- Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES:

- Identify suitable modern construction materials, techniques, practices and equipments considering effective quality and safety management principles.
- Plan, estimate and schedule construction projects using relevant software's for civil engineering construction
- Implement various contract laws and regulations in the construction industry.

CURRICULUM & SYLLABI FOR M. Tech. (Construction Engineering & Project Management)

CURRICULUM

Sl. No.	Course Code	Course Title	L	T	P	C
		SEMESTER I				
1	MAC6183	Probability and Statistics	**3**	**1**	**0**	**4**
2	CEC6121	Modern Construction Materials and Practices	**3**	**0**	**0**	**3**
3	CEC6122	Construction Equipment Management	**2**	**0**	**0**	**2**
4	CEC6123	Project Management in Construction	**3**	**0**	**0**	**3**
5	CEC6124	Construction Planning, Scheduling and Control	**3**	**0**	**2**	**4**
6	CEC6104	Advanced Concrete Technology	**3**	**0**	**2**	**4**
						20
		SEMESTER II				
1	GEC6201	Research Methodology for Engineers	**3**	**0**	**0**	**3**
2	CEC6231	Construction Economics and Finance	**4**	**0**	**0**	**4**
3	CEC6232	Contract Laws and Regulations	**3**	**0**	**0**	**3**
4		Professional Electives #				**9**
5	CEC6233	Mini Project	**0**	**0**	**2**	**1**
						20
		SEMESTER III				
1		General Elective###	**3**	**0**	**0**	**3**
2		Professional Electives #				**9**
3	CEC7122	Industrial Internship* / Seminar**	**0**	**0**	**2**	**1**
4	CEC7121	Project Work - Phase I***	**0**	**0**	**12**	**6**
						13
		SEMESTER IV				
1	CEC7121	Project Phase II	**0**	**0**	**36**	**18**
						6+18=24
		Total				**78**

Student has to take courses for a minimum of 9 credits from list of odd and even semester professional electives.

Student has to take minimum of 3 credits from the list of general electives.

***** 15 days of Industrial training will be undertaken by regular candidates during first year summer vacation and the credit will be awarded in the 3rd semester.

** Seminar will be taken by working Professionals only.

*** Credits for Project Work Phase I to be accounted along with Project Work Phase II in IV Semester

SEMESTER I

MAC6183	PROBABILITY AND STATISTICS	L	T	P	C
		3	1	0	4

OBJECTIVE:

This course intends to provide

- a comprehensive introduction to the probability distributions,
- familiarize with testing of hypothesis and estimation theory.
- basic knowledge in simulations used in engineering.

MODULE I PROBABILITY DISTRIBUTIONS 10+03

Axioms of probability – addition and multiplication theorem – conditional probability – total Probability – random variables- moments – moments generating functions and their properties- Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

MODULE II TWO DIMENSIONAL RANDOM VARIABLES 09+03

Joint distributions - Marginal and conditional distributions – functions of random variables - Covariance - Correlation and regression - Central limit theorem.

MODULE III ESTIMATION THEORY 09+03

Partial, Multiple correlations and regressions – Estimation of parameters using maximum likelihood estimator and method of moments.

MODULE IV TESTING OF HYPOTHESIS 08+03

Hypothesis, test statistic, decisions and errors - classical testing, significance and p-values – Student's t- test , Fisher's test and Chi-square tests.

MODULE V SIMULATION **09+03**

Simulation - definition - Monte Carlo simulation - random number generation, simulation model building - validation - run size determination - simulation applications - inventory control - facilities creation, simulation software.

L – 45; T – 15; Total : 60

TEXT BOOKS:

1. Douglas C. Montgomery, George C. Runger, “Applied Statistics and Probability for Engineers”, 4th Edition, Wiley publication, 2006.
2. Richard A. Johnson, “Probability and Statistics for Engineers”, 6th Edition, Pearson Education, Indian Reprint, 2002.
3. Sheldon M. Ross, “Introduction to probability models”, 10th edition, Academic Press, 2009.

REFERENCES:

1. Jerry Banks, John S. Carson, Barry L. Nelson, “Discrete – Event systems Simulation”, Prentice Hall India, New Delhi, 1999.
2. Jay L. Devore, “Probability and Statistics for Engineering and the Sciences”, Duxbury publication, 2007.
3. R. Lyman Ott, Michael Longnecker, “An Introduction to Statistical Methods and Data Analysis”, 6th edition, Brooks/Cole Cengage Learning, USA, 2010.

OUTCOME:

At the end of the course students will be able to

- identify and fit probability distribution for a given data.
- solve problems in modeling using simulation techniques.

CEC 6121	MODERN CONSTRUCTION MATERIALS AND PRACTICES	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To impart knowledge regarding the properties of modern construction materials used in construction and their suitability of applications in construction industry.
- To impart students the knowledge on modern construction practices related to sub structure, super structure and prefabricated construction.

MODULE I METALS AND NON STRUCTURAL MATERIALS 09

Metals

Different types of steel, aluminium and their products - other alloys - applications in civil engineering.

Non structural materials - water proofing compounds-types - non weathering materials - flooring - types - materials used for flooring - properties - facade materials - types - properties - selection - insulation materials - coatings - eco friendly materials - polymers.

MODULE II SMART AND INTELLIGENT MATERIALS 09

Smart materials – shape memory alloys - application in construction - smart windows -types - intelligent materials - nano materials - coatings & paints - nano sensors- aerogels - phase changing materials - translucent concrete – sensiTile - electrified wood – flexicomb - self-repairing cement/concrete - liquid granite - bendable concrete

MODULE III SUBSTRUCTURE CONSTRUCTION 09

Box jacking - pipe jacking - under water construction of diaphragm walls and basement - methods - stand by plant equipment for underground open excavation. under water construction – problems, encountered. underwater concreting – Sequence of construction activities for tunnels

MODULE IV SUPERSTRUCTURE CONSTRUCTION 09

Formwork& scaffolding – lift slab construction - drop slab construction - ready mix concrete - modes of transporting & continuous concrete placing in tall structure - erection techniques for tall structures, large span structures – launching techniques for heavy decks - Sequence of construction activities for bridges, tall Structures and dams

MODULE V PREFABRICATED STRUCTURES 09

Prefabricated structures - methods, techniques used – advantages - precautions, and pre engineered structures – practices and techniques, fast track construction – modern practices, materials and techniques used- interlocking panels – FRP Panels

Total Hours: 45

REFERENCES:

1. Mamlouk, M.S. and Zaniewski J.P, Materials for Civil and Construction Engineers, Prentice Hall Inc., 2011.
2. Peurifoy, R.L., Ledbetter, W.B. and Schexnayder, C., Construction Planning, Equipment and Methods, 8th Edition, McGraw Hill, Singapore, 2010.
3. Sankar, S.K. and Saraswati, S., Construction Technology, Oxford University Press, New Delhi, 2008
4. Arora S.P. and Bindra S.P., Building Construction, Planning Techniques and Method of Construction, Dhanpat Rai and Sons, 1997.

OUTCOME:

At the end of the course, the student will be able to

- select the materials such as metal and non structural materials for various applications in construction.
- explain the advantages of using smart material in construction.
- choose the suitable technique to be adopted in sub structure construction.
- identify the appropriate technique to be used in super structure construction.
- defend the usage of pre fabricated structures in modern construction.

CEC6122 CONSTRUCTION EQUIPMENT MANAGEMENT

L	T	P	C
2	0	0	2

OBJECTIVE

- To impart knowledge about various equipments and methods used in construction Industry

MODULE I EARTH WORK EQUIPMENTS AND MATERIAL HANDLING EQUIPMENT 12

Fundamentals of earthwork operations-earth moving operations-types of earthwork equipment – tractors, motor graders, scrapers, front end waders, earth movers.- forklifts and related equipment- -cranes - hauling equipments and methods.

MODULE II OTHER CONSTRUCTION EQUIPMENTS 04

Equipments and methods for dredging, trenching, tunneling, drilling, blasting - equipment for compaction - erection methods and equipments-types of pumps used in construction - equipment and methods for dewatering and grouting - foundation and pile driving equipment.

MODULE III AGGREGATE AND CONCRETING EQUIPMENT 04

Crushers- feeders - screening equipment - handling equipment – batching and mixing equipment - pouring and pumping equipment - transporters and related methods- portable material bins - conveyors.

MODULE IV CONSTRUCTION EQUIPMENT MANAGEMENT 10

Compaction and stabilization of geotechnical materials-Selection of equipments – machine power- planning of construction plant and equipment with emphasis on site application - site layout – safety in handling equipments.

Total Hours: 30

REFERENCES:

1. Peurifoy, R.L., Ledbetter, W.B.and Schexnayder, C., Construction Planning, Equipment and Methods, 5th Edition, McGraw Hill, Singapore,2010.
2. Sharma S.C., Construction Equipment and its Management, Khanna Publishers New Delhi, 2002.
3. Deodhar, S.V., Construction Equipment and Job Planning, Khanna Publishers, New Delhi, 2001.

4. Saxena SC, Construction Equipment and Planning, Standard Publishes-Distributors-Delhi, 2009.

OUTCOME:

At the end of the course, students will be able to

- calculate the earthwork volume for cutting and filling
- interpret mass haul diagram for construction activities
- describe the features of construction equipments
- explain the methods for stabilization of soil
- identify suitable equipments according to the construction work
- describe the construction equipment safety measures

CEC6123 PROJECT MANAGEMENT IN CONSTRUCTION

L	T	P	C
3	0	0	3

OBJECTIVE:

To impart knowledge on

- project life cycle of construction projects
- organization for project management
- utilization of labour, material and equipment
- International construction risks

MODULE I PROJECT MANAGEMENT 09

Introduction - project life cycle - major types of construction - construction project participants - project procurement – appointment of parties to the contract - construction contracts – project managers – project management functions – financing alternatives – legal and regulatory requirements.

MODULE II CONSTRUCTION COMPANY ORGANIZATION 09

Trends in modern management - company objectives – company policies & Strategy – company organizational structures - effects of project risks on organization – project delivery systems - management attitude -perceptions of owners and contractors

MODULE III THE DESIGN AND CONSTRUCTION PROCESS 09

Design and construction as an integrated system-Innovation and technological Feasibility-Innovation and technological feasibility-Design Methodology-Functional Design-Physical Structures-Geo-Technical Engineering Investigation-Construction Site Environment-Value engineering-Construction Planning-Industrialized Construction and Prefabrication-Computer -Aided Engineering.

MODULE IV LABOUR,MATERIAL AND EQUIPMENT UTILIZATION 09

Historical perspective - labour productivity - factors affecting job - site productivity - labor relations in construction - problems in collective bargaining - materials management - materials procurement and delivery- inventory control -tradeoffs of cost in material management - construction equipment - choice of equipment and standard production rates-construction processes queues and resource bottlenecks.

MODULE V INTERNATIONAL CONSTRUCTION LOGISTICS AND RISKS 09

The international environment – seeking international work –project funding – finance and payment – conditions of contract – documentation and bureaucracy – construction labor – equipment – materials and equipment support items - supply and delivery – forming partnerships

Total Hours : 45

2. Chitkara, K.K. Construction Project Management: Planning, Scheduling and Control, Tata McGraw-Hill Publishing Company, New Delhi, 201.
3. Chris Hendrickson and Tung Au, Project Management for Construction – Fundamental Concepts for Owners, Engineers, Architects and Builders, Prentice Hall, Pittsburgh, 2000.
4. Calin M. Popescu, Chotchai Charoenngam, Project Planning, Scheduling and Control in Construction: An Encyclopedia of terms and Applications, Wiley, New York, 1995.
5. Willis, E. M., Scheduling Construction Projects, John Wiley & Sons, 1986.
6. Halpin, D. W., Financial and Cost Concepts for Construction Management, John Wiley & Sons, New York, 1985.

OUTCOME:

Upon completion of the course, students will be able to

- define project life cycle and Project management functions
- outline the company's attitudes and activities, easing the transition from site to general management
- demonstrate and explain the various design and construction process
- interpret and apply various resource productivity for effective utilization
- summarize the problems in raising finance and dealing with unfamiliar conditions in international scenario.

CEC6124	CONSTRUCTION PLANNING SCHEDULING AND CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart knowledge about

- planning construction projects
- scheduling the activities using network diagrams
- determining the cost of the project
- controlling the productivity of the project
- using the project information as an information and decision making tool
- process of planning and Scheduling of various construction projects using softwares

MODULE I CONSTRUCTION PLANNING 08

Basic concepts in the development of construction plans - choice of technology and construction method – project planning – functions of planning– objectives and policies- types and stages of planning- defining work tasks- work break down structure – bill of quantity (boq) - hierarchy of plan - coding systems – human aspects of project management- project definition rating index (PDRI).

MODULE II SCHEDULING TECHNIQUES 10

Development of project network - AOA and AON diagrams - defining precedence relationships among activities - estimating activity durations - estimating resource requirements for work activities - critical path method – PERT- construction schedules – scheduling calculations - float - presenting project schedules - scheduling for activity-on-node and with leads, lags, and windows.

MODULE III SCHEDULING WITH UNCERTAIN DURATION 09

Use of advanced scheduling techniques - scheduling with uncertain durations - calculations for monte carlo schedule simulation - crashing and time/cost tradeoffs - improving the scheduling process.- resources, leveling resources, resource leveling strategies- scheduling with resource constraints.

MODULE IV CONSTRUCTION CONTROL 09

Project integrated control system frame work- work scope control- product quality control- labour productivity control- equipment productivity control- material productivity control- ‘What-if’ analysis- time progress monitoring methodology- critical chain project management (CCPM).

MODULE V ORGANIZATION AND USE OF PROJECT INFORMATION 09

Types of project information - accuracy and use of information - computerized organization and use of information - organizing information in databases - relational model of databases - other conceptual models of databases - centralized database management systems - databases and applications programs - information transfer and flow- Product Data Management (PDM)- Line Of Business (LOB).

MODULE VI PLANNING AND SCHEDULING USING MS PROJECT 15

Planning and scheduling of a multi storey building - assigning activities in sequence – assigning duration for activities – preparation of Gantt chart – planning and scheduling of a road construction project

Preparation of resource sheet – assigning and leveling of resources – report preparation – variance graphs.

L : 45; P : 15; Total Hours: 60

REFERENCES:

1. Chitkara, K.K. Construction Project Management: Planning, Scheduling and Control, Tata McGraw-Hill Publishing Company, New Delhi, 1998.
2. Chris Hendrickson and Tung Au, Project Management for Construction – Fundamental Concepts for Owners, Engineers, Architects and Builders, Prentice Hall, Pittsburgh, 2000.
3. Calin M. Popescu, Chotchai Charoenngam, Project Planning, Scheduling and Control in Construction: An Encyclopedia of terms and Applications, Wiley, New York, 1995.
4. Willis, E. M., Scheduling Construction Projects, John Wiley & Sons, 1986.
5. Halpin, D. W., Financial and Cost Concepts for Construction Management, John Wiley & Sons, New York, 1985.

OUTCOME:

Upon the completion of the course students will be able to

- plan the construction projects with coding and work breakdown structure.
- create the scheduling of activities using network diagrams.
- resolve scheduling constrains using advanced techniques.
- control the productivity of a construction projects.

- identify the project information as an information and decision making tool.
- create a plan and schedule of various construction projects using various software's.

CEC 6104 ADVANCED CONCRETE TECHNOLOGY

L	T	P	C
3	0	2	4

OBJECTIVE:

- To impart sufficient knowledge to students about properties of various concrete constituent materials, mix design for different types of concrete, fresh and hardened properties of concrete.
- To provide students knowledge on durability properties of concrete and different types of special concretes.

MODULE I CONCRETE CONSTITUENT MATERIALS 09+06

Cement - Grades and types - properties and testing as per Indian standards. Fine aggregate - coarse aggregate - classification - properties - testing as per Indian standards. Water - quality, properties and requirements. Mineral admixtures - fly ash, silica fume, metakaoline, ground granulated blast furnace slag, rice husk ash, titanium dioxide. Chemical admixtures - Super plasticizers, water reducers, set accelerators, set retarders, air entraining agents, viscosity modifying agents, corrosion inhibiting admixtures - working mechanism and application areas.

MODULE IICONCRETE MIX DESIGN 09+06

Principles of concrete mix design. Mix design for different types of concrete - control concrete, self compacting concrete, high performance concrete and ready mix concrete - Indian standards - ACI method - relevant standards. Design concrete mix for a desired application and subsequent validation.

MODULE III PROPERTIES OF FRESH AND HARDENED CONCRETE 09+06

Fresh concrete properties of control concrete, self compacting concrete and high performance concrete – workability related tests - slump, compaction factor, vee bee consistometer, flow test, L-box test, U-box test, V-funnel test, J-ring test. Hardened concrete properties – strength – modulus of elasticity – creep – shrinkage - bond strength.

MODULE IV DURABILITY PROPERTIES OF CONCRETE 09+06

Deteriorating mechanism : sulphate attack, alkali aggregate reaction, corrosion of steel rebar - mechanism, causes and consequences. Tests related to durability properties - water absorption, permeability, sorptivity, resistance to chemical attack, freeze and thaw resistance, accelerated corrosion test, RCPT test, half-cell potential test and macrocell corrosion test.

MODULE V SPECIAL CONCRETE 09+06

High performance concrete – fibre reinforced concrete – self compacting concrete - polymer concrete composites - light weight concrete – pervious concrete – ferrocement – shotcrete – coloured concrete – heavy density concrete.

Total Hours : 75

17. BIS 13311 - 1992, Non destructive testing of concrete - Method of test, Part -2 : Rebound Hammer, Bureau of Indian Standards.

OUTCOME:

On completion of these modules, students will be able to

- conduct tests assess the properties of concrete constituent materials and its validation for the desired application.
- perform mix design for normal concrete, self compacting concrete and high performance concrete as per specified standards.
- conduct tests as per codal provisions to assess the fresh concrete and hardened concrete properties.
- carryout durability studies on different types of concrete.
- suggest type of concrete based on application and durability requirements.

GEC6201 RESEARCH METHODOLOGY FOR ENGINEERS

L	T	P	C
3	0	0	3

OBJECTIVE:

- To provide a perspective on research to the scholars
- To educate on the research conceptions for designing the research
- To impart knowledge on statistical techniques for hypothesis construction
- To gain knowledge on methods of data analysis and interpretation
- To learn about the effective communication of research finding

MODULE I RESEARCH PROBLEM FORMULATION 07

The research problem – Sources of research problem – Information, how to deal with it – Criteria / characteristics of a good research problem – Errors in selecting a good research problem – Types of research – Nature and use of arguments.

MODULE II HYPOTHESIS FORMULATION 08

Research design – meaning and need – basic concepts, Different research designs, experimental design – principle – important experimental designs, Design of experimental setup, mathematical modeling, simulation – validation and experimentation, dimensional analysis and similitude.

MODULE III STATISTICAL TECHNIQUES 12

Statistics in research – concept of probability – popular distributions –hypothesis testing- sample design- design of experiments – factorial designs -– orthogonal arrays- ANOM - ANOVA - Multivariate analysis - use of optimization techniques – traditional methods – evolutionary optimization techniques –transportation model

MODULE IV STATISTICAL ANALYSIS OF DATA 10

Research Data analysis – interpretation of results – correlation with scientific facts- Accuracy and precision – error analysis, limitations - Curve fitting, Correlation and regression.

MODULE V RESEARCH REPORT 08

Purpose of written report – audience, synopsis writing, preparing papers for International journals, thesis writing – organization of contents – style of writing – graphs and charts – referencing, oral presentation and defence, ethics in research, Patenting, Intellectual Property Rights.

11. Scheffer. R.L. and James T. Mc Clave, Probability and Statistics for Engineers, PWS – Kent Publishers Co., Boston, USA, 1990.

OUTCOME:

Students who complete this course will be able to

- identify the research problem.
- become capable of analyzing the data using mathematical techniques.
- learn to apply the statistical concepts in research.
- demonstrate the different research methods applicable to a specific problem.

CEC6231 CONSTRUCTION ECONOMICS AND FINANCE

L	T	P	C
3	1	0	4

OBJECTIVE:

To impart knowledge about

- economic studies considering the time value of money
- the demonstration of different methods for the comparison of alternatives
- different methods of depreciation, taxes, and cost analysis of construction equipments
- cost estimating
- financial management

MODULE I ENGINEERING ECONOMICS 15

Introduction – Time value of money - quantifying alternatives for decision making - Cash flow diagrams - Equivalence- Single payment in the future (P/F, F/P) - Present payment compared to uniform series payments (P/A, A/P) - Future payment compared to uniform series payments (F/A, A/F) - Arithmetic gradient - Geometric gradient – Tutorial Problems

MODULE II COMPARISON OF ALTERNATIVES 12

Present, future and annual worth method of comparing alternatives - rate of return - incremental rate of return - break-even comparisons - capitalized cost analysis - benefit-cost analysis – tutorial problems

MODULE III EQUIPMENT ECONOMICS 12

Depreciation – inflation – taxes - equipment costs - ownership and operating costs - buy/rent/lease options – replacement analysis – tutorial problems

MODULE IV COST ESTIMATING 09

Types of estimates - approximate estimates – unit estimate - factor estimate - cost indexes - parametric estimate - life cycle cost – case study – tutorial problems

MODULE V FINANCIAL MANAGEMENT 12

Construction accounting - chart of accounts - financial statements – profit and loss - balance sheets - financial ratios - working capital management – case study – tutorial problems

Total Hours: 60

7. Sullivan, W. G., Bontadelli, J. A. and Wicks, E. M., “Engineering Economy”, 11th ed., Prentice Hall, Upper Saddle River, New Jersey, 2001.

OUTCOME:

Upon completion of the course, students will be able to

- understand Construction economies relating to time value of money
- analyze the various methods of alternatives based on present future and annual worth
- demonstrate and explain the choices of equipment selection with respect to buying, renting or leasing options.
- interpret and apply various cost estimating methods to calculate life cycle cost of a project.
- provide an overview of the financial management including construction accounting

.

CEC6232 CONTRACT LAWS AND REGULATIONS

L	T	P	C
3	0	0	3

OBJECTIVE:

- To improve the knowledge of the students in various elements of contract, tendering procedures, arbitration, labor regulations and other laws related to it.

MODULE I CONSTRUCTION CONTRACTS 09

Indian contracts act – elements of contracts – types of contracts – public private partnership in contract - design of contract documents – international contract document - FIDIC– standard contract document – law of torts – fatigue contract.

MODULE II TENDERS 09

Prequalification – bidding – accepting – evaluation of tender from technical, contractual and commercial points of view – contract formation and interpretation – potential contractual problems – world bank procedures and guidelines – tamilnadu transparency in tenders act.

MODULE III ARBITRATION 09

Arbitration agreement- condition for arbitration- composition of arbitral tribunal- number of arbitrators, appointment of arbitrators, power and duties of arbitrator, ground for challenges, termination of mandate, substitution of arbitrator- jurisdiction of arbitral tribunals- conduct of arbitral proceedings- rules of evidence- default of a party- arbitral awards- termination of award- recourse against arbitral award- finality and enforcement of arbitral award- appeal against arbitral award- Newyork convention award- Geneva convention award- Foreign arbitral award.

MODULE IV LEGAL REQUIREMENTS 09

Insurance and bonding – laws governing sale, purchase and use of urban and rural land – land revenue codes – tax laws – income tax, sales tax, excise and custom duties and their influence on construction costs – legal requirements for planning – property law – agency law – benefits in public private partnership -local government laws for approval – statutory regulations.

MODULE V LABOUR REGULATIONS 09

Social security – welfare legislation – laws relating to wages, bonus and industrial disputes, labour administration – insurance and safety regulations Workmen's

Compensation Act – Indian Factory Act – Tamilnadu Factory Act – Child Labour Act - Other Labour Laws

Total Hours: 45

REFERENCES:

1. Gajaria G.T., Laws Relating to Building and Engineering Contracts in India, M.M.Tripathi Private Ltd., Bombay, 2000.
2. Jimmie Hinze,Construction Contracts, McGraw Hill, 2001.
3. Joseph T. Bockrath, Contracts and the Legal Environment for Engineers and Architects, McGraw Hill, 2000.
4. Patil. B.S, Civil Engineering Contracts and Estimates, Universities Press Private Limited, India, 2006.
5. The Indian Contracts Act, 1872,
6. Arbitration and Conciliation Act, 1996.
7. The Tamilnadu Transparency in Tenders act, 1998.

OUTCOME:

At the end of the course the students will be able to

- define the various elements, types and laws related to contract.
- list the various processes involved in tendering.
- elaborate the process involved in construction arbitration.
- describe the various legal requirements related to construction activities.
- list the available labor regulations and its benefits to the labour.

CEC6233 MINI PROJECT	L	T	P	C
	0	0	3	1

GENERAL GUIDELINES:

- The project aims to impart knowledge in construction planning and scheduling and to complement the practical work abilities of the students.
- The project allows students to generalize, apply and synthesize the concepts learned over the duration of the course.
- This approach encourages students to work as a team and “learn by doing”, thereby develop the problem-solving skills which is fundamental to industry practice in the field of construction management.
- Students, working in groups of two, must identify a construction project, Prepare a feasibility report for the project and list the activities, establish an activity logic sequence table, estimate the duration, prepare a network diagram, track, update and crash the project.
- The Students are expected to implement the same plan using Project Management softwares.
- The faculty act as facilitator in helping students to acquire the technical knowledge and basic proficiency needed to perform the master plan.

ODD SEMESTER PROFESSIONAL ELECTIVES

CECY121	CONSTRUCTION PERSONNEL MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To impart knowledge on man power planning, organization, people management and their welfare measures.

MODULE I MANPOWER PLANNING 09

Manpower planning, organizing, staffing, directing, and controlling – personnel principles – case studies.

MODULE II ORGANISATION 09

Organization – span of control – organization charts – staffing plan - development and operation of human resources - managerial staffing – recruitment – selection - placement, training and development

MODULE III HUMAN BEHAVIOUR 10

Introduction to the field of people management - basic individual psychology; motivation - job design and performance management - managing groups at work - self-managing work teams - intergroup behavior and conflict in organizations – leadership - behavioral aspects of decision-making; and communication for people management

MODULE IV WELFARE MEASURES 07

Compensation – Safety and health – GPF – EPF – group insurance – housing - pension – laws related to welfare measures.

MODULE V MANAGEMENT AND DEVELOPMENT METHODS 10

Compensation - wages and salary, employee benefits, employee appraisal and assessment - employee services - safety and health – discipline and discharge - special human resource problems, performance appraisal - employee hand book and personnel manual - job descriptions and organization structure and human relations – productivity of human resources.

Total Hours: 45

REFERENCES:

1. Carleton Counter II, Jill Justice Coutler, The Complete Standard Handbook of Construction Personnel Management, Prentice-Hall, Inc., New Jersey, 1989.
2. Memoria,C.B., Personnel Management, Himalaya Publishing Co., 1997.
3. Josy.J. Familaro, Handbook of Human Resources Administration, McGraw-Hill International Edition, 1985.
4. Dwivedi R.S, Human Relations and Organizational Behavior, Macmillan India Ltd., 2005.

OUTCOME:

At the end of the course, students will be able to

- classify and explain various man power resources required in construction industry
- outline the organizational structure and demonstrate staffing plans for a construction company.
- apply interpersonal human behavior principals to improve the morale and behavioral aspects of human resources.
- demonstrate various welfare measures available to human resources.
- analyze the various development benefits and principles to effectively manage the resources and increase in productivity

CECY222	FINANCING AND MANAGEMENT OF INFRASTRUCTURE PROJECTS	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To provide an understanding and appreciation of financing technique widely used to finance infrastructure projects
- To provide an exposure to various innovative financing methods and its applicability in infrastructure projects.
- To provide an understanding about public private parternership and risks associated with it.

MODULE I INFRASTRUCTURE DEVELOPMENT – INTRODUCTION 09

Infrastructure development - Multiplier effects of infrastructure development on economic development of the nation - Sources of financing infrastructure projects; Traditional and private investments; various financial instruments; Limitations of traditional procurement system of infrastructure; Legal frameworks and Incentives for private sector participation in infrastructure development.

MODULE II PUBLIC PRIVATE PARTNERSHIPS – PROCUREMENT PROCESS 09

Introduction to infrastructure development through ppp route; benefits of PPP mode of procurement; types of PPP Models and their contractual structure; stakeholders' perspectives; granting authority, funders and concessionaire; government's role in successful PPP projects; appraisal of projects; VFM evaluation; PPP procurement process; lifecycle of PPP projects; contractual package of PPP project; bankable concession agreement - case study

MODULE III CONCESSION – DESIGN AND AWARD 09

Introduction to concession design and award; concession design: price setting; price adjustment; specific performance targets; penalties and bonuses; public parties' security rights; duration, termination, and compensation; force majeure and other unforeseen changes; dispute settlement; concession award: competitive bidding; direct negotiations and unsolicited proposals; competitive negotiations; prequalification and unsolicited proposals; competitive negotiations; prequalification and short listing; bid structure and evaluation; bidding rules and procedures; case study

MODULE IV RISK MANAGEMENT OF INFRASTRUCTURE PROJECTS 09

Risks associated with various infrastructure projects; Introduction to risk

management concept; risk analysis techniques; risk mitigation strategies; risk allocation frameworks of major infrastructure projects procured through various ppp modes - environmental concerns and its impact on infrastructure development.

MODULE V PROJECT FINANCE 09

Introduction to project financing concept; analysis of project viability; designing security arrangements; preparing the project financing plan; introduction to credit rating of infrastructure projects and role of credit ratings in financing infrastructure projects; rating frameworks of various national and international credit rating agencies for infrastructure projects in various sectors. financing through international capital markets; urban infrastructure financing.

Total Hours: 45

5. Weber, B., & Alfen, H.W. Infrastructure as an asset class - Investment strategies, project finance and PPP, West Sussex: John Wiley & Sons, 2010.

OUTCOME:

Upon Completion of this course the learner will be able to

- Demonstrate the need for Infrastructure development for the growth of a country and explain the various means of financing an Infrastructure project
- Summarize the types, benefits and limitations of PPP.
- Develop the methods of procurement of infrastructure projects
- Deal with risk associated with Infrastructure Projects
- Appraise and access the various financial options to fund an Infrastructure project.

CECY123	INTELLIGENT BUILDING MANAGEMENT SYSTEM	L	T	P	C
		3	0	0	3

OBJECTIVE:

To provide knowledge on

- concepts of intelligent buildings
- working principles of building automation systems
- office automation systems and communication systems

MODULE I INTRODUCTION 09

Introduction to intelligent buildings - high performance buildings - basic concepts of intelligent buildings - intelligent building automation - building automation system- cost analysis of intelligent buildings – introduction to smart materials and embedded sensor technology – BMS and energy savings – BMS benefits

MODULE II INTELLIGENT COMFORT SYSTEMS 09

Introduction - Basic HVAC system - human comfort - artificial intelligent systems – occupancy sensors – temperature sensors; energy efficient HVAC systems – thermal energy storage – under floor air distribution – chilled beams – Other emerging HVAC technologies for high performance buildings - automated car parking management

MODULE III INTELLIGENT SAFETY SYSTEMS 09

Life safety factors – designing a security system- intrusion sensors and space sensors -closed circuit television & surveillance systems; access control & management system - portrait id system, swipe card access control system, biometric access control system; fire protection systems - smoke detection- automatic fire alarm detection – sprinklers -hose reels hydrants-foam systems - microprocessor based alarm. emergency control of elevator, doors, hvac systems; security & alarm system

MODULE IV BUILDING ELECTRONICS 09

Introduction - microprocessor based control - programmable logic controller – Communication principles - telephone systems - communal aerial broadcasting - satellite communication - fibre optic system

MODULE V PERFORMANCE BUILDINGS 09

High performance buildings - control theory - market trends - energy efficiency - environmental & green house gas emission reduction - CDM - practical benefits;

case studies & examples-smart home - smart office.

Total Hours: 45

REFERENCES:

1. Shengwei Wang, Intelligent Buildings and Building Automation, Spon Press, London, 2009.
2. Derek Clements Croome, Intelligernt Building Design, Management and Operations, 2nd edition, ICEP Publishers, London, 2012.
3. Ehrlich, C., Intelligent Building Dictionary: Terminology for Smart, Integrated Green Building Design, Construction, and Management San Francisco, Handson-Guide, 2007.

OUTCOME:

Upon completion of the course, the student will be able to

- illustrate the concept of Intelligent Buildings and compare the costs, energy savings applied to Building Management Systems.
- demonstrate and explain the various Intelligent Comfort Systems
- demonstrate and explain the various Intelligent Safety Systems
- construct a simple electronic system
- analyze high performance buildings based on energy efficiency

CECY124 MANAGEMENT INFORMATION SYSTEM

L	T	P	C
3	0	0	3

OBJECTIVE:

To lay emphasis on

- the various information systems
- their framework
- their methods of implementation, control and audit

MODULE I INTRODUCTION 09

Information systems - establishing the framework - business models - information system architecture - evolution of information systems.

MODULE II SYSTEM DEVELOPMENT 09

Modern information system - system development life cycle – structured methodologies - designing computer based methods, procedures, control - designing structured programs.

MODULE III INFORMATION SYSTEMS 09

Integrated construction management information system - project management information system - functional areas, finance, marketing, production, personnel - levels, dss, eis, and es - comparison, concepts and knowledge representation - managing international information system.

MODULE IV IMPLEMENTATION AND CONTROL 09

Control - testing security - coding techniques - defection of error - validating - cost benefit analysis - assessing the value and risk of information system.

MODULE V SYSTEM AUDIT 09

Software engineering qualities - design, production, service, software specification, software metrics, software quality assurance - systems methodology - objectives - time and logic, knowledge and human dimension - software life cycle models - verification and validation.

Total Hours: 45

REFERENCES:

1. Kenneth C Laudon and Jane Price Laudon, Management Information Systems Organisation and Technology, Prentice Hall, 1996.
2. Gordon B. Davis, Management Information System: Conceptual Foundations, Structure and Development, McGraw Hill, 1974.
3. Joyce J Elam, Case series for Management Information Systems, Simon and Schuster, Custom Publishing, 1996.

5. Michael W. Evans and John J Marciniah, Software Quality assurance and Management, John Wiley and Sons, 1987.
6. 6 Card and Glass, Measuring Software Design quality, Prentice Hall, 1990.

OUTCOME:

Upon successful completion of the course, the students will be able to

- explain the procedures for successfully managing information systems in projects.
- identify the system development for designing structured problems.
- identify the international information system.
- analyse the coding techniques.
- design the verification and validation for system audit.

CECY103	MAINTENANCE AND REHABILITATION OF STRUCTURES	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To impart students sound knowledge on various causes of failures, detailed assessment procedure for evaluating a distressed structure, materials available for effecting repair and techniques for effective rehabilitation.
- To offer knowledge to students on rehabilitation of real time distressed structures through case studies.

MODULE I CAUSES FOR FAILURES 09

Effects due to climate, temperature, chemicals, wear and erosion - design and construction errors. Corrosion – Mechanism, causes, consequences and remedial measures - effect of cover thickness and cracking on durability of concrete.

MODULE II MAINTENANCE AND ASSESSMENT PROCEDURE 09

Definition: Maintenance, repair and rehabilitation - facets of maintenance - importance of maintenance. Assessment procedure for evaluating a damaged structure - various aspects of inspection - destructive and non–destructive testing techniques.

MODULE III MATERIALS FOR REPAIR 09

Special concretes and mortar - concrete chemicals - elements for accelerated strength gain - expansive cement - polymer concrete composites - ferro cement - fibre reinforced concrete- fibre reinforced polymer composites - micro concrete. Methods of corrosion protection - corrosion inhibitors - protective coating materials for rebar and concrete - corrosion resistant steel - cathodic protection.

MODULE IV TECHNIQUES FOR REPAIR 09

Rust converters and polymer coating for rebars during repair - repair mortar for cracks - bonding agents - epoxy injection - guniting and shotcrete - FRP and ferro cement jacketing - vacuum concreting - bonding plates - overlays - protective coatings - shoring and underpinning technique.

MODULE V REHABILITATION OF STRUCTURES - CASE STUDIES 09

Case studies on repairs to overcome low member strength - deflection - cracking - chemical attack - damage due to wear - leakage - fire - marine exposure and

corrosion. Engineered demolition techniques for dilapidated structures - case study.

Total Hours : 45

REFERENCES:

1. Santha Kumar A.R., “Concrete Technology”, Oxford University Press, (2007).
2. Shetty M.S., “Concrete Technology – Theory and Practice”, S. Chand & Company Limited (2008).
3. Orchard D.F., "Concrete Technology -Vol. I - Properties of Materials, Wiley Publishers, 2010.
4. Yoshihiko Ohama, “Hand Book of Polymer – Modified Concrete and Mortars”, Noyes Publications, 1995.

7. Michael T. Kubal, "Waterproofing the Building Envelope", Mc-Graw Hill Inc., 1993.

OUTCOME:

At the end of course work students will be able to

- specify the various causes for distress in reinforced concrete structures.
- conduct systematic condition assessment of damaged structures using conventional and non-destructive testing methods.
- suggest suitable materials for repair based on damage level, deterioration mechanism and durability requirements of the distressed structures.
- recommend repair techniques for rehabilitation of damaged structural elements based on deterioration level, serviceability and durability requirements.
- specify rehabilitation procedure for fire affected, corrosion affected and other structurally distressed members and engineered demolition techniques.

CEBY125	REMOTE SENSING AND GIS IN INFRASTRUCTURE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To make the student acquainted regarding the principles of remote sensing and the data acquisition and analysis of satellite data.
- To provide exposure to data models and data structure used in GIS.
- To introduce various raster and vector analysis capabilities of GIS for civil engineering.

MODULE I REMOTE SENSING 09

Concepts of remote sensing- energy sources and radiation principles-energy interactions in the atmosphere- spectral reflectance of earth surface features-concepts of microwave remote sensing- visual interpretation-digital image processing- image preprocessing- image enhancement-image classification-remote sensing satellites

MODULE II BASIC CONCEPTS OF GIS 09

Basic concepts and components- hardware, software-spatial and non-spatial data-geo referencing- map projection- types of projection- simple analysis-data retrieval and querying-data input

MODULE III DATA STRUCTURES AND ANALYSIS 09

Data base- data base models- raster and vector data structures- Topology-GIS modeling- Raster and Vector data analysis- Buffering and overlaying techniques-DEM TIN and DTM- network analysis- output devices, errors, types of errors.

MODULE IV APPLICATIONS IN TRANSPORTATION MANAGEMENT 09

Highway and railway alignment, location of transport terminals, and road side facilities, bus stops, route optimization, accident analysis-Integration of GIS, GPS, and remote sensing techniques, Advanced traveller information system and automatic vehicle location system.

MODULE V APPLICATIONS IN WATER AND ENVIRONMENT MANAGEMENT 09

GIS in watershed management, Irrigation management, drought management, flood management, waste land management- management and monitoring of

environment-conservation of resources.

Total Hours: 45

REFERENCES:

1. Burrow P.A.,Principles of GIS for Land Resources Assessment, Oxford Publication, 1994.
2. Marble D.F., CalkinsH.W and Penquest, Basic readings in GIS, Speed System Ltd, New York, 1984.

4. C.P.Lo , Yeung, A.K.W, Concepts and technologies of Geographic Information systems, Prentice Hall India, New Delhi, 2004

OUTCOME:

At the end of the course the student will able to

- identify the energy sources and its target interactions, to be interpreted in a satellite image.
- enhance the satellite image to increase its interpretability of the target features.
- identify the projection suitable for different applications and to generate queries to solve real world problems.
- design GIS data structure to incorporate real world as a system component and to perform spatial queries.
- describe real world problem in transportation and to justify the solutions arrived technically.
- identify problem with respect to water and environmental management and to solve the problems using GIS and remote sensing techniques.

CECY126 URBAN PLANNING AND DESIGN

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart knowledge on urban planning, zoning rules and regulations, architectural design and implementation of management information system in urban planning.

MODULE I INTRODUCTION 06

Definition of terms –trend of urbanization at international, national, state and district levels .national and regional development policies and strategies – urbanization, housing and transportation sustainable urban development-definition and principles.

MODULE II PLANNING PROCESS 08

Types of urban and regional plans, stages in the planning process – delineation of planning areas, goals and objectives of plans, surveys and analysis, formulation of plans, evaluation of alternative plans, plan implementation, legal, financial and institutional constraints in the planning process .social orientation in the planning process.

MODULE III DEVELOPMENT MANAGEMENT SYSTEMS 08

Development control rules – zoning regulations, sub divisional regulations, building bye-laws, co-ordination between urban local bodies and other functional agencies such as water supply & sewerage boards, housing boards including slum boards and planning authorities

MODULE IV SMART CITIES 9

The Origins of smart cities - municipal information systems - gis and interoperability - confidentiality, privacy, the surveillant society - the next generation of sensors - opportunistic data: generated for one purpose, used for another - integrating data, open data - coordinating services, emergency response and location-based services - web mapping, real time sensing and information - making cities smarter, coupling networks, services and people, - new forms of electronic community.

MODULE V MANAGEMENT INFORMATION AND DECISION SUPPORT 08

Database, management information system, decision support system for land

suitability, urban renewal and network analysis.

Total Hours: 30

REFERENCES:

1. Master Plans for Cities and Towns prepared by Planning Authorities, Chennai Metropolitan Development Authority, 1995.
2. Development Control Rules for Chennai Metropolitan Area, CMDA, Chennai, 2004.
3. Rangwala S C, Town Planning, Charotar Publishing House, 2009.
4. Francis D.K.Ching Architecture: Forms, space and order , VNR, New York,2014.

OUTCOME:

At the end of the course the student will be able

- define the concept of urbanization and its trend in developed countries.
- create an plan using various stages of planning.
- describe the bye laws and the role of Urban Local Bodies and Other functional Agencies in urbanization
- define the concept of smart cities.
- manage the datas using various information systems.

CECY127 MATERIAL MANAGEMENT

L	T	P	C
2	0	0	2

OBJECTIVE:

- To impart knowledge on classification, procurement, store management of materials, and methods of disposal of waste.

MODULE I INTRODUCTION 08

Material classification- organizing for materials management – basis for forming organizations – conventional and modern approaches to organizing materials management. materials identification – classifying of materials – codification of materials – standardization – simplification and variety reduction of materials – integrated material management

MODULE II MATERIAL PROCUREMENT 10

Material purchasing– planning purchasing materials – norms of vendor rating – cei methodology – material selection and development – purchasing procedures and methods – legal aspects – insurance of materials - supply management – sources of supply – out sourcing material management- procurement organization - procurement planning – functions of material management - inventory control.

MODULE III STORE MANAGEMENT 06

Storing of materials-management of stores – location – different types of stores – methods of storing – safety and security of materials – stores equipment – materials handling equipment – factors affecting materials handling

MODULE IV WASTE MANAGEMENT 06

Scrap & Obsolete Materials-Management of surplus obsolete and scrap materials – reasons for accumulation of surplus obsolete and scrap materials – methods of disposal – regulations and procedures

Total Hours : 30

REFERENCES

1. 1. A.K. Datta, “Materials Management: Procedures, Text and Cases”, PHI Learning Pvt. Ltd.,2004.
2. 2. Arnold, “Introduction To Materials Management”, Pearson Education India,2009
3. 3. Richard J. Tersine, “Principles Of Inventory And Materials, Management”,

Prentice Hall,2004

4. 4. Richard J. Tersine, “Modern Materials Management”, John Hardin Campbell - 2007
5. 5. P. Gopalakrishnan, “Handbook of Materials Management”, PHI Learning Pvt. Ltd.2004

OUTCOME:

At the end of the course the student will be able to

- categorize and classify the various materials.
- describe the purchase procedure of materials.
- analyse the supply and outsourcing of material management.
- describe the safety and security of material storage.
- analyse the management of scrap and obsolete materials.

CECY128 CONSTRUCTION SAFETY MANAGEMENT

L	T	P	C
2	0	0	2

OBJECTIVE:

To impart knowledge in

- Safety aspects involved in construction industry.
- Policies followed and awareness in construction industry.

MODULE I INTRODUCTION 06

Construction Safety Management – OSHO - Role of various parties, duties and responsibilities of top management, site managers, supervisors etc. role of safety officers, responsibilities of general employees, safety committee, safety monitoring. Writing safety manuals, preparing safety checklists and inspection reports.

MODULE II SAFETY IN DIFFERENT OPERATIONS 12

Safety in construction operations – Safety of accidents on various construction sites such as buildings, dams, tunnels, bridges, roads, etc. safety at various stages of construction. Prevention of accidents. Safety measures. Safety in use of construction equipment e.g. vehicles, cranes, hoists and lifts etc. safety of scaffolding and working platforms. Safety while using electrical appliances. explosives used.

MODULE III SAFETY AWARENESS 06

Various safety equipment and gear used on site. First aid on site, Safety awareness program. Labor laws, legal requirement and cost aspects of accidents on site, Incentive for safety practices.

MODULE IV SAFETY POLICY 06

Study of safety policies, methods, equipment, training provided on any ISO approved construction company, safety in office, working on sites of high rise construction, deep excavation

Total Hours: 30

REFERENCES:

1. Construction safety manual – SP 70 published by National Safety Commission of India- 2007.
2. Safety Management in Construction Industry – A manual for project

managers. NICMAR Mumbai, 1998.
3. Construction Safety Handbook – Davies V.S.Thomasin K, Thomas Telford, London, 1990.
4. Construction Safety Management Tim Howarth, Paul Watson, Wiley-Blackwell,2008.

OUTCOME:

At the end of the course student will be able to

- define the roles and responsibilities of stakeholders in establishing safety in the project.
- describe the safety practices to be followed during various construction operations.
- state the awareness about safety in site.
- analyse the safety policies followed by organization in construction site.

CECY129	TRANSPORTATION PLANNING AND MANAGEMENT	L	T	P	C
		2	0	0	2

OBJECTIVE:

To impart knowledge on

- various transportation systems
- methods of demand forecasting, route choice modeling and transportation management

MODULE I TRANSPORTATION SYSTEMS 06

Systems approach to transport planning – interdependence of the land use and traffic– stages in transportation planning – transport planning considerations travel forecasting process – statutory land use planning process – planning issues

MODULE II TRANSPORTATION INVENTORIES & TRAVEL DEMAND FORECASTING 08

Concepts of zoning – methods of transportation surveys – inventory of transport and other activities – planning studies and methods – development of planning process conventional modeling process – four stage modeling processes – trip generation models – trip distribution models and calibration – advancement in trip end modeling

MODULE III ROUTE AND MODE CHOICE MODELING 08

Methods of trip assignment models – multi modal trip assignment – mode choice and modal split models – advancement in route choice and mode choice modeling

MODULE IV LAND USE TRANSPORT MODEL (LUT) 08

Accessibility measures and basic theories – lowery derivatives model- garim model – Basics of systems approach in LUT Model- classification of land use models – intercity travel demand models – transit planning and services.

Total Hours: 30

REFERENCES:

1. Jotin Khisty C, Kent Lall B, Transportation Engineering – An Introduction, Third Edition, Prentice Hall of India, New Delhi, 2002.
2. Papacostas C.S., Prevedouros, Transportation Engineering and Planning, Third Edition, Prentice Hall of India, New Delhi, 2002.
3. John D.Edwards (Edr.), Transportation Planning Hand Book, Second

Edition, Institute of Transportation Engineers, Prentice Hall Inc., Washington DC, USA, 1999.
4. John W Dicky, Metropolitan Transportation Planning – A Decision Oriented Approach, McGraw Hill, New York, 1984.
5. O'Flaherty C.A, Transport Planning and Traffic Engineering, Elesevier Publications, New Delhi,1997.

OUTCOME:

At the end of this course the student will be able to

- identify the stages of transportation planning.
- design and forecast the travel demand.
- identify the Advancement in Route Choice and Mode Choice Modeling.
- analyse the land use transport model.
- categorize the various transportation management system.

CECY130 LEAN CONSTRUCTION

L	T	P	C
1	0	0	1

OBJECTIVE:

To provide knowledge on

- the basics of lean production management,
- how Lean principles are applied to the Construction industry to improve the operation management and product development.

MODULE I LEAN PRINCIPLES 05

Historical Background – WIP – cycle time – little's law –queuing theory – lean production systems principles

MODULE II LEAN CONSTRUCTION 05

Issues with contemporary CM/PM practices – Lean Construction as Project production system – EZ strobe - lean construction Principles –TFV views on production

MODULE III LEAN PROJECT DELIVERY SYSTEM 05

Improving production design & planning – lean work structuring - improving project control: last planner system - improving design management – improving project delivery

Total Hours: 15

REFERENCES:

1. Liker, J. K., and Meier, D. (2005). The Toyota Way Fieldbook, McGraw-Hill, New York, NY. 476 pp.
2. Readings at http://www.leanconstruction.org/readings.htm
3. Liker, J. K. (2004). The Toyota Way, McGraw-Hill, New York, NY. 330 pp.
4. Hopp, W. J., and Spearman, M. L. (2011). Factory Physics, Third Edition, Waveland Press, Long Grove, Il. 720 pp.

OUTCOME:

Upon completion of the course, the student will be able to

- summarize the Lean Principles.
- explain the Lean construction principles and apply lean principles to a small construction project.
- demonstrate the Lean construction project delivery system

CECY131	SITE INVESTIGATION AND SOIL EXPLORATION TECHNIQUES	L	T	P	C
		1	0	0	1

OBJECTIVE:

- To familiarize the students with various site investigation programme, geotechnical terminology and important concepts

MODULE I SUB SURFACE EXPLORATION TECHNIQUES 07

Necessity of soil sampling -Methods of soil exploration- Direct method of exploration-Auger Boring-Wash Boring - Percussion boring-Core Drilling-Rotary Boring Indirect method of exploration –Geo physical method- Electrical resistivity method – Advantages - Sectional map-Location of ground water basin Sampling Techniques -Disturbed Sample -Undisturbed Sample - thin walled sampler- Split Spoon Sampler-Core Cutter-Area ratio-Core Recovery ratio

MODULE II DEEP EXPLORATION 08

Deep Boring-rock core drilling-Preservation of borelogs- Techniques for deep boring-Water test - Standard Penetration test-Limitations -Advantages- Static cone penetration test-Vane Shear test-Plate load - test- Cyclic plate load test - Pressure meter-subsoil - deformation test-Field Density.

Total Hours : 15

REFERENCES:

1. Tomlinson, M.J. and Boorman. R., Foundation Design and Construction, ELBS Longman, 6th edition, 2013.
2. Nayak, N.V., Foundation Design manual for Practicing Engineers, Dhanpat Rai and Sons, 2012.
3. Winterkorn H.F and Fang H.Y., Foundation Engineering Hand Book, Van Nostrard – Reinhold, 1991.
4. Braja M. Das, Principles of Foundations Engineering, Thomson Asia (P) Ltd., 2012.
5. Bowels J. E., Foundation Analysis and Design, Mc Graw-Hill International Book Co., 1996.

OUTCOME:

At the end of the course students will be able to

- interpret subsurface information to report soil properties
- determine bearing capacity and settlement.

LIST OF EVEN SEMESTER ELECTIVES

		L	T	P	C
CECY221	**CONSTRUCTION QUALITY MANAGEMENT**	**3**	**0**	**0**	**3**

OBJECTIVE:

To impart knowledge in

- quality planning, assurance and improvement techniques.
- Statistical control and standards in construction industry.

MODULE I QUALITY MANAGEMENT 09

Introduction – definitions and objectives – factor influencing construction quality - responsibilities and authority - quality plan - quality management guidelines – quality circles.– requirements – preparing quality system documents – quality related training – implementing a quality system – third party certification.

MODULE II QUALITY PLANNING ASSURANCE AND CONTROL 09

Quality policy, objectives and methods in construction industry - taguchi's concept of quality – codes and standards – documents –— inspection procedures - Total QA / QC programme and cost implication- techniques and needs of QA/QC - different aspects of quality – appraisals- critical, major failure aspects and failure mode analysis

MODULE III QUALITY CONTROL AND IMPROVEMENT TECHNIQUES 09

Quality improvement - selection of new materials - influence of drawings, detailing, specification, standardization - bid preparation - quality checklist in sites - masonry-plastering-concrete construction- batching, mixing, transporting, placing, compaction, finishing, curing - reinforcement work - formwork - timber & steel construction, - doors & windows, - plumbing & drainage - duties, responsibilities, qualification of staff in organization - purpose of inspection: inspection of various components of construction; reports and records;

MODULE IV STATISTICAL QUALITY CONTROL 09

Statistical quality control - quality measurement: attributes and variables - statistical process control (spc) methods - control charts for attributes - p-charts - proportion defective - c-charts - number of defects per unit - control charts for variables - other types of attribute-sampling plans acceptance sampling

MODULE V QUALITY STANDARDS 09

Quality standard codes from its application point of views- List important clauses with range of acceptable parameters related to quality of cement, bricks, steel and concrete as given in quality standards. Important provisions of Indian standards about different construction activities- ISO9000 and ISO14000 standards.

Total Hours: 45

REFERENCES:

5. Er. S.C. Basu Roy, Modern Concept of Total Quality Control and Management for Construction, Nabhi Publication (2013)

OUTCOME:

At the end of the course, students will be able to

- apply total quality management in civil construction.
- check the quality in civil construction works.
- improve the quality of construction.
- identify the variations in quality of civil works.
- use various standard codes in civil construction works.

CECY222	ENVIRONMENTAL IMPACT ASSESSMENT OF INFRASTRUCTURE PROJECTS	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart the knowledge about

- the need of civil engineering professionals to be acquainted with the potential environmental risks of infrastructure projects.
- methods of qualitative and quantitative assessments, environmental risk evaluation, risk management and remediation techniques.

MODULE I INTRODUCTION 06

Environmental impact assessment (EIA), definitions and concepts, rationale and historical development of EIA, EIA in civil engineering, initial environmental examination, environmental appraisal, environmental impact factors and areas of consideration, measurement of environmental impact, Status of EIA in India, types and limitations of EIA

MODULE II EIA: PROCESSES AND PROCEDURES 10

Components of EIA – methods, techniques & procedure for EIA – processes – screening- scoping- setting- analysis- mitigation. matrices- networks – checklists – connections and combinations of processes - cost benefit analysis – analysis of alternatives – expert systems in eia - environmental impact statement. Technical components of environmental impact assessment - case studies -water resources, water quality, and land resources - land use, ecology and wetlands - traffic and transportation - waste management and hazardous materials.

MODULE III SOCIO-ECONOMIC IMPACT ASSESSMENT 09

Prediction tools for EIA – mathematical modeling for impact prediction – assessment of impacts – air – water – soil – noise – biological –– socio-cultural environments -cumulative impact assessment – documentation of eia findings – planning – organization of information and visual display materials – report preparation.

MODULE IV ENVIRONMENTAL MANAGEMENT 10

Environmental management - principles, problems and strategies; environmental management plan - preparation, implementation and review – mitigation and rehabilitation plans – policy and guidelines for planning and monitoring programmes; review of political, ecological and remedial actions; future strategies; multidisciplinary environmental strategies, the human, planning, decision-making

and management dimensions; environmental planning and the future of EIA - ethical and quality aspects of environmental impact assessment.

