:

1. Barrett Hazeltine and Christopher Bull, “Appropriate Technology: Tools Choices and Implications”, Academic Press, Orlando, USA, 1998.
2. Ken Darrow and Mike Saxenian, “Appropriate Technology Source Book : A Guide to Practical Books for Village and Small Community Technology”, Stanford, 1986.

REFERENCES:

1. Richard Heeks, “Technology and Developing Countries: Practical Applications Theoretical Issues”, 1995.
2. John Pickford, “The Worth of Water : Technical Briefs on Health, Water and Sanitation”, Intermediate Technology Publications, 1998.

OUTCOMES:

- At the end of the course, the students will be able to use suitable technologies for various conditions for sustainable development.

GECX203 ENGINEERING SYSTEM MODELLING AND SIMULATION

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn the concepts, techniques, tools for modeling and simulation systems and environments through the use of computers.
- To study the various aspects of discrete dynamic, stochastic systems modeling and conducting experiments with those models on a computer.

MODULE I INTRODUCTION 6

Systems – Modelling – types – systems components – Steps in model building- Simulation Algorithms and Heuristics; Simulation Languages.

MODULE II RANDOM NUMBERS / VARIATES 7

Random numbers – methods of generation – random variates for standard distributions like uniform, exponential, Poisson, binomial, normal etc. – Testing of Random variates – Monte Carlo Simulation.

MODULE III MODELLING PROCESS 7

Primitive Models : Establishing relationships via physical laws; Establishing relationships via curve fitting; Parameters estimation problems; Elementary state transition models.

MODULE IV DESIGN OF SIMULATION EXPERIMENTS 9

Steps on Design of Simulation Experiments – Development of models using of Highlevel language for systems like Queuing, Inventory, Replacement, Production etc., – Model validation and verification, Output analysis.

MODULE V SIMULATION LANGUAGES 10

Need for simulation Languages – Comparisons & Selection of Languages – GPSSARENA- EXTEND – Study of any one of the languages.

MODULE VI CASE STUDIES USING SIMULATION LANGUAGES 6

Case Study using simulation languages

L – 45; Total Hours –45

REFERENCES:

1. Law, A.M., & W.D. Kelton, “Simulation Modelling and Analysis”, McGraw

Hill, Singapore, 2000.
2. Harrel, C.R., et. al., “System Improvement Using Simulation”, 3rd Edition, JMI Consulting Group and ProModel Corporation, 1995.
3. Harrel, C.R. & T. Kerim, “Simulation Made Easy, A Manager’s Guide”, IIE Press, 1995.
4. Geoffrey Gordon, “Systems Simulation”, Prentice Hall, 2002.
5. David Kelton, Rondall P Sadowski, David T Sturrock, “Simulation with Arena”, Mc Graw Hill, 2004.

OUTCOMES:

The student should be able to

- Model and simulate systems and environments through the use of computers.
- Conduct experiments with discrete dynamic, stochastic system models on a computer.

GECX204 VALUE ANALYSIS AND ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To get acquainted with value analysis and engineering tool for productivity improvement.
- To understand and analyze the theory and methodology of Value Engineering.

MODULE I VALUE ENGINEERING BASICS 8

Origin of Value Engineering, Meaning of value, Definition of Value Engineering and Value analysis, Difference between Value analysis and Value Engineering, Types of Value, function - Basic and Secondary functions, concept of cost and worth, creativity In Value Engineering.

MODULE II VALUE ENGINEERING JOB PLAN AND PROCESS 6

Seven phases of job plan, FAST Diagram as Value Engineering Tool, Behavioural and organizational aspects of Value Engineering, Ten principles of Value analysis, Benefits of Value Engineering.

MODULE III ORIENTATION AND INFORMATION PHASES 8

Launching Value Engineering project work - Objectives and Targets - VE Project work: a time-bound programme - Projects and Teams - Time Schedule - Co-ordination - Consultant. Technical data - Marketing related information - Competition profile - Cost data - Materials Management related information - Quality related information - Manufacturing data.

MODULE IV FUNCTION ANALYSIS AND CREATIVE PHASES 9

Objectives - Function definition - Classification of functions - Higher level functions – Function – Cost – Function – Worth - Value Gap - Value index - How to carry out Function Analysis? – Fast Diagraming - Cost Modelling.

Creativity - How to improve creativity of an individual? – How to promote creativity in the organisation? - Obstacles to Creativity - Mental road blocks - Creativity killer phrases. Positive thinking - Ideas stimulators - Creativity techniques - Brainstorming.

MODULE V EVALUATION, INVESTIGATION AND RECOMMENDATION 6

Paired comparison and Evaluation Matrix techniques - Criteria for selection of

VE solutions. Design – Materials – Quality – Marketing – Manufacturing - Preview session. The report - presentation.

MODULE VI IMPLEMENTATION PHASE AND CASE STUDIES 8

Design department - Materials department - Production Planning & Control - Quality Control – Manufacturing – Marketing - Need for co-ordinated teams - The Action Plan. Value Engineering case studies.

L – 45; Total Hours –45

TEXT BOOKS:

1. Mudge, Arthur E. “Value Engineering- A systematic approach”, McGraw Hill, New York, 2000.
2. Kumar S, Singh R K and Jha J K (Ed), “Value Engineering”, Narosa Publishing House, 2005.

REFERENCES:

1. Park RJ, “Value Engineering: A Plan for Invention”, St.Lucie Press, New York, 1999.
2. Lawrence, D.M., “Techniques of Value Analysis and Engineering”, McGraw Hill 1988.
3. George, E.D., “Engineering Design: a Material and Processing Approach”, McGraw Hill, 1991.
4. Heller, D.E., “Value Management, Value Engineering and Cost Reduction”, Addison Wesley, 1988.

OUTCOMES:

- The student will be able to realize the value of products, processes and implement value analysis to achieve productivity improvement.

GECX205 INDUSTRIAL SAFETY L T P C

3 0 0 3

OBJECTIVES:

- To understand the various safety measures to be taken in different industrial environments.

MODULE I SAFETY MANAGEMENT 7

Evolution of modern safety concept- Safety policy - Safety Organization - line and staff functions for safety- Safety Committee- budgeting for safety. safety education and training.

MODULE II SAFETY IN MANUFACTURING 7

Safety in metal working-Machine guarding -Safety in welding and gas cutting - Safety in cold forming and hot working of metals -Safety in finishing, inspection and testing -Regulation.

MODULE III SAFETY IN CONSTRUCTION 8

General safety consideration in Excavation, foundation and utilities – Cordoning – Demolition – Dismantling –Clearing debris – Types of foundations – Open footings.

Safety in Erection and closing operation - Safety in typical civil structures – Dams-bridges-water Tanks-Retaining walls-Critical factors for failure-Regular Inspection and monitoring.

MODULE IV ELECTRICAL SAFETY 8

Electrical Hazards – Energy leakage – Clearance and insulation – Excess energy – Current surges – Electrical causes of fire and explosion – National electrical Safety code.

Selection of Environment, Protection and Interlock – Discharge rods and earthing device – Safety in the use of portable tools - Preventive maintenance.

MODULE V SAFETY IN MATERIAL HANDLING 8

General safety consideration in material handling devices - Ropes, Chains, Sling, Hoops, Clamps, Arresting gears – Prime movers.

Ergonomic consideration in material handling, design, installation, operation and

maintenance of Conveying equipments, hoisting, traveling and slewing mechanisms.

Storage and Retrieval of common goods of shapes and sizes in a general store of a big industry.

MODULE VI SAFETY EDUCATION AND TRAINING 7

Importance of training-identification of training needs-training methods – programme, seminars, conferences, competitions – method of promoting safe practice - motivation – communication - role of government agencies and private consulting agencies in safety training – creating awareness, awards, celebrations, safety posters, safety displays, safety pledge, safety incentive scheme, safety campaign – Domestic Safety and Training.

L – 45; Total Hours –45

REFERENCES:

1. Krishnan N.V, “Safety Management in Industry”, Jaico Publishing House, Bombay, 1997.
2. Blake R.B., “Industrial Safety”, Prentice Hall, Inc., New Jersey, 1973.
3. Fulman J.B., “Construction Safety, Security, and Loss Prevention”, John Wiley and Sons, 1979.
4. Fordham Cooper W., “Electrical Safety Engineering”, Butterworths, London, 1986.
5. Alexandrov M.P., “Material Handling Equipment”, Mir Publishers, Moscow, 1981.

OUTCOMES:

Students would be able to

- Acquire knowledge on various safety Hazards.
- Carry out safety measures for different industrial environments.

GECX206 ADVANCED OPTIMIZATION TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the various advanced optimization tools.
- To provide an understanding to deal with ill identified and fuzzy problems.

MODULE I INTRODUCTION **7**

Review of conventional optimization techniques - limitations - limitation of exhaustive search - need for artificial intelligence - bio mimicking methods

MODULE II HEURISTICS METHODS **8**

Introduction – Advanced methods of algorithm design: Greedy method, Backtracking method, Divide and Conquer method – Dynamic programming – Heuristics exploration algorithms – Greedy search - Local search – Hill climbing – Tabu search – Gradient search – Beam search – Simulated Annealing.

MODULE III GENETIC ALGORITHM **7**

Introduction - Basics of GA – Population – Reproduction – Cross over – Mutation -genetic algorithms in search, optimization and machine learning-practical genetic algorithms.

MODULE IV ANT COLONY OPTIMIZATION **8**

Introduction: Ant Colony Optimization – Meta-heuristic Optimization – History – The ACO Meta-heuristic – ACO Algorithms: Main ACO – Ant system – Ant colony system – Max-Min Ant system – Applications: Routing in telecommunication networks – Travelling salesmen – Graph Coloring – Advantages & Disadvantages

MODULE V FUZZY LOGIC AND ANN **8**

Fuzzy logic, knowledge representation and inference mechanism – Fuzzy and expert control – standard Takagi-Sugeno mathematical characterizations – Design example – Biological foundations to intelligent systems: Artificial neural networks, Back-propagation networks, Radial basis function networks, and recurrent networks.

MODULE VI IMPLEMENTATIONS & APPLICATIONS 7

Reduction of size of an optimization problem – multilevel optimization – parallel processing – multi objective optimization – Job shop scheduling – Vehicle scheduling – Line balancing – Sensor integration.

L – 45; Total Hours –45

REFERENCES:

1. Singiresu S. Rao, “Engineering optimization – Theory and practices”, John Wiley and Sons, 1996.
2. Ravindran – Phillips –Solberg, “Operations Research – Principles and Practice, John Wiley and Sons, 1987.
3. Fredrick S.Hillier and G.J.Liberman, “Introduction to Operations Research”, McGraw Hill Inc. 1995.
4. Kalymanoy Deb, “Optimization for Engineering Design”, PHI, 2003
5. Christos H. Papadimitriou, Kenneth Steiglitz, Combinatorial Optimization, PHI 2006

OUTCOMES:

At the end of the course student will be able to

1. Formulate a real life situation as an optimization the problem.
2. Identify the appropriate solution methodology and provide a solution

GECX207 **MATLAB SIMULINK** **L T P C**
3 0 0 3

OBJECTIVES:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION MATLAB DATA PRESENTATION 7

Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts- Making clear and compelling plots-Solving systems of linear equations numerically and symbolically- Least squares regression -Curve fitting.

MODULE II MATLAB PLOT FUNCTION 7

Introduction- Plot Function – Animation- 3D Plots-Customizing Plots – Plot Applications- Saving &Painting Plots.

MODULE III ROOT FINDING AND COMPUTER REPRESENTATION OF NUMBERS 7

Linearization and solving non-linear systems of equations- The Newton-Rapson method- Integers and rational numbers in different bases- Floating point numbers- Round off and errors in basic arithmetic-Significant digits when reporting results

MODULE IV ORDINARY DIFFERENTIAL EQUATIONS 8

Numerical integration and solving 1^{st} order, ordinary differential equations (Euler's method and Runge-Kutta)- Use of ODE function in MATLAB

MODULE V NON-LINEAR DIFFERENTIAL EQUATIONS 8

Converting 2^{nd} order and higher ODEs to systems of 1^{st} order ODEs- Solving systems of ODEs via Euler's method and Runge-Kutta)- Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations

MODULE VI INTRODUCTION OF SIMULINK 8

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- Modeling the solution of three equations with three unknowns- Representing a model as a subsystem-Simulink demos.

L – 45; Total Hours –45

REFERENCES:

1. Griffiths D V and Smith I M, Numerical Methods for Engineers, Blackwell, 1991.
2. Laurene Fausett, Applied Numerical Analysis Using MATLAB, Pearson 2008.
3. Moin P, Fundamentals of Engineering Numerical Analysis, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB. CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving , Mathematical Exploration with MATLAB, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

1. Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
2. Write programs using first principles without automatic use of built-in ones.
3. Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
4. Be fluent in exploring Matlab's capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
5. Make use of Maltab visual capabilities for all engineering applications.
6. An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECX208	EMBEDDED SYSTEMS AND ITS APPLICATIONS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide a detailed overview of embedded system.
- To equip students with the software development skills necessary for practitioners in the embedded systems field.
- To understand entire software development lifecycle and examine the various issues involved in developing software for embedded systems.

MODULE I EMBEDDED SYSTEMS OVERVIEW 8

Introduction –Embedded Systems vs. General computing systems- Fundamental Components of embedded systems- Characteristics- Challenges-Examples- Embedded System design process.

MODULE II EMBEDDED COMPUTING PLATFORM 8

Overview of Processors and hardware units in an embedded system-CPU buses – Memory devices –Memory types- I/O devices – Designing with computing platforms- Consumer electronics architecture-Design example: Alarm clock.

MODULE III REAL TIME EMBEDDED SYSTEMS 8

Programming embedded systems in assembly and C – Real time systems – Hard and Soft real time systems- Need for RTOS in Embedded Systems- Multiple tasks and processes –Context switching-Scheduling policies- Interprocess communication and synchronization.

MODULE IV EMBEDDED SOFTWARE DEVELOPMENT PROCESS and TOOLS 8

Development process of an embedded system-software modules and tools for implementation of an embedded system- Integrated development environment- Host and target machines-cross compiler-cross assembler-Choosing right platform.

MODULE V PROGRAM MODELING IN EMBEDDED SYSTEMS 8

Program Models – Data Flow Graph model-control DFG model-Synchronous DFG model- Finite state machines- UML modeling – UML Diagrams.

MODULE VI EMBEDDED SYSTEMS APPLICATION 5

Application specific embedded system – case study: digital camera hardware and software architecture, embedded systems in automobile, embedded system for a smart card.

Total Hours –45

TEXT BOOKS:

1. Marilyn Wolf , "Computers as components", Elsevier 2012.
2. Shibu. K.V, “Introduction to Embedded Systems”, Tata Mcgraw Hill,2009.
3. Rajkamal, "Embedded Systems Architecture, Programming and Design",1st Reprint,Tata McGraw-Hill, 2003
4. Frank Vahid and Tony Gwargie, "Embedded System Design", John Wiley & sons, 2002.

REFERENCES:

1. Sriram V Iyer and PankajGupta ,”Embedded Realtime Systems Programming ”Tata McGraw-Hill,2008
2. Qing Li and Carolyn Yao," Real-Time Concepts for Embedded Systems", CMPBooks, 2003
3. David E.Simon, "An Embedded Software Primer", Pearson Education, 2003

OUTCOMES:

On completion of this course, the students will be able to

- Identify the suitable processor and peripherals in embedded applications
- Develop embedded programs in assembly and c
- Choose the right platform for designing an embedded system
- Explore different scheduling mechanism in rtos
- Design the program model for embedded applications.
- Analyze different domain specific applications in embedded systems.

GECX209 USABILITY ENGINEERING L T P C
3 0 0 3

OBJECTIVES:

The objective of this course is

- To understand the emerging concept of usability, requirements gathering and analysis.
- To learn about human computer interaction with the help of interfaces that has high usability.

MODULE I INTRODUCTION 6

Cost Savings – Usability Now – Usability Slogans – Discount Usability Engineering – Usability – Definition – Example – Trade-offs – Categories – Interaction Design – Understanding & Conceptualizing Interaction – Cognitive Aspects.

MODULE II USER INTERFACES 8

Generation of User Interfaces – Batch Systems, Line Oriented Interfaces, Full Screen Interfaces, Graphical User Interfaces, Next Generation Interfaces, Long Term Trends – Usability Engineering Life Cycle – Interfaces – Data Gathering – Data Analysis Interpretation and Presentation.

MODULE III INTERACTION DESIGN 8

Process of Interaction Design - Establishing Requirements – Design,Prototyping and Construction - Evaluation and Framework.

MODULE IV USABILITY TESTING 8

Usability Heuristics – Simple and Natural Dialogue, Users' Language, Memory Load, Consistency, Feedback, Clearly Marked Exits, Shortcuts, Error Messages, Prevent Errors, Documentation, Heuristic Evaluation – Usability Testing - Test Goals and Test Plans, Getting Test Users, Choosing Experimenters, Ethical Aspects, Test Tasks, Stages of a Test, Performance Measurement, Thinking Aloud, Usability Laboratories.

MODULE V USABILITY ASSESSMENT METHODS 8

Observation, Questionnaires and Interviews, Focus Groups, Logging Actual Use, User Feedback, Usability Methods – Interface Standards - National, International and Vendor Standards, Producing Usable In-House Standards.

MODULE VI USER INTERFACES 7

International Graphical Interfaces, International Usability Engineering, Guidelines for Internationalization, Resource Separation, Multilocale Interfaces – Future Developments – Case Study.

L – 45; Total Hours –45

TEXT BOOKS:

1. Yvonne Rogers, Helen Sharp, Jenny Preece, “Interaction Design: Beyond Human - Computer Interaction”, John Wiley & Sons, 3rd Edition, 2011 (Module I, II, III).
2. Jakob Nielsen, “Usability Engineering”, Morgan Kaufmann Academic Press, 1994. (Module I – VI).

REFERENCES:

1. Ben Shneiderman, Plaisant, Cohen, Jacobs, “Designing the User Interface: Strategies for Effective Human Interaction”, Pearson Education, 5th Edition, 2010.
2. Laura M. Leventhal, Julie A. Barnes, “Usability Engineering: Process, Products, and Examples”, Pearson/Prentice Hall, 2008

OUTCOMES:

Students who complete this course will be able to

- build effective, flexible and robust user interfaces.
- translate system requirements into appropriate human/computer interaction sequences.
- choose mode, media and device for the application requirements.

GECX210 SUPPLY CHAIN MANAGEMENT L T P C
3 0 0 3

OBJECTIVES:

- To understand the various decision phases in a supply chain
- To be aware of the Supply Chain and its drivers
- To design Supply Chain Network
- To build a aggregate plan in supply chain
- To understand Sourcing Decisions in Supply Chain
- To comprehend the influence of Information technology in Supply Chain

MODULE I INTRODUCTION TO SUPPLY CHAIN 7

Understanding Supply Chain - Decision phases - Supply chain performance - Competitive and supply chain strategies - Achieving strategic fit - Expanding strategic scope

MODULE II SUPPLY CHAIN DRIVERS AND DESIGN 7

Drivers of supply chain performance – Designing distribution network - Network Design in the Supply Chain - Network design in Uncertain Environment

MODULE III AGGREGATE PLANNING AND MANAGING SUPPLY, DEMAND AND INVENTORY 8

Aggregate Planning in a Supply chain: role - Managing Supply - Managing Demand in Supply Chain – Cycle and Safety inventory in supply chain – Level of product availability.

MODULE IV MANAGING INVENTORY IN SUPPLY CHAIN 8

Managing Economies of Scale in a Supply Chain : Cycle Inventory- Managing uncertainty in a Supply Chain Safety Inventory- Determining optimal level of Product Availability

MODULE V SOURCING AND TRANSPORTATION 8

Sourcing decision in supply chain - Third and Fourth – Party Logistics providers - Supplier scoring and assessment - Transportation in a Supply Chain – Risk and Trade-offs in transportation design.

MODULE VI INFORMATION TECHNOLOGY IN A SUPPLY CHAIN 7

Information technology in a supply chain – CRM, ISCM, SRM in supply chain -

Over view of recent trends in Supply Chain: e-SRM, e-LRM, e-SCM.

L – 45; Total Hours –45

REFERENCES:

1. Sunil Chopra and Peter Meindl, “Supply Chain Management-Strategy Planning and Operation”, Pearson Education, 5th Indian Reprint, 2013.
2. Jananth Shah “Supply Chain Management – Text and Cases“ Pearson Education, 2008.
3. Altekar Rahul V, “Supply Chain Management-Concept and Cases”, Prentice Hall India, 2005.
4. Monczka et al., “Purchasing and Supply Chain Management”, Thomson Learning, 2nd Edition, 2nd Reprint, 2002.

OUTCOMES:

- After taking up the course the student will be able to brighten his prospects of taking up a career on supply chain management.
- The student decision making capability specific to supply chain issues in an industry is improved.
- The student can plan a well defined execution of supply chain strategy in companies.
- The student will be able to design a optimal distribution network as per the demands of the industry.
- The student can also determine the most favorable transportation plan for a company.
- The student will also be able to bring in company from paper environment to paperless environment.

GECX211 SYSTEMS ANALYSIS AND DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To describe the phases of the systems development life cycle
- To teach the automated tools for system development
- To develop and evaluate system requirements.
- To explain the organizational issues in system implementation
- To teach the usability testing and electronic data interchange
- To elucidate the importance of System analysis and design in electronic commerce.

MODULE I FUNDAMENTALS OF SYSTEM DEVELOPMENT 8

System Concept – Characteristics – Elements of System – Types of System – Modern Approach to System Analysis and Design – System Development Life Cycle – Approaches to Improving Development – Tools for System Development – Succeeding as a System Analyst – Skills – Managing the Project.

MODULE II AUTOMATED TOOLS FOR SYSTEMS DEVELOPMENT 7

What is requirements determination? Fact finding techniques, Tools for documenting procedure and decision-CASE Tools-Need for CASE tools-Reverse engineering and reengineering- phases of the software life cycle-Ranking projects-Value Chain Analysis- Corporate Strategic Planning vs. Information Systems Planning.

MODULE III SYSTEM ANALYSIS 8

Determining System Requirements – Traditional Methods - Modern Methods – Radical Methods – Structuring System Requirements – Process Modeling – Data Flow Diagramming – Logic Modeling – Conceptual Data Modeling – E-R Modeling.

MODULE IV SYSTEM DESIGN 8

System Implementation – Software Application Testing – Installation – Documentation – Training and Support – Organizational Issues in Systems Implementation – Maintaining Information System – Conducting System Maintenance.

MODULE V USABILITY AND MEASURING USER SATISFACTION 7

Usability Testing-User satisfaction test- A tool for analyzing user satisfaction – Unified Modeling Language(UML)- Case study: System Design: Application in Human Resource-Financial Applications

MODULE VI SAD IN E-COMMERCE 7

Systems analysis and design in the era of electronic commerce: B2B, B2C and C2C e-commerce -advantages and disadvantages of e-commerce. E-commerce system architecture – physical networks, logical network, World Wide Web, web-services - HTML, XML - case studies-El electronic data interchange: EDI standards - virtual private networks - XML and EDI

L – 45; Total Hours –45

REFERENCES:

1. Jeffrey A. Hoffer, Joey F. George, Joseph S. Valacich, “Modern Systems Analysis and Design”,Fifth Edition, Prentice Hall,March 2007.

2.Ned Kock, “Systems Analysis & Design Fundamentals” Sage South Asia, May 2008.

3. Joseph S. Valacich, Jeffrey A. Hoffer, Joey F. George, “Essentials Of System Analysis And Design” Prentice Hall , August 2005.

5.Larman, C.,” Applying UML and Patterns. An introduction to Object-Oriented Analysis and Design”. Prentice-Hall PTR, 2002.

OUTCOMES:

- List the characteristics of the system and specify the approaches in the development of the system.
- Summarize the phases of the software life cycle
- Differentiate Corporate Strategic Planning and Information Systems Planning.
- Illustrate the system requirements through various modeling diagrams.
- Use tools and techniques for process and data modeling.
- Solve realistic systems analysis problems and perform user satisfaction test.

GECX212 ADVANCED MATERIALS

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student conversant with

- Dielectric materials
- Magnetic materials
- Energy materials
- Nano materials
- Semi conductors
- Smart materials

MODULE I **8**

Dielectric Materials- Polarization and Mechanism-Internal or local field-Clausius-Mossotti relation- Dielectric loss- Temperature and Frequency effect-Measurement of Dielectric constant and loss using Scherring bridge- electric break down- ferro, piezo, pyroelectric materials and its application.

MODULE II **8**

Magnetic Materials- Terminology and classification of magnetic materials (Dia, Para, Ferro & Ferri) – Magnetic moments due to electrospin – Domain theory of Hysteresis – Heisenberg theory of Exchange Interaction (without derivation)- Structure and properties of Ferrites- Properties of Soft and Hard Magnetic Materials- Application: floppy disk, CD ROM, Magneto optical recording.

MODULE III **8**

Energy Materials (Nuclear) - Introduction to nuclear materials- Materials for nuclear fuel in fission and fusion reactors, Fissile and fertile materials- Control & Construction Materials for Nuclear reactors, Moderators, Heat Exchangers- Radiation proof materials- Brief discussion of safety and radioactive waste disposal.

MODULE IV **7**

Nano Materials- The nanosize range- classification of nanomaterials- processing of nanomaterials-properties of nanomaterials- mechanical, electrical, magnetic properties- other properties- carbon based nanomaterials- other nanomaterials and its application.

MODULE V **7**

Semiconductors- The energy gap in solids-Extrinsic Semiconductors- Intrinsic Semiconductors- Hall Effect in semiconductors- Application of Hall Effect- Basic ideas of compound semiconductors -Semiconductor materials- Fabrication of Integrated Circuits- Some semiconductor Devices

MODULE VI **7**

Smart materials- aerospace materials Ni and Co based super alloys, Special steels, Titanium alloys, Intermetallics, ceramics and their composites, New High strength material, Properties of Materials, Materials in Medical Applications, Stainless steel alloys,Cobalt based alloys, titanium based alloys, polymers

L – 45; Total Hours –45

REFERENCES:

1. Materials science and Engineering: A first course by V. RAGHAVAN, 6th ed., Eastern Economy edition,Prentice Hall of India,2015
2. Materials science and Engineering: An Introduction by William D. Callister Jr., 7th ed. John Wiley & Sons Inc. 2007
3. Material science by Dr.M.Arumugam, Anurasha agencies ,third revised edition ,2002

OUTCOMES:

Students will be able to know

- significance of dielectric materials
- types and applications of magnetic materials
- applications of nuclear materials for energy harvesting
- applications of nano materials
- significance of semi conductor devices
- applications of smart materials

GECX213	NATIONAL SERVICE SCHEME	L	T	P	C
		2	0	0	2

OBJECTIVES:

Primary Objective: Personality development through community service.
To achieve the above objective, the following should be adhered:

1. To provide an understanding about the aims, structure and programmes and activities of National Service scheme in terms of Nation Building
2. To develop certain basic skills for personality development through community development.
3. Understand the community in which they work and their relation
4. Identify the needs and problems of the community and involve them in problem-solving and
5. Practice national integration and social harmony.

MODULE I INTRODUCTION TO NSS 8

Orientation and structure of NSS,-Aims and Objectives of National Service Scheme- The history of NSS- Symbol and meaning- NSS hierarchy from national to college level – Role and responsibilities of various NSS functionaries

MODULE II PERSONALITY AND COMMUNITY DEVELOPMENT SKILLS 8

Importance of youth Leadership, Traits of Good Leadership and Personality Development. Role of youth in creating awareness through NSS Programmes on Health & Hygiene; Environmental Conservation and Enrichment for Sustainable Development; Sanitation and Swachh Bharat.

MODULE III UNDERSTANDING YOUTH 7

Definition and Profiles of youth categories, Youth Issues, Challenges and Opportunities for Youth, Youth as agent of social change & Community Mobilization .Role of Youth in Nation Building. National Youth Policy.

MODULE IV SOCIAL HARMONY AND NATIONAL INTEGRATION 7

National Integration, Various obstacles in the way of National Integration; such as caste, religion, language and provisional problems etc. Role of youth in Peace building and conflict resolution- Globalization and its Economic Social Political and

Cultural impacts.

L – 30; Total Hours –30

TEXT BOOKS:

1. National Service Scheme – A Youth Volunteers Programme for Under Graduate students as per UGC guidelines J.D.S.Panwar et al. Astral International. New Delhi.
2. National Service Scheme Revised Manual, 2006.Govt. of India. Ministry of Youth Affairs & Sports. New Delhi.
3. Social Problems in India, *Ram Ahuja.*

REFERENCES:

1. National Youth Policy-2014. Ministry of Youth Affairs & Sports. .Govt. of India

OUTCOMES:

On successful completion of this course-

- Students will have exposure to the the aims, structure and programmes and activities of National Service scheme in terms of Nation Building
- Students will be trained to skills for personality development through community development.
- Students will gain knowledge about national integration and social harmony.
- Students will be exposed to the role of youths in Nation building Students will gain

GECX214	AUTOMOTIVE POLLUTION AND CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To have a fair knowledge in automotive pollution control.
- To understand the concept of formation and control techniques of pollutants like UBHC, CO, NOx, particulate matter and smoke for both SI and CI engine will be taught to the students.
- To know about the instruments for measurement of pollutants
- To get introduced about emission standards

MODULE I EMISSION FROM AUTOMOBILES 8

Sources of Air Pollution. Various emissions from Automobiles — Formation — Effects of ollutants on environment and human beings. Emission control techniques – Modification of fuel, after treatment devices. Emission standards. Automotive waste management, old vehicle disposal, recycling, tyre recycling

MODULE II SI ENGINE EMISSIONS AND CONTROL 9

Emission formation in SI Engines- Carbon monoxide & Carbon di oxide - Unburned hydrocarbon, NOx, Smoke —Effects of design and operating variables on emission formation – controlling of pollutants - Catalytic converters, Charcoal Canister, Positive Crank case ventilation system, Secondary air injection, thermal reactor

MODULE III CI ENGINE EMISSION AND CONTROL 8

Formation of White, Blue, and Black Smokes, NOx, soot, Effect of Operating variables on Emission formation — Fumigation, Split injection, Catalytic Coating, EGR, Particulate Traps, SCR, Fuel additives — Cetane number Effect.

MODULE IV NOISE POLLUTION FROM AUTOMOBILES 8

Sources of Noise — Engine Noise, Transmission Noise, vehicle structural Noise, aerodynamics noise, Exhaust Noise. Noise reduction in Automobiles — Encapsulation technique for noise reduction —Silencer Design.

MODULE V TEST PROCEDURES 6

Constant Volume Sampling I and 3 (CVSI &CVS3) Systems- Sampling Procedures — Chassis dynamometers - Seven mode and thirteen mode cycles for Emission Sampling.

MODULE VI EMISSION MEASUREMENTS 6

Emission analysers —NDIR, FID, Chemiluminesecent, Smoke meters, Dilution Tunnel, SHED Test, Sound level meters.

L – 45; Total Hours –45

TEXT BOOKS:

1. V.Ganesan, 'Internal combustion Engines', Tata McGraw Hill Book Co, Eighth Reprint, 2005.
2. Crouse and Anglin, 'Automotive Emission Control', McGraw Hill company., Newyork 1993.

REFERENCES:

1. G.P.Springer ad D.J.Patterson, Engine Emissions, Pollutant formation, Plenum Press, New York. 1986.
2. D.J.Patterson and N.A.Henin, 'Emission from Combustion Engine and their control', Anna Arbor Science Publication,1985.
3. L.Lberanek, 'Noise Reduction', Mcgrawhill Company., Newyork1993.
4. C.Duerson, 'Noise Abatment', Butterworths ltd., London1990.
5. A.Alexander, J.P.Barde, C.lomure and F.J. Langdan, 'Road traffic noise', Applied science publisher ltd., London,1987.

OUTCOMES:

On completion of the course student should be able to

- Identify the sources of emission from vehicles.
- Analyse the causes and effects of emissions.
- Analyse causes and effects of noise pollution
- Bring out solutions for control of emissions.
- Demonstrate the test procedures and emission norms.
- Select suitable instruments for measurement of emissions.

GECX215	MOTOR VEHICLE ACT, INSURANCE & POLICY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn about basic act and regulation followed for road vehicle
- To learn about systematic steps involved to get licence and registration of motor vehicle
- To learn arbour various types of motor vehicle polices and insurances

MODULE I BASIC RULES FOR ROAD VEHICLE 8

Display and Use of Number Plates- Attachment of number plates- Number plates in horizontal position- Removal of number plates on transfer- Hours prescribed for lighted lamps- Mounting of lamps and reflectors- Multiple beam headlamps- Daytime running lamps- Auxiliary driving lamps- Parking lamps- Brakes- Stopping distances- Emergency or parking brakes- Horn- Muffler- Mirrors- Inspection of motor vehicles- Standards of safety and repair

MODULE II LICENSING OF DRIVERS OF MOTOR VEHICLES 8

Necessity of driving licence- Age limit in connection with driving of motor vehicle-Responsibility of owners of motor vehicles-Restriction on the holding of driving licence-Grant of learner's licence-Grant of driving licence-Addition to driving licence- Renewal of driving licence-Revocation of driving licence on grounds of disease or disability-Driving licence to drive motor vehicle belonging to the central government- power of court to disqualify- suspension of driving licence in certain cases- suspension or cancellation of driving licence on convection- Endorsement.

MODULE III REGISTRATION OF MOTOR VEHICLE 7

Necessity for registration – Registration Where and how to be made- Special provision for registration of motor vehicle of diplomatic officers-Temporary registration- Production of vehicle at the time of registration- Refusal of registration- renewal of certificate of registration- effectiveness in India of registration- Change of residence or place of business-transfer of ownership-Suspension of registration – cancellation of registration suspended under section 53- certificate of fitness of transport vehicle-cancellation of registration.

MODULE IV INSURANCE OF MOTOR VEHICLE 8

Necessity for insurance against third party – Requirements of policies and limits of liability- - Duty of insurers to satisfy judgements and awards against person insured in respect of third party risks-Duty to give information as to insurance-Settlement between insurers and insured persons- transfer of certificate of insurance-production of certain certificates, licences and permit in certain cases-Special provisions as to compensation in case of hit and run motor accident – Types of motor polices

MODULE V CONTROL OF TRANSPORT VEHICLES 7

Power to State Government to control road transport- Transport authorities-General provision as to applications for permits- Application for stage carriage permit- Procedure of Regional Transport Authority in considering application for stage carriage permit- Scheme for renting of motor cabs- Application for private service vehicle permit- Procedure in applying for and granting permits- Duration and renewal of permits- Transfer of permit- Replacement of vehicles-Temporary permits

MODULE VI OFFENCES AND PUNISHMENT 7

Driving without holding an effective driving licence- Driving by an under-aged person (Minor driving vehicle)- Holding of a driving licence permitting it to be used by other person.- Driving a vehicle at an excessive speed- Driving or permitting to drive a vehicle carrying excess load- Driving dangerously / its Abetment Driving an uninsured vehicle

Rider and pillion rider failing to wear protective head gear (Helmet) -Violation of Mandatory Signs -.e-challan and spot challan

L – 45; Total Hours –45

TEXT BOOKS:

1. The motor vehicle act 1988, Universal law publishing co.cpvt ltd. Newdelhi 2011
2. A Commentary On The Motor Vehicles Act, 1988 by SUKHDEV AGGARWAL The Bright Law House, New Delhi

REFERENCES:

1. The Motor Vehicles Act, 1988 Along with Latest Case Law, Notifications

& Table of Offences and Punishments Asia Law House; 15th edition (2014)

2. Assessment of Compensation in Accidents under Motor Vehicles Act by Karkara Delhi Law House (2013)

OUTCOMES:

On completion of the course students should be able to

- Explain the analysis of rules and regulations for road vehicles
- Analyze the procedure for getting driving license for vehicles at national and international level
- Analyze the procedure for registration of vehicles.
- Analyze the procedure for Insurance of vehicles and claims.
- Analyze the procedure for obtaining Government Permits and renewal
- Analyze the consequences of not following the rules and regulations

GECX216	PRINCIPLES OF COMMUNICATION SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To introduce the analog and digital modulation techniques.
To elaborate the working of communication receivers in the presence of noise.
To give an overview of various communication systems.

MODULE I LINEAR MODULATION 8

Baseband signals, Amplitude Modulation – Modulation Index, Power Transmitted, Double Side Band and Single Side Band AM, AM Modulators and AM Receivers, AM Radio systems, Frequency Division Multiplexing.

MODULE II ANGLE MODULATION 8

Frequency Modulation and Phase Modulation, Frequency deviation and modulation index, Bandwidth of FM, FM Modulators and FM receivers, FM Radio and FM Stereo Systems

MODULE III SAMPLING AND PULSE MODULATION 7

Sampling, Nyquist's Sampling Theorem, Pulse Modulations - PAM, PPM and PWM, Time Division Multiplexing, Bandwidth of TDM systems.

MODULE IV DIGITAL COMMUNICATION 7

Digital baseband data, Digital Modulations – ASK, FSK, PSK and QPSK. Digital Communication Transmitters and Receivers.

MODULE V NOISE 8

Sources of Noise, Thermal Noise, shot noise, White noise, Narrow band Noise, Effect of noise in communication, SNR, Receiver Noise Temperature and Noise Equivalent Bandwidth.

MODULE VI COMMUNICATION SYSTEMS & NETWORK 7

FM Radio Systems, Cellular Mobile network, Satellite Communications, Optical Fiber Communication.

L – 45; T – 0; Total Hours – 45

TEXT BOOKS:

1. A. Bruce Carlson, Paul B. Crilly, "Communication Systems", 5th Edition,

McGraw Hill Int., 2011.
2. B.P. Lathi, Zhi Ding, Hari M. Gupta, “Modern Digital and Analog Communication Systems”, 4th Edition, Oxford University Press, 2017.

REFERENCES:

1. Herbert Taub, Donald L. Schilling, Goutam Saha, “Principles of Communication Systems” 4th Edition, McGraw Hill Int. 2013.
2. Simon Haykin, “An Introduction To Analog And Digital Communications”, 1st Edition, Wiley India, 2010.
3. Simon Haykin , “Communications Systems” 4th Edition, Wiley India, 2006.
4. Hwei P. Hsu, “Analog and Digital Communications” 3rd Edition,

OUTCOMES:

On completion of the course students will be able to

1. Identify various communication systems and the corresponding modulation schemes.
2. Predict the characteristics of various analog and digital modulation schemes.
3. Interpret the effect of noise and bandwidth in a communication systems
4. Apply the Nyquist criteria for a given baseband signals.
5. Evaluate the performance of communication receivers.
6. Demonstrate the applications of common communication systems.

GECX217 **LEAN MANAGEMENT** **L T P C**

3 1 0 4

OBJECTIVES:

The objective of the Course to make the student know about

- the basics of lean production management,
- how Lean principles are applied to the Construction industry to improve the operation management and product development.

MODULE I **8**

lean production? – Introduction, background, and lean thinking. Importance of philosophy, strategy, culture, alignment, focus and systems view. Discussion of Toyota Production System.

MODULE II **8**

Manufacturing systems – an overview of manufacturing strategies. Job shops, batch flow, and flexible manufacturing systems Flow production and lean production systems

MODULE III **7**

Value stream mapping in process design and product development Waste reduction - lead time reduction

Process cycle time and value-added vs. non-value added activities Optimum lot sizing

MODULE IV **8**

Lean production processes, approaches and techniques.—Importance of focusing upon flow. Tools -. Workplace organization – 5S. - Stability. - Just-In-Time – One piece flow – Pull. - . Cellular systems. - . Quick change and set-up reduction methods. f. Total productive maintenance. -. Poka-Yoke – mistake proofing, quality improvement. Standards. - . Leveling. - . Visual management. Just-in-time techniques – SMED and Takt Times - Standard work processes and line balancing Poka-yoke and pull systems material handling reduction and facilities planning

MODULE V **8**

Managing change in the lean organization Human resource management and the lean enterprise Employee involvement – Teams – Training – Supporting and encouraging involvement – Involving people in the change process -- communication -- Importance of culture. Startup of lean processes and examples of applications.

Sustaining improvement and change, auditing, follow-up actions.

7

MODULE VI

The lean enterprise and supply chain management Costs and risks of lean initiatives - Measuring lean initiatives

L – 45; Total Hours –45

TEXT BOOKS:

1. The Toyota Way Fieldbook, Jeffrey Liker and David Meier, McGraw-Hill, 2006. Lean Production Simplified, Pascal Dennis, Productivity Press, 2007.
2. Womack, James P., and Daniel T. Jones. Lean Thinking. New York, NY: Simon and Schuster, 2003. ISBN: 0743249275.
3. Murman, Earll. Lean Enterprise Value. New York, NY: Palgrave Macmillan, 2002. ISBN: 0333976975.

REFERENCES:

1. Readings at http://www.leanconstruction.org/readings.htm
2. Hopp, W. J., and Spearman, M. L. (2011). Factory Physics, Third Edition, Waveland Press, Long Grove, Il. 720 pp.

OUTCOMES:

The student will be able to

- Describe the manufacturing approaches employed and the background and philosophy of lean production.
- Illustrate the concept of waste reduction
- Apply evaluation techniques that can be used in preparation for and use in learn production activities.
- Select the tools that can be used implementing lean production in production operations.
- Discuss the importance of workplace organization, pull production, cellular arrangement and employee involvement, need for employee creativity
- Describe about the Methods for promoting success in implementing lean transformations

GECX218 GEOSPATIAL MODELING & ANALYSIS L T P C
3 0 0 3

OBJECTIVES:

- To equip the students with fundamental representation and analysis of geospatial phenomena and provides foundations in methods and algorithms used in GIS analysis.
- To focus is on terrain modeling, geomorphometry, watershed analysis and introductory GIS-based modeling of landscape processes (water, sediment). The course includes analysis from lidar data, coastal change assessment and 3D visualization.

MODULE I INTRODUCTION TO GEOSPATIAL DATA 7

Mapping natural phenomena –Concept of continuous fields and discrete sampling – Units, projections, coordinate transformation – Georeferencing, geospatial formats, conversions, geospatial data abstraction library – Raster and vector representation, raster and vector conversions and resampling.

MODULE II DATA DISPLAY AND VISUALIZATION 7

Display of continuous and discrete data, use of color, shading, symbols, to extract the spatial pattern and relationships – 3D visualization: multiple surfaces and volumes, 3D vector objects – visualization for data analysis (lighting, scaling, transparency, cutting planes, animations) – view/create maps/post your data on-line (Google Earth/Maps, GPS visualizer)

MODULE III GEOSPATIAL ANALYSIS 7

Foundations for analysis of continuous and discrete phenomena – neighborhood operations and buffers – analysis and modeling with map algebra – cost surfaces and least cost path – spatial interpolation and approximation (gridding)

MODULE IV TERRAIN MODELING AND ANALYSIS 9

terrain and bathymetry mapping – mathematical and digital representations (point clouds, contour, raster, TIN) – DEM and DSM, working with multiple return lidar data – spatial interpolation of elevation data and topographic analysis, line of sight, view shed analysis – solar irradiation, photovoltaic energy potential, time series of elevation data, analysis of coastal change.

MODULE V FLOW TRACING, WATERSHED ANALYSIS AND LANDFORMS 8

Methods for flow routing and flow accumulation – Extraction of stream networks – Extraction of watershed boundaries and building watershed hierarchies – feature extraction, types of landforms.

MODULE VI MODELING OF GEOSPATIAL PROCESSES 7

Model formulation, input data processing – introduction to GIS-based hydrologic, erosion and environmental modeling – Geocomputational methods, including agent-based modeling, artificial neural networks and evolutionary computing.

L – 45; T – 0; Total Hours –45

TEXT BOOKS:

1. Hassan A, Karimi (2017), *Geospatial Data Science Techniques and Applications*, CRS Press & Co.
2. Sudipto Banerjee, Bradley P, Carlin, Alan E. Gelfand (2014), *Hierarchical Modeling and Analysis for Spatial Data*, CRS Press & Co.

REFERENCES:

1. Maguire, D., M. Batty, and M. Goodchild. 2015. GIS, Spatial analysis, and modeling. ESRI Press (G70.212 .G584 2005)
2. Zeiler, M. 2010. Modeling Our World: The ESRI Guide to Geodatabase Design. Second Ed. ESRI Press, Redlands, California

OUTCOMES:

On successful completion of this course,

- Students will be able to apply the basic concepts of Conceptualize models as representations of real life systems with inputs, outputs, and processes.
- Students will have gained knowledge in spatial tools to make simulations and predictions of real life phenomena.
- Students will have synthesized knowledge about Apply, integrate, and develop models with geospatial data through a GIS.
- Students will have an overview of Evaluate models in terms of accuracy, sensitivity, and uncertainty.
- Students will have Use of a system-based approach for problem solving, with an emphasis on sustainability.

B.S. Abdur Rahman Crescent Institute of Science & Technology

Deemed to be University u/s 3 of the UGC Act, 1956

REGULATIONS 2017

CURRICULUM AND SYLLABI

B.TECH.

AUTOMOBILE ENGINEERING

DEPARTMENT OF AUTOMOBILE ENGINEERING
VISION AND MISSION

VISION

- To be a leader for Education, Training, Consultancy and Research in Automobile Engineering for the progress of Automotive Industries and over-all Socio-Economic progress of the Country in a sustainable manner.

MISSION

- To provide quality education to the students and to mould them as professionals with sound knowledge in the field of Automobile Engineering.
- To equip students to solve challenging problems in Automobile Engineering and related areas taking in to account their impact on the society.
- To facilitate students to develop good communication, leadership and managerial skills through team approach in conducting experiments and projects
- To pursue academic and collaborative research with industry and related research institutions.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES
B.Tech. (Automobile Engineering)

PROGRAMME EDUCATIONAL OBJECTIVES

The Mission of the Automobile Engineering Program is achieved by student learning outcomes that prepare the graduate to be able to:

- To inculcate involvement in learning by adapting a holistic approach through well designed curriculum, pedagogy and evaluation for a successful professional career.
- To provide a strong foundation in physical sciences and analytics to enable comprehensive understanding of the basic principles of Automobile Engineering.
- To develop knowledge and skill in applying engineering principles to conceive, design, analyze, manufacture, maintain and recycle Automobile Engineering systems and components.
- To equip the students with essential fundamental knowledge from other relevant disciplines to infuse a multi-disciplinary approach.
- To empower the students through projects, internships leading to development of creativity, self confidence and team spirit.
- To create the ambience with scope for developing communication and life skills so as to meet the needs of the society in the globalized environment

PROGRAMME OUTCOMES

The following list of educational outcomes was chosen by the department to describe what the students are expected to know or be able to do at time for graduation from the program:

- Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

- Problem analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- Model tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts and demonstrate the knowledge of and need for sustainable development.
- Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- Individual and team work: Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary settings.
- Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

- Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

PROGRAMME SPECIFICOUTCOMES

B. Tech Automobile Engineering graduates will be able to

- Design, model and analyze automobile components, sub systems and automotive electronic systems.
- Develop as professionals in automotive system design, validation, operation, testing with emission measurement and control and maintenance of vehicles

B.S. ABDUR RAHMAN CRESCENT INSTITUTE OF SCIENCE AND TECHNOLOGY

B.TECH. AUTOMOBILE ENGINEERING

CURRICULUM & SYLLABUS, REGULATIONS 2017

SEMESTER I

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C	
1.	BS	MAC 1181	Differential Calculus and Geometry	3	1	0	4	
2.	HS	ENC 1181/ ISC 1181/ LNC 1181/ LNC 1182/ LNC 1183	English / Arabic / Mandarin / German / Japanese	3	0	0	3	
3.	BS	PHC 1181	Physics	3	0	2	4	
4.	BS	CHC 1181	Chemistry	3	0	2	4	
5.	ESF	GEC 1101	Engineering Graphics	2	0	2	3	
6.	ESF	GEC 1102	Engineering Design	2	0	0	2	
7.	ESF	GEC 1103	Basic Engineering Practices Laboratory	0	0	2	1	
8.	ESF	GEC 1104	Computer Programming I	1	0	2	2	**23**

SEMESTER II

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C
1.	BS	MAC 1281	Advanced Calculus	3	1	0	4
2.	BS	-	Physics Elective	2	0	2	3
3.	BS	-	Chemistry Elective	2	0	2	3
4.	ESF	GEC1211	Basic Engineering Mechanics	3	1	0	4
5.	BS	GEC 1212	Environmental Studies	2	0	0	2
6.	ESF	GEC 1213	Computer Programming II	1	0	2	2

7.	ESF	EEC 1281	Automobile Electrical Engineering	2	0	0	2	
8.	EC	AUC1211	Applied Fluid Mechanics	3	0	0	3	
9.	ESF	EEC 1282	Automobile Electrical Engineering Laboratory	0	0	3	1	**24**

SEMESTER III

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C	
1.	BS	MAC 2181	Partial Differential Equations and Transforms	3	1	0	4	
2.	HS	-	Humanities Elective I	2	0	0	2	
3.	EC	AUC 2101	Applied Thermal Engineering	3	1	0	4	
4.	EC	AUC 2102	Vehicle Body Engineering	2	0	0	2	
5.	EC	AUC 2103	Basic Manufacturing Process	2	0	2	3	
6.	EC	AUC 2104	Strength of Materials	3	1	0	4	
7.	EC	AUC 2105	Automotive Engines	2	0	2	3	
8.	HS	ENC 2181	Oral Communication	0	0	2	1	
9.	EC	AUC 2106	Applied Fluid Mechanics Laboratory	0	0	3	1	**24**

SEMESTER IV

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C
1.	BS	-	Mathematics Elective I	3	1	0	4
2.	HS	-	Humanities Elective I	2	0	0	2
3.	EC	AUC 2211	Automotive Chassis	3	0	0	3
4.	EC	AUC 2212	Mechanics of Machinery	3	1	0	4
5.	EC	AUC 2213	Automotive Electrical & Electronics	2	0	0	2
6.	EC	AUC 2214	Automotive Material & Metallurgy	2	0	2	3
7.	EC	AUC 2215	Production Process of Automotive Components	2	0	0	2

8.	HS	ENC 2282	Written Communication	0	0	2	1	
9.	EC	AUC 2216	Automotive Chassis Laboratory	0	0	3	1	
10.	EC	AUC 2217	Automotive Electrical and Electronics Laboratory	0	0	3	1	**23**

SEMESTER V

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C	
1.	MS	MSC 3181/ MSC 3182	Leadership and CEO Training/ Social Entrepreneurship	3	0	0	3	
2.	EC	AUC 3101	Design of Automotive Components	3	1	0	4	
3.	EC	AUC 3102	Automotive Transmission	3	0	0	3	
4.	EC	AUC 3103	Measurements and Instrumentation	1	0	2	2	
5.	PE	-	Professional Elective I	3	0	0	3	
6.	PE	-	Professional Elective II	3	0	0	3	
7.	GE	-	General Elective I	3	0	0	3	
8.	HS	ENC 3181	Communication and Soft Skills - I Career Choice	0	0	2	1	
9.	EC	AUC 3104	Engine Testing and Emission Laboratory	0	0	3	1	
								23

SEMESTER VI

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C
1.	MS	MSC 3181/ MSC 3182	Leadership and CEO Training/ Social Entrepreneurship	3	0	0	3
2.	BS	-	Mathematics Elective II	2	0	0	2
3.	EC	AUC 3211	Modeling of Simulation of vehicle system	3	0	0	3
4.	EC	AUC 3212	Vehicle Dynamics	3	1	0	4
5.	PE	-	Professional Elective III	3	0	0	3

6.	PE	-	Professional Elective IV	3	0	0	3	
7.	HS	ENC 3281	Communication and Soft Skill – II Confidence Building	0	0	2	1	
8.	EC	AUC 3213	Vehicle system simulation laboratory	0	0	3	1	
9.	EC	AUC 3214	Vehicle Dynamics Laboratory	0	0	3	1	
10.	EC	AUC 3215	Vehicle design laboratory (C- language, CATIA)	0	0	3	1	**22**

SEMESTER VII

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C	
1.	EC	AUC 4101	Vehicle Management System	2	0	0	2	
2.	EC	AUC 4102	Finite Element Analysis of Automotive Components	2	0	2	3	
3.	EC	AUC 4103	Evaluation of Vehicle Performance	3	0	0	3	
4.	EC	AUC 4104	Two and Three Wheelers Technology	2	0	2	3	
5.	PE	-	Professional Elective V	3	0	0	3	
6.	PE	-	Professional Elective VI	3	0	0	3	
7.	GE	-	General Elective II	3	0	0	3	
8.	EC	AUC 4105	Vehicle Maintenance Laboratory	0	0	3	1	
9.	EC	AUC 4106	Advanced Automobile Components Manufacturing Laboratory	0	0	3	1	
10.	EC	AUC 4107	Internship.	0	0	0	1*	**23**

SEMESTER VIII

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C	
1.	EC	AUC 4211	Project Work	0	0	24	12	**12**

Total credits – 174

*Industrial training will be undertaken during Third year summer vacation. The credit will be awarded in the 7th Semester.

PROGRAMME ELECTIVES

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C
1.	PE	AUCX01	Homologation and Testing	1	0	0	1
2.	PE	AUCX02	Geometric Dimensioning and Tolrencing	1	0	0	1
3.	PE	AUCX03	Vehicle Engineering & Integration	1	0	0	1
4.	PE	AUCX04	Automotive HVAC(Heating Ventilation Air Conditioning)	2	0	0	2
5.	PE	AUCX05	Hybrid and electric vehicle	2	0	0	2
6.	PE	AUCX06	Vehicle diagnostics	2	0	0	2
7.	PE	AUCX07	Spark Engine Technology	3	0	0	3
8.	PE	AUCX08	Compression Engine Technology	3	0	0	3
9.	PE	AUCX09	Automotive Aerodynamics	3	0	0	3
10.	PE	AUCX10	Vehicle comfort system and ergonomics	3	0	0	3
11.	PE	AUCX11	Vehicle design data characteristics	3	0	0	3
12.	PE	AUCX12	Design of transmission system and characteristics analysis	3	0	0	3
13.	PE	AUCX13	Design of hydraulics pneumatics systems for automotives	3	0	0	3
14.	PE	AUCX14	Tractor and Agricultural Machineries	3	0	0	3
15.	PE	AUCX15	Vehicle control system	3	0	0	3
16.	PE	AUCX16	Modern and intelligent vehicle system	3	0	0	3
17.	PE	AUCX17	Alternative Fuels and Energy Systems	3	0	0	3
18.	PE	AUCX18	Vehicle Networking and Internet of things	3	0	0	3
19.	PE	AUCX19	Automotive Instrumentation & Embedded System	3	0	0	3

20.	PE	AUCX20	Advanced material testing and failure analysis	3	0	0	3
21.	PE	AUCX21	Computer aided design and manufacturing	3	0	0	3
22.	PE	AUCX22	Design of Jigs, Fixtures and Press Tools	3	0	0	3
23.	PE	AUCX23	Simulation of I.C. Engine Processes	3	0	0	3
24.	PE	AUCX24	Combustion thermodynamics and heat transfer	3	0	0	3
25.	PE	AUCX25	Unconventional energy sources	3	0	0	3
26.	PE	AUCX26	Computational flow and heat transfer	3	0	0	3
27.	PE	AUCX27	Motorsport Engineering	3	0	0	3
28.	PE	AUCX28	Composite Materials for Automobiles	3	0	0	3
29.	PE	AUCX29	Traffic Engineering	3	0	0	3
30.	PE	AUCX30	Surface Engineering	3	0	0	3
31.	PE	AUCX31	Advanced IC Engine	3	0	0	3
32.	PE	AUCX32	Fuel Cell Technology	3	0	0	3
33.	PE	AUCX33	Power Plant Engineering	3	0	0	3

Physics Elective Courses

(to be offered in II Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	PHCX 01	Fundamentals of Engineering Materials	2	0	2	3
2.	PHCX 02	Heat and Thermodynamics	2	0	2	3
3.	PHCX 03	Introduction to Nanoscience and Technology	2	0	2	3
4.	PHCX 04	Lasers and their applications	2	0	2	3
5.	PHCX 05	Materials Science	2	0	2	3
6.	PHCX 06	Non-Destructive Testing	2	0	2	3
7.	PHCX 07	Properties of Matter and Acoustics	2	0	2	3
8.	PHCX 08	Properties of Matter and Nondestructive Testing	2	0	2	3
9.	PHCX 09	Semiconductor Physics and Optoelectronics	2	0	2	3

Chemistry Elective Courses

(to be offered in II Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	CHCX01	Analytical Instrumentation	2	0	2	3
2.	CHCX02	Corrosion and its Control	2	0	2	3
3.	CHCX03	Electrical Materials and Batteries	2	0	2	3
4.	CHCX04	Engineering Materials	2	0	2	3
5.	CHCX05	Fuels and Combustion	2	0	2	3
6.	CHCX06	Fundamentals of Physical Chemistry	2	0	2	3
7.	CHCX07	Green Technology	2	0	2	3
8.	CHCX08	Organic Chemistry of Biomolecules	2	0	2	3
9.	CHCX09	Polymer Science and Technology	2	0	2	3

Maths Elective Courses

(to be offered in IV Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	MACX 01	Discrete Mathematics And Graph Theory	3	1	0	4
2.	MACX 02	Probability And Statistics	3	1	0	4
3.	MACX 03	Random Processes	3	1	0	4
4.	MACX 04	Applied Numerical Methods	3	1	0	4

Maths Elective Courses

(to be offered in VI Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	MACX 05	Mathematical Programming	2	0	0	2
2.	MACX 06	Statistical Methods for Data Analysis	2	0	0	2
3.	MACX 07	Numerical Methods for Integral and Differential Equations	2	0	0	2
4.	MACX 08	Mathematical Modelling	2	0	0	2
5.	MACX 09	Graph Theory	2	0	0	2

Humanities Elective I

(to be offered in III Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	SSCX01	Fundamentals of Economics	2	0	0	2
2.	SSCX02	Principles of Sociology	2	0	0	2
3.	SSCX03	Sociology of Indian Society	2	0	0	2

Humanities Elective II

(to be offered in IV Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	SSCX04	Economics of Sustainable Development	2	0	0	2
2.	SSCX05	Industrial Sociology	2	0	0	2
3.	SSCX06	Law for Engineers	2	0	0	2

General Elective

Group I Courses
(To be offered in V semester)

Sl. No.	Course Code	Course Title	Offering Department
1.	GECX101	Disaster Management	Civil
2.	GECX102	Total Quality Management	Mechanical
3.	GECX103	Energy Studies	Mechanical
4.	GECX104	Robotics	Mechanical
5.	GECX105	Transport Management	Automobile
6.	GECX106	Control Systems	EEE
7.	GECX107	Introduction to VLSI Design	ECE
8.	GECX108	Plant Engineering	EIE
9.	GECX109	Network Security	CSE
10.	GECX110	Knowledge management	CSE
11.	GECX111	Cyber security	IT
12.	GECX112	Genetic Engineering	LS
13.	GECX113	Fundamentals of Project Management	CBS
14.	GECX114	Operations Research	Mathematics
15.	GECX115	Nano Technology	Physics / Chemistry
16.	GECX116	Vehicle Maintenance	Automobile
17.	GECX117	Fundamentals of Digital Image Processing	ECE

Group II Courses

(To be offered in VII semester)

Sl. No.	Course Code	Course Title	Offering Department
1.	GECX201	Green Design and Sustainability	Civil
2.	GECX202	Appropriate Technology	Civil / Mechanical
3.	GECX203	Engineering System Modelling and Simulation	Mechanical
4.	GECX204	Value Analysis and Engineering	Mechanical
5.	GECX205	Industrial Safety	Mechanical
6.	GECX206	Advanced Optimization Techniques	Mechanical
7.	GECX207	Mat Lab Simulation	EEE
8.	GECX208	Embedded Systemsand its Applications	ECE
9.	GECX209	Usability Engineering	CSE
10.	GECX210	Supply Chain Management	CBS
11.	GECX211	System Analysis and Design	CA
12.	GECX212	Advanced Materials	Physics & Chemistry
13.	GECX213	National Service Scheme	School of Humanities
14.	GECX214	Automotive Pollution and Control	Automobile
15.	GECX215	Motor Vehicle Act, Insurance and Policy	Automobile
16.	GECX216	Principles of Communication Systems	ECE
17.	GECX217	Lean Management	Civil
18.	GECX218	Spatial Data Modeling & Analysis	Civil

SEMESTER I

MAC 1181	DIFFERENTIAL CALCULUS AND GEOMETRY	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- introduce eigen values and eigenvectors of matrix algebra.
- make the student knowledgeable in the area of Three Dimensional Analytical Geometry.
- demonstrate the application of Differential Calculus.
- familiarize the student with the functions of several variables.
- develop the use of ODE solvable techniques necessary for engineering applications.
- motivate the students with some basic engineering application problems in ODE.

MODULE I **MATRICES** **8+2**

Characteristic Equation- Eigenvalues and Eigenvectors of a real matrix –Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton Theorem (without proof) – Orthogonal matrices – orthogonal transformations of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation.

MODULE II **THREE DIMENSIONAL ANALYTICAL GEOMETRY** **7+3**

Direction cosines and ratios – angle between two lines – equations of a plane – equations of a straight line, coplanar lines - shortest distance between skew lines - sphere – tangent plane – plane section of a sphere – orthogonal spheres.

MODULE III **DIFFERENTIAL GEOMETRY** **7+3**

Curvature – Cartesian and polar coordinates – centre and radius of curvature – circle of curvature – involutes and evolutes – envelopes.

MODULE IV **DIFFERENTIAL CALCULUS OF SEVERAL VARIABLES** **8+2**

Functions of two variables – partial derivatives – total differential – Implicit Functions – Jacobian - Taylor’s series expansion – Optima of two variables – Lagrange’s multiplier method.

MODULE V **ORDINARY DIFFERENTIAL EQUATIONS** **8+2**

Linear equations of second order with constant and variable coefficients – Simultaneous first order linear equations with constant coefficients – homogeneous equations of Euler's type – method of undetermined coefficients, method of variation of parameters

MODULE VI **APPLICATIONS OF ORDINARY DIFFERENTIAL EQUATIONS** **7+3**

Solution of Ordinary Differential Equation Related to Electric Circuits – Bending of Beams- Motion of a Particle in a resisting medium – Simple harmonic motion.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Ramana, B.V, "Higher Engineering Mathematics" Tata McGraw Hill Publishing Co. New Delhi, 2006.
2. Grewal B.S., "Higher Engineering Mathematics" (43rd edition), Khanna Publishers, New Delhi, 2012.
3. John W. Cell "Engineering Problems Illustrating Mathematics" Mc Graw Hill Publishing Co., New York 1943.

REFERENCES:

1. Veerarajan.T., "Engineering Mathematics" (5th edition) Tata Mc Graw Hill Publishing Co. New Delhi, 2012
2. Kreyszig, E., "Advanced Engineering Mathematics", 10th edition, John Wiley and Sons (Asia) Pvt Ltd., Singapore, 2001.
3. Peter V. O'Neil, "Advanced Engineering Mathematics", 7th edition, Cengage Learning, 2011.
4. Dennis G. Zill, Warren S. Wright, "Advanced Engineering Mathematics", 4th edition, Jones and Bartlett publishers, Sudbury, 2011.
5. Alan Jeffrey, "Advanced Engineering Mathematics", Academic Press, USA, 2002.
6. Venkataraman, M.K., "Engineering Mathematics", Volume I, 2nd edition, National Publishing Co., Chennai, 2003.
7. James Stewart ".Calculus" (7th edition),Brooks/Cole cengage learning,UK

OUTCOMES:

After completing the course, student will be able to

- Understand the matrix techniques and compute eigen values and eigenvectors of a given matrix.
- Do the problems based on three dimensional analytic geometry.
- Apply differential calculus in engineering problems.
- Differentiate more than one variable and their applications.
- Solve the differential equations with constant coefficient and variable coefficient.
- Form and solve differential equations.

ENC 1181	ENGLISH	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To train students to use appropriate vocabulary in academic and technical contexts.
- To facilitate students to speak effectively while exchanging ideas and making presentations.
- To develop students' listening skill for comprehending and analyzing information.
- To develop their reading skill through sub skills like skimming , scanning and critical reading of a text.
- To sharpen their academic writing skills.
- To expose them to the correct usage of language and help them to apply that knowledge appropriately.

MODULE I **8**

L: Listening for general information

S : Self Introduction, Introducing one another.

R: Predicting the content

W: Paragraph Writing

Language Focus: Affixes, Simple Present tense , Connective & Prepositions.

MODULE II **8**

L: Listening for specific information (from dialogues)

S:Exchanging opinion.

R: Skimming technical Passages

W: Argumentative Writing (using the concept of Flipped Learning), Letter to the Editor.

Language Focus: Idioms, use of Modals, Simple Past tense & use of "Wh" and question tags.

MODULE III **7**

L: Learning the ways of describing images and presenting specific information (focusing on note making)

S: Making Presentations using visuals.

R : Scanning short texts for gist of information

W: Letter of Invitation, Expository Writing

Language Focus: Homophones, Homographs, Simple Future & Collocations.

MODULE IV **7**

L: Understanding prepared presentation techniques through videos

S: Short Presentations.

R: Reading for coherence and cohesion

W: Letter seeking permission for Industrial Visit

Language Focus: S-V agreement, Euphemism

MODULE V **8**

L : Understanding Non- Verbal Communications while listening to narration of incidents.

S: Narrating an expereince

R: Inferential Reading

W: Process Description – Transcoding a Flow chart.

Language Focus: Interchange of Active & passive voice, Impersonal Passive voice.

MODULE VI **7**

L: Learning Story telling techniques (stories & visuals) through audio files

S: Discussion in groups

R: Reading for critical appreciation

W: Developing an idea, Slogan writing, Interpreting a Bar Chart.

Language Focus: If clause and phrasal verbs.

TOTAL HOURS :45

4. Sen, Leena. (2004) Communication Skills. Prentice Hall, New Delhi.

5. Matt Firth, Chris Sowton et.al. (2012). Academic English: An Integrated Skills Course for EAP. Cambridge University Press, Cambridge.

OUTCOMES:

After completion of the course, students will have the ability to

- Demonstrate their range of vocabulary in academic and technical contexts
- Exchange ideas and make presentations
- Comprehend and respond appropriately to listening tasks.
- Read a text efficiently and process information.
- Create and draft different kinds of academic documents
- Communicate effectively using grammatically correct expressions.

ISC1181	ARABIC	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To read and write in Arabic language.
- To learn vocabulary of different fields
- To develop situational communication skills.

MODULE I PREPARATORY ARABIC **7**

Introducing Arabic Alphabets.
Listening and Reading.
Audio & Video aided listening, Tajweed listening,
Writing Arabic Alphabets (connected & unconnected).
Introducing words.
Reading simple sentences.
Learning names of the things in and around the class room.
Exercises.

MODULE II FUNCTIONAL ARABIC **7**

Listening Arabic texts, stories and action verbs
Communicating Simple sentences.
Jumla' Ismiyya and Jumla' Fi'liyya
Situational Conversation:
Greetings, Introduction.
Classroom, College, Picnic.
Dining and Kitchen.
Reading skills.
Exercises

MODULE III FUNCTIONAL ARABIC **8**

Implication of effective listening.
Audio aids.
Writing Simple sentences.
Communicating ordinal and cardinal numbers.
Situational communication:

Playground, library.
Forms of plural – Sample sentences.
Introduction to tenses.
Exercises.

MODULE IV FUNCTIONAL ARABIC 8

Communication:
Family, travel
Market, Prayer hall
Writing skills:
Note making.
Sequencing of sentences.
Developing answers from the questions.
Exercises.

MODULE V TECHNICAL ARABIC 8

Importance of technical communication.
Reading and writing skills.
Audio & Video aided listening.
Introduction to Arabic terms related to administration.
Situation communication:
Air travel, Office administration, passport, visa.
Exercises

MODULE VI TECHNICAL ARABIC 7

Situation communication:
Contractual work, machineries and equipments..
Computer, internet browsing.
Banking,
Exercises.

TOTAL HOURS :45

TEXT BOOKS:

1. Arabic for professionals and employees, Kilakarai Bukhari Aalim Arabic College, Chennai, India, 2013.

REFERENCES:

1. Arabic Reader for Non Arabs (Ummul Qura University, Makkah), Kilakarai Bukhari Aalim Arabic College, 2005.

OUTCOMES:

On successful completion of the course, the student will be able to:

- Write correct sentences in Arabic.
- Communicate in Arabic at primary level in working situations in the fields of engineering and administration.

LNC1181	MANDARIN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To improve the proficiency of students in Mandarin language.
- To develop their knowledge of vocabulary.
- To train them in using appropriate grammatical forms during communications.
- To empower them for successful communication in social and academic contexts.
- To make them appreciate the language usage in real life situations.

MODULE I **8**

· General Introduction to Chinese • Pinyin and Tones • Introduction to the Writing System: basic strokes and stroke order · Numbers 1-100, song · Days of the Week · Months of the Year

MODULE II **8**

· Chinese names and related culture · Chinese family structures and values · Greetings · Introducing Yourself · Family members · Occupations

MODULE III **7**

· Languages and Nationalities · Daily Routine · Chinese breakfast · Negative Sentences and Interrogative Sentences · Asking for Personal Information · The Verb *shi* and Basic Sentence Structures

MODULE IV **7**

· Answering an Affirmative-negative Question · Food and drinks · Transportation · Likes and dislikes · Adverbs *bu*, *jiu* and *dou* · Verb-absent Sentences

MODULE V **8**

·*Jisui* and *duoda* Questions · S+V+O Construction · Routines and Daily Activities ·*Haishi* Questions · Modal Verbs · Hobbies and Habits

MODULE VI **7**

· Making Suggestions with *haoma* ·Colors · Clothing · Body parts · Talking about Likes and Dislikes · Measurement Words in Chinese

2. Ma, Yanmin, and Li, Xinying. *Easy Steps to Chinese, Vol. 1 Workbook*. Beijing: Beijing Language and Culture University Press, 2006. Print.

OUTCOMES:

On completion of the course, students will be able to

- Exhibit proficiency in Chinese Language.
- Use vocabulary in appropriate contexts.
- Use appropriate grammatical forms effectively.
- Use the language in social and academic contexts.
- Appreciate the use of language forms.

LNC1182	GERMAN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To improve the proficiency of students in German language.
- To create awareness of using vocabulary among students.
- To expose them to correct grammatical forms of the language.
- To empower them for successful communication in social and academic contexts.

MODULE I **8**

Introduction to German alphabets, phonetics and pronunciation- Introducing themselves and others using simple sentences and answer to some basic personal questions-: Introduction to different types of articles and verbs, Nouns

MODULE II **8**

Understanding and responding to everyday queries like instruction, questions, - number & gender, pronouns, present and past tense.

MODULE III **7**

Short telephone messages, requests etc., if spoken slowly and clearly-- Detailed overview of articles, adjectives with/without articles, Prepositions

MODULE IV **7**

Ask and giving directions using simple prepositions- Ability to fill basic information on forms while registering for courses / classes.

MODULE V **8**

Ability to extract and understand relevant information in a public announcement, broadcast, newspaper, radio etc-- dative & accusative

MODULE VI **7**

Ability to describe about people, work, immediate environment, education and other topics related to personal needs in a concise manner-- Understanding of matters that are familiar and are encountered regularly like instances at school, work, at public places, places of leisure etc.

4. Willkommen! Beginner's course. Paul Coggle, Heiner Schenke. ISBN: 978-1-444-16518-0
5. An Introduction to the German Language and Culture for Communication, Updated Edition Lovik, Thomas A., J. Douglas Guy & Monika Chavez. Vorsprung -. New York, Houghton Mifflin Company, 1997/2002. ISBN 0-618-14249-5.

OUTCOMES:

On completion of the course, students will be able to

- Show their proficiency in German Language.
- Use appropriate vocabulary in real life contexts.
- Use appropriate grammatical forms while communicating with people.
- Effectively use the language in social and academic contexts.

LNC1183	JAPANESE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To train students to use appropriate vocabulary in academic and technical contexts.
- To facilitate students to speak effectively while exchanging ideas and making presentations.
- To develop their reading skill through sub skills like skimming, scanning and critical reading of a text.
- To sharpen their academic writing skills.
- To expose them to the correct usage of language and help them to apply that knowledge appropriately.

MODULE I **7**

Introduction of the Japanese writing system, i.e. *Hiragana*, *Katakana* and *Kanji*, word-building, writing foreign names and loan words in Katakana.

MODULE II **8**

Oral practice of pronunciation and intonation of Japanese sounds, Japanese greetings, self introduction, identifying things, time of the day, calendar; counting using Japanese numerical classifiers; describing things;

MODULE III **7**

Making comparisons; talking of daily activities, kinship terms used for address and reference, seasons, giving and receiving, shopping; making requests, talking of one's likes and dislikes.

MODULE IV **8**

Extensive practice of basic patterns at the lower intermediate level through drills and exercises.

MODULE V **7**

Comprehension of passages in simple Japanese and writing of composition in Japanese applying lower intermediate grammatical patterns.

MODULE VI **8**

Diverse texts based on Japanese culture, customs, history, food habits, and science etc, for the development of communicative competence of students; skimming, scanning of texts with emphasis on advanced sentence patterns, grammatical structures and idiomatic phrases, reading and writing of approximately

2. Exersice book 1of Nihongo 1, and other supplementary material
3. Nippon, the Land and its People & Encyclopedia of Contemporary Japanese
4. Japani: Japanese Conversation for Improving Spoken Proficiency, By P.A. George, Inoue Yoriko and Itsuko Nandi, Books Plus.
5. Chukyu Nihongo, Tokyo Gaikokugo Daigaku; Nihongo II, Kokusaigakuyukai, and other supplementary material.

OUTCOMES:

After completion of the course, students will have the ability to

- Demonstrate their range of vocabulary in academic and technical contexts
- Exchange ideas and make presentations
- Comprehend and respond appropriately to listening tasks.
- Read a text efficiently and process information.
- Create and draft different kinds of academic documents
- Communicate effectively using grammatically correct expressions.

PHC 1181	PHYSICS	L	T	P	C
		3	0	2	4

OBJECTIVES:

To make students conversant with the

- basic concepts of crystal physics and its structures
- production and applications of ultrasonic waves
- study of thermal conductivities of good and bad conductors
- phenomenon of wave optics and its applications
- principle of fibre optic communication and its applications to sensors
- wave mechanics principle and its applications in electron microscopy
- green energy physics and its environmental impacts to society

MODULE I CRYSTAL PHYSICS **8**

Crystalline and amorphous solids – Unit Cell – Seven Crystal Systems – Bravais Lattice – Miller Indices – Interplanar Spacing – Characteristics of Unit Cell - Calculation of Number of atoms per unit cell, Atomic Radius, Coordination Number and Packing Factor for SC, BCC, FCC and HCP and Diamond structures –Defects in crystals-Point defects –Edge and screw dislocations and their significance - Surface Defects.

MODULE II ULTRASONICS AND THERMAL PHYSICS **8**

Introduction to Ultrasonics - Properties - Production methods - Magnetostriction Oscillator method- Piezoelectric Oscillator method – Detection of Ultrasonics – Thermal method – Piezoelectric method – Kundt's tube method – Applications of Ultrasonics – Acoustic Grating – SONAR – Depth of sea – Velocity of blood flow, Ultrasonic Flaw detector (qualitative).

Transmission of heat – Conduction, Convection and Radiation – Thermal Conductivity of good Conductor – Forbe's method- Thermal Conductivity of bad Conductor – Lee's Disc method.

MODULE III APPLIED OPTICS **8**

Interference – Air Wedge – Michelson's Interferometer – Determination of wavelength of light and thickness of thin transparent sheet.

Introduction to Laser – Characteristics of Laser – Spontaneous and Stimulated Emissions – Einstein's Coefficients - Population inversion – Pumping Mechanism – Laser Action – Types of Laser: He-Ne laser, CO2 laser and Nd:YAG laser - Applications : Laser Materials

Processing .

MODULE IV FIBRE OPTICS 7

Optical fibre – Principle and propagation of light in optical fibre – Numerical aperture and acceptance angle – Types of optical fibres – Attenuation – Absorption, Scattering losses, Bending losses and Dispersion in Optical fibres – Fiber Connectors and Couplers - Applications – Fibre optic communication system (block diagram only)- Fibre optic sensors - displacement and pressure sensors (qualitative) - Medical endoscope.

MODULE V QUANTUM MECHANICS 7

Black body radiation – Planck's theory of radiation – Deduction of Wien's displacement law and Rayleigh – Jean's law from Planck's theory –Dual nature of matter – de Broglie's wavelength- Physical significance of wave function – Schrodinger wave equation – Time independent and time dependent wave equation – Particle in one dimensional box – Harmonic oscillator(qualitative).

MODULE VI RENEWABLE ENERGY SOURCES 7

Present Energy sources and sustainability - Solar energy - Solar photovoltaics - Solar cells – Bioenergy - Biomass – production of liquid fuels from biomass – Wind energy – Wind turbines – energy and power from wind turbines - Geothermal energy - Ocean energy: Wave energy – Wave energy conversion devices – Tidal energy – Tidal power basics – power generation –Tidal energy potential – Environmental benefits and impacts of renewable energy sources

PRACTICALS

1. Determination of Velocity of Ultrasonic waves in a given liquid using Ultrasonic Interferometer.
2. Determination of wavelength of ultrasonic waves using Kundt's tube method.
3. Determination of thickness of a thin wire using Air Wedge method.
4. Determination of wavelength of light using spectrometer diffraction grating.
5. Determination of angle of divergence of a laser beam using He-Ne laser.
6. Determination of particle size of lycopodium powder using semiconductor laser.
7. Determination of wavelength of laser light using semiconductor laser diffraction.
8. Determination of Acceptance angle and Numerical Aperture using fiber optic cable.
9. Determination of thermal conductivity of a good conductor by Forbe's method.
10. Determination of thermal conductivity of a bad conductor by Lee's disc method.
11. Determination of solar cell characteristics.

L – 45; P – 30; TOTAL HOURS – 75

REFERENCES :

6. Godfrey Boyle, “Renewable Energy: Power for sustainable future”, 2nd edition, Oxford University Press, UK, 2009.

OUTCOMES:

At the end of the course, students will be able to

- understand the different types of crystal structures
- apply the concept of ultrasonic principle in engineering and medical field
- calculate thermal conductivities of good and bad conductors
- differentiate the various laser systems and its applications in engineering and medical field
- apply the principle of fibre optics for communication and sensor applications
- formulate wave mechanics principle for applications in electron microscopy
- Correlate the different renewable energy sources for societal needs.
- To complement the knowledge acquired in the theory class.
- To correlate the experimental results for application.

CHC1181	CHEMISTRY	L	T	P	C
		3	0	2	4

OBJECTIVES:

The students should be conversant with

- the basic problems like hardness, alkalinity, dissolved oxygen associated with the water used for domestic and industrial purpose and treatment process involved.
- the synthesis, properties and applications of nanomaterials.
- the importance of renewable energy sources like solar, wind, biogas, biomass, geothermal, ocean and their limitations.
- the basic analytical techniques like UV-Visible, FT-IR, NMR, AAS, AES, Circular Dichroism and XRD etc.
- photochemistry concepts related to physical processes and chemical reactions induced by photon absorption and their applications.
- basic principles of electrochemistry, cell construction and evaluation and to understand general methodologies for construction & design of electrochemical cell

MODULE I WATER TECHNOLOGY 9

Impurities present in water, hardness : types of hardness, demerits of hard water in boilers, estimation of hardness by EDTA method (problems) – alkalinity : estimation of alkalinity (problems) – dissolved oxygen: estimation of dissolved oxygen – conditioning methods : external treatment method: – lime soda and zeolite process (principle only), Ion exchange process – Internal treatment : colloidal, carbonate, phosphate and calgon methods – drinking water: standards (BIS), treatment of domestic water {screening, sedimentation, coagulation, filtration, disinfection }– desalination: electrodialysis, reverse osmosis.

MODULE II NANOCHEMISTRY 6

Introduction – distinction between molecules, bulk materials and nanoparticles – classification based on dimension with examples – synthesis (top-down and bottom-up approach} : sol-gel, thermolysis (hydrothermal and solvothermal), electrodeposition, chemical vapour deposition, laser ablation – properties and applications (electronic, magnetic and catalytic) – risk factors and future perspectives.

MODULE III ENERGY SOURCES 8

Energy: past, today, and future – a brief history of energy consumption – present energy scenario of conventional and renewable energy sources – renewable energy : needs of renewable energy, advantages and limitations of renewable energy – solar energy: basics, solar energy in the past , photovoltaic, advantages and disadvantages – bioenergy: conversion, bio degradation, biogas generation, biomass gasifier, factors affecting biogas generation, advantages and disadvantages – geothermal energy: geothermal resources (hot dry rock and magma resources, natural and artificial), advantages and disadvantages – wind energy: wind resources, wind turbines, advantages and disadvantages – ocean energy: wave energy, wave energy conversion devices, ocean thermal energy, advantages and disadvantages.

MODULE IV PHOTOCHEMISTRY 7

Introduction: absorption and emission, chromophores, auxochromes – laws of photochemistry : Grotthus-Draper law, Stark Einstein law – quantum yield (problems) –photo physical processes : fluorescence and phosphorescence - Jablonski diagram (electronic states and transitions) – quenching, annihilation – photosensitization: principle and applications – chemiluminescence, bioluminescence.

MODULE V ANALYTICAL TECHNIQUES 7

Spectroscopy: electromagnetic radiation and spectrum – types of transitions – types of spectra (atomic and molecular with their chemical usefulness) – Beer-Lamberts law (problems) – principles, instrumentation and applications of: Colourimetry – UV-Vis spectrophotometer – atomic absorption spectroscopy – atomic emission spectroscopy – principles and applications of: IR, NMR, mass and X-ray diffraction analysis.

MODULE VI ELECTROCHEMISTRY 8

Electrochemistry - types of electrodes (principle and working) : gas (SHE), metal/metal ion electrode, metal-metal insoluble salt (calomel electrode), ion-selective (glass electrode and fluoride ion selective electrode) – Electrolytic and galvanic cells, construction of cell, EMF measurement and applications (problems), standard cell (Weston-cadmium), reversible and irreversible cell, concentration cell. Determination of fluoride ion using fluoride ion selective electrode – Chemically modified electrodes (CMEs) : concept, approaches and applications.

PRACTICALS

1. Estimation of hardness in given water sample.
2. Estimation of the alkalinity of the given water sample.
3. Estimation of strong acid by conductometry.
4. Estimation of Fe^{2+} present in the given sample by potentiometry.
5. Verification of Beer-Lamberts law and estimation of Cu^{2+} present in unknown sample.
6. Estimation of sodium and potassium present in the given sample by flame photometry.
7. Determination of molecular weight and degree of polymerisation of a polymer by viscosity method.
8. Synthesis of thermosetting polymer.

7. Principles of molecular photochemistry: An introduction, Nicholas J. Turro, V.Ramamurthy and Juan C. Scaiano, University Science Books, Sausalito, CA, 2009.

OUTCOMES:

The students will be able to

- solve problems related to hardness, alkalinity, dissolved oxygen associated with the water and describe the treatment processes.
- classify nanomaterials and apply the nanochemistry approach to synthesize the

nanomaterials.

- explain the principle and enumerate the advantages and disadvantages of various renewable energy sources.
- state the principle and illustrate the instrumentation of various analytical techniques.
- apply the concepts of photochemistry to elaborate various photo-physical and photochemical reactions.
- construct a electrochemical cell and describe the various types of electrodes and determine the fluoride content.

GEC 1101	ENGINEERING GRAPHICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To introduce the students of all engineering programs, the basic concepts of engineering drawing, which is the basic communication medium for all engineers
- To provide practical exposure on important aspects like drawing analytic curves, orthographic projections, section of solids, development of surfaces, isometric projection, perspective projection and free hand drawing.
- To introduce computerized drafting.

MODULE I BASICS AND ENGINEERING CURVES **10**

Drawing instruments, dimensioning, BIS conventions, types of lines, simple geometric constructions.

Conic sections: ellipse, parabola, hyperbola.

Special curves: cycloid, epicycloid, hypocycloid and involutes.

MODULE II ORTHOGRAPHIC PROJECTION **8**

Orthographic projection – first angle, second angle, third angle and fourth angle projections –setup - assumptions, principle. Free hand sketching of orthographic views of simple machine parts as per first angle projection. Orthographic projection of points in all quadrants. Some commands and demonstration of drafting packages.

MODULE III PROJECTION OF STRAIGHT LINES AND PLANES **10**

Projection of straight lines in first quadrant – true length and true inclinations – Rotating line and trapezoidal methods –traces of straight line.

Projection of plane lamina in first quadrant and its traces

MODULE IV PROJECTION OF SOLIDS **10**

Projection of solids in first quadrant: Axis inclined to one reference plane only- prism, pyramid, cone, cylinder – change of position and auxiliary projection methods.

MODULE V SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES **12**

Section of solids: prism, pyramid, cone, cylinder, and sphere – sectional view – true shape of section Solids in simple position and cutting plane inclined to one reference

plane only.

Development of surface of truncated solids: prism, pyramid, cone cylinder – frustum of cone, pyramid and simple sheet metal parts.

MODULE VI PICTORIAL PROJECTIONS 10

Isometric projection: Isometric scale – isometric axes- iso sheet - Isometric projection and view of prism, pyramid, cylinder, cone, frustums, truncated solids and simple products

Perspective projection: station point – vanishing point – Perspective projection and views of prism, pyramid, cylinder and frustums by Visual ray method.

L – 30; P – 30; TOTAL HOURS – 60

TEXT BOOKS:

1. N.D. Bhatt, ‘Engineering Drawing’ Charotar Publishing house, 53rd Edtion, (2014)

REFERENCES:

2. Venugopal. K, and V. Prabhu Raja, Engineering Graphics, New Age International (P) Ltd., Publication, Chennai. (2011)

OUTCOMES:

- Students should be able to read the specifications and standards of technical drawing and able to draw conic sections and special curves.
- Students should be able to understand the insight of orthographic projection and to draw the various views of orthographic projection of a point and various components.
- Students should be able to draw the orthographic views of straight lines and plane figures.
- Students should be able to draw the orthographic views of simple solids.
- Students should be able to draw the sections of solids and development of solid surfaces.
- Students should be able to draw the isometric and perspective projection of simple solids and components.

GEC 1102	ENGINEERING DESIGN	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To understand the role of design in Engineering
- To understand the basic design concepts
- To understand the role of innovation in design

MODULE I DESIGN AS A CENTRAL ACTIVITY IN ENGINEERING 08

Product design – products and processes – product design methodology Design of systems; Software design

MODULE II NEED ANALYSIS AND CONCEPT DEVELOPMENT 07

Voice of customers – product specification - need analysis Bench marking Product architecture – concept generation and evaluation;

MODULE III CASE STUDIES IN ENGINEERING DESIGN 08

Product design – process design; system design; software design -Ergonomics – usability

MODULE IV INNOVATION AND DESIGN 07

Role of innovation in Engineering – incremental changes and systemic changes; scientific approach to driving innovation – case studies.

TOTAL HOURS – 30

REFERENCES:

4. Bengt-Arne Vedin, “The Design-Inspired Innovation Workbook”, World Scientific, 2011.

5. Navi Radjou, Jaideep Prabhu and Simone Ahuja, “Jugaad Innovation”, Published by Random House India, 2012.

OUTCOMES:

The students will be able to

- Apply the basic knowledge of design in engineering products / process / service.
- Analyse the problems and give innovative solutions.
- Correlate the basic knowledge of design in the real world problems.
- Apply innovative approaches to engineering design.

GEC1103	BASIC ENGINEERING PRACTICES LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To provide a practical exposure to basic engineering practices like carpentry, fitting, plumbing, welding and making of simple electrical and electronic circuits
- To have an understanding on the use of various tools, instruments and methods
- To enable the students to appreciate the practical difficulties and safety issues

CIVIL ENGINEERING PRACTICE

1. Study of plumbing in general household and industrial systems
2. Making a small window frame with Lap and Mortise & Tenon Joints
3. Introduction to power tools

MECHANICAL ENGINEERING PRACTICE

1. Fabrication of a small Table frame with Butt, Lap and Fillet Joints
2. Machining of a simple component like a table weight using lathe
3. Mold preparation for simple component

ELECTRICAL ENGINEERING PRACTICE

1. Comparison of incandescent, Fluorescent, CFL and LED lamps.
2. Study of Protection Circuits (small relay, fuse, MCB, HRC, MCCB, ECCB).
3. Familiarization of households Electrical Gadgets (Iron Box, Wet Grinder).
4. Understanding of Domestic and Industrial wiring.
5. Earthing and its significance.
6. Troubleshooting in Electrical Circuits.
7. Study of inverter fed UPS/Emergency lamp

ELECTRONICS ENGINEERING PRACTICE

1. Identifications symbolic representation of active and passive electronic components
2. Soldering and tracing of electronic circuits and checking its continuity
3. Assembling of A.C. to D.C, D.C to A.C. Circuits in bread Board and Mini project.

TOTAL HOURS – 30

OUTCOMES:

Upon the completion of the course, students should be able to

- Appreciate the practical skills needed even in making of simple objects, assemblies and circuits
- Attend minor defects especially in items used in day to day life
- Aware of the safety aspects involved in using tools and instruments

GEC 1104	COMPUTER PROGRAMMING I	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To identify the hardware and software components of the computer.
- To know the basic concept of operating system and get knowledge about different operating systems.
- To learn various database concepts and operations
- To develop efficient algorithms for solving a problem.
- To implement the algorithms in C language.
- To use arrays in solving problems.

MODULE I COMPUTER FUNDAMENTALS **7**

Introduction -. Number System - Planning the computer program - Computer Software - Basic operating system concepts - Database Operations

MODULE II PROGRAMMING IN C **8**

Introduction to C Programming Language – Operators - Control statements -Iterative statements - Arrays.

LIST OF EXPERIMENTS:

1. Computer organization –Hardware in a typical computer Identification – Booting- error messages and what it means
2. Types of Operating systems – Windows and Linux
3. Structure of a basic program - Hello world program – Debugging it
4. Data types: Type conversions
5. Input / Output: Formatted functions – Unformatted functions – Library functions
6. Properties of operators – Priority of operators – Arithmetic relational logical and bitwise operators
7. If – if else- nested if else- goto- switch case – nested switch case – for loops – nested for loops – while loop – do-while loop – break and continue statement
8. Arrays – Operation with arrays
9. Sorting and searching.

L – 15; P – 30; TOTAL HOURS – 45

REFERENCES:

1. Ashok N Kamthane, “Computer Programming”, Pearson Education, 2nd Edition, ISBN 13: 9788131704370, 2012
2. Paul J. Deitel, Deitel & Associates, “C How to Program”, Pearson Education, 7th Edition, ISBN-13: 978-0132990448, 2012

OUTCOMES:

Students who complete this course will be able to

- Recognize Modular design, logic flow, data abstraction
- Analyze the working of the programming constructs, functions, and I/O.
- Write down programs for sorting and searching algorithms
- Write down programs developing cycle for different applications
- Debug the programs and solve some practical problems in programming
- Develop programs using arrays.

SEMESTER II

MAC 1281	ADVANCED CALCULUS	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- train the students in solving problems using multiple integration.
- provide knowledge in using special functions to find out the area and volume of a region.
- acquire knowledge in tangent and normal vectors.
- gain knowledge in finding the areas of a curve and surface using vector integration.
- learn about the analytic functions and their properties along with bilinear transformation.
- know complex integration using Cauchy's theorems.

MODULE I MULTIPLE INTEGRATION AND ITS APPLICATIONS 8+2

Multiple integrals– Cartesian and Polar coordinates – change of order of integration – Multiple integral to compute area and volume.

MODULE II TRANSFORMATION OF COORDINATES AND SPECIAL FUNCTIONS 7+3

Change of variables between Cartesian, polar, cylindrical and spherical coordinates - Beta and Gamma functions – Properties and applications.

MODULE III VECTOR DIFFERENTIATION 7+3

Operations on vectors – Scalar Product, Vector Product, Projection of Vectors - Angle between two vectors - Gradient, divergence and curl

MODULE IV VECTOR INTEGRATION 8+2

Line, surface and volume integrals – Green's Theorem, Gauss Divergence Theorem and Stokes Theorem (statement only) – verification and evaluation of integrals.

MODULE V

ANALYTIC FUNCTION 8+2

Analytic function - Necessary and Sufficient condition (statement only) – Cauchy-Riemann equations in polar coordinates - properties of analytic function – determination of analytic function – conformal mapping (w = z+a, az and 1/z) and bilinear transformation.

MODULE VI COMPLEX INTEGRATION **7+3**

Statement and application of Cauchy's integral theorem – Cauchy's integral formula – Taylor's series and Laurent's series expansion – singularities - classification – residues - Cauchy's residue theorem – contour integration – Unit circle and semi circular contours (excluding poles on the real axis).

6. Venkataraman, M.K., "Engineering Mathematics", Volume 2, 2nd edition, National Publishing Co., Chennai, 2003.
7. James Stewart ".Calculus" (7th edition),Brooks/Cole cengage learning,UK.

OUTCOMES:

After completing the course, student will be able to

- compute the area and volume using multiple integrals.

- apply special functions to solve integration problems.
- apply differentiation in scalar and vector fields.
- find area and volume of a region using vector integration.
- verify analyticity, conformity and bilinearity of complex functions.
- evaluate complex integrals.

GEC 1211	BASIC ENGINEERING MECHANICS	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To impart knowledge about the basic laws of statics and dynamics and their applications in problem solving
- To acquaint both with scalar and vector approaches for representing forces and moments acting on particles and rigid bodies and their equilibrium
- To give on exposure on inertial properties of surfaces and solids
- To provide an understanding on the concept of work energy principle, friction, kinematics of motion and their relationship

MODULE I VECTOR APPROACH TO MECHANICS **07**

Introduction - Units and Dimensions- Vectors – Vectorial representation of forces and moments –Vector Algebra and its Physical relevance in Mechanics - Laws of Mechanics – Parallelogram and triangular Law of forces -Lame's theorem, Coplanar Forces – Resolution and Composition of forces- Equilibrium of a particle.

MODULE II EQUILIBRIUM OF PARTICLE **06**

Forces in space - Equilibrium of a particle in space - Equivalent systems of forces – Principle of transmissibility – Single equivalent force

MODULE III EQUILIBRIUM OF RIGID BODY **06**

Free body diagram – Types of supports and their reactions – requirements of stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis –Vectorial representation of moments and couples – Scalar components of a moment – Varignon's theorem - Equilibrium of Rigid bodies in two dimensions -Examples

MODULE IV PROPERTIES OF SURFACES **08**

Determination of Areas – First moment of area and the Centroid of sections – Rectangle, circle, triangle from integration – T section, I section, Angle section, Hollow section by using standard formula – second and product moments of plane area – Physical relevance - Rectangle, triangle, circle from integration - T section, I section, Angle section, Hollow section by using standard formula – Parallel axis theorem and perpendicular axis theorem – Polar moment of inertia- Mass moment of Area

MODULE V FRICTION 08

Introduction to friction- types of friction- Laws of Coloumb friction- Frictional force – simple contact friction – Rolling resistance –ladder friction

MODULE VI LAWS OF MOTION 10

Review of laws of motion – Newton's law – Work Energy Equation of particles– Impulse and Momentum – Impact of elastic bodies.

L – 45; T – 15; TOTAL HOURS – 60

REFERENCES:

3. Irving H. Shames, Engineering Mechanics – Statics and Dynamics, IV Edition Pearson Education Asia Pvt. Ltd., 2003.

OUTCOMES:

On completion of this course students should be able

- Analyse and resolve forces, moments and solve problems using various principles and laws of Mechanics
- Apply the concept of equilibrium to particles and solve problems
- Apply the concept of equilibrium to rigid bodies and solve problems
- Analyse and determine the properties of surfaces
- Analyse and evaluate the fractional forces between the bodies
- Apply the laws of motion in solving dynamics problems

GEC 1212	ENVIRONMENTAL STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

The student will be conversant with the

- various natural resources, availability, utilisation and its current scenario
- different ecosystems, energy transfer, values, threats and conservation of biodiversity
- levels of different pollutants and its impact and the causes and effects of natural disasters
- impacts of human population, impact assessment, human rights and environmental acts and sustainable development

MODULE I NATURAL RESOURCES **8**

Land resources: land degradation, soil erosion and desertification - Forest resources: use and over-exploitation, deforestation - Water resources: use and over-utilisation of surface and ground water, conflicts over water (inter-state and international), dams (benefits and problems), water conservation (rainwater harvesting and watershed management) - Mineral resources: use and exploitation, environmental effects of extracting and using mineral resources, mining - Food resources: world food problems, changes in land use by agriculture and overgrazing, modern agriculture and its effects, fertilizer and pesticide problems, water logging and salinity - Energy resources: increasing energy needs, renewable and non-renewable, use of alternate energy sources.

MODULE II ECOSYSTEM AND BIODIVERSITY **8**

Ecosystem- energy flow in the ecosystem - food chains, food webs and ecological pyramids - characteristics, structure and function of (a) Terrestrial ecosystems (forest, grassland, desert) and (b) Aquatic fresh water ecosystems (pond, lake, river) (c) Aquatic salt water ecosystems (ocean, estuary) - ecological succession.

Biodiversity - genetic, species and ecosystem diversity – hot-spots of biodiversity – biogeographic classification of India - endangered, endemic, extinct and invasive species of India - red data book - values of biodiversity: consumptive, productive, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - conservation of biodiversity: in-situ and ex-situ conservation of biodiversity

MODULE III ENVIRONMENTAL POLLUTION AND NATURAL DISASTER **8**

Definition, cause, effects and control measures of (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards - ill-effects of fireworks and upkeep of clean environment - solid waste management: types (urban, industrial, biomedical and electronic wastes), collection, processing and disposal (incineration, composting and land-fill) - natural disaster and management: flood, cyclone, drought, landslide, avalanche, volcanic eruptions, earthquake and tsunami.

MODULE IV HUMAN POPULATION, HEALTH AND SOCIAL ISSUES **6**

Population and population growth, population variation among nations, population explosion, family welfare programme.

Human health: air-borne, water borne diseases, infectious diseases, risks due to chemicals in food and environment.

Sustainable development - environmental legislation and laws: water act, air act, wildlife protection act, forest conservation act, environment protection act - environmental impact assessment, steps in EIA - human rights - women and child welfare.

Case studies related to current situation

TOTAL HOURS – 30

TEXT BOOKS:

1. Erach Bharucha, Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education for University Grants Commission, Orient Blackswan Pvt Ltd, Hyderabad, India, 2013.
2. Benny Joseph, Environmental Studies, Tata McGraw-Hill Education, India, 2009.
3. Ravikrishnan A, Environmental Science and Engineering, Sri Krishna Publications, Tamil Nadu, India, 2015.
4. Raman Sivakumar, Introduction to Environmental Science and Engineering, McGraw Hill Education, India, 2009.
5. Venugopala Rao P, Principles of Environmental Science and Engineering, Prentice Hall India Learning Private Limited; India, 2006.
6. Anubha Kaushik and Kaushik C.P., Environmental Science and Engineering,

New Age International Pvt Ltd., New Delhi, India, 2009.

REFERENCES:

1. Masters G.M., Introduction to Environmental Engineering and Science, Prentice Hall, New Delhi, 1997.

3. Miller T.G. Jr., Environmental Science, Wadsworth Publishing Co. Boston, USA, 2016.

OUTCOMES:

The student will be able to

- predict the scenario of various natural resources and suggest remedies to curb the exploitation of these resources.
- identify food chain and web and its role in various ecosystems, assess the impacts on biodiversity and provide solutions to conserve it.
- analyse the impacts of pollutants in the environment and propose suitable method to alleviate the pollutants and the natural disasters.
- assess on the impact of human population and the health related issues and the ethics to be followed for sustainable life.

GEC 1213	COMPUTER PROGRAMMING II	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To provide knowledge about the benefits of Object Oriented Programming over Procedure oriented programming.
- To learn various File operations
- To expose fundamental concepts of object-oriented programming in classes, invoking methods and functions.
- To prepare students to get full use of code reusability using object oriented programming.
- To implement the basic concepts of object oriented programming using C++concepts.
- To focus on solving problems based on analyzing, designing and implementing programs in C and C++.

MODULE I PROGRAMMING IN C 7

Functions - Storage Classes - Structures and Unions – Pointers -Self Referential Structures and Linked Lists - File Processing.

MODULE II PROGRAMMING IN C++ 8

Programming in C++ - Overview of OOP in C – Inheritance - Polymorphism - Type Casting – Exceptions.

LIST OF EXPERIMENTS:

1. Functions
2. One dimensional arrays, Pointers
3. Recursion
4. Multi dimensional arrays, Linked lists.
5. Operating on Files.
6. Simple C++ program with Control statements.
7. Getting input from user console.
8. Classes, Object and Constructors.
9. Method overloading.
10. Inheritance

L – 15; P – 30; TOTAL HOURS – 45

REFERENCES:

OUTCOMES:

Students who complete this course will be able to

- Develop efficient algorithms for solving problems
- Handle files in C
- Use simple data structures like arrays and linked lists in solving problems.
- Write simple programs using concepts of object oriented programming.
- Implement algorithms in C++ Language.
- Demonstrate the Object Oriented Programming concepts applied in networking, web development and Database applications.

EEC1281	AUTOMOBILE ELECTRICAL ENGINEERING	L	T	P	C
		2	0	0	2

OBJECTIVES:

To impart knowledge on

- Basic concepts of electrical circuits and their solutions
- Principle of operationand applications of engine starting systems
- Basics of charging systems
- Concepts of Transformers and Induction motors.

MODULE I DC AND AC CIRCUITS 8

Ohm's law and its limitations .Kirchhoff's laws and its applications. Analysis of series, parallel and series-parallel resistive circuits. Power and Energy in such circuits. Generation of sinusoidal AC voltage, definition of average value, R.M.S value, form factor, peak factor. Phase and phase difference of sinusoidal varying voltage and current. Definition of real power, reactive power, apparent power and power factor -. The relationship between line and phase voltage & currents in balanced 3phase Star and Delta connections - Illustrative Examples

MODULE II ENGINE STARTING SYSTEMS 7

Requirements of the starting system-Choosing a starter motor -Starter motors and circuits: Starting system circuits -Principle of operation of starter motor - DC motor characteristics - Types of starter motor: Inertia starters - Pre-engaged starters - Permanent magnet starters - Heavy vehicle starters -Integrated starters.

MODULE III AUTOMOBILE CHARGING SYSTEMS 7

Basic principles - Charging voltages -Alternators and charging circuits- Generation of electricity - Rectification of AC to DC -Regulation of output voltage - Charging circuits.

MODULE IV TRANSFORMER AND INDUCTION MOTORS 8

Principle of operation and construction and types of single phase transformers.E.M.F equation, - voltage regulation. Three Phase Induction Motor: Principle of operation, constructional features, types, slip and its significance. Applications of squirrel- cage and slip-ring motors, Star Delta starter. Single phase Induction Motor: Principle of operation and applications.

TOTAL HOURS – 30

REFERENCES:

1. Edward Hughes, “Electrical and Electronics Technology”, Pearson India, 9th Edition, 2007.

4. B L Theraja and A K Theraja, “A textbook of Electrical Technology”, S.Chand, 2005.
5.Tom Denton “Automobile Electrical and Electronic Systems” Elsevier Butterworth-Heinemann,Third edition, 2004

OUTCOMES:

On completion of this course, the student will be familiar with

- Demonstrate the basics of Electrical circuits and their solution methods.
- Understand the working of starter- motors.
- Explain the structure of Engine starting systems.
- Understand the working of automobile charging system.
- Understand the concept of Voltage Regulation.
- Explain the operation of Transformers and Induction motors

AUC 1211	APPLIED FLUID MECHANICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the properties of the fluid.
- To understand and solve the fluid flow problems.
- To understand the mathematical techniques of practical flow problems.
- To understand the energy exchange process in fluid machines.

MODULE I FLUID PROPERTIES AND HYDROSTATICS 8

Fluid properties: Mass density, specific weight, specific volume, specific gravity, viscosity, vapour pressure, compressibility, surface tension and capillarity. Fluid statics: fluid pressure at a point, variation of pressure within a static fluid, hydrostatic law - Pressure head, Pascal's law. Measurement of pressure - Piezometric tube, manometry.

MODULE II FLUID DYNAMICS 8

Control volume – Fluid Kinematics - Types of flows; Steady flow, Unsteady flow, Uniform and Non Uniform flow, Rotational flow, Irrotational flow, 1-D, 2-D, 3-D flows– Streamline and Velocity potential lines- Euler and Bernoulli's equations and their applications – moment of momentum – Momentum and Energy correction factors – Impulse – Momentum equation-Navier-Stokes Equations-Applications.

MODULE III OPEN CHANNEL FLOW 7

Flow through pipes – Open Channels and Measurement pipe flow: Darcy's law – Minor losses – Multi reservoir problems – pipe network design – Moody's diagram – Hagen Poiseuille equation – Turbulent flow. Specific Energy – Critical flow concept – specific force – Hydraulic jump – uniform flow and gradually varying flow

MODULE IV DIMENSIONAL ANALYSIS 7

Dimensional homogeneity – Raleigh and Buckingham theorems – Non-dimensional numbers – Model laws and distorted models-Unit quantities-Specific quantities

MODULE V BOUNDARY LAYERS 8

Boundary layer development on a flat plate and its characteristics - Boundary layer thickness, displacement thickness, momentum thickness, energy thickness .Momentum equation for boundary layer by Vonkarman, drag on flat plate, boundary layer separation and its control. Aerofoil theory, lift and drag coefficients, stream lined and bluff bodies.

MODULE VI TURBOMECHINERY 7

Hydraulic turbine: Classification, difference between impulse and reaction turbine. Construction and working of Pelton turbine, Francis turbine and Kaplan turbine, velocity triangle, heads and efficiencies. Pumps: classification, difference between positive and non-positive displacement pumps. construction and working of reciprocating pump. Centrifugal pump-heads of a centrifugal pump, priming, velocity triangle, work done, efficiencies of centrifugal pump.

TOTAL HOURS – 45

TEXT BOOKS:

1. Rajput.R.K, “A text book of Fluid Mechanics and Hydraulic Machines”, S. Chand & Company Ltd., New Delhi, Fourth edition, 2010.
2. Dr.R.K. Bansal, (2000), Fluid Mechanics and Hydraulic Machines, Laxmi Publication (P) Ltd., New Delhi.

REFERENCES:

1. P.N.Modi and S.M.Seth (1999), Hydraulics and Fluid Mechanics including Hydraulic Machines, Standard Book House, Naisarak, Delhi.
2. Vijay Gupta and S.K.Gupta, (1999), Fluid Mechanics and Applications, New-Age International Ltd.
3. D.S. Kumar,(2004), Fluid Mechanics and Fluid Power Engineering, Katson Publishing House, Delhi.

OUTCOMES:

Student will be able to

- To find frictional losses in a pipe when there is a flow between two places.
- Calculate the conjugate depths in a flow.

- Analyse the model and the prototype.
- Find the dependent and independent parameters for a model of fluid flow.
- Explain the various methods available for the boundary layer separation.

AUC1212	FUELS AND LUBRICANTS LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To understand the fuel properties
- To learn the behavior of viscosity liquid fuels
- To examine the ash content, carbon residue, flash and fire point of fuels
- To examine properties of liquid and gaseous fuel.

LIST OF EXPERIMENTS:

1. ASTM distillation test of liquid fuels
2. Aniline Point test of diesel
3. Calorific value of liquid fuel.
4. Calorific value of gaseous fuel.
5. Reid vapour pressure test.
6. Flash and Fire points of petrol and diesel.
7. Copper strip Corrosion Test
8. Temperature dependence of viscosity of lubricants & Fuels by Redwood Viscometer.
9. Viscosity Index of lubricants & Fuels by Saybolt Viscometer
10. Ash content and Carbon Residue Test

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Brame, J.S.S. and King, J.G. – "Fuels Solids, Liquids, Gaseous". Edward Arnold, 1961

4. Lansdown. A.R., Lubrication, "A practical guide to lubricant selection", Pergamon press, 1982.
5. Raymond. C. Gunther, "Lubrication", Chilton Book Co., 1971.

OUTCOMES:

After completion of this course the students should be able to

- Analyze the viscosity, flash point, fire point and Reid vapour pressure of liquid fuel.
- Determine calorific value of liquid and gaseous fuel.

- Analyze of cloud and pour point of liquid fuel and copper strip corrosion.
- Determine the aniline point of given liquid fuel.

EEC1282	AUTOMOBILE ELECTRICAL ENGINEERING LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To understand, simulate and verify Ohm's Law and Kirchhoff's Laws theorem.
- To understand and verify the characteristics of various Electrical Machines
- To fabricate the interfacing and power supply circuits.
- To understand the battery chargers

LIST OF EXPERIMENTS:

1. Verification of Ohm's Law and Kirchhoff's Laws using MATLAB.
2. Power and power factor measurement using two wattmeter method.
3. Load Test on DC Shunt Motor.
4. Load Test on DC Series Motor
5. Load Test on Single Phase Transformer
6. Load Test on Three Phase Induction Motor.
7. Three phase transformer connections.
8. Fabrication of IC78XX based Regulated power supply.
9. Fabrication of opto - Isolator based transistor- relay driver circuit.
10. Study of battery chargers.

TOTAL HOURS –30

OUTCOMES:

At the end of the course, the student should be able to

- Construct and simulate any given simple electric circuits and verify theorems using MATLAB.
- Study and understand the performance of Electrical Machines.
- Fabricate the power supplies.
- Design the relay driver stage.
- Implement the opto - coupler circuits.
- Analyse the battery charging system.

SEMESTER - III

MAC 2181	PARTIAL DIFFERENTIAL EQUATIONS AND TRANSFORMS	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- Familiarize In Solving Partial Differential Equation Of First, Second And Higher Orders.
- Introduce Basics And Engineering Applications Of Fourier Series, Laplace Transform, Fourier Transform And Z- Transform.

MODULE I PARTIAL DIFFERENTIAL EQUATIONS 8+2

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

MODULE II FOURIER SERIES 8+2

Fourier Series and Dirichlet's conditions - General Fourier series - Half range Fourier series - Parseval's identity - Harmonic Analysis.

MODULE III FOURIER TRANSFORMS 7+3

Fourier integral theorem (without proof) - Fourier transform pair - Fourier Inverse Transform – Properties - Convolution theorem - Parseval's identity.

MODULE IV APPLICATIONS OF FOURIER SERIES AND FOURIER TRANSFORMS 7+3

Applications of Fourier series and Fourier Transform to solution of PDEs having constant coefficients with special reference to Heat & Wave equations, Discrete & point Spectrum and Single pulse.

MODULE V LAPLACE TRANSFORM 8+2

Introduction to Laplace transform - Existence of Laplace Transform - Properties of Laplace Transforms - Initial & Final Value Theorems - Inverse Laplace Transform - Convolution Theorem – Circuits to signal square wave: Integral equations with unrepeated complex factors – Damped forced vibrations: repeated complex factors – Resonance - Solution of differential equations

MODULE VI Z – TRANSFORM 7+3

Introduction and Definition of Z-transform - Properties of Z- Transform - Convolution Theorem of Z-Transform - Inverse Z–transform - Convolution Theorem of Inverse Z-Transform - Formation of difference equations - Solving Difference Equations using Z-Transform.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Kreyszig .E., “Advanced Engineering Mathematics“, 10th edition, John Wiley and Sons (Asia) Pvt Ltd., Singapore, 2001.
2. Grewal B.S., “Higher Engineering Mathematics”, 42nd edition, Khanna Publishers, New Delhi, 2012.
3. Ramana, B.V, “Higher Engineering Mathematics” Tata Mc Graw Hill Publishing Co. New Delhi, 2006.

REFERENCES:

1. Veerarajan.T., “Engineering Mathematics“, 5th edition, Tata Mc Graw Hill Publishing Co. New Delhi, 2012.

3. Dennis G. Zill, Warren S. Wright, “Advanced Engineering Mathematics”, 4th edition, Jones and Bartlett publishers, Sudbury, 2011.
4. Alan Jeffrey, “Advanced Engineering Mathematics”, Academic Press, USA, 2002.

OUTCOMES:

After completing the course, student will be able to

- Solve The Partial Differential Equations.
- Derive A Fourier Series Of A Given Periodic Function By Evaluating Fourier Coefficients.
- Apply Integral Expressions For The Forward And Inverse Fourier Transform To A Range Of Non-Periodic Waveforms.
- Solve Wave Equation And Heat Flow Equation.
- Solve Ordinary Differential Equations Using Laplace Transform.
- Solve Difference Equation Using Z-Transform.

AUC 2101	APPLIED THERMAL ENGINEERING	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To gain knowledge on the concept of systems and energy transfer
- To understand analyze and apply the basic laws of thermodynamics
- To understand the principle of steam power cycle and its improvement
- Perform air-standard analysis of IC engines based cycle and Refrigeration cycle
- To understanding of basic concept of hear transfer
- To learn the fundamental concepts of heat exchanger.

MODULE I BASIC CONCEPT AND FIRST LAW 8+2

Basic concepts - concept of continuum, macroscopic approach, types of thermodynamic systems. Property, state, path and process, quasi-static process, work, modes of work, Zeroth law of thermodynamics – concept of temperature and heat. Concept of ideal and real gases. First law of thermodynamics – application to closed and open systems, internal energy, specific heat capacities, enthalpy, steady flow process with reference to various thermal equipment.

MODULE II SECOND LAW, ENTROPY AND AVAILABILITY 8+3

Second law of thermodynamics – Kelvin's and Clausius statements of second law. Reversibility and irreversibility. Carnot cycle, reversed carnot cycle, efficiency, COP. Thermodynamic temperature scale, Clausius inequality, concept of entropy, entropy of ideal gas, principle of increase of entropy – Carnot theorem, absolute entropy, availability, Concept of Exergy analysis.

MODULE III P R O P E R T I E S OF PURE SUBSTANCE AND VAPOUR PROCESSES 8+2

Properties of pure substances – Thermodynamic properties of pure substances in solid, liquid and vapour phases, phase rule, P-V, P-T, T-V, T-S, H-S diagrams, PVT surfaces, thermodynamic properties of steam. Calculations of work done and heat transfer in non-flow and flow processes.

MODULE IV VAPOR AND GAS CYCLES 8+3

Rankine Cycle - Rankine Cycle Efficiency - Reheat Cycle- Regenerative Cycle - Vapor Refrigeration Cycle - Air-Standard Cycle - Otto Cycle - Diesel Cycle - Brayton Cycle - Regenerative Brayton Cycle - Combined Cycle - Gas Refrigeration Cycle

MODULE V CONDUCTION, CONVECTION AND RADIATION 6+2

Modes of heat transfer, Heat conduction in parallel, radial and composite wall - Basics of Convective heat transfer. Fundamentals of Radioactive heat transfer

MODULE VI HEAT EXCHANGERS 7+3

Nusselt's theory of condensation - Regimes of Pool boiling and Flow boiling. Correlations in boiling and condensation. Heat Exchanger Types - Overall Heat Transfer Coefficient - Fouling Factors - Analysis - LMTD method - NTU method.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Nag.P.K., "Engineering Thermodynamics",5th ed, Tata McGraw-Hill(2013). 1998.
2. Cengel, "Thermodynamics An Engineering Approach", 8th Edition – 2015, Tata McGraw Hill, New Delhi.

REFERENCES:

1. Holman.J.P., "Thermodynamics", 3rd Edition McGraw-Hill, 1995.
2. Natarajan. E., "Engineering Thermodynamics" Anuragam Publications, Chennai, 2012.
3. Arora C.P, " Thermodynamics", Tata McGraw-Hill, New Delhi.
4. Merala C, Pother, Craig W, Somerton, "Thermodynamics for Engineers", Schaum Outline Series, Tata McGraw-Hill, New Delhi.
5. Sri Vastava R.C, Saha S. K, Jan A. K, "Thermodynamics" Prentice Hall of India, New Delhi.

OUTCOMES:

The Student Should Be Able To

- Conceptualize and apply the first of thermodynamics to any real life situation
- Conceptualize and apply the second of thermodynamics to any real life situation
- Apply the knowledge for design of air conditioning system
- Design and analyze gas power cycles
- Synthesize and utilize thermodynamic relations for practical problems solving
- Design and analyze heat exchanger

AUC 2102	VEHICLE BODY ENGINEERING	L	T	P	C
		2	0	0	2

OBJECTIVES:

- The students can impart knowledge in construction of car body, design criteria, types of car and safety aspects of car.
- The students able to know the construction of bus body and dimensions of bus body and safety aspects.
- The students can impart knowledge in types of commercial vehicles; design of cab and in aerodynamic testing, forces and moments.
- The student will be well versed in the design and construction of external body of the vehicles and materials used in vehicles.

MODULE I CAR BODY DETAILS 7

Types of Car body - Saloon, convertibles, Limousine, Estate Van, Racing and Sports car – Visibility regulations, driver's visibility, improvement in visibility and tests for visibility. Driver seat design -Car body construction-Various panels in car bodies. Car body construction; design criteria. Crash tests on full scale model, Dummies and Instrumentation. Safety aspect of car body.

MODULE II BUS BODY DETAILS 8

Types of bus body: based on capacity, distance traveled and based on construction. Bus body lay out for various types, floor height, engine location, entrance and exit location, seating dimensions. Types of metal sections used – Regulations – Constructional details: Conventional and integral.

MODULE III COMMERCIAL VEHICLE DETAILS 7

Types of commercial vehicle bodies - Light commercial vehicle body. Construction details of commercial vehicle body - Flat platform body, Trailer, Tipper body and Tanker body, Drivers cab design - Regulations.

MODULE IV BODY MATERIALS AND BODY REPAIR 8

Types of materials used in body construction-Steel sheet, timber, plastics, GRP, properties of materials. Hand tools-power tools-panel repair-repairing sheet metal-repairing plastics-body fillers-passenger compartment service- corrosion and Anticorrosion methods. Modern painting process procedure-paint problems and Body trim items-body mechanisms.

Total Hours – 30

TEXT BOOKS:

1. Powloski, J., "Vehicle Body Engineering", Business Books Ltd., 1998.
2. James E Duffy, "Body Repair Technology for 4-Wheelers", Cengage Learning, 2009.

REFERENCES:

1. Giles, G.J., "Body construction and design", Illiffe Books Butterworth & Co., 1991.
2. John Fenton, "Vehicle Body layout and analysis", Mechanical Engg. Publication Ltd., London, 1992.
3. Braithwaite, J.B., "Vehicle Body building and drawing", Heinemann Educational Books Ltd., London.
4. Dieler Anselm., The passenger car body, SAE International, 200

OUTCOMES:

- The students will able to know design of car body and identify the car body parts in a vehicle.
- The students will able to evaluate about different aspects of car body and bus body, types, commercial vehicle.
- The students will able to analyze the Role of various aerodynamic forces and moments, measuring instruments.
- The students will able to evaluate about different aspects of car body and bus body, types, commercial vehicle.
- The students able to find the material which can be used in car body, bus body of an automobile vehicle.
- The students will able to know painting process for a commercial vehicle and tools used for body repairs.

AUC 2103 BASIC MANUFACTURING PROCESS

L	T	P	C
2	0	2	3

OBJECTIVES:

- To know about the functions of lathe machine and casting process
- To study about the types of welding process and sheet metal forming process
- To know about forging, Rolling and Extrusion process with its applications
- To understand the methods shaping of plastics and powder metallurgy components.

MODULE I LATHE MACHINE AND CASTING PROCESS 8

Lathe Machine: Function of lathe, parts of lathe and Operations performed on lathe machine. Casting Process, Sand casting process, pattern types, pattern allowance, properties of Moulding sand, Cupola furnace, Shell casting and die casting process.

MODULE II WELDING AND SHEET METAL FORMING PROCESS 7

Welding Process: Types of welding- Gas welding, Arc Welding, Resistance welding, MIG and TIG welding . Sheet metal forming Process: Sheet metal forming operations, Hydro forming, Super plastic forming and Explosive forming.

MODULE III FORGING, ROLLING AND EXTRUSION PROCESS 8

Forging process: Open and closed die forging, Types of forging operations Rolling process; Types of rolling mills , Extrusion process: Forward and Backward Extrusion, Principle of rod and wire drawing

MODULE IV SHAPING OF PLASTICS AND POWDER METALLURGY 7

Thermosetting and Thermoplastics, Blow moulding , Injection moulding . Compression and transfer moulding. Powder metallurgy: Steps followed in powder metallurgy, applications.

LAB EXPERIMENTS: **30**

- Turning, Step turning and step turning
- Single start V thread and knurling
- Internal key cutting by slotter
- Many holes on a circular plate with tapping operations.
- Sand Casting : Dumble and Flange mould
- Welding: Different joints welding

- Tray and funnel from sheet metal
- Forging: Fan hook and desired polygon shape.

Total Hours – 60 Hours

TEXT BOOKS:

1. Hajra Choudhury, Elements of Workshop Technology, Vol. I and II, Media Promotors Pvt Ltd., Mumbai, 2007
2. Serope Kalpajian, Steven R.Schmid, Manufacturing Engineering and Technology, Pearson Education, Inc. 2006

REFERENCES:

1. B.S.MegendranParashar & R.K..Mittal, Elements of Manufacturing Processes, Prentice Hall of India, 2003.
2. P.N. Rao, Manufacturing Technology,Tata McGraw-Hill Publishing Limited, IInd Edition, 2009
3. P.C. Sharma, S. Chand and Company, A Text Book of production technology, Xth Edition, 2008
4. Begman, John Wilely & Sons, Manufacturing Process, VIIIth Edition, 1999]

.

OUTCOMES:

- Able to do various operations using lathe machine and produce components by casting process.
- Able to make component by welding and sheet metal forming process
- Able to produce component by forging process
- Understand the principle of sheet metal forming operations and able to produce component by sheet metal forming process

AUC 2104 STRENGTH OF MATERIALS

L	T	P	C
3	1	0	4

OBJECTIVES:

- To gain knowledge of simple stresses, strains and deformation in components.
- To assess stresses and deformations through mathematical models of beams, twisting bars or combinations of both.
- Effect of component dimensions and shape on stresses and deformations are to be understood.
- To gain knowledge in the torsion of circular bars.
- To analyze the two dimensional stresses.
- The study would provide knowledge for use in the design courses.

MODULE I STRESS, STRAIN AND DEFORMATION OF SOLIDS 7+2

Rigid and Deformable bodies – Strength, Stiffness and Stability – Stresses; Tensile, Compressive and Shear – Deformation of simple and compound bars under axial load – Thermal stress.

MODULE II LOADS AND STRESSES IN BEAMS 9+2

Types of beams: Supports and loads – Shear force and Bending Moment in beams – Cantilever and simply supported – Stresses in beams – Theory of simple bending – Stress variation along the length and in the beam section

MODULE III DEFLECTION OF BEAMS 7+3

Evaluation of beam deflection and slope: Double integration method, Macaulay ethod and Moment-area method.

MODULE IV TORSION 7+2

Analysis of torsion of circular bars – Bars of Solid and hollow circular section – Stepped shaft – Twist and torsion stiffness.

MODULE V APPLICATION OF TORSION AND BEAM DEFLECTION 8+3

Application to close-coiled helical springs – Maximum shear stress in spring section including Wahl Factor – Deflection of helical coil springs under axial loads – Columns – End conditions – Equivalent length of a column – Euler equation – Slenderness ratio.

MODULE VI TWO DIMENSIONAL STRESSES 7+3

Thin cylindrical and spherical shells – Volumetric strains – Biaxial stresses at a point – Stresses on inclined plane – Principal planes and stresses – Mohr's circle for biaxial stresses

L – 45; T – 15 – 60 Hours

TEXT BOOKS:

1. Beer F. P. and Johnston R, Mechanics of Materials, McGraw-Hill Book Co, Third Edition, 2002.

REFERENCES:

1. Popov E.P, Engineering Mechanics of Solids, Prentice-Hall of India, New Delhi, 1997.
2. Nash W.A, Theory and problems in Strength of Materials, Schaum Outline Series, McGraw-Hill Book Co, New York, 1995
3. Timoshenko S.P, Elements of Strength of Materials, Tata McGraw-Hill, New Delhi 1997.
4. Ryder G.H, Strength of Materials, Macmillan India Ltd., Third Edition, 2002.
5. Ray Hulse, Keith Sherwin & Jack Cain,"Solid Mechanics", Palgrave ANE Books, 2004.
6. Singh D.K "Mechanics of Solids" Pearson Education 2002.
7. Kazimi S.M.A, Solid Mechanics, Tata McGraw-Hill Publishing Co, New Delhi, 1981.

OUTCOMES:

On completion of the course students should be able to

- Gain knowledge of simple stresses, strains and deformation in components.
- Understood the effect of stresses and deformations on component dimensions and shape.
- To determine and analyse the stresses in two dimensions.
- To determine and analyse the shear forces, bending moments and principal stresses.
- Gain knowledge in columns and springs.
- Use basic knowledge in the design courses.

AUC 2105	AUTOMOTIVE ENGINES	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand the basic concepts, construction, types and working of internal combustion engines used for automotive applications
- To have a clear understanding of the combustion processes of SI and CI engines.
- To have a clear understanding of the testing procedures and performance parameters of automotive engines.
- To understand the developments taking place in automotive engines.

MODULE I ENGINE COMPONENTS AND SYSTEMS 9

Construction and working of Four stroke SI and CI engines, Construction and working of Two stroke SI and CI engines, Engine classification, firing order, Engine specifications, Intake and Exhaust systems, Carburetor, MPFI and CRDI systems, Exhaust system components, Cooling and Lubrication systems

.

MODULE II COMBUSTION IN SI AND CI ENGINES 7

Introduction to combustion in SI and diesel engines and stages of combustion. Combustion chambers for SI and CI engines. Importance of Swirl, squish and turbulence. Factors controlling combustion chamber design. Knocking combustion.

MODULE III ENGINE TESTING AND PERFORMANCE 7

Dynamometers, Indicated thermal, brake thermal and volumetric efficiencies. Measurement of friction, Cylinder pressure measurement. Engine performance maps, Engine testing standards.

MODULE IV DEVELOPMENTS IN AUTOMOTIVE ENGINES 7

Bi fuel and Flexi fuel engines, Adiabatic engines, HCCI engines, Lean burn engines, Stratified charge ignition engines, LPG and Bio gas fuelled engines. Use of hydrogen in automotive engines.

List of Experiments cylinder

Dismantling study and assembling of 4 cylinder SI engine

Measure the bore stroke, cubic capacity and compression ratio of a given 4 cylinder petrol engine. Compare the significance of cubic capacity with power. Identify the name, function and material of the components.

1. **Dismantling study and assembling of 4 cylinder CI engine**

To calculate the clearance volume and compression ratio of a 4 cylinder diesel engine. Measure the pressure in the cylinder at the end of compression stroke. Draw the motoring curve. Identify the name, function and material of the components.

2. **Dismantling study and assembling of 2 stroke SI engine**

Measurement of 2 stroke SI engine specifications Identification of Name function and material of of the components. Understanding of the following scavenging and short circuiting process, air cooling system.

3. **Study of intake systems**

Carburettor, TBI, MPFI and GDI for SI engine and DI, IDI and CRDI systems for CI engine . Identify the Name of components function material etc. Measurement of injector performance, Measurement of runner length of manifold and its significance.

4. **Study of Exhaust systems**

Exhaust system components like catalytic combater muffler, Identification of name of components function and material. Measurement of runner length of exhaust manifold and its significance.

5. **Study of Ignition systems**

Battery coil, magneto and Electronic Ignition systems. Identification of name and function material. Measurement of density of Electrolyte .

6. **Study of cooling systems**

Identification of name, function and material of the components. Measurement of discharge of water pump at various speed.

7. **Study of lubrication systems**

Identification of Name, function and material of the components. Measurement of discharge of oil pump at such pressure for difference speeds.

8. **Measurement of dimensional variation of cylinder block and gudgeon pin**

Measurement on cylinder block – cylinder bore, crankshaft bore and camshaft bore for taper and ovality. Measurement of gudgeon pin, diameter and taper Analysis of the impact of dimensional variation on engine performance

10. **Measurement of dimensional variation of Crankshaft, camshaft, connecting rod**

Measurement of crankshaft journal and pin for taper and ovality

Measurement of camshaft journal taper and ovality and cam lift.

Measurement of connecting rod big end and small end bores for taper and ovality.

Analysis of the impact of dimensional variation on engine performance

PROJECT TITLES:

1. Selection and coupling of suitable I.C. Engine to run a system
2. Measurement of Air intake and calculation of volumetric efficiency
3. Measurement of fuel intake and calculation of energy of the fuel metered
4. Making a working model of CDI system
5. Measurement of Exhaust pressure and calculation of exhaust quantity
6. Working model of Electronic ignition system
7. Working model of lubrication system
8. Working model of cooling system
9. Working model of Rocker arm mechanism
10. Working model of a CRDI system
11. Working model of a MPFI system
12. Working model of variable valve timing.
13. Energy recovery from exhaust system
14. Turbo charger model.

Total Hours – 60 Hours

TEXT BOOKS:

1. Ganesan.V., “Internal Combustion Engines”, Tata McGraw-Hill Publishing Co.,New Delhi, 2003.
2. M.L.Mathur and R.P.Sharma, “A course in Internal combustion engines”,Dhanpat Rai & Sons Publications, New Delhi, 2001.
3. K.K.Ramalingam, “Internal Combustion Engines”, Scitech Publications,Chennai, 2000.
4. William H.Crouse, “Automotive Engines”, McGraw-Hill Publishers, 1985.
5. Pulkrabek “Engineering Fundamentals of the Internal Combustion Engines”,Practice Hall of India, 2003.

REFERENCES:

1. Heldt P.M., “High Speed Combustion Engines”, Oxford IBH PublishingCo., Calcutta,1975.
2. Obert E.F., “Internal Combustion Engines Analysis and Practice”, International

Text Books Co., Scrantron, Pennsylvania - 1988.
3. Ellinger H.E., “Automotive Engines”, Prentice Hall Publishers, 1992.
4. John B.Heywood, “Internal Combustion Engine Fundamental”, McGraw-Hill, 1988.
5. Richard Stone.," Introduction to Internal Combustion Engines”, Third Edition-1999, Society of Automotive Engineers Inc.

OUTCOMES:

- Should be able to analyse and select a suitable power plant for particular application and justify the selection.
- Should critically examine the combustion parameters of engines.
- Should be able to apply the knowledge gained in engine testing laboratory and evaluate the performance parameters of engines.
- Should be able deliberate the developments and suggest improvements for automotive power system.

ENC 2181	ORAL COMMUNICATION	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To expose students to a range of professional contexts through podcasts for learning appropriate expressions.
- To train them in making poster presentations.
- To enable them to make effective business presentations.
- To help them learn persuasive and negotiation skills.
- To train them to debate on issues of current relevance
- To train them to participate in group discussions on current affairs

MODULE I **4**

Orientation to the Importance of Oral Communication -– Verbal and non-verbal communication -Paralinguistic features.

One-minute presentations (using Audacity/Voicethread) – Just a minute (JAM) on random topics

MODULE II **4**

Negotiating and persuading through effective arguments – to arrive at a conclusion (pair-work)

Understanding Negotiation, persuasion and marketing skills through Podcasts

Listening to short conversations and monologues for understanding real life conversations

MODULE III **4**

Making Poster presentations on current issues

Understanding nuances of making effective presentations (TED Videos)

MODULE IV **6**

Deliberation on social and scientific issues – Debates (focus on rebuttal skills and deconstructing arguments)

Viewing videos on debates (NDTV Discussions)

MODULE V **6**

Discussing social issues or current affairs in groups

Viewing group discussions and listening for specific information

MODULE VI **6**

Making full length presentation (through Voicethread) with the focus on one's career plans and prospects (discipline specific)

Listening to interviews for understanding speakers' perception (on industry related issues)

P – 30; Total Hours –30

REFERENCES:

1. Hancock, Mark (2012). *English Pronunciation in Use*. Cambridge University Press, UK.
2. Anderson, Kenneth & et.al (2007). *Study Speaking: A Course in Spoken English for Academic Purposes* (Second Edition). Cambridge University Press, UK.
3. Hurlock, B.Elizabeth (2011). *Personality Development*. Tata McGraw Hill, New York.
4. Dhanavel,S.P (2015). *English and Soft Skills*. Orient Blackswan, Chennai.
5. Whitby, Norman (2014). *Business Benchmark: Pre-Intermediate to Intermediate.* Cambridge University Press, UK.

OUTCOMES:

On completion of the course, students will be able to

- Listen to business conversations and do related tasks.
- Deliver effective poster presentations.
- Make effective business presentations.
- Use persuasive and negotiating skills for justifying arguments.
- Participate effectively in debates.
- Speak English intelligibly, fluently and accurately in group discussions.

AUC 2106	APPLIED FLUID MECHANICS LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To learn about the various measurements of fluid parameters
- To verify the laws of fluid mechanics
- To study the performance of various pumps and turbines.

LIST OF EXPERIMENTS:

1. Comparison of Coefficient of Discharge of given Orifice meter and venturi meter.
2. Calibration of Rota meter.
3. Determination of friction factor for the given set of pipes
4. Performance study of centrifugal pumps / Submersible pumps.
5. Determination of maximum efficiency for the given reciprocating pump.
6. Characteristic curves for Gear pump / Vane pump.
7. Determination of maximum power at constant speed / constant load for an impulse turbine.
8. Performance characteristic of Reaction turbine.
9. Impact of jet on flat and curved vanes.
10. Verification of Bernoulli's theorem.
11. Performance test on a jet pump.
12. Flow visualization :- Laminar and Turbulent flows
13. Flow visualization and pressure measurement on aerofoil

Total Hours – 45

OUTCOMES:

- Students will learn the parameters important for measuring the fluid flows.
- They will be able to run and calculate the performance of the pumps and turbines

SEMESTER - IV

AUC 2211	**AUTOMOTIVE CHASSIS**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To Study the constructional details and Structures of different types of frames used in vehicle
- To Study mechanism of different types of steering system
- To Study mechanism of different types of drive line and final drive.
- To study use age of wheels and tyres.
- To Study the fundamental and working of different types of Suspension Systems of Automobiles
- To Study the fundamental and working of different types of Braking Systems of Automobiles

MODULE I INTRODUCTION AND FRAME, STEERING SYSTEM 6

Types of Chassis layout, with reference to Power Plant location and drive, various types of frames, Loads acting on vehicle frame, Constructional details and materials for frames, Testing of frames

MODULE II FRONT AXLE AND STEERING SYSTEMS 7

Types of Front Axles and Stub Axles, Front Wheel Geometry, namely, Castor, Camber, King Pin Inclination and Toe–in, Condition for True Rolling Motion of Wheels during Steering, Ackerman's and Davis Steering Mechanisms, Steering Error Curve, Steering Linkages, Different Types of Steering Gears, Slip Angle, Over–Steer and Under–Steer, Reversible and Irreversible Steering, Power–Assisted Steering.

MODULE III PROPELLER SHAFT AND FINAL DRIVE 8

Effect of Driving Thrust, torque reactions and side thrust, Hotchkiss drive, torque tube drive, radius rods and stabilizers, Propeller Shaft, Universal Joints, Constant Velocity Universal Joints, Front Wheel drive, Final drive, different types, Double reduction and twin speed final drives, Multi–axled vehicles, Differential principle and types, Differential housings, Non–Slip differential, Differential locks, Final drive of Crawler Tractors.

MODULE IV AXLES AND TYRES 8

Construction and Design of Drive Axles, Types of Loads acting on drive axles, Full –

Floating, Three–Quarter Floating and Semi–Floating Axles, Axle Housings and Types, Types and Constructional Details of Different Types of Wheels and Rims, Different Types of Tyres and their constructional details

MODULE V SUSPENSION SYSTEM 8

Need for Suspension System, Types of Suspension Springs, Constructional details and characteristics of Single Leaf, Multi–Leaf, Coil, Torsion bar, Rubber, Pneumatic and Hydro – elastic Suspension Spring Systems, Independent Suspension System, Shock Absorbers, Types and Constructional details, Design of Leaf and Coil Springs.

MODULE VI BRAKING SYSTEM 8

Theory of Automobile Braking, Stopping Distance Time and Braking Efficiency, Effect of Weight Transfer during Braking, Theory of Drum Brakes, Loading and Trailing Shoes, Braking Torque, Constructional Details of Drum Brake and its Actuators, Disc Brake Theory, Types and Construction, Hydraulic Braking System, Mechanical Braking System, Pneumatic Braking System, Power–Assisted Braking System, Servo Brakes, Retarders, Types and Construction, Anti–Lock Braking System, Constructional Details. Traction control, Hill assist, Engine brakes (alias Jake brake)

Total Hours - 45

TEXT BOOKS:

1. Kripal Singh, Automobile Engineering, Standard Publisher, New Delhi, 2006
2. R.K. Rajput, A Text–Book of Automobile Engineering, Laxmi Publications Private Limited, 2007
3. N.K. Giri, Automotive Mechanics, Kanna Publishers, 2007

REFERENCES:

1. Heldt P.M., Automotive Chassis, Chilton Co., New York, 1990
2. Newton Steeds and Garret, Motor Vehicles, 13th Edition, Butterworth, London, 2005.
3. Heinz Hazler, Modern Vehicle Technology, Butterworth, London, 2005.

OUTCOMES

On completion of the course student should be able to

- Select suitable frame for different vehicle with justification
- Select suitable steering system for different vehicles with justification.
- Analyze various drive line systems for automobiles.

- Select suitable wheels and tires with justification
- Evaluate the different types of suspension system for vehicle.
- Select and analyze different types of vehicle layouts.

AUC 2212 MECHANICS OF MACHINERY

L	T	P	C
3	1	0	4

OBJECTIVES:

- To understand about the links and different types of pairs and the principles in the formation of mechanisms and their kinematics.
- To study the principles involved in assessing the displacement, velocity and acceleration at any point in a link of a mechanism
- To understand the kinematic aspects of friction involved in machineries such as belts, clutches and brakes
- To analyze the kinematics of machineries such as cam, toothed gearing and gear trains.
- To understand the fundamentals of Vibration and Dynamics

MODULE I MECHANISMS 8+3

Machine Structure – Kinematic link, pair and chain – Grueblers criteria – Constrained motion – Degrees of freedom – Slider crank and crank rocker mechanisms – Inversions – Applications – Kinematic analysis of simple mechanisms – Determination of velocity and acceleration.

MODULE II FRICTION 7+3

Friction in screw and nut – Pivot and collar – Thrust bearing – Plate and disc clutches – Belt (flat and V) and rope drives. Ratio of tensions – Effect of centrifugal and initial tension – Condition for maximum power transmission – Open and crossed belt drive.

MODULE III GEARS 7+3

Gear profile and geometry – Nomenclature of spur and helical gears – Gear trains: Simple, compound gear trains and epicylic gear trains – Determination of speed and torque

MODULE IV CAMS 7+2

Cams – Types of cams – Design of profiles – Knife edged, flat faced and roller ended followers with and without offsets for various types of follower motions

MODULE V BALANCING 8+2

Static and dynamic balancing – Single and several masses in different planes – Balancing of reciprocating masses- primary balancing and concepts of

secondary balancing – Single and multi cylinder engines (Inline) – Balancing of radial V engine – direct and reverse crank method.

MODULE VI VIBRATION 8+2

Free, forced and damped vibrations of single degree of freedom systems – Force transmitted to supports – Vibration isolation – Vibration absorption – Torsional vibration of shaft – Single and multi rotor systems – Geared shafts – Critical speed of shaft.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Rattan.S.S, “Theory of Machines”, Tata McGraw–Hill Publishing Co., New Delhi, 2004.
2. Ballaney.P.L, “Theory of Machines”, Khanna Publishers, New Delhi, 2002.

REFERENCES:

1. Rao,J.S and Dukkipati, R.V, “Mechanism and Machine Theory”, Second Edition, Wiley Eastern Ltd., 1992.
2. Malhotra, D.R and Gupta, H.C., “The Theory of Machines”, Satya Prakasam, Tech. India Publications, 1989.
3. Gosh, A. and Mallick, A.K., “Theory of Machines and Mechanisms”, Affiliated East West Press, 1989.
4. Shigley, J.E. and Uicker, J.J., “Theory of Machines and Mechanisms”, McGraw-Hill, 1980.
5. Burton Paul, “Kinematics and Dynamic of Planer Machinery”, Prentice Hall, 1979.

OUTCOMES:

On completion of the course the students should be able to

- Demonstrate the fundamentals of mechanisms and their applications and able to analyze the kinematic properties of mechanism such as displacement , velocity and acceleration
- Analyze the effect of friction in machines such as belt drives, clutches and brakes
- Understand the basic nomenclature of gears and analyze gear kinematics.
- Kinematic analysis of cams .
- Demonstrate the balancing of any kinematic system
- Analyze different types of Vibrations.

AUC 2213 AUTOMOTIVE ELECTRICAL &ELECTRONICS L T P C
2 0 0 2

OBJECTIVES:

- To learn about working principle and different types battery used in automobile.
- To impart knowledge to the students in the principles of operation and construction details of various Automotive of starting system and charging systems.
- To provide fundamental knowledge about various types of ignition systems.
- To impart knowledge to students about lighting system, wiring system and accessories.

MODULE I BATTERIES 7

Requirements of the vehicle battery, Principle and construction of lead-acid battery Characteristics of battery, battery rating, Maintenance and charging, Diagnosing of lead-acid battery faults - Servicing batteries, Testing batteries. Details of modern storage batteries- ZEBRA battery, Ultra-capacitors, Fuel cells, Sodium sulphur battery, Swing battery.

MODULE II STARTING SYSTEM AND CHARGING SYSTEM 8

Condition of starting Behavior of starter during starting. Series motor and its characteristics. Principle & construction of starter motor. Working of different starter drive units. Care & maintenance of starter motor, Starter switches. Function, Components of DC and AC Charging System for Automobile, construction, operating principle, characteristics, charging circuit controls – cut out, relays, voltage and current regulators, troubleshooting

MODULE III IGNITION SYSTEM 7

Types, construction & working of battery coil and magneto ignition systems. Relative merits, centrifugal and vacuum advance mechanisms. Types and construction of spark plugs, Electronic Ignition system. Digital ignition system.

MODULE IV LIGHTING SYSTEM AND WIRING CRCUTE 8

Lighting Fundamentals and Lighting Circuit ,Conventional Headlamps and LED Lighting System, fog lamps; side and tail light; brake warning lights heater and defrosters, wiring and installation; auto cables; cable colours; cable connectors; wiring harnesses; circuit breakers; fuses, Electrical fuel-pump, Speedometer, Fuel, oil & temperature gauges, air bag electrical diagram, Horn, Wiper system, Trafficator,

wiring system. (Accessories) - Parking assist, Electronic brakes, Power window, automatic lock controls, GPS and Satellite navigation.

Total Hours –30

TEXT BOOKS:

1. Tom Denton “Automobile Electrical and Electronic Systems” 3rd edition,Elsiever Butterworth-Heinemann 2004..
2. Judge,A.W., Modern Electrical Equipment of Automobiles, Chapman & Hall, London.

REFERENCES:

1. Young,A.P. & Griffiths,L., Automobile Electrical Equipment, English Language Book Society & New Press.
2. Robert Bosch Gmbh “Bosch Automotive Electric and Electronics” 5th edition Springer-Vieweg
3. Kholi,P.L., Automotive Electrical Equipment, Tata McGraw-Hill Co. Ltd., New Delhi.

OUTCOMES:

On completion of the course the students should be able to

- Enumerate the working principle and different types battery used in automobile.
- Demonstrate the principles of operation and constructional details of various Aut starting system and charging systems.
- Analyze the starting and ignition systems.
- Evaluate the functioning of modern lighting system and accessories.

AUC 2214 AUTOMOTIVE MATERIAL & METALLURGY

L	T	P	C
2	0	2	3

OBJECTIVES:

- Expose the students with various constitutions of alloys and its effects on adding with steel and also modifying the mechanical behavior of materials.
- To impart knowledge on the structure, properties, phase diagrams and applications of materials so as to identify and select suitable materials for various engineering applications.
- Impart to the students the ability to investigate, analyze and provide solutions to problems arising from metallurgical and materials engineering processes.
- To develop an overall sound knowledge of metallurgical and materials engineering .

MODULE I METALLURGICAL FUNDAMENTALS AND CONSITITUTION OF ALLOYS AND PHASE DIAGRAMS 8

Crystal structure –crystal imperfections– Grain size, Constitution of alloys – Solid solutions, substitutional and interstitial. Phase diagrams- Isomorphous, eutectic, peritectic, eutectoid and peritectoid reactions, Lever Rule, Iron – Iron carbide equilibrium diagram- Development of Microstructure in Iron–Carbon Alloys

MODULE II FERROUS AND NON FERROUS METALS 7

Effect of alloying additions on steel (Mn, Si, Cr, Mo, V Ti & W) - stainless and tool steels – HSLA - maraging steels – cast Irons- Gray, White malleable, Spheroidal Graphite. Copper and its alloys– Aluminium and its alloys – Magnesium and its alloys – Titanium and its alloys - microstructure, properties and applications.

MODULE III HEAT TREATMENT AND STRENGTHENING MECHANISMS 8

Full annealing, normalising, hardening and tempering of steel, Isothermal transformation diagrams, Continuous Cooling Transformation Diagrams, case hardening- carburising, nitriding, cyaniding, carbonitriding – Flame and Induction hardening. Hardenability-Jominy end quench test. Grain size strengthening, Solid solution strengthening, Strain hardening, Yield point phenomenon, dispersion strengthening, fibre strengthening, precipitation strengthening.

MODULE IV POWDER METALLURGY 6

Pressure compaction- Isostatic pressing, powder rolling, forging and extrusion,

explosive compaction. Sintering, Hot pressing and Hot Isostatic Pressing , vacuum sintering, finishing operations – sizing, coining, repressing and heat treatment, Processing of nano materials

List of Experiments

1. Metallographic Examination-Demonstration and Practice
   a. Study of metallurgical microscope.
   b. Specimen preparation for micro structural examination-cutting, grinding, polishing, etching.
   c. Selections of etchants for various metals and alloys.
2. Identification of microstructures of Plain Carbon Steel, Tool Steel, Gray C.I, SG Iron,
3. Heat treatment: Annealing, normalizing, hardening and tempering of steel-Hardness and its microstructure.
4. Study of microstructure of welded (HAZ) and cast component.
5. Hardenability test - Jominy End quench test.
6. Tension test
7. Compression test
8. Torsion test.
9. Deflection test
10. Impact test
11. Double shear test

T- 30, P- 30,Total Hours –60

TEXT BOOKS:

1. Syndney H Avner, “Introduction to Physical Metallurgy”, 2/E Tata McGraw Hill Book Company, 2007.

REFERENCES:

1. Williams D Callister, “Material Science and Engineering” Wiley India Pvt Ltd, Revised Indian Edition 2007.
2. Raghavan. V. Materials Science and Engineering”, Prentice Hall of India Pvt. Ltd, 5th Edition 2007.
3. Kenneth G. Budinski and Michael K. Budinski “Engineering Materials”, PHI / Pearson Education, 8th Edition, 2007.
4. George E. Dieter, Mechanical Metallurgy, McGraw Hill, 2007.

OUTCOMES:

On completion of the course the students should be able to:

- Describe the structure of materials, classify defects and explore the constitutional of alloys for different industrial components.
- Interpret and demonstrate phase diagrams.
- Classify and analyze ferrous and non-ferrous materials with properties and applications.
- Select and apply appropriate heat treatment practices to modify the mechanical behaviour of various materials
- Select and apply appropriate strengthening mechanism to modify the mechanical behavior of materials
- Analyze the various operations involved in the powder metallurgy technique.

AUC 2215	PRODUCTION PROCESS OF AUTOMOTIVE COMPONENTS	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To study about the components produced by powder metallurgy
- To understand the concepts of forming process and know the components produced by this process
- To Know about the principle and methods of gear manufacturing process
- To know about the recent trends for production of automobile components.

MODULE I POWDER METALLURGY PROCESS 6

Process flow chart – Production of metal powders and their raw materials – Manufacture of friction lining materials for clutches and brakes – Testing and inspection of PM parts

MODULE II FORMING PROCESS 9

.Forging – forging of valves – connecting rod, crank shaft, cam shaft, propeller shaft, transmission gear blanks, foot brake linkage, steering knuckles.

Extrusions: Basic process steps, extrusion of transmission shaft, steering worm blanks, brake anchor pins, rear axle drive shaft, axle housing spindles, piston pin and valve tappets.

Hydro forming: Process, hydro forming of manifold and tail lamp housing. Stretch forming – Process, stretch forming of auto body panels – Super plastic alloys for auto body panels.

MODULE III GEAR MANUFACTURING 6

Different methods of Gear manufacture – Gear hobbing and gear shaping machines specifications – gear generation – different methods – gear finishing and shaving – Grinding and lapping of hobs and shaping cutters – gear honing – gear broaching

MODULE IV RECENT TRENDS IN MANUFACTURING OF AUTO COMPONENTS 9

Powder injection moulding – Shotpeen hardening of gears – Production of aluminium MMC liners for engine blocks – Plasma spray coated engine blocks and valves – Recent developments in auto body panel forming – Squeeze casting of pistons – aluminium composite brake rotors.

Total – 30 Hours

TEXT BOOKS:

Heldt,P.M., High Speed Combustion Engines, Oxford Publishing Co., New York, 199

REFERENCES:

1. Haslehurst,S.E., Manufacturing Technology, ELBS, London, 1990
2. Rusinoff, Forging and Forming of metals, D.B. Taraporevala Son & Co. Pvt.Ltd., Mumbai, 1995.
3. Subroff, A.M. & Others, Forging Materials & Processes, Reinhold Book Corporation, New York, 1988. 4. High Velocity Forming of Metals, ASTME, Prentice Hall of India (P) Ltd., New Delhi, 1990.
4. High Velocity Forming of Metals, ASTME, Prentice Hall of India (P) Ltd., New Delhi, 1990.
5. Groover. M.P., Automatic production systems and computer integrated manufacturing, Prentice-Hall, 1990.
6. GE Thyer, Computer Numerical Control of Machine Tools, BH.Newners, 1991.

OUTCOMES:

Students will able to

- Design and produce components by powder Metallurgy process .
- Design and fabricate the forming equipments for production of automotive components.
- Apply the various gear manufacturing methods needed for the automotive components.
- Use the recent trend in manufacturing for making auto Components
-

ENC 2282 WRITTEN COMMUNICATION L T P C
0 0 2 1

OBJECTIVES:

- To help students identify content specific vocabulary and learn its usage.
- To expose them to reading for specific purposes, especially in professional contexts.
- To expose them to the process of different kinds of formal writing.
- To help them learn corporate correspondence for different purposes.
- To train them in preparing effective applications with résumé
- To make them write different types of reports.

MODULE I **4**

Introduction - process of writing – Fundamentals of academic and professional writing – Understanding short, real world notices, messages, etc.

MODULE II **4**

Reading industry related texts (ex. Manufacturing, textile, hospitality sector etc.) for specific information. Writing Instructions and recommendations

MODULE III **6**

Understanding format and conventions of writing email, memo, fax, agenda and minutes of the meeting. Writing email, memo, fax, agenda and minutes of the meeting for various purposes (industry specific)

MODULE IV **6**

Viewing letter of application and Résumé, letter calling for an interview, letter of inquiry and Promotional letter. Writing Functional résumé and letter of application using Edmodo,

MODULE V **6**

Viewing a Video and reading a case study (industry specific) – collaborative writing using Edmodo –reading and information transfer

Writing reports- Survey, feasibility and progress – exposure to discipline specific reports

MODULE VI **4**

Writing Statement of purpose (Higher Education)-- Justifying and writing about one's

preparedness for job (Statement of Purpose highlighting strengths and weaknesses) – Peer evaluation skills through Edmodo.

P- 30; Total Hours –30

REFERENCES:

5. Macknish, C. (2010). *Academic and Professional Writing for Teachers*. McGraw-Hill Education. USA.
6. Whitby, Norman (2014). *Business Benchmark: Pre-Intermediate to Intermediate.* Cambridge University Press, UK.

OUTCOMES:

On completion of the course, the students will have the ability to

- Identify content specific vocabulary and also use them in appropriate contexts.
- Demonstrate reading skills with reference to business related texts.
- Draft professional documents by using the three stages of writing.
- Create different types of documents for various corporate correspondences.
- Write effective letter of applications, résumé and statement of purpose.
- Write business related reports efficiently.

AUC 2216	AUTOMOTIVE CHASSIS LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To Study the constructional details and Structures of different types of frames used in vehicle
- To Study mechanism of different types of steering system
- To Study mechanism of different types of drive line and final drive.
- To study use age of wheels and tyres.
- To Study the fundamental and working of different types of Suspension Systems of Automobiles
- To Study the fundamental and working of different types of Braking Systems of Automobiles.