MODULE V ENVIRONMENTAL AUDIT, LIFE CYCLE ASSESSMENT & STANDARDIZATION 10

Environmental audit - definitions and concepts, partial audit, compliance audit, post project audit methodologies and regulations. life cycle assessment; triple bottom line approach; industrial ecology; ecological foot printing; carbon trading; sustainable development; introduction to ISO and ISO 14000; EMAS regulations; wider application of system based approach.

Total Hours: 45

REFERENCES:

3. A. K. Shrivastava, Environmental Impact Assessment, APH Publishing, 2003.
4. R. R. Barthwal, Environmental Impact Assessment, New Age International, 2002.

OUTCOME:

Upon successful completion of this course, the student will be able to

- understand factors, status, measurement and limitations of an EIA
- classify the components and explain the methods and procedures of an EIA
- appreciate specific methods and tools used in EIA for prediction and assessment
- plan the environmental management policy for multi-disciplinary environmental strategies
- Execute an environmental audit and life cycle assesment.

CECY223 FINANCIAL ACCOUNTING & MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVE:

- To provide conceptual knowledge on Accounting
- To prepare Financial Statement like Trading Account, P & L Account, Balance Sheet, and Fund flow & Cash flow statements with specific reference to construction industry
- To understand the Financial Statement s & Analyse the same
- To prepare certain functional budgets
- To apply marginal costing technique for managerial decision making

MODULE I INTRODUCTION TO ACCOUNTING 04

Introduction to accounting - meaning of accounting, branches of accounting, objectives of accounting -fundamental concepts-principles and rules of accounting

MODULE II FINANCIAL ACCOUNTING 12

Basic accounting cycles -journal, ledger and trial balance – preparation of trading account, profit and loss account, balance sheet – ratio analysis

MODULE III CASH FLOW AND FUND FLOW 08

Cash flow statement, meaning and concepts of fund flow & cash flow, difference between fund flow statement and income statement. preparation fund flow & cash flow statement

MODULE IV BUDGETS 09

Types of budgets-techniques for budgeting, preparation of cash budget and flexible budget

MODULE V COST ACCOUNTING 12

Cost - meaning and objective, elements of cost - marginal costing - cost-volume profit analysis- breakeven point. Application of marginal costing techniques to managerial decision making

Total Hours: 45

REFERENCES

4. S.P. JainJain and K.L. Narang, “Cost Accounting Principles and Practice” Kalyani publishers, 2012

OUTCOME

At the end of the course the students will be able to

- ascertain profitability of construction company
- depict the financial position of construction company
- prepare Cash Budget and flexible budget
- take managerial decisions by applying Marginal costing techniques

CECY224	GREEN BUILDING AND ENERGY EFFICIENT STRUCTURES	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart the knowledge on

- design of energy efficient buildings which balances all aspects of energy lighting.
- space conditioning
- ventilation by providing a mix of passive solar design strategies
- use of materials with low embodied energy.

MODULE I INTRODUCTION 09

Energy required for building construction - heat transfer – measuring conduction – thermal storage – measurement of radiation – the green house effect – psychrometry chart – measuring latent and sensible heat. thermal comfort – site planning and development – temperature – humidity – wind – optimum site location sun protection – types of shading devices – conservation – heating and cooling loads - igbc's rating systems - sustainable sights - water efficiency - energy efficiency - materials and resources - indoor environmental quality.

MODULE II PASSIVE SOLAR HEATING AND COOLING 09

General principles of passive solar heating – key design elements - direct gain trombe walls, water walls, convective air loops – concepts – case studies – general principles of passive cooling – ventilation – predicting ventilation in building-window ventilation calculations - radiation – evaporation and dehumidification–mass effect–load control – air filtration and odour removal – heat recovery in large buildings

MODULE III DAYLIGHTING AND ELECTRICAL LIGHTING 09

Materials, components and details - insulation – optical materials – radiant barriers glazing materials - day lighting – sources and concepts – building design strategies – case studies – electric lighting –light distribution – electric lighting control for day lighted buildings – illumination requirement – components of daylight factor – recommended daylight factors – day lighting analysis – supplementary artificial lighting design

MODULE IV HEAT CONTROL AND VENTILATION 09

Requirements – heat transmission through building sections – thermal performance of building sections – orientation of buildings – building characteristics

for various climates – thermal design of buildings influence of design parameters – mechanical controls – examples. ventilation – requirements – minimum standards for ventilation – ventilation design – energy conservation in ventilating systems – design for natural ventilation.

MODULE V DESIGN FOR CLIMATIC ZONES 09

Energy efficiency – an overview of design concepts and architectural interventions – energy efficient buildings for various zones – cold and cloudy – cold and sunny – composite – hot and dry – moderate – warm and humid – case studies of residences, office buildings and other buildings in each zones – energy audit – certification.

Total Hours: 45

REFERENCES:

2. Brown, GZ Sun, Wind and Light: Architectural design strategies, John Wiley,1985.
3. Cook. J, Award –Winning passive Solar Design, Mc-Graw Hill, 1984.

OUTCOME:

At the end of the course, the students will be able to

- identify the required energy for building construction.
- design and analyse the passive solar cooling and heating techniques.
- identify the required amount of daylight and electrical lighting for a building.
- analyse the ventilation and thermal design of a building.
- design a specific type of building for special climatic zones.

CECY225	GREEN CONCEPTS IN BUILDING ENVIRONMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To impart the knowledge on Green buildings concept ,indoor environment quality and economics of green building

MODULE I DEFINING "GREEN" AND "SUSTAINABILITY" 06

Green Design – concepts and definitions - sustainability begins with climate - recent upsurge in the green building movement -incentives for building green - incentives and tax deductions-green building programs -defining sustainable communities- emerging directions- liability - spectacular landmarks

MODULE II DESIGN STRATEGIES AND THE GREEN DESIGN PROCESS 10

Conventional versus Green Delivery Systems- green design strategies- The Integrated Design Process (IDP) -the green-building project delivery process- the integrated multidisciplinary project team - design process for high-performance buildings -sustainable site selection-general considerations- site selection - development density and community connectivity -brownfield redevelopment - alternative transportation -site development –storm water design-heat-island effect - light-pollution reduction -commissioning process -overview -fundamental commissioning –retro commissioning -enhanced commissioning -cost management

MODULE III GREEN MATERIALS AND PRODUCTS 10

General- green building materials - natural versus synthetic - storage and collection of recyclables- low-emitting materials -adhesives, finishes, and sealants -paints and coatings- flooring systems- earthen building materials- windows - miscellaneous building elements- roofing – wood - concrete - building and material reuse - building reuse -materials reuse- construction waste management-recycled materials- regional materials- rapidly renewable materials- bamboo-cork - insulation- linoleum- straw-bale construction-wheat board - use and selection of green office equipment- certified wood- life-cycle assessment of building materials and products- life-cycle cost analysis- third party certification

MODULE IV INDOOR ENVIRONMENTAL QUALITY (IEQ) & WATER EFFICIENCY 10

IEQ- general overview - indoor environmental quality and factors affecting the indoor environment -indoor-air quality -thermal comfort -noise pollution -day lighting and daylight factor (df) -ventilation and filtration -building materials and finishes emittance levels- water efficiency and sanitary waste- general issues- waste-water strategy: water reuse/recycling water- efficient landscaping – innovative wastewater technologies -water-use reduction- construction waste management- water fixtures and conservation strategies- toilets - urinals –faucets -shower heads -baseline water-consumption calculations- retention ponds, bio swales, and other systems

MODULE V ECONOMICS OF GREEN DESIGN 09

General Overview - costs and benefits of green design- the economic benefits of green buildings - cost considerations- life-cycle costing -life-cycle cost method - increased productivity - improved tenant/employee health -enhancement of property value and marketability - other indirect benefits external economic effects - increased recruitment and retention -tax benefits -miscellaneous green-building costs -energy costs- operation, maintenance, and repair costs -replacement costs - other costs - design and analysis tools and methods - present-value analysis - sensitivity analysis -breakeven analysis - computer programs - relevant codes and standards - liability issues - general overview -traditional litigation: pretrial and trial procedures -alternative dispute resolution

Total Hours :45

REFERENCES:

1. “LEED - Practices, Certification andAccreditation Handbook”. Sam kubba Ph.D., LEED AP
2. “Alternative Building Materials and Technologies”. K.S.Jagadish, B. U. Venkataramareddy and K. S. Nanjundarao New Age International, 2007.
3. “ Low Energy Cooling For Sustainable Buildings”. John Wiley and Sons Ltd, 2009.

OUTCOME:

At the end of the course, students will able to

- identify the basic concepts in green and sustainability.
- design and implement green building concepts in high rise buildings.
- identify various green materials and products in construction.

- analyze the indoor environmental quality and water efficiency of building.
- design the perform economic analysis of a green building.

CECY226	INFRASTRUCTURE PLANNING AND MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart knowledge on

- basic understanding of Infrastructure's impact on development of a country
- status of various sectors in Indian Infrastructure
- private Sector participation in infrastructure models
- infrastructure planning
- problems in infrastructure development and management

MODULE I BASIC CONCEPTS RELATED TO INFRASTRUCTURE. 09

Introduction to Infrastructure. -Power Sector - Water Supply and Sanitation Sector - Road, Rail, Air and Port Transportation Sectors - Telecommunications Sector - Urban Infrastructure - Rural Infrastructure - Special Economic Zones. - Organizations and Players in the field of Infrastructure. - The Stages of an Infrastructure. Project Lifecycle.- An Overview of Infrastructure Project Finance.

MODULE II PRIVATE INVOLVEMENT IN INFRASTRUCTURE 09

A Historical overview of infrastructure privatization. - the benefits -problems with infrastructure privatization - pre – requisites necessary to ensure success for switching over from public sector management to private sector management, issues in developing, funding and managing infrastructure projects, role, and responsibility of project management consultants. challenges in privatization of water supply - case study - challenges in privatization of power - privatization of road transportation infrastructure in india.

MODULE III CHALLENGES TO SUCCESSFUL INFRASTRUCTURE PLANNING AND IMPLEMENTATION 09

Mapping and facing the landscape of risks in infrastructure projects.-economic and demand risks: political risks -socio-environmental risks – case study - cultural risks in international infrastructure projects- legal and contractual issues in infrastructure .challenges in construction and maintenance of infrastructure

MODULE IV STRATEGIES FOR SUCCESSFUL INFRASTRUCTURE PROJECT IMPLEMENTATION 09

Risk management framework for infrastructure projects - shaping the planning phase of infrastructure projects to mitigate risks-designing sustainable contracts-introduction to fair process and negotiation. negotiating with multiple stakeholders

on infrastructure projects - sustainable development of infrastructure.

MODULE V INFRASTRUCTURE MANAGEMENT 09

Information technology and systems for successful infrastructure management - innovative design and maintenance of infrastructure facilities-infrastructure modelling and life cycle analysis techniques - capacity building and improving the governments role in infrastructure implementation - an integrated framework for successful infrastructure planning and management - infrastructure management systems and future directions.

Total Hours: 45

REFERENCES:

2. Raghuram, G., Jain, R., Sinha, S., Pangotra, P., Morris, S., Infrastructure Development and Financing: Towards a Public-Private Partnership, MacMillan, 2000.
3. Weber, B., & Alfen, H.W., Infrastructure as an asset class - Investment strategies, project finance and PPP, West Sussex: John Wiley & Sons, 2010.

OUTCOME:

At the end of the course the students will be able to

- classify the various types of infrastructure systems, stages and players in the field.
- summarize the influence of private partnership in infrastructure development
- discover the various risks involved in the infrastructure projects
- develop a successful Infrastructure project implementation strategy
- recommend successful infrastructure management systems for a given condition

CECY227 SHORING, SCAFFOLDING AND FORMWORK

L	T	P	C
3	0	0	3

OBJECTIVE:

To impart knowledge on

- Planning of formwork, plant and site equipments required for formwork.
- Design and erection of forms for various elements such as slabs, beams, columns, walls, shells and tunnels.
- Advanced methods of form construction.

MODULE I PLANNING, SITE EQUIPMENT & PLANT FOR FORM WORK **09**

Introduction - forms for foundations, columns, beams and walls - general objectives of formwork building - planning for safety - development of a basic system - key areas of cost reduction - planning examples. Overall planning - detailed planning - labour requirement - costing - planning crane arrangements - site layout plan - transporting plant - formwork accessories.

MODULE II MATERIALS ACCESSORIES & PRESSURES **09**

Lumber - types - finish - sheathing boards working stresses - repetitive member stress - plywood - types and grades - jointing boarding - textured surfaces and strength - reconstituted wood - steel - aluminum - hardware and fasteners - nails in plywood - allowable withdrawal load and lateral load - pressures on formwork with examples.

MODULE III DESIGN OF FORMS AND SHORES **09**

Basic simplification - beam formulae - allowable stresses - deflection, bending - lateral stability - shear, bearing - design of wall, slab, beam and column forms - simple wood stresses - slenderness ratio - allowable load vs length behaviour of wood shores - form lining design tables for wall, slab and column formwork - slab props - rosett shoring - shoring tower - heavy duty props.

MODULE IV BUILDING AND ERECTING THE FORM WORK **09**

Carpentry shop and job mill - forms for footings – wall, column, sloped, strap and stepped footing - slab form systems - sky deck and multiflex - customized slab table - standard table module forms - swivel head and uniportal head - assembly sequence cycling with lifting fork - moving with table trolley and table prop. various causes of failures.

MODULE V FORMS FOR DOMES AND TUNNELS, SLIP FORMS AND SCAFFOLDS 09

Hemispherical, parabolic, translational shells - forms for thin shell roof slabs design considerations - building the forms - placing concrete - forms removal -strength requirements -tunnel forming components - curb forms invert forms - arch forms - concrete placement methods - cut and cover construction, bulk head method - pressures on tunnels - continuous advancing slope method - slip forms – principles, types, advantages and functions of various components - planning -desirable characteristics of concrete - common problems faced - safety in slip forms - special structures built with slip form technique - types of scaffolds - putlog and independent scaffold, single pole scaffolds, truss suspended, gantry and system scaffolds.

Total Hours: 45

REFERENCES:

1. Austin, C.K., Formwork for Concrete, Cleaver -Hume Press Ltd., London, 1996.
2. Hurd, M.K., Formwork for Concrete, Special Publication No.4, American Concrete Institute, Detroit, 1996.
3. Michael P. Hurst, Construction Press, London and New York, 2003.
4. Robert L. Peurifoy and Garold D. Oberlender, Formwork For Concrete Structures, McGraw - Hill, 1996.
5. “Safety requirements for scaffolding”, American National Standards Institute, New York, 1994.

OUTCOME:

On completion of this course the students will be able to

- plan for the formwork accessories.
- identify the required materials and their properties of the formwork.
- design and construct formwork for various structural elements.
- built and erect formwork in different conditions.
- design formwork for domes, tunnels and scaffolds.

CECY228 AFFORDABLE HOUSING

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart knowledge on low cost housing technology and infrastructure services.

MODULE I HOUSING SCENARIO 09

Status of urban housing- status of rural housing. **Housing finance:** introducing- existing finance system in india- government role as facilitator- status at rural housing finance- impedimently in housing finance and related issues

MODULE II LAND USE AND PHYSICAL PLANNING FOR HOUSING: 09

Planning of urban land- urban land ceiling and regulation act- efficiency of building bye laws -residential densities. **Housing the Urban Poor:** living conditions in slums- approaches and strategies for housing urban poor.

MODULE III DEVELOPMENT AND ADOPT ON OF LOW COST HOUSING TECHNOLOGY 09

Adoption of innovative cost effective construction techniques- adoption of precast elements in partial prefabrication- adopting of total prefabrication of mass housing in india- general remarks on pre cast rooting/flooring systems- economical wall system- single brick thick loading bearing wall- 19cm thick load bearing masonry walls- half brick thick load bearing wall- fly ash, gypsum thick for masonry- stone block masonry- adoption of precast r.c. plank and join system for roof/floor in the building. alternative building materials for low cost housing: substitute for scarce materials- ferro cement- gypsum boards- timber substitutions- industrial wastes- agricultural wastes

MODULE IV LOW COST INFRASTRUCTURE SERVICES 09

Present status- technological options- low cost sanitation’s- domestic wall- water supply energy. rural housing: introduction- traditional practice of rural housing continuous- mud housing technology- mud roofs- characteristics of mud- fire resistant treatment for thatched roof- soil stabilization- rural housing programs.

MODULE V HOUSING IN DISASTER PRONE AREAS 09

Earthquake- damages to houses- traditional houses in disaster prone areas type of damages and railways of non-engineered buildings- repair and restore action of earthquake damaged non-engineered buildings recommendations for future

constructions- requirement's of structural safety of thin precast roofing units against - earthquake forces- status of r&d in earthquake strengthening measures- floods- cyclone- future safety.

Total Hours : 45

REFERENCES:

1. Building materials for low –income houses – International council for building research studies and documentation.
2. Low-Cost Housing in Developing Countries, Guru Charan Mathur, Oxford & IBH Publishing Company, 01-Jan-1993
3. Goodman L J.Low Cost Housing Technology : East - West Perspectives, Pergatmon Press, 1981
4. Hand book of low cost housing - by A. K. Lal – Newage international publishers, 2003

OUTCOME:

At the end of the course, students will able to

- describe the scenario of low cost housing and its financing.
- create a plan for housing the urban poor.
- define the types of low cost housing technology used.
- state the services to be provided in low cost housing.
- identify the types of low cost house to be provided in different disaster prone areas.

CECY229	APPLICATION OF INFORMATION TECHNOLOGY IN INFRASTRUCTURE MANAGEMENT	L	T	P	C
		1	0	2	2

OBJECTIVE:

- To impart knowledge on softwares and applications to manage Infrastructure.

MODULE I INTRODUCTION 08

Introduction to system hardware – languages – feasibility study and analysis – procurement, training, implementation and system management – procedural language - developing application with spread sheet -developing application with files and database software.

MODULE II BUILDING INFORMATION MODELING SOFTWARE 12

Introduction to BIM Software - application to enhance efficiency during and post construction phases, and facility management - applications like determination of quantities of items and material inventory - to build a building virtually prior to building it physically - work out problems and simulate and analyze potential impacts - anticipation and ease of project delivery, the overall safety of the project – introduction to navis works

MODULE III CONSTRUCTION ACCOUNTING 10

Accounting and cost engineering– enterprises – introduction to erp systems - operations simulation financial management- for use of tracking and developing the cost reports and issuing the change orders - computer applications – cash flow – case study

Total Hours: 30

REFERENCES:

1. Bily E. Gillet., Introduction to Operation Research - A Computer Oriented Algorithmic Approach, Tata McGraw Hill, 1990.Inc., 1999.
2. Paulson, B.R., Computer Applications in Construction, McGraw Hill, 2014.
3. Patti Feldman and William Feldman,Construction and Computers,McGraw Hill, 1996.

OUTCOME:

At the end of the course the student will be able to

- manage the database of a project/ organization using database softwares.
- define the application of BIM in construction industry.
- perform accounting using ERP softwares.

CECY 65 COST ESTIMATION AND CONTROL

L	T	P	C
2	0	0	2

OBJECTIVE:

To provide knowledge on

- Cost estimation
- Cost control

MODULE I ESTIMATING AND TENDERING 06

Introduction to estimating and tendering–estimation in large and small organizations- parties involved in estimating and tendering – estimating process – decision to tender –programming the estimate

MODULE II COST ESTIMATION 08

Collection and calculation of cost information – labor – materials – equipment – subcontractors – project study – preparing the estimates – types of estimates – site overheads – estimators reports – tendering adjustments.

MODULE III MANAGEMENT CONTRACT & USE OF SOFTWARE 08

Estimating in management contracting –management contractor's fee – use of estimating software – characteristics of estimating systems – methods of estimating – reports

MODULE IV BUDGETARY CONTROL 08

The Project budget–types of budget – classifications of costs – example of budgetary control - cost control problem – need for cash flow forecasting by contractors – requirements of a forecasting system - forecasting for activity cost control - control of project cash flows - relating cost and schedule information.

Total Hours: 30

REFERENCES:

1. Chris Hendrickson and Tung Au, Project Management for Construction – Fundamental Concepts for Owners, Engineers, Architects and Builders, Prentice Hall, Pittsburgh, 2000.

Construction Management, Sixth Edition, Blackwell Publishing, 2006.
4. Halpin, D. W., Financial and Cost Concepts for Construction Management, John Wiley & Sons, New York, 1985.

OUTCOME:

Upon completion of the course, the student will be able to

- summarize the estimating and tendering process of a project.
- explain the cost estimation process and also estimate a small construction project.
- demonstrate the use of estimation software.
- apply budget controls for a construction project.
- apply cost control techniques to monitor a construction project

CECY231	CONSTRUCTION RISK MANAGEMENT	L	T	P	C
		1	0	0	1

OBJECTIVE:

- To impart the knowledge of risk management in construction projects.

MODULE I INTRODUCTION TO RISK MANAGEMENT 08

Definitions of risk - elements of risk management - causes of risk - components of risk management - planning for risk management – project charter – risk management policies, roles and responsibilities, examining stakeholder tolerance, risk management plan template – revisiting the work breakdown structure – risk management plan, creating the risk management plan, risk analysis, tracking.

MODULE II RISK IDENTIFICATION, RESPONSE AND COMMUNICATION 07

Identifying risk, preparing for risk identification, risk categories, referring to historical information – identifying the project risk – reviewing project documents, brainstorming, the delphi technique, analyzing swot – diagrammatic techniques - examining the results of risk identification, qualitative and quantitative risk analysis - preparing for risk response, creating risk response, results of risk response planning. risk monitoring and control - risk communication, informing public about risk and responding to expressed concerns, education.

Total Hours: 15

5. James B. Atkins and Grant A. Simpson, Managing Project Risk: Best Practices for Architects and Related Professionals, Wiley, 2008

OUTCOME:

At the end of the course student will be able to

- define the risks in a project and its management.
- compute the risk mitigation strategies for a project.

GENERAL ELECTIVES

GECY101	PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The objectives of the course would be to make the students

- Learn to evaluate and choose an optimal project and build a project profile.
- Attain knowledge on risk identification and risk analysis
- Gain insight into a project plan and components
- Familiar with various gamut of technical analysis for effective project implementation
- Learn to apply project management techniques to manage resources.

MODULE I INTRODUCTION & PROJECT INITIATION 09

Introduction to project and project management - projects in contemporary organization – The project life cycle - project initiation - project evaluation methods & techniques - project selection criteria - project profile.

MODULE II RISK ANALYSIS 09

Sources of risk: project specific - competitive - industry specific - market and international risk – perspectives of risk – risk analysis: sensitivity analysis - scenario analysis - breakeven analysis - simulation analysis - decision tree analysis – managing/mitigating risk – project selection under risk.

MODULE III PROJECT PLANNING & IMPLEMENTATION 09

Project planning – importance – functions - areas of planning - project objectives and policies - steps in planning process - WBS – capital requirements - budgeting and cost estimation - feasibility analysis - creation of project plan – project implementation: pre-requisites - forms of project organization

MODULE IV TECHNICAL ANALYSIS 09

Technical analysis for manufacturing/construction/infrastructure projects – process/technology - materials and inputs - product mix - plant capacity – plant location and site selection – plant layout - machinery and equipment – structures and civil works – schedule of project implementation – technical analysis for software projects.

MODULE V PROJECT MANAGEMENT TECHNIQUES 09

Project scheduling - network construction – estimation of project completion time – identification of critical path - PERT & CPM – crashing of project network - complexity of project scheduling with limited resources - resource allocation - resource leveling – resource smoothing – overview of project management software.

Total Hours: 45

REFERENCES:

1. Projects: Planning, Analysis, Financing, Implementation and Review, Prasanna Chandra, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2004.
2. Project Management and Control, Narendra Singh, Himalaya Publishing, New Delhi, 2015.
3. A Management Guide to PERT/CPM, Jerome, D. Weist and Ferdinand K. Levy, Prentice Hall of India, New Delhi, 1994.

OUTCOMES:

On successfully completing this course, the student will be able to:

- Evaluate & select a project as well as develop a project profile.
- Identify various risks associated with the project and manage it effectively.
- Prepare a detailed project plan addressing its components.
- Perform technical analysis for effective project implementation
- Apply project management techniques for maximizing resource utilization.

GECY102 SOCIETY, TECHNOLGY & SUSTAINABILITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- Aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- Understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

MODULE I TECHNOLOGY AND ITS IMPACTS 09

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life – Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT 09

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change.

MODULE III SOCIETY AND TECHNOLOGY 09

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of technology – Impact of technology on developer and consumers – Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE 09

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media Technology – Information Systems Technology – Nanotechnology – Space

Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY 09

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

3. Winston M and Edelbach R, “Society, Ethics and Technology”, 3rd Edition, San Francisco, USA, 2005.
4. Martin A.A Abraham, “Sustainability Science and Engineering: Defining Principles”, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

OUTCOMES:

At the end of this course, the students will be able to

- Understand the benefits of modern technology for the well-being of human life.
- Connect sustainability concepts and technology to the real world challenges.
- Find pathway for sustainable society.

GECY103 ARTIFICIAL INTELLIGENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- Expose the history and foundations of artificial intelligence.
- Showcase the complexity of working on real time problems underlying the need for intelligent approaches.
- Illustrate how heuristic approaches provide a good solution mechanism.
- Provide the mechanisms for simple knowledge representation and reasoning.
- Highlight the complexity in working with uncertain knowledge.
- Discuss the current and future applications of artificial intelligence.

MODULE I HISTORY AND FOUNDATIONS 08

History – Scope – Influence from life – Impact of computing domains - Agents in environments - Knowledge representation – Dimensions of Complexity – Sample application domains – Agent structure.

MODULE II SEARCH 10

Problem solving as search – State spaces – Uninformed Search – Heuristic search – Advanced search – Constraint satisfaction - Applications.

MODULE III KNOWLEDGE REPRESENTATION AND REASONING 10

Foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

MODULE IV REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE 08

Probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference, sample applications.

MODULE V CASE STUDY AND FUTURE APPLICATIONS 09

Design of a game/Solution for problem in student's domain. Natural Language processing, Robotics, Vehicular automation – Scale, Complexity, Behaviour – Controversies.

Theory: 45

TEXT BOOK:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2010.
2. David Poole, Alan Mackworth, Artificial Intelligence: Foundations of Computational Agents, Cambridge University Press, 2010.
3. Nils J. Nilsson, The Quest for Artificial Intelligence, Cambridge University Press, Online edition, 2013.
4. Keith Frankish, William M. Ramsey (eds) The Cambridge Handbook of Artificial Intelligence, Cambridge University Press, 2014.

OUTCOMES:

Students who complete this course will be able to

- Discuss the history, current applications, future challenges and the controversies in artificial intelligence.
- Apply principle of AI in the design of an agent and model its actions.
- Design a heuristic algorithm for search problems.
- Analyze and represent the fact using logic for a given scenario
- Represent uncertainty using probabilistic models
- Develop a simple game or solution using artificial intelligence techniques.

GECY104 GREEN COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To focus on the necessity of green computing technology.
- To expose to various issues with information technology and sustainability.
- To attain knowledge on the technologies for enabling green cloud computing.
- To elaborate on the energy consumption issues
- To illustrate a Green and Virtual Data Center
- To develop into a Green IT Technologist.

MODULE I INTRODUCTION 08

Trends and Reasons to Go Green - IT Data Center Economic and Ecological Sustainment - The Growing Green Gap: Misdirected Messaging, Opportunities for Action - IT Data Center “Green” Myths and Realities - PCFE Trends, Issues, Drivers, and Related Factors - Green Computing and Your Reputation- Green Computing and Saving Money- Green Computing and the Environment

MODULE II CONSUMPTION ISSUES 10

Minimizing power usage – Cooling - Electric Power and Cooling Challenges - Electrical – Power -Supply and Demand Distribution - Determining Energy Usage - From Energy Avoidance to Efficiency - Energy Efficiency Incentives, Rebates, and Alternative Energy Sources - PCFE and Environmental Health and Safety Standards- Energy-exposed instruction sets- Power management in power-aware real-time systems.

MODULE III NEXT-GENERATION VIRTUAL DATA CENTERS 09

Data Center Virtualization - Virtualization beyond Consolidation - Enabling Transparency - Components of a Virtual Data Center - Datacenter Design and Redesign - Greening the Information Systems - Staying Green- Building a Green Device Portfolio- Green Servers and Data Centers- Saving Energy

MODULE IV TECHNOLOGIES FOR ENABLING GREEN AND VIRTUAL DATA CENTERS 08

Highly Effective Data Center Facilities and Habitats for Technology - Data Center Electrical Power and Energy Management - HVAC, Smoke and Fire Suppression

- Data Center Location - Virtual Data Centers Today and Tomorrow - Cloud Computing, Out-Sourced, and Managed Services.

MODULE V SERVERS AND FUTURE TRENDS OF GREEN COMPUTING 10

Server Issues and Challenges - Fundamentals of Physical Servers - Types, Categories, and Tiers of Servers - Clusters and Grids - Implementing a Green and Virtual Data Center - PCFE and Green Areas of Opportunity- 12 Green Computer Companies- What's in Green computer science-Green off the Grid aimed for data center energy evolution-Green Grid Consortium- Green Applications- Green Computing Making Great Impact On Research

Theory: 45

6. Marty Poniatowski, "Foundation of Green IT: Consolidation, Virtualization, Efficiency, and ROI in the Data Center", Printice Hall, ISBN: 9780-1-3704-375-0, 2009.

OUTCOMES:

Students who complete this course will be able to

- Demonstrate issues relating to a range of available technologies, systems and practices to support green computing.
- Select appropriate technologies that are aimed to reduce energy consumption.
- Address design issues needed to achieve an organizations' green

computing objectives.

- Analyze the functionality of Data Centers.
- Critically evaluate technologies and the environmental impact of computing resources for a given scenario.
- Compare the impact of Green Computing with other computing techniques.

GECY105 GAMING DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To master event-based programming
- To learn resource management as it relates to rendering time, including level-of-detail and culling.
- To become familiar with the various components in a game or game engine.
- To explore leading open source game engine components.
- To become familiar of game physics.
- To be compatible with game animation.

MODULE I INTRODUCTION 09

Magic Words – What Skills Does a Game Designer Need? – The Most Important Skill -The Five Kinds of Listening-The Secret of the Gifted.

MODULE II THE DESIGNER CREATES AN EXPERIENCE 09

The Game Is Not the Experience -Is This Unique to Games? -Three Practical Approaches to Chasing Rainbows -Introspection: Powers, Perils, and Practice -Dissect Your Feelings -Defeating Heisenberg -Essential Experience.

MODULE III THE EXPERIENCE IN THE PLAYER MIND AND GAME MECHANICS 08

Modeling – Focus -Empathy – Imagination – Motivation – Space – Objects, Attributes, and States – Actions – Rules.

MODULE IV GAMES THROUGH AN INTERFACE 09

Breaking it Down – The Loop of Interaction – Channels of Information – Other Interface.

MODULE V BALANCED GAME MECHANICS 10

Balance – The Twelve Most Common Types of Game Balance – Game Balancing Methodologies - Balancing Game Economies.

Theory: 45

REFERENCES:

1. Jesse Schell, "The Art of Game Design: A Book of Lenses", Second Edition 2nd Edition ISBN-10: 1466598646, 2014.

4. James M. Van Verth, Lars M. Bishop "Essential Mathematics for Games and Interactive Applications", Third Edition,A K Peters/CRC Press, ISBN-10: 1482250926, 2015.

OUTCOMES:

Students who complete this course will be able to

- Realize the basic history and genres of games
- Demonstrate an understanding of the overall game design process
- Explain the design tradeoffs inherent in game design
- Design and implement basic levels, models, and scripts for games
- Describe the mathematics and algorithms needed for game programming
- Design and implement a complete three-dimensional video game

GECY106 SOCIAL COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To create original social applications, critically applying appropriate theories and effective practices in a reflective and creative manner.
- To critically analyze social software in terms of its technical, social, legal, ethical, and functional features or affordances.
- To encourage the development of effective communities through the design, use, and management of social software.
- To give students with a base of knowledge and advances for them to critically examine existing social computing services.
- To plan and execute a small-scale research project in social computing in a systematic fashion.
- To become familiar with the concept of computational thinking.

MODULE I BASIC CONCEPTS 09

Networks and Relations: Relations and Attributes, Analysis of Network Data, Interpretation of network data -New Social Learning – Four Changes that Shift Work - Development of Social Network Analysis: Sociometric analysis and graph theory, Interpersonal Configurations and Cliques – Analysing Relational Data.

MODULE II SOCIAL LINK 09

Individual Actors, Social Exchange Theory, Social Forces, Graph Structure, Agent Optimization Strategies in Networks – Hierarchy of Social Link Motivation- Social Context.

MODULE III SOCIAL MEDIA 08

Trends in Computing – Motivations for Social Computing – Social Media: Social relationships, Mobility and Social context – Human Computation – Computational Models- Business use of social Media.

MODULE IV SOCIAL INFORMATION FILTERING 09

Mobile Location Sharing – Location based social media analysis – Social Sharing and Social Filtering – Automated recommender Systems – Traditional and Social Recommender Systems.

MODULE V SOCIAL NETWORK STRATEGY 10

Application of Topic Models – Opinions and Sentiments – Recommendation Systems – Language Dnamics and influence in online communities – Psychometric analysis – Case Study: Social Network Strategies for surviving the zombie apocalypse.

Theory: 45

REFERENCES:

1. Tony Bingham, Marcia Conner, “The New Social Learning, 2nd Edition: Connect. Collaborate. Work”, 2nd Edition, ATD Press, ISBN-10:1-56286-996-5, 2015.

6. Jennifer Golbeck, “Analyzing the Social Web”, Elsevier Publication, 2013.
7. Huan Liu, John Salerno, Michael J. Young, “Social computing and Behavioral Modeling”, Springer Publication, 2009.

OUTCOMES:

Students who complete this course will be able to

- Realize the range of social computing applications and concepts.
- Analyze data left after in social media.
- Recognize and apply the concepts of computational models underlying social computing.
- Take out simple forms of social diagnostics, involving network and language models, applying existing analytic tools on social information.
- Evaluate emerging social computing applications, concepts, and techniques in terms of key principles.
- Design and prototype new social computing systems.

GECY107 SOFT COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To become familiar with AI and neural networks that can learn from available examples and generalize to form appropriate rules for inferencing systems.
- To introduce the ideas of fuzzy sets, fuzzy logic and use of heuristics based on human experience.
- To provide the mathematical background for carrying out the optimization associated with neural network learning.
- To familiarize with genetic algorithms and other random search procedures useful while seeking global optimum in self-learning situations.
- To introduce case studies utilizing the above and illustrate the intelligent behavior of programs based on soft computing.

MODULE I INTRODUCTION 09

Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence : Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies. Knowledge representation issues, Prepositional and predicate logic, monotonic and non-monotonic reasoning, forward Reasoning, backward reasoning.

MODULE II INTRODUCTION TO NEURAL NETWROK 09

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb"s learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BPA, momentum, limitation, characteristics and application of EBPA.

MODULE III FUZZY LOGIC 09

Fuzzy set theory, Fuzzy set versus crisp set, crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system: fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference

systems, fuzzy decision making & Applications of fuzzy logic.

MODULE IV GENETIC ALGORITHM 09

Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

MODULE V APPLICATION OF COMPUTATIONAL INTELLIGENCE 09

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency Prediction – Soft Computing for Color Recipe Prediction.

Total Hours: 45

REFERENCES:

5. Klir & Yuan, “Fuzzy sets & Fuzzy Logic: Theory & Application”, Prentice Hall of India Pub, 1995.
6. Kosko: “Neural Network & Fuzzy System”, PHI Publication, 1992.

OUTCOMES:

On completion of the programme students will be able to:

- Learn about soft computing techniques and their applications
- Analyze various neural network architectures and able to Understand perceptrons model
- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems.
- Apply genetic algorithms to combinatorial optimization problems.
- Evaluate and compare solutions by various soft computing approaches for a given problem.

GECY108 EMBEDED SYSTEM PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- This course provides an introduction to the design of embedded computing systems including their hardware and software architectures.
- Entire software development lifecycle and examine the various issues involved in developing software for embedded systems.
- To analyze the I/O programming and Embedded C coding techniques
- This course will equip students with the software development skills necessary for practitioners in the embedded systems field.

MODULE I INTRODUCTION OF EMBEDDED SYSTEM 09

Embedded computing - characteristics and challenges - embedded system design process-Overview of Processors and hardware units in an embedded system-Compiling, Linking and locating – downloading and debugging –Emulators and simulators processor – External peripherals – Memory testing – Flash Memory.

MODULE II SOFTWARE TECHNOLOGY 09

Software Architectures, Software development Tools, Software Development Process Life Cycle and its Model, Software Analysis, Design and Maintenance.

MODULE III INPUT/OUTPUT PROGRAMMING 09

I/O Instructions, Synchronization, Transfer Rate & Latency, Polled Waiting Loops, Interrupt – Driven I/O, Writing ISR in Assembly and C, Non Maskable and Software Interrupts

MODULE IV DATA REPRESENTATION IN EMBEDDED SYSTEMS 09

Data representation ,Twos complement, Fixed point and Floating Point Number Formats ,Manipulating Bits in -Memory, I/O Ports, Low level programming in C ,Primitive data types , Arrays, Functions ,Recursive Functions, Pointers, Structures & Unions ,Dynamic Memory Allocation ,File handling ,Linked lists, Queues, Stacks.

MODULE V EMBEDDED C 09

Embedded Systems programming in C – Binding & Running Embedded C program in Keil IDE – Dissecting the program -Building the hardware. Basic techniques for reading & writing from I/O port pins – switch bounce - LED Interfacing using Embedded C.

Total Hours: 45

REFERENCES:

1. Marilyn Wolf, "Computers as components ", Elsevier, 2012.
2. Qing Li and Carolyn Yao, "Real-Time Concepts for Embedded Systems", CMP Books, 2003.
3. Daniel W. Lewis, "Fundamentals of embedded software where C and assembly meet", Pearson Education
4. Michael Bass, "Programming Embedded Systems in C and C++", Oreilly, 2003.

OUTCOMES:

On completion of this course the student will be able to

- Design the software and hardware components in embedded system
- Describe the software technology
- Use interrupt in effective manner
- Use keil IDE for programming
- Program using embedded C for specific microcontroller
- Design the embedded projects

GECY109 PRINCIPLES OF SUSTAINABLE DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge in the concepts and dimensions of sustainable development.
- To gain knowledge on the framework for achieving sustainability.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 09

Environment and Development - Population poverty and Pollution –Global and Local environmental issues –Resource Degradation- Greenhouse gases- Desertification-industrialization –Social insecurity, Globalization and environment. History and emergence of the concept of sustainable development-Objectives of Sustainable Development.

MODULE II COMPONENTS AND DIMENSIONS OF SUSTAINABLE DEVELOPMENT 09

Components of Sustainability –Complexity of growth and equity – Social economic and environmental dimensions of sustainable development – Environment- Biodiversity- Natural -Resources- Ecosystem integrity- Clean air and water- Carrying capacity- Equity, Quality of Life, Prevention, Precaution-Preservation and Public Participation Structural and functional linking of developmental dimensions.

MODULE III FRAMEWORK FOR ACHIEVING SUSTAINABILITY 09

Operational guidelines- interconnected prerequisites for sustainable development Empowerment of Women, children, Youth, Indigenous People, Non-Governmental Organizations Local Authorities, Business and industry-Science and Technology for sustainable development- performance indicators of sustainability and assessment mechanism- Constraints and barriers for sustainable development.

MODULE IV SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 09

Demographic dynamics of sustainability – Policies for socio-economic development -Strategies for implementing eco-development programmes Sustainable development through trade –Economic growth –Action plan for implementing sustainable development –Urbanization and sustainable Cities – Sustainable Energy and Agriculture –sustainable livelihoods.

MODULE V SUSTAINABLE DEVELOPMENT AND INTERNATIONAL RESPONSE 09

Role of developed countries in the development of developing countries – international summits – Stockholm to Johannesburg – Rio principles – Agenda-Conventions – Agreements – Tokyo Declaration – Doubling statement – Tran boundary issues integrated approach for resources protection and management

Total Hours: 45

REFERENCES:

1. Sayer J. and Campbell, B., The Science of Sustainable Development: Local Livelihoods and the Global environment - Biological conservation restoration & Sustainability, Cambridge university Press, London, 2003.

3. Mackenthun K.M., Concepts in Environmental Management, Lewis Publications London,1999.
4. APJ Abdul Kalam and Srijan Pal Singh, Target 3 Billion: Innovative Solutions Towards Sustainable Development, Penguin India, 2011

OUTCOMES:

At the end of the course the student will be able to

- Describe the concepts of sustainable development
- Define the components and dimensions of sustainable development
- Outline the Frame work for achieving sustainability.
- State the policies and strategies for implementing sustainable development for Socio economic programmes.
- Examine the role of developed countries in sustainable development.

GECY110	QUANTITATIVE TECHNIQUES IN MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart knowledge on

- operations research
- production management
- financial management
- decision theory and managerial economics

MODULE I OPERATIONS RESEARCH 09

Introduction to Operations research-Linear programming-Graphical and Simplex Methods, Duality and Post-Optimality Analysis-Transportation and Assignment Problems

MODULE II PRODUCTION MANAGEMENT 09

Inventory control, EOQ, Quantity Discounts, Safety Stock-Replacement Theory-PERT and CPM-Simulation Models-Quality Control.

MODULE III FINANCIAL MANAGEMENT 09

Working Capital Management-Compound Interest and Present Value methods-Discounted Cash Flow Techniques-Capital Budgeting.

MODULE IV DECISION THEORY 09

Decision Theory-Decision Rules-Decision making under conditions of certainity, risk and uncertainity-Decision trees-Utility Theory.

MODULE V MANAGERIAL ECONOMICS 09

Cost concepts-Break-even -Analysis-Pricing techniques-Game Theory applications.

Total Hours: 45

REFERENCES:

1. Vohra, N.D. , Quantitative Techniques in Management, Tata McGraw Hill Co., Ltd, New Delhi, 2009.
2. Seehroeder, R.G., Operations Management, McGraw Hill, USA, 2002.

4. Frank Harrison, E., The Managerial Decision Making Process, Houghton Miffin Co. Boston, 2005.
5. Hamdy A. Taha, Operations Research- An Introduction, Prentice Hall, 2002.

OUTCOME:

At the end of the course, the students will be able to

- Apply the concepts of operations research for various applications
- Create models for inventory control in production management
- Compute the cash flow for a project
- Choose a project using decision theory based on the risk criterion.
- Apply the concepts of managerial economics in construction management

GECY111 PROGRAMMING USING MATLAB & SIMULINK

L	T	P	C
1	0	2	2

OBJECTIVES:

The aim of this course is to:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION MATLAB DATA PRESENTATION 03+06

Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts-Making clear and compelling plots-Solving systems of linear equations numerically and symbolically- Least squares regression -Curve fitting.

MODULE II MATLAB PLOT FUNCTION 03+06

Introduction- Plot Function – Animation- 3D Plots-Customizing Plots – Plot Applications- Saving &Painting Plots.

MODULE III ROOT FINDING AND COMPUTER REPRESENTATION OF NUMBERS 03+06

Linearization and solving non-linear systems of equations- The Newton-Rapson method- Integers and rational numbers in different bases- Floating point numbers-Round off and errors in basic arithmetic-Significant digits when reporting results

MODULE IV ORDINARY DIFFERENTIAL EQUATIONS 03+06

Numerical integration and solving 1st order, ordinary differential equations (Euler's method and Runge-Kutta) – Use of ODE function in MATLAB

MODULE V NON-LINEAR DIFFERENTIAL EQUATIONS 03+06

Converting 2nd order and higher ODEs to systems of 1st order ODEs- Solving systems of ODEs via Euler's method and Runge-Kutta) – Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations

MODULE VI INTRODUCTION OF SIMULINK 03+06

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- Modeling the solution of three equations with three unknowns- Representing a model as a subsystem-Simulink demos.

Total Hours: 45

REFERENCE:

1. Griffiths D V and Smith I M, Numerical Methods for Engineers, Blackwell, 1991.
2. Laurene Fausett, Applied Numerical Analysis Using MATLAB, Pearson 2008.
3. Moin P, Fundamentals of Engineering Numerical Analysis, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB. CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving, Mathematical Exploration with MATLAB, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

- Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
- Write programs using first principles without automatic use of built-in ones.
- Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
- Be fluent in exploring Matlab's capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
- Make use of Maltab visual capabilities for all engineering applications.
- An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECY112 JAVA PROGRAMMING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the fundamentals of Java programming such as data types, variables and arrays.
- To study the syntax and necessity of decision making and iterative statements.
- To create a class and invoke the methods.
- To instigate programming in overloading of methods.
- To emphasize the concept of packages.
- To learn the exception handling routines.

MODULE I INTRODUCTION TO JAVA PROGRAMMING 15

History and Evolution of Java – Overview of Java – Data types, variables and arrays – Operators – Control statements.

MODULE II METHODS AND CLASSES 15

Class fundamentals – Declaring objects – Methods – Constructors – Garbage collection – Overloading methods – Constructor overloading – Access control – Inheritance – Packages - Exception handling.

Total Hours: 30

REFERENCES:

1. Herbert Schildt, Java The Complete Reference, 9th Edition, Oracle Press, 2014, ISBN: 978007180855-2.
2. Nicholas S. Williams, Professional Java for Web Applications: Featuring WebSockets, Spring Framework, JPA Hibernate and Spring Security (WROX), John Wiley & Sons, 2014, ISBN:978111865651-8.

4. Yashavant Kanetka**,** Let Us Java, 2nd Edition, BPB Publications, 2012**.**

OUTCOMES:

Students to complete this course will be able to

- Implement basic Java programming.
- Create a class and invoke methods for real world problems.
- Construct simple overloading of methods programs.
- Implement various types of inheritance concepts.
- Describe the access control mechanism.

GECY113 PYTHON PROGRAMMING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the list and records of python programming.
- To study the control statements and string functions of python.
- To instigate the fundamental python programming.
- To emphasize GUI in python.
- To integrate python with embedded systems.
- To implement programs in python.

MODULE I INTRODUCTION TO PYTHON PROGRAMMING 15

Installation and environment set up – syntax used in python – variable types – operators – Loops – decision making – string functions - formatted files - GUI basics.

MODULE II EMBEDDED PROGRAMMING USING PYTHON 15

Web interface – system tools – script execution context - Motion-triggered LEDs-Python-arduino prototyping-storing and plotting arduino data-Remote home monitoring system.

Total Hours : 30

REFERENCES:

1. Nick Goddard, “Python Programming”, 2nd edition, ISBN: 1533337772, 2016.

5. Michael Barr, Anthony Massa, “Programming Embedded Systems”, 2nd Edition, O'Reilly Media, 2006.

OUTCOMES:

Students to complete this course will be able to

- Implement date and time function programming using python.
- Write formatted file programming.
- Construct simple python programs.
- Create web interface using python programming
- Develop embedded system with python programming.
- Build arduino prototype using python programming.

GECY114 INTELLECTUAL PROPERTY RIGHTS (IPR)

L	T	P	C
1	0	0	1

OBJECTIVES:

- To study about Intellectual property rights and its need
- To explore the patent procedure and related issues

MODULE I INTRODUCTION 07

Introduction and the need for intellectual property right (IPR) – IPR in India – Genesis and Development – IPR in abroad – Important examples of IPR – Copyrights, Trademarks, Patents, Designs, Utility Models, Trade Secrets and Geographical Indications – Industrial Designs

MODULE II PATENT 08

Concept of Patent – Product / Process Patents & Terminology – Duration of Patents – Law and Policy Consideration Elements of Patentability –- Patentable Subject Matter – Procedure for Filing of Patent Application and types of Applications – Procedure for Opposition – Revocation of Patents – Working of Patents- Patent Agent – Qualification and Registration Procedure – Patent databases and information system – Preparation of patent documents – Process for examination of patent application- Patent infringement – Recent developments in patent system

Total Hours: 15

REFERENCES

8. Jatindra Kumar Das, Law of Copyright, PHI Learning, 2015

COURSE OUTCOMES:

Students should be able to

- Identify the various types of intellectual property and their value
- Apply the procedure to file a patent and to deal the related issues
- Search and extract relevant information from various intellectual database

Seethakathi Estate, G.S.T. Road, Vandalur, Chennai - 600 048.

VISION AND MISSION OF THE DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

VISION

To achieve excellence in the programs offered by the Department of Electrical and Electronics Engineering through quality teaching, holistic learning and innovative research

MISSION

- To offer Under Graduate, Post Graduate & Research programs of industrial and societal relevance
- To provide knowledge and skill in the Design and realization of Electrical and Electronic circuits and systems
- To impart necessary managerial and soft skills to face the industrial challenges
- To pursue academic and collaborative research with industry and research institutions in India and abroad
- To disseminate the outcome of research and projects through publications, seminars and workshops

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

PROGRAMME EDUCATIONAL OBJECTIVES

1. **Engineering knowledge**:
   Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis**:
   Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions**:
   Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems**:
   Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage**:
   Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society**:
   Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability**:
   Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics**:
   Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work**:
   Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication**:
    Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance**:
    Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning**:
    Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME OUTCOMES

(i) Be able to formulate and solve complex problems through efficient Power Electronic components.

(ii) Be able to use modern software packages for modeling, design and analysis of Power Electronic components and systems

(iii) Have the capability to work in areas like embedded technology and evolutionary computing and develop power electronic hardware systems for societal needs.

(iv) Have the ability to trouble shoot problems in power electronics and drives

CURRICULUM & SYLLABI FOR
M. Tech (Power Electronics and Drives)

CURRICULUM
FOUR SEMESTERS / FULL TIME)

Sl. No.	Course Code	Course Title	L	T	P	C
		SEMESTER I				
1	MAC6184	Probability, Matrix Theory And Linear Programming	**3**	**1**	**0**	**4**
2	EEC6125	Modeling and Analysis of Electrical Machines	**3**	**0**	**0**	**3**
3	EEC6126	Advanced Power Semiconductor Devices	**3**	**0**	**0**	**3**
4	EEC6127	Analysis of Power Converters	**3**	**0**	**0**	**3**
7	EEC6128	Embedded Control of Electric Drives	**3**	**0**	**2**	**4**
8		Professional Elective #				**3 #**
8	EEC6129	Simulation of Power Electronic Systems - Laboratory	**0**	**0**	**3**	**1**
9	EEC6130	Design / Fabrication Lab	**0**	**0**	**3**	**1**
		@ Minimum of 3 credits				**22**
		SEMESTER II				
1	EEC6235	Solid State AC and DC Drives	**3**	**0**	**0**	**3**
2	EEC6236	Analysis of Power Inverters	**3**	**0**	**0**	**3**
4	CSB6101	Research Methodology	**3**	**1**	**0**	**4**
5		Professional Electives #				**9#**
6	EEC6238	Power Electronics and Drives Laboratory	**0**	**0**	**3**	**1**
7	EEC6239	Self Learning	**0**	**0**	**2**	**2**
8	EEC6240	Industrial Internship	**0**	**0**	*****	******
		# Minimum of 9 credits				**22**
		SEMESTER III				
1	EEC6240	Industrial Internship	**0**	**0**	*****	**2**
2		General Elective	**3**	**0**	**0**	**3**
3		Professional Elective				**3**

* Minimum 30 days of industrial internship

** Industrial internship will be undertaken during first year summer vacation. The credit will be awarded in the 3rd semester.

4	EEC7111	Project Work - Phase I###	**0**	**0**	**12**	**6###**
		## Minimum of 3 credits				**8**
		SEMESTER IV				
1	EEC7111	Project work - Phase II###	**0**	**0**	**36**	**18**
				18+6=24		
		Total		**76**		

Credits for Project Work Phase I to be accounted along with Project Work Phase II in IV Semester.

PROFESSIONAL ELECTIVE

Sl. No.	Course Code	Course Title	L	T	P	C
1	EECY004	Power Quality	**3**	**0**	**0**	**3**
2	EECY006	Advanced Digital Signal Processing	**3**	**0**	**0**	**3**

SEMESTER I

		L	T	P	C
MAC6184	**PROBABILITY, MATRIX THEORY AND LINEAR PROGRAMMING**	**3**	**1**	**0**	**4**

(M.Tech.: PSE, PED, VLSI, Communication, EIE & Structural)

OBJECTIVE:

The aim of this course is to

- provide a comprehensive introduction to the probability distributions used in engineering.
- familiarize students with advanced matrix theory and variation problems.
- expose the students to Operations Research using concepts of linear programming.

MODULE I PROBABILITY DISTRIBUTIONS 10+03

Axioms of probability – addition and multiplication theorem – conditional probability –total probability – random variables - moments – moments generating functions and their properties- Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

MODULE II TWO DIMENSIONAL RANDOM VARIABLES 08+03

Joint distributions - marginal and conditional distributions - functions of random variables - covariance - correlation and regression - Central limit theorem.

MODULE III ADVANCED MATRIX THEORY 09+03

Matrix norms - singular value decomposition - QR algorithm - pseudo inverse - least square approximations.

MODULE IV LINEAR PROGRAMMING 10+03

Formation - graphical method - simplex method - Big-M method - Two Phase method - transportation and assignment problems.

MODULE V CALCULUS OF VARIATIONS 08+03

Variation and its properties – Euler's equation – functional dependant on first and higher order derivatives – functional dependant on functions of several independent variables – variational problems with moving boundaries – isoperimetric problems – Ritz and Kantorovich methods.

L – 45; T – 15; Total – 60

4. David. J. Rader., “Deterministic Operations Research”, Wiley (2010).
5. Elsgolts, “Differential Equations and Calculus of Variations", University Press of the Pacific (2003).

OUTCOME:

At the end of the course students will be able to

- Solve problems using concept of standard, discrete and continuous distributions.
- Solve problems using one dimensional and two dimensional random variables.
- Find Eigen values and Eigen vectors of a higher order matrix.
- Solve problems of linear programming.
- Solve problems of calculus of variations by direct methods and using Euler’s formulae.

EEC 6125	MODELING AND ANALYSIS OF ELECTRIC MACHINES	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To give an in-depth input on generalized theory of electric machines.
- To impart knowledge on the Modeling aspects of reference frame theory and transformational variables of electrical machines using reference frame theory.
- To impart knowledge on Analysis of electric machines using the reference frame theory model.
- Prediction of torque and other related variables for static and dynamic analysis of electric machines.

MODULE I PRICIPLE OF ELECTOMAGNETIC ENERGY CONVERSION 07

Stored magnetic energy – Co-energy – flux-linkage vs current curves – Singly excited and Doubly excited systems – Force and Torque predictions.

MODULE II BASIC CONCEPTS OF ELECTRIC MACHINES 07

Generalized theory of electric machines – Concept of d-q model – Kron's Primitive Model – Airgap MMF, Per phase machine inductance, Voltage and Torque equations for DC machine and AC machines.

MODULE III MODELING AND ANALYSIS OF DC MACHINES 09

Static and Rotating reference frames and Transformation Relationships – R, L, M, V, I and T equations using direct and quadrature axes in: Modeling of separately excited DC machines – Modeling of DC series machines – Influence of brush shift.

MODULE IV REFERENCE FRAME THEORY FOR 3-PHASE INDUCTION MACHINES 09

Modeling of 3-phase symmetrical induction machines – V, I, L and T equations in actual variables and hypothetical variables – Rotor transformation – V, I, L and T equations in transformed machine.

MODULE V REFERENCE FRAME THEORY FOR 3-PHASE SYNCHRONOUSMACHINES 08

Modeling of Synchronous Machines – Determination of self inductances and mutual inductances – Transformation of self inductances and mutual inductances – Dynamic Modeling of AC machines.

MODULE VI MODELING OF SPECIAL ELECTRIC MACHINES 05

Modeling aspects of Magnetic Systems – Modeling Switched Reluctance Machines – Case Study (Modeling of DC and AC machines.)

Total Hours: 45

REFERENCES:

1. C.V. Jones, 'The Unified Theory of Electric Machines', Butterworth, London, 1967
2. R. Krishnan, 'Switched Reluctance Motor Drives', CRC Press.
3. MAGNET software rule book for Case study purpose.

OUTCOMES:

- Ability to understand the rudiments of electric machines for modeling and analysis.
- Ability to apply generalized machine theory for DC and AC machine modeling.
- Ability to apply Reference Frame theory for DC and AC machine modeling and analysis.
- Ability to model and analyze any new electric machine.
- Ability to use modeling software tools for machine modeling and analysis.

EEC 6126	ADVANCED POWER SEMICONDUCTOR DEVICES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the basics of devices selection.
- To understand the static and dynamic characteristics of power semiconductor devices
- To enable the students for the selection of devices for different power electronics applications
- To get the knowledge about the datasheet of power semiconductor Devices.
- To understand the control and firing circuit for different devices.
- Study about the thermal protection of the Devices

MODULE I INTRODUCTION 06

Power switching devices overview; Attributes of an ideal switch, application requirements, and circuit symbols. Power handling capability, Device selection strategy – On-state and switching losses -Power diodes - Types, forward and reverse characteristics, switching characteristics – rating.

MODULE II SILICON POWER ELECTRONIC SEMICONDUCTORS DEVICES and DRIVER CIRCUITS 10

Construction, static characteristics, switching characteristics and Gate characteristics of Thyristor – GTO – MOSFET- IGBTs – SIC – GAN – FCT – RCT. Converter grade and inverter grade SCR. High Speed Opto-Couplers – Zero Crossing Detectors - Optically Isolated High Voltage and High Current sensing circuits, Driver ICs**:** MOC series SCR , IR2XXX Series Full Bridge and Half Bridge MOSFET / IGBT Driver ICs.

MODULE III DATASHEET RATINGS FOR SEMICONDUCTOR DEVICES 09

Standards, Symbols and terms-Maximum ratings – Thermal Impedance and resistance-Component (type) designation system - Mechanical data –Safe Operating Area during switching and short circuit.

MODULE IV PROTECTION AND NOISE 07

Over voltage, Over current and gate protections and Design of snubber circuits - Noise generated due to switching-Common noise sources in SMPS-Noises Due to High frequency transformer-Measurement of Noise.

MODULE V THERMAL PROTECTION 07

Heat transfer – conduction, convection and radiation, Cooling – liquid cooling, vapour – phase cooling, Guidance for heat sink selection- heat sink types and design-Electrical analogy of thermal components– Mounting types.

MODULE VI CASE STUDY 06

Switching characteristics and VI characteristics of Thyristor – GTO – MOSFET-IGBTs – SIC – GAN. Design of drivers and Snubber Circuit.

Total Hours: 45

6. Dr.-Ing. Arendt Wintrich,Dr.-Ing. Ulrich Nicolai,Dr. techn. Werner Tursky,Univ.-Prof. Dr.-Ing. Tobias Reimann,Application Manual Power Semiconductors ,published by SEMIKRON International GmbH

OUTCOMES:

At the end of the course, the student will

- Understand the operation and characteristics of the semiconductor devices
- Understand the gate drive circuits and its necessity.
- Select suitable component for the particular application with the help of data sheet.
- Design protection circuit for the semiconductor devices.
- Design heat sinks for semiconductor devices

EEC 6127 ANALYSIS OF POWER CONVERTERS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge, analyze and to design the power Electronic converters.
- To discuss in depth the main families of PWM strategies.
- To enable the students to design Power Factor Correction(PFC) controller.

MODULE I AC – DC CONVERTER 08

Circuits and operating principles: Analysis of Single phase and three phase controlled rectifiers with RLE loads - Input line current harmonics and power factor – Fourier Analysis of controlled rectifiers - Dual converters.

MODULE II PERFORMANCE CHARACTERISTICS OFPHASE CONTROLLED CONVERTERS 08

Performance parameters: Dc voltage ratio – input displacement angle – displacement factor - power factor – current distortion factor- Harmonic content of DC terminal voltage and input current - THD of Two quadrant converters and one quadrant converters - reduction of reactive loading of the supply by the Two quadrant converter by means of consecutive firing angle control.

MODULE III PHASE CONTROLLED CYCLOCONVERTER 08

Symmetrical - open delta - Ring connected cycloconverter circuits - Harmonic distortion in the output voltage – General Expression for Three pulse waveform for an arbitrary firing angle control method - Harmonic series of three and six pulse cycloconverters – cosine wave control method – Firing pulse generation: Functional schemes – End stop control : reverence voltage - clamp method – pulse isolating output stage.

MODULE IV AC – AC CONVERTERS 08

Analysis of Single-phase and Three phase AC Voltage Controllers- Matrix converter - Bi-directional switch topologies, Modulation techniques for matrix converters, Concept of Direct AC-AC frequency Converter.

MODULE V ACTIVE FRONT END RECTIFIERS 07

Overview of Power Factor Correction Approaches - Unity power factor rectifiers - Resistor emulation principle –mathematical modeling – control schemes- Design of feedback compensators -front end rectifiers with real and reactive power control

– Phase shifter.

MODULE VI DUAL ACTIVE BRIDGE CONVERTER 07

Dual active bridge converter – circuit configuration – steady state analysis – steady state model of DC-DC DAB Converters - Steady-State Model for AC-AC DAB Converters - soft switching analysis – DAB for Solid state transformer.

Total Hours: 45

6. D.M.Mitchell, DC-DC Switching Regulator Analysis McGraw-Hill Ryerson, Limited, 1988.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following

- Understand the concept of Converters, choppers, and AC voltage controllers.
- Select the suitable devices for the required applications in power Electronic controller for rectification, inversion, frequency conversion.
- Analyze the performance parameters of the converter circuit.
- Provides a comprehensive overview of PFC circuits and details of operation and design considerations for commonly used PFC circuits.
- Able to learn more about advanced power electronics converters.

EEC 6128	EMBEDDED AND ADVANCED CONTROL OF ELECTRICAL DRIVES	L	T	P	C
		3	0	2	4

OBJECTIVES:

- The objective of this course is to introduce embedded application design for Electrical Drives.
- To provide practical experience with microcontroller systems
- Introduces Mikro C compiler for 16 series PICs.
- Demonstrates the use of the PIC Microcontrollers for Electrical Drives.

MODULE I PIC16F8XX- MICROCONTROLLERS 04

Device Overview- Features and Function- Core SFRs- I/O Ports- Timers-CCP MODULEs- Serial Communication MODULEs- Analog MODULEs - Internal oscillator - External oscillator in LP, XT or HS, RC and RCIO modes – EEPROM – Watch Dog Timer- Black-out and Brown-out Resets.

MODULE II MIKRO C COMPILER 05

Mikro C Compiler reference- Valid C Characters- Variables- Constants- Types- Increment and decrement - structure-Operators and expressions-Loops- Conditionals-micro C Libraries- ADC, CAN, CANSPI, EEPROM, Ethernet, PWM, Keypad, LCD, SPI Ethernet, RS485,USART and Trigonometric Libraries - Preprocessor- Statements.

MODULE III MIKRO C BUILDING APPLICATIONS 05

Mikro C IDE : Code Editor- Code Explorer – Debugger – Error Window – Statistics – Integrated Tools - Building applications :Projects – Source Files :Search Paths – Managing Source Files – Compilation : Output Files – Assembly View – Error Messages.- Flashing Software : Overview of PICkit2.

MODULE IV ALGORITHM AND PROGRAMMING IN MIKROC 20

Digital realization of error amplifier, limiter and Proportional-Integral-Derivative (PID) controller - PID algorithm - Source codes in Mikro C: ADC and PWM – SVPWM – Unipolar and Bipolar SPWM – Phase Angle Control with Zero Crossing Detection.

MODULE V MICROCONTROLLER COMMUNICATION 06

PIC to PIC Communication using UART - Communication with RS232 Serial Bus - Interfacing EEPROM -I²C Communication with PIC Microcontroller - Interfacing lcd and Temperature sensors - ZigBee communication between PICs.

MODULE VI CLOSED LOOP CONTROL OF ELECTRIC DRIVES 20

Closed Loop Control of the Plant Model - Hardware and Software Implementation using PIC Microcontrollers: Speed control of Chopper fed separately excited DC Motor – AC Motor Control Using TRIAC Phase Controller, SPWM and SVPWM inverter fed induction motor - Stepper Motor Interfacing – Servo Motor control.

Total Hours: 60

6. Han-Way Huang, Leo Chartrand, "PIC Microcontroller: An Introduction to Software & Hardware Interfacing", Delmar Cengage Learning, 2004.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Work on different projects making use of the PIC microcontroller
- Implement external interfaces in various embedded system projects by using various interfacing techniques.
- Enable the student to design software to interact with real-world systems
- Design and develop both the hardware and software microcontroller based Electric Drive systems.
- Develop and demonstrate how to accomplish a given task using Embedded “C” language on a microcontroller.
- Demonstrate a working knowledge of the necessary steps and methods used to interface a microcontroller system to devices such as motors, sensors, etc.

EEC 6129	SIMULATION OF POWER ELECTRONIC SYSTEMS LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

The aim of this course is

- To enable the students to understand the modeling details of Power electronic Components and circuits in detail.
- To understand the behavior of controlled rectifier circuits for different types of electrical loads and the working of different type of Power Electronic Converters.
- To learn different gating circuits for converters turn-on.
- To understand the control methods of inverters and choppers.

LIST OF EXPERIMENTS

MATLAB / SIMULINK BASED EXPERIMENTS

1. Switching Characteristics of MOSFET and Diode.
2. Step-Down (Buck) DC-DC Converters. Step-Up (Boost) DC-DC Converter.
3. Step-Down/Up (Buck-Boost) DC-DC Converter .
4. Three phase controlled Rectifiers with R-L-E loads.
5. Single phase inverter with PWM control.
6. Three phase inverter with PWM control.
7. Single phase AC voltage regulator.
8. Single phase cycloconverter.

PSIM BASED EXPERIMENTS

1. Frequency Response Analysis of a Buck Converter using an Averaged Model.
2. Designing the Feedback Control for a Buck Converter using the Voltage-Mode Control.
3. Flyback DC-DC Converter.
4. Full-Bridge DC-DC Converters.
5. TRIAC based phase angle controller.
6. Closed loop speed control of dc motor using PID controller.

Total Hours: 45

OUTCOMES:

At the end of the course, the student will be able to

- Model & Simulate the Power Electronic Components and Circuits using various Simulation Softwares.
- Select a suitable power electronic device for different applications.
- Analyze the all types of converters by using simulation
- Regulation of output voltage using converters.
- Design a closed control of Motor drives.

EEC 6130 DESIGN / FABRICATION LAB

L	T	P	C
0	0	3	1

OBJECTIVES:

To prepare students to design and fabricate power electronics circuitry for various electrical applications.

- Applying tools and methodologies of a field of practice in a design project
- Developing knowledge of organizational and social contexts of a chosen field of practice

LIST OF EXPERIMENTS:

1. Design and fabrication of Zero Crossing Detector for Phase angle Controllers.
2. Fabrication of Optically isolated gate driver circuit for Phase angle Controllers.
3. Design and fabrication of TRIAC Phase angle Controller.
4. Design and fabrication of controlled Rectifiers.
5. Fabrication of Optically Isolated MOSFET /IGBT Driver circuit.
6. Design and fabrication of Buck converter.
7. Design and fabrication of Boost converter.
8. Design and fabrication of PWM based AC choppers.
9. Design and fabrication of Half Bridge Driver circuit for MOSFET/ IGBT.
10. Fabrication of self-Oscillating gate driver circuit for MOSFET/ IGBT.
11. Fabrication of Three phase gate driving stage for three phase Inverters.
12. Fabrication of single phase full bridge Inverter.

Total Hours: 45

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Awareness of the impact of Power Electronic circuits on utility supply
- The students are assessed on their performance in meeting the criteria of Open-ended, design-oriented labs. Three small projects have to be designed, built and tested. The students should justify their design.
- Ability to build power electronic circuits
- Ability to read and understand datasheets of power electronic devices and related ICs
- Ability to build Micro Inverters for solar power generation.

SEMESTER II

		L	T	P	C
EEC 6235	**SOLID STATE AC AND DC DRIVES DRIVES PRINCIPLES OF SEC URITY ENGINEERING**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To understand the stable steady-state operation and transient dynamics of a motor-load system.
- To study and analyze the operation of the converter / chopper fed dc drive and to solve simple Problems.
- To study and understand the operation of both classical and modern induction motor drives.
- To understand the differences between synchronous motor drive and induction motor drive and to learn the basics of permanent magnet synchronous motor drives with converter.
- To analyze and design the current and speed controllers for a closed loop solid-state DC and AC motor drive and simulation using a software package

MODULE I FUNDAMENTAL OF DC AND AC MOTOR 06

Components of electrical Drives-electric machines, power converter, controllers-dynamics of electric drive - torque equation - equivalent values of drive parameters - components of load torques types of load - four quadrant operation of a motor– steady state stability– load equalization – classes of motor duty - determination of motor rating.

MODULE II SENSORS FOR DRIVES 06

Hall Effect Sensors – Mechanical SWensors for speed and angular positions – Absolute Encoders – Incremental Encoders – Resolvers

MODULE III CLOSED LOOP CONTROL POD DC AND AC DRIVES 09

Transient analysis of separately excited motor – converter control of dc motors – analysis of separately excited & series motor with 1 - phase and 3 - phase converters – dual converter – analysis of chopper controlled dc drives – converter ratings and closed loop control – transfer function of self, separately excited DC motors – linear transfer function model of power converters – sensing and feeds back elements – current and speed loops, P, PI and PID controllers – response comparison – simulation of converter and chopper fed DC drive.

MODULE IV SCALAR METHODS FOR IM DRIVES FROM STATOR SIDE 09

Stator voltage control of induction motor–torque-slip characteristics-operation with different types of loads – operation with unbalanced source voltages and single phasing – analysis of induction motor fed from non - sinusoidal voltage supply – stator frequency control - variable frequency operation – V/F control, controlled current and controlled slip operation – effect of harmonics and control of harmonics

MODULE V SCALAR METHODS FOR IM DRIVES FROM ROTOR SIDE 08

PWM inverter drives – multiquadrant drives – rotor resistance control – slip torque characteristic – torque equations, constant torque operation – slip power recovery scheme – torque equation – torque slip characteristics – power factor – methods of improving power factor – limited sub synchronous speed operation – super synchronous speed operation.

MODULE VI SYNCHRONOUS MOTOR DRIVES 07

Principle of synchronous motor control – Introduction to CSI Single phase and three phase CSI – CSI fed synchronous machines – adjustable frequency operation of synchronous motors –voltage source inverter drive with open loop control – self controlled synchronous motor with electronic commutation – self controlled synchronous motor drive using load commutated thyristor inverter.

Total Hours: 45

3. G.K.Dubey, Fundamentals of Electrical Drives, Narosa-1999.
4. Nasar, Boldea , Electrical Drives, Second Edition, CRCPress-2006.
5. M. A. ElSharkawi , Fundamentals of Electrical Drives , Thomson Learning - 2000. 49
6. Vedam Subrahmaniam, Electric Drives, TMH-2000.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following: Analyse the system considering the steady state and dynamic characteristics.

- Abilty to design a closed loop control of AC and DC drives.
- Talent in selection of motor for various application.
- Software knowledge in matlab , for drive application.
- Modeling AC,DC machines with appropriate loads
- Design a system with suitable parameters to control a drive system.

EEC 6236 ANALYSIS OF POWER INVERTERS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge, analyze modern inverters with improved performance.
- To prepare the students to analyze and design different power converter circuits.
- To understand the use of power converters in commercial and industrial applications.
- To identify basic requirements for power electronics based design application

MODULE I SINGLE PHASE INVERTERS 08

Principle of operation of half and full bridge inverters with R and RL loads – Performance parameters –Steady –state Analysis and Fourier Analysis of Single – phase Inverter.

MODULE II THREE PHASE VOLTAGE SOURCE INVERTERS 07

180 degree and 120 degree conduction mode inverters with star and delta connected loads- Steady –state Analysis and Harmonics Analysis of Three – phase Inverters. **7**

MODULE III PWM STRATEGIES AND VOLTAGE CONTROL 07

Single-pulse Modulation, Multiple-pulse Modulation, Sinusoidal – Pulse Modulation (sin M), Reduction of Harmonics in the Inverters Output Voltage, Harmonic Reduction By PWM - Voltage control of three phase inverters: sinusoidal, space vector modulation (SVPWM) techniques.

MODULE V MULTILEVEL INVERTERS 07

Multilevel concept –Comparison of multilevel inverters - application of multilevel inverters - Diode clamped – flying capacitor – cascade type multilevel inverters - PWM for multilevel inverters

MODULE VI RESONANT INVERTERS 08

Series and parallel resonant inverters - zero current and Zero voltage switching resonant converters, frequency response.

MODULE VI GRID TIE INVERTER 08

Phase locked loop for synchronization, P-Q Control - Structure of the VSI PQ

Controller - Power-Voltage (PV) Control Scheme - Frequency (V/f) Control Scheme - generation Control based on droop Concept - adaptive droop control.

Total Hours: 45

6. D.M.Mitchell, DC-DC Switching Regulator Analysis McGraw-Hill Ryerson, Limited, 1988

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following

- Ability to analyze the operation of single and three phase inverters.
- Select the suitable devices for the required applications in power Electronic controller for inversion, frequency conversion.
- Ability to determine the performance parameters of single phase and three phase inverters.
- Ability to design a PWM control of inverter.
- Design and implement multi level and resonant inverter.
- Know the control aspects of grid tied inverters

CSB6101	RESEARCH METHODOLOGY FOR ENGINEERS	L	T	P	C
		3	1	0	4

(Common to M .Tech PSE, PED, VLSI, EIE)

OBJECTIVES:

- To make the students well versed in statistical methods used in engineering.
- To describe the steps involved in research process.
- To explain how to formalize research problems.
- To discuss clearly the approaches for research through some case studies.

MODULE I RESEARCH PROBLEM 08

The research problem – Sources of research problem – Information, how to deal with it – Criteria / characteristics of a good research problem – Errors in selecting a good research problem – Types of research – Nature and use of arguments.

MODULE II ANALYSIS OF VARIANCE 07

Anova – one way – two way classification – Collection of Secondary Latin square design – 2^2 factorial design.

MODULE III DESIGN OF EXPERIMENTS 08

Experimental factors – interaction of factors, Types of experimental design – blocking design – factorial – fractional factorial, Taguchi's orthogonal approach.

MODULE IV REGRESSION, CORRELETION AND CURVE FITTING 10

Regression analysis – simple linear regression – regression coefficient, multiple regression – multiple & partial correlation coefficient, curve fitting – graphical – least square – method testing of goodness of fit.

MODULE V TRANSPORTATION AND ASSIGMENT MODELS 06

Transportation Problem – Assignment Problem – Travelling Sales man. Problem.

MODULE VI CASE STUDIES 06

Presentation by students on their area of research.

Total Hours: 60

4. Richard A. Johnson, “Miller and Freund’s Probability and Statistics for Engineers”, 8th Edition, Pearson Education, Asia, 2011.

OUTCOMES:

Students who complete this course will be able to

- Identify the research problem.
- Become capable of analyzing the data using mathematical techniques.
- Learn to apply the statistical concepts in research.
- Demonstrate the different research methods applicable to a specific problem.

EEC 6238	PRINCIPLES OF SECURITY ENGINEERING	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To understand the design and modelling of Electric drives in detail
- To enable the student to obtain a firm grasp of various Power Electronic Circuits and their practical applications in drives.
- To acquire knowledge of the application of Embedded Controllers to the conversion and control of electrical energy.
- To perform the experiments on various motor drive applications.

LIST OF EXPERIMENTS

1. Fabrication of Chopper fed DC drive using PIC 16F877A micro controller.
2. Brushed DC motor drive with C2000 Piccolo F28035 MCU control CARD
3. Closed loop control of Chopper fed DC motor drive using PIC 16F877A micro controller.
4. Stepper motor drive with C2000 Piccolo F28035 MCU control CARD.
5. Three phase brushless DC motor- sensor less field oriented/vector control (FOC) using C2000 Piccolo TMS320F28069M and TMS320F28027F MCU DSPs
6. Three phase Induction motor drive using Hercules RM42L432- dual core ARM Cortex-R4 based MCU.
7. PSIM interfaced Piccolo docking station that features on board USB JTAG emulation with F28035 control CARD
8. Inverter fed Induction motor drive using Intelligent Power Module 3-phase IGBT inverter IC with integral gate drivers.
9. Lab VIEW controlled AC and DC drives.

Total Hours: 45

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- This course allows the students to gain knowledge in advanced controllers.
- Power electronics circuit design, control systems, and a tremendous range of sub-areas.
- Strong experience of design with embedded processors and peripherals.
- Experience of real-time application programming and embedded operating system.
- To fabricate complete AC and DC Drives.

EEC6239	SELF LEARNING	L	T	P	C
		0	2	0	2

OBJECTIVE:

- To provide fundamental and advanced knowledge in the area of final year project work the student intends to do.

COURSE DESCRIPTION:

A student is expected to do the self learning course on his own, relating to the area of Project work. For discussion and interaction with the project supervisor, two hours per week is allocated. The course content and the materials for self learning course shall be decided by the student and the respective supervisor and the same will be approved by the Head of the Department. A broader choice will be given to the student so that a student is permitted to choose a course in the areas of his/her interest.

OUTCOME:

At the end of the course, the student will be able to

- understand research papers through self learning
- self enquiry the technical advancements in the field of power electronics and drives
- Narrow down the area of project work to focus on specific topic.
- Acquire sufficient fundamental and advanced knowledge to carry out the project work.
- Under take any such new ideas on his/her own

EEC 6240	INDUSTRIAL INTERNSHIP	L	T	P	C
		0	0	*	**

* Minimum of 30 days Industrial Internship.

** Industrial internship will be undertaken during first year summer vacation. Two credits will be awarded in the 3rd semester.

OBJECTIVE:

- To provide fundamental and advanced knowledge in the area of final year project work the student intends to do.

COURSE DESCRIPTION:

- To earn credits for this course, a minimum 30 days of industrial training, in a single slot, is mandatory. The course has to be undertaken during the first year summer vacation and the credits will be awarded in the third semester.
- If the student is not able to complete the internship during the first year summer vacation, he/she can complete the course in a single slot between 2th and 4th semester vacation.
- For effective implementation of the course Industry Internship, a teaching faculty is appointed as the coordinator by the Head of the department.
- The students of EEE will be allowed to undergo training only in reputed companies/research labs/design centres. The co-ordinator identifies the companies related to core engineering for internship during second semester. He/she assists the students in every process of getting into the companies as an intern.
- To enable the students to focus on the internship, no two students are allowed to be in the same site.
- Interacting with the respective industries, where the students do their internship, the Coordinator continuously monitors the performance of the students during the internship.
- After completion of the internship, the students are required to submit a detailed report and present what they had learned through the internship, in the form of posters. The students should submit the industry certificate at the time of giving the presentation.
- The performance of the student will be evaluated by the industry as well as the University. Both the evaluations will be considered and aggregated to award the final grade. 50% weightage is given to the evaluation by the industry and remaining 50% weightage to the evaluation by the committee appointed by the Head of the Department.

- The 50 % weightage of evaluation done at the department comprises of (a) 20/50 for viva-voce, (b) 20/50 for the Intern report and (c) 10 /50 for poster presentation.

OUTCOME:

At the end of the course, the student will be able to

- Solve problems typically encountered by engineers in industry.
- Identify and address social, economic, and safety issues in an engineering problem and develop a solution that addresses this.
- Learn new concepts and apply them to the solution of engineering problems.
- Function effectively on a multidisciplinary team and interface effectively with other areas of the organization.
- Clearly communicate their ideas orally and in writing.
- Prepare for a lifelong productive career as an engineer.

SEMESTER III

EEC 7111	**PROJECT WORK**	**L**	**T**	**P**	**C**
	PHASE - I (SEMESTER III)	**0**	**0**	**12**	**6***
	PHASE - II (SEMESTER IV)	**0**	**0**	**36**	**18+6***

* Credits for Project work (Phase-I) of third semester will be accounted along with Project work (Phase-II) of fourth semester

OBJECTIVES:

- To enable a student to do an individual project work which may involve design, modelling, simulation and/or fabrication.
- To analyze a problem both theoretically and practically.
- To motivate the students to involve in research activities leading to innovative solutions for industrial and societal problems.

COURSE DESCRIPTION:

Project work shall be carried out by each and every individual student under the supervision of a faculty of this department. A student may however, in certain cases, be permitted to work for the project in association with other departments or in an Industrial/Research Organization, on the recommendation of the Head of the Department. In such cases, the project work shall be jointly supervised by a faculty of the Department and the faculty of the other department of the University or an Engineer / Scientist from the organization. The student shall meet the faculty periodically and attend the periodic reviews for evaluating the progress.

Project work will be carried out in two phases, Phase-I during the pre-final semester and Phase-2 during the final semester. Phase-I shall be pursued for a minimum of 12 periods per week and Phase - II in 36 periods per week. Credits for Phase I will be accounted along with Phase II in the final semester.

In each phase, there will be three reviews for continuous assessment and one final review and viva voce at the end of the semesters. The Project Report prepared according to approved guidelines and duly signed by the supervisor(s) and the Head of the Department shall be submitted to the concerned department.

OUTCOMES:

At the end of the course, the student will be able to

- Comprehend a problem thoroughly and provide an appropriate solution.
- Do a systematic literature survey.
- Derive a mathematical model for the system under study.
- Get proficiency over the software used for simulation and analysis.
- Present the findings of a research work in conferences and publish in journals.
- Identify and provide solution for the industrial and societal problems.

LIST OF ELECTIVES

EECY004	POWER QUALITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The main objective of the course is to enhance the knowledge of the participants in the emerging area of power quality and several key issues related to its modeling, assessment and mitigation.
- The course will provide a platform to an in-depth discussion on the various challenges and their possible remedies with respect to maintaining power quality in electricity sector, which will benefit participants from academic and R & D institutions, professional engineers from utilities, industries and policy makers

MODULE I INTRODUCTION 06

Power Quality – Significance of power quality, Terms and Definitions (IEC Standards) – Transients, Voltage Imbalance, Waveform distortion, Power frequency variations, DC offset, Electric Noise, Voltage Fluctuation and Flicker Sources of Sags and Interruptions, Estimating Voltage Sag Performance - Solutions at the End-User Level.

MODULE II DISCRETE FREQUENCY DOMAIN ANALYSIS 08

Harmonics versus Transients -Harmonic Indexes -Harmonic Sources from Commercial Loads -Harmonic Sources from Industrial Loads - Time domain methods and Frequency domain methods: Laplace's, Fourier and Hartley transform – The Walsh Transform – Wavelet Transform- Harmonic Distortion - Voltage versus Current Distortion - Locating Harmonic Sources -System Response Characteristics -Effects of Harmonic

MODULE III FUNDAMENTALS OF HARMONICS 07

Harmonic Distortion Evaluations – End users, utility -Principles for Controlling Harmonics- Where to Control Harmonics - Harmonic Studies – Computer tools for harmonic analysis- Harmonic analyzer - Devices for Controlling Harmonic Distortion -Harmonic Filter Design

MODULE IV DISTRIBUTED GENERATION AND POWER QUALITY 08

Resurgence of DG-DG Technologies – Interfacing DG to the Utility System -Power Quality Issues - Operating Conflicts - DG on Distribution Networks - Sitting DG Distributed Generation - Interconnection Standards (IEC)

MODULE V POWER QUALITY MONITORING AND ANALYSIS 08

Monitoring considerations: Power line disturbance analyzer, power quality measurement equipment, harmonic / spectrum analyzer, flicker meters, disturbance analyzer. Analysis of power outages, Analysis of unbalance: Symmetrical components of phasor quantities, Instantaneous symmetrical components, Instantaneous real and reactive powers, Analysis of distortion: On–line extraction of fundamental sequence components from measured samples

MODULE VI GROUNDING 08

Impact of grounding on power quality- Terms and definitions, Reasons for grounding, problems associated with grounding- Problems with conductors and Connectors, Missing safety ground, Multiple neutral-to-ground connections, additional ground rods, ground loops

Solutions to wiring and grounding- Proper grounding practices, Ground electrode (rod), Service entrance connections, Panel board, Isolated ground, Separately derived systems, Grounding techniques for signal Reference, grounding for sensitive equipment

6. Andreas Eberhard, “Power Quality”, Published by InTech, March 2011.
7. Surajit Chattopadhyay, Madhuchhanda Mitra,Samarjit Sengupta, “Electric Power Quality”, Springer, 2010.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Understand the power quality issues and its importance
- Evaluate the characteristics of power quality disturbances
- Know the power quality issues caused due to the insertion of DG
- Able to monitor the power quality parameters
- Identify the techniques to mitigate power quality disturbances
- Know the importance of grounding to improve power quality

EECY006	ADVANCED DIGITAL SIGNAL PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Provide the student with a broad, yet strong background in the traditional topics associated with processing of deterministic digital signals, e.g., discrete-time transforms, and linear filtering.
- Provide student with a strong background in traditional topics associated with processing of stochastic signals, e.g., spectrum estimation and linear prediction.
- To understand different types of prediction and filtering methods
- Introduce the student to some of the more recent developments that promise to have a broad impact on digital signal processing, e.g., nonlinear filtering and adaptive filtering.

MODULE I DISCRETE RANDOM SIGNAL PROCESSING 08

Discrete Random Processes - Ensemble Averages, Stationary processes, Bias and Estimation, Autocovariance, Autocorrelation, Parseval's theorem, Wiener-Khintchine relation, White noise, Power Spectral Density, Spectral factorization, Filtering Random Processes, Special types of Random Processes – ARMA, AR, MA – Yule-Walker equations.

MODULE II SPECTRAL ESTIMATION 08

Estimation of spectra from finite duration signals, Nonparametric methods - Periodogram, Modified periodogram, Bartlett, Welch and Blackman-Tukey methods, Parametric methods – ARMA, AR and MA model based spectral estimation, Solution using Levinson-Durbin algorithm.

MODULE III LINEAR ESTIMATION AND PREDICTION 08

Linear prediction – Forward and Backward prediction, Solution of Prony's normal equations, Least mean-squared error criterion, Wiener filter for filtering and prediction, FIR and IIR Wiener filters, Discrete Kalman filter

MODULE IV ADAPTIVE FILTERS 07

FIR adaptive filters – adaptive filter based on steepest descent method- Widrow-Hopf LMS algorithm, Normalized LMS algorithm, Adaptive channel equalization, Adaptive echo cancellation, Adaptive noise cancellation, RLS adaptive algorithm.

MODULE V MULTIRATE DIGITAL SIGNAL PROCESSING 08

Mathematical description of change of sampling rate – Interpolation and Decimation, Decimation by an integer factor, Interpolation by an integer factor, Sampling rate conversion by a rational factor, Polyphase filter structures, Multistage implementation of multirate system, Application to subband coding – Wavelet transform.

MODULE VI WAVELET TRANSFORM 06

Introduction to continuous discrete and fast wavelet transforms. Families of Wavelets: orthogonal and biorthogonal wavelets, Daubechies' family of wavelets in detail.

Total Hours: 45

REFERENCES:

1. Monson H. Hayes, 'Statistical Digital Signal Processing and Modeling", John Wiley and Sons, Inc, Singapore, 2002
2. John J. Proakis, Dimitris G. Manolakis, : Digital Signal Processing', Pearson Education, 2002
3. Rafael C. Gonzalez, Richard E. Woods, " Digital Image Processing", Pearson Education Inc.,Second Edition, 2004 (For Wavelet Transform Topic)

OUTCOMES:

- Have a more thorough understanding of the relationship between time and frequency domain interpretations and implementations of signal processing algorithms;
- Understand and be able to implement adaptive signal processing algorithms based on second order statistics;
- Students will have the ability to solve various types of practical problems in DSP
- Be familiar with some of the most important advanced signal processing techniques,
- understand the multi-rate processing wavelet transform and time-frequency analysis techniques to solve real time process.
- Apply the above tools to real-world problems including spectral analysis, filter design, noise cancellation, signal compression, rate conversion, feature extraction, inverse problems.

EECY011	HIGH VOLTAGE DIRECT CURRENT TRANSMISSION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- • To identify situations where HVDC is a better alternative
- • To acquire knowledge of HVDC converters, system control and development
- of MTDC systems
- • To perform power flow analysis in an integrated EHVAC - HVDC system.

MODULE I COMPARISON OF EHVAC AND HVDC SYSTEMS 07

Technical and economic problems in bulk power transmission over long distances using EHV / UHV AC lines - HVDC alternatives for transmission - Description of HVDC systems - its application - comparison of EHVAC and HVDC systems.

MODULE II ANALYSIS OF HVDC CONVERTERS 08

Planning of HVDC transmission - modern trends in HVDC transmission – DC breakers - U/G cable transmission - VSC based HVDC - pulse number – choice of converter configuration - simplified analysis of Graetz circuit - 6 pulse converter bridge characteristics - generation of harmonics and filtering.

MODULE III ANALYSIS AND CONTROL OF HVDC SYSTEMS 08

Twelve pulse converter characteristics - its advantages - detailed analysis of Converters - Principles of DC link control - converter / inverter control characteristics - system control hierarchy - firing angle control - current and extinction angle control - power control - higher level controllers.

MODULE IV MULTI TERMINAL HVDC SYSTEMS 07

Introduction to MTDC systems – potential applications of MTDC systems – Types of MTDC systems – Control and protection of MTDC systems – Detailed study about developments of MTDC systems.

MODULE V POWER FLOW ANALYSIS 08

Per unit system for DC quantities – modeling of DC links – solution of DC power flow – solution of AC – DC power flow – case studies

MODULE VI SIMULATION 07

System simulation – philosophy and tools – HVDC systems simulation: modeling of HVDC systems for digital simulation – dynamic interaction between DC and AC systems.Application in Wind Power generation.

Total Hours: 45

REFERENCES:

1. K.R. Padiyar, “HVDC Power Transmission Systems”, New Age International (P) Ltd., New Delhi, 2002.

4. Erich Uhlmann, “Power Transmission by Direct Current”, BS Publications, 2004.
5. V.K. Sood, “HVDC and FACTS Controllers - Applications of Static Converters in power system”, Kluwer Academic Publishers, April 2004.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Identification of situations where HVDC transmission is a better alternative to EHVAC transmission
- The operation and control of converter/Inverter for power control
- The development and applications of MTDC systems
- Power flow analysis used for Integrated EHVAC-HVDC system
- Steady state performance simulation and analysis
- Analysis of HVDC controllers.

EECY012 WIND ENERGY CONVERSION SYSTEM

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the demand for electrical power generation from the renewable wind and fundamentals of wind power.
- To study and understand about the wind turbine components, power generation machinery, and its control systems.
- To simulate the wind turbine dynamic behavior when integrated to grid and in standalone operation.

MODULE I INTRODUCTION 08

Introduction-Historical Development and current status of Wind power-Generators and Power Electronics for wind turbines - Power System Impacts of Wind turbines-Wind speed estimation-wind speed measurements-Rayleigh distribution-Maximum Power obtainable-Bertz limit-Power coefficient –aerodynamics of Wind rotor-Blade element theory-aerodynamic efficiency-Wind energy Conversion System Components.

MODULE II WIND TURBINE 08

Types of Wind Turbine-Rotor design consideration-Tip speed ratio-blade profile-Power regulation-Yaw control –Pitch angle control-stall control-schemes for maximum power extraction.

MODULE III FIXED SPEED AND VARIABLE SPEED SYSTEMS 08

Fixed speed and variable speed wind turbine- Need of variable speed systems-Power-wind speed characteristics-Generation schemes with fixed and variable speed turbines-Comparison of different schemes.

MODULE IV MODELING AND SIMULATION OF FIXED SPEED AND VARIABLE SPEED WIND GENERATORS 08

Modeling of Fixed speed Induction generator-axes transformation-flux linkage equations-voltage equations-state equations-modeling of variable speed DFIG for Wind Energy Conversion Systems-Converter Control System- transient stability simulation of fixed speed induction generator using EUROSTAG 4.3-Doubly Fed Induction Generator(DFIG) modeling - controller modelling -modelling of DFIG in EUROSTAG - transient stability simulation of powersystems with induction generators using EUROSTAG 4.3.

MODULE V POWER ELECTRONICS IN WIND ENERGY CONVERSION SYSTEM 08

Induction generator-Controlled firing angle scheme with AC and DC side Capacitor-Scalar method-flux vector scheme-Control scheme for Synchronous generator with variable speed drive-Variable speed synchronous generator control with boost converter

MODULE VI GRID CONNECTED SYSTEMS 05

Stand alone and Grid Connected WECS system-Grid connection Issues- Impacts of wind power on Power System Stability-wind plant reactive power capability and its requirements-voltage Control and active power control -Storage technologies.

Total Hours: 45

OUTCOMES:

At the end of the course, the student will be able to:

- Recognize the need of renewable energy technologies and their role in the world energy demand.
- Identify and mathematically model the wind turbine components, calculate the available wind power, predict mechanical loads based on design, and discuss the generation of electrical power.

- To numerically simulate the wind turbine dynamic system behavior with integration of component, and control for given real time application.
- Mathematically model and simulate the transient and steady state performance of the stand-alone and grid connected wind generators using EUROSTAGE, MATLAB, CYME packages.
- Analyze the wind power integration issues and their mitigation techniques.
- Identify the present and the future energy storage technologies used for standalone operation and grid connected operation .

EEC 015 FLEXIBLE A.C. TRANSMISSION SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce students to the transmission challenges of modern electrical power systems
- To present the basic concepts, principles and operation of fast high power electronic controllers known as Flexible AC Transmission Systems (FACTS)
- To provide advanced knowledge and understanding of power electronics applications in power transmission systems
- To introduce the operating principles, control systems and modelling of different FACTS devices (SVC, SSSC, SR, TCSC, STATCOM, UPFC, IPFC, etc.)
- To understand the influence of measurement systems, network resonances and harmonic interactions on the performance of FACTS control systems
- To provide the techniques of FACTS controller design for enhancing power transfer, stability and damping, mitigating sub-synchronous resonances, preventing voltage instability, etc.
- To understand the interactions amongst various FACTS Controllers and techniques for their coordination and placement

MODULE I INTRODUCTION 08

Reactive power - uncompensated transmission lines - load compensation - system compensation - lossless distributed parameter lines -symmetrical lines - midpoint conditions of a symmetrical line case study passive compensation - shunt compensation -series compensation - effect on power-transfer capacity.

MODULE II STATIC VAR COMPENSATOR (SVC) 08

Voltage control by SVC - advantages of slope in dynamic characteristics - influence of svc on system voltage - design of SVC voltage regulator - modelling of SVC for power flow and transient stability.

MODULE III THYRISTOR CONTROLLED SERIES CAPACITOR (TCSC) 07

Operation of the TCSC - different modes of operation - modelling of TCSC - variable reactance model - modeling for power flow and stability studies. sub synchronous resonance- torsional interaction,- torsional torque - NGH damping schemes.

MODULE IV VOLTAGE SOURCE CONVERTER BASED FACTS CONTROLLERS 7

Static synchronous compensator (STATCOM) - principle of operation - V-I characteristics. SSSC-operation of SSSC and the control of power flow - modeling of SSSC in load flow and transient stability studies -UPFC and IPFC.

MODULE V CO-ORDINATION OF FACTS CONTROLLERS 07

Controller interactions - SVC - SVC interaction - co-ordination of multiple controllers using linear control techniques - control coordination using genetic algorithms.

MODULE VI APPLICATIONS OF FACTS CONTROLLERS 08

Applications of SVC - enhancement of transient stability - steady state power transfer - enhancement of power system damping - prevention of voltage instability. -applications of TCSC- improvement of the system stability limit - enhancement of system damping. applications of STATCOM- steady state power transfer- enhancement of transient stability - prevention of voltage instability - applications of SSSC – SSR mitigation.

Total Hours: 45

- V.K.Sood, “HVDC and FACTS controllers - Applications of Static Converters in Power System”, Kluwer Academic Publishers, 2004.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Identify the needs of power systems and utility networks where installation of FACTS Controllers/Devices becomes essential
- Compute power transmission capability of a transmission system and apply reactive compensation methods for its improvement
- Comprehend the operating principles, control systems and modeling of different FACTS Controllers
- Understand the influence of measurement systems, network resonances and harmonic interactions on the performance of FACTS control systems
- Apply the techniques of FACTS controller design for enhancing power transfer, increasing stability, augmenting system damping, mitigating sub-synchronous resonances, preventing voltage instability, performing load compensation, etc.
- Analyze the interactions amongst various FACTS Controllers

EECY018 SMART POWER GRID

L	T	P	C
3	0	0	3

OBJECTIVES :

- Introduce the fundamentals of smart grids.
- Introduce modeling of devices associated with smart grids.
- Introduce the different automation and networking standards.
- Introduce the concept of Wide area measuring systems and Phasor measurement units.(PMU)

MODULE I SMART GRID FUNDAMENTALS 09

Smart grid structure – Interactive grid – Micro grid – Distributed Resources modeling – communication infrastructure – sensing and Control devices – smart grid characteristics.

MODULE II COMPONENTS AND STANDARDS 09

Smart grid components – Metering – Virtual power plants- Benefits and cost elements – Pricing regulations – Networking Standards and integration – Analytics.

MODULE III AUTOMATION TECHNOLOGIES 09

Control centre systems – Data management principles – Smart Grid implementation standards and procedure – Advanced Metering Infrastructure – Outage management – Distribution and Substation automation .

MODULE IV WIDE AREA MEASUREMENT SYSTEMS AND PMU 06

Wide area measurement systems –Phasor Measurement Units- Optimal placement algorithm for PMUs. Smart grid experimentation plan for load forecasting.

MODULE V CASE STUDY I 06

Smart meters – Cloud computing and security issues - Forecasting – Coordination between cloud computing and Smart power grids – Development of power system models and control and communication software.

MODULE VI RECENT TRENDS IN SMART POWER GRIDS 06

Demand Response – concepts and models.Real time pricing models for practical applications-SCADA in smart grids.

7. Kenneth . C.Budka , Jayant G.Deshpande :Communication Networks for Smart Grids:Making Smart Grid Real , 2014

OUTCOMES:

At the end of the course the student is expected to possess knowledge and skills on the following :

- Ability to design and implement Smart Power Grid Power Systems
- Ability to apply the concept of demand response in Smart grids.
- Ability to apply Smart grid concepts to real applications.
- Ability to co ordinate between cloud computing and smart grids
- Ability to apply SCADA in smart power grids
- Ability to use PMUs for optimal placement in smart grids.

EECY019	DISTRIBUTED GENERATION AND MICROGRID	L	T	P	C
		3	0	0	3

Course Objectives:

- To impart the importance of renewable based generation system to meet the growing demands
- To locate distributed generation system optimally in the distribution system network and to study its impacts

MODULE I INTRODUCTION 08

Microgrid basic concepts – architecture - operational conditions, Microgrid : merits and demerits - functionalities and variables in microgrid - issues in microgrid. Types of microgrid (LV microgrid, MV microgrid - DC microgrid, AC microgrid, hybrid) - Microgrid as part of smarter grid Modes of operation : grid connected mode - islanded mode - transition between grid connected mode and islanded mode.primary control strategy - secondary control strategy - Control of distribution generation - demand side management - Opportunities and risk of different market players

MODULE II DISTRIBUTED ENERGY RESOURCES AND STORAGE DEVICES 08

Distributed Energy Resources: solar – wind – CHP – MCHP – Microturbine - Diesel generators –geo thermal –working, characteristics and mathematical modeling, Storage devices-Batteries - fuel cells - super capacitors.

MODULE III DISTRIBUTED SYSTEM EXPANSION 08

Power flow, Short circuit and loss calculations- with and without distributed generation- Distribution system reliability analysis –Distribution system expansion planning – load characteristics – load forecasting – design concepts – optimal location of distributed generation – solution technique.

MODULE IV CONTROLLERS 08

Three phase converter - Three phase Voltage source Inverter (VSI) – Boost Converter – PWM Techniques - P-Q Control - Structure of the VSI PQ Controller - Power-Voltage (PV) Control Scheme - Frequency (Vf) Control Scheme - generation Control Based on Droop Concept - adaptive droop control, Phase locked loop for synchronization.

MODULE V PROTECTION ISSUES 07

Requirements of protection - issues in protection (LOM, Blinding of protection, unwanted islanding, lack of selectivity, failure of co-ordination between fuse and recloser) - challenges in protection scheme – Solutions for microgrid protection - digital relays- Adaptive protection scheme : centralized, decentralized–Multiagent based protection scheme – protection scheme based on variables

MODULE VI MICROGRID COMPONENTS 06

PMU basic concepts - International Electrotechnical Commission (IEC) 61850, 61850-7-420, 61850-8. Renewable Microgrid controller RMC 600. Microgrid pilots : KERI – CERTS - Intelligent Electronic Device (IED) - Microgrid Management system (MMS) - Static Transfer switch (STS) - RTU/ gateway - Smart metering – Sensing Devices.

Total Hours: 45

OUTCOMES:

At the end of the course, the student will be able to

- Know the basic concepts with respect to microgrid
- Model the distributed generator for distribution network
- Optimally locate the distributed generator in the distribution system
- Address the Issues involved in microgrid protection
- Model controllers for distributed generator to interface it to the distribution system network

EECY041 DIGITAL SIGNAL PROCESSORS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge on the architectural details and instruction set of TMS320F2812 processor.
- To provide practical experience with Digital Signal Processors.
- Introduces Code Composer Studio IDE for C 2000 Processors.
- To implement DSP Processor in real time Digital Motor Control application.

MODULE I ARCHITECTURE OF F2812 06

TMS320F2812 Architecture - The F2812 CPU-F2812 Math Units-Data Memory Access -Internal Bus Structure- Atomic Arithmetic Logic Unit (ALU) -Instruction Pipeline - Memory Map - Code Security Module - Interrupt Response- Operating Modes - Reset Behaviour.

MODULE II PROGRAM DEVELOPMENT TOOLS 08

Code Composer Studio IDE - The Software Flow - Code Composer Studio – Basics - Lab Hardware Setup - Code Composer Studio – Step by Step procedure - Create a project - Setup Build Options Linker Command File - Download code into DSP - beginner's project - Objective Procedure - Open Files, Create Project File- C28x Flash Programming - C28x Start-up Sequences -C28x Flash Memory Sectors Flash Flash Configuration Registers - Flash Programming Procedure .

MODULE III DIGITAL I/O 07

Data Memory Mapped Peripherals - The Peripheral Frames - Unit Digital I/O Registers Module - Watchdog Timer - System Control and Status Register - Low Power Mode – Digital Input / Output programmes.

MODULE IV INTERRUPT SYSTEM 08

C28x Core Interrupt Lines - The C28x RESET - Reset Bootloader - Interrupt Sources - Maskable Interrupt Processing - Peripheral Interrupt Expansion - C28x CPU Timers - Serial Peripheral Interface (SPI) Data Transfer - SPI Registers - SPI communication.

MODULE V C28X EVENT MANAGER AND C28X ANALOGUE DIGITAL CONVERTER 08

Event Manager Block Diagram - General Purpose Timer Timer Operating Modes - Interrupt Sources - GP Timer Registers - GP Timer Interrupts - Event Manager

Compare Units Capture Units - Quadrature Encoder Pulse Unit (QEP).- Generate a PWM sine wave -.ADC Module Overview - ADC in Cascaded Mode -ADC in Dual Sequencer Mode - ADC Register Block .

MODULE VI DIGITAL MOTOR CONTROL APPLICATIONS 08

C28x IQ – Math Library - IQ – Math Library Functions - IQ- Math Application- FOC -C28x FIR – Filter - Texas Instruments C28x Filter Library- . C28x Digital Motor Control - . Field Orientated Control (FOC) Core Math Operations - PARK Transform - CLARKE Transform - Texas Instruments Digital Motor Control Library Modules . FOC for PMSM - Hardware Laboratory Setup - PMSM control project – Build levels. .

Total Hours: 45

5. TMS320F/C24/X DSP controllers, Refernce guide literature No : SPRU 160c, June 1994.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Programming Knowledge in DSP and its real time application.
- To configure DSPBIOS to handle hardware interrupts (HWI)
- Implementing Digital Motor Control Library Modules.
- Computing steps necessary to build a control scheme for Field Oriented Control (FOC).
- Board level operations of the Digital Signal Processors (DSP)based on the Texas Instruments TMS320F2812 Processor.

EECY042 ROBOTICS AND FACTORY AUTOMATION

L	T	P	C
3	0	0	3

OBJECTIVES :

- To identify the basic component of manufacturing automation and categorize the different types of automated production Process.
- To understand how knowledge based system technology can Improve manufacturing enterprises, to design elementary Mechanisms for automation.
- To understand the principle of industrial sensors.
- To understand the working of Robots.

MODULE I FUNDAMENTAL CONCEPTS OF ROBOTICS 07

History,Present status and future trends in Robotics and automation-Laws of Robotics-Robot definitions –Robot anatomy Specification of Robots-resolution, repeatability and accuracy of a manipulator – Robotics applications.

MODULE II ROBOT DRIVES AND POWER TRANSMISSION SYSTEMS 08

Robot drive mechanisms, hydraulic, electric servomotor, stepper Motor, pneumatic drives-Mechanical transmission method, Gear Transmission, Belt drives, cables, Roller chains, Link-Rod systems- Rotary to Rotary motion conversion, Rotary to Rotary motion conversion ,Rotary to Linear motion conversion, Rack and Pinion Drives, Lead screws, Ball Bearing screws, End effectors, Types.

MODULE III SENSORS 08

Sensor characteristics , Position sensors, Potientiometers, Encoders, Resolvers, LVDT, Velocity sensors, Tachogenerators- Encoders-Proximity sensors, Limit switches, Tactile sensors - Touch sensors – Force and torque sensors.

MODULE IV VISION SYSTEMS FOR ROBOTICS 08

Robot vision systems, Image capture-cameras ,vision and solid State Image representation- Gray scale and colour images, image sampling and quantization-Image processing and analysis – Image Data reduction- Segmentation – Feature extraction – Object Recognition – Image capturing and communication – JPEG,MPEG And H.26x standards ,packet video,error concealment – Image Texture analysis.

MODULE V PLC 08

Building blocks of automation , Controllers, PLC – Role of PLC in FA – Architecture of PLC – Advantages – Types of PLC – Types of Programming – Simple process control programs using Relay Ladder Logic and Boolean logic – PLC arithmetic functions.

MODULE VI FACTORY AUTOMATION 06

Flexible Manufacturing Systems concept – Automatic feeding Lines, ASRS, Lines, automatic inspection – Computer Integrated Manufacture – CNC, intelligent automation. Industrial networking, Bus standards, HMI systems, DCS and SCADA , Wireless controls.

Total Hours: 45

5. Jegannathan .R, “Introduction to Robotics”, 2004.

OUTCOMES:

At the end of the course the student is expected to possess knowledge and skills on the following :

- Ability to design a Robot.
- Ability to troubleshoot Factory Automation products.
- Ability to master PLC programming and applications.
- Ability to apply Robotic concepts in Industrial systems.

EECY043 SCADA AND DCS

L	T	P	C
3	0	0	3

OBJECTIVES:

- The aim of this course is to give an in depth study of SCADA and PLC.
- To acquire knowledge of application of software automation blocks and DCS.
- To expose the students to the Micro SCADA techniques

MODULE I INTRODUCTION 06

Introduction to automation tools PLC, DCS, SCADA, Hybrid DCS/PLC.

MODULE II DCS PROJECT 08

Development of User Requirement Specifications - Functional Design Specifications for automation tool - GAMP, FDA.

MODULE III PROGRAMMABLE LOGIC CONTROLLERS 08

Introduction of Advanced PLC programming, Selection of processor, Input/ output MODULEs - Interfacing of Input/output devices, Operator Interface - OPC- study of SCADA software - Interfacing of PLC with SCADA software.

MODULE IV DCS 09

Introduction to architecture of different makes - DCS Specifications, configuration of DCS blocks for different applications - Interfacing of protocol based sensors - Actuators and PLC systems, Plant wide database management- Security and user access management - MES, ERP Interface.

MODULE V STUDY OF ADVANCE PROCESS CONTROL BLOCKS 09

Statistical Process Control - Model Predictive Control - Fuzzy Logic Based Control - Neural-Network Based Control Higher Level Operations: Control & Instrumentation for process optimization - Applications of the above techniques to the same standard units/processes.

MODULE VI MICRO SCADA FOR POWER ELECTRONICSYSTEMS 05

System concept –Hardware: Base computer - Workstations-Front ends-Peripherals Software Programming-Process Objects – Command Procedures – RTU Integration –Communication to Third Party Systems –Functional description: process pictures- operation-Alarm handling-Event Handling- reports- Trends

5. B.G. Liptak “Handbook of Instrumentation- Process Control”.
6. Installation and user manuals of different DCS, PLC Vendors, 2004.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Basics of SCADA & DCS.
- Appropriate knowledge and skills in Industrial automation systems with the use of DCS, PLCs, and SCADA.
- An ability to apply creativity in design of systems, components or processes appropriate to power electronic circuits.
- Ability to get a grip on micro scada for power electronics applications
- Ability to perform programming in SCADA and DCS.

EECY044 SPACECRAFT POWER SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide covers the entire scope of spacecraft power systems.
- To study and analyze the power conditioning, energy management and the operational
- aspects of spacecraft power systems
- To study and understand the Satellite overview, space environment and its effects.
- To understand the power electronics and magnetics, distribution harness, protection, and ancillary components of the spacecraft.

MODULE I SATELLITE OVERVIEW 07

Satellite systems - Earth orbit classification–Orbit mechanics-Satellite stabilization methods- Near-Earth Space Environment - Power System Options- Environmental Effects. Solar Array– I–V and P–V characteristics - Array construction – Array performance- Array design- Advances in PV technology - Concentrator array- Battery: Types of batteries - Properties and performance

MODULE II POWER ELECTRONICS 08

Switching devices - Shunt regulator - Linear and PWM shunts – Shunt circuit design - Bus ripple filter design - Power converters - Battery charge converter - Battery discharge converter - Load power converter - Voltage and current regulators

MODULE III ENERGY BALANCE AND POWER MANAGEMENT 08

Energy balance analysis - Energy balance simulation runs - Dynamic Performance and Stability - Electromagnetic Interference and Compatibility - Electrostatic Discharge.