LIST OF EXPERIMENTS

1. Measurement of Automotive Chassis and Identification of various parts & types of frame and its Cross Section.
2. Evaluate the steering geometry practically by eye vision also find steering value angle of out side lock of front wheel and true turning circle radius.
3. Evaluate the function of different types of clutches and torque converter .
4. Evaluate the function of transmission system (gear box, propeller shaft, universal joint) also determine the gear ratios for each speed & speed of propeller shaft.
5. Evaluate the function of the final drive differential also find the final reduction and wheel reduction.
6. Evaluate the function of different types of wheel & tires also measure the various parameters of wheels and tyre.
7. Identification and function of each components of front and rears suspension system also find the deflection of springs.
8. Study the power steering and manual steering mechanism also find steering gear ratio.
9. Study the function of disc & drum braking system and also find the different hydraulic pressure value of drum &disc brake.
10. Project work.

Total Hours –45 Hours

OUTCOMES:

On completion of the course student should be able to

- Select suitable frame for different vehicle with justification

- Select suitable steering system for different vehicles with justification.
- Analyze various drive line systems for automobiles.
- Select suitable wheels and tires with justification
- Evaluate the different types of suspension system for vehicle.
- Select and analyze different types of vehicle layouts.

AUC 2217	AUTOMOTIVE ELECTRICAL AND ELECTRONICS LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To study the working principle of the various electrical and electronic control devices used in automobile.

STUDY EXPERIMENTS:

- Study of revolution counter circuit
- Study of control of DC motors
- Study of IC 555 timer for motor control

LIST OF EXPERIMENTS:

1. Verify logic gates (AND,OR, NAND, NOR, EX-OR)
2. Lab VIEW basic programming (tank level control)
3. Implementation of half adder and full adder
4. Characteristics of Silicon controlled rectifier (SCR)
5. Addition and Multiplication of 8 bit numbers using 8085
6. Stepper motor control using 8051.
7. Temperature monitoring using Lab VIEW
8. Heating and ventilation control using Lab VIEW.

Total Hours – 45

OUTCOMES:

On completion of the course students should be able to

- Demonstrate the working of various electronic and control devices used in automobiles
- Design simple electronic circuits for automotive applications
- Design stepper motor actuation for automotive applications

SEMESTER V

MSC 3181	LEADERSHIP AND CEO TRAINING	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims at

- Bringing about positive transformation in students' attitude.
- Building unique leadership competencies that would ensure successful transition of students across all career stages.
- Sensitizing students to identify their strengths & weakness and training them to deal with it
- Assisting students in enhancing their expressive ability and inducing a high level of self confidence to manage both business and emotions
- Training students to become more adaptable and flexible to changing business environment

MODULE I INTRODUCTION TO LEADERSHIP 12

Leadership concept - meaning, definitions, importance of leadership, leadership traits. Leadership functions- general functions, listening, observing, managing and decision making. Components of leadership - leaders, followers and situation. Leadership theories – Trait theory, Skills theory, Style theory, Situational theory, Transformational theory, Transactional theory, Path Goal Theory and LMX. Assessing emotional intelligence and exploring the capabilities and inherent traits.through psychometric tests - Multi factor leadership questionnaire and personal reflections

MODULE II LEADERSHIP STYLE AND COMMUNICATION 08

Leadership styles-visionary, Coaching, Affiliative, Democratic, Pacesetting Commanding, Transformational, Transactional. Autocratic, Participative, Laissez-Faire Leader versus Managers. Leadership communication - Rationale, tactic, assertive, formal, informal, communication in crisis- leadership and negotiations, Leadership Presentations-convincing and impressive style

MODULE III LEADERSHIP ROLES 08

Facets of leadership- Leader as an individual – personality and leadership, values, attitudes and ethics of a leader. Leader as a relationship builder- empowering people to meet higher order needs, initiating organization wide motivational programs, involvement with all stakeholders- focusing on organization growth. Leader as an inspirer- motivation and leadership, recognizing and appreciating contributions,

empowering others to lead Leader as an innovator –leader's role in shaping culture and values in an organization. Leader as a Liaison- Leader as team player

MODULE IV LEADERSHIP CHALLENGES AND STRATEGIES 09

Challenges in leadership: Perception of organization culture and values, interpreting the power dynamics in the organization, establishing work life balance. Bad leadership – Reasons and impact.-Case Study of Marissa Mayer-Yahoo.Inc Organizational transformation through efficient leaders-Case study of Apple Inc. Blue Ocean Leadership-Steps to Blue ocean Leadership-Four Pillars of Blue Ocean leadership-Blue Ocean leadership grid

MODULE V LEADERSHIP AND CEO TRAINING 08

Leader as a CEO: Traits of a successful CEO, Key responsibilities of a CEO, the path to be a CEO ,Training on Board Room Discussions, Meeting the CEO –Live sessions with industry CEO's. Requirements of Leadership: - Cognitive skills, Interpersonal skills, Business skills, Strategic skills. Role of Emotional Intelligence in taking up key-positions in the organization.

Teaching Pedagogy:

Nurturing – Based on the identified strengths and weaknesses, training will be given to enhance the strengths and overcome the weakness.

Assessment - Continuous evaluation will be effected through group discussions, oratory assignments and situational enactments. Pre-and post-training assessment through peer reviews and faculty feedback.

Sustained development – Training will be imparted for self-development and monitoring of leadership skills to ensure sustained applicability of the skills learnt.

Total Hours –45 Hours

AUC 3101 DESIGN OF AUTOMOTIVE COMPONENTS L T P C
3 1 0 4

OBJECTIVES:

- To familiarize the various steps involved in the Design Process
- To understand the principles involved in evaluating the shape and dimensions of a component to satisfy functional and strength requirements.
- To learn to use standard practices and standard data
- To familiarize various forces, stresses and strains on several engine components.
- To design different automotive components in accordance with standard design procedure and design criteria.
- To know the basic design procedure of automotive components

MODULE I INTRODUCTION 5+2

Classification of design - Engineering materials and their physical properties as applied to design -Selection of materials - Factors of safety in design - Endurance limit of materials - Design for variable loading – Soderberg, Goodman and Gerber relations.

MODULE II SHAFT AND SPRING DESIGN 7+4

Design of shafts on the basis of strength -Design of shaft on the basis of rigidity- Design of close coiled helical spring subjected to axial loading - Design of leaf springs.

MODULE III DESIGN OF BEARINGS 8+2

Design of bearings - Journal and ball bearings - Bearing life - Static load capacity - Dynamic load capacity - Bearing material- Boundary lubrication - Oil flow and temperature rise.

MODULE IV DESIGN OF GEARS 9+3

Design considerations - Strength of gear teeth - Terminology of gears - Design of spur gears - helical gears - bevel gears and worm gears.

MODULE V DESIGN OF FLYWHEEL 8+2

Determination of the mass of a flywheel for a given co-efficient of speed fluctuation, Engine flywheels stresses of rim of flywheels, Design of hubs and arms of flywheel.

MODULE VI CLUTCH DESIGN 8+2

Principle of operation- Types of friction materials- Single plate clutch- Multiplate clutch- Cone clutch- Energy dissipated due to clutch slip and the time required to reach full speed from rest during the acceleration period.

L – 45; T – 15; Total Hours –60

2. Sigley, “Machine Design”, McGraw Hill,1981.
3. Design Data Book”, PSG College of Technology, Coimbatore,1992

OUTCOMES:

On completion of the course students should be able to

- Illustrate various design aspects and design procedures.
- Design shafts and springs.
- Design various gears used in automotive.
- Design bearings, flywheels and clutches.
- Evaluate the shape and dimensions of a component to satisfy functional and strength requirements.
- Evaluate the various forces, stresses and strains acting on the different engine components.

AUC 3102 AUTOMOTIVE TRANSMISSION L T P C
3 0 0 3

OBJECTIVES:

- To know about the various components in transmission system and drive line units of automobiles.
- To know about the working principle of transmission system and hydrodynamic transmission.
- The students able to know about the various automatic transmission systems in a vehicle.
- The students able to know the applications of automatic transmission in a vehicle.
- To know about the hydrostatic drive principle and working of electric drive in a vehicle.

MODULE I CLUTCH AND GEAR BOX 9

Requirement of transmission system, Different types of clutches, principle & Construction of Single plate and multiplate clutch, centrifugal clutch. Need and Objectives of Gear box. Construction and operation of Sliding mesh, Constant mesh and Synchromesh gearboxes – Determination of gear ratios for vehicles.

MODULE II HYDRODYNAMIC TRANSMISSION 7

Fluid coupling-working principle and Constructional details, Torque capacity and Performance characteristics. Reduction of drag torque in fluid coupling. Torque converter-working principle and constructional details, performance characteristics.

MODULE III EPICYCLIC GEARBOXES 8

Requirements of Epicycle gear system, Epicycle gearbox working and operation and Constructional details. Principle of Planetary gear trains - Wilson Gear box, Hydraulic Control system for Automatic Transmission.

MODULE IV AUTOMATIC TRANSMISSIONS APPLICATION 7

Need for automatic transmission, Chevrolet “Turboglide” Transmission, Continuously Variable Transmission (CVT) – Types and Operations of a typical CVT and applications.

MODULE V HYDROSTATIC TRANSMISSION 7

Hydrostatic drive- various types of hydrostatic systems – Principles of Hydrostatic

drive system. Advantages and limitations. Comparison of hydrostatic drive with hydrodynamic drive, construction and working of typical Janny hydrostatic drive.

MODULE VI ELECTRIC DRIVE 7

Electric drive, layout of electric drive, types- Principle of early and modified Ward Leonard Control system-Advantages & limitations. Comparison of early and modified ward Leonard control system. Hybrid vehicle, fuel cell powered vehicle and solar powered vehicle.

Total Hours –45

TEXT BOOKS:

- Heldt, P.M., "Torque converters", Chilton Book Co., 1962.
- Newton and Steeds, "Motor vehicles", Illiffe Publishers, 1985.
- Devaradjane. Dr. G., Kumaresan. Dr. M., "Automobile Engineering", AMK Publishers, 2013.
- A Text book of Auto Transmission and Electrical systems by K.S Raghu Ram.
- Automotive Transmissions Fundamentals, Selection, Design and Application 2011. Naunheimer, H., Bertsche, B., Ryborz, J., Novak, W.

REFERENCES:

- SAE Transactions 900550 & 930910.
- Hydrostatic transmissions for vehicle applications, I Mech E Conference, 1981
- Crouse,W.H., Anglin,D.L.," Automotive Transmission and Power Trains construction", McGraw-Hill, 1976.
- Heinz Heisler, "Advance vehicle Technology", Butterworth-Heinemann, 2002

OUTCOMES:

- The students will able to know the constructional and working principle of various types of clutch and gearbox.
- The students will able to evaluate the various types of automatic transmission used in automobile vehicle.
- The students can analyze the design ratio of gear box used in a automobile vehicle.
- The students will able to know about the various types of transmission used in automobile vehicle.
- The students will able to know the constructional and working principle of hydrostatic, hydrodynamic transmission.
  The students will able to analyze the merits of electric drive used in a vehicle.

AUC 3103 MEASUREMENTS AND INSTRUMENTATION L T P C
1 0 2 2

OBJECTIVES:

- To learn about the various linear and angular measuring instruments of vari accuracies and ranges.
- To learn about measuring systems for parameters like force, torque temperature.

MODULE I MEASUREMENTS 7

Metrology, Units and standards-measuring instruments, linear and angular measurements, Range, Variance and Standard deviation, slip gauges, Taper and roundness measurements, form measurement, Flatness and surface finish measurements.

MODULE II INSTRUMENTATION 8

Instruments for gears and threads measurement, laser instrumentation, CMM, machine vision systems, Instrumentation for force and torque measurements, Instrumentation for temperature, flow and acoustic measurements. Instrumentation for engine testing.

Laboratory Experiments.

1. Calibration and Error analysis of measuring Instruments.
2. Measuring Instrument Fabrication:
   Fabrication of 0.2 mm accurate simple Vernier caliper.
   Fabrication of 0.2 mm accurate simple Micrometer.
   Fabrication of simple strain gauge load cell etc.
   Fabrication of simple strain gauge, load cell etc.
3. Complete all measurements including intricate internal details of the given component using standard equipment and by other measuring procedures (Quick setting compounds, moulds etc.).
4. Setting up of comparators for inspection (Mechanical / Pneumatic / Electrical).
5. Measurement of angle using Sine bar / Sine Center /Toolmakers microscope /Slip gauge.
6. Measurement of taper using standard balls / rollers.
7. Measurement of straightness and flatness.
8. Measurement of thread parameters.
9. Measurement of gear parameters.

10. Measurement of radius and surface roughness.
11. Measurement of Temperature.
12. Measurement of Displacement, Force and Torque.
13. Measurement of Acoustic Emission.
14. Scanning the surface using Coordinate Measuring Machine (CMM).
15. Measurement using vision system.

L – 15; P – 30; Total Hours -45

TEXT BOOKS:

1. Jain R.K.,"Engineering Metrology", Khanna Publishers, 1994.
2. Alan S. Morris," The Essence of Measurement", Prentice Hall of India, 1997.

REFERENCES:

1. Gupta S. C," Engineering Metrology", Dhanpat rai Publications, 1984.
2. Beckwith T.G, and R. D. Marangoni, "Mechanical Measurement", Addi Wesley 1999.
3. Donald D Eckma, "Industrial Instrumentation", Wiley Eastern, 1985.
4. ASTME," Hand book of industrial metrology" Prentice hall of India, 1988.
5. ASNT," Nondestructive testing handbook Emission" volume5 – acou emission testing, 1994.

OUTCOMES:

Students should be able to

- Measure various engineering specifications with linear, angular, flatness, form and roughness instruments (PO1 & PO2)
- Set up Instrumentation and measurement of threads, gears, force, torque, flow and temperature. (PO1 & PO2)

ENC 3181	COMMUNICATION AND SOFT SKILLS - I CAREER CHOICE	L 0	T 0	P 2	C 1

OBJECTIVES:

- To create awareness of industrial trends and market demands.
- To encourage students to explore career opportunities in an industry and evaluate themselves in relation to industry preparedness

MODULE I **6**

Knowledge about specific industry-Discussion with industry experts --Self evaluating career prospects through survey questionnaire (based on his/her eligibility for taking up a job (industry preparedness)

MODULE II **6**

. Knowing case studies of industries(pertaining to students' choice of career)- Reading and discussing about job markets-goal setting, working on creativity.

MODULE III **4**

SWOC analysis and discussing outcomes--exploring mini projects or case studies of latest industries.

MODULE IV **6**

Writing statement of purpose pertaining to career choice---- Outcomes

MODULE V **8**

Project or case study presentations (Presentation in pairs) -mini project report or case study report.

Total Hours – 30

REFERENCES:

1. Brown,D.(2002). Career Choice and Development. Wiley,J. & Sons.USA
2. Lore,N.(1998). The Pathfinder: How to Choose or Change Your Career for a Lifetime of Satisfaction and Success. Simon & Schuster.USA.
3. Shell, G.R.(2013). *Springboard Launching your Personal Search for Success.Portfolio.USA.*

OUTCOMES:

After the completion of the course, students would be able to

- Speak about their career choice.
- Self evaluate their strengths and weaknesses and speak about it.
- Make effective presentations on case studies or relating to projects.
- Write the statement of purpose relating to their career choice.

AUC 3104	ENGINE TESTING AND EMISSION LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To learn the various performance characteristics of both petrol and diesel engines
- To learn the various constituents of exhaust emission.

LIST OF EXPERIMENTS:

1. Performance study of petrol engine at full throttle and part throttle conditions.
2. Performance study of twin cylinder constant diesel engine.
3. Performance and combustion study of single cylinder constant speed CI engine.
4. Performance study on variable speed single cylinder compression ignition engine.
5. Performance study of variable speed twin cylinder compression ignition engine.
6. Morse test on petrol engines.
7. Determination of volumetric efficiency and optimum cooling water flow rate in IC engines.
8. Head balance test on a Automotive diesel engine.
9. Engine tuning for performance improvement.
10. Measurement of HC, CO, CO2, O2 using exhaust gas analyzer.
11. Diesel smoke measurement.

Total Hours - 45

REFERENCES:

1. Giles,J.G., Vehicle Operation and performance, lliffe Books Ltd., London, 1989.
2. Obert,E.F., Internal Combustion Engine analysis and Practice, International Text Book Co., Scranton, Pennsylvania, 1988. .

OUTCOMES:

After completion of this course the students should be able to

- Analyze the engine performance of given diesel and petrol engine.
- Analyze the friction loss of given IC engine.
- Measure the heat apportion of given IC engine.
- Analyze the petrol and diesel emission with suitable instruments

SEMESTER - VI

MSC 3182	SOCIAL ENTREPRENEURSHIP	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To be able to understand the field of social entrepreneurship and Social problems
- To be able to describe and understand the traits of social entrepreneurs
- To recognize the social business opportunities
- To synthesize the resource mobilization ways for social entrepreneurship
- To understand the social entrepreneurship models
- To recognize the impact of social entrepreneurship on societies

MODULE I INTRODUCTION TO SOCIAL ENTREPRENEURSHIP 7

Introduction - Emergence and Development of Social Entrepreneurship. Social Problems in India: An Overview. Social Development: The Indian Scenario. Emergence of Social Entrepreneurs and Sustainable Solutions to Social Problem. Characteristics and Context of Social Entrepreneurship .The Role of Social Entrepreneurship in Societies & Economies.

MODULE II SOCIAL ENTREPRENEURSHIP: DRIVERS AND CHALLENGES 7

The Drivers of Social Entrepreneurship. Elements of the Social Entrepreneurial Personality. Challenges of financial constraints. Challenge to attract and cultivate talented workers. Challenge of evaluation of social entrepreneur impact. Challenge of scaling and its impact. Cases

MODULE III SOCIAL ENTREPRENEURSHIP: OPPORTUNITY RECOGNITION 7

Opportunity Recognition and Planning Process. Opportunities for Social Entrepreneurs. The Nature of Social Entrepreneurial Opportunities. Social Problems into Opportunities. Idea development and conceptualization of social problem. Cases

MODULE IV RESOURCE MOBILIZATION FOR SOCIAL VENTURE 8

Resources at Initial Stage. Social Network as a role of Social Capital. Team and Collective Efforts. Need and Determination of Important Resources. Resource of Knowledge, Skills and Abilities. overview of venture capital and angel investment. Cases.

MODULE V **BUSINESS MODELS AND BUSINESS PLAN FOR SOCIAL ENTERPRISES** **8**

Design Principles of Social Entrepreneurship Business Models , Evaluation of the Root Cause of a Societal Problem. Developing business plan for social ventures. Developing an investor presentation. Feasibility study and report. How to start a business - Procedures for registration of small scale industry

MODULE VI **THE IMPACT OF SOCIAL ENTREPRENEURSHIP ON SOCIETIES AND CASES** **8**

Static Impact of Social Entrepreneurship. Impact of Charitable NGOs vs. Social Entrepreneurship, Impact of For-Profit Companies vs. Social Entrepreneurship. Social entrepreneurship report preparation by students.

Case Study of Social Entrepreneurs

Total Hours –45

REFERENCES:

1. “Social Entrepreneurship : New models of sustainable social change” . Alex Nicholls, Oxford University Press 2006
2. The Process of social value creation : A multiple case study on Social Entrepreneurship in India , Archana Singh Springer 2016
3. “Social Entrepreneurship and social business” Christine K Volkmann, Springer Gabler 2012
4. “Social Entrepreneurship” Manuel London ,Routlege, 2010

OUTCOMES:

The students can able to

- Conceptualize social entrepreneurship in terms of a theoretical framework between changing social values and institutions
- Think and communicate about social values
- Learn about practical models of social change to launch, lead, manage, and evaluate a social venture
- Analyze funding needs and sources for the social venture
- Experience the ideas can be critically and collaboratively examined prior to commitment.

AUC 3211	MODELING AND SIMULATION OF VEHICLE SYSTEM	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To gather knowledge about mathematical modelling technique adopted for different vehicle systems.
- To learn various modelling software and its application in automobile.
- To learn the modelling and simulation technique applies in Automobile.
- To gain knowledge of the different types of simulation software's automotive application and application of FEA techniques

MODULE I COMPUTER FUNDAMENTALS AND TYRE 8

Introduction, Computer fundamentals. Introduction to the modelling and simulation methods of vehicle systems-Fundamental of tyre principles, Vehicle tyre performances in various surfaces, Cornering characteristics of vehicle, Introduction working model two dimensional tyre model.

MODULE II COMPUTER DRAFTING AND MODELLING 7

Fundamental of 2D and 3D drafting. Introduction - 3D geometry - Surface types - Conventions - Attributes - Geometry - Examples of surface modelling - Solid modelling. Vehicle Kinematics, Multi body vehicle system design, Introduction to 3D vehicle design- Mechanisms-various Auto body panels, Introduction to Nastran2D, Nastran4D.

MODULE III VEHICLE FRAME AND STEERING SYSTEMS 7

Vehicle Frame **-** loads, moments and stresses on frame members - Computer aided design of leaf springs - Coil springs and torsion bar springs. Determination of optimum dimensions and proportions for steering linkages ensuring minimum error in steering, Steering Mechanisms, steering mechanisms design and analysis.

MODULE IV SUSPENSION AND FRONT AXLE 7

Suspension computer models & simulations using MATLAB/Simulink, Fundamental concepts of vehicle vibrations principle. Bumper design computer model - moments and stresses at different sections of front axle. Determination of bearing loads at Kingpin bearings.

MODULE V CLUTCH AND GEAR BOX 8

Torque capacity of clutch, design of four speed gear boxes. Drive train model, computer modelling using MATLAB/Simulink-Analysis of loads

MODULE VI CRASH AND READ AXLE 8

Vehicle Collision analysis, Fundamental law of motion, energy and momentum forces and moments 2D and 3D computer models for calculation of impact forces. Computer aided design of propeller shaft. Modelling of final drive. Roll overs analysis, Modelling and analysis of axles. Introduction to the ADAMS vehicle design software. Finite Element modelling (FEA) and failure analysis stress. Deformation calculation.

Total Hours –45

Term work

- Two and three dimensional tyre model
- 3D vehicle design mechanisms, various Auto body panels
- Suspension model and simulations using MATLAB/Simulink
- Computer aided design of propeller shaft and final drive gearing.
- Finite Element modelling(FEA) and failure analysis
- Individual vehicle design project.

TEXT BOOKS:

1. Dean Averns, " Automobile Chassis Design ", llliffe Books Ltd, 1992.
2. Radhakrishnan.P. and Kothandaraman.C.P., "Computer Graphics and Design", Dhanpal Rai & Sons, Delhi 1990.

5. Heldt.P.M., "Torque converter", Chilton Book Co., New York, 1982.
6. Ramamurthi.V., "Computer Aided Design in Mechanical Engg"., Tata McGraw Hill, New Delhi, 1987.
7. Naim A Kheir system modeling and computer simulation Marcel Dekker Inc 1996
8. Hatmut Bossel Modeling and simulation Volume 1
9. Michael Blundell,Damian Harty –The multibody systems approach to vehicle dynamics Elsevier 2004
10. Gui Rong Liu S S Quek The finite element method:A Practicalcourse Butterworth Heinemann 2003.

OUTCOMES:

On completion of the course students should be able to

- Identify the fundamental the modelling and simulation methods of vehicle systems.
- Apply the concepts and create two and three dimensional tyre models.
- Design the vehicle frame and steering systems by recall the basic concept
- Develop mathematical model and analyse the performance characteristics of Suspension model using MATLAB/ Simulink.
- Generate the mathematical model and estimate clutch and transmission performances
- Assess the crashworthiness performance of vehicle body associate with FEA techniques.

AUC 3212 VEHICLE DYNAMICS

L	T	P	C
3	1	0	4

OBJECTIVES:

- Understand the concept of sources of vibrations and methods to reduce these vibrations
- Gain knowledge about the suspension related vibrations for improving passenger comfort.
- Understand about the stability of vehicle in various terrains.
- Understand characteristics of tyres in different surfaces.

MODULE I VIBRATION BASICS 8+3

Fundamentals of vibration, Classification of vibration, definitions, Mechanical vibration and human comfort. Single degree of freedom, two degree of freedom, multi-degree freedom systems, free, forced and damped vibrations, sources of vibration in automobile, magnification factor, transmissibility, Vibration absorber. Vibration measuring instruments

MODULE II VERTICAL DYNAMICS 7+3

Vertical forces, Fundamental and types of suspension system, Single, Half and full car wheel models, passive, semi active and active suspension, Influence of suspension stiffness, suspension damping, and tyre stiffness. Pneumatic suspension system.

MODULE III LONGITUDINAL DYNAMICS 7+2

Forces acting in longitudinal direction, load distribution, calculation of acceleration, tractive effort and reactions for different drives, stability of a vehicle on a curved track, slope and a banked road.

MODULE IV LATERAL DYNAMICS 7+2

Forces acting in lateral direction, steady state handling characteristics. Transient response characteristics, Direction control of vehicles. Roll center, Roll axis, Vehicle under side forces. Effect of suspension on cornering.

MODULE V WHEELS AND TYRES 7+2

Types of wheel, wheel wobble, wheel shimmy, wheel balancing - recent, statics, dynamic - tyre - requirements, types, testing dynamics, characteristics, power consumed by a tyre, rolling resistance.

MODULE VI DYNAMIC VEHICLE CONTROL TECHNIQUES 9+3

Suspension Control techniques. Anti lock braking control, stability control, Traction control, Bicycle Model, cruise control.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Singiresu S. Rao, Mechanical Vibrations (5th Edition), Prentice Hall, 2010
2. Giri N.K – Automotive Mechanics, Khanna Publishers, 2002.
3. Rao J.S and Gupta. K “Theory and Practice of Mechanical Vibrations”, Wiley
4. J. Y. Wong, Theory of Ground Vehicles, 3rd Edition, Wiley-Interscience, 2001
   Gillespie T.D, “Fundamentals of Vehicle Dynamics”, SAE USA 1992

REFERENCES:

1. Heldt.P.M -”Automotive Chassis”- Chilton Co., New York- 1992
2. Ellis.J.R - “Vehicle Dynamics”- Business Books Ltd., London- 1991
3. Giles.J.G.Steering - “Suspension and Tyres”, Illiffe Books Ltd., London- 1998
4. Ham B, Pacejka - Tyre and Vehicle Dynamics - SAE Publication - 2002.

OUTCOMES:

- Develop the fundament concepts to analyses the vehicle system performance in dynamic condition
- Generate mathematical model and analyze the performance characteristics of Suspension
- Analyse the performance at different surfaces like curved track, slope and a banked road.
- Discuss the handling characteristics and Transient response characteristic associate with the effect of suspension on cornering.
- Demonstrate characteristics wheels and tyre dynamics control systems.
- Apply the knowledge of modern control methods to develop vehicles for modern scenario.

ENC 3281	COMMUNICATION AND SOFT SKILLS - II	L	T	P	C
	CONFIDENCE BUILDING	0	0	2	1

OBJECTIVES:

- To develop professional skills like work ethics, analytical skills, presentation skills etc.
- To train them in problem solving skills and leadership skills pertaining to industries.
- To train them in team building skills.
- To train in setting up career goals

MODULE I **6**

Brief about Multinational companies- Analysing work ethics of multinational companies and small industries- discussing as pairs-Knowledge about etiquette (different types)

MODULE II **6**

Visit to an Industry and prepare reports --Critically reading of industry specific journal articles and write ups-- preparing reports.

MODULE III **4**

Analysing problem solving situations in industries (relating to application of core subject to specific jobs) and discussing about them- working on a sample case

MODULE IV **6**

Developing Leadership in team projects-- debating about various aspects of leadership: for example, responsibility and reliability-time management

MODULE V **8**

Team building skills-- group discussions pertaining to industries-- presenting career goals. -- preparing for interviews- interpersonal skills

Total Hours – 30

3. Pai, A. (1993).How to Develop Self-Confidence. Amazon.com
4. Wentz,F.H.(2012). Soft skills training: A Workbook to Develop Skills for Employment. Amazon.com

OUTCOMES:

After completing the course students would be able to

- Exhibit critical reading skills through review of industry specific articles.
- Provide solutions to problem based situations.
- Exhibit leadership qualities by debating over industry specific issues.
- Participate in group discussions confidently.
- Present their career goals.

AUC 3213	VEHICLE SYSTEM SIMULATION LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To train the students for developing 2D, 3D and solid model of various components of automobiles.
- To train the students to analyze the characteristics of various structures under load of automotive components

LIST OF EXPERIMENTS:

1. Two dimensional mechanisms.
2. Forward Vehicle Dynamics Two dimensional mechanisms and vehicle analysis.
3. Working Model 2D
4. Introduction to 3D vehicle design SOLIDWORKS.
5. Mechanisms, Door, Auto Body.
6. suspensions Simulations
7. Vehicle vibrations principles
8. Drive train dynamics
9. energy and momentum Forces and Moments 2D and 3D Computer models
10. Finite Element Modeling (FEA) and failure analysis Stress, deformation calculations

Total Hours –30

OUTCOMES:

On Completion of the course students should be able to

- Create three dimensional tyre model using basic concepts
- Develop vehicle design mechanisms and various Auto body panels
- Generate mathematical model and analyse the performance characteristics of Suspension model using MATLAB/ Simulink.
- Analyze the propeller shaft and final drive under various load conditions
- Discuss the drive train dynamics and devise Finite Element analysis (FEA) under vibration and failure condition.
- Create Individual vehicle design report

AUC 3214 VEHICLE DYNAMICS LABORATORY

L	T	P	C
0	0	3	1

OBJECTIVES:

- Measure forces due to dynamic imbalance of a rotating shaft.
- Compute magnitudes and locations of balancing masses in two given planes.
- Implement balancing masses.
- Measure forces after balancing and assess the effectiveness of the balancing design

LIST OF EXPERIMENTS:

1. Governors - Determination of sensitivity, effort, etc.
2. Cam - Study of jump phenomenon and drawing profile of the cam.
3. Gyroscope-Verification of law's -Determination of gyroscopic couple.
4. Determination of critical speed of shaft with concentrated loads.(Whirling of shaft)
5. Balancing of reciprocating masses.
6. Balancing of rotating masses.
7. Determination of moment of inertia for connecting rod and flywheel.
8. Vibrating system Spring mass-system-Determination of damping co-efficient of single degree of freedom system.
9. Determination of influence co-efficients for multidegree freedom suspension system.
10. Determination of transmissibility ratio - Vibrating plateform.
11. Determination of torsional frequencies for compound pendulum and flywheel –system with lumped Moment of inertia
12. Transverse vibration –free- Beam. Determination of natural frequency and deflection of beam.
13. Estimation spring rate of leaf spring
14. Design and determination of spring rate of coil spring
15. Testing of damper – determination of damping rate

Total Hours –30

OUTCOMES:

- Ability to analyze kinematics of the three-dimensional particle motion in various coordinate systems: cartesian, natural and cylindrical.
- Understanding of the concepts of displacement, velocity and acceleration as vectors and how to determine them.
- Understanding of the notion of a force as a vector.

- Ability to understand concepts of kinetic, potential and mechanical energies and the concept of a conservative force.
- Understanding of the concepts of power and mechanical efficiency.
- Ability to analyze particle dynamics
- Ability to make a right decision related to a choice of the system of particles whose motion is to be studied.
- Ability to correctly draw the free-body diagram (FBD) for the system.
- Ability to write and solve Newton equations of motion for the system.
- Ability to use concepts of angular displacement, angular velocity and angular acceleration.
- Ability to draw a FBD for a system of rigid bodies.
- Ability to determine mass moment of inertia for some simple body geometries.
- Ability to use principles derived from Newton's second law, including Work & Energy.

AUC 3215	VEHICLE DESIGN LABORATORY (C-LANGUAGE, CATIA)	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To learn to generate part models assembly of various machine components and systems using modeling packages
- To generate part and assembly models of actual Mechanical Products

INTRODUCTION TO AUTO CAD **9**

Getting into Auto CAD. Drawing Editor, Menus, Co-ordinator systems, Creating adrawing. Line input methods, Angle measures, Circle-5 methods, Unity commands.Organising a Drawing Area: Limits, Zoom all, Drawing Aids, Grid, Shape, Ortho,Function keys, Entity creation, Arc, Point, Polygon, Donut, Trace, Ellipse. EditingCommands: Erase, Object selection methods, U, Oops, Redo, Move, Copy, Mirror,Rotate, Scale, Array.Two-Dimensional geometrical construction curves – Projection of points – Projection of solids – Three dimensional views of simple solids.

MODELING SOFTWARE APPLICATION **36**

Introduction of Modelling Software, Formatting of 2D and 3D objects.3D Part Modeling – Protrusion, cut, sweep, draft, loft, blend, rib, round, chamferEditing-Move, Pattern, Mirror Assembly- Creating assembly from parts-assembly constrains Conversions of 3D solid model to 2D drawing – different views, sections, isometric view and dimensioning Introduction to Surface Modeling Introduction to File import, Export – DXF, IGES, STL, STEP 3D Modeling of machine elements like Flanged coupling, screw, jack etc.,

NOTE: Any one of the 3D MODELING softwares like Pro/E, IDEAS, CATIA UNIGRAPHICS, AutoCAD to be used

LIST OF EXPERIMENTS:

1. 2D – Drawing
2. 3D – Drawing
3. Simple drawing using c- language
4. Piston development CATIA –C
5. Radiator Fan
6. Helical spring design
7. Tension Spring design
8. Leaf Spring design
9. Connecting ROD assembly design

10. Tyre design
11. Wheel – Spoke , Alloy

Total Hours – 45

5. Sham Tikoo, "AutoCAD 2002 with Applications", Tata McGraw-Hili Publishing Company, New Delhi, 2002.

OUTCOMES:

On completion of the course the students should be able to

- Generate solid models and 2-D drawings of products adhering to standards
- Generate part models assembly of various machine components and systems using modeling packages.
- Evaluate various codes and specifications of BIS concerned with engineering Drawings.
- Generate solid models and 3-D drawing for simple components

SEMESTER – VII

AUC 4101	**VEHICLE MANAGEMENT SYSTEM**	**L**	**T**	**P**	**C**
		2	**0**	**0**	**2**

OBJECTIVES:

- To understand the principle of electronic engine management systems.
- To have an understanding about the management SI and CI engines.
- To understand about engine pollutant formation and management.
- To understand the principle of vehicle management systems

MODULE I FUNDAMENTALS OF AUTOMOTIVE ELECTRONICS 7

Components for electronic engine management system, open and closed loop control strategies, PID control, Look up tables, introduction to modern control strategies like Fuzzy logic and adaptive control. Parameters to be controlled in SI and CI engines .Sensors and actuators.

MODULE II MANAGEMENT OF SI AND CI ENGINES 8

Layout and working of SI engine management systems. Group and sequential injection techniques. TBI, MPFI and GDI systems. electronic ignition system, Electronic spark timing control. Diesel injection, Pilot, main, advanced post injection and retarded post injection techniques. Electronically controlled Unit Injection system. Layout of the common rail fuel injection system.

MODULE III MANAGEMENT OF POLLUTANTS 7

Emission from automobiles, transient emission, effect of pollutants, global warming, formation of pollutants in SI engines, formation of pollutants in CI engines. Noise pollution and control. Measurement of pollution. NVH.

MODULE IV VEHICLE MANAGEMENT SYSTEMS 8

Sensors for throttle position, mass air flow, crank shaft position, cam position, engine and wheel speed, steering position, tire pressure, brake pressure, steering torque, fuel level, crash, exhaust oxygen level, knock, engine temperature, manifold temperature and pressure , actuators, various types of actuators. ABS, ESP

Total Hours – 30

TEXT BOOKS:

1. Tom Weather Jr and Cland C.Hunter, “Automotive Computers and Control

System", Prentice Hall Inc., New Jersey, 1984.
2. William B.Ribbens Butterworth, Heinemann,"Understanding Automotive Electronics",5th Edition, 1998.
3. Jeff Hartman, "How to tune and Modify Automotive Engine Management System"Motor books, 2013.
4. Ganesan.V., "Internal Combustion Engines", Tata McGraw-Hill Publishing Co.,New Delhi, 2003.
5. M.L.Mathur and R.P.Sharma, "A course in Internal combustion engines",Dhanpat Rai & Sons Publications, New Delhi, 2001.

REFERENCES:

1. Robert Bosch ,"Diesel Engine Management", Wiley Publications, 2006
2. Robert Bosch , "Gasoline Engine Management", Wiley Publications, 2006
3. Robert N Brady, "Automotive Computers and Digital Instrumentation'", A reston Book, Prentice Hall, Eagle Wood Cliffs, New Jersey, 1988.
4. Bechtold, "Understanding Automotive Electronics", SAE, 1998
5. John B.Heywood, "Internal Combustion Engine Fundamental", McGraw-Hill, 1988

OUTCOMES:

On completion of the course the students should be able to,

- Analyze the requirement and components of engine management system.
- .Select sensors for ignition and injection system with justification.
- Analyze design and operating parameters on emission and select suitable control devices.
- Identify various sensors in VMS and link the actuators

AUC 4102	FINITE ELEMENT ANALYSIS OF AUTOMOTIVE COMPONENTS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand about the concept of Continuum Mechanics
- To Study about the 2D and 3D parametric elements
- To know the static and dynamic problems in FEA

MODULE I INTRODUCTION **7**

Basic concepts of finite element method. Review of various approximate methods in structural analysis, Stiffness and flexibility matrices for simple cases. Direct stiffness method- plane truss idealization, joint forces and displacements. Formulation of governing equations and convergence criteria.

MODULE II DISCRETE ELEMENTS **7**

Use of bar and beam elements in structural analysis. Computer implementation of procedure for these elements. 1D problems with second order equations, weak formulations-Examples from solid mechanics and heat transfer.

MODULE III CONTINUM ELEMENTS **7**

Classification of C0 C1 continuous problems, parameter functions and its properties – completeness and compatibility condition. Different forms of 2D elements and their applications for plane stress, plane strain and axi-symmetric problems. Consistent and lumped formulation. Use of local coordinates. Numerical integration.

MODULE IV ELEMENTS **8**

Isoparametric quadrilateral elements-Shape functions for rectangular elements, Isoparametric mapping for quadrilateral elements, Numerical integration for quadrilateral elements, Four node quadrilateral element for 2DBVP,Eight node serendipity element for 2D BV

MODULE V FEA IN THERMAL ANALYSIS **8**

Finite element analysis of 2D steady state thermal analysis-Galerkin approach-General two dimensional heat conduction-Axisymmetric heat conduction-Triangular, Quadrilateral elements-Simple problems using three

noded triangular only.

MODULE VI FEA IN STRUCTURAL ANALYSIS 8

Finite element analysis of plane elasticity 2D problems-Introduction to theory of elasticity-plane stress-plane strain and Axisymmetric formulation-Element matrices using energy approach-Simple problems using three noded triangular element only.

Total Hours –45

TEXT BOOKS:

1. Segerlind.L.J., " Applied Finite Element Analysis ", Second Edition, John Wiley and Sons Inc., New York, 1984.

REFERENCES:

1. Bathe.K.J. and Wilson.E.L., " Numerical methods in finite elements analysis ", Prentice Hall of India Ltd, 1983.
2. Cook.R.D., "Concepts and Applications of Finite Element analysis ", 3rd Edition, John Wiley & Sons, 1989.
3. Krishnamurthy.C.S., " Finite Elements analysis ", Tata McGraw Hill, 1987.
4. Ramamurthi.V., " Computer Aided Design in Mechanical Engg. ", Tata McGraw-Hill, 1987.

OUTCOMES:

- Apply the numerical methods involved in Finite Element basics of truss, beam, membrane, plate, and continuum elements
- Create of planar one-dimensional (truss and beam) elements having linear, quadratic, and cubic shape functions
- Develop the Global, local, and natural coordinates for analysis.
- Generation of planar, plane stress two-dimensional elements (rectangular and quadratic quadrilateral elements)
- Devise of 3-dimensional elements (four-node tetrahedral and eight-node brick elements)
- Compile the formulation and basic energy and weighted residual formulation of finite elements.

AUC 4103 EVALUATION OF VEHICLE PERFORMANCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the minimum power requirement for vehicle propulsion and significance of aerodynamic drag forces related to vehicle performance.
- To acquire knowledge about the transmission and engine system performance analysis for ground vehicles.
- To expose the modern control system evaluation for engine, steering, suspension and brake systems.
- To acquire knowledge about various types of testing methods used for validating the vehicle design.

MODULE I VEHICLE PERFORMANCE 7

Vehicle performance estimation and prediction, Aerodynamic drag, methods of estimation of resistance to motion, power requirement for propulsion, Power plant characteristics & transmission related requirements, vehicle acceleration, maximum speed, and gradiability drive systems comparison.

MODULE II VEHICLE TRANSMISSION 7

Vehicle transmission performance: Characteristics and features of friction clutches, mechanical gear transmission and Epicyclic gear boxes, fluid coupling & torque converters. Transmission efficiency measurement

MODULE III ENGINE PERFORMANCE 7

Operational performance: Engine performance and operating characteristics at full load and part load condition, fuel economy, effect of vehicle condition, tire and road condition, traffic condition and driving habits on fuel economy.

MODULE IV VEHICLE SYSTEM CONTROL 8

Different Vehicle Control Systems, Braking arrangements and characteristics, weight transfer, steering arrangements, rigid & independent suspension, roll centre, torsion bar, stabilizer, and radius bar. Drive by wire technology, vehicle safety systems.

MODULE V TESTING AND VALIDATION 8

Vehicle performance Testing: Laboratory testing – Testing of major components of vehicle like clutch, suspension, braking, steering etc., Engine testing- noise vibrations, emission, power &fuel consumption, brake testing on the road.

MODULE VI VEHICLE TESTING 8

Vehicle testing on chassis dynamometers, Road and Track testing, Initial inspection, running in and durability, extensive driving, maximum speed & acceleration, handling and ride characteristics on different road surfaces, ride comfort, corrosion testing.

Total Hours – 45

TERM WORKS

- Estimation of power requirement for vehicle propulsion considering Aero dynamic describe the ride characteristics for different road surfaces. Also compute maximum acceleration with respect to speed
- Analyse the performance and characteristic of transmission system for different friction values
- Engine testing for finding the performance characterises and on road fuel consumption measurement
- Brake Efficiency measurement and Noise and vibration measurement in passenger compartment
- Study of chassis dynamometer for vehicle performance testing and study of vehicle component testing

Case Studies

- Study the Automatic Transmission system performances for different speed and Load conditions
- Study the engine performance characterises for various load and speed condition
- Evaluation human ride comfort characteristics for ISO class A to Class E road surfaces

REFERENCES:

1. Gousha H.M., “Engine performance diagnosis & Tune up shop manual”
2. J.G. Giles, “Vehicle Operation & performance”.
3. W.H. Crouse & D.L. Anglin, “Motor vehicle inspection”.
4. SAE Transactions papers – 831814 / 820346 / 820371 /820375
5. CIRT &VRDE Manuals

OUTCOMES:

On completion of the course the students should be able to

- Estimate the power requirement for vehicle propulsion by considering aero dynamic effects and the ride characteristics analysis for different road surfaces. Also able to compute maximum acceleration with respect to vehicle speed.
- Demonstrate basic elements to investigate the performance of transmission

system and brake efficiency measurement.

- Analyze the various performance characteristics of Engines
- Analyze the requirements of modern control methods in steering, suspension and braking systems.
- Compute the vehicle subsystem performance characteristics using fundamental concepts
- Validate the vehicle design with vehicle performance testing, component testing in chassis dynamometer, vibration and noise measurements in passenger compartment

AUC 4104	TWO AND THREE WHEELERS TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

- Gain the knowledge about the constructional and design aspects of two wheelers and three wheelers.
- Develop the ability to know the operating characteristics two and three wheelers
- To create an experience to know the working principle and different types engine, transmission system of two and three wheelers
- To impart knowledge to the learners in the principles of working and operation and of various barking systems. brakes, wheels and tyres
- Enhance ability of the learners about working principles of electrical and electronic subsystem and sensors are using in two wheeler sand three wheelers.

MODULE I INTRODUCTION AND POWER PLANT 7

Classification and layout of two wheelers (Motorcycles, scooters mopeds) and Three wheelers, (Auto rickshaws, pickup van and delivery van) applications and capacity – goods and passengers; study of technical specifications of Two and Three wheelers; Selection of engine, Design considerations of power plants requirements for lubrication, cooling, starting, Recent engine developments

MODULE II STEERING AND TRANSMISSION SYSTEM 8

Steering geometry, steering column construction; steering system for three wheelers, controls on handle bar of two wheelers. Clutch – requirements; different types -need of primary reduction, selection of transmission – gear transmission, gear shift mechanism, belt transmission, automatic transmission (Continuous Variable Transmission – CVT),final drive and differential for three wheeler;

MODULE III SUSPENSION, BRAKES, WHEELS AND TYRES 8

suspension requirements; design considerations; Front and rear suspension systems layouts. Springs and dampers. Design consideration of brake; types of brakes: disc; drum; braking mechanism: mechanical; hydraulic and servo; ABS in two wheelers, Front and rear brake link lay-outs: wheel types Spoked wheel, cast wheel and Disc wheel; Tyre requirements details

MODULE IV FRAMES, BODY AND COMFORT 7

Types of frame; construction; loads acting on frame; design consideration; materials;

three wheeler layout; aerodynamic; aesthetic and ergonomics considerations regulations. Handling characteristics; driver and pillion seating arrangement; ergonomics and comfort; road holding and vehicle stability; gyroscope effect; riding characteristics;

Total Hours – 45

TEXT BOOKS:

1. Irvind, P.E., Motor cycle Engineering , Temple Press Book, London

REFERENCES:

1. The Cycle Motor Manual, Temple Press Ltd., London.
2. Marshall Cavensih, Encyclopedia of Motor cycling,20 Volumes,New York and London.
3. Bryaut,R.V., Vespa Maintenance and Repair series.
4. Raymond Broad, Lambretta – A practical guide to maintenance and repair.

PRACTICAL SESSION: **Hours: 15**

1. Port timing diagram and Port area measurement for Two wheeler (Scooter) Engine and Three Wheeler (Auto rickshaw) Engine.
2. Dismantling and Assembling of two stroke petrol Engine (Zentap) with cubic capacity compression ratio and brake power measurements.
3. Dismantling and Assembling of four stroke petrol engine with cubic capacity compression ratio and brake power measurements.
4. Two and Three wheeler lightning and rooting system inspection and maintenance.
5. Inspection and Testing of Battery for various load condition including measurement of specific gravity.
6. Inspection service and Maintenance of Two and Three wheeler.
7. Removal refitting of wheels and tyres and measurement of aspect ratio and other dimension of the tyre.
8. Inspection and Measurement of pollution is Two and Three wheeler.
9. Actual compression ratio measurement of four stroke petrol Engine (150 cc).

OUTCOME:

On completion of the course students should be able to

- Extrapolate the constructional details of various types of two and three wheelers.
- Analyze the requirement and performance of the two and three wheelers

transmissions systems.

- Summarize the construction of different types steering and suspension system.
- Demonstrate the construction details and design consideration of Braking system, wheel and tyres.
- Apply the basic element while develop a two wheeler frames and body.
- Develop comprehensive knowledge about the functioning of two wheelers and three wheelers and analyze the vehicle performance.

AUC 4105 VEHICLE MAINTENANCE LABORATORY

L	T	P	C
0	0	3	1

OBJECTIVES:

- To study the various maintenance the reconditioning of vehicle parts.
- To train the structures in identifying the fault and rectification.
- To impart the fundamental knowledge in evaluation and maintenance.
- To know about the various methods of maintaining vehicles and their subsystems.

STUDY EXPERIMENTS:

- Study and layout of an automobile repair, service and maintenance shop.
- Safety aspects with respect to man, machine and tools.
- General procedures for servicing and maintenance schedule.
- Fault diagnosis and service of transmission system
- Fault diagnosis and service of Electrical system like battery, starting system,
- charging system, lighting system etc.
- Fault diagnosis and service of vehicle air conditioning system

LIST OF EXPERIMENTS

1. Minor and major tune up of gasoline and diesel engines.
2. Calibration of Fuel injection pump.
3. Cylinder reboring - checking the cylinder bore, Setting the tool and reboring.
4. Calibration of fuel injection nozzle and tester
5. Removal and fitting of tire and tube.
6. Fault diagnosis of ignition system and spark plug cleaner & tester
7. Adjustment of pedal play in clutch, brake, hand brake lever and steering wheel play.
8. Wheel alignment procedure for servicing and maintenance.
9. Fault diagnosis of brake/clutch
10. Calibration of head lamp aligner
11. Calibration of Refacer of valve.

Total Hours –45

TEXT BOOKS:

- Vehicle maintenance and garage practice by Jigar A.Doshi Dhru U.Panchal, Jayesh P.Maniar. 2014
- A Practical Approach to Motor Vehicle Engineering and Maintenance 3rd

Edition by Allan Bonnick.

REFERENCES:

- Vehicle Service Manuals of reputed manufacturers
- Advanced Automotive Fault Diagnosis by Tom Denton 2011.
- Nissan Patrol Automotive Repair Manual: 1998-2014 by Haynes Manuals Inc.
- Automobile electrical manual a comprehensive guide by Haynes manual car repair.

OUTCOMES:

On completion of the course the students should be able to

- Identify the analyze faults in a vehicle.
- Demonstrate the procedure for reconditioning and repairing of various component and subsystems of vehicles.
- Illustrate the complete methodology of evaluation and maintenance of automobile.
- Perform dismantling & assembling of automobile components using tools.
- Enumerate the importance of maintenance and also the step by step procedure for maintaining the various automotive subsystems.

AUC 4106	ADVANCED AUTOMOBILE COMPONENTS MANUFACTURING LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To familiarize the various mechanisms available in the, milling ,gear hobbing and grinding machines.
- To know the various tools and work holding devices used in machining processes
- To practice the basic machining operations performed in the special purpose machines
- To have knowledge about product manufacturing phases and experience working in teams to manufacture a product.
- To know the application of various CNC machines

- Milling Machines
    1. Milling Polygon Surfaces
    2. Keyway Milling
- Grinding / Polishing
    3. Surface Grinding
    4. Cylindrical Grinding
- Machining Components for Assembly of different fits.
    5. Bush and Shaft
    6. Step turning with drilling using capstan lathe
- Gear Machining
    7. Gear Milling
    8. Machining using CNC vertical machining
    9. Machining using CNC turning tap
- Project work
    10. Combined Skill (Each team has to make one simple product)

Total Hours –45

OUTCOMES:

On completion of the course, students should be able to:

- Select suitable machining operations for automobile components.
- Equip with good practical knowledge required in the core industry.
- Write the CNC program for particular machining operations.
- Compute the various operations in the CNC machine.
- Interpret the different machining process using different techniques.

- Apply and analyze the machining operations performed in the special purpose machines

AUC 4107	INTERNSHIP	L	T	P	C
		0	0	0	1

OBJECTIVES:

- To expose the students to industrial environment
- To study the industrial process, product and services
- To study the resources used in industries

OUTCOMES:

- To analyze the present process product for improvement
- To prepare consolidated with findings and conclusion
- To present a seminar on the outcome of the internship

The students will undertake internship training in automotive and related industry for one month during the summer vacation. The student should be submit a report and make presentation about learning outcome for the industry. The credit will be awarded in the 7^{th} semester.

SEMESTER - VIII

		L	T	P	C
AUC 4211	**PROJECT WORK**	**0**	**0**	**24**	**12**

OBJECTIVES:

- To enable the students to apply their acquired knowledge during the course of study and provide solutions to real life problems

OUTCOMES:

- To identify and define the problem
- To carry out literature survey related to the problem and critically review the literature
- To device suitable methodology by adopting methods and modeling & analytical techniques
- To do research on a specified area and find a solution for the objective
- To prepare a consolidated report with all findings and conclusion
- To publish the findings in national / international conference in the form of research paper.

PROFESSIONAL ELECTIVES

AUC X01	HOMOLOGATION AND TESTING	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To provide knowledge on, vehicle certification
- To get familiarized with Vehicle testing procedures

MODULE I HOMOLOGATION **7**

Certification of vehicles, ARAI, NATRIP, GARC, Standards, Testing procedures, Testing conditions, Preparation of vehicles for testing.

MODULE II TESTING **8**

Testing of Vehicles, components, systems such as Engine, Powertrain, Passive safety, EMC (Electrical and Electronic components), NVH, Fatigue, Material, Tyres and Vehicle dynamics, Brakes, HVAC, Crash worthiness

Total Hours: 15

REFERENCES:

1. ARAI Standards and case studies
2. www.araiindia.com

OUTCOMES:

- Ability to demonstrate the procedure for vehicle certification
- Ability to explain the testing procedure of vehicle systems and components.

AUC X02	GEOMETRIC DIMENSIONING AND TOLRENCING	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To provide knowledge on, Dimensioning and Tolerancing.
- To get familiarized Engineering Drawings

MODULE I FUNDAMENTALS 7

Drawing standards, Dimensions, Tolerances, Notes used in drawings, Limits, Fits and Tolerance, Key GD&T Terms, Symbols and ,Modifiers, Rules and Concepts

MODULE II GD&T 8

Datum system. Targets and Features, Orientation, Runout, Concentricity, Symmetry and profile, Applications.

Total Hours –15

TEXT BOOKS:

1. Fundamentals of Geometric Dimensioning and Tolerancing, Third Edition, Alex Krulikowski
2. Geometric Dimensioning and Tolerancing: Workbook and Answerbook, ASME, James D. Meadows

REFERENCES:

1. Geometric Dimensioning and Tolerancing: Applications and Inspection, Prentice Hall, 2002 - Technology & Engineering , Gary.K.Griffith.

OUTCOMES:

- Ability to select suitable dimensions and tolerances for particular application
- Ability to prepare engineering drawings for components

AUC X03	VEHICLE ENGINEERING & INTEGRATION	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To provide knowledge on latest practices in the vehicle manufacture
- To get familiarized with practices on vehicle packaging and integration

MODULE I VEHICLE ENGINEERING 7

Production of components, testing of components, making of sub-systems, testing of sub-systems, prototype of vehicle

MODULE II VEHICLE INTEGRATION 8

Integration of vehicle components, subsystems and systems into vehicle, Integration of soft wares to test the design of vehicle, Vehicle packaging such as engine packaging, interior packaging, auto jewels etc for a particular model to the requirement.

Total Hours – 15

TEXT BOOKS:

1. The Fundamentals of Car Design and Packaging Paperback – Import, 1 Feb 2009 by Stacey Macey

REFERENCES:

1. The Fundamentals of Car Design Packaging Read Online.

OUTCOMES:

- Ability to select suitable components for making a particular vehicle.
- Ability to suggest packages for particular vehicle model

AUC X04	AUTOMOTIVE HVAC(Heating Ventilation Air Conditioning)	L	T	P	C
		2	0	0	2

OBJECTIVES:

Upon completion of this course, the student will be able to:

- Identify and use Heating and Air Conditioning Service specialty test equipment and basic mechanics hand tools.
- Visually inspect a heating and air conditioning system and locate obvious troubles.
- Diagnose common heating and air conditioning problems.
- Perform general repair procedures on the heating and air conditioning system including
- Charging the air conditioning system , Recovering and recycling refrigerant, Evacuating the air conditioning system, Removing and replacing heating and air conditioning system components

MODULE I AUTOMOTIVE AIRCONDITIONING FUNDAMENTALS 7

Purposes of Heating, Ventilation and Air Conditioning- Environmental Concerns- Ozone layer depletion- Location of air conditioning components in a car – Schematic layout of a vehicle refrigeration system. Psychrometry – Basic terminology and Psychrometric mixtures- Psychrometric Chart- Related problem

MODULE II AUTOMOTIVE COOLING AND HEATING SYSTEM 8

Vehicle Refrigeration System and related problems- Fixed thermostatic and Orifice tube system- Variable displacement thermostatic and Orifice tube system- Vehicle air conditioning operation Types of compressor- Compressor Clutches- Compressor Clutch electrical circuit- Compressor lubrication- Condensers- Evaporators- Expansion devices- Evaporator temperature and pressure controls- receiver-drier- Accumulators- refrigerant hoses, Connections and other assemblies- Heating system

MODULE III AIR-CONDITIOING CONTROLS, DELIVERY SYSTEM AND REFRIGERANTS 7

Types of Control devices- Preventing Compressor damage- Preventing damage to other systems- Maintaining driveability- Preventing Overheating Ram air ventilation- Air delivery Components- Control devices- Vacuum Controls Containers – Handling refrigerants – Discharging, Charging & Leak detection – Refrigeration system diagnosis – Diagnostic procedure – Ambient conditions affecting system pressures.

MODULE IV AUTOMATIC TEMPERATURE CONTROL AND A/C SERVICING **8**

Different types of sensors and actuators used in automatic temperature control- Fixed and variable displacement temperature control- Semi Automatic- Controller design for Fixed and variable displacement type air conditioning system. Special tools for servicing vehicle air conditioning – Diagnosing components and air conditioning systems- Diagnosing cooling system- Air delivery system Automatic temperature Control system diagnosis and service

Total Hours –30

TEXT BOOKS:

1. William H. Crouse, 'Automotive Air Conditioning', Tata McGraw Hill Publication.
2. 'Automotive Air Conditioning', Mitchell Information Service, PHI.
3. W.H. Hucho, 'Aerodynamic of Road Vehicles, Butterworths Co.
4. Warren Farnell and James D.Halderman, "Automotive Heating, Ventilation, and Air Conditioning systems", Classroom Manual, Pearson Prentice Hall, 2004
5. William H Crouse and Donald L Anglin, "Automotive Air conditioning", McGraw Hill Inc., 1990.

REFERENCES:

1. Mitchell Information Services, Inc., "Mitchell Automatic Heating and Air Conditioning Systems", Prentice Hall Inc., 1989.
2. Paul Weisler, "Automotive Air Conditioing", Reston Publishing Co. Inc., 1990.
3. McDonald,K.L., "Automotive Air Conditioning", Theodore Audel series, 1978.
4. Goings,L.F., "Automotive Air Conditioning", American Technical services, 1974.

OUTCOMES:

- Upon the completion of the course, the student should understand the basic of vehicle air- conditioning system, its components, working principle, control mechanism, service etc.

AUC X05 HYBRID AND ELECTRIC VEHICLE

L	T	P	C
2	0	0	2

OBJECTIVES:

- To familiar with hybrid vehicles and types
- To understand the hybrid vehicle design, architecture and its specification.
- To study the powerplant specifications
- To study the electric drives and its types

MODULE I HYBRID VEHICLES **8**

Performance characteristics of road vehicles, calculation of road load, predicting fuel economy, Grid connected hybrids. DC motors-series wound, shunt wound. Compound wound and separately excited motors AC motors - induction, synchronous, brushless DC motor, switched reluctance motors.

MODULE II HYBRID ARCHITECTURE **7**

Series configuration- locomotive drives, series parallel switching, load tracking architecture. Pre transmission parallel and combined configurations-Mild hybrid, power assist, dual mode, power split, power split with shift, Continuously Variable transmission (CVT). Wheel motors.

MODULE III HYBRID POWER PLANT SPECIFICATIONS **7**

Grade and cruise targets. launching and boosting, braking and energy recuperation, drive cycle implications, engine fraction-engine downsizing and range and performance, usage requirements.

MODULE IV ELECTRIC DRIVES **8**

Early Ward Leonard control system - main features, generator, merits, reverse motion, modified WARD LEONARD control system - main features, modifications. Modern electric drives - main features, advantages of electric drives, limitations of electric drive, variations of torque and speed with armature current Generator, motor, series motor, variations of efficiency with armature current

Total Hours –30

TEXT BOOKS:

1. Mehrdad Ehsani, Yimin Gao, Ali Emadi., "Modern Electric, Hybrid Electric, and Fuel Cell vehicles", Fundamentals, Theory, and Design, CRC Press 2009.

2. Ron Hodkinson and John Fenton, "Lightweight Electric/Hybrid Vehicle ", Butterworth –Heinemann, 2001.

REFERENCES:

1. James Larminie and John Loury, " Electric Vehicle Technology -Explained", John Wiley & Sons.
2. Ronald K Jurgen, "Electric and Hybrid -Electric Vehicles", SAE, 2002.
3 Sandeep Dhameja, "Electric Vehicle Battery Systems", Butterworth – Heinemann,2002.

OUTCOMES:

On completion of the course the students should be able to

- Identify different types of hybrid vehicles
- Identify different types of hybrid architectures and draw layouts
- To find out the power plant specifications.
- Identify different Electric drives for vehicles

AUC X06	VEHICLE DIAGNOSTICS	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To provide knowledge on, diagnostic procedure and instrumentation.
- To get familiarized with the world of vehicle diagnostics

MODULE I INTRODUCTION 8

Diagnostic process, Mechanical techniques, Electrical techniques, Fault codes, Data sources, Basic equipments, Piecoscope oscilloscope, Scanners, Emission testing, pressure testing, Automotive pressure oscilloscope transducer.

MODULE II ENGINE DIAGNOSTICS 7

Si engine management, OBD, Monitors, Misfire detection, Ignition faults, Fuel system, CI engine management, Fuel system and Injection system faults.

MODULE III CHASSIS SYSTEMS 7

Fault Diagnosis of brake system, ABS, Traction control system, Steering system, Suspension system, Transmission systems, Manual and Automatic, Tires

MODULE IV ELECTRICAL AND ELECTRONIC SYSTEMS 8

Diagnosis of Electronic components and circuits, Multiplexing, Diagnosis of lighting and electrical system and components, Instruments, Auxiliaries.

Total Hours – 30

TEXT BOOKS:

1. Advanced Automotive Fault Diagnosis, 4th Ed: Automotive Technology: Vehicle Maintenance and Repair, Tom Denton.
2. Road vehicles - Diagnostic communication Paperback – 2008, Peter Subke

REFERENCES:

1. How To Use Automotive Diagnostic Scanners (Motor books Workshop) Paperback – Import, 1 Aug 2015 Tracy Martin

OUTCOMES:

- Ability to analyze the faults of vehicle systems and set up instrumentation for identifying the faults.
- Ability to design and develop methods for rectifying the faults in vehicle systems.

AUC X07 SPARK ENGINE TECHNOLOGY L T P C

3 0 0 3

OBJECTIVES:

- To gain knowledge on construction, fuel system and ignition system.
- To understand about the cooling and lubricating system.
- To understand the principle of combustion
- To learn about the formation of emission and control technique.

MODULE I ENGINE CONSTRUCTION AND OPERATION 7

Four and two stroke engine - Constructional details, working principle. Otto cycle, Actual indicator diagram, Fuel air cycle. Cylinder layout and configurations. Firing order and its significance. Engine balancing. Materials for engine components.

MODULE II FUEL SYSTEM 7

Gasoline - air mixtures. Mixture requirements - Mixture formation - Carburettor, Choke, Carburettor systems for emission control- Secondary Air Injection. Electronic injection – requirement – Manifold injection – Port injection – Gasoline direct injection – Air assisted direct injection

MODULE III IGNITION SYSTEM 8

Ignition fundamentals, Solid state ignition systems, High energy ignition systems, Electronic spark timing and control. Combined ignition and fuel management systems. Dwell angle calculation, Ignition timing calculation.

MODULE IV COOLING AND LUBRICATION SYSTEM 7

Need for cooling. Types of cooling system – air cooling and Liquid cooled systems. Forced circulation system, pressure cooling system, Evaporative cooling system – Need for Lubrication system. Mist lubrication system, wet & dry sump lubrication, Properties of lubricants, properties of coolant – Recent Technologies.

MODULE V COMBUSTION IN S.I. ENGINES 8

Stages of combustion, normal and abnormal combustion, knocking, Variables affecting Knock,

Features and design consideration of combustion chambers. Flame structure and speed, Cyclic

variations, Lean burn combustion, Stratified charge combustion systems. Heat release correlations.

MODULE VI EMISSION FORMATION AND CONTROL TECHNIQUES 8

Formation of oxides of nitrogen, carbon monoxide, hydrocarbon, aldehydes emission.

Effects of Engine Design - operating variables on Emission formation. Engine Design modifications, fuel modification, evaporative emission control, EGR, air injection,thermal reactors, catalytic convertors, catalytic converter efficiency.

Total Hours – 45

TEXT BOOKS:

1. Ganesan.V., “Internal Combustion Engines”, Tata McGraw-Hill Publishing Co., New Delhi,2012.
2. M.L.Mathur and R.P.Sharma, “A course in Internal combustion engines”, Dhanpat Rai & Sons Publications, New Delhi, 2001.
3. K.K.Ramalingam, “Internal Combustion Engines”, Scitech Publications, Chennai, 2000.

REFERENCES:

1. Heldt P.M., “High Speed Combustion Engines”, Oxford IBH Publishing Co., Calcutta, 1975.
2. Obert E.F., “Internal Combustion Engines Analysis and Practice”, International Text Books Co., Scrantron, Pennsylvania - 1988.
3. William H.Crouse, “Automotive Engines”, McGraw-Hill Publishers, 2011.
4. Ellinger H.E., “Automotive Engines”, Prentice Hall Publishers, 1992.
5. John B.Heywood, “Internal Combustion Engine Fundamental”, McGraw-Hill, 1988.
6. Pulkrabek “Engineering Fundamentals of the Internal Combustion Engines”, Practice Hall of India, 2003.

OUTCOMES:

The student should be able to

- Identify the two and four stroke engine construction.
- Design the fuel system and ignition system.
- Analyze the cooling and lubricating system.
- Determine the parameter affect the combustion phenomenon.
- Control the emission formation in SI engine

AUC X08 COMPRESSION ENGINE TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn the knowledge on basic concepts on Compression Ignition Engines
- To understand various sub components along with its functions.
- To learn combustion process of diesel engine
- To understand different types of combustion chambers.
- To learn the concept of supercharging and turbo charging.
- To understand the performance testing of diesel engines.

MODULE I DIESEL ENGINE BASIC THEORY 8

Diesel engine construction and operation. Two stroke and four stroke diesel engines. Diesel cycle – Fuel-air and actual cycle analysis. Diesel fuel. Ignition quality. Cetane number. Laboratory tests for diesel fuel. Standards and specifications.

MODULE II FUEL INJECTION SYSTEM 8

Requirements – solid injection. Function of components –common rail direct injection - Jerk and distributor type pumps. Pressure waves, Injection lag. Unit injector. Mechanical and pneumatic governors. Fuel injector, Types of injection nozzle, Nozzle tests. Spray characteristics. Injection timing. Pump calibration. Pilot injection.

MODULE III AIR MOTION, COMBUSTION 7

Importance of air motion – Swirl, squish and turbulence, Swirl ratio. Fuel air mixing. Stages of combustion. Delay period – factors affecting delay period. Knock in CI engines. Comparison of knock in CI & SI engines.

MODULE IV COMBUSTION CHAMBERS 7

Direct and indirect injection combustion chambers. Air cell chamber. Combustion chamber design – objectives – Different types of combustion chamber. Combustion chamber. Combustion chambers for Homogeneous charge compression ignition systems – Dual and alternate fueled engine systems.

MODULE V SUPERCHARGING AND TURBOCHARGING 7

Necessity and limitation – Charge cooling. Types of supercharging and turbocharging – Relative merits. Matching of turbocharger. Inter cooler, Inseries

Twin turbo

MODULE VI TESTING AND PERFORMANCE 8

Automotive and stationary engine testing and related standards – Engine power and efficiencies – performance characteristics. Variables affecting engine performance – Methods to improve engine performance – Heat balance – Performance maps. Hot testing of engines, Dynamometer type, Chassis dynamometer for emission test

Total Hours – 45

TEXT BOOKS:

1. Mathur M.L. and R.P. Sharma, Internal Combustion Engines, Dhanpat Rai Publication, Delhi, 2010.
2. Ganesan,V., Internal Combustion Engines, Tata-McGraw Hill Publishing Co., New Delhi, 1994.

REFERENCES:

1. Heldt,P.M., High Speed Combustion Engines, Oxford IBH Publishing Co., Calcutta, 1985.
2. Obert,E.F., Internal Combustion Engine analysis and Practice, International Text Book Co., Scranton, Pennsylvania, 1988.
3. Maleev,V.M., Diesel Engine Operation and Maintenance, McGraw Hill, 1974. Dicksee, C.B., Diesel Engines, Blackie & Son Ltd., London, 1964.

OUTCOMES:

On completion of course the students should be able to,

- Demonstrate the working concepts of various components of Diesel engine
- Analyze Diesel cycle efficiency.
- Analyze and prepare a layout of fuel system for various diesel engine.
- Demonstrate combustion process and design a combustion chamber in CI engine.
- Analyze the performance of supercharger and turbocharger.
- Analyze the engine performance characteristics.

AUC X09 AUTOMOTIVE AERODYNAMICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- The students able to study the basics of Automotive Aerodynamics in a automobile vehicle.
- The student can impart knowledge in the performance of the automobile vehicle.
- The students able to know the resistance of motion, rolling and grade resistance
- The students can impart knowledge in the aerodynamic drag and pressure occurs in an automobile vehicle.
- The students will have good exposure in automotive aerodynamic aspects.
- The students also able to know about the wind tunnel test in a vehicle and behaviour of a vehicle.

MODULE I INTRODUCTION 5

Scope - historical development trends - Fundamental of fluid mechanics - Flow phenomenon related to vehicles -External & Internal flow problem - Potential of vehicle aerodynamics.

MODULE II RESISTANCE AND PERFORMANCE OF VEHICLE 5

Deceleration of vehicle inside passenger compartment, deceleration on impact with stationary and movable obstacle, concept of crumble zone, safety sandwich construction.

MODULE III AERODYNAMIC DRAG OF CARS 8

Cars as a bluff body - Flow field around car - drag force - types of drag force - analysis of aerodynamic drag - drag coefficient of cars - strategies for aerodynamic development - low drag profiles.

MODULE IV ANALYSIS OF DRAG OF CARS 7

Front end modification - front and rear wind shield angle - Boat tailing - Hatch back, fast back and square back - Dust flow patterns at the rear - Effects of gap configuration - effect of fasteners.

MODULE V VEHICLE HANDLING 10

The origin of forces and moments on vehicle - side wind problems - methods to calculate forces and moments - vehicle dynamics under side winds - the effects of forces and moments - Characteristics of forces and moments - Dirt accumulation on the vehicle - wind noise - drag reduction in commercial vehicles.

MODULE VI WIND TUNNELS FOR AUTOMOTIVE AERODYNAMIC 10

Introduction - Principle of wind tunnel technology - Limitation of simulation - Stress with scale models – full scale wind tunnels - measurement techniques - Equipment and transducers - road testing methods – Numerical methods.

Total Hours – 45

TEXT BOOKS:

1. Hucho.W.H., "Aerodynamic of Road vehicles", Butterworths Co. Ltd., 1997

REFERENCES:

1. Pope. A., "Wind Tunnel Testing", John Wiley & Sons, 2nd Edition, New York, 1974.
2. Automotive Aerodynamic: Update SP-706, SAE, 1987
3. Vehicle Aerodynamic, SP-1145, SAE, 1996.

OUTCOMES:

- Demonstrate knowledge and understanding of the essential facts, concepts and principles of incompressible flows including vortices and viscous effects, boundary layers, wing and diffuser aerodynamic characteristics.
- Demonstrate understanding of how aerodynamics affects the motorsport vehicle design and operation.
- Demonstrate a critical awareness of the wind tunnel techniques used to analyse motorsport aerodynamic problems and apply these techniques and concepts to develop solution strategies for relevant wind tunnel simulations.
- Demonstrate competence in analyzing and evaluating the low speed aerodynamic characteristics of representative vehicles.
- The students able to identify the handling characteristics of a vehicle.
- The students able to know the components using acquired wind tunnel data, data sheets and fundamental principles.

AUC X10	VEHICLE COMFORT SYSTEM AND ERGONOMICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the engineering principles that underpins the design of an automotive vehicle for the comfort of the occupants and other road users.
- Recognize the future direction of the design of comfort systems within the automotive engineering sector.
- Appreciate the role and use of comfort systems in automobile engineering.
- The students also able to know about the safety systems in a vehicle and deformation behavior of a vehicle.

MODULE I INTRODUCTION TO AUTOMOTIVE COMFORT SYSTEMS 9

Introduction to automotive comfort systems for both the vehicle occupants and other road users. Driver assistance systems-Traffic jam assist, Road sign assistant, Intelligent headlight control, Remote park assist, Side view assist, Interior comfort systems-Seat and comfort actuation, Window lift and sunroof drives.

MODULE II DESIGN,CONSTRUCTION AND OPERATION OF COMFORT SYSTEMS 7

Introduction to the design, construction and operation of comfort systems such as: NVH (noise, vibration and harshness) of chassis, engines and power train, ride quality and sound quality; heating, ventilation and air conditioning systems.

MODULE III DRIVER COMFORT 7

Driving comfort for a passenger car and commercial vehicle – driving, seating, visibility, man-machine system, Psychological factors – stress and attention of a driver.

MODULE IV PASSENGER COMFORTS 7

Passenger comforts - Ingress and egress, spaciousness, ventilation, temperature control, dust and fume prevention and vibration.

MODULE V COMFORT AND CONVENIENCE SYSTEM 8

Steering and mirror adjustment, Central locking system- Garage door opening system, Tyre pressure control system, Rain sensor system, Environment information system.

MODULE VI VEHICLE ERGNOMICS 7

Introduction to human body, Anthropometrics and its application to vehicle ergonomics and cockpit design. Ergonomic research methods / ergonomic audit, Practical work aimed at integrating design and ergonomics.

Total Hours – 45

REFERENCES:

1. B.Peacock, Waldemar Karwowski; Automobile ergonomics. Publisher: CRC; 1st edition, 1993
2. Bosch, “Automotive Handbook”, 5th Edition, SAE publication, 2000.
3. Ronald.K.Jurgen, “Automotive Electronics Handbook”, 2nd Edition, McGraw-Hill Inc.,1999

OUTCOMES:

- Describe the characteristics and importance of ergonomics in automotive design technology.
- Identify relevant automotive design standards with regard to ergonomics.
- Design a vehicle system based on automotive design standards with regard to ergonomics.
- Analyze vehicle design performance related to ergonomic aspect.
- The students able to analyze the various comfort system in a automobile vehicle.
- The students able to identify relevant vehicle ergonomics aspects.

AUC X11 VEHICLE DESIGN DATA CHARACTERISTICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- The Students able to collect important technical specifications of an automobile from Technical notes, research publications.

MODULE I INTRODUCTION **8**

Fundamentals of vehicle design, Gross Vehicle, Weight, laden and un-laden weights , Front and rear axle weights, Frontal Area, maximum speed, maximum acceleration, gradability in different gears.

MODULE II POWER ESTIMATION **7**

Analysis of air and rolling resistances at various vehicle speeds - Calculation, Tabulation and Plotting of Curves, Estimation of Driving force, determination of power requirement for different loads and speeds, Maximum Power calculation.

MODULE III PERFORMANCE CURVES **7**

Calculation, Tabulation and Plotting of Torque and Mechanical Efficiency for different vehicle speeds, Interpolation of Pressure – Volume diagram, Calculation of frictional Mean Effective Pressure, Calculation of Engine Cubic Capacity, Bore and Stroke Length.

MODULE IV VELOCITY , ACCERELATION AND TURNING MOVEMENT **7**

Connecting rod length to Crank Radius Ratio, Plotting of Piston Velocity and Acceleration against Crank Angle, Plotting Gas force, inertia force and Resultant force against Crank Angle, Turning Moment and Side Thrust against Crank Angle.

MODULE V GEAR RATIOS **8**

Determination of Gear Ratios, Acceleration and Gradability, Typical Problems on Vehicle performance .

MODULE VI OVERALL VEHICLE PERFORMANCE **8**

Over all vehicle performance, Characteristics of different vehicle sub systems.

Total Hours – 45

TEXT BOOKS:

1. N. K. Giri, Automotive Mechanics, Khanna Publishers, New Delhi, 2005.
2. Heldt, P.M., High Speed Combustion Engines, Oxfore and I.B.H. Publishing Co.,Kolkata, 2002.

REFERENCES:

1. R.B.Gupta, Automobile Engineering

OUTCOMES:

The students should be able to

- Calculate and tabulate various vehicle performance parameters and design parameters
- Draw curves using these data for the system .

AUC X12	DESIGN OF TRANSMISSION SYSTEM AND CHARACTERISTICS ANALYSIS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the design procedures and practices and automotive components like frame, suspension systems, axles, clutch, gear box, drive line components etc.

MODULE I GENERAL DESIGN CONSIDERATIONS

Theory of Failure, Selection of materials, Basic criteria of selection of material for automotive parts like piston, cylinder, connecting rod, crankshaft and camshaft, mechanical properties of those materials in brief. Study of Stress concentration, factor of safety under different loading conditions

MODULE II INTRODUCTION ABOUT TRANSMISSION SYSTEM

Need for Transmission system, Tractive effort and resistances to Motion of a Vehicle, Requirements of transmission system, Classification of Transmission systems, Different Wheel drive systems (Single, Two and Four), Drives (Belt, Chain, Shaft, Hydraulic and Electric drives), Multi-axle drives, Location of transmission system, Different Transmissions units in scooter, car, MUVs and different transport vehicles of Indian make.

MODULE III CLUTCH

Principle of operation, Constructional details, torque capacity and design aspects of different types of clutches, Operation of single plate: helical spring and diaphragm type, and multi-plate clutch, Centrifugal and Automatic Clutches, Dry and Wet type of clutch, Friction lining materials, Over-running clutches, Modes of Operating clutch – mechanical, hydraulic and electric, Dual Clutch transmission.

MODULE IV GEAR BOX

Gear train calculations, layout of gearboxes. Calculation of bearing loads and selection of bearings. Design of three speed and four speed gearboxes. Determination of gear ratios for vehicles, Different types of gearboxes – sliding, constant and synchromesh type, need for double declutching and working of synchronizing unit, Power and economy modes in gearbox, transfer box, Transaxles, Overdrives, Gear shifting mechanisms – mechanical link and wire types, Paddle shift.

MODULE V HYDRODYNAMIC DRIVE

Fluid coupling- principle of operation, constructional details, Torque capacity, Performance characteristics, Reduction of drag torque, Torque converter, converter

coupling- Principle of operation, constructional details & performance characteristics.
Hydrostatic Drive: Hydrostatic drive, various types of hydrostatic systems, Principles of hydrostatic drive system, Advantages and limitations, Comparison of hydrostatic drive with hydrodynamic drive, Construction and working of typical Janny hydrostatic drive.

MODULE VI

Electric Drive: Electric drive, Principle of early and modified Ward Leonard Control system, Advantage & limitations, Performance characteristics.
Automatic Transmission & Applications: Block diagrams of- Chevrolet "Turbo-glide" Transmission, Power-glide Transmission & Clutch Hydraulic Actuation system, Introduction to Toyota "ECT-i" Automatic Transmission with Intelligent Electronic controls system.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

- Giri, N.K., “Automobile Mechanics”, Khanna publishers, New Delhi.
- Khurmi. R.S. & Gupta. J.K., “A textbook of Machine Design”, Eurasia Publishing House (Pvt) Ltd, 2001

REFERENCES:

1. Newton and Steeds, ‘Motor vehicles’, Illiffe Publishers.
2. A.W. Judge, ‘Modern Transmission Systems’, Chapman and Hall Ltd.
3. W.H. Crouse, D.L. Anglin, ‘Automotive Transmission and Power Trains Construction’, McGraw Hill.
4. R.C. Juvenal, ‘Fundamental of Machine Component Design’, John Wiley.
5. ‘PSG Design Data’, PSG College of Technology.
6. J.A. Charles, ‘Selection & Use of Engineering Materials’, Butterworth – Heinemann.
7. V.B. Bhandari, ‘Design of Machine Elements’, McGraw Hill, ED.
8. Joseph Edward, ‘Mechanical Engg. Design’, Shigley.

OUTCOMES:

- At the end of the course, the student can able to design the automotive components like frame, suspension systems, axles, clutch, gear box, drive line components etc

AUC X13	DESIGN OF HYDRAULICS PNEUMATICS SYSTEMS FOR AUTOMOTIVES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The student will able to know fluid power fundamentals
- The student will have good exposure to applied hydraulics and pneumatics.
- The students can impart knowledge basic in fundamentals of fluids, hydraulics system and components.
- The students can impart knowledge basic in design of circuits and in accumulators.
- The students can impart knowledge in properties of air, compressors and regulators.
- The students can impart knowledge in pneumatic systems and components.

MODULE I FLUID POWER SYSTEMS AND FUNDAMENTALS 8

Introduction to fluid power, Advantages of fluid power, Application of fluid power system. Types of fluid power systems, Properties of hydraulic fluids – General types of fluids - Fluid power symbols. Basics of Hydraulics-Applications of Pascal’s Law- Laminar and Turbulent flow - Reynold's number - Darcy's equation - Losses in pipe, valves and fittings.

MODULE II HYDRAULIC SYSTEM & COMPONENTS 8

Sources of Hydraulic Power: Pumping theory - Pump classification - Gear pump, Vane Pump, piston pump, construction and working of pumps – pump performance - Variable displacement pumps. Fluid Power Actuators: Linear hydraulic actuators - Types of hydraulic cylinders - Single acting, Double acting special cylinders like tandem, Rodless, Telescopic, Cushioning mechanism, Construction of double acting cylinder, Rotary actuators - Fluid motors, Gear, Vane and Piston motors. Construction of Control Components : Direction control valve - 3/2 way valve - 4/2 way valve - Shuttle valve - check valve - pressure control valve – pressure reducing valve, sequence valve, Flow control valve - Fixed and adjustable, electrical control solenoid valves, Relays, ladder diagram.

MODULE III DESIGN OF HYDRAULIC CIRCUITS 8

Reciprocation, quick return, sequencing, synchronizing circuits, simple industrial circuits- press circuits, earth movers, grinding machines. Safety and emergency modules. Accumulators and intensifiers: Types of accumulators - Accumulators

circuits, sizing of accumulators, intensifier - Applications of Intensifier - Intensifier circuit

MODULE IV PNEUMATIC SYSTEMS AND COMPONENTS 7

Pneumatic Components: Properties of air - Compressors - Filter, Regulator, Lubricator Unit - Air control valves, Quick exhaust valves, pneumatic actuators

MODULE V PNEUMATIC SYSTEMS AND CIRCUIT DESIGN 7

Pneumatic Power Circuit Design, Speed control circuits, synchronizing circuit, Pneumo hydraulic circuit, Sequential circuit design for simple industrial applications using cascade method.

MODULE VI DESIGN OF FLUIDIC SYSTEMS 7

Fluidic systems - Hydro Mechanical servo systems, Electro hydraulic servo systems and proportional valves. Fluids - Introduction to fluidic devices, simple circuits, Introduction to Electro Hydraulic Pneumatic logic circuits, ladder diagrams, PLC applications in fluid power control. Fluid power circuits; failure and troubleshooting.

Total Hours – 45

TEXT BOOKS:

1. Anthony Esposito, "Fluid Power with Applications", Pearson Education 2000.
2. Majumdar S.R., "Oil Hydraulics", Tata McGraw-Hill, 2000.

REFERENCES:

1. Majumdar S.R., "Pneumatic systems - Principles and maintenance", Tata McGraw Hill, 1995
2. Anthony Lal, "Oil hydraulics in the service of industry", Allied publishers, 1982.
3. Harry L. Stevart D.B, "Practical guide to fluid power", Taraoeala sons and Port Ltd. Broadey, 1976.
4. Michael J, Prinches and Ashby J. G, "Power Hydraulics", Prentice Hall, 1989.
5. Dudely A. Pease and John T. Pippenger, "Basic Fluid Power", Prentice Hall, 1987.

OUTCOMES:

On completion of the course students should be able to

- Analyze the merits and demerits the fluid power.

- Analyze different types of fluid power system, and properties of hydraulic fluids and general types of fluids
- Design hydraulic circuits.
- Compare different pneumatic systems and components
- Design pneumatic circuits
- Select suitable system for different applications.

AUC X14	TRACTOR AND AGRICULTURAL MACHINERIES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The student will have good exposure to Tractors and form equipments

MODULE I GENERAL DESIGN OF TRACTORS 7

Classification of tractors – Main components of tractor – Safety rules.

MODULE II CONTROL OF THE TRACTOR AND FUNDAMENTALS OF ENGINE OPERATION 8

Tractor controls and the starting of the tractor engines – Basic notions and definition – Engine cycles – Operation of multicylinder engines – General engine design – Basic engine performance characteristics.

MODULE III ENGINE FRAME WORK AND VALVE MECHANISM OF TRACTOR 8

Cylinder and pistons – Connecting rods and crankshafts – Engine balancing – Construction and operation of the valve mechanism – Valve mechanism troubles.

MODULE IV COOLING SYSTEM OF A TRACTOR 6

Cooling system – Classification – Liquid cooling system – Components,

MODULE V LUBRICATION SYSTEM AND FUEL SYSTEM OF A TRACTOR 8

Lubricating system servicing and troubles – Air cleaner and turbo charger – Fuel tanks and filters – Fuel pumps.

MODULE VI FARM EQUIPMENTS 8

Working attachment of tractors – Farm equipment – Classification –Auxiliary equipment – Trailers and body tipping mechanism.

Total Hours –45

TEXT BOOKS:

1. Rodichev and G.Rodicheva, Tractor and Automobiles, MIR Publishers, 1987

REFERENCES:

1. Kolchin,A., and V.Demidov, Design of Automotive Engines for Tractor
2. MIR Publishers, 1972.

OUTCOMES:

On completion of the course students should be able able to

- Demonstrate various design aspects of tractors.
- Analyze the control techniques of tractors and performance of tractor engines.
- Select suitable cooling system with justification.
- Analyze various types of lubrication and system.
- Evaluate different types of suspension system
- Select suitable layout for tractors with justification

AUC X15 VEHICLE CONTROL SYSTEM

L	T	P	C
3	0	0	3

OBJECTIVES:

- To study about different sensors and actuator used in the vehicle.
- To understand the methods of representation of system and their transfer function models
- To provide adequate knowledge in the time response of systems and steady state error analysis.
- To give basic knowledge in obtaining the open loop and closed loop frequency responses of systems
- To understand the concept of stability of control system and methods of stability analysis
- To study the three way of designing compensators for a control system.

MODULE I INTRODUCTION 7

Basic elements in control systems-Open loop and Closed loop system-Feedback characteristics-mechanical, Thermal, hydraulic and Pneumatic systems-

MODULE II BASICS OF CONTROL SYSTEM 7

Transfer function- Time response - Types Steady state error - Frequency response - Bode plot- Polar plot- Nichols chart- Determination of closed loop responses from open loop response.

MODULE III SAFETY SYSTEM CONTROL 8

Speed control – cylinder cut - off technology, Gear shifting control – Traction / braking control, brake by wire – Adaptive cruise control, throttle by wire. Steering - automatic parking – steer by wire.

MODULE IV COMFORT SYSTEM CONTROL 8

Active suspension systems, requirement and characteristics, different types, Vehicle Handling and Ride characteristics of road vehicle, pitch, yaw, bounce control, power windows, thermal management system, adaptive noise control.

MODULE V CHASSIS CONTROL SYSTEM 8

Components of chassis management system – role of various sensors and actuators pertaining to chassis system – construction – working of chassis management system .

MODULE VI ROUTING AND TRAFFIC CONTROLS 7

Traffic routing system - Automated highway - Lane departure warning system, Data communication within the car, Future Cars – Case studies.

Total Hours –45

TEXT BOOKS:

1. U. Kiencke, and L. Nielsen, Automotive Control Systems, SAE and Springer-Verlag, 2000.
2. Ljubo Vlacic, Michel Parent, Fumio Harashima, “Intelligent Vehicle Technologies”, Butterworth Heinemann publications, Oxford, 2001.

REFERENCES:

1. Crouse, W.H. & Anglin, D.L., “Automotive Mechanics”, Intl. Student edition, 9thedition, TMH, New Delhi, 2002.
2. William B.Ribbens -Understanding Automotive Electronics, 5th edition, Butter worth Heinemann Woburn,1998.
3. Bosch, “Automotive Hand Book”, 6th edition, SAE, 2004

OUTCOMES:

- Apply the fundamentals of chassis management system and its control
- Apply the knowledge to evaluate open loop and closed loop frequency responses of systems
- Analysis of different sensors and actuators for automotive applications.
- Apply the knowledge in the time response of systems and steady state error analysis
- Apply the knowledge in stability of control system development and analysis
- Discuss case studies on Research focused areas

AUC X16	MODERN AND INTELLIGENT VEHICLE SYSTEM	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To acquire knowledge about the principle of modern vehicle systems.
- To learn about different sensors and actuator used in the vehicle.
- To gather knowledge about the modern techniques in the vehicle
- To learn control systems like steering, suspension, and braking system.
- To gain knowledge of the different controls system in vehicle navigation systems.

MODULE I INTRODUCTION 8

Fundamental of modern and intelligent vehicle systems, different types, functions, Unmaned vehicle technologies

MODULE II SENSOR AND ACTUATORS 7

Working principle of wheel speed sensor, steering position, oxygen sensor, tyre pressure, brake pressure, steering torque, exhaust temperature sensor, fuel level sensors.

MODULE III SAFETY AND SECURITY SYSTEM 7

Airbags, seat belt tightening system, collision warning systems, child Lock, anti lock braking systems, Vision enhancement, road recognition system, Anti theft technologies, smart card system, number plate coding, central locking system.

MODULE IV DRIVER INFORMATION SYSTEMS 7

Traffic routing system - Automated highway systems - Lane warning system – Driver Information system, side blind zone warning system, automatic parking system, driver assistance systems

MODULE V INTELLIGENT TRANSPORTATION SYSTEM 8

Radar guide brakes, radar guided lane assist, Global positioning system. Data communication within the car, Driver conditioning warning -Route Guidance and Navigation Systems – vision enhancement system.

MODULE VI MODERN VEHICLE SYSTEMS 8

Integrator starter, Alternator, Starts stop operation, Un man vehicle technology, Regenerative energy recovery, advanced lead acid batteries, alkaline batteries,

Lithium batteries, Development of new energy storage systems,Deep discharge and rapid charging, ultra-capacitors. - In-Vehicle Computing –Vehicle Diagnostics system – Hybrid / Electric and Future Cars – Case studies.

Total Hours – 45

TEXT BOOKS:

1. U. Kiencke, and L. Nielsen, Automotive Control Systems,SAE and Springer-Verlag, 2000.
2. LjuboVlacic, Michel Parent, Fumio Harashima, “Intelligent Vehicle Technologies” ButterworthHeinemann publications, Oxford, 2001.

2. William B.Ribbens -Understanding Automotive Electronics, 5th edition, Butter worth Heinemann Woburn,1998.
3. Bosch, “Automotive HandBook”, 6th edition, SAE, 2004.

TERM WORK

- Modern storage devices
- Future Cars in Hybrid and Electric
- Intelligent transportation systems
- Safety and security systems
- Energy control and regenerative technologies

OUTCOMES:

- Apply the fundamentals of chassis management system and its control
- Analysis of different sensors and actuators for automotive applications.
- Discuss case studies on research focused areas
- Learner can able to apply the knowledge to develop future technology cars
- Apply The knowledge to develop different controls system in vehicle navigation systems
- Analysis the different vehicle system to develop intelligent transportation system

AUC X17	ALTERNATIVE FUELS AND ENERGY SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To acquire knowledge of alternate fuels
- To understand the changes in the engine design for alternative fuels handling.
- To understand various type of energy systems for use in the automobiles.

MODULE I INTRODUCTION 6

Estimation of petroleum reserve “World Energy Scenerio, Energy Survey of India” – Need for alternate fuel – Availability of alternate fuels.

MODULE II ALCOHOLS 8

Properties of alcohols, engine modifications required to use alcohols in SI engines, performance, combustion and emission characteristics in SI engines, alcohol – gasoline blends, fuel flexible vehicle, methanol reformed gas engine, use of alcohols in CI engines-emulsions, dual fuel system, spark assisted diesel engine, surfaceS ignition engine, ignition accelerators, performance, combustion and emission characteristics in CI engines.

MODULE III GASEOUS FUELS 8

Properties of hydrogen, production and storage methods, safety precautions , use in SI and CI engines, biogas production and its properties, use in SI and CI engines, properties of LPG and CNG, use in SI and CI engines. Performance, combustion and emission characteristics of hydrogen, biogas, LPG and CNG in SI and CI engines.

MODULE IV VEGETABLE OIL 8

Various vegetable oils for diesel engines, structure and properties, problems in using vegetable oils in diesel engines, methods to improve the engine performance using vegetable oils-preheating, Esterification (biodiesel, blending with good secondary fuels, semi-adiabatic engine, surface ignition engine, ignition accelerators dual fuelling with gaseous and liquid fuels, performance, combustion and emission characteristics of vegetable oil fuelled diesel engines.

MODULE V ELECTRIC POWERED VEHICLES 8

Layout of an electric vehicle – advantage and limitations – Specifications – System component, Electronic control system – High energy and power density batteries –

Hybrid vehicle – Fuel cell vehicles- Solar energy power vehicle.

MODULE VI GAS TURBILE VEHICLES 7

Construction and working of gas turbine – Gas turbine cycle – Fuel used in gas turbine – Flame stability – Layout of gas turbine vehicle – power transmitted to wheel - advantage and limitation -

Total Hours –45

TEXT BOOKS:

1. Ramalingam. K.K., Internal combustion engine, scitech publications, Chennai, 2003.
2. Bechtold, R.L., Alternative Fuels Guide Book, SAE, 1997.

REFERENCES:

1. Nagpal, Power Plant Engineering, Khanna Publishers, 1991.
2. Alcohols and motor fuels progress in technology, Series No.19, SAE Publication USA 1980.
3. SAE Paper Nos.840367, 841156, 841333, 841334.
4. The properties and performance of modern alternate fuels – SAE Paper No.841210.

OUTCOMES:

The student should be able to

- Analyze various needs of alternative fuels.
- Select suitable fuels for existing engines.
- Analyze various types of natural fuels.
- Select suitable various vegetable oils for engines with justification.
- Evaluate different layouts for an electric vehicle.
- Select suitable layout for solar vehicle with justification.

AUC X18	VEHICLE NETWORKING AND INTERNET OF THINGS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide with a working knowledge of vehicle systems networks and exposure to aspects of design, development, application and performance issues associated with those systems.
- To provide Knowledge in concepts of capture of sensor data, storage and exchange of data to obtain remote services.

MODULE I FUNDAMENTALS OF VEHICLE NETWORKING 7

Need of Networking - Overview of data communication and networking - need of vehicle networking - layers of communication (Link Layer, Network layer , transport layer, Application layer) multiplexing and de-multiplexing concepts - vehicle buses and types.

MODULE II PROTOCOLS AND NETWORK 8

Multiple access protocols - Ethernet, TCP, UDP, IP, ICMP, ARP, RARP - Hubs, Bridges, and switches - PPP - Overview of CAN - fundamentals - selecting CAN Controllers - CAN development tools - CAN application areas.

CAN Protocol : Principles of data exchange - real time data transmission - message frame formats, bit encoding - bit timing and synchronization - data rate and bus length - network topology - bus access - physical layer standards.

MODULE III LOCAL INTERCONNECT NETWORK (LIN) PROTOCOL 7

Introduction to LIN Protocol - Standard overview - applications - LIN communications real time data transmission - message frame formats, bit encoding - bit timing and synchronization - data rate and bus length - network topology - bus access - physical layer standards.

MODULE IV ADVANCED PROTOCOLS 8

MOST and FlexRay: MOST review - data rates - data types - topology - application areas - FlexRay Introduction - network topology - ECUs and Bus interfaces - Controller host interface and protocol operation controls - media access control and frame and symbol processing - coding/decoding unit - FlexRay scheduling - message processing - Wakeup/startup -applications.

MODULE V WAN AND SATELLITE NETWORKS 7

Introduction to WAN Networks - GPS - setting receivers - Positioning - activating the

navigation function -Concept of latitude and longitude grid system - Mapping and location technologies - application.

MODULE VI SENSORS AND ACTUATORS 8

Electronics and Embedded computing fundamentals - Sensors - Actuators - Microcontrollers - simple microcontroller coding introduction - system on chips - platform considerations - power supply and ranges.

Total Hours – 45

5. Olaf Pfeiffer, Andrew Ayre, Christian Keydal, Embedded Networking With CAN and CANopen, Annbooks/Rtc Books, November 1, 2003.
6. Ronald K Jurgen, Automotive Electronics Handbook, McGraw- Hill Inc. 1999.

OUTCOMES:

- Ability to analyze information for intensive applications that are being enabled for vehicles by a combination of telecommunications and computing technology.
- Ability to develop communications, and navigation/routing, in automotive telematics.

AUC X19	AUTOMOTIVE INSTRUMENTATION & EMBEDDED SYSTEM	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide with a working knowledge of measurements and instrumentation for Automotive applications
- To provide Knowledge in concepts of embedded systems and real time operating systems

MODULE I BASICS OF MEASUREMENT 7

Classification of Instrument, Characteristics of Instruments – Static and dynamic, experimental error analysis, Systematic and random errors, Statistical analysis, Uncertainty, Experimental planning and selection of measuring instruments, Reliability of instruments.

MODULE II AUTOMOTIVE INSTRUMENTATION 8

Modern automotive instrumentation – computerized instrumentation system, multiplexing, sampling and advantages – Measurements – fuel quality, coolant temperature, oil pressure vehicles speed, Display devices – LED, LCD, VFD, CRT and types, CAN network, the glass cockpit and information system

MODULE III DIAGNOSTICS 7

Onboard diagnostics – fault code displays. Off board diagnostics – engine data display , expert system occupant protection system – Airbag deployment system security and warning systems.

MODULE IV MEASUREMENT ANALYSIS 7

Chemical, thermal, magnetic and optical gas analyzers, measurement of smoke, dust and moisture, gas chromatography, spectrometry, measurement of pH, Review of basic measurement techniques.

MODULE V INTRODUCTION TO EMBEDDED SYSTEMS 8

Introduction to functional building blocks of embedded systems – Register, memory devices, ports, timer, interrupt controllers using circuit block diagram representation for each categories – Devices & buses for devices network - serial communication using I2C, CAN, USB buses - parallel communication using ISA, PCI - device drivers in a system – Serial port & parallel port.

MODULE VI REAL TIME OPERATING SYSTEMS 8

Introduction to basic concepts of RTOS, Basics of real time & embedded system operating systems, RTOS – Interrupt handling, task scheduling; embedded system design issues in system development process – Action plan, use of target system, emulator, use of software tools.

Total Hours – 45

3. Frank Vahid, 'Embedded System Design – A Unified hardware & Software Introduction', John Wiley, 2002

OUTCOMES:

- Ability to analyze the data for measurement of parameters and set up instrumentation systems for automotive applications.
- Ability to design and develop embedded circuits for automotive applications.

AUC X20	ADVANCED MATERIAL TESTING AND FAILURE ANALYSIS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To have knowledge about importance and significances of material quality in service.
- To understand the impact on component life, customers satisfaction in performance.
- To know the procedure of Material Testing characterization and failure analysis.

MODULE I MATERIAL PROPERITES 7

Mechanical Characterization: Mechanical Property characterization- Principles & characterization techniques related to tensile, compressive, hardness, fatigue, and fracture toughness properties. Deformation, Super plasticity Stress-strain diagram, Determination of YS, UTS, MoE, %E, %RA, Hardness testing, true stress-strain diagram, stretcher strain characteristics, effects of cold working, & n values, poisons ratio

MODULE II MECHANICAL TESTS 7

Deep drawn quality of sheets, Impact test, bend test, shear test, Significances of property evaluation, SN curves and fatigue life, non-destructive testing, residual stress measurements, microscopy and scanning electron microscopy, EDAX / WDS analysis, corrosion testing, wear & tear characteristics, slow strain rate characteristics, thermal behaviors. Thermal Analysis: Principles and applications of thermal analysis.

MODULE III PROPERTIES OF PLASTICS, ELASTOMERS AND COMPOSITES 8

Molecular weight distribution, MFI, HDT & VICAT softening point, cold temperature behaviors, Rheological behaviors, hardness and impact properties, identification of polymers, weathering characteristics, cyclic temperature test, flammability, VOC and odor test, scratch resistance test, metal composition analysis, RoHS analysis.

MODULE IV MATERIAL BEHAVIOURS – ELECTRICAL EFFECTS 7

Electrical properties of Materials – Dielectric constant, electrical resistivity, wire harness test Mechanical behaviors, Electrical-Magnetic-Optical properties of

ploymer nano-composites.

MODULE V MATERIAL BEHAVIOURS – EFFECTS 8

THermal properties of Materials – coeffic ent of thermal expansion & contraction, Thermal response, Fire retardancy, Chemical resistance.

MODULE VI INSTRUMENTAL TECHNIQUES 8

FTIR spectrometer, Thermal analyzer, X-ray analyzer, Optical emission spectroscopy, Ion Chromatography, Gas and Liquid Chromatography, High strain rate tester, Non-destructive instruments, etc. New innovations in testing and characterization, X-ray Diffraction, Electron microscope (SEM, TEM), Scanning probe microscopy (SPM, AFM), Spectroscopic methods (EDS, FTIR); Mechanical behaviors, Thermal response, Fire retardancy, Chemical resistance and Electrical-Magnetic-Optical properties of ploymer nano-composites.

Total Hours – 45

TEXT BOOK:

1. Dictionary of Materials and Testing, Second Edition by Joan Tomsic
2. "Metallurgy of Failure Analysis" by A K. Das; by McGraw- Hill Professional Publication.

REFERENCES:

1. Material Characterization: Introduction to Microscopic & Spectroscopic Methods by Yang Leng John Wiley & Sons (Asia) Pte Ltd.
2. ASM Handbook on Metals Handbook: Vol. 8 Mechanical Testing – 1978.
3. ASM Handbook Vol.11 - Failure Analysis and Prevention, ASM International Publication, 1995.
4. Automotive Component Failures by A. M. Heyes .
5. Handbook of Case Histories of Failure Analysis, Vol 1 by C.Uhietal Robert

OUTCOMES:

On completion of the course, students should be able to:

- Select the suitable material testing processes with justification
- Identify and analyze the relation between the mechanical properties.
- Evaluate the various mechanical and chemical properties of composites.
- Summarize the characteristics of electrical effects of the material.
- Analyze the material behaviour on thermal and chemical loading.
- Analyze the instrumental techniques employed in material testing.

AUC X21	COMPUTER AIDED DESIGN AND MANUFACTURING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The student will have good exposure in basic of computer aided design and Manufacturing.
- The students shall understand the drafting and geometric modeling of database structure for graphics modeling.
- The students shall understand the numerical control, machining center, turning centre And CNC programming.
- The students will know the importance of computer aided production planning
- The students shall understand the CAD production group technology and production planning.
- The students will understand the principle of automation.

MODULE I INTRODUCTION 7

Computers in Industrial Manufacturing, Product cycle, CAD / CAM Hardware, Basic structure, CPU, Memory types, input devices, display devices, hard copy devices, storage devices. Computer Graphics: Raster scans graphics coordinate system, database structure for graphics modeling, transformation of geometry, 3D transformations, mathematics of projections, clipping, hidden surface removal.

MODULE II GEOMETRIC MODELING 8

Geometric modeling: Requirements, geometric models, geometric construction models, curve representation methods, surface representation methods, modeling facilities desired. Drafting and Modeling systems: Basic geometric commands, layers, display control commands, editing, dimensioning, solid modeling, constraint based modeling.

MODULE III COMPUTER AIDED MANUFACTURING 8

Numerical control, NC modes, NC elements, NC machine tools, structure of CNC machine tools, features of Machining center, turning center, CNC Part Programming: fundamentals, manual part programming methods, Computer Aided Part Programming

MODULE IV COMPUTER AIDED PRODUCTION PLANNING 7

Computer Aided Processes Planning, Material requirement planning, manufacturing resources planning

MODULE V COMPUTER AIDED PRODUCTION GROUP TECHNOLOGY **8**

Part family, coding and classification, production flow analysis, advantages and limitations, Retrieval type and Generative type

MODULE VI FLEXIBLE MANUFACTURING SYSTEMS **7**

Elements of FMS, DNC, AGV, ASRS, Flexible manufacturing systems - FMS equipment, system layouts, FMS control.CIM: Integration, CIM implementation, major functions in CIM, Benefits of CIM, Lean manufacturing, Just-in-time.

Total Hours – 45

TEXT BOOKS:

1. CAD / CAM Principles and Applications - 2nd edition, P.N. Rao, Tata Mc. Graw Hill.

REFERENCES:

1. CAD / CAM Theory and Practice / Ibrahim Zeid / TMH
2. CAD / CAM / CIM / Radhakrishnan and Subramanian / New Age
3. Principles of Computer Aided Design and Manufacturing / Farid Amirouche / Pearson
4. Computer Numerical Control Concepts and programming / Warren S Seames / Thomson.

OUTCOMES:

On completion of the course the students should be able to

- Interpret complex engineering drawings including geometric dimensioning and tolerancing.
- Perform competently in solving technical manufacturing and engineering mathematics problems.
- Exhibit competency in two-dimensional, three-dimensional and solid modeling skills as applied to complex computer-aided design technology.
- Demonstrate an understanding of the role and function of computers and effectively use the computer to solve complex technical problems.
- Able to classify part families and understand production flow analysis.
- Select the suitable manufacturing principle for particular product development with justification.

AUC X22	DESIGN OF JIGS , FIXTURES AND PRESS TOOLS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the basic design of jigs and fixtures
- To study about design of jigs for desired component
- To Know about fixtures design principle for various machining process
- To study about the press working tools
- To understand about press working elements of dies
- To know about the dies and their elements

MODULE I PURPOSE TYPES AND FUNCTIONS OF JIGS AND FIXTURES **8**

Tool design objectives –Design procedures for Jigs and Fixtures-Locating devices-Clamping devices- Production devices - Inspection devices - Materials used in Jigs and Fixtures – Types of Jigs - Types of Fixtures-Mechanical actuation-pneumatic and hydraulic actuation-Analysis of clamping force-Tolerance and error analysis

MODULE II JIGS **8**

Drill bushes –different types of jigs-plate latch, channel, box, post, angle plate, angular post, turnover, pot jigs-Automatic drill jigs-Rack and pinion operated. Air operated Jigs components. Design and development of Jigs for given components

MODULE III FIXTURES **9**

General principles of boring, lathe, milling and broaching fixtures- Grinding, planning and shaping fixtures, assembly, Inspection and welding fixtures-Modular fixtures. Design and development of fixtures for given component

MODULE IV PRESS WORKING TERMINOLOGIES **5**

Press working terminology-Presses and press accessories-Computation of capacities and tonnage requirements

MODULE V PRESS WORKING ELEMENTS OD DIES AND STRIP LAYOUT **6**

Elements of progressive combination and compound dies:Die block-die shoe. Bolster plate-punch plate-punch holder-guide pins and bushes – strippers – knockouts-stops –pilots-Selection of standard die sets strip lay out-strip lay out calculations.

MODULE VI DESIGN AND DEVELOPMENT OF DIES 9

Design and development of progressive and compound dies for Blanking and piercing operations. Bending dies – development of bending dies-forming and drawing dies-Development of drawing dies. Design considerations in forging, extrusion, casting and plastic dies.

Total Hours – 45

TEXT BOOKS:

1. Edward G Hoffman, “Jigs & Fixture Design”, Thomson – Delmar Learning, Singapore 2004
2. Donaldson. C, “Tool Design”, Tata McGraw-Hill, 1986

REFERENCES:

1. Kempster, “Jigs & Fixtures Design”, The English Language Book Society”, 1978.
2. Joshi, P.H., “Jigs & Fixtures”, Second Edition, Tata McGraw-Hill Publishing Company Limited, New Delhi 2004 Hiram E Grant, “Jigs and Fixture” Tata McGraw-Hill, New Delhi, 2003.
3. “Fundamentals of Tool Design”, CEEE Edition, ASTME, 1983.
4. Design Data Handbook PSG College of Technology, Coimbatore.

OUTCOMES:

Upon completion of the subject, students will be able to

- Apply the basic principles in designing general jigs and fixtures,
- Use the basic principles in designing general jigs for any desired component
- Use the basic principles in designing general fixtures for any desired component.
- Implement the basic principles in designing press
- Implement the basic principles in designing elements of dies
- Apply the basic principles in designing dies

AUC X23 SIMULATION OF I.C. ENGINE PROCESSES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn about the heat of reaction and adiabatic flame temperature.
- To learn about the constant volume and constant pressure adiabatic combustion.
- To learn about the progressive combustion and multi zone combustion.
- To learn new concept engine development

MODULE I INTRODUCTION 8

Introduction-Heat of reaction-Measurement of URP-Measurement of HRP-Adiabatic flame temperature, complete combustion in C/H/O/N Systems,

MODULE II ADIABATIC PROCESS 8

Constant volume adiabatic combustion, constant pressure adiabatic combustion. Calculation of adiabatic flame temperature-Isentropic changes of state.

MODULE III SI ENGINE SIMULATION WITH AIR AS WORKING MEDIUM 7

Deviation between actual and ideal cycle-Problems, IC engine simulation with adiabatic combustion, temperature drop due to fuel vaporization, full throttle operation-efficiency calculation, part-throttle operation, super charged operation

MODULE IV PROGRESSIVE COMBUSTION 8

SI Engines simulation with progressive combustion with gas exchange process, Heat transfer process, friction calculation, compression of simulated values, validation of the computer code, engine performance simulation, pressure crank angle diagram and other engine performance.

MODULE V SIMULATION OF CI ENGINE 7

Diesel Engine Simulation: Multi Zone model for combustion, different heat transfer models, equilibrium calculations, simulation of engine performance, and simulation for pollution estimation.

MODULE VI SIMULATION OF NEW ENGINE CONCEPTS 7

Dual fuel engine, low heat rejection engine, lean burn engine, variable compression ratio engine, homogeneously charged compression ignition engine, controlled auto

ignition engine.

Total Hours – 45

TEXT BOOKS:

1. Ganesan .V – 'Computer Simulation of Spark Ignition Processes' - Universities Process Ltd, Hyderabad - 1993.
2. Ganesan.V. – Computer Simulation of compression ignition engines – Orcent Longman – 2000

REFERENCES:

1. Ramoss. A.L., Modelling of Internal Combustion Engines Processes, McGraw Hill Publishing Co., 1992.
2. Ashley Campbel, Thermodynamic analysis of combustion engines, John Wiley & Sons, New York, 1986
3. Benson. R.S., Whitehouse. N.D., Internal Combustion Engines, Pergamon Press, Oxford, 1979.

OUTCOMES:

After completing the course students must be able to

- Analyze the heat reaction and combustion product.
- Analyze the adiabatic flame temperature of constant pressure and volume combustion process.
- Analyze the ideal and actual cycle
- Analyze the progressive combustion and multi zone combustion.
- Design a combustion chamber for HCCI, Dual fuel and multi-fuel engines.

AUCX24	COMBUSTION THERMODYNAMICS OF HEAT TRANSFER	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Acquire the fundamental knowledge of combustion.
- Understand the thermodynamics of combustion.
- Understand the kinetics of combustion.
- Understand the combustion aspects in SI and CI Engines

MODULE I COMBUSTION OF FUELS 7

Combustion equations - Theoretical air, excess air - Air fuel ratio, equivalence ratio - Exhaust gas composition - Air fuel ratio from exhaust gas composition and heating value of fuels.

MODULE II THERMODYNAMICS OF COMBUSTION 7

Thermo-chemistry, first law analysis of reacting systems - Adiabatic combustion temperature - Second law analysis of reacting systems - Criterion for chemical equilibrium - Equilibrium constant for gaseous mixtures - Evaluation of equilibrium composition - Chemical availability.

MODULE III KINETICS OF COMBUSTION 7

Rates of reaction - Reaction order and molecularity complex reactions – Chain reactions - Arrhenius rate equation, collection theory - Activated complex theory - Explosive and general oxidative characteristics of fuels.

MODULE IV FLAMES 8

Laminar and turbulent flames - Premixed and diffusion flames - Burning velocity and its determination - Factors affecting burning velocity - Quenching, flammability and ignition - Flame stabilization in open burners.

MODULE V ENGINE COMBUSTION 8

Combustion in SI and CI engines - Stages of combustion in SI and CI engines, normal combustion and abnormal combustion - Emissions from premixed combustion - Emission from non premixed combustion - Control of emissions.

MODULE VI HEAT TRANSFER IN IC ENGINES 8

Basic definitions - Convective heat traanfer - Radiative heat transfer - Heat transfer,

temperature distribution and thermal stresses in piston - Cylinder liner - Cylinder head - fins and values.

Total Hours – 45

TEXT BOOKS:

1. Ganesan .V - "IC Engines" – 4th edition Tata McGraw-Hill, 2012.
2. John B. Haywodd, "Internal Combustion Engine Fundamentals", McGraw-Hill-Indian edition,2011.

REFERENCES:

1. Ganesan .V – 'Computer Simulation of Spark Ignition Processes' - Universities Process Ltd, Hyderabad - 1993.
2. Ganesan.V. – Computer Simulation of compression ignition engines – Orcent Longman – 2000.
3. Richard Stone – "Introduction to IC Engines" – 2nd edition – Macmilan – 1992

OUTCOMES:

The student should be able to

- Conduct analysis on combustion process of given engine
- Analyze heat apportion of given engine
- Perform photographic analysis of give automobile engines
- Analysis causes of the knocking.
- Perform calculations to evaluate the heat transfer in IC engines.
- Investigate the state variables of combustion and heat flow in IC engines

AUC X25 UNCONVENTIONAL ENERGY SOURCES

L	T	P	C
3	0	0	3

OBJECTIVES:

- Familiarize the biomass energy conversion technologies.
- Familiarize the solar energy technologies.
- Understand the wind energy and hybrid energy systems.
- Know concepts of hydro, ocean and geothermal energy systems.
- Familiarize the operations of direct energy conversion systems.

MODULE I BIOMASS **8**

Biomass, sources of biomass, thermo-chemical and bio-chemical conversion of biomass - pyrolysis, gasification, combustion and fermentation. Gasifiers - up draft, downdraft and fluidized bed gasifiers. Digesters - Fixed and floating digester biogas plants, economics of biomass power generation.

MODULE II SOLAR ENERGY **9**

Solar radiation and its measurements, types of solar thermal collectors - Flat and concentrating collectors, solar thermal applications - Water heaters, dryers, stills, refrigeration, air-conditioning, solar pond, central receiver power generation, thermal energy storage systems, solar photovoltaic components and solar photovoltaic power plants.

MODULE III WIND ENERGY **8**

Basic principle of wind energy conversion system, wind data and energy estimation, Site selection, components of wind energy conversion systems, design consideration of horizontal axis wind mill, aerofoil theory, analysis of aerodynamic forces acting on the blade, performance of wind machines. Introduction to solar - Wind hybrid energy systems.

MODULE IV OCEAN AND HYDRO ENERGY **6**

Wave and tidal energy, ocean thermal energy conversion - Principle, types, power plants - Small, mini and micro hydro power plants.

MODULE V GEOTHREMAL ENERGY **6**

Exploration of geothermal energy, geothermal power plants, challenges - Availability, geographical distribution, scope and economics.

MODULE VI DIRECT ENERGY CONVERSION SYSTEMS 8

Basic principle of thermo-electric and thermo-ionic power generations, fuel cellprinciple, types, conversion efficiency, applications. Magneto hydrodynamic power generation - Principle, open cycle and closed cycles, design considerations and recent developments. Hydrogen energy - Production, storage, transportation and applications.

Total Hours – 45

TEXT BOOKS:

1. Rai.G.D, “Non-Conventional Energy Sources”, Khanna Publishers, 4th edition, New Delhi, 2009.
2. Domkundwar.V.M, Domkundwar.A.V, “Solar energy and Non-conventional sources of energy”, Dhanpat rai & Co. (P) Ltd, 1st edition, New Delhi, 2010.

REFERENCES:

1. Godfrey Boyle, “Renewable energy”, 2nd ed, Oxford University Press, 2010.
2. Khan.B, “Non-conventional Sources of energy”, 2nd edition, New Delhi, Tata McGraw Hill, 2009.
3. Tiwari.G.N, Ghosal.M.K, “Fundamentals of renewable energy sources”,1st edition, UK, Alpha Science International Ltd, 2007.
4. Twidell.J.W and Weir.A.D, “Renewable Energy Resources”,1st edition, UK, E.&F.N. Spon Ltd, 2006.

OUTCOMES:

The student should be able to

- Apply knowledge in production of Bio-mass.
- Design and analysis the solar heater and power plant.
- Apply the knowledge in extraction and utilization of wind, hydro and geothermal energy.

AUC X26	COMPUTATIONAL FLOW AND HEAT TRANSFER	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the basic governing equation and Boundary conditions of various FEA problems
- To gain knowledge about discretization and solution methods.
- To study about the heat conduction of fluids
- To know about the convection and their significances.
- To study flow modelling for fluids.
- To impart knowledge about diffusion problems.

MODULE I GOVERNING EQUATIONS AND BOUNDARY CONDITIONS 7

Basics of computational fluid dynamics – Governing equations of fluid dynamics– Continuity, Momentum and Energy equations – Chemical species transport – Physical boundary conditions – Time-averaged equations for Turbulent flow - Turbulence -Kinetic - Energy Equations – mathematical behavior of PDEs on CFD: Elliptic, Parabolic and Hyperbolic equations.

MODULE II DISCRETIZATION AND SOLUTION METHODOLOGIES 8

Methods of Deriving the Discretization Equations - Taylor Series formulation – Finite difference method – Control volume Formulation – Spectral method. Solution methodologies: Direct and iterative methods, Thomas algorithm, Relaxation method, Alternating Direction Implicit method.

MODULE III HEAT CONDUCTION 7

Finite difference and finite volume formulation of steady/transient one dimensional conduction equation, Source term linearization, Incorporating boundary conditions, Finite volume formulations for two and three dimensional conduction problems

MODULE IV CONVECTION 8

Finite volume formulation of steady one-dimensional convection and Diffusion problems, Central, upwind, hybrid and power-law schemes – Discretization equations for two dimensional convection and diffusion.

MODULE V CALCULATION OF FLOW FIELD 7

Representation of the pressure - Gradient term and continuity equation -Staggered grid - Momentum equations - Pressure and velocity corrections -Pressure - Correction

equation, SIMPLE algorithm and its variants. Turbulence models: mixing length model, Two equation (k-epsilon) models.

MODULE VI DIFFUSION 8

Finite volume formulation of steady one-dimensional Diffusion problems, Central, upwind, hybrid and power-law schemes - Discretization equations for two dimensional diffusion.

Total Hours –45

REFERENCES:

1. Construction Equipment Operation & Maintenance" by Y. Pokras and M. Tushnyakov, MIR,
2. "Truck Cranes", by A. Astskhov, MIR, Moscow.
3. Pipenger, 'Industrial Hydralics', Mcgraw Hill, Tokoyo, 1979.
4. A. Astakhov, 'Truck cranes', MIR Publishers, Moscow, 1971.
5. Bart H Vanderveen, 'Tanks and Transport Vehicles', Frederic Warne and co. Ltd., London, 1974.
6. K. Abrosimov, A. Bromberg and F. Katayer, 'Road making machineries', MIR Publisher, Moscow,1975.

OUTCOMES:

After successfully completing this course you will be able to:

- The student will able to demonstrate the ability to simplify a real fluid-flow system into a simplified model problem.
- To develop an understanding for the major theories, approaches and methodologies used in CFD;
- To build up the skills in the actual implementation of CFD methods (e.g.boundary conditions, turbulence modeling etc.) in using commercial CFD codes;
- To gain experience in the application of CFD analysis to real engineering designs.
- The students able to convert heat transfer problems into mathematical models.
- The student will able to demonstrate the ability to analyze a flow field to determine various quantities of interest, such as flow rates, heat fluxes, pressure drops, losses, etc., using flow visualization and analysis tools.
- The student will able to demonstrate an ability to recognize the type of fluid flow that is occurring in a particular physical system and to use the appropriate model equations to investigate the flow.

AUC X27 MOTORSPORT ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To Study the constructional details and Structures of different types of frames used in motorsports vehicle
- To Study mechanism of different types of steering system used in motorsports vehicle.
- To Study mechanism of different types of drive line and final drive used in motorsports vehicle.
- To study use age of wheels and tyres used in motorsports vehicle.
- To Study the fundamental and working of different types of Suspension Systems of motorsports vehicle.

  To Study the fundamental and working of different types of Braking Systems of motorsports vehicle

MODULE I OVER VIEW OF MOTOR SPORT ENGINEERING 8

Introduction about motor sport vehicles, various types of motor sport vehicles and their requirements, competitions and requirements, Preparing for the competitions, bench marking, project planning, Case studies of completed events.

MODULE II POWER TRAIN 8

Engine management systems, sensors, alternative fuels, oxidizing agents, chemical composition of fuels, ignition systems and components.Engine and transmission configurations – front/ rear/mid engine and associated driveline Transmission systems – clutches, torque converters, manual gearbox types, automatic gearbox types, electronic and hydraulic transmission control, traction control, launch control, KERS systems. Final drive systems – differentials, Torsen, torque biasing, LSD, Salisbury, air-locking, fluid coupling Hybrid Drive systems.

MODULE III MATERIALS AND PROCESSES 8

Selection criteria: material properties, including cost drivers, mechanical, physical, chemical and process characteristics. basic properties of materials such as ceramics, metals, composites and polymers. Testing of materials, ISI standards, standard published data sources, engineering drawings Joining techniques including, brazing and welding, effect on structure and properties,

use of adhesives.Processing limitations: effects of properties such as structure preventing or facilitating processing techniques. heat treatments of metals and alloys, coatings and other surface treatments, polymer processing.

MODULE IV FAILURE MECHANISMS 7

Causes of failure: appreciation of failure mechanisms in materials such as metals, ceramics, polymers and composites; such as creep, fatigue, impact, overstressing, corrosion, temperature, thermal cycling, residual stresses, stress relaxation, degradation (composition change), radiation, electrical breakdown.

MODULE V VEHICLE ELECTRONICS 7

Electronics – semiconductors, electronic circuitry, integrated circuits. ignition systems, Engine management systems, sensors transistorized and capacitor discharge types, fuel injection systems and sensors, ECU programming and mapping., ABS, TRS, active suspension system, Tuned manifloding

MODULE VI MOTOR VEHICLE CHASSIS 7

Frame design for different vehicles, layout of components, weight distribution, weight transfer and braking requirements, suspension system, steering system, body design and fabrication, driver seat and safety requirements, Electrical systems and wiring, wheels and tires. Testing and validation.

Total Hours – 45

REFERENCES:

- Hillier, VAW (2006) Fundamentals of Motor Vehicle TechnologyStanleyThornes Davis & Davis (2001) Supercharging, Turbocharging and Nitrous Oxide performance. Motorbooks.

- van Valkenburg, P (2001)Race car engineering and mechanicsMotorbooks International
- Milliken & Milliken (1997) Vehicle dynamics. SAE

OUTCOMES:

On completion of the course student should be able to

- Design and select suitable frame for different vehicles.
- Select suitable layout of components, based on weight distribution, weight transfer and braking requirements.
- Design suitable transmission, suspension system and steering system.
- Design and fabricate body, driver seat and safety requirements.
- Design of electrical systems and wiring and power train tuning.
- Select suitable wheels and tires.
- Test and validate the vehicle

AUC X28	COMPOSITE MATERIALS FOR AUTOMOBILES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the composite materials and its applications in automotive industry
- To impart knowledge in several composite materials production processes.
- To have knowledge in different polymers, metals and ceramics reinforced composites.
- To gain knowledge in different matrices and reinforcements
- To have knowledge about composite structure.
- To understand the various types of composite materials

MODULE I INTRODUCTION 8

Reinforcement – Fibres – Glass fibre, Aramid fibre, Carbon fibre, boron fibre – Fabrication – Properties – Applications – Comparison of fibres – Particulate and whisker reinforcements. Matrix materials – Properties-Wettability – Effect of surface roughness – Interfacial bonding – Methods for measuring bond strength .

MODULE II POLYMER MATRIX COMPOSITES 8

Polymer Matrix Composites -Types – Processing – Thermal matrix composites – Hand layup and spray technique, filament winding, Pultrution, resin transfer moulding, autoclave molding – Thermoplastic matrix composites – Injection molding, film stacking – Diaphragm forming – Thermoplastic tape laying. Glass fibre/polymer interface. Mechanical properties – Fracture. Applications.

MODULE III METAL MATRIX COMPOSITES 6

Metal Matrix Composites Types. Important metallic matrices. Processing – Solid state, liquid state, deposition, Mechanical properties. Applications.

MODULE IV CERAMIC MATRIX COMPOSITES 6

Ceramic matrix materials – Processing – Hot pressing, liquid infiltration technique, Lanxide process, insitu chemical reaction techniques – CVD, CVI, sol gel process. Interface in CMCs. Mechanical properties – Thermal shock resistance – Applications.

MODULE V COMPOSITE STRUCTURES 9

Fatigue – S-N curves – Fatigue behaviors of CMCs – Fatigue of particle and whisker reinforced composites – Hybrid composites – Thermal fatigue – Creep Introduction to structures - selection of material, manufacturing and laminate configuration -design of joints - bonded joints - bolted joints - bonded and bolted – laminate optimization.

MODULE VI AUTOMOTIVE APPLICATIONS 8

Drive Shafts, Suspension Arms, Wheels, Valve Guides, Clutch Plates, use of MMC in disc brakes, Mufflers and other applications.

Total Hours – 45

REFERENCES:

1. Mathews F L and Rawlings R D, “Composite Materials: Engineering and Science”, CRC Press and Woodhead Publishing Limited, 2002.
2. Krishnan K Chawla, “Composite Materials Science and Engineering”, Springer, 2001.
3. Handbook of Composites – American Society of Metals, 1990.
4. Derek Hull, “An introduction to Composite Materials”, Cambridge University Press, 1988.

OUTCOMES:

On completion of the course, students should be able to:

- Classify the characterization of different composite materials.
- Demonstrate the polymer matrix composite manufacturing processes.
- Identify different metal matrix composites and their productions with justification
- Enumerate the ceramic applications in the composite materials.
- Evaluate the effects of structural parameters on the properties of composite.
- Analyze current automotive applications of composite materials in the industry.

AUCX29 TRAFFIC ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the knowledge of traffic engineering includes traffic survey highway, characteristics and traffic control
- To understand the measure of traffic management and importance motor vehicle act.

MODULE I INTRODUCTION AND TRAFFIC CHRACTERISTICS 7

Objectives and scope of traffic engg. Organizational set up of traffic engg department in India; Importance of traffic characteristics; Road user characteristics; Vehicular characteristics; Max dimensions and weights of vehicles allowed in India. Effects of traffic characteristics on various design elements of the road.

MODULE II TRAFFIC SURVEYS 7

Methods of conducting the study and presentation of the data for traffic volume study; speed study and origin and destination study. Speed and delay study. Parking surveys; On street parking; off street parking. Accident surveys. Causes of road accidents and preventive measures; Use of photographic techniques in traffic surveys.

MODULE III HIGHWAY CAPACITY 7

Importance. Space and time headway. Fundamental diagram of traffic flow. Relationship between speed; volume and density. Level of service. PCU. Design service volume. Capacity of non-urban roads. IRC recommendations. Brief review of capacity of urban roads.

MODULE IV TRAFFIC CONTROL 8

Types of traffic control devices. Traffic signs; general principles of traffic signing; types of traffic signs. Road markings; types; general principles of pavement markings. Design of rotary. Grade separated intersections. Miscellaneous traffic control aids and street furniture.

MODULE V SIGNAL DESIGN 8

Types of signals. Linked or coordinated signal systems. Design of signal timings by trial cycle method; approximate method; Webstor’s method and IRC method

MODULE VI TRAFFIC REGULATION AND MANAGEMENT 8

Need and scope of traffic regulations. Regulation of speed; vehicles and drivers. General traffic regulations. Motor vehicle act. Scope of traffic management. Traffic management measures: restrictions on turning movements; one way streets; tidal flow operations; exclusive bus lanes; traffic restraint; road pricing.

Total Hours – 45

TEXT BOOKS:

1. Khanna S. K. and Justo C. E. G., “Highway Engineering”, Nem Chand Bros., Roorkee.

REFERENCES:

1. Kadiyali L. R., “Traffic Engg. and Transport Planning”, Khanna Publishers
2. Matson T. M., Smith W. S. and Hurd F. W., “Traffic Engineering”, McGraw Hill, New York.
3. Drew D. R., “Traffic Flow Theory”, McGraw Hill, New York.

OUTCOMES:

On completion of the course the students should be able to

- Describe the various traffic characteristic in India
- Analyze the causes for road accident and its preventive methods
- Summarize Non –urban and urban roads characteristics
- Evaluate the various traffic control devices and traffic signs for roads
- Enumerate the procedure for designing of signal timing
- Analyze the latest motor vehicle act and traffic rules and regulations.

AUCX30 SURFACE ENGINEERING

L	T	P	C
3	0	0	3

BJECTIVES:

- To provide knowledge of principle and practice of surface engineering and coating techniques
- To provide knowledge about hardfacing and plating processes.
- To familiarise about thin film coating techniques.
- To provide knowledge about high energy modification processes

MODULE I TRIBOLOGY PROCESSES 7

Introduction to tribology, Wear: Types of wear - adhesive, abrasive, oxidative, corrosive, erosive and fretting wear, roles of friction and lubrication and wear testing.

MODULE II PLATING PROCESSES 7

Plating Processes: Fundamentals of electrodeposition, plating of nickel, chromium, tin and copper, pulsed plating, hydrogen embrittlement, plating adhesion, electroless plating, electrochemical conversion coating, selective plating for repair, plating properties, hard anodizing.

MODULE III HARDFACING PROCESSES 8

SMAW, GTAW, GMAW, FCAW, SAW, PAW, Oxy-Acetylene Welding, Furnace fusing, Thermal -spray, flame spray processes - HVOF, Detonation gun and jet kote processes, hard facing consumables.

MODULE IV SPECIAL DIFFUSION PROCESSES 7

Principle of diffusion processes – Boriding, Aluminising, Siliconising, Chromising, Sursulf - Selection of diffusion processes – Characteristics of diffused layer – micro structure and micro hardness evaluation – properties and applications.

MODULE V THIN FILM COATINGS 8

Physical vapour deposition processes – Thermal evaporation - sputter coating - Ion plating – Chemical vapour deposition – reactive sputtering - TiC, TiN, Alumina, CBN, Diamond and DLC coatings. Structure, properties and applications.

MODULE VI HIGH ENERGY MODIFICATION AND SPECIAL PROCESSES 8

Electron beam hardening/ glazing, Laser beam hardening / glazing ion

inplantation, Composite surface created by laser and Electron beam. Surface cements, Wear tiles, Electro spark deposition, fused carbide cloth, thermal / chemical,Ceramic coatings, centrifugal cast wear coatings, Wear sleeves and Wear plates.

Total Hours – 45

6. William M. Steen, Laser Material Processing, Springer, New York, 2003, TS183.S73.

OUTCOMES:

The students will be able to

- Evaluate various tribology processes.
- Demonstrate the different plating processes.
- Summarize the principles and key characteristics of technologies used in hardfacing processes.
- Characterize the special diffusion processes.
- Identify and describe the various thin film coatings.
- Analyze the high energy modification and special processes.

AUC X31	ADVANCED IC ENGINE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To gain knowledge on ideal cycle and actual cycle.
- To understand the chemical reason of fuels and combustion processes.
- To gain the knowledge in unconventional engines.
- To learn about flow analysis of combustion.

MODULE I INTRODUCTION 7

Fuel air cycle and Actual cycle analysis, Properties of IC engine fuels, Refining process,chemical composition and molecular structure of fuels, octane number, cetane number. Knock rating of SI engine fuels.

MODULE II COMBUSTION OF FUELS 7

Combustion Stoichiometry of petrol, diesel, alcohol and hydrogen fuels – Chemical energy and heating values – Chemical equilibrium and maximum temperature

MODULE III SI AND CI ENGINE COMBUSTION 7

SI engine combustion – Flame velocity and area of flame front – performance number – CI engine combustion. Fuel spray characteristics – droplet size, penetration and atomization.

MODULE IV COMBUSTION MODELLING 8

Basic concepts of engine simulation, governing equations, simulation of various engine processes for SI and CI engines. Adiabatic flame temperature, Heat release calculations. Thermodynamic and Fluid mechanic based models.

MODULE V NON-CONVENTIONAL IC ENGINES 8

Adiabatic and L.H.R. engines – Variable compression ratio engine – Wankel rotary combustion engine – Free piston engine - HCCI and multi fuel engines – Stratified charge and lean burn engines – Locomotive and marine engines.

MODULE VI COMBUSTION ANALYSIS IN IC ENGINES 8

Photographic studies of combustion processes – P-ϕ diagrams in SI and CI engines, Rate of heat release – hot wire and laser Doppler anemometry and velocimetry for flow and combustion analysis in IC engines

Total Hours – 45

TEXT BOOKS:

1. Ganesan .V - "IC Engines" – 4th edition Tata McGraw-Hill, 2012.
2. John B. Haywodd, "Internal Combustion Engine Fundamentals", McGraw-Hill-Indian edition,2011.

REFERENCES:

1. Ganesan .V – 'Computer Simulation of Spark Ignition Processes' - Universities Process Ltd, Hyderabad - 1993.
2. Ganesan.V. – Computer Simulation of compression ignition engines – Orcent Longman – 2000.
3. Richard Stone – "Introduction to IC Engines" – 2nd edition – Macmilan – 1992.

OUTCOMES:

The student should be able to

- Analyze the actual and ideal cycle.
- Calculate the air-fuel ratio of fuels.
- Analyze the adiabatic flame temperature and heat release.
- Analyze the combustion processes of IC engine.

AUC X32 FUEL CELL TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- Understand the basic principles involved fuel cell operation.
- Gain knowledge of various fuel cells and their specific operating principles.
- Understand the research and development challenges in various types of fuel cells.

MODULE I FUNDAMENTALS OF FUEL CELLS 8

Chemoelectricity - what is a fuel cell and how does it work. Electrochemical aspects: Cell potential, reversible potential, Gibbs free energy - Chemical activity and the Nernst equation - Thermo-electrochemical aspects: enthalpy, thermoneutral potential, heat vs. electricity - Real fuel cell behavior: open circuit voltage, polarization curves, over potentials - Fuel cell problem areas: crossover, contamination, leakage currents, partial reactions - Fuel cell efficiencies: voltage, thermodynamic, current, fuel utilization - Types of fuel cells: materials, operating conditions, and applications.

MODULE II FUELS OF FUEL CELLS 6

Fuel cell reactions - Fuels and fuel properties - Fuel processing: steam, reforming, partial oxidation, auto thermal reforming - Water gas shift reaction - Control of contaminants: CO and sulphur - Process integration

MODULE III TYPES OF FUEL CELL 7

Proton Exchange Membrane Fuel Cell (PEMFC) –Direct Methanol Fuel Cell (DMFC) - Phosphoric Acid Fuel Cell (PAFC) - Alkaline Fuel Cell (AFC) – Molten Carbonate Fuel Cell (MCFC) – Solid Oxide Fuel Cell (SOFC).

MODULE IV FUEL CELL PROCESS DESIGN 8

Fuel cell applications and systems overview - Operating and design variables - Examination of process flow diagrams - Theoretical and practical efficiencies: tradeoff of heat and work - Rankine and Brayton cycles - SOFC - Gas turbine combined cycle system - PEM system: material recycle and heat integration.

MODULE V ELECTRODE MODELS 8

Fuel utilization and the envelope of polarization curves - Influence of the Nernst equation (concentration polarization) - Mass balance on SOFC electrode – Energy

balance on SOFC electrode - Multiple reactions in fuel cells: reforming, water gas shift, coking - Temperature profiles.

MODULE VI STACK DESIGN AND SYSTEM INTEGRATION 8

Basic geometry approaches: flat plate vs. tubular - Flow field plate and interconnect design - Fluid mechanics: manifolding, pressure drop - Fuel utilization, efficiency, and current distribution - Internal heat exchange and recovery, internal reforming – Seals and insulation - Safety.

Total Hours – 45

TEXT BOOKS:

1. Pukushpan, J.T., Stctanopoulon, A.G., Peng, H.,"Fuel Cell Power Systems", Springer, 2006.
2. Viswanathan, B., and Aulice Scibioh, M.,"Fuel Cells Principles and Applications", Universities Press (India) Pvt. Ltd., Hyderabad, 2006.

REFERENCES:

1. Larminie.J and Dicks.A, "*Fuel Systems Explained"*, John Wiley & Sons, Ltd., New York, 2001.
2. O'Hayre.R, Suk-Woncha, Whitney Colella, Prinz, F.B., "*Fuel Cell Fundamentals"*, John Wiley & Sons, New York, 2006.
3. Hoogers.G. Edr, "*Fuel Cell Technology Handbook"*, CRC Press, Washington D.C., 2013.

OUTCOMES:

The student should be able to

- Evaluate locate the operational issues and challenges for all major types of fuel cell.
- Evaluate the significance of hydrogen and automobile application
- Formulate the various components required to build the fuel cell
- Determine the performance characteristics of fuel cell for various parameters
- Compare the various types of liquid hydrogen storage methods
- Enumerate the need of fuel cell with various fuel cycle analysis

AUC X33 POWER PLANT ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Know the functions of various auxiliary combustion equipment
- Understand the thermal power plant systems.
- Familiarize with operation of nuclear, Diesel and gas turbine power Plants.
- Familiarize with renewable energy sources and power plant economics.

MODULE I FUEL COMBUSTION EQUIPMENTS 8

Types of combustion, stokers, fuel and ash handling equipments. Draft - forced, induced and balanced drafts. Selection of fans. Heat recovery equipmentseconomisers, air preheaters and reheaters, different types of superheaters and desuperheaters. Emission control, flue gas cleaning, particulate and gaseous emission control methods.

MODULE II THERMAL POWER PLANT SYSTEMS 8

Steam generators - forced circulation, high-pressure boilers and super critical boilers, fluidized bed boiler, boiler accessories and mountings. Boiler testing. Condensers: Different types, design factors, air removal, performance calculation. Cooling towers - natural and mechanical draft types.

MODULE III NUCLEAR POWER PLANTS 7

General nuclear fuels used in reactors, elements of nuclear reactor, moderator, control rods, coolants, description of different types of reactors. Radiation hazards, radioactive waste disposal.

MODULE IV DIESEL AND GAS TURBINE POWER PLANTS 7

Diesel power plant - Classifications, components, selection of engine type. Gas turbine plant - closed and open cycles. Combined power cycles

MODULE V RENEWABLE ENERGY SOURCES 8

Solar energy - measurement, methods of utilization, flat plate and concentrating collectors, water heater, air driers, photovoltaic cell. Wind energy - Horizontal and vertical axis wind turbines. Geothermal plants, tidal power plant, biomass and biogas plants, OTEC plants.

MODULE VI POWER PLANT ECONOMICS 7

Plant load factor and utilization factor, cost economics - Tariff rates, demand changes, load distributions. Energy conservation and audit. Maintenance aspects of power plants.

Total Hours – 45

TEXT BOOKS:

1. Nag.P.K, “Power Plant Engineering”, Tata McGraw Hill, New Delhi, 3rd edition, 2008.
2. Arora.S.C and Domkundwar.S, “Power Plant Engineering”, Dhanpat Rai & Sons, New Delhi, 2001.

REFERENCES:

1. Ramalingam.K.K, “Power Plant Engineering”, Scitech Publication Pvt. Ltd, 2002.
2. Rai.G.D, “Non-Conventional Energy Sources”, Khanna Publishers, 4th edition, New Delhi, 2009.
3. El Wakil.M.M, “Power Plant Technology”, McGraw Hill Inc., New York, 1985.

OUTCOMES:

The student should be able to

- Analyze various sub-systems in power plant.
- Design the power plant sub-system.
- Analyze entire power plants and its efficiency.
- Design and develop low cast power plant components.

Physics Elective Courses
(To be offered in II Semester)

PHCX 01	FUNDAMENTALS OF ENGINEERING MATERIALS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To help students to acquire the properties and applications of conducting and semiconducting materials.
- To familiarize students with basic ideas about the properties of dielectric and magnetic materials and their applications.
- To familiarize students with basic knowledge of nanomaterials and its electrical, electronic, mechanical and magnetic properties.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I CONDUCTING AND SEMICONDUCTING MATERIALS 7

Conductors: properties, Fermi distribution function, Fermi energy in metals- density of states- conducting polymers-properties-applications, semiconductors: intrinsic and extrinsic semiconductors-carrier concentration, conductivity and energy band gap, semiconducting polymers- properties- applications.

MODULE II DIELECTRIC MATERIALS 8

Polarization- dielectric constant – electronic, ionic, orientational and space charge polarization – frequency and temperature dependence of polarisation – Internal field - Clausius Mosotti relation - dielectric loss – dielectric breakdown – applications of dielectric materials (capacitors and transformers) – Pyroelectricity, Piezoelectricity, ferroelectricity and applications in Ferroelectric Random Access Memory (FeRAM) - multiferroic materials and its applications.

MODULE III MAGNETIC MATERIALS 7

Origin of magnetism-magnetic moment, susceptibility, permeability – Bohr magneton – Dia, Para and Ferro magnetism –Spontaneous magnetization- Domain theory – Hysteresis – soft and hard magnetic materials – antiferromagnetic materials – Ferrites and its application - Giant Magneto-resistance effect (GMR) - Magnetic resonance imaging(MRI).

MODULE IV NANOMATERIALS 8

Properties of nanomaterials – size effect on thermal, electrical, electronic, mechanical,

optical and magnetic properties – quantum confinement – classification of nanomaterials – quantum well, quantum wire, quantum dot - nanoporous materials - carbon nanotubes, graphene - nanocomposites – applications of nano materials.

PRACTICALS

1. Determination of energy band gap of a semiconductor.
2. Determination of resistivity of metals by four point probe method.
3. Determination of dielectric constant of dielectric material.
4. Determination of time constant of a capacitor using RC circuit.
5. Determination of paramagnetic susceptibility of given liquid.
6. Determination of hysteresis loss in a transformer using BH curve.
7. Analysis of size effect on the absorption spectrum of nanomaterials.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. William D. Callister, “Material Science and Engineering”, Wiley Publications, 2006.
2. Raghavan, V., “Materials Science and Engineering”, 5th edition, Printice Hall of India Pvt Ltd. New Delhi, 2004.
3. Wahab. M.A, “Solid State Physics: Structure and Properties of Materials”, Narosa Publishing House Pvt. Ltd., New Delhi , 2nd Edition, 2010.
4. Pillai, S.O., “Solid State Physics”, New Age International, New Delhi, 2005.
5. Charles P. Poole and Frank J. Owens, ”Introduction to nanotechnology”, Wiley (India), 2009.
6. Pradeep. T., “Textbook of Nanoscience and Nanotechnology”, McGraw Hill Education (India) Private Limited, New York, 2012.

OUTCOMES:

On completion of this course, the student will be able to

- apply the concepts of conducting and semiconducting materials for solid state devices.
- comprehend the significance of properties of dielectric magnetic materials and derive these properties from synthesized materials.
- differentiate between the properties of the nanomaterials compared to bulk materials.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 02	HEAT AND THERMODYNAMICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To familiarize students with basic concepts of heat.
- To help students acquire the fundamentals of heat conduction and radiation.
- To enable students acquaint with the basics of thermodynamic concepts.
- To make students understand the fundamentals of heat based experiments.

MODULE I CONCEPTS OF HEAT **10**

Definition of temperature, thermal and thermodynamic equilibrium - relationship between temperature and kinetic energy - definition of solid, liquid, gas - Introduction to phase transitions, critical and triple points- definition of heat capacity, mechanical equivalent of heat -Joule's calorimeter- latent heat- microscopic model of ideal gas - equation of state, internal energy, equipartition theorem- equation of state for non-ideal gases.

MODULE II CONDUCTION AND RADIATION **10**

Thermal conductivity – rectilinear flow of heat – thermal conductivity of a good conductor – Forbe’s method – thermal conductivity of a bad conductor – Lee’s disc method – conduction of heat through compound media - radiation – Planck’s law of blackbody radiation – Wien’s law – Stefan’s law – Newton’s law of cooling from Stefan’s law – Solar constant – Pyrometry.

MODULE III FUNDAMENTALS OF THERMODYNAMICS **10**

Thermodynamic equilibrium – zeroth law of thermodynamics – first law of thermodynamics – Reversible and irreversible processes – second law of thermodynamics - Heat engine – Carnot’s engine – Carnot’s theorem – Internal combustion engines – petrol and diesel engines (qualitative) – Entropy and available energy – temperature – entropy diagram for Carnot’s cycle - Third Law of thermodynamics (qualitative).

PRACTICALS

1. Determination of mechanical equivalent of heat by Joule’s calorimeter.
2. Relation between temperature of a body and time by plotting a cooling curve-Newton’s law of cooling.

3. Determination of specific heat capacity of liquid by cooling.
4. Determination of thermal conductivity of a good conductor-Forbe's method
5. Determination of thermal conductivity of a bad conductor-Lee's disc method

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur. D.S, “Heat & Thermodynamics”, S.Chand & Co., 2009.
2. Brijlal & Subramaniam, “Heat and Thermodynamics”, S.Chand & Co, Delhi, 2010.
3. Gupta. A.B and Roy. H, “Thermal Physics”, Books and Allied Ltd., 2002.
4. Sharma. J.K and Sarkar. K.K, “Thermodynamics and statistical Physics”, Himalaya Publishing House, 1988.

OUTCOMES:

On completion of this course, the student will be able to

- understand the concepts of heat and its properties.
- comprehend the ideas governing the conduction and radiation processes.
- apply the knowledge of laws of thermodynamics in thermodynamic systems.
- perform heat based experiments and determine its various properties.

PHCX 03	INTRODUCTION TO NANOSCIENCE AND TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To acquire basic knowledge about the nanomaterials and applications.
- To learn about the synthesis and imaging techniques of nanomaterials.
- To gain the basic concepts of fabrication techniques.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I NANOMATERIALS AND APPLICATIONS **10**

Properties of nanomaterials – size effect on thermal, electrical, electronic, mechanical, optical and magnetic properties – quantum confinement – classification of nanomaterials – quantum well, quantum wire, quantum dot - nanoporous materials - zeolite, mesoporous materials, carbon nanotubes, grapheme - nanocomposites - applications (qualitative): Molecular electronics-nanoelectronics – nanophotonics - single electron transistor-drug delivery.

MODULE II SYNTHESIS AND IMAGING TECHNIQUES **12**

Top-down and bottom up approaches – mechanical alloying and mechanical ball milling - sol-gel approach - hydrothermal method - precipitation method - spray pyrolysis - spin coating-self assembled monolayer (SAM) - Chemical vapour deposition method – Physical vapour deposition method: laser ablation method, sputtering method.

Optical microscopy – Phase contrast and interference microscopy – confocal microscopy - high resolution Scanning electron microscope (HRSEM) - high resolution Transmission electron microscope (HRTEM) - Atomic force microscope - Scanning Tunnelling microscope (STM).

MODULE III NANOFABRICATION **8**

Photolithgraphy - electron beam lithography - X-ray and Ion beam lithography - nanoimprint lithography - soft lithograpy - nanoelectromechnical systems (NEMS) - nanoindentation principles.

PRACTICALS

1. Synthesis of nanomaterials by sol-gel method.

2. Synthesis of nanomaterials by hydrothermal method.
3. Synthesis of nanomaterials by solid state reaction method.
4. Synthesis of nanomaterials by chemical bath deposition method.
5. Synthesis of nanomaterials by co-precipitation method.
6. Synthesis of nano thin films by spray pyrolysis method.
7. Synthesis of nano thin films by pulsed laser deposition (PLD) method.
8. Analysis of size effect on the absorption spectrum of nanomaterials.
9. SEM characterization of nanomaterials.
10. AFM characterization of nano thin films.
11. Phase confirmation by XRD.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Charles P.Poole and Frank J. Owens, ”Introduction to nanotechnology”, Wiley (India), 2009.
2. Cao. G., “Nanostructures & Nanomaterials: Synthesis, Properties & Applications”, Imperial College Press, 2004.
3. Gaddand. W., Brenner. D., Lysherski. S. and Infrate. G.J., “Handbook of NanoScience Engineering and Technology”, CRC Press, 2002.

5. Chris Mack, “Fundamental Principles of Optical Lithography: The Science of Microfabrication”, John Wiley & Sons, 2008.
6. Bandyopadhyay A.K., “Nano Materials”, New Age International Publishers, New Delhi, 2008.

OUTCOMES:

At the end of the course, the students will be able to

- understand the importance and basic concepts of the nanomaterials.
- comprehend the imaging techniques for nanomaterials.
- illustrate the various nanofabrication techniques.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 04 LASERS AND THEIR APPLICATIONS L T P C

2 0 2 3

OBJECTIVES:

- To recognize the fundamentals of laser and its characteristics.
- To comprehend and compare the different laser systems.
- To apply lasers in metrology and material processing.
- To understand the working of laser instrumentation.
- To correlate the experimental results for applications.

MODULE I LASER THEORY 8

Spontaneous and stimulated emission - Population inversion – Einstein's A & B coefficients - Threshold condition – super-radiance Laser – Three level and four level laser systems -conditions for CW and pulsed laser action. Q-Switching - experimental methods - cavity dumping - Mode locking - experimental methods - Spatial and Temporal coherence.

MODULE II DIFFERENT LASER SYSTEMS 8

Laser systems – General description - Laser structure - excitation mechanism - Different laser systems- He-Ne laser, Carbon-dioxide laser - Excimer laser – Free electron laser- Alexandrite laser - Ti-Sapphire laser – Semiconductor diode laser - Diode pumped solid state laser - Pulsed-CW dye laser- Fibre laser.

MODULE III METROLOGICAL AND MATERIAL PROCESSING APPLICATIONS 8

CW and Pulsed laser beam characteristics and its measurements - Beam focusing effects - spot size - Power and Energy density Measurements - Distance measurement - Interferometric techniques - LIDARS - different experimental arrangements - Pollution monitoring by remote sensing - Laser gyroscope - Laser welding, drilling, machining and cutting - Laser surface treatment - Laser vapour deposition – Biophotonic applications.

MODULE IV LASER INSTRUMENTATION 7

Laser for measurement of length, current and voltage – Laser Doppler Velocimetry - Holography and speckle in displacement and deformation measurements - Laser for communication with fiber optics as channel.

PRACTICALS

1. Tuning of Dye Laser using DFDL Arrangement
2. Determination of Brewster Angle using He-Ne laser
3. Study of transversely Pumped Dye Lasers
4. Study of longitudinally Pumped Dye Lasers
5. Determination of power and wavelength using Distributed Feedback Dye Laser (DFDL)
6. Determination of fibre optic losses using semiconductor laser.
7. Bandgap determination of a semiconductor diode.

L – 30; P – 30; TOTAL HOURS – 60

6. William M.Steen, ”Laser Material Processing”, Springer-Verlag, Berlin, Third Edn., 2005.

OUTCOMES:

At the end of the course, the students will be able

- To complement the knowledge acquired in the theory class.
- To work with dye lasers for tunability of laser wavelength.
- To measure the loss of information involved in fibre optic communication.
- To correlate the results for application.

PHCX 05	MATERIALS SCIENCE	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To gain basic knowledge in conducting and semiconducting materials and their properties.
- To provide basic understanding of properties and applications of dielectric materials.
- To impart knowledge on magnetic and optical materials and their properties & applications.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I CONDUCTING AND SEMICONDUCTING MATERIALS 10

Quantum free electron theory of metals and its importance - Energy distribution of electrons in metals - Fermi distribution function - Density of energy states and carrier concentration in metals - Fermi energy – Classification of solids into conductors, semiconductors and insulators on the basis of Band theory – Introduction to Elemental and Compound semiconductors - Carrier concentration derivation for Intrinsic semiconductors - Density of electrons in conduction band & Density of holes in valence band- intrinsic carrier concentration - Fermi energy & Variation of Fermi energy level with temperature - Mobility and electrical conductivity - Band gap determination.

MODULE II DIELECTRIC MATERIALS 7

Introduction to dielectric materials & basic definitions – Electronic, Ionic, Orientation & Space charge polarizations - Total polarization – Frequency and temperature dependence of polarization - Internal field in a dielectric material - Deduction of Clausius - Mosotti's relation - dielectric loss & loss tangent – Different types of dielectric breakdown – Applications of dielectric materials : Capacitors and Transformers.

MODULE III MAGNETIC MATERIALS 6

Introduction to magnetic materials & origin of magnetic moment - Different types of

magnetic materials and their properties - Ferromagnetism & Domain theory of ferromagnetism - Hysteresis, Soft and Hard magnetic materials - Antiferromagnetic materials - Ferrites and its applications – Applications of magnetic materials : Data storage.

MODULE IV OPTICAL MATERIALS 7

Optical properties of semiconductors - Direct and Indirect bandgap semiconductors – Traps, recombination centre, color center and exciton – Luminescence : Fluorescence and Phosphorescence - Liquid crystal display : twisted nematic crystal display – Applications of Optical materials - Optical Sources : light emitting diode and laser diode - Photo detectors : PIN photodiode and Avalanche Photodiode - Pyroelectric devices - Electro optic effect : Kerr effect and Faraday effect.