MODULE IV DISTRIBUTION HARNESS, PROTECTION AND ANCILLARY COMPONENTS 06

Ampacity of wires - R-C-L parameters - Conductor materials - Wire insulation and cable shield- Harness mass minimization-Fuse protection Remote power controllers - Early fault detection - Solar array drive -Deployment devices – Relays - Battery let-down unit - Radiation shield - EMI shield

MODULE V SPECIAL POWER SYSTEMS 08

Interplanetary and Deep Space Missions–Radioisotope Thermoelectric Generator (RTG) - High-Power High-Voltage Systems: High-voltage PV array- High-power nuclear TEC - High-voltage design issues - High-voltage direct current - High-frequency alternating current - High-power components - Very-high-voltage system - Repetitive pulse power - Multi-megawatt burst-power.

MODULE VI ELECTRIC PROPULSION 08

Types of electric propulsion– Solar PV propulsion -Solar thermal propulsion Nuclear power propulsion -Microwave beam propulsion - Tether power propulsion-Fuel Cell Power - Flywheel Energy Storage - Superconductors in Space - Microwave Beam Power Satellite.

Total Hours: 45

4. Mankins, J.C. and Howell, J., Overview of the space solar power exploratory research and technology program, in Proceedings of the 35th Intersociety Energy Conversion Engineering Conference, AIAA, 2000, Paper No. 3060.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Abilty to design a closed loop control of AC and DC drives
- Ability to analyze the new developments Spacecraft power systems.
- Ability to maintain a leading edge in designing and operating a variety of Spacecraft power systems.
- This course allows the students to the knowledge Special systems such as interplanetary and deep space.
- The students is expected to become a professional in Energy management.

EECY045	MODERN ELECTRIC, HYBRID ELECTRIC AND FUEL CELL VEHICLES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the dynamics of a motor-load Vehicles.
- To study the Configurations and Performance of Electric, Hybrid Electric and Fuel Cell Vehicles
- To analyze the operation of modern converters for Electric Vehicles.
- To understand the Battery Technologies and Electrical breaking.

MODULE I VEHICLE FUNDAMENTALS 06

General Description of Vehicle Movement-Dynamic Equation: power converter Tire–Ground Adhesion and Maximum Tractive Effort - Power Train Tractive Effort and Vehicle Speed - Vehicle Power Plant and Transmission Characteristics-Power Plant Characteristics - Transmission Characteristics - Vehicle Performance.

MODULE II ELECTRIC AND HYBRID ELECTRIC VEHICLES 08

Configurations of Electric Vehicles– Performance of Electric Vehicles– Tractive Effort in Normal Driving- Energy Consumption- Hybrid Electric Vehicles: – Concept of Hybrid Electric Drive Trains– Architectures of Hybrid Electric Drive Trains: Series and Parallel Hybrid Electric Drive Trains.

MODULE III ELECTRIC PROPULSION SYSTEMS 08

DC Motor Drives: Multiquadrant Control of Chopper Fed DC Motor - Induction Motor Drives: Constant Volt/Hertz Control - Field Orientation Control(FOC) - Voltage Source Inverter for FOC - Permanent Magnetic Brush-Less DC Motor Drives: Control of BLDC Machines - Sensorless Techniques: Switched Reluctance Motor Drives - Sensorless Control.

MODULE IV ENERGY STORAGES 08

Electrochemical Batteries-Battery Technologies-Lead-Acid Batteries - Nickel-based Batteries– Lithium-Based Batteries- Ultracapacitors– Ultrahigh-Speed Flywheels– Hybridization of Energy Storages.

MODULE V REGENERATIVE BRAKING 08

Fundamentals of Regenerative Braking: Energy Consumption in Braking - Braking Power and Energy on Front and Rear Wheels - Brake System of EVs and HEVs - Series Brake: Optimal Feel - Optimal Energy Recovery - Parallel Brake - Antilock Brake System (ABS).

MODULE VI FUEL CELL VEHICLES 07

Operating Principles of Fuel Cells – Fuel Cell Technologies – Fuel Supply : Hydrogen Storage.- Hydrogen Production – Ammonia as Hydrogen Carrier - Nonhydrogen Fuel Cells - Fuel Cell Hybrid Electric Drive Train Design: Configuration - Control Strategy Parametric Design.

Total Hours: 45

6. Murphy and Turnbull, Power Electronic Control of AC motors, Pergamon Press, 1973.
7. Vedam Subrahmaniam, Electric Drives, TMH-2000.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Ability to analyze the vehicle power source characteristics, transmission characteristics.
- Solve equations used to describe vehicle performance.
- Able to analyze different controls of regenerative braking
- Design of electric propulsion systems and energy storage devices
- Ability to design the fuel cell system, electric propulsion, and the energy storage system.

ECY046	TRANSFORMERS AND INDUCTORS FOR POWER ELECTRONICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the magnetic core characteristics of different core materials.
- To study design methods for converter Transformers and high frequency.
- Inductors.
- To provide real-world step-by-step design examples.
- To offer a practical approach with design examples for design engineers.

MODULE I RECTIFIER TRANSFORMER DESIGN 06

Multiphase Rectifier Circuits - Area Product, Ap, and Core Geometry, Kg, for Three-Phase Transformers - Output Power Versus Apparent, Pt, Capability - Relationship, Kg and Ap to Power Transformer Regulation - Relationship, Ap, to Transformer Power Handling Capability.

MODULE II INDUCTOR DESIGN 08

DC Inductor Design: Critical Inductance for Sine Wave Rectification - Critical Inductance for Buck Type Converters - Core Materials, Used in PWM Converters - Gapped Inductor Design- DC Inductor Design Using Powder Cores- Toroidal Powder Core - Design AC Inductor Design - Input Filter Design – Capacitor – Inductor – Oscillation - Applying Power - Resonant Charge - Input Filter Inductor Design Procedure.

MODULE III FLYBACK CONVERTER, TRANSFORMER DESIGN 08

Energy Transfer - Discontinuous Current Mode - Continuous Current Mode - Continuous and Discontinuous Boundary - The Buck Converter and Boost Converter - Continuous and Discontinuous Current Design Equations - Discontinuous Current and Continuous Current Isolated, Buck-Boost Design Equations - Designing Boost Inductors for Power Factor Correction (PFC).

MODULE IV FORWARD CONVERTER TRANSFORMER AND OUTPUT INDUCTOR DESIGN 08

Circuit Operation - Comparing the Dynamic B-H Loops - Forward Converter Waveforms - Transformer Design Using the Core Geometry, Kg, Approach Forward Converter Output Inductor Design - Output Inductor Design Using the Core Geometry, Kg, Approach.

MODULE V QUIET CONVERTER DESIGN 08

The Voltage-fed Converter - Regulating and Filtering - The Current-fed Converter - The Quiet Converter - Regulating and Filtering - Quiet Converter Waveforms - Technology on the Move - Window Utilization Factor, Ku - Temperature Stability - Calculating the Apparent Power, P,. Quiet Converter Design Equations - Transformer Design, Using the Core Geometry, Kg, Approach Winding Termination - PC Board Base Materials - Core Mounting and Assembly.

MODULE VI PLANAR TRANSFORMERS 07

Planar Transformer Basic Construction-Planar Integrated PC Board Magnetics - Core Geometries - Planar Transformer and Inductor Design Equations - Window Utilization, Ku - Current Density, J - Printed Circuit Windings - Calculating the Mean Length Turn, MLT - Winding Resistance and Dissipation - PC Winding Capacitance - Planar Inductor Design - Winding Termination - PC Board Base Materials - Core Mounting and Assembly.

Total Hours: 45

4. Vencislav Cekov Valchev, Alex Van den Bossche, Inductors and Transformers for Power Electronics, March 24, 2005 by CRC Press

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Ability to design magnetics with faster and tighter control.
- Able to work on state-of-the-art design or high-volume or low-cost production.
- To analyze and design the planar transformer design and planar construction.
- To design lightweight, high-frequency aerospace transformers or low-frequency commercial transformers.
- Ability to use various approaches in arriving at suitable transformer and inductor designs.

EECY047	SPECIAL ELECTRICAL MACHINES AND CONTROLLERS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart knowledge on Construction, principle of operation and performance of switched reluctance motors.
- To understand the Construction, principle of operation and performance of SM.
- To impart knowledge on Construction, principle of operation and performance of AC commutator motors.
- To study about the Construction, principle of operation and performance of permanent magnet brushless D.C. motors and PMSM.
- To impart knowledge on Construction, principle of operation and performance of linear motors.
- To learn the softwares Magnet AND ANSYS for performance analysis of motor.

MODULE I SWITCHED RELUCTANCE MOTORS 07

Constructional features - principle of operation - Torque equation - Power controllers Characteristics and control - Microprocessor based controller.

MODULE II STEPPING MOTORS 07

Constructional features, principle of operation-modes of excitation torque, production in Variable Reluctance (VR) stepping motor- dynamic characteristics, Drive systems - circuit for open loop control- closed loop control of stepping motor.

MODULE III AC COMMUTATOR MOTORS 07

Principle of operation – Equivalent circuit – Phasor diagram – Performance of Repulsion motor and Universal motor.

MODULE IV PERMANENT MAGNET MOTORS 07

Principle of operation – types – magnetic circuit analysis – EMF and Torque equations – Power Controllers – Motor characteristics and control of PMSM and BLDC motors.

MODULE V LINEAR MOTORS 07

Linear Induction motor (LIM) classification – construction – Principle of operation –

Concept of current sheet – goodness factor – DC Linear motor (DCLM) types – circuit equation , DCLM control applications ,Linear Synchronous motor(LSM) – Types - Performance equations – Applications.

MODULE VI CASE STUDY 10

Modeling and simulation – Switched Reluctance Machines – Permanent magnet BLDC Motor – PMSM – MAGNET 6.0, ANSYS software.

Total Hours: 45

4. Naser A and Boldea L,”Linear Electric Motors: Theory Design and Practical Applications”, Prentice Hall Inc., New Jersey 1987.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Talent in selection of motor for various application
- A thorough understanding of various special electric machines and their applications.
- Able to analyse any electric machine.
- Ability to model small power rating of motor for real time application
- Software knowledge in Magnet, ANSYS for electrical application.
- Able to present the rudiments of linear machines.

ECY048 VECTOR CONTROL OF AC DRIVES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge, on advanced aspects of AC drives
- To prepare the students to analyze Vector control of IM drives..
- To prepare the students to analyze advanced control aspects of synchronous machines.
- To prepare the students to analyze control of special machines

MODULE I CONTROL OF INDUCTION MOTOR DRIVES I 08

Principle of Vector control of IM drives – Direct torque control – Direct flux control – torque, voltage and current equations – problems.

MODULE II CONTROL OF INDUCTION MOTOR DRIVES II 07

Sensorless control of IM drives – Flux Observers – Multi-level converter fed IM drive – Utility friendly IM drive. **7**

MODULE III CONTROL OF SYNCHRONOUS MOTOR DRIVE 07

Self controlled SM drives – Vector control of SM drives – Cyclo-converter fed SM machines – torque and speed control of SM drives (including sensorless).

MODULE IV CONTROL OF SPECIAL ELECTRIC DRIVES 07

Control of : PM drives – PM Synchronous Motor drives – Brushless DC motor – switched reluctance motor – stepper motor

MODULE V PARAMETER SENSITIVITY AND SATURATION EFFECTS

Phasor diagram for detuned operation: Field orientation flux, Torque characteristics – influence of saturation – transient response : Torque response with slip gain error- optimal selection of flux level.

MODULE VI FLUX WEAKENING OPERATION

Maximum Speed - Voltage Limit Eclipse - Flux Weakening Operation Scheme - Flux Weakening Control Schemes: Indirect Flux Weakening Algorithm and controllers - Model - free control schemes : six step and Adaptive control - and Model – based control schemes: direct and Indirect control of Flux.

Total Hours: 45

5. Haitham Abu-Rub, Atif Iqbal ,Jaroslaw Guzinski ,High Performance Control Of Ac Drives With Matlab/Simulink Models , 2012 John Wiley & Sons Ltd

OUTCOMES

- Able to develop induction motor models for variable speed operations using scalar and vector control techniques.
- Apply the knowledge of sensors which can be used for controllers and synchronous machines.
- Able to implement Field oriented control (FOC) for synchronous motor, BLDC motors and PMSM motor.
- Able to analyze the characteristics of flux and flux weakening operation.

EECY049 SOLAR AND ENERGY STORAGE SYSTEM

L	T	P	C
3	0	0	3

OBJECTIVES

- To Study about solar modules and PV system design and their applications
- To Deal with grid connected PV systems
- To Discuss about different energy storage systems

MODULE I INTRODUCTION 06

Characteristics of sunlight – semiconductors and P-N junctions –behaviour of solar cells – cell properties – PV cell interconnection

MODULE II STAND ALONE PV SYSTEM 08

Solar modules – storage systems – power conditioning and regulation - protection – stand alone PV systems design – sizing

MODULE III GRID CONNECTED PV SYSTEMS 09

PV systems in buildings – design issues for central power stations – safety – Economic aspect – Efficiency and performance - International PV programs

MODULE IV POWER CONDITIONING SCHEMES 08

DC Power conditioning Converters - Maximum Power point tracking algorithms - AC Power conditioners Synchronized operation with grid supply - Harmonic problem – building integrated PV systems.

MODULE IV ENERGY STORAGE SYSTEMS 08

Impact of intermittent generation – Battery energy storage – solar thermal energy storage – pumped hydroelectric energy storage

MODULE V APPLICATIONS 06

Water pumping – battery chargers – solar car – direct-drive applications –Space – Telecommunications.

2. Solar & Wind energy Technologies – McNeils, Frenkel, Desai, Wiley Eastern, 1990
3. Solar Energy – S.P. Sukhatme, Tata McGraw Hill,1987.

OUTCOME

Students will develop more understanding on solar energy storage systems:

- Students will develop basic knowledge on standalone PV system
- Students will understand the issues in grid connected PV systems
- Able to develop various power conditioning schemes for solar systems.
- Able to explain the Grid connected PV systems.
- Students will study about the modelling of different energy storage systems and their performances
- Students will attain more on different applications of solar energy

EECY050	FUNDAMENTALS OF GRID CONNECTED PHOTO-VOLTAIC POWER ELECTRONIC CONVERTER DESIGN	L	T	P	C
		3	0	0	3

MODULE I INTRODUCTION **04**

Characteristics of sunlight – semiconductors and P-N junctions –behaviour of solar cells – cell properties – PV cell interconnection

MODULE II OVERVIEW OF PHOTO VOLTAIC SYSTEMS AND CONVERTERS **08**

Grid connection standards, Solar Cell Characteristics, Solar panel and converter configurations, Converter topologies,Grid filter topologies, Temporary storage

MODULE III CONTROL OF PHOTO VOLTAIC CONVERTERS **09**

Maximum power utilization of photo voltaic power sources, DC-DC Converter Control, DC- AC Converter control, Harmonic compensation, Grid synchronisation, Anti Islanding

MODULE IV POWER CONDITIONING SCHEMES **09**

DC Power conditioning Converters - Maximum Power point tracking algorithms - AC Power conditioners Synchronized operation with grid supply - Harmonic problem – building integrated PV systems.

MODULE V SYSTEM DESCRIPTION, MODELLING AND OPTIMIZATION **09**

Converter topology and control description, P&O Maximum Power Point Tracker optimization, Phase Locked Loop PI Regulator, Current Regulator,Voltage Controller , Complete control system model.

MODULE VI SIMULATIONS **06**

DC-DC Converter, DC-AC Converter- PLL, Current control, Voltage control, The LCL filter.

Total Hours: 45

TEXT BOOKS

1. Svein Erik Evju,Fundamentals of Grid Connected Photo-Voltaic Power Electronic Converter Design', Norwegian University of Science and Technology.

REFERENCES

1. Eduardo Lorenzo G. Araujo, Solar electricity engineering of photovoltaic systems, Progensa,1994. 2. Stuart R.Wenham, Martin A.Green, Muriel E. Watt and Richard Corkish, Applied Photovoltaics, 2007,Earthscan, UK.
2. Frank S. Barnes & Jonah G. Levine, Large Energy storage Systems Handbook , CRC Press, 2011.
3. Solar & Wind energy Technologies – McNeils, Frenkel, Desai, Wiley Eastern, 1990
4. Solar Energy – S.P. Sukhatme, Tata McGraw Hill,1987.

Outcomes:

- Will become familiar with the operation of the components of PV systems, including solar modules, power control components, and the balance of system components.
- Able to carry out a credible design of a grid-connected PV system.
- Able to model and design MPPT and controllers of grid tied inverters.
- Use of simulation software for energy yield estimation

EECY051 SOLAR POWER SYSTEMS DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge, analyze and to design the modern semi-conductor devices and their applications in power Electronic controller for rectification, inversion, frequency conversion with improved performance.

MODULE I SOLAR POWER SYSTEM PHYSICS 07

Solar Cell Physics - Solar Cell Electronics - Types of Solar Cells Technologies - Concentrators - Solar Panel Arrays - Solar Power System Components.

MODULE II SOLAR POWER TECHNOLOGIES 08

Solar Power System Components - Crystalline Solar Photovoltaic Module Production - Amonix Megaconcentrators - Film Technologies - Solar Photovoltaic System Power Research and Development.

MODULE III SOLAR POWER SYSTEM DESIGN 09

Solar Power System Components and Materials - - Storage Battery Technologies - Solar Power System Wiring - Considerations for - Lightning Protection - Central Monitoring and Logging System Requirements - Ground-Mount and Roof-Mount Photovoltaic Module Installations - Shading Analysis and Solar Energy Performance Multiplier - Site Evaluation - Solar Power Design.

MODULE IV SOLAR POWER GENERATION PROJECT IMPLEMENTATION 07

Designing a Typical Residential Solar Power System - Example of Typical Solar Power System Design and Installation Plans for a Single Residential Unit - Commercial Applications -Small-Scale Solar Power Pumping Systems -Large-Capacity Solar Power Pumping Systems - Pump Operation Characteristics - Semitropic Open Field Single-Axis Tracking System PV Array

MODULE V ECONOMICS OF SOLAR POWER SYSTEMS 06

Current Preliminary Engineering Design - Meteorological Data - Energy Cost Factor - Project Cost Analysis - Feasibility Study Report.

MODULE VI PASSIVE SOLAR HEATING TECHNOLOGIES 08

Passive Solar Water Heating - Pool Heating - Concentrator Solar Technologies - Solar Cooling and Air Conditioning - Direct Solar Power Generation - Innovations

in Passive Solar Power Technology.

Total Hours: 45

REFERENCES:

1. Mukund R. Patel, "Wind and Solar Power Systems Design, Analysis, and Operation", Published in 2006 by CRC Press, Taylor & Francis Group
2. Ned Mohan, Tore M. Undeland. "Power Electronics- Converters, Applications and Design", John Wiley & Sons (Asia) Private Ltd., 2003.
3. M.D.Singh , " Power Electronics"Tata McGraw-Hill Education, 07-Jul-2008

5. Vedam Subrahmanyam, "Power Electronics", New Age International (P) Limited, New Delhi, 1997.
6. D.M.Mitchell, DC-DC Switching Regulator Analysis McGraw-Hill Ryerson, Limited, 1988

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following

- Understand the characteristics of solar cell.
- Understand the constructional details of solar panel.
- Know about the monitoring and commissioning of solar panel
- Know about the solar pumping and mechanical tracking of solar power generation system.
- Cost analysis of solar power generation system.

EECY052	SWITCHED MODE POWER CONVERSION SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To apply the basic concepts of power electronics for designing converters and protection circuits.
- To apply mathematics in analyzing switching converter circuit performance.
- To solve engineering problems related to switching converters.
- To understand the modeling of the switched mode power converter.
- Design and implement practical circuits for UPS, SMPS etc.

MODULE I SWITCHED MODE POWER CONVERSION – OVERVIEW 07

Overview of switched mode power conversion, Prior art, Power semi conductor switches – ideal, non ideal switch characteristics, issues related to switches. Design of Transformer, inductor, capacitor for SMPS.

MODULE II DC – DC CONVERTERS 08

Introduction to DC – DC Converters, Continuous and Dis- continuous operation of DC- DC Converters Primitive converter, Non- isolated converter, Isolated Converters – Performance analysis under ideal and non ideal conditions.

MODULE III MODELING OF CONVERTERS 08

Modeling of DC – DC converter- State space representation - Circuit Averaging – DC-DC converter controller structure

MODULE IV CONTROLLER DESIGN FOR DC-DC CONVERTER 08

Controllers and Sensing Circuit, Current Control, Implementation of PID controller for DC- DC converter – Controller Design, Regulation of Multiple outputs

MODULE V STABILITY AND CONTROL-LOOP COMPENSATION IN SMPS 08

Causes of Instability in Switch mode Supplies - Methods of Stabilizing the Loop - Stability Testing Methods - Test Procedure Transient Testing Analysis - Bode Plots - Measurement-Procedures for Bode Plots of Closed - Loop Power Supply Systems - Test Equipment for Bode Plot Measurement - Test Techniques - Measurement Procedures for Bode Plots of Open-Loop Power Supply Systems - Establishing Optimum Compensation Characteristic by the “Difference Method” - Some Causes of Stubborn Instability – Problems

MODULE VI SIMULATION EXERCISES 06

Complete closed loop controller design for: dc-dc systems – Step down, boost, isolated converters - System id tool based linearization model creation by Matlab

Total Hours: 45

8. Umanand.L, Bhat,S.R., Design of Magnetic Components for Switched Mode
9. Power Converters, Wiley Eastern Publication, 1992.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Understand the importance of switched mode power conversion
- Ability to design DC-Dc converter
- Ability to design controller circuit for DC – DC Converter
- Ability to design and implement switched mode power conversion devices.
- Ability to choose appropriate power converter topologies and design the power stage and feedback controllers for various applications

EEC6101	PR SYSTEMS THEORY INCIPLES OF SECURITY ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide knowledge on state space approach, state feedback controllers and observers for different processes.
- To enhance knowledge on stability analysis of multivariable processes.
- To introduce nonlinear systems and its linearization methods.
- To evaluate Stability of Linear and Non Linear Systems.

MODULE I STATE SPACE APPROACH 08

Introduction to State Space Approach - System representation in state variable form – State transition equation – Methods of computing the state transition matrix.

MODULE II STATE FEEDBACK CONTROL AND STATE ESTIMATOR 08

Stability analysis - Controllability and Observability of linear time invariant systems - State Feedback – Output Feedback – Pole placement technique – Full order and Reduced Order Observers.

MODULE III STABILITY FOR LINEAR SYSTEMS 08

Introduction – Equilibrium points – Stability in the sense of Lyapunov - BIBO Stability – Stability of LTI systems – The direct method of Lyapunov and the Linear continuous time autonomous systems – Popov Stability Criterion.

MODULE IV NON-LINEAR SYSTEMS 06

Types of Non-Linearity – Typical Examples – Phase plane analysis (analytical and graphical methods) – Limit cycles – Equivalent Linearization.

MODULE V STABILITY FOR NON-LINEAR SYSTEMS 08

Equilibrium stability of non linear continuous time autonomous systems – Finding Lyapunov functions for nonlinear continuous time autonomous systems – Krasovskii and variable gradient method.

MODULE VI STABILITY FOR NON-LINEAR SYSTEMS USING DESCRIBING FUNCTION 07

Describing Function Analysis for Non Linear Systems, Describing Functions for different non-linear elements- backlash, deadzone, saturation and hysteresis.

Total Hours: 45

REFERENCES:

1. M.Gopal, “Modern Control System Theory”, New Age International, 2005.
2. K.Ogata, “Modern Control Engineering”, Prentice Hall of India, 2002.
3. John .S.Bay, “Fundamentals of Linear State Space Systems”, Tata McGraw Hill, 1999.
4. Z.Bubnicki, “Modern Control Theory”, Springer, 2005.

OUTCOMES:

At the end of the course, the students will have knowledge and achieve skills on the following:

- Implement state space approach for the process and obtain the solution.
- Design state feedback controller and observers.
- Perform stability analyses of the system using conventional mathematical approach
- Ability to analyze complex systems using mathematical models.
- Ability to analyze the stability of Linear Systems using Lyapnov and Popov Stability Criterions
- Ability to analyze the stability of Non-Linear Systems using novel techniques.

GEC71XX SOFT COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES

The aim of the course is to

- Enumerate the strengths and weakness of soft computing
- Illustrate soft computing methods with other logic driven and statistical method driven approaches
- Focus on the basics of neural networks, fuzzy systems, and evolutionary computing
- Emphasize the role of euro-fuzzy and hybrid modeling methods
- Trace the basis and need for evolutionary computing and relate it with other soft computing approaches

MODULE I SOFT COMPUTING - BASICS 06

Soft computing – Hard Computing – Artificial Intelligence as the basis of soft computing – Relation with logic driven and statistical method driven approaches- Expert systems – Types of problems: Classification, Functional approximation, Optimizations – Modeling the problem – Machine Learning – Hazards of Soft Computing – Current and future areas of research

MODULE II ARTIFICIAL NEURAL NETWORK 12

Artificial Neuron – Multilayer perceptron – Supervised learning – Back propagation network –Types of Artificial Neural Network: Supervised Vs Un Supervised Network – Radial basis function Network – Self Organizing Maps – Recurrent Network – Hopfield Neural Network – Adaptive Resonance Theory – Issues in Artificial Neural Network – Applications

MODULE III FUZZY SYSTEMS 09

Fuzzy Logic – Membership functions – Operators – Fuzzy Inference systems – Other sets: Rough sets, Vague Sets – Fuzzy controllers – Applications

MODULE IV NEURO FUZZY SYSTEMS 09

Cooperative Neuro fuzzy systems – Neural network driven fuzzy reasoning – Hybrid Neuro fuzzy systems – Construction of Neuro Fuzzy systems: Structure Identification phase, Parameter learning phase – Applications

MODULE V EVOLUTIONARY COMPUTING 09

Overview of evolutionary computing – Genetic Algorithms and optimization – Genetic Algorithm operators – Genetic algorithms with Neural/Fuzzy systems – Variants of Genetic Algorithms– Population based incremental learning – Evolutionary strategies and applications

Total Hours: 45

TEXTBOOKS:

1. Samir Roy, “Introduction to Soft Computing: Neuro-Fuzzy and Genetic Algorithms”, Pearson, 2013
2. AnupamShukla, RituTiwari and Rahul Kala, “Real life applications of Soft Computing”, CRC press, 2010.
3. Fakhreddine O. Karray, “Soft Computing and Intelligent Systems Design: Theory, Tools and Applications”, Pearson, 2009

OUTCOMES

The students will be able to

- Enumerate the theoretical basis of soft computing
- Explain the fuzzy set theory
- Discuss the neural networks and supervised and unsupervised learning networks
- Demonstrate some applications of computational intelligence
- Apply the most appropriate soft computing algorithm for a given situation

GENERAL ELECTIVES

GECY101 PROJECT MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

The objectives of the course would be to make the students

- Learn to evaluate and choose an optimal project and build a project profile.
- Attain knowledge on risk identification and risk analysis
- Gain insight into a project plan and components
- Familiar with various gamut of technical analysis for effective project implementation
- Learn to apply project management techniques to manage resources.

MODULE I INTRODUCTION & PROJECT INITIATION 09

Introduction to project and project management - projects in contemporary organization – The project life cycle - project initiation - project evaluation methods & techniques - project selection criteria - project profile.

MODULE II RISK ANALYSIS 09

Sources of risk: project specific - competitive - industry specific - market and international risk – perspectives of risk – risk analysis: sensitivity analysis - scenario analysis - breakeven analysis - simulation analysis - decision tree analysis – managing/mitigating risk – project selection under risk.

MODULE III PROJECT PLANNING & IMPLEMENTATION 09

Project planning – importance – functions - areas of planning - project objectives and policies - steps in planning process - WBS – capital requirements - budgeting and cost estimation - feasibility analysis - creation of project plan – project implementation: pre-requisites - forms of project organization

MODULE IV TECHNICAL ANALYSIS 09

Technical analysis for manufacturing/construction/infrastructure projects – process/technology - materials and inputs - product mix - plant capacity – plant location and site selection – plant layout - machinery and equipment – structures and civil works – schedule of project implementation – technical analysis for software projects.

MODULE V PROJECT MANAGEMENT TECHNIQUES 09

Project scheduling - network construction – estimation of project completion time – identification of critical path - PERT & CPM – crashing of project network - complexity of project scheduling with limited resources - resource allocation - resource leveling – resource smoothing – overview of project management software.

Total Hours: 45

REFERENCES:

1. Projects: Planning, Analysis, Financing, Implementation and Review, Prasanna Chandra, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2004.
2. Project Management and Control, Narendra Singh, Himalaya Publishing, New Delhi, 2015.
3. A Management Guide to PERT/CPM, Jerome, D. Weist and Ferdinand K. Levy, Prentice Hall of India, New Delhi, 1994.

OUTCOMES:

On successfully completing this course, the student will be able to:

- Evaluate & select a project as well as develop a project profile.
- Identify various risks associated with the project and manage it effectively.
- Prepare a detailed project plan addressing its components.
- Perform technical analysis for effective project implementation
- Apply project management techniques for maximizing resource utilization.

GECY102 SOCIETY, TECHNOLGY & SUSTAINABILITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- Aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- Understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

MODULE I TECHNOLOGY AND ITS IMPACTS 09

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life – Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT 09

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change.

MODULE III SOCIETY AND TECHNOLOGY 09

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of technology – Impact of technology on developer and consumers – Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE 09

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media Technology – Information Systems Technology – Nanotechnology – Space

Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY 09

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

Total Hours: 45

4. Martin A.A Abraham, “Sustainability Science and Engineering: Defining Principles”, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

OUTCOMES:

At the end of this course, the students will be able to

- Understand the benefits of modern technology for the well-being of human life.
- Connect sustainability concepts and technology to the real world challenges.
- Find pathway for sustainable society.

GECY103 ARTIFICIAL INTELLIGENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- Expose the history and foundations of artificial intelligence.
- Showcase the complexity of working on real time problems underlying the need for intelligent approaches.
- Illustrate how heuristic approaches provide a good solution mechanism.
- Provide the mechanisms for simple knowledge representation and reasoning.
- Highlight the complexity in working with uncertain knowledge.
- Discuss the current and future applications of artificial intelligence.

MODULE I HISTORY AND FOUNDATIONS 08

History – Scope – Influence from life – Impact of computing domains - Agents in environments - Knowledge representation – Dimensions of Complexity – Sample application domains – Agent structure.

MODULE II SEARCH 10

Problem solving as search – State spaces – Uninformed Search – Heuristic search – Advanced search – Constraint satisfaction - Applications.

MODULE III KNOWLEDGE REPRESENTATION AND REASONING 10

Foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

MODULE IV REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE 08

Probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference, sample applications.

MODULE V CASE STUDY AND FUTURE APPLICATIONS 09

Design of a game/Solution for problem in student's domain. Natural Language processing, Robotics, Vehicular automation – Scale, Complexity, Behaviour – Controversies.

Theory: 45

TEXT BOOK:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2010.
2. David Poole, Alan Mackworth, Artificial Intelligence: Foundations of Computational Agents, Cambridge University Press, 2010.
3. Nils J. Nilsson, The Quest for Artificial Intelligence, Cambridge University Press, Online edition, 2013.
4. Keith Frankish, William M. Ramsey (eds) The Cambridge Handbook of Artificial Intelligence, Cambridge University Press, 2014.

OUTCOMES:

Students who complete this course will be able to

- Discuss the history, current applications, future challenges and the controversies in artificial intelligence.
- Apply principle of AI in the design of an agent and model its actions.
- Design a heuristic algorithm for search problems.
- Analyze and represent the fact using logic for a given scenario
- Represent uncertainty using probabilistic models
- Develop a simple game or solution using artificial intelligence techniques.

GECY104 GREEN COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To focus on the necessity of green computing technology.
- To expose to various issues with information technology and sustainability.
- To attain knowledge on the technologies for enabling green cloud computing.
- To elaborate on the energy consumption issues
- To illustrate a Green and Virtual Data Center
- To develop into a Green IT Technologist.

MODULE I INTRODUCTION 08

Trends and Reasons to Go Green - IT Data Center Economic and Ecological Sustainment - The Growing Green Gap: Misdirected Messaging, Opportunities for Action - IT Data Center “Green” Myths and Realities - PCFE Trends, Issues, Drivers, and Related Factors - Green Computing and Your Reputation- Green Computing and Saving Money- Green Computing and the Environment

MODULE II CONSUMPTION ISSUES 10

Minimizing power usage – Cooling - Electric Power and Cooling Challenges - Electrical – Power -Supply and Demand Distribution - Determining Energy Usage - From Energy Avoidance to Efficiency - Energy Efficiency Incentives, Rebates, and Alternative Energy Sources - PCFE and Environmental Health and Safety Standards- Energy-exposed instruction sets- Power management in power-aware real-time systems.

MODULE III NEXT-GENERATION VIRTUAL DATA CENTERS 09

Data Center Virtualization - Virtualization beyond Consolidation - Enabling Transparency - Components of a Virtual Data Center - Datacenter Design and Redesign - Greening the Information Systems - Staying Green- Building a Green Device Portfolio- Green Servers and Data Centers- Saving Energy

MODULE IV TECHNOLOGIES FOR ENABLING GREEN AND VIRTUAL DATA CENTERS 08

Highly Effective Data Center Facilities and Habitats for Technology - Data Center Electrical Power and Energy Management - HVAC, Smoke and Fire Suppression

- Data Center Location - Virtual Data Centers Today and Tomorrow - Cloud Computing, Out-Sourced, and Managed Services.

MODULE V SERVERS AND FUTURE TRENDS OF GREEN COMPUTING 10

Server Issues and Challenges - Fundamentals of Physical Servers - Types, Categories, and Tiers of Servers - Clusters and Grids - Implementing a Green and Virtual Data Center - PCFE and Green Areas of Opportunity- 12 Green Computer Companies- What's in Green computer science-Green off the Grid aimed for data center energy evolution-Green Grid Consortium- Green Applications- Green Computing Making Great Impact On Research

Theory: 45

6. Marty Poniatowski, "Foundation of Green IT: Consolidation, Virtualization, Efficiency, and ROI in the Data Center", Printice Hall, ISBN: 9780-1-3704-375-0, 2009.

OUTCOMES:

Students who complete this course will be able to

- Demonstrate issues relating to a range of available technologies, systems and practices to support green computing.
- Select appropriate technologies that are aimed to reduce energy consumption.
- Address design issues needed to achieve an organizations' green

computing objectives.

- Analyze the functionality of Data Centers.
- Critically evaluate technologies and the environmental impact of computing resources for a given scenario.
- Compare the impact of Green Computing with other computing techniques.

GECY105 GAMING DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To master event-based programming
- To learn resource management as it relates to rendering time, including level-of-detail and culling.
- To become familiar with the various components in a game or game engine.
- To explore leading open source game engine components.
- To become familiar of game physics.
- To be compatible with game animation.

MODULE I INTRODUCTION 09

Magic Words – What Skills Does a Game Designer Need? – The Most Important Skill -The Five Kinds of Listening-The Secret of the Gifted.

MODULE II THE DESIGNER CREATES AN EXPERIENCE 09

The Game Is Not the Experience -Is This Unique to Games? -Three Practical Approaches to Chasing Rainbows -Introspection: Powers, Perils, and Practice -Dissect Your Feelings -Defeating Heisenberg -Essential Experience.

MODULE III THE EXPERIENCE IN THE PLAYER MIND AND GAME MECHANICS 08

Modeling – Focus -Empathy – Imagination – Motivation – Space – Objects, Attributes, and States – Actions – Rules.

MODULE IV GAMES THROUGH AN INTERFACE 09

Breaking it Down – The Loop of Interaction – Channels of Information – Other Interface.

MODULE V BALANCED GAME MECHANICS 10

Balance – The Twelve Most Common Types of Game Balance – Game Balancing Methodologies - Balancing Game Economies.

Theory: 45

REFERENCES:

1. Jesse Schell, "The Art of Game Design: A Book of Lenses", Second Edition 2nd Edition ISBN-10: 1466598646, 2014.
2. Ashok Kumar, Jim Etheredge, Aaron Boudreaux, “Algorithmic and Architectural Gaming Design: Implementation and Development", 1st edition, Idea Group, U.S ISBN-10: 1466616342, 2012.

4. James M. Van Verth, Lars M. Bishop "Essential Mathematics for Games and Interactive Applications", Third Edition,A K Peters/CRC Press, ISBN-10: 1482250926, 2015.

OUTCOMES:

Students who complete this course will be able to

- Realize the basic history and genres of games
- Demonstrate an understanding of the overall game design process
- Explain the design tradeoffs inherent in game design
- Design and implement basic levels, models, and scripts for games
- Describe the mathematics and algorithms needed for game programming
- Design and implement a complete three-dimensional video game

GECY106 SOCIAL COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To create original social applications, critically applying appropriate theories and effective practices in a reflective and creative manner.
- To critically analyze social software in terms of its technical, social, legal, ethical, and functional features or affordances.
- To encourage the development of effective communities through the design, use, and management of social software.
- To give students with a base of knowledge and advances for them to critically examine existing social computing services.
- To plan and execute a small-scale research project in social computing in a systematic fashion.
- To become familiar with the concept of computational thinking.

MODULE I BASIC CONCEPTS 09

Networks and Relations: Relations and Attributes, Analysis of Network Data, Interpretation of network data -New Social Learning – Four Changes that Shift Work - Development of Social Network Analysis: Sociometric analysis and graph theory, Interpersonal Configurations and Cliques – Analysing Relational Data.

MODULE II SOCIAL LINK 09

Individual Actors, Social Exchange Theory, Social Forces, Graph Structure, Agent Optimization Strategies in Networks – Hierarchy of Social Link Motivation- Social Context.

MODULE III SOCIAL MEDIA 08

Trends in Computing – Motivations for Social Computing – Social Media: Social relationships, Mobility and Social context – Human Computation – Computational Models- Business use of social Media.

MODULE IV SOCIAL INFORMATION FILTERING 09

Mobile Location Sharing – Location based social media analysis – Social Sharing and Social Filtering – Automated recommender Systems – Traditional and Social Recommender Systems.

MODULE V SOCIAL NETWORK STRATEGY 10

Application of Topic Models – Opinions and Sentiments – Recommendation Systems – Language Dnamics and influence in online communities – Psychometric analysis – Case Study: Social Network Strategies for surviving the zombie apocalypse.

Theory: 45

REFERENCES:

6. Jennifer Golbeck, “Analyzing the Social Web”, Elsevier Publication, 2013.
7. Huan Liu, John Salerno, Michael J. Young, “Social computing and Behavioral Modeling”, Springer Publication, 2009.

OUTCOMES:

Students who complete this course will be able to

- Realize the range of social computing applications and concepts.
- Analyze data left after in social media.
- Recognize and apply the concepts of computational models underlying social computing.
- Take out simple forms of social diagnostics, involving network and language models, applying existing analytic tools on social information.
- Evaluate emerging social computing applications, concepts, and techniques in terms of key principles.
- Design and prototype new social computing systems.

GECY107 SOFT COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To become familiar with AI and neural networks that can learn from available examples and generalize to form appropriate rules for inferencing systems.
- To introduce the ideas of fuzzy sets, fuzzy logic and use of heuristics based on human experience.
- To provide the mathematical background for carrying out the optimization associated with neural network learning.
- To familiarize with genetic algorithms and other random search procedures useful while seeking global optimum in self-learning situations.
- To introduce case studies utilizing the above and illustrate the intelligent behavior of programs based on soft computing.

MODULE I INTRODUCTION 09

Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence : Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies. Knowledge representation issues, Prepositional and predicate logic, monotonic and non-monotonic reasoning, forward Reasoning, backward reasoning.

MODULE II INTRODUCTION TO NEURAL NETWROK 09

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb"s learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BPA, momentum, limitation, characteristics and application of EBPA.

MODULE III FUZZY LOGIC 09

Fuzzy set theory, Fuzzy set versus crisp set, crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system: fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference

systems, fuzzy decision making & Applications of fuzzy logic.

MODULE IV GENETIC ALGORITHM 09

Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

MODULE V APPLICATION OF COMPUTATIONAL INTELLIGENCE 09

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency Prediction – Soft Computing for Color Recipe Prediction.

Total Hours: 45

6. Kosko: “Neural Network & Fuzzy System”, PHI Publication, 1992.

OUTCOMES:

On completion of the programme students will be able to:

- Learn about soft computing techniques and their applications
- Analyze various neural network architectures and able to Understand perceptrons model
- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems.
- Apply genetic algorithms to combinatorial optimization problems.
- Evaluate and compare solutions by various soft computing approaches for a given problem.

GECY108 EMBEDED SYSTEM PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- This course provides an introduction to the design of embedded computing systems including their hardware and software architectures.
- Entire software development lifecycle and examine the various issues involved in developing software for embedded systems.
- To analyze the I/O programming and Embedded C coding techniques
- This course will equip students with the software development skills necessary for practitioners in the embedded systems field.

MODULE I INTRODUCTION OF EMBEDDED SYSTEM 09

Embedded computing - characteristics and challenges - embedded system design process-Overview of Processors and hardware units in an embedded system-Compiling, Linking and locating – downloading and debugging –Emulators and simulators processor – External peripherals – Memory testing – Flash Memory.

MODULE II SOFTWARE TECHNOLOGY 09

Software Architectures, Software development Tools, Software Development Process Life Cycle and its Model, Software Analysis, Design and Maintenance.

MODULE III INPUT/OUTPUT PROGRAMMING 09

I/O Instructions, Synchronization, Transfer Rate & Latency, Polled Waiting Loops, Interrupt – Driven I/O, Writing ISR in Assembly and C, Non Maskable and Software Interrupts

MODULE IV DATA REPRESENTATION IN EMBEDDED SYSTEMS 09

Data representation ,Twos complement, Fixed point and Floating Point Number Formats ,Manipulating Bits in -Memory, I/O Ports, Low level programming in C ,Primitive data types , Arrays, Functions ,Recursive Functions, Pointers, Structures & Unions ,Dynamic Memory Allocation ,File handling ,Linked lists, Queues, Stacks.

MODULE V EMBEDDED C 09

Embedded Systems programming in C – Binding & Running Embedded C program in Keil IDE – Dissecting the program -Building the hardware. Basic techniques for reading & writing from I/O port pins – switch bounce - LED Interfacing using Embedded C.

Total Hours: 45

REFERENCES:

1. Marilyn Wolf, "Computers as components ", Elsevier, 2012.
2. Qing Li and Carolyn Yao, "Real-Time Concepts for Embedded Systems", CMP Books, 2003.
3. Daniel W. Lewis, "Fundamentals of embedded software where C and assembly meet", Pearson Education
4. Michael Bass, "Programming Embedded Systems in C and C++", Oreilly, 2003.

OUTCOMES:

On completion of this course the student will be able to

- Design the software and hardware components in embedded system
- Describe the software technology
- Use interrupt in effective manner
- Use keil IDE for programming
- Program using embedded C for specific microcontroller
- Design the embedded projects

GECY109 PRINCIPLES OF SUSTAINABLE DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge in the concepts and dimensions of sustainable development.
- To gain knowledge on the framework for achieving sustainability.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 09

Environment and Development - Population poverty and Pollution –Global and Local environmental issues –Resource Degradation- Greenhouse gases- Desertification-industrialization –Social insecurity, Globalization and environment. History and emergence of the concept of sustainable development-Objectives of Sustainable Development.

MODULE II COMPONENTS AND DIMENSIONS OF SUSTAINABLE DEVELOPMENT 09

Components of Sustainability –Complexity of growth and equity – Social economic and environmental dimensions of sustainable development – Environment- Biodiversity- Natural -Resources- Ecosystem integrity- Clean air and water- Carrying capacity- Equity, Quality of Life, Prevention, Precaution-Preservation and Public Participation Structural and functional linking of developmental dimensions.

MODULE III FRAMEWORK FOR ACHIEVING SUSTAINABILITY 09

Operational guidelines- interconnected prerequisites for sustainable development Empowerment of Women, children, Youth, Indigenous People, Non-Governmental Organizations Local Authorities, Business and industry-Science and Technology for sustainable development- performance indicators of sustainability and assessment mechanism- Constraints and barriers for sustainable development.

MODULE IV SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 09

Demographic dynamics of sustainability – Policies for socio-economic development -Strategies for implementing eco-development programmes Sustainable development through trade –Economic growth –Action plan for implementing sustainable development –Urbanization and sustainable Cities – Sustainable Energy and Agriculture –sustainable livelihoods.

MODULE V SUSTAINABLE DEVELOPMENT AND INTERNATIONAL RESPONSE 09

Role of developed countries in the development of developing countries – international summits – Stockholm to Johannesburg – Rio principles – Agenda-Conventions – Agreements – Tokyo Declaration – Doubling statement – Tran boundary issues integrated approach for resources protection and management

Total Hours: 45

REFERENCES:

1. Sayer J. and Campbell, B., The Science of Sustainable Development: Local Livelihoods and the Global environment - Biological conservation restoration & Sustainability, Cambridge university Press, London, 2003.
2. M.K. Ghosh Roy. and Timberlake, Sustainable Development, Ane Books Pvt. Ltd, 2011.
3. Mackenthun K.M., Concepts in Environmental Management, Lewis Publications London,1999.
4. APJ Abdul Kalam and Srijan Pal Singh, Target 3 Billion: Innovative Solutions Towards Sustainable Development, Penguin India, 2011

OUTCOMES:

At the end of the course the student will be able to

- Describe the concepts of sustainable development
- Define the components and dimensions of sustainable development
- Outline the Frame work for achieving sustainability.
- State the policies and strategies for implementing sustainable development for Socio economic programmes.
- Examine the role of developed countries in sustainable development.

GECY110	QUANTITATIVE TECHNIQUES IN MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart knowledge on

- operations research
- production management
- financial management
- decision theory and managerial economics

MODULE I OPERATIONS RESEARCH 09

Introduction to Operations research-Linear programming-Graphical and Simplex Methods, Duality and Post-Optimality Analysis-Transportation and Assignment Problems

MODULE II PRODUCTION MANAGEMENT 09

Inventory control, EOQ, Quantity Discounts, Safety Stock-Replacement Theory-PERT and CPM-Simulation Models-Quality Control.

MODULE III FINANCIAL MANAGEMENT 09

Working Capital Management-Compound Interest and Present Value methods-Discounted Cash Flow Techniques-Capital Budgeting.

MODULE IV DECISION THEORY 09

Decision Theory-Decision Rules-Decision making under conditions of certainity, risk and uncertainity-Decision trees-Utility Theory.

MODULE V MANAGERIAL ECONOMICS 09

Cost concepts-Break-even -Analysis-Pricing techniques-Game Theory applications.

Total Hours: 45

REFERENCES:

1. Vohra, N.D. , Quantitative Techniques in Management, Tata McGraw Hill Co., Ltd, New Delhi, 2009.
2. Seehroeder, R.G., Operations Management, McGraw Hill, USA, 2002.

4. Frank Harrison, E., The Managerial Decision Making Process, Houghton Miffin Co. Boston, 2005.
5. Hamdy A. Taha, Operations Research- An Introduction, Prentice Hall, 2002.

OUTCOME:

At the end of the course, the students will be able to

- Apply the concepts of operations research for various applications
- Create models for inventory control in production management
- Compute the cash flow for a project
- Choose a project using decision theory based on the risk criterion.
- Apply the concepts of managerial economics in construction management

GECY111 PROGRAMMING USING MATLAB & SIMULINK

L	T	P	C
1	0	2	2

OBJECTIVES:

The aim of this course is to:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION MATLAB DATA PRESENTATION 03+06

Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts-Making clear and compelling plots-Solving systems of linear equations numerically and symbolically- Least squares regression -Curve fitting.

MODULE II MATLAB PLOT FUNCTION 03+06

Introduction- Plot Function – Animation- 3D Plots-Customizing Plots – Plot Applications- Saving &Painting Plots.

MODULE III ROOT FINDING AND COMPUTER REPRESENTATION OF NUMBERS 03+06

Linearization and solving non-linear systems of equations- The Newton-Rapson method- Integers and rational numbers in different bases- Floating point numbers-Round off and errors in basic arithmetic-Significant digits when reporting results

MODULE IV ORDINARY DIFFERENTIAL EQUATIONS 03+06

Numerical integration and solving 1^{st} order, ordinary differential equations (Euler's method and Runge-Kutta) – Use of ODE function in MATLAB

MODULE V NON-LINEAR DIFFERENTIAL EQUATIONS 03+06

Converting 2^{nd} order and higher ODEs to systems of 1^{st} order ODEs- Solving systems of ODEs via Euler's method and Runge-Kutta) – Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations

MODULE VI INTRODUCTION OF SIMULINK 03+06

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- Modeling the solution of three equations with three unknowns- Representing a model as a subsystem-Simulink demos.

Total Hours: 45

REFERENCE:

1. Griffiths D V and Smith I M, Numerical Methods for Engineers, Blackwell, 1991.
2. Laurene Fausett, Applied Numerical Analysis Using MATLAB, Pearson 2008.
3. Moin P, Fundamentals of Engineering Numerical Analysis, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB. CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving, Mathematical Exploration with MATLAB, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

- Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
- Write programs using first principles without automatic use of built-in ones.
- Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
- Be fluent in exploring Matlab's capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
- Make use of Maltab visual capabilities for all engineering applications.
- An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECY112 JAVA PROGRAMMING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the fundamentals of Java programming such as data types, variables and arrays.
- To study the syntax and necessity of decision making and iterative statements.
- To create a class and invoke the methods.
- To instigate programming in overloading of methods.
- To emphasize the concept of packages.
- To learn the exception handling routines.

MODULE I INTRODUCTION TO JAVA PROGRAMMING 15

History and Evolution of Java – Overview of Java – Data types, variables and arrays – Operators – Control statements.

MODULE II METHODS AND CLASSES 15

Class fundamentals – Declaring objects – Methods – Constructors – Garbage collection – Overloading methods – Constructor overloading – Access control – Inheritance – Packages - Exception handling.

Total Hours: 30

REFERENCES:

1. Herbert Schildt, Java The Complete Reference, 9th Edition, Oracle Press, 2014, ISBN: 978007180855-2.
2. Nicholas S. Williams, Professional Java for Web Applications: Featuring WebSockets, Spring Framework, JPA Hibernate and Spring Security (WROX), John Wiley & Sons, 2014, ISBN:978111865651-8.

4. Yashavant Kanetka**,** Let Us Java, 2nd Edition, BPB Publications, 2012**.**

OUTCOMES:

Students to complete this course will be able to

- Implement basic Java programming.
- Create a class and invoke methods for real world problems.
- Construct simple overloading of methods programs.
- Implement various types of inheritance concepts.
- Describe the access control mechanism.

GECY113 PYTHON PROGRAMMING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the list and records of python programming.
- To study the control statements and string functions of python.
- To instigate the fundamental python programming.
- To emphasize GUI in python.
- To integrate python with embedded systems.
- To implement programs in python.

MODULE I INTRODUCTION TO PYTHON PROGRAMMING 15

Installation and environment set up – syntax used in python – variable types – operators – Loops – decision making – string functions - formatted files - GUI basics.

MODULE II EMBEDDED PROGRAMMING USING PYTHON 15

Web interface – system tools – script execution context - Motion-triggered LEDs-Python-arduino prototyping-storing and plotting arduino data-Remote home monitoring system.

Total Hours : 30

REFERENCES:

5. Michael Barr, Anthony Massa, “Programming Embedded Systems”, 2nd Edition, O'Reilly Media, 2006.

OUTCOMES:

Students to complete this course will be able to

- Implement date and time function programming using python.
- Write formatted file programming.
- Construct simple python programs.
- Create web interface using python programming
- Develop embedded system with python programming.
- Build arduino prototype using python programming.

GECY114 INTELLECTUAL PROPERTY RIGHTS (IPR)

L	T	P	C
1	0	0	1

OBJECTIVES:

- To study about Intellectual property rights and its need
- To explore the patent procedure and related issues

MODULE I INTRODUCTION 07

Introduction and the need for intellectual property right (IPR) – IPR in India – Genesis and Development – IPR in abroad – Important examples of IPR – Copyrights, Trademarks, Patents, Designs, Utility Models, Trade Secrets and Geographical Indications – Industrial Designs

MODULE II PATENT 08

Concept of Patent – Product / Process Patents & Terminology – Duration of Patents – Law and Policy Consideration Elements of Patentability –- Patentable Subject Matter – Procedure for Filing of Patent Application and types of Applications – Procedure for Opposition – Revocation of Patents – Working of Patents- Patent Agent – Qualification and Registration Procedure – Patent databases and information system – Preparation of patent documents – Process for examination of patent application- Patent infringement – Recent developments in patent system

Total Hours: 15

7. Deborah E. Bouchoux, Intellectual Property: The Law of Trademarks, Copyrights, Patents, and Trade Secrets, 2015
8. Jatindra Kumar Das, Law of Copyright, PHI Learning, 2015

COURSE OUTCOMES:

Students should be able to

- Identify the various types of intellectual property and their value
- Apply the procedure to file a patent and to deal the related issues
- Search and extract relevant information from various intellectual database

VISION AND MISSION OF THE DEPARTMENT OF MECHANICAL ENGINEERING

VISION

To excel in providing quality education and training through Undergraduate and Postgraduate programmes and carryout quality research in the field of Mechanical Engineering.

MISSION

- To provide a good learning experience through appropriate design of curriculum and syllabi that facilitate students to gain thorough understanding of the fundamental concepts and applications in Mechanical Engineering
- To equip students to solve challenging problems in Mechanical Engineering and related areas taking in to account their impact on the society
- To facilitate students to develop good communication, leadership and managerial skills through team approach in conducting experiments and projects
- To pursue academic and collaborative research activities with industry and other research institutions ensuring high quality in publications and other research outputs

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

M. Tech. (Manufacturing Engineering)

PROGRAMME EDUCATIONAL OBJECTIVES:

- To provide intensive learning opportunities through well designed courses involving state-of-the-art concepts and techniques not only in the field of Manufacturing Engineering and in the related interdisciplinary aspects to ensure holistic approach
- To equip the post graduates, with knowledge and skill to undertake design, analysis, evaluation of manufacturing systems and processes
- To supplement course work through seminars, workshops, case studies and through paper presentation
- To inculcate research culture by way of solving typical problems, project works from real life situation, innovative assignments relating to the field of Manufacturing
- To employ multiple strategies to evaluate acquisition of knowledge and skill to enable the students to face real life situation in the globalised scenario
- To provide scope for self-study thereby preparing post graduates for lifelong learning to meet the varied needs in their future careers

PROGRAMME OUTCOMES:

On completion of programme, the graduates will

- have the ability to provide solutions for Product Realization
- have the ability to appreciate the relation between Design and Manufacturing
- have a broad understanding and knowledge about the various software in the area of Computer Aided Manufacturing and Inspection
- have ability to undertake research and address open ended problems
- have ability to articulate concepts and ideas with clarity
- have ability to acquire the knowledge in any specific area through study and research

CURRICULUM & SYLLABI FOR
M. Tech. (Manufacturing Engineering)
(FOUR SEMESTERS / FULL TIME)

CURRICULUM

Sl. No.	Course Code	Course Title	L	T	P	C

SEMESTER I

MAC6183 PROBABILITY AND STATISTICS

L	T	P	C
3	1	0	4

COURSE EDUCATIONAL OBJECTIVES:

This course intends to provide

- a comprehensive introduction to the probability distributions,
- familiarize with testing of hypothesis and estimation theory.
- basic knowledge in simulations used in engineering.

MODULE I PROBABILITY DISTRIBUTIONS 10+03

Axioms of probability – addition and multiplication theorem – conditional probability – total Probability – random variables- moments – moments generating functions and their properties- Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

MODULE II TWO DIMENSIONAL RANDOM VARIABLES 09+03

Joint distributions - Marginal and conditional distributions – functions of random variables - Covariance - Correlation and regression - Central limit theorem.

MODULE III ESTIMATION THEORY 09+03

Partial, Multiple correlations and regressions – Estimation of parameters using maximum likelihood estimator and method of moments.

MODULE IV TESTING OF HYPOTHESIS 08+03

Hypothesis, test statistic, decisions and errors - classical testing, significance and p-values – Student's t- test , Fisher's test and Chi-square tests.

MODULE V SIMULATION 09+03

Simulation - definition - Monte Carlo simulation - random number generation, simulation model building - validation - run size determination - simulation applications - inventory control - facilities creation, simulation software.

L – 45; T – 15; Total Hours: 60

TEXT BOOKS:

1. Douglas C. Montgomery, George C. Runger, “Applied Statistics and Probability for Engineers”, 4th Edition, Wiley publication, 2006.
2. Richard A. Johnson, “Miller and Freund’s Probability and Statistics for Engineers”, 8th Edition, PHI, 2011.
3. Sheldon M. Ross, “Introduction to probability models”, 10th edition, Academic Press, 2009.

REFERENCES:

1. Jerry Banks, John S. Carson, Barry L. Nelson, “Discrete – Event systems Simulation”, Prentice Hall India, New Delhi, 1999.
2. Jay L. Devore, “Probability and Statistics for Engineering and the Sciences”, Duxbury publication, 2007.
3. R. Lyman Ott, Michael Longnecker, “An Introduction to Statistical Methods and Data Analysis”, 6th edition, Brooks/Cole Cengage Learning, USA, 2010.

COURSE OUTCOMES:

At the end of the course students will be able to

- identify and fit probability distribution for a given data.
- solve two dimensional random variable problem.
- solve estimation theory problem.
- testing the hypothesis.
- solve problems in modeling using simulation techniques.

MEC6121	NON-TRADITIONAL MACHINING AND MODERN FABRICATION	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To gain knowledge on mechanical and chemical energy based non - traditional manufacturing process
- To impart the working principles of electrical energy based non -traditional manufacturing process
- To inculcate the electro thermal energy based non-traditional manufacturing process
- To educate various methods of micro fabrication process
- To learn about micro fabrication technology

MODULE I NON-TRADITIONAL MANUFACTURING PROCESS I (MECHANICAL & CHEMICAL ENERGY BASED) 09

Non thermal energy process – Abrasive machining – Water jet machining - Ultrasonic machining – Chemical machining – Electro chemical machining – construction working principle – steps - types – process parameters – derivations – problems, merits, demerits and applications.

MODULE II NON-TRADITIONAL MANUFACTURING PROCESS II (ELECTRICAL ENERGY BASED) 09

Electro chemical machining – Electro chemical grinding - Electric discharge machining – Wire cut EDM - construction – principle – types – control - circuits – tool design – merits, demerits & applications.

MODULE III NON-TRADITIONAL MANUFACTURING PROCESS III (ELECTRO THERMAL ENERGY BASED) 09

Laser beam machining – Electron beam machining – Plasma arc machining – Ion beam machining – construction working principle types – process parameters – derivations – problems, merits, demerits and applications.

MODULE IV MICROFABRICATION PROCESS 09

Semiconductors – films and film depurification – Oxidation - diffusion – ion implantation – etching – metallization – bonding – surface and bulk machining – LIGA (lithography) Process – Solid free form fabrication.

MODULE V MICROFABRICATION TECHNOLOGY (WAFER LEVEL) 09

Wafer preparation – monolithic processing – moulding – Printed circuit board hybrid & multi chip module technology – programmable devices & application specific integrated circuits (ASIC) – electronic material and processing– steriolithography surface acoustic wave (SAW) devices, Surface Mount Technology.

Total Hours: 45

REFERENCES:

6. Pandey P.C. & Shan H.S., Modern Machining Processes, Standard Publishing Co., 1980.
7. More Madon, Fundamentals of Microfabrication, CRC Press, 1997.

COURSE OUTCOMES:

Students should be able to

- perform mechanical and chemical energy based non -traditional manufacturing process
- execute electrical energy based non -traditional manufacturing process
- use electro thermal energy based non-traditional manufacturing process
- identify various methods of micro fabrication process
- select suitable micro fabrication technology

MEC6101 APPLIED MATERIALS ENGINERING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To study the elastic and plastic behavior of engineering materials
- To understand the fracture behavior of engineering materials
- To gain the knowledge on selection of materials for specific applications
- To select the modern materials and identify their applications
- To suggest suitable non-metallic materials for various engineering applications

MODULE I ELASTIC AND PLASTIC BEHAVIOUR 12

Elasticity in metals and polymers - Anelastic and visco-elastic behaviour – Mechanism of plastic deformation and non metallic shear strength of perfect and real crystals – Strengthening mechanisms - work hardening, solid solutioning, grain boundary strengthening, poly phase mixture, precipitation, particle, fiber and dispersion strengthening - Effect of temperature, strain and strain rate on plastic behaviour – Super plasticity – Deformation of non crystalline materials.

MODULE II FRACTURE BEHAVIOUR 15

Griffith's theory, stress intensity factor and fracture toughness – Toughening mechanisms – Ductile, brittle transition in steel – High temperature fracture, creep – Larson Miller parameter – Deformation and fracture mechanism maps

Fatigue, low and high cycle fatigue test, crack initiation and propagation mechanisms and Paris law - Effect of surface and metallurgical parameters on fatigue – Fracture of non metallic materials – Failure analysis, sources of failure, procedure of failure analysis.

MODULE III SELECTION OF MATERIALS 08

Motivation for selection, cost basis and service requirements – Selection for mechanical properties, strength, toughness, fatigue and creep – Selection for surface durability corrosion and wear resistance – Relationship between materials selection and processing – Case studies in materials selection with relevance to aero, auto, marine, machinery and nuclear applications – Computer aided materials selection.

MODULE IV MODERN METALLIC MATERIALS 05

Dual phase steels, High strength low alloy (HSLA) steel, Transformation induced plasticity (TRIP) Steel, Maraging steel, Nitrogen steel – Intermetallics, Ni and Ti aluminides – Smart materials, Shape memory alloys – Metallic glass and Nano crystalline materials.

MODULE V NON METALLIC MATERIALS 05

Polymeric materials – Formation of polymer structure – Production techniques of fibers, foams, adhesives and coating – structure, properties and applications of engineering polymers – Advanced structural ceramics, WC, TiC, TaC, Al2O3, SiC, Si3N4 CBN and Diamond – properties, processing and applications.

Total Hours: 45

5. ASM Hand book, Vol.11, Failure Analysis and Prevention, (10th Edition), ASM, 2002.
6. Ashby M.F., Material Selection in Mechanical Design, 3rd Edition, Butter Worth 2005.

COURSE OUTCOMES:

Students should be able to

- Describe the elastic and plastic behaviour of engineering materials
- Interpret the fracture behavior of engineering materials
- Use the suitable materials for specific applications
- Choose the modern materials for appropriate applications
- Employ the non- metallic materials for various engineering applications

MEC6122	MECHATRONICS IN MANUFACTURING SYSTEMS	L	T	P	C
		3	0	2	4

COURSE EDUCATIONAL OBJECTIVES:

- To study the fundamentals of mechatronic systems
- To educate the working principles of various sensors and transducers
- To understand the role of actuators in manufacturing technology
- To learn the functions of programmable logic controllers
- To impart knowledge on Mechatronics design in factory automation through case studies

MODULE I INTRODUCTION 10

Mechatronics definition - Systems- Need for Mechatronics - Emerging area of Mechatronics - Classification of Mechatronics - Measurement Systems - Control Systems.

Practices on LabVIEW.

MODULE II SENSORS AND TRANSDUCERS 15

Introduction - Performance Terminology – Potentiometers - LVDT - Capacitance sensors - Strain gauges - Eddy current sensor - Hall effect sensor - Temperature sensors - Light sensors – Motion sensor - Selection of sensors - Signal processing.

Practices on Sensors - Potentiometer, Strain gauge, Torque, LVDT, Hall-effect, speed, Vibration, Pressure - Practices on Transducer – Temperature, optical - operational amplifier circuits.

MODULE III ACTUATORS 15

Actuators – Mechanical - Electrical - Fluid Power - Piezoelectric – Magnetostrictive - Shape memory alloy - Applications - Selection of actuators.

Practices on various hydraulics and pneumatics circuits - Hydraulic circuits, Hydraulic and Pneumatic components, Electro Pneumatic Sequencing circuits, Hydraulic and Pneumatic Circuits using simulation software, Hydraulic and Pneumatic circuits using Programmable Logic Controllers (PLC), Electronic Power controls of DC and AC motors.

MODULE IV PROGRAMMABLE LOGIC CONTROLLERS 10

Introduction - Basic structure - Input and output processing - Programming - Mnemonics- Timers, counters and Internal relays - Data handling - Selection of PLC.

Practices on Simulation of bottling plant and punching operation using PLC.

MODULE V DESIGN AND MECHATRONICS CASE STUDIES 10

Designing - Possible design solutions-Traditional and Mechatronics design concepts - Case studies of Mechatronics systems - Pick and place Robot - Conveyor based material handling system - PC based CNC drilling machine – Mechatronics control in automated manufacturing - Data acquisition Case studies. **Practices on** heating and ventilation control using NI-6009.

Total Hours: 60

7. Bradley D.A, Dawson. D, Buru N.C and Loader A.J, Mechatronics, Nelson Thornes Ltd, Eswar Press, Indian Print, 2004.

COURSE OUTCOMES:

Students should be able to

- Summarize the fundamentals of mechatronic systems
- Select suitable sensor and transducer based on the requirement
- Choose appropriate actuators for an engineering application
- Use Programmable Logic Controller and write simple PLC programs
- Design simple mechatronics systems

MEC6103 ADVANCED FINITE ELEMENT ANALYSIS

L	T	P	C
2	1	2	4

COURSE EDUCATIONAL OBJECTIVES:

- To introduce the mathematical and physical principles underlying the Finite Element Method (FEM).
- To uncover iso-parametric formulation and its importance
- To describe the elementary concepts of plate bending behaviour and theory.
- To introduce time dependent finite element procedure
- To introduce error norms and convergence rates

MODULE I REVIEW OF 1D FEM 12

Historical background - Concept of finite element method - Finite element formulation based on weighted residual method and stationary of a functional - Review of static analysis using 1D element – Bar, truss, Beam element.

Practice on FEA analysis of Machine elements under static loads

MODULE II 2D & 3D FEM 12

Triangular, quadrilateral, tetrahedral element, Lower order and higher order element, Iso-parametric formulation, Static structural and thermal analysis applications.

Practice on FEA analysis of Heat transfer – steady state and transient

MODULE III BENDING OF PLATES & SHELLS 12

Bending of plate and shells - Thin (Kirchoff) and Thick (Mindlin) plate elements – Finite Element Formulation of Plate and Shell Elements – Applications and Examples.

Practice on FEA analysis of Modal analysis, Harmonic analysis

MODULE IV STRUCTURAL DYNAMICS 12

Dynamical equations of motion, Consistent and lumped Mass Matrices, Damping matrices, Vibration Analysis, Eigenvalue problems and solution techniques, Transient dynamical and structural dynamical problems, Explicit and implicit schemes of integrations, Stability issues.

Practice on FEA analysis of Plate bending analysis

MODULE V ERROR ESTIMATES AND ADAPTIVE REFINEMENT 12

Classification of errors – Error tests - Convergence rates- Mesh revision and Gradient Recovery – Adaptive meshing - h refinement with adaptivity – adaptive refinement.

Practice on FEA analysis of Error estimation and convergence tests

Total Hours: 60

7. S.S.Rao, Finite Element Analysis, 2002 Edition.
8. David V Hutton “Fundamentals of Finite Element Analysis”. McGraw-Hill International Edition, 2004.

COURSE OUTCOMES:

Students will be able to

- Solving static structural problem by functional approximation and finite element method.
- Solving structural and thermal problems involving complex geometries.
- Model and analyse structures such as pressure vessel, automobile parts and chimney stacks.
- Perform Modal analysis, Harmonic analysis and transient analysis.
- Enhance the skills of interpreting results

SEMESTER II

GEC6201 RESEARCH METHODOLOGY FOR ENGINEERS

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To provide a perspective on research to the scholars
- To educate on the research conceptions for designing the research
- To impart knowledge on statistical techniques for hypothesis construction
- To gain knowledge on methods of data analysis and interpretation
- To learn about the effective communication of research finding

MODULE I RESEARCH PROBLEM FORMULATION 07

Research – objectives – types, Research process, Solving engineering problems, Identification of research topic, Formulation of research problem, Literature survey and review.

MODULE II HYPOTHESIS FORMULATION 08

Research design – meaning and need – basic concepts, Different research designs, Experimental design – principle – important experimental designs, Design of experimental setup, Mathematical modeling, Simulation – validation and experimentation, Dimensional analysis and similitude.

MODULE III STATISTICAL TECHNIQUES 12

Statistics in research – concept of probability – popular distributions –Hypothesis testing- sample design- Design of experiments – factorial designs -– orthogonal arrays- ANOM - ANOVA - Multivariate analysis - Use of optimization techniques – traditional methods – evolutionary optimization techniques –Transportation model.

MODULE IV STATISTICAL ANALYSIS OF DATA 10

Research Data analysis – interpretation of results – correlation with scientific facts- Accuracy and precision – error analysis, limitations - Curve fitting, Correlation and regression.

MODULE V RESEARCH REPORT 08

Purpose of written report – audience, synopsis writing, preparing papers for International journals, Thesis writing – organization of contents – style of writing –

graphs and charts – referencing, Oral presentation and defense, Ethics in research, Patenting, Intellectual Property Rights.

11. Scheffer. R.L. and James T. Mc Clave, Probability and Statistics for Engineers, PWS – Kent Publishers Co., Boston, USA, 1990.

COURSE OUTCOMES:

Students should be able to

- Formulate the research problem
- Design and Analyse the research methodology
- Construct and optimize the research hypothesis
- Analyse and interpret the data
- Report the research findings

MEC6221	AUTOMATED AND COMPUTER INTEGRATED MANUFACTURING	L	T	P	C
		3	0	2	4

COURSE EDUCATIONAL OBJECTIVES:

- To understand basic concepts of Computer Integrated Manufacturing System
- To learn the various mechanisms of automated manufacturing system
- To acquire the knowledge on group technology (GT) and Flexible Manufacturing Systems (FMS)
- To study the various process planning (PP) methods
- To gain the knowledge in computer aided process control and data capturing techniques

MODULE I INTRODUCTION 12

Introduction to CAD/CAM and CIM - Evolution of CIM – CIM wheel and cycle – Production concepts – CIM hardware and software – Major elements of CIM system –Implementation of CIM –– Computer networks for manufacturing – The future automated factory – Management of CIM – Impact of CIM on personnel.

MODULE II AUTOMATED MANUFACTURING SYSTEMS 12

Automated production line – System configurations, Work part transfer mechanisms – Fundamentals of automated assembly system – System configuration, Part delivery at workstations – Design for automated assembly– Overview of material handling equipments – Consideration in material handling system design - Automated Guided Vehicle (AGV) system – Automated storage/Retrieval system and Carousel storage system.

Practices on CNC Lathe: Plain Turning, Step turning, Taper turning, Threading, Grooving & canned cycle.

MODULE III GROUP TECHNOLOGY AND FMS 12

Part families – Visual – Parts classification and coding – Production flow analysis – Grouping of parts and Machines by rank order clustering method – Benefits of GT – Case studies – FMS – Components – Workstations – FMS layout configurations – FMS planning and implementation issues – Architecture of FMS – Flow chart showing various operations in FMS –FMS applications, Benefits.

MODULE IV PROCESS PLANNING 12

Typical process sheet – Case studies in manual process planning, Computer aided process planning – Process planning module and data base – Variant process

planning (VPP) – Two stages in VPP – Generative process planning – Flow chart showing various activities in generative PP – Semi generative process planning.

MODULE V TYPES OF PROCESS CONTROL AND AUTOMATIC DATA CAPTURE 12

Introduction to process model formulation – Linear feedback control systems – Optimal control – Adaptive control –Sequence control and Programmable Logic Controller (PLC), Computer process control – Computer process interface – Interface hardware – Computer process monitoring – Direct digital control and Supervisory computer control - Overview of Automatic identification methods – Bar code technology – Other automatic data capture technologies.

Practices on CNC Milling Machine: Profile Milling, Mirroring, Scaling & canned cycle.

Total Hours : 60

6. Kant Vajpayee S., Computer Integrated Manufacturing, Prentice Hall of India, New Delhi, 2007.
7. Alavudeen and Venkateshwaran, Computer Integrated Manufacturing, PHI Learning Pvt. Ltd., New Delhi, 2008.

COURSE OUTCOMES:

Students should be able to

- Describe the basic concepts of Computer Integrated Manufacturing System
- Apply the mechanisms of automated manufacturing system
- Execute the concepts of group technology and Flexible Manufacturing Systems
- Establish various process planning methods
- Perform computer aided process control and data capturing techniques

MEC6222 METAL FORMING TECHNIQUES

L	T	P	C
2	0	0	2

COURSE EDUCATIONAL OBJECTIVES:

- To understand the plasticity theories
- To learn the various bulk forming process and their applications
- To study the different sheet metal forming process

MODULE I THEORY OF PLASTICITY 10

Theory of plastic deformation – Yield criteria – Tresca and Von-mises – Distortion energy – Stress-strain relation – Mohr's circle representation of a state of stress – Cylindrical and spherical co-ordinate system – Upper and lower bound solution methods – Overview of FEM applications in metal forming analysis.

MODULE II THEORY AND PRACTICE OF BULK FORMING PROCESSES 10

Analysis of plastic deformation in forging, rolling, extrusion, rod/wire drawing and tube drawing – Effect of friction – Calculation of forces, Work done – Process parameters, Equipment used – Defects – Applications – Recent advances in forging, rolling, extrusion and drawing processes – Design consideration in forming.

MODULE III SHEET METAL FORMING 10

Formability studies – Conventional processes – High energy rate Forming (HERF) techniques – Super plastic forming techniques – Hydroforming – Stretch forming – Water hammer forming – Principles and process parameters – Advantage, limitations and application

Total Hours: 30

6. Marciniak,Z., Duncan J.L., Hu S.J., Mechanics of Sheet Metal Forming, Butterworth-Heinemann, Elsevier, 2006

COURSE OUTCOMES:

Students should be able to

- Express the plasticity theories
- Apply various bulk forming process for different applications
- Use appropriate sheet metal forming techniques based on the needs

MEC6202 ADVANCED METROLOGY AND NDT

L	T	P	C
3	0	2	4

COURSE EDUCATIONAL OBJECTIVES:

- To train the students in recent measurement systems
- To educate the students on laser based measuring instruments usage
- To gain knowledge in liquid penetrant and magnetic particle test
- To impart knowledge in radiography and its applications
- To perceive ultrasonic and acoustic emission techniques

MODULE I MEASURING MACHINES 15

Tool Maker's microscope - Coordinate measuring machine (CMM)- Universal measuring machine - Machine vision technology -Microprocessors in metrology- Nano-metrology -Measurement system analysis.

Practices on Tool Makers Microscope- - Machine vision technology and surface roughness measurement- CMM

MODULE II LASER METROLOGY 12

Precision instruments based on laser-Principles- laser interferometer-application in linear, angular measurements and machine tool metrology- need, constructional features – types, applications – computer aided inspection.

Practices on measuring the quality using linear measuring Instruments

MODULE III LIQUID PENETRANT AND MAGNETIC PARTICLE TESTS 12

Characteristics of liquid penetrates - Different washable systems – Developers - Applications - Methods of production of magnetic fields - Principles of operation of magnetic particle test - Applications - Advantages and limitations.

Practices on Liquid Penetrant and Magnetic Particle Tests

MODULE IV RADIOGRAPHY 12

Sources of ray-x-ray production - Properties of gamma and x rays – Film characteristics - Exposure charts - Contrasts - Operational characteristics of x ray equipment - Applications.

MODULE V ULTRASONIC AND ACOUSTIC EMISSION TECHNIQUES 09

Production of ultrasonic waves - Different types of waves – General characteristics of waves - Pulse echo method - A, B, C scans - Principles of acoustic emission techniques - Advantages and limitations – Instrumentation and applications.

Total Hours: 60

3. American Society for Metals, Metals Hand Book, Vol. II, 1976.
4. I. G. Scott, Basic Acoustic Emission, CRC Press, 1991.

COURSE OUTCOMES:

Students should be able to

- Measure various engineering specifications using recent measurement system
- Use advanced measurement tools such as CMM
- Adopt liquid penetrant and magnetic particle test for engineering applications
- Execute radiography techniques
- Perform ultrasonic and acoustic emission techniques

		L	T	P	C
MEC6223	**MANUFACTURING AND MEASUREMENT PROJECT**	**0**	**0**	**2**	**1**

The main objective is to inculcate problem based learning and to promote team spirit. Students will be asked to take a real world problem in manufacturing and measurement. The students will work in groups.

SEMESTER III

		L	T	P	C
MEC7122	**INDUSTRY INTERNSHIP**	**0**	**0**	**0**	**1**

Students must undergo two weeks industrial training to gain practical experience.

MEC7121	PROJECT WORK - PHASE I	L	T	P	C
		0	0	12	6

The main objective is to promote project based learning.

(Refer to clause 3.15 of B.S. Abdur Rahman University regulations)

SEMESTER IV

		L	T	P	C
MEC7121	**PROJECT WORK - PHASE II**	**0**	**0**	**36**	**18**

This is in continuation with Phase I. The main objective is to promote project based learning.

(Refer to clause 3.15 of B.S. Abdur Rahman University regulations)

PROFESSIONAL ELECTIVES

PROFESSIONAL ELECTIVES ON MANUFACTURING

		L	T	P	C
MECY031	**ADVANCES IN CASTING AND WELDING**	**3**	**0**	**0**	**3**

COURSE EDUCATIONAL OBJECTIVES:

- To impart knowledge on casting design
- To instruct about metallurgical aspects of castings
- To study various casting process and foundry layout
- To educate metallurgical aspects of welding and design
- To understand various welding process

MODULE I CASTING DESIGN 08

Heat transfer between metal and mould — Design considerations in casting – Designing for directional solidification and minimum stresses - Principles and design of gating and risering.

MODULE II CASTING METALLURGY 08

Solidification of pure metal and alloys – Shrinkage in cast metals – Progressive and directional solidification — Degasification of the melt - Casting defects – Castability of steel, cast iron, Al alloys, babbit alloy and Cu alloy.

MODULE III RECENT TRENDS IN CASTING AND FOUNDRY LAYOUT 08

Shell moulding, Precision investment casting, CO2 moulding, Centrifugal casting, Die casting, Continuous casting, Counter gravity low pressure casting, Squeeze casting and semisolid processes - Layout of mechanized foundry – Sand reclamation – Material handling in foundry - Pollution control in foundry — Computer aided design of casting.

MODULE IV WELDING METALLURGY AND DESIGN 10

Heat affected zone and its characteristics – Weldability of steels, cast iron, stainless steel, aluminum, Mg, Cu, Zr and Ti alloys – Carbon equivalent of plain and alloy steels - Hydrogen embrittlement – Lamellar tearing – Residual stress – Distortion and its control - Heat transfer and solidification - Analysis of stresses in welded structures – Pre and post welding heat treatments – Weld joint design – Welding defects – Testing of weldment.

MODULE V RECENT TRENDS IN WELDING 11

Friction welding, friction stir welding – Explosive welding – Diffusion bonding – High frequency induction welding – Ultrasonic welding – Electron beam welding– Laser beam welding –Plasma welding – Electroslag welding - Narrow gap, hybrid twin wire active TIG – Tandem MIG- Modern brazing and soldering techniques – Induction, dip resistance, diffusion processes – Hot gas, wave and vapour phase soldering - Overview of automation of welding in aerospace, nuclear, surface transport vehicles and under water welding.

Total Hours: 45

11. Lancaster. J .F., Metallurgy of Welding – George Alien & Unwin Publishers, 1980.

COURSE OUTCOMES:

Students should be able to

- Demonstrate the casting design
- Interpret the metallurgical aspects of materials
- Distinguish various casting processes and layouts
- Exhibit metallurgical aspect of welding and design
- Perform various welding process

MECY032 CELLULAR MANUFACTURING SYSTEM

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the basic concepts of cellular manufacturing system
- To impart knowledge on cellular manufacturing system planning and design
- To educate implementation of cellular manufacturing system
- To study the performance measurement and control of cellular manufacturing system
- To gain knowledge on conventional and cellular manufacturing system framework

MODULE I INTRODUCTION 12

Introduction to Group Technology, Limitations of traditional manufacturing systems, characteristics and design of groups, benefits of GT and issues in GT.

MODULE II CMS PLANNING AND DESIGN 10

Problems in GT/CMS - Design of CMS - Models, traditional approaches and non-traditional approaches -Genetic Algorithms, Simulated Annealing, Neural networks.

MODULE III IMPLEMENTATION OF GT/CMS 10

Inter and Intra cell layout, cost and non-cost based models, establishing a team approach, Managerial structure and groups, batch sequencing and sizing, life cycle issues in GT/CMS.

MODULE IV PERFORMANCE MEASUREMENT AND CONTROL 08

Measuring CMS performance - Parametric analysis - PBC in GT/CMS, cell loading, GT and MRP - framework.

MODULE V ECONOMICS OF GT/CMS 05

Conventional Vs group use of computer models in GT/CMS, Human aspects of GT/CMS - cases.

Total Hours: 45

TEXT BOOKS:

1. Askin, R.G. and Vakharia, A.J., G.T "Planning and Operation, in the automated factory-Hand Book: Technology and Management", Cleland.D.I. and Bidananda, B (Eds), TAB Books , NY, 1991.
2. Kamrani, A.K, Parsaei, H.R and Liles, D.H. (Eds), "Planning, design and analysis of cellular manufacturing systems", Elsevier, 1995.

REFERENCES:

1. Burbidge, J.L. Group "Technology in Engineering Industry", Mechanical Engineering pub.London, 1979.
2. Irani, S.A. "Cellular Manufacturing Systems", Hand Book.

COURSE OUTCOMES:

- Illustrate the concepts of cellular manufacturing system
- Perform cellular manufacturing system planning and design
- Execute cellular manufacturing system
- Assess the performance and control of cellular manufacturing system
- Critique conventional and cellular manufacturing system

MECY033	LEAN MANUFACTURING SYSTEM AND IMPLEMENTATION	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To educate the concepts of lean manufacturing system
- To understand the concepts of modern manufacturing
- To instruct the principles of TQM
- To impart knowledge on six sigma
- To gain knowledge on implementation of lean manufacturing through case studies

MODULE I INTRODUCTION TO LEAN MANUFACTURING 07

Conventional Manufacturing versus Lean Manufacturing – Principles of Lean Manufacturing – Basic elements of lean manufacturing – Introduction to lean manufacturing Tools.

MODULE II CELLULAR MANUFACTURING, JIT, TPM 09

Cellular Manufacturing – Types of Layout, Principles of cell layout, Implementation, JIT – Principles of JIT and Implementation of Kanban. TPM – Pillars of TPM, Principles and implementation of TPM.

MODULE III SET UP TIME REDUCTION, TQM 10

Set up time reduction – Definition, philosophies and reduction approaches, TQM – Principles and implementation, 5S Principles and implementation - Value stream mapping - Procedure and principles.

MODULE IV SIX SIGMA 09

Six Sigma – Definition, statistical considerations, variability reduction, design of experiments – Six Sigma implementation.

MODULE V CASE STUDIES 10

Case studies - Implementation of lean manufacturing in industries.

Total Hours: 45

REFERENCES:

1. Ronald G. Askin & Jeffrey B. Goldberg, Design and Analysis of Lean Production Systems, John Wiley & Sons, 2003.

2. Rother M. and Shook J, 'Learning to See: Value Stream Mapping to Add Value and Eliminate Muda', Lean Enterprise Institute, Brookline, MA. 1999.
3. Mikell P. Groover, Automation, Production Systems and CIM, 2002.

COURSE OUTCOMES:

Students should be able to

- Explain the concepts of lean manufacturing system
- Utilize the modern manufacturing concepts
- Apply principles of TQM
- Execute the concepts of six sigma
- Implement lean manufacturing system for industries

MECY034 MANUFACTURING SYSTEM SIMULATION

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the basic concepts of manufacturing system and simulation
- To learn the random number generation methods
- To perform the design of simulation experiments
- To perceive the simulation languages used in manufacturing system simulation
- To represent the case studies of simulation models

MODULE I INTRODUCTION 08

Basic concepts of system – Elements of manufacturing system - Concept of simulation – Simulation as a decision making tool – Types of simulation – Monte-Carlo simulation - System modeling – Types of modeling – Limitations and application.

MODULE II RANDOM NUMBERS GENERATION 09

Probability and statistical concepts of simulation – Pseudo random numbers – Methods of generating random numbers – Discrete and continuous distribution– Testing of random numbers – Kolmogorov-Smirnov test, Chi-Square test - Sampling - Simple, random and simulated.

MODULE III DESIGN OF SIMULATION EXPERIMENTS 10

Problem formulation – Data collection and reduction – Time flow - Mechanical key variables - Logic flow chart starting condition – Run size – Experimental design consideration – Output analysis, interpretation and validation – Application of simulation in engineering industry.

MODULE IV SIMULATION LANGUAGE 09

Comparison and selection of simulation languages - Study of General Purpose Simulation System (GPSS) - Basic blocks - Generate, queue, depart, size, release, advance, terminate, transfer, enter and leave.

MODULE V CASE STUDIES 09

Development of simulation models using GPSS for queuing, production, inventory, maintenance and replacement systems – Case studies.

Total Hours: 45

REFERENCES:

1. Jerry Banks and John S.Carson, Discrete event system simulation, Prentice Hall 1991.
2. John H.Mize and J.Grady Cox, Essentials of simulation, Prentice hall 1989.
3. Geoffrey Gordon, System simulation, Prentice Hall of India, 1992.

5. Averill M.Law and W.David Kelton, Simulation Modeling and analysis, McGraw Hill International Editions, 1991.

COURSE OUTCOMES:

Students should be able to

- Describe the basic concepts of manufacturing system simulation
- Ascertain the random number generation methods
- Execute the design of simulation experiments
- Distinguish the simulation languages used in manufacturing system simulation
- Interpret the case studies of simulation models

MECY035 MECHATRONICS IN CNC MACHINES

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the fundamentals of adaptive controls
- To learn about mechatronic elements in CNC machine
- To educate mechatronic elements in CNC measuring system and tooling
- To impart knowledge on CNC programming
- To gain knowledge on installation and maintenance of CNC machines

MODULE I INTRODUCTION OF NC, CNC, DNC AND ADAPTIVE CONTROL 06

Classification of machine tools – types, functions and processes - fundamentals of NC and CNC technologies Adaptive control - types, application and benefits - general configuration of adaptive control and function – reasons for process change - practical problems with adaptive control - example for feedback and adaptive control.

MODULE II MECHATRONIC ELEMENTS IN CNC MACHINE 09

CNC systems - configuration of the CNC system – interfacing – monitoring – diagnostics - machine data - compensations for machine accuracies - PLC in CNC – PLC programming for CNC, steps in programming and case studies - machine structure -types of loads on CNC machine - guide ways and types - mechanical transmission elements - elements for rotary motion to linear motion - ball screw and types - roller screw and types - rack and pinion - various torque transmission elements - requirements of feed drives and spindle drive.

MODULE III MECHATRONIC ELEMENTS IN CNC MEASURING SYSTEM AND TOOLING 12

Measuring systems - feedback devices - velocity feedback - analog and digital - position feedback - rotary and linear. Tooling - requirement and planning - preset, qualified and semi qualified tools. Fixtures – requirement - unified and modular fixtures - tool identification - touch trigger probe- tool coding - EEPROM tools.

Tool condition monitoring - various indirect and direct methods. Identification and gauging of work piece. Tool locking system - ball lock mechanism and contact pressure monitoring. Automatic tool changing system - types and benefits - tool magazine –sensors in CNC.

MODULE IV CNC PROGRAMMING 13

Machine axes identification - primary, secondary and tertiary - manual CNC programming - Milling programming fundamentals - compensation and offset in milling -fixed cycles in milling - repetitive programming - loops, sub programs and macros. Turning programming fundamentals - compensation and offset in turning - fixed cycles in turning – Computer assisted programming in APT - basic geometry definition - cutter motion definition - postprocessor statements - generation and execution of APT programs.

MODULE V TESTING AND MAINTENANCE OF CNC MACHINES 05

Verification of technical specification and functional aspects, Verification during idle running & machine tool and the work piece accuracy - Installation of CNC machines - Maintenance of CNC machines - machine elements – hydraulic elements - electrical and electronic elements – maintenance schedules.

Total Hours: 45

7. Radhakrishnan,P., “CNC Machine”, New Central Book Agency, 2000.
8. Stenerson and Curran, “Computer Numerical Control-Operation and Programming”, PHI Learning Pvt. Ltd., 2008

COURSE OUTCOMES

Students should be able to

- Describe the fundamentals of adaptive controls
- Express the mechatronic elements in CNC machine
- Use various mechatronic elements in CNC measuring system and tooling
- Write CNC programming for various parts
- Execute the installation and maintenance of CNC machines

MECY036 ADDITIVE MANUFACTURING

L	T	P	C
2	0	0	2

COURSE EDUCATIONAL OBJECTIVES:

- To gain knowledge on cad modeling and slicing techniques
- To learn various additive processes
- To understand various applications of additive manufacturing

MODULE I CAD MODELING AND SLICING 10

Basic concept- Digitization techniques – Model reconstruction – Data Processing for Rapid Prototyping: CAD model preparation, Data requirements – Geometric modeling techniques: Wire frame, surface and solid modeling – data formats Data interfacing, Part orientation and support generation, Support structure design, Model Slicing, Tool path generation-Software for AM- Case studies.

MODULE II ADDITIVE PROCESS 15

Material extrusion - Fused deposition Modeling (FDM): Principle, Process details, process variables, types, suitable materials and products, Shape Deposition Manufacturing (SDM) – sheet lamination - Laminated Object Manufacturing (LOM): Working Principles, details of processes, products, materials, advantages, limitations - Photo polymerization – Stereolithography (SLA): Principle, pre-build process, part-building and post-build processes, photo polymerization of SL resins, recoating issues, materials, advantages, limitations Solid Ground Curing (SGC): working principle, process, strengths, weaknesses - Powder bed fusion - Selective Laser Sintering (SLS): Principle, process, Indirect and direct SLS- powder structures, materials, post processing, surface deviation and accuracy, Ballastic Particle Manufacturing (BPM), Selective Laser Melting (SLM), Electron Beam Melting (EBM)- Direct energy deposition - Laser Engineered Net Shaping (LENS): Processes, materials, products, advantages, limitations, case studies – Material Jetting and Binder jetting - Three dimensional Printing (3DP): Principle, basic process, Physics of 3DP, types of printing, process capabilities, materials

MODULE III ADDITIVE PROCESS APPLICATIONS 05

Functional models, Medical models, art models, Engineering analysis models, new materials development, Bi-metallic parts, Re-manufacturing - Application examples for Aerospace, defense, automobile, Bio-medical and general engineering industries - comparison of additive manufacturing methods - business opportunities and future directions

Total Hours: 30

8. Ian Gibson, David W Rosen, Brent Stucker., “Additive Manufacturing Technologies: Rapid Prototyping to Direct Digital Manufacturing”, Springer, 2010.

COURSE OUTCOMES:

Students should be able to

- Describe different cad modeling and slicing techniques
- Use suitable additive manufacturing process for different materials
- Apply additive manufacturing techniques

MECY037 ADVANCED JOINING PROCESS

L	T	P	C
2	0	0	2

COURSE EDUCATIONAL OBJECTIVES:

- To gain knowledge on unique welding processes
- To educate different welding techniques of polymers
- To instruct the design of weld structures based on stress

MODULE I UNIQUE WELDING PROCESSES 10

Plasma welding-Laser Beam Welding-Electron Beam Welding-Friction Welding-Cold Pressure Welding-Ultrasonic Welding-Diffusion Welding-Accumulative Roll Bonding (ARB)

MODULE II WELDING OF POLYMERS 10

Hot plate, Butt fusion, Hot gas welding - extrusion welding - induction welding, resistance welding - implant welding, high frequency, friction, electro – fusion, ultrasonic and vibration welding - adhesive bonding.

MODULE III JOINT DESIGN BASED ON STRESSES IN WELD STRUCTURES 10

Joint design for structural elements such as bars, beams, plates, slabs, columns, trusses, plate girders, cylindrical shells and pressure vessels and pipe lines - Design for flanged connections

Total Hours: 30

10. Welding Technology for Engineers, Eds. Baldev Raj, V. Shankar, A.K. Bhaduri, Narora Publishing House, 3rd Reprint, 2009.

COURSE OUTCOMES:

Students should be able to

- Use unique welding processes
- Apply different welding techniques of polymers
- Execute design of weld structures based on stress

MECY038 LASER MATERIAL PROCESSING

L	T	P	C
2	0	0	2

COURSE EDUCATIONAL OBJECTIVES:

- To understand the fundamentals of laser processing
- To gain knowledge of laser in processing of materials
- To impart knowledge of laser in manufacturing

MODULE I FUNDAMENTALS OF LASER PROCESSING 10

Laser processing fundamentals: Laser beam interaction with metal, semiconductor and insulator, Ultra short laser pulse interaction, heat flow theory and metallurgical considerations

MODULE II LASER IN PROCESSING 10

Laser Material Processing Applications: Laser cutting and drilling: Process characteristics, material removal modes, practical performances - Laser welding: Process mechanisms like keyhole and plasma effect, operating characteristics and process variation Laser surface modifications: Heat treatment, surface remelting, surface alloying and cladding, surface texturing, LCVD and LPVD

MODULE III LASER IN MANUFACTURING 10

Laser rapid manufacturing - Laser metal forming: Mechanisms involved including thermal temperature gradient, buckling, upsetting Laser peening - Fundamentals of Laser Shock Processing, Effects of various laser and process parameters, Mechanical effects and microstructure modification during laser shock processing

Total Hours: 30

TEXT BOOKS

1. Steen, William M., Mazumder, Jyotirmoy, Laser Material Processing by William M.Steen, Springer-Verlag 3rd Ed., 2010

REFERENCES

1. Elijah Kannatey-Asibu, Jr, Principles of Laser Materials Processing, John Wiley & Sons, USA,2009
2. John IonLaser Processing of Engineering Materials: Principles, Procedure and Industrial Application, Butterworth Heinemann,2005

COURSE OUTCOMES:

Students should be able to

- Explain the fundamentals of laser processing
- Use laser in processing of materials
- Apply knowledge of laser in manufacturing

MECY039 PLANT LAYOUT AND MATERIAL HANDLING

L	T	P	C
2	0	0	2

COURSE EDUCATIONAL OBJECTIVES:

- To study the fundamentals of plant layout
- To impart knowledge on space determination and area allocation
- To learn various materials handling equipment and approaches

MODULE I PLANT LAYOUT 10

Importance of plant layout in plant design - Types of layout - Factors affecting design of plant layout - Principles of plant layout design – methods of constructing the layout – Present the layout to the management – Implement the layout

MODULE II SPACE DETERMINATION AND AREA ALLOCATION 10

Factors for consideration in space planning- receiving, storage, production, shipping, tool room and tool crib, other auxiliary service actions - Establishing total space requirement - area allocation factors to be considered, expansion, flexibility, aisles column- area allocation procedure - Design of layout using Travel chart, plot plan, block plan, Sequence demand straight line method and non-directional method

MODULE III MATERIAL HANDLING 10

Definition – Principles - system design and selection of equipment – characteristic features of various MH systems- unit load concepts - basic layout types – Immer, Nadler, Muther, Apple James and Ree's approaches to plant layout - automated guided vehicle systems and automated storage & retrieval systems.

Total Hours: 30

11. Francis White, Facility Location & Layout, PHI, New Delhi
12. G.K Aggarwal, Plant layout & material handling, Jain Publishers, New Delhi
13. Krajewski, Operations Management, Pearson Education, New Delhi

COURSE OUTCOMES:

Students should be able to

- Explain the fundamentals of plant layout
- Analyze space determination and area allocation
- Use various material handling equipment and approaches

MECY020 AUTOMOTIVE MANUFACTURING

L	T	P	C
1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To impart knowledge on various machining processes of automotive components
- To gain knowledge on different forming processes

MODULE I MACHINING PROCESS 08

Machining of connecting rods - crank shafts - cam shafts - pistons - piston pins – piston rings – valves - front and rear axle housings - fly wheel - Honing of cylinder bores - Copy turning and profile grinding machines

MODULE II FORMING PROCESS 07

Powder injection molding - Production of aluminum MMC liners for engine blocks - Plasma spray coated engine blocks and valves - Recent developments in auto body panel forming –Squeeze Casting of pistons - aluminum composite brake rotors - Sinter diffusion bonded idler sprocket – gas injection molding of window channel – cast con process for auto parts

Total Hours: 15

4. Upton, “Pressure Die Casting”, Pergamon Press, 1985.
5. High Velocity “Forming of Metals”, ASTME, prentice Hall of India (P) Ltd., New Delhi, 1990

COURSE OUTCOMES:

Students should be able to

- Execute various machining processes
- Apply suitable forming process for various automotive components

MECY040 FAILURE MODE AND EFFECT ANALYSIS

L	T	P	C
1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To study about FMEA and its need
- To understand different types of FMEA in space and automotive industries

MODULE I INTRODUCTION 05

Definition - General overview of FMEA – History of FMEA – Origin and development – objectives of FMEA – need of FMEA – FMEA team synergy.

MODULE II TYPES AND APPLICATIONS OF FMEA 10

Types of FMEA – System FMEA, Design FMEA, Process FMEA, Service FMEA, Machine FMEA - FMEA software – Applications of FMEA in space and automotive industries

Total Hours: 15

REFERENCES

1. D. H. Stamatis, Failure Mode and Effect Analysis, FMEA From Theory to Execution, 2nd Edition, American Society for Quality Press, 2003.
2. Robin E. McDermott, Raymond J. Mikulak, Michael R. Beauregard, The Basics of FMEA, Productivity Press, 1st edition, 1996.

4. Dyadem Press, Guidelines for Failure Mode and Effects Analysis (FMEA), for Automotive, Aerospace, and General Manufacturing Industries 1st Edition, CRC Press, 1st edition, 2003.

COURSE OUTCOMES:

Students should be able to

- Describe FMEA and its need
- Apply various FMEA techniques in industry

MECY041 RELIABILITY ENGINEERING

L	T	P	C
1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To understand various reliability concepts and their analysis
- To gain knowledge on risk assessment and reduction techniques

MODULE I RELIABILITY CONCEPT AND ANALYSIS 10

Reliability function - failure rate - Mean Time between Failures (MTBF) - Mean Time to Failure (MTTF) - a priori and a posteriori concept - mortality curve - useful life availability - maintainability – system effectiveness - Time-to-failure distributions - Exponential, normal, Gamma, Weibull, ranking of data – probability plotting techniques - Hazard plotting

MODULE II RISK ASSESSMENT 05

Definition and measurement of risk - risk analysis techniques - risk reduction resources - industrial safety and risk assessment

Total Hours: 15

REFERENCES

1. Modarres, “Reliability and Risk analysis ", Mara Dekker Inc., 1993.
2. John Davidson, “The Reliability of Mechanical system ", Institution of Mechanical Engineers,London, 1988.
3. C.O. Smith" Introduction to Reliability in Design ", McGraw Hill, London, 1976

COURSE OUTCOMES:

Students should be able to

- Interpret various reliability concepts and their analysis
- Analyse risk assessment and apply suitable reduction techniques

MECY021 VIRTUAL MANUFACTURING

L	T	P	C
1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To understand the fundamentals of virtual manufacturing
- To introduce different facets of virtual manufacturing

MODULE I FUNDAMENTALS OF VIRTUAL MANUFACTURING 08

Paradigms of VM: Design-centered VM, Production-centered VM and Control-centered VM. Generic VM Issues - relationships between VM, Virtual Prototyping, the Virtual Enterprise. Role of object oriented technology in VM - Integrated Simulation Method to Support Virtual Factory Engineering Application of Virtual Reality.

MODULE II FACETS OF VIRTUAL MANUFCATURING 07

Dispersed Network Manufacturing - Virtual factory, enterprise collaborative modeling system - virtual manufacturing (VM) system - Web-based work flow management, collaborative product commerce - applications of multi-agent technology - e-supply chain management and tele-manufacturing

Total Hours: 15

TEXT BOOKS

1. Warim Ahmed Khan Abdul Raouz, Kari Chens, Virutal Manufacturing, Springer Series in Advanced Manufacturing.

REFERENCES

1. Crabb, C. H., The Virtual Engineer-21st Century Product Development, Society of Manufacturing Engineers, 1998.
2. Rao Ming, Qun Wang, Jianzhong Cha, Integrated Distributed Intelligent Systems in Manufacturing (Intelligent Manufacturing), Chapman & Hall, 1993.
3. Prasant Banerjee, Virtual manufacturing a willey, I addition, 2001, ISBN:-10: 047135443

COURSE OUTCOMES:

Students should be able to

- Describe the fundamentals of virtual manufacturing
- Explain different facets of virtual manufacturing

PROFESSIONAL ELECTIVES ON DESIGN ENGINEERING

MECY003 ADVANCED TOOL DESIGN

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To learn tool design methods and techniques of manufacturing dies and its accessories.
- To acquire knowledge on different materials available for cutting tools and necessary heat treatment procedures to get the required properties.
- To acquire knowledge in selecting suitable materials for calibrating and inspecting gauges.
- To learn to design fixtures for various machining and metal forming operations.
- To acquire knowledge on designing fixtures and cutting tools for NC machine tools.

MODULE I TOOL DESIGN METHODS 05

Introduction – The Design Procedure – Statement of the problem – The Needs Analysis –Research and Ideation – Tentative Design Solutions – The Finished Design – Drafting and Design Techniques in Tooling drawings – Screws and Dowels – Hole location – Jig-boring practice –Installation of Drill Bushings – Punch and Die Manufacture – Electro-discharge machining –Electro-discharge machining for cavity.

MODULE II TOOLING MATERIALS AND HEAT TREATMENT 09

Introduction – Properties of Materials – Ferrous Tooling Materials – Tool steels – Cast Iron – Mild, or low-carbon Steel – Nonmetallic Tooling Materials – Nonferrous Tooling Materials – Metal cutting Tools – Single-point cutting tools – Milling cutters – Drills and Drilling – Reamer classification –Taps – Tap classification- selection of carbide cutting tools – Determining the insert thickness for carbide tools.

MODULE III DESIGN OF DRILL JIGS 09

Introduction – Fixed Gages – Gage Tolerances – The selection of material for Gages – Indicating Gages – Automatic gages – Principles of location – Locating methods and devices – Principles of clamping – Drill jigs – Chip formation in drilling – General considerations in the design of drill jigs – Drill bushings – Methods of construction – Drill jigs and modern manufacturing.

MODULE IV DESIGN OF FIXTURES AND DIES 14

Introduction – Fixtures and economics – Types of Fixtures – Vise Fixtures – Milling Fixtures –Boring Fixtures – Broaching Fixtures – Lathe Fixtures – Grinding Fixtures – Types of Die construction – Die-design fundamentals – Blanking and Piercing die construction – Pilots – Strippers and pressure pads Presswork materials – Strip layout – Short-run tooling for Piercing – Bending dies – Forming dies – Drawing operations.

MODULE V TOOL DESIGN FOR NUMERICALLY CONTROLLED MACHINE TOOLS 08

Introduction – The need for numerical control – A basic explanation of numeric control – Numerical control systems in use today – Fixture design for numerically controlled machine tools – Cutting tools for numerical control – Tool holding methods for numerical control – Automatic tool changers and tool positioners – Tool presetting – Introduction – General explanation of the Brown and sharp machine – tooling for Automatic screw machines.

Total Hours: 45

REFERENCES:

1. Cyrll Donaldson, George H.LeCain, V.C. Goold, “Tool Design”, Tata McGraw Hill Publishing Company Ltd., 2000.
2. Prakash Hiralal Joshi, “Tooling data”, Wheeler Publishing, 2000.

COURSE OUTCOMES:

Students will be able to

- Summarize tool design methods and punch and die manufacturing techniques
- Judge in selecting materials for cutting tools and identify their nomenclature.
- Identify the materials for gauges and to make them with the available technology
- Design fixtures for milling, boring, lathe, grinding and welding
- Design and analyse fixtures and cutting tools for NC machine tools

MECY042 DESIGN FOR MANUFACTURING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To obtain knowledge on design principles for manufacturing
- To instruct casting design and weldment design
- To recognize the design considerations for metal forming techniques
- To train the design for machined parts
- To educate the students on case studies of assembly design

MODULE I INTRODUCTION 06

Economics of Process selection – General design principles of manufacturability – Proper material selection – Strength and Mechanical factors - application of form design.

MODULE II CASTING DESIGN AND WELDMENT DESIGN 10

Factors affecting casting design- Strength aspects – Sand casting and die casting design-Factors affecting weldment design-Gas and arc welding design.

MODULE III DESIGN OF METAL FORMING PROCESS 10

Design considerations for the manufacture of extruded, cold headed metal parts – Tube and section bends – Powder metal parts-Thermo setting plastic parts-Reinforced – Plastic/Composite parts.

MODULE IV DESIGN FOR MACHINED PARTS 10

Design considerations for the manufacture of Turned parts-drilled parts-milled parts, planned, shaped and slotted parts-Ground parts-parts produced by EDM.

MODULE V DESIGN FOR ASSEMBLY (DFA) 09

Types of assembly – DFA –Index – evaluation of assembly – assembly cost reduction – case of assembly – impact on quality – related software usage – case studies.

Total Hours: 45

TEXT BOOKS:

1. James G. Bralla – “Handbook of product design for manufacture”, McGraw Hill Book Co., 1986.

REFERENCE BOOKS:

1. Henry Peck – “Designing for manufacture”, Sir Isaac Pitman & Sons Ltd., 1973.
2. Matousek – “Engineering Design”, Blackie & sons, 1956.

COURSE OUTCOMES:

Students should be able to

- Express the design principles for manufacturing
- Execute casting design and weldment design
- Prepare the design needs of metal forming techniques
- Apply the design for machined parts
- Propose the assembly design for industry needs

MECY043	INDUSTRIAL ROBOTICS AND EXPERT SYSTEMS	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To impart the fundamentals of robots and its kinematics
- To study various drives and controls of robot
- To gain knowledge on working principles of different sensors
- To inculcate robot cell design
- To learn robot programming, artificial intelligence and their applications.

MODULE I INTRODUCTION AND ROBOT KINEMATICS 10

Definition need and scope of Industrial robots – Robot anatomy – Work volume – Precision movement – End effectors – Sensors. Robot Kinematics – Direct and inverse kinematics – Robot trajectories – Control of robot manipulators – Robot dynamics – Methods for orientation and location of objects.

MODULE II ROBOT DRIVES AND CONTROL 09

Controlling the Robot motion – Position and velocity sensing devices – Design of drive systems – Hydraulic and Pneumatic drives – Linear and rotary actuators and control valves – Electro hydraulic servo valves, electric drives – Motors – Designing of end effectors – Vacuum, magnetic and air operated grippers.

MODULE III ROBOT SENSORS 09

Transducers and Sensors – Tactile sensor – Proximity and range sensors – Sensing joint forces – Robotic vision system – Image Representation - Image Grabbing –Image processing and analysis – Edge Enhancement – Contrast Stretching – Band Rationing - Image segmentation – Pattern recognition – Training of vision system.

MODULE IV ROBOT CELL DESIGN AND APPLICATION 09

Robot work cell design and control – Safety in Robotics – Robot cell layouts – Multiple Robots and machine interference – Robot cycle time analysis – Industrial application of robots.

MODULE V ROBOT PROGRAMMING, ARTIFICIAL INTELLIGENCE AND EXPERT SYSTEMS 08

Methods of Robot Programming – Characteristics of task level languages lead through programming methods – Motion interpolation. Artificial intelligence – Basics – Goals of artificial intelligence – AI techniques – problem representation in

AI – Problem reduction and solution techniques - Application of AI and KBES in Robots.

Total Hours: 45

TEXT BOOK:

1. K.S.Fu, R.C. Gonzalez and C.S.G. Lee, “Robotics Control, Sensing, Vision and Intelligence”, Mc Graw Hill, 1987.

REFERENCE:

1. Yoram Koren,” Robotics for Engineers’ Mc Graw-Hill, 1987.
2. Kozyrey, Yu. “Industrial Robots”, MIR Publishers Moscow, 1985.

6. Timothy Jordanides et al ,”Expert Systems and Robotics “, Springer – Verlag, New York, May 1991.

COURSE OUTCOMES:

Students should be able to

- Demonstrate the fundamentals of robots and its kinematics
- Apply suitable drives and controls for robot design
- Choose appropriate sensors
- Execute the design for robot cell
- Use robot programming and artificial intelligence

MECY044 REVERSE ENGINEERING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To explain reverse engineering and its scope
- To learn the tools for reverse engineering
- To study the concepts of reverse engineering
- To enlighten the students on data management
- To study different integration methods of reverse engineering

MODULE I INTRODUCTION 05

Scope and tasks of reverse engineering - Domain analysis- Process of duplicating.

MODULE II TOOLS FOR REVERSE ENGINEERING 08

Functionality- Dimensional- Developing technical data - Digitizing techniques - Construction of surface model - Solid-part material- Characteristics evaluation - Software and application- Prototyping - Verification.

MODULE III CONCEPTS 12

History of reverse engineering – Preserving and preparation for the four stage process – Evaluation and verification- Technical data generation, Data verification, Project implementation.

MODULE IV DATA MANAGEMENT 10

Data reverse engineering – Three data reverse engineering strategies – Definition – Organization data issues - Software application – Finding reusable software components – Recycling real-time embedded software – Design of experiments to evaluate a reverse engineering tool – Rule based detection for reverse engineering user interfaces – Reverse engineering of assembly programs: A model based approach and its logical basics.

MODULE V INTEGRATION 10

Cognitive approach to program understated – Integrating formal and structured methods in reverse engineering – Integrating reverse engineering, reuse and specification tool environments to reverse engineering - Coordinate measurement – Feature capturing – Surface and solid members.

Total Hours: 45

REFERENCES:

1. Bigger staff T J, Design Recovery for Maintenance and Reuse, IEEE Corpn. July 1991.
2. Rugaban S, White paper on RE, Technical Report, Georgia Instt. of Technology, 1994.
3. Katheryn A. Ingle, Reverse Engineering, McGraw-Hill, 1994
4. Aiken Peter, Data Reverse Engineering, McGraw-Hill, 1996
5. Linda Wills, Reverse Engineering, Kluiver Academic Publishers, 1996
6. Donald R. Honsa, Co-ordinate Measurement and reverse engineering, American Gear Manufacturers Association.