PRACTICALS

1. Resistivity measurement of a semiconductor using four point probe method.
2. Determination of band gap of a semiconductor diode.
3. Determination of Hall coefficient of a given semiconductor material.
4. Determination of dielectric constant of a given non-polar liquid.
5. Determination of magnetic susceptibility of a given paramagnetic liquid using Quincke's method.
6. Determination of energy loss of a given transformer core using hysteresis method.
7. To study the I-V characteristics of a photodiode.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Palanisamy P.K., ''Physics II'', Material Science for ECE, Scitech Publications (India) Pvt. Ltd., 2006.

5. Raghavan. V, ''Materials Science and Engineering'', Prentice Hall of India, 5th Edition, 2004.

OUTCOMES:

On the completion of this course, the students will be able to

- Gain knowledge about fundamentals of conducting and semiconducting materials.
- Understand concepts and applications of Dielectric and Magnetic materials.
- Familiarize Optical materials and their applications in Engineering and Medical fields.
- Complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 06	NON-DESTRUCTIVE TESTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To study the process and applications of ultrasonic inspection method.
- To understand the basic concepts of radiographic inspection method.
- To acquire the knowledge about the various surface Non-Destructive Testing (NDT) techniques.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I ULTRASONIC INSPECTION METHOD **10**

Ultrasonic Testing - Principle of operations - types of sound waves - types of Transducers - transmission and pulse-echo method - straight beam and angle beam, instrumentation - calibration methods - ultrasonic testing technique- data representation, A Scan, B-scan, C-scan. Phased Array Ultrasound, Time of Flight. Diffraction - thickness determination - advantages, disadvantages and applications.

MODULE II RADIOGRAPHIC INSPECTION METHOD **10**

Radiographic testing – Principle - Interaction of X-ray with matter - X-ray radiography - method of generation-industrial radiography inspection techniques – Equipment - Exposure charts - Types of films – Fluoroscopy - Xero-Radiography – Limitations - Gamma radiography - Equipment, radiation sources - method of generation - film processing - interpretations of radiography - safety in industrial radiography.

MODULE III SURFACE NDT TECHNIQUES **10**

Liquid Penetrant Testing – Principles, Characteristics and types of liquid penetrants – developers - advantages and disadvantages of various methods - Inspection Procedure and Interpretation of results. Applications of Liquid Penetrant testing.

Magnetic Particle Testing - Principle-magnetizing technique - procedure –equipment - Interpretation and evaluation of test indications - applications and limitations - demagnetization.

PRACTICALS

1. Inspection of welds using solvent removable visible dye penetrant.
2. Inspection of welds using solvent removable fluorescent dye penetrant.

3. Inspection on non magnetic materials by eddy current method.
4. Inspection on magnetic materials by eddy current method.
5. Inspection of welds by Eddy current Testing.
6. Inspection of welds by Magnetic Particle Testing - Dry method.
7. Inspection of welds by Magnetic Particle Testing - Wet method.
8. Ultrasonic flaw detector - Inspection of defects.
9. Demonstration of Radiographic inspection.

5. Charles J., Hellier, “Handbook of Nondestructive evaluation”, McGraw Hill, New York, 2001.

OUTCOMES:

Upon completion of this course, the students will be able to

- illustrate the ultrasonic inspection methods of NDT.
- understand the basic concept of radiographic inspection method.
- test the surfaces by the various surface NDT techniques.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 07	PROPERTIES OF MATTER AND ACOUSTICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand principles and properties of elasticity.
- To understand the basic concepts and application of viscosity.
- To analysis acoustic of building.
- To know about photoelasticity and its applications.

MODULE I ELASTICITY **8**

Stress and strain - Hooke's Law of elasticity - Elastic moduli - Stress-Strain Diagram - Poisson's Ratio - Relation between elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Expression for bending moment - Cantilever–Expression for depression - Uniform bending and Non-uniform bending of beams (theory & experiment) - I form Girders (qualitative treatment) and applications.

MODULE II VISCOSITY **8**

Viscosity- Newton’s formula for viscous flow - Streamline and turbulent motion - Reynolds number - Poiseuille's formula - Determination of coefficient of viscosity- factors affecting viscosity - capillary flow method - Stoke's formula- viscosity of highly viscous liquids – Stoke’s method - Lubricants and its applications –viscosity measurements - Viscometer - Variation of Viscosity with Temperature.

MODULE III ACOUSTICS OF BUILDING **7**

Basic requirement for the acoustically good halls - Reverberation and time of reverberation – Sabine’s formula for reverberation time - Absorption coefficient and its measurement -Transmission of sound and transmission loss - Factors affecting the architectural acoustics and their remedy-sound absorbing materials - vibration and noise control systems for buildings.

MODULE IV PHOTOELASTICITY **7**

Polarization - double refraction - Theory of Plane, Circularly and Elliptically polarized light - Quarter wave plate and half wave plate - photo elasticity - Theory of photo-elasticity - Stress optic relations - model materials - analysis techniques - Photo elastic bench - Three dimensional photo elasticity - Digital photo elasticity - Photo elastic

coatings.

PRACTICALS

1. Determination of viscosity of liquid by Poiseuille's method.
2. Determination of viscosity of liquid by Stoke's method.
3. Analysis of stress by photo elastic method.
4. Verification of Hooke's law by spring method.
5. Determination of Young's modulus of the cantilever beam.
6. Determination of rigidity modulus by static torsion method.
7. Visit to acoustically good auditorium and identifying the sound absorbing materials in the auditorium.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur D.S., "Elements of Properties of Matter", S.Chand & Co, Delhi, 2009.
2. Gaur R.K., Gupta S.L.,"Engineering Physics", Dhanpat Rai Publishers, 2010.

4. Smith C.J.," General Properties of Matter", Orient & Longman,1960.
5. Kenneth G. Budinski and Michel K., Budinski, "Engineering Materials Properties and Selection", Pearson, Singapore, 2002.

OUTCOMES:

Upon completion of this course, the students will be able to

- understand the basic concepts of the elasticity of materials.
- comprehend the concepts of viscosity of liquid and measurement.
- demonstrate the acoustical aspects of building and its importance in construction.
- apply the fundamental concept of photo elasticity for the stress analysis of the object.

PHCX 08	PROPERTIES OF MATTER AND NONDESTRUCTIVE TESTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To impart knowledge about the principles and properties of elasticity.
- To learn the laws governing the dynamic of rigid bodies.
- To acquire the knowledge of the various techniques of Non-Destructive Testing (NDT) of materials.
- To understand the principle and basic concept of low temperature applications.

MODULE I ELASTICITY **8**

Stress and strain - Hooke's Law of elasticity - Elastic moduli - Stress-Strain Diagram - Poisson's Ratio - Relation between elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Expression for bending moment- Cantilever–Expression for depression - Uniform Bending and Non-uniform bending of beams (theory & experiment) - I form Girders (qualitative treatment) and applications.

MODULE II DYNAMICS OF RIGID BODIES **8**

Rigid bodies - angular acceleration - Torque on a particle - angular momentum - law of conservation of angular momentum - moment of inertia and its significance - Theorem of parallel and perpendicular axis - moment of inertia of a thin uniform bar - moment of inertia of a rectangular lamina - moment of inertia of uniform circular disc - Moment of inertia of hollow and solid cylinders – flywheel
(qualitative) - kinetic energy of rotating body – Routh rule.

MODULE III NDT TECHNIQUES **6**

Ultrasonic Testing- types of Transducers-transmission and pulse-echo method- Radiographic testing- Principle-Interaction of X-ray with matter-X-ray radiography-method of generation-industrial radiography inspection techniques- Liquid Penetrant Testing**-** Inspection Procedure and Interpretation of results.

MODULE IV LOW TEMPERATURE PHYSICS **8**

Definition of Refrigeration and Air-Conditioning - Types of **Refrigeration Systems-** Applications- Comfort Air Conditioning, Industrial Refrigeration, Food processing

and food chain - **Cryogenic treatment - Low temperature properties of engineering materials: Mechanical properties, Thermal properties, Electrical properties.**

PRACTICALS

1. Verification of Hooke's law by spring method.
2. Determination of Young's modulus of the beam by bending method.
3. Inspection of welds using solvent removable visible dye penetrant.
   Inspection of welds using solvent removable fluorescence dye penetrant.
5. Inspection of welds by Magnetic Particle Testing.
6. Determination of moment of inertia of the disc by torsion pendulum method.
7. Determination of moment of inertia of the disc by static torsion method.
8. Demonstration of working of flywheel.

L – 30; P – 30; TOTAL HOURS – 60

7. Charles J., Hellier.," Handbook of Nondestructive evaluation", McGraw Hill, New York, 2001.

OUTCOMES:

Upon completion of this course, the students will be able to

- understand the basic of concept of elasticity of materials.
- comprehend the basic concepts of motion of rigid bodies and its applications.
- demonstrate the various NDT techniques and its importance.
- know the low temperature systems and its applications.

PHCX 09	SEMICONDUCTOR PHYSICS AND OPTOELECTRONICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand the Physics of Semiconductor devices.
- To make the students learn the fundamentals of Photoluminous - semiconductors, Optoelectronic devices, Optical modulators/detectors.
- To make them understand the technology behind latest Display devices like LCD, Plasma and LED Panels.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I PHYSICS OF SEMICONDUCTORS **8**

Elemental and compound semiconductors – Drift and diffusion current - Intrinsic semiconductors – Carrier concentration (derivation) – Fermi energy – Variation of Fermi energy level with temperature – Mobility and electrical conductivity – Band gap determination – Extrinsic semiconductors – Carrier concentration in n-type and p-type semiconductor (derivation) – Variation of Fermi level with temperature and impurity concentration – Variation of Electrical conductivity with temperature – Hall effect – Experiment and applications of Hall effect.

MODULE II OPTOELECTRONIC DEVICES **7**

Light Emitting Diodes (LED) – power and efficiency - double hetero LED - LED structure - LED characteristics - White LED – Applications. Liquid crystal displays – Dynamic scattering and Twisted nematic display, Semiconductor Lasers, Homojunction and Heterojunction laser diodes - Optical processes in semiconductor lasers.

MODULE III OPTICAL MODULATORS **7**

Modulation of light – birefringence –Modulation Techniques - Electro optic effect – Electro optic materials –Types of Electro optic Modulators : Kerr and Pockel modulators –- Magneto optic effect - Magneto optic Modulators – Acousto Optic modulators.

MODULE IV OPTICAL DETECTORS **8**

Photo detectors - photodiodes - phototransistors - noise characteristics - PIN diode – Avalanche Photodiode (APD) characteristics - APD design of detector arrays – Charged Couple Device - Solar cells - Materials and design considerations, Thin film

solar cells, amorphous silicon solar cells.

PRACTICALS

1. Resistivity measurement of a semiconductor using four point probe method.
2. Determination of band gap of a semiconductor diode.
3. Determination of Hall coefficient of a given semiconductor material.
4. Determination of the wavelength of a given laser source using diffraction grating.
5. Determination of Planck's constant using LED.
6. To study the I-V characteristics of photodiode and phototransistor.
7. To study the characteristics of a solar cell.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

6. Palanisamy P.K., "Semiconductor physics and optoelectronics" Scitech Publications, 2003.

OUTCOMES:

On completion of this course, the student will be able to

- understand the principles of Physics behind semiconductor devices.
- choose the correct semiconductors for electronic devices and display.
- differentiate the working principle of LED and Diode Laser.
- apply the knowledge of modulation of light for different types of optical modulators.
- select suitable photodetectors for different types of applications.
- complement the knowledge acquired in the theory class and correlate the results for applications.

Chemistry Elective Courses
(To be offered II Semester)

CHCX01	ANALYTICAL INSTRUMENTATION	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the student conversant with

- principles, instrumentation and applications of different electroanalytical techniques
- different chromatographic techniques
- principles, instrumentation and applications of various types of absorption and emission spectroscopy
- different thermal analytical methods and their applications

MODULE I ELECTROANALYTICAL TECHNIQUES **7**

Principle and applications: conductometric titrations – potentiometrIc titrations, ion-selective electrodes and pH-metry – coulometry – voltammetry - polarography, amperometric titrations.

MODULE II CHROMATOGRAPHY **8**

Basic concepts of chromatography – paper chromatography – column chromatography – thin layer chromatography – gas chromatography – high performance liquid chromatography – gel permeation chromatography.

MODULE III SPECTROSCOPY **8**

Absorption spectroscopy (principle, instrumentation and applications): Colorimetric analysis – UV-Visible spectroscopy – FTIR spectroscopy - Emission Spectroscopy (principle, instrumentation and applications): fluorescence, phosphorescence and chemiluminescence – Atomic absorption spectroscopy – flame emission spectroscopy.

MODULE IV THERMAL ANALYSIS **7**

Principle, instrumentation and applications: Thermo gravimetric analysis – Differential thermal analysis – Differential scanning calorimetry

PRACTICALS

1. Conductometric titrations: acid-base and precipitation titrations

2. Potentiometric titrations
3. Determination of pH of the unknown solution
4. Estimation of alkali metals using flame emission spectroscopy
5. Estimation of metal ions of coloured solutions using colorimetric analysis
6. Separation of compounds using gas chromatography
7. Separation of compounds using high performance liquid chromatography
8. Analysis of the given sample and interpretation of the data using IR, UV-Visible spectroscopy
9. Demonstration of TGA/DTA and DSC and interpretation of data.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

6. Settle F. (Editor), Handbook of Instrumental Techniques for Analytical Chemistry, Pearson Education, Singapore, 2004.

OUTCOMES:

The student will be able to

- state the principle and applications of various electro-analytical techniques
- identify the right separation method for a given sample using different chromatographic techniques
- explain the principle, instrumentation & applications of various spectroscopic methods and also to interpret the data
- elaborate the principle, instrumentation and applications of various thermal analytical techniques and interpret the data.

CHCX02	CORROSION AND ITS CONTROL	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with the

- Basic concepts, principles and factors affecting corrosion
- Types and mechanism of corrosion
- Control measures of corrosion by material selection, proper design and by applying organic coatings
- Control of corrosion by applying inorganic coating

MODULE I BASIC CONCEPTS OF CORROSION 8

Corrosion – causes and impacts of corrosion – mechanism of corrosion: Dry corrosion- oxidation corrosion - corrosion by other gases – Pilling-Bedworth rule- Corrosion by hydrogen: hydrogen blistering, hydrogen embritttlement, decarburization and hydrogen attack – corrosion of silver and copper by sulphur compounds – liquid metal corrosion (embritttlement or cracking) – Wet corrosion : hydrogen evolution – presence and absence of oxygen and absorption of oxygen – difference between dry and wet corrosion-factors influencing corrosion-polarization-passivity-emf series and galvanic series- corrosion current -rate of corrosion.

MODULE II FORMS OF CORROSION 7

Forms of corrosion-conditions for electrochemical corrosion –galvanic corrosion – differential aeration corrosion: pitting, water line, wire fencing, crevice and filiform corrosion – stress corrosion – Intergranular corrosion- erosion corrosion – soil corrosion – microbiological corrosion- fretting corrosion- corrosion in composites.

MODULE III CORROSION CONTROL AND ORGANIC COATINGS 8

Corrosion control – selection of materials and designing- cathodic protection – sacrificial anode and impressed current cathodic protection – corrosion inhibitors: anodic, cathodic and vapour phase inhibitors.

Organic protective coatings – paints: constituents – functions – varnishes : types-constituents – functions – lacquers : constituents – functions –enamels-constituents – functions – special paints : fire retardant, water repellant, heat resistant, temperature indicating and luminous paints.

MODULE IV INORGANIC COATINGS 7

Treatment of metal surface-inorganic coatings- classification- metallic coatings : anodic and cathodic coatings-hot dipping : galvanizing and tinning- electroplating—electroless plating – cementation (diffusion) : sherardizing, calorizing and chromizing – metal cladding-metal spraying – non metallic coatings (chemical conversion coatings) : phosphate, chromate, oxide coatings and anodizing – comparison of anodic and cathodic protection.

PRACTICALS

1. Determination and comparison of rate of corrosion of metals in the presence of acid, base and neutral medium by weight loss method.
2. Determination of rate of corrosion of iron in the presence of various acids by weight loss method.
3. Determination of rate of corrosion of iron in the presence and absence of anodic Inhibitor by weight loss method.
4. Determination of rate of corrosion of iron in the presence and absence of cathodic Inhibitor by weight loss method.
5. Electroplating of base metal with copper.
6. Electrolessplating of base metal with copper
7. Chemical conversion coatings such as chromate and phosphate coatings.
8. Demonstration on the study of rate of corrosion by using cyclic voltametry.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. P.C Jain & Monica Jain, Engineering Chemistry Dhanpatrai Publishing Company (P) Ltd., New Delhi (2013).
2. S S Umare & S S Dara, A text Book of Engineering Chemistry, S. Chand& Company Ltd, New Delhi, 2014.

4. S. Banerjee, A.K. Tyagi, Functional Materials- Preparation, Processing and Applications, ELSEVIER Publications, London ; Waltham, MA : 2011

OUTCOMES:

Students will be able to

- explain the mechanism, compare and enumerate the factors affecting

corrosion

- describe and identify the place and types for a given situation.
- choose and elaborate the suitable organic coating method for a given real time situation.
- apply a suitable metallic coating for a given situation

CHCX03	ELECTRICAL MATERIALS AND BATTERIES	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with

- preparation, properties and applications of plastics used in electrical and electronic applications
- properties and uses of electrical engineering materials
- classification and description of different types of batteries.
- classification and types of fuel cells

MODULE I POLYMERS FOR ELECTRICAL AND ELECTRONIC APPLICATIONS **8**

Preparation, properties and applications **:** polyethylene, polypropylene, EPDM, Nylon-6,6, PVC, PTFE, polycarbonates, ABS, phenol formaldehyde, urea formaldehyde, epoxy resins – polymer blends and alloys.

MODULE II ELECTRICAL ENGINEERING MATERIALS **7**

Conductors: Silver, Copper, Gold, Aluminum – Semiconductors: Germanium, Silicon, Gallium Arsenic – Insulating Materials: Rubbers, Mica, Plastics, Ceramics, Insulating papers – Magnetic Materials: ferromagnetic materials, paramagnetic materials, diamagnetic materials, antiferromagnetic materials, ferrites

MODULE III BATTERIES **7**

Electrochemical and electrolytic cell – batteries: types (primary, secondary and flow cell) – primary batteries: dry cells, alkaline batteries – secondary batteries: nickel-cadmium cell – lead acid storage cell, lithium battery: primary and secondary type – solar cell – dye sensitized solar cell.

MODULE IV FUEL CELLS **8**

Difference between batteries and fuel cells - chemistry of fuel cells - types of fuel cell (based on temperature and electrolyte) – principle, characteristic features, advantages, disadvantages and applications of polymer electrolyte membrane or proton exchange membrane fuel cell (PEMFC), direct methanol fuel cell (DMFC), alkaline fuel cell (AFC), phosphoric acid fuel cell (PAFC), molten carbonate fuel cell (MCFC) and solid oxide

fuel cells (SOFC).

PRACTICALS

1. Free radical polymerization of styrene.
2. Free radical polymerization of PMMA.
3. Preparation of phenol-formaldehyde.
4. Preparation of urea-formaldehyde.
5. Synthesis of epoxy resin.
6. Demonstration of mechanical properties of insulating materials using UTM
7. Demonstration of electrical properties of insulating materials
8. Construction of batteries using natural resources
9. Measurement of EMF for different batteries.

L – 30; P – 30; TOTAL HOURS – 60

7. B. Viswanathan and M. Aulice Scibioh, Fuel Cells: Principles and Applications, Taylor and Francis Group, 2007.

OUTCOMES:

The student will be able to

- summarise the preparation, properties and applications of plastics used in electrical and electronic applications
- enumerate the properties and uses of electrical engineering materials
- illustrate various types of batteries with the aid of a diagram
- classify the fuel cells and elaborate the different types of fuel cells.

CHCX04	ENGINEERING MATERIALS	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with

- properties and uses of different types of refractories and abrasives
- adhesives, cements and lime, setting of cements and their chemical behaviors.
- types, properties and uses of lubricants.
- various types of composite materials.

MODULE I REFRACTORIES AND ABRASIVES **8**

Introduction refractory: -classification - based on chemical nature- characteristic and selection of good refractory - general manufacture of refractory- preparation properties and uses of: silica refractory - magnesite refractory - zirconia refractory, properties of refractories: refractoriness - refractoriness under load - thermal spalling - porosity and dimensional stability, Cermets - super refractory.

Abrasives : introduction - Moh's scale - natural abrasives: diamond – corundum – emery - garnet and quartz, synthetic abrasives: preparation properties and uses: carborundum (silicon carbide)– alundum - boron (norbide) carbide

MODULE II ADHESIVES AND BINDING MATERIALS **7**

Introduction - classification of adhesives –advantage –limitation of adhesive bonding – development of adhesive- factors influencing adhesive action: chemical and physical, application techniques of adhesive – Lime: classification – manufacture - setting and hardening, Gypsum: -Manufacture and properties and uses - Cement : chemical composition- Manufacture – setting and hardening – concrete – weathering of cement and concrete and its prevention- special cements: high alumina cement - sorel cement - white portland cement – water proof cement.

MODULE III LUBRICANTS **7**

Introduction –functions of lubricant- mechanism of lubrication - classification of lubricant – liquid lubricant: vegetable and animal oils – mineral oils, semisolid: grease(calcium, lithium, aluminium) – petroleum jelly, solid lubricant: graphite - molybdenum disulphide, Properties of lubricant: viscosity - viscosity index - flash point and fire point - cloud point and pour point – oiliness - aniline point - carbon residue.

MODULE IV COMPOSITE MATERIALS 7

Introduction – advantageous characteristics of composites, applications of composites, main constituent of composites, types and applications of composites: RCC fibre-reinforced plastics (glass , carbon and aramid) - particulate composite - metal matrix composite - layered composites - failures in fibre-reinforced composites, ceramic matrix composites (CMC) – properties and applications.

PRACTICALS

1. Preparation of refractory bricks
2. Preparation of abrasive papers/cloth
3. Preparation of simple adhesives
4. Estimation of alkalinity in cements
5. Determination of cloud point and pour point
6. Determination of flash point and fire point
7. Preparation of fibre-reinforced composite

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. P.C Jain & Monica Jain, Engineering Chemistry Dhanpatrai Publishing Company (P) Ltd., New Delhi (2013).
2. B.Sivasnakar, “Engineering Chemistry”, Tata McGrow-Hill Publication Limited, New Delhi, second reprint 2008.
3. Engineering Chemistry, Wiley India Editorial Team, Willey India Publisher, New Delhi, 2011.
4. S S Umare & S S Dara, A text Book of Engineering Chemistry, S. Chand& Company Ltd, New Delhi, 2014.

OUTCOMES:

The student will be able to

- classify and describe the manufacture the refractories and enumerate the properties and uses of abrasive materials.
- elaborate the manufacture, properties and uses of various adhesives and binding materials.
- classify lubricants and describe the properties and uses of them
- enumerate the properties and uses of various composite materials.

CHCX05	FUELS AND COMBUSTION	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the students conversant with the

- three types of fuels available and the different processes involved in it.
- analysis of fuel characteristics and manufacture of fuels
- calculations involved in calorific values and minimum air requirement for complete combustion.
- classification, functions, mechanism and properties of lubricants.

MODULE I SOLID FUELS **7**

Characteristics of good fuel. Solid fuel – Wood, Coal – Ranking of coal – selection of coal. Analysis of coal – Proximate analysis. Pulverized coal – Metallurgical coke – Carbonization of coal – types. Manufacture of metallurgical coke – Beehive oven and Otto Hoffman's by-product oven methods.

MODULE II LIQUID AND GASEOUS FUELS **8**

Liquid fuel: Petroleum: Refining of petroleum, Liquid fuels derived from petroleum – Cracking: Thermal (Liquid and Vapour phase) – Catalytic (fixed bed and moving bed cracking – Synthetic petrol: Fischer-Tropsch method– Knocking in petrol and diesel engine: octane number and antiknocking – cetane number and improvement of cetane number – biodiesel (trans-esterification) – Gaseous fuels: Compressed natural gas (CNG) – LPG – oil gas – producer gas – water (blue) gas – biogas.

MODULE III COMBUSTION **8**

Calorific value: Gross and net caloric value – Bomb Calorimeter, Gas calorimeter - Definition of combustion – calculation of minimum requirement of air (problems) – theoretical calculation of calorific values (Dulong's formula), Gross and net calorific values ((problems) – Analysis of flue gas: Orsat's gas analysis method, explosive range, Ignition temperature. Introduction to air pollution from IC (Internal combustion) engines, photochemical smog, primary and secondary pollutants.

MODULE IV LUBRICANTS **7**

Friction and wear – lubricants: definition, functions and mechanism of lubrication

(thick film and thin film) –classification: liquid lubricants: animal and vegetable origin, mineral oil, blended oils, lubricating emulsions and silicones – properties of lubricating oils: viscosity and viscosity index; Flash and fire-point, Cloud and pour point, oiliness, emulsification number, volatility, carbon residue, aniline point – semisolid lubricant: greases and waxes – solid lubricant: graphite and molybdenum disulphide –nanolubricants.

PRACTICALS

1. Testing of fuels - proximate analysis (moisture, volatile matter, ash content and fixed carbon present in coal, coke, charcoal etc)
2. Ash content and carbon residue test
3. Biodiesel synthesis by trans-esterification method (from coconut, groundnut, mustard oil, palm oil)
4. Determination of calorific value of a solid fuel using Bomb calorimeter (coal, charcoal, coke etc)
5. Determination of calorific value of a liquid fuel using Bomb calorimeter (petrol, diesel, biodiesel etc)
6. Determination of cloud point and pour point of a lubricant
7. Determination of flash and fire point of diesel.
8. Aniline Point of diesel
9. Viscosity Index of lubricants and Fuels by Viscometer
10. Flue gas analysis by Orsat's gas analysis method – Demonstration
11. Working of internal combustion engine – Demonstration

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Jain P.C and Renuka Jain, Physical Chemistry for Engineers, Dhanpat Rai and Sons, New Delhi, 2001.
2. Engineering Chemistry, Wiley India Editorial Team, Willey India Publisher, New Delhi, 2011.

4. J.B. Heywood, Internal Combustion Engine Fundamentals, McGraw Hill International Editions, 1989.
5. Bahl B.S., Tuli and Arun Bahl, Essentials of Physical Chemistry, S. Chand and Company Ltd., New Delhi, 2004.

OUTCOMES:

The students will be able to

- compare and contrast the solid, liquid and gaseous fuels and also describe the processes involved in liquid and gaseous fuels.
- analyse the fuel properties such as moisture, votalite matter, ash content, calorific value etc
- calculate minimum air required for complete combustion and calorific values of fuels.
- categorize different lubricants into three types, explain the preparation and determine their properties.

CHCX06	FUNDAMENTALS OF PHYSICAL CHEMISTRY	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students will be conversant with the

- various thermodynamic terms and relate the laws of thermodynamics in chemical processes
- molecularity and order of reaction and derive the rate constant for different order of reactions
- basics of adsorption of different materials and propose mechanisms and surface area measurement
- conditions for equilibrium and learn different components at equilibrium

MODULE I BASIC THERMODYNAMICS **8**

Introduction - Thermodynamic terms - Thermodynamic equilibrium and processes - 1st law of thermodynamics: internal energy, enthalpy, heat capacity, isothermal and adiabatic expansion, Joule-Thomson effect - Zeroth law of thermodynamics: absolute temperature - 2nd law of thermodynamics: - spontaneous and cyclic process, Entropy in isothermal, isobaric and isochoric processes, work and free energy function, Maxwell's relation - 3rd law of thermodynamics

MODULE II CHEMICAL KINETICS **8**

Rate of chemical reaction - order and molecularity of a reaction - Rate constant - kinetics of opposing, parallel and consecutive and chain reactions - isotope effects - effect of temperature on reaction rate - collision theory - absolute reaction rate theory - kinetics in enzyme catalysis

MODULE III SURFACE SCIENCE AND CATALYSIS **8**

Adsorption - adsorption isotherms - uni and bimolecular adsorption reactions - parahydrogen conversion - factors affecting adsorption – Langmuir adsorption isotherm - Hinshelwood mechanism and *Eley-Rideal* mechanism with example - adsorption of gases on solids and surface area measurement by BET method - Terms in catalysis - homogeneous and heterogeneous and enzyme catalysis with example

MODULE IV PHASE RULE 6

Terms involved - Conditions for equilibrium - application of phase rule to water, lead-silver system, freezing mixtures, thermal analysis: cooling curves.

PRACTICALS

1. Determination of the heat capacity of benzoic acid, internal energy of combustion of camphor using Bomb calorimeter. Calculation of enthalpy of combustion and formation for camphor.
2. Determination of adsorption isotherm of (i) acetic acid on charcoal (ii) oxalic acid on charcoal.
3. *Kineticsoffirst and second order reactions.*
4. Phase rule experiments with organic compounds: (i) naphthalene and p-dichloro benzene (ii) naphthalene and diphenyl (iii) m-dinitrobenzenzene and p-nitro toluene.

L – 30; P – 30; TOTAL HOURS – 60

6. Puri B.R., Sharma L.R. and Pathania M.S., Principles of Physical Chemistry, 47th Edition, Vishal Publishing Co. India, 2016.

OUTCOMES:

The student will be able to

- calculate entropy, enthalpy and free energy change for different chemical processes
- calculate the rate constant for any chemical and biochemical processes
- differentiate the adsorption processes and calculate the surface area and predict the suitability of catalysts for different chemical processes

- predict the equilibrium conditions for water, alloys, freezing mixtures and draw the thermal curves for phase transition

CHCX07	GREEN TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make students conversant with the

- basic principles of green chemistry and green technology.
- wastes that causes hazards to human health
- chemicals that harms our environment
- need for green processes in various industries

MODULE I GREEN CHEMISTRY PROTOCOL **7**

Need – Significance – 12 Principles with examples – R4 model – Life cycle analysis – sustainable and cleaner production - Green Technology: definition, examples: CFC free refrigerants, green building, energy, 3D printers, nanotechnology – Awards for Green chemistry – organization promoting green chemistry.

MODULE II WASTE & WASTE MINIMISATION **8**

Source of wastes: domestic, industrial, medical, nuclear, e-waste; problems; prevention – economy of waste disposal – Waste minimization techniques: general waste treatment and recycling – alternate waste water treatment technologies: hybrid process – Green computing: goals, green cloud, green ICT - Pollution statistics from various industries (Industrial case studies).

MODULE III GREEN SYNTHESIS **7**

Introduction - Solvent free reactions - green reagents, green solvents in synthesis - microwave and ultrasound assisted reactions – supercritical fluid extraction – green oxidation and photochemical reactions – catalyst and biocatalysts.

MODULE IV GREEN INDUSTRIAL PROCESSES **8**

Polymer industry: biodegradable polymer - textile industry: greener approaches of dyeing, waste disposal – ecofriendly agrochemicals: biofertilizers, biopesticides – Pharmaceutical industry: atom economy, reduction of toxicity, use of biocatalyst, zero waste disposal – Leather industry: greener process in tanning, crusting, surface coating – ecofriendly batteries & fuel cells.

PRACTICALS

1. Synthesis of an ionic liquids (Ex: imidazolium) and testing the solubility of organic

chemicals.

2. Green bromination of stilbene (using pyridine hydrobromide).
3. Green synthesis: Photocatalytic reactions, solvent-free organic reaction – Aldol; green oxidation, green reduction.
4. Microwave assisted chemical reaction. (synthesis of aspirin, pinacol-pinacolone reaction, etc).
5. Comparison of conventional reaction with microwave assisted reactions (atom economy, solvent, etc) [Ex: aldehyde and ketones with hydrazines to give hydrazones].
6. Diels-Alder reaction in eucalyptus oil (green process).

L – 30; P – 30; TOTAL HOURS – 60

4. Rashmi Sanghi, M. M. Srivastava, Green chemistry, Narosa publishers, New Delhi, 2003.

OUTCOMES:

The students will be able to

- outline the principles and implications of green chemistry.
- comprehend the potential risks of waste generated and analyse the threats to human and environment.
- integrate information into design of molecules to avoid/eliminate toxic solvents & reagents or reduce toxic products.
- identify various alternate greener technologies for various industries.

CHCX08	ORGANIC CHEMISTRY OF BIOMOLECULES	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make students conversant with the

- basic concepts in organic chemistry
- types and structure of carbohydrates and lipids
- formation of different structures of proteins from amino acid
- structure of nucleic acids

MODULE I BASIC CONCEPTS IN ORGANIC CHEMISTRY **8**

Classification and IUPAC nomenclature of organic compounds – stereochemistry – optical, stereo and geometrical isomerism – types of reagents: electrophiles and nucleophiles – types of reactions: addition, substitution, elimination and rearrangement reactions.

MODULE II CARBOHYDRATES, LIPIDS AND VITAMINS **7**

Structure and functions of carbohydrates: mono, di, oligo and polysaccharides – lipids: phospholipids, glycolipids, sphingolipids – cholesterol – steroids – Structure, functions and deficiency disorders of fat soluble vitamins: A, D, E & K - Water soluble vitamins B & C: Thiamine, riboflavin, pantothenic acid, niacin, pyridoxine, biotin, cobalamine, folic acid and ascorbic acid.

MODULE III AMINO ACIDS, PEPTIDES AND PROTEINS **7**

Aminoacids: classification, properties - peptides – polypeptides – proteins: primary, secondary, tertiary and quaternary structure – glycoproteins – lipoproteins – Enzymes: classification and functions

MODULE IV NUCLEIC ACIDS **8**

Nucleic acids – importance - structure of purines and pyrimidines – nucleotides – polynucleotides - RNA – types & structure - DNA – phosphodiester bonds – chemical, helical structure and functions – DNA replication – gene modification.

PRACTICALS

1. Qualitative tests to identify carbohydrates.

2. Quantitative estimation of carbohydrates.
3. Separation of sugars – TLC and/or paper chromatography.
4. Quantitative estimation of lipids.
5. Separation of amino acids – TLC and/or paper chromatography.
6. Quantitative estimation of proteins by Lowry's method.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. V. K. Ahluwalia, Organic Reaction Mechanism, Narosa Publishers, New Delhi, 2002.
2. Johnson Arthur T., Biology for Engineers, CRC Press, Finland, 2011.

4. David L. Nelson, Michael M. Cox, Lehninger Principles of biochemistry, Macmillan press, London, 2010

OUTCOMES:

The students will be able to

- classify organic compounds and explain the mechanism of various organic reactions.
- draw the structures and enumerate the functions of carbohydrate, lipids and vitamins.
- correlate the relationship among amino acids, peptides and proteins.
- recognize the role of nucleic acid in the formation of RNA & DNA and differentiate DNA & RNA using their structure and function.

CHCX09	POLYMER SCIENCE AND TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the student conversant with the

- basic concepts of polymers, classification, types of polymerization and molecular weight & its distribution
- preparation, properties and applications of thermoplastics and introduction to biodegradable polymers
- properties and applications of thermosets, elastomers and FRP
- different types of moulding techniques

MODULE I BASIC CONCEPTS OF POLYMERS **8**

Definitions: monomer, polymer, functionality, degree of polymerization – classification of polymers: source, structure, application, thermal processing behavior (thermoplastics and thermosets), composition and structure (addition and condensation), mechanism (chain growth and step-wise growth) – copolymer: types – Definition –nomenclature of polymers – tacticity – types of polymerization : free radical, cationic and anionic polymerization (concepts only) – average molecular weight of polymer: number, weight – molecular weight distribution (problems)

MODULE II THERMOPLASTICS AND BIODEGRADABLE POLYMERS **8**

Preparation, properties and applications : LDPE, HDPE, polypropylene, PVC, PTFE, PET, polyamides (Nylon-6 and Nylon 6,6) and polycarbonates – polymer blends and alloys – basics of biodegradable polymers.

MODULE III THERMOSET RESINS, ELASTOMERS AND FRP **7**

Thermoset resins : phenolic resins, amino resins (urea and melamine formaldehyde), epoxy resins, unsaturated polyesters – polyurethanes – elastomers : vulcanization of natural rubber, diene based elastomers –fibre reinforced plastics: glass, aramid and carbon.

MODULE IV MOULDING TECHNIQUES 7

Moulding constituents**:** functions – moulding techniques**:** compression, injection, extrusion (single screw), blow moulding, thermoforming, (mechanical and vacuum forming), lamination.

PRACTICALS

1. Determination of molecular weight and degree of polymerization using Oswald's viscometer.
2. Free radical polymerization of styrene.
3. Free radical polymerization of PMMA.
4. Preparation of phenol-formaldehyde.
5. Preparation of urea-formaldehyde.
6. Synthesis of epoxy resin.
7. Synthesis of unsaturated polyester.
8. Preparation of FRP laminates.
9. Demonstration of injection moulding, compression moulding and blow moulding.

L – 30; P – 30; TOTAL HOURS – 60

6. Gowarikar V.R., Viswanathan N.V and Jayadev Sreedhar, Polymer Science, Wiley Eastern Limited, Madras, 1981.

OUTCOMES:

The student will be able to

- classify various polymers, name the polymers and types of polymerization

reactions, calculate molecular weight of polymers,

- summarise preparation, properties and applications of thermoplastics and give examples of biodegradable polymers
- elaborate the properties and applications of thermosets, elastomers and FRP
- select the appropriate moulding technique for a given polymer, based on the application

Maths Elective Courses

(to be offered in IV

Semester)

MACX 01	**DISCRETE MATHEMATICS AND GRAPH THEORY**	**L**	**T**	**P**	**C**
		3	**1**	**0**	**4**

OBJECTIVES:

The aims of this course are to

- introduce Logical and Mathematical ability to deal with abstraction.
- familiarize the basic mathematical ideas and terminologies used in computer science.
- translate real life situations into diagrammatic representations.

MODULE I PROPOSITIONAL CALCULUS 8

Propositions – Logical connectives – Compound propositions – Conditional and biconditional propositions – Truth tables – Tautologies and contradictions – Contrapositive – Logical equivalences and implications – DeMorgan's Laws – Normal forms – Principal conjunctive and disjunctive normal forms – Rules of inference – Arguments – Validity of arguments.

MODULE II PREDICATE CALCULUS 7+3

Predicates – Statement function – Variables – Free and bound variables – Quantifiers – Universe of discourse – Logical equivalences and implications for quantified statements – Theory of inference – The rules of universal specification and generalization – Validity of arguments.

MODULE III FUNCTIONS 7+3

Functions – Classification of functions –— Composition of functions – Inverse functions – Binary and n–ary operations – Characteristic function of a set – Hashing functions – Recursive functions – Permutation functions.

MODULE IV ALGEBRAIC SYSTEMS 8+2

Groups, Cyclic Groups, Subgroups, Cosets, Lagrange's theorem, Normal subgroups – Codes and group codes – Basic notions of error correlation – Error recovery in group codes.

MODULE V GRAPH THEORY 7+3

Graphs – incidence and degree – subgraphs – isomorphism – complement of a graph – operations on graphs

MODULE VI PATH AND CIRCUIT 8+2

Walks, trails and paths – Eulerian graphs – Konigsburg bridge problem - Hamiltonian graphs

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1 Trembly J.P and Manohar R, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 30th Reprint 2011.

2 Kenneth H.Rosen, “Discrete Mathematics and its Applications:, 7th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, Special Indian Edition, 2011.

REFERENCES:

1 Ralph.P.Grimaldi, “Discrete and Combinatorial Mathematics: An Introduction”, 4th Edition, Pearson Education Asia, Delhi, 2007.

3 C.L.Liu, D.P.Mohapatra, “Elements of Discrete Mathematics”, 4th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 2012.

OUTCOMES:

At the end of the course, student will be able to

- use the concepts of propositional calculus.
- use the concepts of predicate calculus.
- identify types of functions and their importance.
- decode and encode the messages using group theory concepts.
- apply the basic concepts of graph theory.
- represent some real life situations into diagrammatic representation.

MACX 02 PROBABLITY AND STATISTICS L T P C
3 1 0 4

OBJECTIVES:

The aims of this course are to impart the

- knowledge of the theory of probability and random variables
- techniques to carry out probability calculations and identifying probability distributions
- application of statistical inference in practical data analysis

MODULE I BASICS OF PROBABILITY AND STATISTICS 8+2

Sample space, events- axioms of probability and interpretation – Addition, multiplication rules – conditional probability, Independent events - Total probability – Baye's theorem - Descriptive Statistics.

MODULE II ONE DIMENSIONAL RANDOM VARIABLE AND PROBABILITY DISTRIBUTION FUNCTIONS 7+3

Discrete random variable –continuous random variable – Expectation - probability distribution - Moment generating function – Binomial, Poisson, Geometric, Uniform (continuous), Exponential and Normal distributions.

MODULE III TWO DIMENSIONAL RANDOM VARIABLES 8+2

Joint, marginal, conditional probability distributions –covariance, correlation - transformation of random variables.

MODULE IV SAMPLING AND ESTIMATION 7+3

Sampling distributions – basic knowledge on Random , simple random , stratified and cluster samplings – Test of Hypotheses - concepts- Point estimation and Interval estimation.

MODULE V THEORY OF INFERENCE 8+2

Large sample tests – test for single and difference on proportions, single mean, difference of means, difference of variances – confidence intervals. Small sample tests – Student's t test, F test and Chi square test on theory of goodness of fit and analyses of independence of attributes.

MODULE VI DESIGN OF EXPERIMENTS 7+3

Analysis of variance – one way classification – two way classification – Completely

Randomised Block Designs – Randomised Block Design – Latin square designs - Interpretations - case studies.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. T.Veerarajan, “Probability and Statistics”, Tata McGraw-Hill Education, 2008.
2. Miller, I., Miller, M.,Freund, J. E., “Mathematical statistics”, 7th Edition, Prentice Hall International, 1999.
3. S.P.Gupta, “Applied Statistics”, Sultan Chand & Sons

REFERENCES:

1. S.M.Ross, “Introduction to Probability and Statistics for Engineers and Scientists” Fifth Edition, Elesvier.
2. S.C.Gupta and V.K.Kapoor, “Fundamentals of Mathematical Statistics” First edition, Sultan Chand and Sons.
3. Arora and Arora, “Comphrensive Statistical Methods”, S. Chand, 2007

OUTCOMES:

On completion of the course, students will be able to

- do basic problems on probability and descriptive statistics.
- derive the probability mass / density function of a random variable.
- calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.
- calculate point and interval estimates.
- apply some large sample tests and small sample tests.
- carry out the data collection representation analysis and implications and the importance of inferences.

MACX 03	RANDOM PROCESSES	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of the course are to

- acquire the knowledge of the theory of probability and random variables
- study discrete and continuous probability distributions.
- demonstrate the techniques of two dimensional random variables and its distributions.
- introduce the random process, stationarity, Markov process and the study of correlation function and spectral analysis.

MODULE I Basics of Probability 7+3

Sample space, events- axioms of probability and interpretation – Addition, multiplication rules – conditional probability, Independent events - Total probability – Baye's theorem - Tchebychev's inequality.

MODULE II One dimensional Random variable and Probability Distribution functions 7+3

Discrete random variable –continuous random variable – Expectation - probability distribution - Moment generating function – Binomial, Poisson, Geometric, Uniform (continuous), Exponential and Normal distributions.

MODULE III Two dimensional random variables 7+3

Joint, marginal, conditional probability distributions - covariance, correlation and regression lines - transformation of random variables.

MODULE IV RANDOM PROCESSES 8+2

Classification of Random process - Stationary process - WSS and SSS processes - Poisson process – Markov Chain and transition probabilities.

MODULE V CORRELATION FUNCTIONS 8+2

Autocorrelation function and its properties - Cross Correlation function and its properties - Linear system with random inputs – Ergodicity.

MODULE VI SPECTRAL DENSITY 8+2

Power spectral Density Function - Properties - System in the form of convolution - Unit Impulse Response of the System – Weiner-Khinchine Theorem - Cross Power

Density Spectrum.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Veerarajan T., “Probability, Statistics and Random Processes”, Tata McGraw Hill,3rd edition, 2008.
2. Papoulis, “Probability, Random Variables and Stochastic Processes”, 4th Edition, Tata McGraw Hill Company, 2002.
3. S.M.Ross, “Introduction to Probability and Statistics for Engineers and Scientists” Fifth Edition, Elesvier

REFERENCES:

2. Trivedi K S, “ Probability and Statistics with reliability, Queueing and Computer Science Applications”,Prentice Hall of India,New Delhi,2nd revised edition, 2002

OUTCOMES:

On completion of the course, students will be able to

- do basic problems on probability.
- derive the probability mass / density function of a random variable.
- calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.
- identify and study the different random processes.
- compute correlation functions and related identities.
- compute power spectral density functions and apply Weiner-Khinchine formula.

MACX 04 APPLIED NUMERICAL METHODS L T P C
3 1 0 4

OBJECTIVES:

The aims of the course are to

- introduce basic computational methods for analyzing problems that arise in engineering and physical sciences.
- acquire knowledge about approximation theory and convergence analysis associated with numerical computation.

MODULE I NUMERICAL SOLUTIONS OF EQUATIONS 7+3

Bisection method - Regula Falsi method – Secant method - Fixed point iteration method - Newton's Raphson method –Gauss Elimination method - Gauss-Jordon method – Gauss Jacobi method - Gauss-Seidel method.

MODULE II INTERPOLATION 8+2

Finite difference operators – Gregory Newton's forward and backward interpolations – Cubic spline interpolation - Lagrange interpolation - Newton's divided difference formula.

MODULE III NUMERICAL DIFFERENTIATION AND INTEGRATION 8+2

Numerical differentiation using Newton's forward and backward formulae – Numerical integration : Trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Gaussian Two Point and Three Point Quadrature formulae – Double integrals using Trapezoidal and Simpson's 1/3 rule.

MODULE IV INITIAL VALUE PROBLEMS FOR FIRST ORDER ORDINARY DIFFERENTIAL EQUATIONS 7+3

Numerical solutions by Taylor's Series method, Euler's method, Modified Euler's Method - Runge – Kutta Method of fourth order – Milne's and Adam's Bashforth Predictor and Corrector methods

MODULE V INITIAL AND BOUNDARY VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 8+2

Numerical solutions by Taylor's Series method - Runge – Kutta Method of fourth order of second order ODE. Finite difference methods.

MODULE VI BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS **7+3**

Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace equation.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Grewal, B.S., “Numerical methods in Engineering and Science”, 7th edition, Khanna
   Publishers, 2007.
2. C.F.Gerald, P.O.Wheatley, “Applied Numerical Analysis” ,Pearson Education, New Delhi, 2002.

REFERENCES:

1. Chapra S.C, Canale R.P. “Numerical Methods for Engineers”, 5th Ed., McGraw Hill, 2006.
2. M.K.Jain, S.R.K.Iyengar, R.K.Jain, “Numerical methods for Scientific and Engineering Computation”, New Age International Publishers, New Delhi, 2003

OUTCOMES:

At the end of this course, students will be able to

- solve algebraic, transcendental and system of equations.
- apply interpolation techniques.
- carry out numerical differentiation and integration using different methods.
- solve first order ODE using single and multi step methods.
- solve second order ODE, initial and boundary value problems.
- solve the boundary value problems in PDE.

Maths Elective Courses
(To be offered in VI Semester)

MACX 05	MATHEMATICAL PROGRAMMING	L	T	P	C
		2	0	0	2

OBJECTIVES:

The aims of the course are to

- acquire knowledge and training in optimization techniques.
- obtain knowledge about optimization in utilization of resources.
- understand and apply operations research techniques to industrial operations.

MODULE I LINEAR PROGRAMMING PROBLEM 10

Linear programming – formulation of the problem - graphical interpretation of optimality - Simplex method – to obtain basic feasible solution – types of linear programming solution – complications and their resolution.

MODULE II ADVANCED LINEAR PROGRAMMING PROBLEMS 8

Artificial variable - Big M method – Two phase method – alternative optimal solution – unbounded solution - Duality – primal dual relationships.

MODULE III TRANSPORTATION PROBLEM 7

Transportation problems – Initial basic feasible solutions, MODI method, Unbalanced transportation problem, Degeneracy in transportation models,.

MODULE IV ASSIGNMENT PROBLEM 5

Assignment problem – Minimization and Maximization type of problems by Hungarian method.

Total Hours –30

TEXT BOOKS:

1. Hamdy A Taha, “Operations Research - An introduction”, 8th edition, Phil Pearson, 2007.
2. Winston.W.L., “Operations Research”, 4th edition, Thompson-Brooks/Cole, 2003.

3. A. Ravindran, D. T. Phillips and J. J. Solberg, "Operations Research: Principles and Practice", 2nd edition, John Wiley & Sons, New York, 1992.
4. Robertazzi. T.G., “Computer networks and systems-Queuing theory and performance evaluation”, 3rd edition, Springer, 2002.

OUTCOMES:

At the end of the course, students will be able to

- formulate industrial problems as mathematical programming problems.
- solve linear programming problems by different methods.
- solve transportation problems by different methods.
- solve assignment problems by Hungarian method.

MACX 06	STATISTICAL METHODS FOR DATA ANALYSIS	L	T	P	C
		2	0	0	2

OBJECTIVES:

The aim of the course is to

- introduce statistical quality control tools.

MODULE I TESTS OF HYPOTHESES AND STATISTICAL INFERENCES 8

Small sample tests – Student's ' t ' test for single mean , difference of means, paired t test – F test for difference of variances – Chi square test on theory of goodness of fit and analyses of independence of attributes.

MODULE II DESIGN OF EXPERIMENTS 7

Analysis of variance – one way classification – two way classification – Completely Randomised Block Designs – Randomised Block Design – Latin square designs - Statistical analysis -Interpretations - case studies.

MODULE III STATISTICAL QUALITY CONTROL-I 8

Quality improvement and statistics –Statistical quality control- statistical process control – control charts – design of control charts –analysis of patterns on control charts - X bar chart, R chart and S chart.

MODULE IV STATISTICAL QUALITY CONTROL-II 7

Process and product control – attribute charts – P, np and C charts – control charts performance.

Total Hours –30

TEXT BOOKS:

1. Douglas C.Montgomery, George C. Runger "Applied Statistics and probability for Engineers" V Edition – John Wiley & Sons Inc.
2. Miller, I., Miller, M., Freund, J. E. "Mathematical statistics" 7th Edition. Prentice Hall International, 1999.

REFERENCES:

1. Dekking, F.M., Kraaikamp, C., Lopuhaä, H.P., Meester, L.E. "A Modern Introduction to Probability and Statistics" Springer, 2nd Edition.

2003.
3. S.C.Gupta and V.K. Kapoor, “Mathematical Statistics” , Sultan Chand publications.
4. Veerarajan “Fundamentals of Mathematical Statistics” I Edition, Yes Dee Publishing Pvt. Ltd., 2017.

OUTCOMES:

On completion of the course, students will be able to

- develop and test hypothesis for different statistical tests
- design an experiment and case study the experiment with different data.
- analyze the industrial data using quality control design tools statistically.
- analyze the industrial data using process and product control tools statistically.

MACX 07 NUMERICAL METHODS FOR INTEGRATION AND DIFFERENTIAL EQUATIONS

L	T	P	C
2	0	0	2

OBJECTIVES:

- This course aims to solve numerically integral and differential equations.

MODULE I NUMERICAL INTEGRATION 8

Numerical integration by trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Two Point and Three point Gaussian quadrature formulae.

MODULE II NUMERICAL DOUBLE INTEGRATION 6

Double integrals using trapezoidal and Simpson's 1/3 rules

MODULE III NUMERICAL SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS 8

Milne's Predictor and Corrector Method – Adam's Predictor-Corrector Method - Finite difference methods for two – point Boundary Value problems for Ordinary Differential Equations.

MODULE IV BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS 8

Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace and Poisson equations

Total Hours –30

TEXT BOOKS:

1. M.K.Jain, S.R.K.Iyengar, R.K.Jain, "Numerical methods for Scientific and Engineering Computation", New Age International Publishers, New Delhi, 2003.
2. Grewal, B.S., "Numerical methods in Engineering and Science" 7th edition, Khanna Publishers, 2007

2. P.Dechaumphai, N. Wansophark, "Numerical Methods in Engineering", Narosa Publications, 2012.

OUTCOMES:

At the end of the course students will be able to

- solve the integration by numerical methods.
- solve the double integration by numerical methods
- find numerical solution of ordinary differential equations in engineering problems.
- find numerical solution of partial differential equations in engineering problems.

MACX 08 MATHEMATICAL MODELLING

L	T	P	C
3	0	0	3

OBJECTIVES:

The aims of the course are to

- provide basic idea of formation and use of Mathematical models for different purposes.
- determine the extent to which models are able to replicate real-world phenomena under different conditions

MODULE I PRINCIPLES OF MATHEMATICAL MODELING 7

Mathematics as a modelling language - Classification of models - Building, studying, testing and using models - Black and white box models – Difference equations

MODULE II PHENOMENOLOGICAL MODELS 7

Linear, Multiple linear and nonlinear regression - Neural networks - Fuzzy model - Stability and higher dimensional systems

MODULE III MECHANISTIC MODELS –I 8

Setting up ODE models – Initial and Boundary value problems - Numerical solutions - Fitting ODE to data - Applications

L	T	P	C
2	0	0	2

MODULE IV MECHANISTIC MODELS –II 8

Linear and nonlinear equations - Elliptic, parabolic and hyperbolic equations - Closed form solutions - Finite difference and finite element methods

Total Hours –30

TEXT BOOKS:

1. G . Ledder , “Calculus, modelling , probability and dynamic systems”, Springer 2013
2. Kei Velten, “Mathematical modelling and simulation”, J. Wiley and sons,2009

REFERENCES:

2. Alfio Quarteroni, “Mathematical models in science and engineering”, Notices of AMS
3. J.N. Kapur, “Mathematical models in Biology and Medicine”, Affiliated East-

West Press Private Limited, New Delhi, 1992.

OUTCOMES:

On completion of the course, the students will be able to

- identify the relationship between real world and mathematical models
- Classify the data and choose the appropriate model
- Distinguish between linear and nonlinear models
- identify the relationship between empirical and mechanistic models

MACX 09 **GRAPH THEORY** **L T P C**
3 0 0 3

OBJECTIVES:

The aims of this course are to

- represent the real life situations diagrammatically.
- appraise different methods to find solutions to graph theory problems.

MODULE I INTRODUCTION TO GRAPH THEORY **8**

Graphs - finite and infinite graphs - Incident and degree-isolated vertex, pendent vertex and null vertex.

MODULE II PATH AND CIRCUIT **8**

Isomorphism – sub graphs-walks, paths and circuits – connected and disconnected graphs- Euler graphs – operation on a graph.

MODULE III TREES AND FUNDAMENTAL CIRCUITS **7**

Trees- some properties of trees- pendent vertices in a tree – rooted binary tree-spanning trees-fundamental circuits.

MODULE IV CUT SETS AND CUT VERTICES

Cut sets – some properties of cut sets- fundamental circuits and cut sets-network flows.

Total Hours –30

TEXT BOOKS:

1. NARSINGH DEO, Graph theory with applications to Engineering and Computer Science, Prentice Hall INC, New Delhi,
2. J.A. Pondy and U.S.R. Murthy, North Holland, Oxford, New York Graph theory with applications

REFERENCES:

1. Trembly J.P and Manohar R, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 30th Reprint 2011
2. Kenneth H.Rosen, “Discrete Mathematics and its Applications”, 7th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, Special Indian Edition, 2011

3. Md. Saidur Rahman, “Basic graph theory”, Springer, 2017

OUTCOMES:

At the end of the course, students will be able to

- demonstrate the basic concepts of Graph theory.
- explore connected and disconnected graphs.
- identify the real life problems with trees and circuits.
- bring out the cut set properties and network flows properties.

Humanities Elective I

(To be offered in III Semester)

		L	T	P	C
SSCXO1	**FUNDAMENTALS OF ECONOMICS**	**2**	**0**	**0**	**2**

OBJECTIVES:

- To identify and present the basic concepts of demand, supply and equilibrium.
- To explain and discuss the types and concepts of national income and inflation.
- To illustrate the fundamental concepts of money, banking and public finance.
- To apprise the students about Indian economy and the role of engineers in economic development.

MODULE I DEMAND AND SUPPLY ANALYSIS 8

Classification of economy – open and closed economy, Demand - Types of demand - Determinants of demand – Law of Demand - Demand elasticity - Supply - Determinants of Supply – Law of Supply - Supply elasticity - Pricing strategies.

MODULE II NATIONAL INCOME AND INFLATION 7

Concepts of National income and measurement – Importance and difficulties of estimating National Income in India - Aggregate demand and aggregate supply, Macroeconomic equilibrium – meaning of inflation- types - causes and preventive measures

MODULE III MONEY, BANKING AND PUBLIC FINANCE 9

Money – Meaning, types, functions, importance - Commercial Banks - Central Bank - Monetary policy – meaning, objectives, Methods of Credit Control By RBI, Government Budget – Government revenue and Expenditures – Fiscal policy - Its objectives, instruments and limitations - Deficit Financing - The Fiscal Responsibility and Budget Management Act, 2003 (FRBMA) .

MODULE IV INDIAN ECONOMY AND THE ROLE OF ENGINEERS 6

Economic reforms – Liberalization, Privatization and Globalization - challenges and opportunities, Engineers – Engineers' contributions to the economic growth.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Dutt and Sundharam (2013), *Indian Economy*, S. Chand & Company Pvt. Ltd, New Delhi.
2. Hussain, Moon Moon (2015), *Economics for Engineers*, Himalaya Publishing House, New Delhi.

REFERENCES:

1. Cleaver Tony (2004), "*Economics: The Basics*", Routledge, London.
2. Mell Andrew and Walker Oliver (2014), "*The Rough Guide to Economics*", Rough Guide Ltd.

OUTCOMES:

On successful completion of this course,

- Students will have had exposure to the basic concepts of demand, supply and various pricing strategies.
- Students will have understood the macroeconomic concepts of national income and inflation.
- Students will be able to apply the knowledge of money, banking and public finance in their real life situations.
- Students will have an overview of the economic reforms introduced in Indian economy.

SSCXO2	PRINCIPLES OF SOCIOLOGY.	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To acquaint the students with Concepts and perspectives of Sociology
- To explain the reflection of society in Individuals and vice versa
- To describe the hierarchical arrangement of individuals and groups in society
- To explicate the dimensions, forms and factors of Social change.
- To examine the context, impact and agencies of Globalization

MODULE I THE FOUNDATIONAL CANON 8

Sociology-Definition, scope and importance; Major theoretical perspectives- Functionalism, Conflict Theorising and Interactionism; Elements of social formation- Society, Community, Groups and Association; Associative Social Process- Co-operation, Accommodation and Assimilation; Dissociative Social Process- Competition and Conflict.

MODULE II INDIVIDUAL AND SOCIETY 7

Culture-definition, characteristics, functions, types, cultural lag and civilization, Socialization – definition, process, stages, agencies and anticipatory socialization; Social Control- definition, characteristics, importance, types & agencies.

MODULE III SOCIAL INEQUALITY AND STRATIFICATION 7

Concepts- inequality, hierarchy, differentiation, Social Exclusion, and Social Stratification. Forms of Social Stratification- Caste, Class and Estate. Gender and Social Stratification- sex and gender, patriarchy, factors perpetuating gender stratification; Globalization and gender inequality

MODULE IV SOCIAL CHANGE AND GLOBALIZATION 8

Social Change-definition, nature, direction; Forms- evolution, development, progress and transformation; Factors of social change- demography, economy, technology, polity and culture. Globalization- definition, characteristics, historical and social context and Impact, agencies of globalization- IGOs, INGOs, Nation-State, MNEs and Media

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Giddens A. 1989. “Sociology” Cambridge: Polity Press.
2. Heald Haralambos, R.M(2014) . ‘‘Sociology Themes and Perspectives”, Oxford, New Delhi-92
3. Bhushan Vidya and D.R. Sachdeva (2012). ‘‘Fundamental of Sociology”, Pearson, Delhi.

REFERENCES:

1. Das Gupta, Samir and Paulomi Saha (2012), ‘‘An Introduction to Sociology”, Pearson, Delhi
2. Bottomore, T.B. 1972. *Sociology- A Guide to Literature and Problems*, New Delhi,

OUTCOMES:

On successful completion of this course,

- Students will have exposure to the fundamentals tenets of Sociology.
- Students will be trained to understand social reality with sociological perspective.
- Students will be oriented to constructively analyze human interactions, social relationship and social issues
- Students will gain exposure to the dynamics of human society with special reference to the contemporary trends of globalization.

SSCXO3	SOCIOLOGY OF INDIAN SOCIETY.	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To present a portrayal of the components of the Indian Social structure
- To describe the nature and contemporary structure of Indian social Institutions.
- To examine the causality and magnitude of social problem facing the contemporary India.
- To elucidate the processes forms and impact of change and development in Indian society

MODULE I INDIAN SOCIAL STRUCTURE 7

Unity and Diversity; Concepts of unity and diversity- racial, religious, ethnic and linguistic composition of India. Types of communities-rural, urban and tribal; Social backwardness- OBC, SC and ST; Indian minorities- religious, ethnic, linguistic and LGBT

MODULE II INDIAN SOCIAL INSTITUTIONS 7

Family- definition, types, characteristics, functions of family; Joint Family- definition features, utility, changes; Marriage- definition, characteristics, marriage as sacrament or contract. Caste- definition, principles, contemporary changes, dominant caste, caste -class interface.

MODULE III SOCIAL PROBLEMS IN INDIA 8

Social Problem-definition, nature, social disorganization; Population explosion-causes, effects, relationship with development; Child Labour- causes, magnitude and consequences; Unemployment-nature , types, causes and effects; Gender issues-social status of women, violence against women and women in work place; Contemporary issues- communalism, terrorism and corruption.

MODULE IV SOCIAL CHANGE AND DEVELOPMENT IN INDIA 8

Socio-cultural Change- Sanskritization, Westernization, Secularization, Modernization; Processes of Social change- Industrialization, Urbanization, Globalization; Development- definition, elements, role of government, industry and corporate sector. Technology and change- invention and innovation, impact of technology on social institutions, technology and development.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Sharma,K.L.2008. *Indian Social Structure and Change*. Jaipur: Rawat Publications,.
2. Shah, A.M. 1998. *The Family in India: Critical Essays*. New Delhi: Orient Longman,
3. Ahuja Ram. 1999. *Social problems in India*, Rawat Publication: New Delhi.
4. Ahuja Ram. 2014. *Society in India,*, Rawat Publication: New Delhi.

REFERENCES:

1. Jayapalan, N.(2001), **"**Indian Society and Social Institutions" Atlantic Publishers & Distri,
2. Atal, yogesh (2006), "Changing Indian Society" Rawat Publications, Jaipur

OUTCOMES:

On successful completion of this course,

- Students will gain an in-depth understanding of the social structure and social institutions that constitute society in India.
- Students will be sensitized to the various categories ,Inequalities and their challenges
- Students will be exposed to the social problems encountered in contemporary India.
- Students will gain knowledge about the various forms and trends of the social change.
- Students will become aware about the challenges in the path of progress of Indian society and realize relevance of their role in bringing about development

Humanities Elective II

(To be offered in IV Semester)

		L	T	P	C
SSCXO4	ECONOMICS OF SUSTAINABLE DEVELOPMENT	2	0	0	2

OBJECTIVES:

- To have an increased awareness on the concept and components of sustainable development.
- To develop the ability to demonstrate the need of sustainable development and international responses to environmental challenges.
- To have an insight into global environmental issues and sustainable globalization.
- To establish a clear understanding of the policy instruments of sustainable development.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 7

Evolution of the Concept – Rio Summit and sustainable development - various definitions of sustainable development - Components of sustainable development: Social, environmental and economic components.

MODULE II NEED FOR SUSTAINABLE DEVELOPMENT 8

Need for sustainability – Global environmental challenges: population growth, resource depletion, pollution, energy use, climate change, pollution, growing water scarcity, other urban problems, loss of biodiversity, hazardous wastes disposal.International responses to environmental challenges - Global policy such as Kyoto Protocol, Montreal Protocol, Basel Convention.

MODULE III GLOBALIZATION AND ENVIRONMENT SUSTAINABILITY 8

Impact of Globalization on sustainable development, Co - existence of globalization and Environment sustainability, Globalization and Global Governance.Green economy - Renewable energy, sustainable transport, sustainable construction, land and water management, waste management.

MODULE IV POLICIES FOR ACHIEVING SUSTAINABLE DEVELOPMENT 7

Principles of environmental policy for achieving sustainable development:

precautionary principle and polluter pays principle – Business Charter for Sustainable Development.Policy instruments for sustainable development: direct regulation – market based pollution control instruments such as pollution tax, subsidy, pollution permits.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Anderson, David A (2010), "*Environmental Economics and Natural Resource Management*", Routledge, 3rd edition.
2. Karpagam M (1999), "*Environmental Economics: A Textbook*", Sterling Publishers Pvt. Ltd, New Delhi.

REFERENCES:

1. Karpagam M and Jaikumar Geetha (2010), "*Green Management Theory and Applications*", Ane Books Pvt. Ltd, New Delhi.
2. Sengupta Ramprasad (2004), "*Ecology and Economics: An Approach to Sustainable Development*", Oxford University Press, New Delhi.

OUTCOMES:

On successful completion of this course,

- The students will have understood the concepts and components of sustainable development.
- The students will have a holistic overview on the challenges of sustainable development and International responses to environmental challenges.
- The students will have gained knowledge on the global environment issues and demonstrate responsible globalization through global governance.
- The students will have developed awareness of the ethical, economic, social and political dimensions that influence sustainable development.

SSCXO5 INDUSTRIAL SOCIOLOGY

L	T	P	C
2	0	0	2

OBJECTIVES:

- To introduce sociological approaches and perspectives to understand the social relationship in manufacturing industries and corporate sector.
- To explain the structure and functions of industrial organizations.
- To elucidate the dynamics of organizational behavior, leadership and communication.
- To inculcate professional ethics and values to equip students to work in organizational settings.

MODULE I INTRODUCTION 8

Industrial Sociology- definition, scope and importance; Theoretical approaches- scientific management, human relations approach, theory of bureaucracy, Fordism and post-fordism; Production system- concept and characteristics of factory system, automation and rationalization; Industrial conflict- strike , lockout and trade unions.

MODULE II INDUSTRIAL ORGANIZATION 7

Formal organization- definition, features, utility; Informal organization- definition, characteristics, types and relevance; Structure of industrial organization- features and functions of line organization, characteristics and roles of staff organization, distinction;

Industrial hierarchy-white collar, blue collar, supervisors and managers.

MODULE III DYNAMICS OF INDUSTRIAL RELATIONS 8

Group dynamics- Definition, Group behaviour model, Group decision making process, group cohesiveness; Leadership- definitions, style and effective supervision; Communication- concepts, types, model barriers; Job satisfaction- nature, employee compensation and job satisfaction.

MODULE IV PROFESSIONAL ETHICS AND VALUES 7

Concepts- values- morals, and ethics, Integrity, work ethics , service learning - Civic Virtue - caring - Sharing - Honesty - Courage - Valuing Time - Co-operation - commitment - empathy - Self-Confidence - Environmental Ethics, Cyber issues - computer ethics, cyber crimes, plagiarism Ethical living-concept of harmony in life.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Narender Singh, Industrial Sociology, Tata McGraw Hill Education Pvt. Ltd., New Delhi, 2012.
2. Gisbert Pascal, Fundamentals of Industrial Sociology, Tata Mc. Graw Hill Publishing Co., New Delhi, 1972
3. Schneider Engeno. V, Industrial Sociology 2nd Edition, Mc. Graw Hill Publishing Co., New Delhi, 1979.

REFERENCES:

1. Robbins, Stephen, Organizational Behaviour , Prentice Hall of India PVT ltd new Delhi, 1985
2. Devis Keith , Human Behaviour at work place, Mc. Graw Hill Publishing Co., New Delhi,1984

OUTCOMES:

On successful completion of this course,

- Students will have acclimatized with sociological perspectives for dealing with social relationships in production and service organizations.
- Students will be familiar with structure of authority, roles and responsibility in organizational settings.
- Students will imbibe leadership, communication and behavioral acumen to govern organization
- Students will be sensitized to standards of desirable behavior to engage in industrial and corporate sector.

SSCXO6	LAW FOR ENGINEERS	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To understand the Constitution and Governance of our country.
- To apprise the students of human rights - local and international and redressal mechanism.
- To have an insight into the industrial, corporate and labour laws of our country.
- To establish a clear understanding about the importance of intellectual property related laws.

MODULE I INDIAN CONSTITUTION AND GOVERNANCE 8

Constitution – salient features, Preamble, Citizenship, Fundamental rights, Fundamental duties, Directive principles, Union executive, Legislature – Union – State and union territories – Election Commission – Election for parliament and state legislature, Judiciary- basic functioning of the Supreme Court and High Courts, Right to information Act 2005 – evolution – concept – practice.

MODULE II HUMAN RIGHTS 7

Human rights – meaning and significance, Covenant on civil and political rights, Covenant on Economic, Social and Cultural rights, UN mechanism and agencies, The Protection of Human Rights Act, 1993 – watch on human rights and enforcement.

MODULE III INDUSTRIAL, CORPORATE AND LABOUR LAWS 8

Corporate laws – meaning and scope, Companies Act 1956 – Indian Contract Act 1872 - Principles of Arbitration - Industrial Employment (Standing Orders) Act 1946 - Industrial Disputes Act 1947 - Workmen's Compensation Act 1923 - The Factories Act, 1948.

MODULE IV LAWS RELATED TO IPR 7

IPR – meaning and scope, International organization – WIPO – TRIPS, Major Indian IPR Acts – Copyright laws, Patent and Design Act, Trademarks Act, Trade Secret Act, Geographical Indicator.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. M.P. Jain (2005) *Indian Constitutional Law*, Wadhwa & Co.

2. H. D, Agarwal (2008), *International Law and Human Rights,* Central Law Publications,
3. Rao, Meena (2006), *Fundamental Concepts in Law of Contract*, 3rd edn., Professional offset.
4. Ramappa (2010), *Intellectual Property Rights Law in India*, Asia Law House.
5. Singh, Avtar (2007), *Company Law*, Eastern Book Co.
6. R.F, Rustamji (1967)*, Introduction to the Law of Industrial Disputes*, Asia Publishing House.

REFERENCES:

1. Acts: Right to Information Act, Industrial Employees (standing order) Act, Factories Act, Workmen Compensate Act.

OUTCOMES:

On successful completion of this course,

- Students will `be able to apply the basic concepts of Indian Constitution, Governance and power in their real life situation.
- Students will have gained knowledge in human rights, cultural, social and political rights.
- Students will have synthesized knowledge about industrial, corporate and labour laws of our country.
- Students will have an overview of IPRs and laws related to Intellectual Property Rights.

General Elective Courses
Group I courses
(To be offered in V Semester)

		L	T	P	C
GECX101	**DISASTER MANAGEMENT**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To give an exposure to various environmental hazards and disasters: and various concepts and principles to manage disaster.
- To give exposure to various environmental policies & programs in India for disaster management

MODULE I ENVIRONMENTAL HAZARDS 7

Environmental hazards, Environmental Disasters and Environmental stress-Meaning and concepts. Vulnerability and disaster preparedness.

MODULE II NATURAL DISASTERS 7

Natural hazards and Disasters - Volcanic Eruption, Earthquakes, Tsunamis, Landslides, Cyclones, Lightning, Hailstorms, Floods, Droughts, Cold waves, Heat waves and Fire.

MODULE III MAN-MADE DISASTERS 7

Man induced hazards & Disasters - Soil Erosion, Chemical hazards, Population Explosion

MODULE IV DISASTER MANAGEMENT 8

Emerging approaches in Disaster Management- Preparing hazard zonation maps, Predictability / forecasting & warning, Preparing disaster preparedness plan, Land use zoning, Communication. Disaster resistant house construction, Population reduction in vulnerable areas, Awareness - Rescue training for search & operation at national & regional level - Immediate relief, Assessment surveys, Political, Administrative, Social, Economic, Environmental Aspects.

MODULE V NATURAL DISASTER REDUCTION & MANAGEMENT 8

Provision of Immediate relief measures to disaster affected people, Prediction of Hazards & Disasters, Measures of adjustment to natural hazards

MODULE VI ENVIRONMENTAL POLICIES & PROGRAMMES IN INDIA **8**

Regional survey of Land Subsidence, Coastal Disaster, Cyclonic Disaster & Disaster in Hills with particular reference to India. Ecological planning for sustainability & sustainable development in India, Sustainable rural development: A Remedy to Disasters, Role of Panchayats in Disaster mitigations, Environmental policies & programmes in India- Institutions & National Centers for Natural Disaster reduction, Environmental Legislations in India, Awareness, Conservation Movement, Education & training.

L – 45; Total Hours –45

REFERENCES:

1. Satender, “Disaster Management in Hills”, Concept Publishing Co., New Delhi, 2003.
2. Singh, R.B. (Ed.), “Environmental Geography”, Heritage Publishers, New Delhi,1990.
3. Savinder Singh, “Environmental Geography”, Prayag Pustak Bhawan,1997.
4. Kates, B.I. and White, G.F., “The Environment as Hazards”, Oxford University Press, New York, 1978.
5. Gupta, H.K., (Ed), “Disaster Management”, University Press, India, 2003.
6. Singh, R.B.,“Space Technology for Disaster Mitigation in India (INCED)”, University of Tokyo, 1994.
7. Bhandani, R.K., “An overview on Natural & Manmade Disaster & their Reduction”, IIPA Publication, CSIR, New Delhi, 1994.
8. Gupta, M.C., “Manuals on Natural Disaster management in India”, National Centre for Disaster Management, IIPA Publication, New Delhi, 2001.

OUTCOMES:

At the end of the course, the students will

- achieve sufficient knowledge on the disaster prevention strategy, early warning system, disaster preparedness, response and human resource development.
- be familiar with the National Policy on Disaster Management.

GECX102 TOTAL QUALITY MANAGEMENT L T P C
3 0 0 3

OBJECTIVES:

- To understand the various principles, practices of TQM to achieve quality.
- To get acquainted with the various statistical tools and approaches for quality control and continuous improvement.
- To get aware of the importance of ISO and Quality Systems.

MODULE I INTRODUCTION 8

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

MODULE II TQM PRINCIPLES 7

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits.

MODULE III TQM IMPROVEMENT PROCESS 8

Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership – Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures – Basic Concepts, Strategy, Performance Measure.

MODULE IV STATISTICAL PROCESS CONTROL (SPC) 8

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma, New seven Management tools.

MODULE V TQM TOOLS 7

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA.

MODULE VI QUALITY SYSTEMS 7

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System– Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 – Concept, Requirements and Benefits

L – 45; Total Hours –45

TEXT BOOKS:

1. Dale H.Besterfiled, et al., “Total Quality Management”, Pearson Education, Inc. 2003.

REFERENCES:

1. James R.Evans & William M.Lidsay, “The Management and Control of Quality”, 5th Edition, South-Western (Thomson Learning), 2002.
2. Feigenbaum.A.V., “Total Quality Management”, McGraw-Hill, 1991.
3. Oakland.J.S., “Total Quality Management”, Butterworth Hcinemann Ltd., Oxford, 1989.
4. Narayana V. and Sreenivasan. N.S., “Quality Management – Concepts and Tasks”, New Age International, 1996.
5. Zeiri, “Total Quality Management for Engineers”, Wood Head Publishers, 1991.

OUTCOMES:

The student should be able to

- apply the various statistical tools and approaches for Quality control.
- achieve continuous process improvement through TQM.

GECX103 ENERGY STUDIES L T P C
3 0 0 3

OBJECTIVES:

- To learn the growing demand, supply of energy on global and national levels and the need for renewable energy promotion.
- To understand the basic need for energy conservation and waste heat recovery.
- To learn the important aspects of energy audit and management.
- To get acquainted with the global environmental issues and carbon credits.

MODULE I GLOBAL AND NATIONAL ENERGY SCENARIO 7

Role of energy in economic development, various energy resources - overall energy demand and availability- Energy consumption in various sectors and its changing pattern - Exponential increase in energy consumption and projected future demands. Need for renewable energy.

MODULE II SOLAR ENERGY 8

Solar Radiation – Measurements of Solar Radiation - Flat Plate and Concentrating Collectors – Solar direct Thermal Applications – Solar thermal Power Generation - Fundamentals of Solar Photo Voltaic Conversion – Solar Cells – Solar PV Power Generation – Solar PV Applications.

MODULE III OTHER RENEWABLE ENERGY SOURCES 8

Power from wind – wind turbine working and types, solar thermal power plants – low medium and high power generation, power from wave , tidal, geothermal sources, OTEC system. MHD power plants – working, types, merits and demerits. Energy from biomass.

MODULE IV COGENERATION, WASTE HEAT RECOVERY AND COMBINED CYCLE PLANTS 8

Cogeneration principles- topping and bottoming cycles, role in process industries. Energy from wastes- waste heat recovery- heat recovery from industrial processes. Heat exchange systems – recuperative and regenerative heat exchangers – commercially available waste heat recovery devices. Combined cycle plants – concept, need and

advantages, different combinations and practical scope.

MODULE V ENERGY CONSERVATION AND MANAGEMENT 7

Need for energy conservation – use of energy efficient equipment. Energy conservation opportunities - in educational institutions, residential, transport, municipal, industrial and commercial sectors – concept of green building. Energy audit in industries – need, principle and advantages. Case studies.

MODULE VI GLOBAL ENERGY ISSUES AND CARBON CREDITS 7

Energy crisis, fossil consumption and its impact on environmental climate change. Energy treaties – Montreal and Kyoto protocols - Transition from carbon rich and nuclear to carbon free technologies, carbon foot print – credits – clean development mechanism.

L – 45; Total Hours –45

TEXT BOOKS:

1. S.S. Rao and B.B. Parulekar, “Energy Technology”, 3rd Edition, Khanna Publishers, New Delhi, 2011.
2. O. Callaghn. P.W., “Design and Management for Energy Conservation”, Pergamon Press, Oxford, 1981.

REFERENCES:

1. G.D. Rai, “Non Conventional Energy Sources”, Khanna Publishers, New Delhi, 2011.
2. Archie, W Culp. “Principles of Energy Conservation”, McGraw Hill, 1991.
3. D Patrick and S W Fardo, “Energy Management and Conservation”, PHI,1990
4. P. O’Callaghan: “Energy Management”, McGraw - Hill Book Company, 1993.
5. Kenney, W. F., “Energy Conservation in Process Industries”, Academic Press, 1983.

OUTCOMES:

The student should be able to

- Realize the global and national energy status and need to switch over to renewable energy technology.
- Energy audit and suggest methodologies for energy savings.
- Utilize the available resources in an optimal way.
- Concern about the global environmental issues & promote carbon credits.

GECX104	ROBOTICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To learn about the robots, various components, of Robots, programming and their applications.

MODULE I **8**

Definition- Need - Application, Types of robots – Classifications – Configuration, work volume, control loops, controls and intelligence- basic parts - functions – specifications. of robot, degrees of freedoms, end effectors – types, selection

MODULE II ROBOT DRIVES AND CONTROL **8**

Controlling the Robot motion – Position and velocity sensing devices – Design of drive systems – Hydraulic and Pneumatic drives – Linear and rotary actuators and control valves – Electro hydraulic servo valves, electric drives – Motors – Designing of end effectors – Vacuum, magnetic and air operated grippers.

MODULE III ROBOT SENSORS **8**

Transducers and Sensors – Tactile sensor – Proximity and range sensors – Sensing joint forces – Robotic vision system – Image Representation - Image Grabbing –Image processing and analysis – Edge Enhancement – Contrast Stretching – Band Rationing - Image segmentation – Pattern recognition – Training of vision system.

MODULE IV ROBOT PROGRAMMING & AI TECHNIQUES **7**

Types of Programming – Teach pendant programming – Basic concepts in AI techniques – Concept of knowledge representations – Expert system and its components.

MODULE V ROBOTIC WORK CELLS AND APPLICATIONS OF ROBOTS **7**

Robotic cell layouts – Inter locks – Humanoid robots – Micro robots – Application of robots in surgery, Manufacturing industries, space and underwater.

MODULE VI ROBOT KINEMATICS AND DYNAMICS 7

Forward and inverse Kinematic equations, Denvit – Hartenbers representations Fundamental problems with D-H representation, differential motion and velocity
of frames - Dynamic equations for sing, double and multiple DOF robots – static force analysis of robots.

L – 45; Total Hours –45

REFERENCES:

1. Yoram Koren," Robotics for Engineers", Mc Graw-Hill, 1987.
2. Kozyrey, Yu, "Industrial Robots", MIR Publishers Moscow, 1985.
3. Richard. D, Klafter, Thomas, A, Chmielewski, Michael Negin, "Robotics Engineering – An Integrated Approach", Prentice-Hall of India Pvt. Ltd., 1984.
4. Deb, S.R. "Robotics Technology and Flexible Automation", Tata Mc Graw-Hill, 1994.
5. Mikell, P. Groover, Mitchell Weis, Roger, N. Nagel, Nicholas G. Odrey, "Industrial Robotics Technology, Programming and Applications", Mc Graw- Hill, Int. 1986.
6. Timothy Jordanides et al,"Expert Systems and Robotics", Springer – Verlag, New York, May 1991.

OUTCOMES:

Students would be able to

- Understand about the robots, its various components.
- Design Robots for industrial applications.
- Do programming for robots and apply them in real time applications.

GECX105	TRANSPORT MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the transport fleet and their related activities for minimizing operational cost.
- To understand the need of maintenance and its importance.
- To understand the functions and applications of various types of transport system.

MODULE I INTRODUCTION 7

Personnel management; objectives and functions of personnel management, psychology, sociology and their relevance to organization, personality problems. Selection process: job description, employment tests, interviewing, introduction to training objectives, advantages, methods of training, training procedure, psychological tests.

MODULE II ORGANISATION AND MANAGEMENT 7

Forms of Ownership – principle of Transport Management – Staff administration – Recruitment and Training – welfare – health and safety. Basic principles of supervising. Organizing time and people. Driver and mechanic hiring - Driver checklist - Lists for driver and mechanic - Trip leasing - Vehicle operation and types of operations.

MODULE III TRANSPORT SYSTEMS 9

Introduction to various transport systems. Advantages of motor transport. Principal function of administrative, traffic, secretarial and engineering divisions. chain of responsibility, forms of ownership by state, municipality, public body and private undertakings.

MODULE IV SCHEDULING AND FARE STRUCTURE 8

Principal features of operating costs for transport vehicles with examples of estimating the costs. Fare structure and method of drawing up of a fare table. Various types of fare collecting methods. Basic factors of bus scheduling. Problems on bus scheduling.

MODULE V MOTOR VEHICLE ACT 7

Traffic signs, fitness certificate, registration requirements, permit insurance, constructional regulations, description of vehicle-tankers, tippers, delivery vans, recovery vans, Power wagons and fire fighting vehicles. Spread over, running time, test for competence to drive.

MODULE VI MAINTENANCE 7

Preventive maintenance system in transport industry, tyre maintenance procedures. Causes for uneven tyre wear; remedies, maintenance procedure for better fuel economy, Design of bus depot layout.

L – 45; Total Hours –45

TEXT BOOKS:

1. John Duke, "Fleet Management", McGraw-Hill Co, USA, 1984.
2. Kitchin.L.D., "Bus Operation", III edition, Illiffee and Sons Co., London, 1992

REFERENCES:

1. Government Motor Vehicle Act, Publication on latest act to be used as on date.

OUTCOMES:

Upon completion of the course, students will

- Know about different aspects related to transport system and management.
- Features of scheduling, fixing the fares
- Know about the motor vehicle act and maintenance aspects of transport.

GECX106 CONTROL SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the system modeling and to derive their transfer function.
- To provide adequate knowledge of time response of systems and steady state error analysis.
- To accord basic knowledge in obtaining the open loop and closed–loop frequency responses of Control systems.

MODULE I BASIC CONCEPTS AND SYSTEM REPRESENTATION **8**

Control System - Basic elements in control systems – Open and closed loop systems – Electrical analogy of mechanical and thermal systems – Transfer function – Block diagram reduction techniques – Signal flow graphs.

MODULE II TIME RESPONSE ANALYSIS AND DESIGN **8**

Time response – Time domain specifications – Types of test input – First and Second order system - Type I and Type II System – Response - Error coefficients – Generalized error series – Steady state error – P, PI, PID modes of feedback control.

MODULE III FREQUENCY RESPONSE ANALYSIS AND DESIGN **7**

Performance specifications - correlation to time domain specifications - bode plots and polar plots – gain and phase margin – constant M and N circles and Nichols chart – all pass and non-minimum phase systems.

MODULE IV STABILITY **8**

Characteristics equation – Location of roots in s plane for stability – Routh Hurwitz criterion – Root locus construction – Effect of pole, zero addition – Gain margin and phase margin – Nyquist stability criterion.

MODULE V COMPENSATOR DESIGN **8**

Performance criteria – Lag, lead and lag-lead networks – Compensator design using bode plots and root locus technique.

MODULE VI CONTROL SYSTEM COMPONENTS AND APPLICATION OF CONTROL SYSTEMS **6**

Synchros – AC servomotors - DC Servo motors - Stepper motors - AC

Tacho generator - DC Tacho generator - Typical applications of control system in industry.

L – 45; Total Hours –45

REFERENCES:

1. K. Ogata, “Modern Control Engineering”, 4th Edition, Pearson Education, New Delhi, 2003.
2. I.J. Nagrath & M. Gopal, “Control Systems Engineering”, New Age International Publishers, 2003.
3. C.J.Chesmond, “Basic Control System Technology”, Viva student edition, 1998.
4. I.J.Nagarath and M.Gopal, “Control System Engineering”, Wiley Eastern Ltd., Reprint, 1995.
5. R.C.Dorf and R.H.Bishop, “Modern Control Systems”, Addison-Wesley (MATLAB Reference), 1995.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Proper understanding of basics of Control Systems.
- Ability and skill to carry-out time domain and frequency domain analysis.
- Capable of determining stability of the system using Routh Hurwitz criterion, Root locus and Nyquist criterion.
- Ability to design lag, lead and lag lead compensator networks.

GECX107 INTRODUCTION TO VLSI DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- Basic concepts of HDL.
- Verilog language and its syntax constructs.
- Programmable Logic Devices and FPGAs
- MOS devices theory
- CMOS based combinational and sequential circuits

PREREQUISITES:

Fundamentals of Electronics

Basics knowledge in Digital Electronics.

MODULE I REVIEW OF BASIC DIGITAL SYSTEMS 7

Boolean algebra, Building blocks of combinational logic design-Adders, multiplexer, encoder, decoder, comparator, Latches & flip-flops, counters, shift registers.

MODULE II LOGIC DESIGN USING VERILOG HDL 8

Overview of Digital Design with Verilog HDL, Levels of Design Description, Concurrency, Hierarchical Modeling Concepts, Modules and Ports, Component instantiation Data flow and RTL, structural, gate level, switch level modeling and Behavioral Modeling.

MODULE III LANGUAGE CONSTRUCTS OF VERILOG HDL 7

Identifiers- gate primitives, gate delays, operators, timing controls, procedural assignments, conditional statements Variable types, arrays and tables, Tasks and functions, Test bench.

MODULE IV BUILDING BLOCKS OF DIGITAL VLSI SYSTEMS 8

HDL Design -Data Path Operations-Addition/Subtraction, Parity Generators, Comparators, Zero/One Detectors, Binary Counters, ALUs, Multiplication, Shifters, Memory Elements. Programmable logic elements and AND-OR arrays, FPGAs programming methods.

MODULE V TRANSISTOR THEORY 7

Introduction to MOS Transistors-NMOS & PMOS Characteristics, Current Equations, Complementary CMOS Inverter-DC Characteristics, Static Load MOS Inverters.

MODULE VI BASICS OF DIGITAL CMOS DESIGN 8

NMOS & PMOS Logic Gate, CMOS Logic Gate, Basic layout design of simple gate-stick diagram, CMOS Logic Structures-full adder, multiplexers.

Total Hours –45

TEXT BOOKS:

1. M.Morris Mano "Digital Design", 3rd Edition, Prentice Hall of India Pvt. Ltd New Delhi, 2003

REFERENCES:

1. Michael D. Ciletti“Advanced Digital Design with the Verilog HDL" (2nd Edition) Hardcover – January 31, 2010
2. J.Bhasker: Verilog HDL primer, BS publication, 2001.
3. J. P. Uyemura, "Introduction to VLSI Circuits and System", Wiley, 2002
4. Neil Weste and K. Eshragian, “Principles of CMOS VLSI Design: A System Perspective,” 2nd edition, Pearson Education (Asia) Pvt.Ltd., 2000
5. Douglas A Pucknell& Kamran Eshragian , “Basic VLSI Design” PHI 3rd Edition (original edition – 1994)

OUTCOMES:

At the end of the course the students will be able to

- Create basic Register Transfer Level (RTL) models for combinational circuits & Sequential circuits using Verilog HDL.
- Create basic behavioral models for combinational circuits & Sequential circuits using Verilog HDL.
- Describe the usage of Programmable Logic Devices and FPGAs.
- Describe MOS devices theory and inverter circuit DC characteristics
- Design the basic digital building blocks using MOS circuit.
- Apply VLSI design concepts based on the requirements to conduct experiments or projects

GECX108 PLANT ENGINEERING L T P C
3 0 0 4

OBJECTIVES:

- To provide in depth knowledge on Plant Engineering
- To introduce detail engineering and P&ID
- To learn about the support to Instrumentation from other disciplines
- To study about the Installation and commissioning

MODULE I INTRODUCTION OF PLANTS 7

General Project Cycle – Feed – Sales - Plant Description, Component / Areas of Plant, Plant Layout, Plant Interfaces, Plant Location

MODULE II ELEMENTS OF PLANT 8

Main Elements of a Plant, Process Flow Scheme (PFD – Process Flow Diagram) P&ID's, Plant Legend Finalization.

MODULE III DETAIL ENGINEERING 10

P& ID Development with PFD's, Major Discipline Involvement & Inter discipline Interaction, Major Instrumentation & Control Systems - Development Phase – Instrument List , I/O Count, Specification Sheets, Instrument Installation (Hook ups) , Control Philosophy – Detail Engineering.

MODULE IV SUPPORT FROM OTHER DISCIPLINE 8

Other Discipline Supports to Instrumentation – Plot Plan, Piping / Equipment Plan, Electrical Area Classification, Fire Hazardous Classification Telecommunication Systems - Control Network architecture.

MODULE V INSTALLATION AND COMMISSIONING 7

Plant Construction - Key Drawings for Construction Support Construction Activities, System Testing, Startup / Commissioning, Production.

MODULE VI CASE STUDIES 5

Case studies of Water Treatment Plant - Paper Industry – Power Plant etc

L – 45; Total Hours –45

REFERENCES:

1. Duncan C Richardson, Plant Equipment and Maintenance Engineering Handbook, McGraw-Hill Education: New York, Chicago, San Francisco, Athens, London, Madrid, Mexico City, Milan, New Delhi, Singapore, Sydney, Toronto, 2014 McGraw-Hill Education
2. Gabriel Salvendy, Handbook of Industrial Engineering – Technology and operations Management, John Wiley & Sons, 2001.
3. Robert C Rosaler , Standard Handbook of Plant Engineering, Mc Graw Hill third Edition, 2004
4. R. Keith Mobley, Plant Engineer's Handbook, Technology and Engineering, 2001.

OUTCOMES:

At the end of the course, the student will be able to

- Review and correct P&IDs
- Do installation and commissioning of new plants
- Apply plant engineering in design and maintenance of water treatment plant / power plant etc

GECX109	NETWORK SECURITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

The students should be able to

- Discuss the basic concepts of computer security, model and attacks
- Examine the major types of threats and the associated attacks
- Identify the encryption techniques in real time applications
- Understand the special requirements for wireless security and how authentication is implemented in wireless systems
- Understand the functions of Network Security Device Firewall and its types
- Interpret the various network intrusion such as computer viruses, network worms etc

MODULE I INTRODUCTION 6

Computer Security Concepts - The OSI Security Architecture - Security Attacks - Security Services - Security Mechanisms - A Model for Network Security - Standards – classical encryption techniques.

MODULE II SYMMETRIC ENCRYPTION AND MESSAGE CONFIDENTIALITY 7

Symmetric Encryption Principles - Symmetric Block Encryption Algorithms - Random and Pseudorandom Numbers - Stream Ciphers and RC4 - Cipher Block Modes of Operation

MODULE III PUBLIC KEY CRYPTOGRAPHY AND MESSAGE AUTHENTICATION 8

Approaches to Message Authentication - Secure Hash Functions - Message Authentication Codes - Public-Key Cryptography Principles - Public-Key Cryptography Algorithms - Digital Signatures

MODULE IV KEY DISTRIBUTION ,USER AUTHENTICATION AND TRANSPORT-LEVEL SECURITY 8

Symmetric Key Distribution Using Symmetric Encryption - Kerberos - Key Distribution Using Asymmetric Encryption - X.509 Certificates - Public-Key Infrastructure -Federated Identity Management - Web Security Considerations -

Secure Socket Layer and Transport Layer Security - Transport Layer Security

MODULE V WIRELESS NETWORK SECURITY, ELECTRONIC MAIL SECURITY AND IP SECURITY **8**

IEEE 802.11 Wireless LAN Overview -IEEE 802.11i Wireless LAN Security - Wireless Application Protocol Overview - Wireless Transport Layer Security - WAP End-to-End Security - Pretty Good Privacy - S/MIME – Domain Keys Identified Mail- IP Security Overview -IP Security Policy - Encapsulating Security Payload - Combining Security Associations - Internet Key Exchange - Cryptographic Suites

MODULE VI SYSTEM SECURITY **8**

Intruders -Intrusion Detection -Password Management - Types of Malicious Software - Viruses Virus Countermeasures – Worms - Distributed Denial of Service Attacks- The Need for Firewalls - Firewall Characteristics - Types of Firewalls - Firewall Basing - Firewall Location and Configurations

L – 45; Total Hours –45

5. Nitesh Dhanjani, Justin Clarke, "Network Security Tools", O'Reilly Media, ISBN-13: 9780596007942, 2005.

OUTCOMES:

Students who complete this course will be able to

- Recognize the computer security concepts, architecture attacks and model
- Distinguish the symmetric and asymmetric encryption techniques
- Apply the cryptographic algorithms in different applications
- Express the network security designs using available secure solutions

such as PGP,SSL, IPSec, etc.

- Describe the firewalls principles and different types of firewalls applied in organization
- Identify abnormalities within the network caused by worms, viruses and Network related security treats**.**

GECX110	KNOWLEDGE MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course

- Focuses on positioning knowledge as a valuable commodity, embedded in products and in the tacit knowledge of highly mobile individual employees.
- Presents KM as a deliberate and systematic approach to cultivating and sharing an organization's knowledge base.
- Brings out the paradigm in terms of information technology and intellectual capital.

MODULE I KNOWLEDGE MANAGEMENT 6

KM Myths – KM Life Cycle – Understanding Knowledge – Knowledge, intelligence – Experience – Common Sense – Cognition and KM – Types of Knowledge – History of Knowledge Management - From Physical assets to Knowledge Assets – Expert knowledge – Human Thinking and Learning.

MODULE II KNOWLEDGE MANAGEMENT SYSTEMS AND MODELS 9

Challenges in Building KM Systems – Conventional Vs KM System Life Cycle (KMSLS) – Knowledge Creation and Knowledge Architecture – KM cycle - Different variants of KM cycle - KM models - Implications and practical implementations.

MODULE III CAPTURING KNOWLEDGE AND SHARING 9

Tacit knowledge capture - Explicit knowledge codification – Knowledge taxonomies - Knowledge sharing - Communities - Obstacles to knowledge capture and sharing.

MODULE IV KNOWLEDGE MANAGEMENT TOOLS 9

KM System tools – Neural Network – Association Rules – Classification Trees – Data Mining and Business Intelligence – Knowledge capture and creation tools - Content creation tools - Data mining and knowledge discovery – Content management tools - Knowledge sharing and dissemination tools – Group ware

and Collaboration tools - Intelligent filtering tools.

MODULE V KNOWLEDGE APPLICATION 6

KM at individual level - Knowledge workers - Task analysis and modeling - Knowledge application at group and organizational levels – Knowledge repositories - Knowledge reuse -Case study: e-learning.

MODULE VI VALUE OF KNOWLEDGE MANAGEMENT 6

KM return on investment and metrics - Benchmarking method – Balanced scorecard method - House of quality method - Results based assessment method - Measuring success - Future challenges for KM.

L – 45; Total Hours –45

TEXT BOOKS:

1. Elias M. Awad, Hassan M. Ghaziri, “Knowledge Management”, Prentice Hall, 2nd Edition, 2010.
2. Jay Liebowitz, “Handbooks on Knowledge Management”, 2nd Edition, 2012.
3. Irma Becerra-Fernandez, Rajiv Sabherwal, ”Knowledge Management: Systems and Processes”, 2010.

OUTCOMES:

Students who complete this course will be able to

- Describe the fundamental concepts in the study of knowledge and its creation, acquisition, representation, dissemination, use and re-use, and management.
- Explains the core concepts, methods, techniques, and tools for computer support of knowledge management.
- Critically evaluate current trends in knowledge management and apply it for e-learning

GECX111 CYBER SECURITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the basics of Cyber Security Standards and Policies.
- To know the legal, ethical and professional issues in Cyber security.
- To understand Cyber Frauds and Abuse and its Security Measures.
- To know the technological aspects of Cyber Security.

MODULE I FUNDAMENTALS OF CYBER SECURITY 7

Security problem in computing – Cryptography Basics – History of Encryption – Modern Methods – Legitimate versus Fraudulent Encryption methods – Encryption used in Internet.

MODULE II CYBERCRIME AND CYBEROFFENSES 8

Cybercrime and Information Security – Cybercriminals – Classifications of Cybercrimes – Email Spoofing – Spamming – Cyber defamation – Internet Time Theft – Forgery – Web jacking – Hacking – Online Frauds – Software Piracy – Mail Bombs – Password Sniffing – Cyberoffenses – Categories – Planning the attacks – Cyberstalking – Cybercafe and Cybercrimes – Botnets.

MODULE III CYBERCRIME: MOBILE AND WIRELESS DEVICES 8

Proliferation of Mobile and Wireless Devices – Trends in Mobility – Credit card frauds in Mobile and Wireless Computing – Security Challenges – Authentication Service Security – Attacks on Mobile Phones.

MODULE IV TOOLS AND METHODS USED IN CYBERCRIME 8

Proxy Servers and Anonymizers – Phishing – Password Cracking – Keyloggers and Spywares – Virus and Worms – Trojan Horses and Backdoors – Steganography – DoS and DDoS Attacks.

MODULE V SECURITY POLICIES 7

Introduction - Defining User Policies – Passwords – Internet Use – Email Usage – Installing/ Uninstalling Software – Instant Messaging – Defining System Administrative Policies – Defining Access Control Developmental Policies Standards, Guidelines and Procedures – Basics of assessing a system

MODULE VI COMPUTER FORENSICS 7

General Guidelines – Finding Evidence on the PC - Finding Evidence in System Logs – Windows Logs – Linux Logs – Getting Back Deleted Files – Operating System Utilities – The Windows Registry.

L – 45; Total Hours –45

TEXT BOOKS:

1. Nina Godbole, Sunit Belapure, “Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives”, Wiley, 2011.

2. Chuck Easttom, “Computer Security Fundamentals”, 2nd Edition, Pearson Education, 2012.

REFERENCES:

1. Charles B. Pfleeger, Shari Lawrence Pfleeger, “Security in Computing”, 3rd Edition, Pearson Education, 2003.
2. William Stallings, “Cryptography and Network Security – Principles and Practices”, 3rd Edition, Pearson Education, 2003.
3. Atul Kahate, “Cryptography and Network Security”, Tata McGraw Hill, 2000.

OUTCOMES:

Upon completion of this course, students will be able to

- Explain the general security issues.
- Discuss various cybercrimes and offenses.
- Outline the occurrence of Cybercrime in mobile and wireless environment.
- Use relevant tools and methods in cybercrime
- Apply security policies in cyber forensics.
- Outline the strategies adopted in computer forensics.

GECX112 GENETIC ENGINEERING L T P C
4 0 0 4

OBJECTIVES:

The course aims to provide an advanced understanding of the core principles and topics of Cell and Organism reproduction and the Principles of heredity and their experimental basis, and to enable students to be able to apply these principles in assessment of pedigrees to identify genotypes and predict the mating outcomes.

MODULE I GENETICS AND ORGANISM 10

Genetics and human affairs, Genetics and Biology, Genes and Environment, Techniques of genetic analysis, The chromosome theory of heredity, Sex chromosomes, Sex linkage, The parallel behaviour of autosomal genes and chromosomes.

MODULE II MENDELISM AND LINKAGE 12

Mendel's laws of inheritance, Interaction of genes, Variations on dominance, Multiple alleles, Lethal alleles, Several genes affecting the same character, Penetrance and expressivity, Linkage- Basic eukaryotic chromosome mapping, The discovery of linkage, Recombination linkage symbolism, Linkage of genes on X chromosomes, Linkage maps, Examples of linkage maps.

MODULE III FINE STRUCTURE OF GENES 10

The concept of promoter, Coding sequence, Terminator, Induction of gene for expression. The concept of extranuclear genome in higher plants and animals, Overview of mitochondrial genome, Chloroplast genome.

MODULE IV RECOMBINATION IN BACTERIA AND VIRUSES 10

Conjugation recombination and mapping the E.coli chromosomes, Transformation, Transduction, Chromosome mapping. Population genetics: Darwin's revolution, Variation and its modulation, The effect of sexual reproduction on variation, The sources of variation, Selection quantitative genetics

MODULE V PRINCIPLES OF PLANT BREEDING 9

Objectives, Selfing and crossing techniques, Male sterility,Incompatability,

Hybrid vigour.

MODULE VI HUMAN GENOME PROJECT 9

Genetic diseases in humans, Genetics and society

L – 45; T – 15; Total Hours –60

REFERENCES:

1. In Introduction to genetic analysis, Griffiths, Miller, Suzuki, Lewontin and Gelbart, Freeman and Company.
2. Genetics, A.V.S.S. Sambamurty, Narosa Publishing House.
3. Concepts of Genetics, Klug & Cummings, Prientice Hall.
4. Molecular Cloning, Moniatisetal, Cold Spring Harbor Laboratory.

OUTCOMES:

At the end of the course students will be able to

- Describe the structure, function and replication of DNA as the genetic material
- Describe gene structure, expression and regulation
- Describe the chromosomal basis of inheritance and how alterations in chromosome number or structure may arise during mitosis and meiosis

GECX113	FUNDAMENTALS OF PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The students would gain knowledge on

- Technicalities attached to Project Management and Significance of Quality Consideration
- Project management methodologies – tools and techniques, supplemented with examples from case studies
- The importance of Efficient HR team and role of Communication in executing Projects.
- Managing Risks in Project Management

MODULE I INTRODUCTION TO PROJECT MANAGEMENT 9

Introduction to Project and Project Management-Project Management as a Career-Project Management Skill Sets-Project Scope Management: Project Charter, Scope Creep, Scope Validation, Scope Change Control-Type of Organization: Organization Structure-Influence of Organization Structure on Project, Project Stakeholders and Organizational Productivity.

MODULE II PROJECT MANAGEMENT PROCESS, TOOLS AND TECHNIQUES 8

Project life cycle-Initiation, Planning, Execution, Monitoring and Closing Phase; - Link between project management process, process groups and knowledge areas; Project management tools and techniques- Project Stakeholders description and mapping - Stakeholder Management Process

MODULE III PROJECT QUALITY, COST AND SCHEDULE MANAGEMENT 10

Triple constraints of project-quality, cost and schedule-Quality Planning, Quality Assurance and Quality Control, Process Control, Cost of Quality, Seven Tools of Quality Control- Cost Management: Cost Estimating Methods, Estimating Completion Cost, Earned Value Management, Budgeting, Life-Cycle Cost analysis- Project Time Management: Duration Estimation Method, FS/FF/SS/ SF Relations, Lead/Lag, Arrow Diagram Method and Precedence Diagram Method for Scheduling-Resource Allocation

MODULE IV PROJECT HR MANAGEMENT 5

Organizational Goals- (MBO/MBE/MBP)-Responsibility Assignment Matrix (RAM)-Types of Powers- Manage or Lead-Conflict management Techniques-Performance Evaluation Process-Motivation Theories and its Application for execution of Projects-Leadership Styles-Project Team Building-Project Staffing Constraints/Policies

MODULE V COMMUNICATION MANAGEMENT 5

Communication Management: Understanding Body languages of Project Personnel-Effective Communications- Interpersonal Skills for project Managers-PMIS-Communicating with the Customer-Communicating with Management- Formal vs. Informal Communications-Written, Verbal and Non-Verbal Communications.

MODULE VI PROJECT PROCUREMENT & RISK MANAGEMENT 8

Introduction to Project Procure Management: Soliciting RFQ/RFP-Contract Proposals-Contract Negotiation-Contract Closure-Risk Management: Defining risks-Risk management process-Risk identification-Qualitative and Quantitative Risk-Probability and Decision trees-Risk Response strategies / methods-Expected monetary value-Risk vs. life cycle phases

L – 45; Total Hours –45

REFERENCES:

1. Jack. R. Meredith, Samuel. J. Mantel & Scott. M. Shafer, Project Management in Practice, Fifth Edition, Bangalore: Wiley, 2015
2. Bob Hughes, Mike Cotterrel “Software Project Management”, Tata McGraw-Hill, 2009

OUTCOMES:

- Learners will be able to identify the Key Knowledge Areas and apply PM process in hypothetical project assignments given as continuous assessment.
- They would be able to suitably recognize tools and techniques required for various phases included in a project.
- They would also be able to manage scope, time, cost and other major components that would help them to execute the project efficiently.

GECX114	OPERATIONS RESEARCH	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To acquire knowledge and training in optimization techniques.
- To get knowledge about optimization in utilization of resources.
- To understand and apply operations research techniques to industrial operations

MODULE I LINEAR PROGRAMMING PROBLEM 8

Linear programming – formulation of the problem - graphical interpretation of optimality - Simplex method – to obtain basic feasible solution – types of linear programming solution – complications and their resolution.

MODULE II ARTIFICIAL VARIABLE AND TWO PHASE METHOD, DUALITY 6

Artificial variable - Big M method – Two phase method – alternative optimal solution – unbounded solution - Duality – primal dual relationships - rules of constructing the dual from primal.

MODULE III TRANSPORTATION PROBLEM & ASSIGNMENT PROBLE 8

Transportation problems – Initial basic feasible solutions, MODI method, Unbalance in transportation, Degeneracy in transportation models, Assignment problem – Minimization and Maximization type of problems by Hungarian method.

MODULE IV NETWORK AND SEQUENCING PROBLEMS 8

PERT and CPM – Network diagram – Fulkerson's rule - CPM Probability of achieving completion date – Crash time – Cost analysis. Sequencing N jobs through 2 machines and 3 machines.

MODULE V QUEUING THEORY & SIMULATION 7

Poisson arrivals and exponential service times – characteristics of Queuing models – single channel – Introduction to multi channel models – Random number generation – Monte Carlo Simulation.

MODULE VI INVENTORY CONTROL, REPLACEMENT MODELS AND GAME THEORY 8

Types of inventory- Inventory cost - EOQ - Deterministic inventory problems –

Introduction to probabilistic models & system level inventory control - Replacement models – Replacement of items that deteriorate with time – value of money changing with time – not changing with time – Individual and group replacement policy - Game theory – simple games.

L – 45; Total Hours –45

TEXT BOOKS:

3. Hamdy ATaha, “Operations Research an introduction”, 8th edition, Phil Pearson, 2007.
4. Winston.W.L., “Operations Research”, 4th edition, Thompson-Brooks/Cole, 2003.

REFERENCES:

1. Wayne.L. Winston, “Operations Research applications and algorithms”, 4th edition, Thomson learning, 2007.
2. Frederick. S. Hiller and Gerald.J.Lieberman, “Operations Research concepts and cases”, 8th edition (SIE), Tata McGraw – Hill Pub. Co. Ltd., New Delhi, 2006.
3. A. Ravindran, D. T. Phillips and J. J. Solberg, "Operations Research:Principles and Practice", 2nd edition, John Wiley & Sons, New York, 1992.
4. Robertazzi. T.G., “Computer networks and systems-Queuing theory and performance evaluation”, 3rd edition, Springer, 2002.

OUTCOMES:

At the end of the course students will be able to

- solve linear programming problems
- solve transportation and assignment problems.
- solve network and sequencing problems.
- apply the operations research techniques to solve industrial problems.

GECX115	NANO TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the basic concepts of Nanoscience relevant to the field of engineering.
- To provide an exposure about the importance of various synthesis method.
- To enrich the knowledge of students in various characterisation techniques.

MODULE I INTRODUCTION & CLASSIFICATION OF NANOMATERIALS 9

Definition - Origin of nanotechnology - Difference between bulk and nanomaterials- Top-down and bottom-up processes - Size dependent properties (magnetic, electronic,transport and optical), Classification based on dimensional property - 0D, 1D, 2D and 3D nanostructures – Kubo gap.

MODULE II TYPES OF NANOMATERIALS 9

Metal oxides and metal nano particles - Ceramic nano particles - Semi conducting quantum dots - Core-shell quantum dots - Nanocomposites - Micellar nanoparticles.

MODULE III PRODUCTION OF NANOPARTICLES 7

Sol-gel, hydrothermal, solvothermal, Plasma Arcing, Electro deposition, RF sputtering, Pulsed laser deposition, Chemical vapour, deposition.

MODULE IV CARBON BASED NANOMATERIALS 6

Carbon nanotubes: Single wall nanotubes (SWNT), Multiwall nanotubes (MWNT) - structures-carbon nanofibre, Fullerenes-Application of carbon nanotubes and Fullerenes.

MODULE V NANOPHOTONICS 7

Light and nanotechnology, Interaction of light and nanotechnology, Nanoholes and photons, nanoparticles and nanostructures; Nanostructured polymers, Photonic Crystals, Solar cells.

MODULE VI CHARACTERISATION TECHNIQUES 7

Basic principles of scanning Electron Microscopy (SEM), Atomic force microscopy (AFM), Scanning tunneling microscopy (STM), Scanning probe

microscopy (SPM) and Transmission electron microscopy (TEM), Particle size analyzer, Luminescence techniques.

L – 45; Total Hours –45

TEXT BOOKS:

1. Hari Singh Nalwa, “Handbook of Nanostructured Materials and Nanotechnology”, Academic Press, 2000.
2. Guozhong Cao, “Nanostructures and Nano materials-Synthesis, Properties and Applications”, Imperial College Press (2011).
3. Zhong Lin Wang, “Handbook of Nanophase and Nanomaterials (Vol 1 and II)”, Springer, 2002.
4. Mick Wilson, Kamali Kannangara, Geoff smith, “Nanotechnology: Basic Science and Emerging Technologies”, Overseas press, 2005.

REFERENCES:

1. A. Nabok, “Organic and Inorganic Nanostructures”, Artech House, 2005.
2. C.Dupas, P.Houdy, M.Lahmani, Nanoscience: “Nanotechnologies and Nanophysics”, Springer-Verlag Berlin Heidelberg, 2007.
3. Mick Wilson, Kamali Kannangara, Michells Simmons and Burkhard Raguse, “Nano Technology – Basic Science and Emerging Technologies”, 1st Edition, Overseas Press, New Delhi,2005.
4. M.S. Ramachandra Rao, Shubra SinghH, “Nanoscience and Nanotechnology: Fundamentals to Frontiers”, Wiley, 2013.

OUTCOMES:

At the end of this course, the students will be able to:

- Apply the knowledge of different types of nanomaterials for various engineering applications.
- Acquire the knowledge of various methods of production of nanomaterials.
- Familiarize with various characterization techniques.

GECX116	VEHICLE MAINTENANCE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To know about the various methods of maintaining procedure, vehicle insurance and basic problems in a vehicle.
- The student able to impart knowledge in maintaining of engine components and subsystems.
- The student able to impart knowledge in maintaining of transmission, driveline, steering, suspension, braking and wheels.
- The student able to impart carefully maintaining their vehicle and can increase driving safety.

MODULE I MAINTENANCE, WORKSHOP PRACTICES, SAFETY AND TOOLS **7**

Maintenance – Need, importance, primary and secondary functions, policies - classification of maintenance work - vehicle insurance - basic problem diagnosis. Automotive service procedures – workshop operations – workshop manual - vehicle identification. Safety – Personnel, machines and equipment, vehicles, fire safety - First aid. Basic tools – special service tools – measuring instruments – condition checking of seals, gaskets and sealants. Scheduled maintenance services – service intervals - Towing and recovering.

MODULE II ENGINE AND ENGINE SUBSYSTEM MAINTENANCE **8**

General Engine service- Dismantling of Engine components- Engine repair- working on the underside, front, top, ancillaries- Service of basic engine parts, cooling and lubricating system, fuel system, Intake and Exhaust system, electrical system - Electronic fuel injection and engine management service - fault diagnosis- servicing emission controls.

MODULE III TRANSMISSION AND DRIVELINE MAINTENANCE **8**

Clutch- general checks, adjustment and service- Dismantling, identifying, checking and reassembling transmission, transaxle- road testing- Removing and replacing propeller shaft, servicing of cross and yoke joint and constant velocity joints- Rear axle service points- removing axle shaft and bearings- servicing differential assemblies- fault diagnosis.

MODULE IV STEERING AND SUSPENSION MAINTENANCE 7

Maintenance and Service of Mc person strut, coil spring, leaf spring, shock absorbers. Dismantling and assembly procedures. Inspection, Maintenance and Service of steering linkage, steering column, Rack and pinion steering, Recirculating ball steering service- Worm type steering, and power steering system.

MODULE V BRAKE AND WHEEL MAINTENANCE 7

Inspection, Maintenance and Service of Hydraulic brake, Drum brake, Disc brake, parking brake. Bleeding of brakes. Wheel alignment and balance, removing and fitting of tyres, tyre wear and tyre rotation.

MODULE VI AUTO ELECTRICAL AND AIR CONDITIOING MAINTENANCE 8

Maintenance of batteries, starting system, charging system and body electrical -Fault diagnosis using Scan tools. Maintenance of air conditioning parts like compressor, condenser, expansion valve, evaporator - Replacement of hoses- Leak detection- AC Charging- Fault diagnosis Vehicle body repair like panel beating, tinkering, soldering, polishing, painting.

L – 45; Total Hours –45

TEXT BOOKS:

1. Ed May, "Automotive Mechanics Volume One" , Mc Graw Hill Publications, 2003
2. Ed May, "Automotive Mechanics Volume Two" , Mc Graw Hill Publications, 2003
3. Vehicle Service Manuals of reputed manufacturers
4. Vehicle maintenance and garage practice by Jigar A.Doshi Dhru U.Panchal,Jayesh P.Maniar. 2014
5. A Practical Approach to Motor Vehicle Engineering and Maintenance 3rd Edition by Allan Bonnick.

REFERENCES:

1. Bosch Automotive Handbook, Sixth Edition, 2004.
2. Advanced Automotive Fault Diagnosis by Tom Denton 2011.
3. Nissan Patrol Automotive Repair Manual: 1998-2014 by Haynes Manuals Inc.
4. Automobile electrical manual a comprehensive guide by Haynes manual car repair.

OUTCOMES:

On completion of the course student should be able to

- Prepare maintenance schedules and procedures with appropriate tools.
- Demonstrate the procedure and methods to repair and calibrate the engine.
- Analyze the causes and remedies for fault in transmission and drive line systems.
- Analyze the causes and remedies of steering and suspension systems.
- Analyze the causes and remedies of brake system.
- Demonstrate the procedure for wheel alignment and wheel balanced.

GECX117	FUNDAMENTALS OF DIGITAL IMAGE PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Describe and explain basic principles of digital image processing
- Design and implement algorithms that perform basic image processing
- Design and implement algorithms for advanced image analysis
- Assess the performance of image processing algorithms and systems

PRE-REQUISITES:

- Basic knowledge of transforms in Mathematics

MODULE I DIGITAL IMAGE FUNDAMENTALS 8

Elements of Image Processing System, Fundamentals steps in Digital Image Processing, Image Sampling & Quantization, Spatial and Gray Level Resolution.

MODULE II COLOR IMAGE PROCESSING 8

Fundamental of color image processing, color models- RGB, CMY, HIS, Pseudo color image processing

MODULE III IMAGE ENHANCEMENT 7

Basic gray level Transformations, Histogram Processing, Spatial Filtering

MODULE IV IMAGE TRANSFORMS 7

2D-DFT, DCT, Haar Transform, Fundamentals of 2D-wavelet transform, sub-band coding

MODULE V IMAGE SEGMENTATION AND RESTORATION 8

Point, line and edge detection methods ,Image Segmentation and its types, Restoration: Noise model, Inverse filter and Wiener filter.

MODULE VI IMAGE COMPRESSION 7

Fundamentals of redundancies, Basic Compression Methods: Huffman coding, Arithmetic coding, JPEG and MPEG Compression standards.

TOTAL HOURS 45

TEXT BOOKS

1. Gonzalez and Woods, "Digital Image Processing", 3rd Edition, Pearson Education, 2016.
2. Anil. K. Jain, "Fundamentals of Digital Image Processing"; 4th Edition, PHI, 2007

REFERENCES

1. Pratt William, "Digital Image Processing", John Wiley & Sons, 2007.
2. Arthur Weeks Jr., "Fundamentals of Digital Image Processing", PHI, 2006.

OUTCOMES:

On completion of the course, students will be able to

- Explain the fundamental concepts of digital image processing.
- Discuss about color image processing
- Recognize & apply various image enhancement techniques.
- Apply various transforms for image processing.
- Apply various techniques for image segmentation and restoration.
- Identify and use appropriate image compression techniques

Group II courses

(To be offered in VII Semester)

		L	T	P	C
GECX201	**GREEN DESIGN AND SUSTAINABILITY**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To impart knowledge to face challenges, the technology poses for water, energy, and climate change by implementing sustainable design.

MODULE I CONCEPTS OF SUSTAINABLE DEVELOPMENT 7

Objectives of Sustainable Development - Need for sustainable development-Environment and development linkages - Globalisation and environment-Population, poverty and pollution- global, regional and local environment issues-Green house gases and climate change.

MODULE II SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 8

Demographic dynamics of sustainability- Policies for socio economic development- Sustainable Development through trade- Economic growth- Action Plan for implementing sustainable development- Sustainable Energy and Agriculture.

MODULE III FRAME WORK FOR ACHIEVING SUSTAINBAILITY 7

Sustainability indicators- Hurdles to sustainability- Business and Industry – Science and Technology for Sustainable Development- Performance indicators of sustainability and assessment mechanism- Constraints and barriers of Sustainable Development.

MODULE IV GREEN BUILDINGS 8

Introduction to Green Building- Energy- Water- Materials and Resources - Sustainable Sites and Land Use - Indoor Environmental Quality- Life Cycle Assessment- Energy, water and materials efficiency.

MODULE V ENERGY CONSERVATION AND EFFICIENCY 7

Energy savings- Energy Audit- Requirements- Benefits of Energy conservation-Energy conservation measures for buildings- Energy wastage- impact to the environment.

MODULE VI GREEN BUILDINGS DESIGN 8

Elements of Green Buildings Design- Foundation, Electrical, Plumbing, flooring, Decking, roofing, insulation, wall coverings, windows, siding, doors and finishing, LEED certification for Green Buildings, Green Buildings for sustainability.

L – 45; Total Hours –45

TEXT BOOKS:

1. Kirby, J., Okeefe, P., and Timber lake, “Sustainable Development”, Earthscan Publication, London, 1995.

REFERENCES:

1. Charles Kibert, J., “Sustainable Construction: Green Building Design and Delivery”, 2nd Edition, John Wiley and sons, 2007.

OUTCOMES:

At the end of the course, the students will be able to

- Explain the relationship between sustainability and emergence of green building practices.
- Address the economic, environmental, and social concerns.

GECX202 APPROPRIATE TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart students knowledge about the basics and applications of various appropriate technologies in the field of civil engineering.

MODULE I BASICS CONCEPTS **7**

Back ground, Tools, Choices and Implications, Appropriate Technology Movement (an overview) - Basic design process, basic financial analysis-discounted cash flow, and energy fundamentals.

MODULE II APPROPRIATE TECHNOLOGY WITH REFERENCE TO BUILDING DESIGN **7**

Appropriate Building Materials, Appropriate Energy Saving Techniques, Water Conservation (Indoor), Rain Water Harvesting.

MODULE III WATER, HEALTH AND SANITATION MANAGEMENT **7**

Water Storage: Designing Dams and Pipelines, Appropriate Selection for Sanitation Technique, Sewerage, Communal Health and Waste Water Recycling.

MODULE IV WASTE MANAGEMENT **8**

Types of Waste - Sources - Collections and On-Site Processing -Transferring Stations - Disposal Systems - Recycling.

MODULE V ENERGY EFFICIENT TECHNIQUES **8**

Green building concepts-renewable energy sources- Solar – Steam and wind-Biofuels - Biogas – Electricity.

MODULE VI TECHNOLOGY POLICY **8**

Government Policies- Energy Policy-Appropriate technology Development Centre-its function and responsibilities-Building policies-Case Studies.

L – 45; Total Hours –45

TEXT BOOKS:

1. Barrett Hazeltine and Christopher Bull, “Appropriate Technology: Tools Choices and Implications”, Academic Press, Orlando, USA, 1998.
2. Ken Darrow and Mike Saxenian, “Appropriate Technology Source Book : A Guide to Practical Books for Village and Small Community Technology”, Stanford, 1986.

REFERENCES:

1. Richard Heeks, “Technology and Developing Countries: Practical Applications Theoretical Issues”, 1995.
2. John Pickford, “The Worth of Water : Technical Briefs on Health, Water and Sanitation”, Intermediate Technology Publications, 1998.

OUTCOMES:

- At the end of the course, the students will be able to use suitable technologies for various conditions for sustainable development.

GECX203	ENGINEERING SYSTEM MODELLING AND SIMULATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn the concepts, techniques, tools for modeling and simulation systems and environments through the use of computers.
- To study the various aspects of discrete dynamic, stochastic systems modeling and conducting experiments with those models on a computer.

MODULE I INTRODUCTION 6

Systems – Modelling – types – systems components – Steps in model building- Simulation Algorithms and Heuristics; Simulation Languages.

MODULE II RANDOM NUMBERS / VARIATES 7

Random numbers – methods of generation – random variates for standard distributions like uniform, exponential, Poisson, binomial, normal etc. – Testing of Random variates – Monte Carlo Simulation.

MODULE III MODELLING PROCESS 7

Primitive Models : Establishing relationships via physical laws; Establishing relationships via curve fitting; Parameters estimation problems; Elementary state transition models.

MODULE IV DESIGN OF SIMULATION EXPERIMENTS 9

Steps on Design of Simulation Experiments – Development of models using of Highlevel language for systems like Queuing, Inventory, Replacement, Production etc., – Model validation and verification, Output analysis.

MODULE V SIMULATION LANGUAGES 10

Need for simulation Languages – Comparisons & Selection of Languages – GPSSARENA- EXTEND – Study of any one of the languages.

MODULE VI CASE STUDIES USING SIMULATION LANGUAGES 6

Case Study using simulation languages

L – 45; Total Hours –45

REFERENCES:

1. Law, A.M., & W.D. Kelton, “Simulation Modelling and Analysis”, McGraw

Hill, Singapore, 2000.
2. Harrel, C.R., et. al., “System Improvement Using Simulation”, 3rd Edition, JMI Consulting Group and ProModel Corporation, 1995.
3. Harrel, C.R. & T. Kerim, “Simulation Made Easy, A Manager’s Guide”, IIE Press, 1995.
4. Geoffrey Gordon, “Systems Simulation”, Prentice Hall, 2002.
5. David Kelton, Rondall P Sadowski, David T Sturrock, “Simulation with Arena”, Mc Graw Hill, 2004.

OUTCOMES:

The student should be able to

- Model and simulate systems and environments through the use of computers.
- Conduct experiments with discrete dynamic, stochastic system models on a computer.

GECX204 VALUE ANALYSIS AND ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To get acquainted with value analysis and engineering tool for productivity improvement.
- To understand and analyze the theory and methodology of Value Engineering.

MODULE I VALUE ENGINEERING BASICS 8

Origin of Value Engineering, Meaning of value, Definition of Value Engineering and Value analysis, Difference between Value analysis and Value Engineering, Types of Value, function - Basic and Secondary functions, concept of cost and worth, creativity In Value Engineering.

MODULE II VALUE ENGINEERING JOB PLAN AND PROCESS 6

Seven phases of job plan, FAST Diagram as Value Engineering Tool, Behavioural and organizational aspects of Value Engineering, Ten principles of Value analysis, Benefits of Value Engineering.

MODULE III ORIENTATION AND INFORMATION PHASES 8

Launching Value Engineering project work - Objectives and Targets - VE Project work: a time-bound programme - Projects and Teams - Time Schedule - Co-ordination - Consultant. Technical data - Marketing related information - Competition profile - Cost data - Materials Management related information - Quality related information - Manufacturing data.

MODULE IV FUNCTION ANALYSIS AND CREATIVE PHASES 9

Objectives - Function definition - Classification of functions - Higher level functions – Function – Cost – Function – Worth - Value Gap - Value index - How to carry out Function Analysis? – Fast Diagraming - Cost Modelling.

Creativity - How to improve creativity of an individual? – How to promote creativity in the organisation? - Obstacles to Creativity - Mental road blocks - Creativity killer phrases. Positive thinking - Ideas stimulators - Creativity techniques - Brainstorming.

MODULE V EVALUATION, INVESTIGATION AND RECOMMENDATION 6

Paired comparison and Evaluation Matrix techniques - Criteria for selection of

VE solutions. Design – Materials – Quality – Marketing – Manufacturing - Preview session. The report - presentation.

MODULE VI IMPLEMENTATION PHASE AND CASE STUDIES 8

Design department - Materials department - Production Planning & Control - Quality Control – Manufacturing – Marketing - Need for co-ordinated teams - The Action Plan. Value Engineering case studies.

L – 45; Total Hours –45

TEXT BOOKS:

1. Mudge, Arthur E. “Value Engineering- A systematic approach”, McGraw Hill, New York, 2000.
2. Kumar S, Singh R K and Jha J K (Ed), “Value Engineering”, Narosa Publishing House, 2005.

REFERENCES:

1. Park RJ, “Value Engineering: A Plan for Invention”, St.Lucie Press, New York, 1999.
2. Lawrence, D.M., “Techniques of Value Analysis and Engineering”, McGraw Hill 1988.
3. George, E.D., “Engineering Design: a Material and Processing Approach”, McGraw Hill, 1991.
4. Heller, D.E., “Value Management, Value Engineering and Cost Reduction”, Addison Wesley, 1988.

OUTCOMES:

- The student will be able to realize the value of products, processes and implement value analysis to achieve productivity improvement.

GECX205 INDUSTRIAL SAFETY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the various safety measures to be taken in different industrial environments.

MODULE I SAFETY MANAGEMENT **7**

Evolution of modern safety concept- Safety policy - Safety Organization - line and staff functions for safety- Safety Committee- budgeting for safety. safety education and training.

MODULE II SAFETY IN MANUFACTURING **7**

Safety in metal working-Machine guarding -Safety in welding and gas cutting - Safety in cold forming and hot working of metals -Safety in finishing, inspection and testing -Regulation.

MODULE III SAFETY IN CONSTRUCTION **8**

General safety consideration in Excavation, foundation and utilities – Cordoning – Demolition – Dismantling –Clearing debris – Types of foundations – Open footings.

Safety in Erection and closing operation - Safety in typical civil structures – Dams-bridges-water Tanks-Retaining walls-Critical factors for failure-Regular Inspection and monitoring.

MODULE IV ELECTRICAL SAFETY **8**

Electrical Hazards – Energy leakage – Clearance and insulation – Excess energy – Current surges – Electrical causes of fire and explosion – National electrical Safety code.

Selection of Environment, Protection and Interlock – Discharge rods and earthing device – Safety in the use of portable tools - Preventive maintenance.

MODULE V SAFETY IN MATERIAL HANDLING **8**

General safety consideration in material handling devices - Ropes, Chains, Sling, Hoops, Clamps, Arresting gears – Prime movers.

Ergonomic consideration in material handling, design, installation, operation and

maintenance of Conveying equipments, hoisting, traveling and slewing mechanisms.

Storage and Retrieval of common goods of shapes and sizes in a general store of a big industry.

MODULE VI SAFETY EDUCATION AND TRAINING 7

Importance of training-identification of training needs-training methods – programme, seminars, conferences, competitions – method of promoting safe practice - motivation – communication - role of government agencies and private consulting agencies in safety training – creating awareness, awards, celebrations, safety posters, safety displays, safety pledge, safety incentive scheme, safety campaign – Domestic Safety and Training.

L – 45; Total Hours –45

REFERENCES:

2. Blake R.B., “Industrial Safety”, Prentice Hall, Inc., New Jersey, 1973.
3. Fulman J.B., “Construction Safety, Security, and Loss Prevention”, John Wiley and Sons, 1979.
4. Fordham Cooper W., “Electrical Safety Engineering”, Butterworths, London, 1986.
5. Alexandrov M.P., “Material Handling Equipment”, Mir Publishers, Moscow, 1981.

OUTCOMES:

Students would be able to

- Acquire knowledge on various safety Hazards.
- Carry out safety measures for different industrial environments.

GECX206 ADVANCED OPTIMIZATION TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the various advanced optimization tools.
- To provide an understanding to deal with ill identified and fuzzy problems.

MODULE I INTRODUCTION **7**

Review of conventional optimization techniques - limitations - limitation of exhaustive search - need for artificial intelligence - bio mimicking methods

MODULE II HEURISTICS METHODS **8**

Introduction – Advanced methods of algorithm design: Greedy method, Backtracking method, Divide and Conquer method – Dynamic programming – Heuristics exploration algorithms – Greedy search - Local search – Hill climbing – Tabu search – Gradient search – Beam search – Simulated Annealing.

MODULE III GENETIC ALGORITHM **7**

Introduction - Basics of GA – Population – Reproduction – Cross over – Mutation -genetic algorithms in search, optimization and machine learning-practical genetic algorithms.

MODULE IV ANT COLONY OPTIMIZATION **8**

Introduction: Ant Colony Optimization – Meta-heuristic Optimization – History – The ACO Meta-heuristic – ACO Algorithms: Main ACO – Ant system – Ant colony system – Max-Min Ant system – Applications: Routing in telecommunication networks – Travelling salesmen – Graph Coloring – Advantages & Disadvantages

MODULE V FUZZY LOGIC AND ANN **8**

Fuzzy logic, knowledge representation and inference mechanism – Fuzzy and expert control – standard Takagi-Sugeno mathematical characterizations – Design example – Biological foundations to intelligent systems: Artificial neural networks, Back-propagation networks, Radial basis function networks, and recurrent networks.

MODULE VI IMPLEMENTATIONS & APPLICATIONS 7

Reduction of size of an optimization problem – multilevel optimization – parallel processing – multi objective optimization – Job shop scheduling – Vehicle scheduling – Line balancing – Sensor integration.

L – 45; Total Hours –45

REFERENCES:

1. Singiresu S. Rao, “Engineering optimization – Theory and practices”, John Wiley and Sons, 1996.
2. Ravindran – Phillips –Solberg, “Operations Research – Principles and Practice, John Wiley and Sons, 1987.
3. Fredrick S.Hillier and G.J.Liberman, “Introduction to Operations Research”, McGraw Hill Inc. 1995.
4. Kalymanoy Deb, “Optimization for Engineering Design”, PHI, 2003
5. Christos H. Papadimitriou, Kenneth Steiglitz, Combinatorial Optimization, PHI 2006

OUTCOMES:

At the end of the course student will be able to

1. Formulate a real life situation as an optimization the problem.
2. Identify the appropriate solution methodology and provide a solution

GECX207	MATLAB SIMULINK	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION MATLAB DATA PRESENTATION 7

Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts- Making clear and compelling plots-Solving systems of linear equations numerically and symbolically- Least squares regression -Curve fitting.

MODULE II MATLAB PLOT FUNCTION 7

Introduction- Plot Function – Animation- 3D Plots-Customizing Plots – Plot Applications- Saving &Painting Plots.

MODULE III ROOT FINDING AND COMPUTER REPRESENTATION OF NUMBERS 7

Linearization and solving non-linear systems of equations- The Newton-Rapson method- Integers and rational numbers in different bases- Floating point numbers- Round off and errors in basic arithmetic-Significant digits when reporting results

MODULE IV ORDINARY DIFFERENTIAL EQUATIONS 8

Numerical integration and solving 1^{st} order, ordinary differential equations (Euler's method and Runge-Kutta)- Use of ODE function in MATLAB

MODULE V NON-LINEAR DIFFERENTIAL EQUATIONS 8

Converting 2^{nd} order and higher ODEs to systems of 1^{st} order ODEs- Solving systems of ODEs via Euler's method and Runge-Kutta)- Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations

MODULE VI INTRODUCTION OF SIMULINK 8

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- Modeling the solution of three equations with three unknowns- Representing a model as a subsystem-Simulink demos.

L – 45; Total Hours –45

REFERENCES:

1. Griffiths D V and Smith I M, Numerical Methods for Engineers, Blackwell, 1991.
2. Laurene Fausett, Applied Numerical Analysis Using MATLAB, Pearson 2008.
3. Moin P, Fundamentals of Engineering Numerical Analysis, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB. CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving , Mathematical Exploration with MATLAB, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

1. Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
2. Write programs using first principles without automatic use of built-in ones.
3. Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
4. Be fluent in exploring Matlab's capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
5. Make use of Maltab visual capabilities for all engineering applications.
6. An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECX208	EMBEDDED SYSTEMS AND ITS APPLICATIONS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide a detailed overview of embedded system.
- To equip students with the software development skills necessary for practitioners in the embedded systems field.
- To understand entire software development lifecycle and examine the various issues involved in developing software for embedded systems.

MODULE I EMBEDDED SYSTEMS OVERVIEW 8

Introduction –Embedded Systems vs. General computing systems- Fundamental Components of embedded systems- Characteristics- Challenges-Examples- Embedded System design process.

MODULE II EMBEDDED COMPUTING PLATFORM 8

Overview of Processors and hardware units in an embedded system-CPU buses – Memory devices –Memory types- I/O devices – Designing with computing platforms- Consumer electronics architecture-Design example: Alarm clock.

MODULE III REAL TIME EMBEDDED SYSTEMS 8

Programming embedded systems in assembly and C – Real time systems – Hard and Soft real time systems- Need for RTOS in Embedded Systems- Multiple tasks and processes –Context switching-Scheduling policies- Interprocess communication and synchronization.

MODULE IV EMBEDDED SOFTWARE DEVELOPMENT PROCESS and TOOLS 8

Development process of an embedded system-software modules and tools for implementation of an embedded system- Integrated development environment- Host and target machines-cross compiler-cross assembler-Choosing right platform.

MODULE V PROGRAM MODELING IN EMBEDDED SYSTEMS 8

Program Models – Data Flow Graph model-control DFG model-Synchronous DFG model- Finite state machines- UML modeling – UML Diagrams.

MODULE VI EMBEDDED SYSTEMS APPLICATION 5

Application specific embedded system – case study: digital camera hardware and software architecture, embedded systems in automobile, embedded system for a smart card.

Total Hours –45

TEXT BOOKS:

1. Marilyn Wolf , "Computers as components", Elsevier 2012.
2. Shibu. K.V, “Introduction to Embedded Systems”, Tata Mcgraw Hill,2009.
3. Rajkamal, "Embedded Systems Architecture, Programming and Design",1st Reprint,Tata McGraw-Hill, 2003
4. Frank Vahid and Tony Gwargie, "Embedded System Design", John Wiley & sons, 2002.

REFERENCES:

1. Sriram V Iyer and PankajGupta ,”Embedded Realtime Systems Programming ”Tata McGraw-Hill,2008
2. Qing Li and Carolyn Yao," Real-Time Concepts for Embedded Systems", CMPBooks, 2003
3. David E.Simon, "An Embedded Software Primer", Pearson Education, 2003

OUTCOMES:

On completion of this course, the students will be able to

- Identify the suitable processor and peripherals in embedded applications
- Develop embedded programs in assembly and c
- Choose the right platform for designing an embedded system
- Explore different scheduling mechanism in rtos
- Design the program model for embedded applications.
- Analyze different domain specific applications in embedded systems.

GECX209 USABILITY ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of this course is

- To understand the emerging concept of usability, requirements gathering and analysis.
- To learn about human computer interaction with the help of interfaces that has high usability.

MODULE I INTRODUCTION 6

Cost Savings – Usability Now – Usability Slogans – Discount Usability Engineering – Usability – Definition – Example – Trade-offs – Categories – Interaction Design – Understanding & Conceptualizing Interaction – Cognitive Aspects.

MODULE II USER INTERFACES 8

Generation of User Interfaces – Batch Systems, Line Oriented Interfaces, Full Screen Interfaces, Graphical User Interfaces, Next Generation Interfaces, Long Term Trends – Usability Engineering Life Cycle – Interfaces – Data Gathering – Data Analysis Interpretation and Presentation.

MODULE III INTERACTION DESIGN 8

Process of Interaction Design - Establishing Requirements – Design,Prototyping and Construction - Evaluation and Framework.

MODULE IV USABILITY TESTING 8

Usability Heuristics – Simple and Natural Dialogue, Users' Language, Memory Load, Consistency, Feedback, Clearly Marked Exits, Shortcuts, Error Messages, Prevent Errors, Documentation, Heuristic Evaluation – Usability Testing - Test Goals and Test Plans, Getting Test Users, Choosing Experimenters, Ethical Aspects, Test Tasks, Stages of a Test, Performance Measurement, Thinking Aloud, Usability Laboratories.

MODULE V USABILITY ASSESSMENT METHODS 8

Observation, Questionnaires and Interviews, Focus Groups, Logging Actual Use, User Feedback, Usability Methods – Interface Standards - National, International and Vendor Standards, Producing Usable In-House Standards.

MODULE VI USER INTERFACES 7

International Graphical Interfaces, International Usability Engineering, Guidelines for Internationalization, Resource Separation, Multilocale Interfaces – Future Developments – Case Study.

L – 45; Total Hours –45

TEXT BOOKS:

1. Yvonne Rogers, Helen Sharp, Jenny Preece, “Interaction Design: Beyond Human - Computer Interaction”, John Wiley & Sons, 3rd Edition, 2011 (Module I, II, III).
2. Jakob Nielsen, “Usability Engineering”, Morgan Kaufmann Academic Press, 1994. (Module I – VI).

REFERENCES:

1. Ben Shneiderman, Plaisant, Cohen, Jacobs, “Designing the User Interface: Strategies for Effective Human Interaction”, Pearson Education, 5th Edition, 2010.
2. Laura M. Leventhal, Julie A. Barnes, “Usability Engineering: Process, Products, and Examples”, Pearson/Prentice Hall, 2008

OUTCOMES:

Students who complete this course will be able to

- build effective, flexible and robust user interfaces.
- translate system requirements into appropriate human/computer interaction sequences.
- choose mode, media and device for the application requirements.

GECX210	SUPPLY CHAIN MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the various decision phases in a supply chain
- To be aware of the Supply Chain and its drivers
- To design Supply Chain Network
- To build a aggregate plan in supply chain
- To understand Sourcing Decisions in Supply Chain
- To comprehend the influence of Information technology in Supply Chain

MODULE I INTRODUCTION TO SUPPLY CHAIN 7

Understanding Supply Chain - Decision phases - Supply chain performance - Competitive and supply chain strategies - Achieving strategic fit - Expanding strategic scope

MODULE II SUPPLY CHAIN DRIVERS AND DESIGN 7

Drivers of supply chain performance – Designing distribution network - Network Design in the Supply Chain - Network design in Uncertain Environment

MODULE III AGGREGATE PLANNING AND MANAGING SUPPLY, DEMAND AND INVENTORY 8

Aggregate Planning in a Supply chain: role - Managing Supply - Managing Demand in Supply Chain – Cycle and Safety inventory in supply chain – Level of product availability.

MODULE IV MANAGING INVENTORY IN SUPPLY CHAIN 8

Managing Economies of Scale in a Supply Chain : Cycle Inventory- Managing uncertainty in a Supply Chain Safety Inventory- Determining optimal level of Product Availability

MODULE V SOURCING AND TRANSPORTATION 8

Sourcing decision in supply chain - Third and Fourth – Party Logistics providers - Supplier scoring and assessment - Transportation in a Supply Chain – Risk and Trade-offs in transportation design.

MODULE VI INFORMATION TECHNOLOGY IN A SUPPLY CHAIN 7

Information technology in a supply chain – CRM, ISCM, SRM in supply chain -

Over view of recent trends in Supply Chain: e-SRM, e-LRM, e-SCM.

L – 45; Total Hours –45

REFERENCES:

1. Sunil Chopra and Peter Meindl, “Supply Chain Management-Strategy Planning and Operation”, Pearson Education, 5th Indian Reprint, 2013.
2. Jananth Shah “Supply Chain Management – Text and Cases“ Pearson Education, 2008.
3. Altekar Rahul V, “Supply Chain Management-Concept and Cases”, Prentice Hall India, 2005.
4. Monczka et al., “Purchasing and Supply Chain Management”, Thomson Learning, 2nd Edition, 2nd Reprint, 2002.

OUTCOMES:

- After taking up the course the student will be able to brighten his prospects of taking up a career on supply chain management.
- The student decision making capability specific to supply chain issues in an industry is improved.
- The student can plan a well defined execution of supply chain strategy in companies.
- The student will be able to design a optimal distribution network as per the demands of the industry.
- The student can also determine the most favorable transportation plan for a company.
- The student will also be able to bring in company from paper environment to paperless environment.

GECX211	SYSTEMS ANALYSIS AND DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To describe the phases of the systems development life cycle
- To teach the automated tools for system development
- To develop and evaluate system requirements.
- To explain the organizational issues in system implementation
- To teach the usability testing and electronic data interchange
- To elucidate the importance of System analysis and design in electronic commerce.

MODULE I FUNDAMENTALS OF SYSTEM DEVELOPMENT 8

System Concept – Characteristics – Elements of System – Types of System – Modern Approach to System Analysis and Design – System Development Life Cycle – Approaches to Improving Development – Tools for System Development – Succeeding as a System Analyst – Skills – Managing the Project.

MODULE II AUTOMATED TOOLS FOR SYSTEMS DEVELOPMENT 7

What is requirements determination? Fact finding techniques, Tools for documenting procedure and decision-CASE Tools-Need for CASE tools-Reverse engineering and reengineering- phases of the software life cycle-Ranking projects-Value Chain Analysis- Corporate Strategic Planning vs. Information Systems Planning.

MODULE III SYSTEM ANALYSIS 8

Determining System Requirements – Traditional Methods - Modern Methods – Radical Methods – Structuring System Requirements – Process Modeling – Data Flow Diagramming – Logic Modeling – Conceptual Data Modeling – E-R Modeling.

MODULE IV SYSTEM DESIGN 8

System Implementation – Software Application Testing – Installation – Documentation – Training and Support – Organizational Issues in Systems Implementation – Maintaining Information System – Conducting System Maintenance.

MODULE V USABILITY AND MEASURING USER SATISFACTION 7

Usability Testing-User satisfaction test- A tool for analyzing user satisfaction – Unified Modeling Language(UML)- Case study: System Design: Application in Human Resource-Financial Applications

MODULE VI SAD IN E-COMMERCE 7

Systems analysis and design in the era of electronic commerce: B2B, B2C and C2C e-commerce -advantages and disadvantages of e-commerce. E-commerce system architecture – physical networks, logical network, World Wide Web, web-services - HTML, XML - case studies-El electronic data interchange: EDI standards - virtual private networks - XML and EDI

L – 45; Total Hours –45

REFERENCES:

1. Jeffrey A. Hoffer, Joey F. George, Joseph S. Valacich, “Modern Systems Analysis and Design”,Fifth Edition, Prentice Hall,March 2007.

2.Ned Kock, “Systems Analysis & Design Fundamentals” Sage South Asia, May 2008.

3. Joseph S. Valacich, Jeffrey A. Hoffer, Joey F. George, “Essentials Of System Analysis And Design” Prentice Hall , August 2005.

5.Larman, C.,” Applying UML and Patterns. An introduction to Object-Oriented Analysis and Design”. Prentice-Hall PTR, 2002.

OUTCOMES:

- List the characteristics of the system and specify the approaches in the development of the system.
- Summarize the phases of the software life cycle
- Differentiate Corporate Strategic Planning and Information Systems Planning.
- Illustrate the system requirements through various modeling diagrams.
- Use tools and techniques for process and data modeling.
- Solve realistic systems analysis problems and perform user satisfaction test.

GECX212	ADVANCED MATERIALS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To make the student conversant with

- Dielectric materials
- Magnetic materials
- Energy materials
- Nano materials
- Semi conductors
- Smart materials

MODULE I **8**

Dielectric Materials- Polarization and Mechanism-Internal or local field-Clausius-Mossotti relation- Dielectric loss- Temperature and Frequency effect- Measurement of Dielectric constant and loss using Scherring bridge- electric break down- ferro, piezo, pyroelectric materials and its application.

MODULE II **8**

Magnetic Materials- Terminology and classification of magnetic materials (Dia, Para, Ferro & Ferri) – Magnetic moments due to electrospin – Domain theory of Hysteresis – Heisenberg theory of Exchange Interaction (without derivation)- Structure and properties of Ferrites- Properties of Soft and Hard Magnetic Materials- Application: floppy disk, CD ROM, Magneto optical recording.

MODULE III **8**

Energy Materials (Nuclear) - Introduction to nuclear materials- Materials for nuclear fuel in fission and fusion reactors, Fissile and fertile materials- Control & Construction Materials for Nuclear reactors, Moderators, Heat Exchangers- Radiation proof materials- Brief discussion of safety and radioactive waste disposal.

MODULE IV **7**

Nano Materials- The nanosize range- classification of nanomaterials- processing of nanomaterials-properties of nanomaterials- mechanical, electrical, magnetic properties- other properties- carbon based nanomaterials- other nanomaterials and its application.

MODULE V **7**

Semiconductors- The energy gap in solids-Extrinsic Semiconductors- Intrinsic Semiconductors- Hall Effect in semiconductors- Application of Hall Effect- Basic ideas of compound semiconductors -Semiconductor materials- Fabrication of Integrated Circuits- Some semiconductor Devices

MODULE VI **7**

Smart materials- aerospace materials Ni and Co based super alloys, Special steels, Titanium alloys, Intermetallics, ceramics and their composites, New High strength material, Properties of Materials, Materials in Medical Applications, Stainless steel alloys,Cobalt based alloys, titanium based alloys, polymers

L – 45; Total Hours –45

REFERENCES:

1. Materials science and Engineering: A first course by V. RAGHAVAN, 6th ed., Eastern Economy edition,Prentice Hall of India,2015
2. Materials science and Engineering: An Introduction by William D. Callister Jr., 7th ed. John Wiley & Sons Inc. 2007
3. Material science by Dr.M.Arumugam, Anurasha agencies ,third revised edition ,2002

OUTCOMES:

Students will be able to know

- significance of dielectric materials
- types and applications of magnetic materials
- applications of nuclear materials for energy harvesting
- applications of nano materials
- significance of semi conductor devices
- applications of smart materials

GECX213	NATIONAL SERVICE SCHEME	L	T	P	C
		2	0	0	2

OBJECTIVES:

Primary Objective: Personality development through community service.
To achieve the above objective, the following should be adhered:

1. To provide an understanding about the aims, structure and programmes and activities of National Service scheme in terms of Nation Building
2. To develop certain basic skills for personality development through community development.
3. Understand the community in which they work and their relation
4. Identify the needs and problems of the community and involve them in problem-solving and
5. Practice national integration and social harmony.

MODULE I INTRODUCTION TO NSS 8

Orientation and structure of NSS,-Aims and Objectives of National Service Scheme- The history of NSS- Symbol and meaning- NSS hierarchy from national to college level – Role and responsibilities of various NSS functionaries

MODULE II PERSONALITY AND COMMUNITY DEVELOPMENT SKILLS 8

Importance of youth Leadership, Traits of Good Leadership and Personality Development. Role of youth in creating awareness through NSS Programmes on Health & Hygiene; Environmental Conservation and Enrichment for Sustainable Development; Sanitation and Swachh Bharat.

MODULE III UNDERSTANDING YOUTH 7

Definition and Profiles of youth categories, Youth Issues, Challenges and Opportunities for Youth, Youth as agent of social change & Community Mobilization .Role of Youth in Nation Building. National Youth Policy.

MODULE IV SOCIAL HARMONY AND NATIONAL INTEGRATION 7

National Integration, Various obstacles in the way of National Integration; such as caste, religion, language and provisional problems etc. Role of youth in Peace building and conflict resolution- Globalization and its Economic Social Political and

Cultural impacts.

L – 30; Total Hours –30

TEXT BOOKS:

1. National Service Scheme – A Youth Volunteers Programme for Under Graduate students as per UGC guidelines J.D.S.Panwar et al. Astral International. New Delhi.
2. National Service Scheme Revised Manual, 2006.Govt. of India. Ministry of Youth Affairs & Sports. New Delhi.
3. Social Problems in India, *Ram Ahuja.*

REFERENCES:

1. National Youth Policy-2014. Ministry of Youth Affairs & Sports. .Govt. of India

OUTCOMES:

On successful completion of this course-

- Students will have exposure to the the aims, structure and programmes and activities of National Service scheme in terms of Nation Building
- Students will be trained to skills for personality development through community development.
- Students will gain knowledge about national integration and social harmony.
- Students will be exposed to the role of youths in Nation building Students will gain

GECX214	AUTOMOTIVE POLLUTION AND CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To have a fair knowledge in automotive pollution control.
- To understand the concept of formation and control techniques of pollutants like UBHC, CO, NOx, particulate matter and smoke for both SI and CI engine will be taught to the students.
- To know about the instruments for measurement of pollutants
- To get introduced about emission standards

MODULE I EMISSION FROM AUTOMOBILES 8

Sources of Air Pollution. Various emissions from Automobiles — Formation — Effects of ollutants on environment and human beings. Emission control techniques – Modification of fuel, after treatment devices. Emission standards. Automotive waste management, old vehicle disposal, recycling, tyre recycling

MODULE II SI ENGINE EMISSIONS AND CONTROL 9

Emission formation in SI Engines- Carbon monoxide & Carbon di oxide - Unburned hydrocarbon, NOx, Smoke —Effects of design and operating variables on emission formation – controlling of pollutants - Catalytic converters, Charcoal Canister, Positive Crank case ventilation system, Secondary air injection, thermal reactor

MODULE III CI ENGINE EMISSION AND CONTROL 8

Formation of White, Blue, and Black Smokes, NOx, soot, Effect of Operating variables on Emission formation — Fumigation, Split injection, Catalytic Coating, EGR, Particulate Traps, SCR, Fuel additives — Cetane number Effect.

MODULE IV NOISE POLLUTION FROM AUTOMOBILES 8

Sources of Noise — Engine Noise, Transmission Noise, vehicle structural Noise, aerodynamics noise, Exhaust Noise. Noise reduction in Automobiles — Encapsulation technique for noise reduction —Silencer Design.

MODULE V TEST PROCEDURES 6

Constant Volume Sampling I and 3 (CVSI &CVS3) Systems- Sampling Procedures — Chassis dynamometers - Seven mode and thirteen mode cycles for Emission Sampling.

MODULE VI EMISSION MEASUREMENTS 6

Emission analysers —NDIR, FID, Chemiluminesecent, Smoke meters, Dilution Tunnel, SHED Test, Sound level meters.

L – 45; Total Hours –45

TEXT BOOKS:

1. V.Ganesan, 'Internal combustion Engines', Tata McGraw Hill Book Co, Eighth Reprint, 2005.
2. Crouse and Anglin, 'Automotive Emission Control', McGraw Hill company., Newyork 1993.

REFERENCES:

1. G.P.Springer ad D.J.Patterson, Engine Emissions, Pollutant formation, Plenum Press, New York. 1986.
2. D.J.Patterson and N.A.Henin, 'Emission from Combustion Engine and their control', Anna Arbor Science Publication,1985.
3. L.Lberanek, 'Noise Reduction', Mcgrawhill Company., Newyork1993.

5. A.Alexander, J.P.Barde, C.lomure and F.J. Langdan, 'Road traffic noise', Applied science publisher ltd., London,1987.

OUTCOMES:

On completion of the course student should be able to

- Identify the sources of emission from vehicles.
- Analyse the causes and effects of emissions.
- Analyse causes and effects of noise pollution
- Bring out solutions for control of emissions.
- Demonstrate the test procedures and emission norms.
- Select suitable instruments for measurement of emissions.

GECX215	MOTOR VEHICLE ACT, INSURANCE & POLICY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn about basic act and regulation followed for road vehicle
- To learn about systematic steps involved to get licence and registration of motor vehicle
- To learn arbour various types of motor vehicle polices and insurances

MODULE I BASIC RULES FOR ROAD VEHICLE 8

Display and Use of Number Plates- Attachment of number plates- Number plates in horizontal position- Removal of number plates on transfer- Hours prescribed for lighted lamps- Mounting of lamps and reflectors- Multiple beam headlamps- Daytime running lamps- Auxiliary driving lamps- Parking lamps- Brakes- Stopping distances- Emergency or parking brakes- Horn- Muffler- Mirrors- Inspection of motor vehicles- Standards of safety and repair

MODULE II LICENSING OF DRIVERS OF MOTOR VEHICLES 8

Necessity of driving licence- Age limit in connection with driving of motor vehicle-Responsibility of owners of motor vehicles-Restriction on the holding of driving licence-Grant of learner's licence-Grant of driving licence-Addition to driving licence- Renewal of driving licence-Revocation of driving licence on grounds of disease or disability-Driving licence to drive motor vehicle belonging to the central government- power of court to disqualify- suspension of driving licence in certain cases- suspension or cancellation of driving licence on convection- Endorsement.

MODULE III REGISTRATION OF MOTOR VEHICLE 7

Necessity for registration – Registration Where and how to be made- Special provision for registration of motor vehicle of diplomatic officers-Temporary registration- Production of vehicle at the time of registration- Refusal of registration- renewal of certificate of registration- effectiveness in India of registration- Change of residence or place of business-transfer of ownership-Suspension of registration – cancellation of registration suspended under section 53- certificate of fitness of transport vehicle-cancellation of registration.

MODULE IV INSURANCE OF MOTOR VEHICLE 8

Necessity for insurance against third party – Requirements of policies and limits of liability- - Duty of insurers to satisfy judgements and awards against person insured in respect of third party risks-Duty to give information as to insurance-Settlement between insurers and insured persons- transfer of certificate of insurance-production of certain certificates, licences and permit in certain cases-Special provisions as to compensation in case of hit and run motor accident – Types of motor polices

MODULE V CONTROL OF TRANSPORT VEHICLES 7

Power to State Government to control road transport- Transport authorities-General provision as to applications for permits- Application for stage carriage permit- Procedure of Regional Transport Authority in considering application for stage carriage permit- Scheme for renting of motor cabs- Application for private service vehicle permit- Procedure in applying for and granting permits- Duration and renewal of permits- Transfer of permit- Replacement of vehicles-Temporary permits

MODULE VI OFFENCES AND PUNISHMENT 7

Driving without holding an effective driving licence- Driving by an under-aged person (Minor driving vehicle)- Holding of a driving licence permitting it to be used by other person.- Driving a vehicle at an excessive speed- Driving or permitting to drive a vehicle carrying excess load- Driving dangerously / its Abetment Driving an uninsured vehicle

Rider and pillion rider failing to wear protective head gear (Helmet) -Violation of Mandatory Signs -.e-challan and spot challan

L – 45; Total Hours –45

TEXT BOOKS:

1. The motor vehicle act 1988, Universal law publishing co.cpvt ltd. Newdelhi 2011
2. A Commentary On The Motor Vehicles Act, 1988 by SUKHDEV AGGARWAL The Bright Law House, New Delhi

REFERENCES:

1. The Motor Vehicles Act, 1988 Along with Latest Case Law, Notifications

& Table of Offences and Punishments Asia Law House; 15th edition (2014)

2. Assessment of Compensation in Accidents under Motor Vehicles Act by Karkara Delhi Law House (2013)

OUTCOMES:

On completion of the course students should be able to

- Explain the analysis of rules and regulations for road vehicles
- Analyze the procedure for getting driving license for vehicles at national and international level
- Analyze the procedure for registration of vehicles.
- Analyze the procedure for Insurance of vehicles and claims.
- Analyze the procedure for obtaining Government Permits and renewal
- Analyze the consequences of not following the rules and regulations

GECX216	PRINCIPLES OF COMMUNICATION SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To introduce the analog and digital modulation techniques.
To elaborate the working of communication receivers in the presence of noise.
To give an overview of various communication systems.

MODULE I LINEAR MODULATION 8

Baseband signals, Amplitude Modulation – Modulation Index, Power Transmitted, Double Side Band and Single Side Band AM, AM Modulators and AM Receivers, AM Radio systems, Frequency Division Multiplexing.

MODULE II ANGLE MODULATION 8

Frequency Modulation and Phase Modulation, Frequency deviation and modulation index, Bandwidth of FM, FM Modulators and FM receivers, FM Radio and FM Stereo Systems

MODULE III SAMPLING AND PULSE MODULATION 7

Sampling, Nyquist's Sampling Theorem, Pulse Modulations - PAM, PPM and PWM, Time Division Multiplexing, Bandwidth of TDM systems.

MODULE IV DIGITAL COMMUNICATION 7

Digital baseband data, Digital Modulations – ASK, FSK, PSK and QPSK. Digital Communication Transmitters and Receivers.

MODULE V NOISE 8

Sources of Noise, Thermal Noise, shot noise, White noise, Narrow band Noise, Effect of noise in communication, SNR, Receiver Noise Temperature and Noise Equivalent Bandwidth.

MODULE VI COMMUNICATION SYSTEMS & NETWORK 7

FM Radio Systems, Cellular Mobile network, Satellite Communications, Optical Fiber Communication.

L – 45; T – 0; Total Hours – 45

TEXT BOOKS:

1. A. Bruce Carlson, Paul B. Crilly, "Communication Systems", 5th Edition,

McGraw Hill Int., 2011.
2. B.P. Lathi, Zhi Ding, Hari M. Gupta, “Modern Digital and Analog Communication Systems”, 4th Edition, Oxford University Press, 2017.

REFERENCES:

1. Herbert Taub, Donald L. Schilling, Goutam Saha, “Principles of Communication Systems” 4th Edition, McGraw Hill Int. 2013.
2. Simon Haykin, “An Introduction To Analog And Digital Communications”, 1st Edition, Wiley India, 2010.
3. Simon Haykin , “Communications Systems” 4th Edition, Wiley India, 2006.
4. Hwei P. Hsu, “Analog and Digital Communications” 3rd Edition,

OUTCOMES:

On completion of the course students will be able to

1. Identify various communication systems and the corresponding modulation schemes.
2. Predict the characteristics of various analog and digital modulation schemes.
3. Interpret the effect of noise and bandwidth in a communication systems
4. Apply the Nyquist criteria for a given baseband signals.
5. Evaluate the performance of communication receivers.
6. Demonstrate the applications of common communication systems.

GECX217	LEAN MANAGEMENT	L	T	P	C
		3	1	0	4

OBJECTIVES:

The objective of the Course to make the student know about

- the basics of lean production management,
- how Lean principles are applied to the Construction industry to improve the operation management and product development.

MODULE I **8**

lean production? – Introduction, background, and lean thinking. Importance of philosophy, strategy, culture, alignment, focus and systems view. Discussion of Toyota Production System.

MODULE II **8**

Manufacturing systems – an overview of manufacturing strategies. Job shops, batch flow, and flexible manufacturing systems Flow production and lean production systems

MODULE III **7**

Value stream mapping in process design and product development Waste reduction - lead time reduction

Process cycle time and value-added vs. non-value added activities Optimum lot sizing

MODULE IV **8**

Lean production processes, approaches and techniques.—Importance of focusing upon flow. Tools -. Workplace organization – 5S. - Stability. - Just-In-Time – One piece flow – Pull. - . Cellular systems. - . Quick change and set-up reduction methods. f. Total productive maintenance. -. Poka-Yoke – mistake proofing, quality improvement. Standards. - . Leveling. - . Visual management. Just-in-time techniques – SMED and Takt Times - Standard work processes and line balancing Poka-yoke and pull systems material handling reduction and facilities planning

MODULE V **8**

Managing change in the lean organization Human resource management and the lean enterprise Employee involvement – Teams – Training – Supporting and encouraging involvement – Involving people in the change process -- communication -- Importance of culture. Startup of lean processes and examples of applications.

Sustaining improvement and change, auditing, follow-up actions.

7

MODULE VI

The lean enterprise and supply chain management Costs and risks of lean initiatives - Measuring lean initiatives

L – 45; Total Hours –45

TEXT BOOKS:

1. The Toyota Way Fieldbook, Jeffrey Liker and David Meier, McGraw-Hill, 2006. Lean Production Simplified, Pascal Dennis, Productivity Press, 2007.
2. Womack, James P., and Daniel T. Jones. Lean Thinking. New York, NY: Simon and Schuster, 2003. ISBN: 0743249275.
3. Murman, Earll. Lean Enterprise Value. New York, NY: Palgrave Macmillan, 2002. ISBN: 0333976975.

REFERENCES:

1. Readings at http://www.leanconstruction.org/readings.htm
2. Hopp, W. J., and Spearman, M. L. (2011). Factory Physics, Third Edition, Waveland Press, Long Grove, Il. 720 pp.

OUTCOMES:

The student will be able to

- Describe the manufacturing approaches employed and the background and philosophy of lean production.
- Illustrate the concept of waste reduction
- Apply evaluation techniques that can be used in preparation for and use in learn production activities.
- Select the tools that can be used implementing lean production in production operations.
- Discuss the importance of workplace organization, pull production, cellular arrangement and employee involvement, need for employee creativity
- Describe about the Methods for promoting success in implementing lean transformations

GECX218 GEOSPATIAL MODELING & ANALYSIS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To equip the students with fundamental representation and analysis of geospatial phenomena and provides foundations in methods and algorithms used in GIS analysis.
- To focus is on terrain modeling, geomorphometry, watershed analysis and introductory GIS-based modeling of landscape processes (water, sediment). The course includes analysis from lidar data, coastal change assessment and 3D visualization.

MODULE I INTRODUCTION TO GEOSPATIAL DATA 7

Mapping natural phenomena –Concept of continuous fields and discrete sampling – Units, projections, coordinate transformation – Georeferencing, geospatial formats, conversions, geospatial data abstraction library – Raster and vector representation, raster and vector conversions and resampling.

MODULE II DATA DISPLAY AND VISUALIZATION 7

Display of continuous and discrete data, use of color, shading, symbols, to extract the spatial pattern and relationships – 3D visualization: multiple surfaces and volumes, 3D vector objects – visualization for data analysis (lighting, scaling, transparency, cutting planes, animations) – view/create maps/post your data on-line (Google Earth/Maps, GPS visualizer)

MODULE III GEOSPATIAL ANALYSIS 7

Foundations for analysis of continuous and discrete phenomena – neighborhood operations and buffers – analysis and modeling with map algebra – cost surfaces and least cost path – spatial interpolation and approximation (gridding)

MODULE IV TERRAIN MODELING AND ANALYSIS 9

terrain and bathymetry mapping – mathematical and digital representations (point clouds, contour, raster, TIN) – DEM and DSM, working with multiple return lidar data – spatial interpolation of elevation data and topographic analysis, line of sight, view shed analysis – solar irradiation, photovoltaic energy potential, time series of elevation data, analysis of coastal change.

MODULE V FLOW TRACING, WATERSHED ANALYSIS AND LANDFORMS 8

Methods for flow routing and flow accumulation – Extraction of stream networks –

Extraction of watershed boundaries and building watershed hierarchies – feature extraction, types of landforms.

MODULE VI MODELING OF GEOSPATIAL PROCESSES 7

Model formulation, input data processing – introduction to GIS-based hydrologic, erosion and environmental modeling – Geocomputational methods, including agent-based modeling, artificial neural networks and evolutionary computing.

L – 45; T – 0; Total Hours –45

TEXT BOOKS:

1. Hassan A, Karimi (2017), *Geospatial Data Science Techniques and Applications*, CRS Press & Co.
2. Sudipto Banerjee, Bradley P, Carlin, Alan E. Gelfand (2014), *Hierarchical Modeling and Analysis for Spatial Data*, CRS Press & Co.

REFERENCES:

1. Maguire, D., M. Batty, and M. Goodchild. 2015. GIS, Spatial analysis, and modeling. ESRI Press (G70.212 .G584 2005)
2. Zeiler, M. 2010. Modeling Our World: The ESRI Guide to Geodatabase Design. Second Ed. ESRI Press, Redlands, California

OUTCOMES:

On successful completion of this course,

- Students will be able to apply the basic concepts of Conceptualize models as representations of real life systems with inputs, outputs, and processes.
- Students will have gained knowledge in spatial tools to make simulations and predictions of real life phenomena.
- Students will have synthesized knowledge about Apply, integrate, and develop models with geospatial data through a GIS.
- Students will have an overview of Evaluate models in terms of accuracy, sensitivity, and uncertainty.
- Students will have Use of a system-based approach for problem solving, with an emphasis on sustainability.

REGULATIONS 2017

CURRICULUM AND SYLLABI

B.A

ISLAMIC STUDIES

VISION AND MISSION OF THE DEPARTMENT OF ISLAMIC STUDIES

VISION

The department looks forward to be a pioneer in the field of Islamic Studies to promote Scholars, capable of bringing about positive change for the betterment of self, family, society and humanity on the basis of moderate approach derived from the Holy Quran and Sunnah - Tradition of the Prophet (PBUH).

MISSION

The department is committed:

- To empower the younger generation through quality education in both revealed and scientific knowledge.
- To promote competent, creative scholars in the field through scientific research.
- To provide excellent ambience for language skill development and leadership qualities through various training programmes

PROGRAMME EDUCATIONAL OBJECTIVES:

The programme objectives covering all three years of under graduate courses are as follows:

- To provide a broad understanding of Islam as a way of life.
- To acquire revealed knowledge of Quran and Hadeeth (Traditions of Prophet (PBUH).
- To develop students' ability in analyzing texts of Quran and Hadeeth as sources of Islamic Jurisprudence.
- To train students in finding solutions for modern issues of family life and social life in the light of Quran and Hadeeth.
- To learn basic concepts and philosophy of Major religions namely Hinduism, Christianity and Judaism about God, world life and hereafter.
- To develop students' language skills in both Arabic and English.

PROGRAMME OUTCOMES:

A successful learner of this programme will be able to:

- Demonstrate Islamic viewpoints to people from all walks of life.
- Derive principles and theories from the sources of Islamic jurisprudence.
- Compare views of different schools of thought by applying principles of jurisprudence.
- Contribute to the inter-faith dialogues to promote harmony among plural societies.
- Address modern issues related to family and social life in the Islamic perspective.
- Give solutions for disputes related to inheritance and waqf (Endowments).
- Lead congregational prayers and deliver sermons.
- Translate and interpret texts from Arabic to English and vice versa.
- Pursue higher studies in Islamic studies, Arabic language and other fields.
- Emphasizing the importance of adherence to a high standard of ethical behavior

B.A (BACHELOR OF ARTS)

TOTAL CREDITS – 138

ISC 1101	FUNCTIONAL ARABIC	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to

- Impart the student's basic elements of Arabic and its structure.
- Train the students in Arabic conversation according to the situations.
- Practice the Arabic language according to context, purpose and audience.

MODULE I TECHNICAL VOCABULARY 8

Al Aalam qaryathun sagirathun: As sabkathu dhavliyath - wasailun naql val Ithisal qadheeman va Hadeesan - Nadva anil Avlama - Dhuvalu shimal va dhuvalul janub - An nazhafa : Al muslimu yahthammu binazafath - Al Islamu vathaharath

MODULE II 8

Al Aklathu sariath - nazafathul biath - Al Islam: kaifa thafhamul Isalama fahman sahihan? - Haqeeqathul Islam - limadha aslama Charles? - Arkanul Islamil khamsa.

MODULE III 8

As sabab : Marhalathul Murahaqa - Marhalthus Sabab - Al Alaqathu binal A'ba val abn'a - Min muskilathus sabab - Al Aalamul Islamiyyu : Musabaqa Islamiyya.

MODULE IV 7

Meezathul Aalamil Islamiyyi - Asbabu dha'ful muslimeen - Minad duwalil Islamia - Al Amn: Haadisu sariqa - Alharbu vassalam.

MODULE V 7

Ababul jareema - Asarul Amu fil hayathi - Athalavus: dafnun Nufayath - anv' thalavusul bia' - Man yahmi Albia' vaman yufsiduha?

MODULE VI 7

Wasayilul Muhafaza alal bia' - Athaqath: Fathurathul kahraba - An nifth - Azmathun Nifth - Athaqathus shamsiya - Al mufradath

TOTAL HOURS – 45

TEXT BOOKS:

1. Al Lugathul Arabiyya, Volume III, Part I, Kilakarai Bukhari Aalim Arabic College, 2017

REFERENCES:

1. Al Arabiya Lin Nashiyeen (Education Ministry, K.S.A.), Bukhari Aalim Arabic College, 2005.
2. Durus Al Lugathil Arabiyya by Dr. F. Abdur Raheem, Published by Islamic Foundation Trust, Chennai, 2002.
3. Al Qirathul Arabiyya Lil Mubtadiyeen (Ummul Qura University, Makkah), Bukhari Aalim Arabic College, 2005.

OUTCOMES:

At the end of the course, the student is expected to:

- Recognize and understand Arabic language elements that have been recombined in new ways.
- Communicate in Arabic on familiar topics such as personal and accommodation needs, introduction and identification of self, others, objects, exchange of greetings etc.
- Develop sentences and short paragraphs related to most survival needs such as food, lodging, transportation, immediate surroundings and some important situations.

ISC 1102	COMMUNICATIVE ENGLISH	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To enable students to use basic grammatical categories and its functi appropriately.
- To aid students to improve speaking skills effectively in contexts of ba conversation and role-plays.
- To assist students understand the significance of basic reading skills.
- To help students develop listening skills for academic purpose.

To develop their basic letter writing skills

MODULE I **8**

Language Skills I: Articles – Prepositions – Antonyms and Synonyms – Correct Form of Verb – Question Tags – Prefixes and Suffixes - Active and Passive Voice – Direct and Indirect Speech.

MODULE II **8**

Language Skills II: Forming Negatives – Forming Questions - Punctuation and correction of sentences with regard to gender, Clauses to be combined – Completion of sentences with dependent or independent clauses.

MODULE III **8**

Language Skills III: Correction of Sentences (Case, Adjective, Adverb) – Rewriting sentences in the right order – Correction of spelling – Substitution, Idioms and Phrases.

MODULE IV **7**

Speaking: Introducing oneself – Introducing one another – Conversations – Role play.

MODULE V **7**

Reading Comprehension: Skimming – Scanning – Passages from real life Situations.

MODULE VI **7**

Writing: Paragraph Writing – How to write Structured Paragraphs – Writing Essays.
Letter writing: Letter to class teacher asking for leave – Letter to father asking for hostel fees, permission for picnic, Letter congratulating a friend.

TOTAL HOURS – 45

REFERENCES:

1. Bansal R.K., Harrison.J.B. – Spoken English, Orient Langman, Mumbai (1999).
2. Leacock Steven – An Anthology of Prose.

4. Grellet, Francoise. Developing Reading Skills: A Practical Guide to Reading Comprehension Exercises. Ney York: Cambridge University Press, 1981.
5. Bender, Michael. Academic Vocabulary and Reading Comprehension. Virginia: Linguizz, 2013

OUTCOMES:

At the end of this course, the students will be able to:

- Apply grammatical categories in writing English at the functional level effectively.
- Converse fluently in English at the low beginning level.
- Understand various stages of reading and interpret any given texts at the beginning level.
- Develop listening skills for the academic purpose.
- Write basic letters effectively for academic purpose.

ISC 1103 INTRODUCTION TO QURANIC STUDIES

L	T	P	C
4	0	0	4

OBJECTIVES:

The course aims to:

- Introduce the significance of learning Quran.
- Familiarize the student with the nature of revelation and the unique qualities of the Qur'an
- Explain the student about the context and the guidance of Chapter Al Baqara.

MODULE I **10**

Introduction to Tafseer, Al Mufassiroon & Sura al Fathihah

MODULE II **10**

Sura al Baqarah: Verse nos. 1 – 20

MODULE III **10**

Sura al Baqarah: Verse nos. 21 – 40

MODULE IV **10**

Sura al Baqarah: Verse nos. 41 – 60

MODULE V **10**

Sura al Baqarah: Verse nos. 61 – 90

MODULE VI **10**

Sura al Baqarah: Verse nos. 91 - 129

Total Hours –60

TEXT BOOKS:

Safwat al-Tafasir by Muhammad Ali Al-Sabouni, Maktabathul Asriyya, Lebanon, 2001.

REFERENCES:

1. Tafseer Al Jalalain by Jalaluddeen Al Mahalli and Jalaludeen Al Suyooti, Darul Jeel, Beirut, 1995.
2. Meanings of the Quran by Abdullah Yusuf Ali, Amana Corp., Maryland, USA, 1983.

OUTCOMES:

At the end of the course, the student will be able to

- Describe the significance of learning Quran.
- Analyze the student with the nature of revelation and the unique qualities of the Qur'an.
- Discuss about the characteristics of Believers, Non Believers, and Hypocrites, the ideologies of the Jews, Christians and other contents of Chapter Al Baqara.

ISC 1104	GUIDANCE OF PROPHET (PBUH) – IBADAATH	L	T	P	C
		4	0	0	4

OBJECTIVES:

The course aims to:

- Impart the knowledge of Hadith
- Introduce the rules (Ahkam) of cleanness, timing of prayers and various types of prayers
- Learn the prophetic guidance towards the worship.

MODULE I **10**

Bab al miyah- al niyyat- Babu Izalah al Najasa-Bab al wudhu

MODULE II **10**

Bab al mash ala khuffain- Bab al nawaqidhul wudhu-Bab Aadabu Qadha al Hajaa- al ghusl wa hukmul junub- Bab al Tayammum- Bab al Haidh

MODULE III **10**

Bab al Mawaqeeth- Bab al Adhan- Bab shooruthu Salaah- Bab al suthra h al musalli- al khushu' fee Salah

MODULE IV **10**

Bab al Masjid- Babu sifathissalah- Babu Sahwu wa gairihi- Babu thathavvu- Babul jamathi wal imama

MODULE V **10**

Babu Salathil musafir wal mareed- Salathul Jumu'a- Babu Salathil khawf- Babu Salathil Eidain- Babu Salathil khusoof

MODULE VI **10**

Babu Salathil Isthiqsa – Kithab al Libas- Kithab al Janaiz

Total Hours –60

TEXT BOOKS:

Bulugh al-Maram min Adillat al-Ahkam by Al Hafizh Ibn Hajar Al Asqalani, Darul Jeel, Beirut.

REFERENCES:

1. Subulus Salam by Imam San'ani, Maktabathu Ishathil Islam, Delhi, India.
2. Nailul Awtaar by Shawkani, Dar Al Fikr, Beirut, 2000

OUTCOMES:

At the end of the course, the student is expected to:

- Explain the Meaning of Hadiths
- Perform the prayer as guided by Prophet (PBUH).
- Analyze the rules (Ahkam) of cleanness, timing of prayers and various types of prayers.

ISC 1105 **ISLAMIC FIQH - IBADAATH** **L T P C**

3 0 0 3

OBJECTIVES:

The course aims to:

- Learn the procedures of Ibadaath in the light of Hanafi and Shafi schools and their methods and approaches related with the concerned chapters.
- Collect basic rules and information from the classical texts of Islamic Jurisprudence.

MODULE I SALATH (Prayer) 8

Prerequisites of Babu shurooth assalath va arkanuha – Vajibathu assalath va sununuha va aadabuha – Al Imamath – Ma yufsidus salath va ma la yufsidu salath – Al makruhath – Salathul vithri – An Navafil – Salathul Musafir – Salathul Mareedh

MODULE II SALATH (Prayer) 7

Qalaul Favaeith – Idrak ul Fareedha – Sujudusahvu Va sujusu Thilavath – Babu ul jumu'a – Babu ul Eidain – Ahkamul Janaiz

MODULE III SAUM (Fasting) 8

Definition of Saum – Sababu vugubihi Va ruknihi Va sifathihi – Anniyath – ruayathul Hilal – Babu mala yufsidu saum Va ma yufsidu saum Va tajibu bihi Al Kaffarath ma al qadha – Babu ma yufsidu saum Va yuvgibul qadha maa gairi kaffarath - Babul I'thikaf.

MODULE IV ZAKATH (Charity) 8

Definition of Zakath - Ta'reefu Zakath va Fardhiyathiha – sharth vujubi adaiha – sharth sihath adaaiha – Zakathu dain – Malu dhamar – Mala yuzjiu ani Zakath- Ma yesihu ani naqdin – Thaqdeeru Nisab – Ma la Zakath fihi – Halakul maal- Babul masrif – Babu sadaqthul Fithr.

MODULE V HAJ (Pilgrimage) 7

Explanation of Hajj - Ta'reeful Haj – Shuruthul Fareedha – Shuruthu Vujubi ada – Ma esihu bihi adau fardhul haj – Kaifiyathu tharkeebu af'aalul haj – Al Qiran – Al Thamathu' – Al Umrah

MODULE VI HAJ (Pilgrimage) 7

Babul Jinayah – Al hadhyu – Ziyarah al Nabi

Total Hours –45

TEXT BOOKS:

1. Noorul Eidhah by Abul Ikhlas Hasan al Shurunbulali, IthihadBook depot, Deoband, India.
2. Umdah al Salik by Shihabuddin Ahmed bin Naqeeb, Ithihad Book depot, Deoband, India.

REFERENCES:

1. Fiqh al Sunnah by Syed Sabiq, Darul Fath, Cairo, 1999.

OUTCOMES:

At the end of the course, the student is expected to:

- Apply basic shariah procedures of Ibadath (like ablution, Salah, Zakath, Saum and Haj) in the light of Hanafi and Shafi schools of thought.
- Examine the judicial verdicts of the interpretation and application of procedures of Ibadaath.

ISC 1106 **MODERN ARABIC GRAMMAR** **L T P C**
4 0 0 4

OBJECTIVES:

The course aims to:

- Introduce the Grammar in Arabic language.
- Understand Nahv &Sarf - basic principles of grammar.
- Read Arabic text without I'rab (Grammatical signs).

MODULE I **10**

Al Mubthadha wal Khabar - Khabar al Mubthadha Heena Yakoonu Jumlah - Khabar al Nawasikh - Mawadhi' Fath-h Hamzah Anna - Al masdhar al Muawwal - Mawadhi' Kasr Hamzah Inna - Thaqseem al Fi'l.

MODULE II **10**

Dhamair al Raf' al Baarizah - Isnaad al af'aal al saheehah wal Mu'thallah - Al Mujarrad wal Mazeedh - Hamathaa al wasl wal Qat' - Al Laazim wal Mutha adhi

MODULE III **10**

Aqsaam al Mutha adhi - Tha'dhiyah al Fi'l - Ism al Faa'il - Ism al Mafuool - Al Musthasnaa.- Hukmul Musthansna - Anwaaul Al Haal

MODULE IV **10**

Al Thamieez – Hukmuth thameez,- Hukmul Al adhad - Al Munaadha - Al Mamnu' min al Sarf.-Al Na'at al Haqeeqi & Al Sababi

MODULE V **10**

Al Thawkeed - Al Athf - Waaw al Athf & Waaw al Maiyyah - Al Badhal - Adawaat al Isthifhaam - Al Isthifhaam wan Nafi ma'an

MODULE VI **10**

Al Mujarradh wal Mazeedh - Al Ibdaal & Al I'laal – Qalbul vaavi Yaan-Qalbul vaavi & ya ee Hamzathan – Al ibdal - Al I'laal bithaskeen

Total Hours –60

TEXT BOOKS:

Al Nahw Al Wadhih by Ali Al Jarim & Mustafa Ameen (Preliminary - Part: III& Secondary- Part: I (First Half)), Danish Book Depot, Delhi, India

REFERENCES:

1. Al Qawaid al Asaasiya Lillughathil Arabiya, Ahmed Ibn Ibrahim Musthafa Al Hashimi, KSA, 2000.

OUTCOMES:

Expected outcome of the course:

On successful completion of the course, students will be able to:

- Describe the Arabic texts and its significance through grammar.
- Explain the various rules of Arabic grammar in a proper manner.

Create sentences and write comprehension in Arabic correctly.

ISC 1107 **ARABIC COMPREHENSION** **L T P C**
2 0 0 2

OBJECTIVES:

The course aims to:

- Develop the Arabic writing skill.
- Train the students in paragraph and essay writing in Arabic.
- Improve the Arabic writing flow.

MODULE I **5**

Introduction and Importance of Arabic Insha and Ta'bir – Alaamat al Tharqeem (Punctuation Marks): Comma – Semicolon - Full stop – Colon – Question Mark – Exclamation mark – Parentheses – Quotation Mark.

MODULE II **5**

Practice on writing Hamzah wasl and Hamzah Qata' – Yaa Mu'jama and Yaa Muhmalah - Making Arabic Phrases: Mudhaaf and Mudhaaf Ilaihi – Na't and Man'ut.

MODULE III **5**

Sentence Making: Nominal Sentences – Verbal Sentences – Using Inna and its sisters with sentences – Using Kaana and its sisters with sentences – Using prepositions with sentences.

MODULE IV **5**

Making sentences using frequently used phrases: Awwalan, al-aan, ilal aan, Laa budha, badhalam min, Fee haajah, Indhal Haajah, Min ghairi Haajah, Fil Haal, Alaa kulli Haal, Mundhu, Huna wa Hunaak etc.

MODULE V **5**

Translation skill: Arabic to English and vice versa - Diary writing - Paragraph writing for various situations: In a beach, In a bus, In a train, In a classroom, In a medical shop, In a hotel etc.

MODULE VI **5**

Letter writing for various situations: *Personal Letters*: Letter to a Father, Mother, Brother, Friend etc. *Official Letters*: Letter to a principal seeking admission in the school / college – Letter to the Manager of company seeking job etc.

Total Hours –30

TEXT BOOKS:

Mahaaraat al Kitabah al Arabiyya, Dr. Naif Kharma, Dr. Abdur Rawoof Zuhdi, Dr.Saamy Abu Zaid, Jamia Isra, Jordan.

REFERENCES:

1. Muallim al Insha (Part II & III), Syed Mohammed Rabi Hasani Nadwi, Nadwatul Ulama, Lucknow, India.

OUTCOMES:

On successful completion of the course, students will be able to:

- Put the ideas in Arabic writing.
- Write paragraphs and essays in Arabic.
- Identify the grammatical errors and rectify it.

SEMESTER II

ISC 1211	**COMMUNICATIVE ARABIC**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

The course aims to:

- Enable the students to develop the interpersonal and communicative skills in Ara Language through learning basic vocabulary and phrase/sentence structures.
- Familiarize the student the use of the language according to context, purpose an audience.

MODULE I **8**

AL Mujizal Khalidha – Kaana wa Akhawathuha - Inna wa akhawathuha - yawmun fi hayathi nashi

MODULE II **7**

Anwa'ul khabar - thaqdheem khabarul mubthadha- Aqalliyathuna fil Aalam

MODULE III **8**

Adhawathus sharthi ghairul jazima - As sunna An nabawiya - Iqthiran jawabis sarth bilfa'

MODULE IV **7**

Al Athfalu wal qira'th - dhanna wa akhawathiha - Al Afa'al allathi thansibu mafuoolin

MODULE V **8**

Hijrathul Uqool - hamzathul wasl - Thaba nawmukum wathaba yawmukum - Al Mamnou minas sarf

MODULE VI **7**

Nawadir wathuraf – Al Badl – At Tawkeed

Total Hours –45

TEXT BOOKS:

1. Al Lugathul Arabiyya, Volume III, Part II, Kilakarai Bukhari Aalim Arabic College, 2017.

REFERENCES:

- Introduce the student the historical Islamic revolution in the field of education.
- Familiarize the student with the contribution of Sahabas and the famous Islamic centres of education towards educational development.
- Provide the student with the development of different sects, schools of thought and biographies of the intellectuals in Islamic history.
-

MODULE I Introduction 7

Importance of knowledge in Islam - Religious movements - Companions - Mawaali.

MODULE II 8

Centers of knowledge - Mecca - Medina - Iraq - koofa - Basara - Damascus and Egypt.

MODULE III Religious groups 8

Khawariji and its teachings - Shia and their ideological developments - Murji'ah- Mutazilah - Imam Hasan Basari and Imam Ash'ari.

MODULE IV Educational Institutions 7

Kuttab - Masaajid - Debate centers - Library.

MODULE V Religious science and four Imaams 7

Imaam Abu Haneefa - Imaam Malik - Imaam Shaafi - Imaam Ahmed bin Hanbal.

MODULE VI Philosophy and Science 8

Astronomy - Medicine and mathematics biography of Raazi - Faraabi - Ghazzali - Ibnu Seena and Al biruni.

L-45; Total Hours –45

TEXT BOOKS:

1. Tareekh al Fiqr al Islami, Bukhari Aalim Arabic College, 2009

REFERENCES:

1. Fajr al Islam by Ahmad Ameen, Darul Kutubul Arabi, Beirut, 1975.
2. Taareekh al Fikr Al Arabi by Umar Farrookh, Beirut, 3rd edition, 1981.

OUTCOMES:

At the end of the course, the student is expected to:

- Explain the Islamic revolution in the field of education.
- Estimate the service and contribution of the Islamic scholars and educational centres in the history of Islamic civilization.
- Evaluate the evolution of Islamic thought with reference to the different sects and schools of thought.

ISC 3106	MUSLIMS IN INDIA & PLURAL SOCIETY	L	T	P	C
		2	0	0	2

OBJECTIVES:

The course aims to:

- Introduce the role of Muslims in Indian culture.
- Learn the major contribution of Muslim intellectuals to various fields including Arabic language, Intellectual Heritage of Muslim Scholars in India.
- Familiarize the concept of Meditation, Thawheed, Sufism in India and its impact on the society
- Enlighten the students with the concept of Plural society in Islamic perspective in Indian scenario.

MODULE I **5**

Role of Muslims in Indian Culture – Medical Services – Intellectual Heritage of Muslim Scholars in India and Importance of Arabic Language – Prominent Scholars among Indian Muslims

MODULE II **5**

The Impact of Arabic Language on Indian Languages - Islamic Culture in India – Two main Elements for Shaping the Culture – Three Abrahamic Characteristics. Meditation – Thawheed: Global Characteristic – Human Equality and Dignity –

MODULE III **5**

Education system - Centers of Education: Sind, Multan, Delhi, Lahur, Gujarat, Lucknow – Different stages of Educational System. Salient Features of Methodology – Centers of knowledge and Islamic Culture in India: Darul Uloom Deoband Seminary, Salafi Madrasa, Banaras.

MODULE IV **5**

Modern schools and Universities: Aligarh Muslim University, Jamia Millia, Usmania University, Nadwatul Ulama, Madrasatul Islah - Sufism in India and Its impact on the Society.

MODULE V **5**

Role played by Muslims in Indian Independence Movement – Indian National Congress – Khilafath Movement – Jamiyatul Ulama.

MODULE VI **5**

Plural Society in Islamic Perspective: Rights – Duties – Historical evidence – Doubt clearing

L-30; Total Hours –30

TEXT BOOKS:

1. Al Muslimoona Fil Hind by Syed Abul Hasan Ali, Nadwatul Ulama, Lucknow, 1986

REFERENCES:

1. Ghair al Muslimeen fil Mujtama' al Islami by Dr.Yusuf Qardhawi, Beirut, 2nd edition, 1983.

OUTCOMES:

At the end of the course, the student is expected to:

- Define the role of Muslims to be played in Indian culture.
- Analyze the contribution of Muslim intellectuals in various fields including Arabic language.
- Discuss the various aspects related to Islam like meditation, tawheed, Sufism etc.
- Demonstrate the concept of Plural society in Islamic perspective in Indian scenario.

ISC 3107	BUSINESS ARABIC & SECRETARIAL PRACTICE	L	T	P	C
		2	0	0	2

OBJECTIVES:

The course aims to

- Teach the significance of Arabic communication.
- Train for communication in various situations.
- Develop reading, writing and translation skills.
-

MODULE I Comprehension – Letter writing **5**

Personal, Official & Commercial letters.

MODULE II Audio and video listening **5**

Introducing technical terms in Arabic.

MODULE III Situational communication **5**

In Commercial field, administrative field Vocabularies and examples of usage.

MODULE IV Situational communication **5**

In Engineering field and various work fields.

MODULE V Introduction to Translation **5**

Translation Method, Comparison of Arabic and English sentence structures, Sample Study.

MODULE VI Translation skill development **5**

Arabic to English and vice versa.

L-30; Total Hours –30

TEXT BOOKS:

1. Arabic for professional and employees, Bukhari Aalim Arabic College, 2013.

REFERENCES:

1. Secretarial Practice in Arabic by Haneef Palliyath, Darul Huda Book Stall, Calicut, 1996.

OUTCOMES:

At the end of the course, the student is expected to:

- Describe the importance of commercial communication in Arabic.
- Communicate in Arabic in different working fields.

- Write letters and translate texts from Arabic to English and vice versa.

ISC 3108 INDIAN CONSTITUTION: MINORITY RIGHTS

L	T	P	C
1	0	0	1

OBJECTIVES:

The course aims to

- Describe the rights of ethnic, religious and linguistic minorities in the Indian constitution.
- contribute to the political and social stability of States

MODULE I **2**

Concept of Minority - Sociology of minority groups

MODULE II **3**

Racial or ethnic minorities - Religious Minorities - Gender and Sexual Minorities

MODULE III **2**

Age Minorities- Disabled Minorities - Minorities according to law

MODULE IV **3**

Minority as per international law - Minority as per the Constitution of India - Religious Composition of the Indian Population - Linguistic Minority

MODULE V **2**

Constitutional Assembly Debates on Minority Rights - Minority as Per Judicial Trends

MODULE VI **3**

Constitutional Provisions related to minority rights - Cultural and Educational Rights Article 29. Protection of interests of minorities - Why Minority Rights?

L – 15; Total Hours –15

TEXT BOOKS:

1. Minority rights in Indian constitution, Sodhganga, New Delhi.

REFERENCES:

1. Constitutional rights of minorities: A critical Analysis, Saika Sabir.

OUTCOMES:

At the end of the course, the student is expected to:

- Define the rights of ethnic, linguistic and ethnic minorities.
- Analyze the minority rights in the Indian Constitution.

SEMESTER VI

ISC 3211	**THEMATIC STUDY OF QURAN**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

The course aims to:

- Introduce the Thematic tafseer.
- Teach the contents of Chapter Ar Ra'd, An Nahl and Al Kahf based on the theme of the chapters.
- Acquaint the student with the message of Chapters Luqman, Ar Rahman and Al Mulk based on the theme of the chapters.

MODULE I **8**

Chapter: 13 Al Ra'd

MODULE II **7**

Chapter: 16 Al Nahl

MODULE III **8**

Chapter: 18 Al Kahf - Chapter: 26 Al Shu'arah

MODULE IV **7**

Chapter: 31 Al Luqman - Chapter: 36 Al Yaaseen

MODULE V **8**

Chapter: 54 Al Rahman- Chapters: 55 Al Waqia'

MODULE VI **7**

Chapter: 67 Al Mulk - Chapter: 78 Al Naba'

L – 45; Total Hours –45

TEXT BOOKS:

1. Nahwa Tafseer Mawdhuyi li Suwar Al Quran by Sheik Mohammed Ghazzali. (Text prepared by Bukhari Aalim Arabic College, 2012).

REFERENCES:

1. At Tafseerul Mawdooyi Li Suwar Al Quran Al Kareem, Nukhbathun Min Ulamayit Tafseer Wa Uloomul Quran, University of Sharjah.

OUTCOMES:

On successful completion of the course, the student will be able to:

- Define the concept of Thematic Tafseer.
- Analyze the main and sub themes in Chapters Ar Ra’d, An Nahl and Al Kahf.
- Discuss about the themes of Chapters Luqman, Ar Rahman and Al Mulk

ISC 3212	A SPECIAL STUDY ON SAHEEH AL BUKHARI	L	T	P	C
		4	0	0	4

OBJECTIVES:

The course aims to:

- Introduce the biography of author Al Bukhari and highlight the significance and method of Sahih Al Bukhari
- Define Wahi - The revelation and its different kinds.
- Learn Hadith texts pertaining to Iman, Haya (Modesty) and importance of search of knowledge in Islam with special reference to journey of Moosa (Pbuh) and questioning for religious learning.

MODULE I BOOK OF REVELATION 10

Introduction to Saheeh Al Bukhari – Biography of the Author, Imam Mohamed Ismail Al Bukhari (Rah) – Collection of Hadith – Methodology – Special features.

How the divine Revelation started to be revealed to Prophet Muhammad (sal) – Types of revelation – Revelation and good righteous dreams – Story of Waraqa bin naufal with Prophet.

MODULE II BOOK OF BELIEF (IMAN) 10

Revelation in starting prophet period – Revelation with great stress and hardness. Islam and Five principles – Invocation and faith – Deeds of faith – The feed is a part of Iman – Love the messenger from the faith – Sweetness of faith.

MODULE III PARTS OF FAITH 10

Love the Ansar from Iman – To run away from Al – Fitan – The grades in superiority of the belivers. Al Haya (Self respect, modesty) – Faith and Action – To greet is a part of Iman – Zulm (wrong) and Iman – The signs of hypocrite – In Allah’s cause is a part of faith.

MODULE IV BOOK OF KNOWLEDGE (Ilm) 10

Observe fasting and faith – Religion is very easy – Offering prayer is a part of faith – Faith increase and decrease – Zakath and Iman – Accompany the funeral procession from faith – Dialogue between Prophet and Jibril (Alai) about Iman. Superiority of Knowledge.

MODULE V SEARCH FOR KNOWLEDGE 10

Raising Questions and Voices for knowledge – Imam Questioning his companion-

Testing of Knowledge – Religious talk to students – Comprehend (Faiqh) in religion – Comprehending knowledge – Knowledge and wisdom. Journey of Prophet Moosa (Ala) – To go out in search of knowledge.

MODULE VI SEARCH FOR KNOWLEDGE 10

Religious knowledge and ignorance- superiority of knowledge – Rotation for learning knowledge – Knowledge from religious preacher – Repeating knowledge for understanding – Man teaching to his family – Eagerness to learn the prophet Hadith – Convey knowledge to absentees – Writing of knowledge – Memorization – Questioning for religious learning – Shy while learns.

L – 45; Total Hours –60

TEXT BOOKS:

1. Sahih al Bukhari By Imam Bukhari, Maktaba Asriya, Beirut, 2001.

REFERENCES:

1. Fat-hul Baari by Imam Ibn Hajar al Asqalani, Maktaba Ashrafiya, Deoband, India.

OUTCOMES:

At the end of the course, the student is expected to:

- Outline the life of the author and the significance of his methodology.
- Discuss about the revelation and its various types.
- Elaborate the status of Iman, Haya (Modesty) and importance of search of knowledge in Islam with special reference to journey of Moosa (Pbuh) and questioning for religious learning.

ISC 3213	QURAN AND MODERN ISSUES	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to

- Introduce the importance of Fatwa and various fatwa centers in modern days.
- Explain modern issues related to Shariah and their solutions.
- Train the students to find solutions of certain issues based on Quran and Sunnah.

MODULE I **7**

Introduction to Modern Fatawa – Fiqh Academy of World Islamic Organization – Al Rabita – Research Academy of Egypt – Islamic Fiqh Academy in India – Shariah Scholars' Academy, USA - European council for research and fatwa.

MODULE II **8**

Modern Issues on divorce and maintenance.

MODULE III **7**

Modern issues on medical field – Brain death – Test tube baby – Organ transplantation.

MODULE IV **7**

Cloaning – Milk Bank – Blood Bank – Sperm bank.

MODULE V **8**

Bank transactions – Share Market – Insurance.

MODULE VI **8**

Research works carried out in the topic subject.

L – 45; Total Hours –45

TEXT BOOKS:

1. Quran and Modern Issues, Text book of Kilakarai Bukhari Aalim Arabic College,2017.

REFERENCES:

1. Fatawa Mu'sirah by Yousuf Al Qardhawi, Darul Wafa, Egypt, 1994.
2. Al Fiqh III, Al Manahij Al Dirasiyya, Ministry of Education, KSA, 2012. (E

Book).

OUTCOMES:

At the end of the course, the student is expected to:

- List out the authenticated Fatwa centres and Mufthis in modern days.
- Demonstrate solution of Modern issues published by Muftees.
- Find solution of certain issues in the light of Quran and Sunnah.

ISC 3214 DA'WAH & COMPARATIVE RELIGION L T P C

3 0 0 3

OBJECTIVES:

The course aims to:

- Introduce the student the science of comparative religion with an emphasis on the differences between Islam and other religions.
- Provide the student with an understanding of the beliefs of the nations from the beginning of creation until today.
- Familiarize the concept of various religions and their doctrines.
- Enlighten the students with the various issues related with religion and secularism.

MODULE I **7**

Introduction to Comparative religion- Definition of religion- Various types of people and religions in current scenario - Semitic and Non Semitic religions - Judaism – Definition and its origin - Basic beliefs in Judaism - Old Testament, Tanakh (Jewish Bible) and Torah – A brief study.

MODULE II **8**

Distorted doctrines of Jews - Mention of Prophet Muhammad (PBUH) in Jewish scriptures – The worst characters and behavior of Jews - Goals and objectives of today's Jews - Introduction to Masonic (Free Masonry) religion and its basics - History of Masonic religion and its founders

MODULE III **7**

Objectives and activities of Masonic followers throughout the history - Plans and means of Masonic religion in today's context - Proving that Masonic religion is a part of Judaism - Definition of Zionism and its origin - Evolution of Zionism and its goals - Introduction to Christianity and its nature - Differences between Judaism and Christianity.

MODULE IV **7**

Similarities between Islam and Christianity - Basic beliefs of Christianity - Differences between Quran and Bible - Concept of Trinity - What Bible says about Prophet Muhammad (PBUH)?- Sects of Christianity - Goals and objectives of today's Christians.

MODULE V **8**

Introduction to Hinduism - Basic Beliefs in Hinduism - Concept of God in Hinduism - Hindu Scriptures: Vedas, Upanishads, Puranas and Ithihas - Prophet Muhammad (PBUH) in Hindu scriptures - Similarities between Islam and Hinduism - Comparison: Prophet and Sages, Angels and Devas - Introduction to Buddhism and its principles.

MODULE VI **8**

Buddhist concepts: Eight fold path and Nirvana - Introduction to Sikhism and its concepts, Comparison between Islam and Sikhism - A brief study about communism and its concepts - Differences between Islam and communism - A clear explanation of nullifying the concept of Atheism - An introduction to Qadianism and its fallacies - A brief study about other faiths: Ismailism, Nuzairism, Bahaism, Tijanism etc.

L – 45; Total Hours –45

TEXT BOOKS:

1. Mukhtasarul Bayan Fee Muqaranathil Adyaan, Kilakarai Bukhari Aalim Arabic College, 2013.

REFERENCES:

1. Al Mujaz fee al Adhyan wal Madhahib al Muaasirah by Nasir bin Abdullah Qaffari& Nasir bin Abdul Kareem, 1st edition, Riyadh, 1992.
2. Muqaaranatul Adhyan by Mohamed Abu Zahrah, Cairo, 1974.
3. Islam, Christianity and Hinduism by Sandeela, Taj Publishers, 1998.

OUTCOMES:

At the end of the course, the student is expected to:

- Compare Islam with other religions in broader vision.
- Estimate the doctrines and principles of major religions.
- Analyze the differences between Islam and other religions in the aspect of Oneness of God, belief in the Day of resurrection etc.
- Demonstrate the concept of secularism in Islamic perspective.

ISC 3215 HISTORY OF MODERN ARABIC LITERATURE

L	T	P	C
3	0	0	3

OBJECTIVES:

The course aims to:

- Introduce the history of Arabic literature in the modern period.
- Highlight the development of modern prose and poetry.
- Learn biography and contribution of modern writers and poets.

MODULE I **7**

Impact of printing and journalism on Modern Arabic in 19th century - Contribution of Shaik Muhammad Abduhu - Jamaluddin Afghani.

MODULE II **8**

Mustafa Manfluthi and his writings - Mustafa Saadiq Rafi - Hussain Haikal - Ahmed Lutfi Syed and their contribution to Modern Arabic prose.

MODULE III **7**

Dr.Thaha Husain - Thoufeeq Hakeem.

MODULE IV **8**

Development of Modern Poetry - Shaa'ira Nahdha - Jail Jadeed.

MODULE V **7**

Shua'ra Mahjar - Jamaa'ath Abu lulu - Contribution of Al Baaroody - Ahmed Shouqi - Hafiz Ibraheem - Khaleel Mutran and their works.

MODULE VI **8**

Modernization of Arabic Poetry in the works of Al Aqqaad - Shukri and Al Maazini.

L – 45; Total Hours –45

TEXT BOOKS:

History of Modern Arabic literature by Bukhari Aalim Arabic College, 2008.

REFERENCES:

Thareekh al Adabil Arabi by showqi Dhaif - Dar al ma'arif, Cairo, 1960.

OUTCOMES:

At the end of the course, the student is expected to:

- Summarize the history of Modern Arabic literature.
- Analyze the development of modern prose and poetry.
- Criticize the works of modern writers and poets.

ISC 3216 ISLAMIC PHILOSOPHY & DOCTRINE

L	T	P	C
4	0	0	4

OBJECTIVES:

The course aims to:

- Introduce the Islamic philosophy and doctrine.
- Discuss about the death, visiting the graveyards, Munkar - Nakeer and after death.
- Learn about Mahshar, Sirathul Mustakeem, Meezan, Judgement, Heaven and hell.
- Teach the fate (Al Qaza wal Qadr), Faith and repentance.

MODULE I **10**

Zikr-il-mouth - Fazlu zikr-il-mouth- Bayanu Turki-fi Thahqeeki zikr il mouth fil khalb- Toolal amali wa faleezhilatu kasrul amali wa sababu kaifiyahu wa mua'alajathihi - Fazhilathu kasrul amali- Bayanu sababi fi toolal amali wa ilajihi- Bayanu murathibu na'asi fi toolal amali wa kasrihi- Bayanul mubadarathi ilal amali wa hadri A'afa'athi tha'kheer- Sacra'athul mouthi wa shiddathu wama yasthahibbu minal ahwali indhahu - Bayanul hasrathi indha liqa'au malikul mouthi bihikaayathi yu'rabu lisaanil haali anha

MODULE II **10**

Wafaathu rasoolullah(sas) wal khulafaaur rashideen min ba'dhihi- Wafaathu rasoolullah(sas) - Wafaathu Abi backar siddiq (rali) - Wafaathu Umar bin khatthab(rali)- Wafaathu Usman (rali) - Ali karramallahu wajhu - Kalaamul muhthazharewen minal khulafaa'i wal umaraai wal saliheen - Bayanu ahwalil jama'athi min khususi saaliheen mina sahabah wa tabiyeen wa min ba'adhihim min ahli thasuf(rali) - Akaawilul aarifeen alal janaayizi wal maqabir wa hukmu jiyarathil kuboor - Bayaanu haalil kabri wa akaawiluhum indhal kuboor - Bayaanu akaawilahum indhal mouthil waladhi

MODULE III **10**

Bayanu ziyaarathul kuboori wa dua'u lil mayitthi - Hakikathul mouthi wa ma yalhakaahul mayyithi fil kabri ila nafakhathi soori - Bayaanu hakikathil mouth - Bayaanu kalaamul kabri lil mayyithi wa kalaamul mouthaa imma bi lisaanil mukaal aau bi lisaanil haal - Bayaanu adhaabil kabri wa sua'alu munkar wa nakeer - Feema arafa min akhwaalil mouthaa bil mukaashafathi fil manaam - Bayaanu manaamathul mashaayikh(rah) - Kitabu zikrul mouth fi Ahwaalil mayyithi min wakthi nafakhathi soori ila aakhar isthikraar fi jannathi wa naar wa tafseel ma baina yadihi minal ahwaali wa akthaari wa feehi nafakathi soor - Sifaathu nafakathi soor

MODULE IV **10**

Sifaathu arlul mahshar wa ahlahu - Sifaathul irk - Sifaathu toola yaumul kiyamathi - Sifaathu yaumal kiyaamathi wadahihi wa asaamihi - Sifaathu mas'alath - Sifaathu meezan- Sifaathu khusama'u wardul muzham - Sifaathu sirath - Sifaathu shafaa'ath - Sifaathu hawzh - Fi sifaathi jahannam wa ahwaluha wa ankaaluha- Fi sifaathil jannathi wa asnaafu nayeenuha.

MODULE V **10**

Belief in Al Qaza and Al Qadr- free will of human being

MODULE VI **10**

Faith & Deed – Faith and sinful deed- repentants

L – 60; Total Hours –60

TEXT BOOKS:

1. Ihya Ulum al Deen by Imam Ghazzali, Beirut, 1999.
2. Aqeedah al Muslim by Sheik Muhammad Al Ghazzali, 8th edition, Jeddah 1996.

REFERENCES:

1. Hujjathullahil Baaliga, Shah Waliullah Dehlavi, Maktaba Deoband, New Delhi.

OUTCOMES:

At the end of the course, the student is expected to:

- Summarize the Islamic philosophy and doctrine.
- Describe the death and human destination after the death.
- Clarify Mahshar, Sirathul Mustakeem, Meezan, Judgement, Heaven and hell.
- Explain the fate (Al Qaza wal Qadr), Faith and repentance.

ISC 3217	Journal Arabic, Web Translation & SAP	L	T	P	C
		1	0	0	1

OBJECTIVES:

The course aims to:

- Introduce the Arabic usages in journals and magazines.
- Teach the various aspects of SAP translation.

MODULE I **2**

News clippings – Advertisements

MODULE II **3**

Memorandum of Understanding (MOU) – Rental Agreements

MODULE III **3**

Commercial Claims – Political Reports

MODULE IV **2**

Ministries approval request for cable laying work in the GCC region - Minutes of Meeting

MODULE V **2**

Material Management - HR & Staff Affairs

MODULE VI **3**

Webpage Translation - Payment gateways

L – 15; Total Hours –15

TEXT BOOKS:

1. Journal Arabic, Haneef Palliyath, Al Huda Book Stall, Calicut.

REFERENCES:

1. SAP Translation, Arabic – English, Saudi Arabia.

OUTCOMES:

At the end of the course, the student is expected to:

1. Understand the Arabic terms in Journals and magazines.
2. Translate the documents especially related to SAP projects.

ISC 3218	Project	L	T	P	C
		0	0	2	2

OBJECTIVES:

The course aims to:

- Teach the student to do a project on any topic related to Islamic Studies.
- Train him the research methodology and practices.

OUTCOMES:

At the end of the course, the student is expected to:

- Do a project on a relevant topic.
- Analyze the various aspects of the research.

VISION AND MISSION OF THE SCHOOL OF LIFE SCIENCES

VISION

To attain new heights in biotechnology research, shaping life sciences into a premier precision tool for the future for creation of wealth and ensuring social justice-specially for the welfare of the poor

MISSION

The mission of the school of life sciences and Technology is to maximize the benefits of biotechnology to the University, the nation and the globe by being an excellent quality, comprehensive, multidisciplinary school that supports, coordinates, disseminates and advances biotechnology in the areas of social welfare and entrepreneurship.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES
B.Tech BIOTECHNOLOGY

PROGRAMME EDUCATIONAL OBJECTIVES

- "This course will facilitate the graduates to be professionally competent in Biotechnology to solve the problems in environmental, food, biochemical and biomedical engineering.
- This course will offer students with a solid foundation in Chemical engineering and Biological Sciences, to enable them to work on engineering applications in biotechnology as per the requirement of the industries, and also will enable the students to pursue higher studies and research.
- This course will enable students to acquire knowledge on the fundamentals of Biochemistry, Cell biology, Microbiology and Molecular biology to enable them to understand basic concept in modern biology and help them to build their carrier in this field.
- This course will facilitate the students to acquire knowledge in fields such as genetic engineering, protein engineering, and Bioprocess engineering and associated downstream processing enabling their application through Bioprocess technology.
- This course will aid the students to learn the recent developments in the field of Genomics, Proteomics, Cancer Biology and modern drug discovery approaches. It will also empower the students to have advanced focus on the molecular basis of diseases and development of advanced therapeutics.
- This programme will teach students the importance of Bioethics, entrepreneurship, communication and management skills.
- This course will also offer the graduates to demonstrate their proficiency in theory and practice of bio-techniques through life-long learning and provide confidence to perform as an individual and / or member of a team with professional and ethical behavior.

PROGRAMME OUTCOMES

- Graduates of the course will have strong background in the interface of modern biology and advanced bioprocess technology and be able to use these tools in industry and/or institutes wherever necessary.

- Graduates will identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural science, and engineering sciences.
- Graduates will demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- Graduates of the course will have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- Graduates of the course will function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- Graduates of the course will communicate effectively on complex engineering activities with the engineering community and with the society at large.
- Graduates of the course will apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering and technology practice.
- Graduates of the course will design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

GENERAL ELECTIVES

1.	GEBX22	National Service Scheme	0	0	3	1

SEMESTER I

ENB1181	ENGLISH	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To enable students to use language appropriately and effectively
- To help learners improve their vocabulary and to enable them speak fluently and appropriately in different contexts.
- To help students develop listening skills for academic and professional purposes
- To develop reading comprehension skills and enhance their ability to read official documents.
- To develop their creative thinking and practice creative writing.

MODULE I BASIC LANGUAGE SKILLS AND GRAMMAR 4

Conducting a language proficiency test in the language laboratory to assess the use of various parts of speech, vocabulary, phrasal verbs and idiomatic expressions of students.

MODULE II LISTENING 8

Listening to BBC radio plays and VOA special lessons to teach Phonetics, accent and intonation of spoken English, Appreciation and critical review of popular movies like 'My Fair Lady', 'Sound of Music'. (Excerpts from the movies) - Historical/popular speeches made by Winston Churchill, Abraham Lincoln (Gettysberg's Address), Swami Vivekananda.

MODULE III SPEAKING 8

(a) Self introduction – pair work – introducing one another – short conversations – exchanging opinions – agreement /disagreement

(b) Short presentation (extempore speech) based on visuals – Personal narrations

MODULE IV READING 8

Newspaper articles, circular, notices – Note making – vocabulary extension – Critical review of newspaper articles, Science fiction- Issac Asimov's "The

Dead Past"(Abridged version) - Wings of Fire – Creative thinking – retelling a story with different ending; critical appreciation of plot and characters

MODULE V CREATIVE WRITING 8

(a) Writing slogans for Advertisements

(b) Writing descriptive paragraphs based on visuals

MODULE VI ENGLISH FOR ACADEMIC AND BUSINESS PURPOSES 9

(a) English for academic purpose: letters to the editor, letter seeking permission for industrial visit, letter inviting a dignitary for technical symposium

(b) English for Business purpose: Telephone etiquette – telephone conversations – taking and leaving phone messages.

Total: 45

5. P.K.Dutt, G. Rajeevan and C.L.N. Prakash, 'A Course in Communication Skills', Cambridge University Press, India (2007).

OUTCOME:

- After completion of the course, students will have the ability to communicate correctly and effectively in academic and professional contexts through exposure and practice in LSRW skills.

MAB1182 FUNDAMENTALS IN MATHEMATICS

L	T	P	C
3	1	0	4

OBJECTIVES:

The course is aimed a developing the skills in additional areas of Engineering Mathematics, necessary for grooming them into successful engineers. The topics introduced will serve as basic tools for specialized studies in many Engineering fields.

MODULE I MATRICES **12**

Eigenvalue Problems – Eigenvalues and Eigenvectors of a real matrix, Engineering Applications – Properties of Eigenvalues and Eigenvectors – Cayley Hamilton Theorem (without proof) – Orthogonal matrices – orthogonal transformations of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation.

MODULE II TRIGONOMETRY **12**

Expansions of $\sin^n\theta$ and $\cos^n$ in powers of sin and cos – Expansions of $\sin^n$ and $\cos^n$ interms of sines and cosines of multiples of – Hyperbolic and inverse hyperbolic functions – Logarithm of complex numbers – Separation of complex functions into real and imaginary parts – Simple problems.

MODULE III THEOR Y OF EQUATIONS **12**

Introduction - surds and irrational roots – simple problems – equations whose roots are in A.P, G.P and in H.P – Relations between the roots and coefficients – Symmetric functions – Formation of equations – Decreasing and Increasing the roots – Transformation of equation – Reciprocal equations.

MODULE IV DIFFERENTIAL CALCULUS **12**

Differentiation and Derivatives of simple functions – Successive Differentiation – Various forms of Algebraic and Trigonometric functions – Simple problems.

MODULE V INTEGRAL CALCULUS **12**

Various types of Integration – Reduction formula for $e^{ax}x^n$, $\sin^n x$, $\cos^n x$, $\sin^n x \cos^m x$ (without Proof) – Simple Problems.

8. Venkataraman, M.K., “Engineering Mathematics”, Volume I, 2nd edition, National Publishing Co., Chennai, 2003.

OUTCOMES:

On completion of the course the students will be able to

- solve Eigenvalue and Eigenvector problems
- solve trigonometry problems
- use differential calculus and integral calculus for solving problems pertaining to Engineering applications.

PHB1181	PHYSICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce basic physics concepts relevant to Engineering and Technology students.
- To get familiarize with solving problems in basic physics.
- To acquaint applications of physics for Engineering issues.

MODULE I PROPERTIES OF MATTER **7**

Elasticity – Stress strain diagram – Factors affecting elasticity – Twisting couple on a wire – Shaft – Torsion pendulum – Depression on a cantilever – Young's modulus by cantilever – Uniform and non-uniform bending – Viscosity.

MODULE II CRYSTAL PHYSICS **6**

Introduction – Space lattice – unit cell – Bravais lattices – Miller Indices for cubic crystals – Inter planar spacing in cubic lattice – Simple crystal structures – SC, BCC, FCC and HCP structures – Atomic radius, coordination number, Packing factor calculation – Crystal imperfections.

MODULE III QUANTUM PHYSICS **7**

Black body radiation – Planck's theory of radiation – Deduction of Wien's displacement law and Rayleigh – Jeans law from Planck's theory – Compton effect – Theory and experimental verification – Dual nature of matter – de Broglie's wavelength- Physical significance of wave function – Schroedinger wave equation – Time independent and time dependent wave equation – Particle in one dimensional box.

MODULE IV WAVE OPTICS **9**

Interference theory – Air wedge – Michelson interferometer – Diffraction – Fresnel and Fraunhofer diffraction - Polarization – Double refraction – Theory of plane polarized, circularly polarized and elliptically polarized light – Quarter wave plate, Half wave plate – Production and detection of plane, circularly and elliptically polarized lights – Photoelasticity – Photo elastic effect – Stress optic law – Effect of stressed model in a plane polariscope (qualitative) –Photo elastic bench.

MODULE V LASER & FIBER OPTICS **9**

Principle of spontaneous emission and stimulated emission - Characteristics of laser light -Einstein's A & B coefficients (derivation) – Population inversion - pumping - Nd:YAG laser – CO_2 laser – Applications – Material processing and holography (construction and reconstruction of hologram)- Optical fiber – Principle and propagation of light in optical fibers – Numerical aperture and acceptance angle – Types of optical fibers - applications – Fiber optic communication system (block diagram only)- Fiber optic sensors (displacement and pressure sensors (qualitative), Medical endoscope.

MODULE VI ULTROSONICS AND NDT **7**

Ultrasonics – Production – Magnetostriction and piezo electric methods – Properties of ultrasonic waves – Detection of ultrasonic waves – Applications –Ultrasonic interferometer- Acoustical grating – SONAR – Depth of sea – Measurement of velocity of blood flow – Non Destructive Testing (NDT) methods – Ultrasonic flaw detector – A,B & C scanning methods.

8. William T. Silfvast, "Laser Fundamentals", 2nd edition, Cambridge University Press, 2004.

OUTCOMES:

At the end of the course, the students will be able to

- Apply the knowledge of properties of matter in Engineering Mechanics and Fluid Dynamics.
- Characterize Engineering materials
- Use Lasers for Fiber Optics Technology and Material Processing
- Do non-destrictive testing using Ultrasonic Techniques

CHB1181	CHEMISTRY	L	T	P	C
		3	0	0	3

OBJECTIVES:

To make students conversant with the

- Water quality for potable and industrial purposes.
- Different engineering materials, their physico-chemical properties and specific applications.
- Concept of electrochemistry, corrosion and theories of corrosion.
- Principles of spectroscopy and applications.
- Basic principles of green chemistry and the need for green processes in industries.

MODULE I WATER TECHNOLOGY **8**

Introduction – Impurities present in water – Hardness, Types of Hardness, Estimation of Hardness (EDTA method) (Problems) – Alkalinity, Estimation of Alkalinity – Disadvantages of hard water in industries – Conditioning methods: external treatment method: Ion exchange method – internal treatment: colloidal, phosphate, calgon, carbonate methods – drinking water standards (BIS) – treatment of domestic water: screening, sedimentation, coagulation, filtration, disinfection: by chlorination, UV treatment, ozonization – desalination and reverse osmosis (principle only).

MODULE II ENGINEERING MATERIALS **8**

Abrasives: Moh's scale of hardness – natural abrasives: diamond, corundum, emery, garnets and quartz – artificial abrasives: silicon carbide, boron carbide; Refractories: characteristics, classification – acidic, basic and neutral refractories, properties – refractoriness, refractoriness under load, dimensional stability, porosity, thermal spalling – general method of manufacture of refractories, properties and uses of high alumina bricks, magnesite and zirconia bricks; Nanomaterials: Definition – types of Nanomaterials; nanofilms, nanowires, carbon nanotubes, quantum dots and fullerenes (C60) – Size and shape dependent optical, electrical, thermal and mechanical properties; Synthesis of nanomaterials – Top down and bottom up approach; Applications of nanomaterials – Catalysis, Electronics and Telecommunication, Medicines, Composites and Energy.

MODULE III ELECTROCHEMISTRY AND CORROSION 9

Construction of a cell – Standard and single electrode potential – electrochemical series – EMF and its measurement – Nernst equation, application and problems – Types of electrodes: standard hydrogen electrode, calomel electrode, ion selective electrode - glass electrode and determination of pH using glass electrode – polarization, overvoltage, decomposition potential (statements only) – Conductometric and potentiometric titrations; Corrosion: Definition – Dry corrosion and Wet corrosion with mechanisms – Factors influencing corrosion.

MODULE IV CHEMISTRY OF POLYMERS 6

Monomers – functionality – polymer – degree of polymerization – classification – polymerization techniques: addition, condensation and co-polymerization with example – mechanism of polymerization: free radical, cationic and anionic mechanism – thermoplastics and thermosetting plastics with examples – compounding and moulding of plastics: injection moulding and compression moulding.

MODULE V SPECTROSCOPY 9

Electromagnetic spectrum – absorption of radiation – electronic, vibrational, translational and rotational – intensities of spectral lines – Beer-Lambert's Law (Problems) – Colorimetric analysis: estimation of concentration of a solution – Flame photometry: theory, instrumentation (block diagram only) and application – UV-Visible spectroscopy: Principles, instrumentation (block diagram only) and simple applications – IR spectroscopy – simple applications only.

MODULE VI GREEN CHEMISTRY 5

Introduction – Significance – Industrial applications of green chemistry; Green technology – Latest green laboratory technique for saving experimental resources and infrastructural framework; Principles of green chemistry – R4M4 model (Reduce, Reuse, Recycle, Redesign; Multipurpose, Multidimensional, Multitasking, Multi-tracking) – Life cycle analysis technique (cradle to grave approach)

5. Puri B.R., Sharma L.R. and Madan S. Pathania, 'Principles of Physical Chemistry', Shoban Lal Nagin Chand and Co., Jalandhar, (2000).

OUTCOMES:

At the end of the course, students will be able to

- Estimate the degree of hardness in water; solve related problems and treatment methods for potable water.
- Select materials for specific engineering applications.
- Use electrochemistry principles to understand the mechanism of corrosion.
- Analyze trace quantity of metals using instrumental methods.
- Realize the need of green practices in industries.

BTB1101 FUNDAMENTALS IN BIOTECHNOLOGY

L	T	P	C
4	0	0	4

OBJECTIVES:

- Provide a breadth of knowledge of basic principles and concepts of biological sciences.
- Provide knowledge content across the full range of biology.
- Demonstrate knowledge of form, function, mechanism, organization, scale, hierarchy, diversity and evolution.

MODULE I INTRODUCTION TO BIOTECHNOLOGY **10**

Definitions, Historical perspectives, Scope and Importance, Commercial potential, An interdisciplinary challenge, A Quantitative approach, Classical vs. Modern concepts, Manufacturing quality control, Product Safety, Good manufacturing practices, Good laboratory practices, Marketing, Biotechnology in India and Global trends

MODULE II MICROBIAL CULTURE AND APPLICATIONS **10**

Introduction, Microbial Culture Techniques, Measurement and Kinetics of Microbial Growth, Scale up of Microbial Process, Isolation of Microbial Products, Strain Isolation and Improvement, Applications of Microbial Culture Technology, Bioethics in Microbial Technology.

MODULE III PROTEIN ENGINEERING **10**

Introduction to the world of Proteins, 3-D Shape of Proteins, Structure Function relationship in Proteins, Purification of Proteins, Characterization of Proteins, Protein based products, Designing Proteins, Proteomics.

MODULE IV BASICS OF RDNA TECHNOLOGY **10**

Introduction, Tools of rDNA Technology, Making Recombinant DNA, DNA Library, Introduction of Recombinant DNA into host cells, Identification of Recombinants, Polymerase Chain Reaction (PCR), DNA Probes, Hybridization Techniques, DNA Sequencing, Site-directed mutagenesis.

MODULE V GENOMICS AND PROTEOMICS **10**

Introduction, Genome Sequencing Projects, Gene prediction and Counting,

Genome similarity, SNPs and comparative genomics, Functional Genomics, History of Bioinformatics, Sequences and Nomenclature, Information Sources, Analysis using Bioinformatics tools.

MODULE VI PLANT AND ANIMAL CELL CULTURE AND APPLICATION 10

Introduction, Cell and Tissue Culture Techniques, Applications of Cell and Tissue Culture, Gene Transfer Methods in Plants, Transgenic Plants with Beneficial Traits, Animal Cell CultureTechniques, Characterization of Cell Lines, Scale-up of Animal Culture Process,Applications of Animal Cell Culture

TOTAL: 60

REFERENCES

1. Concepts in Biotechnology,C.F. Bryce,D. Balasubramanian,Universities Press.
2. Biotechnology by Smith, Cambridge Press.

OUTCOMES:

At the end of the course students will be able to

- Understand and apply fundamental biological principles from the major areas of biology (ecology, genetics, evolution, cell and molecular biology, and organism biology).
- Describe basic biological concepts and principles.
- Understand that biology has a chemical, physical, and mathematical basis.
- Explain the importance of the scientific method to understanding natural phenomena.

SSB1181 INTRODUCTION TO ECONOMICS

L	T	P	C
3	0	0	3

OBJECTIVES:

Primarily to give an overview of fundamentals of economics to the engineering students in particular

- To introduce the basic concepts of demand, supply and equilibrium.
- To familiarize on National Income concepts.
- To provide fundamental concepts of money, banking and exchange.
- To give an idea on industrial sector, markets and trade.
- To give an overview on five year plans, budget, policies and taxation.
- To provide an overview of Indian economy and the role of engineers in economic development.

MODULE I INTRODUCTION **8**

Classification of economy – open and closed economy – sectors of economy – Basic principles of micro economics – supply, demand and equilibrium, elasticity of demand- pricing models.

MODULE II NATIONAL INCOME DETERMINATION **7**

National Income concepts – GNP, GDP, disposable Income; Aggregate demand and Aggregate supply, macroeconomic equilibrium - concepts of MPS, APS, MPC APC, Inflation – prices indices WPI, CPI and Inflation control.

MODULE III MONEY AND BANKING **7**

Monetary system - Role of Central Bank – Monetary policy – Commercial banks, Development banks; Money market – the role of money.

MODULE IV INDUSTRY, MARKET AND TRADE **7**

Public and private sectors – Contribution to the national economy, Industrial policy. Markets – labor, capital and debt market. Trade: domestic and International trade.

MODULE V BUDGET, POLICIES AND INDICATORS 8

Economic development – Five year plans, Macro-economic indicators; Central budget: Government revenue-tax and non-tax revenue, government expenditures-plan and non-plan expenditures – Fiscal policy – The impact of the budget on the economy.

MODULE VI ECONOMIC GROWTH AND THE ROLE OF ENGINEERS 8

India Economy – the role of market in the Indian economy – Development in the post independence era – Growth of the economy, Globalization and liberalization – reforms made and their effects, challenges and opportunities, Engineers – Engineers' contributions to the economic growth.

TOTAL: 45

REFERENCES:

1. Vanitha Agarwal, 'Macroeconomics: Theory and Practice', Pearson, (2010).
2. Dwivedi D.N, 'Macroeconomics: Theory and Policies', 3rd edition; McGraw Hill, (2010).
3. Samuelson,Paul A., 'Macroeconomics', 19th edition., TMH, (2009).
4. Gupta G.S, 'Macroeconomics: Theory and Applications', 3rd edition; TMH, (2007).

OUTCOMES:

- Students will have an exposure to the basic concepts of microeconomics and macroeconomics.
- Students will have gained knowledge in government budget, economic planning and its implementation, money, banking and trade.
- They will have learnt about the economic reforms introduced in Indian economy and the role of engineers towards the economic growth and development of the country.

PHB1182	PHYSICS LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To understand the basic concepts of properties of matter, wave optics
- To understand the properties of ultrasonic and Laser.
- To understand the crystal growth technique.
- To correlate the experimental results with the theoretical values.

LIST OF EXPERIMENTS:

1. Torsional Pendulum- Determination of rigidity modulus of a given wire.
2. Determination of coefficient of viscosity of a liquid by Poiseuille's method.
3. Determination of Young's modulus of a beam using non – uniform bending method.
4. Determination of a thickness of a given wire – Air wedge.
5. Spectrometer- determination of wavelength of given source by using grating.
6. Determination of velocity of ultra sonic waves – Ultrasonic Interferometer.
7. Determination of numerical aperture and acceptance angle of an optical fiber.
8. Determination of particle size using Laser.
9. Growth of crystal by slow evaporation technique.
10. Determination of angle of divergence of Laser beam.
11. Photo electric effect experiment.

REFERENCE

Laboratory Manual

OUTCOMES:

On completion of this course, the student will know

- Properties of matter, wave optics and quantum physics
- Properties and application of Ultrasonic and Laser
- Principle and concept of crystal growth technique.

CHB1182	CHEMISTRY LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

To make students conversant with the

- Estimation of hardness and TDS in water samples.
- Construction of cell and determination of EMF.
- Estimation of pH of solutions.
- Verification of Beer Lambert's law.

LIST OF EXPERIMENTS:

1. Estimation of hardness in domestic water.
2. Estimation of total dissolved solids (TDS) in domestic water
3. Construction and determination of emf of a cell.
4. Determination of single electrode potential.
5. Estimation of strong acid in the industrial effluents
6. Estimation of Fe2+ present in unknown sample – by Potentiometry
7. Verification of Beer-Lambert's law and estimation of Cu2+ present in unknown sample.
8. Estimation of Na and K present in the agricultural field – by flame photometry.
9. Study of effect of inhibitors in free radical polymerization (Demo)

REFERENCE

Laboratory Manual

OUTCOMES:

At the end of the course, students will be able to

- Estimate the degree of hardness and TDS in water samples.
- Construct and calculate EMF of cell.
- Apply the concept of Beer lamberts law.

GEB1103	COMPUTER PROGRAMMING AND APPLICATIONS LABORATORY	L	T	P	C
		2	0	2	3

OBJECTIVES:

- Expose fundamental concepts and techniques in programming
- Give coverage on application logic in programming
- Focus on solving practical problems based on analyzing, designing, and implementing computer programs

MODULE I FUNDAMENTALS OF COMPUTERS **5**

Evolution - Generations - Classifications - Applications - Computer organization -Hardware in a typical computer Identification - Booting - Booting error messages - Number system - Number system conversions

MODULE II BASIC PROGRAMMING AND DEBUGGING **5**

Software types - Types of Operating systems - Software development steps - Information technology and internet - The programming tool - Structure of a basic program - Hello world program - Debugging it - Character set - Delimiters - Keywords, identifiers - Constants - Variables -- Tools and help features - Comments in a program

MODULE III INPUT AND OUTPUT **5**

Data types - Type conversions - Input/Output: Formatted functions - Unformatted functions - Library functions - Debugging the code - Systems software: Compiler - interpreter- linker - loader - Finding the correct answer given a code snippet and justifying it

MODULE IV PROBLEM SOLVING **5**

Problem solving techniques: Algorithm, flowchart - Pseudo-code - Examples of simple problems in algorithms and flowcharts - Sorting and Searching - Characteristics of a good program - Generations of programming language

MODULE V OPERATORS AND DECISION STATEMENTS **5**

Properties of operators - Priority of operators - Arithmetic relational logical and bitwise operators - If -if else- nested if else- goto- switch case - nested switch case - for loops - nested for loops - while loop - do-while loop - break and continue statement

MODULE VI ARRAYS AND LOOP CONTROL STATEMENTS 5

Arrays - Initialization - Definition - Characteristics - One dimensional array - Two dimensional arrays - Multi dimensional arrays - Predefined streams - Operation with arrays - Sorting and searching - Structures - Operations on structures

LIST OF EXPERIMENTS:

1. Computer organization -Hardware in a typical computer Identification - Booting - error messages and what it means
2. Types of Operating systems - Windows and Linux
3. Structure of a basic program - Hello world program - Debugging it
4. Data types Type conversions
5. Input/Output: Formatted functions - Unformatted functions - Library functions
6. Properties of operators - Priority of operators - Arithmetic relational logical and bitwise operators
7. If - if else- nested if else- goto- switch case - nested switch case - for loops - Nested for loops - while loop - do-while loop - break and continue statement
8. Arrays - Operation with arrays
9. Sorting and searching

REFERENCES:

1. Ashok N Kamthane, "Computer Programming", 2nd Edition, Pearson Education, 2012.
2. Paul J. Deitel, Deitel& Associates, "C How to Program", 7th Edition, Pearson, Education, 2012.

OUTCOMES:

Students who complete the course will be able to

- Understand Modular design, logic flow, data abstraction
- Describe basic programming constructs, functions and I/O
- Write down programs for sorting and searching Algorithms
- Write down programs for developing cycle for different applications
- Debug programs while solving practical problems in programming.

SEMESTER- II

BTB1211 BIOCHEMISTRY L T P C
3 0 0 3

OBJECTIVES:

The course aims to provide an advanced understanding of the core principles and topics of Biochemistry and their experimental basis, and to enable students to acquire a specialized knowledge and understanding of selected aspects by means of a stem/branch lecture series and a research project.

MODULE I AMINO ACIDS, CARBOHYDRATES AND LIPIDS 7

Structure, Function, Methods of Characterization, Separation Techniques based on the structure and properties of amino acids, Classification, Structure, Function, Separation and Characterization Techniques of mono and polysaccharides and lipids.

MODULE II NUCLEIC ACIDS AND VITAMINS 7

Nucleic Acids and Polynucleotides, Classification, Structure, Function, Separation and Characterization Techniques, Clinical Significance.Vitamins: classification, Structure, Function, Separation and Characterization Techniques, Clinical Significance.

MODULE III METABOLISM OF AMINO ACIDS 8

Nitrogen metabolism and urea cycle - Biosynthesis of amino acids (Gly, Ser, Cys, Met, Thr, Lys, Ile, Val and Leu) - Regulation of branched chain amino acids (concerted inhibition, allosteric regulation and enzyme multiplicity, sequential feed back) from oxaloacetate and pyruvate - Biosynthesis of aromatic amino acids - Metabolic disorders associated with branched chain and aromatic amino acid degradation - Important molecules derived from amino acids (auxins, DOPA, Serotonian, porphyrins, T3, T4, Adrenaline, Noradrenaline, histamine, GABA, polyamines).

MODULE IV METABOLISM - NUCLEIC ACIDS, POLYSACCHARIDES AND LIPIDS 8

Biosynthesis of nucleotides - de novo and salvage pathways for purines and pyrimidines - Regulatory mechanisms - Degradation of nucleic acid by exo and endo nucleases - Biosynthesis and degradation of starch and glycogen -

Biosynthesis and degradation of Lipids -Fatty acid synthesis and oxidative degradation - Triacylglycerol and phospholipid biosynthesis and degradation - Cholesterol biosynthesis and regulation and targets and action of cholesterol lowering drugs.

MODULE V BIOMEMBRANE, TRANSPORT AND ELECTRICAL CONDUCTIVITY 8

Micelles - Lipid bi-layer structure of membranes - Membrane proteins - Passive - Careermediated and active transport - Ion-selective channels - Trans-membrane potential coupled ATP generation - Receptors - Acetylcholine receptor as a ligand gated ion-channel - Neuronal sodium channel as voltage-gated ion channel - Neurotransmitters and their mechanism of action - Action potential - Depolarization and nerve conduction - Ion-channel agonists and antagonists as drugs - Ion channel defects (Cystic Fibrosis)

MODULE VI BIOCHEMICAL ENERGETICS 7

Energy Yielding and Energy Requiring Reactions, Calculations of Equilibrium Concentrations, Oxidation-Reduction Reactions, Metabolism and ATP Yield. Photosynthetic Phosphorylation, Active Transport, Second Law of Thermodynamics, Enthalpy and Entropy, Activation Energy.

TOTAL : 45

REFERENCES:

1. Biochemistry by Lubert Stryer. W. H. Freeman & Company, NY
2. Biochemistry by Lehninger. McMillan publishers
3. Biochemistry by Zubey. Wm. C. Brown publishers

OUTCOMES:

At the end of the course students will be able to

- demonstrate broad knowledge of the biomolecules, machinery and information flowwithin living cells, and an appreciation of how these underpin all biological processes, in both normal and diseased states
- demonstrate knowledge of key facets of modern biochemistry including: proteins andstructural biology, bioinformatics, advanced molecular biology, cell organisation,signal transduction and its role in diseases such as cancer; and the identification of drug targets

- demonstrate proficiency in core biochemical laboratory techniques, understandingboth the principles and applications of these methods within the molecular biosciences.
- demonstrate familiarity with the risk assessment process, and use this information to operate safely in the laboratory environment.
- collect, organise, analyse, evaluate and interpret biochemical data using appropriate quantitative, technological and critical thinking skills.

BTB1212 CELL BIOLOGY L T P C
4 0 0 4

OBJECTIVES:

This course seeks to achieve the following goals: introduce the four basic areas of cell biology. A successful student will gain an in-depth knowledge about cell organelles, structure and functions.

MODULE I INTRODUCTION TO CELL & ITS COMPONENTS 12

Basic properties of cell, different classes of cell: Prokaryotic and eukaryotic cell, their characterstics, cell wall, composition, function of bacterial cell wall. Physical structure of the cell-brief introduction to the Cell Membrane

MODULE II CELL PHYSIOLOGY 12

Transport of substances through cell membrane- osmosis, diffusion and its types, Active transport (sodium pump) and passive transport; membrane potential, measuring membrane potential, action potential, electrocardiogram (ECG), electromyography (EMG), electroencephalography (EEG).

MODULE III CELL ORGANELLE 12

Cellular organelles - structure and function of cell wall, plasma membrane nucleus, Mitochondria, Chloroplast, Nucleus, lysosomes, peroxisomes, golgi bodies, and transport across membranes.

MODULE IV CYTOSKELETON 12

Eukaryotic cytoskeleton - Actin - Myosin - Actin polymerization - Acto-myosin complexes - Mechanism of myosin ATPase activity - Excitation-contraction coupling and relaxation - Microtubules - Microfilaments - Intermediate filaments and their role in organelle movements - Prokaryotic cytoskeleton - FtsZ - MreB - ParM - Crescentin.

MODULE V DNA REPLICATION, TRANSCRIPTION AND TRANSLATION 12

DNA replication- Prokaryotic and eukaryotic DNA replication, mechanism of replication. Transcription - Prokaryotic and eukaryotic Transcription; Translation- Genetic code- Prokaryotic and eukaryotic translation- translational machinery- Mechanism of initiation- elongation and termination.

TOTAL: 60

REFERENCES:

1. Molecular Biology of Cell by Albert et.al. John Wiley & Sons
2. The Cell by Cooper. ASM Press
3. Cell and Molecular Biology by Karp. John Wiley & Sons

OUTCOMES:

At the end of this course students will be able to:

- Define components of a cell
- Understand cellular structure and functions
- Understand the mechanisms of DNA replication and protein synthesis

BTB1213 MICROBIOLOGY L T P C
3 0 0 3

OBJECTIVES:

To provide an introduction to the science of microbiology, particularly medical microbiology, to the student with both limited background in the biological sciences and limited interest in pursuing this field further.

MODULE I MICROBES AND FUNCTIONAL ANATOMY 7

Types of microorganisms. Brief history of microbiology. Microbes& human warfare. Microbes & human disease, Classification of microorganism and methods of classifying and identification of microorganism. Size, shape, and arrangement of bacterial cells. Structures external to cell wall, structures internal to cell wall. Microbial Metabolism.

MODULE II OBSERVING MICROORGANISMS THROUGH A MICROSCOPE 7

Types of Microscopy, Light, electron, scanned-probe, microscopy. Confocal Microscopy, Simple, differential and special stains.

MODULE III CATABOLIC & ANABOLIC REACTIONS 8

Enzymes, energy production and carbohydrate metabolism. Lipid & protein catabolism, bacterial identification and photosynthesis. Energy production mechanism, metabolic diversity & pathways of energy use. Integration of metabolism.

MODULE IV MICROBIAL GROWTH 9

Growth requirements, culture media, obtaining pure cultures and preservation of cultures, growth of bacterial cultures, Control of Microbial Growth, Action of microbial control agents, physical and chemical methods of microbial control. domain bacteria, proteobacteria, nonproteobacteria Gram-ve and Gram+ve bacteria. Bacterial diversity. lichens, algae, protozoa, helminthes, arthropods as vectors. viral structures, isolation, cultivation and identification of viruses, viral multiplication.

MODULE V APPLIED & INDUSTRIAL MICROBIOLOGY 7

Industrial fermentation, primary and secondary metabolites, Role of

microorganisms in the production of industrial chemicals and pharmaceuticals, Microbes as alternative energy sources and as industrial products.

MODULE VI MICROBIAL GENETICS 7

Recent advances in molecular genetics of viruses and bacteria. Transformation, conjugation and transduction, complementation.

TOTAL: 45

REFERENCES:

1. Microbiology: An Introduction: Tortora, Funke & Case. 7th edition, 2001
2. Microbiology: Davis, Dulbecco, Eisen and Ginsburg.
3. Introduction to Microbiology: Ross
4. General Microbiology: Stainier, Adelberq and Ingraham.

OUTCOMES:

At the end of the course the students will be able to

- demonstrate a broad understanding of the diversity and range of microorganisms, the interactions between humans and microorganisms, the role of microorganisms in industrial and environmental processes, and their role in the development of the techniques that underpin modern molecular biology
- demonstrate proficiency in a set of core microbiological and molecular biologicaltechnical methods, including both an understanding of the principles of the methods and their utilisation in laboratory settings
- demonstrate familiarity with the risk assessment process, and use this information to operate safely in the laboratory environment
- collect, organise, analyse, evaluate and interpret experimental data using appropriate quantitative, technological and critical thinking skills
- critically evaluate relevant scientific data and literature and comprehend the natureand scope of the scientific literature in microbiology and related areas
- communicate microbiological principles and information effectively to diverse audiences, using a variety of formats

BTB1214 BIO ORGANIC CHEMISTRY L T P C
3 0 0 3

OBJECTIVES:

The course aims to develop skills of Students in the area of Organic Chemistry and its applications in Biology.

MODULE I INTRODUCTION TO ENZYMES 9

Classification of enzymes. Mechanisms of enzyme action; concept of active site and energetics of enzyme substrate complex formation; specificity of enzyme action; Stereochemistry - R,S notation - re-si faces - e,z isomerism-conformers- ethane - cyclopean - reactivates- mechanisms of sn1 sn2 reactions, e1 e2 reactions - ester formation and hydrolysis, reaction rates - hammond's postulate - h/d effects. Catalysis - general acid - base and covalent catalysis.

MODULE II ENZYME KINETICS 9

Allosteric regulation of enzymes, Monod changeux wyman model, ph and temperature effect on enzymes & deactivation kinetics - Stereospecific enzymatic reactions - Stereochemistry of nucleophilic reactions - chiral methyl group - chiral phosphate.

MODULE III ENZYME IMMOBILIZATION & CASE STUDIES 9

Physical and chemical techniques for enzyme immobilization - adsorption, matrix entrapment, encapsulation, cross-linking, covalent binding etc., - examples, advantages and disadvantages. Case studies include dehydrogenases, proteases - lysozyme- stability of proteins

MODULE IV PROTEIN FOLDING 9

Kinetics of single substrate reactions; estimation of Michelis - Menten parameters, multisubstrate reactions- mechanisms and kinetics; turnover number; types of inhibition & models -substrate, product - folding of peptides.

MODULE V FOLDING PATHWAYS & ENERGY LANDSCAPES 9

Folding of ci2 - nucleation condensation mechanism - folding of barnase - time resolution - insights from theory - optimization of folding rates - molecular chaperones. Production and purification of crude enzyme extracts from plant,

animal and microbial sources; methods of characterization of enzymes; development of enzymatic assays.

TOTAL : 45

REFERENCES:

1. Structure and Mechanism In Protein Science: A Guide To Enzyme Catalysis and Protein Folding; A. R. Fersht, W.H. Freeman, 1999.
2. Bioorganic Chemistry; H. Dugas, Springer Verlag, 1999.

OUTCOMES:

At the end of this course students will be able to:

- Understand enzyme actions
- Understand enzyme kinetics
- Understand the mechanisms of protein folding

BTB1215 **BIO-PHYSICS** **L T P C**
3 0 0 3

OBJECTIVES:

This course aims to introduce the theories and concepts of biophysics of bio molecules which are considered important in biotechnology applications. To Learn the structures of biological molecules and to understand the concept of structural analysis.

MODULE I MOLECULAR STRUCTURE OF BIOLOGICAL SYSTEMS 7

Intermolecular bonds - Covalent - Ionic and hydrogen bonds -Biological structures -General features - Water structure - Hydration - Interfacial phenomena and membranes - Self assembly and molecular structure of membranes.

MODULE II CONFORMATION OF NUCLEIC ACIDS 7

Primary structure -Bases, sugars , phosphodiester bonds - Double helical structure, A,B and Z forms - Properties of circular DNA - Topology - Polymorphism and flexibility of DNA - Structure of ribonucleic acids - Hydration of nucleic acids - Thermodynamics of DNA denaturation - Changes in nucleic acid structures during biochemical processes.

MODULE III CONFORMATION OF PROTEINS 7

Conformation of the peptide bond - Secondary structures - Ramachandran's plots - Use of potential functions - Tertiary structure - Dynamics of protein folding - Hydration of proteins - Hydropathy index - Effect of amino acids on the structure of proteins - Energy status of a protein molecule - Helix coil transformation of proteins.

MODULE IV CELLULAR PERMEABILITY AND ION - TRANSPORT 8

Ionic conductivity - Transport across ion channels - Mechanism - Ion pumps - Proton transfer - Nerve conduction - Techniques of studying ion transport and models.

MODULE V ENERGETICS AND DYNAMICS OF BIOLOGICAL SYSTEMS 8

Concepts in thermodynamics - Force and motion - Entropy and stability -

Analyses of fluxes - Diffusion potential - Basic properties of fluids and biomaterials - Laminar and turbulent flows.

MODULE VI METHODS IN BIOPHYSICS **8**

Fractionation of proteins using: PAGE, PAPER electrophoresis, TLC: Amino acids/ sugars/ fruit juice/oil, Column chromatography for protein /pigment, study of conformational changes in biomolecules using Ostwald viscometer Refractoemetry: study of sugars/proteins/amino acids.

TOTAL : 45

REFERENCES :

1. Cantor, C.R. and Schimmel, P.R., Biophysical Chemistry, W.H Freeman and Company, Press, New York, 4th Edition, 1999.

2. Glaser, R., Biophysics, Springer Verlag, London, 2nd Edition, 2004.

OUTCOMES:

At the end of the course the students will be able to

- Develop a conceptual framework for understanding the system by identifying the key physical principles, relationships, and constraints underlying the system.
- If required, develop a physical experiment to analyze the system withint h e framework which includes : designing the experiment; making basicorder-of-magnitude estimates; working with standard data-measuringd e v i c e s such as oscilloscopes, digital multi-meters, signal generators, etc.;
- Identify and appropriately address the sources of systematic error and statistical error in their experiment.

SSB1182 SOCIOLOGY, ETHICS AND HUMAN VALUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To give an overview of the fundamental of sociology.
- To expose how society developed in India, classes and impact.
- To introduce sociological aspects relating to industry
- To provide some basic concepts on ethics and human rights.
- To stress the role of engineer to the society, environment and sustainability.

MODULE I FUNDAMENTALS OF SOCIOLOGY **7**

Sociology - definition, evolution - scope - basic concepts - social process, sociological theories, social institutions, culture and social stratification - family - economic - politics - religion - education, state and civil society - social control.

MODULE II SOCIOLOGY IN INDIAN CONTEXT **7**

Development - Institutions, classes - women and society - impact of social laws, social change in contemporary India - secularism and communalism - social exclusion and inclusion.

MODULE III INDUSTRIAL SOCIOLOGY **7**

Definition and perspectives - industry in India - social groups in industry, behaviour pattern - group dynamics - focus groups - team - enhancing group behaviour.

MODULE IV INDUSTRIAL - SOCIETY INTERFACE **8**

Perspectives - social responsibilities - sociological effect on industrialization - urbanization, child labour, psychological impact, Impact of technology, modernization - globalization - challenges - role of engineers.

MODULE V ETHICS AND HUMAN VALUES **8**

Ethics and values - organizational values - personal worth, ethical behavior, professional ethics, whistle blowing, international ethics, corruption.

MODULE VI ENGINEERS AND SOCIETY **8**

Quality of life and society - engineer in economic development, technology development - invention, innovation and diffusion - appropriate technology - engineer's contribution, ecology and environment - sustainability - role of engineers.

5. Thopar, Romila, Early India, Penguin (2003).
6. Mike Martin and Roland Schinzinger, Ethics in Engineering, McGraw Hill, New York, 1996.

OUTCOMES:

At the end of the course students will

- Have an exposure to the fundamentals and basic concepts of Sociology.
- Gain knowledge in Industrial Sociology.
- Have gained knowledge about the impact of technology, modernization, globalization and their contribution towards society.

BTB1216 BIOCHEMISTRY LABORATORY L T P C
0 0 4 2

OBJECTIVES :

Provides opportunities to experimentally verify the theoretical concepts already studied. It also helps in understanding the theoretical principles in a more explicit and concentrated manner. The students should be able to understand and develop their skills in

- Accuracy and Precession of analysis
- Qualitative testing of Carbohydrates
- Identification of amino acids and proteins
- Quantitative analysis of nucleic acids and enzymes.

LIST OF EXPERIMENTS

1. pH measurements and preparation of buffers.
2. Qualitative tests for Carbohydrates.
3. Estimation of sugars.
4. Estimation of proteins by Lowry's method / Biuret method.
5. Estimation of cholesterol by Zak's method.
6. Determination of saponification number of lipids.
7. Separation of amino acids - Thin layer chromatography.
8. Separation of sugars - Paper chromatography
9. Biochemical estimation of DNA /RNA using Spectrophotometer

BOOKS:

Laboratory Manual

OUTCOMES

Students will learn about the biomolecules, estimation of biomolecules and analytical techniques including spectrophotometer and chromatography.

BTB1217	CELL BIOLOGY LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

Provides an opportunity to experimentally verify the theoretical concepts already studied. It also helps in understanding the theoretical principles in a more explicit and concentrated manner. The students should be able to

- Understand explicitly the concepts
- Develop their skills in the preparation and identification of cell structures and their functions.

LIST OF EXPERIMENTS:

1. Microscopic study of cell and cell organelles
2. Cell fractionation
3. Fixation, Dehydration, embedding and sectioning of tissues
4. Histology of extracellular matrix
5. Isolation of microtubules
6. Isolation of actin and Myosin filaments
7. Isolation of Mitochondria
8. Nuclear staining

REFERENCE:

Laboratory Manual

BTB1218 MICROBIOLOGY LABORATORY L T P C
0 0 2 1

OBJECTIVES:

Provides an opportunity to experimentally verify the theoretical concepts already studied. It also helps in understanding the theoretical principles in a more explicit and concentrated manner. The students should be able to

- Understand explicitly the concepts
- Develop their skills in the preparation, identification and quantification of microorganisms

LIST OF EXPERIMENTS:

1. Sterilization techniques
2. Media preparation
3. Microscopy and Micrometry
4. Isolation, enumeration and purification of microbes from a given sample
5. Staining Techniques (Simple, Gram staining, spore staining)
6. Motility test by Hanging drop method
7. Biochemical Characterization of Bacteria Oxidation/Fermentation Test, Catalase, Oxidase and Urease Tests, IMViC test, Hydrogen Sulfide Test and Nitrate Reduction Test. Casein and Starch Hydrolysis
8. Antibiotic Assay - Antimicrobial Sensitivity Test (Disc Diffusion Method)
9. Growth Kinetics (Bacterial Growth Curve)
10. Isolation of antibiotics producing bacteria
11. Isolation and characterization of plant microbes

REFERENCE:

Laboratory Manual

OUTCOME:

Students will learn about

- Basic methods in microbiology
- Characterization and isolation of bacteria isolated from various sources
- Growth kinetics of Bacteria

ENB2182 COMMUNICATION SKILLS LABORATORY

L	T	P	C
0	0	2	1

OBJECTIVES:

- To help the students acquire efficiency in Spoken English with due importance to Stress, Accent and Pronunciation
- To enable them to make Presentation effectively
- To prepare them for Interviews and Group Discussions
- To train them in writing official letters , resume'writing and reports.

MODULE I **4**

Theory: Oral and Written Communication – implications in real life and workplace situations

Lab: Listening to ESL Podcast- Viewing Multimedia- Listening to BBC News- Received Pronunciation (RP/VOA/NDTV) – exposure to paralinguistic features.

MODULE II **6**

Theory:

(i) One–minute Presentations (JAM) on concrete and abstract topics that test their creative thinking

(ii) Prepared presentations and extempore presentations

Lab: viewing Presentation Tips, Interviews Skills

(iii) Group project – presentation on any social issue. The group will have to research on the history of the problem, its cause, impact and outcome hoped for and then make a presentation

MODULE III **4**

Theory: Developing persuasive skills – establishing a point of view - convincing some one on social issues such as preservation of water, fuel, protection of environment, gender discrimination.

Lab: Negotiating Skills, Expressing Opinion

MODULE IV **4**

Theory: Brainstorming – Think, pair and share activity – Discussion etiquette

– Assigning different roles in a GD (Note-taker, Manager, Leader and Reporter)

Lab: Viewing Group Discussion

MODULE V **8**

Theory: Written correspondence - Letter of Application and CV - e-mail writing - writing instructions and recommendations – Lab reports

Lab: Resume' writing – viewing different types – Functional, Chronological- Writing one's resume using wiki, viewing e-mail etiquette, format and style.

MODULE VI **4**

Theory: Technical Writing –Writing a technical Proposal – format- cover page, executive summary, time line chart, budget estimate, drafting, conclusion.

6. Riordan & Pauley. 'Report Writing Today'. 9th Edition. Wadsworth Cengage Learning, USA. 2005.

OUTCOME:

On completion of the course, the students will have the ability to speak effectively and write official letters, reports and proposals.

SEMESTER-III

BTB2101 ENZYME TECHNOLOGY L T P C
4 0 0 4

OBJECTIVES:

The course aims to present the current methods of enzyme characterization, detailing the structures and kinetic properties of the enzymes, the biotechnological strategies to improve the stability and activity of the enzymes and to study the applications of enzyme technology.

MODULE I ENZYMES AND STRUCTURE 10

Enzymes, brief history of enzymes, nomenclature and classification of enzymes.Chemical nature of Enzymes: amino acids, the building blocks of protein, Levels of protein Structure: Primary, secondary, tertiary and quaternary structure, Specificity of Enzymes: Types of specificity, the Koshland “induced fit” hypothesis,Strain or transition – state stabilization hypothesis.

MODULE II ENZYME CATALYSIS AND KINETICS 12

Factors affecting the rate of chemical reactions, kinetics of uncatalyzed chemical reactions, kinetics of enzyme-catalyzed reaction, methods for investigating the kinetics of enzyme-catalyzed reactions, nature of enzyme catalysis, inhibition of enzyme activity,The identification of binding sites and catalytic site, three dimensional structure of active site, mechanism of catalysis, mechanism of reaction catalyzed by enzyme without cofactors, metal-activated enzyme and metalloenzyme, coenzymes in enzyme catalyzed reactions.

MODULE III IMMOBILIZATION OF ENZYMES 8

Concept, methods of immobilization, Kinetics of immobilized enzymes, effect of solute partition and diffusion on kinetics of immobilized enzymes, use of immobilized enzymes, bioreactors using immobilized enzyme. Prediction of enzyme structure, design and construction of novel enzymes.

MODULE IV INDUSTRIAL USES OF ENZYMES 10

Industrial enzymes: Sales value of industrial enzymes, traditional (non-recombinant) sources of industrial enzymes, The impact of genetic engineering on enzyme production, Engineered enzymes, Extremophiles: hyperthermophiles, enzymes from hyperthermophiles, enzymes from additional extremophiles, enzymes in organic solvent.

MODULE V INDUSTRIAL ENZYMES PROTEASES AND CARBOHYDRASES **10**

Proteolytic enzymes: Carbohydrases, Lignocellulose degrading enzymes, Pectin and pectic enzymes, Lipases, Penicillin acylase, Amino acylase and amino acid production, cyclodextrins and cyclodextrin glycosyl transferase, enzymes in animal nutrition, Oxidoreductases, Enzymes in molecular biology.

MODULE VI BASIC TOXICOLOGY **10**

Introduction to Toxicology, Definition of toxicology, toxicant, toxicity, LC50, LD50; Measurements of toxicants and toxicity, Class of chemicals of toxic importance, Sources of toxic compounds, Absorption and distribution of toxicants, Routes of absorption in mammals, Distribution of a Toxicant, Toxicodynamics, Metabolism of toxicants, Applications of toxicology, Toxicity studies of liver in animals.

TOTAL : 60

REFERENCES:

1. Enzymes by Palmer (2001): Horwood Publishing Series.
2. Fundamentals of Enzymology by Price and Stevens (2002): Oxford University Press.
3. Enzyme Technology by Helmut uhling (1998): John Wiley
4. Introduction to Proteins Structure by Branden and Tooze (1998): Garland Publishing Group.

OUTCOMES:

At the end of the course the students will be able to

- Discuss enzyme properties, enzyme nomenclature, enzyme mechanism as well as kinetics of enzyme-catalysed reactions
- Describe the methods for production and purification of recombinant enzymes as well as discuss how enzymes can be utilized in the laboratory and industrially
- Conduct experimental work to assay enzymatic activity as well as carry out protein purification of an enzyme
- Evaluate the current application of enzymes in the field of biotechnology

BTB2102 BIOINFORMATICS L T P C
3 0 0 3

OBJECTIVES:

The course aims to provide the students with an experimental and computational knowledge to embrace a systems biology approach and experience authentic systems genetics research by designing and conducting independent research projects.

MODULE I INTERNET AND BIOINFORMATICS 7

Internet basics, FTP, Gopher, World-wide web, Information Retrieval from Biological Databases: Retrieving database entries, integrated information retrieval: The entrez system, sequence databases beyond NCBI, Medical Databases.

MODULE II DATABASES 8

Introduction, Primary & Secondary database, Format vs content: computer vs humans, GenBank Flat File dissection, GCG, ACDEB. Introduction, SeqIDS, Bioseq: Sequences, Bioseqsets: Collections of sequences, Seq. Annot: Annotating the sequence, Seqdiscr: Describing the sequence, Structure Databases: Introduction to structures, PDB, MMDB, Structure file formats, Visualizing structural information, Database structure viewers.

MODULE III SEQUENCE ALIGNMENT AND DATABASE SEARCHING 8

Introduction, Evolutionary basis of sequence alignment, Optimal alignment methods, Substitution scores & gap penalties, Statistical significance of alignments, Database similarity searching, FASTA, BLAST, Low complexity regions, Repetitive elements, Multiple Sequence Alignment: Progressive alignment methods, Motifs and patterns,Hocks, MOST, Probe, Presentation methods, Abscript.

MODULE IV PHYLOGENETIC ANALYSIS 7

Elements of phylogenetic models, data analysis: Alignment, substitution model building, tree building and tree evaluation, building methods, searching for trees, hooting trees, Evaluating trees and data, phylogenetic software Some simple practical consideration

MODULE V PREDICTIVE METHODS **8**

Framework, marking repetitive DNA, Database search, Codon bias detection, Detecting function sites in the DM, Integrated gene passing, Finding tRNA genes, Protein identity based on composition, Propsearch, Physical properties based on sequences, secondary structure and folding classes, spread sopma, Specialized structures of features, Tertiary structure.

MODULE VI ADVANCED BIOINFORMATICS **7**

Further applications on the design of new molecules 3D data base searching and virtual screening, Sources of data, molecular similarity and similarity searching, combinatorial libraries-generation and utility.

TOTAL: 45

REFERENCES:

1. Bioinformatics: A practical guide to the analysis of genes and proteins A.D. Baxevanis and B.F.F. Ouellette (Eds). 2002 John Wiley and Sons.

2. Bioinformatics: Sequence and Genome Analysis by D.W. Mount, 2001, Cold Spring Harbor Laboratory Press.

OUTCOMES

At the end of the course students will be

- Familiar with principles used in modelling dynamic phenomena in cells and methods that are used to analyze computational models
- Able to understand basic research methods in bioinformatics
- Able to understand the data structure (databases) used in bioinformatics and interpret the information (especially: find genes; determine their functions), understand and be aware of current research and problems relating to the area of their research project, to be able to critically evaluate the literature and identify the most important body of work
- Aware of the range of technologies available to computer scientists in bioinformatics
- Able to carry out data mining gene and protein expression patterns and modelling cellular interactions and processes

BTB2103 FUNDAMENTALS IN CHEMICAL ENGINEERING **L T P C**
4 0 0 4

OBJECTIVES:

- to prepare students for challenging careers in the chemical, petroleum, petrochemical, pharmaceutical, food and other related industries, and in the emerging areas such as biotechnology, microelectronics, energy and nanomaterials processing;
- to provide students with an appreciation of the role of chemical technology in society, and the skills of analyzing and solving related industrial problems;
- to prepare students for graduate study in chemical engineering and related
- disciplines; and
- to nurture engineer leaders with a global outlook.

MODULE I OVERVIEW OF PROCESS INDUSTRY **10**

Mass and energy conservation – Process automation – Environment – SI Modules – Conservation factors – Applied mathematics for experimental curve fitting – Numerical differentiation – Integration.

MODULE II MATERIAL BALANCES **10**

Overall and component balances – Material balances without and with chemical reactions – Degrees of freedom – Steady and unsteady state – Module operations – Recycle and by pass – Humidity calculations.

MODULE III FIRST AND SECOND LAWS OF THERMODYNAMICS **10**

Energy balances – Sensible heat – Latent heat – Vapour pressure – Steady and unsteady state calculations.

MODULE IV FLUID MECHANICS **10**

Fluids – Fluid statics and applications in chemical engineering – Fluid flow – Laminar – Turbulent – Pressure drops – Compressible fluid flow concepts – Multiphase flow concepts.

MODULE V FLOW THROUGH PACKED COLUMNS **10**

Fluidization – Centrifugal and piston pumps – Characteristics – Compressors – Work.

MODULE VI REACTORS **10**

Batch Reactors, Continuous reactors and Fed batch Reactors, Kinetics of Reactions and Scale-up of Reactors.

TOTAL : 60

REFERENCES:

1. Bhatt, B.I. and Vora S.M., "Stoichiometry", 4th Edition, Tata McGraw-Hill, 2004.
2. McCabe W.L., Smith J.C. and Harriot P., "Module Operations in Chemical Engineering", 7th Edition, McGraw-Hill Professional, 2005.
3. Geankoplis C.J., "Transport Processes and Unit Operations", 4th Edition, Prentice Hall, 2007.

5. Venkataramani, V. and Anantharaman, N., "Process Calculations", Prentice Hall, 2004.

OUTCOMES:

At the end of the course students will be able to demonstrate good knowledge and understanding of

- Mathematics, science and engineering principles (including ITC), relevant to the Process Industries.
- Economic evaluation principles relevant to engineering and engineers.
- The essential concepts, principles and theories in subjects of the student's own choice.
- The role of the engineer in society and as a team player, and the constraints within which their engineering judgement will be exercised.
- The professional and ethical responsibilities of engineers.

BTB2104 **BIOSTATISTICS** **L T P C**
3 1 0 4

OBJECTIVES:

This course aims to provide students with fundamental knowledge of the design and analysis of clinical trials and epidemiological studies, of statistical issues arising in biomedical research, and of important methods for the analysis of biostatistical data, including data from microarray experiments.

- Students will be able to make informed decisions based on data
- Students will be able to correctly apply a variety of statistical procedures and tests
- Students will know the uses, capabilities and limitations of various statistical procedures
- Students will be able to interpret the results of statistical procedures and tests.

MODULE I INTRODUCTION **10**

Introduction, Exploratory Data Analysis-Motivation, Population vs. Sample, "Scientific Method"- Definitions, Examples, Medical Study Designs - Graphical Displays: Dotplots, Stemplots, Histograms- Summary Statistics: Measures of Center - Summary Statistics: Measures of Spread.

MODULE II DATA MEASURE AND LOCATION **10**

Frequency distribution, graphical presentation of data by histogram,frequency curve and cumulative frequency curves,Mean, Medium, Mode and their simple properties(without derivation) and calculation of median by graphs: range, mean deviation,Standard deviation, Coefficient of variation.

MODULE III PROBABILITY AND DISTRIBUTION **10**

Random distributions, events-exhaustive, mutually exclusive and equally likely, definition of probability (with simple exercises), definition of binomial, Poisson and normal distributions and their inter-relations, Simple properties of the above distributions (without derivation).

MODULE IV CORRELATION AND REGRESSION **10**

Bivariate data – simple correlation and regression coefficients and their relation, Limits of correlation coefficient, Effect of change of origin and scale on correlation coefficient, Linear regression and equations of line of regression, Association and independence of attributes.

MODULE V SAMPLING **10**

Concept of population and sample, Random sample, Methods of taking a simple random sample, Tests of Significance: Sampling distribution of mean and standard error, Large sample tests (test for an assumed mean and equality of two population means with known S.D.);small sample tests (t-test for an assumed mean and equality of means of two populations when sample observations are independent, Paired and unpaired t-test for correlation and regression coefficients, T-test for comparison of variances of two populations, Chi-square test for independence of attributes, Goodness of fit and homogeneity of samples.

MODULE VI EXPERIMENTAL DESIGNS **10**

Principles of experimental designs, Completely randomized, Randomized block and latin square designs, Simple factorial experiments of 22, 23, 24 and 32 types, Confounding in factorial experiments (mathematical derivations not required); Analysis of variance (ANOVA) and its use in the analysis of RBD.

TOTAL : 60

REFERENCE:

1. Statistical methods in biology by Norman T.J. Bailey (3rd Edition), Cambridge University Press (1995).

OUTCOMES:

At the end of the course students will be able to

- Explain how the Central Limit Theorem applies in inference
- Interpret the meaning of con?dence intervals in context
- Interpret the results of hypothesis tests
- Make an informed decision, based on the results of inferential procedures

BTB2105 MOLECULAR BIOLOGY L T P C
3 0 0 3

OBJECTIVE:

The aim is to extend understanding of the molecular mechanisms via which genetic information is stored, expressed and transmitted among generations.

MODULE I DNA REPLICATION AND REPAIR 9

Mechanism of Prokaryotic and Eukaryotic DNA replication, Enzymes and accessory proteins involved in DNA, replication, DNA repair Mechanism.

MODULE II TRANSCRIPTION 9

Prokaryotic transcription, Eukaryotic transcription, RNA polymerase, General and specific transcription factors, Regulatory elements.

MODULE III MODIFICATIONS IN RNA 9

5'-cap formation, transcription termination, 3 '-end processing and polyadenylation, Splicing, Editing, Nuclear export of mRNA and mRNA stability.

MODULE IV TRANSLATION 9

Prokaryotic and Eukaryotic translation, the translation Machinery; Mechanisms of initiation, elongation and termination, regulation of translation, co-and post-translational modifications of proteins.

MODULE V REGULATION OF GENE EXPRESSION & ANTISENSE TECHNOLOGY 9

Lac operon, Ara operan, regulation in Eukaryotes; Molecular mechanism of antisense molecules, inhibition of spilicing, polyadenylation and translation, disruption of RNA structure and capping,

TOTAL : 45

4. Jeremy M Berg, John L Tymoczko, and LubertStryer. Biochemistry 5th edition

OUTCOMES:

On the completion of the above objectives student will be able to get the overview of classes Molecular Biology and understand the process involved in replication, transcription and translation and regulation of gene expression.

BTB2106 BASIC BIOANALYTICAL TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

The students will be exposed to basic concepts related with techniques and instrumentation widely used in Biotechnology.

MODULE I CALORIMETRY AND SPECTROSCOPY 9

Properties of electromagnetic radiations, interaction with matter. Ultraviolet spectroscopy: Origin of UV spectra, types of transition, chromophore & related terms, choice of solvent, instrumentation and applications Infra-red spectroscopy: Origin of infra-red spectra, modes of vibrations, instrumentation, sampling technique and applications; Nuclear magnetic resonance spectroscopy: Mass Spectroscopy: Origin, Instrumentation, types of ions produced, interpretation and applications of mass spectra GCMS, LCMS & MSMS.

MODULE II CENTRIFUGATION AND MICROSCOPY 9

Principle of centrifugation, rotors, different types of centrifuges, preparative and analytical centrifugation, ultra centrifugation. Optical microscopy, Bright field, Dark field, phase contrast and fluorescence microscopy. Electron microscopy: Transmission and scanning electron microscopy, Atomic force microscopy.

MODULE III ELECTROPHORESIS 9

General principle, support media. Agarose gels, polyacrylamide gels. SDS PAGE, 2D PAGE Pulsed field gel electrophoresis Iso-electric focusing Capillary electrophoresis

MODULE IV RADIOISOTOPE TECHNIQUES 9

Study of radioisotopes in biological samples, proportional and GM counter, scintillation counters, autoradiography, radio –immunoassay.

MODULE V CHROMATOGRAPHY 9

Introduction: Chromatography theory and practice. Paper chromatography. Thin layer chromatography. Ion exchange chromatography. Affinity

chromatography. Partition chromatography. Adsorption chromatography. Introduction to gas chromatography and HPLC. Permeation.

TOTAL : 45

REFERENCES:

1. Pierre C. ORD and CD in chemistry and biochemistry: An Introduction. Academic Press, 1972.
2. Paddock S. W. Confocal Microscopy methods & protocols.1st Edition, Human Press, 1999.
3. Murphy D. B. Fundamental of Light Microscopy & Electron Imaging. 1st Edition, Wiley-Liss, 2001.

OUTCOME:

- At the end of the course, the students will have sufficient scientific understanding of the basic concepts of molecular biology.
- Good understanding of protein synthesis and gene expression

BTB2107	BIOINFORMATICS LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To understand the sequence of protein and nucleic acids
- To understand the structural prediction of protein primary secondary, tertiary and quaternary structures.

LIST OF EXPERIMENTS

1. Study of internet resources in Bioinformatics
2. Internet protocols
3. Basic programming tags with XML, HTML and CML.
4. Algorithm used in data base
5. BLAST
6. FASTA
7. Prediction of DNA sequence
8. Prediction of protein sequence
9. Perl
10. Bioperl

DEMO (OPTIONAL)

1. Phylogenetic analysis
2. Shell Programming

REFERENCE:

Laboratory Manual

OUTCOME:

Students will get complete knowledge about sequence alignment, structure prediction, Phylogeny and algorithms

BTB2108 MOLECULAR BIOLOGY LABORATORY

L	T	P	C
0	0	3	1

OBJECTIVES:

- To learn basic techniques in molecular biology
- To study and to differentiated the electrochemical properties of nucleic acids

LIST OF EXPERIMENTS **30**

1. Agarose gel electrophoresis of chromosomal & plasmid DNA
2. Extraction of genomic DNA from bacteria
3. Extraction of plasmid DNA from bacteria
4. Extraction of genomic DNA from yeast cells
5. Isolation of RNA from bacteria
6. Isolation of DNA fragment from agarose gel

REFERENCE:

1. Michel R. G and Sambrook J. Molecular Coning- A laboratory manual. Cold spring harbor laboratory press, 2012.

OUTCOMES:

On the completion of the above experiments students will be able to handle DNA samples and also to isolate, purify and visualize nucleic acid.

BTB2109 BIOANALYTICAL TECHNIQUES LABORATORY

L	T	P	C
0	0	3	1

OBJECTIVES:

Provides an opportunity to experimentally verify the theoretical concepts of bioenergetics and protein engineering already studied. It also helps in understanding the theoretical principles in a more explicit and concentrated manner.

LIST OF EXPERIMENTS

1. Preparation of Acetate, Tris and Phosphate Buffer systems and validation of Henderson-Hasselbach equation.
2. Reactions of amino acids – Ninhydrin, Pthaldehyde, Dansyl chloride – measurement using colorimetric and fluorimetric methods.
3. Differential estimations of carbohydrates – reducing vs non-reducing, polymeric vs oligomeric, hexose vs pentose
4. DNA determination by UV-Vis Spectrophotometer – hyperchromic effect Separation of lipids by TLC.
5. Enzyme Kinetics: Direct and indirect assays – determination of Km, Vmax and Kcat, Kcat/ Km
6. Restriction enzyme – Enrichment and Module calculation
7. Ion-exchange Chromatagraphy – Purification of IgG and Albumin
8. Gel filtration – Size based separation of proteins
9. Affinity chromatography – IMAC purification of His-tagged recombinant protein
10. Assessing purity by SDS-PAGE Gel Electrophoresis
11. Chemical modification of proteins – PITC modification of IgG and Protein immobilization

REFERENCES:

2. Biochemical Calculations: How to Solve Mathematical Problems in General Biochemistry, 2nd Edition, Irwin H. Segel, 1976 John Wiley & Sons Publishers, Inc,

3. Principles and Techniques of Practical Biochemistry- Wilson, K. and Walker, J. Cambridge Press.

OUTCOME:

On the completion of the above objectives student will be able to perform biochemical assays, electrochemical techniques, spectrophotometry and chromatography.

SEMESTER-IV

BTB2211 GENETIC ENGINEERING

L	T	P	C
4	0	0	4

OBJECTIVES:

The course aims to provide an advanced understanding of the core principles and topics of Cell and Organism reproduction and the Principles of heredity and their experimental basis, and to enable students to be able to apply these principles in assessment of pedigrees to identify genotypes and predict the mating outcomes.

MODULE I GENETICS AND ORGANISM 10

Genetics and human affairs, Genetics and Biology, Genes and Environment, Techniques of genetic analysis, The chromosome theory of heredity, Sex chromosomes, Sex linkage, The parallel behaviour of autosomal genes and chromosomes.

MODULE II MENDELISM AND LINKAGE 12

Mendel's laws of inheritance, Interaction of genes, Variations on dominance, Multiple alleles, Lethal alleles, Several genes affecting the same character, Penetrance and expressivity, Linkage- Basic eukaryotic chromosome mapping, The discovery of linkage, Recombination linkage symbolism, Linkage of genes on X chromosomes, Linkage maps, Examples of linkage maps.

MODULE III FINE STRUCTURE OF GENES 10

The concept of promoter, Coding sequence, Terminator, Induction of gene for expression. The concept of extranuclear genome in higher plants and animals, Overview of mitochondrial genome, Chloroplast genome.

MODULE IV RECOMBINATION IN BACTERIA AND VIRUSES 10

Conjugation recombination and mapping the E.coli chromosomes, Transformation, Transduction, Chromosome mapping. Population genetics: Darwin's revolution, Variation and its modulation, The effect of sexual reproduction on variation, The sources of variation, Selection quantitative genetics

MODULE V PRINCIPLES OF PLANT BREEDING **9**

Objectives, Selfing and crossing techniques, Male sterility,Incompatability, Hybrid vigour.

MODULE VI HUMAN GENOME PROJECT **9**

Genetic diseases in humans, Genetics and society

TOTAL : 60

REFERENCES:

1. In Introduction to genetic analysis, Griffiths, Miller, Suzuki, Lewontin and Gelbart, Freeman and Company.
2. Genetics, A.V.S.S. Sambamurty, Narosa Publishing House.
3. Concepts of Genetics, Klug & Cummings, Prientice Hall.
4. Molecular Cloning, Moniatisetal, Cold Spring Harbor Laboratory

OUTCOMES:

At the end of the course students will be able to

- Describe the structure, function and replication of DNA as the genetic material
- Describe gene structure, expression and regulation
- Describe the chromosomal basis of inheritance and how alterations in chromosome number or structure may arise during mitosis and meiosis

BTB2212 IMMUNOTECHNOLOGY L T P C
3 0 0 3

OBJECTIVES:

The course is aimed at introducing the science of immunology and detailed study of various types of immune systems and their classification structure and mechanism of immune activation.

MODULE I INTRODUCTION TO IMMUNOLOGY 8

Properties of immune response, Innate and acquired immunity, active and passive immunity, Cells & Tissues of Immune System: Lymphocytes, Classes of lymphocytes, antigen presenting cells, NK Cells, Mast Cells, Dendritic Cell, Organs of the Immune System,Bone marrow, Thymus, Lymph node, Spleen, CALT, MALT.

MODULE II MOLECULAR IMMUNOLOGY 8

Molecular structure of antibody, Classification, Isotypes, Synthesis assembly and expression of immunoglobulin molecules, Nature of antigens, function and diversity, Generation of anti-body diversity, Antigens: Different characteristics of antigens, mitogens, Hapten, Immunogen, Adjuvants.

MODULE III MHC 8

Discovery of MHC complex, Role of MHC, Structure of MHC molecule, Binding of peptides to MHC molecules, MHC restriction, Effector Mechanism of Immune Response: Cytokines, T- cell receptors, cell activation, complement system, antigen processing and presentation, regulation of immune response.

MODULE IV IMMUNOLOGICAL TECHNIQUES 7

Antigen- antibody reactions, Immuno diffusion, immunoelectrophoresis, ELISA, RIA, fluorescence activated cell sorter.

MODULE V APPLIED IMMUNOLOGY 7

Immune system in health and disease, autoimmunity, hypersensitivity,tumor immunity, tissue and organ transplant, Synthetic vaccines.

MODULE VI HYBRIDOMA TECHNOLOGY **7**

Fusion of myeloma cells with lymphocytes, production of monoclonal antibodies and their application.

TOTAL: 45

REFERENCES:

1. Kuby- Immunology (4th Edition) by R. A. Goldsby, T.J. Kindt, B.A. Osborne.
2. Essentials of Immunology (6th Edition): Ivan Riot- Blakswell Scientific Publications, Oxford, 1988.
3. Fundamentals of Immunology: Paul W.E. (Eds.) Raven Press, New York, 1988.
4. Antibodies A laboratory Manual: Harlow and David Lane (1988), Cold spring harbor laboratory.

OUTCOMES:

At the end of the course students will be able to

- describe and explain the fundamental principles of modern immunology
- understand and apply related immunological techniques in medical laboratory profession
- relate and apply medical laboratory science knowledge to immunological changes in healthy and disease contexts

BTB2213 ANIMAL BIOTECHNOLOGY L T P C
3 0 0 3

OBJECTIVES:

The course aims to provide the students with the theoretical basis of the main mechanism of cell, tissues, organs and apparatus functionality and the current methods of animal cell culture and its application in research.

MODULE I INTRODUCTION TO ANIMAL TISSUE CULTURE 8

Background, Advantages, Limitations, Application, Culture Environment, Cell Adhesion, Cell Proliferation, Differentiation. Planning, Construction, Layout, Essential Equipments, Aseptic Technique, Objectives, Elements, Sterile Handling, Safety, Risk Assessment, General Safety, Fire, Radiation, Biohazards.

MODULE II MEDIA 7

Physicochemical Properties, Balanced Salt Solutions, Complete Media, Serum, Serum-Free Media, Disadvantages of Serum, Advantages of Serum-Free media, Primary Culture: Isolation of Tissue, Steps involved in primary cell culture, Cell Lines, Nomenclature, Subculture and Propagation, Immortalization of cell lines, Cell line designations, Routine maintenance

MODULE III CHARACTERIZATION & QUANTITATION OF CELL LINE 7

Need for characterization, Morphology,Chromosome Analysis, DNA Content, RNA and Protein, Enzyme Activity, Antigenic Markers, Transformation, Immortalization, Aberrant Growth Control, Tumorigenicity, Cellcounting, DNA content, Protein, Rates of Synthesis, Cell Proliferation, Plating Efficiency, Labeling Index, Generation Time.

MODULE IV CRYOPRESERVATION 8

Need of Cryopreservation, Preservation, Cell banks, Transporting Cells, Cytotoxicity: Introduction, In vitro limitations, Nature of assay, Viability assay, Survival assay, Microtitration assay, Transformation assay, In Vitro Fertilization and Embryo Transfer: Composition of IVF media, Steps involvedin IVF, Fertilization by means of micro insemination, PZD, ICSI, SUZI, MESA

MODULE V TRANSGENIC ANIMALS **7**

Methodology, Embryonic Stem Cell method, Microinjection method, Retroviral vector method, Applications of transgenic animals.

MODULE VI GENE THERAPY **8**

Ex-vivo gene therapy, In vivo gene therapy, Viral gene delivery system, Retrovirus vector system, Adenovirus vector system, Adeno-Associated virus vector system, Herpex simplex virus vector system, Non-viral gene delivery system, Prodrug activation therapy, Nucleic acid therapeutic agents

TOTAL: 45

REFERENCES:

1. Animal Cell Culture by John R.W. Masters Oxford University Press
2. Introduction to Cell and Tissue Culture by Jennie P. Mather and Penelope E. Roberts, Plenum Press, New York and London
3. Molecular Biotechnology: Primrose.
4. Animal Cell Biotechnology: R.E. Spier and J.B. Griffiths (1988), Academic press.

OUTCOMES:

At the end of the course students will be able to

- Apply biotechnological methods for basic research;
- Apply bimolecular methods to veterinary pharmacology, to the design, correct use and traceability of medicines;
- Apply reproduction methods with particular reference to gamete and embryo manipulation techniques, production of transgenic animals and cloning;
- Apply biomolecular techniques for the diagnosis and study of epidemiology andetiopathogenesis of infective and parasitic animal diseases, as well as for the production of biotechnological vaccines for veterinary use;

BTB2214 PLANT BIOTECHNOLOGY L T P C
3 0 0 3

OBJECTIVES:

The purpose of the course is to provide training in the science behind plant biotechnology, an appreciation of the current scope and limits to its industrial application, and the implications of modern methods of genetic modification for plant industries.

MODULE I HISTORY AND IMPORTANCE 7

Important events in the history of plant tissue culture, Cellular Totepotency: Introduction, cyto-differentiation, orgemogenic differentiation, loss of morphogenic potential in long-term cultures, practical applications of cellular totipotency.

MODULE II TISSUE CULTURE MEDIA 8

Introduction, media constituents, media selection, media preparation, Cell and Suspension Culture: Introduction, isolation of single cells, suspension cultures, culture of single cells, plant cell reactors, applications of cell culture, Proloplast Culture: Proloplast isolation, culture and regeneration.

MODULE III SOMATIC EMBRYOGENESIS 8

Introduction, some examples of formatic embryogenesis, factors affecting somatic embryogenesis, induction and development, maturation, Haploid Production: Introduction, techniques, factor affecting androgenesis, ontogeny ofandrogenic haploids, plant regeneration from pollen embryos, gynogeresis, haploidproduction through disport hybridization idiptridization to raise homozygous diploids,applications, limitations, Triploid Production: Introduction, callusing, histology and cytology of cells, organogenesis,applications of endosperm culture.

MODULE IV EMBRYO CULTURE 8

Introduction, techniques, culture requirements role of the suspensor in embryo culture, precocious germination, morphogenesis in the culture of seeds with partially differentiated embryos, micronugical experiments, embryo and seed culture of parasitic angiosperms, morphogenic potential of the embryo callus,

practial applications. In-vitro pollination and fertilization: Introduction, terminology, in vitro pollination, in vitro fertilization, applications.

MODULE V MICROPROPAGATION 7

Introduction, techniques, applications, production of pathogen free Plants, Production of secondary metabolites-Introduction, strategies used to optimize product yield, commercial aspects

MODULE VI GERMPLASM STORAGE 7

Introduction, long-term storages, short or medium term storage

TOTAL: 45

REFERENCES:

1. Experiments in Plant Tissue Culture by John H. Dodds & Lorin W. Robert.
2. Plant tissue Culture : Theory and Practice by S.S. Bhojwani and M.K. Razdan (1996) Elsevier, Amsterdam.
3. An Introduction to Plant Biotechnology by H C Chawla Oxford and IBH 2002

OUTCOMES:

At the end of the course the students will acquire:

- An understanding of the theoretical background knowledge in molecular, biochemical and plant sciences needed for an understanding of plant biotechnology.
- A working knowledge of laboratory techniques used in plant biotechnology.
- An appreciation of the issues associated with growing and using transgenic plants as food crops.
- An understanding of the aims and needs of industrial enterprises using plant biotechnology techniques to develop new products.
- A capacity to undertake research in plant biotechnology

BTB2215 INDUSTRIAL BIOTECHNOLOGY

L	T	P	C
3	1	0	4

OBJECTIVES:

This course helps the students to provide biologically trained students with appropriate academic studies and industrial experience to enable them to contribute to the field of biotechnology.

- To update students knowledge of new developments in biology of industrial relevance.
- To give students a broad understanding and experience, of technological processes involved in biotechnological industries.

MODULE I INTRODUCTION TO BIOTECHNOLOGY 10

Biotechnology, An interdisciplinary pursuit, A three-component central core, Product safety, Public perception of biotechnology, Biotechnology and the developing world.

MODULE II BIOCHEMICAL ENERGETICS 10

Energy Yielding and Energy Requiring Reactions, Calculations of Equilibrium Concentrations, Oxidation-Reduction Reactions, Metabolism and ATP Yield. Photosynthetic Phosphorylation, Active Transport, Second Law of Thermodynamics, Enthalpy and Entropy, Activation Energy.

MODULE III METABOLIC STRATEGIES 10

General Principles of Intermediary Metabolism, Regulation of Pathways, Strategies for Pathway Analysis,Bioprocess/fermentation technology: Bioreactor, Scale-up, Media design,Technology for microbial, mammalian and plant cell culture, Downstream processing.

MODULE IV ENZYME TECHNOLOGY & BIOPHARMACEUTICALS 10

Nature, Application, Genetic engineering & protein engineering, Immobilised enzymes and Technology of enzyme production, Introduction to genetic engineering, Antibiotics, Therapeutic proteins, Vaccines & monoclonal antibodies, Gene therapy.

MODULE V APPLICATIONS **10**

Introduction, Fermentation, Food processing, Sweeteners, Food wastes, Rapid diagnostics, Public acceptance & safety, Plant biotechnology, Forestry, Biological control, Animal biotechnology, Diagnostics in agriculture, Bioremediation. IPR, Safety, Social, moral and ethical aspects of Biotechnology

MODULE VI PRODUCTION MODERN BIOTECHNOLOGY PRODUCTS 10

Production of recombinant proteins having therapeutic and diagnostic applications, production of vaccines. Production of monoclonal antibodies. Products of plant andanimal cell culture.

TOTAL : 60

REFERENCES:

1. Biochemistry by Lubert Stryer. W. H. Freeman & Company, NY
2. Biochemistry by Lehninger. McMillan publishers
3. Biochemistry by Zubey. Wm. C. Brown publishers
4. Biotechnology, John E. Smith
5. Bioprocess Engineering Principles, Pauline M. Doran

OUTCOMES:

At the end of the course students will be able to acquire knowledge on

- The facts, concepts, principles and theories relevant to the broad area of Biotechnology.
- The professional and ethical responsibilities of the Biotechnologist.
- Current themes and/or insights, at/or informed by, the forefront of the Biotechnology Industry and its related disciplines.
- The techniques applicable to the area of Biotechnology.
- Processes which facilitate the critical evaluation of research, scholarship and methodologies within the area of Biotechnology.

GEB3201 ENVIRONMENTAL SCIENCE AND ENGINEERING **L T P C**
3 0 0 3

OBJECTIVES:

To impart the basic scientific knowledge on the environment and human impacts on various elements of environment and assessment tools.

MODULE I PHYSICAL ENVIRONMENT **8**

Earth's surface - the Interior of Earth - Plate Tectonics - Composition of the Crust: Rocks - formation and types, Soils - formation and components - soil profile. Atmosphere - structure and composition - weather and climate - tropospheric airflow; Hydrosphere - water budget - hydrological cycle - Rainwater and precipitation, River Water and solids, Lake Water and stratification, Seawater and solids, soil moisture and groundwater. Bioelement cycling - The Oxygen cycles - the carbon cycle - the nitrogen cycle - the phosphorous cycle - the sulfur cycle sodium, potassium and magnesium cycles.

MODULE II BIOLOGICAL ENVIRONMENT **7**

Cellular basis of life - prokaryotes and eukaryotes - cell respiration - photosynthesis - DNA and RNA - genetically modified life, Population dynamics - population - population growth - survival and growth curves - population regulation - future of human population, Biological communities - Five major interactions: competition, predation, parasitism, mutualism and commensalism - Concepts of habitat and niche - natural selection - species richness and species diversity - ecological succession and climax. Ecosystem and Biomes - Food Chains and food webs - biomagnifications - ecological pyramids - Trophic levels - Energy flow in ecosystem - ecosystem stability - Terrestrial and aquatic biomes.

MODULE III IMPACTS ON NATURAL RESOURCES AND CONSERVATION **9**

Biological resources - nature and importance - direct damage - introduced species - Habitat degradation, loss and fragmentation - Values of biodiversity - hotspots of biodiversity, threats to biodiversity- endangered and endemic species of India- conservation of biodiversity, in-situ and ex-situ conservation; Land Utilization - past patterns of land use - Urban and Industrial development

- deforestation, salinisation, soil erosion, and desertification - Modern Agriculture and Impacts; Waste management - types of solid wastes: domestic, municipal, industrial and e-wastes - disposal options - reduce, recovery, reuse - waste minimization, cleaner production technology.

MODULE IV IMPACTS ON WATER AND AIR AND CONSERVATION 8

Water pollution - organic oxygen demanding wastes - anthropogenic phosphate and eutrophication - Ground water contamination - Usage of fertilizer and pesticides- acid rain -acid mine discharges - toxic metals - organochlorines - endocrine disrupting substances- treatment process - Rain water harvesting and watershed management- manmade radionuclide's - thermal pollution; Atmospheric pollution - primary and secondary pollutants - anthropogenic, xenobiotic, synergism, sources and sink, residence time, levels and impacts of major pollutants - processes leading to smog, acid rain, global warming, stratospheric ozone depletion - Noise pollution and abatement.

MODULE V IMPACTS ON ENERGY AND CONSERVATION, ENVIRONMENTAL CRISIS 8

Energy - Renewable and non renewable energy resources - thermal power plants - nuclear fuels, fossil fuels, solar energy, wind energy, wave energy, tidal energy, ocean thermal energy, hydropower, geothermal energy, biomass energy; Environment crisis - state of environment in developed and developing countries- managing environmental challenges for future - disaster management, floods, earthquake, cyclone and landslides.

MODULE VI ENVIRONMENTAL IMPACT ASSESSMENT AND SUSTAINABILITY 5

Environmental Impact Assessment - Impacts: magnitude and significance - steps in EIA - methods - precautionary principle and polluter pays principle - role of NGOs and Public - value education - Environment protection act (air, water, wild life) and forest Conservation act; Concept of Sustainability - Sustainable Development - Gaia Hypothesis - Traditional Knowledge for sustainability.

TOTAL: 45

REFERENCES:

2. Environmental Science (Working with the Earth), G Tyler Miller, Jr., Thomson Brooks/Cole, 2006.
3. Physical Geology, Earth Revealed, David McGeary and Charles C Plummer, WCB McGraw Hill, 1998.
4. Sustainability: A Philosophy of Adaptive Ecosystem Management, Bryan G. Norton, 2005.
5. Environmental Impact Assessment, Larry W. Canter, McGraw-Hill, 1996.
6. The Revenge of Gaia: Why the Earth is Fighting Back and How We Can Still Save Humanity, James Lovelock, Penguin UK, 2007.

OUTCOME:

Students will be able to gain the basic scientific knowledge on the environment, human impacts on various elements of environment and their assessment tools.

BTB2216 GENETIC ENGINEERING LABORATORY

L	T	P	C
0	0	3	1

OBJECTIVES:

Provides an opportunity to experimentally verify the theoretical concepts already studied. It also helps in understanding the theoretical principles in a more explicit and concentrated manner. The students should be able to develop their skills in the

- Isolation of plasmid DNA, genomic DNA and RNA
- Electrophoresis and restriction digestion of DNA
- Phage titration

LIST OF EXPERIMENTS:

1. Preparation of Agarose Gel
2. Isolation of Plasmids
3. Isolation of Genomic DNA from blood, plant cell and bacteria
4. Isolation of RNA
5. Formaldehyde gel electrophoresis of RNA
6. Polyacrylamide gel electrophoresis of DNA
7. Restriction digestion of DNA
8. Ligation of digested of DNA
9. UV mutation
10. Phage Titration

REFERENCE:

Sambrook et al, "Molecular Cloning-A laboratory Manual"

OUTCOME:

Students will learn about

- Isolation of DNA, RNA,
- digestion and ligation of nucleic acids,
- mutation and phage titration

BTB2217	IMMUNOLOGY LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

Provides an opportunity to experimentally verify the theoretical concepts already studied. It also helps in understanding the theoretical principles in a more explicit and concentrated manner. The students should be able to develop their skills in

- Antigen - Antibody interaction
- Electrophoresis techniques

LIST OF EXPERIMENTS:

1. Blood grouping
2. Antigen-antibody reaction-Haemagglutination, precipitation-Widal and VDRL
3. Immunodiffusion, Immunoelectrophoresis.
4. Affinity chromatography for antibody purification.
5. ELISA-DOT and plate ELISA
6. Western blotting

REFERENCE:

Laboratory manual

OUTCOME

Students could independently perform diagnostics assays involving antigen-antibody reaction. They also learn to perform the qualitative and quantitative analysis using antibody.

BTB2218	ANIMAL AND PLANT CELL CULTURE LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

Provides an opportunity to experimentally verify the theoretical concepts already studied. It also helps in understanding the theoretical principles in a more explicit and concentrated manner. The students should be able to

- Understand explicitly the concepts
- Develop their skills in the animal and plant cell culture techniques

LIST OF EXPERIMENTS:

1. Preparation of culture media and sterilization
2. Fibroblast culture.
3. Study of effect of anti cancer agent in cell culture.
4. Live cell counting
5. Callus Induction
6. Shoot tip culture
7. Embryo / Endosperm Culture

REFERENCE:

Laboratory Manual

OUTCOME:

On the completion of the above objectives student will be able to explorethemselves about pre -requisites for animal as well as plant tissue culture.They will be able to understand cell cycle and alsotechnical applications of cell culture.

SEMESTER-V

BTB3101 MOLECULAR PATHOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

The course aims to provide the students with the theoretical basis of the main mechanism of cell, tissues, organs and apparatus functionality and the current methods of animal cell culture and its application in research.

MODULE I INTRODUCTION TO MOLECULAR BASIS OF DISEASE 9

Mechanisms of cell death, apoptosis, necrosis, pathways to apoptosis, acute and chronic inflammation, infection and host response, neoplasia

MODULE II MOLECULAR BIOLOGY AND GENETICS 9

Structure and organization of human genome, human genome project, genetic diseases, gene expression profiling, microarrays-applications in basic research and translational medicine

MODULE III PRINCIPLES OF MOLECULAR PATHOLOGY 9

History of approaches to disease, current practice and future prospect, pathogenesis of Hepatitis C, Acute myeloid leukemia and cystic fibrosis

MODULE IV MOLECULAR BASIS OF HUMAN DISEASES 9

Cardiovascular diseases-atherosclerosis, ischemic heart diseases, cardiomyopathies; lymphoid and myeloid diseases; diseases of immune system, major syndrome, pulmonary diseases, diseases of gastrointestinal tract, neuropathological disorders

MODULE V MOLECULAR THERAPEUTICS 9

Pharmacogenetics, SNPs, cytochrome P450 system, High throughput screening techniques, Gene therapy, Immunotherapy, recombinant drugs, embryonic stem cells.

TOTAL: 45

REFERENCES:

1. Animal Cell Culture by John R.W. Masters Oxford University Press
2. Introduction to Cell and Tissue Culture by Jennie P. Mather and Penelope E. Roberts
3. Plenum Press, New York and London
4. Molecular Biotechnology: Primrose.
5. Animal Cell Biotechnology: R.E. Spier and J.B. Griffiths (1988), Academic press.

OUTCOMES:

At the end of the course students will be able to

- Apply biotechnological methods for translational research;
- Apply bimolecular methods to pharmacology, to the design, correct use and traceability of medicines;

BTB3102 CHEMICAL AND BIO-THERMODYNAMICS

L	T	P	C
3	0	0	3

OBJECTIVES:

The course aims at making the students understand the fundamental principles and concepts of chemical and bio thermodynamics.

MODULE I THERMODYNAMIC PROPERTIES OF FLUIDS 7

Volumetric properties of fluids exhibiting non ideal behavior – Residual properties – Estimation of thermodynamic properties using equations of state – Calculations involving actual property exchanges – Maxwell's relations and applications.

MODULE II SOLUTION THERMODYNAMICS 7

Partial molar properties – Concepts of chemical potential and fugacity – Ideal and non-ideal solutions – Concepts and applications of excess properties of mixtures – Activity coefficient – Composition models – Gibbs Duhem equation.

MODULE III PHASE EQUILIBRIA 7

Criteria for phase equilibria – VLE calculations for binary and multi component systems – Liquid-liquid equilibria (LLE) and solid-solid equilibria (SLE).

MODULE IV CHEMICAL REACTION EQUILIBRIA 8

Equilibrium criteria for homogeneous chemical reactions – Evaluation of equilibrium constant – Effect of temperature and pressure on equilibrium constant – Calculation of equilibrium conversion and yields for single and multiple reactions.

MODULE V THERMODYNAMIC ANALYSIS OF PROCESSES 8

Concept of lost work – Entropy generation – Calculation of real irreversible processes – Power cycle – Liquefaction.

MODULE VI BIOCHEMICAL THERMODYNAMICS 8

Energetics of metabolic pathways energy coupling (ATP and NADH), stoichiometric and energetic analysis of cell growth and product formation-elemental balances, degree of reduction concepts-available –electron balance,

yield coefficients, oxygen consumption and heat evolution in aerobic cultures, thermodynamics efficiency of growth.

TOTAL : 45

REFERENCES

1. Smith, J.M., Van Ness H.C. and Abbott M., "Introduction to Chemical Engineering Thermodynamics", 6th Edition, Tata McGraw- Hill, 2001.
2. Narayanan, K.V., "A Text Book of Chemical Engineering Thermodynamics", Prentice Hall India, 2001.
3. Sandler, S.I., "Chemical, Biochemical and Engineering Thermodynamics", 4th Edition, John Wiley and Sons Inc., 2006.

3. Nicholls, D.G. and Ferquson, S.J., "Bioenergetics 3", 2nd Edition, Elsevier Science Ltd., 2002.

OUTCOMES:

At the end of the course the students will be well versed with the behavior of fluids under PVT conditions and also apply them for practical purpose, aim advantage will be to deal with power production and refrigeration processes. The study further provides a comprehensive exposition to theory and application of solution thermodynamics.

BTB3103 FOOD BIOTECHNOLOGY L T P C
4 0 0 4

OBJECTIVES:

The course aims to

- Provide a programme of education which can enable its graduates to enter a career in the food industry as technologists capable of ensuring the production and marketing of safe and quality foods.
- Provide a broadly based technological education whose graduates can also enter into employment in other sectors of the food chain, or related technical sectors, where they can apply their technological skills.
- Allow individuals to develop their capacity to undertake research into problems relating to the production and marketing of safe and quality foods.

MODULE I HISTORICAL BACKGROUND 12

History of Microorganisms in food, Historical Developments, Taxonomy, role and significance of microorganisms in foods. Intrinsic and Extrinsic Parameters of Foods that affect microbial growth, Microorganisms in fresh meats and poultry, processed meats, seafood's, fermented and fermented dairy products and miscellaneous food products, Starter cultures, cheeses, beer, wine and distilled spirits, SCP, medical foods, probiotics and health benefits of fermented milk and foods products.

MODULE II FERMENTATION 10

Brewing malting, mashing, hops, primary & secondary fermentation: Biotechnological improvements: catabolic repression, High gravity brewing, B-glucan problem, getting rid of diacetyl. Beer, wine and distilled spirits.

MODULE III NUTRITIONAL BOOSTS AND FLAVOR ENHANCERS 10

Emerging processing and preservation technologies for milk and dairy product, Microbiological Examination of surfaces, Air Sampling, Metabolically Injured Organisms,Enumeration and Detection of Food-borne Organisms. Bioassay and related Methods.

MODULE IV FOOD PRESERVATION 10

Food Preservation Using Irradiation, Characteristics of Radiations of Interest

in Food Preservation. Principles Underlying the Destruction of Microorganisms by Irradiation, Processing of Foods for Irradiation, Application of Radiation, Radappertization, Radicidation, and Radurization of Foods Legal Status of Food Irradiation, Effect of Irradiation of Food constituents.

MODULE V STORAGE 9

Stability Food Preservation with Low Temperatures, Food Preservation with HighTemperatures, Preservation of Foods by Drying, Indicator and Food-borne Pathogens, Other Proven and Suspected Food-borne Pathogens.

MODULE VI FOOD QUALITY AND CONTROL 9

Analysis of food, major ingredients present in different product, Food additives colour, flavour, vitamins, Microbial safety of food products, Chemical safety of food products, heavy metal, fungal toxins, pesticide and herbicide contamination.

TOTAL: 60

REFERENCES:

1. Modern Food Micro-Biology by James M. Jay, (2000), 6th edition, An Aspen Publication, Maryland, USA.
2. Food Microbiology: Fundamentals and frontiers by M.P. Doyle, L.R. Beuchat and Thoma J. Montville, (2001), 2nd edition, ASM press, USA.
3. Food Science and Food Biotechnology by G.F.G. Lopez & G.V.B. Canovas (2003), CRCPress, Florida, USA.

OUTCOMES:

At the end of the course students will be able to

- Integrate the scientific disciplines relevant to food
- Apply and communicate technological knowledge to meet the needs of industry andthe consumer for the production and marketing of safe and quality foods.

BTB3104 BIO PROCESS ENGINEERING L T P C
4 0 0 4

OBJECTIVES:

The course aims to provide the students with the theoretical basis Bioprocess principles and the integration of biochemistry, microbiology, cell biology and process engineering. It aims to exploit the potential of microorganisms and cells by technical means.

MODULE I INTRODUCTION TO ENGINEERING CALCULATION, PRESENTATIONS AND ANALYSIS OF DATA 7

Physical variables, dimensions, Modules, errors in data and calculations, testing mathematical models, process flow diagram

MODULE II MATERIAL & ENERGY BALANCES 10

Thermodynamics Law of conservation of mass, types of material balance products, electron balances, biomass yield, theoretical oxygen demand. Problems, Basic concepts, General Energy balance equations, Enthalpy calculations, Enthalpy changes in non-reactive processes, Types of energy balance calculations, Types of heat reactions, problems.

MODULE III UNSTEADY STATE MATERIAL AND ENERGY BALANCES 10

Material balance equation for CSTR, Energy balance equations, solving differential equations, solving mass balances, solving energy balances, problems.

MODULE IV FLUID FLOW AND MIXING 10

Classification of fluids, Reynolds number, Momentum transfer, Non – Newtonian fluids, Two-Parameter models, rheological properties of fermentation broths, mixing, power requirements for mixing, scale-up of mixing systems, role of shear in stirred fermentors, problems.

MODULE V HEAT& MASS TRANSFER 10

Equipments, mechanism of heat transfer, conduction, heat transfer between fluids, design equation for heat transfer systems, applications of design equations, problems, Mass transfer: Molecular diffusion, role of diffusion in

bio-processing, film theory, convective mass transfer, oxygen uptake and transfer in cell cultures, kLa determination, problems.

MODULE VI REACTOR ENGINEERING **13**

Bioreactor configurations, practical considerations for bioreactor construction, monitoring and control of bioreactors, ideal reactor operations, batch operation of a mixed reactor, case study of penicillin production. Homogeneous reactions: Basic reaction theory, calculation of reaction rates, general reaction kinetics for biological systems, yields in cell culture, cell growth kinetics,production kinetics, kinetics of cell death, problems, Heterogeneous reactions: Concentration gradients and reaction rates in solid catalysts,internal mass transfer and reaction, the Thiele modulous and effectiveness factor, external mass transfer, problems

TOTAL: 60

REFERENCES:

1. Bioprocess Engineering - Basic concepts by M. L. Schuler & F. Kargi, Entice Hall 1992.
2. Bioprocess Engineering Principles by Pauline M. Doran, Academic Press 1995.
3. Fermentation & Biochemical Engineering Hand Book (1983), Principles, Process
4. Design and Equipment. HC Vogel, Noyes.
5. Principal of Microbe & Cell Cultivation (1975), SJ Prit, Blackwell Scientific co.).
6. Bioprocess Computations in Biotechnology (Vol. 1) TK Ghose, Ellis howard Ltd.

OUTCOMES:

At the end of the course the students will be able to

- Understand the basic role of engineering in bio-processing applications
- Obtain a basic understanding of how cells work and become familiar with theenvironmental conditions (i.e. nutrients, pH, etc.) required for applications ofbiological components (cells or enzymes) to bio-processing systems.

- Understand and model enzyme kinetics and apply the models for analysis of immobilized enzymatic bioreactors.
- Utilize material balances to evaluate cell growth and substrate/product utilization in bioreactors.
- Design bioreactors to achieve desired results (i.e. specified cell concentration, production rates, etc.).
- Understand and apply scale-up methods for designing bioreactors.
- Become familiar with principles of recovery and purification techniques of bioprocesses.

BTB3105 PROTEIN ENGINEERING L T P C
3 0 0 3

OBJECTIVES:

The course aims to provide the students with a knowledge on the biosynthesis, structure and function of proteins and furthermore, the techniques associated with gene cloning and the expression of recombinant proteins. To provide knowledge about the design of proteins with specific properties.

MODULE I PROTEIN STRUCTURE 7

Introduction, Overview of protein structure, Higher level structure, Protein post-translational modification, Protein stability and folding, Protein Sources: Introduction, Microorganisms as sources of proteins, Proteins from plants, Animal tissue as a protein source, Direct chemical synthesis, Conclusion.

MODULE II PROTEIN PURIFICATION AND CHARACTERIZATION 8

Introduction, Initial recovery of proteins, Removal of whole cells and cell debrisConcentration and primary purification, Column chromatography, Protein inactivation and stabilization, Protein characterization, Large-Scale Protein Purification: Some general principles, Therapeutic protein production: some special issues, Range and medical significance of impurities potentially present in protein-based therapeutic products, Labelling and packing of finished products.

MODULE III THERAPEUTIC PROTEINS 8

Introduction, Blood products, Haemophilia A and B, Anticoagulants, Thrombolytic agents, Additional blood-related products, Vaccine technology, Vaccines for AIDS, Therapeutic Antibodies and Enzymes: Introduction, Antibodies for in vivo application, Therapeutic enzymes.

MODULE IV HORMONES AND GROWTH FACTORS USED THERAPEUTICALLY 8

Introduction, Insulin, Glucagon, Gonadotrophins, Growth hormone, Erythropoietin, Other growth factors, Thyrotrophin, Corticotrophin, Prolactin, Peptide Regulatory Factor, Interferons, Interleukins and Additional Regulatory Factors: Regulatory factors; cytokines versus hormones, Interferons, Interleukins, Tumour necrosis factors, Colony stimulating factors, Cytokine toxicity.

MODULE V PROTEINS USED FOR ANALYTICAL PURPOSES 7

Introduction, Enzymes as diagnostic/analytical reagents, Biosensors, Antibodies as analytical reagents.

MODULE VI NON-CATALYTIC INDUSTRIAL PROTEINS 7

Introduction, Functional properties of proteins, Milk and milk proteins, Animal and microbial proteins, Sweet and taste modifying proteins.

TOTAL: 45

REFERENCES:

1. Proteins: Biochemistry and Biotechnology by Gary Walsh. (2002): John Wiley & Sons Ltd.
2. Fundamentals of Protein Biotechnology: Edited by Stanley Stein (1990): Marcel Dekker, Inc.