COURSE OUTCOMES:

Students should be able to

- Describe about reverse engineering and its scope
- Use relevant tools for reverse engineering
- Apply the concepts of reverse engineering
- Practice data management
- Synthesize various integration methods of reverse engineering

MECY045 TRIBOLOGY OF MACHINES

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand theories of friction its surface interaction
- To study various types of wear and surface treatment
- To gain knowledge on lubricants and lubrication system
- To impart knowledge on hydrostatics and hydrodynamic applications
- To educate high pressure contacts and elasto hydrodynamic lubrication

MODULE I SURFACE INTERACTION AND FRICTION 07

Topography of Surfaces – Surface features-Properties and measurement – Surface interaction – Adhesive Theory of Sliding Friction –Rolling Friction-Friction properties of metallic and non-metallic materials – friction in extreme conditions – Thermal considerations in sliding contact.

MODULE II WEAR AND SURFACE TREATMENT 08

Types of wear – Mechanism of various types of wear – Laws of wear – Theoretical wear models-Wear of Metals and Non metals – Surface treatments – Surface modifications – surface coatings methods- Surface Topography measurements – Laser methods – instrumentation - International standards in friction and wear measurements

MODULE III LUBRICANTS AND LUBRICATION REGIMES 08

Lubricants and their physical properties- Viscosity and other properties of oils – Additives - selection of Lubricants - Lubricants standards ISO, SAE, AGMA, BIS standards – Lubrication Regimes – Solid Lubrication - Dry and marginally lubricated contacts - Boundary Lubrication.

MODULE IV THEORY OF HYDRODYNAMIC AND HYDROSTATIC LUBRICATION 12

Reynolds Equation,-Assumptions and limitations-One and two dimensional Reynolds Equation-Reynolds and Sommerfeld boundary conditions- Pressure wave, flow, load capacity and friction calculations in Hydrodynamic bearings-Long and short bearings-Pad bearings and Journal bearings-Squeeze film effects-Thermal considerations-Hydrostatic lubrication of Pad bearing-Pressure, flow , load and friction calculations-Stiffness considerations- Various types of flow restrictors in hydrostatic bearings

MODULE V HIGH PRESSURE CONTACTS AND ELASTO HYDRODYNAMIC LUBRICATION 10

Rolling contacts of Elastic solids- contact stresses – Hertzian stress equation- Spherical and cylindrical contacts-Contact Fatigue life- Oil film effects- Elasto Hydrodynamic lubrication Theory-Soft and hard EHL-Reynolds equation for elasto hydrodynamic lubrication- Film shape within and outside contact zones-Film thickness and friction calculation- Rolling bearings- Stresses and deflections- Traction drives

Total Hours: 45

REFERENCES:

1. Rabinowicz.E, “Friction and Wear of materials”, John Willey & Sons, UK, 1995
2. Cameron, A. “Basic Lubrication Theory”, Ellis Herward Ltd., UK, 1981
3. Halling, J. (Editor) – “Principles of Tribology”, Macmillian – 1984.

6. G.W.Stachowiak & A.W.Batchelor, Engineering Tribology, Butterworth-Heinemann, UK, 2005

COURSE OUTCOMES:

Students should be able to

- Express theories of friction its surface interaction
- Describe various types of wear and surface treatment
- Use suitable lubrication systems
- Apply hydrostatics and hydrodynamic lubrication systems
- Illustrate high pressure contacts and elasto hydrodynamic lubrication

MECY046 HYDRAULICS AND PNEUMATICS

L	T	P	C
2	0	0	2

COURSE EDUCATIONAL OBJECTIVES:

- To study the basics of hydraulic systems and pumps
- To gain knowledge on various hydraulic actuators and valves
- To impart knowledge on pneumatic systems

MODULE I HYDRAULIC BASICS AND PUMPS 10

Basic hydraulic systems and components- Reservoir, Strainers/filters, Accumulators, gauges, meters, circuitry systems, fittings/connections, leakage, seals – Pumps- Positive and non-positive displacement types-hydraulic symbols.

MODULE II HYDRAULIC ACTUATORS AND VALVES 10

Hydraulic actuators- (Linear- single acting, double acting, differential, non-differential, cushioned) and rotary – maintenance of actuators – Hydraulic valves – Pressure control valves, directional control valves, flow control valves-valve installation (Meter-in, Meter-out, Bleed-off circuits) – Troubleshooting valves

MODULE III PNEUMATICS 10

Pneumatics basics- Air filter and lubricators and regulators – Pneumatic actuators and valves – pneumatic circuits – pneumatic logic control

Total Hours: 30

REFERENCES

1. Hydraulic Control Systems by H.E. Merritt, Wiley New York.
2. Fluid Power by Esposito, Peaerson Education
3. Hydraulics and Pneumatics by Andrew Parr, Jaico Publishers.
4. Hydraulics and Pneumatics, A Technician's and Engineer's Guide, Third edition, Andrew Parr, Elsevier publications
5. “Oil Hydraulic Systems – Principles and Maintenance” by S.R. Majumdar
6. “Fundamentals of Pneumatic Control Engineering” by J.P. Hasebrink and R. Kobble

COURSE OUTCOMES:

Students should be able to

- Express the basics of hydraulic systems and pumps
- Use various hydraulic actuators and valves
- Implement pneumatic systems

MECY047 AI BASED OPTIMIZATION TECHNIQUES

L	T	P	C
1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To gain knowledge on novel methods for optimization
- To impart knowledge on neural networks and its application

MODULE I NOVEL METHODS FOR OPTIMIZATION 07

Introduction to simulated annealing - selection of simulated annealing parameters - simulated annealing algorithm - Genetic Algorithm (GA), Design of GA, Key concepts of GA.

MODULE II NEURAL NETWORKS 08

Basics - A framework for Neural Network models - Construction of Neural Network algorithm - Examples of simulated algorithm - genetic annealing and Neural Network method

Total Hours: 15

REFERNCES

1. Engineering Optimization S. S. Rao New Age International
2. Applied Optimal Design E. J. Haug and J.S. Arora Wiley, New York
3. Optimization for Engineering Design Kalyanmoy Deb Prentice Hall of India
4. Optimization G.V. Reklaites, A. Ravindran and K.M. Rogsdeth

COURSE OUTCOMES:

Students should be able to

- Practice on novel methods for optimization
- Apply neural networks for various applications

MECY048	FINITE ELEMENT ANALYSIS IN MANUFACTURING	L	T	P	C
		1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To study the application FEA in casting and welding
- To understand the application of FEA in plastic deformation process

MODULE I FEA IN CASTING AND WELDING 07

Steady state and Transient Thermal analysis of different casting processes – Thermo- mechanical analysis of welding processes

MODULE II FEA IN PLASTIC DEFORMATION PROCESS 08

Basic concepts of plasticity and fracture – Solid and flow formulation – small incremental deformation formulation – Fracture criteria – FE analysis of metal cutting and metal forming

Total Hours: 15

REFERENCES

1. Reddy, J.N. An Introduction to the Finite Element Method, McGraw Hill, 1985.
2. Rao, S.S., Finite Element method in engineering, Pergammon press, 1989.
3. Bathe, K.J., Finite Element procedures in Engineering Analysis, 1990
4. Kobayashi,S, Soo-ik-Oh and Altan,T, Metal Forming and the Finite Element Methods, Oxford University Press, 1989.
5. Lewis R.W.Morgan, K, Thomas, H.R. and Seetharaman, K.N. The Finite Element Method in Heat Transfer Analysis, John Wiley, 1994.

COURSE OUTCOMES:

Students should be able to

- Apply the concepts FEA in casting and welding
- Use FEA in plastic deformation process

MECY013	GEOMETRIC DIMENSIONING AND TOLERANCING	L	T	P	C
		1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To teach the principles of geometric product definition
- To educate the students on types of tolerances.

MODULE I INTRODUCTION 05

Introduction to limits fits and tolerances – GDNT definitions and importance -Datum reference frame – Feature control frame - MMC & LMC – General Rules – Datum System.

MODULE II PRINCIPLES OF MEASUREMENT FOR GEOMETRIC CHARACTERISTICS 10

Geometric characteristic symbols and meanings – Form tolerances – Profile tolerances – Location tolerances – Runout tolerances – Orientation tolerances – True position theory – Dimensional and tolerance schemes

Total Hours: 15

REFERENCES

1. ASME Y – 14.5
2. Rao Ming, Harry Peck, “Designing for Manufacture”, Pitman Publications, London, 1983.
3. Krulikowski. A, “Fundamentals of Geomtric Dimensioning and Tolerancing”, Delmar Publishers – New York, 1997
4. Spotts.M.F, “Dimensioning and Tolerance for Quality Production”, Prentice Hall Inc., New Jersey, 1983.
5. Oliver R Wade, “Tolerance Control in Design and Manufacturing”, Industrial Press Inc., New York, 2008.

COURSE OUTCOMES:

Students should be able to

- Analyze situations and proceed to the logical end to solve product’s geometric definitions in order to function and be cost effective
- Totally consider function, manufacturing process and inspection methods in order to guarantee function with reduction in manufacturing and inspection cost

PROFESSIONAL ELECTIVES ON MATERIAL SCIENCE ENGINEERING

MECY049	CORROSION AND SURFACE ENGINEERING	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand various types of corrosion and its mechanism
- To impart knowledge on testing and prevention of corrosion
- To gain knowledge on corrosion behavior of materials
- To learn surface protection techniques
- To study various surface modification processes

MODULE I MECHANISMS AND TYPES OF CORROSION 09

Principles of direct and Electro chemical Corrosion, Hydrogen evolution and Oxygen absorption mechanisms – Galvanic corrosion, Galvanic series-specific types of corrosion such as uniform, Pitting, Intergranular, Cavitations, Crevice Fretting, Erosion and Stress Corrosion –Factors influencing corrosion.

MODULE II TESTING AND PREVENTION OF CORROSION 09

Corrosion testing techniques and procedures- Prevention of Corrosion-Design against corrosion – Modifications of corrosive environment –Inhibitors – Cathodic Protection –Protective surface coatings

MODULE III CORROSION BEHAVIOR OF MATERIALS 09

Corrosion of steels, stainless steel, Aluminum alloys, copper alloys, Nickel and Titanium alloys corrosion of Polymers, Ceramics and Composite materials.

MODULE IV SURFACE PROTECTION 09

Diffusion coatings –Electro and Electroless Plating –Hot dip coating –Hard facing-Metal spraying, Flame and Arc processes- Conversion coating – Selection of coating for wear and Corrosion resistance.

MODULE V SURFACE MODIFICATION PROCESSES 09

Laser and Electron Beam hardening – Effect of process variables such as power and scan speed - Physical vapor deposition, Thermal evaporation, Arc vaporization, Sputtering, Ion plating – Chemical vapor deposition – Coating of

tools, TiC, TiN, Al2O3 and Diamond coating – Properties and applications of thin coatings.

Total Hours: 45

REFERENCES:

1. Fontana. G., “Corrosion Engineering”, McGraw Hill, 1985.
2. Serope Kalpakjian – “Manufacturing Engineering & Technology- Addison Wesley Publishing Co; New York 1995.
3. Schweitzer.P.A., “Corrosion Engineering Hand Book”, 3rd Edition, Marcel Decker, 1996.
4. Winston Revie. R. Uhlig, Corrosion, Hand Book 2nd edition. John Wiley, 2000.
5. Kenneth G.Budinski, “Surface Engineering for Wear Resistance”, Prentice hall, 1988.
6. ASM Metals Hand Book –Vol. 5, Surface Engineering, 1996.

COURSE OUTCOMES:

Students should be able to

- Describe various types of corrosion and its mechanism
- Utilize different testing to prevent corrosion
- Interpret corrosion behaviour of materials
- Use various surface protection techniques
- Implement a variety of surface modification processes

MECY050 MEMS & NANO TECHNOLOGY

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To learn the fundamentals of MEMS and microsystems
- To understand the materials and fabrication process for MEMS
- To impart knowledge on materials for micro devices
- To instruct the behaviour of nano materials
- To gain knowledge on characterization of nano materials

MODULE I OVER VIEW OF MEMS AND MICROSYSTEMS 06

Definition – Historical development – fundamentals – properties, micro fluidics, design and fabrication micro-system, microelectronics, working principle and applications of micro system.

MODULE II MATERIALS, FABRICATION PROCESSES AND MICRO SYSTEM PACKAGING 10

Substrates and wafers, silicon as substrate material, mechanical properties of Si, Silicon Compounds silicon piezo resistors, Galium arsenide, quartz, polymers for MEMS, conductive polymers. Photolithography, photo resist applications, light sources, in implantation, diffusion process exudation – thermal oxidation, silicon diode, chemical vapour deposition, sputtering - deposition by epitoxy – etching – bulk and surface machining – LIGA process Micro system packaging – considerations packaging – levels of micro system packaging die level, device level and system level.

MODULE III MICRO DEVICES AND MATERIALS 08

Sensors – classification – signal conversion ideal characterization of sensors micro actuators, mechanical sensors – measurands displacement sensors, pressure and flow sensors, micro actuators – smart materials – applications.

MODULE IV SCIENCE OF NANO MATERIALS 10

Classification of nano structures – effect of the nanometer length scale - effects of nano scale dimensions on various properties – structural, thermal, chemical, mechanical, magnetic, optical and electronic properties – effect of nanoscale dimensions on biological systems - Fabrication methods – Top down processes – bottom up process.

MODULE V CHARACTERIZATION OF NANO MATERIALS 11

Nano-processing systems – Nano measuring systems – characterization – analytical imaging techniques – microscopy techniques, electron microscopy scanning electron microscopy, transmission electron microscopy, scanning tunneling microscopy, atomic force microscopy, diffraction techniques – spectroscopy techniques – Raman spectroscopy, 3D surface analysis – Mechanical, Magnetic and thermal properties – Nano positioning systems.

Total Hours: 45

REFERENCES:

1. Tai – Ran Hsu, MEMS and Microsystems Design and Manufacture, Tata-McGraw Hill, New Delhi, 2002.
2. Mark Madou Fundamentals of Microfabrication, CRC Press, New York, 1997.
3. Norio Taniguchi, Nano Technology, Oxford University Press, New York, 2003
4. The MEMS Hand book, Mohamed Gad-el-Hak, CRC Press, New York, London.
5. Charles P Poole, Frank J Owens, Introduction to Nano technology, John Wiley and Sons, 2003
6. Julian W. Hardner Micro Sensors, Principles and Applications, CRC Press 1993.

COURSE OUTCOMES:

Students should be able to

- Exhibit the fundamentals of MEMS and Microsystems
- Suggest the materials and fabrication process for MEMS
- Select materials for micro devices
- Express the behaviour of nano materials
- Perform the characterization of nano materials

MECY051 POLYMERS AND COMPOSITE MATERIALS

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To study the various properties of polymers
- To impart knowledge on processing of polymers
- To learn various fibres and matrix materials
- To educate various processing methods of polymer matrix composites
- To inculcate processing of metal matrix composites and ceramic matrix composites

MODULE I PROPERTIES OF POLYMERS 08

Chemistry and Classification of Polymers – Properties of Thermo plastics – Properties of Thermosetting plastics – Applications – Merits and Disadvantages.

MODULE II PROCESSING OF POLYMERS 09

Extrusion – Injection Moulding – Blow Moulding – Compression and Transfer Moulding – Casting – Thermo Forming – General Machining properties of Plastics – Machining parameters and their effect – Joining of plastics – Mechanical fasteners – Thermal bonding – Press fitting.

MODULE III INTRODUCTION TO FIBRES AND COMPOSITE MATERIALS 09

Fibres – Fabrication, Structure, properties and applications - Glass, boron, carbon, organic, ceramic and metallic fibers whiskers – Matrix materials structure – polymers, – metals and ceramics – Physical and chemical properties

MODULE IV PROCESSING OF POLYMER MATRIX COMPOSITES 09

Open mould process, bag moulding, compression moulding with BMC and SMC filament winding – pultrusion – centrifugal casting – injection moulding – structure, properties and application of PMC’s – Carbon Matrix Composites - Interfaces – Properties – recycling of PMC.

MODULE V PROCESSING OF METAL MATRIX COMPOSITES AND CERAMIC MATRIX COMPOSITES 10

Solid state fabrication techniques – diffusion bonding – powder metallurgy techniques – plasma spray, chemical and physical vapour deposition of matrix on fibres – Chemical vapour infiltration – Sol gel – liquid state fabrication methods –

infiltration – squeeze, casting – rheo casting – compocasting - Interfaces properties– application of MMC and ceramic matrix composites.

Total Hours: 45

REFERENCES:

1. Krishnan K Chawla, “Composite Materials Science and Engineering, International Edition”, Springer, 2006
2. Harold Belofsky, Plastics, Product Design and Process Engineering, Hanser Publishers, 2002.
3. Bera.E and Moet. A, High performance polymers, Hanser Publishers, 2001.
4. Rauwendaal,C., Polymer extrusium, Hanser publishers, 2000.
5. Rosatao, D.V. Blow moulding HandBook, Hanser Publishers, 1989.
6. Seamour, E.B. Modern Plastics Technology, Prentice Hall, 2002
7. Mallick, P.K. and Newman.S., Composite Materials Technology, Hanser Publishers, 2003

COURSE OUTCOMES

Students should be able to

- Describe the properties of polymers
- Report various processing of polymers
- Use various fibres and matrix materials for production of composite
- Prepare polymer matrix composites using various processing methods
- Produce metal matrix composites and ceramic matrix composites

PROFESSIONAL ELECTIVES ON MANUFACTURING MANAGEMENT

MECY052 LEAN SIX SIGMA

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the concepts and principles of lean Six Sigma
- To impart knowledge on lean six sigma methodologies
- To learn various tools and techniques of six sigma
- To instruct various lean tools
- To educate implementation of lean six sigma

MODULE I EVOLUTION OF LEAN SIX SIGMA 05

Introduction to Lean Principles and Six Sigma Concepts-Similarities and differences – Synergy-Evolution of Lean Six Sigma.

MODULE II LEAN SIX SIGMA APPROACH 08

Lean Six Sigma Methodology - Phases of Lean Six Sigma Method, Managing Lean Six sigma Project, Six sigma Methodologies (DMAIC, DMADV, DFSS)

MODULE III SIX SIGMA TOOLS AND TECHNIQUES 12

Advanced Statistical Tools - Statistical Process Control – Process Capability Analysis – Sigma computation - Hypothesis Testing – ANOVA-Design of Experiments- Chi – square test, Regression analysis – Case studies.

MODULE IV LEAN TOOLS 10

Value Stream Mapping – Poka Yoke-5S-Cycle Time Analysis-Push-Pull Systems-Waste Elimination – Total Productive Maintenance- Failure Mode Effect Analysis-Standard Work Practices-Control Plans, SMED, Kanban, Visual control, Kaizen – Case studies.

MODULE V LEAN SIX SIGMA IMPLEMENTATION 10

Identifying Lean Six Sigma Projects, Define Scope, Planning for Implementation, Selection of tools and techniques for each phase, Measuring the Benefits

Total Hours: 45

REFERENCES:

1. Michael L. George, David Rowlands, Bill Kastle ,What is Lean Six Sigma, McGraw-Hill, 2003
2. Thomas Pyzdek,The Six Sigma Handbook ,McGraw-Hill, 2000
3. James P. Womack, Daniel T. Jones, Lean Thinking, Free press business, 2003.
4. Forrest W. Breyfogle III, Implementing Six Sigma: Smarter Solutions Using Statistical Methods, 1999.
5. Liker, Jeffrey; Meier, David,Toyota Talent, Tata Mcgraw Hills

COURSE OUTCOMES:

Students should be able to

- Describe the concepts and principles of lean six sigma
- Use lean six sigma methodologies
- Apply various tools and techniques of six sigma
- Implement various lean tools
- Adopt lean six sigma for relevant industries

MECY053 MANUFACTURING MANAGEMENT

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the basic concepts of various layouts and material handling systems
- To learn work study techniques
- To gain knowledge on process planning and forecasting methods
- To inculcate knowledge on scheduling and project management
- To impart knowledge on functions of personnel and marketing management

MODULE I PLANT ENGINEERING 07

Plant location – Factors affecting plant location – Techniques – Plant layout - principles - Types –Comparison of layouts – Materials handling – Principles – Factors affecting selection of Materials handling system – Types of materials handling systems – Techniques.

MODULE II WORK STUDY 08

Method study – Principles of motion economy – steps in method study – Tools and Techniques – Work measurement – Purpose – stop watch time study – Production studies – work sampling – Ergonomics – Value analysis.

MODULE III PROCESS PLANNING AND FORECASTING 09

Process planning – Aims of process planning – steps to prepare the detailed work sheets for manufacturing a given component – Break even analysis – Forecasting – Purpose of forecasting – Methods of forecasting – Time series – Regression and Correlation – Exponential smoothing – Forecast errors.

MODULE IV SCHEDULING AND PROJECT MANAGEMENT 12

Scheduling – Priority rules scheduling – sequencing – Johnson's algorithm for job sequencing – n job M machine problems – Project Network analysis – PERT/CPM – Critical path –Floats – Resource leveling – Queuing analysis.

MODULE V PERSONNEL AND MARKETING MANAGEMENT 09

Principles of Management – Functions of personnel management – Recruitment – Training – Motivation – Communication – conflicts – Industrial relations – Trade Union – Functions of marketing – Sales promotion methods – Advertising – Product packaging – Distribution channels – Market research and techniques.

Total Hours: 45

REFERENCES

1. Dr. R. Kesavan, C.Elanchezian and B.Vijayaramnath, Production Planning and Control, Anuratha Publications, Chennai – 2008
2. Dr. R. Kesavan,C. Elanchezian and T.Sundar Selwyn, Engineering Management – Eswar Press, Chennai – 2005
3. Dr. R. Kesavan, C. Elanchezian, and B.Vijayaramnath, Principles of Management – Eswar Press – Chennai – 2004

5. Martand T. Telsang, Production Management, S.Chand & Co., 2005
6. Thomas E Mortan, Production and Operations Management, Vikas Publications, 2003.

COURSE OUTCOMES:

Students should be able to

- Describe the basic concepts of various layouts and material handling systems
- Apply the work study techniques in industries
- Perform process planning and forecasting for a manufacturing industry
- Implement the scheduling and project management techniques
- Execute the functions of personnel and marketing management

MECY054 PRODUCTION AND INVENTORY MANAGEMENT

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the fundamentals of production management
- To instruct various forecasting methods
- To inculcate planning methodologies and strategies
- To acquire knowledge on various control activities
- To gain knowledge on types of inventory systems

MODULE I INTRODUCTION 05

Production Management – Input-output model, Trends and challenges, value chains, operations strategy – Technological Innovations in Manufacturing – Corporate strategic choices – Process planning and selection.

MODULE II FORECASTING 10

Forecasting process – Time series forecasting models – moving averages, exponential smoothing – multi-item forecasting – regression models, qualitative methods, forecasting system controls.

MODULE III PLANNING ACTIVITIES 10

Capacity planning – Aggregate production planning strategies and methods – Master Production Schedule, MRP, MRP II, CRP, ERP.

MODULE IV CONTROL ACTIVITIES 10

Production Activity Control – Just-in-time systems – Scheduling in Manufacturing – Theory of constraints and synchronous manufacturing.

MODULE V INVENTORY MANAGEMENT 10

Classification of Inventory - Inventory costs - Deterministic and probabilistic models – Inventory control systems.

Total Hours: 45

REFERENCES:

1. Seetharama L.Narasimhan, Dennis W.McLeavey, Peter J.Billington, “Production Planning and Inventory Control”, PHI, 2002.
2. Panneerselvam, R. Production and operations management, PHI, 2005

3. Lee J.Krajewski, Larry P.Ritzman, “Operations Management”, Pearson Education, 2000
4. Mahadevan,B. Operations- Theory & Practice, Pearson Education, 2007.

COURSE OUTCOMES:

Students should be able to

- Explain the fundamentals of production management
- Apply various forecasting methods in production management
- Execute planning methodologies and strategies
- Implement different types of control activities
- Choose relevant inventory systems

MECY055	PRODUCTIVITY MANAGEMENT AND RE - ENGINEERING	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To learn productivity concepts and its measurement
- To impart knowledge on systems approach for productivity measurement
- To gain knowledge in organizational transformation concepts and models
- To study the Re-engineering process improvement models
- To educate Re-engineering tools and its implementation

MODULE I PRODUCTIVITY AND MEASUREMENT 09

Productivity concepts – Macro and micro factors of productivity – Dynamics of productivity - Productivity cycle - Productivity measurement at International, national and organisation level - Productivity measurement models.

MODULE II SYSTEMS APPROACH TO PRODUCTIVITY MEASUREMENT 09

Conceptual frame work – Management by objectives (MBO) - Performance objective productivity (POP) – Methodology and application to manufacturing and service sector.

MODULE III ORGANISATIONAL TRANSFORMATION 09

Elements of organisational transformation and re-engineering - Principles of organizational transformation and re-engineering – Fundamentals of process re-engineering – Preparing the workforce for transformation and re-engineering - Methodology, guidelines, LMI CIP Model – DSMC Q & PMP model.

MODULE IV RE-ENGINEERING PROCESS IMPROVEMENT MODELS 09

PMI models – PASIM model – Moen and Nolan strategy for process improvement – LMICIP model – NPRDC model.

MODULE V RE-ENGINEERING TOOLS AND IMPLEMENTATION 09

Analytical and process tools and techniques – Information and communication technology – Implementation of re-engineering projects – Success factors and common implementation problem – Cases.

Total Hours: 45

REFERENCES

1. Sumanth, D.J., Productivity Engineering and Management, TMH, New Delhi, 1990.
2. Edosomwan, J.A., Organisational Transformation and Process Re-engineering, Library Cataloging in Pub. Data, 1996.

4. Premvrat, Sardana, G.D. and Sahay, B.S., Productivity Management – A Systems Approach, Narosa Publishing House, New Delhi, 1998.

COURSE OUTCOMES:

Students should be able to

- Reproduce productivity concepts and its measurement
- Communicate systems approach for productivity measurement
- Apply organizational transformation concepts and models
- Implement the Re-engineering process improvement models
- Execute the Re-engineering tools

MECY056 SUPPLY CHAIN MANAGEMENT

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To study the basic concepts of supply chain management
- To acquire knowledge on logistics management
- To instruct the design of supply chain network
- To communicate the sourcing and pricing of supply chain
- To impart knowledge on technology involved in supply chain

MODULE I INTRODUCTION 06

Definition of Logistics and SCM: Evolution, Scope, Importance & Decision Phases – Drivers of SC Performance and Obstacles.

MODULE II LOGISTICS MANAGEMENT 10

Factors – Modes of Transportation - Design options for Transportation Networks- Routing and Scheduling – Inbound and outbound logistics- Reverse Logistics – 3PL- Integrated Logistics Concepts- Integrated Logistics Model – Activities - Measuring logistics cost and performance – Warehouse Management - Case Analysis.

MODULE III SUPPLY CHAIN NETWORK DESIGN 10

Distribution in Supply Chain – Factors in Distribution network design –Design options-Network Design in Supply Chain – Framework for network Decisions - Managing cycle inventory and safety.

MODULE IV SOURCING AND PRICING IN SUPPLY CHAIN 09

Supplier selection and Contracts - Design collaboration - Procurement process. Revenue management in supply chain

MODULE V COORDINATION AND TECHNOLOGY IN SUPPLY CHAIN 10

Supply chain coordination - Bullwhip effect – Effect of lack of co-ordination and obstacles – IT and SCM - supply chain IT frame work. E Business & SCM. Metrics for SC performance – Case Analysis.

Total Hours: 45

REFERENCES:

1. Sunil Chopra and Peter Meindl,Supply Chain Management, Strategy, Planning, and operation –- PHI, Second edition, 2007
2. David J.Bloomberg, Stephen Lemay and Joe B.Hanna,Logistics, , PHI 2002

4. Jeremy F.Shapiro, Thomson Duxbury Modeling the supply chain, 2002
5. James B.Ayers, Handbook of Supply chain management, St.Lucle Press, 2000

COURSE OUTCOMES:

Students should be able to

- Confer the basic concepts of supply chain management
- Express the concepts of logistics management
- Execute the design of supply chain network
- Apply the thoughts of sourcing and pricing of supply chain
- Use relevant technology involved in supply chain

MECY057 TECHNOLOGY MANAGEMENT

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To understand the basic methods of technology management in the global context
- To gain exposure in technology forecasting methods
- To communicate choice and evaluation of decision making studies
- To impart knowledge on technology transfer and acquisition
- To study technology absorption and innovation

MODULE I INTRODUCTION 09

Technology management - Scope, components, and overview – Technology and environment – Technology and society – Technology Impact analysis, environmental, social, legal, political aspects, techniques for analysis - steps involved. Technology policy strategy: Science and technology Policy of India, implications to industry – The dynamics of technology change.

MODULE II TECHNOLOGY FORECASTING 09

Need, methodology and methods - trend Analysis, Analogy, Delphi, Soft System Methodology, Mathematical Models, Simulation, and System Dynamics.

MODULE III TECHNOLOGY CHOICE AND EVALUATION 09

Issues in the development of new high tech products – Methods of analyzing alternate technologies – Techno-economic feasibility studies – Need for multi-criteria considerations such as, social, environmental, and political – Analytic hierarchy method – Fuzzy multi-criteria decision making, and other methods.

MODULE IV TECHNOLOGY TRANSFER AND ACQUISITION 09

Import regulations – Implications of agreements like Uruguay Round and WTO – Bargaining process – Transfer option, MOU- Technology Adoption and Productivity - Adopting technology-human interactions – Organisational redesign and re-engineering – Technology productivity.

MODULE V TECHNOLOGY ABSORPTION AND INNOVATION 09

Present status in India – Need for new outlook – Absorption strategies for acquired technology – creating new/improved technologies – Innovations – Technology Measurement – Technology Audit, Risk and exposure, R&D portfolio management.

Total Hours: 45

6. Gerard H. Gaynor, Handbook of Technology Management, McGraw-Hill Professional, 1996
7. Richard C. Dorf, Technology Management Handbook, CRC, 1999

COURSE OUTCOMES:

Students should be able to

- Describe the methods of technology management in the global context
- Illustrate technology forecasting methods
- Apply decision making studies for the choice and evaluation of technology
- Present knowledge on technology transfer and acquisition
- Critique technology absorption and innovation

MECY058 TOTAL QUALITY SYSTEM AND MANAGEMENT

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To study the basic concepts of TQM
- To communicate the knowledge on practice of TQM
- To learn the techniques of TQM
- To understand the concepts of statistical quality control
- To educate various sampling techniques

MODULE I INTRODUCTION 09

Principles of Quality Management – Pioneers of TQM –Quality Cost-Quality System- Customer Orientation –Bench marking – Re-engineering - Concurrent Engineering.

MODULE II PRACTICE OF TQM 09

Leadership – Organizational Structure - Team Building- Information Systems and Documentation –Quality Auditing-ISO 9000-QS 9000.

MODULE III TECHNIQUES OF TQM 09

Single vendor Concept –J.I.T –Quality Function Deployment- Quality Circles – KAIZEN- POKA YOKE - Taguchi Methods.

MODULE IV STATISTICAL QUALITY CONTROL 09

Methods and Philosophy of statistical process control –Control Charts for Variables and Attributes – Cumulative sum and Exponential - weighted moving average control charts- other SPC techniques –Process Capability Analysis – Six Sigma accuracy.

MODULE V SAMPLING TECHNIQUES 09

Acceptance sampling Problem –Single Sampling Plans for Attributes –Double, Multiple and Sequential sampling, Military standards – Dodge – Romig Sampling plans.

Total Hours: 45

6. Leavensworth. G.E.L., “Statistical Quality Control”, McGraw-Hill,1984.

COURSE OUTCOMES:

Students should be able to

- Express the basic concepts of TQM
- Implement the practice of TQM
- Apply the techniques of TQM
- Anayze the defects using control charts
- Use various sampling techniques for industrial products

MECY059 ENTREPRENEURSHIP

L	T	P	C
1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To introduce the fundamentals of entrepreneurship
- To impart knowledge on managerial skills and leadership qualities

MODULE I ENTREPRENEURSHIP 08

Entrepreneurship – Functions – Types – Expectations – Sources of finance – Concept of small scale and ancillary units – Sickness and Remedies in SMEs

MODULE II MANAGERIAL SKILLS AND LEADERSHIP QUALITIES 07

Characteristics of Management – Managerial Skills – Contribution of F.W.Taylor and Henry Fayol – Industrial Ownership - Leadership Styles – Qualities of Leadership – Morale – Motivation Theories (Maslow, Herzberg and ERG theory).

Total Hours: 15

TEXT BOOKS

1. “Text book of production management”, Shridhara Bhat.K, 1st Edition, Himalaya Publishing House.
2. “Industrial Engineering and Management”, Khanna.O.P, 2nd Edition, Dhanpat Rai Publications.

COURSE OUTCOMES:

Students should be able to

- Discuss the fundamentals of entrepreneurship
- Execute managerial skills and leadership qualities

GENERAL ELECTIVES

GECY101 PROJECT MANAGEMENT

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

The objectives of the course would be to make the students

- Learn to e valuate and choose an optimal project and build a project profile.
- Attain knowledge on risk identification and risk analysis
- Gain insight into a project plan and components
- Familiar with various gamut of technical analysis for effective project implementation
- Learn to apply project management techniques to manage resources.

MODULE I INTRODUCTION & PROJECT INITIATION 09

Introduction to project and project management - projects in contemporary organization – The project life cycle - project initiation - project evaluation methods & techniques - project selection criteria - project profile.

MODULE II RISK ANALYSIS 09

Sources of risk: project specific - competitive - industry specific - market and international risk – perspectives of risk – risk analysis: sensitivity analysis - scenario analysis - breakeven analysis - simulation analysis - decision tree analysis – managing/mitigating risk – project selection under risk.

MODULE III PROJECT PLANNING & IMPLEMENTATION 09

Project planning – importance – functions - areas of planning - project objectives and policies - steps in planning process - WBS – capital requirements - budgeting and cost estimation - feasibility analysis - creation of project plan – project implementation: pre-requisites - forms of project organization

MODULE IV TECHNICAL ANALYSIS 09

Technical analysis for manufacturing/construction/infrastructure projects – process/technology - materials and inputs - product mix - plant capacity – plant location and site selection – plant layout - machinery and equipment – structures and civil works – schedule of project implementation – technical analysis for software projects.

MODULE V PROJECT MANAGEMENT TECHNIQUES 09

Project scheduling - network construction – estimation of project completion time – identification of critical path - PERT & CPM – crashing of project network - complexity of project scheduling with limited resources - resource allocation - resource leveling – resource smoothing – overview of project management software.

Total Hours: 45

REFERENCES:

1. Projects: Planning, Analysis, Financing, Implementation and Review, Prasanna Chandra, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2004.
2. Project Management and Control, Narendra Singh, Himalaya Publishing, New Delhi, 2015.
3. A Management Guide to PERT/CPM, Jerome, D. Weist and Ferdinand K. Levy, Prentice Hall of India, New Delhi, 1994.

OUTCOMES:

On successfully completing this course, the student will be able to:

- Evaluate & select a project as well as develop a project profile.
- Identify various risks associated with the project and manage it effectively.
- Prepare a detailed project plan addressing its components.
- Perform technical analysis for effective project implementation
- Apply project management techniques for maximizing resource utilization.

GECY102 SOCIETY, TECHNOLGY & SUSTAINABILITY

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- To understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

MODULE I TECHNOLOGY AND ITS IMPACTS 09

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life – Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT 09

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change.

MODULE III SOCIETY AND TECHNOLOGY 09

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of technology – Impact of technology on developer and consumers – Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE 09

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media

Technology – Information Systems Technology – Nanotechnology – Space Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY 09

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

Total Hours: 45

REFERENCES:

2. Arthur W.A, “The nature of Technology: What it is and how it evolves”, Free Press, NY, USA, 2009.
3. Winston M and Edelbach R, “Society, Ethics and Technology”, 3rd Edition, San Francisco, USA, 2005.
4. Martin A.A Abraham, “Sustainability Science and Engineering: Defining Principles”, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

COURSE OUTCOMES:

At the end of this course, the students will be able to

- Understand the benefits of modern technology for the well-being of human life.
- Connect sustainability concepts and technology to the real world challenges.
- Find pathway for sustainable society.

GECY103 ARTIFICIAL INTELLIGENCE

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- Expose the history and foundations of artificial intelligence.
- Showcase the complexity of working on real time problems underlying the need for intelligent approaches.
- Illustrate how heuristic approaches provide a good solution mechanism.
- Provide the mechanisms for simple knowledge representation and reasoning.
- Highlight the complexity in working with uncertain knowledge.
- Discuss the current and future applications of artificial intelligence.

MODULE I HISTORY AND FOUNDATIONS 08

History – Scope – Influence from life – Impact of computing domains - Agents in environments - Knowledge representation – Dimensions of Complexity – Sample application domains – Agent structure.

MODULE II SEARCH 10

Problem solving as search – State spaces – Uninformed Search – Heuristic search – Advanced search – Constraint satisfaction - Applications.

MODULE III KNOWLEDGE REPRESENTATION AND REASONING 10

Foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

MODULE IV REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE 08

Probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference, sample applications.

MODULE V CASE STUDY AND FUTURE APPLICATIONS 09

Design of a game / Solution for problem in student's domain. Natural Language processing, Robotics, Vehicular automation – Scale, Complexity, Behaviour – Controversies.

Total Hours: 45

TEXT BOOK:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2010.
2. David Poole, Alan Mackworth, Artificial Intelligence: Foundations of Computational Agents, Cambridge University Press, 2010.
3. Nils J. Nilsson, The Quest for Artificial Intelligence, Cambridge University Press, Online edition, 2013.
4. Keith Frankish, William M. Ramsey (eds) The Cambridge Handbook of Artificial Intelligence, Cambridge University Press, 2014.

COURSE OUTCOMES:

Students who complete this course will be able to

- Discuss the history, current applications, future challenges and the controversies in artificial intelligence.
- Apply principle of AI in the design of an agent and model its actions.
- Design a heuristic algorithm for search problems.
- Analyze and represent the fact using logic for a given scenario
- Represent uncertainty using probabilistic models
- Develop a simple game or solution using artificial intelligence techniques.

GECY104 GREEN COMPUTING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To focus on the necessity of green computing technology.
- To expose to various issues with information technology and sustainability.
- To attain knowledge on the technologies for enabling green cloud computing.
- To elaborate on the energy consumption issues
- To illustrate a Green and Virtual Data Center
- To develop into a Green IT Technologist.

MODULE I INTRODUCTION 08

Trends and Reasons to Go Green - IT Data Center Economic and Ecological Sustainment - The Growing Green Gap: Misdirected Messaging, Opportunities for Action - IT Data Center “Green” Myths and Realities - PCFE Trends, Issues, Drivers, and Related Factors - Green Computing and Your Reputation- Green Computing and Saving Money- Green Computing and the Environment

MODULE II CONSUMPTION ISSUES 10

Minimizing power usage – Cooling - Electric Power and Cooling Challenges - Electrical – Power -Supply and Demand Distribution - Determining Energy Usage - From Energy Avoidance to Efficiency - Energy Efficiency Incentives, Rebates, and Alternative Energy Sources - PCFE and Environmental Health and Safety Standards- Energy-exposed instruction sets- Power management in power-aware real-time systems.

MODULE III NEXT-GENERATION VIRTUAL DATA CENTERS 09

Data Center Virtualization - Virtualization beyond Consolidation - Enabling Transparency - Components of a Virtual Data Center - Datacenter Design and Redesign - Greening the Information Systems - Staying Green- Building a Green Device Portfolio- Green Servers and Data Centers- Saving Energy

MODULE IV TECHNOLOGIES FOR ENABLING GREEN AND VIRTUAL DATA CENTERS 08

Highly Effective Data Center Facilities and Habitats for Technology - Data Center Electrical Power and Energy Management - HVAC, Smoke and Fire Suppression

- Data Center Location - Virtual Data Centers Today and Tomorrow - Cloud Computing, Out-Sourced, and Managed Services.

MODULE V SERVERS AND FUTURE TRENDS OF GREEN COMPUTING 10

Server Issues and Challenges - Fundamentals of Physical Servers - Types, Categories, and Tiers of Servers - Clusters and Grids - Implementing a Green and Virtual Data Center - PCFE and Green Areas of Opportunity- 12 Green Computer Companies- What's in Green computer science-Green off the Grid aimed for data center energy evolution-Green Grid Consortium- Green Applications- Green Computing Making Great Impact On Research

Total Hours: 45

REFERENCES:

6. Marty Poniatowski, "Foundation of Green IT: Consolidation, Virtualization, Efficiency, and ROI in the Data Center", Printice Hall, ISBN: 9780-1-3704-375-0, 2009.

COURSE OUTCOMES:

Students who complete this course will be able to

- Demonstrate issues relating to a range of available technologies, systems and practices to support green computing.
- Select appropriate technologies that are aimed to reduce energy consumption.
- Address design issues needed to achieve an organizations' green

computing objectives.

- Analyze the functionality of Data Centers.
- Critically evaluate technologies and the environmental impact of computing resources for a given scenario.
- Compare the impact of Green Computing with other computing techniques.

GECY105 GAMING DESIGN

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To master event-based programming
- To learn resource management as it relates to rendering time, including level-of-detail and culling.
- To become familiar with the various components in a game or game engine.
- To explore leading open source game engine components.
- To become familiar of game physics.
- To be compatible with game animation.

MODULE I INTRODUCTION 09

Magic Words – What Skills Does a Game Designer Need? – The Most Important Skill -The Five Kinds of Listening-The Secret of the Gifted.

MODULE II THE DESIGNER CREATES AN EXPERIENCE 09

The Game Is Not the Experience -Is This Unique to Games? -Three Practical Approaches to Chasing Rainbows -Introspection: Powers, Perils, and Practice -Dissect Your Feelings -Defeating Heisenberg -Essential Experience.

MODULE III THE EXPERIENCE IN THE PLAYER MIND AND GAME MECHANICS 08

Modeling – Focus -Empathy – Imagination – Motivation – Space – Objects, Attributes, and States – Actions – Rules.

MODULE IV GAMES THROUGH AN INTERFACE 09

Breaking it Down – The Loop of Interaction – Channels of Information – Other Interface.

MODULE V BALANCED GAME MECHANICS 10

Balance – The Twelve Most Common Types of Game Balance – Game Balancing Methodologies - Balancing Game Economies.

Total Hours: 45

REFERENCES:

1. Jesse Schell, "The Art of Game Design: A Book of Lenses", 2nd Edition

ISBN-10: 1466598646, 2014.

2. Ashok Kumar, Jim Etheredge, Aaron Boudreaux, “Algorithmic and Architectural Gaming Design: Implementation and Development", 1st edition, Idea Group, U.S ISBN-10: 1466616342, 2012.

4. James M. Van Verth, Lars M. Bishop "Essential Mathematics for Games and Interactive Applications", Third Edition, A K Peters / CRC Press, ISBN-10: 1482250926, 2015.

COURSE OUTCOMES:

Students who complete this course will be able to

- Realize the basic history and genres of games
- Demonstrate an understanding of the overall game design process
- Explain the design tradeoffs inherent in game design
- Design and implement basic levels, models, and scripts for games
- Describe the mathematics and algorithms needed for game programming
- Design and implement a complete three-dimensional video game

GECY106 SOCIAL COMPUTING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To create original social applications, critically applying appropriate theories and effective practices in a reflective and creative manner.
- To critically analyze social software in terms of its technical, social, legal, ethical, and functional features or affordances.
- To encourage the development of effective communities through the design, use, and management of social software.
- To give students with a base of knowledge and advances for them to critically examine existing social computing services.
- To plan and execute a small-scale research project in social computing in a systematic fashion.
- To become familiar with the concept of computational thinking.

MODULE I BASIC CONCEPTS 09

Networks and Relations: Relations and Attributes, Analysis of Network Data, Interpretation of network data -New Social Learning – Four Changes that Shift Work - Development of Social Network Analysis: Sociometric analysis and graph theory, Interpersonal Configurations and Cliques – Analysing Relational Data.

MODULE II SOCIAL LINK 09

Individual Actors, Social Exchange Theory, Social Forces, Graph Structure, Agent Optimization Strategies in Networks – Hierarchy of Social Link Motivation- Social Context.

MODULE III SOCIAL MEDIA 08

Trends in Computing – Motivations for Social Computing – Social Media: Social relationships, Mobility and Social context – Human Computation – Computational Models- Business use of social Media.

MODULE IV SOCIAL INFORMATION FILTERING 09

Mobile Location Sharing – Location based social media analysis – Social Sharing and Social Filtering – Automated recommender Systems – Traditional and Social Recommender Systems.

MODULE V SOCIAL NETWORK STRATEGY 10

Application of Topic Models – Opinions and Sentiments – Recommendation Systems – Language Dynamics and influence in online communities – Psychometric analysis – Case Study: Social Network Strategies for surviving the zombie apocalypse.

Total Hours: 45

REFERENCES:

6. Jennifer Golbeck, “Analyzing the Social Web”, Elsevier Publication, 2013.
7. Huan Liu, John Salerno, Michael J. Young, “Social computing and Behavioral Modeling”, Springer Publication, 2009.

COURSE OUTCOMES:

Students who complete this course will be able to

- Realize the range of social computing applications and concepts.
- Analyze data left after in social media.
- Recognize and apply the concepts of computational models underlying social computing.
- Take out simple forms of social diagnostics, involving network and language models, applying existing analytic tools on social information.
- Evaluate emerging social computing applications, concepts, and techniques in terms of key principles.
- Design and prototype new social computing systems.

GECY107 SOFT COMPUTING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

The aim of the course is to

- Enumerate the strengths and weakness of soft computing
- Illustrate soft computing methods with other logic driven and statistical method driven approaches
- Focus on the basics of neural networks, fuzzy systems, and evolutionary computing
- Emphasize the role of euro-fuzzy and hybrid modeling methods
- Trace the basis and need for evolutionary computing and relate it with other soft computing approaches

MODULE I SOFT COMPUTING - BASICS 06

Soft computing – Hard Computing – Artificial Intelligence as the basis of soft computing – Relation with logic driven and statistical method driven approaches- Expert systems – Types of problems: Classification, Functional approximation, Optimizations – Modeling the problem – Machine Learning – Hazards of Soft Computing – Current and future areas of research

MODULE II ARTIFICIAL NEURAL NETWORK 12

Artificial Neuron – Multilayer perceptron – Supervised learning – Back propagation network –Types of Artificial Neural Network: Supervised Vs Un Supervised Network – Radial basis function Network – Self Organizing Maps – Recurrent Network – Hopfield Neural Network – Adaptive Resonance Theory – Issues in Artificial Neural Network – Applications

MODULE III FUZZY SYSTEMS 09

Fuzzy Logic – Membership functions – Operators – Fuzzy Inference systems – Other sets: Rough sets, Vague Sets – Fuzzy controllers - Applications

MODULE IV NEURO FUZZY SYSTEMS 09

Cooperative Neuro fuzzy systems – Neural network driven fuzzy reasoning – Hybrid Neuro fuzzy systems – Construction of Neuro Fuzzy systems: Structure Identification phase, Parameter learning phase – Applications

MODULE V EVOLUTIONARY COMPUTING 09

Overview of evolutionary computing – Genetic Algorithms and optimization –

Genetic Algorithm operators – Genetic algorithms with Neural/Fuzzy systems – Variants of Genetic Algorithms– Population based incremental learning – Evolutionary strategies and applications

Total Hours: 45

TEXTBOOKS:

1. Samir Roy, “Introduction to Soft Computing: Neuro-Fuzzy and Genetic Algorithms”, Pearson, 2013
2. Anupam Shukla, Ritu Tiwari and Rahul Kala, “Real life applications of Soft Computing”, CRC press, 2010.
3. Fakhreddine O. Karray, “Soft Computing and Intelligent Systems Design: Theory, Tools and Applications”, Pearson, 2009

COURSE OUTCOMES:

At the end of the course the students will be able to

- Enumerate the theoretical basis of soft computing
- Explain the fuzzy set theory
- Discuss the neural networks and supervised and unsupervised learning networks
- Demonstrate some applications of computational intelligence
- Apply the most appropriate soft computing algorithm for a given situation

GECY108 EMBEDDED SYSTEM PROGRAMMING

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To introduce the design of embedded computing systems with its hardware and software architectures.
- To describe entire software development lifecycle and examine the various issues involved in developing software for embedded systems.
- To analyze the I/O programming and Embedded C coding techniques
- To equip students with the software development skills necessary for practitioners in the field of embedded systems.

MODULE I INTRODUCTION OF EMBEDDED SYSTEM 09

Embedded computing – characteristics and challenges – embedded system design process – Overview of Processors and hardware units in an embedded system – Compiling, Linking and locating – downloading and debugging – Emulators and simulators processor – External peripherals – Memory testing – Flash Memory.

MODULE II SOFTWARE TECHNOLOGY 09

Software Architectures, Software development Tools, Software Development Process Life Cycle and its Model, Software Analysis, Design and Maintenance.

MODULE III INPUT/OUTPUT PROGRAMMING 09

I/O Instructions, Synchronization, Transfer Rate & Latency, Polled Waiting Loops, Interrupt – Driven I/O, Writing ISR in Assembly and C, Non Maskable and Software Interrupts

MODULE IV DATA REPRESENTATION IN EMBEDDED SYSTEMS 09

Data representation, Twos complement, Fixed point and Floating Point Number Formats, Manipulating Bits in -Memory, I/O Ports, Low level programming in C, Primitive data types, Arrays, Functions, Recursive Functions, Pointers, Structures & Unions, Dynamic Memory Allocation, File handling, Linked lists, Queues, Stacks.

MODULE V EMBEDDED C 09

Embedded Systems programming in C – Binding & Running Embedded C program in Keil IDE – Dissecting the program - Building the hardware. Basic techniques for

reading & writing from I/O port pins – switch bounce - LED Interfacing using Embedded C.

Total Hours: 45

REFERENCES:

1. Marilyn Wolf, "Computers as components ", Elsevier, 2012.
2. Qing Li and Carolyn Yao, "Real-Time Concepts for Embedded Systems", CMP Books, 2003.
3. Daniel W. Lewis, "Fundamentals of embedded software where C and assembly meet", Pearson Education
4. Michael Bass, "Programming Embedded Systems in C and C++", Oreilly, 2003.

COURSE OUTCOMES:

On completion of this course the student will be able to

- Design the software and hardware components in embedded system
- Describe the software technology
- Use interrupt in effective manner
- Use keil IDE for programming
- Program using embedded C for specific microcontroller
- Design the embedded projects

GECY109 PRINCIPLES OF SUSTAINABLE DEVELOPMENT

L	T	P	C
3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To impart knowledge in the concepts and dimensions of sustainable development.
- To gain knowledge on the framework for achieving sustainability.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 09

Environment and Development - Population poverty and Pollution – Global and Local environmental issues – Resource Degradation- Greenhouse gases – Desertification-industrialization – Social insecurity, Globalization and environment. History and emergence of the concept of sustainable development-Objectives of Sustainable Development.

MODULE II COMPONENTS AND DIMENSIONS OF SUSTAINABLE DEVELOPMENT 09

Components of Sustainability – Complexity of growth and equity – Social economic and environmental dimensions of sustainable development – Environment – Biodiversity – Natural – Resources – Ecosystem integrity – Clean air and water – Carrying capacity – Equity, Quality of Life, Prevention, Precaution – Preservation and Public Participation Structural and functional linking of developmental dimensions.

MODULE III FRAMEWORK FOR ACHIEVING SUSTAINABILITY 09

Operational guidelines – interconnected prerequisites for sustainable development Empowerment of Women, children, Youth, Indigenous People, Non-Governmental Organizations Local Authorities, Business and industry – Science and Technology for sustainable development – performance indicators of sustainability and assessment mechanism – Constraints and barriers for sustainable development.

MODULE IV SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 09

Demographic dynamics of sustainability – Policies for socio-economic development – Strategies for implementing eco-development programmes Sustainable development through trade – Economic growth – Action plan for implementing sustainable development – Urbanization and sustainable Cities – Sustainable Energy and Agriculture – sustainable livelihoods.

MODULE V SUSTAINABLE DEVELOPMENT AND INTERNATIONAL RESPONSE 09

Role of developed countries in the development of developing countries – international summits – Stockholm to Johannesburg – Rio principles – Agenda-Conventions – Agreements – Tokyo Declaration – Doubling statement – Tran boundary issues integrated approach for resources protection and management

Total Hours: 45

REFERENCES:

1. Sayer J. and Campbell, B., The Science of Sustainable Development: Local Livelihoods and the Global environment - Biological conservation restoration & Sustainability, Cambridge university Press, London, 2003.
2. M.K. Ghosh Roy. and Timberlake, Sustainable Development, Ane Books Pvt. Ltd, 2011.
3. Mackenthun K.M., Concepts in Environmental Management, Lewis Publications London, 1999.
4. APJ Abdul Kalam and Srijan Pal Singh, Target 3 Billion: Innovative Solutions Towards Sustainable Development, Penguin India, 2011

COURSE OUTCOMES:

At the end of the course the student will be able to

- Describe the concepts of sustainable development
- Define the components and dimensions of sustainable development
- Outline the Frame work for achieving sustainability.
- State the policies and strategies for implementing sustainable development for Socio economic programmes.
- Examine the role of developed countries in sustainable development.

GECY110 QUANTITATIVE TECHNIQUES IN MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVE:

To impart knowledge on

- Concepts of operations research
- Inventory control in production management
- Financial management of projects
- Decision theory and managerial economics

MODULE I OPERATIONS RESEARCH 09

Introduction to Operations research – Linear programming – Graphical and Simplex Methods, Duality and Post-Optimality Analysis – Transportation and Assignment Problems

MODULE II PRODUCTION MANAGEMENT 09

Inventory control, EOQ, Quantity Discounts, Safety Stock – Replacement Theory – PERT and CPM – Simulation Models – Quality Control.

MODULE III FINANCIAL MANAGEMENT 09

Working Capital Management – Compound Interest and Present Value methods – Discounted Cash Flow Techniques – Capital Budgeting.

MODULE IV DECISION THEORY 09

Decision Theory – Decision Rules – Decision making under conditions of certainty, risk and uncertainty – Decision trees – Utility Theory.

MODULE V MANAGERIAL ECONOMICS 09

Cost concepts – Break even Analysis – Pricing techniques – Game Theory applications.

Total Hours: 45

REFERENCES:

1. Vohra, N.D. , Quantitative Techniques in Management, Tata McGraw Hill Co., Ltd, New Delhi, 2009.
2. Seehroeder, R.G., Operations Management, McGraw Hill, USA, 2002.

4. Frank Harrison, E., The Managerial Decision Making Process, Houghton Miffin Co. Boston, 2005.
5. Hamdy A. Taha, Operations Research- An Introduction, Prentice Hall, 2002.

OUTCOME:

At the end of the course, the students will be able to

- Apply the concepts of operations research for various applications
- Create models for inventory control in production management
- Compute the cash flow for a project
- Choose a project using decision theory based on the risk criterion.
- Apply the concepts of managerial economics in construction management

GECY111 PROGRAMMING USING MATLAB & SIMULINK

L	T	P	C
1	0	2	2

COURSE EDUCATIONAL OBJECTIVES:

The aim of this course is to:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION TO MATLAB AND DATA PRESENTATION 10

Introduction to MATLAB-Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts- Making clear and compelling plots-Solving systems of linear equations numerically and symbolically.