OUTCOMES:

This Course will provide theoretical and methodological knowledge in Protein Engineering. In particular, the student will get acquainted with enzyme kinetics, rational protein engineering, and directed evolution of enzymes. In addition, expertise in enzyme immobilization and in enzymology in non conventional media will also be credited.

BTB3106 CHEMICAL REACTION ENGINEERING

L	T	P	C
4	0	0	4

OBJECTIVES:

To impart knowledge to design different types of chemical reactors. Students gain knowledge on different types of chemical reactors, the design of chemicalreactors under isothermal and non-isothermal conditions

MODULE I REACTION KINETICS **10**

Rate equation, elementary, non-elementary reactions, theories of reaction rate andtemperature dependency; Design equation for constant and variable volume batch reactors,analysis of experimental kinetics data, integral and differential analysis.

MODULE II DESIGN OF CONTINUOUS REACTORS **10**

Design of continuous reactors - stirred tank and tubular flow reactor, recycle reactors,combination of reactors, size comparison of reactors.

MODULE III MULTIPLE REACTIONS **9**

Design of reactors for multiple reactions - consecutive, parallel and mixed reactions - factorsaffecting choice, optimum yield and conversion, selectivity, reactivity and yield.

Module IV KINETICS OF COMPLEX REACTIONS **11**

Non-isothermal homogeneous reactor systems, adiabatic reactors, rates of heat exchangesfor different reactors, design for constant rate input and constant heat transfer coefficient,operation of batch and continuous reactors, optimum temperature progression.

MODULE V RESIDENCE TIME DISTRIBUTION **10**

The residence time distribution as a factor of performance; residence time functions andrelationship between them in reactor; basic models for non-ideal flow; conversion in non-ideal reactors.

MODULE VI CHEMICAL REACTOR DESIGN **10**

Transient and steady state analysis, Optimal design of reactors, Multiphase

reactors: fixed, fluidized, trickle bed, slurry etc, Non-ideal continuous flow reactors.

TOTAL: 60

REFERENCES:

1. Levenspiel O, "Chemical Reaction Engineering", Wiley Eastern Ltd., IInd Edition, 2000.
2. Smith, J.M, "Chemical Engineering Kinetics", McGraw Hill, IIIrd Edition, 1981.
3. Fogler.H.S., "Elements of Chemical Reaction Engineering", Prentice Hall of India Ltd.,IIIrd Edition, 2000.
4. Froment. G.F. & K.B.Bischoff, "Chemical Reactor Analysis and Design",John Wiley andSons, 1979

OUTCOMES:

At the end of the course students will be able to:

- Develop rate laws for use in reactor design based on reaction data from a reactor or set of reactors.
- Make comparisons of ideal reactor types (batch, plug flow, mixed flow, etc.) and be able to determine the best choice for simple objectives when using a single reactor or a set of reactors.
- Predict reactor performance in situations where a reacting gas has a significantly changing density, including the case of variable pressure within an ideal plug flow reactor.
- Determine optimal ideal reactor design for multiple reactions for yield or selectivity.
- Predict reactor performance for reactors when the temperature is not uniform within the reactor.
- Predict reactor performance in situations where the observed reaction rate is significantly influenced by internal mass transfer in porous heterogeneous catalysis (the iso-thermal effectiveness factor).

BTB3107	BIOPROCESS LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

Enables the student to develop their skills in the field of enzyme isolation its assay, enzyme kinetics and microbial fermentation. The students will be able to

- Develop their practical skills in enzyme isolation and purification.
- Evaluate enzyme kinetics
- Carry out enzyme immobilized reaction and microbial culture
- Develop practical skill in submerged and solid state fermentation.

LIST OF EXPERIMENTS:

1. Isolation of proteolytic organism from soil sample
2. Glucose assay by DNS method
3. Evaluations of enzyme kinetic parameters
4. Enzyme activity calculation
5. Determination of optimum pH for enzyme
6. Determination of optimum temperature for an enzyme
7. Enzyme immobilized by alginate gel method
8. Hydrolysis of starch by immobilized method
9. Effect of substrate concentration on biomass yield
10. Solvent extraction techniques for product recovery

REFERENCE:

Laboratory Manual

OUTCOMES:

At the end of the syllabus student will be able to understand the fundamentals of bioprocess techniques. Students will be familiar with techniques involved in downstream process.

BTB3108 CHEMICAL ENGINEERING LABORATORY

L	T	P	C
0	0	3	1

OBJECTIVES:

This course helps the students to experimentally verify the theoretical concepts they learnt in the course. To make the students to experimentally

- Determine the percentage extraction .
- Determine overall stage efficiency of a continuous counter current leaching unit.
- Verify the applicability of Freundlich equation for adsorption of acetic acid on activated carbon.
- Verify Rayleigh's equation.

LIST OF EXPERIMENTS:

1. Simple distillation
2. Steam distillation
3. Leaching
4. Batch adsorption
5. Diffusion
6. Air drying
7. Continuous absorption
8. Extraction
9. Vacuum drying
10. Infra red drying

REFERENCE:

1. Laboratory Manual

OUTCOMES:

At the end of the syllabus student will be able to understand the fundamentals of chemical engineering techniques. Students will be familiar with techniques involved in chemical engineering by performing distillations, adsorption and drying experiments.

BTB3109 PROTEIN ENGINEERING LABORATORY

L	T	P	C
0	0	3	1

OBJECTIVES:

Course aims to provide a detail understating of the concepts in protein engineering by providing hands on exposure to the methods in protein engineering.

LIST OF EXPERIMENTS:

1. Production of protein hydrolysates using enzymes.
2. Amino Acid Analysis by Precolumn Derivatization with 1-Fluoro-2,4-Dinitrophenyl-5-L-Alanine Amide.
3. Estimation of Disulfide Bonds Using Ellman's Reagent.
4. Quantitation of Cysteine Residues and Disulfide Bonds by Electrophoresis.
5. Protein Ladder Sequencing.
6. Isolation of Proteins Cross-linked to DNA by Formaldehyde
7. Chemical Methods of Analysis of Glycoproteins.
8. Monosaccharide Analysis by Gas Chromatography (GC)
9. Performic Acid Oxidation.
10. Modification of Arginine Side Chains with p-Hydroxyphenylglyoxal.
11. Amidation of Carboxyl Groups.
12. Modification of Sulfhydryl Groups with DTNB.
13. Chemical Cleavage of Proteins at Methionyl-X Peptide Bonds.
14. Chemical Cleavage of Proteins at Cysteinyl-X Peptide Bonds.
15. Enzymatic Digestion of Proteins in Solution and in SDS Polyacrylamide Gels.

REFERENCE:

The protein protocols hand book, 2nd edition by John M. Walker

OUTCOME:

On the completion of the above objectives student will be able to explore themselves about chemical methods to modify protein of interest. They will be able to understand techniques involved in qualitative and quantitative analysis of protein.

SEMESTER VI

BTB3211 STRUCTURAL BIOLOGY

L	T	P	C
4	0	0	4

OBJECTIVES:

The course aims to provide the students with a detailed understanding of the behavior of proteins in solution and how their properties may be altered by changing the physical surroundings. To provide an understanding of the theory and practical techniques involved in developing a purification process.

MODULE I METHODS FOR STRUCTURE DETERMINATION 10

Diffraction methods, X-ray crystallography, crystallization, resolution, temperature factors, electron density maps, NMR methods for protein structure determination

MODULE II PROPERTIES OF MACROMOLECULES IN CRYSTALLINE STATE 10

Protein crystal, physical properties, chemistry of crystalline proteins, enzymatic and biological activities, structural heterogeneity in protein crystals

MODULE III STRUCTURAL STATES OF PROTEINS 14

Secondary structure, chemical nature of polypeptide chains, beta structure, collagen triple helix, prediction of secondary structure, helical protein structures, quaternary structures, oligomeric enzymes, biological implications of quaternary structure, surface accessibility.

MODULE IV CONFORMATIONAL STATES AND HYDROGEN BONDS 13

Oxygenation of hemoglobin: two crystal conformation, hydrogen bonds and water molecules in crystalline proteins, hydrogen bonding positions, distribution of protein bound water, water networks in crystalline proteins

MODULE V PROTEIN COMPLEXES 13

Protein and nucleic acid complex, DNA binding motifs, helix-turn-helix, leucine zipper, metalloproteins, membrane protein structure by electron microscopy and X ray methods

TOTAL: 60

REFERENCES:

1. Protein: Biochemistry and Biotechnology by Gary Walsh (2002 John Wiley & Sons Ltd.)
2. Foundations of Structural Biology by Leonard J. Banaszak (2000) Academic Press.

OUTCOMES:

At the end of this course, students will be able to understand methods to determine and study protein structures

BTB3212 TISSUE ENGINEERING L T P C
4 0 0 4

OBJECTIVES:

The course aims to provide the students with an experimental knowledge to embrace a cell culture approach and experience authentic systems genetics research by designing and conducting independent research projects.

MODULE I INTRODUCTION 10

Basic definition, Structural and organization of tissues: Epithelial, connective; vascularity and angiogenesis, basic wound healing, cell migration, current scope of development and use in therapeutic and in-vitro testing.

MODULE II CELL CULTURE 11

Different cell types, progenitor cells and cell differentiations, different kind of matrix, cell-cell interaction. Aspect of cell culture: cell expansion, cell transfer, cell storage and cell characterization, Bioreactors.

MODULE III MOLECULAR BIOLOGY ASPECTS 12

Cell signaling molecules, growth factors, hormone and growth factor signaling, growth factor delivery in tissue engineering, cell attachment: differential cell adhesion, receptor-ligand binding, and Cell surface markers.

MODULE IV SCAFFOLD AND TRANSPLANT 13

Engineering biomaterials for tissue engineering, Degradable materials (collagen, silk and polylactic acid), porosity, mechanical strength, 3-D architecture and cell incorporation. Engineering tissues for replacing bone, cartilage, tendons, ligaments, skin and liver. Basic transplant immunology, stems cells: introduction, hepatopoiesis.

MODULE V CASE STUDY AND REGULATORY ISSUES 14

Case study of multiple approaches: cell transplantation for liver, musculoskeletal, cardiovascular, neural, visceral tissue engineering. Ethical, FDA and regulatory issues of tissue engineering.

TOTAL : 60

REFERENCES:

1. Principles of tissue engineering, Robert. P.Lanza, Robert Langer & William L. Chick, Academic press (2007).

2. The Biomedical Engineering –Handbook, Joseph D. Bronzino, CRC press (2006).

OUTCOMES

At the end of the course students will be

- Familiar with principles used in generating cell culture models as well as in manipulation of the same for basic and translational research

BTB3213 DEVELOPMENTAL BIOLOGY L T P C
4 0 0 4

OBJECTIVES:

This course aims to provide a thorough grounding in animal and plant developmental biology with particular emphasis on the role of cell-cell interactions.

Three major themes are highlighted in the lecture

- The genetic regulation of cell behaviour as the main determinant of development.
- The molecular mechanisms by which cells interact and are recruited to achieve complex morphogenesis.
- The significant role of post-embryonic regulation and environmental signals in the control of plant development.

MODULE I HISTORY & BASIC CONCEPTS 10

The origins of developmental biology, Concepts in development – Developmental signals in cell division & differentiation, Role of gene expression in development, Identifying developmental genes, Cell commitment & differentiation, Determination & induction of cell fate, Concept of morphogen & positional information.

MODULE II AN INTRODUCTION TO MODEL SYSTEMS 12

Model vertebrate organisms: X. laevis, Chicken, Mouse, Zebrafish, Model invertebrate organisms: D. melanogaster, C. elegans, Model plant: A. thaliana, Germ Cells & Sex, Genotypic & phenotypic sex-determiantion in mammals, D. melanogaster and C. elegans, Structure & Formation of germ cells, Fertilization, Patterning the Vertebrate Body Plan : Axes & Germ Layers, Setting up the body axes, The origin & specification of the germ layers, The Mesoderm & Early Nervous System, Somite formation & Patterning, Role of the organizer region & neural induction

MODULE III DEVELOPMENT OF THE DROSOPHILA 12

Body Plan, Specification of body axes & role of maternalgenes, Polarization of body axes during oogenesis, Patterning of early embryo & role of zygotic genes, Segmentation & role of pair-rule genes, Compartments & role of segment polarity genes, Selector & Homeotic genes, Development of Nematodes &

Cellular Slime Molds: Developmental axes determination in C. elegans, Cell-fate specification in C. elegans, Larval development in C. elegans, Vulva development in C. elegans, Patterning of the slug in slime mold, Cell differentiation in slime mold, Aggregation.

MODULE IV MORPHOGENESIS 9

Kinds of cleavage & blastulation, Types of tissue movement in gastrulation, Gastrulation in amphibians & mammals, Neural tube formation & neural crest migration.

MODULE V CELL DIFFERENTIATION & ORGANOGENESIS 8

Models of cell differentiation, Insect imaginal disc & wing development.

MODULE VI MOLTING & METAMORPHOSIS 9

Amphibian metamorphosis, Insect metamorphosis,Plant Development: Pattern development in early embryogenesis of angiosperms, Floral development.

TOTAL: 60

REFERENCE:

1. Developmental Biology, by Scott F. Gilbert (1997), Sinauer Associates, Inc.

OUTCOMES

At the end of the course students should be able to:

- Describe how regulation of gene expression is fundamental in cell differentiation.
- Describe developmental processes in animal model systems and recognise the importance of cell-cell interactions.
- Recognize the interplay between development and evolution.
- Describe the life cycle and particular advantages of using Arabidopsis thaliana as a model species for studying plant development.
- Recognize embryonic polarity systems and the importance of cell lineage and position in embryonic pattern formation.
- Describe genetic approaches to study plant development and molecular techniques used to localize gene expression.
- Recognize the ways in which analysis of plant morphogenesis is being used to manipulate the growth and development of crop plants.

BTB3214 CANCER BIOLOGY L T P C
3 0 0 3

OBJECTIVES:

This course will cover the origins of cancer and the genetic and cellular basis for cancer. It will examine the factors that have been implicated in triggering cancers; the intercellular interactions involved in cancer proliferation; current treatments for cancer and how these are designed; and future research and treatment directions for cancer therapy.

MODULE I FUNDAMENTALS OF CANCER BIOLOGY 7

Regulation of cell cycle, mutations that cause changes in signal molecules - Effects on receptor, signal switches, tumour suppressor genes - Modulation of cell cycle in cancer, different forms of cancers, diet and cancer.

MODULE II CANCER SCREENING METHODS 7

Cancer screening and early detection, detection using biochemical assays, tumor markers - Molecular tools for early diagnosis of cancer.

MODULE III PRINCIPLES OF CARCINOGENESIS 7

Theory of carcinogenesis - Chemical carcinogenesis, metabolism of carcinogenesis, principles of physical carcinogenesis, x-ray radiation - Mechanisms of radiation carcinogenesis.

MODULE IV PRINCIPLES OF MOLECULAR CELL BIOLOGY OF CANCER 8

Signal targets and cancer, activation of kinases - Oncogenes, identification of oncogenes, retroviruses and oncogenes – Detection of oncogenes, oncogenes and proto oncogene activity – Growth factors related to transformation - Telomerases.

MODULE V PRINCIPLES OF CANCER METASTASIS 8

Clinical significances of invasion, heterogeneity of metastatic phenotype - Metastatic cascade, basement membrane disruption - Three step theory of invasion, proteinases and tumour cell invasion.

MODULE VI NEW MOLECULES FOR CANCER THERAPY 8

Different forms of therapy - Chemotherapy, radiation therapy, detection of cancers, prediction of aggressiveness of cancer, advances in cancer detection, use of signal targets towards therapy of cancer - Gene therapy

TOTAL: 45

REFERENCES:

1. Bruce Alberts, Alexander Johnson, Julian Lewis, Martin Raff, Keith Roberts, Peter Walter. Molecular Biology of the Cell 5Edition, Garland Science; 2008.
2. Robert A. Weinberg. The Biology of Cancer 2nd Edition Garland Science, 2013

OUTCOMES:

At the end of the course students will be able to

- Explain how scientists Hippocrates and Galen coined the terms cancer and oncology.
- Describe how surgeon John Hunter and microscopic researcher Rudolf Virchow connected their observations to the pathology and treatment of cancer.
- List the common theories used to describe the cause of cancer.
- Overview the impact that the discovery of DNA by scientists Watson and Crick had on the cancer community.
- Discuss the finding of Nobel Prize winner Peyton Rous, that certain viruses can cause cancer.
- Differentiate between carcinoma, sarcoma, leukemia, and lymphoma and how these terms are used to name cancer types.
- Summarize why it is important to understand basic biology in the study of cancer.
- Name the six hallmarks of cancer.
- Outline how cancer starts and how it spreads.
- Identify common causes of cancer.

BTB3215	GENE MANIPULATION LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVE:

To provide an opportunity to experimentally verify the theoretical concepts of genetic engineering already studied. it also helps in understanding the theoretical principles in a more explicit and concentrated manner.

LIST OF EXPERIMENTS:

1. Isolation and Restriction enzyme digestion of bacterial genomic DNA
2. Purification of digested DNA
3. Ligation of DNA fragment with cloning vector
4. Preparation of competent cells
5. Transformation in E.coli with recombinant vector
6. Isolation of recombinants and confirmation of insert DNA in vector

OUTCOME:

The student will be able to understand and develop the concept of recombinant DNA technique.

ENB2282 CONFIDENCE BUILDING AND BEHAVIOURAL SKILLS **L T P C**
0 0 2 1

OBJECTIVES:

To enable the students to develop communication skills for verbal communication in the work place.

TOPICS OUTLINE:

This course is practical oriented one and exercises will be given to the students group users /individually depending upon the aspect considered. The following aspect will form the broad outline content of the syllabi. The exercises will be designed by the faculty member and coordinated by the overall course coordinator.

LAB ACTIVITIES:

- Introduction: Soft skills definition, examples
- Verbal communication: Case study, communication and discussion
  - Prepared speech
  - Impromptu speech
  - Debate: Case studies - Attitude and Behavior: role play and exploration
  - Ability to ask for help – communication and team work
- Manners and etiquette
  - Organization and Planning
  - Time keeping
  - Conduct in workplace
  - Conscientiousness
  - Work output
  - Professionalism
  - Motivation
- Ownership of tasks
- Adaptability/flexibility

ASSESSMENT:

The assessment will be continuous and portfolio based. The students must produce the record of the work done through the course of the semester in the individual classes. The portfolio may consist of a) the individual task outline and activities, b) worked out activities c) Pre-designed sheets which may be provided by the Faculty member. The portfolio will be used by the Faculty member for assessment. The course coordinator in consultation with the course committee shall decide at the beginning of the semester, the number of exercises, method of assessment of each and the weightage for the end semester assessment.

OUTCOMES :

The students should be able to:

- develop verbal communication skills
- debate with other students confidently
- communicate effectively their ideas

SEMESTER VII

BTB4101 BIOMEDICAL INSTRUMENTATION L T P C
4 0 0 4

OBJECTIVES:

- To provide an acquaintance of the physiology of the heart, lung, blood circulation and circulation respiration. Biomedical applications of different transducers used.
- To introduce the student to the various sensing and measurement devices of electrical origin. To provide awareness of electrical safety of medical equipments
- To provide the latest ideas on devices of non-electrical devices.
- To bring out the important and modern methods of imaging techniques.
- To provide latest knowledge of medical assistance / techniques and therapeutic equipments.

MODULE I PHYSIOLOGY AND TRANSDUCERS 13

Cell and its structure – Resting and Action Potential – Nervous system: Functional organisation of the nervous system – Structure of nervous system, neurons - synapse –transmitters and neural communication – Cardiovascular system – respiratory system – Basic components of a biomedical system - Transducers – selection criteria – Piezo electric, ultrasonic transducers – Temperature measurements - Fibre optic temperature sensors.

MODULE II ELECTRO – PHYSIOLOGICAL MEASUREMENTS 13

Electrodes –Limb electrodes –floating electrodes – pregelled disposable electrodes - Micro, needle and surface electrodes – Amplifiers: Preamplifiers, differential amplifiers, chopper amplifiers – Isolation amplifier. ECG – EEG – EMG – ERG – Lead systems and recording methods – Typical waveforms. Electrical safety in medical environment: shock hazards – leakage current- Instruments for checking safety parameters of biomedical equipments.

MODULE III NON-ELECTRICAL PARAMETER MEASUREMENTS 12

Measurement of blood pressure – Cardiac output – Heart rate – Heart sound – Pulmonary function measurements – spirometer – Photo Plethysmography,

Body Plethysmography – Blood Gas analysers : pH of blood –measurement of blood pCO_2, pO_2, finger-tip oxymeter - ESR, GSR measurements.

MODULE IV MEDICAL IMAGING 12

Radio graphic and fluoroscopic techniques – Computer tomography – MRI – Ultrasonography – Endoscopy – Thermography – Different types of biotelemetry systems and patient monitoring – Introduction to Biometric systems.

MODULE V ASSISTING AND THERAPEUTIC EQUIPMENTS 10

Pacemakers – Defibrillators – Ventilators – Nerve and muscle stimulators – Diathermy – Heart – Lung machine – Audio meters – Dialysers – Lithotripsy

TOTAL : 60

REFERENCES:

1. R.S. Khandpur, 'Hand Book of Bio-Medical instrumentation', Tata McGraw Hill Publishing Co Ltd., 2003.

2. Leslie Cromwell, Fred J.Weibell, Erich A.Pfeiffer, 'Bio-Medical Instrumentation and Measurements', IInd edition, Pearson Education, 2002 / PHI.

OUTCOMES:

The course will help the student to acquire an adequate knowledge of the physiological systems of the human body and relate them to the parameters that have clinical importance.

BTB4102 PROTEOMICS & GENOMICS

L	T	P	C
4	0	0	4

OBJECTIVES:

This course offers advanced level training on gene expression and gene therapy by covering topics such as genome mapping, proteomic techniques and new targets for drug discovery. To familiarize and expose the students to the Principle of gene expression, Concepts of functional genomics in biopharmaceutical industry, Application of gene therapy, Principles of proteomics and the role of models in genetic disorder.

MODULE I OUTLINE ABOUT GENOME 10

Genome organization (prokaryotes and Eukaryotes) – Physical mapping of genome - Whole genome sequencing - Various strategies of sequencing - Mass spectroscopy – Shotgun - Automation in sequencing finding genes and mutations - Genome sequence annotation.

MODULE II FUNCTIONAL GENOMICS 10

Construction and screening of cDNA libraries, PCR, yeast two hybrid systems - Serial analysis of gene expression (SAGE) – SAGE adaptation fro down sized extracts (SADE) – Pharmacogenomics.

MODULE III PROTEOME 10

Introduction - Methods exists to tackle the proteome complexity - Imaging mass spectroscopy - Protein chip array - Methods for protein interaction analysis - Multi dimensional chromatography.

MODULE IV PROTEIN STRUCTURAL GENOMICS 10

Determining gene function by sequence comparison – Determining gene function through conserved protein structure - Approaches to protein structural genomics.

MODULE V PROTEOMICS IN DRUG DEVELOPMENT 10

Role of Proteomics in Drug Development - Diagnosis of disease by Proteomics - Separation and identification techniques for protein analysis - Development of antibody based protein assay for diagnosis

MODULE VI ADVANCE TOPICS **10**

Proteomics in vaccine discovery from genome sequence to vaccine discovery, the case study, omics approaches of discovery

TOTAL: 60

REFERENCES:

1. Saccone, C., Pesole, G., Hand book of Comparative Genomics – Principles and Methodology, John Wiley and Sons Publication, New Jersey, 1st Edition, 2003.
2. Lesk, A.M., Introduction to Protein Science. Architecture, Function and Genomics, Oxford University press, New York, 2nd Edition, 2004.
3. Creighton, T.E., Protein Structure – A Practical Approach, Oxford University Press, New York, 4th Edition, 2004.
4. Brown, T.A., Genomes III, Garland Science, Taylore and Francis Group, New York, 3rd Edition, 2007.

OUTCOMES:

At the end of the course students will be able to

- Describe DNA sequencing technologies and recent advances for high throughput genomic sequencing.
- Compare and contrast different methods for functional genomic analysis.
- Provide examples of how genomics technologies have been applied to improve our understanding of biological systems.
- Compare and contrast classical approaches to understanding protein structure and function with recent proteomic approaches.
- Describe proteomic approaches and techniques used to investigate protein structure and function.
- Explain how specific proteomics techniques can contribute to understanding of biological systems.

BTB4103 FERMENTATION TECHNOLOGY L T P C
4 0 0 4

OBJECTIVES:

1. To educate the students about microorganisms, development of media, and anaerobic digesters
2. To make the students understand the fermentation process using these tools and its combination of bioprocess engineering

MODULE I PILOT PLANT FERMENTATION 10

Microbial fermentation, Mammalian cell culture system, Plant cell tissue and organ cultures.

MODULE II FERMENTATION DESIGN 11

Fermentation department, equipment and space requirements, the design of large fermenters (based on aeration), Statistical Methods for Fermentation Optimization.

MODULE III ENVIRONMENTAL CONCERNS ABOUT FERMENTATION 13

Environmental regulations and technology, laws and regulations, Technology (waste water), Waste water treatment strategy, Air (emissions of concerns), Selecting a Control Technology, Inorganics, and volatile Organic Compound Emission Control.

MODULE IV ANAEROBIC DIGESTERS 12

An overview of aerobic and anaerobic fermentation. Substrates, Products and Biogas, Operational Conditions, Types of anaerobic digesters.

MODULE V BIOREACTOR FOR PLANT CELL CULTURE 14

Biochemical Engineering of the Production of Plant – specific Secondary metabolites by Cell Suspension Cultures, Gas Concentration Effects on Secondary Metabolite Production by Plant Cell Cultures, Integrated Bioprocessing for Plant Cell Cultures and Large – Scale plant micro propagation.

TOTAL : 60

REFERENCES:

1. Fermentation and biochemical engineering handbook by Henry C. Ogal, 2nd edition, Noyes Publications.
2. Advances in Biochemical Engineering Biotechnology by T. Sceper and J.J Zhong; Springer Publication.
3. The Microbiology of anaerobic digesters by Michael H. Gerardi, A John Wiley & Sons, Inc., Publication, 2003.

OUTCOMES:

- This course will give a basic understanding of the types of fermentation process, bioprocess, and the preparation of media, and anaerobic digesters.
- This course is taught to give a basic understanding of the types of fermentation process, bioprocess, and the preparation of media, and anaerobic digesters.

BTB4104 NANO-BIOTECHNOLOGY L T P C
4 0 0 4

OBJECTIVES:

The course aims at introducing the underlying principles and applications of the emerging field of nanotechnology and nanoscience intended for a multidisciplinary audience with a variety of backgrounds. Introduces tools and principles relevant at the nanoscale dimension and discusses current and future nanotechnology applications in engineering, materials, physics, chemistry, biology, electronics and energy.

MODULE I INTRODUCTION 10

Technological impact of nano-scale systems, Micro and nano-systems and technologies - Overview of nano-devices and techniques.

MODULE II NANOSCALE MATERIALS 10

Strategies for nano architecture (top down and bottom up approaches) - Fabrication technologies and characterizations – Selfassembly systems, some aspects of nanofluidics- Surfactants, polymers, emulsions and colloids.

MODULE III INORGANIC NANOSCALE SYSTEMS FOR BIOSYSTEMS 10

Nano-structured materials, fullerenes - Properties and characteristics, carbon nanotubes - Characteristics and applications quantum dots and wires, gold nanoparticles and nanopores.

MODULE IV APPLICATIONS OF NANO-MOLECULES IN BIOSYSTEMS 10

Molecules of life - Proteins, lipids, RNA and DNA – Nanoscale elements for delivery of materials into cells, peptides coupled nanoparticles - DNA based artificial nanostructure proteins as components in nanodevices.

MODULE V APPLICATION OF NANO-BIOTECHNOLOGY IN DRUG DELIVERY 10

Nanoscale devices for drug discovery Micelles for drug delivery protein targeting - Small molecule - Protein interactions, microarray and genome chips.

MODULE VI NANOTECHNOLOGY FOR CANCER DIAGNOSIS 10

Nanobiosensors and nanobiochips, Nanomedicines, Drug targeting, Nanotechnology for cancer diagnosis and treatment – tumour targeted drug delivery system –nanotechnology for imaging and detection .Nanotechnology for cell destruction

TOTAL : 60

REFERENCES:

1. Mick Wilson, Kamali Kannangra, Geoff Smith., Nanotechnology, Oversees Press India Private Ltd, New Delhi, 2nd Edition, 2005.

3. Kimball Nill., Glossary of Biotech and Nanobioterms, CRC Publisher, California, 4th Edition, 2005.

OUTCOMES:

At the end of the course students will be able to

- Use knowledge of nano science and mathematics to: Follow protocols, Conduct science or engineering procedures, Fabricate products, Make conclusions about results, Troubleshoot, Discover
- Function effectively in a laboratory environment using complex instrumentation machinery and protocols
- Independently seek out innovations in the rapidly changing field of nano-technology
- Compile and analyze data and draw conclusions at the nano level.
- Design, implement and document experiments
- Collaborate and communicate effectively in a high tech environment

BTB4105 FERMENTATION LABORATORY L T P C
0 0 3 1

OBJECTIVES:

Provides an opportunity to experimentally verify the theoretical concepts already studied. It also helps in understanding the theoretical principles in a more explicit and concentrated manner. The students will be able to

- Develop the skills of large scale production of secondary metabolites.
- Identify the growth factors
- Study the batch and continuous culture growth
- Evaluate the temperature effect on culture growth

LIST OF EXPERIMENTS:

1. Temperature effect on growth-estimation of energy of activation and Arrhenius constant for microorganisms. Batch, fed batch and continuous cultures a) Estimation of Monod parameters b) Pure and mixed cultures.
2. Production of secondary metabolite by plant cells in a photobioreactor. Production of secondary metabolites in synthetic and complex industrial media.
3. Production of wine by yeast.
4. Production of Aminoacid.
5. Screening of process variables single dimensional search, Plackett Burman design, design expert etc.
6. Study of rheology of fermentation broth and power determination.

REFERENCE:

Laboratory manual

OUTCOMES:

On the completion of the above objectives student will be able to perform production and analysis fermented products.

BTB4106 BIOMEDICAL INSTRUMENTATION LABORATORY **L T P C**
0 0 3 1

OBJECTIVES:

- To acquire knowledge on immunological techniques
- To learn and perform antibody production in rabbit
- To train in various techniques involving antigen and antibody reactions

LIST OF EXPERIMENTS **30**

1. Blood pressure measurement
2. Determination of percentage Transmittance, Absorbance & Concentration of given solutions using Spectrophotometer
3. Demonstration of direct agglutination reactions
4. Estimation of Haemoglobin content by Sahli's method
5. Erythrocyte sedimentation rate – Wintrobe's method
6. Packed cell volume
7. ELISA
8. Blood group mapping
9. Slide and tube agglutination reaction
10. SDS-PAGE and Immunoblotting

REFERENCE:

1. Laboratory Manual

OUTCOME:

Students could independently perform diagnostics assays involving antigen-antibody reaction. They also learn to perform the qualitative and quantitative analysis using antibody.

BTBX01 PHARMACEUTICAL BIOTECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

The course aims to provide the students with the important principles and techniques that are used in the design and analysis of biopharmaceutical engineering processes.

MODULE I INTRODUCTION **7**

Development of drug and pharmaceutical industry – Therapeutic agents, their use and economics Regulatory aspects.

MODULE II DRUG METABOLISM AND PHARMACOKINETICS **7**

Drug metabolism - Physico chemical principles - Radio activity - Pharma kinetic action of drugs on human bodies.

MODULE III IMPORTANT UNIT PROCESSES AND THEIR APPLICATIONS **7**

Bulk drug manufacturers - Type of reactions in bulk drug manufacture and processes - Special requirement for bulk drug manufacture.

MODULE IV MANUFACTURING PROCESSES **8**

Compressed tablets, wet granulation - Dry granulation or slugging -Direct compression - Tablet presses, coating of tablets, capsules, sustained action dosage forms -Parental solution - Oral liquids – Injections – Ointment - Topical applications – Preservation -Analytical methods and test for various drug and pharmaceuticals - Packing techniques -Standard of hygiene and GMP.

MODULE V PHARMACEUTICAL PRODUCT AND THEIR CONTROL **8**

Therapeutic categories - Vitamins, laxatives, analgesics, nonsteroidal contraceptives - External antiseptics - Antacids and others, antibiotics, biological hormones - Quality management and control.

MODULE VI DRUG MANUFACTURE AND MARKET SPECIFICATIONS **8**

Principles of monoclonal antibodies production, design and development of ELISA kit. Monoclonal antibodies in diseases detection and treatment. Role of PCR in microbial, plant and animal cell/ virus detection. Principles of drug

manufacture- solutions, suspensions and emulsions. Topical application of ointments, creams, suppositories. Solid dosage forms-powders, granules, capsules, coating of tablets, aerosols. Preservation, packing techniques. Indian pharmacopoeia, Guide to good manufacturing practice. Preclinical and clinical trials, Role of regulatory agencies.

2. Remington., Pharmaceutical Science, Mark Publishing and Company, 2nd Edition, 1990.
3. Katzung, B.G., Basic and Clinical Pharmacology, Prentice Hall, New Delhi, 10th Edition, 2006.

OUTCOMES:

At the end of the course, students should be able to :

- describe the principles underlying the discovery, development and application of drugs of the future integrate the knowledge in explaining and evaluating the impact of biotechnology on modern medicine.
- discuss ideas and reach an agreement to the current and future prospect of pharmaceutical biotechnology and drug development in the global market

BTBX02 MEDICAL BIOTECHNOLOGY L T P C
3 0 0 3

OBJECTIVES:

The course aims to build on previous study and, through team-based research, student-led journal clubs and critical evaluation of scientific literature, challenge you to investigate new developments in selected, medical applications of biotechnology.

MODULE I SIMPLE PROTEINS AND THERAPEUTIC AGENTS 8

Proteins as therapeutic agents - Choice of expression systems and optimizing gene expression - Applications, delivery and targeting of therapeutic proteins - Engineering human interferons and human growth hormones - Regulatory aspects of therapeutic proteins - Enzymes as therapeutic agents - Use of genetically engineered DNase I and alginate lyase for treatment of Cystic Fibrosis.

MODULE II MONOCLONAL ANTIBODY AS THERAPEUTIC AGENT 8

Production of monoclonal antibodies - Human monoclonal antibodies, its scope and limitations - Hybrid human – Mouse antibodies - Production of antibodies in E. coli -Approaches for producing HIV therapeutic agents.

MODULE III HUMAN DISEASES 8

Viral and bacterial diseases - Diseases caused by protozoan and parasitic worms (helminths) - Emerging infectious diseases – Active and passive immunity – Autoimmunity- Rational of immunization - Diseases controllable by vaccination – Vaccines, designing vaccines adjuvants - Whole organisms vaccines - Attenuated viruses and bacteria - Inactivation of pathogenic organisms by heat and chemical treatment.

MODULE IV VACCINES 7

Bacterial polysaccharides, proteins and toxins as vaccines -Recombinant vaccines- subunit, attenuated and vector vaccines -Multivalent vaccine development against AIDS - Commercial and regulatory aspects of vaccine production and its distribution

MODULE V APPLICATION OF GENETIC ENGINEERING IN HEALTH CARE 7

Production of Recombinant Proteins having therapeutic and diagnostic applications, recombinant vaccine.

MODULE VI DIAGNOSIS AND KIT DEVELOPMENT 7

Use of enzymes in clinical diagnosis - Use of biosensors for rapid clinical analysis - Diagnostic kit development for microanalysis

TOTAL : 45

REFERENCES:

1. Glick, B.R., Pasternak, J. J., Molecular Biotechnology, Principles and Application of Recombinant DNA, ASM press, Washington, 2nd Edition, 1998
2. Ratledge, C., Kristiansen, B., Basic Biotechnology, Cambridge University Press, USA, 2nd Edition, 2001.
3. David, E., Technology and Future of health care, Preparing for the Next 30 years, Jhon Wiley, Singapore, 2nd Edition, 2000.

OUTCOMES:

At the end of the course students will be able to

- Research, evaluate and critically assess the theoretical basis and practical application of selected medical biotechnologies
- Demonstrate knowledge and understanding of selected medical biotechnologies
- Describe in detail essential facts and theory in molecular biology and biotechnology when applied to medicine
- Describe and critically evaluate aspects of current research in the biosciences with reference to reviews and research articles
- With limited guidance, deploy established techniques of analysis and enquiry within the biosciences

BTBX03 DRUG DESIGN AND DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

The course aims to provide the students with an understanding of all aspects of the drug design concepts: genomics, bioinformatics, drug target selection, structural biology, molecular modeling, intellectual property and marketing.

MODULE I DRUG DISCOVERY AND DEVELOPMENT 9

Organized drug discovery and development – Pharmacology -Microbial, recombinant - Biochemical and molecular level screeningsystems and their construction strategies - Alternative strategies inlead identification - Lead optimization.

MODULE II DRUG DESIGNING 9

Rational basis of drug designing, criteria for synthesizing drugs -Drug designing approaches - Pharmacophore based drug design -Lead and target tissues - Lead finding and lead optimization - Action and reaction, structure based drug design process of structure based design - Receptor based design - Drug designing using known receptor structure - Design of energy inhibitors.

MODULE III COMPUTATION FOR DRUG DESIGNING 9

Overview of computer based tools for drug designing - Ludi, Ludi/CAP, auto dock, GRAMM, CAMD tools - Scoring and Docking mode-QSAR principles and methods in drug designing -Current research in drug designing , a case study - Drug design by receptor site fit, active site simulations using PDB structure data and homology modeling - Concept of perturbation free energy and its practical applications - Rational design of enzyme inhibitors - Enzyme catalytic principles - Recapitulation affinity labels - Illustrative examples - Principle of suicide inactivation – Design strategies - Scope and limitations.

MODULE IV MIMICING IN DRUG DESIGNING 9

Principles and practice of transition state mimicry – Illustrative examples - ACE, renin and HIV protease inhibitors – Collected substrate analog inhibitors and design strategies, illustrative examples - Combinatorial approach to compound libraries

MODULE V CURRENT STATUS AND FUTURE PROSPECTS 9

Synthetic peptide libraries - Peptide libraries through phage display - Applications in epitope and agretope mapping, synthetic vaccine design - Artificial combinatorial - Peptides, bezodiazepines and other current examples - Selection strategies and screening methodologies - Perspectives in gene therapy

3. Scolnick, J., Drug Discovery and Design, Academic Press, London, 1st Edition, 2001.

OUTCOMES:

At the end of the course students will be able to

- Effectively and critically evaluate each stage of the drug development process and predict future bottlenecks
- Critically evaluate validation of drug targets
- Manage and develop complex work situations related to drug discovery and development
- Critically evaluate chemical process development projects
- Independently initiate and carry out discipline-specific and interdisciplinary collaboration related to drug development
- Initiate, plan, implement and assume professional responsibility for drug development projects from discovery to clinical trials and registration
- Organise the elements of a drug development programme
- Liaise and communicate professionally, using scientific terminology, with other specialist groups within the drug development industry
- Take independent responsibility for own professional development.

BTBX04 INTELLECTUAL PROPERTY RIGHTS

L	T	P	C
4	0	0	4

OBJECTIVES:

This course creates awareness on the Biosafety, bioethics, Intellectual property rights and patenting of biotechnological processes. It introduces the biosafety regulations and ethical concepts in biotechnology and emphasizes on IPR issues and need for knowledge in patents in biotechnology.

MODULE I WTO **9**

As an international agency controlling trade among nations. WTO with refernce to biotechnological affairs, TRIPs.

MODULE II GENERAL INTRODUCTION TO PATENT **9**

Patent claims, the legal decision – making process, ownership of tangible and intellectual property. Basic Requirements of Patentability, Patentable subject matter, novelty and the public domain, non obviousness.

Module III SPECIAL ISSUES IN BIOTECHNOLOGY PATENTS **9**

Disclosure requirements, Collaborative research, Competitive research, plant, Plant biotechnology Indian patents and Foreign patents, Plant variety protection act, The strategy of protecting plants.

MODULE IV PATENT LITIGATION **9**

Substatritive aspects of patent litigation, Procedural aspects of patent litigation, different Doctrines, Recent Developments in Patent System and Patentability of biotechnological inventions.

MODULE V IPR ISSUES IN INDIAN CONTEXT **9**

Role of patent in pharmaceutical industry, computer related innovations, Case studies Rice, Haldi, neem, etc. and challenges ahead

TOTAL : 45

REFERENCES:

1. The law and strategy of Biotechnological patents by Sibley. Butterworth publications.

2. Intellecutla property rights – Ganguli – Tat McGrawhill

3. Intellectual property right – Wattal – Oxford Publishing House.

OUTCOMES:

At the end of the course students will be able to

- Communicate in depth knowledge on selected topics within the area of biotechnology
- Identify current technical problems within the area of biotechnology
- Describe the relationship between patenting and scientific discovery
- Describe the patenting process and how it relates to the international patent authorities and organizations.
- Understand patents as strategic tools in business development
- Understand how intellectual property rights relates to and handles genetic sequences and other biological material

BTBX05 RECOMBINANT DNA TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

The aim of the course is to enable students:

- To establish an understanding of DNA manipulation strategies
- To establish an appreciation of the advantages and disadvantages of novel methods for DNA purification, sequencing and mutagenesis
- To be aware of ethical issues associated with DNA engineering and cloning

MODULE I TOOLS OF GENETIC ENGINEERING 7

Cloning vehicles, Restriction enzymes, Modifying enzymes, DNA ligase, Polymerase etc, Cloning Vectors: Plasmids, Lambda phage, Phagemids, Cosmids, Artificial chromosomes (BACs, YACs), Shuttle vectors, and virus based vectors.

MODULE II METHODS OF GENE TRANSFER 7

Transformation, transduction, Particle gun, Electroporation, liposome mediated, microinjection, Agrobacterium mediated gene transfer, Preparation and application of molecular probes: DNA probes, RNA probes, Radioactive labeling, Non radioactive labeling, use of molecular probes, DNA fingerprinting.

MODULE III ANALYSIS AND EXPRESSION OF CLONED GENE IN HOST CELLS 8

Expression vectors, Restriction enzyme analysis, Southern blotting, Northern blotting, Western blotting, In-situ hybridization. Colony and plaque hybridization, Factors affecting expression of cloned genes, Reporter genes, Fusion proteins.

MODULE VI GENE LIBRARIES 8

cDNA synthesis, Genomic DNA libraries, Amplification of gene libraries, Identifying the products of cDNA clones, Isolation, Sequencing and synthesis of gene: Different methods of gene isolation,Techniques of DNA sequencing, Artificial DNA synthesis.

MODULE V MODIFYING GENES 7

Site-directed mutagenesis, Insertion & Deletion Mutagenesis, Polymerase Chain reaction (PCR): Basic principles, modifications, applications.

MODULE VI APPLICATION OF RDNA TECHNOLOGY 8

Antisense and ribozyme technology, Human genome project and its application, Gene therapy prospect and future, DNA vaccine, Transgenic plants, Current production of rDNA products, Bio-safety measures and regulations for rDNA work.

TOTAL : 45

REFERENCES:

1. From Genes to Clones by Winnacker. PANIMA
2. Molecular Biotechnology by Pasternack and Glick.
3. From Genes to Genomes: Concepts & Applications of DNA Technology by J.W. Dale & M.V. Schartz.
4. Gene Cloning & DNA Analysis: An Introduction (4th edition) by T.A. Brown.
5. Molecular Cloning by Sambrook, et al.
6. Principles of Gene Cloning by Old and Primrose.

OUTCOMES:

At the end of the course students will be able to

- Define recombinant DNA technology and explain how it is used to clone genes.
- Compare and contrast different types of vectors and describe practical features of vectors and their applications in molecular biology.
- Discuss how DNA libraries are created and screened to clone a gene of interest.
- Describe how agarose gel electrophoresis, restriction enzyme mapping, and DNA sequencing can be used to study gene structure.
- Explain common techniques used to study gene expression.
- Be familiar with RNA interference (RNAi) as a powerful new technique for silencing gene expression.
- Understand potential scientific and medical consequences of the Human Genome Project, and discuss its ethical, legal, and social issues.
- Define bioinformatics and explain why this new field is important.

BTBX06 BIOREACTOR DESIGN AND ANALYSIS

L	T	P	C
3	0	0	3

OBJECTIVES:

The course imparts advanced knowledge on bioreactor design for efficient utilization of the principles in bioprocess technology. To familiarize the Basic concepts of bioreactor design , Bioreactor instrumentation and control, Methods and strategies for fermentation control, Modelling and simulation of fermentation processes and Plant and animal cell bioreactors.

MODULE I REACTION KINETICS **8**

Definitions of rate constant, reaction order - Elementary and nonelementary reactions - Mechanisms and kinetics - Reactions with constant volume and variable volume-Conversion yield - Kinetics of chemical reactions - Elementary and non - elementary reactions, nth order kinetics - Rate equations with multiple rate constants, shifting - Order kinetics, interpretation of batch reactor data for simple and complex reactions, dependence of reaction rate on environmental conditions – Arrheniu's equation.

MODULE II IDEAL REACTORS **7**

Introduction to ideal reactors - Performance equations for ideal reactors and non-isothermal reactors - Rate data analysis – Multiple reactors and multiple reactions -Polymerization reactions, enzymatic reactions, microbial growth and bioreactors.

MODULE III NON-IDEALITY IN REACTORS **7**

RTD studies - Dispersion effects, models for non-ideal reactors – Non isothermal reactors - External diffusion effects on heterogeneous reactions - Diffusion and reaction in porous catalysts.

MODULE IV BIOREACTOR **7**

Definition of bioreactor, basic principles of bioreactor – Interaction of heat and mass transfer in the microbial processes – Classification of bioreactors and their configurations - Analysis of batch, continuous, fed batch and semi-continuous bioreactors, non-ideal effects, mechanical design of bioreactors and its components

MODULE V BIOREACTOR SCALE – UP **8**

Regime analysis of bioreactor processes, oxygen mass transfer in bioreactors - Microbial oxygen demands, methods for the determination of mass transfer coefficients, mass transfer correlations - Scale up criteria for bioreactors based on oxygen transfer, power consumption and impeller tip speed.

MODULE VI SIMULATION AND OPTIMIZATION OF BIOPROCESSES **8**

Simulation techniques (Numerical Methods): Programs based on numerical methods like algebraic equations, Newton-Raphson method for algebraic convergence, interpolation, arbitrary function generation (FUN1, FUN2 subroutines). Programs based on solution of differential equations: Euler method for 1st and 2nd order integration, subroutines INT and INTI; Fourth order Runga –Kutta method: stability of numerical integration variable slip size method. Case studies, Numerical problems

TOTAL : 45

REFERENCES:

1. Levenspiel, O., Chemical Reaction Engineering, Wiley Easter Ltd, New York, 5th Edition, 1999
2. Fogler, H. S., Elements of Chemical Reaction Engineering, Prentice Hall Pvt Ltd, 4th Edition, 2006
3. Smith, J.M., Van Ness, H.C., Abbott, M. M., Introduction to Chemical Engineering Thermodynamics , McGraw Hill, New York, 6th Edition, 2001

OUTCOMES:

At the end of the course students will be able to

- Design reactors with mass transfer between two ideally mixed fluid phases, for continuous, fed-batch, batch operation.
- Design reactors with mass transfer between an ideally mixed fluid phase and a fluid phase moving in ideal plugflow, for continuous, fed-batch, batch operation design reactors with mass transfer between two ideally mixed fluid phases and an ideal plugflow compartment with conversion, for continuous, fed-batch, batch operation.
- Design reactors with diffusion into cell aggregates surrounded by an ideally

mixed fluid phase which exchanges mass with a second ideally mixed fluid phase. The equation for the penetration depth of the rate-limiting reactant/ product is given; its derivation is not included. Continuous, fed-batch, and batch operation are included.

- Design reactors with diffusion into cell aggregates surrounded by one fluid phase moving in ideal plugflow. The equation for the penetration depth of the rate-limiting reactant/product is given; its derivation is not included. Only continuous, operation is included.
- Design photo-bioreactors with mass transfer between two ideally mixed fluid phases and an ideal plugflow compartment with conversion, only for continuous reactors in steady state.

BTBX07 MOLECULAR AND CELLULAR DIAGNOSTICS

L	T	P	C
3	0	0	3

OBJECTIVES:

The course aims to provide the students with an understanding on the principles and modern day applications of molecular diagnostics in a biotechnology based industry.

MODULE I GENERAL LABORATORY TECHNIQUES & PROCEDURE 8

Chemical & Related substrates, volumetric analysis, Balancing & Weighing, Concept of solute & solvent, Units of measurement, Specimen Collection & Processing: Specimen collection (Blood, urine, spinal fluid,saliva synovial fluid, Amniotic fluid), Preservation, transportation, Selection & Interpretation of Lab. Procedure: Classification of BIAS, Sensitivity and specificity, Receiver Operator Characteristics, Interpretation a test, Quality Management: Fundamentals of total quality management, Element of QAP,External quality assessment and proficiency testing programme.

MODULE II CLINICAL ENZYMOLOGY 7

Principle of diagnostic enzymology, Liver, cardiac and skeletal enzyme, Digestive enzyme, Miscellaneous enzyme, General Function Tests: Liver function test, Cardiac Function Test, Renal Function Test, Thyroid Function test, Reproductive endocrine function test.

MODULE III IMMUNODIAGNOSTICS 7

Introduction, Antigen-Antibody Reactions, Conjugation Techniques, Antibody Production, Enzymes and Signal Amplification Systems, Separation and Solid-Phase Systems, Case studies related to bacterial, viral and parasitic infections.

MODULE IV PRODUCT DEVELOPMENT 7

Immunoassay Classification and Commercial Technologies, Assay Development, Evaluation, and Validation, Reagent Formulations and Shelf Life Evaluation, Data Analysis, Documentation, Registration, and Diagnostics Start-Ups.

MODULE V DNA BASED DIAGNOSTICS 8

PCR, RFLP, SSCP, Microarrays, FISH, In-situ hybridization, Case studies

related to bacterial, viral and parasitic infections, Cell based diagnostics: Antibody markers, CD Markers, FACS, HLA typing, Bioassays.

MODULE VI BIOSENSORS **8**

Concepts and applications, Biosensors for personal diabetes management, Noninvasive Biosensors in Clinical Analysis, Introduction to Biochips and their application in modern Sciences, Introduction to Nanotechnology.

TOTAL : 45

REFERENCES:

1. Tietz Textbook of Clinical Chemistry, Carl A. Burtis, Edward R. Ashwood, HarcourtBrace & Company Aisa Pvt. Ltd.
2. Commercial Biosensors: Graham Ramsay, John Wiley & Son, INC. (1998).
3. Essentials of Diagnostic Microbiology, Lisa Anne Shimeld. Diagnostic Microbiology, Balley & Scott's.
4. Tietz Text book of Clinical Biochemistry, Burtis & Ashwood.
5. The Science of Laboratory Diagnosis, Crocker Burnett.

OUTCOMES:

At the end of the course students will be able to

- List the key historical developments in the field of molecular diagnostics
- Identify the role and importance of molecular diagnostics such as real-time PCR, epidemiological genotyping, microfluidics, bio-imaging and sequencing technologies
- Assess the benefit of research and development practices within a biotechnology company
- Incorporate both in silico and lab based techniques as part of a combined molecular diagnostics strategy.
- Perform selected laboratory techniques, interpret results and prepare reports.

BTBX08 BIOMEDICAL ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

The course aims to provide education that prepares students to lead, innovate, and self-educate throughout their careers in bioengineering and biomedical professions and industries.

MODULE I INTRODUCTION **8**

Introduction to cell structure and components, protein structure, cell membranes, chromosomes, cytoskeleton, actin filaments, microtubules, cell signaling and ECM, biomembrane and action potentials - Transducers and electrodes, types of transducers and their selection for biomedical applications - Biosensors based on electrochemical transducers.

MODULE II MOLECULAR BASIS OF METABOLIC DISORDERS **7**

Biochemistry and molecular basis of different disorders related to carbohydrate, protein fat and nucleic acids, In-born errors of metabolism, Clinical manifestations and their precautions by nutritional management.

MODULE III CARDIAC SYSTEMS AND ITS FUNCTION **8**

Cardiovascular systems, the heart and other cardiac systems, circulation and blood flow, blood pressure, cardiac output, cardiac rate, cardiac shock and response to exercise, magnet cardiography, cardiac pacemaker, computer applications - Measurement of electrical activities in muscles and brain - Electromyography, electro encephalographs and their interpretation.

MODULE IV BIOSYSTEM MODELING **7**

Electrical impedance encephalography, biotelemetry, Biosignal analyzer, biosystem modeling.

MODULE V BIOMEDICAL TESTS **8**

Biomedical tests - measurement of sugar, pH, sodium potassium ions, haemoglobin, oxygen and carbondioxide concentration in blood, medical imaging, ultrasound imaging, radiography, biophysics of signal transmission and reception of biological signals, telemedicine.

MODULE VI ULTRASOUND IN DIAGNOSIS **7**

Ultrasound in diagnosis, limb prosthetics and Orthotics, sensory aids for the blinds, assisting the heart and kidney, ECG, EEB, physiological equipments

TOTAL : 45

REFERENCES:

1. Atilla Hincal, A., Suheylakas, H., Biomedical Science and Technology, Plenum Press, New York, 1st Edition, 2001.
2. Khandpur, R.S., Handbook of biomedical Instrumentation, McGraw Hill, USA, 1st Edition, 2004
3. Manz and Becker., Microsystem technology in Chemistry and Life Sciences, Springer Verlag, London, 1st Edition, 1999.

OUTCOMES:

At the end of the course students

- Will have in-depth knowledge of the analysis techniques applied to complex biological systems, assessing the most appropriate mathematical and simulation tools and suitable data and signal processing techniques.
- Will know the techniques and instruments used to design conventional and innovativebiomedical equipment, image processing techniques, advanced methods for the design and use of prostheses.
- Will be able to interact with doctors and biologists to analyse complex problems,recommend the correct management of equipment, and provide advice on the innovative use of diagnostic systems and equipment.
- Will be able to participate autonomously in biomedical experimentation, research and development activities.
- Will be able to skilfully participate in the sale of biomedical equipment together with sales staff, suggesting improvements and adaptations, taking autonomous initiatives and competently interpreting the needs of the purchaser in order to transform them into appropriate design specifications.

BTBX09 BIOSAFETY AND BIOETHICS L T P C
3 0 0 3

OBJECTIVES:

The aim of this course is to teach biosafety issues, biosafety and biotechnological applications, biosafety in laboratory, waste management, registration, national and international regulations, bio-ethical issues in medicine, environment and genetics, related regulations and laws.

MODULE I BIOTECHNOLOGY AND SOCIETY 7

Introduction to science, technology and society, biotechnology and social responsibility, public acceptance issues in biotechnology, issues of access, ownership, monopoly, traditional knowledge, biodiversity, benefit sharing, environmental sustainability, public vs. private funding, biotechnology in international relations, globalisation and development divide.

MODULE II BIOETHICS 8

Legality, morality and ethics, the principles of bioethics: autonomy, human rights, beneficence, privacy, justice, equity etc, Biotechnology and Bioethics: The expanding scope of ethics from biomedical practice to biotechnology, ethical conflicts in biotechnology - interference with nature, fear of unknown, unequal distribution of risks and benefits of biotechnology, bioethics vs. business ethics, ethical dimensions of IPR, technology transfer and their global biotech issues.

MODULE III BIOSAFETY CONCEPTS AND ISSUES 7

Rational vs. subjective perceptions of risks and benefits, relationship between risk, hazard, exposure and safeguards, biotechnology and biosafety concerns at the level of individuals, institutions, society, region, country and the world.

MODULE IV BIOSAFETY IN THE LABORATORY INSTITUTION 8

Laboratory associated infections and other hazards, assessment of biological hazards and levels of biosafety, prudent biosafety practices in the laboratory/ institution, Biosafety regulations in the handling of recombinant DNA processes and products in institutions and industries, biosafety assessment procedures in India and abroad

MODULE V BIOTECHNOLOGY AND FOOD SAFETY 7

The GM-food debate and biosafety assessment procedures for biotech foods & related products, including transgenic food crops, case studies of relevance.

MODULE VI ECOLOGICAL SAFETY ASSESSMENT 8

Recombinant organisms and transgenic crops, case studies of relevance (Eg. Bt cotton), Biosafety assessment of biotech pharmaceutical products such as drugs/vaccinesetc, International dimensions in biosafety: Catagena protocol on biosafety, bioterrorism and convention on biological weapons

TOTAL : 45

REFERENCES:

1. Thomas, J.A., Fuch, R.L. (2002). Biotechnology and Safety Assessment (3rd Ed). Academic Press.
2. Fleming, D.A., Hunt, D.L., (2000). Biological safety Principles and practices (3rd Ed). ASM Press, Washington.
3. Biotechnology - A comprehensive treatise (Vol. 12). Legal economic and ethical dimensions VCH.
4. Encyclopedia of Bioethics

OUTCOMES:

At the end of the course students will be able to

- Explain the international and national controls with regards to biosafety, biosecurity and bioethics applicable to facilities and associated scientists handling pathogens.
- Apply a framework for risk assessment to biosafety, biosecurity and dual-use risks and hazards associated with pathogens.
- Analyse the ethical and social responsibilities of life scientists with reference to the responsible conduct of research and other work
- Integrate dual-use biosecurity, biosafety and bioethical issues and concerns into their program.
- Contribute to the development and implementation of relevant country-specific and institutional mechanisms, guidelines, regulations and legislation.

- Explain the key components of administrative controls that a facility has to put in place to mitigate biosafety and biosecurity risks.
- Develop a strategy for the implementation of a biosafety management program in a facility handling pathogens
- Organize and synthesize ideas and questions on dual-use bio-security, biosafety and bioethics relevant to the conduct of research and other work with pathogens.

BTBX10 HEALTHCARE BIOTECHNOLOGY L T P C
3 0 0 3

OBJECTIVES:

- To introduce the underlying principles and applications in the emerging field of Health care biotechnology
- To analyze the key concepts used in the debate about health and its issues.
- To list the properties that defines a therapeutic agent and human diseases.
- To list the common and extrapolated potential clinical uses and applications of various modules of health care.

MODULE I SIMPLE PROTEINS AND THERAPEUTIC AGENTS 8

Proteins as therapeutic agents - Choice of expression systems and optimizing gene expression - Applications, delivery and targeting of therapeutic proteins - Engineering human interferons and human growth hormones - Regulatory aspects of therapeutic proteins - Enzymes as therapeutic agents - Use of genetically engineered DNase I and alginate lyase for treatment of Cystic Fibrosis.

MODULE II MONOCLONAL ANTIBODIES AS THERAPEUTIC AGENTS 8

Production of monoclonal antibodies - Human monoclonal antibodies, its scope and limitations - Hybrid human – Mouse antibodies - Production of antibodies in E. coli -Approaches for producing HIV therapeutic agents.

MODULE III HUMAN DISEASES 8

Viral and bacterial diseases - Diseases caused by protozoan and parasitic worms (helminths) - Emerging infectious diseases – Active and passive immunity – Autoimmunity- Rational of immunization - Diseases controllable by vaccination – Vaccines, designing vaccines adjuvants - Whole organisms vaccines - Attenuated viruses and bacteria - Inactivation of pathogenic organisms by heat and chemical treatment.

MODULE IV VACCINES 7

Bacterial polysaccharides, proteins and toxins as vaccines -Recombinant vaccines- subunit, attenuated and vector vaccines -Multivalent vaccine

development against AIDS - Commercial and regulatory aspects of vaccine production and its distribution.

MODULE V ENDOCRINE DISORDERS 7

Disorders of pituitary, adrenal, pancreas, gonads, thyroid and their metabolic effects. Possible and respective clinical manifestations.

MODULE VI APPLICATION OF GENETIC ENGINEERING IN HEALTH CARE 7

Production of Recombinant Proteins having therapeutic and diagnostic applications, recombinant vaccine

TOTAL : 45

REFERENCES:

1. Glick, B. R., Pasternak, J. J., Molecular Biotechnology, Principles and Application of Recombinant DNA, ASM press, Washington, 2nd Edition, 1998
2. Ratledge, C., Kristiansen, B., Basic Biotechnology, Cambridge University Press, USA, 2nd Edition, 2001.
3. David, E., Technology and Future of health care, Preparing for the Next 30 years, Jhon Wiley, Singapore, 2nd Edition, 2000.

OUTCOMES:

At the end of the course students should be able to:

- Search and read current health care literature and apply to a particular problem
- Classify various diseases and treatment strategies.
- Outline how therapeutic agents are currently being used in the clinic and what kinds of future treatments lie on the horizon.
- To demonstrate an interdisciplinary understanding of central concepts in tissue engineering, biomaterials and health care, and critically evaluate different methods and techniques used.

BTBX11 MOLECULAR PHARMING L T P C
3 0 0 3

OBJECTIVES:

- To introduce molecular pharming.
- To create complete knowledge about the recombinant protein production.
- To create awareness about the production of pharmaceutical proteins in plants.

MODULE I INTRODUCTION AND FOREIGN PROTEIN EXPRESSION 9

Introduction, foreign protein production systems- plant tissue culture, suspended cultures, hairy root cultures, shoot teratoma cultures. Strategies for improving FP production in tissue culture, expression systems, modifications to existing expression constructs, secretion of foreign proteins, foreign protein stability, stability inside the cells.

MODULE II NOVEL SPROUTING TECHNOLOGY FOR RECOMBINANT PROTEIN PRODUCTION 9

Biology of sprouting, dicotyledonous seeds, germination, sprout, rubisco synthesis, rubisco promoters, inhibition of endogenous gene expression, expression cassette design, sprouting- equipments, conditions, sterilization, time and temperature, light, inhibition of endogenous gene expression, growth regulators, nitrogen fertilizer, seed production, quality and environmental aspects.

MODULE III MONOCOT AND PLANT VIRAL EXPRESSION SYSTEMS 10

Cereal production crops, Technical aspects, cereal transformation, expression construct design, Prodigene and Maize. Recombinant proteins expressed in Rice, Wheat, Barley. Plant RNA viruses as expression vectors- TMV, PVX, CPMV, AIMV. Biological activity of target molecules, efficacy of plant virus antigens, vaccine antigens- particle based.

MODULE IV CHLOROPLAST DERIVED ANTIBODIES, BIOPHARMACEUTICALS AND EDIBLE VACCINES 10

Introduction, expression of therapeutic and human proteins in plants, transgenic chloroplast system, chloroplast derived human antibodies, biopharmaceuticals, Human Serum Albumin, Human insulin like growth factor-1, Human interferon,

Antimicrobial peptides, chloroplast derived vaccine antigens, cholera toxin B subunit, Bacillus anthracis protective antigen, Yersinia pestis F1-V fusion antigen, Canine Parvovirus VP2 protein.

MODULE V DOWNSTREAM PROCESSING OF PLANT DERIVED RECOMBINANT THERAPEUTIC PROTEINS 7

Similarities and differences in the processing of pharmaceutical proteins from different sources, process scale, individual steps of a Downstream process, Initial processing and extraction, chromatographic purification, regulatory requirements for downstream processing of plant derived products.

TOTAL : 45

REFERENCE:

1. Molecular Farming – Plant-made Pharmaceuticals and Technical Proteins, Rainer Fischer and Stefan Schillberg. Wiley.VCH Verlag GmbH and Co. KGaA. 2004.

OUTCOME:

The student will be aware about the basics of molecular farming

BTBX12 STEM CELLS IN HEALTHCARE

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the underlying principles and applications in the emerging field of Stem Cell Technology
- To analyze the key concepts used in the debate about stem cell research
- To list the properties that define a stem cell and explain hoe stem cells are derived for scientific research
- To list the common and extrapolated potential clinical uses of stem cells

MODULE I INTRODUCTION **7**

Stem Cell Biology, Fate Mapping of Stem Cell, Stem Cell Pattern, differentiated parental DNA chain causes stem cell pattern of cell type switching in Schizosaccharomyces pombe.

MODULE II CELL CYCLE CONTROL **7**

Checkpoints, and Stem Cell Biology, Senescence of Dividing Somatic Cells, The Drosophila Ovary, An In Vivo Stem Cell System, Male Germ-line Stem Cells.

MODULE III PRIMORDIAL GERM CELLS **8**

Primordial Germ Cells as Stem Cells, Embryonic Stem Cells, Embryonal Carcinoma Cells as Embryonic Stem Cells, Trophoblast Stem Cells.

MODULE IV HEMATOPOIETIC STEM CELLS **8**

Repopulating Patterns of Primitive Hematopoietic Stem Cells,Molecular Diversification and Developmental Interrelationships, Hematopoietic Stem Cells:Lymphopoiesis and the Problem of Commitment Versus Plasticity, Hemangioblast, Mesenchymal Stem Cells of Human Adult Bone Marrow.

MODULE V TYPES OF STEM CELLS **7**

Stem Cells and Neurogenesis, Epidermal Stem Cells: Liver Stem Cells, Pancreatic Stem Cells, Stem Cells in the Epithelium of the Small Intestine and Colon

MODULE VI APPLICATIONS OF STEM CELLS 8

Cell based therapy, organ factories, drug discovery and development, understanding developmental biology, Medical applications in Leukemia, Immune deficiencies, diabetes, liver diseases, cardiovascular diseases, Neurological disorders

TOTAL : 45

REFERENCES:

1. Developmental Biology, 6th Edition, Scott F. Gilbert
2. Hematology, William J. Williams, Ernest Beutler, Allan JU. Erslev, Marshall A. Lichtman
3. Molecular Biology of the Cell, 3rd Edition, Bruce Alberts, Dennis Bray, Julian Lewis,
4. Martin Raff, Keith Roberts, James D. Watson
5. Stem Cell Biology by Marshak, 2001, Cold Spring Harbar Symposium Pulblication.

OUTCOMES:

At the end of the course students should be able to:

- Search and read current stem cell technology literature applied to a particular problem domain (To treat Parkinsons Disease etc.)
- Classify tumor stem cells which give rise to metastases and treatment-resistant remnant cells that cause relapse, and how this impacts on the development of future cancer treatment strategies.
- Outline how stem cells are currently being used in the clinic and what kinds of future treatments lie on the horizon. Students will also be exposed to current Norwegian projects lying at the frontier of stem cell research.
- To demonstrate an interdisciplinary understanding of central concepts in tissue engineering, biomaterials and stem cell science, and critically evaluate different methods and techniques used.

BTBX13 TRANSPORT PHENOMENA IN BIOPROCESS

L	T	P	C
4	0	0	4

OBJECTIVES:

The course aims to provide the students with an introduction to the multidisciplinary nature of biotechnology and how bioprocesses are planned, organised and how they develop from basic cell structure and function through bioreactor to DSP.

MODULE I BIOREACTORS **7**

Introduction to bioreactor systems - Principles and practices of fermentation - Fermentation organisms - Basic bioreactor design

MODULE II FLUID RHEOLOGY **7**

Rheology - Review of fluid rheology - Experimental viscometry of biofluids- Effects of cell morphology on broth rheology

MODULE III BUBBLES AND DROPS **7**

Bubbles and drops - Bubble formation, break-up and coalescence - Bubble rise velocities - Interfacial area and hold-up in agitated and non-agitated systems - Behaviour of bubbles in beverages – Drop dispersion

MODULE IV SCALE UP OF BIOREACTORS **9**

Aeration and Agitation - Achieving mixing and mass transfer in bioreactors - Specification of equipment - Flow regimes – Power requirements - Oxygen mass transfer in bioreactors – Microbial oxygen demands - Methods for the determination of mass transfer coefficients - Mass transfer correlations - Scale-up of stirred tank bioreactors - Principle of similarity - Criteria for scale-up in biological systems

MODULE V HEAT TRANSFER **7**

Heat generation and heat transfer in bioreactors - Sources of heat generation - Heat removal - Specification of heating and cooling systems - Heat transfer coefficients in agitated systems.

MODULE VI PROCESS DESIGN **8**

Process design of distillation columns, extraction equipments and tray dryers.

Mechanical design of pressure vessels under internal pressure, Mechanical design of stirred batch fermenter.

TOTAL : 45

REFERENCES:

1. Van Den Akker, H.E.A., Heijnen, J.J.C., Leach, K., Mudde, R.F., Bioprocess Technology, Modelling and Transport Phenomena (Biotol Series), 1st Edition, 1990

2. Byron, R.Bird., Warren, E. Stewart., and Edwin, N. Lightfoot., Transport Phenomena, John Wiley and Sons, New York, 1st Edition, 2000

4. Brodkey, R.S. and Hershey, H.C., Transport Phenomena – A Moduleed Approach, McGraw Hill, New York, 1st Edition, 1987

OUTCOMES:

At the end of the course students will be able to

- Have the information about recognition and modelling of bioprocesses.
- Identify problems faced with bioprocess applications, have the knowledge and ability of analyzing and solving those problems.
- Gain knowledge about management of bioprocess waste.
- Able to design of a bioprocess.
- Develop the ability of written and oral communication, preparing technical design report.

GEBX22 NATIONAL SERVICE SCHEME L T P C
(Paper: 01 - As per Ministry of Youth Affairs and Sports) 0 0 3 1

OBJECTIVES:

- understand the community in which they work
- understand themselves in relation to their community
- identify the needs and problems of the community and involve them in problem-solving
- develop among themselves a sense of social and civic responsibility
- utilise their knowledge in finding practical solutions to individual and community problems
- develop competence required for group-living and sharing of responsibilities
- gain skills in mobilising community participation
- acquire leadership qualities and democratic attitudes
- develop capacity to meet emergencies and natural disasters and
- practise national integration and social harmony

MODULE I INTRODUCTION AND BASIC CONCEPTS OF NSS 4

History, philosophy, aims & objectives of NSS – Emblem, flag, motto, song, badge, etc. – Organizational structure, roles and responsibilities of various NSS functionaries.

MODULE II NSS PROGRAMMES AND ACTIVITIES 10

Concept of regular activities, special camping, Day Camps – Basis of adoption of village/slums, Methodology of conducting Survey – Financial pattern of the scheme – Other youth programme/schemes of GOI – Coordination with different agencies – Maintenance of the Diary.

MODULE III UNDERSTANDING YOUTH 5

Definition, profile of youth, categories of youth – Issues, challenges and opportunities for youth – Youth as an agent of social change.

MODULE IV COMMUNITY MOBILISATION **9**

Mapping of community stakeholders – Designing the message in the context of the problem and the culture of the community – Identifying methods of mobilisation – Youth-adult partnership.

MODULE V VOLUNTEERISM AND SHRAMDAN **7**

Indian Tradition of volunteerism – Needs and importance of volunteerism – Motivation and Constraints of Volunteerism – Shramdan as a part of volunteerism.

Total Hours: 35

REGULATIONS 2016

CURRICULUM AND SYLLABI

B.Sc

Computer Science

VISION AND MISSION OF THE DEPARTMENT OF COMPUTER APPLICATIONS

VISION

Aspires to provide quality education in the field of computer applications with state of the art computational facilities and undertake quality research in collaboration with industries and universities to produce committed professionals and academicians to meet the needs of the industries and society.

MISSION

The Department of Computer Applications, endeavors

- To disseminate knowledge through education and training of graduates in the field of computer applications.
- To focus on teaching - learning, research and consultancy to promote excellence in computer applications.
- To foster graduates with opportunities required to explore, create and face challenges of IT related industries.
- To equip the graduates with the necessary skills in communication, team work and leadership qualities to meet the needs of the IT related sector globally.
- To disseminate the outcome of projects and research work undertaken by the department through appropriate measures for the benefit of society and industry.

PROGRAMME EDUCATIONAL OBJECTIVES:

The students of B.Sc Computer science Programme would be able to

- Communicate computing concepts and solutions to bridge the gap between industry and academic institution.
- Utilize their knowledge of computing principles to develop solutions to current and future computing problems.
- Understand professional, ethical, legal, security, and social issues and responsibilities.
- Use current techniques, skills, and tools necessary for computing practices
- apply design and development principles in the construction of software systems of varying complexity.

PROGRAMME OUTCOMES:

On successful completion of the programme, the graduates will have

- Have knowledge of computing and mathematics appropriate to the discipline
- Identify analyze a problem and define the computing requirements appropriate to its solution;
- Have use current techniques, skills, and tools necessary for computing practices;
- Be prepared for career in Information Technology oriented business or industry for graduate study in technical fields.

ENC1181 **GENERAL ENGLISH – I** **L T P C**

4 1 0 4

OBJECTIVES:

- To help the students acquire efficiency in Spoken English through role plays.
- To enable them to make Presentation effectively.
- To develop reading skills among students through extensive readers.
- To orient them in writing letters.
- To train them in appreciating and interpreting English literature.

MODULE I **7**

Oral and Written Communication – implications in real life and workplace situations
Essential English Grammar - 1-6 units

MODULE II **8**

One–minute Presentations (JAM) on concrete and abstract topics that test their creative thinking (ii) Prepared p and extempore presentations
Short Story; O Henry - “Robe of Peace” (Extensive Reading)

MODULE III **8**

Role-Play – establishing a point of view - convincing someone on social issues such as preservation of water, fuel, protection of environment, gender discrimination.
Poetry: William Shakespeare - “All the World’s a Stage”

MODULE IV **8**

Letter Writing- Letter of Invitation & Permission Developing story from hints- Short Story: John Galsworthy - “Quality” (Extensive Reading)

MODULE V **8**

Précis Writing- Writing instructions and recommendations Reading Comprehension: Short Story**--**Rudyard Kipling – “The Miracle of Puran Bhagat”(Extensive Reading)
Written correspondence - - e-mail writing Prose : Education, Employment, Unemployment

MODULE VI **6**

Written correspondence - - e-mail writing
Prose : Education, Employment, Unemployment

TOTAL HOURS – 45

7. Murphy, Raymond. Essential English Grammar. New Delhi: Cambridge University Press, 2009.
8. Seshadri, K G Ed. Stories for Colleges. Chennai: Macmillan India Ltd, 2003.

OUTCOMES:

Students would be able to

- Actively take part in role plays
- Make effective presentation s
- Read and comprehend various texts.
- Write letters without making mistakes.
- Analyse literary texts.

MAC1187	ALGEBRA, CALCULUS AND TRIGONOMETRY	L	T	P	C
		3	1	0	4

OBJECTIVES:

The course is aimed at

- Developing the skills of students in applying basic concepts in chosen topics of mathematics that are imperative for effective understanding of application oriented topics.
- Laying the foundation for learning concepts of Differentiation, Integration and Trigonometry.

MODULE I MATRICES **(9+3)**

Symmetric – Skew-Symmetric - Orthogonal and Unitary matrices - Rank of a Matrix -Consistency - Characteristic equation - Eigenvalues and Eigenvectors - properties -Cayley Hamilton’s Theorem (proof not needed) - Simple applications.

MODULE II THEORY OF EQUATIONS **(9+3)**

Partial Fractions - Theory of equations- Polynomial Equations with real Coefficients -Irrational roots - Complex roots - Symmetric functions of roots - Transformation of equation by increasing or decreasing roots by a constant - Reciprocal equations.

MODULE III DIFFERENTIAL CALCULUS **(9+3)**

Rules of differentiation - Derivative of implicit function - Successive differentiation nth derivatives - Leibnitz theorem (without proof) and applications - maxima and minima of functions of two variables - Partial differentiation - Euler’s Theorem.

MODULE IV INTEGRAL CALCULUS **(9+3)**

Integration of rational functions - algebraic expressions involving only one irrational quantity- rational functions of sinx and cosx - Trigonometric substitutions - Bernoulli's formula for integration by parts - reduction formulae - properties of definite integral -Evaluation of double and triple integrals.

MODULE V TRIGONOMETRY **(9+3)**

De Moivre's theorem and its application - Circular and Hyperbolic functions – Inverse circular and hyperbolic functions - Expansion of trigonometric functions in terms of power and multiples - Separation of real and imaginary parts of logarithmic -trigonometric and inverse trigonometric functions - Summation of series including C+iS method.

TOTAL HOURS – 60

3. Kandasamy P, K. Thilagavathi and K. Gunavathy- Allied Mathematics aper-I, First semester, 1/e, S. Chand & Co., New Delhi, 2003

REFERENCES:

1. Stewart J - Single Variable Calculus (4th edition) Brooks / Cole, Cenage Learning 2010.
2. Tom M. Apostol - Calculus, Vol. I (second edition) John Wiley and Sons, Inc., Jan 2007.
3. Burnside W.S. and A.W. Panton - The Theory of Equations, Dublin University Press, 1954.
4. MacDuffee, C.C. - Theory of Equations, John Wiley & Sons Inc., 1954.
5. Ushri Dutta, A.S.Muktibodh and S.D. Mohagaonkar: Algebra and Trigonometry, PHI India, 2006.

OUTCOMES:

On completion of the course the students will be able to

- solve eigenvalue and eigenvector problems
- classify and solve polynomial equations of different types.
- differentiate different types of functions.
- integrate rational and trigonometric functions and to evaluate definite integrals (double and triple).
- demonstrate the application of Demoivre's theorem and find the sum of series of trigonometric functions.

CAC1151	COMPUTER FUNDAMENTALS &ORGANIZATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The basic knowledge of how a computer works is very important for any fresh networking or operating system professional.
- The functional knowledge of a computers working and its main building parts are paramount.
- The computers of today may come with variety of features but the basic working principles remain the same.
- Students will explore the fundamentals of organization of a computer and the principles and building units of a computer (its hardware).
- Also, they will be introduced to the basics of networking and MS Office

MODULE I GENERAL FEATURES OF A COMPUTER **9**

General features of a computer, Generation of computers, Personal computer, workstation, mainframe computer and super computers. Computer applications – data processing, information processing, commercial, office automation, industry and engineering, healthcare, education, graphics and multimedia.

MODULE II COMPUTER ORGANIZATION **9**

Computer organization, central processing unit, computer memory – primary memory and secondary memory, Secondary storage devices – Magnetic and optical media, Input and output units, OMR, OCR, MICR, scanner, mouse, modem.

MODULE III COMPUTER HARDWARE AND SOFTWARE **9**

Computer hardware and software, Machine language and high level language, Application software, computer program, operating system, Computer virus, antivirus and computer security, Elements of MS DOS and Windows OS, Computer arithmetic, Binary, octal and hexadecimal number systems, Algorithm and flowcharts, illustrations, elements of a database and its applications, Basic Gates (Demorgans theorems, duality theorem, NOR, NAND, XOR, XNOR gates), Boolean expressions and logic diagrams, Types of Boolean expressions

MODULE IV MS OFFICE 9

Word processing and electronic spread sheet, An overview of MSWORD, MSEXCEL and MSPOWERPOINT

MODULE V INTRODUCTION TO NETWORKING 9

Network of computers, Types of networks, LAN, Intranet and Internet, Internet applications, World Wide Web, E-mail, browsing and searching, search engines, multimedia applications

TOTAL HOURS – 45

TEXT BOOKS

1. M. Morris Mano and Michael D.Ciletti, "Digital Design with an introduction to the Verilog HDL", Pearson Education, Fifth Edition, ISBN-13: 978-0-13-277420-8, 2012.
2.

REFERENCES

1. Charles H.Roth, Jr., Kinney," Fundamentals of Logic Design", Brooks Publications, Seventh Edition,. ISBN-13 :978 -1-133-62848-4,2013
2. Ashok N Kamthane, "Computer Programming", Pearson Education, 2nd Edition, ISBN 13: 9788131704370, 2012

OUTCOMES:

- Students will get in-depth knowledge about the general features of a computer.
- Student which will allow introduce them to various features of computer,
- Understand the computer concepts on which they can base their learning and design.
- Student will be able to understand the basic MS- office.
- To get a better knowledge on networking aspects
- An insight to the different software and hardware components of a computer will take them a step ahead in terms of what they can accomplish from their learning.

CAC1152	PROBLEM SOLVING TECHNIQUES AND PROGRAMMING IN C	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of the course are as follows

- This course is designed to provide a comprehensive study of the C programming language. It stresses the strengths of C, which provide students with the means of writing efficient, maintainable, and portable code.
- To learn and acquire art of computer programming.
- Programming language for solving a problem
- To gain experience about structured programming
- To understand various features in C

MODULE I INTRODUCTION TO COMPUTER PROBLEM SOLVING 9

Problem Solving Process - Hierarchy charts to plan the program design - Algorithms - Iterative versus recursive style - Modular Programming - Structured Programming - Algorithm representation using Psuedocode, Algorithm Testing, brief introduction to Efficiency of Algorithms - Data Verification v/s Validation – Module design – Cohesion – Coupling – Fan-in – Fan-out concepts

MODULE II FUNDAMENTAL ALGORITHMS FOR PROBLEM SOLVING 9

Algorithms for Exchanging the values – Counting – Factorial Computation – some trigonometric functions computation as a sum of series – Base Conversion of numbers – Factoring Methods – Array Techniques – Sorting Algorithms - Bubble, Selection, Insertion, Merge Sort, Quick Sort–Sequential and Binary Search Algorithms. Algorithms for implementing numerical methods such as Newton Raphson and RungaKutta Methods.

MODULE III INTRODUCTION TO 'C' 9

Overview of C – Constants, Variables and Data Types; Operators and Expressions; Managing Input/Output Operations – Formatted I/O; Decision Making – Branching - IF, Nested IF – Switch – goto; Looping- While, do, for statements

MODULE IV ARRAYS, FUNCTIONS, STRUCTURES AND UNIONS 9

Arrays – static, dynamic and multi-dimensional arrays - Character arrays and Strings – String handling Functions - User defined Functions – Recursion; Structures and Unions – Array of Structures – Structures and Functions

MODULE V POINTERS AND FILE MANAGEMENT 9

Pointers– Declaration, Accessing a variable, character strings, pointers to functions and structures; File Management in ‘C’ any programming language; Dynamic Memory allocation– Linked Lists; Preprocessor Directives; Storage Classes, Command-line Arguments, multi-file programs and use of make utility.

TOTAL HOURS – 45

TEXT BOOKS:

1. Jeri R. Hanly and Eliot B. Koffman “Problem Solving and Program Design in C” Pearson Education, VII Edition, 2012
2. R.G.Dromey "How to Solve it by Computer ", PHI, 2006.

REFERENCES:

1. Paul J. Deitel, Deitel & Associates, “C How to Program”, Pearson Education, 7th Edition, ISBN-13: 978-0132990448, 2012
2. E.Balagurusamy " Programming in ANSI C " , Sixth Edition, 2004

OUTCOMES:

At the completion of this course, the student will able to

- Study, analyze, understand logical structure and compare various programming methodologies of a computer program, and different construct to develop a program in ‘C’ language
- Write small programs related to simple/ moderate mathematical, and logical problems in ‘C’.
- Study, analyze and understand simple data structures, use of pointers, memory allocation and data handling through files in ‘C’.

CAC1153	INTRODUCTION TO LINUX	L	T	P	C
		3	0	0	3

OBJECTIVES:

At the end of this course the learner is expected:

- To gain knowledge on the basic Linux commands.
- To have a hands on experience in open office
- To have clear understanding in open source softwares

MODULE I - INTRODUCTION TO LINUX 9

What Is Linux? -The Problems with Windows -The Benefits of Linux - Proprietary Software and the GPL- GNU and Linux Together- Different Flavors of Linux- Who Uses Linux?- Understanding How Linux Differs from Windows- Using Ubuntu

MODULE II BASH SHELL 9

What Is the BASH Shell? -Working with Files-Listing Files-Copying Files and Directories -Moving Files and Directories -Deleting Files and Directories -Changing and Creating Directories-Real Files and Virtual Files. -Users and File Permissions - The File System Explained -File Searches -Using the find Command -Using the locate Command -Using the whereis Command-File Size and Free Space -Viewing File Sizes -Finding Out the Amount of Free Space.

MODULE III INITIALIZATION 9

Linux kernel and kernel initialization - system initialization – hardware support - boot loaders.

MODULE IV DEVICE HANDLING 9

Device driver basics - module utilities - file systems - MTD subsystems – busybox.

MODULE V DEVELOPMENT TOOLS 9

Embedded development environment - GNU debugger - tracing & profiling tools - binary utilities - kernel debugging - debugging embedded Linux applications - porting Linux - Linux and real time - SDRAM interface.

TOTAL HOURS – 45

TEXT BOOKS:

1. Keir Thomas and Andy Channelle with Jaime Sicam (2009), “Beginning Ubuntu
2. Karim Yaghmour, Jon Masters, Gillad Ben Yossef, Philippe Gerum, “Building

embedded Linux systems", O'Reilly, 2008.

REFERENCES:

1. Christopher Hallinan, "Embedded Linux Primer: A practical real world approach", Prentice Hall, 2007.
2. Craig Hollabaugh, "Embedded Linux: Hardware, software and Interfacing", Pearson Education, 2002.

OUTCOMES:

Students are provided learning experiences that enable them to:

- Use Linux desktop and GNU tool chain with Eclipse IDE.
- Cross compile Linux kernel and port it to target board.
- Add applications and write customized application for the Linux kernel in the target board.

CAC1154	PROBLEM SOLVING TECHNIQUES AND PROGRAMMING IN C LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

The aims of the course are as follows

- To make the student learn C programming language.
- To teach the student to write programs in C to solve the problems.
- To introduce the student to simple linear and non linear data structures such as lists, stacks, queues, trees and graphs and use the efficient for problem solving

LIST OF PROGRAMS

1. Write a C program to find the sum of individual digits of a positive integer.
2. Write a C program to generate all the prime numbers between 1 and n, where n is a value supplied by the user.
3. Write a C program to calculate the following Sum:

   $Sum=1+x^2/2! +x^4/4!+x^6/6!+x^8/8!+x^{10}/10!$
4. Write a C program to find the roots of a quadratic equation.
5. Write C programs that use both recursive and non-recursive functions
   i) To find the factorial of a given integer.
   ii) To find the GCD (greatest common divisor)of two given integers.
   iii) To solve Towers of Hanoi problem.
6. Write a C program, which takes two integer operands and one operator form the user, performs the operation and then prints the result. (Consider the operators +,-,*,/,% and use Switch Statement)
7. Write a C program to find both the larges and smallest number in a list of integers.
8. Write a C program that uses functions to perform the following:
   i)Addition of Two Matrices
   ii)Multiplication of Two Matrices
9. Write a C program that uses functions to perform the following operations:
   i)To insert a sub-string in to given main string from a given position.
   ii)To delete n Characters from a given position in a given string.
10. Write a C program to determine if the given string is a palindrome or not
11. Write a C program that displays the position or index in the string S where the string T begins, or - 1 if S doesn't contain T.
12. Write a C program to count the lines, words and characters in a given text and C program to generate Pascal's triangle.

13. Write a C program to construct a pyramid of numbers.
14. 2's complement of a number is obtained by scanning it from right to left and complementing all the bits after the first appearance of a 1. Thus 2's complement of 11100 is 00100. Write a C program to find the 2's complement of a binary number.
15. Write a C program to convert a Roman numeral to its decimal equivalent.
16. Write a C program that uses functions to perform the following operations:
    i) Reading a complex number
    ii) Writing a complex number
    iii) Addition of two complex numbers
    iv) Multiplication of two complex numbers

TOTAL HOURS :45

TEXT BOOKS:

1. Reema Thareja, Computer Fundamentals and Programming in C, Oxford Press, 2012

REFERENCES:

1. Programming in C by Pradip Dey, Manas Ghosh 2nd edition Oxford University Press.
2. E.Balaguruswamy, Programming in ANSI C 5th Edition McGraw-Hill

OUTCOMES:

At the completion of this course, the student will able to

- Able to write, compile and debug programs in C language.
- Able to use different data types in a computer program.
- Able to design programs involving decision structures, loops and functions.
- Able to understand the dynamics of memory by the use of pointers.
- Able to use different data structures and create/update basic data files.

CAC1155	LINUX LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

The main objective of this course is to

- Learn and get familiar with the Unix operating system through Red hat
- Linux. UNIX basic commands working and their purpose will be defined.

LIST OF PROGRAMS

1. Write programs using the following system calls of UNIX operating system: fork, exec, getpid, exit, wait, close, stat, opendir, readdir
2. Write programs using the I/O system calls of UNIX operating system (open, read, write, etc)
3. Write C programs to simulate UNIX commands like ls, grep, etc.
4. Given the list of processes, their CPU burst times and arrival times, display/print the Gantt chart for FCFS and SJF. For each of the scheduling policies, compute and print the average waiting time and average turnaround time.
5. Given the list of processes, their CPU burst times and arrival times, display/print the Gantt chart for Priority and Round robin. For each of the scheduling policies,
6. compute and print the average waiting time and average turnaround time.

TOTAL HOURS –30

TEXT BOOKS:

1. The Design of Unix Operating System, Maurice J. Bach, Pearson Education, 2010

REFERENCES:

1. Advance UNIX, a Programmer’s Guide, S. Prata, BPB Publications, and New Delhi, 2011
2. Unix Concepts and Applications, Sumitabh Das, 2010

OUTCOMES:

- To use Linux desktop and GNU tool chain with Eclipse IDE.
- Cross compile Linux kernel and port it to target board.
- Add applications and write customized application for the Linux kernel in the target board.

SEMESTER II

ENC1283	GENERAL ENGLISH-II	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To prepare students for Interviews and Group Discussions
- To train them in writing official letters, resume' writing and reports.
- To train them in analysing different genre of literature.

MODULE I **7**

Filling Money Order Challan and Bank Challan
Short Story :G.K.Chesterton – The Hammer of God (Extensive Reading)
Essential English Grammar – 7-12 units

MODULE II **8**

Brainstorming – Think, pair and share activity
Poetry **:** Walt Whitman- I Celebrate Myself

MODULE III **8**

Dialogue Writing- Discussion etiquette -Assigning different roles in a GD (Note-taker, Manager, Leader and Reporter)
Prose**:** Environment

MODULE IV **8**

Interview skills- SWOT Analysis
Letter Writing- Letter to the Editor- Letter of Application and CV

MODULE V **8**

Report Writing- feasibility report and survey report
Short Story : Katherine Mansfield—A Cup of Tea (Extensive Reading)

MODULE VI **6**

Technical reports –Writing a technical report – format and content

TOTAL HOURS – 45

REFERENCES:

1. M. Ashraf Rizvi ‘Effective Technical Communication”. Tata McGraw – Hill Education, 2005. Gerson, Sharon & Steven M. Gerson, “ Technical Writing : Process and Product”
2. Pearson Education, New Delhi, 2004. 6. Riordan & Pauley. ‘Report Writing Today’. 9th Edition. Wadsworth Cengage Learning, USA. 2005.
3. Krishnaswamy. N, Sriraman T. **Current English for Colleges.** Hyderabad:
4. Macmillan Indian Ltd, 2006.
5. Dahiya SPS. Ed. **Vision in Verse- An Anthology of Poems**. New Delhi: Oxford
6. University Press, 2002.
7. Murphy, Raymond. **Essential English Grammar**. New Delhi: Cambridge
8. University Press, 2009.
9. Seshadri, K G Ed. **Stories for Colleges.** Chennai: Macmillan India Ltd, 2003.

OUTCOMES:

Students would be able to

- Take part in group discussions and interviews with confidence.
- Write official letters, their application letter with CV and reports.
- Analyse various genre of literature.

MAC1288 PROBABILITY AND STATISTICS L T P C
3 1 0 4

OBJECTIVES:

- To impart knowledge about the basic concepts of probability in solving application oriented problems
- To provide an understanding on the concepts of statistics

Recap Introduction to Probability (4)

Sample space - events - algebraic operations on events - definition of probability - Conditional probability - addition and multiplication theorems of probability – Baye's theorem.

MODULE I RANDOM VARIABLES AND DISTRIBUTION FUNCTIONS (10+3)

Discrete and continuous random variables - distribution function and its properties - probability mass function and probability density function - discrete and continuous probability distributions - Binomial, Geometric, Poisson, Uniform, Exponential and Normal distributions.

MODULE II MOMENTS AND MOMENT GENERATING FUNCTIONS (8+3)

Expectation of a random variable – probability generating function – properties - moment generating function.

MODULE III TWO DIMENSIONAL RANDOM VARIABLES (6+3)

Joint, marginal and conditional distribution functions - independence of random variables.

MODULE IV DESCRIPTIVE STATISTICS (8+3)

Types of data - primary and secondary data - classification and representation of data -formation of frequency distribution - various measures of central tendency, dispersion - and their merits and demerits - concept of skewness and kurtosis.

MODULE V CORRELATION AND CURVE FITTING (9+3)

Correlation coefficient and regression - rank correlation - curve fitting by least square methods - fitting a straight line, parabola, power curve and exponential curves. (no derivation, numerical problems only)

TOTAL HOURS – 60

TEXT BOOKS:

1. Richard Arnold Johnson, Irwin Miller, John E. Freund , Miller & Freund's
2. Probability and Statistics for Engineers, Prentice Hall, 2011.
3. Dr. P. Kandaswamy, Dr. K. Thilagavathy and Dr. K. Gunavathy, Probability and Queuing Theory, Revised edition, S. Chand Publishing, 2013.
4. T. Veerarajan, Probability, Statistics and Random Processes, Tata McGraw Hill, 2nd edition.

REFERENCES:

1. Goon, A.M., M. K. Gupta and B. Das Gupta Fundamentals of Statistics- Vol. I, World Press Ltd, Kolkata, 2002.
2. Gupta, S.C. and V.K. Kapoor, Fundamentals of Mathematical Statistics, Sultan Chand & Sons, New Delhi, 2002.
3. Hogg, R.V. and A. Craig, Introduction to Mathematical Statistics, McMillan Publishing co., Inc. 1978.
4. Mood A.M., F.A. Graybill and D.C. Boes, Introduction to Theory of Statistics McGraw Hill Book Co., 1974.
5. Sheldon M. Ross, Introduction to Probability and Statistics for Engineers and Scientists, Fourth Edition, Elsevier.

OUTCOMES:

On completion of the course the students will be able to

- solve basic problems in probability and fundamentals of statistics.
- solve problems using standard probability distributions.
- find the marginal and conditional distributions of two dimensional random
- variables.
- calculate rank correlation and fitting curves for the given data.
- use method of moments and moment generating functions.

CAC1251	OPERATING SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To gain knowledge about operating system, memory management and scheduling concepts and to study about the basics of OS, process management, Synchronization, memory management and File management.

MODULE I INTRODUCTION: 9

What is an operating system – operating system concepts – system calls – operating system structure

MODULE II PROCESSES AND THREADS 9

Process – Inter process communication – Scheduling; Deadlocks: Resources – Introduction to deadlocks – Deadlock detection and recovery – deadlock avoidance – Deadlock Prevention.

MODULE III MEMORY MANAGEMENT: 9

Basic memory management – Swapping – Virtual Memory – Page replacement algorithms – Implementation Issues – Segmentation.

MODULE IV INPUT / OUTPUT: 9

Principles of I/O hardware – Principles of I/O software – I/O software layers – Disks – Character oriented terminals – Graphical user interfaces – Network terminals.

MODULE V FILE SYSTEMS: 9

Files – Directories – File System Implementation – Example file systems – Case study 1: Unix and Linux; Case Study 2 : Windows 2000.

TOTAL HOURS – 45

TEXT BOOKS:

1. Abraham Silberschatz and P. B. Galvin - Operating system concepts - Addison Wesley Publication, Eighth Edition.,2012

REFERENCES:

1. Stalling William, Operating Systems: Internals and Design Principles, 7th

Edition, Prentice Hall, 2011.
2. Dietel et al, Operating Systems, 3rd Edition, Pearson Education, 2004.
3. A.S. Tanenbaum, Modern Operating Systems, 3rd Edition, Prentice Hall, 2007.

OUTCOMES:

At the completion of this course, students will be able to

- Demonstrate understanding of the concepts, structure and design of operating
- Systems Demonstrate understanding of operating system design and its impact on application system design and performance
- Demonstrate competence in recognizing and using operating system features.

CAC1252	OOPS WITH C++	L	T	P	C
		3	0	0	3

OBJECTIVES:

The aim of the course is to

- Understand the concepts of classes and object
- Define classes for a given situation and instantiate objects for specific problem solving.
- Reuse available classes after modifications if possible
- Possess skill in object oriented thought process

MODULE I INTRODUCTION TO OBJECT ORIENTED PROGRAMMING 9

Concept of Object orientation – comparison with procedural and structured programming – Classes and objects – data Abstraction, encapsulation, dynamic binding, message passing. Advantages of object orientation -Basic data types and declarations.

MODULE II CLASSES AND OBJECTS 9

Classes and objects in C++, access modifiers, static members, friend functions, Constructors and Destructors, polymorphism, Operator Overloading and type conversion

MODULE III INHERITANCE 9

Inheritance - parent and child classes, private, public and protected inheritance, multiple inheritances and multi-level inheritance, Virtual base classes. new and delete operators, objects.

MODULE IV POLYMORPHISM AND EXCEPTION HANDLING 9

Binding & Polymorphism: Early binding, Late Binding, Pointers to derived class objects, virtual functions, Pure virtual functions, exception handling in C++: try, throw and catch.

MODULE V FILE STREAM CLASSES AND TEMPLATES 9

Study of File stream classes in C++. Templates – class and function templates, Templates versus macros, String objects in C++, Standard Template Library in C++ .

TOTAL HOURS – 45

TEXT BOOKS:

1. Bjarne Stroustrup, “ Programming: Principles and Practice Using C++ “, Addison Wesley, 2nd edition, ISBN-13: 978-0321992789, 2014.

REFERENCES:

1. Bjarne Stroustrup," The C++ Programming Language", Addison Wesley, 4 th edition, ISBN-13: 978-0321563842, 2013.
2. Herbert Schildt, "C++ The Complete Reference", Tata McGraw Hill fourth Edition, 2003

OUTCOMES:

After completion of this course, the students would be able to

- Understand concepts of objects and their significance in real world
- Learn to co-relate relationship among different entities involved in a system
- Develop software in terms of objects, associations, and integrity constraints
- Identify, understand and analyze various sample development models
- Design classes and inheritances
- Real life problem formulation in terms of objects and classes
- Data handling through files

CAC1253	DATA STRUCTURES USING C	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the fundamental concepts of data structure
- To understand the basic operations of stacks and queues for real time scenario
- To comprehend the significance of sorting algorithms
- To demonstrate the understanding of various searching algorithms

MODULE I INTRODUCTION TO DATA STRUCTURES 9

Definition, Classification of data structures : primitive and non primitive. Operations on data structures. Dynamic memory allocation and pointers: Definition Accessing the address of a variable, Declaring and initializing pointers. Accessing a variable through its pointer. Meaning of static and dynamic memory allocation. Memory allocation functions: malloc, calloc, free and realloc.

MODULE II INTRODUCTION TO STACK AND QUEUE 9

Stack – Definition, Array representation of stack, Operations on stack: Infix, prefix and postfix notations- Conversion of an arithmetic expression from Infix to postfix. Applications of stacks. Queue - Definition, Array representation of queue, Types of queue: Simple queue, circular queue, double ended queue (deque) priority queue, operations on all types of Queues

MODULE III LINKED LISTS 9

Definition, Components of Linked List, Representation of Linked List, Advantages and Disadvantages of Linked List. Types of Linked List: Singly Linked Lists – Doubly Linked Lists – Circular List – Representing Stacks and Queues in C using Arrays and Linked Lists, Infix to Postfix Conversion, Postfix Expression Evaluation. Applications of Linked Lists.

MODULE IV TREES 9

Trees – Binary Trees - Terminology – Representation – Traversals – Graphs – Terminology – Representation – Graph Traversals (DFS & BFS).

MODULE V SEARCHING AND SORTING 9

Searching - Linear Search Methods - Binary Search Methods, Sorting - Bubble Sort, Selection Sort, Insertion Sort, Quick Sort, Merge Sort.

TOTAL HOURS – 45

TEXT BOOKS:

1. Narasimha Karumanchi, "Data Structures and Algorithms Made Easy: Data Structure and Algorithmic Puzzles", 2nd Edition, Create Space Independent Publishing Platform, 2011.
2. Ashok N. Kamthane, "Introduction to Data Structures in C", 2nd Edition, Wiley Publications, 2008.

REFERENCES:

1. Classic Data Structures, D. Samanta, PHI Learning , New Delhi 2011
2. Data Structure made simple, Sathish Jain, Shashi Singh, BPB Publications, New Delhi 2006

OUTCOMES:

On completion of this course, students will be able to

- Describe common applications for arrays
- Apply Stack and Queue data structures for real time applications
- Analyse, evaluate and choose appropriate abstract data types and algorithms to solve particular problems

CAC1254	OOPS WITH C++ LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

- Understand and solve logical & mathematical problems through C++ language
- Strengthen knowledge of a procedural programming language.
- Design and develop solutions to intermediate level problems
- Develop their skills in software development using a procedural language
- Get programming in skill the object oriented technology with the usage of C++.

LIST OF PROGRAMS

1. Creation of classes and use of different types of functions.
2. Programs using Constructor and Destructor
3. Count the number of objects created for a class using static member function.
4. Write programs using function overloading and operator overloading.
5. Programs using inheritance.
6. Program using friend functions.
7. Program using virtual function.
8. Program using exception handling mechanism.
9. Programs using files.
10. Programs using function templates.

TEXT BOOKS

1. Bjarne Stroustrup, " Programming: Principles and Practice Using C++ ", Addison Wesley, 2nd edition, ISBN-13: 978-0321992789, 2014.

REFERENCES:

1. Bjarne Stroustrup," The C++ Programming Language", Addison Wesley, 4 th edition, ISBN-13: 978-0321563842, 2013.
2. Herbert Schildt, "C++ The Complete Reference", Tata McGraw Hill Edition, 2003

OUTCOMES:

- After completion of this course, the students would be able to Create classes and objects in C++
- Implement inheritance, polymorphism and object relationship in C++

- Design methods and procedure
- Manipulate data through file in C++
- Debug and test software.
- Develop a minor software in C++ language

CAC1255	DATA STRUCTURES USING C LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

The objective of this course is to teach the students to

- Be familiar with writing recursive methods
- Implement stack and queue using array
- Implement circular queue using array
- Implement singly linked list and doubly linked list using dynamic variables and pointers
- Implement quick sort, selection sort, insertion sort and bubble sort techniques to sort a given list of integers.
- Implementation of binary search method for a given list of integers

LIST OF PROGRAMS

1. Write a C program to demonstrate the working of stack of size N using an array. The operations to be supported are 1. PUSH 2. POP 3. DISPLAY. The program should print appropriate messages for STACK overflow and Under flow.
2. Write a C program to simulate the working of an ordinary Queue using an array. Provide the operations QINSERT, QDELETE and QDISPLAY. Check the Queue status for empty and full.
3. Write a C program to simulate the working of an Circular Queue using an array. Provide the operations CQINSERT, CQDELETE and CQDISPLAY. Check the Circular Queue status for empty and full.
4. Using dynamic variables and pointers Write a C program to construct a singly linked list consisting of the following information in each node; Roll – No (Integer), Name (Character string). The operations to be supported are :
    - Inserting a node in the front of the list
    - Deleting the node based on Roll – No
    - Searching a node based on Roll-No
    - Displaying all the nodes in the list
5. Write a C program to implement doubly linked list
6. Write a C program to sort a list of N elements of integer type using quick sort Algorithm
7. Write a C program to sort a list of N elements using Bubble sort Technique

8. Write a C program to search for an element in an array using Binary search
9. Write a C program to implement insertion sort method to sort a given list of integers in descending order.
10. Write a C program to implement selection sort method to sort a given list of integers in descending order.

TOTAL HOURS –30

TEXTBOOKS:

1. Magnifying Data Structures, Aprita Gopal , First Edition , PHI Learning, New Delhi Data Structures in C, Horowitz, Sahni, Anderson-Freed, Universities Press
2. Narasimha Karumanchi, "Data Structures and Algorithms Made Easy: Data Structure and Algorithmic Puzzles", 2nd Edition, Create Space Independent Publishing Platform, 2011.

REFERENCES:

1. Ashok N. Kamthane, "Introduction to Data Structures in C", 2nd Edition, Wiley Publications, 2008.
2. DataStructures Using C - A.S.Tanenbaum, Y. Langsam, and M.J. Augenstein, PHI/Pearson education.

OUTCOMES:

The completion of this course the students will be able to

- Write and demonstrate recursive methods
- Implement stack and queue and evaluate various operations involved in it
- Implement and execute circular queue using array
- Develop an application using singly linked list and doubly linked list
- Implement and analyze various searching techniques and sorting techniques

CAC1256	ENVIRONMENTAL STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

To impart knowledge on

- Various natural resources, availability, utilization and its current scenario.
- Different ecosystems, energy transfer.
- Values, threats and conservation of biodiversity.
- Levels of different pollutants and its impact and the causes and effects of natural disasters

MODULE I NATURAL RESOURCES 8

Land resources: land degradation, soil erosion and desertification - Forest resources: use and over-exploitation, deforestation - Water resources: use and over-utilisation of surface and ground water, water conservation (rainwater harvesting and watershed management) - Food resources: world food problems, changes in land use by agriculture and overgrazing, modern agriculture and its effects - Energy resources: increasing energy needs, renewable and non-renewable, use of alternate energy sources.

MODULE II ECOSYSTEM 8

Ecosystem- energy flow in the ecosystem - food chains, food webs and ecological pyramids - characteristics, structure and function of (a) Terrestrial ecosystems (forest, grassland, desert) and (b) Aquatic fresh water ecosystems (pond, lake, river) (c) Aquatic salt water ecosystems (ocean, estuary) - ecological succession.

MODULE III BIODIVERSITY AND ITS CONSERVATION 8

Biodiversity - genetic, species and ecosystem diversity – hot-spots of biodiversity – bio geographic classification of India - endangered, endemic, extinct and invasive species of India - red data book - values of biodiversity: consumptive, productive, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - conservation of biodiversity: in-situ and ex-situ conservation of biodiversity

MODULE IV ENVIRONMENTAL POLLUTION AND NATURAL DISASTER 6

Definition, cause, effects and control measures of (a) air pollution (b) water pollution

(c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards - ill-effects of fireworks and upkeep of clean environment - solid waste management: types (urban, industrial, biomedical and electronic wastes), collection, processing and disposal (incineration, composting and land-fill).

Natural disaster and management: flood, cyclone, drought, landslide, earthquake and tsunami.

Case studies related to current situation.

TOTAL HOURS – 30

TEXT BOOKS:

1. Erach Bharucha, Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education for University Grants Commission, Orient Blackswan Pvt Ltd, Hyderabad, India, 2013.
2. Benny Joseph, Environmental Studies, Tata McGraw-Hill Education, India, 2009.
3. Ravikrishnan A, Environmental Science and Engineering, Sri Krishna Publications, Tamil Nadu, India, 2015.
4. Raman Sivakumar, Introduction to Environmental Science and Engineering, McGraw Hill Education, India, 2009.
5. Venugopala Rao P, Principles of Environmental Science and Engineering, Prentice Hall India Learning Private Limited; India, 2006.
6. Anubha Kaushik and Kaushik C.P., Environmental Science and Engineering, New Age International Pvt Ltd., New Delhi, India, 2009.
7. Rajah G, Basic Environmental Studies, Margham Publications, Chennai, 2016.

REFERENCE BOOKS:

1. Masters G.M. and **Wendell P.,** Introduction to Environmental Engineering and Science, **3rd** Edition, Prentice Hall, New Delhi, 2007.
2. Miller T.G. Jr., Environmental Science, Wadsworth Publishing Co. Boston, USA, 2016.

OUTCOMES:

At the end of the course the student will be able to

- Predict the scenario of various natural resources and suggest remedies to curb the exploitation of these resources.

- Identify food chain and web and its role in various ecosystems.
- Assess the impacts on biodiversity and provide solutions to conserve it.
- Analyze the impacts of pollutants in the environment and propose suitable method to alleviate the pollutants and the natural disasters.

SEMESTER III

CAC2151	**DATABASE MANAGEMENT SYSTEMS**	**L**	**T**	**P**	**C**
		3	**1**	**0**	**4**

OBJECTIVES:

The aim of the course is to

- Provide an introduction to the management of database systems.
- Understand the fundamentals of relational systems including data models, database architectures, and database manipulations.

MODULE I INTRODUCTION 12

Database Systems vs. File Systems - View of Data - Data Models- Database Languages -Transaction Management - Database Systems Structure - History of Database Systems - Database Systems Applications - Entity Relationship Model.

MODULE II RELATIONAL DATABASES 12

SQL - Basic Structure - Set Operations - Complex Queries - Joined Queries - DDL-Embedded SQL-Dynamic SQL-Other SQL Functions-Query by Example- Integrity and Security of searching-Relational Database Design.

MODULE III DATA STORAGE AND INDEXING 12

Storage & File Structure - Disks-RAID-File Organization - Indexing &Hashing- B+ TREE-B Tree-Static Hashing-Dynamic Hashing-Multiple Key Access.

MODULE IV QUERY EVALUATION & OPTIMIZATION 12

Query Processing-Selection Operation-Sorting-Join Operation-Evaluation of Expressions

MODULE V QUERY OPTIMIZATION 12

Query Optimization Overview - Transformation of Relational Expressions -Estimating Statistics of Expression Results - Choice of Evaluation Plans

Total Hours –60

TEXT BOOK:

1. Elmasri and Navathe, "Fundamentals of Database Systems", 6th Edition, Addison-Wesley, 2011

REFERENCES:

1. Raghu Ramakrishnan & Johannesgerhrke, “Data Base Management Systems”, Mc Graw Hill International Edition, 2000.
2. C.J. Date, A. Kannan, S. Swamynathan, "An Introduction to Database Systems", 8th Edition, Pearson Education, 2006.

OUTCOMES:

At the conclusion of the course, the student will be able to:

- Understand terms related to database design and management.
- Understand the objectives of data and information management.
- Develop physical data models for relational database management systems.
- Implement relational databases using a RDBMS retrieve data using SQL.

CAC2152 DIGITAL ELECTRONICS L T P C

3 0 0 3

OBJECTIVES:

The main objective of the Course Digital Electronics is the students will learn

- through the basic understanding of Boolean Algebra and Number systems,
- introduces the student to the fundamentals of combination logic design and then to sequential circuits(both synchronous and asynchronous)
- Understandings in Flip Flops, Multiplexers, ADC and DAC

MODULE I NUMBER SYSTEMS 9

Number Systems and Codes Decimal, binary, octal, hex numbers, conversion from one to another- codes, BCD, excess 3 , gray codes conversion from one to another - Error detection codes.

MODULE II BOOLEAN ALGEBRA AND THEOREMS 9

Boolean Algebra and Theorems : Basic, Universal logic gates - Boolean theorems - sum of products , products of sums expressions , simplification by Karnaugh Map method, simplification based on basic Boolean theorems - don't care conditions.

MODULE III COMBINATIONAL DIGITAL CIRCUITS 9

Combinational Digital Circuits Arithmetic Building blocks , Basic Adders and subtractors, BCD adders - Data of processing circuits, multiplexers, demulitiplexers, encoders, decoders - TTL, CMOS digital logic families.

MODULE IV SEQUENTIAL DIGITAL CIRCUITS 9

Sequential Digital Circuits : Flip-flops , RS, Clocked SR, JK, D, T, master-slave types-shift registers, ring counters - ripple counters - synchronous counters, timer IC 555, applications.

MODULE V DAC AND ADC 9

DAC and ADC : Parameters, Accuracy, resolution - DAC, variable resister network, R-2R ladder network types - ADC, counting continuous, successive approximation, dual - slope types - comparison of various types of DAC and ADC.

Total Hours –45

TEXT BOOKS:

1. M. Morris Mano and Michael D.Ciletti, "Digital Design with an introduction to the Verilog HDL", 5th Edition, Pearson Education, 2012.

REFERENCES:

1. Donald D. Givone, "Digital Principles and Design", 13th reprint, Tata McGraw Hill, 2003.
2. S.P. Bali, Solved Problems in Digital Electronic, Sigma Series, Tata McGraw-Hill,(2005)

OUTCOMES:

A student who successfully fulfills the course requirements will have demonstrated:

- An ability to understand basic parameters of a logic Gates.
- An ability to analyze and design a CMOS logic inverter.
- An ability to analyze a TTL and ECL logic inverter.
- An ability to understand the operation of latch circuit and flip-flop circuits.
- An ability to understand the operation of different types of semiconductor memories.

CAC2153	COMPUTER NETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES:

This course provides a comprehensive introduction to

- Understand the underlying Network model and Communication principles.
- Switching techniques and Multiplexing approaches
- knowledge in Internetworking Devices

MODULE I NETWORK FUNDAMENTALS

A communications model - Data Communications - Data Communications Networking - computer communication architecture - standards Data Transmission - Concepts and terminology - Analog and Digital - Transmission - Transmission Impairments - Transmission media.

MODULE II PHYSICAL LAYER

Data encoding - Digital data Digital signals ,Digital data Analog signals,, Analog data Analog signals Data Communications Interface : Asynchronous and synchronous Transmission - Line configuration - Interfacing.

MODULE III DATA LINK LAYER

Data link control: Flow controls - Error Detection - Error Control - High Level Data Link Control (HDLC) - MULTIPLEXING - Frequency Division multiplexing - Synchronous time - Division multiplexing - Statistical time division multiplexing.

MODULE IV NETWORK LAYER

Circuit switching: Circuit switching networks switching concepts - Routing in circuit switched networks - Packet switching principles - Routing in packet switching - Congestion control.

MODULE V HIGH PERFORMANCE NETWORKS

Frame relay: Frame relay Protocol Architecture - Frame relay call control user data transfer - Networks functions - Congestion control, ASYNCHRONOUS TRANSFER MODE (ATM) Protocol Architecture – ATM logical connection - ATM Cells – Transmission of ATM cells - ATM adaption layer - Traffic and congestion control.

TOTAL HOURS – 45

TEXT BOOKS:

1. Larry L. Peterson and Bruce S. Davie, "Computer Networks: A Systems Approach", 4th Edition, Elsevier, 2007.

2. Forouzan: Introduction to Data Communication & Networking, McGraw-Hill, 2007.

REFERENCES:

1. Andrew S. Tanenbaum, "Computer Networks", 4 th Edition, Prentice-Hall of India, 2003.

2. James F. Kurose and Keith W. Ross, "Computer Networking: A Top-Down Approach Featuring the Internet", 3rd Edition, Pearson Education, 2006.

OUTCOMES:

Upon completion of the subject, students will be able to

Explain the importance of data communications and the Internet in supporting business communications and daily activities.

- Understand how communication works in data networks and the Internet.
- Recognize the different internetworking devices and their functions.
- Explain the role of protocols in networking.
- Analyze the services and features of the various layers of data networks

CAC2154 FUNDAMENTALS OF ALGORITHMS

L	T	P	C
3	0	0	3

OBJECTIVES:

The aim of the course is to

- introduce mathematical aspects and analysis of algorithms
- analyze sorting and searching algorithms
- study various algorithmic techniques
- devise correct and efficient algorithms for solving a given problem
- explain the NP-Completeness and deal with NP-complete problems

MODULE I INTRODUCTION **9**

Notion of an Algorithm – Fundamentals of Algorithmic Problem Solving – Important Problem Types – Fundamentals of the Analysis of Algorithm Efficiency – Analysis Framework – Asymptotic Notations and its properties – Mathematical analysis for Recursive algorithm and Non-recursive algorithms.

MODULE II DIVIDE-AND-CONQUER **9**

Brute Force – Closest-Pair and Convex-Hull Problems-Exhaustive Search – Traveling Salesman Problem – Knapsack Problem – Assignment problem. Divide and conquer methodology – Merge sort – Quick sort – Binary search – Multiplication of Large Integers – Strassen's Matrix Multiplication.

MODULE III DYNAMIC PROGRAMMING AND GREEDY TECHNIQUE **9**

Computing a Binomial Coefficient – Warshall's and Floyd' algorithm – Optimal Binary Search Trees – Knapsack Problem and Memory functions. Greedy Technique– Prim's algorithm- Kruskal's Algorithm- Dijkstra's Algorithm.

MODULE IV BACKTRACKING **9**

Backtracking – N-Queens problem – Hamiltonian circuit problem – Subset sum problem

MODULE V BRANCH AND BOUND **9**

Branch and bound – Assignment problem – Knapsack problem – Traveling salesman problem.

TOTAL HOURS –45

TEXT BOOKS:

1. Baase,S., Gelder,A.V., Computer Algorithms: Introduction To Design And Analysis, 3rd Edition, Pearson India.
2. Anany Levitin, Introduction to the Design and Analysis of Algorithms, 3rd Edition, Pearson Education.

REFERENCES:

1. Thomas H. Cormen, Charles E. Leiserson, Ronal L. Rivest, Clifford Stein, Introduction to Algorithms, 2ndEdition, PHI, 2006.
2. Introduction to the Design and Analysis of Algorithms A Strategic Approach, R.C.T. Lee, S.S. Tseng, R.C. Chang & Y.T.Tsai, TMH, 2005.

OUTCOMES:

At the completion of this course, students will be able to

- Ability to decide the appropriate data type and data structure for a given problem.
- Ability to select the best algorithm to solve a problem by considering various problem characteristics, such as the data size, the type of operations, etc.
- understand NP-Completeness and deal with NP-complete problems.

CAC2155 MULTIMEDIA AND ITS APPLICATIONS L T P C

3 0 0 3

OBJECTIVES:

- Understand the Flash/Animate working environment and its terminology.
- Explore and implement the different types of animation Flash/Animate supports.
- Learn how to import and use sound and sound effects in animation programs.
- To edit images in Photoshop

MODULE I -INTRODUCTION 9

What is multimedia: Definitions - Where to use Multimedia - Introduction to making Multimedia- The stages of a Project - What You Need – Multimedia Skills and Training: Basic Tools :Text Editing and Word Processing Tools - Painting and Drawing Tools - 3- D Modeling and Animation Tools - Image Editing Tools - Sound Editing Tools - Animation, Video and Digital Movie Tools - Helpful Accessories

MODULE II VECTOR AND RASTER GRAPHICS 9

Adding multimedia to the web-Raster image editing software Introduction -Image Basics -File Formats -GIF -JPEG -Color Palette –Color models-Layers -Creating new Images - Brushes –Grids and guides-Gradients -Scaling Images -Moving and Merging Layers - Tool Palette -Dialogs -masking –Filters –Adding text to images – Designing icons and background images.

MODULE III IMAGE HANDLING 9

Introduction –Creating Simple Vector graphics –Creating banners -Images -Working with layers –Tweening -Motion guide –Masking –Frame by Frame animation –Onion Skin Effect –Creating special effects -Text effects and animation –Action scripts.

MODULE IV ANIMATIONS AND INTERACTION 9

Creating clippings - Animations with sound effects -Adding audio or Video - Windows Media Player ActiveX Control -Real Player ActiveX control- web site with a particular theme using all the utilities -Graphics -Animations and Interaction

.

MODULE V PROJECT PLANNING 9

Estimating -Designing - Producing - Content and Talent- Acquiring Content - Using content created by others - Using Content created for a Project - Using

Talent Delivering: Testing - Preparing for Delivery - Compact Disc Technology - Wrapping It Up - Delivering on the World Wide Web.

TOTAL HOURS –45

TEXT BOOKS:

1. Richard Schrand, Photoshop 6 Visual Jumpstart, Adobe Press 2000.(II)
2. James L. Mohles, Flash 5.0 Graphics, Animation & Interaction, Macromedia 2000. (III&IV)
3. Tay Vaughan, Multimedia: Making It Work, Fourth Edition - Tata McGraw Hill Edition, 1999.(I&V)

REFERENCES:

1. Tay Vaughan , "Multimedia:Making It Work,8th Edition", McGraw Hill, 2010.
2.John F Koegelbuford, Multimedia Systems Addison Wesley - First Indian Reprint, 2000.

OUTCOMES:

On completion of the course, Students will be able to

- Create Flash/Animate banners for websites that will capture and hold viewers attention
- Create animated photo galleries.
- Incorporate audio and video and learn how to edit it within Flash/Animate.
- Design icons and background images.

CAC2156	DATABASE MANAGEMENT SYSTEMS LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

The aim of the course is

- to learn SQL (Structured Query Language) which would provide functionality to:
- to learn how to create tables which are fundamental storage blocks of data.
- to learn how to place constraints on data that is entered on tables to ensure data integrity.
- to learn how to add, change and remove data from tables.
- to learn how to select a subset of the data you want to see from the collection of tables and data.
- to learn how to combine table and group multiple rows of data in table. to learn PL/SQL which would provide the ability to do iterative
- programming at database level to:
- to write programming blocks with conditional structure, assignment structure, loop structure, etc.
- use exception Handling, Transaction oriented programs, Stored procedures, functions, packages, etc.

LIST OF PROGRAMS

1. Execute a single line and group functions for a table.
2. Execute DCL and TCL Commands.
3. Create and manipulate various DB objects for a table.
4. Create views, partitions and locks for a particular DB.
5. Write PL/SQL procedure for an application using exception handling.
6. Write PL/SQL procedure for an application using cursors.
7. Write a DBMS program to prepare reports for an application using functions.
8. Write a PL/SQL block for transaction operations of a typical application using package.
9. Design and develop an application using any front end and back end tool (make use of ER diagram and DFD).

Typical Applications – Banking, Electricity Billing, Library Operation)

TOTAL HOURS –30

OUTCOMES

At the end of this course, a student will be able to

- Use in real time business activities.
- create and do manipulation on database in any domain.
- work with table by using PL/SQL Program.
- get a clear idea about database transaction activities.

TEXTBOOK:

1.Ramez Elmasri and Shamkant B. Navathe, “Fundamentals of Database Systems”, Fifth Edition, Pearson Education, 2008.

REFERENCES:

1.Abraham Silberschatz, Henry F. Korth and S. Sudharshan, “Database System Concepts”, Sixth Edition, Tata Mc Graw Hill, 2011.

2. C.J.Date, A.Kannan and S.Swamynathan, “An Introduction to Database Systems”, Eighth Edition, Pearson Education, 2006.

CAC2157	MULTIMEDIA LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- Expose students to various interactive multimedia based software such as Flash
- Gain a working knowledge of all the Adobe Flash/Animate tools and their functions.

LIST OF PROGRAMS

Exercises Using Flash

1. Drawing a Semi Circle by snap tool, spokes on a wheel.
2. Placing a text along a curved path .
3. Changing on objects shape using shape tweening, text tweening.
4. Application using buttons, animating the button
5. Tweening a using the shape hints, motion tweening
6. An application to show the masking effect in Flash
7. Slide show presentation(minimum 5 slides)
8. Creating smudge effect for an image
9. Usage of textbox, dynamic text box, buttons with action scripts.

Exercises Using Photoshop

1. Working with the clone stamp tool , custom shape
2. Using the sponge Tool
3. Removing an element from an image
4. Creating an edge mask
5. Applying Transformations
6. Correcting brightness and contrast

TOTAL HOURS – 30

TEXT BOOKS:

1.Richard Schrand, Photoshop 6 Visual Jumpstart, Adobe Press 2000.

2. James L. Mohles, Flash 5.0 Graphics, Animation & Interaction, Macromedia 2000

REFERENCES:

1. John F Koegelbuford, Multimedia Systems Addison Wesley - First Indian Reprint, 2000.

2. Walter Worth John, A - Multimedia Technologies and Applications, Ellis Horwood Ltd., London,1991.

OUTCOMES:

On completion of the course, Students will be able to

- Draw simple images prepare them for animation and add motion.
- Animate a sequence with a soundtrack.

CAC2158	COMMUNICATION SKILLS	L	T	P	C
		0	0	4	2

OBJECTIVES:

The aim of the course is to

- enable the students to speak English with correct accent and pronunciation.
- interact effectively in real life situations and in workplace.
- develop the writing ability of students by providing them the required practice.
- improve the written communication skill so as to write reports, letters etc.

MODULE I

Introduction to Communication-Need for Effective Communication. The Process of Communication:Levels of communication- Flow of communication- Use of language in communication- Communication networks- Significance of technical communication.

MODULE II

Barriers to Communication:Types of barriers- Miscommunication- Noise- Overcoming measures. Listening Skills:Listening as an active skill- Types of Listeners- Listening for general content- Listening to fill up information- Intensive Listening- Listening for specific information-Developing effective listening skills- Barriers to effective listening skills.

MODULE III

Reading Skills :Previewing techniques- Skimming- Scanning- Understanding the gist of an argument-Identifying the topic sentence- Inferring lexical and contextual meaningrecognizing coherence and sequencing of sentences- Improving comprehension skills. Writing Skills:Sentence formation- Use of appropriate diction- Paragraph and Essay Writing- Coherence and Cohesion.

MODULE IV

Technical Writing:Differences between technical and literary style, Elements of styleCommon Errors. Letter Writing: Formal, informal and demi-official letters- business letters. Job Application :Cover letter, Differences between bio-data, CV and Resume. Group Discussion:Differences between group discussion and debate; Ensuring success in group discussions.

MODULE V

Non-verbal Communication and Body Language: Forms of non-verbal

communicationInterpreting body-language cues- Kinesics- Proxemics- Chronemics- Effective use of body language. Interview Skills:Types of Interviews- Ensuring success in job interviewsAppropriate use of non-verbal communication. Presentation Skills:Oral presentation and public speaking skills- business presentations

TOTAL HOURS –20

TEXT BOOKS:

1.Deparment of English,Anna University,Mindscapes,English for Technologists & Engineers,Orient Longman Pvt.Ltd,Chennai :2012.

2.M.Ashraf Rizvi,,Effective Technical Communication,Tata McGraw Hill Publishing Company Ltd,New Delhi,2009.

REFERENCES:

1. Sangeetha Sharma,Binod Mishra,'Communication Skills for Engineers & Scientists,PHI,Learning Pvt Ltd,New Delhi,2009.
2. Sumant S,Technical English, 2nd Edition,McGraw-Hill Education Pvt Ltd,2008.

OUTCOMES:

This course will enable students to use „good" English and perform the following
Gather ideas and information, to organise ideas relevantly and coherently.

- Engage in debates.
- Participate in group discussions.
- Make oral presentations.
- Write formal letters.
- Transfer information from non-verbal to verbal texts and vice versa.
- Take part in social and professional communication.

SEMESTER IV

CAC2251	PROGRAMMING IN JAVA	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aim of the course is to

- Learn the fundamentals of the capabilities of Java and to introduce encapsulation, polymorphism, and the Java language mechanism (classes and objects) to implement it.
- Develop Java computer programs that perform various problem-solving algorithms.
- Develop the programming skills to use the Java object oriented programming methodology to produce quality computer based solutions to real problems.

MODULE I INTRODUCTION TO JAVA 12

The Confidentiality, Integrity & Availability (CIA) Triad, Cryptographic concepts, methodologies &practices, Symmetric& Asymmetric cryptography, public& private keys, Cryptographic algorithms and uses, Construction& use of Digital signatures

MODULE II CLASS AND INHERITANCE 12

The Java Class- Inheritance, Deriving Classes, Method Over-riding, Method Overloading, Access Modifiers, Abstract Class and Method, Interfaces, Packages, Imports and Class Path.

MODULE III THREADS AND EXCEPTION HANDLING 12

Exception Handling, The Try-Catch Statement, Catching more than one Exception, Generating Exceptions, Threads: Introduction, Creating Threads in Applications-Thread Priority

MODULE IV : INPUT STREAM CLASSES 12

IO Packages, Java Input Stream Classes, Java Output Stream Classes, File Class.

MODULE V APPLETS AND AWT PACKAGES 12

Creating an Executable Applet, Applets Life Cycle, AWT and Graphic methods, Fonts, Loading and Viewing Images, Loading and Playing Sound, Event Handling, Layouts

TOTAL HOURS –60

TEXT BOOKS:

1. Hortsmann & Cornell, "Core Java Advance Features VOL II", 9th Edition,

Pearson Education, 2013.

REFERENCES:

1. Patrick Naughton, "Complete Reference: JAVA 2", 8th Edition, Tata McGrawHill, 2011.
2. Andrew Lee Rubinger, Bill Burke "Enterprise JavaBeans 3.1", 6th Edition, O'Reilly Publishers, 2010.

OUTCOMES:

Upon completion of this course, students would be able to:

- Develop Java computer programs that perform various problem-solving algorithms.
- Improve the programming skills in Object Oriented language.
- Understand the concept of OOP as well as the purpose and usage principles of inheritance,
- Develop programs using the Java Collection API as well as the Java standard class library

CAC2252 COMPUTER SECURITY L T P C

3 0 0 3

OBJECTIVES:

- To provide the student with a foundation covering computer security issues
- To determine appropriate mechanisms for protecting Computer systems.
- To help organizations increase awareness of security policies and procedures.

MODULE I INTRODUCTION 8

Physical Security – Viruses – Worms – Trojan Horses –Principles of Computer Security

MODULE II IDENTITY THEFT AND PRIVACY 9

Identity Theft- Shredding – Internet Cookies –Phishing – Homograph Threat – Privacy Issues- Trust.

MODULE III ELEMENTS OF CRYPTOGRAPHY 10

Principles of Cryptography - Modular Arithmetic - Integrity Check Functions - Kirchoff's Principle – Monoalphabetic -Polyalphabetic Cipher – One Time Pad – Key distribution Problem – Diffie Hellman Key Merkle Keys- Public Key Cryptography – RSA – SSL - Digital Signatures – Encryption - Strength of Mechanisms –Performance.

MODULE IV DATABASE SECURITY 9

Introduction - Relational Databases- Access Control - Statistical Database Security – Integration with the Operating System – Privacy

MODULE V COMMUNICATION AND WEB SECURITY 9

Basics of authentication, tokens, certificate-based and biometric authentication, Protocol Design Principles - IP Security - IPsec and Network Address Translation- SSL/TLS – Xtensible Authentication Protocol - Web Services Security.

TOTAL HOURS –45

TEXT BOOK:

1.Chuck Easttom, "Computer Security Fundamentals", 2nd Edition, Pearson Education, 2012.

REFERENCES:

1. Christof Paar, Jan Pelzl, Bart Preneel, "Understanding Cryptography: A Textbook for

Students and Practitioners", 1st Edition, Springer, 2010

2. Bruce Schneider, "Applied Cryptography Protocols, Algorithms, and Source Code in C", 2nd Edition, John Wiley & Sons, 2007.

OUTCOMES:

Students who complete this course will be able to

- identify fundamental concepts of computer security.
- use the World Wide Web to know the latest security alerts and information.
- compare and contrast types of malicious code, including worms, Trojan horses, and viruses.

CAC2253	SOFTWARE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

The aims of the course are as follows

- to define software engineering and explain its importance
- to discuss the concepts of software products and software processes
- to solve problems in a team environment through effective use of written and oral communication skills.
- to practice the lifelong learning needed in order to keep current as new issues emerge.
- to develop software in at least one application domain.

MODULE I INTRODUCTION 9

Definition of software and software engineering – Software myths –Software Engineering paradigms: Linear Sequential Model & Prototyping Model Software Project Management – Software Metrics – Software Cost Estimation – Software Project Planning.

MODULE II SOFTWARE REQUIREMENT ANALYSIS 9

Software Risks – Software Configuration Management System Analysis – Modeling the System Architecture – System Specification –Fundamentals of Requirement Analysis – Software Prototyping – Prototyping methods and tools specification – Software requirements Specifications

MODULE III STRUCTURED ANALYSIS 9

Introduction – the elements of the analysis model – data objects, attributes and relationships – Cardinality and Modality – ERD – DFD – Classical Analysis Methods : DSSD, JSD, SADT.

MODULE IV SOFTWARE DESIGN 9

Software Design and Software Engineering – Design and Software Quality – Evolution of Software Design – Design Principles. Design Concepts, Abstraction, Refinement, Modularity – Effective Modular Design, Functional Independence, Cohesion, Coupling.

MODULE V SOFTWARE TESTING METHODS 9

Software Testing Fundamentals – White Box Testing – Black Box Testing – Debugging – Software Quality: McCall's Quality Factors

TOTAL HOURS – 45

TEXT BOOKS:

1. Stephen Withal, "Software Requirement Patterns", 3rd Edition, Microsoft Press, 2011.

REFERENCES:

1. Karl & Joy Beatty," Software Requirements", 3rd Edition, Microsoft Press, 2012..
2. S.K.Kataria, Rajiv Chopra, "Object Oriented Software Engineering", 3rd Edition, 2013.

OUTCOMES:

At the completion of this course students will be able to

- understand and apply foundations of software engineering practice and process within production constraints.
- get an awareness of current industry standards and practices.
- understand and apply principles of project management for single- paired, and team processes.
- have strong oral and written communication skills to help students in preparing good quality documentation.

CAC2254	INFORMATION STORAGE AND MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce advanced Storage System, Backup and Security Managements.
- The Concept of Cloud Computing, Virtualization and other related services.
- To Explain Storage networking Technologies
  Security in cloud Environment and cloud Service management activities

MODULE I STORAGE SYSTEM

Introduction to Information Storage, virtualization, and cloud computing, Data center environment, RAID, Intelligent Storage system

MODULE II STORAGE NETWORKING TECHNOLOGIES

Fibre Channel Storage Area Network (FC SAN), IP SAN and Fibre Channel over Ethernet (FCoE), Network Attached Storage (NAS), Object based and Unified Storage

MODULE III BACKUP. REPLICATION AND ARCHIVE

Introduction to Business Continuity, Backup and Archive, Local Replication, Remote Replication

MODULE IV CLOUD COMPUTING

Cloud Computing, benefits, characteristics, deployment models, and Services, cloud challenges and migration considerations

MODULE V SECURING AND MANAGING STORAGE INFRASTRUCTURE

Securing the Information Infrastructure, framework and domains of storage security, security Implementation at storage networking, security in virtualized and cloud environments, Managing the Information Infrastructure, infrastructure monitoring and management, information lifecycle management (ILM), cloud service management activities

TOTAL HOURS –45

TEXTBOOK:

1.G. Somasundaram, Alok Shrivastava, Information Storage and Management - Storing, Managing, and Protecting Digital Information EMC Education Services,2012.

REFERENCE:

1. John W.Rittinghouse and James F.Ransome, “Cloud Computing: Implementation, Management, and Security”, CRC Press, 2010.

OUTCOMES:

Upon completion of the subject, students will be able to

- A working understanding of the Storage, Backup, virtualization, and cloud computing
- Acquire knowledge in different technologies of Storage System and Backup System
- An awareness of Security in Cloud and cloud service management activities

CAC2255 PROGRAMMING IN JAVA LAB

L	T	P	C
0	0	4	2

OBJECTIVES

The aim of the course is to

- Develop the programming skills using the object oriented programming methodology to produce quality computer based solutions to real problems.
- Utilize the advance features of Java technology.
- Work with collection API and develop fast programs.
- Develop good multithreaded programs.

LIST OF EXERCISES

1. Programs using basic data types, operators and control structures.
2. Class definitions and usage involving variety of constructors and finalizes
3. Programs involving various kinds of inheritances,
4. Program to demonstrate creation and handling of packages, their imports and Class Path.
5. Programs involving a variety of Exception Handling situations
6. Program involving creating and handling threads in applications and applets.
7. Program to demonstrate AWT/Swing graphic methods
8. Program for Loading and Viewing Images, Loading and Playing Sound
9. Programs to demonstrate various Layouts
10. Programs to demonstrate event handling

TOTAL HOURS –30

TEXT BOOKS:

1. Patrick Naughton, "Complete Reference: JAVA 2", 8th Edition, Tata McGrawHill, 2011.

REFERENCES:

1. Keyur shah, “Gateway to Java Programmer Sun Certification”, Tata McGraw Hill 2002.
2. Herbert Schildt, The Complete Reference – Java 2 , 4th Edition, Tata McGraw Hill, 2007

OUTCOMES:

After completion of this course, the students would be able to

- Understand Java and object-oriented programming language concepts.

- Write, debug, and document well-structured Java applications
- Implement Java classes from specifications
- Effectively create and use objects from predefined class libraries
- Understand the behavior of primitive data types, object references, and arrays
- Implement interfaces, inheritance, and polymorphism as programming techniques
- Apply exceptions handling

CAC2256	SOFT SKILLS AND PERSONALITY DEVELOPMENT	L	T	P	C
		0	0	4	2

OBJECTIVES:

This course is designed to

- provide attitude Control and Personal Self Esteem Improvement
- interview Motivation effective Answering and Maintaining Fluent Communication
- positive Body Language
- effective Resume Creation
- leadership Skills, Team Player Skills

MODULE I INTRODUCTION 4

Awareness of Real World Industry and Situations - Conscious Self-Awareness - Practical Visualizations - Neuro- Linguistic Programming Basics

MODULE II MOTIVATION 4

Developing Self Esteem and Self Motivation - Confident Goal Setting - Positive Attitude Development and Positive Thinking - Developing Inner Achievement Mindset.

MODULE III LEADERSHIP SKILLS 4

Types of Leadership - Leadership Process and Thinking - Innovative Thinking - Role of Competency, Discipline, Planning and Ethics - Creating Cooperation and Trust in Team Building Process – Mentoring.

MODULE IV EFFECTIVE COMMUNICATION I 4

Eliminating Stage Fright - Increasing Fluency - Increasing Focus while Listening - How to communicate as a Follower - How to communicate as a Leader - Assertive and Polite Communication

MODULE V EFFECTIVE COMMUNICATION II 4

Fluency with increased vocabulary - Group Discussion Etiquette - Advanced Group Discussions - Giving a positive Body Language - Interviews: Clear Speaking - Interviews: Handling Pressure

TOTAL HOURS –20

REFERENCES:

1. Charles Faulkner and Steve Andreas, "NLP: The New Technology of Achievement", Harper Paperbacks publishers, 1996.
2. Sarvesh Gulati, "Corporate Soft Skills" , Rupa and Co publishers.

3. P.K.Dutt, G. Rajeevan and C. L. N. Prakash, “A Course in Communication Skills”, Cambridge University Press, India 2007.

OUTCOMES:

By the end of this course students will be able to develop the following:

Awareness of Real World Industry and Situations

- Role of Competency, Discipline, Planning and Ethics
- Advanced Group Discussions
- Giving a positive Body Language
- Interviews: Clear Speaking

SEMESTER V

		L	T	P	C
CAC3151	**C# AND .NET PROGRAMMING**	**3**	**1**	**0**	**4**

OBJECTIVES:

To enable the students to learn and develop Web and Windows application for the .NET platform.

MODULE I INTRODUCTION 12

Vision and goals of .NET, Building blocks of .Net, overview of .Net applications- .Net evolution- The .Net Framework Architecture- Intermediate Language(IL)- Common Language Runtime (CLR)- JIT Compilation- Common Type System (CTS)- Common Language System (CLS)- Assemblies- IL Disassembler (ILdasm.exe)- Namespaces. C# features Working with methods- understanding method structure- calling a method- understanding parameter types- overloading methods- virtual methods- overriding methods.

MODULE II C# CLASSES 12

Constants- fields- methods- properties- events- indexers- operators- constructors- destructors- static modifiers. Class Inheritance Compiling with multiple classes- virtual and override methods- abstract methods- sealed classes- Boxing and Unboxing- Working with namespaces- Understanding interfaces- handling exceptions.

MODULE III WINDOWS APPLICATIONS 12

Understanding Windows Forms Architecture- Windows controls: Common- Containers- Menus and Tool strips- Data- Reporting. Adding and using windows controls to the form.

MODULE IV DATABASE PROGRAMMING WITH ADO.NET II 12

Understanding the Dataset classes and their relatives- Understanding OLEDB and SQL Server Support- Understanding common database operations using ADO.NET – Operations that don’t return rows- Data operations that return single- row entities- data operations that affect single-row entities- data operations returning sets of rows- data operations affecting sets of rows- operations that return hierarchical data.

MODULE V CREATING WEB APPLICATIONS WITH WEB FORMS 12

[Asp.NET]Difference between ASP and ASP.Net- Defining a web application- ASP.NET architecture- ASP.net web forms- Code behind model- Validation controls in ASP.NET- Server controls and data binding- Grid view- data repeater- data list- Data binding in ASP.NET- Data source controls- sqldata source- Data controls – grid view and details view- Login controls.

TOTAL HOURS –45

TEXT BOOKS:

1. Jeff Ferguson, Brian Patterson, Jason Beres ,C# Programming Bible , Wiley Publishing Inc., Reprint 2006.

REFERENCES:

1. Jeff Prosise, Programming .Net, 2nd Edition, WP Publishers & Distributors Pvt. Ltd, 2009.
2. Kevin Hoffman & Jeff Gabriel, Professional .Net Framework, 1st Edition, Wrox Press Publishers, 2006.

OUTCOMES:

- Upon successful completion of the course, the students would be able to
- Update the students with the latest technologies thereby make them fit for the industry
- Make the students aware of a new development platform for internet and distributed applications
- Simplify application development and deployment

CAC3152 WEB DESIGNING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Introduce the students to the concepts, terms and technologies used in web site design
- Highlight the theories underlying web site design.
- To understand the principles of creating an effective web page
- To use scripting languages to transfer data and add interactive components to web pages.

MODULE I INTRODUCTION 9

Introduction to WWW **-** Introduction to Network, Internet and Intranet, Application and Services, Internet Addressing – URL, Elements of Web – Web Page, Designing Principles-Web Site Building , Web Languages – HTML/DHTML, JavaScript, PHP.

MODULE II HTML 9

Building Web Based Application using HTML**-**Html Document Structure, Various HTML Tags – Text Formatting Tag, Link Tag, List Tag, Image Tag, Table Tag, Line Breaks, Frames, Forms.

MODULE III CASCADING STYLE SHEET 9

Introduction to Style sheet - Types of Style sheet, concept of class &ID - CSS Property– Background Property - Font property- Text - Borders -Margins-Padding.

MODULE IV CLIENT-SIDE SCRIPTING LANGUAGE 9

Types of Scripting language, Introduction to JavaScript-How to develop JavaScript-Operators- Conditional Structure & Looping Structure-Dialog Boxes- Arrays- Built-in Functions (String, Math, Date, Array)- Form Objects and events.

MODULE V SERVER SIDE SCRIPTING LANGUAGE 9

Introduction to PHP-Basic PHP syntax-PHP tags, PHP statements and whitespace, comments, Operators, Conditional and Looping Structure, User Define Functions, Arrays.

TOTAL HOURS –45

TEXT BOOKS:

1. HTML: The Complete Reference**,**Thomas A. Powell , 2000(I,II&III)
2. Beginning JavaScript 2nd Edition, Wrox, Nicholas C. Zakas, 2004(IV)
3. PHP Bible, Wiley Publication, Tim Converse, Joyce Park, 2002(V)

REFERENCES:

1. Developing Web Application, Wiley India Publication, Ralph Moseley, Wiley India, 2007.
2. Web Enabled Commercial Application Development Using HTML, DHTML, PERL, Java Script, BPB Publications, Ivan Bayross, 2005

OUTCOMES:

On completion of the course, Students will be able to

- Demonstrate the knowledge and ability to apply the design principles, techniques and technologies to the development of creative websites.
- Identify most HTML tags and CSS properties and use a text editor to construct the basic HTML and CSS structure for a webpage
- Apply markup languages for processing, identification and presentation of information in web pages.
- Incorporate concepts of layout and organization to design websites that effectively communicate using visual elements

.

CAC3153 SOFTWARE TESTING

L	T	P	C
3	0	0	3

OBJECTIVES:

The aims of the course are as follows

- To learn about purpose of testing.
- To understand various types of testing.
- To understand the metrics of testing

MODULE I : INTRODUCTION **9**

Basic Definitions – test cases –Identifying test cases –Error and fault taxonomies – Level of Testing.

MODULE II : FUNCTIONAL TESTING **9**

Functional Testing: Boundary value Testing, Equivalence class testing, Decision Table based testing, Retrospection.

MODULE III STRUCTURAL TESTING **9**

Role of Strategic Planning for IT, Strategic Direction and Alignment of Security Strategy with Business Objectives, Role of CISO, Security Metrics Program

MODULE IV INTEGRATION AND SYSTEM TESTING **9**

Levels of Testing, Integration Testing, System Testing, Interaction Testing.

MODULE V OBJECT ORIENTED TESTING **9**

Class Testing –GUI Testing – Object Oriented System Testing.

TOTAL HOURS – 45

TEXT BOOKS:

1. Ali Mili, FairouzTchier , “Software Testing: Concepts and Operations”, Wiley, ISBN: 978-1-118-66287-8, 2015.

REFERENCES:

1. .Glenford J. Myers, Corey Sandler, “The Art of Software Testing”, 3rd Edition, Wiley, ISBN 978-1-118-03196-4, 2011
2. Srinivasan Desikan and Gopalswamy Ramesh, “ Software Testing : Principles and Practice”, Pearson ,ISBN-13: 978-8177581218, 2014.

OUTCOMES:

At the completion of this course, the student will able to

- define, formulate and analyse a problem
- Identify the strengths and weaknesses of different types of testing
- choose the appropriate testing for a specified application.

CAC3154	C# AND .NET PROGRAMMING LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

To obtain overall view of .NET technologies and its programming with C#

LIST OF PROGRAMS

1. To implement the concept of indexers
2. To implement the concept of sealed class
3. To implement the concept of namespace
4. To implement the concept of interfaces
5. To implement the concept of events
6. To implement exception handling
7. To design a calculator in windows form
8. To implement data controls in windows form
9. To implement validation controls in web form
10. To implement Data controls in web form
11. To implement Sql DataReader in ADO.NET
12. To implement Dataset object in ADO.NET

TOTAL HOURS –30

TEXT BOOKS:

1. Jeff Ferguson, Brian Patterson, Jason Beres, C# Programming Bible , Wiley Publishing Inc., Reprint 2006.

REFERENCES:

1. Kevin Hoffman & Jeff Gabriel, Professional .Net Framework, 1st Edition, Wrox Press Publishers, 2006.
2. Jeff Prosise, Programming .Net, 2nd Edition, WP Publishers & Distributors Pvt. Ltd, 2009

OUTCOMES:

At the completion of this course, the student will be able to:

- Create and populate Windows Forms.
- Create and use user controls in a Windows Forms application
- Create menus in a Windows Forms application
- Add code to form and control event procedures in a Windows Forms application
- Create Multiple Document Interface (MDI) applications
- Validate user input in a Windows Forms application

- Bind Windows Forms applications to various data sources by using Microsoft ADO.NET
- Use .NET and COM components in a Windows Forms application

CAC3155	WEB DESIGNING LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

- To develop webpages that present information, graphics and hypertext links to other webpages in a cohesive manner
- Identify most HTML tags and CSS properties and use a text editor to construct the basic HTML and CSS structure for a webpage
- To validate forms using Javascript.

LIST OF PROGRAMS

1. Create a webpage to illustrate text formatting tags, order and unordered list
2. Develop a web page to display table and frames
3. Create a web page to embed an image map in a web page.
4. Create a web page with all types of Cascading style sheets.
5. Design a web page using different CSS properties like border, background, text, and font.
6. Client Side Scripts for Validating Web Form Controls
7. Develop a simple calculator using JavaScript
8. Designing a digital clock using JavaScript
9. Demonstrate string and math objects predefined methods available in JavaScript
10. To create a html registration form and perform validation.

TOTAL HOURS – 30

TEXT BOOKS:

1. Developing Web Application, Wiley India Publication, Ralph Moseley, Wiley India, 2007.
2. Web Enabled Commercial Application Development Using HTML, DHTML, PERL, Java Script, BPB Publications, Ivan Bayross, 2005

REFERENCES:

1. HTML: The Complete Reference**,**Thomas A. Powell , 2000(I,II&III)
2. Beginning JavaScript 2nd Edition, Wrox, Nicholas C. Zakas, 2004(IV)
3. PHP Bible, Wiley Publication, Tim Converse, Joyce Park, 2002(V)

OUTCOMES:

On completion of the course, Students will be able to

- Demonstrate an understanding of basic HTML , CSS structures and JavaScript.
- Gain the skills needed for entry into web design and development careers.

SEMESTER VI

CAC3251	**NETWORK SECURITY**	**L**	**T**	**P**	**C**
		3	**1**	**0**	**4**

OBJECTIVES:

- Various types of ciphers, DES, AES, message Authentication, digital Signature and Security System.
- Network security, virus, worms and firewall.
- Encrypt and decrypt messages using block ciphers.
- Sign and verify messages using well-known signature generation and verification algorithms.
- The ethical issues related to the misuse of computer security

MODULE I **12**

Computer Security : Introduction, Need for security, Principles of Security, Types of Attacks Cryptography : Plain text and Cipher Text, Substitution techniques, Caesar Cipher, Mono-alphabetic Cipher, Polygram, Polyalphabetic Substitution, Playfair, Hill Cipher, Transposition techniques, Encryption and Decryption, Symmetric and Asymmetric Key Cryptography, Steganography, Key Range and Key Size, Possible Types of Attacks

MODULE II **12**

Symmetric Key Algorithms and AES: Algorithms types and modes, Overview of Symmetric key Cryptography, Data Encryption Standard (DES), International Data Encryption Algorithm (IDEA), RC4, RC5, Blowfish, Advanced Encryption Standard (AES)

MODULE III **12**

Asymmetric Key Algorithms, Digital Signatures and RSA: Brief history of Asymmetric Key Cryptography, Overview of Asymmetric Key Cryptography, RSA algorithm, Symmetric and Asymmetric key cryptography together, Digital Signatures, Knapsack Algorithm, Some other algorithms (Elliptic curve cryptography, ElGamal, problems with the public key exchange

MODULE IV **12**

Digital Certificates and Public Key Infrastructure (PKI): Digital Certificates, Private Key Management, The PKIX Model, Public Key Cryptography Standards (PKCS), XML,PKI and Security, Hash functions, Key Predistribution, Blom's Scheme, Diffie-

Hellman Key Predistribution, Kerberos, Diffie-Hellman Key Exchange, The Station-to-station Protocol

MODULE V **12**

Network Security, Firewalls and Virtual Private Networks: Brief Introduction to TCP/IP, Firewalls, IP Security, Virtual Private Networks (VPN), Intrusion Internet Security Protocols: Basic concepts, Secure Socket Layer (SSL), Transport Layer Security (TLS), Secure Hyper Text Transfer Protocol (SHTTP), Time Stamping Protocol (TSP), Secure Electronic Transaction (SET), SSL vs SET, 3-D Secure Protocol, Electronic Money, E-mail Security, Wireless Application Protocol (WAP) Security, Security in GSM, Security in 3G

Total Hours –60

TEXT BOOKS:

1. Cryptography and Network Security by Atul Kahate, 2nd Edition, Tata McGrawHill,2012

REFERENCES:

1. Cryptography and Network Security by William Stallings, Fifth Edition, Pearson Education,2008.
2. Cryptography: Theory and Practice by Douglas Stinson, CRC Press, CRC Press LLC,2010.

OUTCOMES:

- Understand the basic concept of Cryptography and Network Security, their mathematical models.
- Acquire knowledge in security issues, services, goals and mechanism.
- Understand mathematical foundation required for various cryptographic Algorithms.
- Identify and classify computer and security threats and develop a security model to prevent, detect and recover from attacks.
- Analyze key agreement algorithms to identify their weaknesses.
- Understand the SSL or firewall based solution against security threats.

CAC3252 DATA MINING AND WAREHOUSING

L	T	P	C
3	1	0	4

OBJECTIVES:

The aim of this course is to

- Provide an overview of data mining and warehousing.
- Learn the importance and use of preprocessing techniques
- Comprehend association rules
- Introduce data mining techniques such as Clustering and Classification
- Offer adequate knowledge to work with data warehouse

MODULE I INTRODUCTION 12

Introduction - What is Data mining, Data mining – Importance of Data mining - various kind of data: Relational databases – Data Warehouses - Transactional Databases – Advanced Data and Information Systems and Advanced Applications. Data mining Functionalities: Concept / Class Description, Characterization and Discrimination – Mining Frequent Patterns, Associations and Correlations – Classification and Prediction – Cluster Analysis – Outlier Analysis – Evolution Analysis.

MODULE II DATA PREPROCESSING and ASSOCIATION RULES 12

Why Preprocess Data – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation **-** Mining– Frequent Patterns, Associations Correlations - Basic Concepts - Efficient and Scalable Frequent Item set Mining methods Mining

MODULE III CLASSIFICATION

What is Classification? – Issues regarding Classification - Classification by Decision Tree Induction – Bayesian Classification – Rule Based Classification - KNN Classifiers.

MODULE IV CLUSTERING

Clusters Analysis: Types of Data In Cluster Analysis- Categorization of Major Clustering Methods: Partitioning Methods: k-Means, k-Medoids – Hierarchical Methods: BIRCH, Chameleon – Density based Methods: DBSCAN, OPTICS. Applications.

MODULE V DATA WAREHOUSING

What is a Data Warehouse – A multidimensional Data Model – Data warehouse

Architecture - From Data Warehousing to Data Mining

L – 45; T – 15; Total Hours –60

TEXT BOOK:

1. Author : Jiawei Han and MichelineKamber Data Mining Concepts and Techniques, Second Edtion, Morgan Kaufmann Publishers (An imprint of Elsevier),2011

REFERENCES:

1. Author: Karguta, Joshi, Sivakumar&Yesha, Data Mining Next Generation Challenges and Future Directions, Printice Hall of India, 2007
2. G.K. Gupta, PHI Private limited, Introduction to Data mining with case studies, New Delhi, 2008. 2nd Edition, PHI , 2011

OUTCOMES:

On completion of this course students will be able to:

- Obtain the knowledge of data mining and data warehousing
- Recognize the preprocessing techniques in data mining
- Differentiate clustering and classification
- Make more effective use of data stored in databases
- Apply and analyze association rules
- Compare database and data warehouse

ELECTIVE COURSES

CACX01 ADVANCED COMPUTER ARCHITECTURE L T P C

3 0 0 3

OBJECTIVES:

- To gain knowledge about the concepts of CPU, ALU Design, I/O Instruction format
- Analyze architectures and computational designs.
- Understand the operation of modern CPUs, memory systems and buses.

MODULE I DIGITAL COMPONENTS 9

Integrated circuits -Decoders - Encoders - Multiplexers - Registers with Parallel Load - Shift Registers - Bidirectional Shift Registers with Parallel Load - Binary Counters with Parallel Load - Memory Unit - RAM - ROM - Types of ROMs.

MODULE II COMPUTER ORGANIZATION 9

Instruction codes - Operation codes - Indirect Address - Effective Address – Computer Registers - Common Bus System - Computer Instructions - Timing and Control - Clock Pluses -Control Unit - Instruction Cycle - Fetch and decode - Reference Instructions

MODULE III INPUT – OUTPUT ARCHITECTURE 9

Peripheral Devices – Input-Output Interface – Asynchronous Data Transfer – Modes Of Transfer – Priority Interrupt – DMA – IOP – Serial Communication- I/O Configuration - I/O Instructions - Program Interrupt - Interrupt Cycle.

MODULE IV CENTRAL PROCESSOR ORGANIZATION 9

Central Processor Organization- General Register Organization - Control Word - ALU - Stack Organization - Register Stack - Memory Stack - Stack Limits - Instruction Formats - Three Types of CPU Organization - RISC Instructions - Addressing Modes

MODULE V MEMORY ARCHITECTURE 9

Memory Hierarchy – Main Memory – Auxiliary Memory – Associative Memory – Cache Memory – Virtual Memory – Memory Management Hardware

Total Hours –45

TEXT BOOK:

1.William Stallings, "Computer Organization and Architecture - Designing for

Performance", 9th Edition, Pearson Education, 2012.

REFERENCE:

1. Carl Hamacher, Zvonko Vranesic and Safwat Zaky, "Computer organization", 5 th Edition, McGraw Hill, 2002.

OUTCOMES:

On completion of the course, Students will be able to

- Describe organization of digital computers and explain the basic principles and operations of different components
- Recall the internal organization of computers, CPU, memory unit and Input/Outputs and the relations between its main component

CACX02 **COMPILER DESIGN** **L T P C**

3 0 0 3

OBJECTIVES:

The aim of the course is to

- Develop the understanding of functioning of compilers and enable to write Compilers.
- Introduce the major concept areas of language translation and compiler design.
- Enrich the knowledge in various phases of compiler ant its use, code optimization techniques, machine code generation, and use of symbol table.
- Extend the knowledge of parser by parsing LL parser and LR parser.
- provide practical programming skills necessary for constructing a compiler

MODULE I INTRODUCTION TO COMPILER 9

Introduction to assembler, Compiler and linkers, Structure of Compiler, Overview of compilation Process, Compiler writing language, Compiler writing tools.

MODULE II LANGUAGES AND GRAMMAR 9

Programming Languages and grammar, Context free grammar, Ambiguity and Non ambiguity, Role of Lexical analyzer, Finite automat & regular expressions, Transformation of the grammar

MODULE III PARSING APPROACHES 9

Parsing : Top-down and bottom up approaches, Syntax Directed Translations Inherited and Synthesized attributes, Dependency graph, Top Down Parsing Implementation, Predictive Top down Parser, Recursive decent parsing, Table Driver Parser, Bottom up Parsing Implementation, LR Parser, SLR parser.

MODULE IV BRANCHING AND LOOPING 9

Translation of assignment - statement, Boolean expression, Unconditional branching, Conditional branching and looping, Code Optimization-Source of Optimization, Optimization of Basic Blocks, Loops, Error Handling

MODULE V CODE OPTIMIZATION 9

Code Optimization, Basics- Principle source of optimization, Loops in flow graph- Introduction to global data flow analysis- Code improving transformations.

Total Hours –45

TEXT BOOKS:

1.Alfred V Aho, Monica S. Lam, Ravi Sethi, Jeffrey D Ullman ,"CompilersPrinciples, Techniques and Tools", 2nd Edition, Pearson Education, 2011.

REFERENCES:

1. Parag Himanshu Dave and Himanshu Bhalchandra Dave, "Compilers: Principles and Practice", 1st Edition, Pearson Education, 2012.
2. Keith Cooper and Linda Torczon, "Engineering a Compiler", 2nd Edition, Morgan Kauffman Publications, 2011.

OUTCOMES:

After completing this course students must be able to

- Design and conduct experiments for Intermediate Code Generation in compiler.
- Understand lexical, syntax and semantic analysis processes.
- Deal with different translators.
- Understand, and use Context free grammar, and parse tree construction
- apply error detection and correction methods
- Learn the new code optimization techniques to improve the performance of a program in terms of speed & space.

CACX03 **DATABASE DESIGN** **L T P C**

3 0 0 3

OBJECTIVES:

The aims of the course are as follows:

- To understand and use a relational database system.
- To design ER Diagrams
- To apply normalization techniques to create a database.

MODULE I : INTRODUCTION TO DATABASE SYSTEM CONCEPTS

Introduction – What is Database System – What is Database – Why Database – Data Independence – Relational Systems.

MODULE II DATA MODELING

Architecture – Three levels of Architecture – The External level –Conceptual Level – Internal Level –Client/Server Architecture- Introduction to ER Model –ER diagrams – Database Design with ER model – A brief Analysis of the ERModel

MODULE III NORMALIZATION

Introduction – Trivial and non-trivial Dependencies – Closure of a set of Dependencies – Closure of a set of attributes- Introduction – Nonloss Decomposition and Functional Dependencies – First, Second and Third Normal form – Dependency Preservation – Boyce/Codd Normal form –Relation Valued Attributes.

MODULE IV RELATIONAL DATABASE MODELS

The Relational Database Model: Types – Relations –Relational Algebra –Relational Calculus

MODULE V INTRODUCTION TO SQL

Introduction to SQL: Introduction- Overview – Catalog – Views – Transactions-EmbeddedSQL – Dynamic SQL and SQL /CLI-Data Definition Commands-Data Manipulation Commands.

Total Hours –45

TEXT BOOKS:

1. Elmasri and Navathe, "Fundamentals of Database Systems", 6th Edition, Addison-Wesley, 2011

REFERENCE:

1. AtulKahate, Introduction to Database Management Systems, Pearson Education (2006).

OUTCOMES:

At the completion of this course, the student will able to

- Able to master the basic concepts and understand the applications of database system.
- Able to construct a database using basic SQL queries.
- To identify strengths and weakness of database design.

CACX04 **E-COMMERCE** **L T P C**

3 0 0 3

OBJECTIVES:

The objective of the course are as follows

- To learn about e-commerce business models.
- To understand different techniques for web security.
- To understand the basics of Mobile E-Commerce.

MODULE I : FOUNDATIONS OF E-COMMERCE 9

Foundations of E-commerce - Business to consumer(B2C) Electronic Commerce - Business to Business(B2B)Electronic Commerce.

MODULE II NETWORK INFRASTRUCTURE FOR E-COMMERCE 9

Network Infrastructure for E-commerce - The Internet, Intranets and Extranets asE commerce Infrastructure

MODULE III WEB SECURITY 9

Web Security - Cryptography – Firewall.

MODULE IV ELECTRONIC PAYMENT SYSTEMS 9

Electronic Funds Transfer – types of Electronic payments – Electronic Payment Mechanisms – credit cards – smart cards –electronic cash – electronic checks.

MODULE V MOBILE E-COMMERCE 9

Mobile Commerce -WAP (Wireless Application Protocol) - Legal Requirements in E-commerce

Total Hours –45

TEXT BOOKS:

1. E-ommerce, MamtaBhusry, Firewall Media, An Imprint of Laxmi Publications Pvt. Ltd. Edition: First 2005

REFERENCES:

1. E-Commerce, P. T. Joseph, S. J. Third edition, Prentice Hall of India Pvt. Lt, NewDelhi, 2008.
2. Electronic Commerce, PeteLoshin/ JhonVacca Firewall Media,An Imprint of Laxmi Publications Pvt. Ltd, NewDelhi , FourthEdition: 2004.

3. David Whiteley, " E-Commerce", Tata McGraw Hill, 2000
4. Eframi Turban, Jae Lee, David King, K. Michale Chung, "Electronic Commerce", Pearson Education, 2000

OUTCOMES:

At the completion of this course, the student will able to

- Apply different strategies of E-Commerce.
- Identify the strengths and weaknesses of different Electronic payment systems.
- Apply different cryptographic techniques

CACX05 HIGH PERFORMANCE COMPUTER SYSTEMS L T P C
3 0 0 3

OBJECTIVES:

- To learn the concept of Parallel computing and High performance computing
- To provide in-depth knowledge of High performance computing concepts,
- design issues, challenges, technologies, architectures, and applications.
- To comprehend the technical capabilities and research benefits of High performance computing and learn how to measure and compare those benefits.

MODULE I PARALLEL PROCESSING CONCEPTS 9

Parallel Processing Concepts , Levels of parallelism, Models (SIMD, MIMD, SIMT, SPMD, Dataflow Models, Demand-driven Computation etc), Architectures: N-wide superscalar architectures, multi-core, multi-threaded

MODULE II PARALLEL PROCESSOR ARCHITECHTURE 9

Processor Architecture, Interconnect, Communication, Memory Organization, and Programming Models in high performance, computing architectures: , Memory hierarchy and transaction specific memory design, Thread Organization

MODULE III DESIGN ISSUES IN PARALLEL COMPUTING 9

Fundamental Design Issues in Parallel Computing, Synchronization, Scheduling, Job Allocation, Job Partitioning, Dependency Analysis, Mapping Parallel Algorithms onto Parallel Architectures, Performance Analysis of Parallel Algorithms

MODULE IV HPC CHALLENGES 9

Cache Coherence Problem - Invalidate vs. Update protocols – Bandwidth Limitations - Latency Limitations - Latency Hiding - Tolerating Techniques and their limitations

MODULE V HIGH PERFORMANCE COMPUTING IN THE CLOUD COMPUTING 9

Classification of scientific applications and services in the cloud – HPC Programming models - The Map Reduce programming model and Implementations

Total Hours –45

TEXTBOOKS:

1. Rajkumar Buyya, “High Performance Cluster Computing: Architectures and Systems”, Volume 1, Pearson Edition, 2008.

2. George Hager & Gerhard Wellein “Introduction to High Performance Computing for Scientists and Engineers”, CRC Press, 2012.

REFERENCES:

1. Ian Foster, “Designing and Building Parallel Programs”, Addison Wesley 1995.
2. David Culler, Jaswinder Pal Singh, Anoop Gupta Parallel Computer Architecture: A hardware/Software Approach, Morgan Kaufmann, 1999.
3. Rajkumar Buyya, Christian Vecchiola, and Thamarai Selvi, Mastering Cloud Computing, Tata McGraw Hill, 2013.

OUTCOMES:

After the completion of the course, the student will be able to

- Introduce the major scientific application areas and basic concepts of parallel computing
- Solid foundation in High Performance Computing (HPC) and its role in science and engineering.
- outlines the hardware design of modern HPC platforms and the parallel programming models.
- identify the key challenges and research issues in High performance Computing.

CACX06 INTERNET AND WEB PROGRAMMING L T P C

3 0 0 3

OBJECTIVES:

The aims of the course are as follows

- To introduce students to the concepts, terms and technologies in Internet.
- To provide students with basic knowledge of web page design and development.
- To highlight the issues in internet.

MODULE I INTRODUCTION TO INTERNET 9

Basics of Networks – Topologies of Networks – Layers in Networking – Switching in the Networks – Bridges, Routers and Gateways – Types of Networks. Evolution of the Internet.

MODULE II INTERNET CONNECTIVITY AND ISSUES 9

Growth of the World Wide, Web Browsers, Architecture of the Intranet/Internet /Extranet., Domain name, Access methods: dialup, ISDN, ADSL/2+, cable, LAN, WIFI,. Proxy servers. Security policies / Privacy/ Identification/Authentication/Access control. Hardware and Software, Risk assessment, vulnerabilities.

MODULE III ADVANCED INTERNET 9

Threats and attack methods Viruses, Spam, Root kits, “phishing”, Firewalls –spyware plug-ins. Performance: speed, reliability, downtime, bandwidth. Search engine, Client-Server model, Web and Big Data, Mobile & Satellite, Application areas.

MODULE IV BASIC WEB PROGRAMMING 9

Introduction to HTML– Introduction, Tags, Tables, Frames - Linking-Images-special characters and line breaks-unordered lists-simple HTML programs- Static and dynamic HTML., Style Sheet, Embedding Multimedia in Web Pages

MODULE V ADVANCED WEB PROGRAMMING 9

Fluency in at least one of the following client-side scripting languages: JavaScript or VBscript. DOM model, XML, CSS and XSL. Development tools: page and site authoring, delivery and maintenance tools

Total Hours –45

TEXT BOOKS:

1. Paul Deitel, Harvey Deitel and Abbey Deite, "Internet & World Wide Web: How to Program", 5th Edition, Prentice Hal, 2011.
2. Jennifer Niederst Robbins, "Learning Web Design: A Beginner's Guide to

HTML, CSS, JavaScript, and Web Graphics", 4th Edition, O'Reilly Media, 2012.

REFERENCE:

1. Robin Nixon, "Learning PHP, MySQL, JavaScript, and CSS: A Step-by-Step Guide to Creating Dynamic Websites", 2nd Edition, O'Reilly Media, 2012.

OUTCOMES:

At the completion of this course, the student will able to

- To demonstrate knowledge and ability to develop website
- To comprehend concepts in internet technologies.
- To understand various issues in internet.

CACX07 MANAGEMENT INFORMATION SYSTEMS L T P C
3 0 0 3

OBJECTIVES:

The aims of the course are as follows

- Provide students with comprehensive knowledge needed to successfully participate in and support the increasingly applied role of information technology in corporate decision making,
- Enable graduates to conceptualize and manage the specification, design and implementation of applied information systems,
- Provide the knowledge of contemporary issues related to the field of managing information systems,
- Develop knowledge and skills required to work effectively in a profession,
- Enhance self-confidence, ability to make proper decisions and effective communication, and Pursue lifelong learning and continuing education.

MODULE I INTRODUCTION 9

Overview – Structure of MIS – Survey of information System Technology – Hardware, Software and Communication or Information – Storage and Retrieval of Data – Transactions Processing, Office Automation and Information Processing Control Function.

MODULE II CONCEPTIONAL FOUNDATIONS 9

Design Making Process – Concept of Information – Human as Information Processors – System Concepts – Concepts of Planning and control – Organizational Structure and Management Concepts.

MODULE III INFORMATION BASED SUPPORT SYSTEMS 9

Support System for Planning, Control and Decision making – Support System for Management for Knowledge work – Decision Support Systems**.**

MODULE IV INFORMATION SYSTEM REQUIREMENTS 9

Developing a long range Information system – Plant Strategies for the determination of Information requirement – Database requirement – User interface requirements

MODULE V DEVELOPMENT, IMPLEMENTATION AND MANAGEMENT OF INFORMATION SYSTEM RESOURCES 9

Developing and Implementing Application Systems – Quality Assurance and

Evaluation of Information Systems – Organization and Management of the Information resources – further Development and their Organizational and social Implications

Total Hours –45

TEXT BOOKS:

1. Rahul De, MIS: Management Information Systems in Business, Government and Society, Wiley; 1st edition (2012)

REFERENCES:

1. David Kroenke, "Management Information systems", tenth Edition, Pearson Education.

OUTCOMES:

At the completion of this course, the student will able to

- Appreciate the use of IS for effective management,
- Analyze the impact of computing on individuals, organizations and society, including ethical, religious, legal, security and global policy issues.
- Function effectively on teams to accomplish a common goal.
- Understand professional, ethical and social responsibilities.
- Employ effective communication skills consistent with the professional environment, and Pursue lifelong learning and continued professional development

CACX08 **PARALLEL ALGORITHMS** **L T P C**

3 0 0 3

OBJECTIVES:

Students will be able to:

- Understand the scope, design and model of parallelism
- Know the parallel computing architecture.
- Know the Characteristics, model and design of parallel algorithms.

MODULE I **9**

Need for parallel computers, Modules of Computation, Analyzing Algorithms, Expressing Algorithms - Broadcast, All sum and selection algorithms on SIMD model - Searching a sorted sequence: EREW, CREW SMSIMD algorithms, Searching a Random sequence on shared memory SIMD, Tree and mesh interconnected computers.

MODULE II **9**

Sorting on a Linear Array, Sorting on a Mesh, Sorting on EREW SIMD computer, MIMD Enumeration sort, MIMD Quick sort. Sorting on other Networks.

MODULE III **9**

Matrix Transposition: Mesh Transpose, Shuffle Transpose, EREW transpose. Matrix by matrix Multiplication: Mesh multiplication, Cube multiplication. Matrix by vector Multiplication: Linear Array Multiplication, Tree Multiplication.

MODULE IV **9**

Solving Numerical problems, solving systems of Linear equations: An SIMD algorithm, An MIMD algorithm. Finding Roots of Nonlinear Equations: MIMD algorithm. Solving partial Differential Equations, Computing Eigen values.

MODULE V **9**

Solving Graph Theoretical problems, Computing the connectivity matrix. Finding connected components, All-Pairs shortest paths, Traversing combinatorial spaces, sequential tree traversal. The minimal alpha-Beta Tree, MIMD Alpha-Beta algorithm, parallel cutoffs. Storage requirements.

Total Hours –45

TEXT BOOKS:

1. Peter S. Pacheco, “An Introduction to Parallel Programming”, Morgan Kauffman/ Elsevier, ISBN 978-0-12-374260-5, 2011.

REFERENCES:

1. Yan Sohilin, Fundamentals of Parallel Multicore Architecture, Chapman and Hall/CRC Computational Science, ISBN 9781482211184, 2015

OUTCOMES:

At the completion of the course, students will be able to

- Compute speedup, efficiency, and scaled speedup of parallel computations, given appropriate data
- Explain the advantages and disadvantages of constructing parallel computers using commodity off-the-shelf components

CACX09 WIRELESS NETWORKS L T P C

3 0 0 3

OBJECTIVES:

The aims of the course are as follows:

- Introduction of an advanced element of learning in the field of wireless communication.
- The concepts of wireless devices and mobile computing.
- To introduce wireless communication and networking principles, that support connectivity to cellular networks, wireless internet and sensor devices.

.

MODULE I **9**

Cellular systems- Frequency Management and Channel Assignment- types of handoff and their characteristics, dropped call rates & their evaluation - MAC – SDMA – FDMA –TDMA – CDMA

MODULE II DATA MODELING **9**

IEEE 802.11 Standards – Architecture – Services

MODULE III MOBILE COMMUNICATION SYSTEMS **9**

GSM-architecture-Location tracking and call setup- Mobility management- Handover-Security'

MODULE IV MOBILE NETWORK AND TRANSPORT LAYERS **9**

Mobile IP – Dynamic Host Configuration Protocol-Mobile Ad Hoc Routing Protocols– Multicast routing-TCP over Wireless Networks – Indirect TCP – Snooping TCP – Mobile TCP – Fast Retransmit / Fast Recovery – Transmission/Timeout Freezing-Selective Retransmission – Transaction Oriented TCP

MODULE V APPLICATION LAYER **9**

WAP Model- Mobile Location based services -WAP Gateway –WAP protocols – WAP user agent profile- caching model-wireless bearers for WAP - WML – WMLScripts

Total Hours –45

TEXT BOOKS:

1. Jochen Schiller, "Mobile Communications", Second Edition, Pearson Education, 2008.

2. Hansmann, Merk, Nicklous, Stober, "Principles of Mobile Computing", 2nd Edition,

Springer, 2007.

REFERENCES:

1. Kaveh Pahlavan, Prasanth Krishnamoorthy, “Principles of Wireless Networks”, First Edition, Pearson Education, 2003.
2. Uwe Hansmann, Lothar Merk, Martin S. Nicklons and Thomas Stober, “Principles of Mobile Computing”, Springer, 2003.
3. C.K.Toh, “AdHoc Mobile Wireless Networks”, First Edition, Pearson Education, 2002.

OUTCOMES:

At the completion of this course, the student will able to

- Able to master the basic concepts and understand the applications of database system.
- Able to construct a database using basic SQL queries.
- To identify strengths and weakness of database design.

CACX10 ARTIFICIAL INTELLIGENCE L T P C

3 0 0 3

OBJECTIVES:

- Know the difficulties that arise from attempting to define "artificial intelligence."
- Know the three areas of research of AI, and give examples of problems from each area.
- Understand in a general way how a neural network is designed and trained.
- Know the components of a formal system.
- Use evaluation functions to expedite the search process.

MODULE I INTRODUCTION TO ARTIFICIAL INTELLIGENCE 9

Problems of AI, AI technique, Tic - Tac - Toe problem. Intelligent Agents: Agents & environment, nature of environment, structure of agents, goal based agents, utility based agents, learning agents. Problem Solving**-** Problems, Problem Space & search.Defining the problem as state space search, production system, problem characteristics, and issues in the design of search programs.

MODULE II SEARCHING TECHNIQUES 9

Search techniques: Solving problems by searching: problem solving agents, searching for solutions. Uniform search strategies: breadth first search, depth first search, depth limited search, bidirectional search, comparing uniform search strategies. Heuristic search strategies: Greedy best-first search, A* search, memory bounded heuristic search

MODULE III SEARCH ALGORITHMS 9

Local search algorithms optimization problems: Hill climbing search, simulated annealing search, local beam search. Genetic algorithms: constraint satisfaction problems, local search for constraint satisfaction problems. Adversarial search: Games, optimal decisions & strategies in games, the minimax search procedure, alpha-beta pruning, additional refinements, iterative deepening.

MODULE IV KNOWLEDGE REPRESENTATION 9

Knowledge: Knowledge representation issues, representation & mapping, approaches to knowledge representation, issues in knowledge representation. Using predicate logic: Representing simple fact in logic, representing instant & ISA relationship, computable functions & predicates, resolution, natural deduction. Representing

knowledge using rules: Procedural verses declarative knowledge, logic programming, forward verses backward reasoning, matching, control knowledge.

MODULE V REASONING & PLANNING 9

Reasoning- Probabilistic reasoning: Representing knowledge in an uncertain domain, the semantics of Bayesian networks, Dempster-Shafer theory, Fuzzy sets & fuzzy logics. Planning: Overview, components of a planning system, Goal stack planning, Hierarchical planning, other planning techniques

Total Hours –45

TEXT BOOKS:

1. Stephen Lucci, Danny Kopec," Artificial Intelligence in the 21st Century", Mercury Learning and Information, 2012.

REFERENCES:

1. Kevin Warwick, "Artificial Intelligence: The Basics", Routledge Publications, 2011.

OUTCOMES:

On completion of this course, students will be able to

- Identify problems that are amenable to solution by AI methods, and which AI methods may be suited to solving a given problem
- Apply knowledge representation, reasoning, and machine learning techniques to real-world problem
- Implement basic AI algorithms

CACX11 CLIENT / SERVER TECHNOLOGY L T P C

3 0 0 3

OBJECTIVES:

The aims of the course are as follows

- To learn about different kinds of client server technology
- To understand different components of Client Server Systems
- To understand architecture of Client/Server Systems.

MODULE I INTRODUCTION 9

Introduction to client/server technology-What is client/server technology-Benefits of client/server technology-Classification of Client/Server Systems-Development of Client/Server Systems- Client Server Standards- Client Server Technology

MODULE II ARCHITECTURE OF CLIENT/SERVER SYSTEMS 9

Components of C/S – Principles – Client Components – Server Components – Communication Middleware Components- Architecture for Business Information System- Existing Client Server Architecture.

MODULE III CLIENT SERVER APPLICATION COMPONENTS 9

Introduction – Technologies for Client/Server Application – Categories –Client Services-Server Services- Clint /Server Application: Connectivity- Layered Architecture

MODULE IV CLIENT /SERVER TECHNOLOGY AND WEB SERVICES 9

Introduction- Web Services – Role of Java for Client/Server on Web –Server Technology-Web Applications-Balanced Computing – Server's Changing Role

MODULE V FUTURE OF CLIENT/SERVER COMPUTING 9

Introduction – Technology of Next Generation –Enabling Technology – Client/Server Computing and Intranet – Future Perspectives – Transformational System

Total Hours –45

TEXT BOOKS:

1. Subash Chandra Yadav,Sanjay Kumar Singh,An Introduction to Client/Server Computing,New Age International Publisher,First Edition,January 2009.

REFERENCES:

1. Christophe Toulemonde, Anthony Button, Karen Harrison, Jae Hyung Lee, Stephen Longhurst, Luigi Walter Sartore,From Client/Server to Network Computing A Migration to Java., IBM, May 1998.
2. Douglas E.Comer& David L. Stevens: “Internetworking with TCP/IP – Vol. 3, Client-Server Programming and Applications”, BSD Socket Version with ANSI C, 2nd Edition, Pearson Education Asia, 2001

OUTCOMES:

At the completion of this course, the student will able to

- Comprehend the basic concepts of the client-server model for network programming
- Identify the strengths and weaknesses of different client server .
- Analyze the different components for developing client/server applications.

CACX12 DISTRIBUTED OPERATING SYSTEM L T P C

3 0 0 3

OBJECTIVES:

The aims of the course are as follows:

- This course provides an introduction to the fundamentals of distributed computer systems, assuming the availability of facilities for data transmission.
- To learn the principles, architectures, algorithms and programming models used in distributed systems.
- To examine state-of-the-art distributed systems, such as Google File System.
- To design and implement sample distributed systems.
- Through these objectives, the course will transform your computational thinking from designing applications for a single computer system, towards that of distributed systems.

MODULE I INTRODUCTION 9

Fundamentals – evolution – system Models – distributed Operating System – Issues – Distributed Computing environment- Message passing – Introduction – Features – Issues – Synchronization – Buffering – Message – Encoding – Decoding – Process addressing – Failure Handling.

MODULE II COMMUNICATION 9

Remote Procedure calls – Introduction – Model – Transparency – Implementation – Stub Generation – Messages – Marshaling Arguments and results – Server Management. Parameter passing Semantics – Call Semantics – Communication Protocols – Complicated RPC's – client – server Binding – Exception handling – Security distributed shared Memory - Introduction – Architecture – Issues – Granularity Structure – consistency Models – replacement Strategy – Thrashing

MODULE III COMMUNICATION II 9

Synchronization – Introduction – Clock Synchronization – Event ordering – Mutual Exclusion – Deadlock – Election Algorithms.

MODULE IV RESOURCE ALLOCATION 9

Resource Management – Introduction – features – task Assignment approach – Load Balancing approach – Load – Sharing Approach Process Management – Introduction – Process – Migration - Threads

MODULE V DISTRIBUTED FILE SYSTEMS

Distributed File systems – Introduction – Features – File Models – Accessing Models – sharing Semantics – Catching Schemes – file Replication – Fault Tolerance – Atomic Transactions – Design principles naming – Introduction – features – Terminologies – Concepts.

Total Hours –45

TEXT BOOKS:

1.A.D. Kshemkalyani, M. Singhal, "Distributed Computing: Principles, Algorithms and Systems", Paperback Edition, Cambridge University Press, 2011.

REFERENCES:

1. Andrew S Tanenbaum , Maartenvan Steen, "Distributed Systems - Principles and Pardigms",2nd Edition, Pearson Education, 2007.
2. Pradeep K. Sinha, "Distributed Operating Systems - Concepts, Systems and Applications", 3rd Edition, Prentice Hall India, New Delhi, 2008

OUTCOMES:

At the completion of this course, the student will able to

- Learn about distributed systems design and implementation.
- Exposed to various areas of research in distributed systems mobile computing systems.
- Learn about designing and implementing fault tolerant distributed systems.
- student completing this course successfully will be able to pursue independent research in distributed systems.
- Identify the core concepts of distributed systems: the way in which several machines orchestrate to correctly solve problems in an efficient, reliable and scalable way.
- Students will examine how existing systems have applied the concepts of distributed systems in designing large systems, and will additionally apply these concepts to develop sample systems.

CACX13 EMBEDDED SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

The purpose of the Embedded System course is to

- provide the students, knowledge and hands-on experience in the embedded computer system technology.
- students specializing in software and system design, giving most attention to hardware design, as understanding in this area is vital for most embedded software designers.

MODULE I INTRODUCTION TO EMBEDDED SYSTEMS 9

Definition and Classification – Overview of Processors and hardware units in an embedded system – Software embedded into the system – Exemplary Embedded Systems – Embedded Systems on a Chip (SoC) and the use of VLSI designed circuits.

MODULE II DEVICES AND BUSES FOR DEVICES NETWORK - PART - 1 9

I/O Devices - Device I/O Types and Examples – Synchronous – Isosynchronous and Asynchronous Communications from Serial Devices - Examples of Internal Serial-Communication Devices

MODULE III DEVICES AND BUSES FOR DEVICES NETWORK - PART - 2 9

UART and HDLC - Parallel Port Devices - Sophisticated interfacing features in Devices/Ports- Timer and Counting Devices - „12C", „USB", „CAN" and advanced I/O Serial high speed buses- ISA, PCI, PCI-X, cPCI and advanced buses.

MODULE IV EMBEDDED PROGRAMMING - PART - 1 9

Programming in assembly language (ALP) vs. High Level Language – C Program Elements, Macros and functions -Use of Pointers - NULL Pointers - Use of Function Calls – Multiple function calls in a Cyclic Order in the Main Function Pointers

MODULE V EMBEDDED PROGRAMMING - PART - 2 9

Function Queues and Interrupt Service Routines Queues Pointers – Concepts of EMBEDDED PROGRAMMING in C++ - Objected Oriented Programming – Embedded Programming in C++, „C" Program compilers – Cross compiler – Optimization of memory codes.

Total Hours –45

TEXT BOOKS:

1. Rajkamal, Embedded Systems Architecture, Programming and Design, TATA McGraw Hill, First reprint 2003.

REFERENCES:

1. David E.Simon, An Embedded Software Primer, Pearson Education Asia, First Indian Reprint 2000.

OUTCOMES:

On completion of the course:

• students get exposure with different families and architectures of Embedded System tools such as Microcontrollers, DSPs, FPGAs etc.

• students shall get the expertise required to design any embedded system (h/ w or s/w or both) based on any of the above tools

• students become highly proficient in Embedded Software particularly in real-time programming with Industry standard RTOS such as VxWorks and RTLinux

CACX14 ENTERPRISE RESOURCE PLANNING L T P C
3 0 0 3

OBJECTIVES:

The aims of the course are as follows

- Comprehend the role and function of human resource management in industry.
- Describe how to strategically plan for the human resources needed to meet the organizational needs.
- Gain insight of concepts of job analysis and compensation function and their legal provisions.

MODULE I INTRODUCTION 9

ERP: An Overview, Enterprise – An Overview, Benefits of ERP, ERP and Related Technologies, Business Process Reengineering (BPR), Data Warehousing, DataMining,OLAP,SCM

MODULE II ERP IMPLEMENTATION 9

ERP Implementation Lifecycle, Implementation Methodology, Hidden Costs, Organizing the Implementation, Vendors, Consultants and Users, Contracts with Vendors, Consultants and Employees, Project Management and Monitoring

MODULE III BUSINESS MODULES 9

Business modules in an ERP Package, Finance, Manufacturing, Human Resources, Plant Maintenance, Materials Management, Quality Management, Sales and Distribution

MODULE IV THE ERP MARKET 9

ERP Market Place, SAP AG, Peoplesoft, Baan, JD Edwards, Oracle, QAD, SSA

MODULE V ERP – PRESENT AND FUTURE 9

Turbo Charge the ERP System, EIA, ERP and e-Commerce, ERP and Internet, Future Directions

Total Hours –45

TEXT BOOKS:

1.Alexis Leon, Enterprise Resource Planning, second edition, Tata McGrawHill, 2008.

REFERENCES:

1. Joseph A Brady, Ellen F Monk, Bret Wagner, “Concepts in Enterprise

Resource Planning", Thompson Course Technology, USA, 2001.
2. Jagan Nathan Vaman, ERP in Practice, Tata McGraw-Hill, 2008

OUTCOMES:

At the completion of this course, the student will able to

- examine systematically the planning mechanisms in an enterprise, and identify all components in an ERP system and the relationships among the components.
- understand production planning in an ERP system, and systematically develop plans for an enterprise.
- understand the difficulties of a manufacturing execution system, select a suitable performance measure for different objectives, and apply priority rules to shop floor control..

CACX15 MOBILE COMMERCE L T P C

3 0 0 3

OBJECTIVES:

The objective of the course is as follows

- A broad knowledge of mobile commerce applications and technologies
- A high-level understanding of requirements of diverse m-commerce services
- A critical knowledge of wireless infrastructure for location-based services

MODULE I INTRODUCTION 9

Emerging applications, wireless service providers, middleware, wireless infrastructure, different players in m-commerce, and m-commerce life cycle-Requirements and multi-layer frameworks wireless and networking requirements, quality of service, location-management, security, dependability-Mobile financial services, mobile entertainment services, and proactive service management service details and usage scenarios

MODULE II LOCATION BASED M-COMMERCE SERVICES 9

Location, context and user-oriented services, location management in heterogeneous wireless and mobile networks. Location-based m-commerce services**:** push/pull services, role of middleware in location-based services, location-enabled devices

MODULE III GROUP ORIENTED MOBILE COMMERCE SERVICES 9

Mobile auctions, mobile entertainment services, multi-party games-Group-oriented mobile commerce services- wireless multicast and broadcast, multicast in wireless LANs, satellites, and cellular systems, multicast in wireless Internet

MODULE IV TRANSACTIONS IN MOBILE COMMERCE SERVICES 9

Group communications, membership management, transaction support, dis-connection and multi-stage transactions-Transactions in mobile commerce services-impact of failures on transactions, security and reliability of transactions.

MODULE V MANAGEMENT OF MOBILE COMMERCE SERVICES 9

Content development and distribution to hand-held devices, content caching, pricing of mobile commerce services.The emerging issues in mobile commerce - role of emerging wireless LANs and 3G/4G wireless networks, personalized content management, implementation challenges in m-commerce, futuristic m-commerce services

Total Hours –45

TEXT BOOKS:

1. Brian Mennecke and Troy J. Strader, Mobile Commerce: Technology, Theory and Applications Idea Group Publishing,2003.

REFERENCES:

1. Mobile Commerce and Applications, Upkar Varshney, A tutorial at IEEE International Conference on Wireless Communications (WCNC).
2. Mobile Commerce: Frameworks, Applications and Networking Support, ACM/Kluwer Journal on Mobile Networks and Applications (MONET), June 2002(Upkar Varshney and Ron Vetter).
3. Location-based Mobile Commerce Services, ACM Transactions on Internet Technology, August 2003, (Upkar Varshney).
4. Mobile Commerce: An Emerging Frontier, IEEE Computer, Oct 2000 (Varshney and others).
5. Group-oriented Mobile Services, ACM/Kluwer Journal on Mobile Networks and Applications (MONET), 2004 (Upkar Varshney).

OUTCOMES:

At the end of the course the students will be able to

- Identify the different types of service providers.
- Perform real time transactions.
- Identify the issues in Mobile Commerce

CACX16 MOBILE COMPUTING L T P C

3 0 0 3

OBJECTIVES:

- Introduction of an advanced element of learning in the field of wireless communication.
- The concepts of wireless devices and mobile computing.
- To introduce wireless communication and networking principles, that support connectivity to cellular networks, wireless internet and sensor devices.
- To appreciate the social and ethical issues of mobile computing, including privacy.

MODULE I INTRODUCTION

Introduction: Applications – A Simplified Reference Mode. Wireless Transmission: Cellular System. Medium Access Control : Motivation for a Specialized MAC : Hidden and exposed terminals – Near and far terminals – SDMA – FDMA – TDMA : Fixed TDM Classical Aloha – Slotted Aloha – Carrier Sense Multiple Access – Demand assigned Multiple Access – PRMA Packet Reservation Multiple Access – Reservation TDMA – Multiple Access With Collision Avoidance – Polling – Inhibit Sense Multiple Access. CDMA: Spread Aloha multiple access.

MODULE II TELECOMMUNICATIONS

Telecommunication Systems: GSM: Mobile Services – System Architecture – Radio Interface – Protocols - Localization And Calling – Handover – Security – New Data Services. DECT: System Architecture – Protocol Architecture - TETRA.

MODULE III SATELLITE AND BROADCAST SYSTEMS

UMTS and IMT 2000: UMTS Releases and Standardization – UMTS System Architecture - UMTS Radio Interface – UTRAN – Core Network – Handover. Satellite System: History – Applications – Basics: GEO – LEO – MEO . Routing – Localization – Handover. Broadcast Systems: Overview – Cyclical Repetition Of Data – Digital Audio Broadcasting – Digital Video Broadcasting – Convergence of Broadcasting and Mobile Communication.

MODULE IV WIRELESS NETWORKS

Wireless LAN: Infra Red Vs Radio Transmission – Infrastructure and Ad-Hoc Network IEEE 802.11: System Architecture – Protocol Architecture – Physical Layer – Medium Access Control Layer – MAC Management – HIPERLAN: HIPERLAN1 -WATM –

BRAN – HiperLAN2. Bluetooth: User scenarios – Architecture – Radio layer – Base band layer – Link manager protocol.

MODULE V MOBILE NETWORK LAYER

Mobile Network Layer: Mobile IP – Dynamic Host Configuration Protocol – Mobile AdHoc Networks. Mobile Transport Layer: Traditional TCP-Classical TCP Improvement-TCP Over 2.5/3G Wireless Networks – Performance Enhancing Proxies.

Total Hours –45

TEXT BOOKS:

1. Jochen Schiller , Mobile Communications,Pearson Education.,Second Edition,New Delhi,2008.

REFERENCES:

1. William C.Y.Lee, "Mobile Cellular Telecommunications-Analog and Digital Systems", Second Edition,Tata McGraw Hill Edition,2006.
2. C.K Toh,"Adhoc Mobile Wireless Networks", First Edition,Pearson Education,2002.

OUTCOMES:

Upon completion of the subject, students will be able to

- A working understanding of the characteristics and limitations of mobile hardware devices including their user-interface modalities
- The ability to develop applications that are mobile-device specific and demonstrate current practice in mobile computing contexts.
- A comprehension and appreciation of the design and development of context-aware solutions for mobile devices.
- An awareness of professional and ethical issues, in particular those relating to security and privacy of user data and user behavior.

CACX17 SOFTWARE PROJECT MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

The aims of the course are as follows

- Understand the fundamental principles of Software Project management
- Be familiar with the different methods and techniques used for project management.
- By the end of this course the student will have good knowledge of the issues and challenges faced while doing the Software project Management.
- Will be able to do the Project Scheduling, tracking, Risk analysis, Quality management and Project Cost estimation using different techniques

MODULE I INTRODUCTION TO SOFTWARE PROJECT MANAGEMENT **9**

Project Definition – Contract Management – Activities Covered By Software Project Management – Overview of Project Planning – Stepwise Project Planning.

MODULE II PROJECT EVALUATION **9**

Strategic Assessment – Technical Assessment – Cost Benefit Analysis –Cash Flow Forecasting – Cost Benefit Evaluation Techniques – Risk Evaluation – software effort estimation.

MODULE III ACTIVITY PLANNING **9**

Objectives – Project Schedule – Sequencing and Scheduling Activities – Network Planning Models – forward Pass – backward Pass – Activity Float – Shortening Project Duration – Activity on Arrow Networks – Risk Management – Nature of Risk – Types of Risk – Managing Risk – Hazard Identification – Hazard Analysis – Risk Planning and Control.

MODULE IV MONITORING AND CONTROL **9**

Resource allocation – identifying and scheduling resources – publishing resource and cost schedule – scheduling sequence – Creating Framework – Collecting the Data – Visualizing Progress – Cost Monitoring – Earned Value – Prioritizing Monitoring – Getting Project Back to Target – change control – Managing Contracts – Introduction – Types of Contract – Stages In Contract Placement – Typical Terms of a Contract – Contract Management – Acceptance

MODULE V MANAGING PEOPLE AND ORGANIZING TEAMS 9

Introduction – Understanding Behavior – Organizatinal Behaviour – Selecting the Right person. Instruction In The Best Methods – Motivation– The Oldman – Hackman Job Characteristics Model – Working In Groups – Becoming A Team – Decision Making – Leadership – Organizational Structures – Stress –Health And Safety – Case Studies.

Total Hours –45

TEXT BOOK:

1. Bob Hughes, “Mike Cotterell, Rajib Mall, Software Project Management”, 5th Edition, The McGraw-Hill Higher Education, ISBN :13:978-0-07-10724- 8 , 2011.

REFERENCE:

1. S. A. Kelkar, “Software Project Management: A Concise Study”, 3rd edition, PHI learning pvt Ltd ,ISBN: 9788120347021, 2013.
2. Robert K. Wysocki, “Effective Project Management – Traditional, Agile, Extreme”, 6th Edition, Wiley Publication, ISBN: 1118080653, 2011.

OUTCOMES:

At the completion of this course, the student will able to

- Understand and practice the process of project management and its application in delivering successful IT projects; •
- Evaluate a project to develop the scope of work, provide accurate cost estimates and to plan the various activities; •
- Understand and use risk management analysis techniques that identify the factors that put a project at risk and to quantify the likely effect of risk on project timescales;
- Identify the resources required for a project and to produce a work plan and resource schedule;
- Monitor the progress of a project and to assess the risk of slippage, revising targets or counteract drift;
- Distinguish between the different types of project and follow the stages needed to negotiate an appropriate contract

CACX18 WEB TECHNOLOGY L T P C

3 0 0 3

OBJECTIVES:

The aims of the course are as follows

- To learn about different kinds of Network protocols that are suited to different kinds of applications
- To understand the basics of HTML.
- To understand the basics of search engines.

MODULE I INTRODUCTION 9

Concept of the point to point and Broadcast Network , Bus, Ethernet LAN, FDDI LAN, Token Ring, Star, Hub, WAN, MAN, TCP/IP, Routers, Gateways, Bridge, Switches, Subnet, Internet & Intranet, Introduction to TCP/IP and Shell Account, Internet Addressing ,Difference between a Name and Address.

MODULE II NETWORK PROTOCOLS 9

Concept of ISP (Internet Service Provider), Internet Backbones, NAPs, Concept of URL Address, Domain Names, Hypertext Concepts and World Wide Web, FTP, NNTP. The Email Electronic Post Service, Type of Email, SMTP, Configuring a Computer for an email.

MODULE III WEB SECURITY

Web server and proxy server, Web caches, FAQS, Web browser ,Internet Viruses, Internet security issues, Embedded and S/W based firewall, Data encryption and Digital signatures and certificates

MODULE IV INTRODUCTION TO HTML

The art of creating the website and home page, The HTML programming basics, Syntax and rules, Tables, Frames, Forms, Example of HTML page, Choice of page color, banners, Linking with HTML page, Div, Span, metatags, span

MODULE V SEARCH ENGINES

The search and search engine for internet, Spidders, Robotes, Botes, Internet Agents, mobile agents, meta search sites, outlook express and front page.

Total Hours –45

TEXT BOOK:

1. Jeffrey C. Jackson Web Technology : A Computer Science Perspective -

Pearson Education 2012.

REFERENCE:

1. Raj Kamal , Internet and Web Technologies, TATA McGraw Hill 2012

OUTCOMES:

At the completion of this course, the student will able to

- Obtain knowledge on Internet technologies.
- Identify the strengths and weaknesses of different search engines
- choose the appropriate data encryption technique.

CACX19 BIG DATA ANALYTICS L T P C

3 0 0 3

OBJECTIVES:

The aim of the course is to

- Learn tips and tricks for Big Data use cases and solutions
- Learn to build and maintain reliable, scalable, distributed systems with Apache Hadoop.
- Apply Hadoop system components
- bring together several key technologies used in manipulating, storing, and analyzing big data.
- Make the student understand details of Hadoop

MODULE I INTRODUCTION TO BIG DATA 9

Introduction– Big Data and its importance, Big data applications. Four V's of Big Data – Drivers for Big Data – Introduction to Big Data Analytics –

MODULE II BIG DATA TECHNOLOGIES 9

Hadoop's Parallel World – Data discovery – Open source technology for Big Data Analytics – cloud and Big Data –Predictive Analytics – Mobile Business Intelligence and Big Data

MODULE III – INTRODUCTION TO HADOOP 9

Big Data – Apache Hadoop & Hadoop EcoSystem – Moving Data in and out of Hadoop – Understanding inputs and outputs of MapReduce - Data Serialization.

MODULE IV HADOOP ARCHITECTURE 9

Hadoop Architecture, Hadoop Storage: HDFS, Common Hadoop Shell commands , Hadoop Configuration – HDFS Administering –Monitoring & Maintenance

MODULE V MAP REDUCE 9

Hadoop Distributed File Systems – Visualizations - Visual Data Analysis Techniques - Interaction Techniques; Systems and Applications

Total Hours –45

TEXT BOOKS:

1. Kevin Roebuck, "Storing and managing Big Data - NoSql, Hadoop and more: High-Impact Strategies - What You Need to Know", Tebbo Publishers, 2011.

REFERENCES:

1. Tom White, "Hadoop: The Definitive Guide", 3rd Edition, O'Reilly, 2012.
2. Michael Minelli, Michehe Chambers, Ambiga Dhiraj, "Big Data, Big Analytics: Emerging Business Intelligence and Analytic Trends for Today's Business", 1st Edition, Wiley CIO Series, 2013.

OUTCOMES:

After completing this course students must be able to demonstrate the knowledge and ability to:

- Explain the human components functions regarding interaction with computer
- Explain Computer components functions regarding interaction with human
- Demonstrate Understanding of Interaction between the human and computer components.
- Implement Interaction design basics
- Use HCI in the software process
- Apply Design rules
- Use Evaluation techniques

CACX21 SOFTWARE QUALITY ASSURANCE L T P C
3 0 0 3

OBJECTIVES:

- To make the students understand the importance of quality in software development.

MODULE I FUNDAMENTALS OF SOFTWARE QUALITY ASSURANCE 9

The Role of SQA – SQA Plan – SQA considerations – SQA people – Quality Management – Software Configuration Management

MODULE II MANAGING SOFTWARE QUALITY 9

Managing Software Organizations – Managing Software Quality – Defect Prevention – Software Quality Assurance Management

MODULE III SOFTWARE QUALITY ASSURANCE METRICS 9

Software Quality – Total Quality Management (TQM) – Quality Metrics – Software Quality Metrics Analysis

MODULE IV SOFTWARE QUALITY PROGRAM 9

Software Quality Program Concepts – Establishment of a Software Quality Program – Software Quality Assurance Planning – An Overview – Purpose & Scope.

MODULE V SOFTWARE QUALITY ASSURANCE STANDARDIZATION 9

Software Standards–ISO 9000 Quality System Standards - Capability Maturity Model and the Role of SQA in Software Development Maturity – SEI CMM Level 5 – Comparison of ISO 9000 Model with SEI's

Total Hours –45

TEXT BOOKS:

1. Abu SayedMahfuz, "Software Quality Assurance: Integrating Testing, Security, and Audit", CRC Press, Taylor and Francis Group, Auerbach Publications, ISBN 978-1-498-73553-7, 2016.

REFERENCES:

1. Gordon G Schulmeyer, "Handbook of Software Quality Assurance", Third Edition,Artech House Publishers 2007

2. Nina S Godbole, “Software Quality Assurance: Principles and Practice”, Alpha Science International, Ltd, 2004

OUTCOMES:

On completion of the course, the students will be

- able to identify and determine the practices needed to manage a software system configuration.
- understands the mission of a quality system and knows the applicable standards and norms.
- understands the interrelation between product quality and process quality.
- knows and applies product and process quality control techniques.

CACX21	WEB SERVICES AND SERVICE ORIENTED ARCHITECTURE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To Understand Web Services and implementation model for SOA
- To Understand the SOA, its Principles and Benefits
- To Understand XML concepts
- To Understand paradigms needed for testing Web Services
- To explore different Test Strategies for SOA-based applications
- To implement functional testing, compliance testing and load testing of Web Services
- To Identify bug-finding ideas in testing Web Services

MODULE I **9**

Evolution and Emergence of Web Services – Evolution of distributed computing. Core distributed computing technologies – client/server, CORBA, JAVA RMI, Micro Soft DCOM, MOM, Challenges in Distributed Computing, role of J2EE and XML in distributed computing, emergence of Web Services and Service Oriented Architecture (SOA). Introduction to Web Services – The definition of web services, basic operational model of web services, tools and technologies enabling web services, benefits and challenges of using web services.

MODULE II **9**

Web Service Architecture – Web services Architecture and its characteristics, core building blocks of web services, standards and technologies available for implementing web services, web services communication, basic steps of implementing web services. Describing Web Services – WSDL introduction, non functional service description, WSDL1.1 Vs WSDL 2.0, WSDL document, WSDL elements, WSDL binding, WSDL tools, WSDL port type, limitations of WSDL.

MODULE III **9**

Brief Over View of XML – XML Document structure, XML namespaces, Defining structure in XML documents, Reuse of XML schemes, Document navigation and transformation. SOAP : Simple Object Access Protocol, Inter-application communication and wire protocols, SOAP as a messaging protocol, Structure of a SOAP message, SOAP envelope, Encoding, Service Oriented Architectures, SOA revisited, Service roles in a SOA, Reliable messaging, The enterprise Service Bus, SOA Development Lifecycle, SOAP HTTP binding, SOAP communication model,

Error handling in SOAP.

MODULE IV **9**

Registering and Discovering Services : The role of service registries, Service discovery, Universal Description, Discovery, and Integration, UDDI Architecture, UDDI Data Model, Interfaces, UDDI Implementation, UDDI with WSDL, UDDI specification, Service Addressing and Notification, Referencing and addressing Web Services, Web Services Notification.

MODULE V **9**

SOA and web services security considerations, Network-level security mechanisms, Application-level security topologies, XML security standards, Semantics and Web Services, The semantic interoperability problem, The role of metadata, Service metadata, Overview of .NET and J2EE, SOA and Web Service Management, Managing Distributed System, Enterprise management Framework, Standard distributed management frameworks, Web service management, Richer schema languages, WS-Metadata Exchange.

Total Hours –45

TEXT BOOK:

1. Thomas Erl, "SOA Principles of Service Design", Prentice Hall, 2008.

REFERENCES:

1. Eric Newcomer, Greg Lomow, "Understanding Soa with Web Services", 2nd Edition, Pearson Education, 2009.
2. Shankar Kambhampaty, "Service Oriented Architecture for Enterprise Applications", 1st Edition, Wiley India Private Limited, 2008.

OUTCOMES:

1.Demonstrate an understanding of software oriented architectures.

2. Demonstrate an understanding of the service composition..

3. Demonstrate an ability to manage a modern medium scale software development project using SOA principles.

4.Demonstrate and ability to implement a service oriented application.

B.S. Abdur Rahman Crescent Institute of Science & Technology

Deemed to be University u/s 3 of the UGC Act, 1956

REGULATIONS 2016

CURRICULUM AND SYLLABI

B.Com

GENERAL

VISION AND MISSION OF THE DEPARTMENT OF COMMERCE

VISION

To develop into a world class centre of excellence in the fields of Business and Economics through value based education, training & research.

MISSION

- To impart holistic education using state of the art technology and to give a global perspective through value based education for social transformation.
- Inspire and empower the students to become innovative leaders and involving people who contribute to the success of organizations and betterment of communities.
- To develop a team of competent and qualified entrepreneur.
- To explore training and development opportunities
- To involve in projects leading to high quality research.
- To continuously evaluate our performance against suitable benchmarks, develop new programmes, global tie-ups to meet stakeholder requirements
- To train them with good communication and soft skills for employment.
- To prepare students for higher education in Commerce and Business Studies.
- To provide contextually relevant commerce education.
- To inculcate the use of Information and Communication Technology for the development of society.

PROGRAMME EDUCATIONAL OBJECTIVES

- To provide a strong foundation in Accounting, Business Laws and Taxation to the students
- To prepare students to pursue professional courses like CA, CWA, CS etc
- To provide sufficient knowledge and skills to students to seek employment or for managing business organization effectively.
- To provide career oriented education to students so that they can either go for jobs or engage in self-employment.

PROGRAMME OUTCOMES

On successful completion of the programme, the graduates will

- Apply the knowledge of accounting, business laws and taxation to understand the business and commerce.
- Be able to pursue the professional courses like CA, CWA, CS etc.
- communicate effectively and perform efficiently in the organization, social and personal life.
- Be able to aptly use the obligatory knowledge and skill to furnish as an entrepreneur and social entrepreneur.
- Be able to lead and manage a team effectually in varied situations.

SEMESTER I

ENC 1184	GENERAL ENGLISH II	L	T	P	C
		3	1	0	3

OBJECTIVES:

- To make students learn English literary texts.
- To train them in appreciating and critically analyzing literary texts.
- To train in using the four skills, Reading, Writing, Speaking and Writing skills
- To encourage them to use appropriate vocabulary and grammatical expressions.

MODULE I **8**

Prose Education
Poem William Shakespeare - "All the World's a Stage"
Letter Writing Formal and Informal
Short Story O Henry - "Robe of Peace" (Extensive Reading)
Essential English Grammar - 1-3 MODULES

MODULE II **8**

Prose Employment & Unemployment
Poem Ben Jonson - "On Shakespeare"
Short Story Rudyard Kipling – "The Miracle of PuranBhagat" (Extensive Reading)
Essential English Grammar – 4-7 MODULES

MODULE III **9**

Prose A Dead Planet
Poem Robert Herrick - "Gather Ye Rosebuds"
Note Making
Short Story H.G.Wells – "The Truth About Pyecraft" (Extensive Reading)
Essential English Grammar – 8-10 MODULES

MODULE IV **8**

Prose Riddles
Poem Oliver Goldsmith - "The Village Schoolmaster"
Essential English Grammar – 11-13 MODULES

MODULE V **6**

Prose KillersA Short Story

Poem William Blake - “From Auguries of Innocence”

Précis Writing

Short Story William Somerset Maugham - “Mabel” (Extensive Reading)

Essential English Grammar – 14-17 MODULEs

6

MODULE VI

Prose Galloping Growth

PoemRobert Browning- “The Last Ride Together”

Developing story from hints

Short Story John Galsworthy - “Quality” (Extensive Reading)

Essential English Grammar-- 18 &19 Modules

TOTAL HOURS – 45

REFERENCES:

1. Krishnaswamy. N, Sriraman T. **Current English for Colleges.** Hyderabad: Macmillan Indian Ltd, 2006.

2. Dahiya SPS. Ed. **Vision in Verse- An Anthology of Poems**. New Delhi: Oxford University Press, 2002.

3. Murphy, Raymond. **Essential English Grammar**. New Delhi: Cambridge University Press, 2009.

4. Seshadri, K G Ed. **Stories for Colleges.** Chennai: Macmillan India Ltd, 2003.

OUTCOMES:

After completing the course the students would be able to

- Respond to literary texts efficiently.
- Appreciate and critically analyse literary texts.
- Use the four skills of the language
- Use vocabulary and grammatical expressions effectively.

LNC 1182	GERMAN I	L	T	P	C
		3	1	0	3

OBJECTIVES:

- To improve the proficiency of students in German language.
- To create awareness of using vocabulary among students.
- To expose them to correct grammatical forms of the language.
- To empower them for successful communication in social and academic contexts .

MODULE I **8**

Introduction to German alphabets, phonetics and pronunciation- Introducing themselves and others using simple sentences and answer to some basic personal questions-: Introduction to different types of articles and verbs, Nouns

MODULE II **8**

Understanding and responding to everyday queries like instruction, questions, - number & gender, pronouns, present and past tense.

MODULE III **7**

Short telephone messages, requests etc., if spoken slowly and clearly-- Detailed overview of articles, adjectives with/without articles, Prepositions

MODULE IV **7**

Asking and giving directions using simple prepositions- Ability to fill basic information on forms while registering for courses / classes.

MODULE V **8**

Ability to extract and understand relevant information in a public announcement, broadcast, newspaper, radio etc-- dative & accusative

MODULE VI **7**

Ability to describe about people, work, immediate environment, education and other topics related to personal needs in a concise manner-- Understanding of matters which are familiar and are encountered regularly like instances at school, work, at public places, places of leisure etc.

6.

OUTCOMES:

On completion of the course, students will be able to

- Show their proficiency in German Language.
- Use appropriate vocabulary in real life contexts.
- Use appropriate grammatical forms while communicating with people.
- Effectively use the language in social and academic contexts.

LNC 1184 **TAMIL I** **L T P C**

3 1 0 3

OBJECTIVES:

- சமூகமாற்றச் சிந்தனைகளைஉள்ளடக்கியதற்கால இலக்கியங்களைஅறிமுகம் செய்தல்
- புதுக்கவிதை,சிறுகதை,உரைநடைஆகிய இலக்கியங்களின் நயம் பாராட்டுதல்
- சந்திப் பிழையின்றிஎழுதமாணவர்களைப் பயிற்றுவித்தல்.

அலகு I இருபதாம் நூற்றாண்டுமரபுக்கவிதைகள 8

மனோன்மணியம் சுந்தரனார் - தமிழ்த்தாய் வாழ்த்து,பாரதியார் - யோகசித்தி,பாரதிதாசன் - நீங்களேசொல்லுங்கள்,கண்ணதாசன் - காலக்கணிதம்

அலகு II புதுக்கவிதைகள 8

ஈரோடுதமிழன்பன் - கனாக்காணும் வினாக்கள்,மீரா - ஊிசகள்,வைரமுத்து - அந்தி,நா.காமராசன் - அலிகள்,தாமரை - ஒருகதவும் கொஞ்சம் கள்ளிப்பாலும்,மொழிபெயர்ப்புக் கவிதைகள் - கீதாஞ்சலி,மும்பைவாசிகள் (10 கவிதைகள் மட்டும்)

அலகு III சிறுகதைகள் 8

புதுமைப்பித்தன் - பால்வண்ணம் பிள்ளை,பி.எஸ்.ராமையா - பணம் பிழைத்தது, ஜெயகாந்தன் - விதியும் விபத்தும். கி.இராஜநாராயணன் - நாற்காலி,சு.சமுத்திரம் மொழிபெயர்ப்புச் சிறுகதைகள் - காகிதஉறவு,மாதவிக்குட்டி - நெய்ப்பாயாசம்,அந்தோன்செகாவ் - பச்சோந்தி

அலகு IV மொழிப்பயிற்சி 7

கலைச்சொல்லாக்கம்,பிழைதிருத்தம் (ஒருமை,பன்மை, ல-ள-ழகர, ர�றீறகர, ண-ந-னகரவேறுபாடுகள்),அயற்சொற்களைதல்

அலகு V இலக்கியவரலாறு 7

பாடந்தழுவியது (இருபதாம் நூற்றாண்டுமரபுக் கவிதைகள்,புதுக்கவிதையின் தோற்றமும் வளர்ச்சியும்,சிறுகதையின் தோற்றமும் வளர்ச்சியும்)

அலகு VI படைப்பிலக்கியம 7

கவிதைஎழுதுதல்,சிறுகதைவரைதல்

டு – 45 வு – 30 வுழுவுயுடு ர்ழுருசுளு – 75

REFERENCES:

1. பொதுத்தமிழ் - செய்யுள்திரட்டு - தமிழ்த்துறைவெளியீடு
2. தமிழ் இலக்கியவரலாறு - சோம. இளவரசு
3. சிறுகதைத் தொகுப்பு (கட்டுரைக்களஞ்சியம்)

OUTCOMES:

- மாணவர்கள் சமூகமாற்றச் சிந்தனைகளைஅறிந்துகொள்வர்
- சந்திப்பிழைகளைநீக்கிஎழுதும் திறன் பெறுவர்
- புத்திலக்கியங்களைப் படைக்கும் திறனையும் திறனாய்வுசெய்யும் திறனையும் பெறுவர்

COC 1101	FINANCIAL ACCOUNTING	L	T	P	C
		4	2	0	5

OBJECTIVES:

- To facilitate the understanding of Accounting in General
- To give a comprehensive understanding of the system of Financial Accounting
- To understand the intermediate concepts for assets, liabilities and stockholders' equity
- To develop skill, related to problem solving and critical thinking

MODULE I INTRODUCTION TO ACCOUNTING 12

Meaning and scope of Accounting, Basic Accounting Concepts and Conventions, Objectives of Accounting, Accounting Transactions, Double Entry Book Keeping - Journal, Ledger, Preparation of Trial Balance

MODULE II FINAL ACCOUNTS 15

Preparation of Final Accounts of a Sole Trading Concern, Closing Stock, Adjustments, Outstanding and Prepaid items, Depreciation, bad debts, Provision for Bad and Doubtful Debts, Provision for Discount on Debtors, Provision for Discount on creditors, Interest on Capital and Drawings, Abnormal Loss of stock.

MODULE III RECTIFICATION OF ERRORS 18

Classification of Errors, Rectification of Errors, Preparation of Suspense Account-Profit & loss adjustment Account.

MODULE IV BANK RECONCILIATION STATEMENT 18

Introduction, Procedure for reconciling the cash book balance with the pass book balance, Methods of Bank Reconciliation Statement.

MODULE V DEPRECIATION ACCOUNTING 15

Depreciation, Meaning, Causes, Methods, Straight Line Method, Written down Value Method, Change in method of depreciation (retrospective and prospective method) Insurance claims **-** Insurance claims, Average Clause (Loss of stock only)

L – 52; T – 26;TOTAL HOURS – 78

TEXT BOOK:

1. Financial Accounting - T.S.Reddy&A.Murthy, Margham Publications, Chennai.

REFERENCES:

1. Financial Accounting by Hanif and Mukherjee, MCGRAW hill education
2. Financial Accounting by P.C. Tulsian, Pearson
3. Jain &Narang (2015) Financial Accounting, Kalyani Publishers.
-

OUTCOMES:

On successful completion of this course students are able to

- Explain the fundamental concept of financial accounting system
- Recognize the transaction, understand the accounting cycle and various accounts books
- Recognize the error and it rectification
- Understand the depreciation and its different treatment in accounting
- Understand the financial statement of its importance and method of preparation for sole proprietorship
- Understand the importance of bank reconciliation system and method of preparation of reconciliation statement

COC 1102 BUSINESS MANAGEMENT

L	T	P	C
4	1	0	5

OBJECTIVES:

- To understand the fundamental concepts in management
- To trace the evolution and growth of management as a body of knowledge
- To have an in depth knowledge of various functions of management and their relevance to an organization

MODULE I MANAGEMENT 10

Meaning – Role of Management – Management Process – Importance – Management & Administration – Levels of Management – Taylor's Scientific Management – Fayol's Administrative Management Principles.

MODULE II PLANNING 20

Nature & Characteristics – Importance – Advantages & Limitations – Steps in Planning – Types of Plan – Standing Plan – Objectives – Policies – Procedures – Rules – Strategies – Single use Plans – Programmers and Budgets.

Management by Objectives: Concept, Process and Limitations. Decision Making: Process, Limitations and Techniques used in decision making.

MODULE III ORGANIZATION 15

Importance – Types – Line, Functional, Line and Staff – Committee Organization – Authority and Responsibility – Delegation of Authority – Principles, Types, advantages and Barriers to Delegation – Departmentalization – Formal and Informal Organization. Staffing: Nature & Importance – Functions of Staffing (In Brief)

MODULE IV DIRECTING 10

Nature & Importance – Elements of Directing Function – Supervision – Span of Supervision – Factors Determining span of supervision.

Motivation: Importance – Types of Motivators – Maslow's Theory – Hertzberg's Two factor theory – Douglas McGregor's Theory X & Theory Y.

MODULE V CONTROL 10

Need for Control – Controlling Process – Controlling Tools & Techniques. Coordination: Need & Importance – Principles & techniques of Coordination

Leadership: Importance – Formal & Informal Leaders – Leadership Styles – Traits

of a Good Leader.

L – 52; T – 13; TOTAL HOURS-65

TEXT BOOK

- Business Management – DinkarPagare
- Principles of Management – C.B.Guptha

REFERENCES:

- J. Jayasankar, 1st Edition. 2004, Reprint2008-Principles of Management (Business Management). Margham Publication. Chennai
- P.C.Tripathi& P.N Reddy, 1991, Principles of Management. Tata Mc.Graw, Hill. New Delhi.
- Weihnrich and Koontz, Management, 10th Edition, 1993, A Global Perspective.
- N. Premavathy, 2nd Edition, 2003, Principles of Management, Sri Vishnu Publication. Chennai.

OUTCOMES:

At the end of this course, the students will be able to:

- understand different types of functions plans and the managerial decisions
- understand the organizational chart and explain the staffing process
- understand the different control technique in the organizations
- understand the appropriate way to lead and motivate the team.

COC 1103 QUANTITATIVE TECHNIQUES & LOGICAL REASONING

L	T	P	C
4	1	0	5

OBJECTIVES

- To learn basics of mathematical equations.
- To have knowledge in various arithmetical calculations.
- To understand different mathematical operations for logical analysis

MODULE I QUANTITATIVE **15**

LCM & HCF – Average - Ratio and Proportion – Logarithm – Permutation and Combination – Probability (Excluding conditional probability and Bayes' Therom).

MODULE II SEQUENCES AND SERIES **15**

Arithmetic Progression, Sum up to n terms, Properties of Arithmetic Progression, Geometric Progression, Sum up to n terms Properties of GP

MODULE III INTEREST AND ROOTS **10**

Simple Interest and Compound Interest – Surds and Indices – Square root – Calendar and Clock.

MODULE IV MENSURATION **10**

Fractions and Percentage and Simplification – Simple Equation – Time and Work – Speed & Distance – Mensuration: Area (Circle, Square, Rectangle, Triangle) – Volume (Cube, Cuboid, Cone, Sphere).

MODULE V LOGICAL REASONING **15**

Coding and Decoding – Mathematical Operations – Series completion (alphabets and numbers) – Logical Venn Diagram.

L – 52; P – 13; TOTAL HOURS – 65

REFERENCES:

1. Quantitative Aptitude – R.S. Aggarwal – Sultan Chand Publication.
2. Logical Reasoning - R.S. Aggarwal – Sultan Chand Publication.

OUTCOMES:

On completion of the course, the students will be able to

- Calculate the various practical problem on Ratio, Proportion and Logarithm

- Students will be able to solve the problem related to Linear Equation, Inequalities and Interests.
- Students will be able to solve the problem of Permutation and Combination and Arithmetic and Geometric Series

COC 1104 EXCEL MODELING (PRACTICAL)

L	T	P	C
0	0	4	2

OBJECTIVES:

- Analyse business data for better decision making.
- Apply basic tools and functions of excel.
- Solve various mathematical and managerial problems.
-

MODULE I BASICS OF EXCEL 8

Entering Data, Selecting an area of worksheet, Saving closing and opening files, Copying Data, Inserting and deleting rows and columns, Wrap text, Merge and center, Understanding excel options, Setting advanced options-Data validation, Working with multiple sheets, Fixing of cells, Freezing of cells, Alignment, Protect sheet, Protect workbook, Page layout, Insert equation and symbol, Insert text box, Insert header and footer.

MODULE II BASIC MATHEMATICAL FUNCTIONS 12

Sum, Average, Product, SQRT, MOD, Aggregate, Power, SUM PRODUCT. **Financial arithmetic**: Compound interest, Continuous compounding, Simple interest, Fractional years.

MODULE III DATA HANDLING 10

Sorting data, Filtering data, Parsing data, Data validations, What-If-Analysis, Group, Ungroup, Creating subtotals, Understanding data consolidation, Consolidating data using the SUM function. **Descriptive statistics**: Mean, Median, Mode, Variance, Standard deviation, Weighted averages, Maximum and Minimum, Range.

MODULE IV CHARTS AND GRAPHS 10

XY Scatter plot, Column and Bar Chart, Pie Charts, Adding Legends and Titles.**Depreciation using Excel**: Calculating Fixed Line Depreciation using DB function, Calculating Straight Line Depreciation using SLN function.

MODULE V CONDITIONAL FORMATTING 12

Highlight cell rules, Top/Bottom rules, Data Bars,Color Scales and Icon Sets, New Rule, Clear Rules, Manage rules.**Data analysis in Excel**: Analysis by goal seek, Analysis by pivot table and charts, Solver to determine the optimal product mix.

TOTAL HOURS – 52

TEXT BOOK:

1. Microsoft excel 2013: data analysis and business modeling by waynewinston, prentice hall

REFERENCES:

1. Business data analysis using excel by davidwhigham, oxford university press
2. Excel Bible 2013

OUTCOMES:

At the end of the course students will be able to

- Anaylse data using descriptive statistics
- copy data and paste it in the desired location, give name to cells and use them, inserting and deleting rows and columns
- learn to use the advanced excel options
- learn to work with Protect sheet, Protect workbook, Page layout, Insert equation and symbol, Insert text box, Insert header and footer
- learn to work Page layout and data validation
- apply basic mathematical functions
- calculate Compound interest , Fractional year and continuous compounding in excel
- work with Filtering data, Parsing data
- calculate mode and average in excel
- Ablility to analyse data using charts and graphs

COC 1105 ENVIRONMENTAL STUDIES L T P C
2 0 0 2

OBJECTIVES:

- Developing an awareness and sensitivity to the total environment and its related problems
- Motivating people for active participation in environmental protection and improvement
- Developing skills for active identification and development of solutions to environmental problems
- Evaluation of environmental programes in terms of social, economic, ecological and aesthetic factors.

MODULE I MULTIDISCIPLINARY NATURE OF ENVIRONMENTAL STUDIES 6

Definition-scope and importance- need for public awareness.

Natural resources and associated problems

a) Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people.

b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources

d) Food resources : World food problems, changes caused by agriculture and over-grazing, effects of modern agriculture, fertilizer-pesticide problems, water logging ,salinity

e) Energy resources : Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources.

f) Land resources : Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

Role of an individual in conservation of natural resources-Equitable use of resources for sustainable lifestyles.

MODULE II ECOSYSTEMS 7

Concept of an ecosystem.-Structure and function of an ecosystem.-Producers, consumers and decomposers.-Energy flow in the ecosystem.-Ecological succession-Food chains, food webs and ecological pyramids.-Introduction, types, characteristic features, structure and function of the following Ecosystems :-

a.Forest ecosystems.
b.Grassland ecosystem.
c.Desert ecosystem
d.Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

MODULE III BIODIVERSITY AND ITS CONSERVATION 5

Introduction – Definition : genetic, species and ecosystem diversity.- Bio geographical classification of India-Value of biodiversity:consumptive use, productive use, social, ethical, aesthetic adoption values-Biodiversity at global, National and local levels.-Hot-sports of biodiversity.-Threats to biodiversity : habitat loss, poaching of wildlife, man-wildlife conflicts.-Endangered and endemic species of India
Conservation of biodiversity : In-situ and Ex-situ conservation of biodiversity.

MODULE IV ENVIRONMENTAL POLLUTION 5

Definition-Cause, effects and control measures of :-Air pollution-Water pollution-Soil pollution-Marine pollution-Noise pollution-Thermal pollution- Nuclear hazards
Solid waste Management : Causes, effects and control measures of urban and industrial wastes.-Role of an individual in prevention of pollution.
Disaster management : floods, earthquake, cyclone and landslides.

TOTAL HOURS – 23

REFERENCES:

1. Environmental Science- Kaushik&Kaushik-New Age International Publications
2. Environmental Science & Engineering-Anandan&Kumaravelan-Scicech Publications

OUTCOMES:

At the end of the course students will be able to

- Understand the natural environment and its relationships with human activities.
- Characterize and analyze human impacts on the environment.
- Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
- Acquire practical skills for scientific problem-solving, including familiarity with laboratory and field instrumentation, computer applications, statistical and modeling techniques.

SEMESTER II

ENC 1284	GENERAL ENGLISH II	L	T	P	C
		3	1	0	3

OBJECTIVES:

- To make students learn English literary texts.
- To train them in appreciating and critically analyzing literary texts.
- To train in using the four skills, Reading, Writing, Speaking and Writing skills
- To encourage them to use appropriate vocabulary and grammatical expressions

MODULE 1 **9**

Prose Qahwah

Poem William Wordsworth – "Nutting"

Filling Money Order Challan and Bank Challan

Short Story G.K.Chesterton – The Hammer of God (Extensive Reading)

Essential English Grammar: - 31-33 Modules

MODULE 2 **8**

Prose Environment

Poetry John Keats – "La Belle Dame Sans Merci"

Short Story Katherine Mansfield—A Cup of Tea (Extensive Reading)

Dialogue Writing

Essential English Grammar: 34-37 Modules

MODULE 3 **8**

Prose A Dilemma

Poetry Robert Frost – "Design"

Short Story Thomas Wolfe—The Far and the Near (Extensive Reading)

Conversations

Essential English Grammar: 38-40 Modules

MODULE 4 **8**

Prose Computeracy

Poetry Sarojini Naidu –"The Gift of India"

Short Story R.K. Narayan – "Half a Rupee Worth" (Extensive Reading)

Essential English Grammar: 41-43 Modules

MODULE 5 **11**

Prose War Minus Shooting
Who's Who

Poetry Nissim Ezekiel – "The Night of The Scorpion"

Short Story Anita Desai – "A Devoted Son" (Extensive Reading)
Ruskin Bond – "The Boy Who Broke the Bank" (Extensive Reading)

Report Writing

Letter to the Editor

Essential English Grammar: 44-47 Modules

8

MODULE 6

Prose Usage and Abusage

Poetry Mathew Arnold –Dover Beach

Short Story ManoharMalgonkar – "Bacha Lieutenant"

Essential English Grammar: 48-50 Modules

TOTAL HOURS – 52

REFERENCES:

1. Krishnaswamy. N, Sriraman T. **Current English for Colleges.** Hyderabad: Macmillan Indian Ltd, 2006.
2. Dahiya SPS. Ed. **Vision in Verse- An Anthology of Poems**. New Delhi: Oxford University Press, 2002.
3. Murphy, Raymond. **Essential English Grammar**. New Delhi: Cambridge University Press, 2009.
4. Seshadri, K G Ed. **Stories for Colleges.** Chennai: Macmillan India Ltd, 2003.

OUTCOMES:

After completing the course the students would be able to

- Respond to literary texts efficiently.
- Appreciate and critically analyse literary texts.
- Use the four skills of the language
- Use vocabulary and grammatical expressions effectively.

LNC 1284 **TAMIL II** **L T P C**

3 1 0 3

OBJECTIVES:

- சமூகமாற்றச் சிந்தனைகளைஉள்ளடக்கியதற்கால இலக்கியங்களைஅறிமுகம் செய்தல்
- புதுக்கவிதை,சிறுகதை,உரைநடைஆகிய இலக்கியங்களின் நயம் பாராட்டுதல்
- சந்திப் பிழையின்றிஎழுதமாணவர்களைப் பயிற்றுவித்தல்

அலகு I **அற இலக்கியங்கள்** **8**

திருக்குறள் - சொல்வன்மை (65ஆம் அதிகாரம்),நாலடியார் - அவையறிதல் (5 பாடல்கள் -32ஆம் அதிகாரம்),பழமொழிநானூறு - இன்னாசெய்யாமை(5 பாடல்கள்), இனியவைநாற்பது - முதலைந்துபாடல்கள

அலகு II **பக்தி இலக்கியங்கள்** **8**

தேவாரம் - மூவர் தேவாரம் (15 பாடல்கள்) அப்பர் தேவாரம்,திருஞானசம்பந்தர் தேவாரம்,சுந்தரர் தேவாரம் (ஒவ்வொன்றிலிருந்தும் ஐந்துபாடல்கள்),காரைக்காலம்மையார் - மூன்றுபாடல்கள் (அற்புதத் திருவந்தாதி),மாணிக்கவாசகர் - திருவெம்பாவை (தேர்ந்தெடுக்கப்பெற்ற 5 பாடல்கள்),ஆண்டாள் - திருப்பாவை (தேர்ந்தெடுக்கப்பெற்ற 5 பாடல்கள்),குலசேகராழ்வார் - திருவேங்கடத்தில் பிறத்தலும் இருத்தலும் போதுமெனல் (11 பாசுரம்)

அலகு III **காப்பியங்கள்** **8**

மணிமேகலை - ஆதிரைபிச்சையிட்டகாதை (20 அடிகள் மட்டும்),கம்பராமாயணம் - பாலகாண்டம்,நாட்டுப்படலகம் (10 பாடல்கள் மட்டும்), இரட்சணியயாத்ரிகம் - சிலுவைப்பாடு (10 பாடல்கள்),சீறாபுராணம் - மானுக்குப் பிணைநின்றபடலம் (6 பாடல்கள்)

அலகு IV **கட்டுரைகள்** **7**

உ.வே.சாமிநாதையர்-தமிழ்நாட்டுவணிகர். வ.இராமசாமிஐயங்கார்-மூதறிஞர் இராஜகோபாலாச்சாரியார்,மா.இராசமாணிக்கனார்-சித்தன்னவாசல் ஓவியங்கள், பி.எல்.சாமி-சங்க இலக்கியத்தில் அறிவயல் கலை,க.கைலாசபதி - பாரதியும் மேனாட்டுக் கவிஞரும்,தொ. பரமசிவன் - சொல்லும் பொருளும்.

அலகு V **இலக்கியவரலாறு** **7**

அற இலக்கியங்களின் தோற்றமும் வளர்ச்சியும்,சைவவைணவ இலக்கியங்கள் தோற்றமும் வளர்ச்சியும்,காப்பியங்கள் தோற்றமும் வளர்ச்சியும்,உரைநடைதோற்றமும் வளர்ச்சியும்

அலகு VI **மொழிப்பயிற்சி** **7**

இலக்கணக் குறிப்புத் தருதல்,வல்லினம் மிகுமிடங்களும்,மிகாவிடங்களும்,மொழிபெயர்ப்பு (ஆங்கிலத்திலிருந்துதமிழில் பெயர்த்தல்),கடிதங்களும் வகைகளும்

OUTCOMES:

- மாணவர்கள் சமூகமாற்றச் சிந்தனைகளைஅறிந்துகொள்வர்
- சந்திப்பிழைகளைநீக்கிஎழுதும் திறன் பெறுவர்
- புத்திலக்கியங்களைப் படைக்கும் திறனையும் திறனாய்வுசெய்யும் திறனையும் பெறுவர்

LNC1282	GERMAN II	L	T	P	C
		3	1	0	3

OBJECTIVES:

- To develop existing language skills further and to achieve a professional fluency.
- By the end of the course you will be able to understand general and detailed information and to communicate in standard speech on a range of everyday issues.

MODULE I **8**

Shopping for food and going to restaurants, Recent events, Personal experiences, Apologies and excuses

MODULE II **8**

Studying German Wishes and needs, Plans and projects, Certainty and probability, Physical condition, illness and remedies

MODULE III **7**

A birthday party, Food and drink, Presents and Congratulations

MODULE IV **7**

Travelling (I), Biographies, Important events in life, Social situations

MODULE V **8**

Telephone conversations, appointments and invitations, Travelling (II), City life: public places, transport and directions, Leisure activities

MODULE VI **7**

Objects, shapes and material, Speaking about historical events, Childhood and memories, Personality traits

2. STUDIO D A2 (SET OF 3 BOOKS + CD), Hermann Funk. Cornelsen, ISBN: 9788183073516

OUTCOMES:

On completion of the course, students will be able to

- Read printed and handwritten script on a limited number of everyday topics
- Write simple texts using descriptive language accurately.
- Developed intercultural competence.

COC 1201 ADVANCED FINANCIAL ACCOUNTING L T P C

4 2 0 5

OBJECTIVES:

- To facilitate the understanding of Accounting in specific areas
- To understand the practical applicability of Financial Accounting
- To develop skill, related to problem solving and critical thinking

MODULE I BRANCH AND DEPARTMENTAL ACCOUNTS 15

Dependent branches-Accounting Method

Departmental Accounts: Basis for allocation of expenses, Inter departmental transfer at cost or selling price, Treatment of expenses which cannot be allocated

MODULE II HIRE PURCHASE AND INSTALLMENT ACCOUNTING 12

Hire purchase and Installment-Default and repossession, Hire purchase trading account, Installment purchase system

MODULE III PARTNERSHIP 18

Admission of a Partner: Calculation of New Profit Sharing Ratio and Sacrificing Ratio – Treatment of Goodwill – Revaluation Account – Memorandum Revaluation Account – Adjustment of Capital – Preparation of Balance sheet of New Firm.

MODULE IV PARTNERSHIP 15

Retirement, Admission cum retirement of partners and Death of a partner: Calculation of New profit Sharing Ratio and Gaining Ratio – Treatment of Goodwill – Revaluation account – memorandum revaluation account – Adjustment of Capital – preparation of balance sheet of new firm.

MODULE V DISSOLUTION OF A PARTNERSHIP 12

Insolvency of a partner (Application of Indian Partnership Act 1932), Insolvency of all partners, Gradual Realization of Assets and Piecemeal Distribution.

L – 52; T – 26; TOTAL HOURS – 78

TEXT BOOKS:

1. Financial Accounting -T.S.Reddy&A.Murthy,Margham Publications, Ch-17

4. Financial Accounting-T.S.Reddy&A.Murthy,Margham Publications,Ch-17
5. Jain &Narang (2015) Financial Accounting,Kalyani Publishers, New Delhi.

OUTCOMES:

On successful completion of this course students are able to

- Record the transaction related to installment and hire purchase system
- Explain the accounting for branches and departments and transactions related to it.
- Record the transactions in partnership form of business

COC 1202 BUSINESS LAW L T P C
4 1 0 5

OBJECTIVES:

- To enable the students to learn the elements of general contract.
- To make the learners to understand and apply the various contracts in business or profession.

MODULE I NATURE OF CONTRACT 10

Object of Law of Contract-The Indian Contract Act 1872-Meaning and definition of contract -Essential elements of a valid contract- Classification of contracts.

MODULE II OFFER, ACCEPTANCE AND CONSIDERATION 15

Offer- Meaning-Definition-Rules relating to offer-tenders-Types of offer.
Acceptance-Meaning and definition. Legal rules as to acceptance. Revocation of offer and acceptance
Consideration-Meaning and definition- Legal rules relating to consideration-stranger to contract and consideration- Contracts without consideration.

MODULE III CAPACITY TO CONTRACT, FREE CONSENT AND LEGALITY OF OBJECT 10

Minors-Rules relating to agreements with minors-Persons disqualified by law to enter into valid contact- Persons of unsound mind.
Free consent- Meaning and definition of free consent. Coercion- fraud- Misrepresentation- Undue influence- Mistakes
Legality of object. Illegal agreements and agreements opposed to public policy.

MODULE IV QUASI AND CONTINGENT CONTRACTS 15

Quasi Contracts: Meaning and Definition, Types of Quasi Contracts.
Contingent Contracts: Meaning and Definition- Rules regarding Contingent Contracts.

MODULE V PERFORMANCE OF CONTRACTS 15

Meaning and definition-Performance of reciprocal promises-Time as the essence of contract-Appropriation of payments-Breach of contracts.-Remedies for breach of contract.

3. BALACHANDRAN V, & THOTHARDI, *Business Law*, Tata McGraw Hill Publishing Company Ltd.-2015.

OUTCOMES:

Through this course students should be able to

- appreciate the legal provisions related to Contract act and special contracts
- acquaint with the legal provisions related to various essential elements of a valid contract.
- Understand various provisions of contract related to business.

COC 1203 BUSINESS ECONOMICS L T P C
4 1 0 5

OBJECTIVES:

- To introduce students to the fundamentals of economics relevant from business aspects
- To familiarize students with the importance of economic approaches in business decision making
- To study about the application of economic theory into practical business
- To study about the economic tools and analysis that help make better business decisions

MODULE I INTRODUCTION TO ECONOMICS 15

Positive and Normative economics definition, Scope and Importance of business economics concepts, Uses and Limitations of Microeconomic Theories

MODULE II DEMAND AND SUPPLY 10

Demand and Supply Analysis: Introduction to demand, Law of demand, Shift and movement in the demand curve, Price, income and cross elasticity, Market Equilibrium, Elasticity of demand, Exceptions of the law of demand, Law of supply: shift and movements, Determinant of supply and supply function

MODULE III PRODUCTION THEORY 10

Production Function with one variable and more than one variable, Return to factor and Return to scale, Types of inputs, Total, Marginal and Average Product, Introduction to production function.

MODULE IV ECONOMIC CONCEPT OF COST AND REVENUE 15

Average and Marginal concepts in Cost in long and short run, Relationship between average cost curves- Long Run and Short Run, Kinds of costs, Economies and diseconomies of Scale

Revenue Analysis: Average and Marginal Revenue Curves, Relationship between Revenue curves

MODULE V MARKET STRUCTURE 15

Perfect Competition: Introduction and features of Perfect Competition, Short Run and long run equilibrium

Monopoly: Introduction and features, Price discrimination, Price and output decisions of discriminating monopolist., Types of monopoly, Price and output determination in

short run and long run

Monopolistic Competition: Introduction to monopoly and its features, Price and output determination in short and long run, Role of advertising in monopolistic competition.

TEXT BOOK:

1. Business Economics-S Sankaran, Margam Publication
2. Business Economics-Lekhi- Kalyani publications

REFERENCES:

1. Managerial economics: an integrative approach by hirshey, mark, cengage learning
2. Micro economics by Salvatore dominick, oxford university press
3. Advanced economic theory. micro economic analysis by aujah.l, s. chand& company

OUTCOMES:

Through this course students should be able to

- understand basic concepts of economic applied in managerial decision making
- analyse the demand and supply conditions and assess the position of a comapny
- understand the determinants of consumer choices, including inter-temporal choices and those involving risk.
- describe how firm's behavior differs in different market structures and may help to determine those structures.
- Integrate the knowledge of the economic theory with decision-making techniques

COC 1204	DATABASE MANAGEMENT SYSTEM	L	T	P	C
		0	0	4	2

OBJECTIVES:

- To analyze the large amount of data in meaningful way and quickly.
- To be able to demonstrate the proficiency in Access, executing powerful analysis on large database.
-

MODULE I **13**

Basics of Data, Information, Introduction of Data, Database, & Database Management System, Advantages of Computerized Data Base, Various View of Data, Data Independence, Database Schema and Subschema, Data Models, Introduction to Various Models, Database Languages, DDL, DML, DCL, Database Administrator, Functions of DBA, Role of DBA, Data Base User, Various Types of Database User, E-R Model, E-R Diagram, Keys: Primary, Candidate Key, Super Key, Key Candidate, Foreign Key

MODULE II **15**

Access Concepts and Terms, Starting and Quiting Access, Database Tables, Relational Database Management System, Relational Database and its Advantages, Relational Database and its Advantages, Parts of Access Window

Database Tables, Relational Database, Records and Fields, Tables, Creating Database, Fields Controls and Objects, Queries, Creating and run Queries, Introduction of Dynasets, Forms, Reports, Properties, Wizard, Macro, Advantages of Macros, Hardware & Software Requirements for MS Access

MODULE III **14**

Creating Database, Creating Database With Wizard, Creating Database Without Wizard, Field Name and Field Properties, Various Data Types and Use, Properties of Various Data Types, Adding Fields in to Existing Tables, Removing Fields From Existing Tables, Renaming Fields, Renaming Field's Caption, Resizing Fields, Freezing Columns, Primary Key Field, Indexing Fields

MODULE IV **8**

Forms, Use, Form Creation, Creating, Saving, and Modifying Forms, Entering and Editing Data Via Forms, Finding Data,Sorting Data, Displaying Data,Dynaset

Queries, Creating and run Queries, Creating Select Query,Using Select Query, Using Wild Cards in Select Query

10

MODULE V

Reports: Creating Reports, Previewing and Printing Reports, Modifying and Saving Reports, Relational Database: Definition & Purpose, Creating Relational Database, Viewing and Deleting Expressions, Data Models, Creating Database
Keys, Queries

TOTAL HOURS – 60

TEXT BOOK:

1. Michael Alexander, Microsoft Access 2007 Data Analysis, Wiley Publishing, Inc.

REFERENCES:

1. Michael Alexander and Dick Kusleika, Access® 2013 Bible, John Wiley & Sons, Inc
2. Michael Alexander, Microsoft Access 2007 Data Analysis, Wiley Publishing, Inc

OUTCOMES:

After studying this course students will able to

- Manage large data of business effectively
- Generate different type of reports from the large data effectively

COC 1205	BUSINESS ENVIRONMENT	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To enable the students to have an overview of Business Environment – Political, social and Global.
- To enable the students to appreciate the importance of environment and its impact on business and society

MODULE I INTRODUCTION 6

Definition and meaning of business – Scope of Business – Characteristics of Business – Business goals – Business during the 21st century - Knowing the environment – Factors influencing the Indian Business Environment – Environmental Analysis.

TEXT BOOKS:

1. T.S. Reddy & Murthy, “Corporate Finance”, Margham Publications, Reprint, 2013.

REFERENCES:

1. Dr. S. Kr.Paul&Chandri Paul, “Corporate Finance”, New Central Book Agency (p) Ltd, 2009.
2. K. K. Varma, “Corporate Accounting”, Published by Anurag Jain for Excel Books, First Edition, 2008.
3. Dr. Naseem Ahmed, “Corporate Accounting”, Atlantic Publication, First Edition, 2007

OUTCOMES:

After completing the course the students would be able to

- Understand the features of Shares and Debentures
- Develop an understanding about redemption of Shares and Debenture and its types
- Gets an exposure to the company final accounts and Goodwill
- Effectively use an idea about internal reconstruction

COC2102	COMPANY LAW	L	T	P	C
		4	1	0	5

OBJECTIVES:

- To make students aware of the provisions of the companies Act, 1956 this would help item to float a company and to manage the affairs of the company effectively.

MODULE I INTRODUCTION TO COMPANY ACT 2013 13

Introduction-Company definition-Characteristics-Types of companies-Features of public company and private company- Conversion of public company into private company-Companies registration -Lifting up of corporate veil.

MODULE II MEMORANDUM & ARTICLES 12

Memorandum of association-Contents-Alteration of memorandum- Articles of association –contents –Alteration of Articles –Doctrine of Constructive notice – Doctrine of Indoor Management - Prospectus.

MODULE III MEETINGS 12

Introduction-Definition-General meeting of shares holders-Statutory meeting-Annual general meeting-Extraordinary general meeting Class meeting-Quorum for meeting-Proxy-Resolution-Minutes.

MODULE IV DIRECTORS 13

Board of directors-Appointment of directors-Appointment of directors by small shareholders -Appointment of additional director, alternate directors, nominee directors Women Directors - Powers & Duties of directors-Vacation of office of directors-Register of director-Removal of directors.

MODULE V WINDING UP 10

Dissolution of company-Winding up by court-Voluntary Winding up-.General provisions on Winding up

L – 52; T – 13; Total Hours –65

TEXT BOOKS:

1. N.D.Kapoor – Company Law

REFERENCES:

1. P.P.S.Gogna – A Text Book of Company Law

2. A.K. Majumdar and G.K. Kapoor Company Law & Practice, Taxman Publications
3. P.K.Ghosh & Dr.V.Balachandran – Outline of Company Secretary Practice

OUTCOMES:

On completion of the course, students will be able to

- Acquainted with the company act 2013 and their practical application in managing the company.
- Familiar in the provision of Memorandum & Articles of the Company.
- Acquire knowledge of various procedures of Meetings of the Company
- Get a deep insight in appointment of Directors of the company and Winding up of the Company

COC2103	MARKETING MANAGEMENT	L	T	P	C
		4	2	0	5

OBJECTIVES:

- To acquaint the students with the basics of marketing to make them understand the consumer behaviour and buying motives.
- To equip students with Product and Pricing Knowledge
- To impart knowledge on Sales Forecasting.

MODULE I INTRODUCTION 15

Nature Scope and importance of marketing – marketing approaches – Role of marketing – Various environmental factors affecting marketing functions – concept of marketing mix – Market – meaning types of market.

MODULE II CONSUMER BEHAVIOUR 15

Consumer Behavior – Meaning and its importance – factors influencing Buying Behavior Buying motives.

MODULE III PRODUCT 18

Products –Classifications of products – Product characteristics – new product development process – product life cycle – product positioning, Targeting, Branding and Packaging – Market segmentation – needs and basis of segmentation.

MODULE IV PRICING 15

Pricing – Objection of pricing, pricing policies and procedures, Factors influencing pricing decision – importance of distribution, Various kinds of marketing channels.

MODULE V SALES FORECASTING 15

Sales forecasting – Various methods of sales forecasting sales management – Motivation and Compensation of salesman – Personal selling – Direct selling – Sales promotion – An overview of Advertising, Publicity and public Relations.

L – 52; T – 26; Total Hours –78

TEXT BOOKS:

1. Philp Kotler, “Marketing Management”, Pearson Education, 06-Jan-2015.
2. Slanton , W.J. “Fundamentals of Marketing”, McGraw-Hill, 01-Jan-1994.

REFERENCES:

1. Rajan Nair, “Marketing Management”, Sultan Chand & Sons, 01-Jan-1995

2. Ramaswany Namakumari, “Marketing Management”, Macmillan India Limited, 2002.

OUTCOMES:

After completing the course the students would be able to

- Develop an idea about marketing and its functions
- Enhance the students on consumer behaviour
- Familiarize students about product and its classifications
- Make them understand pricing policies
- Get an exposure on the concept of sales forecast

COC2104	ENTERPRENEURSHIP DEVELOPMENT	L	T	P	C
		4	1	0	5

OBJECTIVES:

- To enrich the students towards the knowledge of entrepreneurial skills
- To make the students understand the approaches to attain the goals of the business.

MODULE I INTRODUCTION 13

Entrepreneurship – Meaning – Definition – Types – Entrepreneur – Definition – Entrepreneur and Entrepreneurship – Characteristics - Types – Functions – Factors Influencing Entrepreneurship – Role of Entrepreneur in Economic Development – Factor Affecting Entrepreneurial Growth – Development of Women Entrepreneur and Rural Entrepreneurs.

MODULE II ENTREPRENEURIAL DEVELOPMENT PROGRAMME 12

Entrepreneurial Development Programmes (EDP's) – their Relevance and Achievement – Phases Of EDP – Course Content EDP – Role Of Government in Organizing EDP's – Critical Evaluation.

MODULE III PROJECT FORMULATION 12

Project Formulation – Importance of Project formulation - Project Identification – Process of Project identification - Evaluation – Feasibility Analysis – Project Report.

MODULE IV EDP SCHEMES 13

Entrepreneurial Development Agencies – Commercial Banks – District Industries Centers (DIC's) – National Small Industries Corporation (NSIC) – Small Industries Development Organization (SIDO) – Small Industries Service Institute (SISI) – All India Financial Institution – IDBI, IFCI, ICICI, IRDBI.

MODULE V ENTERPRENEURIAL GROWTH 10

Economic Development and Entrepreneurial Growth – MSME – Definition – Importance – Role in Economic Growth – Incentives and Subsides of Government to MSME – Networking - Niche Play – Geographic Concentration – Franchising and Dealership.

L – 52; T – 13; Total Hours –65

TEXT BOOKS:

1. C.S.V. Murthy, " Entrepreneurial Development", Himalaya publishing house, 2015.

REFERENCES:

1. Dr.S.S. Khanka, "Entrepreneurial Development", S. Chand & Company (pvt).Ltd, 2014.
2. Sami Uddin, "Entrepreneurial development in India", Mittal Publications, First Edition, 1989.

OUTCOMES:

After completing the course the students would be able to

- Develop students about Entrepreneurship development
- Create awareness on various Entrepreneurship Development Programme III. To enable them to understand project formulation
- Familiarize the students with EDP schemes
- Give an introduction about MSME, EDI and other training institutes in Entrepreneurship

COC2105 BUSINESS STATISTICS - I

L	T	P	C
5	1	0	5

OBJECTIVES:

- To develop skills in analysis & interpretation of data
- Handle challenging problems using appropriate analysis tools

MODULE I INTERPRETATION OF STATISTICAL DATA 15

Introduction – Classification and tabulation of statistical data - Diagrammatic and graphical representation of data

MODULE II INTERPRETATION OF STATISTICAL DATA 15

Measures of Central tendency –Mean, median and mode – Dispersion , Range, Quartile Deviation, Mean Deviation , Standard Deviation – Measures of Skewness.

MODULE III CORRELATION AND REGRESSION 15

Karl Pearson's Coefficient of Correlation – Spearman's Rank Correlation – Regression Lines and Coefficients

MODULE IV TIME SERIES 15

Time Series Analysis – Trend – Seasonal Variation.

MODULE V PROBABILITY 18

Probability – Addition and Multiplication Theorem – Conditional probability – Bayer's Theorem (without proof) – Simple problems.

L – 52; T – 26; Total Hours –78

TEXT BOOKS:

1. Statistical Methods – S.P. Gupta, Sultan Chand & Sons

REFERENCES:

1. Introduction to Operations Research – Dr. P.R. Vittal, Margham Publications
2. Fundamentals of Statistics -Elhance D.N. KitabMahal
3. Operations Research – Hira and Gupta, S. Chand & Co.
4. Operations Research – Handy and H.A. Taha, Macmillan Publishers.

OUTCOMES:

On the successful completion of the course the students should have:

- Tabulate and classify various statistical data
- To analyse data using various statistical tools
- To have knowledge on correlation and Regression.

COC 2106 OFFICE MANAGEMENT L T P C

2 0 0 2

OBJECTIVES:

- To provide students with the knowledge, understanding and application of the concepts, competence and responsibilities associated with office organization, system, procedures and administration.
- To provide students with good business awareness, decision-making and time management skills so as to enable them to hold responsible office administrative positions.
- To help students develop accuracy, flexibility, commitment and initiative.

MODULE I INTRODUCTION 5

Office management – Meaning – Elements of office management – Functions of office management.

MODULE II OFFICE ORGANIZATION 6

Office organization – Definition, Characteristics and Steps – Types of Organization – Functions of an Office administrator

MODULE III RECORD MANAGEMENT 5

Office record management – Importance – Filing essentials –Classification and arrangement of files-Modern methods of filing-Modern filing devices

MODULE IV OFFICE COMMUNICATION 5

Office Communication – Correspondence–Meaning of office communication & mailing

MODULE V FORM LETTERS & REPORT WRITING 5

Form letters –Meaning, Principles, and Factors to be considered in designing office forms – Report writing -Types of report writing

TOTAL HOURS-26

TEXT BOOK:

1. Office Management by S.P.Arora, Vikas Publications.

REFERENCES:

1. Fundamentals of office management – by J.P.Mahajan
2. Office Management – R.S.N.Pillai & Bagavathi- S.Chand.

3. Office Management – R K Chopra , Himalaya Publication

OUTCOMES:

Through this course students should be able to

- Identity the various elements of Office Management
- Analyze the various functions of an Office Administrator
- Understand the various office communication techniques
- Identify the various Office Communication in the environment

3. Indian Banking – Parameswaran – S. Chand and Co.
4. Banking Law Theory and Practice – Tanon
5. Banking Law Theory and Practice – Sherlaker & Sherlaker

OUTCOMES:

After completing the course the students would be able to

- Get familiarized on banking system
- Acquires knowledge on banker and customer relationship
- Get awareness on E-Banking Services
- Can gain of information on fund transferring

COC2204	FINANCIAL MARKETS & SERVICES	L	T	P	C
		4	0	1	5

OBJECTIVES:

- To know about the various financial services and market.
- To get awareness of the credit rating and its operations.
- To learn about the mutual fund services to the people.
- To get insight knowledge in Leasing and Hire purchase functions to the society.
- To know about the concept of Dematerialization.
- To gain knowledge of the Factoring and forfaiting services.

MODULE I INTRODUCTION TO FINANCIAL SERVICES 10

An overview of financial system in Markets – Objectives of financial system – Types of financial services – Regulation of Financial services – Problems and Prospects of Financial service sector.

MODULE II INTRODUCTION TO FINANCIAL MARKET 10

Management of NIM – Secondary market Vs NIM - Functions of Stock exchanges –– National Stock Exchanges – OTCEI- Non Banking Financial Institutions - SEBI Functions and Workings - Listing of securities.

MODULE III CREDIT RATING, FACTORING & FORFAITING 15

Credit Rating:

Definition- Features – Advantages – Credit rating system (Growth Factors) – Global Credit Rating agencies – Rating agencies in India (CRISIL, IICRA, CAREDCR) - Credit rating symbols – Credit rating process and its limitations, - SEBI Guidelines – Future credit rating in India.

Factoring & Forfaiting:

The concept – significance – types – factoring mechanism – factoring in India. Forfaiting - Definition – Factoring Vs Forfaiting – Problems and prospects of forfaiting.

MODULE IV LEASING AND HIRE PURCHASE 15

Leasing: The concept –Types of lease – Structure of leasing industry – Legal aspects – Problems and prospects.

Hire purchase: Meaning – Hire purchase –Leasing VS Hire purchase – Problems and prospects of hire purchase in India.

MODULE V **MUTUAL FUNDS, DEMATERIALISATION & REMATERIALISATION:** **15**

Mutual Funds: Meaning – Classification – Functions – Importance – Risk involved in M.F) – Commercial banks and Mutual Funds (includes UTI, LIC) -. General guidelines of M.F. – Future of mutual fund industry.

Dematerialisation & Rematerialisation:

Meaning – objective – Functions – Merits and Demerits – Progress of demat in India – NSDL & CDSL (Growth & Functioning)

L – 52; T – 13; Total Hours –65

TEXT BOOKS:

REFERENCES:

1. Banking & Financial System - B.Santhanam - Margham Publishers
2. Indian Financial Systems – Dr.S.Guruswamy
3. Vasant Desai, Indian Financial Systems, Himalaya Publishers

OUTCOMES:

After completing the course the students would be able to

- Learns about the various financial services and market
- Gets knowledge and ides on credit and mutual funds.
- Acquire knowledge on Leasing and Hire- purchasing
- Gets an insight on Dematerialization and factoring.

COC2205 BUSINESS STATISTICS - II

L	T	P	C
5	1	0	5

OBJECTIVES:

- To develop skills in analysis & interpretation of data
- Handle challenging problems using appropriate analysis tools

MODULE I INTRODUCTION TO OPERATION RESEARCH 15

Introduction to OR –Meaning & Scope –Characteristics-models in OR. LPP-formulation graphical method-simplex method (Simple Problems) - Big M method application in business- merits & demerits.

MODULE II ASSIGNMENT& TRANSPORTATION 15

Transportation model- basic feasible solution- formulation, solving a TP. Assignment models – Formulation – solution

MODULE III NETWORK ANALYSIS 15

Network analysis - work break down analysis – Construction - numbering of event. Time calculation - critical path, slack, float - application.

MODULE IV DISTRIBUTIONS 15

Discrete probability distributions- Binomial – Geometric- Poisson.
Continuous probability distributions - Uniform- Normal

MODULE V TESTING HYPOTHESIS 18

Testing hypothesis- testing of means and proportions-large and small samples- Z test and t test. Chi square distribution- Characteristics and application- test of goodness of fit and test of independence- Test of Homogeneity, F distribution- testing equality of population variances- Analysis of variance-one way and two way classification.

L – 52; T – 26; Total Hours –78

TEXT BOOKS:

1. Statistical Methods – S.P. Gupta, Sultan Chand & Sons

REFERENCES:

1. Introduction to Operations Research – Dr. P.R. Vittal, Margham Publications

2. Fundamentals of Statistics -Elhance D.N. KitabMahal
3. Operations Research – Hira and Gupta, S. Chand & Co.
4. Operations Research – Handy and H.A. Taha, Macmillan Publishers.

OUTCOMES:

On the successful completion of the course the students should have:

- Tabulate and classify various statistical data
- To analyse data using various statistical tools
- To have knowledge on correlation and Regression.

COC2206 COMMUNICATION SKILLS L T P C
2 0 0 2

OBJECTIVES:

- To equip students with networking system
- To make awareness among students on how to maintain public relation
- To familiarize with grievance handling procedure.
- To gain/ acquires skill on business correspondence

MODULE I PRESENTATION SKILLS 5

Presentations: (to be tested in tutorials only) 4 Principles of Effective Presentation Effective use of OHP Effective use of Transparencies How to make a Power-Point Presentation

MODULE II GROUP COMMUNICATION - I 5

Interviews : Group Discussion Preparing for an Interview, Types of Interviews – Selection, Appraisal, Grievance, Exit Meetings: Need and Importance of Meetings, Conduct of Meeting and Group Dynamics Role of the Chairperson, Role of the Participants, Drafting of Notice, Agenda and Resolutions

MODULE III GROUP COMMUNICATION - II 5

Conference: Meaning and Importance of Conference Organizing a Conference
Modern Methods: Video and Tele – Conferencing
Public Relations: Meaning, Functions of PR Department, External and Internal Measures of PR.

MODULE IV BUSINESS CORRESPONDENCE TRADE LETTERS 6

Order, Credit and Status Enquiry, Collection (just a brief introduction to be given) Only following to be taught in detail:- Letters of Inquiry, Letters of Complaints, Claims, Adjustments Sales Letters, promotional leaflets and fliers Consumer Grievance Letters, Letters under Right to Information (RTI) Act
[Teachers must provide the students with theoretical constructs wherever necessary in order to create awareness. However students should not be tested on the theory.]

MODULE V LANGUAGE AND WRITING SKILLS 5

Reports: Parts, Types, Feasibility Reports, Investigative Reports. Summarization: Identification of main and supporting/sub points presenting these in a cohesive manner

L – 26; T – 0; Total Hours –26

REFERENCES:

1. Alien, R.K.(1970) Organisational Management through Communication.

2. T.S.reddy & Dr. Y. Hariprasad reddy, “Management Accounting”, Margham Publications, Fifth revised Edtion, 2014.

OUTCOMES:

After completing the course the students would be able to

- Know about the provisions of the Income Tax Act of 1961.
- Get knowledge about heads of income very particular about salary income.
- Learn about capital gain. Students can learn about house property income.
- Get provisions of Income Tax Act for depreciation.

COC3203 **AUDITING** **L T P C**

4 2 0 5

OBJECTIVES:

- To equip students with audit system
- To create awareness on vouching
- To impart knowledge on EDP base audit
- To educate on auditors appointment procedures

MODULE I INTRODUCTION **15**

Definition – Objective of an Audit – Role of auditors in detecting errors and frauds – basic principles governing an audit – scope and procedures – advantages and limitations – classification of audit.

MODULE II INTERNAL CHECK **15**

Internal check – Internal control and Internal Audit – Introduction of vouching – Objectives – importance of vouching – verification of assets and liabilities.

MODULE III EDP **15**

General approach to EDP based audit – Approaches to EDP audit – Special techniques for auditing in an EDP environment.

Investigation : Objectives-difference between investigation and auditing

MODULE IV APPOINTMENT OF AUDITOR **15**

Appointment – Qualification. Rights and liabilities of company auditor – Types of audit reports – Audit certificate.

MODULE V AUDITING OF COMPANIES **18**

Auditing of Banking companies, Insurance companies, Educational institutions and Hospitals

L – 52; T – 26; Total Hours –78

TEXT BOOKS:

1. B.N.Tandon - Auditing . S.Chand

REFERENCES:

1. Auditing concepts and techniques, Pearson Ed

OUTCOMES:

After completing the course the students would be able to

- Gain knowledge on audit system
- Learn about vouching of transactions
- Get an exposure on EDP based audit
- Familiarize with auditors appointment procedures

PROGRAMME ELECTIVE

COCX01	**INVESTMENT MANAGEMENT**	**L**	**T**	**P**	**C**
		4	**1**	**0**	**5**

OBJECTIVES:

- To provide knowledge on the various investment avenues that benefit the individuals and nation.
- To introduce the students to the application of various tools and techniques of investments and risks management.

MODULE I INVESTMENT 13

Investment - Investment process - Speculation - Security Analysis - Construction of portfolio - Negotiable and non-negotiable securities – Concepts of Risk and Return

MODULE II PRIMARY AND SECONDARY MARKET 12

New issue market - Methods of issues -Placement of the issues - Pricing of new issues - Investors protection - The secondary market - History of stock exchange - Its function - Types of orders - Share groups - Online trading.

MODULE III FUNDAMENTAL ANALYSIS 12

Fundamental Analysis - Economic Analysis - Industry Analysis - Company Analysis - Quantitative Analysis.

MODULE IV TECHNICAL ANALYSIS AND EMH 13

Technical Analysis - Assumptions - History of technical analysis -Technical tools - Dow Theory - Primary trend - Secondary trend - Mirror trends. Technical Analysis - Assumptions - History of technical analysis -Technical tools - Dow Theory - Primary trend - Secondary trend - Mirror trends.

MODULE V DERIVATIVES 10

Futures and Options - Meaning - Types - Factors affecting the value of option - Futures - Types.

L – 52; T – 13; Total Hours –65

TEXT BOOKS:

1. Punithavathi Pandian, (2013), Security Analysis and Portfolio Management, Vikas Publishing House Pvt ltd, New Delhi.

REFERENCES:

OUTCOMES

After completing the course the students would be able to

- Gains wide information on nature and principles of insurance
- Acquires knowledge of various types of insurances (life , Marine, Fire)
- Gets an insight into the importance of burglary

COCX05	RESEARCH METHODOLOGY	L	T	P	C
		3	2	0	5

OBJECTIVES:

- To enable to student to understand and work methods and concepts related research.
- To enable the student to develop research project and work with research problem.

MODULE I INTRODUCTION 13

Meaning and Definition of Research - Characteristics of Research – Objectives of Research – Types of Research – Process and steps of Research.

MODULE II PROCESS OF SELECTION AND FORMULATION OF RESEARCH PROBLEM 12

Problem Selection / Identification of the problem – Sources of research problems – Criteria of a good research problem – Principles of research problem – Hypothesis – Meaning – Sources of Hypothesis – Characteristics of good Hypothesis.

MODULE III RESEARCH DESIGN 12

Meaning of R/D – Types of R/D – Essential steps in preparation of R/D – Evaluation of the R/D – A Model Design.

MODULE IV DATA COLLECTION AND ANALYSIS AND INTERPRETATION OF DATA. 13

Main forms of Data Collection responses – Methods of data Collection – Analysis of data – Types of analysis – Statistical tools and analysis – Interpretation of data – Need and Importance – Technique of interpretation

MODULE V . RESEARCH REPORT 10

Meaning of R / R – Steps in Organization of R / R – Types of Report – Significance of Report Writing – Drafting of reports – Contents of a report.

L – 39; T – 26; Total Hours –65

TEXT BOOKS:

1. Dr. P. Ravilochanan, Research Methodlogy , Margham Publications, Chennai

REFERENCES:

1. C. R. Kothari - Research Methodology: Methods and Techniques- New Age

International Publisher.
2. Patten chetty - Research Methodology - Rainbow Publications.
3. P.Saravanavel - Research Methodology - Kidap Publications

OUTCOMES:

After completing the course the students would be able to

- Get good understanding on research concept and its methods
- Gets awareness on choosing research topics
- Acquire knowledge on how to define a problem
- Gets an idea on how to prepare project proposal

COCX06	E- COMMERCE	L	T	P	C
		4	1	0	5

OBJECTIVES:

- To analyze the business model of firm, and determine the role that the internet (and related technologies) can play to support or even enable this model
- To understand the key issues involved in managing electronic commerce initiatives
- To utilize the internet to collect information to conduct research.

MODULE I TELECOMMUNICATION NETWORKS 13

Introduction- LAN-WAN- internet- what is electronic commerce- brief history of electronic commerce- advantages and limitations of electronic commerce- types of electronic commerce- integrating electronic commerce key questions for management.

MODULE II THE INTERNET AND THE WORLD WIDE WEB 12

The internet today- history of the web- unique benefits of the internet- internet architecture – world wide web concepts and technology- creating web pages- launching a business on the internet.

MODULE III ELECTRONIC PAYMENT SYSTEMS 12

Overview of the electronic payment technology- requirements for internet based payments – electronic payment media - electronic commerce and banking.

MODULE IV E-SECURITY 13

Security in the cyberspace- designing for security- virus- security protection and recovery encryption- the basin algorithm system- authentication and trust- key management internet security protocols and standard- other encryption issues.

MODULE V WEB BASED BUSINESS 10

Business-to-business electronic commerce- intranets and extranets- intranets and supply chain management- legal and ethical issues- case studies.

L – 52; T – 13; Total Hours –65

TEXT BOOKS:

guide", Addison- Wesley, 2000.
2. Zheng Qin, "Introduction to E-Commerce", T Singha University Press, Beijing, 2009.

OUTCOMES:

On the successful completion of the course the students should have:

- Understand the concept of E-Commerce and Describe the opportunities and challenges offered by E-Commerce
- Able to handle electronic payment technology and requirements for internet based payments
- Understand the categories of E-Commerce and understand the different applications of E-Commerce
- understand and identify security issues of E-Commerce
- Understand the concept of WEB Based Business Understand the M-Commerce applications

ACCOUNTS AND FINANCE

VISION AND MISSION OF THE DEPARTMENT OF COMMERCE

VISION

To develop into a world class centre of excellence in the fields of Business and Economics through value based education, training & research.

MISSION

- To impart holistic education using state of the art technology and to give a global perspective through value based education for social transformation.
- Inspire and empower the students to become innovative leaders and involving people who contribute to the success of organisations and betterment of communities.
- To develop a team of competent and qualified entrepreneur.
- To explore training and development opportunities
- To involve in projects leading to high quality research.
- To continuously evaluate our performance against suitable benchmarks, develop new programmes, global tie-ups to meet stakeholder requirements
- To train them with good communication and soft skills for employment.
- To prepare students for higher education in Commerce and Business Studies.
- To provide contextually relevant commerce education.
- To inculcate the use of Information and Communication Technology for the development of society.

PROGRAMME EDUCATIONAL OBJECTIVES

- To make students well versed with the various Accounting, Finance, Business Law and Taxation policies in India.
- To facilitate taking up of various professional courses (CA, ICWA, CMA, CS etc.) by providing the necessary inputs.
- To provide an in-depth understanding of various accounting and taxation rules to the students.
- To provide sufficient knowledge and skills to students to seek employment or for managing business organization effectively.
- To provide career oriented education to students so that they can either go for jobs or engage in self-employment.

PROGRAMME OUTCOMES

On successful completion of the programme, the graduates will

- Be able to apply the knowledge of accounting, business laws and taxation in business and commerce.
- Be able to pursue the professional courses like CA, CWA, CS etc.
- Communicate effectively and perform efficiently in the organization, social and personal life.
- Be able to aptly use the obligatory knowledge and skill to furnish as an entrepreneur and social entrepreneur.
- Be able to lead and manage a team effectually in varied situations.
- Have sufficient skill to handle the financial matter of organizations.

SEMESTER I

ENC1183	GENERAL ENGLISH I	L	T	P	C
		3	1	0	3

OBJECTIVES:

- To make students learn English literary texts.
- To train them in appreciating and critically analyzing literary texts.
- To train in using the four skills, Reading, Writing, Speaking and Writing skills
- To encourage them to use appropriate vocabulary and grammatical expressions.

MODULE I **8**

Prose Education
Poem William Shakespeare - “All the World’s a Stage”
Letter Writing Formal and Informal
Short Story O Henry - “Robe of Peace” (Extensive Reading)
Essential English Grammar - 1-3 MODULES

MODULE II **8**

Prose Employment & Unemployment
Poem Ben Jonson - “On Shakespeare”
Short Story Rudyard Kipling – “The Miracle of Puran Bhagat” (Extensive Reading)
Essential English Grammar – 4-7 MODULES

MODULE III **9**

Prose A Dead Planet
Poem Robert Herrick - “Gather Ye Rosebuds”
Note Making
Short Story H.G.Wells – “The Truth About Pyecraft” (Extensive Reading)
Essential English Grammar – 8-10 MODULES

MODULE IV **8**

Prose Riddles
Poem Oliver Goldsmith - “The Village Schoolmaster”
Essential English Grammar – 11-13 MODULES

MODULE V **6**

Prose Killers

A Short Story

Poem William Blake - “From Auguries of Innocence”

Précis Writing

Short Story William Somerset Maugham - “Mabel” (Extensive Reading)

Essential English Grammar – 14-17 MODULES

MODULE VI **6**

Prose Galloping Growth

Poem Robert Browning- “The Last Ride Together”

Developing story from hints

Short Story John Galsworthy - “Quality” (Extensive Reading)

Essential English Grammar-- 18 &19 Modules

TOTAL HOURS – 45

3. Murphy, Raymond. **Essential English Grammar**. New Delhi: Cambridge University Press, 2009.

4. Seshadri, K G Ed. **Stories for Colleges.** Chennai: Macmillan India Ltd, 2003.

OUTCOMES:

After completing the course the students would be able to

- Respond to literary texts efficiently.
- Appreciate and critically analyse literary texts.
- Use the four skills of the language
- Use vocabulary and grammatical expressions effectively.

LNC 1182	GERMAN	L	T	P	C
		3	1	0	3

OBJECTIVES:

- To improve the proficiency of students in German language.
- To create awareness of using vocabulary among students.
- To expose them to correct grammatical forms of the language.
- To empower them for successful communication in social and academic contexts.

MODULE I **8**

Introduction to German alphabets, phonetics and pronunciation- Introducing themselves and others using simple sentences and answer to some basic personal questions-: Introduction to different types of articles and verbs, Nouns

MODULE II **8**

Understanding and responding to everyday queries like instruction, questions, - number & gender, pronouns, present and past tense.

MODULE III **7**

Short telephone messages, requests etc., if spoken slowly and clearly-- Detailed overview of articles, adjectives with/without articles, Prepositions

MODULE IV **7**

Asking and giving directions using simple prepositions- Ability to fill basic information on forms while registering for courses / classes.

MODULE V **8**

Ability to extract and understand relevant information in a public announcement, broadcast, newspaper, radio etc-- dative & accusative

MODULE VI **7**

Ability to describe about people, work, immediate environment, education and other topics related to personal needs in a concise manner-- Understanding of matters

which are familiar and are encountered regularly like instances at school, work, at public places, places of leisure etc.

OUTCOMES:

On completion of the course, students will be able to

- Show their proficiency in German Language.
- Use appropriate vocabulary in real life contexts.
- Use appropriate grammatical forms while communicating with people.
- Effectively use the language in social and academic contexts.

LNC 1184	TAMIL I	L	T	P	C
		3	1	0	3

நோக்கங்கள்

- சமூக மாற்றச் சிந்தனைகளை உள்ளடக்கிய தற்கால இலக்கியங்களை அறிமுகம் செய்தல்
- புதுக்கவிதை, சிறுகதை, உரைநடை ஆகிய இலக்கியங்களின் நயம் பாராட்டுதல்
- சந்திப் பிழையின்றி எழுத மாணவர்களைப் பயிற்றுவித்தல்

அலகு I **இருபதாம் நூற்றாண்டு மரபுக்கவிதைகள** 8

மனோன்மணியம் சுந்தரனார் - தமிழ்த்தாய் வாழ்த்து, பாரதியார் - யோக சித்தி, பாரதிதாசன் - நீங்களே சொல்லுங்கள், கண்ணதாசன் - காலக்கணிதம்

அலகு II **புதுக்கவிதைகள** 8

ஈரோடு தமிழன்பன் - கனாக்காணும் வினாக்கள், மீரா - ஊிசகள், வைரமுத்து - அந்தி, நா.காமராசன் - அலிகள், தாமரை - ஒரு கதவும் கொஞ்சம் கள்ளிப்பாலும், மொழிபெயர்ப்புக் கவிதைகள் - கீதாஞ்சலி, மும்பைவாசிகள் (10 கவிதைகள் மட்டும்)

அலகு III **சிறுகதைகள்** 8

புதுமைப்பித்தன் - பால்வண்ணம் பிள்ளை, பி.எஸ்.ராமையா - பணம் பிழைத்தது, ஜெயகாந்தன் - விதியும் விபத்தும். கி.இராஜநாராயணன் - நாற்காலி, சு.சமுத்திரம் மொழிபெயர்ப்புச் சிறுகதைகள் - காகித உறவு, மாதவிக்குட்டி - நெய்ப்பாயாசம், அந்தோன்செகாவ் - பச்சோந்தி

அலகு IV **மொழிப்பயிற்சி** 7

கலைச்சொல்லாக்கம், பிழை திருத்தம் (ஒருமை, பன்மை, ல-ள-ழகர, ர�றீறகர, ண-ந-னகர வேறுபாடுகள்), அயற்சொற்களைதல்

அலகு V **இலக்கிய வரலாறு** 7

பாடந்தழுவியது (இருபதாம் நூற்றாண்டு மரபுக் கவிதைகள், புதுக்கவிதையின் தோற்றமும் வளர்ச்சியும், சிறுகதையின் தோற்றமும் வளர்ச்சியும்)

அலகு VI **படைப்பிலக்கியம** 7

கவிதை எழுதுதல், சிறுகதை வரைதல்

L – 45; T – 30; TOTAL HOURS – 75

குறிப்புகள்:

1. பொதுத்தமிழ் - செய்யுள்திரட்டு - தமிழ்த்துறை வெளியீடு
2. தமிழ் இலக்கிய வரலாறு - சோம. இளவரசு
3. சிறுகதைத் தொகுப்பு (கட்டுரைக்களஞ்சியம்)

வெளிப்பாடு:

1. மாணவர்கள் சமூக மாற்றச் சிந்தனைகளை அறிந்துகொள்வர்
2. சந்திப்பிழைகளை நீக்கி எழுதும் திறன் பெறுவர்
3. புத்திலக்கியங்களைப் படைக்கும் திறனையும் திறனாய்வு செய்யும் திறனையும் பெறுவர்

COC 1101 FINANCIAL ACCOUNTING L T P C

4 2 0 5

OBJECTIVES:

- To facilitate the understanding of Accounting in General
- To give a comprehensive understanding of the system of Financial Accounting
- To understand the intermediate concepts for assets, liabilities and stockholders' equity
- To develop skill, related to problem solving and critical thinking

MODULE I INTRODUCTION TO ACCOUNTING 12

Meaning and scope of Accounting, Basic Accounting Concepts and Conventions, Objectives of Accounting, Accounting Transactions, Double Entry Book Keeping - Journal, Ledger, Preparation of Trial Balance

MODULE II FINAL ACCOUNTS 15

Preparation of Final Accounts of a Sole Trading Concern, Closing Stock, Adjustments, Outstanding and Prepaid items, Depreciation, bad debts, Provision for Bad and Doubtful Debts, Provision for Discount on Debtors, Provision for Discount on creditors, Interest on Capital and Drawings, Abnormal Loss of stock.

MODULE III RECTIFICATION OF ERRORS 18

Classification of Errors, Rectification of Errors, Preparation of Suspense Account-Profit & loss adjustment Account.

MODULE IV BANK RECONCILIATION STATEMENT 18

Introduction, Procedure for reconciling the cash book balance with the pass book balance, Methods of Bank Reconciliation Statement.

MODULE V DEPRECIATION ACCOUNTING 15

Depreciation, Meaning, Causes, Methods, Straight Line Method, Written down Value Method, Change in method of depreciation (retrospective and prospective method)
Insurance claims **-** Insurance claims, Average Clause (Loss of stock only)

L – 52:T – 26; TOTAL HOURS – 78

TEXT BOOK:

1. Financial Accounting-T.S.Reddy & A.Murthy, Margham Publications, Ch.

REFERENCES:

1. Financial Accounting by Hanif and Mukherjee, MCGRAW hill education
2. Financial Accounting by P.C. Tulsian, Pearson
3. Jain &Narang (2015) Financial Accounting, Kalyani Publishers.

OUTCOMES:

On successful completion of this course students are able to

- Explain the fundamental concept of financial accounting system
- Recognize the transaction, understand the accounting cycle and various accounts books
- Recognize the error and it rectification
- Understand the depreciation and its different treatment in accounting
- Understand the financial statement of its importance and method of preparation for sole proprietorship
- Understand the importance of bank reconciliation system and method of preparation of reconciliation statement

COC 1102 BUSINESS MANAGEMENT L T P C

4 1 0 5

OBJECTIVES:

- Understand the fundamental concepts in management
- Trace the evolution and growth of management as a body of knowledge
- Have an in depth knowledge of various functions of management and their relevance to an organization

MODULE I MANAGEMENT 10

Meaning – Role of Management – Management Process – Importance – Management & Administration – Levels of Management – Taylor's Scientific Management – Fayol's Administrative Management Principles.

MODULE II PLANNING 20

Nature & Characteristics – Importance – Advantages & Limitations – Steps in Planning – Types of Plan – Standing Plan – Objectives – Policies – Procedures – Rules – Strategies – Single use Plans – Programmers and Budgets.

Management by Objectives: Concept, Process and Limitations. Decision Making: Process, Limitations and Techniques used in decision making.

MODULE III ORGANIZATION 15

Importance – Types – Line, Functional, Line and Staff – Committee Organization – Authority and Responsibility–Delegation of Authority–Principles,Types, advantages and Barriers to Delegation – Departmentalization – Formal and Informal Organization. Staffing: Nature & Importance – Functions of Staffing (In Brief)

MODULE IV DIRECTING 10

Nature & Importance – Elements of Directing Function – Supervision – Span of Supervision – Factors Determining span of supervision.

Motivation: Importance – Types of Motivators – Maslow's Theory – Hertzberg's Two factor theory – Douglas McGregor's Theory X & Theory Y.

MODULE V CONTROL 10

Need for Control – Controlling Process – Controlling Tools & Techniques.

Coordination: Need & Importance – Principles & techniques of Coordination
Leadership: Importance – Formal & Informal Leaders – Leadership Styles – Traits of a Good Leader.

L – 52; T – 13; TOTAL HOURS – 65

TEXT BOOKS:

1. Business Management – Dinkar Pagare
2. Principles of Management – C.B.Guptha

REFERENCES:

1. J. Jayasankar, 1st Edition. 2004, Reprint2008-Principles of Management (Business Management). Margham Publication. Chennai
2. P.C.Tripathi& P.N Reddy, 1991, Principles of Management. Tata Mc.Graw, Hill. New Delhi.
3. Weihnrich and Koontz, Management, 10th Edition, 1993, A Global Perspective.
4. N. Premavathy, 2nd Edition, 2003, Principles of Management, Sri Vishnu Publication. Chennai.

OUTCOMES:

At the end of this course, the students will be able to:

- understand different types of functions plans and the managerial decisions
- understand the organizational chart and explain the staffing process
- understand the different control technique in the organizations
- understand the appropriate way to lead and motivate the team.

COC 1103	QUANTITATIVE APTITUDE REASONING	L	T	P	C
		4	1	0	5

OBJECTIVES:

- To learn basics of mathematical equations.
- To have knowledge in various arithmetical calculations.
- To understand different mathematical operations for logical analysis

MODULE I QUANTITATIVE 15

LCM & HCF – Average - Ratio and Proportion – Logarithm – Permutation and Combination – Probability (Excluding conditional probability and Bayes' Therom).

MODULE II SEQUENCES AND SERIES 15

Arithmetic Progression, Sum up to n terms, Properties of Arithmetic Progression, Geometric Progression, Sum up to n terms Properties of GP

MODULE III INTEREST AND ROOTS 10

Simple Interest and Compound Interest – Surds and Indices – Square root – Calendar and Clock.

MODULE IV MENSURATION 10

Fractions and Percentage and Simplification – Simple Equation – Time and Work – Speed & Distance – Mensuration: Area (Circle, Square, Rectangle, Triangle) – Volume (Cube, Cuboid, Cone, Sphere).

MODULE V LOGICAL REASONING 15

Coding and Decoding – Mathematical Operations – Series completion (alphabets and numbers) – Logical Venn Diagram.

L – 52; T – 13; TOTAL HOURS – 65

REFERENCES:

1. Quantitative Aptitude – R.S. Aggarwal – Sultan Chand Publication.
2. Logical Reasoning - R.S. Aggarwal – Sultan Chand Publication.

OUTCOMES:

On completion of the course, the students will be able to

- Calculate the various practical problem on Ratio, Proportion and Logarithm
- Students will be able to solve the problem related to Linear Equation, Inequalities and Interests.
- Students will be able to solve the problem of Permutation and Combination and Arithmetic and Geometric Series

COC 1104 EXCEL MODELLING (PRACTICAL)

L	T	P	C
0	0	4	2

OBJECTIVES:

- Analyse business data for better decision making.
- Apply basic tools and functions of excel.
- Solve various mathematical and managerial problems.

MODULE I BASICS OF EXCEL **8**

Entering Data, Selecting an area of worksheet, Saving closing and opening files, Copying Data, Inserting and deleting rows and columns, Wrap text, Merge and center, Understanding excel options, Setting advanced options-Data validation, Working with multiple sheets, Fixing of cells, Freezing of cells, Alignment, Protect sheet, Protect workbook, Page layout, Insert equation and symbol, Insert text box, Insert header and footer.

MODULE II BASIC MATHEMATICAL FUNCTIONS **12**

Sum, Average, Product, SQRT, MOD, Aggregate, Power, SUM PRODUCT. **Financial arithmetic**: Compound interest, Continuous compounding, Simple interest, Fractional years.

MODULE III DATA HANDLING **10**

Sorting data, Filtering data, Parsing data, Data validations, What-If-Analysis, Group, Ungroup, Creating subtotals, Understanding data consolidation, Consolidating data using the SUM function. **Descriptive statistics**: Mean, Median, Mode, Variance, Standard deviation, Weighted averages, Maximum and Minimum, Range.

MODULE IV CHARTS AND GRAPHS **10**

XY Scatter plot, Column and Bar Chart, Pie Charts, Adding Legends and Titles.**Depreciation using Excel**: Calculating Fixed Line Depreciation using DB function, Calculating Straight Line Depreciation using SLN function.

MODULE V CONDITIONAL FORMATTING **12**

Highlight cell rules, Top/Bottom rules, Data Bars, Color Scales and Icon Sets, New Rule, Clear Rules, Manage rules. **Data analysis in Excel**: Analysis by goal seek,

Analysis by pivot table and charts, Solver to determine the optimal product mix.

TOTAL HOURS – 52

TEXT BOOK:

1. Microsoft excel 2013: data analysis and business modeling by waynewinston, prentice hall

REFERENCES:

1. Business data analysis using excel by david whigham, oxford university press
2. Excel Bible 2013

OUTCOMES:

At the end of the course students will be able to

- Anaylse data using descriptive statistics
- copy data and paste it in the desired location, give name to cells and use them, inserting and deleting rows and columns
- learn to use the advanced excel options
- learn to work with Protect sheet, Protect workbook, Page layout, Insert equation and symbol, Insert text box, Insert header and footer
- learn to work Page layout and data validation
- apply basic mathematical functions
- calculate Compound interest , Fractional year and continuous compounding in excel
- work with Filtering data, Parsing data
- calculate mode and average in excel
- Ablility to analyse data using charts and graphs

COC 1105	ENVIRONMENTAL STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

- Developing an awareness and sensitivity to the total environment and its related problems
- Motivating people for active participation in environmental protection and improvement
- Developing skills for active identification and development of solutions to environmental problems
- Evaluation of environmental programes in terms of social, economic, ecological and aesthetic factors.

MODULE I MULTIDISCIPLINARY NATURE OF ENVIRONMENTAL STUDIES **6**

Definition-scope and importance- need for public awareness.

Natural resources and associated problems

a) Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people.

b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources

d) Food resources : World food problems, changes caused by agriculture and over-grazing, effects of modern agriculture, fertilizer-pesticide problems, water logging ,salinity

e) Energy resources : Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources.

f) Land resources : Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

Role of an individual in conservation of natural resources-Equitable use of resources for sustainable lifestyles.

MODULE II ECOSYSTEMS **7**

Concept of an ecosystem.-Structure and function of an ecosystem.-Producers, consumers and decomposers.-Energy flow in the ecosystem.-Ecological succession-Food chains, food webs and ecological pyramids.-Introduction, types, characteristic

features, structure and function of the following Ecosystems :-

a.Forest ecosystems.

b.Grassland ecosystem.

c.Desert ecosystem

d.Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

MODULE III BIODIVERSITY AND ITS CONSERVATION 5

Introduction – Definition : genetic, species and ecosystem diversity.- Bio geographical classification of India-Value of biodiversity:consumptive use, productive use, social, ethical, aesthetic adoption values-Biodiversity at global, National and local levels.-Hot-sports of biodiversity.-Threats to biodiversity : habitat loss, poaching of wildlife, man-wildlife conflicts.-Endangered and endemic species of India

Conservation of biodiversity : In-situ and Ex-situ conservation of biodiversity.

MODULE IV ENVIRONMENTAL POLLUTION 5

Definition-Cause, effects and control measures of :-Air pollution-Water pollution-Soil pollution-Marine pollution-Noise pollution-Thermal pollution- Nuclear hazards

Solid waste Management : Causes, effects and control measures of urban and industrial wastes.-Role of an individual in prevention of pollution.

Diaster management : floods, earthquake, cyclone and landslides.

TOTAL HOURS – 23

REFERENCE BOOKS:

- Environmental Science- Kaushik & Kaushik-New Age International Publications
- Environmental Science & Engineering-Anandan & Kumaravelan-Scicech Publications

OUTCOMES:

At the end of the course students will be able to

- Understand the natural environment and its relationships with human activities.
- Characterize and analyze human impacts on the environment.
- Integrate facts, concepts, and methods from multiple disciplines and apply to environmental problems.
- Acquire practical skills for scientific problem-solving, including familiarity with laboratory and field instrumentation, computer applications, statistical and modeling techniques.

SEMESTER II

		L	T	P	C
ENC1284	**GENERAL ENGLISH II**	**3**	**1**	**0**	**3**

OBJECTIVES:

- To make students learn English literary texts.
- To train them in appreciating and critically analyzing literary texts.
- To train in using the four skills, Reading, Writing, Speaking and Writing skills
- To encourage them to use appropriate vocabulary and grammatical expressions

MODULE 1 **9**

Prose Qahwah

Poem William Wordsworth – "Nutting"

Filling Money Order Challan and Bank Challan

Short Story G.K.Chesterton – The Hammer of God (Extensive Reading)

Essential English Grammar: - 31-33 Modules

MODULE 2 **8**

Prose Environment

Poetry John Keats – "La Belle Dame Sans Merci"

Short Story Katherine Mansfield—A Cup of Tea (Extensive Reading)

Dialogue Writing

Essential English Grammar: 34-37 Modules

2. Fundamentals of Statistics -Elhance D.N. KitabMahal
3. Operations Research – Hira and Gupta, S. Chand & Co.
4. Operations Research – Handy and H.A. Taha, Macmillan Publishers.

OUTCOMES:

After studying this course students will able to

- Tabulate and classify various statistical data
- To analyse data using various statistical tools
- To have knowledge on operations research analysis

COC 1204 DATABASE MANAGEMENT SYSTEM L T P C
0 0 4 2

OBJECTIVES:

- To analyze the large amount of data in meaningful way and quickly.
- To be able to demonstrate the proficiency in Access, executing powerful analysis on large database.

MODULE I **13**

Basics of Data, Information, Introduction of Data, Database, & Database Management System, Advantages of Computerized Data Base, Various View of Data, Data Independence, Database Schema and Subschema, Data Models, Introduction to Various Models, Database Languages, DDL, DML, DCL, Database Administrator, Functions of DBA, Role of DBA, Data Base User, Various Types of Database User, E-R Model, E-R Diagram, Keys: Primary, Candidate Key, Super Key, Key Candidate, Foreign Key

MODULE II **15**

Access Concepts and Terms, Starting and Quiting Access, Database Tables, Relational Database Management System, Relational Database and its Advantages, Relational Database and its Advantages, Parts of Access Window
Database Tables, Relational Database, Records and Fields, Tables, Creating Database, Fields Controls and Objects, Queries, Creating and run Queries, Introduction of Dynasets, Forms, Reports, Properties, Wizard, Macro, Advantages of Macros, Hardware & Software Requirements for MS Access

MODULE III **14**

Creating Database, Creating Database With Wizard, Creating Database Without Wizard, Field Name and Field Properties, Various Data Types and Use, Properties of Various Data Types, Adding Fields in to Existing Tables, Removing Fields From Existing Tables, Renaming Fields, Renaming Field's Caption, Resizing Fields, Freezing Columns, Primary Key Field, Indexing Fields

MODULE IV **8**

Forms, Use, Form Creation, Creating, Saving, and Modifying Forms, Entering and Editing Data Via Forms, Finding Data,Sorting Data, Displaying Data,Dynaset
Queries, Creating and run Queries, Creating Select Query,Using Select Query, Using Wild Cards in Select Query

MODULE V **10**

Reports: Creating Reports, Previewing and Printing Reports, Modifying and Saving Reports, Relational Database: Definition & Purpose, Creating Relational Database, Viewing and Deleting Expressions, Data Models, Creating Database Keys, Queries

TOTAL HOURS – 60

OUTCOMES:

Students will be able to calculate FOREX rates

- Will help student to identify the various steps in Foreign Exchange trading
- Students will understand the various regulation of Foreign Exchange

COC2113 PRACTICAL AUDITING

L	T	P	C
4	0	1	5

OBJECTIVES:

- To understand the meaning, nature and scope of auditing and auditor
- To analyse the various audit programs
- To know how vouching is done by auditors
- To identify the various steps in valuation of assets and liabilities by an auditor
-

MODULE I INTRODUCTION 12

Meaning and Definition of Auditing – Nature and Scope of Auditing – Accountancy and Auditing, Auditing and Investigation – Objectives of Auditing – Limitations of Audit – Advantages of Audit – Classification of Audit

MODULE II AUDIT PROGRAMME 13

Meaning and Definition of Audit Programme – Advantages and Disadvantages – Audit File, Audit Note Book, Audit Working Papers – Purposes and Importance of Working Papers – Internal Check – Meaning, Object of Internal Check – Features of Good Internal Check System – Auditors duty with regards to Internal Check System – Internal Check and Internal Audit.

MODULE III VOUCHING 15

Vouching – Meaning – Objects – Importance of Vouching – Meaning of Voucher – Vouching of Cash Receipts and Vouching of Cash Payments – Vouching of Trading Transactions.

MODULE IV VERIFICATION AND VALUATION OF ASSETS AND LIABILITIES 13

Verification and Valuation of assets and liabilities – Meaning and objects of verification – Vouching and verification – Verification and Valuation of different kinds of Assets and Liabilities.

MODULE V THE AUDIT OF LIMITED COMPANIES 12

The Audit of Limited Companies – Necessity of Company Audit – Qualification and Disqualification of Auditors – Appointment – Removal – Remuneration – Status of Auditors – Rights – Powers – Duties and Liability of Auditors – Auditor's Report – Importance and Contents.

L – 52; P – 13; Total Hours –65

TEXT BOOKS:

1. B.N. Tandon, Sultan Chand – A handbook of practical auditing
2. DinkarPagare-Principles and Practices of Auditing

REFERENCES:

1. B.N. Tandon, Sultan Chand – A handbook of practical auditing
2. B.N. Tandon, Sudharsanam, Sundharabahu – S Chand – Practical auditing
3. Sharma, SahityaBhavan, Agra – Auditing
4. Dr.N.Premavathy, Practical Auditing, Sri Vishnu Publications, Chennai.

OUTCOMES:

- Student will be in a position to identify the various duties and responsibilities of an auditor
- Will be able to understand how vouching is done for cash receipts and cash payments
- Student will understand the various roles of an Internal Auditor
- Will bring knowledge to students about how an auditor prepares his audit report

COC 2114 BUSINESS ECONOMICS L T P C
4 1 0 5

OBJECTIVES:

- To introduce students to the fundamentals of economics relevant from business aspects
- To familiarize students with the importance of economic approaches in business decision making
- To study about the application of economic theory into practical business
- To study about the economic tools and analysis that help make better business decisions

MODULE I INTRODUCTION TO ECONOMICS 15

Positive and Normative economics definition, Scope and Importance of business economics concepts, Uses and Limitations of Microeconomic Theories

MODULE II DEMAND AND SUPPLY 10

Demand and Supply Analysis: Introduction to demand, Law of demand, Shift and movement in the demand curve, Price, income and cross elasticity, Market Equilibrium, Elasticity of demand, Exceptions of the law of demand, Law of supply: shift and movements, Determinant of supply and supply function

MODULE III PRODUCTION THEORY 10

Production Function with one variable and more than one variable, Return to factor and Return to scale, Types of inputs, Total, Marginal and Average Product, Introduction to production function.

MODULE IV ECONOMIC CONCEPT OF COST AND REVENUE 15

Average and Marginal concepts in Cost in long and short run, Relationship between average cost curves- Long Run and Short Run, Kinds of costs, Economies and diseconomies of Scale

Revenue Analysis: Average and Marginal Revenue Curves, Relationship between Revenue curves

MODULE V MARKET STRUCTURE 15

Perfect Competition: Introduction and features of Perfect Competition, Short Run and long run equilibrium

Monopoly: Introduction and features, Price discrimination, Price and output decisions

of discriminating monopolist., Types of monopoly, Price and output determination in short run and long run

Monopolistic Competition: Introduction to monopoly and its features, Price and output determination in short and long run, Role of advertising in monopolistic competition.

L – 52; T – 13; TOTAL HOURS – 65

3. Dr..V.R.Palanivelu, “Financial Management”, S.Chand Publication,2010

OUTCOMES:

- Students will be equipped with the knowledge of various Financial Management techniques
- Students will be able to understand various concepts of Leverages
- Students will analyze various Cash Management and Receivables Management concepts in Financial Statements

COC2212 BUSINESS AND CORPORATE LAWS

L	T	P	C
4	0	1	5

OBJECTIVES:

- To help the students to understand the basic laws related with business and corporate.
- To orient students, about the legal aspects of business and corporate
- To familiarize the students with case law studies related to Business and Corporate Law

MODULE I INTRODUCTION 12

Law of contract-Nature of contract-classification-offer and acceptance-capacity of parties to contract-free consent-consideration-legality of object-Agreement declared void

MODULE II CONTRACT ACT 13

Performance of contract-discharge of contract-Remedies of breach of contract-Quasi contract(general contract-section 1 to 75) Contract of indemnity-Guarantee-Bailment &pledge-contract of agency.

MODULE III SALE OF GOODS ACT 15

Sale of goods act-Definition-sale-Agreement to sell-distinction between sale and agreement to sell-condition and warranties-distinction between condition and warranties-Right and duties of an unpaid seller.

MODULE IV COMPANIES ACT 13

Company-types of companies-memorandum of association-Articles of association-prospectus-shares and debentures-company meetings.

MODULE V FOREIGN EXCHANGE 12

Foreign exchange management act 1999(FEMA)-Information technology act-Intellectual property rights(IPRA).

L – 52; T – 13; Total Hours –65

TEXT BOOKS:

1. Business laws-N.D.Kapoor, sultan chand& sons

REFERENCES:

1. P.Saravanavel,S.Sumathi**,** Legal System in Business,
2. Kapoor publication pvt., ltd – Student guide to Student guide to mercantile law
3. Balachandran, by Company law - Vijai Nicole publication.

OUTCOMES:

- Make the students understand about business and corporate law
- Develop knowledge on contract and various types of contracts
- To help the students to understand the concept of sale of goods
- Make the students understand about companies and its types
- To equip the students with proper knowledge about Foreign exchange

COC2213 GOODS & SERVICE TAX (GST)

L	T	P	C
4	0	1	5

OBJECTIVES:

- To provide students with a working knowledge of principles and provisions of GST
- To make students understand the various impacts of GST in current scenario
- To impart knowledge to students about the procedures involved in calculation in GST

MODULE I INTRODUCTION **13**

Constitutional framework of Indirect Taxes before GST (Taxation Powers of Union & State Government); Concept of VAT: Meaning, Variants and Methods; Major Defects in the structure of Indirect Taxes prior to GST; Rationale for GST; Structure of GST (SGST, CGST, UTGST &IGST); GST Council, GST Network, State Compensation Mechanism, Registration.

MODULE II LEVY AND COLLECTION OF GST **15**

Taxable event- “Supply” of Goods and Services; Place of Supply: Within state, Interstate, Import and Export; Time of supply; Valuation for GST- Valuation rules, taxability of reimbursement of expenses; Exemption from GST: Small supplies and Composition Scheme; Classification of Goods and Services: Composite and Mixed Supplies.

MODULE III INPUT TAX CREDIT **12**

Eligible and Ineligible Input Tax Credit; Apportionments of Credit and Blocked Credits; Tax Credit in respect of Capital Goods; Recovery of Excess Tax Credit; Availability of Tax Credit in special circumstances; Transfer of Input Credit (Input Service Distribution); Payment of Taxes; Refund; Doctrine of unjust enrichment; TDS, TCS. Reverse Charge Mechanism, Job work

5. Chandra Mahesh and Shukla D.C., Income Tax Law and practice; PragatiPublications, New Delhi.

OUTCOMES:

- To know about the provisions of the Income Tax Act of 1961.
- Students can get knowledge about heads of income very particular about salary income.
- To learn about capital gain. Students can learn about house property income.
- Students will get provisions of Income Tax Act for depreciation.

COC3105 PERSONALITY DEVELOPMENT L T P C
2 0 0 2

OBJECTIVES:

- To Make Aware About The Importance Of Personality And Development InThe Business World.
- To Make The Students Follow The Good Personality And Create A Good Relationship With Others.

MODULE I PERSONALITY DEVELOPMENT-INTRODUCTION 5

The Concept Personality - Dimensions of Personality - Term Personality Development - Significance. The Concept of Success And Failure What Is Success? - Hurdles In Achieving Success - Overcoming Hurdles - Factors Responsible For Success – What Is Failure - Causes of Failure-Do's And Don'ts Regarding Success And Failure.

MODULE II ATTITUDES AND VALUES 5

Attitude - Concept - Significance - Factors Affecting Attitudes - Positive Attitude - Advantages -Negative Attitude - Disadvantages - Ways To Develop Positive Attitude – Difference between Personalities Having Positive And Negative Attitude.

MODULE III MOTIVATION 5

Concept Of Motivation - Significance - Internal And External Motives - Importance Of Self-Motivation- Factors Leading To De-motivation -Theories To Motivation.

MODULE IV SELF ESTEEM AND SMART 6

Term Self-Esteem - Symptoms - Advantages - Do's And Don'ts To Develop Positive Self-Esteem – Low Self-Esteem - Symptoms - Personality Having Low Self Esteem - Positive And Negative Self-Esteem. Interpersonal Relationships - Teaming - Developing Positive Personality - Analysis of Strengths and Weaknesses. Concept Of Goal-Setting - Importance Of Goals - Dream Vs Goal - Why Goal-Setting Fails? – Smart (Specific, Measurable, Achievable, Realistic, Time-Bound) Goals - Art Of Prioritization - Do's And Don'ts About Goals.

MODULE V BODY LANGUAGE, STRESS MANAGEMENT & TIME MANAGEMENT 5

Body Language - Assertiveness - Problem-Solving - Conflict And Stress Management - Decision-Making Skills - Positive And Creative Thinking - Leadership

And Qualities Of A Successful Leader - Character-Building - Team-Work - Lateral Thinking - Time Management - Work Ethics – Management Of Change - Good Manners And Etiquettes (Concept, Significance And Skills To Achieve Should Be Studied.)

L – 26; T – 0; Total Hours –26

TEXT BOOKS:

1. Richard Denny, “Communicate To Win”, Kogan Page India Private Limited, New Delhi-2009.

REFERENCES:

1. S. P. Robbins, “OrganisationalBehaviour”,Prentice-Hall Of India Pvt. Ltd., New Delhi-15th edition, 2013
2. Rajendra Pal And J. S. Korlhalli ,“Essentials Of Business Communication”, Sultan Chand & Sons, New Delhi,1st edition,2012.

OUTCOMES:

After completing the course the students would be able to

- Provide orientation about personality development
- Understand the importance of Values and Attitudes for their self-development.
- give them Motivation and to create knowledge about motivation theories
- Enable them to become SMART and Self esteemed
- Create awareness about body language and stress management

SEMESTER VI

COC3211	**ADVANCED COST ACCOUNTING**	**L**	**T**	**P**	**C**
		4	**2**	**0**	**5**

OBJECTIVES:

- To enlighten the students on the importance of cost ascertainment reduction and control.
- To teach the students to calculate the element-wise and the total cost of product and services
- To understand the methods of costing adopted by different types of industries.

MODULE I JOB, BATCH, CONTRACT COSTING 15

Job, Batch, Contract Costing: Job Costing – definition – Features – Procedure – WIP – Cost Accumulation, Batch Costing – EBQ, Contract Costing – Definition, Features, Work Certified and Uncertified – Incomplete Contact – Escalation Clause – Cost Plus Contract – Contract Account

MODULE II MATERIAL PURCHASE AND CONTROL 15

Process Costing : Definition – Features – Job Vs Process Costing – Process Account – Losses – By Products and Joint Products – WIP – Equivalent Units and its Calculation - Closing WIP with or without Process Loss.

MODULE III OPERATING COSTING 15

Operating Costing (Transport Costing): Cost Unit – Cost Classification – Operating Cost sheet.

MODULE IV MARGINAL COSTING 15

Marginal Costing: Definition – Advantages and Limitation – Break Even Point – Margin of Safety – P/V Ratio – Key factor – Make or Buy Decision – Selection of Product Mix – Changes in Selling Price – Foreign Market Offer – Desired Level of Profit.

MODULE V RECONCILIATION 18

Reconciliation of Cost and Financial Accounts.

L – 52; T – 26; Total Hours –78

TEXT BOOKS:

1. T.S. Reddy &Hari Prasad Reddy – Cost Accounting – Margham Publications,

Chennai

REFERENCES:

1. S.P.Jain and Narang – Cost Accounting – Kalyani Publishers, New Delhi
2. S.N.Maheswari – Principles of Cost Accounting – Sultan Chand & sons, New Delhi
3. S.P.Iyangar – Cost Accounting – Sultan Chand & Sons, New Delhi
4. A.Murthy and S. Gurusamy, Cost Accounting, Tata McGraw-Hill Publishing Company Ltd. New Delhi.
5. Tulsian P.C. – Cost Accounting – Tata McGraw Hills

OUTCOMES:

After completing the course the students would be able to

- Calculate the various elements of cost of a product
- Analyse the various Marginal Costing Techniques
- Identify the various Job and Process Costing methods

COC3212 COMPUTERIZED ACCOUNTING L T P C
4 0 2 5

OBJECTIVES:

- To create an awareness on operation and maintenance of computerized accounting.
- To educate students on latest version of tally accounting software.

MODULE I FUNDAMENTALS OF COMPUTERIZED ACCOUNTING 15

Fundamentals of Computerized accounting – Computer accounting Vs Manual accounting. Architecture and customization of Tally – Features of Tally – Configuration of Tally – Tally screen and menu.

MODULE II CREATION OF COMPANY 15

Creation of company – Group – Editing and deleting ledgers. Creation of ledgers – Editing and deleting ledgers. Introduction to voucher entries – Payment voucher – Contra voucher – Journal voucher – Editing and deleting vouchers.

MODULE III INTRODUCTION TO INVENTORIES 15

Introduction to inventories – Creation – Configuration and features of stock item – Editing and deleting – Usage of stock in voucher entry – Purchase orders – Stock vouchers.

MODULE IV INTRODUCTION TO COST 15

Introduction to cost – Creation of cost categories – Creation of cost centers – Editing and deleting – Usage of cost category and cost centers in voucher entry.

MODULE V VALUE ADDED TAX. 18

Generating and printing reports in detailed and condensed format – Day book – Balance sheet – Trial Balance – Profit and Loss account – Ratio analysis – Cash flow statement – Fund flow statement – Cost centers report – Inventory report – Bank reconciliation statement. - VAT.

L – 52; T – 26; Total Hours –78

TEXT BOOKS:

1. K.K.Nandhani - Implementing tally 9.0 - BPB Publishers
2. Tally Note Book - Work book and study material - Teaching Staff from the department

REFERENCES:

1. Narmata Agarwal – Tally – Dreamtech press

OUTCOMES:

After completing the course the students would be able to

- At the end of the course, students shall be able to initiate, operate and maintain computerized accounts of business concern using Tally accounting software as per the version in the use.

COC3213	TAXATION – II	L	T	P	C
		4	0	2	5

OBJECTIVES:

- To impart knowledge on Computation on Tax Liability
- Get awareness on powers and functions of Income Tax Officers
- Students will get knowledge and information on appealing procedure

MODULE I COMPUTATION OF TAX LIABILITY 15

Computation of total income and tax liability of an individual, H.U.F and firm.

MODULE II AGGREGATIONS AND DEDUCTIONS 15

Aggregation of income; Set-off and carry forward of losses; Deduction from Gross total income

MODULE III TAX MANAGEMNET 15

Tax Management: Tax deduction at source; Advance payment of tax; Assessment Procedure; Tax planning for individuals.

MODULE IV INCOME TAX AUTHORITIES 15

Income Tax Authorities: Powers and Functions of Income Tax Officer, Central Board of Direct Taxes, Commissioner of Income Tax – Types of Assessments and Rectification of Mistakes – Recovery of Tax and Refunds.