Lab Experiments

1. Study of basic matrix operations and manipulations.
2. Numerical and symbolical solution of linear equations.

MODULE II ROOT FINDING AND MATLAB PLOT FUNCTION 10

Linearization and solving non-linear systems of equations- The Newton-Raphson method- Integers and rational numbers in different bases- Least squares regression -Curve fitting-Polynomial fitting and exponential fitting.

Lab Experiments

1. Solution of non linear equations using Newton-Raphson method.
2. Determination of polynomial fit and exponential fit for the given data.

MODULE III LINEAR AND NON-LINEAR DIFFERENTIAL EQUATIONS 13

Numerical integration and solving first order, ordinary differential equations (Euler's method and Runge-Kutta) - Use of ODE function in MATLAB- Converting second order and higher ODEs to systems of first order ODEs- Solving systems of higher order ODEs via Euler's method and Runge-Kutta) - Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations - Plot Function –Saving & Painting Plots.

Lab Experiments

1. Solution of fourth order linear differential equations using
    a. Trapezoidal Rule

b. Euler method

2. Solution of fourth order non-linear differential equations using
   a. Modified Euler method
   b. Runge – Kutta method

MODULE IV INTRODUCTION OF SIMULINK 12

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- - Representing a model as a subsystem- Programme specific Simulink demos.

Lab Experiments

1. Solution of fourth order non-linear differential equations using simulink.
2. Programme specific experiment based on simulink.

Total Hours (Including Practicals): 45

REFERENCE:

1. Griffiths D V and Smith I M, “Numerical Methods for Engineers”, Blackwell, 1991.
2. Laurene Fausett, “Applied Numerical Analysis Using MATLAB”, Pearson 2008.
3. Moin P, “Fundamentals of Engineering Numerical Analysis”, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB”, CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving, “Mathematical Exploration with MATLAB”, Cambridge University Press, 1999.

COURSE OUTCOMES:

At the end of this unit students will be able to:

- Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
- Write programs using first principles without automatic use of built-in ones.
- Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
- Be fluent in exploring Matlab’s capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
- Make use of Maltab visual capabilities for all engineering applications.

- An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECY112 JAVA PROGRAMMING

L	T	P	C
1	0	2	2

COURSE EDUCATIONAL OBJECTIVES:

- To learn the fundamentals of Java programming such as data types, variables and arrays.
- To study the syntax and necessity of decision making and iterative statements.
- To create a class and invoke the methods.
- To instigate programming in overloading of methods.
- To emphasize the concept of packages.
- To learn the exception handling routines.

MODULE I INTRODUCTION TO JAVA PROGRAMMING 08

History and Evolution of Java – Overview of Java – Data types, variables and arrays – Operators – Control statements.

MODULE II METHODS AND CLASSES 07

Class fundamentals – Declaring objects – Methods – Constructors – Garbage collection – Overloading methods – Constructor overloading – Access control – Inheritance – Packages - Exception handling.

L: 15, P: 30, Total Hours: 15

4. Yashavant Kanetka**, “**Let Us Java”, 2nd Edition, BPB Publications, 2012**.**

COURSE OUTCOMES:

Students who complete this course will be able to

- Implement basic Java programming.
- Create a class and invoke methods for real world problems.

- Construct simple overloading of methods programs.
- Implement various types of inheritance concepts.
- Describe the access control mechanism.
- Handle exception thrown while implementing programming.

GECY113 PYTHON PROGRAMMING

L	T	P	C
1	0	2	2

COURSE EDUCATIONAL OBJECTIVES:

- To learn the list and records of python programming.
- To study the control statements and string functions of python.
- To instigate the fundamental python programming.
- To emphasize GUI in python.
- To integrate python with embedded systems.
- To implement programs in python.

MODULE I INTRODUCTION TO PYTHON PROGRAMMING 08

Installation and environment set up – syntax used in python – variable types – operators – Loops – decision making – string functions - formatted files - GUI basics.

MODULE II EMBEDDED PROGRAMMING USING PYTHON 07

Web interface – system tools – script execution context - Motion-triggered LEDs – Python - Arduino prototyping-storing and plotting Arduino data-Remote home monitoring system.

L: 15, P: 30, Total Hours: 15

COURSE OUTCOMES:

Students who complete this course will be able to

- Implement date and time function programming using python.

- Write formatted file programming.
- Construct simple python programs.
- Create web interface using python programming
- Develop embedded system with python programming.
- Build Arduino prototype using python programming.

GECY114 INTELLECTUAL PROPERTY RIGHTS (IPR)

L	T	P	C
1	0	0	1

COURSE EDUCATIONAL OBJECTIVES:

- To study about Intellectual property rights and its need
- To explore the patent procedure and related issues

MODULE I INTRODUCTION 07

Introduction and the need for intellectual property right (IPR) – IPR in India – Genesis and Development – IPR in abroad – Important examples of IPR – Copyrights, Trademarks, Patents, Designs, Utility Models, Trade Secrets and Geographical Indications – Industrial Designs

MODULE II PATENT 08

Concept of Patent – Product / Process Patents & Terminology – Duration of Patents – Law and Policy Consideration Elements of Patentability –- Patentable Subject Matter – Procedure for Filing of Patent Application and types of Applications – Procedure for Opposition – Revocation of Patents – Working of Patents- Patent Agent – Qualification and Registration Procedure – Patent databases and information system – Preparation of patent documents – Process for examination of patent application- Patent infringement – Recent developments in patent system

Total Hours: 15

REFERENCES

8. Jatindra Kumar Das, Law of Copyright, PHI Learning, 2015

COURSE OUTCOMES:

Students should be able to

- Identify the various types of intellectual property and their value
- Apply the procedure to file a patent and to deal the related issues
- Search and extract relevant information from various intellectual database

REGULATIONS, CURRICULAM AND SYLLABUS

M. TECH.
ELECTRONICS AND INSTRUMENTATION ENGINEERING

(As approved by the 9th Academic Council)

JULY 2016

B.S.ABDUR RAHMAN UNIVERSITY
B.S.ABDUR RAHMAN INSTITUTE OF SCIENCE & TECHNOLOGY
(Estd.u/s 3 of the UGC Act, 1956)
(FORMERLY B.S.ABDUR RAHMAN CRESCENT ENGINEERING COLLEGE)
Seethakathi Estate, G.S.T. Road, Vandalur, Chennai - 600 048.

VISION AND MISSION OF THE DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

VISION

The Department aspires to excel in providing quality education, training and research in the area of Electronics and Instrumentation Engineering to meet the industrial and societal needs.

MISSION

- To provide quality education in the field of Electronics and Instrumentation Engineering by offering Under Graduate, Post Graduate and Doctoral Programs.
- To impart technical knowledge and hands on experience, leadership and managerial skills to meet the current industrial and societal needs.
- To enhance problem solving capabilities through design projects, internship and industrial projects.
- To maintain active linkages with industries and research institutions
- To develop analytical skills, leadership quality and team spirit through balanced curriculum and a judicial mix of co-curricular, extra-curricular and professional society activities.
- To enrich the knowledge and skills of faculty through continuous learning and active research.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

PROGRAMME EDUCATIONAL OBJECTIVES

1. To provide advanced knowledge in the areas of Instrumentation, Control & Electronics and be aware of latest trends in the fields
2. To develop ability to design, implement and maintain the automation systems for the process industries
3. To develop skill by providing practical exposure in the areas of Electronics and Instrumentation Engineering, to interpret and evaluate the experimental results
4. To kindle interest in the development of innovative ideas in the real time problems related to electronics, Instrumentation and Control and take up projects to implement these ideas
5. To impart necessary managerial and soft skills required to face the challenges in process industries and software companies.
6. To inculcate sustained interest in the process of lifelong learning to keep abreast of new developments in the field of Electronics, Instrumentation and Control.

PROGRAMME OUTCOME

1. Identify real-time problems in the areas of instrumentation, industrial automation & microelectronics and carryout industry standard project
2. Apply the in-depth knowledge gained in the areas of Electronics , Instrumentation and Process Control to find feasible and optimal solutions for industrial problems
3. Formulate/Select and apply relevant techniques, resources and Engineering & IT tools for the design of instrumentation systems; process modeling and control
4. Function actively and efficiently as a lead of different teams and multidisciplinary projects
5. Communicate effectively the engineering concepts and ideas with a wide range of engineering community and others, to understand and prepare reports, to make effective presentations and to frame instructions and guidelines.
6. Carry out the assigned task in the career with professional approach and ethical responsibility
7. Recognize the need for self and life-long learning keeping pace with technological changes.

CURRICULUM & SYLLABI FOR

M. Tech (Electronics and Instrumentation Engineering)

CURRICULUM

FOUR SEMESTERS / FULL TIME)

S. No	Course Code	Course Name	L	T	P	C
		Semester I				
1	MAC6184	Probability, Matrix Theory And Linear Programming	**3**	**1**	**0**	**4**
2	EEC6101	System Theory	**3**	**0**	**0**	**3**
3	EIC6101	Microcontroller based system design	**3**	**0**	**0**	**3**
4	EIC6102	Frequency based Control System	**3**	**0**	**2**	**4**
5	EIC6103	Applied Industrial Instrumentation	**3**	**0**	**0**	**3**
6		Professional Elective				**2/3**
		Total Credit (semester I)				**19/20**
		Semester II				
1	GEC6201	Research Methodology for Engineers	**3**	**0**	**0**	**3**
2	EIC6211	Advanced Process Control	**3**	**0**	**2**	**4**
3	EIC6212	Industrial Automation using PLC, SCADA and DCS	**3**	**0**	**2**	**4**
4		Professional Elective (min credit of 9)				**9**
5	EIC6213	Mini project/Seminar	**0**	**0**	**2**	**1**
		Total Credit (semester II)				**21**
		Semester III				
1		Professional Elective				**7/6**
2		General Elective (min credit of 3)				**3**
3	EIC7102	Industry Internship	**0**	**0**	#	**1**
4	EIC7101	Project Phase I	**0**	**0**	**12**	**6***
		Total Credit (semester III)				**17/16**
		# - Two week summer internship				
		Semester IV				
1	EIC7101	Project Phase II	**0**	**0**	**36**	**18**
		Total Credit (semester IV)				**18**

S. No	Course Code	Course Name	L	T	P	C

*Credit for Project Phase I to be accounted along with Project work phase II in IV semester

**Value added course by industrial person / Academician with 1 credit

Grand Total of credits **75**

List of Electives

General Elective (GE1) (to be appended) (3 credits)

S. No	Course Code	Course Name	L	T	P	C
Professional Elective (Semester 1 Electives)			**(2/3 credits)**			
1.	EICY101	Piping & Instrumentation for Process Industries	**2**	**0**	**0**	**2**
2.	EICY102	Applied soft computing techniques for Process Modeling, Control and Optimization	**2**	**0**	**2**	**3**
3.	EICY103	Instrumentation System Design	**2**	**0**	**2**	**3**
Professional Elective - (Semester 2 Electives)			**(9 credits)**			
1	EICY201	System Identification and Modeling	**2**	**0**	**2**	**3**
2	EICY202	Adaptive Control	**3**	**0**	**0**	**3**
3	EICY203	Optimal Control	**3**	**0**	**0**	**3**
4	EICY204	Virtual Instrumentation	**2**	**0**	**2**	**3**
5	EICY205	Advanced Fibre optics and Laser Instrumentation	**3**	**0**	**0**	**3**
6	EICY206	Applied Biomedical Instrumentation	**3**	**0**	**0**	**3**
7	ECCY001	Digital Image Processing	**3**	**0**	**0**	**3**
8	ECC6104	Advanced Digital Signal Processing	**3**	**1**	**0**	**4**
9	ECCY022	Speech and Audio Signal Processing	**3**	**0**	**0**	**3**
10	ECCY016	Network Security	**3**	**0**	**0**	**3**
11	MACY081	Signal Processing Techniques	**3**	**1**	**0**	**4**
12	ECCY050	MEMS System Design	**3**	**0**	**0**	**3**
Professional Elective (Semester 3 Electives)			**(7/6 credits)**			
1	EICY130	Fault Tolerant Control	**3**	**0**	**0**	**3**
2	EICY131	Robotics and Automation	**3**	**0**	**0**	**3**
3	EICY132	Instrumentation in Power Plant	**3**	**0**	**0**	**3**
4	EICY133	Instrumentation in Petrochemical Industry	**3**	**0**	**0**	**3**
5	EICY134	Value Added Course	**1**	**0**	**0**	**1**
6	ECCY025	Wireless Communication	**3**	**0**	**0**	**3**
7	ECCY011	Medical Image Processing	**3**	**0**	**0**	**3**
8	ECCY026	Wireless sensor Networks	**3**	**0**	**0**	**3**
9	EEC6128	Embedded and Advanced Control of	**3**	**0**	**2**	**4**

		Electric Drives				
10	EEC6235	Solid State AC and DC Drives	**3**	**0**	**0**	**3**
11	EECY047	Special Electrical Machines and Controllers	**3**	**0**	**0**	**3**

GENERAL ELECTIVES FOR M.TECH PROGRAMMES

Sl. No.	Course Code	Course Title	L	T	P	C
1	GECY101	Project management	**3**	**0**	**0**	**3**
2	GECY102	Society, Technology & Sustainability	**3**	**0**	**0**	**3**
3	GECY103	Artificial Intelligence	**3**	**0**	**0**	**3**

14	GECY114	Intellectual Property Rights	**1**	**0**	**0**	**1**

SEMESTER I

		L	T	P	C
MAC6184	**PROBABILITY, MATRIX THEORY AND LINEAR PROGRAMMING**	**3**	**1**	**0**	**4**

OBJECTIVE:

The aim of this course is to

- provide a comprehensive introduction to the probability distributions used in engineering.
- familiarize students with advanced matrix theory and variational problems.
- expose the students to Operations Research using concepts of linear programming.

MODULE I PROBABILITY DISTRIBUTIONS 10+03

Axioms of probability – addition and multiplication theorem – conditional probability – total probability – random variables - moments – moments generating functions and their properties- Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

MODULE II TWO DIMENSIONAL RANDOM VARIABLES 08+03

Joint distributions - marginal and conditional distributions - functions of random variables - covariance - correlation and regression - Central limit theorem.

MODULE III ADVANCED MATRIX THEORY 09+03

Matrix norms - singular value decomposition - QR algorithm - pseudo inverse - least square approximations.

MODULE IV LINEAR PROGRAMMING 10+03

Formation - graphical method - simplex method - Big-M method - Two Phase method - transportation and assignment problems.

MODULE V CALCULUS OF VARIATIONS 08+03

Variation and its properties – Euler's equation – functional dependant on first and higher order derivatives – functional dependant on functions of several independent variables – variational problems with moving boundaries – isoperimetric problems – Ritz and Kantorovich methods.

L – 45; T – 15; Total – 60

TEXT BOOKS:

1. S.M.Ross, “A First Course in Probability”, 9th edition, Pearson Education, 2013.
2. Lewis.D.W., “Matrix Theory”, Allied Publishers, Chennai, 1995.
3. Taha, H.A., “Operations Research - An Introduction '', 10th edition, Pearson Prentice Hall, 2016.
4. A.S. Gupta, “Calculus of variations with applications”, PHI Pvt. Ltd, New Delhi, 2011.

REFERENCES:

1. H. Cramer., “Random Variables and Probability Distributions”, Cambridge University Press (2004).
2. Roger A. Horn, Charles R. Johnson, “Matrix Analysis”, Cambridge University Press; 2nd edition (2012).

4. David. J. Rader., “Deterministic Operations Research”, Wiley (2010).
5. Elsgolts, “Differential Equations and Calculus of Variations", University Press of the Pacific (2003).

OUTCOME:

At the end of the course students will be able to

- Solve problems using concept of standard, discrete and continuous distributions.
- Solve problems using one dimensional and two dimensional random variables.
- Find eigenvalues and eigen vectors of a higher order matrix.
- Solve problems of linear programming.
- Solve problems of calculus of variations by direct methods and using Euler’s formulae.

EEC6101 SYSTEM THEORY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide knowledge on state space approach, state feedback controllers and observers for different processes.
- To enhance knowledge on stability analysis of multivariable processes.
- To introduce nonlinear systems and its linearization methods.
- To evaluate Stability of Linear and Non Linear Systems.

MODULE I STATE SPACE APPROACH 08

Introduction to State Space Approach - System representation in state variable form – State transition equation – Methods of computing the state transition matrix.

MODULE II STATE FEEDBACK CONTROL AND STATE ESTIMATOR 08

Stability analysis - Controllability and Observability of linear time invariant systems - State Feedback – Output Feedback – Pole placement technique – Full order and Reduced Order Observers.

MODULE III STABILITY FOR LINEAR SYSTEMS 08

Introduction – Equilibrium points – Stability in the sense of Lyapunov - BIBO Stability – Stability of LTI systems – The direct method of Lyapunov and the Linear continuous time autonomous systems – Popov Stability Criterion.

MODULE IV NON-LINEAR SYSTEMS 06

Types of Non-Linearity – Typical Examples – Phase plane analysis (analytical and graphical methods) – Limit cycles – Equivalent Linearization.

MODULE V STABILITY FOR NON-LINEAR SYSTEMS 08

Equilibrium stability of non linear continuous time autonomous systems – Finding Lyapunov functions for nonlinear continuous time autonomous systems – Krasovskii and variable gradient method.

MODULE VI STABILITY FOR NON-LINEAR SYSTEMS USING DESCRIBING FUNCTION 07

Describing Function Analysis for Non Linear Systems, Describing Functions for different non-linear elements- backlash, deadzone, saturation and hysteresis

Total Hours: 45

REFERENCES:

- M.Gopal, “Modern Control System Theory”, New Age International, 2005.

- John .S.Bay, “Fundamentals of Linear State Space Systems”, Tata McGraw– Hill, 1999.
- Z.Bubnicki, “Modern Control Theory”, Springer, 2005.

OUTCOMES:

At the end of the course, the students will have knowledge and achieve skills on the following:

- Implement state space approach for the process and obtain the solution.
- Design state feedback controller and observers.
- Perform stability analyses of the system using conventional mathematical approach
- Ability to analyze complex systems using mathematical models.
- Ability to analyze the stability of Linear Systems using Lyapnov and Popov Stability Criterions
- Ability to analyze the stability of Non-Linear Systems using novel techniques.

EIC 6101	MICROCONTROLLER BASED SYSTEM DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To expose the students to the fundamentals of embedded Programming
- To provide knowledge about the architectures and features of various microcontrollers
- To impart knowledge about both hardware and software aspects of integrating digital devices into microcontroller based systems.
- To understand the concepts of algorithm development and programming on software tools and microcontrollers with peripheral interfaces.
- To design embedded system for real time applications.

MODULE I INTRODUCTION TO EMBEDDED SYSTEM 09

Microprocessor and Microcontroller architecture, Comparison, Advantages and applications of each Harvard and Von Neumann architecture, RISC and CISC comparison, Definition of embedded system and its characteristics. Role of microcontroller in embedded System. Study of RS232, RS 485, I2C, SPI protocols. Serial communications, Memory,Software and hardware tools for development of microcontroller based system.

MODULE II PIC MICROCONTROLLER 09

Introduction to PIC Microcontroller, PIC16F877A Architecture and Instruction Set , Memory Organization, I/O Ports and SFRs , Interrupts , Timers and ADC,addressing modes – instruction set – PIC programming in Assembly & C.

MODULE III AVR MICROCONTROLLER 09

Overview of AVR family, AVR family Categories and importance (ATmega/ Xmega).AVR Microcontroller architecture, Register, AVR status register, ROM space and other hardware modules, ATmega32 pin configuration & function of each pin. AVR Assembly Language Programming, Timers, Interrupts.

MODULE IV LPC 2148 MICROCONTROLELR 09

LPC2148 ARM 7 microcontroller, Features of LPC2148, Block diagram of LPC2148, Pin diagram of LPC2148, Architectural overview, On-chip flash program memory, On-chip static RAM. System control, Timers, ADC, DAC, UART.

MODULE V CASE STUDIES 09

Home security system, Smart card application, Design of DAS system, Design of Digital Multimeter, Stepper motor control, Design of DC Motor control using PWM, Line Following Robotic Circuit using ATMega8 Microcontroller.

Total Hours:45 hours

TEXT BOOKS:

1. "The PIC Microcontroller and Embedded systems – Using Assembly and C for PIC18," Muhammad Ali Mazidi, Rolin D. McKinlay, and Danny Causey, Prentice Hall, 2013
2. The AVR Microcontroller and Embedded Systems Using Assembly and C, By Muhammad Ali Mazidi, Sarmad Naimi and Sepehr Naimi, Pearson Education, 2011.
3. Programming and Customizing the AVR Microcontroller, By Dhananjay Gadre, McGraw Hill Education,2008
4. Lyla B Das," Embedded Systems-An Integrated Approach",Pearson2013

REFERENCE BOOKS:

1. Rajkamal, 'Embedded system-Architecture, Programming, Design', TMH,2011.
2. Peckol, "Embedded system Design",JohnWiley&Sons,2010
3. Microcontrollers, Principles and Applications – Ajit pal – PHI Ltd., - 2011.

OUTCOMES:

At the end of the course the student will be able to

- Compare microprocessor and microcontroller and analyze the tools in an embedded system
- Distinguish the architecture of three microcontroller's namely PIC, AVR microcontrollers.
- Interface PIC,AVR microcontrollers to various peripheral devices such as ADC, DAC, Motor , LCD etc.
- Develop the programming skills with simple arithmetic and control instructions for PIC, AVR microcontrollers
- Design and implement a microcontroller based embedded system for selected industrial projects.

EIC6102	FREQUENCY BASED CONTROL SYSTEM	L	T	P	C
		3	0	2	4

OBJECTIVES:

- To review the methods of stability analysis of systems
- To enhance knowledge on frequency domain based controller design
- To provide in depth knowledge on the synthesis of linear time invariant controllers for linear systems
- To introduce the concept of fractional calculus for control applications
- To impart knowledge on fractional order controller design

MODULE I BASICS OF FEEDBACK CONTROL SYSTEMS 08

Theory

Introduction – Basic frequency domain characteristics- Stability analysis using Bode plot - Nichol's charts – Closed loop specification – Performance limitations of NMP/Unstable systems.

Practical

Modeling of a process, stability analysis using Bode Plot, Nichol's chart using Matlab and Labview

MODULE II CONTROLLER DESIGN USING FREQUENCY RESPONSE PLOTS 08

Theory

Frequency response plots - reshaping the Bode plot – compensator design using bode plot – Lag, Lead, Lag-Lead design – Frequency domain analysis and its applications - Quantitative Feedback Theory – Quantitaive Feedback ApplicationsLoop shaping

Practical

Reshaping the Bode plot, Compensator design and Loop shaping using Matlab

MODULE III CONTROLLER DESIGN USING QUANTITATIVE FEEDBACK THEORY 08

Theory

Quantitative feedback theory – Overview, Design objective, control system performance specifications, Insight to QFT techniques – Open Loop Plant, Closed Loop formulation, Insight to the use of Nichols Chart in the QFT – MISO Analog Control System – Design Procedure Outline : LTI plant models, performance specifications, plant templates, stability bound, tracking bounds, disturbance bounds, Loop shaping, design of prefilter, Design Example.

Practical

Controller design, tuning and simulation using QFT toolbox

MODULE IV FRACTIONAL ORDER SYSTEM 09

Theory

Fractional-order Calculus and Its Computations – Frequency and Time Domain Analysis of Fractional-Order Linear Systems - Filter Approximations to Fractional-Order Differentiations – Model reduction Techniques for Fractional Order Systems.

Practical

Fractional order modeling and control using Matlab for process setups

MODULE V FRACTIONAL ORDER CONTROLLER DESIGN 12

Theory

Design of fractional order PI, PD, PID controller for first order plus dead time process - using graphical method, analytical method & optimization techniques - tuning of fractional order lead-lag compensators.

Practical

Fractional order controller design and simulation using Matlab

L: 45, T:15, Total :60

TEXT BOOK:

1. Oded Yaniv, 'Quantitative feedback theory for linear and non-linear systems', Kluwer Academic publishers, 1999.
2. M.Gopal, 'Control systems, principles and design' fourth edition, Tata McGraw Hill publishers pvt ltd, 2014
3. Monje, C.A., Chen, Y., Vinagre, B.M., Xue, D., Feliu-Batlle, V.,' Fractional-order Systems and Controls Fundamentals and Applications', Springer-Verlag London,2010.

OUTCOMES:

At the end of the course, the student will be able to

- Analyze the techniques used for estimating the stability of systems
- Design controllers/compensators using frequency domain approach
- Synthesize linear time invariant controllers for linear systems
- Analyze fractional order system in frequency and time domains
- Design of fractional order controllers using different techniques

EIC6103	APPLIED INDUSTRIAL INSTRUMENTATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To review the various techniques used for the measurement of primary industrial parameters like flow, level, temperature and pressure.
- To provide knowledge about the important parameters to be monitored and analyzed in Thermal power Plant
- To give an exposure on the important parameters to be monitored and analyzed in Petrochemical Industry
- To impart knowledge about the hazardous zone classification and intrinsic safety techniques to the adapted in industries.
- To introduce special purpose instruments like Nuclear radiation detection techniques, fibre optic sensors, Instrumentation for NDT applications etc

MODULE I REVIEW OF INDUSTRIAL INSTRUMENTATION 10

Overview of Measurement of Flow, level, Temperature, Pressure, Viscosity, Humidity, Force, Torque and Acceleration, Intelligent Sensors and its Interfaces with Process controllers and PLC, Process Analysers (Toxic,Combustible, Gas Detectors, Flame scanners)

MODULE II MEASUREMENT IN THERMAL POWER PLANT 10

Selection and Installation of instruments used for the Measurement of fuel flow, Air flow, Drum level, Steam pressure, Steam temperature – Feed water quality measurement Flue gas Oxygen Analyzers- pH measurement – Pollution monitoring instruments

MODULE III MEASUREMENT IN PETROLEUM REFINERY 10

Flow, Level, Temperature and Pressure measurement in Distillation. Pyrolysis, catalytic cracking and reforming process-Hydrocarbon analyzers, oil in water analysers - sulphur in oil Analyzer- Selection and maintenance of measuring instruments

MODULE IV INSTRUMENTATION FOR INDUSTRIAL SAFETY 05

Area Classification - Electrical and Intrinsic Safety - Explosion Suppression and Deluge systems - Conservation and emergency vents - Flame, fire and smoke detectors - Leak Detectors - Intrinsic Safety.

Process Industry Practices : Field Insts, Estimation, Control Panel, Analyser Housing, Inst Air, Electrical interfaces, Selection, Inst Tools, cabels/wires, Value proposition, Installation Support, Safety Systems, Project Documentation

MODULE V SPECIAL PURPOSE INSTRUMENTATION 10

Detection of Nuclear Radiation – Corrosion monitoring – Fibre optic sensors - smart transmitters and wireless transmitters – Instrumentation for NDT applications - Instrumentation for energy conservation and management - Image based measurements.

Total Hours: 45

TEXT BOOKS:

1. B.G.Liptak, “Instrumentation Engineers Handbook (Process Measurement & Analysis)”, Fourth Edition, Chilton Book Co, 2003.
2. K.Krishnaswamy and M.Ponnibala, “Power Plant Instrumentation”, PHI Learning Pvt Ltd, 2013. 25
3. John G Webster, “The Measurement, Instrumentation, and Sensors Handbook”, CRC and IEEE Press, 1999.

REFERENCE BOOKS:

1. Håvard Devold, “Oil and Gas Production Handbook - An Introduction to Oil and Gas Production”, ABB ATPA oil and gas, 2006.
2. M.Arumugam, “Optical Fibre Communication and Sensors”, Anuradha Agencies, 2002.
3. Paul E. Mix, “Introduction to Nondestructive Testing”, John Wiley and Sons, 2005.

OUTCOMES:

At the end of the course the student will be able to:

- select suitable measuring instruments for real time industrial applications
- select and install various measuring instruments used in thermal power plants and petroleum industries
- Analyze industrial safety measures and select appropriate techniques to provide intrinsic safety
- Adapt industrial practices for instrument housing, electrical interfaces, and installation support
- Apply the special purpose instruments for NDT, energy conservation and management.

SEMESTER II

GEC6201	RESEARCH METHODOLOGY FOR ENGINEERS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide a perspective on research to the scholars
- To educate on the research conceptions for designing the research
- To impart knowledge on statistical techniques for hypothesis construction
- To gain knowledge on methods of data analysis and interpretation
- To learn about the effective communication of research finding

MODULE I RESEARCH PROBLEM FORMULATION 07

Research – Objectives**:** – types, Research process, Solving engineering problems, Identification of research topic, Formulation of research problem, Literature survey and review.

MODULE II HYPOTHESIS FORMULATION 08

Research design – meaning and need – basic concepts, Different research designs, Experimental design – principle – important experimental designs, Design of experimental setup, Mathematical modeling, Simulation – validation and experimentation, Dimensional analysis and similitude.

MODULE III STATISTICAL TECHNIQUES 12

Statistics in research – concept of probability – popular distributions –Hypothesis testing- sample design- Design of experiments – factorial designs -– orthogonal arrays- ANOM - ANOVA - Multivariate analysis - Use of optimization techniques – traditional methods – evolutionary optimization techniques –Transportation model.

MODULE IV STATISTICAL ANALYSIS OF DATA 10

Research Data analysis – interpretation of results – correlation with scientific facts- Accuracy and precision – error analysis, limitations - Curve fitting, Correlation and regression.

MODULE V RESEARCH REPORT 08

Purpose of written report – audience, synopsis writing, preparing papers for International journals, Thesis writing – organization of contents – style of writing –

graphs and charts – referencing, Oral presentation and defence, Ethics in research, Patenting, Intellectual Property Rights.

Total Hours: 45

OUTCOMES:

Students should be able to

- Formulate the research problem
- Design and Analyse the research methodology
- Construct and optimize the research hypothesis
- Analyse and interpret the data
- Report the research findings

EIC6211 ADVANCED PROCESS CONTROL

L	T	P	C
3	0	2	4

OBJECTIVES:

- To review the various processes and basic control schemes used for linear processes
- To determine the multivariable models for the Single Input Single Output, Multi Input Single Output, Single Input Multi Output and Multi Input and Multi Output systems.
- To analyse the interaction among the loops in the MIMO system
- To design and develop the multiloop and multivariable control schemes
- To model and control time varying and nonlinear systems

MODULE I REVIEW OF PROCESS CONTROL 09+03

Need for process control –Continuous and batch processes – Self regulation – Servo and regulatory operations – Interacting and non-interacting systems – Degrees of freedom - Linearization of nonlinear systems- Mathematical model of Level and Thermal processes – Lumped and Distributed parameter models - ON-OFF, P, P+I, P+D and P+I+D control - Controller Tuning:- Process reaction curve method, Continuous cycling method and Damped oscillation method

MODULE II MULTIVARIABLE SYSTEMS 09+03

Theory

Introduction to Multivariable systems -Transfer Matrix Representation -State Space representation - Poles and Zeros of MIMO System - Multivariable frequency response analysis - Directions in Multivariable systems - Singular Value Decomposition - Demonstration of Multivariable Systems analysis

Practicals

Differential equation modelling using matlab and simulink, determination of State space around an operating condition, Computation of Transfer Function Matrix, SVD computation, Frequency analysis using Matlab.

MODULE III MULTI-LOOP REGULATORY CONTROL 09+03

Theory

Introduction to Multi Loop Control - Process Interaction, Pairing of Inputs and Outputs - Relative Gain Array (RGA) – Properties and Application of RGA - Multi Loop PID Controller - Biggest Log Modulus Tuning Method - Decoupling Control - LQG Control - RGA for Non-Square Plant

Practicals

Computation of RGA, simulation of multiloop PID controller, Implementation of Decouplers, LQG design for a process

MODULE IV MULTIVARIABLE REGULATORY CONTROL 09+03

Theory

Introduction to Multivariable Control - Multivariable PID Controller - Multivariable IMC, Multivariable Dynamic Matrix Controller - Multivariable Model Predictive Control - Generalized Predictive Controller - Multiple Model based Predictive Controller - Constrained Model Predictive Controller - Implementation Issues

Practicals

Multivariable PID controller, Multivariable Dynamic Matrix controller simulation, multivariable IMC simulation

MODULE V CONTROL OF TIME VARYING AND NONLINEAR SYSTEMS 09+03

Theory

Model for Time varying systems - Models for Nonlinear Systems - Real time parameter estimation - Gain Scheduling Adaptive Control - Deterministic Self tuning controller - Model Reference Adaptive controller - Nonlinear PID Controller - Hammerstein and Wiener Systems

Practicals

Simulation of time varying process and analysis, Self tuning regulator design and simulation, Gain scheduler for control of a nonlinear process

SAMPLE CASE STUDIES

Students will be asked to select a case study given below or any other process of their choice. He/She has to do the advanced control schemes which will suit their process and demonstrate.

Control Schemes for Distillation Column, CSTR, Bioreactor, Three Tank System, Quadruple Tank System, pH process control system, Polymerization Reactor Automation

L: 45, P:15, Total :60

8. Sigurd Skogestad, Iam Postlethwaite, "Multivariable Feedback Control: Analysis and Design", John Wiley and Sons, 'Second Edition',2005.

OUTCOMES:

At the end of the course the student will be able to:

- Identify real world industrial or biomedical process and carry out dynamic performance analysis
- Perform interaction study in multivariable process and select the control scheme to be used
- Devise the process model of a multivariable system and apply multiloop and multivariable control
- Design and simulate the control scheme and evaluate the servo-regulatory response
- Model the time varying, nonlinear systems and perform control for the same

EIC6212	INDUSTRIAL AUTOMATION USING PLC, SCADA AND DCS	L	T	P	C
		3	0	2	4

OBJECTIVES:

- To provide in depth knowledge about PLC hardware and its programming
- To train the students to take up industrial applications and solve it using PLC
- To provide basic knowledge in the architecture and local control unit of distributed control system
- To give adequate knowledge about hardware, interfaces used in DCS and communication protocols
- To impart skill in developing data acquisition and supervisory control

MODULE I PROGRAMMABLE LOGIC CONTROLLER: HARDWARE AND BASIC OPERATIONS 09+04

Hard relay logic, Evolution of Programmable logic controller (PLC), Hardware Components of PLC: Input/Output modules, power supplies, isolators, CPU, memory and programming devices. Generic Control system Architecture and IO Assignments, General PLC programming procedures, Developing fundamental ladder logic programs (as per IEC61131) for Boolean operations, PLC basic functions : Register basics, timer functions, counter functions.

Practical: Development of Ladder program for simple on-off applications, Development of Ladder program for Timing and counting applications.

MODULE II PROGRAMMABLE LOGIC CONTROLLERS : ADVANCED OPERATIONS, INSTALLATIONS AND TROUBLESHOOTING 09+04

Developing program control instructions, data manipulation instructions, math instructions, sequencer and shift register instructions, Functional block diagram, Analog control using PLC (PID control configuration, PLC installations and troubleshooting.

Practical: Development of FBD in PLC, Automatic control of level using PLC, Automatic control of temperature using PLC, Control of pressure loop using PLC.

MODULE III DISTRIBUTED CONTROL SYSTEM 09+04

Introduction to Distributed control system, DCS architectures, Comparison, Local Control Unit, Process interfacing issues, Operator interfaces - Low level and high level operator interfaces - Operator displays - Engineering interfaces - Low level and high level engineering interfaces, Latest trends and developments.

Practical: Configuring Screens and Graphics (DCS), Tag Assignments to Field Devices in DCS, DCS based PID control for level loop.

MODULE IV DATA ACQUISITION SYSTEMS 09+03

Computers in Process control – Data Loggers – Data acquisition systems (DAS) – Alarms – Direct Digital Control (DDC) - Characteristics of digital data – Controller software – Computer Process interface for Data Acquisition and control – Supervisory Digital Control (SCADA) -introduction and brief history of SCADA – SCADA Hardware and software.

Practical: Programming of HMI interfacing with PLC, Communicate PLC with SCADA

MODULE V COMMUNICATIONS IN DCS 09

Introduction - Evolution of signal standard - HART communication protocol - communication modes - HART networks - HART commands - HART field controller implementation - HART and OSI model - Field bus – Introduction Profibus, Modbus - Foundation field bus - General field bus architecture – basic requirement - basic requirements of field bus standard - field bus topology. Introduction to AS-Interface (As-i), Device net and Industrial Ethernet.

5. Michael P.Lucas, Distributed Control System, Van Nastrand Reinhold Company, New York,1986.

OUTCOMES:

At the end of the course, the student will be able to

- Analyze the hardware components of PLC and its programming languages
- Develop programs for the use of PLC in industrial application
- Analyze the different architecture and interfaces of DCS
- Design and develop supervisory control and data acquisition system for given application
- Apply the various communication protocols in process industries

ELECTIVE COURSES

GENERAL ELECTIVE

Professional Elective (Semester 1 Electives) (2/3 credits)

		L	T	P	C
EICY 101	**PIPING AND INSTRUMENTATION FOR PROCESS INDUSTRIES**	**2**	**0**	**0**	**2**

OBJECTIVES:

- To provide in depth knowledge on piping and instrumentation
- Learn about detail engineering and P & ID
- Other discipline support to Instrumentation
- How to do the Installation and commissioning
- Learn about calibration and fault finding

MODULE I DESCRIPTION OF PROCESS PLANT 05

General Project Cycle, Plant description, feed, component and Areas of plant, Plant layout, Plant location, accessibility, Marketing and Sales.

MODULE II PIPING AND INSTRUMENTATION DIAGRAM PREPARATION 05

Main description of a plant, P & ID Symbols, line numbering, line schedule P& ID development, various stages of P & ID, Process flow scheme plant legend finalization.

MODULE III SYSTEM DESIGN AND DETAIL ENGINEERING 05

Major Discipline involvement and Inter discipline Interaction, Major Instrumentation and Control Systems – Development Phase – Instrument List, I / O Count, Specification Sheets, Instrument Installation, Control Philosophy, Detail Engineering.

MODULE IV BOILET CONTROL-II 05

Plot plan, Piping, equipment plan, Electrical area classification, Fire Hazardous classification, Control Network architecture.

MODULE V ANALYSERS – FLUE GAS ANALYSIS 10

i. Dearator in Boiler and associated Instrumentation.
ii. Turbine monitoring – speed, vibrations, Lubricant oil temperature control systems how it functions.
iii. Boiler Drum Level Pressure compensation.
iv. Control of distillation column and instruments designed for Level, Pressure, flow etc.
v. Detailed study of intrinsic safety of Instruments.

Total hours: 30

3. Robert C Rosaler, Standard Handbook of Plant Engineering, McGraw-Hill third edition, 2004.
4. R.Keith Mobley, Plant Engineer's Handbook, Technology and Engineering, 2001.

OUTCOMES:

- System testing and startup
- Development of correct P & IDs
- Install and commissioning of new plants
- Apply piping and Instrumentation in design and maintenance of process Industry
- Understanding area classification

EICY102	APPLIED SOFT COMPUTING TECHNIQUES FOR PROCESS MODELING, CONTROL AND OPTIMIZATION	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To expose the students to the basic concepts of neural networks, fuzzy logic and evolutionary algorithms
- To foster their abilities in designing and implementing soft computing based solutions for real-world problems in modeling and control
- To familiarize the Neural Network, Fuzzy Logic, Adaptive Neuro Fuzzy Inference System toolbox to the students
- To facilitate the student to optimize the model and controller parameters using Evolutionary and swarm intelligence techniques

MODULE I REVIEW OF NEURAL NETWORK AND FUZZY LOGIC 06+03

Theory

Introduction to Neural network - Biological Neuron - Artificial neuron — Activation functions — Network Architecture — Learning Process — Single Layer Perception — Limitations — Multi Layer Perception —Back propagation algorithm — RNN — Reinforcement learning — Discrete time hop field networks RBF — ART, SVM.

Fuzzy set theory — Fuzzy sets — Operation on Fuzzy sets — Fuzzy relations — Fuzzy membership functions — Fuzzy conditional statements — Fuzzy rules – MAMDANI – TAKAGI SUGENO.

Practicals

Familiarization of Neural Network Control Tool Box and Fuzzy Logic Tool Box

MODULE II NEURAL NETWORKS FOR MODELING AND CONTROL 06+03

Theory

Modeling of non linear systems using ANN- NARX,NNSS,NARMAX – Generation of training data - Model validation- Control of non linear system using ANN

Practicals

NARX, NNSS, NARMAX modeling using Neural Network toolbox

MODULE III FUZZY LOGIC FOR MODELING AND CONTROL 06+03

Theory

Modeling of non linear systems using fuzzy models (Mamdani and Sugeno) – TSK model - Fuzzy Logic controller – Adaptive fuzzy systems- Gain scheduling using Fuzzy Logic

Practicals

Modeling and Gain Scheduling of Nonlinear process using Fuzzy toolbox

MODULE IV HEURISTIC OPTIMIZATION ALGORITHMS AND HYBRID CONTROL SCHEMES 06+03

Theory

Particle Swarm Optimization – Ant colony optimization-Introduction to Evolutionary Algorithm — Optimization of membership function and rule base using Genetic Algorithm — Adaptive Neuro Fuzzy Inference Systems(ANFIS)

Practicals

Optimization of benchmark optimization problems using swarm intelligence and evolutionary algorithms in MATLAB

MODULE V OPTIMAL IDENTIFICATION AND PARAMETER OPTIMIZATION USING EVOLUTIONARY AND SWARM INTELLIGENCE TECHNIQUES 06+03

Theory

Process identification, PID controller parameter optimization, State feedback controller parameter optimization of process loops using evolutionary optimization techniques and swarm intelligence technique

Practicals

Optimal process modeling, controller parameter optimization, state feedback using soft computing techniques in MATLAB

L: 30; P: 15;Total Hours: 45

6. MATLAB Fuzzy Logic Tool Box Manual mathworks publications, 2011.
7. R. Eberhart, P.simpson and R.Dobbins,Computional Intelligence PC Tools, AP Professional, Boston, 1996.

OUTCOMES:

At the end of the course the student will be able to:

- Identify and analyze soft computing techniques and their roles in building intelligent machines.
- Recognize the feasibility of applying a soft computing methodology for modeling and control
- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems.
- Effectively use existing software tools to solve problems using a soft computing approach.
- Evaluate and compare solutions of engineering problems various soft computing approaches
- Optimize the performance using Evolutionary and swarm intelligence techniques.

EIC Y103 INSTRUMENTATION SYSTEM DESIGN

L	T	P	C
2	0	2	3

OBJECTIVES:

- To provide knowledge in amplifier and filter circuits.
- To learn about transmitters, data loggers and annunciators.
- To get knowledge in design of controllers
- To enhance knowledge on selection of control valves and flow meters.

MODULE I DESIGN OF SIGNAL CONDITIONING CIRCUITS 07+05

Design of V/I Converter and I/V Converter- Design of first and second order analog and digital filters– Signal conditioning circuit for pH measurement –Design of Instrumentation amplifiers – Signal Conditioning circuit for strain gauge circuits – Thermocouple compensation circuits- Cold Junction Compensation – Thermocouple Linearization.

Practical: Design of instrumentation amplifiers, Design of active filters, Design of V/I and I/V converters, Design of linearising circuit and cold – junction compensation circuit for thermocouples.

MODULE II DESIGN OF TRANSMITTERS 07+04

Design of Transmitters for RTD &Thermocouple Instruments – Design of transmitters for Pressure measurement - Capacitance based Level Transmitter – Air purge flow measurement -Smart Flow Transmitters.

Practical:

Design of signal conditioning circuits for strain gauge and RTD, Measurement of level using capacitance method.

MODULE III DESIGN OF DATA LOGGER AND PID CONTROLLER 08+03

Design of ON / OFF Controller using Linear Integrated Circuits- Electronic PID Controller –Digital PID Controller design – Microcontroller based Data Logger – PC based Data Acquisition Cards (NI DAQ mx)

Practical: Design of on-off controller, PID controllers using operational amplifier, Design of digital PID using Matlab/simulink.

MODULE IV ORIFICE AND CONTROL VALVE SIZING 08+03

Orifice Sizing: - Liquid, Gas and steam services - Control Valves – Valve body:- Commercial valve bodies – Control valve sizing – Liquid, Gas and steam services – Cavitation and flashing –Selection criteria – Rotameter Design.

Practical: Determine the coefficient of discharge using orifice plate, study of flow-lift characteristics of control valve.

4. B. C. Nakra and K. K. Choudhari, “Instrumentation: Measurement and Analysis”, Tata McGraw Hill pub, 2008.

OUTCOMES:

- At the end of the course the student will be able to:
- design amplifiers and filters circuits for any requirement
- design signal conditioning circuits for transmitters
- Design the suitable controllers for various process
- select the suitable control valves for process

PROFESSIONAL ELECTIVE (SEMESTER 2 ELECTIVES) (9 CREDITS)

		L	T	P	C
EICY201	**SYSTEM IDENTIFICATION AND MODELING**	**2**	**0**	**2**	**3**

OBJECTIVES:

- To introduce various model structures for system identification
- To impart knowledge on parametric and non-parametric identification
- To introduce non-linear identification and model validation techniques
- To illustrate the identification techniques through case studies

MODULE I MODELS FOR IDENTIFICATION 12

Theory

Introduction - Need for modeling. Types of models: On the basis of their information source for development: first principle models, empirical models. On the basis of mathematical property: linear and non linear, deterministic and probabilistic, static and dynamic, lumped and distributed models. On the basis of transparency: white-box, black box models with examples

Practical

Empirical models using real time data for linear and non linear systems

MODULE II NON-PARAMETRIC AND PARAMETRIC IDENTIFICATION 09

Theory

Transient response and Correlation Analysis – Frequency response analysis – Spectral Analysis – Least Square – Recursive Least Square –Forgetting factor-Maximum Likelihood – Instrumental Variable methods.

Practical

Identification using time domain and frequency domain analysis

MODULE III NON-LINEAR IDENTIFICATION AND MODEL VALIDATION 12

Theory

Open and closed loop identification: Approaches – Direct and indirect identification –Joint input-output identification – Non-linear system identification – Wiener models –Power series expansions - State estimation techniques – Non linear identification using Neural Network and Fuzzy Logic-Model validation and verification

Practical

Neural and fuzzy modeling and model validation using Matlab

MODULE IV CASE STUDIES 12

Theory

Development of detailed mathematical model of Inverted Pendulum, heat exchanger, Distillation column and continuous stirred tank reactor

Practical

Mathematical model of Inverted Pendulum, heat exchanger, Distillation column and continuous stirred tank reactor using Matlab (any 2)

L:30; P:15;Total Hours : 45

TEXT BOOKS:

1. Soderstorm.T and Petre stioca, System Identification, Prentice Hall International (UK) Ltd. 1989

REFERENCE BOOKS:

1. Ljung, “System Identification Theory for the User”, PHI, 1999.
2. William S.Levine, “Control Systems Advanced Methods, the Control Handbook, CRC Press, 2011.

OUTCOMES:

At the end of the course the student will be able to:

- compare the different types of models used for describing systems
- estimate system parameters using parametric and non-parametric identification approaches
- analyze the techniques used for identification of nonlinear systems
- validate the developed models for linear and nonlinear systems with real time data
- implement the modeling and simulation for selected processes used in industry

EICY202 ADAPTIVE CONTROL

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide knowledge on parametric and nonparametric identification of system.
- To impart knowledge on adaptive control techniques.
- To enhance knowledge on the implementation issues and practical consideration by investigating the adaptive schemes

MODULE I INTRODUCTION 09

Introduction to adaptive control - Effects of process variations – Adaptive control schemes – Adaptive control problem – Applications – Real time parameter estimation - Estimating parameters in dynamical system

MODULE II PARAMETRIC AND NON-PARAMETRIC IDENTIFICATION 04

Non-parametric identification : Step response method – Impulse response method – Frequency response method.

Parameter identification : ARX – ARMAX – ARIMAX – Least square estimation – Recursive least square estimation – Extended least square estimation – Maximum likelihood estimation

MODULE III SELF-TUNING REGULATOR 09

Deterministic in-direct self-tuning regulators – Deterministic direct self-tuning regulators – Stochastic self-tuning regulators – Linear Quadratic STR – Adaptive Predictive Control.

MODULE IV MODEL REFERENCE ADAPTIVE 09

The MIT rule – Lyapunov theory – Design of model reference adaptive controller using MIT rule and Lyapunov theory – Relation between model reference adaptive controller and self-tuning regulator

MODULE V AUTOTUNING AND GAIN SCHEDULER 09

Design of gain scheduling controller - Auto-tuning of PID controller : Relay Feedback test, parameter estimation using autotuning

CASE STUDIES **05**

Application of adaptive control in distillation column, Continuous Stirred Tank Reactor, Heat exchanger and variable area tank system.

Total Hours: 45

TEXT BOOKS:

1. Karl J. Astrom & Bjorn Wittenmark, “Adaptive Control”, (Pearson Education, Singapore), Second Edition, 2003.
2. Landau, I.D., Lozano, R., M'Saad, M., Karimi, A., “Adaptive Control: Algorithms, Analysis and Applications”, Series: Communications and Control Engineering, 2nd edition. 2011.
3. Shankar Sastry, Marc Bodson, “Adaptive Control : Stability, Convergence and Robustness”, Prentice-Hall Advanced Reference Series (Engineering), 1994, Republished by Dover Publications in 2011 (ISBN-10: 0486482022)

REFERENCE BOOKS:

1. T. C.H.A. Hsia, “System Identification”, Lexington books, 1974.
2. Stephanopoulis G. “Chemical Process Control”, Prentice Hall of India, New Delhi, 1990.
3. Ljung, L., “System Identification: Theory for the user”, Prentice Hall, Englewood cliffs, 1987. 4. Sastry S. and Bodson M., “Adaptive control – stability, Convergence ad Robustness”, Prentice Hall inc., New Jersey, 1989.

OUTCOMES:

The student will be able to

- Analyze the circumstances in which adaptive control is to be used
- Identify the process parameters using the experimental data obtained from step response, impulse response and frequency response
- Estimate the process parameters using recursive least square method and maximum likelihood method
- Design deterministic and stochastic self tuning regulators
- Compare the design procedure and performance of model reference adaptive controllers and self tuning regulator
- Analyze the stability of adaptive controller and design adaptive controllers for selected processes.

EICY 203 OPTIMAL CONTROL

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explain the significance of optimal control in process industries and the different methods of optimization
- To introduce the concept of variational approach for the design of optimal control system
- To formulate linear quadratic optimal control system with a specified degree of stability
- To impart knowledge about discrete time linear state regulator system and discrete time linear quadratic tracking system
- To illustrate the application of dynamic programming and HJB equation in the design of constrained and/or time optimal control system

MODULE I INTRODUCTION TO OPTIMAL CONTROL 07

Statement of optimal control problem - problem formulation and forms of optimal control - performance measures - various methods of optimization - Linear programming - nonlinear programming

MODULE II CALCULUS OF VARIATIONS 09

Basic concepts – variational problem - Extreme functions with conditions - variational approach to optimal control systems

MODULE III LINEAR QUADRATIC OPTIMAL CONTROL SYSTEM 09

Problem formulation - finite time LQR - infinite time LQR - Linear Quadratic tracking system – LQR with a specified degree of stability

MODULE IV DISCRETE TIME OPTIMAL CONTROL SYSTEM 10

Variational calculus for DT system – DT optimal control system - DT linear state regulator system -- DT linear quadratic tracking system

MODULE V CONSTRAINED OPTIMAL CONTROL 10

Constrained system – Pontryagin minimum principle - Dynamic programming – Hamilton - Jacobi - Bellman equation - LQR system using HJB equation - Time optimal control system – fuel optimal control system – energy optimal control system

Total hours: 45

TEXT BOOK:

1. Naidu D.S, Optimal Control System, CRC Press, 2003.

REFERENCE BOOKS::

1. Kirk D.E, Optimal Control Theory, Dover publication, 2004.
2. Lewis F.L, Draguna Vrabia, Syrmos V.L, Optimal Control, John Wiley & Sons, 2012.

OUTCOMES:

At the end of the course the student will be able to

- Formulate the optimization problem based on the requirement and evaluate its performance
- Apply the variational approach to optimal control system with conditions
- Differentiate finite time LQR and infinite time LQR and design linear quadratic tracking system
- Analyze discrete time optimal control systems used in different applications
- Design constrained optimal control system and time optimal control system

EICY204 VIRTUAL INSTRUMENTATION

L	T	P	C
2	0	2	3

OBJECTIVES:

- To familiarize the concepts in VI and to realize its architecture.
- To learn the various programming techniques available in LABVIEW.
- To enhance knowledge in various VI tools
- To provide the knowledge in various analysis tools and develop programs
- To analyze the application of VI for measurement, control and simulation study.

MODULE I INTRODUCTION VIRTUAL INSTRUMENTATION 09

Historical perspective - advantages - block diagram and architecture of a virtual instrument - Conventional Instruments versus Traditional Instruments - data-flow techniques, graphical programming in data flow, comparison with conventional programming

MODULE II VI PROGRAMMING TECHNIQUES 09

VIs and sub-VIs, loops and charts, arrays, clusters and graphs, case and sequence structures, formula nodes, local and global variables, State machine, string and file I/O

MODULE III DATA ACQUISITION 09

Introduction to latest ADCs, DACs. Introduction to PC based data acquisition - typical plug-in data acquisition board - multiplexing of analog inputs - single ended and differential inputs - different strategy for sampling of multichannel analog inputs. Concept of universal DAQ card - use of timers/counters

MODULE IV VI TOOLSETS 09

Use of Analysis tools, Fourier transforms, power spectrum, correlation methods, windowing and filtering. Simulation of level, thermal, reactor processes. On-Off controller PID Controller

MODULE V APPLICATIONS 09

Distributed I/O modules-Virtual Laboratory, Virtual Oscilloscope, Virtual function generator, Simulation of systems using VI, Development of Control system, Industrial Communication, Image acquisition and processing, Motion control.

Development of Virtual Instrument using GUI, Real-time systems, Embedded Controller, OPC, HMI / SCADA software, Active X programming

Total Hours: 45

LABORATORY COMPONENT

1. Creating Virtual Instrumentation for simple applications
2. Programming exercises for loops and charts
3. Programming exercises for clusters and graphs.
4. Programming exercises on case and sequence structures, file Input / Output.
5. Data acquisition through Virtual Instrumentation.
6. Developing voltmeter using DAQ cards.
7. Developing signal generator using DAQ cards.
8. Simulating reactor control using Virtual Instrumentation.
9. Real time temperature control using Virtual Instrumentation.
10. Real time sequential control of any batch process

OUTCOMES:

At the end of the course, the students will be able to

- Analyze the concepts and architecture of virtual instrumentation
- Develop a program for loops, charts, clusters, and graphs.
- Design data acquition system and interface analog and digital instruments with PC.
- Analyze the various tools used for signal processing and simulate process in PC.
- Design selected virtual instruments and develop simulation system using VI

EICY205	ADVANCED FIBER OPTIC AND LASER INSTRUMENTATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To review the methods of Propagation of light, way of connecting connectors and splicer.
- To enhance working models on measurement of varies parameters and gain knowledge of working of fiber optic sensors.
- To provide in depth knowledge on the types of lasers and way of generation of laser
- To provide practical exposure in industry for measurement of critical parameters like velocity, acceleration and voltage and show the application of lasers in various applications
- To impart knowledge on procedure for medical treatment using lasers in biomedical field.

MODULE I OPTICAL FIBERS AND THEIR PROPERTIES 09

Principles of light propagation through a fiber - Different types of fibers and their properties — Fiber materials and their characteristics - Transmission characteristics of fibers - absorption losses - scattering losses — Dispersion– Connectors and splicers - Optical sources - Optical detectors.

MODULE II INDUSTRIAL APPLICATION OF OPTICAL FIBERS 09

Fiber optic instrumentation system - Fiber optic sensors Different types of modulators -Application in instrumentation - Interferometric method of measurement of length -Measurement of pressure, temperature, current, voltage, liquid level and strain.

MODULE III LASER FUNDAMENTALS 09

Fundamental characteristics of laser - three level and four level lasers - properties of lasers - laser modes - resonator configuration - Q-switching and mode locking - cavity dumping - types of laser - gas laser, solid laser, liquid laser - semi conductor laser.

MODULE IV LASERS IN MEASUREMENTS AND TESTING 09

Laser for measurement of distance, length, velocity, acceleration, current, voltage, and atmospheric effect - material processing - laser heating, welding, melting and trimming of materials - removal and vaporization. Holography - Basic principle; methods; Holographic interferometry and applications; Holography for non-

destructive testing - Holographic components

MODULE V MEDICAL APPLICATIONS OF LASERS 09

Medical applications of lasers; laser and tissue interaction - Laser instruments for surgery. Removal of tumors of vocal cards, brain surgery, plastic surgery, gynaecology, endoscopy, photodynamic laser surgery and oncology.

Total hours: 45

REFERENCES:

1. John and Harry, Industrial lasers and their applications, McGraw Hill, 1st Edition, 1974.
2. John F Ready, Industrial applications of lasers, Academic press, 2nd Edition, 1978.
3. John Crisp & Darry Elliott, Introduction to Fiber Optics, Newnes Publication, 3rd Edition 2005.
4. Jasprit Singh, Semi Conductor Optoelectronics: Physics & Technology, McGraw Hill, ISE Edition, 1995.
5. Silvano Donati, Electro-optical Instrumentation Sensing and Measurement with Laser, Prentice Hall, 1st Edition, 2004.

OUTCOMES:

At the end of the course, the student will be able to

- Analyze the techniques used for Propagation of light, way of connecting connectors and splicer.
- Design working model on measurement of atleast one parameter.
- Analyze the techniques of generation of laser beam.
- Implement the method to measure parameter and Develop the appropriate model for industrial application
- Design the electronic laser system for biomedical field to treat various problems like tumors, blood clot removal etc..

EICY206	APPLIED BIO-MEDICAL INSTRUMENTATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide knowledge on biomedical measurable variables, standards and awareness of electrical safety of medical equipments
- To have knowledge on modeling, simulation and analysis of biomedical signals
- To acquire and analyze biomedical signals
- To bring out the important and modern methods of imaging techniques and latest knowledge of medical monitoring equipments.
- To provide the latest information on implantable and prosthetic devices

MODULE I INTRODUCTION TO BIOMEDICAL MEASUREMENTS 09

Physiological systems and measurable variables - Components of a medical instrumentation system, Problems encountered in a measuring system, Nature and complexities of biomedical measurements - Medical equipment standards - organization, classification and regulation - Human and Equipment safety – Physiological effects of electricity, Methods of accident prevention

MODULE II ADVANCES IN MODELING AND SIMULATION IN BIOMEDICAL INSTRUMENTATION 09

Introduction to modeling and simulation – Difference in modeling engineering systems and physiological systems – Model based analysis of Action Potentials - cardiac output – respiratory mechanism and breath analysis - Blood glucose regulation

MODULE III BIOMEDICAL SIGNALS AND THEIR ANALYSIS 09

Types and Classification of biological signals – Signal transactions – Noise and artifacts and their management - characteristics - Origin, recording schemes and analysis of biomedical signals: Electrocardiography(ECG), Electroencephalography (EEG) , Electroretinography (ERG) and Electromyography (EMG) – Processing and transformation of signals - applications of wavelet transforms in signal compression and denoising.

MODULE IV INSTRUMENTATION FOR DIAGNOSIS AND MONITORING 09

Tests and instrumentation for mechanics of breathing - Advanced medical imaging techniques and modalities - Computed tomography, Magnetic Resonance Imaging and ultrasound - Algorithms and applications of artificial intelligence in medical image analysis and diagnosis -Telemedicine and its applications in tele monitoring.

MODULE V BIOMEDICAL IMPLANTS, PROSTHETIC AND ORTHOTIC DEVICES 09

Implantable medical devices: artificial valves, vascular grafts and artificial joints- cochlear implants - cardiac pacemakers – Principal and components of prosthesis and orthoses – orthoses for spinal pain – orthoses for osteoporosis – Arm and foot orthoses – future trends and research in orthoses .

Total Hours: 45

TEXT BOOK:

4. John M.Semmlow, Biosignal and Bio medical Image processing, CRC Press, 2004.
5. Joseph J. Carr and John M Brown, Introduction to Biomedical Equipment Technology,Pearson Education, 2004

OUTCOMES:

The students will be able to

- Identify Unscrupulous manufacturers / importers who move equipments into India which are not safe.
- Model and simulate physiological systems
- Analyze typical waveforms of bio potentials
- Apply the modern methods of imaging techniques and analyse
- Choose implantable , prosthetic and orthotic devices for specific bio application

PROFESSIONAL ELECTIVES FROM OTHER DEPARTMENT

ECCY001	DIGITAL IMAGE PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- • Describe and explain basic principles of digital image processing;
- • Design and implement algorithms that perform basic image processing
- • Design and implement algorithms for advanced image analysis
- • Assess the performance of image processing algorithms and systems.

MODULE I DIGITAL IMAGE FUNDAMENTALS 09

Elements of digital image processing systems, Basics of visual perception,Psycho, visual model, Color image fundamentals, Brightness, contrast, hue,saturation, GB,HSI models, Image sampling & quantization.

MODULE II IMAGE TRANSFORMS 09

2D discrete transforms, DFT, DCT, WHT, KLT, DWT, Simulation of 2D transformby 1D transform.

MODULE III IMAGE ENHANCEMENT, RESTORATION, SEGMENTATION & RECOGNITION 12

Histogram modification and specification techniques, Noise distributions, Low and High Pass filters, Color image enhancement, Image degradation model – Unconstrained and constrained restoration, Geometric transformations, Spatial transformations, Gray level interpolation, Image Segmentation & its types, Pattern and Pattern classes.

MODULE IV IMAGE COMPRESSION 08

Need for image compression, Vector Quantization, Run Length Encoding, Shiftcodes, Block Truncation Coding, DCT and Wavelet Transform coding, Simulation of basic concepts.

MODULE V IMAGE PROCESSING APPLICATIONS 07

Biometric identification, Satellite image processing, Industrial machine vision application, Neural Networks in image processing, Medical image processing and Motion Analysis, Augmented\Virtual reality.

Total Hours : 45

7. Sonka,Hlavac,Boyle,Digital Image Processing and Computer Vision ,Cengage Learning,India Edition,2008
8. Madhuri A.Joshi, Digital Image Processing-An Algorithmic approach,Prentice Hall of India,2008

OUTCOMES:

At the completion of the course, students will be able to

- Acquire the knowledge of fundamental concepts of a digital image processing system
- Analyze 2D signals in the frequency domain through the various transforms.
- Describe various techniques for image enhancement and restoration.
- Recognize and apply suitable image segmentation techniques
- Identify and use of appropriate image compression techniques.
- Implement concepts of image processing using simulation technique.
- Apply suitable image processing techniques for various applications

ECC6104 ADVANCED DIGITAL SIGNAL PROCESSING

L	T	P	C
3	1	0	4

OBJECTIVES:

Make the students to

- Describe the use of various transforms in digital signals & systems analysis.
- Estimate the spectrum of Discrete Random Signals.
- Model and design adaptive filters.
- Explain the concepts of multirate signal processing
- Choose the DSP processor for various applications

MODULE I TRANSFORMS AND THEIR APPLICATIONS 06

Review of Z Transform, Discrete Fourier Transform, Discrete Time Fourier Transform, Discrete Fourier series. Introduction to Discrete Wavelet Transform.Haarwavelet.Application of transforms to discrete signals.

MODULE II DISCRETE TIME RANDOM PROCESSES AND SPECTRUM ESTIMATION 09

Deterministic process – Stochastic (random) process – Auto correlation & auto covariance of random processes – Cross correlation of random variables – Ergodic random process – Gaussian random process – Stationary & WSS random process – Power spectrum – Parseval's theorem – Wiener-Khinchine theorem – Spectral factorization – Periodogram - Modified periodograms using Bartlett , Welch, Blackman &Tukey windows – AR, MA, ARMA model based spectral estimation – Yule-Walker Equations – Durbin's algorithm.

MODULE III SIGNAL MODELING AND OPTIMUM FILTERS 08

Least square method model – Prony's pole-zero model – Prony's all pole model – Levinson-Durbin's recursion – Lattice filters – Forward & backward linear prediction filters.

MODULE IV ADAPTIVE FILTERS 08

FIR adaptive filters – Steepest descent method - Widrow-Hoff LMS algorithm – Normalized LMS method – Adaptive channel equalization – Adaptive noise cancellation – IIR adaptive filters - RLS filters.

MODULE V MULTIRATE DIGITAL SIGNAL PROCESSING 08

Need for multirate sampling – Decimation – Interpolation - Poly-phase filters – Multistage implementation –Phase shifters – Sub-band coders – Trans multiplexers– Quadrature mirror filters.

MODULE VI DSP PROCESSORS 06

General and special purpose DSP Processors – Computer Architecture for signal processing – Havard Architecture – Pipelining – Hardware Multiply and Accumulate – Special Instructions – Replication – On-chip Memory Cache – Extended Parallelism – SIMD – VLIW and static super-scalar Processing – Brief study of TMS320C4X and ADSP 2106 processors.

Total Hours: 60

REFERENCES:

5. Andreas Antoniou, “Digital signal Processing Processing”, Tata McGraw Hill,second edition, 2008.
6. Stewen W. Smith, “Digital signal Processing Processing” –“ A practical guide for Engineers and scientist”, Elsevier Science, 2003

OUTCOMES:

The students will be able to,

- Apply various transforms in digital signals & systems analysis.
- Estimate the power spectrum of signals
- Design & analyze digital filters based on signal modeling
- Design & analyze the adaptive filters
- Implement multirate signal processing techniques.
- Summarize various DSP processorarchitectures.

ECCY022 SPEECH AND AUDIO SIGNAL PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the speech and audio signal processing
- To discuss the speech mechanics, various analysis and synthesis methods
- To characterize speech , audio signals and hearing system.
- To introduce various algorithms for different applications.

MODULE I INTRODUCTION 05

Sources, propagation and environmental characteristics, audio sources, sampling, quantizing and compression. Human speech and hearing: speech generation, speech signal characteristics, the hearing system, hearing characteristics.

MODULE II MECHANICS OF SPEECH 07

Speech production mechanism, Nature of Speech signal, Discrete time modelling of Speech production, Representation of Speech signals, Classification of Speech Sounds, Phones, Phonemes, Phonetic and Phonemic alphabets, Articulatory features. Music production, Auditory perception, Anatomical pathways from the ear to the perception of sound, Peripheral auditory system, Psycho acoustics.

MODULE III TIME DOMAIN METHODS FOR SPEECH PROCESSING 07

Time domain parameters of Speech signal, Methods for extracting the parameters Energy, Average Magnitude, Zero crossing Rate, Silence Discrimination using ZCR and energy, Short Time Auto Correlation Function, Pitch period estimation using Auto Correlation Function.

MODULE IV FREQUENCY DOMAIN METHOD FOR SPEECH PROCESSING 08

Short Time Fourier analysis, Filter bank analysis, Formant extraction, Pitch Extraction, Analysis by Synthesis, Analysis synthesis systems, Phase vocoder, Channel Vocoder.omomorphic Speech Analysis: Cepstral analysis of Speech, Formant and Pitch Estimation – HomomorphicVocoders.

MODULE V LINEAR PREDICTIVE ANALYSIS OF SPEECH 09

Formulation of Linear Prediction problem in Time Domain, Basic Principle, Autocorrelation method, Covariance method, Solution of LPC equations, Cholesky method, Durbin’s Recursive algorithm, lattice formation and solutions, Comparison

of different methods, Application of LPC parameters, Pitch detection using LPC parameters, Formant analysis, VELP, CELP.

MODULE VI APPLICATION OF SPEECH & AUDIO SIGNAL PROCESSING 09

Algorithms: Dynamic time warping, K-means clustering and Vector quantization, Gaussian mixture modeling, hidden Markov modeling - Automatic Speech Recognition: Feature Extraction for ASR, Deterministic sequence recognition, Statistical Sequence recognition, Language models - Speaker identification and verification, Voice response system, Speech synthesis: basics of articulatory, source-filter, and concatenative synthesis, VOIP.

Total Hours : 45

4. J.L.Flanagan, "Speech analysis: Synthesis and Perception", Springer-Verlag, Berlin.
5. I.H.Witten, "Principles of Computer Speech", Academic Press, 1982.

OUTCOMES:

At the end of the course, the student will be able to

- Explain speech signal, audio signal and hearing characteristics , mechanics and their generation
- Manipulate, visualize and analyze speech signals and use various processing methods
- Apply various decomposition techniques and modifiy the speech signals.
- Analyze speech and audio signals in time domain and frequency domain.
- Apply various algorithms for speech and audio processing and synthesizing.
- Characterize and justify various speech processing techniques for various applications.

ECCY016 NETWORK SECURITY

L	T	P	C
3	0	0	3

OBJECTIVES:

The student will be able to,

- Understand security concepts, Ethics in Network Security.
- Understand security threats, and the security services and mechanisms to counter them.
- Ability to analyze performance of various cryptographic and cryptanalytic algorithms.
- Gain knowledge about the role of Firewalls and Intrusion Detection Systems.

MODULE I SYMMETRIC CIPHERS (TECHNIQUES AND STANDARDS) –I 09

Introduction – Services, Mechanisms and Attacks, OSI security Architecture, Model for network Security; Classical Encryption Techniques- Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor Machines, Stegnography; Block Ciphers and Data Encryption Standard Simplified DES, Block Cipher Principles, Data Encryption Standard, Strength of DES, Differential and Linear Crypt Analysis, Block Cipher Design Principles, Block Cipher Modes of Operation.

MODULE II SYMMETRIC CIPHERS (TECHNIQUES AND STANDARDS) – II 09

Advanced Encryption Standard- Evaluation Criteria for AES, AES Cipher; Contemporary Symmetric Ciphers- Triple DES, Blowfish, RC5, Characteristics of Advanced Symmetric Block Ciphers, RC4 Stream Cipher; Confidentiality using Symmetric Encryption- Placement of Encryption Function, Traffic Confidentiality, Key Distribution, and Random Number Generation.

MODULE III PUBLIC-KEY ENCRYPTION AND HASH FUNCTIONS 09

Public Key Cryptography and RSA- Principles of Public Key Cryptosystems, RSA Algorithm; Key Management and other public key cryptosystems- Key Management, Diffie-Hellman Key Exchange, Elliptic Curve arithmetic, Elliptic Curve Cryptography; Message Authentication and Hash Functions Authentication Requirements, Authentication Functions, Message Authentication Codes, Hash Functions and MACs; Hash Algorithms- MD5 Message Digest Algorithm; Secure Hash Algorithm, RIPEMD 160, HMAC; Digital Signatures and Authentication

Protocols - Digital Signatures, Authentication Protocols, Digital Signature Standards.

MODULE IV NETWORK SECURITY PRACTICE 09

Authentication Applications- Kerberos, X.509 Authentication Service; Electronic Mail Security- Pretty Good Privacy, S/MIME; IP Security- IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations; Web Security- Web Security Considerations, Secure Sockets Layer and Transport Layer Security, Secure Electronic Transaction.

MODULE V SYSTEM SECURITY 09

Intruders- Intruder Detection, Password Management; Malicious Software-Virus and Related Threats, Virus Counter Measures; Firewalls- Firewall Design Principles, Trusted Systems.

Total Hours : 45

REFERENCES:

1. William Stallings, “Cryptography and Network Security”, 3rd edition.Prentice Hall of India, New Delhi, 2004.
2. William Stallings, “Network Security Essentials”, 2rd edition.Prentice Hall of India, New Delhi, 2004.
3. Charlie Kaufman , “Network Security: Private Communication in Public World”, 2nd edition. Prentice Hall of India, New Delhi, 2004.

OUTCOMES:

On completion of the course the student will be able ,

- To identify common network security vulnerabilities/attacks; explain the foundations of network security;
- To identify the appropriate procedures required to secure networks;
- To evaluate the risks and threats to networked computers;
- To demonstrate detailed knowledge of the role of encryption to protect data;
- Get knowledge on development of security policies, standards and practices.
- To determine firewall requirements, and configure a firewall.

MACY081 SIGNAL PROCESSING TECHNIQUES

L	T	P	C
3	1	0	4

OBJECTIVES:

- To impart knowledge on various mathematical transforms for signal processing applications.

MODULE I LAPLACE TRANSFORMATION FOR CONTINUOUS TIME SIGNALS 06+03

Analog and digital signals - Periodic and aperiodic signals – Spectrum estimation for bandwidth requirement – Laplace Transform – Spectrum estimation – Frequency filtering for spectrum modification – Inverse Laplace Transform – Modified spectrum to get filtered signal.

MODULE II Z -TRANSFORM FOR DISCRETE TIME SIGNALS 12+03

Sampling of continuous time signals for discrete time signals – Nyquist sampling rate - Need for discrete signals – Quantization for digital signal – Z-Transform – Spectrum estimation of discrete signals – Digital filters for spectrum modification – Inverse Z-Transform – Modified spectrum to get filtered signal – Impulse response of digital systems - Bilinear Transform for analog to digital conversion.

MODULE III DISCRETE FOURIER TRANSFORM FOR DISCRETE TIME SIGNALS 09+03

Discrete Fourier Transform – Comparison with Z-Transform – Discrete signals for spectrum estimation – Digital filters for spectrum modification – Inverse Discrete Fourier Transform to get filtered signals – Fast Fourier Transform with decimation in either time or frequency

MODULE IV DISCRETE COSINE TRANSFORM FOR DISCRETE TIME SIGNALS 09+03

One dimensional and two dimensional discrete Cosine transforms – comparison with discrete Fourier transform – image processing applications like filtering & compression – two dimensional transform implementation using successive one dimensional transform – application in JPEG standards – zig zag scanning of transform coefficients – inverse discrete Cosine transform – expansion of compressed images – calculation of compression parameters of CF,RMSE,PSNR &CQ.

MODULE V DISCRETE WAVELET TRANSFORM FOR DISCRETE TIME SIGNALS 09+03

Wavelet – Haar wavelet – one dimensional forward discrete wavelet transform – comparison with discrete Cosine transform - two dimensional transform implementation using successive one dimensional transform – Image processing applications like filtering & compression - application in JPEG 2000 standards – zig zag scanning of transform coefficients – inverse discrete wavelet transform – expansion of compressed images – calculation of compression parameters of CF, RMSE, PSNR & CQ.

L – 45; T – 15; Total Hours– 60

REFERENCES:

1. Joel L.Schiff ,“ The Laplace Transform: Theory and Applications” – Springer – 1999.
2. Alexander D. Poularikas ,”The Transforms and Applications Handbook” Chapter 6 on Z- Transforms - Boca Raton : CRC Press LLC - 2000.
3. D.Sundararajan,” The Discrete Fourier Transform: Theory,” Algorithm and Applications – World Scientific Publishers – 2001.
4. K.Rao and P.Yip ,” Discrete Cosine Transform – Elsevier ,”– 1990.
5. D.Sundararajan ,” Discrete Wavelet Transform: A Signal Processing Approach ,”Wiley – 2015.

OUTCOMES:

On completion of the course, the student will be able to apply

- Laplace transform for analog signal analysis.
- Z Transform for discrete signal analysis.
- Discrete Fourier Transform for discrete signal analysis.
- Discrete Cosine Transform for discrete signal analysis.
- Discrete Wavelet Transform for discrete signal analysis.
- The methods to calculate compression parameters.

ECCY050 MEMS SYSTEM DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of the course is to

- Provide the basic of MEMS device fabrication
- Fulfill the need of electronic engineer who wants to create MEMS devices
- Introduce the concepts of MEMS Electronic Sensors, Optical and RF system

MODULE I INTRODUCTION TO MEMS 09

MEMS and Microsystems, Miniaturization, Typical products, Micro sensors, Micro actuation, MEMS with micro actuators, Micro accelerometers and Micro fluidics, MEMS materials, Micro fabrication.

MODULE II MECHANICS FOR MEMS DESIGN 09

Elasticity, Stress, strain and material properties, Bending of thin plates, Spring configurations, torsional deflection, Mechanical vibration, Resonance, Thermo mechanics - actuators, force and response time, Fracture and thin film mechanics.

MODULE III ELECTRO STATIC DESIGN 09

Electrostatics: basic theory, electro static instability. Surface tension, gap and finger pull up, Electro static actuators, Comb generators, gap closers, rotary motors, inch worms, Electromagnetic actuators. bistable actuators

MODULE IV CIRCUIT AND SYSTEM ISSUES 09

Electronic Interfaces, Feedback systems, Noise , Circuit and system issues, Case studies - Capacitive accelerometer, Peizo electric pressure sensor, Modelling of MEMS systems, CAD for MEMS.

MODULE V INTRODUCTION TO OPTICAL AND RF MEMS 09

Optical MEMS - System design basics - Gaussian optics, matrix operations, resolution. Case studies, MEMS scanners and retinal scanning display, Digital Micro mirror devices. RF MEMS - design basics, case study - Capacitive RF MEMS switch, performance issues.

L:45 Total Hours:45

REFERENCES:

2. NadimMaluf," An introduction to Micro electro mechanical system design", Artech House, 2000.
3. Mohamed Gad-el-Hak, editor," The MEMS Handbook", CRC press Baco Raton, 2000.
4. Tai Ran Hsu," MEMS & Micro systems Design and Manufacture" Tata McGraw Hill, New Delhi, 2002.

OUTCOMES:

At the end of the course students will be able to

- Describe the process of MEMS fabrication
- Describe the mechanisms followed to design MEMS devices
- Elucidate the methods to make electrostatic MEMS sensors
- Elucidate the methods to make MEMS based accelerometers
- Describe the MEMS based RF Switches
- Discuss the MEMS based optical scanners and sensors

PROFESSIONAL ELECTIVE (SEMESTER 3) (7/6 CREDITS)

EICY130	FAULT TOLERANT CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide knowledge on the method of fault detection and diagnosis.
- To expose redundancy concept for fault detection and isolation.
- To impart knowledge on formulation, implementation of residual generators.
- To acquaint with the design of directional residual for parametric fault.
- To provide knowledge on various intelligent techniques for fault diagnosis and control.

MODULE I INTRODUCTION 09

Introduction-Scope - Approaches to fault detection and diagnosis:-Model free methods and Model based methods -Introduction to Random variables - Distribution Bivariated distribution-Multivariate distribution-Normal distribution - Maximum likelihood distribution-Hypothesis testing.

MODULE II ANALYTICAL REDUNDANCY CONCEPT 09

Additive faults and disturbance-Multiplicative faults and disturbance –Residual generation-Detection property-Isolation property Computational of Residual generation-Specification and implementation.

MODULE III PARITY EQUATION IMPLEMENTATION OF RESIDUAL GENERATOR 09

Parity equation formulation Implementation of single residual-Implementation with input output relation-Fault system matrix Design for structure residual - Structural definition-Canonical structures-Handling disturbance-Residual structure for multiple faults.

MODULE IV DESIGN FOR DIRECTIONAL RESIDUAL 09

Design for directional residual-Directional specifications-Parity equation - Linearly dependent columns Residual generation for parametric faults - Representation of parametric fault-Design for parametric fault and model errors-Robustness in residual generation-Perfect decoupling from disturbance.

MODULE V ADVANCE TOPICS 09

Fault diagnosis using Kalman filtering-Fault diagnosis using principle component

analysis - Fault diagnosis using ANN and Fuzzy clustering Case study: Aircraft fault detection - FTC Requirements IEC-61511-1, Guidance IEC-61511-2 & Methods IEC-61511-3.

Total hours: 45

REFERENCES:

1. Janos.J.Gertler, “Fault detection and diagnosis in engineering system second edition, Marcel Dekker, 1998.
2. Rami S.Mangoubi, “Robust Estimation and Failure detection”, Springer-Verlag London, 1998.

OUTCOMES:

At the end of the course the student will be able to:

- Compare the different approaches used infault detection and diagnosis
- Analyze the various types of fault isolation methods.
- Formulate parity equation implementation of residual generators and design of residual structure for single and multiple faults.
- design directional residual for parametric faults
- Carry out Fault diagnosis using Kalman filtering and principle component analysis

EICY131 ROBOTICS AND AUTOMATION

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide in depth knowledge about Robotic design, hardware and its programming
- To train the students to take up industrial applications and learn using high level languages like C,C++, Embedded C and micro processor programming.
- To provide basic knowledge in the architecture and local control unit of embedded systems for robotics and
- To give adequate knowledge about interfacing of drivers for Robert movement.
- To impart skill in developing Robot design like object detection, pick and place and line follower and path recognination and following.

MODULE I INTRODUCTION AND ROBOT KINEMATICS 09

Basic concepts of Robots and automation-classification-specifications-Application-Notation-Direct Kinematics-Co-ordinate frames-rotations-Homogeneous coordinates-The Arm equation-Kinematic analysis of a typical Robot -Inverse Kinematics -Tool configuration-Inverse kinematics of a typical Robot -Workspace analysis and trajectory planning-Work envelope of different robots-The pick and place operation

MODULE II DYNAMIC OF ROBOTS 09

Continuous path motion-interpolated motion-Straight line motion-Tool configuration Jacobian matrix and manipulator Jacobian-Manipulator Dynamics- -Kinetic of potential energy-Energized forces- Lagrange's Equation -Euler Dynamic model.

MODULE III ROBOT CONTROL 06

The control problem-state equation-Single axis PID control-PD gravity control-Computed torque control-Variable Structure control-Impedance control.

MODULE IV ROBOT VISION & MICRO ROBOTICS 12

Fundamentals of Robot applications-Robot vision –Image representation-Template-matching-polyhedral objects-Shape analysis- Segmentation – Iterative processing -Robot cell design-Types of applications-material handling applications-Machine loading and unloading-spot welding-arc welding-spray

painting-Micro Robotics and MEMS- Fabrication technology for micro robotics, Stability issues in legged robots, under actuated manipulators.

MODULE V MOBILE ROBOTS AND CONTROL ISSUES 09

Industrial automation-General layout-general configuration of an automated flow line-conveyor systems - major features – types - Roller, State wheel, Belt, Chain and overhead trolley-Inspection station with feedback loops to up steam workstations-shop floor control-3 phases-order scheduling.

Total hours: 45

REFERENCES:

1. Saeed B.Niku, “Introduction to robotics- Analysis, Systems, Application” Prentice Hall of India Pvt. Ltd., 2008.
2. Koren, “Robotics for Engineers”, McGraw Hill International Company. Tokyo 2005.
3. Vokotravotic, “Introduction to Robotics”, Springer, 1985.

5. Robort J.Schilling, “Fundamentals of robotics- Analysis and Control, Prentice Hall of India Pvt. Ltd., 2002.

OUTCOMES:

At the end of the course, the student will be able to

- Analyze the hardware components of processors, sub components and its programming languages used for it.
- Develop programs for the use of Robot in industrial applications for applications like fixing car parts, cleaning, welding and adjustment of load in correct coordinates.
- Analyze the different embedded architecture and interfaces of Robotic parts for movement.
- Design and develop Robotic motion control and data acquisition system for given application.
- Analyze the various coding techniques used in process industries.

EICY 132 INSTRUMENTATION IN POWER PLANT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To have an idea about different methods of Power Generation, with a particular emphasis on thermal power Generation.
- Should aware about the various measurements involved in power generation plants.
- To Impact knowledge about the different types of analysers used in power plant
- Should aware about the different types of controls and control loops.
- The student should know the methods of monitoring different parameters like speed, vibration of turbines and their control.

MODULE I INTRODUCTION 07

Brief Survey of power generation – Hydro, thermal, Instrumentation in power generation, thermal power plants – block diagram, details of boiler process, co-generation.

MODULE II MEASUREMENTS IN POWER PLANTS 08

Full Measurement – review of temperature and pressure measurement of steam, water flow measurement, review of recording and indicating instruments in power stations, water level of gauge for Boiler drum, gas analysis meter smoke instruments, dust monitor – measurement of Impurities in feed water, Instrument maintenance aspects.

MODULE III BOILER CONTROL - I 08

Boiler control – combustion of Fuels (gaseous liquid and solid), excess air, combustion chemistry and products of combustion, requirement for excess combustion, air-circulation of efficiency of Boiler, steam temperature control systems – super heaters and de-super heaters

MODULE IVBOILER CONTROL - II 08

Feed water supply and Boiler water circulation systems – Drum level control systems – boiler draft systems – measurement and control of furnace draft – measurement and control of combustion – draft and air flow control related functions. Interlodes in Boiler start up.

MODULE V ANALYSERS – FLUE GAS ANALYSIS 07

Combustion control for liquid and gaseous fuel Boilers coal or solid fuel, pulverized coal fired boilers, flue gas oxygen analyser, pH meter. Pollution monitoring instruments, dissolved oxygen analyser silica analyser and conductivity meter.

MODULE VI TURBINE MONITORING 07

Speed, vibration, shell temperature monitoring and control, lubricant oil temperature control – L.P. Heater, H.P. Heater, condenser Hot Well Control, Interlocks in turbine operation.

Total hours: 45

REFERENCE BOOKS:

1. S.M. Elonka and A.L. Kohal, 'Standard Boiler Operations', Tata McGraw Hill, New Delhi, 1994.
2. R.K.Jain, 'Mechanical and Industrial Measurements', Khanna Publishers, New Delhi, 1995.
3. E.Al. Wakil, 'Power Plant Engineering', Tata McGraw Hill, 1984

OUTCOMES:

At the end of the course, the students will be able to

- Know the different methods of Power Generation in operation and maintenance of power generation in a core industry
- Shall learn different parameters like speed, vibration of turbines and their control
- Optimise power plant using control loops effectively
- Know various parameters measured in Power Plant
- Learn about different analytical instruments used

EICY133	INSTRUMENTATION IN PETROCHEMICAL INDUSTRY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- The students should know with raw material pertaining to making of petroleum process
- They should know about various operations
- To learn the measurement, automation and control system in respect of petrochemical industry
- Should accustomed to computer application in petrochemical industry
- To learn about major petroleum products

MODULE I COMPOSITION OF PETROLEUM 08

Brief review of petroleum, its formation and composition of crude oil, exploration recovery techniques.

MODULE II OPERATION IN PETROLEUM INDUSTRY 08

Characterizsation of crude oil, Pretreatment of crude, removal of moisture, salts etc; General refinery setup and functions of various units, refinery flow diagram, equipment and tank farm layout.

MODULE III TYPES OF REFINERIES AND DISTILLATION 08

Types of refineries such as simple intermediate and complex, Pre-flashing distillation principles, atmospheric distillation, coloum types, vacuum distillation, pressure distillation methane deri.

MODULE IV MAJOR PETROLEUM PRODUCTS 07

Major petroleum products like LPG, Gasoline, Industrial Solvents, Haptha, Kerosene, Aviation turbine fuel, High speed diesel, Furnace oil, Lubricants, Bitumen, base oil molecular re-building process e.g. Gasto liquid Process, methane derivatives, acetylene derivatives ethylene derivatives, propylene derivatives.

MODULE V MEASUREMETNS AND CONTROL LOOPS IN PETROCHEMICAL INDUSTRY 09

Parameters to be measured in Petrochemical Industry, Selection of Instruments, Intrinsic safety Instruments, Control of distillation column, Control of Catalytic Crackers, Control of Vinyl Chloride and PVC production.

MODULE VI **05**

Statistical information Indian Petroleum and Petrochemical / Industry, future trends and developments.

Total hours: 45

REFERENCE BOOKS:

1. Austin G.T. Shreeves, Chemical Process Industries, McGraw Hill International student edition, Singapore, 1985.
2. Liptak B.G. Instrumentation in Process Industries, Chilton Book Company, 1994.

OUTCOMES:

At the end of the course, the students will be able to

- Introduce the concept of different measurement techniques and control systems in Petrochemical Industry
- adopt computer control in petrochemical industry
- Find out Fault and repairing of Instruments
- Understood good knowledge about process
- Understanding area classification

PROFESSIONAL ELECTIVE FROM OTHER DEPARTMENT

ECCY025	WIRELESS COMMUNICATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce current wireless systems and spectrum allocation
- To explain general ray tracing models and path loss models
- To impart knowledge on wireless channels and capacity
- To introduce MIMO systems, multiuser system, OFDM and broadband modulation
- To impart knowledge on multiuser systems .

MODULE I INTRODUCTION 09

Current wireless systems, Wireless spectrum and allocation to existing systems, radio propagation models, path loss calculation, ray tracing methods, empirical path loss models, discrete time and space time statistical channel models.

MODULE II CAPACITY AND DIVERSITYOF WIRELESS CHANNELS 09

Capacity in AWGN, capacity of flat fading channels, capacity of frequency selective fading channels. Receiver Diversity& Transmitter Diversity techniques.

MODULE III MULTIPLE ANTENNA SYSTEMS 09

Narrow band MIMO model, MIMO channel capacity, MIMO Diversity and beam forming, diversity multiplexing tradeoff, space time modulation and coding, Smart antennas.

MODULE IV MULTI CARRIER MODULATION 09

Data transmission using multiple carriers, Multi carrier modulation with overlapping subchannels. Mitigation of subcarrier fading, Discrete implementation of multicarrier systems, OFDM, PAPR.

MODULE V SPREAD SPECTRUM AND MULTI USER SYSTEMS 09

Spread spectrum principle – DSSS – FHSS , multiuser DSSS – spreading codes, downlink and uplink channels , multicarrier CDMA system and multi user FHSS systems. Multiuser channels - uplink and downlink channel capacity – Multiuser detection .

Total Hours: 45

REFERENCES:

1. Andrea Goldsmith," Wireless Communication" , Cambridge Univ. Press, 2006.
2. Andreas F.Molisch, "Wireless Communications" 2nd Edition, Wiley publications, 2014
3. Theodore S.Rappaport., "Wireless Communications", 2nd Edition, Pearson Education, 2002.
4. Yong SooCho , "MIMO – OFDM wireless communications with MATLAB", IEEE press, John Wiley publications, 2010.

OUTCOMES:

On completion of this course, student will be able to

- Describe ray tracing models and path loss models
- Characterize wireless channels and describe channel models
- Discuss MIMO narrow band model and transmission techniques with multiple antennas.
- Explain multi carrier modulation schemes
- Explore on broadband modulation and multiuser systems
- Discuss on wireless communication techniques

ECCY011 MEDICAL IMAGE PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explain fundamental concepts of digital image processing
- Design and implement algorithms that perform basic image pre-processing
- To interpret medical images through various multimodal imaging sources
- To describe idea on image representation,analysis, classification, reconstruction, registration and visualization of medical images.

MODULE I IMAGE FUNDAMENTALS 09

Image perception, MTF of the visual system, Image fidelity criteria, Image model, Image sampling and quantization – two dimensional sampling theory, Image quantization, Optimum mean square quantizer, Image transforms – 2D-DFT and other transforms.

MODULE II IMAGE PREPROCESSING 09

Image enhancement, point operation, Histogram modeling, spatial operations, Transform operations, Image restoration, Image degradation model, Inverse and Weiner filtering. Image Compression, Spatial and Transform methods.

MODULE III MEDICAL IMAGE RECONSTRUCTION 09

Mathematical preliminaries and basic reconstruction methods, Imagereconstruction in CT scanners, MRI, functional MRI, Ultra sound imaging, 3DUltra sound imaging Nuclear Medicine Imaging Modalities-SPECT, PET,Molecular Imaging.

MODULE IV IMAGE ANALYSIS AND CLASSIFICATION 09

Image segmentation: pixel based, edge based, region based, segmentation. Image representation and analysis, Feature extraction and representation, Statistical, Shape, Texture, feature and image classification: Statistical, Rulebased, Neural Network approaches.

MODULE V IMAGE REGISTRATIONS AND VISUALIZATION 09

Rigid body visualization: Principal axis registration, Interactive principal axisregistration, Feature based registration, Elastic deformation based registration,Image visualization: 2D display methods, 3D display methods, virtual realitybased interactive visualization.

Total Hours : 45

7. Jerry L. Prince and Jonathan M.Links, “Medical Imaging Signals and Systems”, Pearson Education Inc. 2006.

OUTCOMES:

On completion of the course the student will be able to

- Explain the fundamental concepts of digital image processing
- Recognize & apply suitable image enhancement,compression and restoration techniques.
- Compare various imaging sources(i.e.,MRI,CT,SPECTetc)
- Solve Mathematical Preliminaries for image Reconstruction
- Describe various techniques for image analysis and classification
- Use appropriate image registration technique for various applications

ECCY026 WIRELESS SENSOR NETWORKS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To make the students list the Wireless Sensor Network Architecture and its Applications
- To explain the physical layer design,
- To describe the MAC protocols and time synchronization algorithms
- To discuss various routing protocols, localization algorithms used for sensor network.
- To explain basics of sensor network programming and Internet of Things

MODULE I NODE ARCHITECTURE 07

Introduction to sensor network – Application – Difference between Adhoc and Sensor Network - Node architecture - Hardware components overview - Energy consumption of Sensor nodes - Operating Systems and Execution Environment - some examples of Sensor nodes.

MODULE II NETWORK ARCHITECTURE 07

Sensor Network Scenarios – Optimization goals- Design Principles –Gateway Concepts–Wireless Channel fundamentals - Physical layer and transceiver design considerations in Wireless Sensor Network

MODULE III MAC PROTOCOLS & TIME SYNCHRONIZATION 10

Fundamentals of MAC Protocols – Low duty cycle protocols – Contention based Protocols – schedule based protocols – IEEE 802.15.4 MAC – Address and name management in wireless sensor network. Need for time synchronization

MODULE IV LOCALIZATION & ROUTING PROTOCOLS 12

Properties of localization and positioning procedures – Range based Localization – Range free Localization Routing Metrics – Data Centric Routing– Proactive Routing - On Demand Routing – Hierarchical Routing – QoS based Routing Protocols

MODULE V SENSOR NETWORK PROGRAMMING and IoT 09

Challenges in sensor network programming – Node Centric programming – Dynamic programming – Sensor Network Simulators - Internet of Things (IoT): overview, Applications, potential & challenges, and architecture.

Total Hours : 45

4. “Adrian McEWen and Hakim Cassimalli, “Designing the Internet of Things” Wiley publications, November 2013.

OUTCOMES:

At the end of the course students will be able to

- Describe Wireless Sensor Network Architecture and its Applications
- Explain the physical layer design
- Compare the various MAC protocols and illustrate time synchronization algorithms
- Distinguish various routing protocols, localization algorithms used for sensor network.
- To describe the basics of sensor network programming and Internet of Things
- Analyze various Sensor Network Simulators

EEC 6128	EMBEDDED AND ADVANCED CONTROL OF ELECTRICAL DRIVES	L	T	P	C
		3	0	2	4

OBJECTIVES:

- The objective of this course is to introduce embedded application design for Electrical Drives.
- To provide practical experience with microcontroller systems
- Introduces Mikro C compiler for 16 series PICs.
- Demonstrates the use of the PIC Microcontrollers for Electrical Drives.

MODULE I PIC16F8XX- MICROCONTROLLERS 04

Device Overview- Features and Function- Core SFRs- I/O Ports- Timers-CCP MODULEs- Serial Communication MODULEs- Analog MODULEs - Internal oscillator - External oscillator in LP, XT or HS, RC and RCIO modes – EEPROM – Watch Dog Timer- Black-out and Brown-out Resets.

MODULE II MIKRO C COMPILER 05

Mikro C Compiler reference- Valid C Characters- Variables- Constants- Types- Increment and decrement - structure-Operators and expressions-Loops- Conditionals-micro C Libraries- ADC, CAN, CANSPI, EEPROM, Ethernet, PWM, Keypad, LCD, SPI Ethernet, RS485,USART and Trigonometric Libraries - Preprocessor- Statements.

MODULE III MIKRO C BUILDING APPLICATIONS 05

Mikro C IDE : Code Editor- Code Explorer – Debugger – Error Window – Statistics – Integrated Tools - Building applications :Projects – Source Files :Search Paths – Managing Source Files – Compilation : Output Files – Assembly View – Error Messages.- Flashing Software : Overview of PICkit2.

MODULE IV ALGORITHM AND PROGRAMMING IN MIKROC 20

Digital realization of error amplifier, limiter and Proportional-Integral-Derivative (PID) controller - PID algorithm - Source codes in Mikro C: ADC and PWM – SVPWM – Unipolar and Bipolar SPWM – Phase Angle Control with Zero Crossing Detection.

MODULE V MICROCONTROLLER COMMUNICATION 06

PIC to PIC Communication using UART - Communication with RS232 Serial Bus - Interfacing EEPROM -I²C Communication with PIC Microcontroller - Interfacing lcd and Temperature sensors - ZigBee communication between PICs.

MODULE VI CLOSED LOOP CONTROL OF ELECTRIC DRIVES 20

Closed Loop Control of the Plant Model - Hardware and Software Implementation using PIC Microcontrollers: Speed control of Chopper fed separately excited DC Motor – AC Motor Control Using TRIAC Phase Controller, SPWM and SVPWM inverter fed induction motor - Stepper Motor Interfacing – Servo Motor control.

Total Hours: 60

REFERENCES:

1. John Main, “PIC Microcontroller C”, 2006-2007 Edition, 2007.
2. Mikro C- Compiler for PIC Microchip controllers- mikro Electronik, 2012.
3. Martin P. Bates,” Programming 8-bit PIC Microcontrollers in C: With Interactive Hardware Simulation.
4. Tim Wilmshurst “Designing Embedded Systems with PIC Microcontrollers- Principles and applications”

7. Han-Way Huang, Leo Chartrand, "PIC Microcontroller: An Introduction to Software & Hardware Interfacing", Delmar Cengage Learning, 2004.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Work on different projects making use of the PIC microcontroller
- Implement external interfaces in various embedded system projects by using various interfacing techniques.
- Enable the student to design software to interact with real-world systems
- Design and develop both the hardware and software microcontroller based Electric Drive systems.
- Develop and demonstrate how to accomplish a given task using Embedded “C” language on a microcontroller.
- Demonstrate a working knowledge of the necessary steps and methods used to interface a microcontroller system to devices such as motors, sensors, etc.

EEC 6235 SOLID STATE AC AND DC DRIVES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the stable steady-state operation and transient dynamics of a motor-load system.
- To study and analyze the operation of the converter / chopper fed dc drive and to solve simple Problems.
- To study and understand the operation of both classical and modern induction motor drives.
- To understand the differences between synchronous motor drive and induction motor drive and to learn the basics of permanent magnet synchronous motor drives with converter.
- To analyze and design the current and speed controllers for a closed loop solid-state DC and AC motor drive and simulation using a software package

MODULE I FUNDAMENTAL OF DC AND AC MOTOR 06

Components of electrical Drives-electric machines, power converter, controllers-dynamics of electric drive - torque equation - equivalent values of drive parameters - components of load torques types of load - four quadrant operation of a motor– steady state stability– load equalization – classes of motor duty - determination of motor rating.

MODULE II SENSORS FOR DRIVES 06

Hall Effect Sensors – Mechanical SWensors for speed and angular positions – Absolute Encoders – Incremental Encoders – Resolvers

MODULE III CLOSED LOOP CONTROL POD DC AND AC DRIVES 09

Transient analysis of separately excited motor – converter control of dc motors – analysis of separately excited & series motor with 1 - phase and 3 - phase converters – dual converter – analysis of chopper controlled dc drives – converter ratings and closed loop control – transfer function of self, separately excited DC motors – linear transfer function model of power converters – sensing and feeds back elements – current and speed loops, P, PI and PID controllers – response comparison – simulation of converter and chopper fed DC drive.

MODULE IV SCALAR METHODS FOR IM DRIVES FROM STATOR SIDE 09

Stator voltage control of induction motor–torque-slip characteristics-operation with different types of loads – operation with unbalanced source voltages and single

phasing – analysis of induction motor fed from non - sinusoidal voltage supply – stator frequency control - variable frequency operation – V/F control, controlled current and controlled slip operation – effect of harmonics and control of harmonics

MODULE V SCALAR METHODS FOR IM DRIVES FROM ROTOR SIDE 08

PWM inverter drives – multiquadrant drives – rotor resistance control – slip torque characteristic – torque equations, constant torque operation – slip power recovery scheme – torque equation – torque slip characteristics – power factor – methods of improving power factor – limited sub synchronous speed operation – super synchronous speed operation.

MODULE VI SYNCHRONOUS MOTOR DRIVES 07

Principle of synchronous motor control – Introduction to CSI Single phase and three phase CSI – CSI fed synchronous machines – adjustable frequency operation of synchronous motors –voltage source inverter drive with open loop control – self controlled synchronous motor with electronic commutation – self controlled synchronous motor drive using load commutated thyristor inverter.

Total Hours: 45

5. M. A. ElSharkawi , Fundamentals of Electrical Drives , Thomson Learning - 2000. 49
6. Vedam Subrahmaniam, Electric Drives, TMH-2000.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following: Analyse the system considering the steady state and dynamic characteristics.

- Abilty to design a closed loop control of AC and DC drives.
- Talent in selection of motor for various application.
- Software knowledge in matlab , for drive application.
- Modeling AC,DC machines with appropriate loads
- Design a system with suitable parameters to control a drive system.

EECY047	SPECIAL ELECTRICAL MACHINES AND CONTROLLERS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart knowledge on Construction, principle of operation and performance of switched reluctance motors.
- To understand the Construction, principle of operation and performance of SM.
- To impart knowledge on Construction, principle of operation and performance of AC commutator motors.
- To study about the Construction, principle of operation and performance of permanent magnet brushless D.C. motors and PMSM.
- To impart knowledge on Construction, principle of operation and performance of linear motors.
- To learn the softwares Magnet AND ANSYS for performance analysis of motor.

MODULE I SWITCHED RELUCTANCE MOTORS 07

Constructional features - principle of operation - Torque equation - Power controllers Characteristics and control - Microprocessor based controller.

MODULE II STEPPING MOTORS 07

Constructional features, principle of operation-modes of excitation torque, production in Variable Reluctance (VR) stepping motor- dynamic characteristics, Drive systems - circuit for open loop control- closed loop control of stepping motor.

MODULE III AC COMMUTATOR MOTORS 07

Principle of operation – Equivalent circuit – Phasor diagram – Performance of Repulsion motor and Universal motor.

MODULE IV PERMANENT MAGNET MOTORS 07

Principle of operation – types – magnetic circuit analysis – EMF and Torque equations – Power Controllers – Motor characteristics and control of PMSM and BLDC motors.

MODULE V LINEAR MOTORS 07

Linear Induction motor (LIM) classification – construction – Principle of operation –

Concept of current sheet – goodness factor – DC Linear motor (DCLM) types – circuit equation , DCLM control applications ,Linear Synchronous motor(LSM) – Types - Performance equations – Applications.

MODULE VI CASE STUDY 10

Modeling and simulation – Switched Reluctance Machines – Permanent magnet BLDC Motor – PMSM – MAGNET 6.0, ANSYS software.

Total Hours: 45

4. Naser A and Boldea L,”Linear Electric Motors: Theory Design and Practical Applications”, Prentice Hall Inc., New Jersey 1987.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Talent in selection of motor for various application
- A thorough understanding of various special electric machines and their applications.
- Able to analyse any electric machine.
- Ability to model small power rating of motor for real time application
- Software knowledge in Magnet, ANSYS for electrical application.
- Able to present the rudiments of linear machines.

GENERAL ELECTIVES

GECY101 PROJECT MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

The objectives of the course would be to make the students

- Learn to evaluate and choose an optimal project and build a project profile.
- Attain knowledge on risk identification and risk analysis
- Gain insight into a project plan and components
- Familiar with various gamut of technical analysis for effective project implementation
- Learn to apply project management techniques to manage resources.

MODULE I INTRODUCTION & PROJECT INITIATION 09

Introduction to project and project management - projects in contemporary organization – The project life cycle - project initiation - project evaluation methods & techniques - project selection criteria - project profile.

MODULE II RISK ANALYSIS 09

Sources of risk: project specific - competitive - industry specific - market and international risk – perspectives of risk – risk analysis: sensitivity analysis - scenario analysis - breakeven analysis - simulation analysis - decision tree analysis – managing/mitigating risk – project selection under risk.

MODULE III PROJECT PLANNING & IMPLEMENTATION 09

Project planning – importance – functions - areas of planning - project objectives and policies - steps in planning process - WBS – capital requirements - budgeting and cost estimation - feasibility analysis - creation of project plan – project implementation: pre-requisites - forms of project organization

MODULE IV TECHNICAL ANALYSIS 09

Technical analysis for manufacturing/construction/infrastructure projects – process/technology - materials and inputs - product mix - plant capacity – plant location and site selection – plant layout - machinery and equipment – structures

and civil works – schedule of project implementation – technical analysis for software projects.

MODULE V PROJECT MANAGEMENT TECHNIQUES 09

Project scheduling - network construction – estimation of project completion time – identification of critical path - PERT & CPM – crashing of project network - complexity of project scheduling with limited resources - resource allocation - resource leveling – resource smoothing – overview of project management software.

Total Hours: 45

REFERENCES:

1. Projects: Planning, Analysis, Financing, Implementation and Review, Prasanna Chandra, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2004.
2. Project Management and Control, Narendra Singh, Himalaya Publishing, New Delhi, 2015.
3. A Management Guide to PERT/CPM, Jerome, D. Weist and Ferdinand K. Levy, Prentice Hall of India, New Delhi, 1994.

OUTCOMES:

On successfully completing this course, the student will be able to:

- Evaluate & select a project as well as develop a project profile.
- Identify various risks associated with the project and manage it effectively.
- Prepare a detailed project plan addressing its components.
- Perform technical analysis for effective project implementation
- Apply project management techniques for maximizing resource utilization.

GECY102 SOCIETY, TECHNOLGY & SUSTAINABILITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- Aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- Understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

MODULE I TECHNOLOGY AND ITS IMPACTS 09

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life – Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT 09

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change.

MODULE III SOCIETY AND TECHNOLOGY 09

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of technology – Impact of technology on developer and consumers – Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE 09

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media Technology – Information Systems Technology – Nanotechnology – Space Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY 09

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

4. Martin A.A Abraham, “Sustainability Science and Engineering: Defining Principles”, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

OUTCOMES:

At the end of this course, the students will be able to

- Understand the benefits of modern technology for the well-being of human life.
- Connect sustainability concepts and technology to the real world challenges.
- Find pathway for sustainable society.

GECY103 ARTIFICIAL INTELLIGENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- Expose the history and foundations of artificial intelligence.
- Showcase the complexity of working on real time problems underlying the need for intelligent approaches.
- Illustrate how heuristic approaches provide a good solution mechanism.
- Provide the mechanisms for simple knowledge representation and reasoning.
- Highlight the complexity in working with uncertain knowledge.
- Discuss the current and future applications of artificial intelligence.

MODULE I HISTORY AND FOUNDATIONS 08

History – Scope – Influence from life – Impact of computing domains - Agents in environments - Knowledge representation – Dimensions of Complexity – Sample application domains – Agent structure.

MODULE II SEARCH 10

Problem solving as search – State spaces – Uninformed Search – Heuristic search – Advanced search – Constraint satisfaction - Applications.

MODULE III KNOWLEDGE REPRESENTATION AND REASONING 10

Foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

MODULE IV REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE 08

Probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference, sample applications.

MODULE V CASE STUDY AND FUTURE APPLICATIONS 09

Design of a game/Solution for problem in student's domain. Natural Language processing, Robotics, Vehicular automation – Scale, Complexity, Behaviour – Controversies.

Theory: 45

TEXT BOOK:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2010.
2. David Poole, Alan Mackworth, Artificial Intelligence: Foundations of Computational Agents, Cambridge University Press, 2010.
3. Nils J. Nilsson, The Quest for Artificial Intelligence, Cambridge University Press, Online edition, 2013.
4. Keith Frankish, William M. Ramsey (eds) The Cambridge Handbook of Artificial Intelligence, Cambridge University Press, 2014.

OUTCOMES:

Students who complete this course will be able to

- Discuss the history, current applications, future challenges and the controversies in artificial intelligence.
- Apply principle of AI in the design of an agent and model its actions.
- Design a heuristic algorithm for search problems.
- Analyze and represent the fact using logic for a given scenario
- Represent uncertainty using probabilistic models
- Develop a simple game or solution using artificial intelligence techniques.

GECY104 GREEN COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To focus on the necessity of green computing technology.
- To expose to various issues with information technology and sustainability.
- To attain knowledge on the technologies for enabling green cloud computing.
- To elaborate on the energy consumption issues
- To illustrate a Green and Virtual Data Center
- To develop into a Green IT Technologist.

MODULE I INTRODUCTION 08

Trends and Reasons to Go Green - IT Data Center Economic and Ecological Sustainment - The Growing Green Gap: Misdirected Messaging, Opportunities for Action - IT Data Center “Green” Myths and Realities - PCFE Trends, Issues, Drivers, and Related Factors - Green Computing and Your Reputation- Green Computing and Saving Money- Green Computing and the Environment

MODULE II CONSUMPTION ISSUES 10

Minimizing power usage – Cooling - Electric Power and Cooling Challenges - Electrical – Power -Supply and Demand Distribution - Determining Energy Usage - From Energy Avoidance to Efficiency - Energy Efficiency Incentives, Rebates, and Alternative Energy Sources - PCFE and Environmental Health and Safety Standards- Energy-exposed instruction sets- Power management in power-aware real-time systems.

MODULE III NEXT-GENERATION VIRTUAL DATA CENTERS 09

Data Center Virtualization - Virtualization beyond Consolidation - Enabling Transparency - Components of a Virtual Data Center - Datacenter Design and Redesign - Greening the Information Systems - Staying Green- Building a Green Device Portfolio- Green Servers and Data Centers- Saving Energy

MODULE IV TECHNOLOGIES FOR ENABLING GREEN AND VIRTUAL DATA CENTERS 08

Highly Effective Data Center Facilities and Habitats for Technology - Data Center Electrical Power and Energy Management - HVAC, Smoke and Fire Suppression - Data Center Location - Virtual Data Centers Today and Tomorrow - Cloud Computing, Out-Sourced, and Managed Services.

MODULE V SERVERS AND FUTURE TRENDS OF GREEN COMPUTING 10

Server Issues and