MODULE V APPEALS AND REVISION 18

Appeals and revision – procedure in appeal – powers of commissioner (Appeal) – appeal to Appellate Tribunal – reference to high court- appeal to supreme court – revision of best judgement assessment – revision by commissioner – penalties and prosecution – procedure and time limit for imposing penalty – offences and prosecution

L – 52; T – 26; Total Hours –78

TEXT BOOKS:

1. Singhanai V.K., Students" Guide to Income Tax; Taxmann, Delhi.*

REFERENCES:

1. Prasad, Bhagwathi., Income Tax Law & Practice; Wiley Publication New Delhi.
2. Mehrotra H.C., Income Tax Law & Accounts, SahityaBhawan, Agra.

3. DinkerPagare., Income Tax Law and Practice; Sultan Chand & Sons, New Delhi.
4. GirishAhuja and Ravi Gupta., Systematic approach to income Tax; SahityaBhawanPublications, New Delhi.
5. Chandra Mahesh and Shukla D.C., Income Tax Law and practice; PragatiPublications, New Delhi.

OUTCOMES:

After completing the course the students would be able to

- Calculate the tax liability of an Individual
- Identify the various Deductions available in computation of Tax Liability
- Understand the various roles and responsibilities of Income Tax Officers

COC 3204 VALUE EDUCATION L T P C
2 0 0 2

OBJECTIVES:

- To help individuals think about and reflect on different values.
- To deepen understanding, motivation and responsibility with regard to making personal and social choices and the practical implications of expressing them in relation to themselves, others, the community and the world at large.
- To inspire individuals to choose their own personal, social, moral and spiritual values and be aware of practical methods for developing and deepening.

MODULE I VALUE SYSTEM 4

Value Education- Introduction – Definition of values–Need for Inculcation of values – Object of Value- Education-Sources of Value – Types

MODULE II PERSONAL VALUES 6

definition of person - Self confidence – Self discipline – Self Assessment – Self restraint – Self motivation – Determination – Ambition – Contentment – Humility and Simplicity – Sympathy and Compassion –Gratitude – Forgiveness – Honesty – Courtesy.

MODULE III SOCIAL VALUES 5

Definition of Society – Units of Society – Individual, family, different groups – Community – Social consciousness – Equality and Brotherhood – Dialogue – Tolerance – Responsibility – Co-operation Freedom –Repentance and Magnanimity.

MODULE IV PROFESSIONAL VALUES 4

Definition – Competence – Confidence – Devotion to duty – Efficiency – Accountability –Respect for learning / learned – Willingness to learn-Open and balanced mind – Team spirit – Professional Ethic –Willingness for Discussion – Aims – Effort – Avoidance of Procrastination and slothfulness – Alertness.

MODULE V BEHAVIORAL VALUES

Individual values and group values – Good manners at home and outside – Equality – purity of thought, speech and action – Understanding the role of religion – Faith – Understanding the commonness of religions –respect for other faiths – unity diversity – Living together – Tolerance – Non-violence – Truthfulness – Common aim –Unified efforts towards peace – Patriotism.

TOTAL HOURS – 26

OUTCOMES:

Through this course students should be able to

- to be respectful of others
- To provide guiding principles and tools for the development of the whole person recognizing that the individual is comprised of Physical, Intellectual, Emotional and Spiritual dimensions.
- Students will understand the importance of acting responsibly and respectfully when using forums, social media, or mobile
- Be good citizens and learn to avoid the misuse of information or to acknowledge and respect others' right to peace and privacy.
- Showing tolerance and understanding to those less fortunate.

PROGRAMME ELECTIVE

COCX01	**INVESTMENT MANAGEMENT**	**L**	**T**	**P**	**C**
		4	**1**	**0**	**5**

OBJECTIVES:

- To provide knowledge on the various investment avenues that benefit the individuals and nation.
- To introduce the students to the application of various tools and techniques of investments and risks management.

MODULE I INVESTMENT 13

Investment - Investment process - Speculation - Security Analysis - Construction of portfolio - Negotiable and non-negotiable securities – Concepts of Risk and Return

MODULE II PRIMARY AND SECONDARY MARKET 12

New issue market - Methods of issues -Placement of the issues - Pricing of new issues - Investors protection - The secondary market - History of stock exchange - Its function - Types of orders - Share groups - Online trading.

MODULE III FUNDAMENTAL ANALYSIS 12

Fundamental Analysis - Economic Analysis - Industry Analysis - Company Analysis - Quantitative Analysis.

MODULE IV TECHNICAL ANALYSIS AND EMH 13

Technical Analysis - Assumptions - History of technical analysis -Technical tools - Dow Theory - Primary trend - Secondary trend - Mirror trends. Technical Analysis - Assumptions - History of technical analysis -Technical tools - Dow Theory - Primary trend - Secondary trend - Mirror trends.

MODULE V DERIVATIVES 10

Futures and Options - Meaning - Types - Factors affecting the value of option - Futures - Types.

L – 52; T – 13; Total Hours –65

TEXT BOOKS:

1. PunithavathiPandian, (2013), Security Analysis and Portfolio Management, Vikas Publishing House Pvt ltd, New Delhi.

REFERENCES:

1. Natarajan L, (2013), Investment Management, Security Analysis and Portfolio management, Margham Publications, Chennai.

4. Prasanna Chandra, (2009), Investment Analysis and Portfolio Management, Tata McGraw-Hill Publishing Company Limited, New Delhi.

OUTCOMES:

After completing the course the students would be able to

- Obtains in-depth knowledge on stock market operations(Equity Market)
- Get acquainted with analysis on fundamental and technical analysis
- Get an insight in the derivatives market

COCX02 INTERNATIONAL FINANCE

L	T	P	C
4	1	0	5

OBJECTIVES:

- To have exposure on international monetary system
- To understand about balance of payments
- To familiarize the international financial markets and instrument

MODULE I INTRODUCTION 13

International Finance- scope- International Monetary System- Bimetallism- Gold standard- Bretton Wood System- Floating Exchange Rate regime- European Monetary System- IMF- WTO-GATT

MODULE II BALANCE OF PAYMENT 12

Balance of Payments – The Current Account – The Capital Account – Significance – Balance of Payments in the World – Balance of Payments Account of India

MODULE III INTERNATIONAL FINANCIAL MARKETS 12

International Financial Markets – Sources of International Funds – Multilateral Development Banks – International Banks – International Equities – GDRs – ADRs – Euro Bonds – Repos – Euro Deposits – Euro Issues in India.

MODULE IV CURRENCY RISK AND EXPOSURE 13

Currency Risk and Exposure – Types of Currency Risk – Management of Currency Risk – Concept and Measurement of Transaction Exposure – Translation Exposure methods – Exchange risk – Operating Exposure.

MODULE V FOREIGN DIRECT INVESTMENT (FDI 10

Foreign Direct Investment (FDI) – Forms of FDIs – Purpose of overseas investment - Benefits to the Host Countries – Effect of FDI – FDI in India – Current trends in FDI in India.

L – 52; T – 13; Total Hours –65

TEXT BOOKS:

1. Dr. V.A. Avadhani, International Finance, JBA, New Delhi, 2011
2. Kevin. S Fundamentals of International Financial Management, PHI, Delhi, 2009.

REFERENCES:

2. Joseph Anbarasu, Global Financial Management, Ane, New Delhi, 2010
3. G. Shailaja, International Finance, JBA, New Delhi, 2011.

OUTCOMES:

After completing the course the students would be able to

- Get an exposure on monetary system
- Familiarized with the financial markets and instruments
- Gain knowledge on balance of payment

COCX04	INSURANCE	L	T	P	C
		4	1	0	5

OBJECTIVES:

- To understand the nature of insurance and the principles that governs general insurance.
- To gain an insight on the nature of life insurance, fire insurance and marine insurance and to know the procedures for making claims against different kinds of insurance policies
- To understand the importance of burglary insurance and personal accident insurance.

MODULE I INSURANCE **13**

Meaning, functions, nature and principles of insurance, importance of insurance to individuals and business

MODULE II LIFE INSURANCE **12**

Life Insurance – features of a life insurance contract – classification of policies – investment of funds – surrender value – bonus option – policy condition – annuity contracts.

MODULE III MARINE INSURANCE **12**

Contract of marine insurance – elements of marine insurance – classes of policies – policy conditions – clause in a marine insurance policy – marine losses.

MODULE IV FIRE INSURANCE **13**

Fire Insurance – features of a fire insurance – kinds of policies – policy conditions – payment of claims – reinsurance.

MODULE V MISCELLANEOUS INSURANCE **10**

Miscellaneous Insurance – motor insurance – burglary – personal accident insurance.

L – 52; T – 13; Total Hours –65

TEXT BOOKS:

1. M. N. Mishra, Insurance Principles And Practice,S. Chand & Co, New Delhi,2000

REFERENCES:

1. M.N.Mishra, Modern concepts of Insurance, S.Chand&Co., 2000
2. P.S .Palandi, Insurance in India, Response Books – Sagar Publications, 2000

OUTCOMES:

After completing the course the students would be able to

- Gains wide information on nature and principles of insurance
- Acquires knowledge of various types of insurances (life , Marine, Fire)
- Gets an insight into the importance of burglary

COCX05 RESEARCH METHODOLOGY L T P C
3 2 0 5

OBJECTIVES:

- To enable to student to understand and work methods and concepts related research.
- To enable the student to develop research project and work with research problem.

MODULE I INTRODUCTION 13

Meaning and Definition of Research - Characteristics of Research – Objectives of Research – Types of Research – Process and steps of Research.

MODULE II PROCESS OF SELECTION AND FORMULATION OF RESEARCH PROBLEM 12

Problem Selection / Identification of the problem – Sources of research problems – Criteria of a good research problem – Principles of research problem – Hypothesis – Meaning – Sources of Hypothesis – Characteristics of good Hypothesis.

MODULE III RESEARCH DESIGN 12

Meaning of R/D – Types of R/D – Essential steps in preparation of R/D – Evaluation of the R/D – A Model Design.

MODULE IV DATA COLLECTION AND ANALYSIS AND INTERPRETATION OF DATA. 13

Main forms of Data Collection responses – Methods of data Collection – Analysis of data – Types of analysis – Statistical tools and analysis – Interpretation of data – Need and Importance – Technique of interpretation

MODULE V . RESEARCH REPORT 10

Meaning of R / R – Steps in Organization of R / R – Types of Report – Significance of Report Writing – Drafting of reports – Contents of a report.

L – 39; T – 26; Total Hours –65

TEXT BOOKS:

1. Dr. P. Ravilochanan, Research Methodlogy, Margham Publications, Chennai

REFERENCES:

1. C. R. Kothari - Research Methodology: Methods and Techniques- New Age

International Publisher.
2. Patten chetty - Research Methodology - Rainbow Publications.
3. P.Saravanavel- Research Methodology - Kidap Publications

OUTCOMES:

After completing the course the students would be able to

- Get good understanding on research concept and its methods
- Gets awareness on choosing research topics
- Acquire knowledge on how to define a problem
- Gets an idea on how to prepare project proposal

COCX21	ACCOUNTING STANDARD	L	T	P	C
		5	1	0	5

OBJECTIVES:

- To lay a theoretical foundation for the preparation and presentation of financial statements;
- To gain working knowledge of the professional standards, principles and procedures of accounting and their application to different practical situations;
- To gain the ability to solve simple problems and cases relating to sole proprietorship, partnership and companies; and
- To familiarize students with the fundamentals of computerized system of accounting.

MODULE I INTRODUCTION 15

A General Knowledge of the framing of the accounting standards, national and international accounting authorities, adoption of international financial reporting standards

MODULE II Accounting Standards - I 15

AS 1:Disclosure of Accounting Policies

AS 2:Valuation of Inventories

MODULE III Accounting Standards - II 15

AS 3: Cash Flow Statements

AS 6: Depreciation Accounting

MODULE IV Accounting Standards - III 15

AS 7: Construction Contracts (Revised 2002)

AS 9: Revenue Recognition

MODULE V Accounting Standards - IV 18

AS 10: Accounting for Fixed Assets

AS 13: Accounting for Investments

L – 52; T – 26; Total Hours –78

REFERENCES:

1. IPCC/IPCE study material

OUTCOMES:

On the successful completion of the course the students should have:

- Knowledge about various accounting standards and its impacts
- They will be able to have an indepth knowledge about various Accounting standards that are commonly used in Financial aspects
- They will be able to understand the concepts of Financial reporting and its impact

COCX22	FINANCIAL MARKETS & SERVICES	L	T	P	C
		4	0	1	5

OBJECTIVES:

- To know about the various financial services and market.
- To get awareness of the credit rating and its operations.
- To learn about the mutual fund services to the people.
- To get insight knowledge in Leasing and Hire purchase functions to the society.
- To know about the concept of Dematerialization.
- To gain knowledge of the Factoring and forfaiting services.

MODULE I INTRODUCTION TO FINANCIAL SERVICES 10

An overview of financial system in Markets – Objectives of financial system – Types of financial services – Regulation of Financial services – Problems and Prospects of Financial service sector.

MODULE II INTRODUCTION TO FINANCIAL MARKET 10

Management of NIM – Secondary market Vs NIM - Functions of Stock exchanges –– National Stock Exchanges – OTCEI- Non Banking Financial Institutions - SEBI Functions and Workings - Listing of securities.

MODULE III CREDIT RATING, FACTORING & FORFAITING 15

Credit Rating:

Definition- Features – Advantages – Credit rating system (Growth Factors) – Global Credit Rating agencies – Rating agencies in India (CRISIL, IICRA, CAREDCR) - Credit rating symbols – Credit rating process and its limitations, - SEBI Guidelines – Future credit rating in India.

Factoring & Forfaiting:

The concept – significance – types – factoring mechanism – factoring in India.

Forfaiting - Definition – Factoring Vs Forfaiting – Problems and prospects of forfaiting.

MODULE IV LEASING AND HIRE PURCHASE 15

Leasing: The concept –Types of lease – Structure of leasing industry – Legal aspects – Problems and prospects.

Hire purchase: Meaning – Hire purchase –Leasing VS Hire purchase – Problems and prospects of hire purchase in India.

MODULE V **MUTUAL FUNDS, DEMATERIALISATION & REMATERIALISATION** **15**

Mutual Funds: Meaning – Classification – Functions – Importance – Risk involved in M.F) – Commercial banks and Mutual Funds (includes UTI, LIC) -. General guidelines of M.F. – Future of mutual fund industry.

Dematerialisation&Rematerialisation:

Meaning – objective – Functions – Merits and Demerits – Progress of demat in India – NSDL & CDSL (Growth & Functioning)

TEXT BOOKS:

1. Gordon Natarajan - Financial Markets and Services – Himalaya publishing House

REFERENCES:

1. Banking & Financial System - B.Santhanam - Margham Publishers
2. Indian Financial Systems – Dr.S.Guruswamy
3. Vasant Desai, Indian Financial Systems, Himalaya Publishers

OUTCOMES:

After completing the course the students would be able to

- Learns about the various financial services and market
- Gets knowledge and ides on credit and mutual funds.
- Acquire knowledge on Leasing and Hire- purchasing
- Gets an insight on Dematerialization and factoring.

B.S. Abdur Rahman Crescent Institute of Science & Technology

Deemed to be University u/s 3 of the UGC Act, 1956

REGULATIONS 2017

CURRICULUM AND SYLLABI (I & II Semester)

B.DES
(INTERIOR ARCHITECTURE)

VISION AND MISSION

CRESCENT SCHOOL OF ARCHITECTURE

VISION

To be a leading school for Education, Training and Research in Architecture & Design for a better future and over-all Socio-Economic progress of the Country in a sustainable manner.

MISSION

- To nurture Architects & Designers into ethically strong and responsible leaders to address Global challenges through Quality Education, Application oriented research, innovation, inspiration, motivation and sustainable growth.
- To enrich and enhance knowledge for the best practices in various disciplines of Architecture & Design through Collaborations with Global Institutions of Excellence, Industries and Research Organizations.

PROGRAMME EDUCATIONAL OBJECTIVES

Bachelor of Design (Interior Architecture) curriculum is designed to prepare the graduates having aptitude and knowledge

- To enable a successful professional and technical career.
- To enable a strong foundation in Theory, Theory cum studio & Interior Design Studio.
- To impart knowledge of the theories and practices in the field of Interior Architecture.
- Engage in life-long learning to keep themselves abreast of new developments.
- To put into practice and inspire high ethical values and technical standards.

PROGRAMME OUTCOMES

The graduates will be have the

- Ability to gain knowledge of Theory, Theory cum studio & Interior Design studio.
- Ability to understand elements of Interior Architecture and apply basic principles in Design projects.
- Ability to identify social, economic and cultural issues in Interior Architectural Design.
- Ability to analyze and apply theoretical knowledge to achieve Interior Architectural Design solutions.
- Ability to understand ethical and professional responsibilities.
- Ability to review, comprehend and report technological developments.
- Ability to understand real life situation of Interior Architectural Practice.
- Ability to communicate effectively and work in interdisciplinary groups.

SEMESTER I

IA C 1101	BASIC DESIGN – I	L	T	P	C
		0	0	11	6

OBJECTIVES:

Basic Design studio aims at

- Allowing the students to develop the observational, analytical, inference & visualization skills by involving in design problems.
- Offers the transition phase for the students in which they can explore the potential creativity through design exercises.
- The next phase of the students is the phase of realization of the practical design exercise, by which they explore creating appealing harmonious interior Environment.

PHASE I: 60

- Elements and Principles –Exercises related to the same.
- Exploring color schemes and their application in a visual composition and in Architectural forms and spaces.
- Study of texture and schemes of texture both applied and stimulated and their application
- Study of linear and planar forms using simple material like Mount Board, metal foil, box boards, wire string, thermocol etc.
- Study of Solids and voids to evolve sculptural forms and spaces and explore the play of light and shade and application of color.
- Analytical appraisal of building form in terms of visual character, play of light and shade, solids and voids etc.

PHASE II 65

- Application of Basic design through design of simple architectural elements like
- Introduction to Design principles & ordering systems through exercises in Product Designs. Eg: Pen Holder, Book Shelves, etc.,
- Focus on understanding physical dimensions through exercises in ergonomics and anthropometric. Eg: Small scale furniture design.
- Exercises to explore the translation of verbal (adjective & verbs) to visual through compositions both in two and three dimensions.

PHASE III **55**

- Materials, Built forms and expressions.
- Understanding of built Environments and its determinants. Eg:. Single space Design exercises- Typology of single room/User/Utility area Eg: Bedroom, Toilet, Living area, Kiosk Design, etc.,
- Man and his basic living activity- Body, Activity & Enclosure.

TOTAL HOURS – 180

TEXT BOOKS:

1. Paul Zelanski & Mary Pat Fisher, "Design principles & Problems" , 2nd Ed, Thomson & Wadsworth,USA,1996
2. Owen Cappleman & Michael Jack Kordan, "Foundations in Architecture: An Annotated Anthology of beginning design projects", Van Nostrand Reinhold, New York.
3. Paul Laseau, "Graphic Thinking For Architects and Designers", John Wiley & Sons, New York, 2001.
4. Francis D.K.Ching, "Architecture - Form Space and Order", Van Nostrand Reinhold Co., (Canada), 1979.

REFERENCES:

1. John W.Mills, “The Technique of Sculpture", B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London,1966.
2. C.Lawrence Bunchy, "Acrylic for Sculpture and Design", 450,West 33rd Street,New York,N.Y.10001,1972.
3. Charles Wallschlaeger & Synthia Busic Snyder, "Basic Visual Concepts & Principles for artists, architects & designers", McGraw hill, USA, 1992.
4. Exner V., Pressel D., “Basics Spatial Design”, Birkhanser, 2009.

OUTCOMES:

- To understand various design elements and principles - applying them in two-dimensional and three-dimensional compositions.
- To understand the creative process, develop techniques and methods of creative problem solving.
- To equip the students to understand about the various anthropometric aspects, human factors & other design criteria involved in the design

through small scale furniture.

- To produce the best possible solution within given limits of time.
- To acquire the knowledge of colors schemes and textures
- To acquire a basic knowledge of art terminology to express their ideas verbally.
- To familiarize the students with design principles and ordering system through 3D modeling and the product designs.
- To develop understanding of the scale, function and options existing when designing small-scale spaces in residences such as toilets, kitchens, living, bedrooms etc
- Increase awareness of the creative process

IA C 1102	ALLIED DESIGN STUDIO- I	L	T	P	C
		2	0	4	4

OBJECTIVES:

Allied Design Studio aims to provide the students with the knowledge of the basic understanding of materials in Interior Design. This studio also focuses on two dimensional and three dimensional geometry and its representations through drawing.

PHASE I CONSTRUCTION TECHNIQUES & REPRESENTATIONS 50

1. Exercises involve the understanding and representation of principles of geometry, orthographic projections of points, lines, and planes and solids sections of simple and complex solids and the development of the surfaces of solids.
2. Exercises that helps the students to familiarize with drawing materials and equipments. Significance of precision and accuracy in technical drawings is taught to the students.
3. Understanding of use of Bricks in Buildings and interiors.

PHASE II BRICKS IN BUILDING CONSTRUCTION 25

4. Understanding of components of buildings throughsection through walls
5. Brick bonding - English and Flemish: L- junction, T- junction, intersections. Stretcher and header bond. Rat-trap bond, Creative bonding. Piers and foundations.

TOTAL HOURS – 75

TEXT BOOKS:

1. P.C. Varghese, "Building Materials", Prentice Hall of India put Ltd New Delhi 110001, 2005.
2. B.C. Punmia, "Building Construction", 2005.

REFERENCES:

1. I.H. Morris, Geometrical Drawing for Art Students, Orient Longman Chennai.
2. Ralph W. Liebing "Architectural Working Drawing", John Wiley & Sons. Inc - 2000.
3. Morgan, "Elements of structure".

OUTCOMES:

- To equip the students with various tools of drafting.
- To acquire the knowledge of basic and complex projections.

- To familiarize the students in two dimensional and three dimensional geometry and its representations through drawing.
- To develop understanding of the scale and proportion.
- To attain the knowledge of components of building through section.
- To gain the technical knowledge of bricks and its bonding in Buildings and interiors.

IA C 1103 **WORKSHOP- I**

L	T	P	C
1	0	4	3

OBJECTIVES:

- Workshop aims at the development of model making skills of the students to communicate and develop ideas through model making techniques.
- Not restricted to any specific medium, the course offers the platform for the students to explore their mode of model making techniques.

COURSE CONTENTS:

PHASE I **30**

- Understand material and tools by making objects which allow students to explore forms, surfaces, textures, and patterns i.e. elements and principles of design.
- Model making- Tools, materials, Techniques of Model- making. Scaled models are still the most effective and instant way of completely communicating a concept in spite of advances in computerization.

PHASE II **30**

- This subject teaches the students to properly comprehend the three dimensional in its aesthetic and functional totality.
- Connecting with the Basic Design Studio –I exercises. The models for the end products of Design can be made through the techniques learned in this workshop.

TOTAL HOURS –60

TEXT BOOKS:

1. Paul Zelanski & Mary Pat Fisher, "Design principles & Problems" , 2nd Ed, Thomson & Wadsworth,USA,1996
2. Owen Cappleman & Michael Jack Kordan, "Foundations in Architecture: An Annotated Anthology of beginning design projects", Van Nostrand Reinhold, New York.

REFERENCES:

1. Charles Wallschlaeger & Synthia Busic Snyder, "Basic Visual Concepts & Principles for artists, architects & designers", McGraw hill, USA, 1992.

2. John W.Mills, " The Technique of Sculpture", B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London,1966.

OUTCOMES:

- The students will be made to understand the materials and tools by making objects which allow them to explore forms, surfaces, textures, and patterns i.e. elements and principles of design.
- The students will be made familiar with Model making- Tools, materials and techniques of Model- making.
- Scaled models are still the most effective and instant way of completely communicating a concept in spite of advances in computerization.
- This subject teaches the students to properly comprehend the three dimensional in its aesthetic and functional totality.
- Connecting with the Basic Design Studio –I exercises. The models for the end products of Design can be made through the techniques learned in this workshop.
- products of Design can be made through the techniques learned in this workshop.

IA C 1104	INTEGRATED DESIGN STUDIO01	L	T	P	C
		1	0	4	3

OBJECTIVES:

The phase I of the course explores the use of free hand sketching and drawing as tools of visual representation.It uses geometrical analysis of objects as a means to understand shapes and proportions, as well as aspects like opacity, transparency, shades and shadows, and light and depth. Students develop skills in observation andrecording through drawing with different media like pencil, pen, dry pastels and water colors.

The phase II of the course explores the use of digital media as a tool for both designing & Creation. The course aims to make the students proficient in digital skills by constant practice in the various updated software. It introduces the students to the basics of software, and techniques of two dimensional drawings and representation.

COURSE CONTENTS:

PHASE I **30**

- Exercises to understand Color wheels & color theory.
- Free hand Sketching
- Understanding & Representing the quality of various materials- opacity, transparency, shades and shadows, and light and depth
- Exercises to explore various medium of presentations- pencil, pen, crayons and water colors, etc.,
- Exercise to improve the skills of observation through the recording of different types of spaces with respect to their scale, volume, form, materials and finishes.

PHASE II **30**

- Understanding the use of drawing tools, object editing, drawing objects, filing and setting drawing units, scales, limits that size and dimensioning, lettering. Setting up of drawing of various simple objects with complete text and dimensioning.
- Transparent overlays, hatching utilities, assigned color and line type, use of multi-line, style, block, symbol library, manipulation for accurate drawings, incorporating the above mentioned utilities.
- Introduction to tools of productivity – Blocks. Understanding concepts of View

port, concept of object linking and editing session.

- Introduction to basic presentation tools- PowerPoint techniques, Communication tools.

TOTAL HOURS –60

TEXT BOOKS:

1. Jim Legitt, "Drawing Shortcuts", John Wiley & sons Inc, 2010.
2. Webb, Frank, “The Artist guide to Composition”, David & Charles, U.K., 1994.
3. Ching Francis, “Drawing a Creative Process”, Van Nostrand Reinhold, New York, 1990.
4. Alan Swann, “Graphic Design School”, Harper Collins, 1991.

REFERENCES:

1. Moivahuntly, "The artist drawing book", David & Charles, U.K., 1994.
2. Drawing a Creative Process", Ching Francis, Van Nostrand Reinhold, New York, 1990.
3. Arundell (Jan) Exploring sculpture, Mills and Boon, London/Charles, T. Brand Ford Company, U.S.A.
4. The art of drawing trees, heads, colours, mixing, drawing, landscape and painting, water colour, oil colour, etc. – The Grumbacher Library Books, New York, 1996.
5. Caldwell peter, “Pen and Ink Sketching”, B.T. Bats ford Ltd., London, 1995.

OUTCOMES:

- The students are expected to have the knowledge of free hand sketching and Understand visual perception, principles and systems of order that inform two- and three-dimensional design, architectural composition.
- To familiarize the students with the concepts of 3D modeling.
- To enable them to experiment with forms, mapping, rendering and presentation techniques.
- To equip the students with various tools of sketching and rendering like pencils, pens, different medium of colors, etc.
- To practice and extend the ability to think visually and to communicate concepts, design solutions and arguments clearly and concisely through visual, verbal and written means.
- To attain the knowledge of quality of various materials- opacity, transparency, shades and shadows, and light and depth

IA C 1105	SKILL DEVELOPMENT	L	T	P	C
		2	0	0	2

OBJECTIVES:

The primary objective of this course is to improve communication skill development and technical writing.

The course is aimed at providing the students with language skills which is an inescapable tool for the young technocrats to break geographical boundaries and step into global world.

COURSE CONTENT

PHASE I **15**

- Seminars, Guest Lectures, putting up Exhibitions, Workshops, participating in Architectural Competitions or conducting Site Visits or Study Tours.
- INTRODUCTION: Skimming, scanning, inferring, predicting and responding to content - Guessing the meaning of words from contexts - Note making and vocabulary extension.
- VOCABULARY DEVELOPMENT: Listening and understanding recorded, structured talks and classroom lectures - Comprehending the matter - understanding the links between different parts of speech - practice in note taking.

PHASE II **15**

- COMMUNICATION: Features of an effective speech-Practice in speaking fluently - Dialogue practice- simple social exchanges - short extempore talks.
- COMPREHENSION: Effective sentences-cohesive paragraphs - clear and concise writing - Introduction to technical writing - Definition, Description, Instruction - Summary Writing practice.
- RESOURCE UTILIZATION: Use of library - Role of Bibliography, Table of contents, Index etc. - use of Dictionary.

TOTAL HOURS –30

OUTCOMES:

- Seminars, Guest Lectures, putting up Exhibitions, Workshops, participating in Architectural Competitions or conducting Site Visits or Study Tours.
- INTRODUCTION: Skimming, scanning, inferring, predicting and responding to content - Guessing the meaning of words from contexts - Note making and vocabulary extension.
- VOCABULARY DEVELOPMENT: Listening and understanding recorded,

structured talks and classroom lectures - Comprehending the matter - understanding the links between different parts of speech - practice in note taking.

- COMMUNICATION: Features of an effective speech-Practice in speaking fluently - Dialogue practice- simple social exchanges - short extempore talks.
- COMPREHENSION: Effective sentences-cohesive paragraphs - clear and concise writing - Introduction to technical writing - Definition, Description, Instruction - Summary Writing practice.
- RESOURCE UTILIZATION: Use of library - Role of Bibliography, Table of contents, Index etc. - use of Dictionary.

IA C 1106	THEORY OF DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The course aims to provide the basic theories and principles needed for the students while handling the design exercises.
- They are equipped with the knowledge of theories applied in the conception and development of design.
- The theoretical approach is to be interwoven with the design processes.

COURSE CONTENT:

PHASE I **15**

- Space – definition; Interior space – spatial qualities: form, scale, outlook; structuring space with interior design elements; spatial form; spatial dimension; height of space; spatial transitions – openings within wall planes, doorways, windows, stairways.
- Point, line, volume, shape, texture, color & Form – in relation to light, pattern etc. and application of the same in designing interiors.

PHASE II **15**

- Ratio; proportions – golden section; relationships; scale; Balance, symmetry, harmony; unity; variety; rhythm; emphasis.
- Definition, theory of standard dimension based on human figures for activities, functions, circulation, furniture design, spatial requirements etc. Study of Ergonomics Design of Furniture for Living, Dining, Kitchen, Office etc.

PHASE III **15**

- Design process – Analysis, synthesis, design evaluation;
- Design criteria – function and purpose, utility and economy, form and style;
- Human factors - human dimensions, distance zones, activity relationships;
- Fitting the space – plan arrangements, function, aesthetics.

TOTAL HOURS – 45

TEXT BOOKS:

1. Ching, Frank (Francis D.K.), "Architecture: Form, Space & Order", Van Nostrand Reinhold, New York. Hoboken 2007; ISBN 0471752169
2. Ching, Frank (Francis D.K.), "Drawing: A Creative Process", Van Nostrand Reinhold, New York 1990.

3. Simon Unwin, "Analysing Architecture", Rouledge, London, 2003.
4. V.S.Pramar, "Design Fundamentals in Architecture", Somaiya Publications Private Ltd.,

REFERENCES:

1. Yatin Pandya,"Elements of Space making", Mapin 2007.
2. Leland M.Roth, "Understanding Architecture: Its Experience History and Meaning", Craftsman house, 1994.
3. Peter von Meiss, "Elements of architecture – from form to place", Spon Press 1977.
4. Rudolf Arnheim, "The dynamics of architectural form", University of California Press, 1977.
5. Neils Prak, "The language of Architecture", Mounton & Co., 1968.
6. . Paul Alan Johnson, "The Theory of Architecture – Concepts and themes", Van Nostrand Reinhold Co., New York, 1994.

OUTCOMES:

- The students will be taught about Space – definition; Interior space – spatial qualities: form, scale, outlook; structuring space with interior design elements; spatial form; spatial dimension; height of space; spatial transitions – openings within wall planes, doorways, windows, stairways.
- Application of the design principles like Point, line, volume, shape, texture, color & Form – in relation to light, pattern etc. in designing interiors.
- The will be encouraged to use Ratio; proportions – golden section; relationships; scale; Balance, symmetry, harmony; unity; variety; rhythm; emphasis in basic design and workshop exercises.
- Definition and theory of standard dimension based on human figures for activities, functions, circulation, furniture design, spatial requirements etc. Study of Ergonomics Design of Furniture for Living, Dining, Kitchen, Office etc. will be brought in use through the workshop's model making exercises.

SEMESTER II

		L	T	P	C
IA C 1201	**INTERIOR DESIGN STUDIO - I**	**0**	**0**	**11**	**6**

OBJECTIVES:

- Interior Design studio- II facilitate the students to design spatial interventions in response to physical and visual attributes of a given site context.
- To understand the basic structural systems.
- To comprehend the services pertaining the design projects.
- As continued from the Basic Design - Phase II, the students explore creating appealing harmonious Environment.

COURSE CONTENTS

PHASE I **70**

- Multi space design Exercises- Eg: Types of Residence.
- Exercise to involve the development of services along with the design problem.

PHASE II **50**

- Site Planning and analysis
- Contextual Exploration of materials and usage.

PHASE III **60**

- Working of the Basic structural systems.
- Working drawings with respect to the Plumbing, Electrical details.

TOTAL HOURS – 180

TEXT BOOKS:

1. Joseph De Chiara, Michael J Crosbie, Time Saver Standards for Building Types, McGraw Hill Professional 2001.
2. Julius Panero, Martin Zelnik, Human Dimension and Interior Space, Whitney Library of Design, 1975
3. Joseph De Chiara, Julius Panero, Martin Zelnik, Time Saver Standards for Interior Design and Space Planning, McGraw Hill 2001.
4. Ernst Neuferts Architects Data, Blackwell 2002

REFERENCES:

1. Hideaki Hareguchi, A Comparative analysis of 20thcentury houses, Academy Editions, 1988
2. Robert Powell, Tropical Asian House, Select Books, 1996

3. Terence Conran, The Essential House Book, Conran Octopus, 1994
4. Sam F. Miller, Design Process: A Primer for Architectural and Interior Design, Van Nostrand Reinhold, 1995.

OUTCOMES:

- The students will be able to comprehend to physical and visual attributes of a given site context.
- The students will be able to familiarize themselves with the structural systems of the projects.
- The students will be able to comprehend the services pertaining the design projects.

IA C 1202	ALLIED DESIGN STUDIO- II	L	T	P	C
		2	0	3	4

OBJECTIVES:

- Allied Design Studio aims to provide the students with the knowledge of the basic understanding of materials in Interior Design.
- This studio focuses on Doors, windows, Ventilators- materials, types, construction details.
- To study about the various recent developments regarding the opening in spaces.

COURSE CONTENT

PHASE I **25**

- Introduction to the openings in spaces.
- Doors- types of doors- Fully paneled single and double shutter doors of various types and sizes.Drawings of timber joinery for Doors. With respect to material: Details of Aluminum doors - Openable, Sliding, Pivoted, Glass Entrance doors, UPVC doors.

PHASE II **25**

- Windows- fully glazed window, fixed glass and timber louvered windows. Drawings of timber joinery for Windows. With respect to material: Details of Aluminum windows - Openable, Sliding, Fixed, Pivoted.

PHASE III **25**

- Ventilators- Drawings of timber joinery for Ventilators, Aluminum ventilators - Top hung, Bottom hung, Pivoted, Louvered.
- Study of various other recent developments in Industry regarding openings in spaces.

TOTAL HOURS –75

TEXT BOOKS:

1. W.B. Mickay, “Building construction Vol 1,2 and 3”, Longmans, UK 2005.
2. R.Chudley, ”Building Construction Handbook”, Elsevier/Butterworth-Heinemann2006.
3. S.C.Rangwala, “Engineering materials”, Charotar Publishing, 2011.
4. S.P.Arora & S.P.Bindra, “Text book of Building Construction”, Ganpat Rai Publications (P) Ltd, New Delhi, 2013
5. B.C. Punmia, “Building Construction”, 2005
6. P.C. Varghese, “Building Materials”, Prentice Hall of India put Ltd New Delhi 110001, 2005

REFERENCES:

1. Don A.Watson, “Construction Materials and Processes”, McGraw Hill Co.,1992.
2. Alanwerth, “Materials”, The Mitchell Pub.Co.Ltd., London,1986

OUTCOMES:

- The students will be equipped with the knowledge of the basic understanding of materials in Interior Design.
- The students can comprehend the details and techniques of Doors, windows, Ventilators- materials, types, and construction details.
- To familiarize with various recent developments regarding the opening in spaces.

IA C 1203	WORKSHOP- II	L	T	P	C
		1	0	3	3

OBJECTIVES:

- Workshop II aim at the development of model making skills of the students to communicate and develop ideas through model making techniques. Not restricted to any specific medium, the course offers the platform for the students to explore their mode of model making techniques.

COURSE CONTENT:

PHASE I **25**

- Exercises related to Model making
- Understand material and tools by making objects which allow students to explore forms, surfaces, textures, and patterns i.e. elements and principles of design.
- Exploration of the model making techniques in the recent development of the Industry.

PHASE I **35**

- Textile Printing- Basic Knowledge of the fabric as interior element.
- Woodwork & Carpentry.
- Glass painting.

TOTAL HOURS – 60

TEXT BOOKS:

1. Owen Cappleman & Michael Jack Kordan, "Foundations in Architecture: An Annotated Anthology of beginning design projects", Van Nostrand Reinhold, New York.
2. John W.Mills, " The Technique of Sculpture", B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London,1966.
3. C.Lawrence Bunchy, "Acrylic for Sculpture and Design", 450,West 33rd Street,New York,N.Y.10001,1972.

REFERENCES:

1. Charles Wallschlaeger & Synthia Busic Snyder, "Basic Visual Concepts & Principles for artists, architects & designers", McGraw hill, USA, 1992.
2. John W.Mills, " The Technique of Sculpture", B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London,1966.

OUTCOMES:

- The students will be able to communicate and develop ideas through model

making techniques.

- The students will be equipped with the various recent model making techniques in the industry.

IA C 1204 INTEGRATED DESIGN STUDIO L T P C
1 0 4 3

OBJECTIVES:

- The course explores the use of digital media as a tool for both designing & Creation. The course aims to make the students proficient in digital skills by constant practice in the various updated software.
- It introduces the students to the basics of three dimensional form explorations.

COURSE CONTENT

PHASE I 30

- Introduction to 3 D software- tools of productivity, rendering techniques.
- Understanding the use of drawing tools, object editing, drawing objects, filing and setting drawing units, scales, limits that size and dimensioning, lettering.
- Setting up of drawing of various simple objects with complete text and dimensioning.
- Layout - way to use the fundamental drawing, editing and navigation tools to put together quick presentations.
- Leverage Templates, including custom Title blocks, Document Settings.

PHASE II 30

- Ways to light your model and add realistic reflections and finishes in Shade light
- Advance command programming – Transparent overlays, hatching utilities, assigned color and line type, use of multi-line, style, block, symbol library, manipulation for accurate drawings, incorporating the above mentioned utilities.
- Introduction to tools of productivity – Blocks. Understanding concepts of View port, concept of object linking and editing session.

TOTAL HOURS – 60

TEXT BOOKS:

1. Watt, “Fundamentals of Three-Dimensional Computer Graphics”, Addison Wesley, Massachusetts, 1989.
2. Aouad, “Computer Aided Design guide for Architecture, Engineering and construction”, Spon process, 2012.

REFERENCES:

1. Ralph Grabowski, “The Illustrated AutoCAD 2002 Quick Reference”, 1 st edition, Cengage Learing, 2001
2. Sham tikoo, “Autocad 2000: A Problem-Solving Approach”,.Delmar Cengage Learning, 1999.
3. Fiorello. J. A., “CAD for Interiors beyond the basics”, Wiley publications, 2011.

OUTCOMES:

- The students becomes equipped with the exploration of digital media as a tool for both designing & Creation.
- The students become proficient in digital skills by constant practice in the various updated software.
- The students are introduced with the basics of three dimensional form explorations.

IA C 1205 HISTORY OF INTERIOR ARCHITECTURE

L	T	P	C
3	0	0	3

OBJECTIVES:

- The course aim to provide a brief overview of the development of Interior Architecture through various historical phases that is explained through various examples.

COURSE CONTENT:

- EARLY CLASSICAL PERIOD: Prehistoric Cave paintings – Primitive Designs- Interiors during Egyptian, Greek, Roman, Gothic, Early Christian & Renaissance Periods.
- MIDDLE AGES: Interiors in Romanesque, Gothic, and renaissance periods
- COLONIALPeriod: Colonial, Victorian designs, Arts & Crafts movement, Art Nouveau.
- PROJECTS: Projects based on Historical Styles in Interiors & Assignments.

PHASE I **25**

- EARLY CLASSICAL PERIOD: Prehistoric Cave paintings – Primitive Designs- Interiors during Egyptian, Greek, Roman, Gothic, Early Christian & Renaissance Periods.
- MIDDLE AGES: Interiors in Romanesque, Gothic, and renaissance periods.

PHASE II **20**

- COLONIAL Period: Colonial, Victorian designs, Arts & Crafts movement, Art Nouveau.
- PROJECTS: Projects based on Historical Styles in Interiors & Assignments.

TOTAL HOURS – 45

TEXT BOOKS:

1. Sir Banister Fletcher, A History of Architecture, University of London, The Antholone Press, 1996.
2. Spiro Kostof - A History of Architecture - Setting and Rituals, Oxford University Press, London, 1985.
3. Henri Stelerlin - The Pharaohs - Plerre Terrail - 2001.
4. G.K.Hiraskar, Great Ages of World Architecture, Dhanpat Rai & Sons, Delhi

REFERENCES:

1. Marco Bussagli - Rome Art and Architecture - Konemann - 2004.
2. S.Lloyd and H.W.Muller, History of World Architecture - Series, Faber and Faber Ltd., London, 1986
3. Gosta, E. Samdstrp, Man the Builder, Mc.Graw Hill Book Company, New York, 1970

OUTCOMES:

- The students become aware of the development of Interior Architecture through various historical phases that is explained through various examples.
- The students are exposed to various inspirations/ Techniques/ Design details of the historical Examples.

IA CX01	VERNACULAR DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The course aims to the students understand traditional architecture built in various cultural and geographical regions of India with an emphasis on spatial types, use, materials, construction and building process.
- It also aims to explore the various approaches, definition, concepts and typologies of the vernacular designs of a region for better understanding, comprehension and interpretation.
- It also explores the role of indigenous materials and climate in the elements, ornamentation, layout and character of residential and public buildings.

COURSE CONTENT

PHASE I **20**

- Definition of Vernacular designs: Importance and factors determining the character of vernacular designs. Approaches and concepts used - Aesthetic, Anthropology, Architectural, Geographical, spatial, Ecological, Behavioral and Developmental.

PHASE II **25**

- Cultural aspects, symbolism, color, art, materials of construction and construction techniques of Northern India, Gujarat, Kerala & Tamilnadu. Examples related to the same.
- Contemporary projects by various nationally & internationally acclaimed Designers using vernacular elements & characters.

TOTAL HOURS – 45

TEXT BOOKS:

1. Minakshi, J., & Khulbushan, J. (1992.). Mud Architecture of the Indian Desert. Ahmedabad: Aadi Centre.
2. Randhawa, T. S. (1999). The Indian courtyard house. Prakash Books.

REFERENCES:

1. G.H.R.Tillotsum. (1989). The tradition of Indian Architecture Continuity, Controversy Change since 1850. New Delhi: Oxford University Press.
2. Meenakshi, M., Muthiah, S., Visalakshi, R., & Muthuraman, V. (2006). The

Chettiar Heritage. Chennai: Chettiar Heritage.
3. Oliver, P. (1998). Encyclopedia of Vernacular Architecture of the World. Cambridge: Cambridge University Press.
4. V.S.Pramar. (1989). Haveli - Wooden Houses & Mansions of Gujarat. Ahmedabad: Mapin Publishing Pvt. Ltd.

OUTCOMES:

- The students understand traditional architecture built in various cultural and geographical regions of India with an emphasis on spatial types, use, materials, construction and building process.
- The students explore the various approaches, definition, concepts and typologies of the vernacular designs of a region for better understanding, comprehension and interpretation.
- The students also explores the role of indigenous materials and climate in the elements, ornamentation, layout and character of residential and public buildings

IA CX02	ENERGY EFFICIENT DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- A growing worldwide concern for the conservation of energy & environment has led to energy efficient designs; renewable nature sources of energy (solar energy etc.) and utilizing materials that least pollute the environment.
- This course attempts to make the students understand about built environments responses to natural heating and cooling and thereby understanding principles to be implemented when designing spaces.

COURSE CONTENT:

PHASE I **10**

- Introduction to energy efficient designs and need for the day.
- Solar geometry and shading - Thermal comfort - Heat Transfer - Heating and cooling loads - Energy estimates - Conservation - Day lighting - Water Heating and Photo voltaic system.

PHASE II **15**

- Passive Solar heating: General principles - Direct Gain - Thermal storage wall - Sunspace - Convective air loop - related examples.
- Passive Cooling Techniques: General principles - Ventilation - Radiation - Evaporation and Dehumidification, - Mass effect - related examples.

PHASE III **20**

- Site Planning & Developments: Land form - vegetation type and pattern - water bodies - open spaces and built spaces - urbanscape - design strategies.
- Contemporary projects by various nationally & internationally acclaimed Designers using energy efficient concepts and techniques.

TOTAL HOURS – 45

TEXT BOOKS:

1. Fuller Moore, Environmental Control Systems, McGraw Hill Inc., New Delhi, 1997.
2. Climatically Responsive Energy Efficient Architecture, PLEA/SPA, New Delhi - 1998.

REFERENCES:

1. A.Konya, Design Primer for Hot Climates, Architectual Press, London, 1988.

2. Ms.Sudha, N.K.Bansal and M.A.S.Malik - Solar Passive Building - Pergamon.
4. V.Gupta - Energy and Habitat - Wiley Eastern Limited, New Delhi.

OUTCOMES:

- The students are exposed to the growing worldwide concern for the conservation of energy & environment has led to energy efficient designs; renewable nature sources of energy (solar energy etc.) and utilizing materials that least pollute the environment.
- The students understand about built environments responses to natural heating and cooling and thereby understanding principles to be implemented when designing spaces.

B.S. Abdur Rahman Crescent Institute of Science & Technology

Deemed to be University u/s 3 of the UGC Act, 1956

REGULATIONS 2017

LAW DEGREE PROGRAMMES

(Recognized by Bar Council of India)

CURRICULUM AND SYLLABI

BBA.LL.B (Hons)

CRESCENT SCHOOL OF LAW

VISION

The Vision of Crescent School of Law is to produce promising and credible Law Graduates with potential knowledge and skills to meet the requirements of contemporary times. The present world that is global, competitive and complex and the 'issues' that are the confronting was also on the same span. Hence, the Crescent School of Law contemplates to train young minds with strong fundamentals, sound legal knowledge and skill-set to deal, answer and fight for just and legal causes.

The vision of Crescent School of Law is to produce competent law graduates who can be instrumental in delivering goods as Advocates, Judicial Officers, Legal Advisors and Law Officers/Executives not only in legal arena but in Corporate and Business world as well.

The student will

- have conceptual clarity on matters relating to legally enforceable contracts. (Formation-Performance-Discharge of a contract)
- be familiarized with the redressal mechanisms available to the aggrieved parties in case of breach of contract.

BLC 1104	LAW AND LANGUAGE	L	T	P	C
		4	1	0	5

OBJECTIVES:

- To train students to use appropriate vocabulary in academic and technical/legal contexts.
- To facilitate students to speak effectively while exchanging ideas and making presentations.
- To develop students' listening skill for comprehending and analyzing information.
- To develop their reading skill through sub skills like skimming, scanning and critical reading of a text.
- To sharpen their academic writing skills.
- To expose them to the correct usage of language and help them to apply that knowledge appropriately.

MODULE I **7**

L: Listening for general information

S : Self Introduction, Introducing one another.

R: Predicting the content

W: Paragraph Writing

Language Focus: Affixes, Simple Present tense , Connective & Prepositions.

Language-significance-English as a legal language-distinctive features of English as a legal language - Basics of Law

MODULE II **7**

L: Listening for specific information (from dialogues)

S: Exchanging opinion.

R: Skimming technical Passages

W: Argumentative Writing (using the concept of Flipped Learning), Letter to the Editor.

Language Focus: Idioms, use of Modals, Simple Past tense & use of "Wh" and question tags.

Indian Languages as Legal Language - Legal Terms

MODULE III **8**

L: Learning the ways of describing images and presenting specific information (focusing on note making)

S: Making Presentations using visuals.

R : Scanning short texts for gist of information

W: Letter of Invitation, Expository Writing

Language Focus: Homophones, Homographs, Simple Future & Collocations.

Latin Expressions - Doctrines and Legal Maxims

MODULE IV **8**

L: Understanding prepared presentation techniques through videos

S: Short Presentations.

R: Reading for coherence and cohesion

W: Letter seeking permission for Industrial Visit

Language Focus: S-V agreement, Euphemism

Confused wordings, Phrases, Idioms, Synonyms, Legal Jargon - Terminology - Vocabulary in Law of Torts

MODULE V **8**

L : Understanding Non- Verbal Communications while listening to narration of incidents.

S: Narrating an experience

R: Inferential Reading

W: Process Description – Transcoding a Flow chart.

Language Focus: Interchange of Active & passive voice, Impersonal Passive voice.

Legal jargon in Family Law - Business Law

MODULE VI **7**

L: Learning Story telling techniques (stories & visuals) through audio files

S: Discussion in groups

R: Reading for critical appreciation

W: Developing an idea, Slogan writing, Interpreting a Bar Chart.

Language Focus: If clause and phrasal verbs.

Legal jargon in Cyber Law - International Law - Procedural Laws

TOTAL HOURS : 45

Motivation—theories of motivation (Maslow's, Hertzberg, Mc Greger, X and Y theory) financial and non financial motivation-Attitudes & Values, personality theories

MODULE III GROUP 10

Concept of group dynamics—features of group—types of group behavior—formal and informal group behavior—stages of group development— group moral—group Norms—group cohesiveness..

MODULE IV LEADERSHIP 10

Types—theories of leadership (Trait theory, Michigan studies and Fideler's contingency model) modern approach to leadership theories—leadership styles.

MODULE V STRESS MANAGEMENT 10

Meaning, types of stress—consequences of work stress—causesof stress—Conflict, types of conflicts, conflict resolution— Organizational development—Meaning, need, benefits and limitations of OD—steps in OD. Organizational changes.

TOTAL HOURS : 50

REFERENCES:

1. Fred Luthans : Organisational behavior

2. Danial C. Fieldman and Hugh Arnold : Managing individual and group Behavior in organization

3. Henry Mintzberg : The structure of organization

4. Edwin Gerlof : Organization theory and design5 Robin. S. P : Organizational behavior

OUTCOME:

- Student will form an idea how an Individual will discharge his role in an Organization individually and collectively.
- Students will be able to discuss the development in the field of Organizational Behavior and explain the micro and macro approaches to analyze and will be able to compare different models.
- .The study helps to identify the processes used in developing communication and resolving conflicts in an Organization.
- The course helps to explain group dynamics and demonstrates skills required for working in groups therefore enables team building.

GEC 1212	ENVIRONMENTAL STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

The student will be conversant with the

- various natural resources, availability, utilization and its current scenario
- different ecosystems, energy transfer, values, threats and conservation of biodiversity
- levels of different pollutants and its impact and the causes and effects of natural disasters
- impacts of human population, impact assessment, human rights and environmental acts and sustainable development

MODULE I NATURAL RESOURCES 8

Land resources: land degradation, soil erosion and desertification - Forest resources: use and over-exploitation, deforestation - Water resources: use and over-utilisation of surface and ground water, conflicts over water (inter-state and international), dams (benefits and problems), water conservation (rainwater harvesting and watershed management) - Mineral resources: use and exploitation, environmental effects of extracting and using mineral resources, mining - Food resources: world food problems, changes in land use by agriculture and overgrazing, modern agriculture and its effects, fertilizer and pesticide problems, water logging and salinity - Energy resources: increasing energy needs, renewable and non-renewable, use of alternate energy sources.

MODULE II ECOSYSTEM AND BIODIVERSITY 8

Ecosystem- energy flow in the ecosystem - food chains, food webs and ecological pyramids - characteristics, structure and function of (a) Terrestrial ecosystems (forest, grassland, desert) and (b) Aquatic fresh water ecosystems (pond, lake, river) (c) Aquatic salt water ecosystems (ocean, estuary) - ecological succession.

Biodiversity - genetic, species and ecosystem diversity – hot-spots of biodiversity –biogeographic classification of India - endangered, endemic, extinct and invasive species of India - red data book - values of biodiversity: consumptive, productive, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - conservation of biodiversity: in-situ and ex-situ conservation of biodiversity

MODULE III ENVIRONMENTAL POLLUTION AND NATURAL DISASTER 8

Definition, cause, effects and control measures of (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards - ill-effects of fireworks and upkeep of clean environment - solid waste management: types (urban, industrial, biomedical and electronic wastes), collection, processing and disposal (incineration, composting and land-fill) - natural disaster and management: flood, cyclone, drought, landslide, avalanche, volcanic eruptions, earthquake and tsunami.

MODULE IV HUMAN POPULATION, HEALTH AND SOCIAL ISSUES 6

Population and population growth, population variation among nations, population explosion, family welfare programme.

Human health: air-borne, water borne diseases, infectious diseases, risks due to chemicals in food and environment.

Sustainable development - environmental legislation and laws: water act, air act, wildlife protection act, forest conservation act, environment protection act - environmental impact assessment, steps in EIA - human rights - women and child welfare.

TOTAL HOURS : 30

TEXT BOOKS:

1. Erach Bharucha, Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education for University Grants Commission, Orient Blackswan Pvt Ltd, Hyderabad, India, 2013.

3. Miller T.G. Jr., Environmental Science, Wadsworth Publishing Co. Boston, USA, 2016.

OUTCOMES:

The student will be able to

- Predict the scenario of various natural resources and suggest remedies to curb the exploitation of these resources.
- Identify food chain and web and its role in various ecosystems, assess the impacts on biodiversity and provide solutions to conserve it.
- analyse the impacts of pollutants in the environment and propose suitable method to alleviate the pollutants and the natural disasters.
- assess on the impact of human population and the health related issues and the ethics to be followed for sustainable life.

SEMESTER III

BLC 2101	LAW OF CRIMES-I (IPC)	L	T	P	C
		4	1	0	5

OBJECTIVES:

Crime and Law are so closely connected with each other that it is very difficult to understand one without knowing the other. Student should have clarity on concepts relating to crime, criminal and punishment.

MODULE I INTRODUCTION- GENERAL DEFENCES 10

Nature and Scope of Criminal Law: Definition-Essential Elements- Strict Responsibility-MensRea-Intention and Negligence-Recklessness and Knowledge-Offences without Conduct- Punishment Objectives- Basis and Types-Theories of Punishment- Justification of Punishment- General Defences- Justifiable defenses-Private defence- Joint and Constructive Liability- Abetment-Conspiracy-Attempt-corporate Liability- Jurisdiction-Territorial-Extra Territorial Personal and Admiralty.

MODULE II OFFENCES AGAINST HUMAN BODY: **10**

Culpable Homicide and Murder- Suicide-Causing Miscarriage-Hurt-Wrongful Restraint and Wrongful Confinement- Assault- Kidnapping-Abduction and Rape

MODULE III GENERAL OFFENCES 10

Offences against State- Offences against Public Peace- Unlawful Assembly- Riot-Affray- Offences against election- Bribery- inpersonation- Offences relating to Religion- Offences against Public Justice- Administration of Justice-Giving and Fabricating the false Evidence- disappearance of Evidence.

MODULE IV OFFENCES AGAINST PROPERTY 10

.Offences against Property: Theft-Extortion-Robbery and Dacoity-Criminal Misappropriation of Property and Trust-Cheating Mischief-offences relating to Documents.

MODULE V OFFENCES RELATING TO MARRIAGE AND REPUTATION: 10

Mock or Deceitful Marriage-Bigamy-Adultery-Cruelty by Husband or Relatives-Defamation- Intimidation - Attempt to Commit Offences- Thug.

TOTAL HOURS : 50

OUTCOMES:

Student can understand the basis on which the criminal law is based. Various offences and the punishment thereof.

BLC2102 **FAMILY LAW - I** **L T P C**
3 1 0 4

OBJECTIVES:

To understand the Family as an Institution and various personal laws that govern issues relating to marriage, divorce, adoption and maintenance, minority and guardianship are the subject matter of this course. Student will go through Acts that govern and the decision of higher judiciary on various matter

MODULE I **8**

Application of various personal laws- Traditional and modern sources of Hindu Law and Muslim Law – The Classical Schools of Hindu Law and Muslim Law – Origin of the Schools – Main Schools and sub-Schools – Effect of Migration

MODULE II **LAW ON MARRIAGE**

Nature of Marriage – Various forms of marriage and requirements for a valid marriage on a comparative analysis – Void, voidable and valid marriage in different religious texts and statutes – Laws and Issues on marriage under the Special Marriage Act – Unisex marriage and question on living together – The demand of dowry and the concept of dower under the relevant personal laws – ceremonies of marriage under various religious systems.

MODULE III **LAW ON DIVORCE & MAINTENANCE**

Restitution of Conjugal Rights, Judicial Separation, Nullity of Marriage and

Divorce – Various grounds and procedure on a comparative analysis – Court's jurisdiction and procedure for the issues raised on marriage and divorce – In Camera proceedings – Decree on proceedings – Maintenance under Hindu, Muslim and Christian Laws – Permanent alimony – Maintenance during pendency of the suit - Maintenance under the Special Marriage Act, the Hindu Adoptions and Maintenance Act and the Code of Criminal Procedure. Structure, procedure and jurisdiction of Family Courts – The Family Courts Act

MODULE IV **LAW ON LEGITIMACY OF CHILDREN AND ADOPTION** **12**

Legitimacy of children born of void and voidable marriages – Their rights and legal issues – Adoption in different religious groups – Requisites, conditions, procedure of

adoption – Effect of adoption – Inter-Country adoption

MODULE V **LAW ON MINORITY AND GUARDIANSHIP** **12**

Guardian under the Hindu Minority and Guardianship Act, 1956 – Definition- types of guardians – Guardianship under Muslim Law – Procedure for appointment and their powers – Guardian under the Guardian and Wards Act 1890

Total Hours –60

The Family Courts Act, 1984

The Dowry Prohibition Act, 1961

The Hindu Widows' Remarriage Act 1856

Prohibition of Child Marriage Act, 2006

OUTCOMES:

Student will get clarity on family as an institution and legal issues arise out of family relations. He can understand changing facets of family as a social unit and legal issues that surface.

BLC 2103 CONSTITUTIONAL LAW- I

L	T	P	C
4	1	0	5

OBJECTIVES:

This course enables the student to understand and appreciate the importance of Constitutional Law as a Fundamental Law of the Land. It gives emphasis on fundamental rights which are non-negotiable and Directive Principles of State Policy that promotes good governance. It ignites the minds of student on issues that are detrimental to make democracy vibrant.

MODULE I CLASSIFICATION OF CONSTITUTION AND GOVERNMENTS 12

Classification of Constitution and Governments. Definition and meaning of Constitution - Kinds of Constitution - Meaning of Constitutionalism- Features of Indian Constitution. Constitution and the Constitutional Law. Preamble-meaning-scope-importance-objectives and values, Union and its Territories (Art 1 to 4)- Citizenship (Article 5 to 11) Definition and meaning of State (Article 12) Definition and meaning of Law (Article 13)

MODULE II PREAMBLE, BASIC STRUCTURE-JUDICIAL REVIEW 12

Doctrine of Basic Structure, Development of Basic Structure theory- Doctrine of Eclipse-Severability and Ultravires- Judicial Review-

MODULE III FUNDAMENTAL RIGHTS - I 12

Fundamental Rights - Article 14- Right to Equality-General Equality Clasuse under Article 14- Reasonable Classification- Protective Discrimination-Reservation and Social Justice under Article 15 and 16. Untouchability under Article 17. Right to Freedom: Freedom of Speech and Expression Article 19-Scope and Ambit- Reasonable restrictions- Right to strike-Bundh-Hartal- Right to Information. Rights of the Accused: Article 20 Ex-post Facto- Double jeopardy-Self incrimination.

MODULE IV FUNDAMENTAL RIGHTS - II 12

Right to Life under Article 21- Life and Liberty-Meaning and Scope- Procedure established by Law- Judicial Interpretation- Maneka Gandhi's Case and its consequences on Constitutional Law. Article 21 A: Right to Education. Land

mark cases in which Right to Life has given a wider scope. Preventive Detention Laws- Exceptions- Safeguards.

Freedom of Religion Article 25 to 28. Secularism-Judicial Interpretation- Cultural and Educational Rights of the Minorities- Recent trends on Minority Educational Institutions. Right to Constitutional remedies Article 32 and Article 226.

MODULE V **12**

. Director Principles of State Policy and Fundamental Duties Relationship between Part III and Part IV. Relevance of Fundamental Duties.

TOTAL HOURS : 60

References:

- D.J. De- The Constitutional Law of India Vol I and Vol II.

OUTCOMES:

The student will get an understanding the importance of Fundamental Rights the essence of democratic spirit and Directive Principles of State Policy the core of good governance.

SSC 2181 INTRODUCTION TO POLITICAL SCIENCE L T P C
4 1 0 5

OBJECTIVES:

Political Science has close link with Legal Studies. The Course intends to make the student to understand the basic concepts connected with Political Science such as, state and its functions, origin of state, various theories of its origin different forms of governments. Concepts like Sovereignty, Liberty, Equality, Citizenship, Rights and Duties. It also focuses on International facets of political science such as Realism, Political Power, National Power, Balance of Power, Diplomacy, Cold War and Alliance and the Structure and Functions of International and Regional Institutions.

MODULE I INTRODUCTION- NATURE, SCOPE, SIGNIFICANCE STATE AND ITS ELEMENTS-FUNCTIONS 10

Meaning, Nature, Scope and Significance of Political Science- Political Science and other Social Sciences, Theories of the origin of State- Divine Origin Theory- Force Theory- Patriarchal and Matriarchal theories- Social Contract Theories of Hobbes, Locke and Rousseau- Evolutionary Theory. Approaches to study of Political Science- Traditional Approach- Modern Approach- Marxist Approach. Elements of State, State and Society- State and Nation- State and Functions.

MODULE II EQUALITY-JUSTICE-RIGHTS AND DUTIES- LIBERTY 10

Equality- Extent of Equality in Modern Times. Rights and Duties-Rights recognized by the State- Human Rights recognized by International bodies Basic Political Concepts: Sovereignty- Characteristics and types of Sovereignty- Justice- Meaning and Kinds of Justice- Liberty- Meaning- Kinds of Liberty- Civil Liberty- Political Liberty-Safeguards of Liberty.

MODULE III VARIOUS FORMS OF GOVERNMENTS 10

Classification of Government. Merits and demerits of Democracy- Merits and demerits of Monarchy, Merits and demerits of Dictatorship- Role of Law in Governance. Laissez Faire theory- Welfare governments-Parliamentary form of government- Presidential form of government- Unitary and Federal systems. Unicameral and Bicameral legislatures- Role of political parties- public opinion

MODULE IV INTERNATIONAL FACETS 10

Introduction to International Relations- Relationship between International Relations and International Law. Theories of International Relations- Moralistic Theory Merits

and Demerits- Realistic' Theory- Concept of Political Power of the State- Concept of National Power, Elements of National Power- Limitations of National Power- role of Political Power in International Relations- Two World-Wars and their Impact.

MODULE V GLOBAL SCENARIO 10

Bi-Polar World- Cold War- end of the Cold War- Unipolar world and Multi-polar World- Balance of Power- Non-Aligned movement - UNO and its structure and its role in International Peace and Security- Non State Actors- Terrorism- Human Rights and Environmental issues.

OUTCOMES: TOTAL HOURS : 50

* Student can understand and appreciate the relationship between political science and law.
* Student can understand political science basic in Global context.
* Student can understand the issues that the world is facing.

REFERENCES:

1. Amal ray and Mohit Battacharya - Political Theory: Ideals and Institutions.

BLC 2105	FINANCIAL AND MANAGEMENT ACCOUNTING	L	T	P	C
		4	1	0	5

OBJECTIVES:

Knowledge about financial services, markets and their concepts and functions, are essential to the students. This course is designed to understand the information and ideas about financial market and marketing management practices in prevailing situation.

MODULE I INTRODUCTION TO FINANCIAL SERVICES 10

Financial Service- Meaning - Importance- types- financial Service and Economic Development - Financial Instruments- financial Services Sector- Problems- Challenges- Reforms- Financial Markets and Capital Markets in India.

MODULE II MERCHANT BANKING AND VENTURE CAPITAL FINANCE 10

Merchant Banking- concept-Origin and Growth- Scope of Merchant Banking and Services-Issues-Issues Management- Underwriting- Importance - Methods - Venture Capital Finance - Concept and Growth of Venture Capital Finance in India - Leasing- type and Methods - Leasing and Borrowing -Credit Rating - Importance - factoring- Arrangements - Purpose and Procedures of Credit Rating - Short Term and Long Term Instruments - role of CRISIL- ICRA- and other Credit Rating Agencies.

MODULE III MUTUAL FUNDS AND FOREIGN EXCHANGE MARKET 10

Mutual Funds- Concept - Objectives - Importance - Mutual Fund Schemes - Mutual Funds and Money Markets-Portfolios - Concepts - Importance- Classification - Portfolio Management- Debt Securitization - SEBI- Introduction Functions Role of SEBI- NSDL-CSDL- foreign Exchange Market - Importance - Currency Swap-forward Contract and Future Contract- Money Laundering- Importance.

MODULE IV INTRODUCTION TO MARKETING MANAGEMENT 10

Marketing Management- Meaning- Importance- fundamentals- Approaches- Factors Affecting Marketing Functions- Market Mix-Buyers Behavior and Motives- consumer goods and Industrial Goods- Market Segmentation-

Targeting- Positioning.

MODULE V THE PRODUCT AND MARKETING CHANNELS 10

The Product-Meaning-Characteristics and Classifications- New Product Process - Product Life Cycle- Branding- Packaging- Physical Distribution - Importance and Kinds- Marketing Channels- Promotion- Advertisement - Publicity- Direct Selling and Sales Promotion.

TOTAL HOURS : 50

REFERENCE:

2. E.F. Brisham, " Fundamentals of Management. CBS International Editor-New Delhi, India
3. I.M. Pandey - " Financial Management" Vikas Publishing Private Limited, New Delh

OUTCOMES:

The student will know about financial markets and marketing operations through this course. He will knowledge about securities, mutual funds, portfolio management etc. He will know about the role of SEBI as a regulatory authority.

SEMESTER - IV

		L	T	P	C
BLC 2201	**MANAGERIAL ECONOMICS**	**4**	**1**	**0**	**5**

OBJECTIVES:

The aim is to strengthen the analytical skills of the students by integrating the theoretical knowledge with decision making.

MODULE I NATURE AND SCOPE OF MANAGERIAL ECONOMICS 15

Meaning, Nature and Scope - Scarcity- Choice and Allocation - Decision Making Techniques - Marginalism- Equi-Marginalism and Opportunity Cost- Risk and Uncertainties

MODULE II DEMAND ANALYSIS AND FORECASTING 10

Demand Theory- Types of Demand- Demand Elasticity - Elasticity of Demand and Marginal Revenue - Users of Elasticity - Decision Making - Estimation of Demand and Function - Demand Forecasting - Quantitative and Qualitative Techniques.

MODULE III PRODUCTION ANALYSIS 10

Production Function - returns of Factors - Production Decision - Isoquant-Isocost - Production Possibility - Expansion Path - Optimum Product Mix of Multy-Product Firm - C.S. Function.

MODULE IV COST, REVENUE AND PROFIT ANALYSIS 05

Cost Theories - Applications and Types of Costs - Derivation of Cost Functions - Revenue - Concepts- Functions - Break Even Analysis - Economics Scale vs. Economics of Scope. Profit Maximization- Vs Sales Maximization- Accounting Profit Vs. Economic Profit - theories of Firm.

MODULE V MARKET STRUCTURE AND PRODUCT PRICING xx

Features - Output - Princing Decisions in Different Markets- Equilibrium of Firm and Industry - Monopoly Power- Welfare Triangle - Pricing and Output Decisions- Differentiate Pricing - Mark up Pricing - government Ingtervention and Pricing.

TOTAL HOURS : 40

REFERENCES:

- Rangarajan - Principles of Macro Economics
- P.L. Mehta - Managerial Economics
- Joel Dean - Managerial Economics
- Stephen Robbins and Timothy Judge- Organisational Behaviour
- Fired Luthana - Organisational Behaviour

OUTCOMES:

The student will have a grasp over functional economics in any business establishments with the above in-puts.

BLC 2202	JURISPRUDENCE	L	T	P	C
		4	1	0	5

OBJECTIVES:

Jurisprudence is the study of Law of the Law. Its philosophy and science. It clarifies legal concepts and concerns. Different Schools of Law and their relevance in the contemporary legal world.

MODULE I NATURE, DEFINITION AND SCHOOLS OF JURISPRUDENCE **12**

Nature and definition of jurisprudence – Analytical positivism, Natural law school, Historical school, Sociological school – Economic interpretation of law, Indian jurisprudence – Concept of dharma, PIL, social justice and compensatory jurisprudence.

MODULE I NATURE AND PURPOSE OF LAW **12**

Nature and definition of law, constitutional law and international law and their nature. Justice, critical studies, feminist jurisprudence and Art 142 of Constitution – The administration of justice.

MODULE III SOURCES OF LAW **12**

Legislation – Nature of legislation – Supreme and subordinate legislation – Relation of legislation to other sources, codification and the interpretation of enacted law. Precedent – The authority of precedents – Circumstances destroying or weakening the binding force of precedent, the hierarchy of authority – Ratio decidendi and judicial reasoning. Custom: Kinds of custom, conventional custom, local custom, custom and prescription – The general custom

MODULE IV LEGAL CONCEPTS I **12**

Legal Rights and Duties – Right – Duty correlation – Persons – Nature of personality – Status of unborn, Minor, Llunatic, Drunken and Dead persons – Corporate Personality Possession and Ownership

MODULE V LEGAL CONCEPTS II **12**

Title, Property, Liability, Obligation and the Procedure Law.

TOTAL HOURS : 60

TEXT BOOKS:

. 1. Salmond - Jurisprudence
2. Paton - Jurisprudence
3. H.L.A. Hart - Concept of law
4. Dias - Jurisprudence
5. Bodenheimer - Jurisprudence
6. V.D.Mahajan - Jurisprudence
7. Tripathi - Jurisprudence

OUTCOMES:

Student will get clarity on the concepts and concerns of Law and its philosophy. It demystifies certain notions and inculcates scientific legal attitude.

BLC 2203 FAMILY LAW – II L T P C
4 1 0 5

OBJECTIVES:

The main objective of this course is to make the students to indentify and understand the scheme of succession under the Hindu, Muslim and Christian Laws. Further, with reference to un- codified Hindu Law, the matters relating to Joint Family System, Coparcenaries,, Karta and his powers, partition and the Hindu Religions Endowments are given in the syllabus for understanding the changes effected after the passing of the Hindu Succession Act, 1956 and other related laws. 6. Prof. G.C.V. Subba Rao - Family Law in India
7. Paruck - Indian succession Act
8. R. Swaroop - Hindu Law of Succession
9. Poonam Pradhan Saxera - Family Law Lectures Family Law II

OUTCOMES:

The student will have idea on issues relating to succession among Hindus, Muslims and Christians etc. He knows the Law that governs religious endowments and Wakfs.

BLC 2204 CONSTITUTIONAL LAW II

L	T	P	C
4	1	0	5

OBJECTIVES:

The very objective of this course is to introduce, explain and enlighten the student on the matters relating to Constitutional governance in India. Union government, State governments and their relations, Powers and Functions of Constitutional Bodies will be discussed.

MODULE I OFFICE OF THE PRESIDENT AND OFFICE OF THE GOVERNOR 10

The Union Executive - The President – Election, Term of Office, Powers and functions, Impeachment – Immunities – Pardoning power - Ordinance making power - President and Union Council of Ministers-The State Executive - Governor – Appointment, Powers and functions - Immunities – Pardoning power – Removal of Governor, Doctrine of Pleasure - State Council of Ministers

MODULE II PARLIAMENT AND STATE LEGISLATURES 10

Composition of Parliament and State legislatures – Office of the Speaker – Qualification/Disqualification of Members - Legislative Procedures, Legislative Privileges – Judicial interpretations – Anti Defection law, X Schedule Union Judiciary-Supreme Court of India (Articles 124-147) – Composition, Appointment and Removal of Judges of Supreme Court - Writ Jurisdiction of Supreme Court under Art 32 - Appellate Jurisdiction of Supreme Court – Civil, Criminal and in other Matters - Statutory Appeals and Enlargement of Jurisdiction - Special Leave to Appeal (Art. 136) - Power of Review (Art. 137) - Advisory Jurisdiction (Art. 143) - Public Interest Litigation – Compensatory Jurisprudence - Independence of Judiciary - Tribunals
State Judiciary -High Courts in the States - Composition, Appointment and Removal of Judges - Writ Jurisdiction of High Courts under Art. 226.

MODULE III DIVISION OF POWERS 10

Distribution of Legislative Powers - Doctrine of Territorial Nexus - Subject matter of laws made by Parliament and Legislatures of States - Doctrine of Harmonious Construction - Doctrine of Pith and Substance – Doctrine of Occupied Field- Colourable Legislation - Parliament's Power to Legislate in State List – Implied and Residuary Power - Doctrine of Repugnancy.

Administrative relations – Full faith and credit clause – Centre and inter-state conflict management Fiscal Relations – Sharing of tax – Grants-in-Aid – Restriction on the power of state legislatures – Doctrine of immunity of Instrumentality – Borrowing powers – Constitutional Limitations Freedom of Trade, Commerce and Intercourse (Art. 301-307) - Meaning of Freedom of trade, commerce and intercourse - Power of Parliament – Restrictions.

MODULE IV EMERGENCY 10

Emergency Provisions- National Emergency - Duty of the Union to protect the States against external aggression and internal disturbance - Power of Union Executive to issue directions and the effect of non- compliance.

State Emergency - Imposition of President's Rule in States – Grounds, Limitations, Parliamentary Control, Judicial Review (Articles 356-357) –

Financial Emergency (Article 360)

Emergency and suspension of fundamental rights

MODULE V CONSTITUTIONAL BODIES 10

Organisation, powers and function of Election Commission of India, Union Public Service Commission, State Public Commission, Comptroller and Auditor General, Attorney General & Advocate General– Constitutional safeguards for Civil Servants Art 311 - Protection against arbitrary dismissal, removal, or reduction in rank – Exceptions to Art 311 – Role of Finance Commission – Planning Commission- Niti Ayog – Inter- state Council – National Development Council – Local Self Government (Panchayat Raj)

TOTAL HOURS : 40

OUTCOMES:

Student will learn the scheme of Constitutional Frame-work- in respect of President, PM- Governors-State Governments- Emergency Provisions- Center - State Relations- Powers and Functions of Constitutional Bodies.

BLC 2211	COMPUTER FOR MANAGEMENT AND MANAGEMENT INFORMATION SYSTEMS (MIS)	L	T	P	C
		4	1	0	5

OBJECTIVES:

This subject is designed to provide such a knowledge-base, business application of word processing, database management system, electronic data interchange, internet and its basic concepts and Management information system as a major functional area of business. It helps the student in many ways.

MODULE I WORD PROCESSION 10

Introduction-Creating, Editing, Formatting and Printing Documents- Using Tools such as Spell Check, Thesaurus- etc. In Work Proceessors (MS Word), Electronic Spreadsheet, structure of Spread Sheet and its applications to Accounting, Finance and Marketing functions of business- Creating a Dynamic/Sensitive worksheet; concept of Absolute and relative cell- reference using Built in Functions; Goal Seeking and Using graphics and sharing data with other Desktop Applications, Strategies of Creating Error-free Worksheet. (MS Excel)

MODULE II DATA BASE MANAGEMENT SYSTEM 10

Data Base Management System: Basic concept of DBMS; Sorting, Indexing and Searching Data Records- Designing Queries, and Reports- Linking of Data Files- Developing Menu Driven Applications in query Language (MS Access) - Electronic Data Interchange (EDI) Introduction of EDI - EDI Standards- Financial EDI (FEDI) FEDI for International Trade Transaction-Applications of EDI, Advantages of EDI- Future of EDI.

MODULE III THE INTERNET AND ITS BASIC CONCEPTS 10

The Internet and its Basic Concepts; Development in India; Distributed Computing; Client-Server Computing; Internet Protocol Suits, IP Addresses, Internet Protocol, Domain Name System (DNS); Allocation of Second Level Domains; Application of Internet in Business, Education, Governance, etc. Allocation of Second Level Domains; Basic Idea of Information Audit; Difference with the Traditional concepts of Audit; Conduct and Applications of IS Audit in Internet Environment.

MODULE IV MANAGEMENT INFORMATION SYSTEM 10

Management Information System: Basic Concepts, MIS Support for Planning, Organizing and Controlling-Structure of MIS - Decision Making System concepts, Characteristics and Classification of Computers Input/output devices- storage devices- Batch and online Procession- Hardware and Software.

MODULE V SYSTEM ANALYSIS AND DESIGN: 10

SDLC -Role of System Analyst-Functional Information System- Personnel, Production, Material, Marketing. Decision Support System - Group Decision Support Systems- Business Process Outsourcing Functions.

TOTAL HOURS : 50

BOOKS:

1. Agarwala Kamlesh N and Agarwala Deeksha- 'Business on the Net - Introduction to E-Commerce'.
2. Dr. S.P. Rajagopalan " Management Information Systems and EDP.

REFERENCES:

1. Minoli Daniel, Minoli Emma - E. Commerce Technology Handbook
2. Kanter- Managing with Information System
3. Goyal - Management Information System
4. Mudrick and Ross- Management Information System

OUTCOMES:

This course will make the student computer literate in a scientific way. In this digital era, this course will enrich and empower him with necessary inputs on E-Related issues including E-Commerce and MIS Systems.

SEMESTER V

BLC 3101 PUBLIC INTERNATINAL LAW L T P C
4 1 0 5

OBJECTIVES:

International Law regulates the relations between and among States. The object is this course is that the student should understand the nature and scope of IL and its ever increasing significance. Student will learn about UNO - International treaties- Law of the Sea-Space-Refugee Law. It also looks into State as a subject and Individual as a subject of IL.

MODULE I NATURE AND SCOPE 10

International Law – Definition, Basis and Nature – Codification – International Law Commission – Sources of International Law – Relationship between International Law & Municipal Law – Theories and State Practice.

MODULE II STATE AND INDIVIDUAL AS A SUBJECT OF IL 10

State and Individual as a subject – Rights and Duties / Responsibilities – State Recognition – Theories – Kinds and legal effects – Nationality – Acquisition and loss related issues – Extradition Asylum - Territorial Sovereignty – Modes of acquisition and loss of territory – State Jurisdiction – State Succession and liability.

MODULE III LAW OF THE SEA- AIR AND SPACE 10

Law of the Sea - Air & Space Law; Diplomatic Law – Agents Consulars, Immunities and Privileges – Refugee Law.

MODULE IV FORMATION OF TREATIES AND OBSERVANCE 10

Concept - Definition of International Treaties – Formation of Treaties and its stages – Reservation, observance of Treaties, Interpretation of Treaties – Suspension and Termination of Treaties.

MODULE V UNITED NATIONS ORGZANISATION ITS FRAMEWORK. 10

Origin, Nature & Scope of International Organizations – League of Nations, United Nations and its organs – International Tribunals.

TOTAL HOURS : 40

REFERENCES:

1. Starke – International Law
2. S.K. Kapoor – International Law
3. K.K. Bhattachary – International Law
4. Agarwal – International Law
5. Oppenheim – International Law

3. Sir John Paget - Law of Banking
4. H.P. Sheldon - The Practice and Law of Banking

OUTCOMES:

Through this course, the student will learn about the law that governs banking activities.

BLC 4105 ALATERNATIVE DISPUTE RESOLUTION MECHANISM (Clinical Course II)

L	T	P	C
2	1	2	5

OBJECTIVES:

This course offers an opportunity to know the mechanism to settle the legal issues through alternative methods like Arbitration, Negotiation and Conciliation. Students is expected to acquire certain skills in this regard. Course is designed to simulate the student mind.

MODULE I ARBITRATION 15

Case Study in Arbitration Center (Practical/Simulation Exercise)
(Three exercises 10 marks each; 30 marks

MODULE II VIVA VOCE/ PRESENTATION OF CASES OBSERVED 10

The student has to present the cases he observed- and he has to face viva-voce on case studies (10 marks)

MODULE III INTERNAL EXAMINATION ON THE SUBJECT 10

Internal Examination will be held on ADR. (it is for 10 marks)

SUBMISSION OF RECORD ON ADR- ON INTERNATIONAL ARBITRATION- ARBITRATION ACT- RULES ETC. (50 MARKS)

TOTAL HOURS : 50

7. Universal's Guide- Competition Law in Law
8. P.K. Mujumdar: Law of Consumer Protection in India.

OUTCOMES:

Student will learn about Competition Commission in India and its emergence, its role, functions.

➢

BLC 4202 ENVIRONMENTAL LAW L T P C
4 1 0 5

OBJECTIVES:

The course will help the student to know about legal and regulatory mechanism that intends to protect environment. Course can be divided into International Environmental Law and Indian Environmental Law. Legal mechanism to strengthen the ongoing 'Green' efforts at local, national and global levels.

MODULE I INTRODUCTION 10

Environment- Environmental Law- Factors responsible for degradation of Environment - Need to protect, preserve and conserve Environment. International Environmental Law: Stockholm Declaration on Human Environment-1972- Rio Declaration on Environment and Development - 1992, Johannesburg Summit on Sustainable Development - 2002, Agenda-21- Rio Plus 20 - Our Common Future-1987. UNDP- GEF

MODULE II INDIAN ENVIRONMENTAL LAW 10

Constitutional Provisions- 42 Amendment- 48A-51A (g), Extensive Interpretation of Article 21. Judicial Activism- Public Interest Litigation. Doctrines pronounced by the Supreme Court- 'Absolute Liability'- 'Sustainable Development' - 'Public Trust Doctrine'

MODULE III LEGISLATIVE FRAME-WORK 10

Anti Polllution Laws: Air and Water (Prevention and Controll of Pollution) Acts- Pollution Control Boards- their structure and functions

Environmental Protection Act- 1986- its high lights- Powers and Functions of Central Government- Merits and Demerits... various Authorities under this Act, rules notified under this Act. Coastal Regulatory Zone Notification, Noise Pollution Rules, Municipal Solid Water Management Rules, Bio-Medical Waste Rules- E- Waste- Environmental Impact Assessment- Environmental Clearance- National Green Tribunals.

MODULE IV CONSERVATION AND PROTECTION 10

Forest Act-1927 and Amendments- Wild Life Protection Act-1972 - Forest Conservation Act-1980- Biological Diversity Act-2002 - Prevention of Cruelty to Animals act-1960- Leading cases on Forest, Wild Life and Cruelty against

Animals.

MODULE V REMEDIES FOR ENVIRONMENTAL POLLUTION 10

Common Law Remedies- under Law of Tort- Penal Remedies under IPC and Cr.P.C.- Remedies under Constitutional Law- Article 32- Article 226- Public Interest Litigation - Judicial Activism- Leading Environmental Cases.

TOTAL HOURS : 50

REFERENCE:

1. P. Leelakrishnan- Environmental Law in India

6. N. Maheswara Swami- Law Relating to Environmental Pollution and Protection.
7. Alan Bopyle and Patricia Bernie - International Law and Environment
8. Philippe Sands - Principles of International Environmental Law
9. Elli Louka - International Environmental Law
10. R.N. Choudhry - Law of Forests in India

OUTCOMES:

This course will help the student to understand legal and regulatory mechanism in place. With all clarity on concepts of pollution, protection, conservation and the Doctrines enshrined by the Supreme Court of India-it enrich the students knowledge base.

BLC 4203 MARITIME LAW

L	T	P	C
4	1	0	5

Objectives

The object of this course is to introduce the basics of Indian Maritime Law to the students. Maritime Law gaining significance as a separate branch of law. Student will know about Admiralty Law, The Merchant Shipping Act, 1958- International treaties, Conventions and Protocols relevant to Indian Maritime Law and their applicability. Law governing Marine Pollution, Marine fishing etc

.

MODULE I INTRODUCTION TO ADMIRALTY 10

Admiralty Act- Admiralty Jurisdiction of High Courts- International Convention for Arrest of Ships, Wrongful arrest - release from Arrest- Security for Release from Arrerst - Action in Rem; Action in Personam in Maritime Context- Maritime Claims, Limkitation of Liability, Damage done by or to a ship, Salvage, Loss of Life or Personal Injury- recent Admiralty Act- its salient features.

MODULE II THE MERCHANT SHIPPING ACT-1958 10

The Merchant Shipping Act-1958 - Structure of Shipping Administration in India- DG of Shipping- Mercantile Marine Department, Surveyors, Seamen's Welfare Officers - Major and Minor Ports, Application of National and State Laws at Ports- Registration of Indian Ships- Transfer of Ownership - National Character and Flag.

MODULE III INTERNATIONAL LAW AND CONVENTIONS 10

International Treaties, Conventions and Protocols relevant to Indian Maritime Law, their objectives applicability and legal status. Maritime Legislation based on these treaties, Conventions and Protocols-

MODULE IV MARINE POLLUTION 10

International Convention on the Prevention of Marine Pollution by Dumping of Waste Convention-1972- Maritime Lien

MODULE V MARINE FISHING 10

Jurisdictional issues and relevant provisions under Indian Laws- The Territorial Waters, Continental Shelf, Exclusive Economic Zone and Maritime Zones Act-1976 - The Maritime Zones of India (Regulation of Fishing by Foreign Vessals) Act,1981- Suppression of Unlawful Acts Against Safety of Maritime Navigation

and Fixed Platforms on Continental Shelf Act,2002

TOTAL HOURS : 50

REFERENCES:

Acts:

1. The Merchant Shipping Act, 1958
2. The Territorial waters, Continental Shelf, Exclusive Economic Zone and other Maritime Zones Act, 1976
3. the Maritime Zones of India (Regulation of Fishing by Foreign Vessels) Act,1981
4. Suppression of Unlawful Acts Against Safety of Maritime Navigation and Fixed Platforms on Continental Shelf Act,2002
5. Fisheries Act
6. International Convention on the Prevention of Marine Pollution by Dumping of Waste Convention,1972
7. United Nations Convention on the Law of the Sea (UNCLOS)

OUTCOMES:

Basics of Maritime Laws will be known to the student in respect of marine fishing, marine pollution, International obligations, merchant shipping etc. He will be familiar with jurisdictional issues relating to the Sea.

BLC 4205 INTERNATIONAL TRADE LAW

L	T	P	C
4	1	0	5

OBJECTIVES:

In the Era of LPG, Trade is global. In the context of world economic integration and the new order it is essential to know the International Trade Regime, International Trade Agreements - International Trade Practices and various bilateral and regional agreements in place. The student will learn- regulatory mechanism, dispute settlement bodies. This course offers basic inputs in the International Trade Law.

MODULE I GENESIS OF INTERNATIONAL TRADE LAW 10

Origin and Development - Theories - UN XConventions - Unification of International Trade Law- International Commercial Contracts- International sale of Goods - foreign Direct Investments(FDI) - Transnational Companies - Electronic Business Transactions - Elements of International Taxation - Risk Analysis of International Trade.

MODULE II INTERNATIONAL ECONOMIC INSTITUTIONS 10

Structure and Functions of International Economic Institutions - International Trade Organization(ITO)- WTO- GATT- New International Economic Order (NIEO)- International Monetary Fund (IMF)- International Bank for Reconstruction anhd Development (IBRD)- International Investments.

MODULE III WORLD TRADE ORGANISATION 10

Structure and Functions of WTO. Covered Agreements- Subsidies- Dumping and Anti-Dumping- General Agreement of Trade and Services (GATS)- Trade Related Intellectual Property Rights (TRIPS), Trade Related Investiment Measures (TRIMs), Trade in Agriculture- Technical Barriers of Trade (TBT)- UN Committee on Trade and Environment (UNCTE)- UN Committee on Trade and Development (UNCTAD)- Summits of the WTO.

MODULE IV BILATERAL AND REGIONAL TRADE 10

Regional Arrangements under the UN - Most Favoured Nation (MFN) Clause- South Asian Association for Regional Cooperation (SAARC)- Association for South Eastern Asian Nations (ASEAN)- European Union (EU)- Organisation for Petroleum Exporting Countries (OPEC)- North American Free Trade Agreement (NAFTA)- South Asian Free Trade Agreement (SAFTA)

MODULE V SETTLEMENT OF DISPUTES IN INTERNATIONAL TRADE **10**

Methods of Dispute Settlement - Alternative Dispute Resolution (ADR) and International

Trade- UNCTRAL-International Arbitration, Conciliation, Mediation and Litigation - Online Dispute Resolution- Dispute Settlement Body in WTO - Appellate Body (AB)- Consultation - Trade and Environment Controversies- Enforcement and Compliance

TOTAL HOURS : 50

REFERENCES:

1. Dr.Myneni SR - International Trade Law

6. C. Singhania- foreign Collaborations and Investments in India Law and Procedure
7. Correa, Carlos. M. - IPRs the WTO and Developing Countries
8. Day, D.M. and Griffin, Bernardettee- The Law of International Trade
9. Anupam Goyal- The WTO and International Environmental Law: Towards Conciliation.
10. Petersmann, Ernst Ulrich - The GATT/WTO Dispute Settlement Systems: International Law, International Organisations and Dispute Settlement

OUTCOMES:

Student will learn the basic frame-work of International Trade Regulation-varies Agencies- their role and functions. Student will learn about 'Dispute Settlement Mechanism'. It provides basic understanding on issues relating to International Trade Law.

BLC 4205 CYBER LAWS AND FORENSIC

L	T	P	C
4	1	0	5

OBJECTIVES:

In this digital era, the regulatory framework analysis has become vital. This course helps in understanding the regulations relating to E-Contracts, E-Banking, Intellectual Property Issues, Cyber Crimes and E-Taxation. The course intends to analyze the need of cyberspace regulation both Jurisdictional and Jurisprudential aspects of Cyberspace.

MODULE I INTRODUCTION **10**

Cyber Space Introduction and UNCITRAL Model Law- Information Technology Act, 2013 with recent Amendments- Jurisdictional Issues- Digital Signatures- Regulation of Certifying Authorities- Cyber Regulation Appellate Tribunal.

MODULE II ON LINE CONTRACTS **10**

Formation of Online Contracts- E-Banking transactions-Online Payment Options- Online Advertising- Electronic and Digital Signature- Taxation Issues in "Cyber Space- Indirect Tax- tax Evasion- Double Tax- International Tax- Permanent Establishment- Protection of Trade secrets and Deceptive Trade Practices.

MODULE III CYBER CRIMES **10**

Understanding Cyber Crimes- Actus Reus and MensRea- Types of Crimes in the Internet- Against Person, Against Property, Against Government- Digital Evidence- Investigation and Adjudication of Cyber Crimes in India- Cyber Arbitration - Cyber Conflict Investigation.

MODULE IV INTELLECTUAL PROPERTY RIGHTS AND CYBER SPACE **10**

Copy Right issues in the Internet - Protection of Computer Software- Caching- International Regime - OSS- DMCA- DATA PROTECTION DIRECTIVES- Trademark Issus in the Internet - Domain Name; Registration- Domain Name- Registration- Domain Name Dispute- ICANN -UDRP Policy- Linking - Framing - Met tagging - Database issues in the internet.

MODULE V CONTEMPORARY ISSUES **10**

Convergence Technologies- Cloud Computing - Online Digital Libraries - Access to Internet - A Human Right Issue - Issue of Censorship - Privacy issues

- National Security and Social Security.

TOTAL HOURS : 50

REFERENCES:

1. Nandan Kamath **-** Law relating to Computer- Internet and E-Commerce.
2. S.K. Verma & Raman Mital - Legal Dimensions of Cyber space
3. Rahul Mahathan - The Law relating to Computer and Internet.
4. Justice Yatindra singh - Cyber Laws
5. Edtu Chris reed and Joh Angel - Computer Law
6. Roger Leroy Miller & Gaylord A. Jentz - Law for E-Commerce

OUTCOMES:

The Student will know and understand the Cyber related Law, regulatory mechanism and cyber crimes. He can follow the ongoing developments and cyber related issues.

SEMESTER IX

BLC 5101	**LAW OF INSURANCE**	**L**	**T**	**P**	**C**
		4	**1**	**0**	**5**

OBJECTIVES:

The focus of this course is to explain legal dimensions of Insurance Contract in respect of its formation, performance and discharge. As the Insurance sector is opened for private players as part of reforms significant changes have taken place. The IRDA apex regulatory body is striving to balance the interests of the general public and the insurance companies.

MODULE I INTRODUCTION 10

.Insurance Meaning -Risk Management _ Kinds of Risks- Insurable Interest- Insurance and Assurance- Parties of Insurance- Insurance and Contract Law- Principles of 1. Uberrimae fidae, 2. Indemnity, 3. Subrogation, 4. Contribution, 5. Proximate Cause - Cover Note and Slip.

MODULE II FIRE INSURANCE CONTRACT 10

Meaning of the term "Fire" - Fire Policies- Perils Insured- Fire Claims- Scope of Applicability of Special Principles to Contract of Fire Insurance. Standard Fire Policy ' Average' in Fire Insurance Contract.

MODULE III MARINE INSURANCE CONTRACT 10

Significance of Marine Insurance- Maritime Peerils- Subject matter covered by Marine Policy- KInds of Marine POlicies - Scope and Applicability of Special Principles to Contract of Marine Insurance - Principles of 'Change of Voyage' and 'Deviation' - Total Loss - Partial Loss- Marine Insurance Act 1963 with special reference to Bill of Lading and Counter Part.

MODULE IV LIFE INSURANCE CONTRACT 10

Introduction- Concept- Life Insurance-Significance-Kinds-Extent of apaplicability of Special Principles to Life Insurance. 'Suicide" clause. 'Medical insurance' policies. Assignment and Nomination- Constitution. IRDA- Role and Functions

.

MODULE V MOTOR VEHICLE INSURANCE 10

Introduction- The MV Act-1988. Compulsory III Party Insurance of Motor Vehicles- No Fault Liability- Motor Accident Claims Tribunals.

TOTAL HOURS : 50

REFERENCES:

1. KVS Sarma: Modern Law of Insurance
2. M.N.Srinivasan- Law of Insurance
3. Srinivasan and Murty: Law of Insurance
4. Haardy Ivany- Law of Insurance

OUTCOMES:

Student will learn the concept of Insurance and how it penetrated into various facets. They will learn about Life Insurance, Marine Insurance and Fire Insurance. Student will understand the role and functions of IRDA that regulates Insurance sector in India.

BLC 5102	LAW OF CRIMES II CRIMINAL PROCEDURE CODE & JUVENILE JUSTICE	L	T	P	C
		4	1	0	5

OBJECTIVES:

The law of Criminal Law is indented to provide a mechanism for the enforcement of criminal law. Without proper procedural law, the Substantial Criminal law which defines offences and provides punishments for them would be almost worthless. Every threat does not deter. Without deterrent effect, the Criminal law will have hardly any meaning or justification. Thus the law of Criminal Procedure is meant to be complementary to Criminal Law and has been designated to ensure the process of its administration.

MODULE I CRIMINAL PROCEDURE CODE-TYPES AND FUNCTIONARIES **10**

. Aquisitorial, inquisitorial – brief history about the code-definition-main functionaries of the code- powers of superior police officers and aid to the magistrates and police.

MODULE II PRE-TRIAL PROCEEDINGS **10**

Stages of Investigation - process compelling for the presence of the presence of accused for investigation and trial - arrest-procedure for arrest - rights of arrested persons consequences of non - compliance of arrest procedures – search and seizure – process of investigation by police – investigation of unnatural and suspicious death – Local jurisdiction of the Courts in Inquires and Trials **–** cognizance of offence and commencement of proceedings – bail procedures – types of bail - General Provision regarding bond of accused and sureties.

MODULE III TRAIL PROCEDURE **10**

Stages of Investigation - process compelling for the presence of the presence of accused for investigation and trial - arrest-procedure for arrest - rights of arrested persons consequences of non - compliance of arrest procedures – search and seizure – process of investigation by police – investigation of unnatural and suspicious death – Local
jurisdiction of the Courts in Inquires and Trials **–** cognizance of offence and commencement of proceedings – bail procedures – types of bail - General

Provision
regarding bond of accused and sureties.

MODULE IV APPEAL PROCEDURES 10

Types of Appeals - Reference and Transfer of Criminal Cases - Execution, Suspension, Remission and Commutation of Sentences – Execution of Sentence death penalty and Imprisonment – Execution of Sentence of fine - Preventive and Precautionary Measures for keeping peace and good behavior – Maintenance procedures – conditions for claiming maintenance – cancellation of maintenance – Muslim Women Protection of Rights on Divorce Act.

MODULE V JUVENILE JUSTICE (CARE AND PROTECTION) ACT, 2001 & PROBATION OF OFFENDERS ACT,1958 10

Juvenile Justice (Care and Protection) Act, 2001 and Probation of Offenders Act, 1958

Introduction – Object – definitions – Statutory bodies for juveniles under the Act Reformative institutions for juveniles – Special offences – Probation –Object and meaning – Criminal court and probation – Duties of Probation officers - Report of the probation officers - conditions and cancellation of probation.

TOTAL HOURS : 50

REFERENCES:

Books:

1. Ratanlal : Code of Criminal Procedure
2. Sarkar : Code of Criminal Procedure
3. Kelkar R.V. : Outlines of Criminal Procedure
4. Basu : Code of Criminal Procedure
5. Dr.Nandhal's : Code of Criminal Procedure (3 Volumes)
6. P. Ramanatha Iyer : Code of Criminal Procedure (3 Volumes)
7. Sohonis : Code of Criminal Procedure (4 Volums)
8. R.B. Sethi : Probation of Offenders Act
9. Consuls : Probation of Offenders Act and Rules.
10. M.K.Chakrabarathi : Probation System in the Administration of CriminalJustice
11. Vedkumari (IT) : Treaties on the Juvenile Justice Act.
12. S.K. Swasthi : Judgements of Juvenile Justice Act 1986.

OUTCOMES:

Students will learn the procedure that is followed in Criminal Justice Administration in the Country. They will also learn special procedure that is followed in Juveniles justice system that is in place.

BLC 5103	CIVIL PROCEDURE CODE AND LIMITATION ACT	L	T	P	C
		4	1	0	5

OBJECTIVES:

The course intends to understand the legislative measures in procedure. The course also helps in understanding the procedures to be followed by the civil courts from the institution of suits till the final disposal. The course tries to understand the computation of limitation period for the institution of suit, appeal and applications along with exclusion

MODULE I INTRODUC TION 10

Definitions – Civil Nature - Jurisdiction of Civil Court – Place of Suing – Institution of Suits – Presentation of Plaint – Parties to the suit-principles of res subjudice and res judicata.

MODULE II PLEADINGS AND PROCEEDINGS 10

Plaint – Written Statement – Service of Summons – Appearance and Non-Appearance of Parties - – Discovery, Inspection and Production of Documents – Admission – Production, Impounding - and Returning of Documents- transfer of suits-decree and judgment -Remand – Restitution – -Appeals: first appeal, second appeal, appeals from orders and appeals to Supreme Court – Reference – Review – Revision

MODULE III SUITS IN PARTICULAR CASES 10

Suits by and against government and public officer – Suits by indigent person – suits by or against minors and lunatics, aliens and foreign rulers, soldiers, corporation, Firms, trustees, executors and administrators-suits relating to family matters, mortgages, public nuisance and public charities- interpleader suits-summary procedure.

MODULE IV EXECUTION 10

General principles, courts by which decree may be executed, payment under decree, application for execution, mode of execution, stay of execution, questions to be determined by executing court, arrest and detention, attachment of property sale and delivery of property, distribution of assets.

MODULE V LIMITATION ACT 10

Definitions – Limitation of Suits – Appeals – Computation of Period of Limitation

– Acquisition of ownership by possession.

TOTAL HOURS : 50

. REFERENCES:

Acts:

1. Code of Civil Procedure, 1908
2. Limitation Act, 1963

Books

1. K. Takwani : Civil Procedure Code
2. Mulla : Code of Civil Procedure
3. M. P. Jain : Code of Civil Procedure
4. Pattabiraman : Code of Civil Procedure
5. Taxmann : Code of Civil Procedure
6. M. P. Tandon : Code of Civil Procedure
7. C. K. Takkar : Code of Civil Procedure
8. P. Basu : Law of Limitation

OUTCOMES:

Procedural Laws are essential to understand how the law will put into motion through courts. Student will get an idea about procedure followed by civil courts

BLC 5104 LAND LAWS L T P C
4 1 0 5

OBJECTIVES:

Land Laws of Tamilnadu along with Land Acquisition Act and Real Estate Regulation Act are significant laws. Students should know the laws relating to land acquisition, real estate, rent control, lease etc. Bone of contention is land in significant number of cases. Hence, the student is expected to know the law relating to land.

MODULE I BACKGROUND OF LAND ADMINISTRATION 10

Concept of Land-Kinds-Ownership and Possession of Land- Land Reforms and Constitutional History- Eminent Domain- Right to Property under Article 31 A-31 B- 31 C of the Constitution- Article 300 A; Ninth Schedule-Early Revenue Administration in Tamilnadu-Grants- Inams -Zamindari System- Permanent Settlement -Ryotwari-Rights and Liabilities of Ryotwari Pattadar- Tamilnadu Estates (Abolition and Conversion into Ryotwai) Act, 1948.

MODULE II LAND ACQUISITION 10

Land Acquisition, Rehabilitation and Resettlement Act-2013 (LARR Act,2013)- Compensation - payment-

MODULE III ENACTMENTS AND CULTIVATING TENANTS 10

The Tamilnadu Cultivating Tenants Protections Acts- 1989-1983-2010-
The Tamilnadu Cultivating Tenants (Payment of Fair Rent) Act, 1956- Rights and Liabilities of Cultivating Tenants and Land Owner- Fair Rent- Alteration or Revision of Fair Rent-Kaiaeruvamdar and Mattuvaramdar- Rent Court- Rent Tribunals- Exceptions - Powers of the High Court.

MODULE I ESSENTIALS OF A CONTRACT 12

Basic Nature of Contract – Formation of Contract – Offer, Acceptance, Revocation, Lapse of offer and Acceptance – Intention to create Legal Relationship – Terms of Contracts & Standard form Contracts.

MODULE II CONSIDERATION AND LEGALITY 12

Consideration – past, present, future consideration – Privity as to consideration - Value & Adequacy of consideration, Rule in Pinnel's case – Exceptions to consideration – Capacity to contract – Free consent – Factors which vitiate free consent – Objects of a Contract – Unlawful & illegal objects or considerations – Valid, Voidable, Void Agreements.

MODULE III PERFORMANCE & ENFORCEMENT 12

Performance of Contract – Privity of Contract – Tender of performance - Time as essence to performance – Law relating to time, place & order of performance – Performance of reciprocal promises, contingent contracts, joint promises – appropriation of payments.

MODULE IV TERMINATION OF CONTRACT 12

Discharge of contracts – by – Impossibility of performance – Discharge by Agreement - Novation, Recission, Alteration – Discharge by Breach - Waiver – Accord & Satisfaction – Material Alteration – Damages – Types and Measure.

MODULE V LEGAL -REDRESSAL 12

Quasi contracts – Quantum Meruit – Specific Relief Act, 1963 - recovery of

possession - specific performance of contracts-rectification, Cancellation of Instruments - Rescission-Declaratory Decrees - Injunctions.

TOTAL HOURS : 60

TEXT BOOKS:

1. Dr. Avatar Singh – Law of Contract & Specific Relief.
2. Anson's Law of Contract.
3. Venkatesh Iyer – Indian Contract Law
4. M. Krishnan Nair – Indian Contract Law.

Bare Acts:

1. Indian Contract Act, 1872
2. Specific Relief Act, 1963

REFERENCES:

1. Cheshire & Fifoot – Law of Contracts.
2. Mulla – Indian Contract Act.
3. Sarkar – Specific Relief Act..
4. Basu – Specific Relief Act.
5. Smith & Thomas – A Casebook on Contract.

OUTCOMES:

The student will have conceptual clarity on matters relating to legally enforceable contracts. (Formation-Performance-Discharge of a contract)

- Will be familiarized with the redressal mechanisms available to the aggrieved parties in case of breach of contract.

BLC 1104	LAW AND LANGUAGE	L	T	P	C
		4	1	0	5

OBJECTIVES:

- To train students to use appropriate vocabulary in academic and technical/legal contexts.
- To facilitate students to speak effectively while exchanging ideas and making presentations.
- To develop students' listening skill for comprehending and analyzing information.
- To develop their reading skill through sub skills like skimming, scanning and critical reading of a text.
- To sharpen their academic writing skills.
- To expose them to the correct usage of language and help them to apply that knowledge appropriately.

MODULE I **7**

L: Listening for general information

S : Self Introduction, Introducing one another.

R: Predicting the content

W: Paragraph Writing

Language Focus: Affixes, Simple Present tense , Connective & Prepositions.

Language-significance-English as a legal language-distinctive features of English as a legal language - Basics of Law

MODULE II **7**

L: Listening for specific information (from dialogues)

S: Exchanging opinion.

R: Skimming technical Passages

W: Argumentative Writing (using the concept of Flipped Learning), Letter to the Editor.

Language Focus: Idioms, use of Modals, Simple Past tense & use of "Wh" and question tags.

Indian Languages as Legal Language - Legal Terms

MODULE III **8**

L: Learning the ways of describing images and presenting specific information

(focusing on note making)

S: Making Presentations using visuals.

R : Scanning short texts for gist of information

W: Letter of Invitation, Expository Writing

Language Focus: Homophones, Homographs, Simple Future & Collocations.

Latin Expressions - Doctrines and Legal Maxims

MODULE IV **8**

L: Understanding prepared presentation techniques through videos

S: Short Presentations.

R: Reading for coherence and cohesion

W: Letter seeking permission for Industrial Visit

Language Focus: S-V agreement, Euphemism

Confused wordings, Phrases, Idioms, Synonyms, Legal Jargon - Terminology - Vocabulary in Law of Torts

MODULE V **8**

L : Understanding Non- Verbal Communications while listening to narration of incidents.

S: Narrating an experience

R: Inferential Reading

W: Process Description – Transcoding a Flow chart.

Language Focus: Interchange of Active & passive voice, Impersonal Passive voice.

Legal jargon in Family Law - Business Law

MODULE VI **7**

L: Learning Story telling techniques (stories & visuals) through audio files

S: Discussion in groups

R: Reading for critical appreciation

W: Developing an idea, Slogan writing, Interpreting a Bar Chart.

Language Focus: If clause and phrasal verbs.

Legal jargon in Cyber Law - International Law - Procedural Laws

TOTAL HOURS : 45

- Liability of the partners of the acts of the firm and for the wrongful acts of other partner – nature of liability.
- Principle of agency in partnership.
- Partnership property – Tests.
- Settlement of accounts – goodwill and its disposal – distribution of assets.
- Retirement of partners.
- Dissolution of firm and modes and circumstances.
- Effect of non – registration of firm.

TOTAL HOURS : 60

TEXT BOOKS:

1. The Law of Contracts – Dr. Avatar Singh
2. Sale of Goods Act – Mulla
3. Law of Contracts – Krishna Nair
4. Law of Contracts – Anson

OUTCOMES:

- Student should able to understand special nature of contracts; duties and rights arise out to these contracts. Performance and discharge of contracts and remedies available in case of any breach.

BLC1203	PRINCIPLES OF ACCOUNTING	L	T	P	C
		4	1	0	5

OBJECTIVES:

To facilitate the understanding of Accounting in General

- To give a comprehensive understanding of the system of Financial Accounting
- To understand the intermediate concepts for assets, liabilities and stockholders' equity
- To develop skill, related to problem solving and critical thinking

MODULE I INTRODUCTION TO ACCOUNTING 10

Meaning and scope of Accounting, Basic Accounting Concepts and Conventions, Objectives of Accounting, Accounting Transactions, Double Entry Book Keeping - Journal, Ledger, Preparation of Trial Balance

MODULE II ACCOUNTS 10

Preparation of Final Accounts of a Sole Trading Concern, Closing Stock, Adjustments, Outstanding and Prepaid items, Depreciation, bad debts, Provision for Bad and Doubtful Debts, Provision for Discount on Debtors, Provision for Discount on creditors, Interest on Capital and Drawings, Abnormal Loss of stock.

MODULE III RECTIFICATION OF ERRORS 10

Classification of Errors, Rectification of Errors, Preparation of Suspense Account - Profit & loss adjustment Account.

MODULE IV RECONCILIATION STATEMENT 10

Introduction, Procedure for reconciling the cash book balance with the pass book balance, Methods of Bank Reconciliation Statement

MODULE V DEPRECIATION ACCOUNTING 10

Depreciation, Meaning, Causes, Methods, Straight Line Method, Written down Value Method, Change in method of depreciation (retrospective and prospective method) Insurance claims Insurance claims, Average Clause (Loss of stock only)

TOTAL HOURS : 50

TEXT BOOKS:

1.Financial Accounting By P.C. Tulsian, Pearson

REFERENCES:

1.Financial Accounting by Hanif and Mukherjee, Mcgraw Hill Education
2.T.S.Reddy&A.Murthy (2015) Financial Accounting, Margham Publications, Chennai.
3.Jain&Narang (2015) Financial Accounting, Kalyani Publishers, New Delhi

OUTCOME:

The student will grasp the purpose and methods of accounting that is the core of all business environment. The student will be equipped with recording, classifying and summarizing business transactions that are legal, regular and valid. Thus helps in making business decisions accurate and ensures flaw less tax planning.

GEC 1212	ENVIRONMENTAL STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

The student will be conversant with the

- various natural resources, availability, utilization and its current scenario
- different ecosystems, energy transfer, values, threats and conservation of biodiversity
- levels of different pollutants and its impact and the causes and effects of natural disasters
- impacts of human population, impact assessment, human rights and environmental acts and sustainable development

MODULE I NATURAL RESOURCES 8

Land resources: land degradation, soil erosion and desertification - Forest resources: use and over-exploitation, deforestation - Water resources: use and over-utilisation of surface and ground water, conflicts over water (inter-state and international), dams (benefits and problems), water conservation (rainwater harvesting and watershed management) - Mineral resources: use and exploitation, environmental effects of extracting and using mineral resources, mining - Food resources: world food problems, changes in land use by agriculture and overgrazing, modern agriculture and its effects, fertilizer and pesticide problems, water logging and salinity - Energy resources: increasing energy needs, renewable and non-renewable, use of alternate energy sources.

MODULE II ECOSYSTEM AND BIODIVERSITY 8

Ecosystem- energy flow in the ecosystem - food chains, food webs and ecological pyramids - characteristics, structure and function of (a) Terrestrial ecosystems (forest, grassland, desert) and (b) Aquatic fresh water ecosystems (pond, lake, river) (c) Aquatic salt water ecosystems (ocean, estuary) - ecological succession.

Biodiversity - genetic, species and ecosystem diversity – hot-spots of biodiversity –biogeographic classification of India - endangered, endemic, extinct and invasive species of India - red data book - values of biodiversity: consumptive, productive, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - conservation of biodiversity: in-situ and

ex-situ conservation of biodiversity

MODULE III ENVIRONMENTAL POLLUTION AND NATURAL DISASTER **8**

Definition, cause, effects and control measures of (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards - ill-effects of fireworks and upkeep of clean environment - solid waste management: types (urban, industrial, biomedical and electronic wastes), collection, processing and disposal (incineration, composting and land-fill) - natural disaster and management: flood, cyclone, drought, landslide, avalanche, volcanic eruptions, earthquake and tsunami.

MODULE IV HUMAN POPULATION, HEALTH AND SOCIAL ISSUES **6**

Population and population growth, population variation among nations, population explosion, family welfare programme.

Human health: air-borne, water borne diseases, infectious diseases, risks due to chemicals in food and environment.

Sustainable development - environmental legislation and laws: water act, air act, wildlife protection act, forest conservation act, environment protection act - environmental impact assessment, steps in EIA - human rights - women and child welfare.

TOTAL HOURS : 30

TEXT BOOKS:

1. Erach Bharucha, Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education for University Grants Commission, Orient Blackswan Pvt Ltd, Hyderabad, India, 2013.
2. Benny Joseph, Environmental Studies, Tata McGraw-Hill Education, India, 2009.
3. Ravikrishnan A, Environmental Science and Engineering, Sri Krishna Publications, Tamil Nadu, India, 2015.
4. Raman Sivakumar, Introduction to Environmental Science and Engineering, McGraw Hill Education, India, 2009.
5. Venugopala Rao P, Principles of Environmental Science and Engineering, Prentice Hall India Learning Private Limited; India, 2006.

6. Anubha Kaushik and Kaushik C.P., Environmental Science and Engineering, New Age International Pvt Ltd., New Delhi, India, 2009.

2. E.F. Brisham, " Fundamentals of Management. CBS International Editor-New Delhi, India
3. I.M. Pandey - " Financial Management" Vikas Publishing Private Limited, New Delh

OUTCOMES:

The student will know about financial markets and marketing operations through this course. He will knowledge about securities, mutual funds, portfolio management etc. He will know about the role of SEBI as a regulatory authority.

SEMESTER - IV

BLC 2201	**MANAGERIAL ECONOMICS**	**L**	**T**	**P**	**C**
		4	**1**	**0**	**5**

OBJECTIVES:

The aim is to strengthen the analytical skills of the students by integrating the theoretical knowledge with decision making.

MODULE I NATURE AND SCOPE OF MANAGERIAL ECONOMICS 15

Meaning, Nature and Scope - Scarcity- Choice and Allocation - Decision Making Techniques - Marginalism- Equi-Marginalism and Opportunity Cost- Risk and Uncertainties

MODULE II DEMAND ANALYSIS AND FORECASTING 10

Demand Theory- Types of Demand- Demand Elasticity - Elasticity of Demand and Marginal Revenue - Users of Elasticity - Decision Making - Estimation of Demand and Function - Demand Forecasting - Quantitative and Qualitative Techniques.

MODULE III PRODUCTION ANALYSIS 10

Production Function - returns of Factors - Production Decision - Isoquant-Isocost - Production Possibility - Expansion Path - Optimum Product Mix of Multy-Product Firm - C.S. Function.

MODULE IV COST, REVENUE AND PROFIT ANALYSIS 05

Cost Theories - Applications and Types of Costs - Derivation of Cost Functions - Revenue - Concepts- Functions - Break Even Analysis - Economics Scale vs. Economics of Scope. Profit Maximization- Vs Sales Maximization- Accounting Profit Vs. Economic Profit - theories of Firm.

MODULE V MARKET STRUCTURE AND PRODUCT PRICING xx

Features - Output - Princing Decisions in Different Markets- Equilibrium of Firm and Industry - Monopoly Power- Welfare Triangle - Pricing and Output Decisions- Differentiate Pricing - Mark up Pricing - government Ingtervention and Pricing.

TOTAL HOURS : 40

REFERENCES:

1. Rangarajan - Principles of Macro Economics

2. P.L. Mehta - Managerial Economics
3. Joel Dean - Managerial Economics
4. Stephen Robbins and Timothy Judge- Organisational Behaviour
5. Fired Luthana - Organisational Behaviour

OUTCOMES:

The student will have a grasp over functional economics in any business establishments with the above in-puts.

BLC 2202	JURISPRUDENCE	L	T	P	C
		4	1	0	5

OBJECTIVES:

Jurisprudence is the study of Law of the Law. Its philosophy and science. It clarifies legal concepts and concerns. Different Schools of Law and their relevance in the contemporary legal world.

MODULE I NATURE, DEFINITION AND SCHOOLS OF JURISPRUDENCE **12**

Nature and definition of jurisprudence – Analytical positivism, Natural law school, Historical school, Sociological school – Economic interpretation of law, Indian jurisprudence – Concept of dharma, PIL, social justice and compensatory jurisprudence.

MODULE I NATURE AND PURPOSE OF LAW **12**

Nature and definition of law, constitutional law and international law and their nature. Justice, critical studies, feminist jurisprudence and Art 142 of Constitution – The administration of justice.

4. Richte – Natural rights
5. Raphael D.D., Macmillan – Human Rights Old and New
6. R. Dworkin – Taking rights seriously
7. Dr. U. Chandra – Human Rights, Allahabad Law Agency
8. Paras Diwan – Human Rights and Law

OUTCOMES:

The student will learn about the evaluation, frame work of Human Rights Law at Global level in general and in Indian context in particular both in theory and practice.

BLC 3104 FINANCIAL MANAGEMENT L T P C
4 1 0 5

OBJECTIVES:

This course is all about financial management that includes capital structure - debts and equity proportion. This will help the student to calculate cost of capital and determine divided and various dividend models. Calculation of working capital requirement and forecasting the requirement.

MODULE I INTRODUCTION 10

Meaning, Objectives and Importance of Finance - Sources of Finance- Functions of Financial Management- Role of Financial Manager in Financial Management.

MODULE II CAPITAL 10

Capital Structures Planning - Factors Affecting Capital Structures- Determining Debt and Equity Proportion - Theories of Capital Structures - Leverage Concept.

MODULE III CAPITAL STRUCTURE 10

Cost of Capital- Cost of Equity - Cost of Preference Capital - Cost of Debt - Cost of Retained Earnings - Weighted Average or Composite Cost of Capital (WACC)

MODULE IV DIVIDEND 10

Dividend Policies- Factors Affecting Dividend Payment - Company Laaw Provision on Dividend Payment - Various Dividend Models (Walter's Gordon's - M.M. Hypothesis)

MODULE V WORKING CAPITAL 10

Working Capital- Components of Working Capital- working Capital Operating Cycle - factors Influencing Working Capital - Determining (or) Forecasting of Working Capital Requirements.

TOTAL HOURS : 50

REFERENCES:

1. I.M. Pandey, Financial Management
2. S.N.Maheswari - finacial Management
3. Dr. Radha - Financial Management
4. Dr. N. Premavathy - financial Management

5. Prasanna Chandra - financial Management
6. Y.Khan and Jain - Financial Management

OUTCOMES:

The student will learn about financial management, capital structures, dividend and related aspects through this course, which is essence of any business activity.

BLC 3105 PRACTICAL AUDITING

L	T	P	C
4	1	0	5

OBJECTIVES:

Auditing as a separate and distinct branch of study, involves critical and intelligent examination of financial 'health' of any business/corporate establishment. The process of Auditing is a safeguard against mal (mis)-functioning of any firm. the object of this course, student is expected to know about the process-method-analysis-of auditing to know, understand, improve and develop business operations.

MODULE I INTRODUCTION 10

Meaning-Definition of Auditing. Distinction between Auditing and Accounting.- Objectives - Advantages and Limitations of Audit - Scope of Audit- Classifications of Audit - Audit Planning, Meaning - Audit Programme, - Meaning Objectives and Contents- Audit Note Book, contents, Usefulness of Audit Note Book, Audit Working Papers, Meaning. Ownership and Custody- test Checking and routine Checking, Meaning - Internal Control, Meaning Definition, Objectives, Technique for Evaluation of Internal control System - Internal Check, Meaning, Objectives, Difference Between Internal Control, Internal Check and Internal Audit.

MODULE II PROCESS IN AUDITING 10

Vouching, Meaning and Definitions, Objectives- Trading Transactions - Audit of Ledger- Scrutinizing of Ledgers- Vouching of Cash Receipts and Payments - Vouching of Outstanding Assets and Liability - Verification, Meaning objectives and Process - valuation of Assets and Liabilities - Distinction between Verification and Valuation.

MODULE III DEPRECIATION 10

Depreciation and Reserves - Meaning - Auditor's Duty with regard to Depreciation - reserves and Provisions - Distinguish Reserves and Provision - Depreciation of Wasting Assets.

MODULE IV AUDITOR 10

Appointment of Auditors- Appointment of First Auditor - Appointment by Central Government - Filling of Casual Vacancy - Appointment by special Resolution- Reappoingtment and Compulsory Re-Appointment- Ceiling on the number of Auditors - removal of Auditor - Remuneration - Auditors Lien - qualification and

Disqualification - duties of the Company Auditor - Rights and Powers of Auditors - Different Classes of Auditors - Audit Report - Preparation and Presentation.

MODULE V ELECTRONIC DATA PROCESSING (EDP) 10

EDP Audit - Meaning - Division of Auditing in EDP environment - Impact of Computerization on Audit Approach - Online Computer system Audit - types of Online computer Systems - Audit Around with the Computers - Procedure of Audit under EDP System.

TOTAL HOURS : 40

b. Legislative function–Quasi Legislative functions – Administrative Directions.

c. Judicial function – Quasi Judicial functions – Tribunals and Administrative Justice

d. Executive function – Ministerial functions and discretionary functions.

MODULE II DELEGATED LEGISLATION 10

Meaning, Nature, Origin, Development and causes of growth of delegated legislation, Types of Delegated Legislation and Constitutionality of Delegated Legislation-Delegated Legislation and Conditional Legislation, Sub-Delegation-Restraints on Delegation of Legislative Power, Doctrine of Excessive Delegation-Control over Delegated Legislation – Judicial, Procedural and Legislative Control-Administrative directions and Delegated Legislation

MODULE III PROCEDURAL FAIRNESS AND JUDICIAL REVIEW 10

A. Principles of Natural Justice

Concept, Parameters and application of the Principles of Natural Justice-Rule against Bias-Audi Alteram Partem or the Rule of Fair Hearing – Meaning, Object, Ambit and Ingredients of Fair Hearing, Institutional Decision, Post-Decision Hearing-Reasoned Decisions- Exceptions to the Rule of Natural Justice-Effects of Breach of Natural Justice

B. Administrative Process and Judicial Review

1) Meaning and need for Judicial Review

2) Scope of Judicial Review

Jurisdiction of the Supreme Court -Writ Jurisdiction-Appeal by Special Leave (Art. 136)-Scope and Object of Article 136- Jurisdiction of the High Court

3) Judicial Review of Administrative Action through Writs- cope of the Writ Jurisdiction -Against whom the Writ lies-Territorial extent of Writ Jurisdiction -Relief against an Interim Order – Interim Relief [Art. 226(3)]-*Locus-standi*-Kinds of Writ -Grounds for issue of Writs

4) Principles for the Exercise of Writ Jurisdiction Alternative Remedy-Laches or Dela-*Res Judicata*

5) Public Interest Litigation and *Locus-Standi*

6) Doctrine of Legitimate Expectation and Doctrine of Proportionality

C. Statutory Remedies

a) Injunction- Declaration against the Government - Exclusion of Civil Suits

D. Privileges and Immunities of Government in Legal Proceedings

Privilege to withhold documents - Miscellaneous Privileges of the Government-Notice, Limitation, Enforcement of Court Order- Binding nature of Statutes over the States action-Promissory Estoppel- Right to Information

E. Judicial Control of Administrative Discretion

Meaning, Nature and need of Administrative discretion -Ground and Extent of Judicial Review -Fundamental Rights and Discretionary Powers

F. Liability of the State

Liability of the State in Torts and Contracts.

MODULE IV OMBUDSMAN, LOKPAL, LOKAYUKTA AND CENTRAL VIGILANCE COMMISSION 10

Meaning, Object, Main characteristics, Need and Utility-Origin and development of the Institution -Ombudsman in New Zealand- Ombudsman in England (Parliamentary Commissioner)- Ombudsman in India –Lokpal-Lokayukta in States-Central Vigilance Commission

MODULE V ADMINISTRATIVE TRIBUNALS AND PUBLIC UNDERTAKING **10**

(A) Administrative Tribunals

Meaning, Nature, Main characteristics, Origin and development (U.S.A., U.K. and India)-Franks Committee- Tribunal and Court, Similarity and Difference-Reason for growth of Administrative Tribunals-Merits and Demerits of Administrative Tribunal-Procedure and powers of Administrative Tribunal (U.K., U.S.A. and India)-Tribunal under Constitution -High Court's Superintendence over Tribunals-Appeal to Supreme Court by Special Leave-Working of the Administrative Tribunal Administrative Tribunals under Administrative Tribunals Act, 1985-Administrative Procedure Act in U.S.A.-Domestic Tribunal

(B) Public Undertaking

Object, Importance, Characteristics, Classification, Reason for the growth -working of Public Corporations-Rights, Duties and Liabilities of Public Corporations-Controls over Public Corporations, Government Control, Parliamentary Control, Judicial Control, Public Control-Role of Ombudsman in Public Undertaking

TOTAL HOURS : 60

REFERENCES:

1. M.P. Jain and S.N. Jain – Principles of Administrative Law
2. S.P. Sathe – Administrative Law
3. I.P. Massey – Administrative Law
4. C.K. Takwani – Administrative Law
5. Kailash Rai - Administrative Law
6. Wade – Administrative Law
7. De Smith – Administrative Law
8. Foulkes – Administrative Law
9. Indian Law Institute – Cases and Material of Administrative Law
10. Markose – Judicial Control of Administrative action
11. Griffith and Street – Administrative Law
12. Report of the Law Commission – First Report Second Report –
13. Fourteenth Report

OUTCOMES:

Student will learn how to protect the common man or a little man from administrative excesses. He knows various methods and forums to protect the legal interests of a common man. He knows the methods and techniques to keep the administrative authorities within their limits to ensure Rule of Law and Constitutional Governance.

BLC 3204 PROFESSIONAL ETHICS AND BAR BENCH RELATIONS AND ACCOUNTANCY FOR LAWYERS (CLINICAL COURSE - I)

L	T	P	C
2	1	2	5

OBJECTIVES:

The object of this course is to familiarize the student about ethics to be followed in Legal Profession. Bar and the Bench are equally important in justice dispensing system and certain Do's and Don'ts were prescribed. The student will study as many as 50 selected decisions of the Bar Council of India on professional ethics. The paper is divided into four modules

MODULE I PROJECT ON PROFESSIONAL ETHICS

Student has to write 50 selected decisions of Bar Council of India on the matters relating to Professional Ethics- Disciplinary Proceedings. It is written submission of record. (50 Marks)

MODULE II LECTURE SESSIONS 20

Lecture sessions will be arranged with Practicing Advocates, Senior Advocates and Teaching Faculty on Profession, Ethics, Need and Purpose, Accountancy for Lawyers, and Important decisions of Supreme Court, High Courts and Bar Council of India Disciplinary Proceedings.

MODULE III INTERNAL EXAMINATION

Internal Examination will be held for marks 25 on the subjects discussed

MODULE IV VIVA VOCE EXAMINATION

Viva Voce Examination for 25 marks.

TOTAL HOURS : 20

REFERENCE:

1. Mr. Krishna Murtyiyer - 'Advocacy'
2. Indian Bar Review: Selected Disciplinary Proceedings
3. The Contempt Law And Practice
4. The Bar Council Of India Code Of Ethics.

OUTCOMES:

Student will learn court etiquette, ethics to be observed in profession and consequences of non-observance of professional conduct.

BLC 3206 CUSTOMS AND EXCISE LAWS L T P C
4 1 0 5

OBJECTIVES:

The main source of government revenue is Excise and Customs Duty. The mode of levying, assessing and collection of Tax is the essence of this Course. Now the trade is global and tax matters need to be balanced between the State and the assesses. The whole process is prone to give rise of 'litigation'. It is essential to have basic knowledge about these twin tax laws.

MODULE I INTRODUCTION 10

Constitutional Law Principles - Art. 265 - 286 - Relevant Entries of VII Schedule of the Constitution of India.

MODULE II CUSTOMS ACT - PRELIMINARY 10

Definitions - Officers - Customs Ports, Airports, Warehouses- Regulations- Prohibition on import and export - Prevention and detection of illegal import - Notified goods - Prevention and detention of illegal export - specified goods - Indicating amount of duty in the price of goods- regulations on Conveyances carrying imported and exported goods - Clearance of imported and exported goods - Regulations relating to Warehouses - government or Certified ware houses.

MODULE III CUSTOMS ACT- LEVY AND COLLECTION 10

Dutiable Goods - Valuation of Goods- Exemption Determination - Abatement - Remission - Assessment of Duty-Refund of Duty - Customs Clearance- Recovery of Duty - Advance Rulings - Duty During Transit - Duty Drawback- Special Economic Zones - coastal Goods - Baggage.

MODULE IV CENTRAL EXCISE ACT 10

Basic Concepts - Basic conditions of Liability - Definitions- Levy and Collection of Excise Duty- amount of Duty - valuation of Methods of Excisable Goods - Remission of Duty - Indicating Amount of Duty in the Price of Goods - Power to Grant Exemption from Duty - CENVAT- Credit- Registration - Restriction on Possession of Goods- Presumption Advance Ruling - Assessment od Duty (Rules) special Economic Zone.

MODULE V ENFORCEMENT UNDER CUSTOMS ACT & CENTRAL EXCISE ACT 10

Power of Search , Seizure, Arrest, Confiscation and Penalty under both Acts -

Settlement of Cases- Appeal - Appellate- tribunal - Revision by Central Government - Appeal Supreme Court

TOTAL HOURS : 50

REFERENCES:

Acts:

1. Banerjea and Mukerjea - Central Excise Manual
2. Datey (Taxman) guide to Central Excise Procedures
3. P.L. Malik - Customs Act
4. Kapin Singhania (Taxman) - Customs Tariff in India

6. Kapil Singhania - Central Excise TYariff
7. Bharat's Service Tax Manual
8. Bharat's- guide to GST Regime
9. Mukerjea - Customs Act
10. Customs Manual

OUTCOMES:

Student will learn about two important tax legislations through this course. He will know about the legal mechanism as well as enforcement machinery of these two legislations.

SEMESTER VII

BLC 4201	TRANSFER OF PROPERTY LAW	L	T	P	C
		4	1	0	5

OBJECTIVES:

This course will explain about transfer of immovable properties between living persons. It covers various principles of transfer of property and doctrines for specific transfer. The Easement Act explains various modes of acquisition of easementary rights and its end.

MODULE I GENERAL PRINCIPLES OF TRANSFER 10

Concept of Property- Definition of Transfer of Property - Kinds of Interest - Conditional Transfer - Doctrine of Election - Ostensible Owner- Bonafide purchase- Lis Pendens- fraudulent Transfer - Doctrine of Part Performance and other General Principles of Transfer.

MODULE II SPECIFIC TRANSFERS - TRANSFER OF ABSOLUTE INTEREST 10

Sale: Definition of Sale- rights Liabilities of Seller and Buyer

Gift: Definition of Gift: Definition - Onerous Gift - Universal Donee- Death Bed Gift- Suspension and Revocation of Gift-Exchange:

MODULE III TRANSFER OF LIMITED INTEREST - SPECIFIC TRANSFER 10

Mortgage: Different kinds of Mortgages - Redemption - Clog on Redemption- Partial Redemption- Rights and Liabilities of Mortgagor and Mortgagee including Doctrine of Consolidation - Marshalling - Contribution- Subrogation: Charge: Lease: Different Rights and Liabilities of Lessor and Leasee- Determination of Lease- Doctrine of Holding Over; Actionable Claim

MODULE IV INDIAN EASEMENT ACT 10

Definition - Acquisition of Easement- Easement of Necessity and Quasi Easements - Easement by Prescription - Exinction - suspension and Revival of Easements and License

MODULE V INDIAN REGISTRATION ACT AND STAMP ACT 10

Registration its validity- Consequences of Non- Registration- Procedure to Registration of Transfer of Property- Valuation - Stamp-

TOTAL HOURS : 50

REFERENCES:

1. Vepa P. Saradhi: Law of Transfer of Property Act
2. Shah: Principles of Transfer
3. G.C.V.Subba Rao - Law of Property
4. Mitra B.B. Transfer of Property
5. Goyle - Transfer of Property
6. C.L. Gupta - Law of Transfer of Property
7. Khatiar - Law of Easements

OUTCOMES:

Transfer of immovable property between living persons is often tend to lead to litigation. This student will know the basic law that governs transfer of property between living persons and registration process.

➢

BLC 4102 INTELLECTUAL PROPERTY LAW

L	T	P	C
4	1	0	5

OBJECTIVES:

The Course intends to introduce different categories of Intellectual Property, the minimum standard to identify the 'issues' of protection. It exposes the student on the procedural requirements for the acquisition of rights under IPR. It may a copy right, patent, Trade Mark or Industrial Design. In case of any violation or infringement of the 'Rights Conferred' under I.P.R, the remedies available to the 'Claimant' will also be studies.

MODULE I INTELLECTUAL PROPERTY 15

Meaning and Concept of Intellectual Property - Need for Protection - The World Intellectual Property Organization (WIPO) Convention - Origin and Functions of World Trade Organization (WTO) -Trade Related Intellectual Property Rights (TRIPS) Agreement of WTO and its effects on Intellectual Property Law in India, Dispute Settlement Mechanism.

MODULE II PATENTS 15

The Patents Act 1970 - Object - Definitions - Salient Features - Patentable and Non-Patentable Inventions. Product Patent, Process Patent-Persons entitled to apply for Patents, Provisional and Complete Specifications, Opposing grant of Patent, Secrecy in certain inventions - Patent Office- Powers of Controller - Grant and Sealing of Patents- Rights of Patentees- Rights of Co-Owners of Patents- Term of Patent- Patents of Addition, Assignment and Transmission- Registrar of Patents- Amendment of Applications and Specificants, Restoration of Lapsed Patents- Rights of Patentees of Lapsed Patents which have been Restored, Surrender and Revocation of Patents- Compulsory Licenses, Exclusive Marketing Rights, Licenses of Right, Acquisition of Inventions by Central Government - Remedies for Infringement of Patents - Patent Agents, Scientific Advisers, International Arrangements - International Law - Rights of Plant Breeders and Farmers- National Law on Biological Diversity.

MODULE III TRADE MARKS 15

The Trade Mark Act (1999), Object, Definition, Salient Features, Marks Registrable and Non- Registrable, Conditions for Registration, Absolute and Relative Grounds for Refusal of Registration, Procedure for, and Duration of Registration. Effects of Registration - Powers and Functions of Registrar -

Distinctiveness, Deceptive Similarity, Concurrent Registration, Rectification and Correction of Registrar, Assignment and Transmission - Use of Trademarks and Registered Users, Collective Marks, Registration of Certification of Marks, Trade Mark Agents- Appellate Board - Infringement Action, Passing Off, - International Treaties - Geographical Indication of Goods(Registration and Protection) Act (1999) Objects, Definitions, Conditions for Registration, Prohibition of Registration of Certain Geographical Indications Procedure for and Duration of Registration - Effects of Registration - Special Provisional Relating to Trademark and Prior Users, Remedies for Infringement, International Law.

MODULE IV COPYRIGHT 10

The Copyright Act, (1957) and Recent Amendments: Works in which Copyright Subsists; Meaning of Copyright; Ownership and Rights of the Owner; assignment; Term of Copyright, Powers and Functions of Copy Right Board- Registration of Copyright; Compulsory Licenses; License to Produce and Publish Translations, Copyright Societies- Rights of Broadcasting Organisations and of Performers - International Copyright - Acts Constituting and not Constituting Infringement; Remedies for Infringement.

MODULE V INDUSTRIAL DESIGNS 05

The Designs Act 2000- Definitions - Registration of Designs - Copyright in Registered Designs - Piracy of Registered Designs - Remedies - Powers and Duties of Controller- International Law - Semi Conductor Integrated Circuit Layout.

TOTAL HOURS : 60

REFERENCES:

Acts:

1. The Patent Act, 1970, The Trade Marks Act, 1999, The Copyright Act,1957, The Designs Act, 2000
2. Dr. S.R. Myneni - Law of Intellectual Property
3. P.Narayana - Intellectual Property Law in India
4. Dr.B.L. Wadehra - Law relating to Patents, Trademarks, Copyright, Design and Geographical Indications.
5. Vikas Vashisht - Law and practice of Intellectual Property in India
6. W.R. Cornish - Cases and Materials on Intellectual Property

7. Allison Comkeman- The Legal Proction of Trade Secrets
8. David I. Bainbridge - Intellectual Property
9. Arad Sherman and Lionel Bently - the Making of Modern Intellectual Property Law

OUTCOMES:

Student will get an idea of IPR legal frame-work in respect of Patents, Trademarks, Copyright and Industrial Designs- Practices and Procedures in filling. Remedies available in case of any violation/ infringement

BLC 4103 LABOUR LAW II

L	T	P	C
4	1	0	5

OBJECTIVES:

Concept of Social Security is based on ideals of human dignity and social justice. The quest for Social security and freedom from want and distress has been the consistent urge of man through ages. Social Security is part of social justice. The core objective of this course is to explain various Social Security and Welfare Legislations in India.

MODULE I SOCIAL SECURITY AND LABOUR WELFARE 10

Concept- Evolution and Constituents of Social Security - Object of social Security Laws - Social security and Constitution of India- ILO on Social security

MODULE II SOCIAL SECURITY : INDUSTRIAL INJURIES 10

The Employees' Compensation Act, 1923 - Scope and Objects- coverage and Definitions - Liability of the Employer to Pay compensation - Personal Injurty, Accident arising out of and in the course of employment, Doctrine of Notional Extension and Occupational Diseases - Determination and Distribution of Compensation - Principle employer's Right of Indemnity- commissioner's Powers and Functions.

MODULE III SOCIAL SECURITY 10

The Employee's state Insurance Act, 1948: Objects, application and 'seasonal Facgtory' Definition - E.S.I. Corporation - E.S.I. Funds - Payment of Contributions - ESI Benefits - Adjudication of Disputes - ESI Court - Penalties.

MODULE IV OTHER SOCIAL SECURITY LEGISLATIONS 10

The Maternity Benefits Act, 1961; Object and Application - Eligibility and Maternity Benefits - Notice of Claim Prohibition against Dismissal, wage Deduction - Powers and Duties of Inspectors

Employees Provident Funds and Miscellaneous Provisions Act, 1952; Scope, Coverage, Application and Definitions - Authorities, their Powers and Functions Contributions - employees Provident Fund Scheme. Employees' Pension Scheme and Deposit Linked Insurance Scheme - Penalties.

Payment of Bonus Act 1965:

Bonus Commission - Definitions and Coverage - Kinds of Bonus- Calculation of Bonus- Available Surplus, allocable Surplus, Set on and set Off- Forfeiture of

Bonus- Prior Charges- Machinery

Payment of Gratuity Act, 1972: background, Object and definitons - Eligibility for Payment of gratuity- Forfeiture, Exemption, Determination- Controlling Authority- Penalties.

MODULE V LABOUR WELFARE LEGISLATIONS 50

Factories Act, 1948: Background and Definitions - Formalities to start a Factory - Health, Safety and Welfare Measures- Working Hours - Employment of Young Persons - Annual Leave with Wages - Special Provisions.

The Tamilnadu Shops and Establishment Act, 1947: Applicability and Persons covered by this Act- Opening and Closing Hours, Employment of Young Persons- working Hours- Public Holidays- Safety- and Cleanliness - Leave and Annual Leave with Wages.

TOTAL HOURS : 50

REFERENCES:

1. S.N. Mishra - Labour and Industrial Laws

3. Madhavan Pillai - Labour and Industrial Law
4. S.C. Srivastava - Social Security and Labour Laws
5. K.D. Srivastava - The Employees' Compensation Act,1923 and The Employees' Provident Funds and Miscellaneous Provision Act,1961, The Payment of Bonus Act,1965, Payment of Gratuity, 1972, Factories Act,1948.

OUTCOMES:

The student will learn about various legislations that govern Social Security aspects of Industrial workers.

BLC 4104 LAW OF BANKING L T P C
4 1 0 5

OBJECTIVES:

Focus of this course will be on 'Banking' its regulation through legislations. In the era of Globalisation the Banking Sector registered a tremendous growth along with a host of problems. Student will learn about RBI regulations. Recent changes in NI Act etc.

MODULE I INTRODUCTION 10

History of Banking – Different types of Banks including foreign companies – Nationalisation of major banks.

RBI's control over commercial banks – Special status of RBI and State Bank of India – Subsidiary Banks.

MODULE II LEGAL CONCEPTS OF BANKER VS CUSTOMER 10

Definition of Banker & Customer and relationship between them – Special types of customer – Banker as Borrower – Different types of accounts – Duties and rights of the Bankerand different types of instruments – Banker – Paying Banker and Collecting Banker.

MODULE III BANKING AND RELATED ACTIVITIES 10

Subsidiary business operations of bankers with special reference to Safety Deposit Lockers – Liability of Banker in case of bank robberies and fraud by bank employees – Vicarious liability of the bank employees – Vicarious liability of the bank – Recovery of loans and advances – Recovery of debts due to banks, Financial Institutions Act, 1993.

MODULE IV BANKERS OMBUDSMAN AND DRT 10

Effect of winding up of Banking Companies – Rights of customers on winding up of companies – Necessity for reforms in Indian Banking Law to meet global challenges – Banking ombudsman – Debt Recovery Tribunal – SARFAI Act.

MODULE V NI ACT AND ITS RECENT AMENDMENTS 10

Definition and characteristics – Parties to negotiable instruments – Presentation – Negotiation

discharge and dishonour – Liability – Various kinds of crossing – effect of crossing of cheque –Rights of holder and holder in due course against Banker – Civil and criminal liability for dishonour of cheques under Section 138 to Section 142 of the

Amended Negotiable Instruments
Act.

TOTAL HOURS : 50

REFERENCE:

1. Tannan's – Banking law and Practice in India (India Law House, New Delhi)
2. Bhashyan & Adiga – Negotiable Instruments (Bharat Law House Pvt. Ltd., New Delhi.)
3. Sir John Paget - Law of Banking
4. H.P. Sheldon - The Practice and Law of Banking

OUTCOMES:

Through this course, the student will learn about the law that governs banking activities.

BLC 4105 ALATERNATIVE DISPUTE RESOLUTION MECHANISM (Clinical Course II)

L	T	P	C
2	1	2	5

OBJECTIVES:

This course offers an opportunity to know the mechanism to settle the legal issues through alternative methods like Arbitration, Negotiation and Conciliation. Students is expected to acquire certain skills in this regard. Course is designed to simulate the student mind.

MODULE I ARBITRATION **15**

Case Study in Arbitration Center (Practical/Simulation Exercise)
(Three exercises 10 marks each; 30 marks

MODULE II VIVA VOCE/ PRESENTATION OF CASES OBSERVED **10**

The student has to present the cases he observed- and he has to face viva-voce on case studies (10 marks)

MODULE III INTERNAL EXAMINATION ON THE SUBJECT **10**

Internal Examination will be held on ADR. (it is for 10 marks)

SUBMISSION OF RECORD ON ADR- ON INTERNATIONAL ARBITRATION- ARBITRATION ACT- RULES ETC. (50 MARKS) **10**

TOTAL HOURS : 50

REFERENCES:

1. O.P. Malhotra and Indu Malhotra - Arbitration to Conciliation
2. P.C.Markanda - Law Relating to Arbitration and Conciliation
3. Justice Dr. B.P. Saraf and Justice S.M. Jhunjhunwala - Law of Arbitration and Conciliation.
4. S.K. Chawla - Law of Arbitration and Conciliation

SEMESTER VIII

BLC 4201	**COMPETITION LAW**	**L**	**T**	**P**	**C**
		4	**1**	**0**	**5**

OBJECTIVES:

Competition Commission of India came into existence replacing Monopolies Restrictive Trade Practices Commission. The objective of the course is to ensure the student should know the legal dimensions of Competition Law and functions of Competitive Commission of India that ensures fair trade practices and facilitates healthy competition in the business arena. Student will know about Anti-Competition Policies.

MODULE I INTRODUCTION 15

Objective and Nature of Competition Laws- Origin of Competition Laws- Anti Trust Legislation in USA. UK Competition Act, 1998- MRPTAct,1969- Raghavan Committee Report 2000,Competation Act-2002, Distinction between Competition Act Vs MRTP Act, Object and Scope of Competition Act,2002.

MODULE II ANTI COMPETITIVE AGREEMENTS 10

Definition - Tie in Arrangement - Exclusive Supply Agreement - Exclusive Distribution Agreement - Refusal to Deal - Resale Price Maintenance - Cartel - Bid rigging Exceptions - Protection of IPR.

MODULE III ABUSE OF DOMINANT POSITION 10

Meaning of Dominant position - Unfair or Discriminatory trade Practices - Provisions under MRTP and Consumer Protection Act - Limiting Protection or Technical or Scientific Supplementary Obligations- Protection of other Markets - Predatory Price - Unfair Prices.

MODULE IV REGULATION OF COMBINATIONS 10

Acquisition - Merger - Amalgamations - Ban on Combinations - Non Competition Clauses in Merger and Acquisition - Restrictive Trade Practices - Unfair Trade Practices.

MODULE V COMPETITION COMMISSION OF INDIA 10

Composition - Duties, Power and Functions of the Commission - Contraventions of the Orders of the Commission - Penalties- Competition Appellate Tribunal- Competition Advocacy - Miscellaneous. Important guidelines and cases decided

by Competition Commission of India.

TOTAL HOURS : 55

REFERENCES:

Acts:

1. MRTP Act, 1969

- Alan Bopyle and Patricia Bernie - International Law and Environment
- Philippe Sands - Principles of International Environmental Law
- Elli Louka - International Environmental Law
- R.N. Choudhry - Law of Forests in India

OUTCOMES:

This course will help the student to understand legal and regulatory mechanism in place. With all clarity on concepts of pollution, protection, conservation and the Doctrines enshrined by the Supreme Court of India-it enrich the students knowledge base.

BLC 4203 MARITIME LAW

L	T	P	C
4	1	0	5

Objectives

The object of this course is to introduce the basics of Indian Maritime Law to the students. Maritime Law gaining significance as a separate branch of law. Student will know about Admiralty Law, The Merchant Shipping Act, 1958- International treaties, Conventions and Protocols relevant to Indian Maritime Law and their applicability. Law governing Marine Pollution, Marine fishing etc

.

MODULE I INTRODUCTION TO ADMIRALTY 10

Admiralty Act- Admiralty Jurisdiction of High Courts- International Convention for Arrest of Ships, Wrongful arrest - release from Arrest- Security for Release from Arrerst - Action in Rem; Action in Personam in Maritime Context- Maritime Claims, Limkitation of Liability, Damage done by or to a ship, Salvage, Loss of Life or Personal Injury- recent Admiralty Act- its salient features.

MODULE II THE MERCHANT SHIPPING ACT-1958 10

The Merchant Shipping Act-1958 - Structure of Shipping Administration in India- DG of Shipping- Mercantile Marine Department, Surveyors, Seamen's Welfare Officers - Major and Minor Ports, Application of National and State Laws at Ports- Registration of Indian Ships- Transfer of Ownership - National Character and Flag.

MODULE III INTERNATIONAL LAW AND CONVENTIONS 10

International Treaties, Conventions and Protocols relevant to Indian Maritime Law, their objectives applicability and legal status. Maritime Legislation based on these treaties, Conventions and Protocols-

MODULE IV MARINE POLLUTION 10

International Convention on the Prevention of Marine Pollution by Dumping of Waste Convention-1972- Maritime Lien

MODULE V MARINE FISHING 10

Jurisdictional issues and relevant provisions under Indian Laws- The Territorial Waters, Continental Shelf, Exclusive Economic Zone and Maritime Zones Act-1976 - The Maritime Zones of India (Regulation of Fishing by Foreign Vessals) Act,1981- Suppression of Unlawful Acts Against Safety of Maritime Navigation

and Fixed Platforms on Continental Shelf Act,2002

TOTAL HOURS : 50

REFERENCES:

Acts:

1. The Merchant Shipping Act, 1958
2. The Territorial waters, Continental Shelf, Exclusive Economic Zone and other Maritime Zones Act, 1976
3. the Maritime Zones of India (Regulation of Fishing by Foreign Vessels) Act,1981
4. Suppression of Unlawful Acts Against Safety of Maritime Navigation and Fixed Platforms on Continental Shelf Act,2002
5. Fisheries Act
6. International Convention on the Prevention of Marine Pollution by Dumping of Waste Convention,1972
7. United Nations Convention on the Law of the Sea (UNCLOS)

OUTCOMES:

Basics of Maritime Laws will be known to the student in respect of marine fishing, marine pollution, International obligations, merchant shipping etc. He will be familiar with jurisdictional issues relating to the Sea.

BLC 4205 INTERNATIONAL TRADE LAW

L	T	P	C
4	1	0	5

OBJECTIVES:

In the Era of LPG, Trade is global. In the context of world economic integration and the new order it is essential to know the International Trade Regime, International Trade Agreements - International Trade Practices and various bilateral and regional agreements in place. The student will learn- regulatory mechanism, dispute settlement bodies. This course offers basic inputs in the International Trade Law.

MODULE I GENESIS OF INTERNATIONAL TRADE LAW 10

Origin and Development - Theories - UN XConventions - Unification of International Trade Law- International Commercial Contracts- International sale of Goods - foreign Direct Investments(FDI) - Transnational Companies - Electronic Business Transactions - Elements of International Taxation - Risk Analysis of International Trade.

MODULE II INTERNATIONAL ECONOMIC INSTITUTIONS 10

Structure and Functions of International Economic Institutions - International Trade Organization(ITO)- WTO- GATT- New International Economic Order (NIEO)- International Monetary Fund (IMF)- International Bank for Reconstruction anhd Development (IBRD)- International Investments.

MODULE III WORLD TRADE ORGANISATION 10

Structure and Functions of WTO. Covered Agreements- Subsidies- Dumping and Anti-Dumping- General Agreement of Trade and Services (GATS)- Trade Related Intellectual Property Rights (TRIPS), Trade Related Investiment Measures (TRIMs), Trade in Agriculture- Technical Barriers of Trade (TBT)- UN Committee on Trade and Environment (UNCTE)- UN Committee on Trade and Development (UNCTAD)- Summits of the WTO.

MODULE IV BILATERAL AND REGIONAL TRADE 10

Regional Arrangements under the UN - Most Favoured Nation (MFN) Clause- South Asian Association for Regional Cooperation (SAARC)- Association for South Eastern Asian Nations (ASEAN)- European Union (EU)- Organisation for Petroleum Exporting Countries (OPEC)- North American Free Trade Agreement

(NAFTA)- South Asian Free Trade Agreement (SAFTA)

MODULE V SETTLEMENT OF DISPUTES IN INTERNATIONAL TRADE **10**

Methods of Dispute Settlement - Alternative Dispute Resolution (ADR) and International

Trade- UNCTRAL-International Arbitration, Conciliation, Mediation and Litigation - Online Dispute Resolution- Dispute Settlement Body in WTO - Appellate Body (AB)- Consultation - Trade and Environment Controversies- Enforcement and Compliance

TOTAL HOURS : 50

REFERENCES:

1. Dr.Myneni SR - International Trade Law

10. Petersmann, Ernst Ulrich - The GATT/WTO Dispute Settlement Systems: International Law, International Organisations and Dispute Settlement

OUTCOMES:

Student will learn the basic frame-work of International Trade Regulation-varies Agencies- their role and functions. Student will learn about 'Dispute Settlement Mechanism'. It provides basic understanding on issues relating to International Trade Law.

BLC 4205 CYBER LAWS AND FORENSIC

L	T	P	C
4	1	0	5

OBJECTIVES:

In this digital era, the regulatory framework analysis has become vital. This course helps in understanding the regulations relating to E-Contracts, E-Banking, Intellectual Property Issues, Cyber Crimes and E-Taxation. The course intends to analyze the need of cyberspace regulation both Jurisdictional and Jurisprudential aspects of Cyberspace.

MODULE I INTRODUCTION **10**

Cyber Space Introduction and UNCITRAL Model Law- Information Technology Act, 2013 with recent Amendments- Jurisdictional Issues- Digital Signatures- Regulation of Certifying Authorities- Cyber Regulation Appellate Tribunal.

MODULE II ON LINE CONTRACTS **10**

Formation of Online Contracts- E-Banking transactions-Online Payment Options- Online Advertising- Electronic and Digital Signature- Taxation Issues in "Cyber Space- Indirect Tax- tax Evasion- Double Tax- International Tax- Permanent Establishment- Protection of Trade secrets and Deceptive Trade Practices.

MODULE III CYBER CRIMES **10**

Understanding Cyber Crimes- Actus Reus and MensRea- Types of Crimes in the Internet- Against Person, Against Property, Against Government- Digital Evidence- Investigation and Adjudication of Cyber Crimes in India- Cyber Arbitration - Cyber Conflict Investigation.

MODULE IV INTELLECTUAL PROPERTY RIGHTS AND CYBER SPACE **10**

Copy Right issues in the Internet - Protection of Computer Software- Caching- International Regime - OSS- DMCA- DATA PROTECTION DIRECTIVES- Trademark Issus in the Internet - Domain Name; Registration- Domain Name- Registration- Domain Name Dispute- ICANN -UDRP Policy- Linking - Framing - Met tagging - Database issues in the internet.

MODULE V CONTEMPORARY ISSUES **10**

Convergence Technologies- Cloud Computing - Online Digital Libraries -

Access to Internet - A Human Right Issue - Issue of Censorship - Privacy issues - National Security and Social Security.

TOTAL HOURS : 50

REFERENCES:

1. Nandan Kamath **-** Law relating to Computer- Internet and E-Commerce.

3. Rahul Mahathan - The Law relating to Computer and Internet.
4. Justice Yatindra singh - Cyber Laws
5. Edtu Chris reed and Joh Angel - Computer Law
6. Roger Leroy Miller & Gaylord A. Jentz - Law for E-Commerce

OUTCOMES:

The Student will know and understand the Cyber related Law, regulatory mechanism and cyber crimes. He can follow the ongoing developments and cyber related issues.

SEMESTER IX

BLC 5101 LAW OF INSURANCE

L	T	P	C
4	1	0	5

OBJECTIVES:

The focus of this course is to explain legal dimensions of Insurance Contract in respect of its formation, performance and discharge. As the Insurance sector is opened for private players as part of reforms significant changes have taken place. The IRDA apex regulatory body is striving to balance the interests of the general public and the insurance companies.

MODULE I INTRODUCTION 10

.Insurance Meaning -Risk Management _ Kinds of Risks- Insurable Interest- Insurance and Assurance- Parties of Insurance- Insurance and Contract Law- Principles of 1. Uberrimae fidae, 2. Indemnity, 3. Subrogation, 4. Contribution, 5. Proximate Cause - Cover Note and Slip.

MODULE II FIRE INSURANCE CONTRACT 10

Meaning of the term "Fire" - Fire Policies- Perils Insured- Fire Claims- Scope of Applicability of Special Principles to Contract of Fire Insurance. Standard Fire Policy ' Average' in Fire Insurance Contract.

MODULE III MARINE INSURANCE CONTRACT 10

Significance of Marine Insurance- Maritime Peerils- Subject matter covered by Marine Policy- KInds of Marine POlicies - Scope and Applicability of Special Principles to Contract of Marine Insurance - Principles of 'Change of Voyage' and 'Deviation' - Total Loss - Partial Loss- Marine Insurance Act 1963 with special reference to Bill of Lading and Counter Part.

MODULE IV LIFE INSURANCE CONTRACT 10

Introduction- Concept- Life Insurance-Significance-Kinds-Extent of apaplicability of Special Principles to Life Insurance. 'Suicide" clause. 'Medical insurance' policies. Assignment and Nomination- Constitution. IRDA- Role and Functions

.

MODULE V MOTOR VEHICLE INSURANCE 10

Introduction- The MV Act-1988. Compulsory III Party Insurance of Motor Vehicles- No Fault Liability- Motor Accident Claims Tribunals.

TOTAL HOURS : 50

REFERENCES:

1. KVS Sarma: Modern Law of Insurance
2. M.N.Srinivasan- Law of Insurance
3. Srinivasan and Murty: Law of Insurance
4. Haardy Ivany- Law of Insurance

OUTCOMES:

Student will learn the concept of Insurance and how it penetrated into various facets. They will learn about Life Insurance, Marine Insurance and Fire Insurance. Student will understand the role and functions of IRDA that regulates Insurance sector in India.

BLC 5102 **LAW OF CRIMES II** **L T P C**

CRIMINAL PROCEDURE CODE &

JUVENILE JUSTICE

4 1 0 5

OBJECTIVES:

The law of Criminal Law is indented to provide a mechanism for the enforcement of criminal law. Without proper procedural law, the Substantial Criminal law which defines offences and provides punishments for them would be almost worthless. Every threat does not deter. Without deterrent effect, the Criminal law will have hardly any meaning or justification. Thus the law of Criminal Procedure is meant to be complementary to Criminal Law and has been designated to ensure the process of its administration.

MODULE I **CRIMINAL PROCEDURE CODE-TYPES AND FUNCTIONARIES** **10**

. Aquisitorial, inquisitorial – brief history about the code-definition-main functionaries of the code- powers of superior police officers and aid to the magistrates and police.

MODULE II **PRE-TRIAL PROCEEDINGS** **10**

Stages of Investigation - process compelling for the presence of the presence of accused for investigation and trial - arrest-procedure for arrest - rights of arrested persons consequences of non - compliance of arrest procedures – search and seizure – process of investigation by police – investigation of unnatural and suspicious death – Local jurisdiction of the Courts in Inquires and Trials **–** cognizance of offence and commencement of proceedings – bail procedures – types of bail - General Provision regarding bond of accused and sureties.

MODULE III **TRAIL PROCEDURE** **10**

Stages of Investigation - process compelling for the presence of the presence of accused for investigation and trial - arrest-procedure for arrest - rights of arrested persons consequences of non - compliance of arrest procedures – search and seizure – process of investigation by police – investigation of unnatural and suspicious death – Local
jurisdiction of the Courts in Inquires and Trials **–** cognizance of offence and commencement of proceedings – bail procedures – types of bail - General Provision

regarding bond of accused and sureties.

MODULE IV APPEAL PROCEDURES 10

Types of Appeals - Reference and Transfer of Criminal Cases - Execution, Suspension, Remission and Commutation of Sentences – Execution of Sentence death penalty and Imprisonment – Execution of Sentence of fine - Preventive and Precautionary Measures for keeping peace and good behavior – Maintenance procedures – conditions for claiming maintenance – cancellation of maintenance – Muslim Women Protection of Rights on Divorce Act.

MODULE V JUVENILE JUSTICE (CARE AND PROTECTION) ACT, 2001 & PROBATION OF OFFENDERS ACT,1958 10

Juvenile Justice (Care and Protection) Act, 2001 and Probation of Offenders Act, 1958

Introduction – Object – definitions – Statutory bodies for juveniles under the Act Reformative institutions for juveniles – Special offences – Probation –Object and meaning – Criminal court and probation – Duties of Probation officers - Report of the probation officers - conditions and cancellation of probation.

TOTAL HOURS : 50

REFERENCES:

Books:

1. Ratanlal : Code of Criminal Procedure
2. Sarkar : Code of Criminal Procedure
3. Kelkar R.V. : Outlines of Criminal Procedure
4. Basu : Code of Criminal Procedure
5. Dr.Nandhal's : Code of Criminal Procedure (3 Volumes)
6. P. Ramanatha Iyer : Code of Criminal Procedure (3 Volumes)
7. Sohonis : Code of Criminal Procedure (4 Volums)
8. R.B. Sethi : Probation of Offenders Act
9. Consuls : Probation of Offenders Act and Rules.
10. M.K.Chakrabarathi : Probation System in the Administration of CriminalJustice
11. Vedkumari (IT) : Treaties on the Juvenile Justice Act.

OUTCOMES:

Students will learn the procedure that is followed in Criminal Justice Administration in the Country. They will also learn special procedure that is followed in Juveniles justice system that is in place.

BLC 5103 CIVIL PROCEDURE CODE AND LIMITATION ACT

L	T	P	C
4	1	0	5

OBJECTIVES:

The course intends to understand the legislative measures in procedure. The course also helps in understanding the procedures to be followed by the civil courts from the institution of suits till the final disposal. The course tries to understand the computation of limitation period for the institution of suit, appeal and applications along with exclusion

MODULE I INTRODUC TION 10

Definitions – Civil Nature - Jurisdiction of Civil Court – Place of Suing – Institution of Suits – Presentation of Plaint – Parties to the suit-principles of res subjudice and res judicata.

MODULE II PLEADINGS AND PROCEEDINGS 10

Plaint – Written Statement – Service of Summons – Appearance and Non-Appearance of Parties - – Discovery, Inspection and Production of Documents – Admission – Production, Impounding - and Returning of Documents- transfer of suits-decree and judgment -Remand – Restitution – -Appeals: first appeal, second appeal, appeals from orders and appeals to Supreme Court – Reference – Review – Revision

MODULE III SUITS IN PARTICULAR CASES 10

Suits by and against government and public officer – Suits by indigent person – suits by or against minors and lunatics, aliens and foreign rulers, soldiers, corporation, Firms, trustees, executors and administrators-suits relating to family matters, mortgages, public nuisance and public charities- interpleader suits-summary procedure.

MODULE IV EXECUTION 10

General principles, courts by which decree may be executed, payment under decree, application for execution, mode of execution, stay of execution, questions to be determined by executing court, arrest and detention, attachment of property sale and delivery of property, distribution of assets.

MODULE V LIMITATION ACT 10

Definitions – Limitation of Suits – Appeals – Computation of Period of Limitation

– Acquisition of ownership by possession.

TOTAL HOURS : 50

. REFERENCES:

Acts:

1. Code of Civil Procedure, 1908
2. Limitation Act, 1963

Books

1. K. Takwani : Civil Procedure Code
2. Mulla : Code of Civil Procedure
3. M. P. Jain : Code of Civil Procedure
4. Pattabiraman : Code of Civil Procedure
5. Taxmann : Code of Civil Procedure
6. M. P. Tandon : Code of Civil Procedure
7. C. K. Takkar : Code of Civil Procedure
8. P. Basu : Law of Limitation

OUTCOMES:

Procedural Laws are essential to understand how the law will put into motion through courts. Student will get an idea about procedure followed by civil courts

BLC 5104 LAND LAWS L T P C
4 1 0 5

OBJECTIVES:

Land Laws of Tamilnadu along with Land Acquisition Act and Real Estate Regulation Act are significant laws. Students should know the laws relating to land acquisition, real estate, rent control, lease etc. Bone of contention is land in significant number of cases. MODULE IV VIVA-VOCE EXAMINATION (10 MARKS) 05

A Viva Voce Examination on all the above three components. Records and Diaries submitted by the student will be verified and the student has to answer and substantiate their work-done.

TOTAL HOURS : 40

OUTCOMES:

The student will have a firsthand account of court procedures, practices of office of the Advocate and the court-room etiquette.

SEMESTER X

BLC 5201 INTERPRETATION OF STATUTES L T P C

4 1 0 5

OBJECTIVES:

Interpretation of Statutes evolved into certain rules and principles to clarify ambiguities, inconsistencies, contradictions and lacunas. Legislative drafting often tend to give rise to all these 'doubts'. This core of this subject is to unlock the locks put by the Legislature through certain principles, rules etc. Legislative expression will reflect in the form of a Statute and it needs to be understood and given effect in the same tone. The guiding principles behind interpretation of Tax Laws, Penal Laws and Welfare Laws may differ in approach but the central idea of interpretation remains the same. This paper provides those inputs that are very much essential.

MODULE I LAW MAKING 10

Legislature, Executive and the Judiciary _ Principles of Utility- Law and Public Openion- Law and Social Control- Relevance of John Rawls and Robert Nozick- Individual interest to Community Interest- Law and Morals- Meaning, Objectives and Scope of 'Interpretation' 'construction' and 'Statute' - Public Opinion and Law Making.

MODULE II NATURE AND KINDS OF INDIAN LAWS 10

Statutory, Non Statutory, Codified, Un-codified, State made, State Recognized Laws- Parts of the Statute-Commencement- Extent-Operation and Repeal and Revival of Statutes- Purpose of Statutory Interpretation-Basic sources of Statutory Interpretation- The General Clauses Act, 1897; Nature, Scope and Relevance- Definition clauses in various Legislations; Nature and Imperative Rule.

MODULE III RULES OF STATUTORY INTERPRETATION 10

Literal Rule- Golden Rule - Mischief Rule and Strict Construction of Penal Laws and Taxation Laws - Internal Aids and External Aids of Interpretation.

MODULE IV INTERPRETATION OF CONSTITUTION AND INTERNATIONAL INSTRUMENTS 10

Principles and theories - Interpretation of Constitution- Reading DPSP and FR. Interpretation of International Instruments- Presumption in favour of

Constitutionality of a Statute- Presumption against violation of International Law- Presumption against retrospective operation of law- Presumption against Ouster of Jurisdiction of Courts.

MODULE V LEGISLATIVE DRAFTING 10

Principles and Process of Legislative Drafting - Simplicity, Preciseness, Consistency, Alignment with Existing Law- Brevity- Drafting General Laws and Special Laws-Rules and Orders.

TOTAL HOURS : 50

REFERENCES:

Acts:

1. General Clauses Act - 1897
2. Constitution of India, 1950

Books:

1. Maxwell - Interpretation of Statutes
2. G.P.Sing- Principles of Statutory Interpretation
3. P.M. Bakshi - Interpretation of Statutes
4. Jeremy Bentham - Theories of Legislation
5. Dicey - Law and Public Opinion
6. Indian Law Institute - The Drafting of Laws
7. P.K. Tripathi - Spotlights on Constitutional Interpretation
8. Thornton G.C. - Legislative Drafting

Outcomes:

The student will learn how to read, understand, interpret various Laws including Constitution of India and International Instruments as well. It is will enrich him with all skills that are required to unlock the legislative intent. He will learn the basics in legislative drafting too.

BLC 5202 RIGHT TO INFORMATION ACT L T P C
4 1 0 5

OBJECTIVES:

Right to Information Act is an Act that can be used as a weapon against mal-administration, abuse of power and corrupt practices. In real sense it empowers the people with a right to be informed. Object of this course is to familiarize the student about this Act to enable them to make use of its to empower the people.

MODULE I CONSTITUTIONAL PROVISIONS 10

Fundamental Rights - Article 19- Article 21 and its interpretation. Right to Know- Right to be Informed - Right to Information - Right to Information Vis-a-Vis Right to Life.

MODULE II LEGISLATIVE PROVISIONS 10

Right to information- in Consumer Laws; Right to Information; Environmental Laws; Right to Information Administrative Law. Right to information Criminal Law. Public Interest Vs. Private Interest, Law of Evidence- Section 123; 'Affairs of the State"

MODULE III HIGH LIGHTS OF RIGHT TO INFORMATION ACT 10

Procedure to file application- first appeal- second appeal- penal provisions-etc.

MODULE IV AUTHORITIES UNDER RTI 10

Central Information Commission; State Information Commissions, Powers and Functions.

MODULE V ANTI - CORRUPTION LAWS 10

Issues relating corruption in Administration, Various anti Corruption Laws, Whistleblowers Protection Act, Powers and Functions of CVC.

TOTAL HOURS : 50

REFERENCES

OUTCOMES:

The student will know how to 'move' the authorities to unearth the 'facts' and 'figures' laying in the bureaucracy so as to fight against mal-administration, abuse of power and corruption.

BLC 5203 LAW OF TAXATION

L	T	P	C
4	1	0	5

OBJECTIVES:

The course intends to understand the taxing system in India. Tax Laws helps to government to generate funds for the development of the country and at the same time they tax the people directly or indirectly. The student should know important Tax Laws. Student will learn basics relating to Income Tax Act and Goods and Services Tax etc.

MODULE I GENERAL INTRODUCTION 10

What is Tax and What is Fee. Income Tax Act and Finance Act- Canons of Taxation - Kinds of Taxes- Direct and Indirect Taxes- Applicability of Doctrines under the Constitution to Taxation Laws - Interpretation of Tax Laws

MODULE II THE INDIAN INCOME TAX ACT - 1961- I 10

Concepts under IT Act. Income-Agricultural Income- Casual Income- Assesse Person- Residential Status- Previous Year- Assessment Year- General Charging Section- Specific Charging Section- Exemptions- Income from ' House Property Income from Business or Profession, Income from 'Capital Gains'- Income from other sources-Procedure for Assessment- deduction allowed in certain cases-

MODULE III THE INDIAN INCOME TAX ACT - 1961- II 10

Filing Procedures- Tax Tribunals- Appeal Provisions under I.T.Act. - Grievance Procedure-

MODULE IV GOODS AND SERVICES ACT-2017 I 10

Goods and Services Act-2017 its highlights- significance- merits- filling procedures- legal mechanism.

MODULE V INTERPRETATION OF TAX LAWS- PRINCIPLES 10

.How to Interpret Tax Legislations. General guidelines; Principles; Authoarities- Quasi-Judicial- Tribunals. Courts.

TOTAL HOURS : 50

REFERENCES:

1. Sukumar Battacharya - Income Tax Law - Practice
2. N.A. Palkowala - Income Tax

3. Manoharan - Income Tax Act
4. Dinager Pagre - Direct Taxes and Indirect Taxes
5. Taxmann- Income Tax Act
6. Girish Ahuja - Law and Procedure: Professional Approaches to Direct Taxes

OUTCOMES:

The student will learn the Law relating to Taxes in India. He will know about highlights of Income Tax andf GST and filing of returns procedures etc. Student will also know about and quasi-judicial authorities, tribunals and judicial mechanism in place to address the legal issues.

Meaning and Significance of Crime- Concept of Crime and basis of Criminalization- Definition of Crime- Criminology- Criminological Reminiscence; Global Scenario- Renaissance- Modern Age - Focus on the need for Criminological Study- Ingredients of Crime - Distinguish Crime and Non-Crime- Classification of Crimes-Development of Criminal Law- Sources of Crime Data- Crime Reporting- Uses of Crime Data- Schools of Criminology.

MODULE II CAUSES OF CRIME 10

Individual centric causes- Social Centric Causes-Theories on Crime causation- Juvenile Delinquency- Juvinile Justice (Care and Protection of Children) Act- Case Law-

MODULE III TYPES OF CRIME 10

Corruption: White - Collar Crime and Blue Collar Crime- Implication of White Collar Crimes- - White Collar Crimes- Detection and Investigation and Trails of White Collar Crimes. -.Crime and Women: Female Criminality- Crimes of Passion- Prostitution- Immoral Traffic Prevention Act- Medical Termination of Pregnancy Act- PNDT (Regulation) Act- Domestic Violence Act- Criminal Law Amendment Act-2013. Terrorism; Definition-Nature-Causative Factors- Kinds- Measures to combat. Communal Violence-causes and cures. Drugs and Crimes- NDPS Act- Cyber Crimes- Trafficking in women and Children, Human Organ Crimes- International Crimes and Environmental Crimes.

MODULE IV POLICE AND CRIMINAL JUSTICE SYSTEM 10

Organizational structure of Indian Police- set-up- bureaucracy-Crimes by police- Crime Record Bureaus- Need for police reforms. Social Defense.

MODULE V CORRECTIONAL INSTITUTION AND CRIME PREVENTION **10**

.Prison system in India- Probation and Parole- Origin- Probation of Offenders Act, 1958- Prison Reforms. Boaster School. Prevention of Crime and Delinquency.

TOTAL HOURS : 50

REFERENCES

OUTCOMES:

Crime is considered to be a threat to the society. The student know about different types of crimes that the country. He will learn about the police system and prison systems in place.

BLC 5205	DRAFTING, PLEADING & CONVEYANCING (Clinical Course - IV)	L	T	P	C
		4	1	0	5

OBJECTIVES:

Drafting skills are essential for an Advocate. Students are expected to learn, improve their drafting skills that are essential to enter into the profession of Advocacy. This course will help them in this regard. Class room instruction is followed by record writing. This is part of Clinical Legal Education course of Bar Council of India, which is mandatory. The student has to submit a hand-written record.

MODULE I Introduction **10**

A. Drafting: General Principles of Drafting and relevant substantive rules shall be taught.

B. Pleadings: a) Civil: Plaint, Written Statement, Interlocutory Application, Original Petition, Affidavit, Execution, Petition, Memorandum of Appeal and Revision. Petition under Article 226 and 32 of the Constitution of India.

b) Criminal: complaint, Criminal Miscellaneous Petition, Bail Application, Memorandum of Appeal and Revision.

c.. Conveyancing: sale Deed, Mortgage Deed, Lease Deed, Gift Deed, Promissory Note, Power of Attorney, Will, Trust Deed.

d. Drafting of Writ Petition and PIL Petition

Method of instruction

Instructions class and simulation exercises, preferably with assistance of practicing lawyers/ retired judges will be provided for the students.

Apart from teaching the relevant provisions of law, the course may included not less than 15 practical exercises in Drafting carrying a total of 45 marks (3 marks for each) and 15 exercises in Conveyancing carrying another 45 marks (3 marks for each exercise) remaining 10 marks will be allotted for Viva Voce.

Total Number of Hours: 30

B.S. Abdur Rahman Crescent Institute of Science & Technology

Deemed to be University u/s 3 of the UGC Act, 1956

REGULATIONS 2016

CURRICULUM AND SYLLABI

B.B.A

FINANCIAL SERVICES

VISION AND MISSION OF THE DEPARTMENT OF MANAGEMENT

VISION

Department of Management Studies aspires to become Management Institution of national repute, providing industry-oriented, socially-responsible & research inclined management professionals.

MISSION

- To offer UG and research programmes of industrial and social relevance
- To provide functional specific knowledge through industry scenario study and analysis / multiple pedagogies
- To enhance managerial and soft skill that augment the overall professional development
- To encourage and support in fulfilling the drive for teaching and research
- To pursue consultancy projects and collaborative research

PROGRAMME EDUCATIONAL OBJECTIVES:

- To provide necessary ambiance for a holistic teaching-learning approach to match the international standards of education.
- To provide strong foundation in Management of Financial Services and to enable comprehensive understanding and application of the concepts applied in financial service industry.
- To equip students with managerial skills like teamwork, leadership, communication and analytical skills for performing functional tasks efficiently and effectively.
- To equip the students with essential knowledge from other relevant disciplines of management in order to infuse a multi-disciplinary approach.

PROGRAMME OUTCOMES:

On successful completion of the programme, the graduates will be able to:

- Identify and analyse issues in the organization at basic level.
- Apply functional knowledge in completing routine tasks of the organization.
- Classify financial information into parts for further analysis.
- Display effective presentation skills, communication skills and team work.
- Display understanding of the functioning of financial services sector at basic level.
- Display analytical skills and competency in the application of financial tools.
- Display awareness on contemporary issues and concerns of the business and society

B.S. ABDUR RAHMAN CRESCENT INSTITUTE OF SCIENCE & TECHNOLOGY

1	MSC 3201	Fundamentals of Business Taxation	5	0	0	4	
2	MSC 3202	Introduction to International Finance	4	0	0	3	
3	MSC 3203	Investment Banking and Operations	4	0	0	3	
4	MSC 3204	Financial Modelling Using Excel	2	1	0	3	
5	MSC 3205	Financial Modelling Using Excel – Lab	0	0	4	2	
6	MSC 3206	Project Work	-	-	-	5	20

TOTAL CREDITS – 124

SEMESTER I

		L	T	P	C
MSC 1101	**ACCOUNTING – I**	**4**	**0**	**0**	**4**

OBJECTIVES:

- Acquaint students with the basic knowledge of the accounting principles and the accounting process.
- Familiarize students with subsidiary books and the Bank Reconciliation Statement.
- Demonstrate how final accounts of proprietary concerns are prepared.

MODULE I INTRODUCTION TO ACCOUNTING **9**

Introduction; Meaning and Definition; Objectives of Accounting; Need for Accounting; Functions of Accounting; Users of Accounting Information; Limitations of Accounting; Accounting Principles: Accounting Concepts and Accounting Conventions. Indian Accounting Standards and International Financial Reporting Standards – Brief Overview only

MODULE II JOURNAL, LEDGER AND TRIAL BALANCE **12**

Journal, Rules of Debit and Credit, Compound Journal Entry; Opening Entry; Ledger, Posting, Rules Regarding Posting, Balancing Ledger Accounts; Advantages of Ledger, Meaning and Importance of Trial balance, Preparation of the Trial Balance

MODULE III SUBSIDIARY BOOKS **12**

Meaning and Significance of Subsidiary Books; Types of Subsidiary Books: Purchases Book Sales Book, Purchase Returns Book, Sales Return Book, Bills Receivable Book, Bills Payable Book, Cash Book (Simple Cash Book, Double Column Cash Book, Three Column Cash Book and Petty Cash Book) and Journal proper

MODULE IV RECTIFICATION OF ERRORS AND BANK RECONCILIATION STATEMENT **12**

Meaning of Accounting Errors, Types of Accounting Errors, Rectification of Errors – Before Preparation of Trial Balance and After Preparation of Trial Balance

Meaning and objective of bank reconciliation statement; Importance of bank reconciliation statement; Causes of difference between cash book balance and pass book balance; Techniques of preparing bank reconciliation statement

MODULE V FINAL ACCOUNTS OF PROPRIETARY CONCERNS 15

Final Accounts: Trading Account, Profit & Loss Account and Balance Sheet; Preparation of Trading Account, Profit & Loss Account and Balance Sheet with the adjustments relating to: closing stock, outstanding expenses, prepaid expenses, accrued incomes, unearned incomes, depreciation, bad debts, provision for bad debts, provision for discount on debtors, interest on capital, and interest on drawings

TOTAL HOURS – 60

REFERENCES:

2. R. L. Gupta and V. K. Gupta., “Financial Accounting: Fundamentals”, Sultan Chand Publishers, 2016.
3. Rajesh Agarwal and R Srinivasan., “Accounting Made Easy”, McGraw Hill, 2014.

OUTCOMES:

At the end of this course, the student will be able to:

- Apply the basic accounting principles and identify the steps in the accounting process.
- Prepare subsidiary books and the Bank Reconciliation Statement.
- Prepare final accounts of proprietary concerns.

MSC 1102	MANAGEMENT CONCEPTS AND PRACTICES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Explain the concept and nature of Management and state various perspectives on management given by famous authors.
- Discuss the evolution and process of management stated by famous management authors.
- Explain the concept of principles of management and its application in the present business scenario.
- Illustrate the role of effective communication in management.

MODULE I INTRODUCTION TO MANAGEMENT 9

Introduction and Nature of Management, Definition & Meaning-By P. F. Drucker, Koontz O'Donnel, S. George, Management as an Art, Science and Profession, Distinction between Administration and Management, Importance & Functions of Management

MODULE II EVOLUTION OF MANAGEMENT 9

Evolution of Management- Thought, Pre Scientific Management era, Scientific Management & Contribution of F. W. Taylor, Process Management & contribution of Henri Fayol, HR movement - Hawthorne experiments, Contributions of Behavioral scientists- Abraham Maslow, Peter Drukker, Douglas Mc. Gregor

MODULE III PLANNING AND DECISION MAKING 9

Nature & Definition of Planning- Koontz o'Donnel, Hart, Alfred &Beaty, Importance and limitations, Planning process, Types of Plans- on the basis of use, functions, time (meaning only), Meaning of Decision making, Steps in decision making, Types of decisions- Programmed-Non-programmed; Strategic-tactical, Individual-Group, Policy Operation, Organizational-Personal

MODULE IV ORGANIZING & DEPARTMENTATION 9

Meaning & Definition- Koontz O'Donnell & McFarland, Organizing - Nature, Purpose & Principles, Types of Organization (Formal & Informal), Types of Authority relationships- Line, Functional, Line& staff, Committees, Meaning and

types of Departmentation, Centralization and De-centralization (Meaning Only)

MODULE V ELEMENTS OF DIRECTING, CO-ORDINATION AND CONTROL **9**

Meaning & Importance of Directing, Leadership: Meaning & Styles, Motivation: importance & Theories (Maslow, Herzberg. McGregor), Communication- Meaning, Objectives & Types of communication, Meaning, Principles and techniques of Co-ordination, Meaning, Need & steps in Controlling

TOTAL HOURS – 45

REFERENCES:

1. Dr P. N. Reddy, Prof H R Appannaiah, P C Tripathi., “Essentials of Management”, Himalaya Publications, 2014.
2. L. M. Prasad., “Principles and Practice of Management”, Sultan Chand & Sons, 2015
3. R. Srinivasan and S. A. Chunawalla., “Management: Principles and Practice”, Himalaya Publications, 2014.
4. P. C. Tripathi and P. N. Reddy., “Principles of Management”, Tata McGraw Hill, 2015

OUTCOMES:

At the end of this course, the student will be able to:

- Outline the concept and nature of Management and recognize various perspectives on management given by famous authors.
- Identify the steps involved in the process of management.
- Apply the principles of management in the present business scenario.
- Analyse the role of effective communication in management.

MSC 1103	FUNDAMENTALS OF MANAGERIAL ECONOMICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Outline the concept of Economics, Managerial Economics and the role of a manager in using the concept of economics in managerial decision making.
- Explain the concept and application of Law of Demand, Demand Forecasting, Supply Management, Consumption, Production and Cost.
- Describe the tools and techniques used for forecasting demand, production levels and identifying the cost.
- Illustrate the functioning of different market structures and its application in the present business scenario.

MODULE I INTRODUCTION TO MANAGERIAL ECONOMICS 9

Meaning & Definition, Features of Managerial Economics, Scope of Managerial Economics, Objectives and practical uses of Managerial Economics, Role and Responsibilities of Business Economist to modern Business Management

MODULE II THEORY OF DEMAND AND DEMAND FORECASTING 9

Meaning- determinants - demand schedule - demand curve, Law of Demand- exceptions- shifts in demand and movements in demand, Elasticity of demand- meaning- types, Price elasticity of demand- meaning-degrees-measurement: Total outlay- Point Method, Income elasticity of demand, Cross elasticity of demand, Demand Forecasting- Meaning- levels- objective, Method of estimation-Survey Method and Statistical method, Forecasting for a new product

MODULE III THEORY OF CONSUMPTION 9

Consumption - meaning, features –types, Role of consumer under open and closed economy, Theory of consumer Behaviour, Cardinal Approach: Gossen first law and second law, Concept of consumer surplus, Ordinal approach – Hicks and Allen model, Meaning of ICA properties - consumer's equilibrium, Concept of MRS– substitution effect- Income effect -price effects, Concept of Engle's law

MODULE IV THEORY OF PRODUCTION AND COST 9

Meaning of production function- classification- fixed factors-variable factors, Law of

variable proportion, Concept of Iso-quant and Iso-cost - producer's equilibrium, Managerial equilibrium- MRTS- optimal combination, Economies of scale- meaning- Internal and External economies of scale, Supply- meaning- determinants, Law of supply, Cost: Meaning- concepts-Computation of costs.

MODULE V MARKET STRUCTURE 9

price determination simultaneous changes in demand and supply – importance of time element- short run and long run equilibrium, Imperfect competition – Monopoly- meaning- features- short and long run equilibrium – price and output determination under Discriminating Monopoly, Oligopoly- meaning – features- kinked demand curve, Duopoly-meaning- features

TOTAL HOURS – 45

REFERENCES:

1. D. M. Mithani., "Business Economics", Himalaya Publishing House, 2015.
2. M. L. Jhingan., "International Economics", Fourth Edition, Vrinda Publication Pvt. Limited, 2016.
3. Varshney and Maheshwari., "Managerial Economics", Sultan Chand, 2014.
4. K. K. Dewett., "Modern Economic Theory", Fourth Edition, S Chand & Co Ltd, 2006.

OUTCOMES:

At the end of this course, the student will be able to:

- State the role of manager in effective management of organisation using the concepts of managerial economics.
- Describe the meaning of demand, supply, production and cost with respect to Managerial Economics.
- Identify different market structures and its impact on the business organisation.

MSC 1104	BASIC STATISTICS	L	T	P	C
		4	0	0	4

OBJECTIVES:

- Make students familiar with the measures of central tendency and dispersion.
- Enable students to analyse bi-variate and uni-variate data.
- Provide basic knowledge of quantitative tools and their applications in business and management.

MODULE I INTRODUCTION TO STATISTICS & ORGANIZATION OF DATA **12**

Definition of Statistics, Functions, Limitations, Scope of statistics in Business, Industry and Economics, Concept of Data, Variable population, Sample, Concept of Classification of data - Types, Frequency distributions, Tabulation of Data, Parts of table, Requisites of a good table

MODULE II ANALYSIS OF UNI-VARIATE DATA **15**

Measures of Central Tendency: Introduction, Types of Central Tendency Measures, qualities of good measure of Central tendency, Arithmetic mean – Computation using Direct shortcut and step-deviation method, problems on missing frequencies (one or two), properties of AM, problems on combined Mean, corrected Mean, Weighted AM – Simple problems of Weighted AM, Median – computation for raw data, discrete and continuous data, problems on missing frequencies, Mode – computation of mode for raw data, discrete and continuous data – for Uni-modal distribution, problems on Grouping and analysis table; Measures of Dispersion: Introduction, Types of dispersion measures – concept absolute and relative measures, Qualities of good measure of dispersion, Range – Concept and simple problems, Quartile deviation – computation of QD and its coefficient for raw, discrete and continuous data, Standard Deviation – Computation of SD and its coefficient for raw, discrete and continuous data

MODULE III TIME SERIES ANALYSIS **9**

Objectives and uses of Time series analysis, Components of Time series, Measurement of Trend by Moving averages method and Least squares method to Linear

MODULE IV ANALYSIS OF BI VARIATE DATA- CORRELATION 12

Correlation – Meaning & Types, Spearman's Rank correlation, Karl Pearson's co efficient of correlation, Probable error, Concurrent deviation method

MODULE V ANALYSIS OF BI VARIATE DATA- REGRESSION 12

Regression – Meaning, Regression lines, Properties of Regression lines and regression coefficient, Related problems on regression lines and Regression coefficient

TOTAL HOURS – 60

2. V. K. Khanna, QaziZameeruddin, S. K. Bhambri., "Business Mathematics", Second Edition, Vikas Publishing House Pvt Limited, 2009.
3. R. S. Soni., "Essential Business Mathematics & Business Statistics", ANE Books, 2012.
4. J. K. Singh., "Business Mathematics", Second Edition, Himalaya Publishing House, 2012.

OUTCOMES:

At the end of this course, the student will be able to:

- Compute the measures of central tendency and dispersion.
- Analyse bi-variate and uni-variate data.
- Apply quantitative tools and techniques in business and management.

MSC 1105	CORPORATE COMMUNICATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Introduce students to the communication process.
- Familiarize students with different methods, models and theories of communication.
- Enable students to understand different types of business correspondence and write business reports.

MODULE I COMMUNICATION IN BUSINESS **6**

Introduction, Communication Process, Essentials of Business Communication, Barriers to Business Communication

MODULE II METHODS, MODELS AND THEORIES OF COMMUNICATION **12**

Models of communication, Shannon's Model of the communication Process, Derivative Models of the Communication Process, New Model of the Communication Process, Defining Communication Theories. Types of Communication: Verbal Communication, Nonverbal Communication, Types of Communication Based on Style and Purpose

MODULE III ENGLISH GRAMMAR **9**

Remedial English - I: Parts of Speech (Nouns, Pronouns, Adjectives, Verbs, Adverbs, Prepositions, Conjunctions, and Interjections) Reading Skills – II: Sentences, Subject-Verb Agreement, Active and Passive Voice, Direct and Indirect Speech

MODULE IV BUSINESS CORRESPONDENCE **9**

Communication in an Organization: Types of Communication Meetings, Memo, Circulars and Notices Business Correspondence: General Rules for All Business Correspondence, Guidelines for the Basic Cover Letter, Guidelines for Information Interviewing, Networking Letters, Guidelines for Thank You Letters, Guidelines for Job Offer, Acceptance Letters, Guidelines for Letters Declining a Job Offer, Style in Business Correspondence

MODULE V BUSINESS REPORT WRITING 9

Cover Letters, Business Report Writing, The purpose of statistical studies, sample of business correspondence

TOTAL HOURS – 45

4. John M. Penrose, Robert J. Myers, Robert W. Rasberry., “Business Communication for Managers: An Advanced Approach”, South Western Educational Publishing, 2003.

OUTCOMES:

At the end of this course, the student will be able to:

- Identify the steps in the communication process.
- Apply different methods, models and theories of communication.
- Make different types of business correspondence and write business reports.

MSC 1106 IT FOR BUSINESS AND ACCOUNTING

L	T	P	C
2	0	0	2

OBJECTIVES:

- Introduce students to the basics of information technology and fundamentals of computer .
- Familiarize students with data organization, Data Base Management System, data communication and computer networks.
- Enable students to understand the Computerised Accounting System.

MODULE I BASICS OF INFORMATION TECHNOLOGY (IT) 6

Concepts of data, information and computer based information system. Deployment of IT in various business sectors (Banking, Travel & Tourism, Retailing and Insurance); Impact of information technology on business (business data processing and storage, intra-organisational and inter-organisational communication by using network technology, business process and knowledge process outsourcing); Information system – Definition, Framework and features, Types of Information System -Transaction Processing System (TPS), Management Information System (MIS), Decision Support System (DSS), Knowledge Management System (KMS); Application of information system(s) at managerial level (operational, tactical and strategic); Basic concepts of Cloud computing – Definition, types of cloud (public cloud & private cloud), applications (types of industries preferring cloud computing), types of security involved in cloud computing).

MODULE II FUNDAMENTALS OF COMPUTER 6

Hardware specifications of a digital computer system: processor, cores, screen resolutions, types of monitor, primary and secondary memory; Software; Application and system software – definition and examples. Programming Languages and their features –procedural, object-oriented, scripting, mark-up; Computer codes– ASCII, UNICODE; Operating systems [characteristics & functions]; Problem-solving Tools – Flow chart – Concept, Advantages and disadvantages

MODULE III DATA ORGANIZATION AND DATA BASE MANAGEMENT SYSTEM 6

Data organization – character, field, record, file and database; Types of Data

Processing System [Serial, Batch, Real-time, Online, Centralized, Distributed] Data Base Management System: Limitations of Traditional file organization. Concept of Data Base Management System, Types of database model [E-R Model, Relational and Object-oriented]; Important terms of DBMS [Entity, Attribute, Primary Key, Foreign Key, Candidate Key, Referential integrity, Table, Relation, Views, SQL, Data Dictionary, Metadata, Entity-Relationship Diagram]. SQL commands – DDL, DCL DML, Significance of SQL as programming language

MODULE IV DATA COMMUNICATION AND COMPUTER NETWORKS 6

Data Communication: Concept of Data communications, Transmission Modes [Simplex, Half-Duplex, Full Duplex]Types of Data Transmission [Serial, Parallel, Synchronous, Asynchronous], Communication Media [Guided &Unguided], Network components – Hub, Bridge, Switch, Router, Gateway.

Computer Networks: Concepts of Internet, Intranet and Extranet, Network Architecture [P2P, Client-Server], Various Topologies: Bus, Star, Ring, Mesh, Tree; Types of network [LAN, WAN, MAN, VAN, SAN, VPN]

Basic concept of web technology: Network Addressing Concept - IP address (IPV4, IPV6). Protocol Models [OSI,TCP/IP]; Important Terms [URL, Domain Name System; UDP, HTTP, FTP, TELNET, HTML, DHTML AND XML]

MODULE V COMPUTERISED ACCOUNTING SYSTEM 6

Concept of Computerised Accounting System, Comparison between Manual and Computerised Accounting, Advantages of Computerised Accounting System, Limitations of Computerised Accounting System, Sourcing of Accounting Software, Accounting Packages: Ready to use, Customised, Tailored; Generic Considerations before Sourcing an Accounting Software; Generic Considerations before Sourcing an Accounting Software

TOTAL HOURS – 30

REFERENCES:

Inventory", 2012.

4. Sinha and Sinha, "Fundamentals of Computers", BPB Publication, 2004.
5. K. Nadhani and K. K. Nadhani, "Implementing Tally 9 Comprehensive Guide", 2nd Edition, Bpb, 2007.

OUTCOMES:

- Understand the basics of information technology and fundamentals of computer.
- Familiarize students with data organization, Data Base Management System, data communication and computer networks.
- Enable students to understand the Computerised Accounting System.

MSC 1107	IT FOR BUSINESS AND ACCOUNTING – LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

- Introduce students to the MS Word and Power Point .
- Familiarize students with the techniques of Data Base Management Systems.
- Enable students to understand the fundamentals of Tally.

MODULE I INTRODUCTION TO MS WORD AND POWER POINT 9

Getting Started with Ms-Word, Main Menu Options, Format, Insert, Design and Page Layout; Getting Started with Power Point, Developing onscreen presentations for business projects including- automatic slide transition and custom animation

MODULE II DATABASE MANAGEMENT SYSTEM 9

Creation of Tables, Constraints Specification, Multiple Table**,** Handling-Defining Relationship [Foreign Key], Generating simple and conditional Queries, Types of queries [Update, Delete, Append], Forms, Reports, Introduction to SQL through Basic Commands

MODULE III FUNDAMENTALS OF TALLY 6

Overview**,** Installation**,** Getting Functional,Creation/Setting Up Company

MODULE IV BOOKS OF ACCOUNTS IN TALLY 9

Charts of Accounts, Accounting Masters, Voucher Entry, Day Book Summaries, Bank Reconciliation Statement

MODULE V FINAL ACCOUNTS IN TALLY 12

Trial Balance**,** Profit and Loss Statement**,** Balance Sheet

TOTAL HOURS – 45

9. Asok K. Nadhani, “Simple Tally 9”, 1st Edition. BPB Publications, 2007.

OUTCOMES:

At the end of this course, the student will be able to:

- Prepare reports using MS Word and Power Point Presentations.
- Apply the techniques of Data Base Management Systems.
- Prepare books of accounts using Tally.

SEMESTER II

MSC 1201	ACCOUNTING– II	L	T	P	C
		5	0	0	4

OBJECTIVES:

- Acquaint students with the basic understanding of accounting for share capital and debentures
- Demonstrate preparation of Company final accounts and Cash flow statement
- Familiarize students with valuation of shares and goodwill

MODULE I ACCOUNTING FOR SHARE CAPITAL 12

Share and share capital: nature and types; Accounting for share capital: issue and allotment of equity shares, private placement of shares, Public subscription of shares - over subscription and under subscription of shares; Issue at par and at premium and at discount, Calls in advance and arrears; Issue of shares for consideration other than cash; Accounting treatment of forfeiture and re-issue of shares; Disclosure of share capital in company's Balance Sheet only

MODULE II ACCOUNTING FOR DEBENTURES 12

Debentures: Issue of debentures at par, at premium and at discount; Issue of debentures for consideration other than cash; Debentures as collateral security; Interest on debentures; Redemption of debentures: Lump sum, draw of lots and conversion

MODULE III COMPANY FINAL ACCOUNTS 12

Statutory Provisions regarding preparation of Company Final Accounts; Treatment of Special Items: Managerial Remuneration, Tax deducted at source, Advance payment of Tax, Provision for Tax, Depreciation, Interest on debentures; Dividends, Rules regarding payment of dividends; Transfer to Reserves; Preparation of Profit and Loss Account and Balance Sheet as per Companies Act 2013

MODULE IV CASH FLOW STATEMENT 12

Meaning, Advantages and Disadvantages of Cash Flow Statement, Cash flow from operating activities, Cash flow from investing activities, Cash flow from financing activities, Preparation of Cash Flow Statement as per AS-3.

MODULE V VALUATION OF GOODWILL AND SHARES 12

Valuation of Goodwill: Meaning – Circumstances of Valuation– Factors influencing Valuation – Methods of Valuation: Average Profit Method, Super Profit Method, Capitalization of average Profit Method, Capitalization of Super Profit Method

Valuation of shares: Meaning – Need for Valuation – Factors Affecting Valuation – Methods of Valuation: Intrinsic Value Method, Yield Method, Earning Capacity Method, Fair Value of shares.

4. R. .L Gupta, “Advanced Accountancy” 2016.
5. V.K. Goyal, “Corporate Accounting”, 2015.

OUTCOMES:

At the end of this course, the student will be able to:

- Record the transactions relating issue of shares and debentures and the redemption of debentures.
- Prepare company final accounts and the cash flow statement.
- Compute the value of shares and goodwill.

MSC 1202	BUSINESS MATHEMATICS	L	T	P	C
		4	0	0	4

OBJECTIVES:

- Acquaint students with the number system and the theory of equations.
- Familiarize students with matrices and determinants algebra.
- Enable students to understand commercial arithmetic and progressions.

MODULE I NUMBER SYSTEM **9**

Introduction – Natural Numbers - Even Numbers – Odd Numbers – Integers – Prime Numbers – Rational & Irrational numbers, Real Numbers, HCF & LCM (Simple problems).

MODULE II THEORY OF EQUATIONS **12**

Introduction – Meaning - Types of Equations – Simple/ Linear Equations and Simultaneous Equations (only two variables), Elimination and Substitution Methods only. Quadratic Equation - Factorization and Formula Method ($ax^2 + bx + c = 0$ form only). Problems on Commercial Applications

MODULE III MATRICES AND DETERMINANTS **12**

Meaning – types – operation on matrices – additions – subtractions and multiplication of two matrices – transpose – determinants – minor of an element – co-factor of an element –inverse – crammers rule in two variables – application oriented problems.

MODULE IV COMMERCIAL ARITHMETIC **15**

Simple Interest, Compound Interest including half yearly and quarterly calculations, Annuities, Percentages, Bills Discounting, Ratios and proportions, duplicate-triplicate and sub-duplicate of a ratio. Proportions: third, fourth and inverse proportion - problems.

MODULE V PROGRESSIONS **12**

Introduction, Arithmetic Progression - Finding the nth term of AP and Sum to nth term of AP. Insertion of Arithmetic Mean; Geometric Progression – Finding the nth

term of GP and sum of n terms of GP and insertion of Geometric Mean .

TOTAL HOURS – 60

7. G.R. Veena and Seema, “Business Mathematics and Statistics”, I.K. Intl Publishers, 2014.

OUTCOMES:

At the end of this course, the student will be able to:

- Identify the number system and apply the theory of equations.
- Apply matrices and determinants algebra to business scenarios.
- Understand the application of commercial arithmetic and progressions in business.

MSC 1203	ORGANISATION BEHAVIOUR	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Introduce the idea of how individual behaviour affects organizational behaviour
- Help the students understand the crucial role of people in any business
- Explore different aspects of organizational behaviour

MODULE I INTRODUCTION **9**

Nature and scope of OB, Challenges and opportunities for OB, Organization Goals, Models of OB, Impact of Global and Cultural diversity on OB**.**

MODULE II INDIVIDUAL BEHAVIOUR **9**

Individual behaviour, Personality, Perception and its role in individual decision making, Learning, Motivation, Hierarchy of needs theory, Theory X and Y, Motivation- Hygine theory, Vrooms Expectancy theory

MODULE III BEHAVIOUR DYNAMICS **9**

Interpersonal behaviour, Communication, Transaction Analysis, The Johari Window, Leadership, Its Theories and Prevailing Leadership styles in Indian Organisations.

MODULE IV GROUP BEHAVIOUR **9**

Definition and classification of Groups, Types of Group Structures, Group decision making, Teams Vs Groups, Contemporary issues in managing teams, Inter group problems in organizational group dynamics, Management of conflict**.**

MODULE V MANAGEMENT OF CHANGE **9**

Change and Organisational development, Resistance to change, Approaches to managing organizational change, Organisational effectiveness, Organisational culture, Power and Politics in Organisational Quality of work life, recent advances in OB**.**

TOTAL HOURS – 45

5. UdayPareek, “Understanding Organizational Behaviour”, Third Edition, Oxford Press, 2012.

OUTCOMES:

At the end of this course, the student will be able to:

- Identify how individual behaviour affects organizational behaviour
- Understand the crucial role of people in any business
- Analyse different aspects of organizational behaviour

MSC 1204 APPLIED MACRO ECONOMICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- Explain the various approaches to economic theory and the concept of circular flow of Income.
- State the concept and use of the Public finance and its role in Economy of the country.
- Describe the concept of Inflation and the role of Monetary and Fiscal Policy in managing inflation in the economy.
- Outline the concept of Balance of Payment, Foreign trade, Business Cycle and its impact on the economy.

MODULE I APPROACHES TO ECONOMIC THEORY 9

Classical Vs. Modern Economic approach, Micro and Macro Meaning, Circular flow of Income- Concept of National Income: GNP, NNP, GDP, NDP, PI, DPI, PCY; National Income at factor cost and Market price, Estimation of National income- Product-Income-Expenditure, Difficulties of Estimation, National income and economic welfare

MODULE II PUBLIC FINANCE 9

Public Finance: Budget – Types, Public revenue - Tax and Non-tax, Public Expenditure- Heads of expenditure, Public Debt: Classification, Deficit financing - Taxable capacity - factors influencing taxable capacity, Quasi-government institutions finance

MODULE III MACRO ECONOMIC ENVIRONMENT 9

Meaning of Inflation - causes and effect, Cost push and demand pull inflation, Deflation – Meaning and causes, Phillips curve- stagflation- M1 and M3, Measures to control inflation - Role of Monetary policy, Fiscal policy- Instruments

MODULE IV BALANCE OF PAYMENTS AND BUSINESS CYCLES 9

Meaning- Difference- Types, Component of BOP- Current and Capital Account, Unfavourable BOP- causes, Monetary and Non-Monetary Measures, Business cycle: Meaning- definition- features, Stages of Business Cycle, Effects and

Measures to control cyclical fluctuation

MODULE V FOREIGN TRADE & DEVELOPMENT 9

Role of External Trade in Economic Development, Terms of Trade: NBTOT – GBTOT, Exchange rate- spot and forward exchange rate, Foreign capital – Role of foreign aid – types

TOTAL HOURS – 45

9. A. Koutosoyiannis, "Modern Micro Economics", 2nd edition, Macmillan, 2008.

OUTCOMES:

At the end of this course, the student will be able to:

- Illustrate the concept of GNP, NNP, GDP, NDP, PI, DPI, PCY and its relation with macro economics.
- Discuss the role of Monetary and Fiscal Policy in managing Inflation in an economy.
- Discuss the concept of Public Finance and Balance of Payment.
- Infer different market structures and its impact on the business of the organisation.

MSC 1205	INDIAN FINANCIAL SYSTEM	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Acquaint students with the components of the Indian financial system
- Familiarize students with various financial assets
- Enable students to understand the role and responsibilities of various market intermediaries
- Introduce students to different regulatory authorities operating in the Indian financial system

MODULE I INTRODUCTION TO INDIAN FINANCIAL SYSTEM 9

Financial System: Meaning and Functions; Saving-Investment Process; Components of the Financial System; Growth and Trends in Indian Financial System; Financial Sector Reforms in India, Role of Indian Financial System in Indian Economic Development

MODULE II FINANCIAL ASSETS 9

Meaning and Features of Financial Assets; Financial Assets Vs. Real Assets; Classification of Financial Assets; Equity Shares; Preference Shares, Debentures, Innovative Debt Instruments; Derivative Instruments; Non-Marketable Financial Assets, Money Market Instruments

MODULE III FINANCIAL MARKETS 9

Meaning and Functions of Financial Markets; Classifications of Financial Markets; Money Market and Capital Market; Debt Market and Equity Market; Primary Market (IPO and Book Building) and Secondary Market; Spot Market and Forward Market; Exchange Traded Market and Over the Counter Market

MODULE IV FINANCIAL INTERMEDIARIES 9

Meaning of Financial Intermediation; Functions of Financial Intermediaries; Major Financial Intermediaries and Their Roles: Commercial Banks, Non-Banking Financial Companies, Mutual Funds, and Insurance Companies, Financial Institutions, Non-Banking Financial Services Companies

MODULE V REGULATORY AUTHORITIES 9

Regulators of Indian Financial System; The Reserve Bank of India – Organization, Roles and Functions, Monetary Policy, Techniques of Monetary Control; The Securities and Exchange Board of India – Organization, Objectives, Roles, Functions and Power; Insurance Regulatory and Development Authority of India - Organisation, Power, Scope, and Functions

TOTAL HOURS – 45

REFERENCES:

4. Bhole and Mahakud, “Financial Institutions and Markets”, 5th edition, McGraw Hill, 2009.
5. Ramesh Babu, “Financial Markets and Institutions”, 1st edition, Concept publishing company, 2006.

OUTCOMES:

At the end of this course, the student will be able to:

- Identify the components of the Indian financial system.
- Compare the distinguishing features of various financial assets.
- Understand the role and responsibilities of various market intermediaries.
- Recognize the roles of different regulatory authorities operating in the Indian financial system.

MSC 1206 EXCEL APPLICATIONS FOR BUSINESS

L	T	P	C
2	0	0	2

OBJECTIVES:

- Familiarize students with basic and advanced Excel functions
- Enable students to understand the application of Excel for business activities.

MODULE I INTRODUCTION TO EXCEL **6**

Excel Introduction, Understanding Workbooks and Worksheets, Introducing the Ribbon, Using Shortcut Menus, Working with Dialog Boxes, Using the Task Pane, Creating Excel Worksheet, Entering and Editing Worksheet Data, Essential Worksheet Operations

MODULE II ADVANCED EXCEL 1 **6**

Working with Cells and Ranges, Introducing Tables, Worksheet Formatting, Using Custom Number Formats, Understanding Excel Files, Using and Creating Templates, Printing Your Work, Working with Dates and Times

MODULE III ADVANCED EXCEL 2 **6**

Introducing Formulas and Functions, Creating Formulas That Count and Sum, Creating Formulas That Look Up Values, Creating Formulas for Financial Applications, Introducing Array Formulas, Visualizing Data Using Conditional Formatting, Using Data Validation

MODULE IV CREATING CHARTS AND GRAPHICS **6**

Understanding How Excel Handles Charts, Understanding Chart Types, Understanding Chart Elements, Modifying the Chart Area, Modifying the Plot Area, Working with Chart Titles, Working with a Legend, Working with Gridlines, Working with Data Series, Creating Chart Templates

MODULE V ANALYZING DATA WITH EXCEL **6**

Introducing Pivot Tables, Analyzing Data with Pivot Tables, Understanding Slicers and Slicer properties

TOTAL HOURS –30

REFERENCES:

1. John Walkenbach, Excel 2013 Bible, Wiley, PAP/CDR edition, 2013
2. JohnWalkenbach, Excel 2013 Power Programming with VBA. (Mr. Spreadsheet's Bookshelf) Wiley; PAP/CDR edition, 2013

OUTCOMES:

At the end of this course, the student will be able to:

- Use basic and advanced Excel functions to achieve efficiency in repetitive computations
- Apply Excel for creating tables, charts, and other reports useful for business activities.

MSC 1207 EXCEL APPLICATIONS FOR BUSINESS – Lab

L	T	P	C
0	0	4	2

OBJECTIVES:

- Provide students with hands-on experience of working with basic and advanced Excel functions
- Enable students to use Excel for creating tables, charts, and other reports useful for business activities.

MODULE I INTRODUCTION TO EXCEL **9**

Excel Introduction, Basic formulae: Entering and editing data, Creating and copying formulae, Creating functions easily, Formatting: Inserting/deleting rows/columns, Changing fonts, Colors and borders, Merging and aligning cells, Printing: Page break preview, Using page layout view, Headers and footers, Freezing print titles, Charts: Selecting data, Quick ways to create charts, Formatting your chart, Basic tables: Table styles, Using calculated columns, Header rows and total rows, Case Exercises/ Practical Assignments/Activities

MODULE II ADVANCED EXCEL 1 **9**

Sorting and filtering lists/tables of data, custom sort, Number formatting: Creating custom formats, The four parts of a format, Scaling numbers, Dates and times: How dates and times are stored, Useful date/time functions, Formatting dates and times, Case Exercises/ Practical Assignments/Activities

MODULE III ADVANCED EXCEL 2 **9**

Conditional formatting: Creating/using cell rules, Data bars and colour sets, Styles and themes, How themes work, Using the default styles, Creating custom styles, Validation and protection: Setting cell validation, Protecting cells/worksheets, Grouping and outlining, Cell comments, Range names and absolute references: Absolute references ($ symbol), Fixing only the row/column, Creating range names, Labelling ranges automatically

MODULE IV EXCEL FUNCTIONS **9**

Excel Functions: Introduction to Mathematical Functions, Introduction to Text Functions, Introduction to Logical & Reference Functions, Introduction to Date &

Time Functions, Introduction to Financial Functions, Introduction to Information Functions, IF and LOOKUP functions: The conditional (IF) function, Nested Ifs, Lookup functions, Case Exercises/ Practical Assignments/Activities

MODULE V TABLES AND CHARTS 9

Advanced Tables, Using calculated columns, Removing duplicates, Advanced filter, Pivot tables: Creating pivot tables, Swapping rows, columns and pages, Grouping fields, Slicers, Pivot table slicers, Changing slicer properties, Advanced charts, Creating chart templates, Combination charts, Picture charts, Custom chart types, Case Exercises/ Practical Assignments/Activities

TOTAL HOURS – 45

REFERENCES:

1. John Walkenbach, “Excel 2013 Bible”, PAP/CDR edition, Wiley, 2013.

2. John Walkenbach, “Excel 2013 Power Programming with VBA (Mr. Spreadsheet's Bookshelf)” PAP/CDR edition, Wiley, 2013.

OUTCOMES:

At the end of this course, the student will be able to:

- Perform repetitive computations efficiently using basic and advanced Excel functions
- Create tables, charts, and other reports useful for different business activities.

GEC 1212	ENVIRONMENTAL STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

The student will be conversant with the

- various natural resources, availability, utilisation and its current scenario
- different ecosystems, energy transfer, values, threats and conservation of biodiversity
- levels of different pollutants and its impact and the causes and effects of natural disasters
- impacts of human population, impact assessment, human rights and environmental acts and sustainable development

MODULE I **NATURAL RESOURCES** **8**

Land resources: land degradation, soil erosion and desertification - Forest resources: use and over-exploitation, deforestation - Water resources: use and over-utilisation of surface and ground water, conflicts over water (inter-state and international), dams (benefits and problems), water conservation (rainwater harvesting and watershed management) - Mineral resources: use and exploitation, environmental effects of extracting and using mineral resources, mining - Food resources: world food problems, changes in land use by agriculture and overgrazing, modern agriculture and its effects, fertilizer and pesticide problems, water logging and salinity - Energy resources: increasing energy needs, renewable and non-renewable, use of alternate energy sources.

MODULE II **ECOSYSTEM AND BIODIVERSITY** **8**

Ecosystem- energy flow in the ecosystem - food chains, food webs and ecological pyramids - characteristics, structure and function of (a) Terrestrial ecosystems (forest, grassland, desert) and (b) Aquatic fresh water ecosystems (pond, lake, river) (c) Aquatic salt water ecosystems (ocean, estuary) - ecological succession.

Biodiversity - genetic, species and ecosystem diversity – hot-spots of biodiversity – biogeographic classification of India - endangered, endemic, extinct and invasive species of India - red data book - values of biodiversity: consumptive, productive, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - conservation of biodiversity: in-situ and

ex-situ conservation of biodiversity

MODULE III **ENVIRONMENTAL POLLUTION AND NATURAL DISASTER** **8**

Definition, cause, effects and control measures of (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards - ill-effects of fireworks and upkeep of clean environment - solid waste management: types (urban, industrial, biomedical and electronic wastes), collection, processing and disposal (incineration, composting and land-fill) - natural disaster and management: flood, cyclone, drought, landslide, avalanche, volcanic eruptions, earthquake and tsunami.

MODULE IV **HUMAN POPULATION, HEALTH AND SOCIAL ISSUES** **6**

Population and population growth, population variation among nations, population explosion, family welfare programme.

Human health: air-borne, water borne diseases, infectious diseases, risks due to chemicals in food and environment.

Sustainable development - environmental legislation and laws: water act, air act, wildlife protection act, forest conservation act, environment protection act - environmental impact assessment, steps in EIA - human rights - women and child welfare.

Case studies related to current situation

TOTAL HOURS – 30

TEXT BOOKS:

1. Erach Bharucha, Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education for University Grants Commission, Orient Blackswan Pvt Ltd, Hyderabad, India, 2013.
2. Benny Joseph, Environmental Studies, Tata McGraw-Hill Education, India, 2009.
3. Ravikrishnan A, Environmental Science and Engineering, Sri Krishna Publications, Tamil Nadu, India, 2015.
4. Raman Sivakumar, Introduction to Environmental Science and Engineering, McGraw Hill Education, India, 2009.
5. Venugopala Rao P, Principles of Environmental Science and Engineering, Prentice Hall India Learning Private Limited; India, 2006.

6. Anubha Kaushik and Kaushik C.P., Environmental Science and Engineering, New Age International Pvt Ltd., New Delhi, India, 2009.

3. Miller T.G. Jr., Environmental Science, Wadsworth Publishing Co. Boston, USA, 2016.

OUTCOMES:

The student will be able to

- predict the scenario of various natural resources and suggest remedies to curb the exploitation of these resources.
- identify food chain and web and its role in various ecosystems, assess the impacts on biodiversity and provide solutions to conserve it.
- analyse the impacts of pollutants in the environment and propose suitable method to alleviate the pollutants and the natural disasters.
- assess on the impact of human population and the health related issues and the ethics to be followed for sustainable life.

SEMESTER III

		L	T	P	C
MSC2101	**MARKETING MANAGEMENT**	**3**	**0**	**0**	**3**

OBJECTIVES:

- Familiarize students with the all-pervasive nature of markets and their transformation across decades
- Explore the rational, sensory & emotional triggers in consumer buying & selling habits
- Provide students with the latest information about marketing developments & practices to inculcate managerial approach to marketing problems

MODULE I INTRODUCTION TO MARKETING MANAGEMENT 9

Introduction – Meaning and nature of marketing management, objectives and importance of marketing management, marketing concepts.

Consumer Needs, Wants, and Consumer Insights: Introduction, Needs and Wants, Using Needs/Wants Insight in Marketing, Benefits Sought By Consumers, The Impact of Emotional Benefits, Consumer Insight, Possible Sources of Insights, Using Insights, Finding and Developing an Insight , The Role of an Insight in Product Development and Marketing.

MODULE II SEGMENTATION TARGETING AND POSITIONING (STP) 9

Market Segmentation and Product Positioning: Introduction, Market Segmentation, Market Targeting, Target Market Strategies, Product Positioning and Differentiation, Choosing a Differentiation and Positioning Strategy, Changing the Product Positioning, USPs.

MODULE III MARKETING MIX: PRODUCT AND PRICE 9

Products and Services: Introduction, Levels of Product and Services, Classifications, Product and Service Decisions. Branding, New Product Development and Product Life Cycle (PLC), Services Marketing: The Nature and Characteristics of a Service, Marketing Strategies for Service Firms. Pricing: Introduction - factors influencing pricing decisions and Pricing Strategies.

MODULE IV MARKETING MIX: PROMOTION 9

Marketing Communication, Integrated Marketing Communications (IMC), and Promotion Mix Strategies – Push and Pull Strategy, Advertising and Public

Relations, Personal Selling and Sales Promotion, Sales Promotion - Trade Shows, Trade Sales Promotion, Consumer Sales Promotion. Publicity and direct marketing - Direct Marketing, Benefits of Direct Marketing, Direct Marketing Channels, Public and Ethical Issues in Direct Marketing.

MODULE V MARKETING MIX: PLACE (DISTRIBUTION CHANNEL) 9

Distribution Channels: Introduction, Type of Marketing Channel, Channel Motivation, Importance of Channel of Distribution, Multiple Channels Distribution, Retail, Levels of Service, Corporate Retailing, The New Retail Environment. New trends in the area of marketing

L – 45;Total Hours –45

TEXT BOOKS:

1. Kotler, Philip and Armstrong, “Principles of Marketing”, New York: Pearson Education, 2014.

4. Evans and Berman, “Marketing”, 2nd ed., Biztantra, 2005.
5. William M Pride and O C Ferrell, ”Marketing – Concepts”, 12th ed., Cengage Learning, 2005.

OUTCOMES:

At the end of this course, the student will be able to:

- Understand the all-pervasive nature of markets and their transformation across decades.
- Analyse the rational, sensory & emotional triggers in consumer buying & selling habits.
- Identify the recent marketing developments and practices to inculcate them into managerial approach.

MSC2102	INTRODUCTION TO FINANCIAL MANAGEMENT	L	T	P	C
		2	0	0	0

OBJECTIVES:

- Familiarize students with the goals of financial management.
- Provide insights into concepts such as, leverages, cost of capital, capital budgeting, and capital structure.
- Enable students to understand the techniques of estimating working capital and dividend policies and decisions.

MODULE I INTRODUCTION TO FINANCIAL MANAGEMENT 9

Meaning and Definition of Financial Management, Goals of Financial Management, The Fundamental Principle of Finance, Risk-return trade-off, Agency problem, Emerging roles of financial managers in India; Time Value of Money: Future Value, Present Value, Annuity, Perpetuity.

MODULE II CAPITAL STRUCTURE, LEVERAGES AND COST OF CAPITAL 15

Meaning of Capital Structure, factors determining capital structure, capital structure planning and policy, approaches to establish target capital structure; Different sources of Long-term Finance; Leverages: Operating leverage, financial leverage and Combined leverage, EBIT-EPS analysis; Cost of capital: Cost of equity, Cost of preference shares, Cost of debt, WACC.

MODULE III TECHNIQUES OF CAPITAL BUDGETING 12

Capital Budgeting – Meaning, Capital budgeting Process; Project Classification; Evaluation Techniques – Payback period, ARR, Discounted payback period; NPV, PI , IRR, Accept/reject criteria.

MODULE IV DIVIDEND POLICIES AND DECISIONS 12

Meaning of dividend policy, factors influencing dividend policy, objectives of dividend policy, stability of dividends, forms of dividend; Relevance V/s Irrelevance of Dividends (Relevant Theory: Walter's Model, Gordon's Model; Irrelevant Theory: MM's Approach).

MODULE V MANAGEMENT OF WORKING CAPITAL 12

Introduction, Concepts of working capital, Operating and cash conversion cycle, Permanent and variable working capital, Balanced working capital position,

Determinants of working capital, Issues in working capital management, Estimating working capital requirement.

L – 60; Total Hours –60

TEXT BOOKS:

1. Khan M. Y. and Jain P. K., “Financial Management”, McGraw Hill 2016.

REFERENCES:

4. Richard A. Brealey, StewartMyersand Franklin Allen, “Principles of Corporate Finance” 11thed, McGraw Hill, 2013.

OUTCOMES: At the end of this course, the student will be able to:

- Identify the goals of financial management.
- Understand important concepts such as, capital structure, leverages, cost of capital, and capital budgeting.
- Estimate the working capital requirement for a firm and understand dividend policies and decisions of a firm.

MSC2103 HUMAN RESOURCE MANAGEMENT L T P C
3 0 0 3

OBJECTIVES:

- State the meaning, role and importance of Human Resource Management in an Organisation.
- Explain the concept of Human Resource planning and the process of recruitment, and selection of prospective employees in an organisation.
- State the purpose, need and benefits of training, induction and mentoring.
- Outline the process of Performance appraisal and its role in Compensation Management.

MODULE I INTRODUCTION TO HUMAN RESOURCE MANAGEMENT 9

Meaning - definitions, objectives and importance of HRM, functions of HRM– managerial functions – operative functions – nature and scope of HRM – HR manager, Role, qualification and qualities.

MODULE II HUMAN RESOURCE PLANNING, RECRUITMENT AND SELECTION 9

Meaning and importance of human resource planning, benefits of human resource planning, Meaning of recruitment, selection, Methods of Recruitment and Selection - Uses of tests in selection, Problems involved in placement.

MODULE III TRAINING, INDUCTION AND HRM STRATEGIES 9

Meaning of Training and Induction, Objective and purpose of induction, Need for training, benefits of training, Identification of training needs, methods of training. HRM Strategies - Human capital – emotional quotient –mentoring.

MODULE IV PROMOTION AND TRANSFERS 9

Meaning of promotion-Purposes and types – promotion policy – bases of promotion – seniority v/s merit– transfer, need –purposes –types of transfers-demotion –causes of demotion.

MODULE V PERFORMANCE APPRAISAL AND COMPENSATION 9

Meaning - objectives of performance appraisal, 360-degree appraisal, other methods of performance appraisal and limitations. Principles - techniques of wage fixation, job evaluation, compensation -meaning of compensation,

objectives and importance of compensation.

L – 45; Total Hours –45

TEXT BOOKS:

1. P. Subba Rao, “Personnel and Human Resource Management”, Himalaya Publishing House, 2015.

REFERENCES:

1. C.B.Gupta, “Human Resource Management”, Sultan chand and sons, 2014.
2. P. N. Reddy and H. R. Appannaiah, “Personnel Management”, Himalaya Publishing House, 2012.

OUTCOMES: At the end of this course, the student will be able to:

- Describe the meaning, role and importance of Human Resource Management in an Organisation.
- Identify the purpose, need and benefits of training, induction and mentoring.
- Discuss the concept of Human Resource planning and the process of recruitment, and selection of prospective employees in an organisation.
- Relate the process of Performance appraisal and its role in Compensation Management.

MSC2104 INTRODUCTION TO ENTREPRENEURSHIP

L	T	P	C
3	0	0	3

OBJECTIVES:

- Familiarise the students with the fundamentals of entrepreneurship, business principles and ideas – with a focus on global business environment.
- Help students understand the theories of entrepreneurship, entrepreneurial motivation.
- Provide insights into preparation of business plan, business growth, and global entrepreneurs.

MODULE I THEORIES OF ENTREPRENEURSHIP 9

Who is an Entrepreneur?, Theories of Entrepreneurship, Economic Entrepreneurship Theories, Psychological Entrepreneurship Theories, Personality Traits theory, Locus of Control, Need for Achievement theory, Traits of Successful Entrepreneurs, Types of Entrepreneurs, Clarence Danhof Classification, Arthur H. Cole Classification, Classification on the Basis of Ownership, Classification Based on the Scale of the Enterprise.

MODULE II ENTREPRENEURIAL MOTIVATION 9

Entrepreneurial Motivation, the Needs Framework, Entrepreneurship Development Programmes (EDPs), The Kakinada Experiment, Objectives of Entrepreneurship Development Programmes (EDPs), The Entrepreneurship Development Programme Model in India, Criteria for the Evaluation of EDPs.

MODULE III FORMING A BUSINESS PLAN 9

Forming a Business, Business Structure, Creating a Business Plan, Market Size Analysis, Funding a Business Plan, Regulations and Laws, Sustaining a Business, Customer Satisfaction, Commerce Bank, Customer Service scenario in India, Managing cash flows, Employee Buy-in, HCL, Government Incentives and Resources.

MODULE IV GROWING THE BUSINESS 9

Growing the Business, Managing Creativity, Innovation and the Sense of Ownership in a Growing Organization, Creativity and Innovation, Strategies for Growth, Organic and Inorganic Growth, Growing the business across geographical borders.

MODULE V THE GLOBAL ENTREPRENEUR 9

Laws and regulations that govern entrepreneurship, Things to know and plan before setting up a venture for the global market, Ideas to arrange for finances, Support system for entrepreneurs, Identifying opportunities in the global market, Case studies.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

4. Bohoney, Jason., “The Entrepreneurship Toolkit: Successful Approaches to Fostering Entrepreneurship”, Weidemann Associates Inc., Washington, 2011.

OUTCOMES:

At the end of this course, the student will be able to:

- Understand the fundamentals of entrepreneurship, business principles and ideas – with a focus on global business environment.
- Apply the theories of entrepreneurship and entrepreneurial motivation.
- Prepare a business plan and understand the requirements of growing a business globally.

MSC2105 FUNDAMENTAL OF FOREIGN TRADE

L	T	P	C
3	0	0	3

OBJECTIVES:

- Explain students the framework of Export Import trade.
- Illustrate various documents related to procedures in exporting and importing.
- Outline the levels of economic integration and the importance of international agreements.
- Present the regulations applicable in international business.

MODULE I AN OVERVIEW ON FOREIGN TRADE 9

Importance - nature and scope of International business; Modes of entry into International Business; Internationalisation process and managerial implications.

MODULE II CONDUCTING BUSINESS IN MULTIPLE COUNTRIES 9

Framework for analysing international business environment – Domestic, foreign and global environments and their impact on international business - UNESCO guidelines

MODULE III ECONOMIC INTEGRATION AND AGREEMENTS 9

Levels of Economic integration, NAFTA, SAFTA, ASEAN, EU and recent multilateral agreement in India's foreign trade.

MODULE IV JOINT VENTURES AND FOREIGN COLLABORATIONS 9

Joint Ventures and other forms for strategic alliances: Traditional and emerging reasons for forming strategic alliances: Pitfalls in strategic alliances; Making cross-cultural alliances work.

MODULE V REGULATIONS FOR FOREIGN TRADE 9

India Laws and Regulations Governing International Business Transactions, Taxation of foreign income; foreign investment; Setting up offices and branches abroad.

L – 45; Total Hours –45

TEXT BOOKS:

1. Ghanshyam Sharma, "*International Trade* Theory and Practice", Centrum Press, 2016.

REFERENCES:

1. M.L. Varma, "*Foreign Trade Management"*, Government of India, 2012.
2. Vaish, M.C., "Macro Economics", Vikas Publishing House, 2002.

3. Daniels, Radebaugh and Sullivan, “International Business”, Pearson Publications, 2015.

OUTCOMES: At the end of this course, the student will be able to:

- Identify the different modes available for entering international markets.
- State the documents required for international business.
- Understand the implications of international agreements.

MSC2106 COST ACCOUNTING

L	T	P	C
4	0	0	4

OBJECTIVES:

- Familiarize students with different cost concepts and the cost sheet.
- Provide insight into different techniques of material costing, labour costing, and overhead costing.
- Describe the techniques of job costing and batch costing.

MODULE I INTRODUCTION TO COST ACCOUNTING 9

Introduction, Meaning and Definition of Cost, Costing and Cost Accounting; Objectives of Costing, Comparison between Financial Accounting and Cost Accounting, Designing and Installing a Cost Accounting System; Cost Concepts, Classification of Costs, Cost Unit, Cost Centre; Elements of Cost; Preparation of Cost Sheet ;Tenders and Quotations

MODULE II MATERIAL COSTING AND CONTROL 15

Meaning, Types: Direct Material, Indirect Material; Material Control, Techniques of Inventory Control: Levels settings, EOQ, ABC Analysis, VED Analysis, Just In-Time, Perpetual Inventory System; Methods of Pricing Material Issues: FIFO, LIFO, Weighted Average Price Method and Simple Average Price Method.

MODULE III LABOUR COST 12

Meaning, Types: Direct Labour, Indirect Labour; Timekeeping, Time booking, Idle Time, Overtime, Labour Turn Over, Methods of Labour Remuneration: Time Rate System, Piece Rate System, Incentive Systems: Halsey plan, Rowan Plan & Taylor's differential Piece Rate System.

MODULE IV OVERHEADS 12

Meaning and Definition; Classification of Overheads; Allocation of Overheads, Apportionment of Overheads, Primary Overhead Distribution Summary, Secondary Overhead Distribution Summary, Repeated Distribution Method and Simultaneous Equations Method, Absorption of Factory Overheads, Methods of Absorption, Machine Hour Rate.

MODULE V JOB AND BATCH COSTING 12

Definition and Features of Job cost; Pre requisites of Job costing; Source documents, Preparation of job cost sheet; Definition of Batch costing and its

accounting procedure; Determination of economic batch size, Preparation of batch cost sheet.

L – 60; Total Hours –60

OUTCOMES:

At the end of this course, the student will be able to:

- Understand different cost concepts and prepare cost sheet.
- Identify different techniques of material costing, labour costing, and overhead costing.
- Prepare job cost sheet and batch cost sheet.

SEMESTER IV

MSC 2201	BUSINESS RESEARCH METHODS	L	T	P	C
		4	0	0	4

OBJECTIVES:

- Outline the concept and types of research.
- Explain the difference between research methods and methodology.
- Construct hypothesis and research design.
- Describe different data collection methods.
- Apply statistical tools available for the analysis of data.
- Compile the results of a research in the form of report.

MODULE I INTRODUCTION TO BUSINESS RESEARCH 9

Research: Meaning, Purpose, Motivations; Types of research; Research Approaches; Significance of research; Research methods versus methodology; Research and scientific method; Research process; Scope of business research; Review of literature: Need and Purpose

MODULE II RESEARCH PROBLEM AND RESEARCH DESIGN 12

Selection and formulation of a research problem; Formulation of hypothesis, Operational definition of concepts; Sampling techniques; Research Design: Meaning, Nature; Components of research design

MODULE III METHODS OF DATA COLLECTION 12

Meaning and Types of Data, Collection of Primary Data; Observation Method; Interview Method; Collection of Data through Questionnaires and Schedules; Other Methods of Primary Data Collection; Collection of Secondary Data; Selection of Appropriate Method for Data Collection

MODULE IV PROCESSING AND ANALYSIS OF DATA 15

Processing Operations; Problems in Processing; Types of Analysis; Statistics in Research; Measures of Central Tendency, Dispersion, Asymmetry, and Relationship; Other Measures for Analysis of Data; Testing of Hypothesis

MODULE V INTERPRETATION AND REPORT WRITING 12

Meaning and Need for Interpretation; Techniques of Interpretation; Meaning and Significance of Report Writing; Different Steps in Report Writing; Layout of Research Report; Types of Report; Mechanics of Writing Research Report

L – 60; Total Hours –60

TEXT BOOKS:

1. Kothari, C. R., “Research Methodology - Methods and Techniques”, New Age International, 2016.

REFERENCES:

1. Chawla, Sondhi., “Research Methodology”, Vikash Publication, 2015.
2. Tony Proctor, “Essentials of Marketing Research”, 4th ed., Prentice Hall,

OUTCOMES: At the end of this course, the student will be able to:

- Outline the concept of research and identify different types of research.
- Formulate hypothesis and research design.
- Select the data collection methods appropriate for the research.
- Interpret the results from the data analysis.
- Write a research report.

MSC 2202 DERIVATIVES AND COMMODITY MARKET

L	T	P	C
3	0	0	3

OBJECTIVES:

- Explain the concept of derivative and functioning of derivative market.
- Describe different types of derivative contracts.
- Elucidate the mechanism and pricing of derivative products.
- Explain the mechanism of commodity derivatives in India.
- State the role of the derivative exchanges in India.

MODULE I INTRODUCTION TO DERIVATIVES 9

Meaning of Derivatives, Types of Derivative Contracts, History of Financial Derivatives Markets, Exchange-traded Markets and OTC Markets, Participants in a Derivative Market, Economic Function of Derivative Market, Overview of Indian Derivative Market

MODULE II FUTURES CONTRACTS, MECHANISM AND PRICING 9

Forward Contracts, Limitations of forward markets, Introduction to Futures, Distinction between Futures and Forwards Contracts, Futures Terminology, Futures Payoffs, Pricing Stock Futures, Applications of Stock Futures

MODULE III OPTIONS CONTRACTS, MECHANISM AND APPLICATION 9

Option Terminology, Comparison between Futures and Options, Options Payoffs, Application of Options, Variables affecting Option Pricing, The Black Scholes Merton Model for Option Pricing, The Greeks

MODULE IV COMMODITY DERIVATIVES 9

Introduction, Meaning, Definitions, Commodity Exchange, Role of Commodity Exchanges, Commodity Derivative Markets in India, Latest Developments

MODULE V THE DERIVATIVE EXCHANGES IN INDIA – NCDEX & MCX 9

Introduction, Meaning, Structure of NCDEX, Spot Pricing Polling, Exchange Membership, Commodities Traded on the NCDEX Platform, Trading and Instruments of Trading, Pricing Commodity – Futures, Using commodity Futures, Clearing and Settlement System.

L – 45; Total Hours –45

TEXT BOOKS:

1. Dr. Manu Sharma, “Financial Derivatives”,2015.

REFERENCES:

1. NCFM study materials.Latest Editions.
2. John CHull , “Options, Futures, and Other Derivatives”, 9th Edition, Pearson. 2016.
3. Sunil Parameswaran, “Fundamentals of Financial Instruments: An Introduction to Stocks, Bonds, Foreign Exchange and Derivatives”, 2012.

OUTCOMES: At the end of this course, the student will be able to:

- Outline the concept of derivative and functioning of derivative market.
- Identify different types of derivative contracts.
- Perform valuation for different derivative products.
- Explicate the mechanism of commodity derivatives in India.
- Recognize the role of the derivative exchanges in India.

MSC 2203 ENTERPRISE RESOURCE PLANNING L T P C
4 0 0 4

OBJECTIVES:

- Describe the meaning, evolution, Growth and importance of ERP.
- State the requisites for implementing ERP in an Organisation.
- Explain various technologies used in ERP.
- Elucidate ERP system and its application.

MODULE I INTRODUCTION TO ERP 9

Evolution of ERP; what is ERP? Reasons for the Growth of ERP; Scenario and Justification of ERP in India; Evaluation of ERP; Various Modules of ERP; Advantage of ERP, An Overview of Enterprise

MODULE II AN OVERVIEW OF ENTERPRISE 12

Integrated Management Information; Business Modelling; ERP for Small Business; ERP for Make to Order Companies; Business Process Mapping for ERP Module Design; Hardware Environment and its Selection for ERP Implementation.

MODULE III ERP AND RELATED TECHNOLOGIES 12

Business Process Reengineering (BPR); Management Information System (MIS); Executive Information System (EIS); Decision support System (DSS); Supply Chain Management (SCM).

MODULE IV ERP SYSTEM 15

Introduction; Finance, Plant Maintenance, Quality Management, Materials Management, Introduction, SAP AG, Baan Company, Oracle Corporation, People Soft, JD Edwards World Solutions Company, System Software Associates, Inc. (SSA); QAD; A Comparative Assessment and Selection of ERP Packages and Modules.

MODULE V ERP IMPLEMENTATION LIFECYCLE 12

Issues in Implementing ERP Packages; Pre-evaluation Screening; Package Evaluation; Project Planning Phase; Gap Analysis; Reengineering; Configuration; Implementation; Team Training; Testing; Going Live; End-User Training; Post Implementation (Maintenance Mode).

L – 60; Total Hours –60

TEXT BOOKS:

1. Khalid Sheikh, “Manufacturing Resource Planning (MRP II) with Introduction to ERP; SCM”, McGraw-Hill, 2002.

REFERENCES:

1. K.B. Hendricks, V.R. Singhal, and J.K. Stratman., “The Impact of Enterprise Systems on Corporate Performance: A study of ERP, SCM, and CRM System Implementations, Journal of Operations Management”, Elsevier, 2015.
2. Christian N. Madu, “ERP and Supply Chain Management”, CHI, 2005.
3. Glynn C. Williams, “Implementing SAP ERP Sales & Distribution”, McGraw-Hill, 2008.

OUTCOMES: At the end of this course, the student will be able to:

- Recall meaning, evolution and growth of ERP applications.
- Select among the related technologies used in ERP.
  Demonstrate the application of ERP in an organization.

MSC 2204 FINANCIAL SERVICES

L	T	P	C
3	0	0	3

OBJECTIVES:

- Outline the concept of financial services and classify financial services.
- Differentiate between Leasing and Hire Purchase Financing.
- State the procedure of factoring and other fund based services.
- Describe the services provided by Merchant Bankers.
- State the role of Depositories and Credit Rating Agencies in India.

MODULE I INTRODUCTION TO FINANCIAL SERVICES 9

Meaning, nature, scope of financial Services, Types of financial services: Fund based and Fees based services, Need and the market of various financial Services, Growth of Financial Services in India, Problems faced in financial services sector

MODULE II LEASING AND HIRE-PURCHASE FINANCING 9

Leasing: Conceptual framework, Types, Legal framework, Tax aspects of leasing and Financial Evaluation: Perspectives of both Lessee and Lessor; Hire-Purchase Financing: Conceptual framework, Legal framework, and Financial Evaluation

MODULE III FACTORING AND OTHER FUND-BASED SERVICES 9

Factoring: Meaning, Concept and evolution of Factoring; Functions of a Factor; Types of Factoring; Factoring Vs Bills discounting; Advantages of Factoring: Forfeiting – an overview; Venture Capital Financing: Concept, Features, Need, Stages of financing, Exit Route; Consumer Credit and Housing Finance-An overview

MODULE IV MERCHANT BANKING SERVICES 9

Concept, Growth, Merchant Banking in India, Policy measures, Institutional Structure, Legal and Regulatory Frameworks, Role of Merchant Banker in Appraisal of Projects, Designing Capital Structure and Instruments, Issue Pricing, and Preparations of Prospectus

MODULE V CREDIT RATING AND OTHER FEE-BASED SERVICES 9

Introduction, Regulatory Framework, Credit Rating Agencies, Rating Process and Methodology, Rating Symbols and Grades; Overview of Stock Broking,

Depository Services, Custodial Services, and Corporate Restructuring

L – 45; Total Hours –45

TEXT BOOKS:

1. Khan, M .Y., "Financial Services", 4th Edition, Tata McGraw Hill, 2013.

REFERENCES:

1. Dr. Gurusamy, "Merchant Banking and Financial Services", 2nd Edition, Tata McGraw Hill, 2009.

OUTCOMES: At the end of this course, the student will be able to:

- Identify different types of financial services.
- Illustrate the difference between Leasing and Hire Purchasing.
- List the fearures of factoring and other fund based services.
- Explain the functions of Merchant Bankers in India.
- List Credit Rating Agencies and the services provided by them.

MSC 2205 MANAGERIAL ACCOUNTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Explain management accounting and its role in a business organisation and
- State the difference between Cost accounting, Management accounting and Financial accounting.
- Demonstrate the application of marginal costing for managerial decision making.
- Elucidate the concept of budgetary control, classify the budgets and apply the concept for preparing various budgets.
- Describe the application of standard costing and variance analysis.
  Elucidate financial statements analysis.

MODULE I INTRODUCTION TO MANAGERIAL ACCOUNTING 9

Meaning, nature and scope of management accounting, Goals of management accounting, Role of Management Accountant, Installation of the Management Accounting System, Tools of Management Accounting, Limitations of Management Accounting, Difference between cost accounting and Management accounting, difference between management accounting and financial accounting

MODULE II MARGINAL COSTING 9

Meaning, need and features of marginal costing, Marginal Costing Vs. Absorption Costing, Contribution, P/V ratio, Computation of profit using marginal costing and absorption costing, Break-even point, Break even chart, Angle of incidence, Margin of safety, Applications of Marginal Costing for Managerial Decision Making

MODULE III BUDGETARY CONTROL 9

Meaning - budget and budgetary control, objectives, advantages and limitations of budgetary control, Classification of budgets, Preparation of flexible budget, Sales budget and Cash budget

MODULE IV STANDARD COSTING 9

Meaning of standard cost and standard costing - Application of standard costing, Advantages and Disadvantages of standard costing, Variance analysis: Material and Labour variances only

MODULE V FINANCIAL STATEMENT ANALYSIS 9

Understanding Financial Statements and their inter-links; Meaning and Importance of

Financial Statement Analysis, Techniques of Financial Statement Analysis: Horizontal Analysis, Vertical Analysis, Trend Analysis, Ratio Analysis-Meaning and Importance, Classification of ratios: Liquidity ratios, Solvency/Capital Structure Ratios, Turnover ratios, Profitability ratios, Valuation ratios

L – 45; Total Hours –45

TEXT BOOKS:

1. Khan& Jain, “Management Accounting”, Tata Mcgraw Hill, 2016.

REFERENCES:

1. M. N. Arora, “Management Accounting”, Himalaya Publisher, 2016.
2. Shashi K. Gupta, “Management Accounting”, Kalyani Publishers, 2014.
3. Maheshwari, “Management Accounting”, Vikas Publishers, 2016.

OUTCOMES: At the end of this course, the student will be able to:

- Recognize the importance of management accounting and its role in a business.
- Compare Cost Accounting, Management Accounting and Financial Accounting.
- Apply marginal costing techniques for managerial decision making.
- Prepare different types of budgets.
- Apply techniques of standard costing and variance analysis.
- Analyse the financial statements using ratio analysis.

MSC 2206	INTRODUCTION TO FINANCIAL PLANNING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Explain the concept of financial planning, process of financial planning and the role of financial planner.
- Describe the procedure of retirement planning and the factors considered for it.
- Elucidate Investment planning, strategies used in investment planning and the role of return analysis in decision making.
- Introduce the concept of risk management and the application of tools used in risk management.
- Explain the concept of insurance, different types of insurance and their uses in financial planning.

MODULE I OVERVIEW OF FINANCIAL PLANNING 9

Meaning and Importance of Financial Planning; Major Areas of Financial Planning; Growth of Financial Planning Profession in India; Role of a Financial Planner; Financial Planning Process: Establishing and Defining Client Relationship; Collecting Client Information; Analyzing Client's Financial Status, Risk Profile, and Determining Financial Goals; Developing and Presenting Financial Planning Recommendations; Implementing Financing Planning Recommendations; Monitoring and Reviewing Client's Situation

MODULE II RETIREMENT PLANNING 9

Introduction to Retirement Planning, Analysis of Client's Life Cycle, Factors Considered in Retirement Planning, Analysis of Client's Retirement Needs, Factors and Principles of Wealth Creation, Retirement Planning Process, Pre-retirement Strategies, Post-Retirement Strategies

MODULE III INVESTMENT PLANNING I 9

Array of Investment Products, Types of Investment Risk, Product Profiling based on Inherent Risk and Tenure, Risk Profiling of Investors, Financial Asset Allocation Strategies, Investment Planning for Achieving Financial Goals, Analysis of Return: Time Weighted Return, Rupee Weighted Return, Real Return, Nominal Return, Holding Period Return, Compounded Annual Growth Rate, Yields.

MODULE IV INVESTMENT PLANNING II 9

Analysis of Risk: Beta and Portfolio Beta, Standard Deviation, Variance, Semi-Variance, Covariance, and Correlation; Active Investment Strategies, Passive Investment Strategies, Investment Portfolio Management: Risk-Return Relationship, CAPM, CML, SML, Sharpe, Trey nor and Jensen Ratios; Revision of Portfolio

MODULE V INSURANCE PLANNING 9

Meaning of Insurance, Role of Insurance in Financial Planning, Different Types of Insurance Used in Financial Planning: Auto Insurance, Homeowners Insurance, Liability Insurance, Life Insurance, Disability Insurance, Health Insurance, Long-Term Care Insurance

L – 45; Total Hours –45

TEXT BOOKS:

1. C.E. Scott Brewster, “Financial Planning Handbook”, 2015.

REFERENCES:

1. Jack R. Kapoor, Les R. Dalai, Robert J. Hughes., “Focus on Personal Finance”, 4th Revised Edition. McGraw-Hill Education, 2012.
2. S. K. Bagchi, “Wealth Management”, 1sted., Jaico Publishing House, 2009.
3. Dun, Bradstreet, “Wealth Management” 1sted., McGraw Hill, 2009.

OUTCOMES: At the end of this course, the student will be able to:

- Outline the concept of financial planning, major areas of financial planning and the role of a financial planner.
- Describe the procedure of retirement planning and the factors considered for it.
- Explicate the concept of Investment planning, strategies used in investment planning and the role of return analysis in decision making.
- Explain the concept of risk management and apply different tools of risk management.
- List types of Insurance and its uses in financial planning.

SEMESTER V

		L	T	P	C
MSC 3101	**INTRODUCTION TO BUSINESS LAW**	**4**	**0**	**0**	**4**

OBJECTIVES:

- Describe Indian contract act and its relevance in the organisations and business transactions.
- Discuss Indian Partnership act and its application for setting up a partnership firm in India.
- Explain Company law, documents required and the procedure to be followed for setting up a company in India.
- Outline the Limited Liability Partnership act and the documents required in setting up a Limited liability company.
- Discuss the role of Information technology in today's business scenario and the need and use of Information technology act in the organisation.

MODULE I INDIAN CONTRACT ACT 15

Meaning, Characteristics & Scope of the contract law, Elements of contract, Offer and acceptance, Lawful consideration, Capacity to contract, Free Consent, Lawful object. Discharge of contract including performance of contract. Breach of contract, contingent contract, quasi contract, Contract of Indemnity and Guarantee, Contract of Bailment, Contract of Agency

4. Kevin, S., “Security Analysis and Portfolio Management”, Prentice Hall of India 2006.

   Murphy, John J., “Technical Analysis of the Financial Markets”, New York Institute of Finance, 2008.

OUTCOMES:

- Differentiate between fundamental analysis and technical analysis.
- List the components of fundamental analysis.

  Identify technical indicators for conducting technical analysis.

SEMESTER VI

		L	T	P	C
MSC 3201	**FUNDAMENTALS OF BUSINESS TAXATION**	**4**	**0**	**0**	**4**

OBJECTIVES:

- Explain the concept of Taxation and the components of taxation.
- Illustrate the computation of taxable income under different heads of Income.
- Discuss Customs act and Goods and Services Tax applicable in India.

MODULE I INTRODUCTION TO TAXATION 9

Introduction, Canons of Taxation, Types of Taxes, Definitions- Income, Person, Assesses, Assessment year, Pervious year, Agricultural Income (simple numerical problems). Exempted Incomes, Capital and Revenue Income and expenditure, Residential Status and Incidence of Tax

MODULE II COMPUTATION OF TAXABLE INCOME UNDER THE DIFFERENT HEADS OF INCOME 15

Income from Salary- Meaning of salary, Allowances, Perquisites, Deductions from salary (Theory and Problems);Income from House Property - Basis of Chargeability, Annual Value, Self occupied and let out property- Deductions (Theory and Problems);Profits and Gains of Business & Profession -Definitions, Concepts, Practical Aspects - Deductions expressly allowed and disallowed (Theory only); Capital Gains - Chargeability-Definitions-Practical aspects - Cost of Improvement – Indexation - Short term and long term capital gains-Exemptions (Theory only);Income from other sources - Chargeability-Deductions-Amounts not deductible (Theory only)

MODULE III COMPUTATION OF TOTAL TAXABLE INCOME OF AN INDIVIDUAL 12

Gross total Income- deductions from GTI, Calculation of tax liability- (Rates applicable for respective Assessment year) Education cesses, Refund of tax

MODULE IV CUSTOMS ACT 12

Customs Act - Meaning – Types of Custom Duties – Valuation for Customs Duty, levy and exemption from custom duty. Offences and prosecution, Baggage rules, carrying of currency, gold and goods (Theory only)

MODULE V GOODS AND SERVICES TAX ACT 12

Goods and Services Tax Act: Overview, extent and scope, Levy and Collection of Central/State Goods and Services Tax, Composition Levy, Taxable person, Power to grant exemption from tax, Remission of tax on supplies found deficient in quantity. Change in tax rates, improvements and critiques of the law. Grievance redressal system, Model tax calculations.

Total Hours –60

TEXT BOOKS:

1. Alan C. Shapiro, Peter Moles, Dr. Jayanta Kumar Seal., "International Financial
Management", Wiley, 2016.

REFERENCES:

1. Jeff Madura, "International Financial Management", 2nd edition, Cengage Learning, 2011.
2. Vyuptakesh Sharan, "International Financial Management" 5th ed., PHI, 2011.
3. P. G. Apte, "International Finance Management", 1st edition, McGraw Hill, 2010.
4. John Holland, "International Finance Managemen,. 2nd edition, Oxford, Blackwell Publication, 1997.
5. Shapiro, "International Finance", 1st edition, Wiley India Pvt Ltd, 2008.

OUTCOMES:

- Explain the meaning and concept of International Finance, International Financial Market and Exchange rate determination.
- State the meaning of Inflation, Interest Rate, Exchange rate, Interest rate parity, Purchasing power parity and International Arbitrage.
- Describe the role and functioning of Forex Market, Currency Derivatives Markets, Eurocurrency Market, Euro credit Market, Eurobond Market and International Stock Markets.

MSC 3203	INVESTMENT BANKING AND OPERATIONS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Outline the concept of Investment banking, functions of Investment Banker and the participants in Investment banking business in India.
- Elaborate on Global Financial Instruments and their features.
- Describe Trade Life Cycle, the trading mechanism and the clearing and settlement process.
- List the components of corporate actions and its implementation in Indian business scenario.
- Describe functions, regulatory and compliance responsibilities under risk management and lending services.

MODULE I INTRODUCTION TO INVESTMENT BANKING 9

Introduction to Investment Banking: Meaning, role and functions of Investment Banker, key functions of security trading organization, custodian, depository & securities dealing & investment banking -Various market participants – Hedge fund, Portfolio Managers, Institutional Investors

MODULE II GLOBAL FINANCIAL INSTRUMENTS 9

Global Financial Instruments – Equity, Debt, Derivatives, Forex, Commodities, SWAPS, Mortgage Backed Securities, Asset Backed Securities, CDS, Warrants, REITS, LEAPS, STRIPS

MODULE III INTRODUCTION TO TRADE LIFE CYCLE 9

Introduction to Trade life cycle- Equity & Debt Understanding the Trade execution, trade capture, trade enrichment, trade confirmation-SWIFT FIX transaction reporting function, Brokerage Calculation, Brokerage Calculation, Settlement Terminologies, Clearing & Settlement process – Settlement instructions- Types of trade settlements, Role of Custodian.

MODULE IV CORPORATE ACTIONS 9

Corporate Actions: Introduction to Corporate Actions - Mandatory & Voluntary, Corporate events - Bonus issue, stock split, right issue reverse stock split - Special Corporate action events with options –impact of corporate actions on portfolio statement

MODULE V RISK MANAGEMENT AND LENDING SERVICES

9

Risk Management and lending services: Functions of Treasury Department, Role of Risk Manager, Collateral Management Process, Margin and VAR Calculation, ISDA Norms – Regulatory and Compliance Responsibilities. Security Lending and Borrowing (SLB), Concept of Margin Funding, External – Internal reconciliation and cash management

Total Hours –45

TEXT BOOKS:

1. Pratap Subramanyam, “Investment Banking”, Latest edition, Tata McGraw-Hill Education.

REFERENCES:

1. Pratap Subramanyam, “Investment Banking: Concepts, Analysis & Cases”, Latest edition Tata McGraw-Hill Education.
2. Pratap Giri S., “Investment Banking”, Latest edition, Tata McGraw-Hill Education.

OUTCOMES:

- State the concept of Investment banking, functions of Investment Banker and the participants in Investment banking business in India.
- List Global Financial Instruments and their features.
- Explain Trade Life Cycle, the trading mechanism and the clearing and settlement process.
- Discuss the functions, regulatory and compliance responsibilities under risk management and lending services.

MSC 3204 FINANCIAL MODELLING USING EXCEL

L	T	P	C
2	1	0	2

OBJECTIVES:

- Illustrate the application of Excel for Annuity Functions, Investment Analysis Functions, Bond Functions and Depreciation Functions at basic level.
- Illustrate application of excel in conducting Sensitivity Analysis, Simulation exercises and Financial Models at basic level.

MODULE I INTRODUCTION **9**

Understanding Finance Functions present in Excel: Annuity Functions, Investment analysis functions, Bond Functions, Depreciation Functions. Making Decisions: Examples of creating Decision making formulas (Income tax calculator), Looking up values and conditional formatting. Analysing databases using Sort, Filter and Pivot Tables

MODULE II SENSITIVITY ANALYSIS USING EXCEL **9**

Scenario Manager, Other Sensitivity Analysis Features, Goal Seek, Solver, Data Tables

MODULE III SIMULATION USING EXCEL **9**

Different Statistical Distributions used in Simulation. Generating Random Numbers that follow a particular distribution; Building Models in Finance using Simulation

MODULE IV FINANCIAL MODELS PART-1 **9**

Preparing common size statements directly from Trial Balance, Forecasting Financial Statements using Excel, Analysing Financial Statements by using Spread Sheet Model

MODULE V FINANCIAL MODELS PART-2

9

Loan Ammortization Table, Financial Planning & Investments: Retirement Planner, Portfolio Structuring, Bond Pricing

Total Hours –45

TEXT BOOKS:

1. Chandan Sengupta, Financial Analysis and Modeling using Excel and VBA, Wiley, 2016..

REFERENCES:

1. Benninga, S., “Financial Modeling”, 3rd ed. Massachusetts, MIT Press, 2008.
2. Swan, Jonathan, “Practical Financial Modeling: A Guide to Current Practice”, 2nd ed. CIMA publishing Publication, 2005.
3. Musiela, Marek and Rutkowski, Marek., “Models in Financial Modeling”, 2nd ed. Springer, 2005.

OUTCOMES:

- Use of Excel for Annuity Functions, Investment Analysis Functions, Bond Functions and Depreciation Functions at basic level.
- Apply Excel tools and techniques in conducting Sensitivity Analysis, Simulation exercises and Financial Models at basic level.

MSC 3205	IT FOR BUSINESS AND ACCOUNTING - LAB	L	T	P	C
		0	0	4	2

OBJECTIVES:

- Demonstrate the application of Excel using Annuity Functions, Investment Analysis Functions, Bond Functions and Depreciation Functions at advance level.
- Perform Sensitivity Analysis, Simulation exercises and Financial Modelling using Excel.

MODULE I FINANCE FUNCTIONS IN EXCEL 9

Annuity Functions, Investment analysis functions, Bond Functions, Depreciation Functions. Creating Decision making formulas (Income tax calculator), Looking up values and conditional formatting, Analysing databases using Sort, Filter and Pivot Tables

MODULE II SENSITIVITY ANALYSIS USING EXCEL 9

Scenario Manager, Goal Seek, Solver, Data Tables

MODULE III SIMULATION USING EXCEL 9

Generating Random Numbers that follow a particular distribution, Building Models in Finance using Simulation

MODULE IV FINANCIAL MODELS PART-1 9

Preparing common size statements directly from Trial Balance using Excel, Forecasting and Analysing Financial Statements using Excel

MODULE V FINANCIAL MODELS PART-2 9

Loan Amortization Table, Portfolio Structuring, Bond Pricing

Total Hours –45

TEXT BOOKS:

1. Chandan Sengupta, “Financial Analysis and Modeling using Excel and VBA”, Wiley, 2016.

REFERENCES:

1. Benninga, S., “Financial Modeling”, 3rd ed. Massachusetts MIT Press, 2008.

REGULATIONS 2016

CURRICULUM AND SYLLABI (I & II Semesters)

B.Sc

BIO TECHNOLOGY

VISION AND MISSION OFTHE DEPARTMENT OF LIFESCIENCES

VISION

To attain new heights in biotechnology research, shaping life sciences into a premier precision tool for the future for creation of wealth and ensuring social justice-specially for the welfare of the poor

MISSION

The mission of the school of life sciences and Technology is to maximize the benefits of biotechnology to the University, the nation and the globe by being an excellent quality, comprehensive, multidisciplinary school that supports, coordinates, disseminates and advances biotechnology in the areas of social welfare and entrepreneurship.

PROGRAMME EDUCATIONAL OBJECTIVES:

- "This course will facilitate the graduates to be professionally competent in Biotechnology to solve the problems in environmental, food, biochemical and biomedical sciences.
- This course will offer students with a solid foundation in Biological Sciences, to enable them to work on applications in biotechnology as per the requirement of the industries, and also will enable the students to pursue higher studies and research.
- This course will enable students to acquire knowledge on the fundamentals of Biochemistry, Cell biology, Microbiology and Molecular biology to enable them to understand basic concept in modern biology and help them to build their carrier in this field.
- This course will facilitate the students to acquire knowledge in skill based courses such as Biofertilizer Technology, Agricultural Biotechnology, Medical Biotechnology, Herbal Technology, Disease Management and Mushroom Culture Technology enabling their skills and give confidence to them for business opportunities.
- This programme will teach students the importance of Bioethics, entrepreneurship, communication and management skills.
- This course will also offer the graduates to demonstrate their proficiency in theory and practice of bio-techniques through life-long learning and provide confidence to perform as an individual and / or member of a team with professional and ethical behavior.

PROGRAMME OUTCOMES:

- Graduates of the course will have strong background in the interface of modern biology and skill based courses and be able to use these tools in business/industry and/or institutes wherever necessary.
- Graduates will identify, formulate, research literature, and analyze complex science problems reaching substantiated conclusions using first principles of mathematics, natural science, and applied sciences.

- Graduates will demonstrate knowledge and understanding of the science and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- Graduates of the course will have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- Graduates of the course will function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- Graduates of the course will communicate effectively on complex science activities with the science community and with the society at large.
- Graduates of the course will apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering and technology practice.
- Graduates of the course will design solutions for complex science problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

SEMESTER I

LNC 1184	TAMIL I	L	T	P	C
		3	1	0	3

OBJECTIVES:

- சமூக மாற்றச் சிந்தனைகளை உள்ளடக்கிய தற்கால இலக்கியங்களை அறிமுகம் செய்தல்
- புதுக்கவிதை, சிறுகதை, உரைநடை ஆகிய இலக்கியங்களின் நயம் பாராட்டுதல்
- சந்திப் பிழையின்றி எழுத மாணவர்களைப் பயிற்றுவித்தல்

MODULE I இருபதாம் நூற்றாண்டு மரபுக்கவிதைகள 8

மனோன்மணியம் சுந்தரனார் - தமிழ்த்தாய் வாழ்த்து, பாரதியார் - யோக சித்தி, பாரதிதாசன் - நீங்களே சொல்லுங்கள், கண்ணதாசன் - காலக்கணிதம்

MODULE II புதுக்கவிதைகள 8

ஈரோடு தமிழன்பன் - கனாக்காணும் வினாக்கள், மீரா - ஊசிகள், வைரமுத்து - அந்தி, நா.காமராசன் - அலிகள், தாமரை - ஒரு கதவும் கொஞ்சம் கள்ளிப்பாலும், மொழிபெயர்ப்புக் கவிதைகள் - கீதாஞ்சலி, மும்பைவாசிகள் (10 கவிதைகள் மட்டும்)

MODULE III சிறுகதைகள் 8

புதுமைப்பித்தன் - பால்வண்ணம் பிள்ளை, பி.எஸ்.ராமையா - பணம் பிழைத்தது, ஜெயகாந்தன் - விதியும் விபத்தும். கி.இராஜநாராயணன் - நாற்காலி, சு.சமுத்திரம் மொழிபெயர்ப்புச் சிறுகதைகள் - காகித உறவு, மாதவிக்குட்டி - நெய்ப்பாயாசம், அந்தோன்செகாவ் - பச்சோந்தி

MODULE IV மொழிப்பயிற்சி 7

கலைச்சொல்லாக்கம், பிழை திருத்தம் (ஒருமை, பன்மை, ல-ள-ழகர, ர�றீறகர, ண-ந-னகர வேறுபாடுகள்), அயற்சொற்களைதல்

MODULE V இலக்கிய வரலாறு 7

பாடந்தழுவியது (இருபதாம் நூற்றாண்டு மரபுக் கவிதைகள், புதுக்கவிதையின் தோற்றமும் வளர்ச்சியும், சிறுகதையின் தோற்றமும் வளர்ச்சியும்)

MODULE VI படைப்பிலக்கியம 7

கவிதை எழுதுதல், சிறுகதை வரைதல்

L – 45; P – 30; TOTAL HOURS – 75

REFERENCES:

1. பொதுத்தமிழ் - செய்யுள்திரட்டு - தமிழ்த்துறை வெளியீடு
2. தமிழ் இலக்கிய வரலாறு - சோம. இளவரசு
3. சிறுகதைத் தொகுப்பு (கட்டுரைக்களஞ்சியம்)

OUTCOMES:

1. மாணவர்கள் சமூக மாற்றச் சிந்தனைகளை அறிந்துகொள்வர்
2. சந்திப்பிழைகளை நீக்கி எழுதும் திறன் பெறுவர்
3. புத்திலக்கியங்களைப் படைக்கும் திறனையும் திறனாய்வு செய்யும் திறனையும் பெறுவர்

ENC1181	GENERAL ENGLISH – I	L	T	P	C
		4	1	0	4

OBJECTIVES:

- To help the students acquire efficiency in Spoken English through role plays.
- To enable them to make Presentation effectively.
- To develop reading skills among students through extensive readers.
- To orient them in writing letters.
- To train them in appreciating and interpreting English literature.

MODULE I **8**

Oral and Written Communication – implications in real life and workplace situations Essential English Grammar - 1-6 units

MODULE II **8**

One–minute Presentations (JAM) on concrete and abstract topics that test their creative thinking (ii) Prepared p and extempore presentations
Short Story; O Henry - “Robe of Peace” (Extensive Reading)

MODULE III **8**

Role-Play – establishing a point of view - convincing someone on social issues such as preservation of water, fuel, protection of environment, gender discrimination.
Poetry: William Shakespeare - “All the World’s a Stage”

MODULE IV **7**

Letter Writing- Letter of Invitation & Permission Developing story from hints- Short Story: John Galsworthy - “Quality” (Extensive Reading)

MODULE V **14**

Précis Writing- Writing instructions and recommendations Reading Comprehension: Short Story**--**Rudyard Kipling – “The Miracle of Puran Bhagat”(Extensive Reading) Written correspondence - - e-mail writing Prose : Education, Employment, Unemployment

L – 45; P – 30; TOTAL HOURS – 75

REFERENCES:

1. Anderson, Kenneth & et.al. “Study Speaking : A Course in Spoken English for Academic Purposes” (Second Edition). Cambridge University Press, UK. 2004.
2. Sharma, R.C. & Krishna Mohan, “Business Correspondence and Report Writing”.

3. Tata MacGraw – Hill Publishing Company Limited, New Delhi. 2002
4. Hurlock, B. Elizabeth “Personality Development”. Tata McGraw Hill, New York, 2004.

6. Dahiya SPS. Ed. Vision in Verse- An Anthology of Poems. New Delhi: Oxford University Press, 2002
7. Murphy, Raymond. Essential English Grammar. New Delhi: Cambridge University Press, 2009.
8. Seshadri, K G Ed. Stories for Colleges. Chennai: Macmillan India Ltd, 2003.

OUTCOMES:

Students would be able to

- Actively take part in role plays
- Make effective presentation s
- Read and comprehend various texts.
- Write letters without making mistakes.
- Analyse literary texts.

LSC1101	CELL BIOLOGY	L	T	P	C
		4	0	0	4

OBJECTIVES:

- To get overview of classes of cells and structural and function aspects of membrane structure and functions.
- To develop a detailed knowledge of cell organelle.
- To develop skill to understand Cell division.
- To understand tissue organization and stem cells.

MODULE I INTRODUCTION TO CELL **12**

Discovery of cells-a brief history: Cell Theory; Basic properties of cell, Different classes of cell: Prokaryotic and eukaryotic cell; difference between plant cell and animal cell.

MODULE II CELL MEMBRANE **12**

Structure and function of plasma membrane, Transport of substances through cell membrane- osmosis, diffusion and its types, Active transport (sodium pump) and passive transport; membrane potential, measuring membrane potential, ion channels- Na^+ and K^+ channels, action potential and nerve impulse.

MODULE III CELL ORGANELLE AND CYTOSKELETON **12**

Nucleus-structure and function, concept of chromosomes; Mitochondria, Chloroplast Endoplasmic reticulum, Golgi apparatus, lysosome, Membrane transport- exocytosis and endocytosis, cytoskeleton structures- intermediate filaments, microtubules- tubulin, centrosome structure, actin filaments, muscle contraction.

MODULE IV CELL SIGNALLING **12**

Principles of cell signaling, cell surface receptors, ion channel coupled receptors, G-protein coupled receptors, GPCRs, cAMP signaling pathway, Calcium signaling pathway, Enzyme coupled receptors, RTKs, Ras pathway.

MODULE V CELL DIVISION AND CELL CYCLE **12**

Cell cycle, regulation of cell cycle, mitosis-different stages of mitosis and proteins involved, meiosis- stages of meiosis I and II; genetic recombination, Meiotic non

disjunction.

TOTAL HOURS – 60

REFERENCES:

1. Essential Cell Biology by Albert et.al. John Wiley & Sons, 4Ed, 2015
2. The Cell by Cooper. ASM Press, 4Ed, 2007
3. Cell and Molecular Biology by Karp. John Wiley & Sons, 7Ed, 2013

OUTCOMES:

At the end of this course students will be able to:

- Define components of a cell
- Understand cellular structure and functions
- Understand the mechanisms of Cell cycle control and cell division

LSC1102	CELL BIOLOGY LAB	L	T	P	C
		0	0	3	2

OBJECTIVES:

The students should be able to

1. Understand explicitly the concepts
2. Develop their skills in the preparation and identification of cell structures and their functions

LIST OF EXPERIMENTS

1. Introduction to microscopes used for cell biology studies
2. Microscopic study of cell and cell organelles
3. Cell counting and viability
4. Mitosis and the Cell Cycle in Onion Root-Tip Cells
5. Blood smear preparation
6. Buccal Smear Preparation
7. Isolation of Mitochondria
8. Isolation of Chloroplast

TOTAL HOURS - 45

REFERENCES:

Laboratory Manual

OUTCOMES:

Students will learn about

- Basic methods in cell biology
- Characterization and structure of cell isolated from various sources

LSC1103	MICROBIOLOGY	L	T	P	C
		4	0	0	4

OBJECTIVES:

- To offer a sense of the history of microbial science, its methodology and its many contributions to humanity
- To ensures the students to understand about the microbiology and diseases.

MODULE I BASICS OF MICROBIOLOGY **12**

Microbiology - history and scope– General structure & functions -viruses, bacteria, algae, fungi, protozoa –Microscopy - Principles & classification of microbes – Whittaker five kingdom classification.

MODULE II STERILIZATION **12**

Sterilization and disinfection - stain and staining methods –. Microbial media – methods of obtaining pure cultures - Phases of growth curve, Factors influencing the growth of microbes –classification of microorganisms.

MODULE III FOOD AND INDUSTRIAL MICROBIOLOGY **12**

Role of microbes in food production - Microbiology of fermented food and dairy products - Alcoholic beverages- Food spoilage and Preservation processes. Production of antibiotics, amino acids and organic Acids.

MODULE IV MEDICAL MICROBIOLOGY **12**

Pathogenesis, lab diagnosis, prevention and control of important microbial diseases. Pathogenic bacterial diseases, Fungal diseases, Viral Diseases and Protozoan diseases.

MODULE V ENVIRONMENTAL MICROBIOLOGY **12**

Role of microbes in the ecosystems – Microorganisms in soil, air and water. Sewage treatment methods - biological nitrogen fixation - biofertilizers.

TOTAL HOURS – 60

REFERENCES:

1. Microbiology: An Introduction: Tortora, Funke & Case. 7th edition, 2001

2. A. H. Patel, “Industrial microbiology”, Macmillan Publishers India, 2002.
3. Pelezar, chan, “Microbiology ”– Krieg Tata McGraw Hill Publications, 2007.
4. Prescott, Harley and Klein, “Microbiology”, McGraw Hill publications, Fifth edition, 2003.
5. Wulf Crueger and Anneliese Crueger, “Biotechnology – A textbook of Industrial Microbiology”, Panima publishing corporation, New Delhi , 2000, reprint 2005.
6. Jacquelyn G.Black, “Microbiology -Principles and Explorations” Wiley publications 2008.

OUTCOMES:

At the end of the course the students will be able to

• demonstrate a broad understanding of the diversity and range of microorganisms, the interactions between humans and microorganisms, the role of microorganisms in industrial and environmental processes, and their role in the development of the techniques that underpin modern molecular biology

• demonstrate proficiency in a set of core microbiological and molecular biologicaltechnical methods, including both an understanding of the principles of the methods and their utilisation in laboratory settings

• demonstrate familiarity with the risk assessment process, and use this information to operate safely in the laboratory environment

• collect, organise, analyse, evaluate and interpret experimental data using appropriate quantitative, technological and critical thinking skills

• communicate microbiological principles and information effectively to diverse audiences, using a variety of formats

LSC1104	MICROBIOLOGY LAB	L	T	P	C
		0	0	3	2

OBJECTIVES:

Provides an opportunity to experimentally verify the theoretical concepts already studied. It also helps in understanding the theoretical principles in a more explicit and concentrated manner. The students should be able to

• Understand explicitly the concepts

• Develop their skills in the preparation, identification and quantification of Microorganisms

LIST OF EXPRIMENTS

1. Bio-safety guideline.
2. Preparation of media for growth of various organisms.
3. Identification and culturing of various organisms
4. Staining of microorganisms. – Grams staining, spore staining, capsular staining.
5. Measure of bacterial population by turbidometry and studying the effect of temperature, pH, carbon and nitrogen.
6. Assay of antibiotics production and demonstration of antibiotic resistance.
7. Biochemical tests to identify various organisms

TOTAL HOURS – 45

REFERENCES:

Laboratory Manual

OUTCOMES:

Students will learn about

Basic methods in microbiology

Characterization and isolation of bacteria isolated from various sources

Growth kinetics of Bacteria

CHB1182	CHEMISTRY	L	T	P	C
		3	0	0	3

OBJECTIVES:

The students should be conversant with

- the basic problems like hardness, alkalinity, dissolved oxygen associated with the water used for domestic and industrial purpose and treatment process involved.
- the synthesis, properties and applications of nanomaterials.
- the importance of renewable energy sources like solar, wind, biogas, biomass, geothermal, ocean and their limitations.
- the basic analytical techniques like UV-Visible, FT-IR, NMR, AAS, AES, Circular Dichroism and XRD etc.
- photochemistry concepts related to physical processes and chemical reactions induced by photon absorption and their applications.
- basic principles of electrochemistry, cell construction and evaluation and to understand general methodologies for construction & design of electrochemical cell

MODULE I WATER TECHNOLOGY **8**

Impurities present in water, hardness : types of hardness, demerits of hard water in boilers, estimation of hardness by EDTA method (problems) – alkalinity : estimation of alkalinity (problems) – dissolved oxygen: estimation of dissolved oxygen – conditioning methods : external treatment method: – lime soda and zeolite process (principle only), Ion exchange process – Internal treatment : colloidal, carbonate, phosphate and calgon methods – drinking water: standards (BIS), treatment of domestic water {screening, sedimentation, coagulation, filtration, disinfection }– desalination: electrodialysis, reverse osmosis.

MODULE II NANOCHEMISTRY **8**

Introduction – distinction between molecules, bulk materials and nanoparticles – classification based on dimension with examples – synthesis (top-down and bottom-up approach} : sol-gel, thermolysis (hydrothermal and solvothermal), electrodeposition, chemical vapour deposition, laser ablation – properties and applications (electronic, magnetic and catalytic) – risk factors and future perspectives.

MODULE III ENERGY SOURCES **8**

Energy: past, today, and future – a brief history of energy consumption – present energy scenario of conventional and renewable energy sources – renewable energy : needs of renewable energy, advantages and limitations of renewable energy – solar energy: basics, solar energy in the past , photovoltaic, advantages and disadvantages – bioenergy: conversion, bio degradation, biogas generation, biomass gasifier, factors affecting biogas

generation, advantages and disadvantages – geothermal energy: geothermal resources (hot dry rock and magma resources, natural and artificial), advantages and disadvantages – wind energy: wind resources, wind turbines, advantages and disadvantages – ocean energy: wave energy, wave energy conversion devices, ocean thermal energy, advantages and disadvantages.

MODULE IV PHOTOCHEMISTRY 7

Introduction: absorption and emission, chromophores, auxochromes – laws of photochemistry : Grotthus-Draper law, Stark Einstein law – quantum yield (problems) – photo physical processes : fluorescence and phosphorescence - Jablonski diagram (electronic states and transitions) – quenching, annihilation – photosensitization: principle and applications – chemiluminescence, bioluminescence.

MODULE V ELECTROCHEMISTRY 7

Electrochemistry - types of electrodes (principle and working) : gas (SHE), metal/metal ion electrode, metal-metal insoluble salt (calomel electrode), ion-selective (glass electrode and fluoride ion selective electrode) – Electrolytic and galvanic cells, construction of cell, EMF measurement and applications (problems), standard cell (Weston-cadmium), reversible and irreversible cell, concentration cell. Determination of fluoride ion using fluoride ion selective electrode – Chemically modified electrodes (CMEs) : concept, approaches and applications.

TOTAL HOURS – 45

7. Principles of molecular photochemistry: An introduction, Nicholas J. Turro, V.Ramamurthy and Juan C. Scaiano, University Science Books, Sausalito, CA, 2009.

OUTCOMES:

The students will be able to

- solve problems related to hardness, alkalinity, dissolved oxygen associated with the water and

describe the treatment processes.

- classify nanomaterials and apply the nanochemistry approach to synthesize the nanomaterials.
- explain the principle and enumerate the advantages and disadvantages of various renewable energy sources.
- state the principle and illustrate the instrumentation of various analytical techniques.
- apply the concepts of photochemistry to elaborate various photo-physical and photochemical reactions.
- construct a electrochemical cell and describe the various types of electrodes and determine the fluoride content.

ENC1183	COMMUNICATION SKILLS	L	T	P	C
		2	0	0	2

OBJECTIVES:

• To help the students acquire efficiency in Spoken English with due importance to Stress, Accent and Pronunciation

• To enable them to make Presentation effectively

• To prepare them for Interviews and Group Discussions

• To train them in writing official letters , resume'writing and reports.

MODULE I **8**

Theory: Oral and Written Communication – implications in real life and workplace situations

Lab: Listening to ESL Podcast- Viewing Multimedia- Listening to BBC News- Received Pronunciation (RP/VOA/NDTV) – exposure to paralinguistic features.

MODULE II **8**

Theory:

(i) One–minute Presentations (JAM) on concrete and abstract topics that test their creative thinking

(ii) Prepared presentations and extempore presentations

Lab: viewing Presentation Tips, Interviews Skills

(iii) Group project – presentation on any social issue. The group will have to research on the history of the problem, its cause, impact and outcome hoped for and then make a presentation

MODULE III **8**

Theory: Developing persuasive skills – establishing a point of view – convincing some one on social issues such as preservation of water, fuel, protection of environment, gender discrimination.

Lab: Negotiating Skills, Expressing Opinion

MODULE IV **8**

Theory: Brainstorming – Think, pair and share activity – Discussion etiquette

63 – Assigning different roles in a GD (Note-taker, Manager, Leader and Reporter)

Lab: Viewing Group Discussion

MODULE V **13**

Theory: Written correspondence - Letter of Application and CV - e-mail writing - writing instructions and recommendations – Lab reports
Lab: Resume' writing – viewing different types – Functional, Chronological- Writing one's resume using wiki, viewing e-mail etiquette, format and style.
Theory: Technical Writing –Writing a technical Proposal – format- cover page, executive summary, time line chart, budget estimate, drafting, conclusion.

6. Riordan & Pauley. 'Report Writing Today'. 9th Edition. Wadsworth Cengage Learning, USA. 2005.

OUTCOMES:

On completion of the course, the students will have the ability to speak effectively and write official letters, reports and proposals.

SEMESTER II

ENC1282	**GENERAL ENGLISH II**	**L**	**T**	**P**	**C**
		3	**1**	**0**	**3**

OBJECTIVES:

- To prepare students for Interviews and Group Discussions
- To train them in writing official letters , resume' writing and reports.
- To train them in analysing different genre of literature.

MODULE 1 **7**

Filling Money Order Challan and Bank Challan Short Story :G.K.Chesterton – The Hammer of God (Extensive Reading) Essential English Grammar – 7-12 units

MODULE 2 **8**

Brainstorming – Think, pair and share activity Poetry : Walt Whitman- I Celebrate Myself

MODULE 3 **8**

Dialogue Writing- Discussion etiquette -Assigning different roles in a GD (Note-taker, Manager, Leader and Reporter) Prose: Environment

MODULE 4 **8**

Interview skills- SWOT Analysis Letter Writing- Letter to the Editor- Letter of Application and CV

MODULE 5 **8**

Report Writing- feasibility report and survey report Short Story : Katherine Mansfield—A Cup of Tea (Extensive Reading)

MODULE 6 **6**

Technical reports –Writing a technical report – format and content

TOTAL HOURS – 45

1. M. Ashraf Rizvi ‘Effective Technical Communication”. Tata McGraw – Hill Education, 2005. Gerson, Sharon & Steven M. Gerson, “ Technical Writing : Process and Product”
2. Pearson Education, New Delhi, 2004. 6. Riordan & Pauley. ‘Report Writing Today’. 9th Edition. Wadsworth Cengage Learning, USA. 2005.

5. Murphy, Raymond. Essential English Grammar. New Delhi: Cambridge University Press, 2009.
6. Seshadri, K G Ed. Stories for Colleges. Chennai: Macmillan India Ltd, 2003.

OUTCOMES:

After completing the course the students would be able to

- Take part in group discussions and interviews with confidence.
- Write official letters, their application letter with CV and reports.
- Analyse various genre of literature.

LNC 1284	TAMIL II	L	T	P	C
		3	1	0	3

OBJECTIVES:

- சமூக மாற்றச் சிந்தனைகளை உள்ளடக்கிய தற்கால இலக்கியங்களை அறிமுகம் செய்தல்
- புதுக்கவிதை, சிறுகதை, உரைநடை ஆகிய இலக்கியங்களின் நயம் பாராட்டுதல்
- சந்திப் பிழையின்றி எழுத மாணவர்களைப் பயிற்றுவித்தல்

MODULE I அற இலக்கியங்கள் 8

திருக்குறள் - சொல்வன்மை (65ஆம் அதிகாரம்), நாலடியார் - அவையறிதல் (5 பாடல்கள் - 32ஆம் அதிகாரம்), பழமொழி நானூறு - இன்னா செய்யாமை (5 பாடல்கள்), இனியவை நாற்பது - முதலைந்து பாடல்கள்

MODULE II பக்தி இலக்கியங்கள் 8

தேவாரம் - மூவர் தேவாரம் (15 பாடல்கள்) அப்பர் தேவாரம், திருஞானசம்பந்தர் தேவாரம், சுந்தரர் தேவாரம் (ஒவ்வொன்றிலிருந்தும் ஐந்து பாடல்கள்), காரைக்காலம்மையார் - மூன்று பாடல்கள் (அற்புதத் திருவந்தாதி), மாணிக்க வாசகர் - திருவெம்பாவை (தேர்ந்தெடுக்கப்பெற்ற 5 பாடல்கள்), ஆண்டாள் - திருப்பாவை (தேர்ந்தெடுக்கப்பெற்ற 5 பாடல்கள்), குலசேகராழ்வார் - திருவேங்கடத்தில் பிறத்தலும் இருத்தலும் போதுமெனல் (11 பாசுரம்)

MODULE III காப்பியங்கள் 8

மணிமேகலை - ஆதிரை பிச்சையிட்ட காதை (20 அடிகள் மட்டும்), கம்பராமாயணம் - பாலகாண்டம், நாட்டுப்படலகம் (10 பாடல்கள் மட்டும்), இரட்சணிய யாத்ரிகம் - சிலுவைப்பாடு (10 பாடல்கள்), சீறா புராணம் - மானுக்குப் பிணைநின்ற படலம் (6 பாடல்கள்)

MODULE IV கட்டுரைகள் 7

உ.வே.சாமிநாதையர்-தமிழ்நாட்டு வணிகர். வ.இராமசாமி ஐயங்கார்-மூதறிஞர் இராஜகோபாலாச்சாரியார், மா.இராசமாணிக்கனார்-சித்தன்னவாசல் ஓவியங்கள், பி.எல்.சாமி-சங்க இலக்கியத்தில் அறிவயல் கலை, க.கைலாசபதி - பாரதியும் மேனாட்டுக் கவிஞரும், தொ. பரமசிவன் - சொல்லும் பொருளும்.

MODULE V இலக்கிய வரலாறு 7

அற இலக்கியங்களின் தோற்றமும் வளர்ச்சியும், சைவ வைணவ இலக்கியங்கள் தோற்றமும் வளர்ச்சியும், காப்பியங்கள் தோற்றமும் வளர்ச்சியும், உரைநடை தோற்றமும் வளர்ச்சியும்

MODULE VI **மொழிப்பயிற்சி** **7**

இலக்கணக் குறிப்புத் தருதல், வல்லினம் மிகுமிடங்களும், மிகாவிடங்களும், மொழிபெயர்ப்பு (ஆங்கிலத்திலிருந்து தமிழில் பெயர்த்தல்), கடிதங்களும் வகைகளும்

L – 45; P – 30; TOTAL HOURS – 75

REFERENCES:

2. தமிழ் இலக்கிய வரலாறு - சோம. இளவரசு
3. சிறுகதைத் தொகுப்பு (கட்டுரைக்களஞ்சியம்)

OUTCOMES:

- மாணவர்கள் சமூக மாற்றச் சிந்தனைகளை அறிந்துகொள்வர்
- சந்திப்பிழைகளை நீக்கி எழுதும் திறன் பெறுவர்
- புத்திலக்கியங்களைப் படைக்கும் திறனையும் திறனாய்வு செய்யும் திறனையும் பெறுவர்

LSC1201	MOLECULAR BIOLOGY	L	T	P	C
		4	0	0	4

OBJECTIVES:

The aim is to extend understanding of the molecular mechanisms via which genetic information is stored, expressed and transmitted among generations

MODULE I DNA REPLICATION **12**

Semiconservative mode of replication, Mechanism of Prokaryotic and Eukaryotic DNA replication, Enzymes and accessory proteins involved in DNA replication

MODULE II DNA DAMAGE AND REPAIR **12**

Chemical modifications of DNA, Ionizing radiations and DNA damage, DNA double strand breaks, DNA damage repair, Base excision repair and Nucleotide excision repair, NHEJ and homologous recombination in DNA double strand break repair

MODULE III TRANSCRIPTION **12**

Prokaryotic transcription, Eukaryotic transcription, RNA polymerase, Chain elongation models, Transcription termination in prokaryotes and eukaryotes General and specific transcription factors, Regulatory elements.

MODULE IV TRANSCRIPTION MODIFICATIONS IN RNA **12**

5'-cap formation, transcription termination, 3 '-end processing and polyadenylation, Splicing, Editing, Nuclear export of mRNA and mRNA stability.

MODULE V TRANSLATION **12**

Prokaryotic and Eukaryotic translation, the translation Machinery; Mechanisms of initiation, elongation and termination, regulation of translation

TOTAL HOURS –60

1. Molecular Biology of the Gene. James D Watson, 7Ed. Cold Spring Harbor Laboratory Press. 2014
2. Molecular Biology. Robert F Weaver, 5Ed, McGraw Hill, 2013
3. Molecular Biotechnology. Glick and Pasternak, 4Ed, ASM Press, 2010.

OUTCOMES:

Through completion of this course, the student will achieve,

- A basic understanding of the central dogma of molecular biology
- An exposure to the modern day techniques employed to study DNA and hence gene functions

LSC1202	MOLECULAR BIOLOGY LAB	L	T	P	C
		0	0	3	2

OBJECTIVES:

- To learn basic techniques in molecular biology
- To study and to differentiated the electrochemical properties of nucleic acids

LIST OF EXPERIMENTS

1. Agarose gel electrophoresis of chromosomal & plasmid DNA
2. Extraction of genomic DNA from bacteria
3. Extraction of plasmid DNA from bacteria
4. Isolation of RNA from bacteria
5. Isolation of DNA fragment from agarose gel

TOTAL HOURS –45

REFERENCES:

1. Michel R. G and Sambrook J. Molecular Coning- A laboratory manual. Cold spring harbor laboratory press, 2012.

OUTCOMES:

On the completion of the above experiments students will be able to handle DNA samples and also to isolate, purify and visualize nucleic acid.

LSC1203 BIOINSTRUMENTATION L T P C

4 0 0 4

OBJECTIVES:

The students will be exposed to basic concepts related with techniques and instrumentation widely used in Biotechnology.

MODULE I COLORIMETRY AND SPECTROSCOPY 12

Principle and application of colorimeter, ultraviolet spectroscopy, Infra-red, Nuclear magnetic resonance spectroscopy and Mass Spectroscopy (GCMS, LCMS & MSMS).

MODULE II CENTRIFUGATION AND MICROSCOPY 12

Principle of centrifugation, rotors, different types of centrifuges, preparative and analytical centrifugation, ultra centrifugation. Optical microscopy, Bright field, Dark field, phase contrast and fluorescence microscopy. Electron microscopy: Transmission and scanning electron microscopy, Atomic force microscopy.

MODULE III ELECTROPHORESIS 12

General principle, support media. Agarose gels, polyacrylamide gels. SDS PAGE, 2D PAGE Pulsed field gel electrophoresis Iso-electric focusing Capillary electrophoresis

MODULE IV RADIOISOTOPE TECHNIQUES 12

Study of radioisotopes in biological samples, autoradiography- GM counter, scintillation counters, radio –immunoassay.

MODULE V CHROMATOGRAPHY 9

Introduction: Chromatography theory and practice. Paper chromatography. Thin layer chromatography. Ion exchange chromatography. Affinity chromatography. Partition chromatography. Adsorption chromatography. Introduction to gas chromatography and HPLC. Permeation.

TOTAL HOURS – 60

REFERENCES:

1. Pierre C. ORD and CD in chemistry and biochemistry: An Introduction. Academic Press, 1972.
2. Paddock S. W. Confocal Microscopy methods & protocols.1st Ed., Human Press, 1999.
3. Murphy D. B. Fundamental of Light Microscopy & Electron Imaging. 1st Ed., Wiley-Liss, 2001.

OUTCOMES:

At the end of the course, the students will have sufficient scientific understanding of the basic concepts in instrumentation used in Biotechnology.

LSC1204	BIOINSTRUMENTATION LABORATORY	L	T	P	C
		0	0	3	2

OBJECTIVES:

- Provides an opportunity to experimentally verify the theoretical concepts of bioenergetics and protein engineering already studied. It also helps in understanding the theoretical principles in a more explicit and concentrated manner.

LIST OF EXPERIMENTS:

1. Preparation of Acetate, Tris and Phosphate Buffer systems and validation of Henderson-Hasselbach equation.
2. Reactions of amino acids – Ninhydrin, Pthaldehyde, Dansyl chloride – measurement using colorimetric and fluorimetric methods.
3. Differential estimations of carbohydrates – reducing vs non-reducing, polymeric vs oligomeric, hexose vs pentose
4. DNA determination by UV-Vis Spectrophotometer – hyperchromic effect
5. Separation of lipids by TLC.
6. Enzyme Kinetics: Direct and indirect assays – determination of K_m, V_{max} and
7. Restriction enzyme – Enrichment and Module calculation
8. Ion-exchange Chromatagraphy – Purification of IgG and Albumin
9. Gel filtration – Size based separation of proteins
10. SDS-PAGE Gel Electrophoresis

TOTAL HOURS – 45

REFERENCES:

1. Biochemical Methods: A Concise Guide for Students and Researchers, Alfred Pingoud, Claus Urbanke, Jim Hoggett, Albert Jeltsch, 2002 John Wiley & Sons Publishers, Inc,

2. Biochemical Calculations: How to Solve Mathematical Problems in General Biochemistry, 2nd Edition, Irwin H. Segel, 1976 John Wiley & Sons Publishers, Inc,

3. Principles and Techniques of Practical Biochemistry- Wilson, K. and Walker, J. Cambridge Press.

OUTCOMES:

On the completion of the above objectives student will be able to perform biochemical assays, electrochemical techniques, spectrophotometry and chromatography.

LSC 1205 BASICS OF COMPUTERS

L	T	P	C
3	1	0	4

OBJECTIVES:

To know about computer and to operate the computer.
To familiarize the office suite.

MODULE I INTRODUCTION TO COMPUTER **12**

What is Computer – Evolution – Basic Components – Memory – Software Components - Input / Output Devices - External Storage Devices – Personal Computer – Work Station - Mainframes.

MODULE II MS - WORD **12**

Introduction – User Interface – Themes and Quick Styles - Server Components Word Basics: Parts of Word Window – Formatting Features – Menus, Commands, Toolbars and their Icons – MS Word menus in focus - Word Exercise I – Word Exercise II.

MODULE III MS-EXCEL **12**

Introduction – Entering and Editing Text - Menus, Commands and Toolbars – MS Excel Menus in Focus - Excel Exercise-I – Alternate method - Entering formulas – Formatting Cells, Date Range – Inserting Headers & Footers – Saving a file and opening a file.

MODULE IV MS-POWER POINT **12**

Creating a new presentation and new slide– Opening a presentation – Deleting a slide, Copying a slide – Numbering the Slides – Saving a presentation – Changing the default directory – Printing a presentation – Working with Power Point – MS Power Point Menus in focus – Formatting in Power Point.

MODULE V MS-ACCESS **12**

Parts of an Access Window – MS Access Menus in Focus – Starting Microsoft Access – Creating a New Database – Creating Table using Table Wizard – Saving the Database - Creating Tables in design view – Query – Forms – Reports.

TOTAL HOURS – 60

2. Sinha P.K., “Computer Fundamentals”, BPB Publications, 6th Edition, New

Delhi, 2004.

OUTCOMES:

On the completion of the above objectives student will be able to operate the computer.

LSC1206	CONFIDENCE BUILDING BEHAVIOURAL SKILLS	L	T	P	C
		2	0	0	2

OBJECTIVES:

To enable the students to develop communication skills for verbal communication in the work place.

MODULE I **8**

This course is practical oriented one and exercises will be given to the students group users /individually depending upon the aspect considered. The following aspect will form the broad outline content of the syllabi. The exercises will be designed by the faculty member and coordinated by the overall course coordinator.

LAB ACTIVITIES:

- Introduction: Soft skills definition, examples
- Verbal communication: Case study, communication and discussion
- Prepared speech
- Impromptu speech
- Debate: Case studies - Attitude and Behavior: role play and exploration
- Ability to ask for help – communication and team work
- Manners and etiquette
- Organization and Planning
- Time keeping
- Conduct in workplace
- Conscientiousness
- Work output
- Professionalism
- Motivation
- Ownership of tasks
- Adaptability/flexibility

ASSESSMENT:

The assessment will be continuous and portfolio based. The students must produce the record of the work done through the course of the semester in the individual classes. The portfolio may consist of a) the individual task outline and activities, b) worked out activities c) Pre-designed sheets which may be provided by the Faculty member. The portfolio will be used by the Faculty member for

assessment. The course coordinator in consultation with the course committee shall decide at the beginning of the semester, the number of exercises, method of assessment of each and the weightage for the end semester assessment.

TOTAL HOURS – 45

OUTCOMES:

The students should be able to:

- develop verbal communication skills
- debate with other students confidently
- communicate effectively their ideas

REGULATIONS 2017

CURRICULUM AND SYLLABI (I & II Semester)

(Recognised by Pharmacy Council of India)

B.Pharm

Bachelor of Pharmacy

VISION AND MISSION OF CRESCENT SCHOOL OF PHARMACY

VISION

The Crescent School of Pharmacy aspires to be a centre of excellence in pharmaceutical education, training and research to contribute for the socio-economic progress of the nation.

MISSION

- To provide quality education and training in Pharmaceutical Science and Technology to bring out high quality pharmacists.
- To create a simulating environment with supporting infrastructure for learning of pharmacy science and technology
- To provide sound knowledge, good practical skill sets and inculcate right attitude through a well balanced curriculum, co-curricular and extracurricular activities.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

PROGRAMME EDUCATIONAL OBJECTIVES

- **PEO1:** To inform students of the standards and expectations of the course
- **PEO2:** To provide students with a strong and well defined concepts in the various fields of pharmaceutical sciences
- **PEO3:** To encourage students to have enquiring minds and seek opportunities to become global citizens
- **PEO4**: To train the students to contribute towards healthcare system and counseling for prophylaxis and prevention of diseases.
- **PEO5**: To promote the development of trained human resource in Pharmaceutical Sciences for dissemination of quality education with highly professional and ethical attitude, strong communication skills, effective skills to work in a team with a multidisciplinary approach.
- **PEO6**: To encourage the students to participate in life-long learning process for a high productive career and to relate the concepts of Pharmaceutical Sciences towards serving the cause of the society.

PROGRAMME OUTCOMES

- **PO1:** Is capable of critical thinking, i.e., assessing information and applying research information to his or her work
- **PO2:** Develop and demonstrate depth and breadth of knowledge in pharmaceutical, social, behavioral, administrative, and clinical sciences.
- **PO3:** Integrate knowledge from foundational sciences to explain how specific drugs or drug classes work and evaluate their potential value in individuals and populations.
- **PO4:** Develop an ability to solve, analyze and interpret data generated from Formulation Development, Quality Control & Quality Assurance.
- **PO5:** Identify and utilize technology, human, financial, and physical resources to optimize the medication use system.
- **PO6:** Apply standards, guidelines, best practices, and established processes related to safe and effective medication use.

- **PO7:** Provide prevention, intervention, and educational strategies for individuals and communities to improve health and wellness.
- **PO8:** Using a systematic instructional design model provide effective, appropriate patient education.
- **PO9:** Encourage patients to take responsibility for and control of their health and healthcare.
- **PO10:** Assist all patients in obtaining the necessary resources, services, medications, devices, and care in a timely and cost-effective manner.
- **PO11:** Act as a public health advocate by identifying and providing patients with current health-care information.
- **PO12:** Understands the basic economic principles governing business activities and social operations in the field of health care.

PROGRAMME SPECIFIC OUT COMES

- **PSO1:** Develop ability for in-depth analytical and critical thinking in order to identify, formulate and solve the issues related to Pharmaceutical Industry, Regulatory Agencies, and Hospital Pharmacy & Community Pharmacy.
- **PSO2:** Develop written and oral communication skills in order to communicate effectively the outcomes of the Pharmaceutical problems.
- **PSO3:** Develop an understanding for the need of pharmaceutical sciences and technology towards giving quality life to people in society.

Pharmacy Council of India

New Delhi

Rules & Syllabus for the Bachelor of Pharmacy (B. Pharm) Course

---

[Framed under Regulation 6, 7 & 8 of the Bachelor of Pharmacy (B. Pharm) course regulations 2014]

CHAPTER- I: REGULATIONS

1. Short Title and Commencement

These regulations shall be called as "The Revised Regulations for the B. Pharm. Degree Program (CBCS)of the Pharmacy Council of India, New Delhi". They shall come into effect from the Academic Year 2016-17. The regulations framed are subject to modifications from time to time by Pharmacy Council of India.

2. Minimum qualification for admission

2.1 First year B. Pharm:

Candidate shall have passed 10+2 examination conducted by the respective state/central government authorities recognized as equivalent to 10+2 examination by the Association of Indian Universities (AIU) with English as one of the subjects and Physics, Chemistry, Mathematics (P.C.M) and or Biology (P.C.B / P.C.M.B.) as optional subjects individually. Any other qualification approved by the Pharmacy Council of India as equivalent to any of the above examinations.

2.2. B. Pharm lateral entry (to third semester):

A pass in D. Pharm. course from an institution approved by the Pharmacy Council of India under section 12 of the Pharmacy Act.

3. Duration of the program

The course of study for B.Pharm shall extend over a period of eight semesters (four academic years) and six semesters (three academic years) for lateral entry students. The curricula and syllabi for the program shall be prescribed from time to time by Pharmacy Council of India, New Delhi.

4. Medium of instruction and examinations

Medium of instruction and examination shall be in English.

5. Working days in each semester

Each semestershall consist of not less than 100 working days. The odd semesters shall be conducted from the month of June/July to November/December and the even semesters shall be conducted from December/January to May/June in every calendar year.

6. Attendance and progress

A candidate is required to put in at least 80% attendance in individual courses considering theory and practical separately. The candidate shall complete the prescribed course satisfactorily to be eligible to appear for the respective examinations.

7. Program/Course credit structure

As per the philosophy of Credit Based Semester System, certain quantum of academic work viz. theory classes, tutorial hours, practical classes, etc. are measured in terms of credits. On satisfactory completion of the courses, a candidate earns credits. The amount of credit associated with a course is dependent upon the number of hours of instruction per week in that course. Similarly, the credit associated with any of the other academic, co/extra-curricular activities is dependent upon the quantum of work expected to be put in for each of these activities per week.

7.1. Credit assignment

7.1.1. Theory and Laboratory courses

Courses are broadly classified as Theory and Practical. Theory courses consist of lecture (L) and /or tutorial (T) hours, and Practical (P) courses consist of hours spent in the laboratory. Credits (C) for a course is dependent on the number of hours of instruction per week in that course, and is obtained by using a multiplier of one (1) for lecture and tutorial hours, and a multiplier of half (1/2) for practical (laboratory) hours. Thus, for example, a theory course having three lectures and one tutorial per week throughout the semester carries a credit of 4. Similarly, a practical having four laboratory hours per week throughout semester carries a credit of 2.

7.2. Minimum credit requirements

The minimum credit points required for award of a B. Pharm. degree is 208. These credits are divided into Theory courses, Tutorials, Practical, Practice School and Projectover the duration of eight semesters. The credits are distributed semester-wise as shown in Table IX. Courses generally progress in sequences, building competencies and their positioning indicates certain academic maturity on the part of the learners. Learners are expected to follow the semester-wise schedule of courses given in the syllabus.

The lateral entry students shall get 52 credit points transferred from their D. Pharm program. Such students shall take up additional remedial courses of 'Communication Skills' (Theory and Practical) and 'Computer Applications in Pharmacy' (Theory and Practical) equivalent to 3 and 4 credit points respectively, a total of 7 credit points to attain 59 credit points, the maximum of I and II semesters.

8. Academic work

A regular record of attendance both in Theory and Practical shall be maintained by the teaching staff of respective courses.

9. Course of study

The course of study for B. Pharm shall include Semester Wise Theory & Practical as given in Table – I to VIII. The number of hours to be devoted to each theory, tutorial and practical course in any semester shall not be less than that shown in Table – I to VIII.

Table-I: Course of study for semester I

Course code	Name of the course	No. of hours	Tutorial	Credit points
BP101T	Human Anatomy and Physiology I– Theory	3	1	4

Semester	Credit Points
I	**27/29$/30#**
II	29
III	26
IV	28
V	26
VI	26
VII	24
VIII	22
Extracurricular/ Co curricular activities	01*
Total credit points for the program	**209/211$/212#**

* The credit points assigned for extracurricular and or co-curricular activities shall be given by the Principals of the colleges and the same shall be submitted to the University. The criteria to acquire this credit point shall be defined by the colleges from time to time.

$Applicable ONLY for the students studied Physics / Chemistry / Botany / Zoology at HSC and appearing for Remedial Mathematics course.

#Applicable ONLY for the students studied Mathematics / Physics / Chemistry at HSC and appearing for Remedial Biology course.

10. Program Committee

1. The B. Pharm. program shall have a Program Committee constituted by the Head of the institution in consultation with all the Heads of the departments.

2. The composition of the Program Committee shall be as follows:

   A senior teacher shall be the Chairperson; One Teacher from each department handling B.Pharm courses; and four student representatives of the program (one from each academic year), nominated by the Head of the institution.

3. Duties of the Program Committee:

   i. Periodically reviewing the progress of the classes.
   ii. Discussing the problems concerning curriculum, syllabus and the conduct of classes.
   iii. Discussing with the course teachers on the nature and scope of assessment for the course and the same shall be announced to the students at the beginning of respective semesters.
   iv. Communicating its recommendation to the Head of the institution on academic matters.
   v. The Program Committee shall meet at least thrice in a semester preferably at the end of each Sessionalexam (Internal Assessment) and before the end semester exam.

11. Examinations/Assessments

The scheme for internal assessment and end semester examinations is given in Table – X.

11.1. End semester examinations

The End Semester Examinations for each theory and practical coursethrough semesters I to VIII shall beconducted by the university except for the subjects with asterix symbol (*) in table I and II for which examinations shall be conducted by the subject experts at college level and the marks/grades shall be submitted to the university.

Tables-X: Schemes for internal assessments and end semester examinations semester wise

11.2. Internal assessment: Continuous mode

The marks allocated for Continuous mode of Internal Assessment shall be awarded as per the scheme given below.

Table-XI:Scheme for awarding internal assessment: Continuous mode

Theory		
Criteria	**Maximum Marks**	
Attendance (Refer Table – XII)	4	2
Academic activities (Average of any 3 activities e.g. quiz, assignment, open book test, field work, group discussion and seminar)	3	1.5
Student – Teacher interaction	3	1.5
Total	**10**	**5**
Practical		
Attendance (Refer Table – XII)	2	
Based on Practical Records, Regular viva voce, etc.	3	
Total	**5**	

Table- XII: Guidelines for the allotment of marks for attendance

Percentage of Attendance	**Theory**	**Practical**
95 – 100	4	2
90 – 94	3	1.5
85 – 89	2	1
80 – 84	1	0.5
Less than 80	0	0

11.2.1. Sessional Exams

Two Sessional exams shall be conducted for each theory / practical course as per the schedule fixed by the college(s). The scheme of question paper for theory and practical Sessional examinations is given below. The average marks of two Sessional exams shall be computed for internal assessment as per the requirements given in tables – X.

Sessional exam shall be conducted for 30 marks for theory and shall be computed for 15 marks. Similarly Sessional exam for practical shall be conducted for 40 marks and shall be computed for 10 marks.

Question paper pattern for theory Sessional examinations

For subjects having University examination

I. Multiple Choice Questions (MCQs)	=	10 x 1 = 10
OR		OR
Objective Type Questions (5 x 2)	=	05 x 2 = 10
(Answer all the questions)		
I. Long Answers (Answer 1 out of 2)	=	1 x 10 = 10
II. Short Answers (Answer 2 out of 3)	=	2 x 5 = 10

Total	=	30 marks

For subjects having Non University Examination

I. Long Answers (Answer 1 out of 2)	=	1 x 10 = 10
II. Short Answers (Answer 4 out of 6)	=	4 x 5 = 20

Total	=	30 marks

Question paper pattern for practical sessional examinations

I. Synopsis	=	10
II. Experiments	=	25
III. Viva voce	=	05

Total	=	40 marks
		----------

12. Promotion and award of grades

A student shall be declared PASSand eligible for getting gradein a course of B.Pharm.program if he/she secures at least 50% marks in that particular course including internal assessment.For example, to be declared as PASS and to get grade, the student has to secure a minimum of 50 marks for the total of 100 including continuous mode of assessment and end semester theory examination and has to secure a minimum of 25 marks for the total 50 including internal assessment and end semester practical examination.

13. Carry forward of marks

In case a studentfails to secure the minimum 50% in any Theory or Practical course as specified in 12,then he/she shall reappear for the end semester examinationof that course. However his/her marks of the Internal Assessmentshallbe carried overand he/she shall be entitled for grade obtained by him/her on passing.

14. Improvement of internal assessment

A studentshall have the opportunity to improvehis/her performance only oncein the Sessional exam component of the internal assessment. The re-conduct of the Sessional exam shall be completed before the commencement of next end semester theory examinations.

15. Re-examination of end semester examinations

Reexamination ofend semester examinationshall be conducted as per the schedule given in table XIII. The exact dates of examinations shall be notified from time to time.

Table-XIII: Tentative schedule of end semester examinations

Semester	For Regular Candidates	For Failed Candidates
I, III, V and VII	November / December	May / June
II, IV, VI and VIII	May / June	November / December

Question paper pattern for end semester theory examinations

For 75 marks paper

I. Multiple Choice Questions(MCQs) = 20 x 1 = 20
OR OR
Objective Type Questions (10 x 2) = 10 x 2 = 20
(Answer all the questions)
II. Long Answers (Answer 2 out of 3) = 2 x 10 = 20
III. Short Answers (Answer 7 out of 9) = 7 x 5 = 35

Total = 75 marks

For 50 marks paper

I. Long Answers (Answer 2 out of 3) = 2 x 10 = 20
II. Short Answers (Answer 6 out of 8) = 6 x 5 = 30

Total = 50 marks

For 35 marks paper

I. Long Answers (Answer 1 out of 2) = 1 x 10 =10
II. Short Answers (Answer 5 out of 7) = 5 x 5 = 25

Total = 35 marks

Question paper pattern for end semester practical examinations

I. Synopsis = 5
II. Experiments = 25
III. Viva voce = 5

Total = 35 marks

---

16. Academic Progression:

No student shall be admitted to any examination unless he/she fulfills the norms given in 6. Academic progression rules are applicable as follows:

A student shall be eligible to carry forward all the courses of I, II and III semesters till the IV semester examinations. However, he/she shall not be eligible to attend the courses of V semester until all the courses of I and II semesters are successfully completed.

A student shall be eligible to carry forward all the courses of III, IV and V semesters till the VI semester examinations. However, he/she shall not be eligible to attend the courses of VII semester until all the courses of I, II, III and IV semesters are successfully completed.

A student shall be eligible to carry forward all the courses of V, VI and VII semesters till the VIII semester examinations. However, he/she shall not be eligible to get the course completion certificate until all the courses of I, II, III, IV, V and VI semesters are successfully completed.

A student shall be eligible to get his/her CGPA upon successful completion of the courses of I to VIII semesters within the stipulated time period as per the norms specified in 26.

A lateral entry student shall be eligible to carry forward all the courses of III, IV and V semesters till the VI semester examinations. However, he/she shall not be eligible to attend the courses of VII semester until all the courses of III and IV semesters are successfully completed.

A lateral entry student shall be eligible to carry forward all the courses of V, VI and VII semesters till the VIII semester examinations. However, he/she shall not be eligible to get the course completion certificate until all the courses of III, IV, V and VI semesters are successfully completed.

A lateral entry student shall be eligible to get his/her CGPA upon successful completion of the courses of III to VIII semesters within the stipulated time period as per the norms specified in 26.

Any student who hasgiven more than 4 chances for successful completion of I / III semester courses and more than 3 chances for successful completion of II / IV semester courses shall be permitted to attend V / VII semester classes ONLY during the subsequent academic year as the case may be. In simpler terms there shall NOT be any ODD BATCH for any semester.

Note: Grade ABshould be considered as failed and treated as one head for deciding academic progression. Such rules are also applicable for those students who fail to register for examination(s) of any course in any semester.

17. Grading of performances

17.1. Letter grades and grade points allocations:

Based on the performances, each student shall be awarded a final letter grade at the end of the semester for each course.The letter grades and their corresponding grade points are given in Table – XII.

Table – XII: Letter grades and grade points equivalent to Percentage of marks and performances

Percentage of Marks Obtained	Letter Grade	Grade Point	Performance
90.00 – 100	O	10	Outstanding
80.00 – 89.99	A	9	Excellent
70.00 – 79.99	B	8	Good
60.00 – 69.99	C	7	Fair
50.00 – 59.99	D	6	Average
Less than 50	F	0	Fail
Absent	AB	0	Fail
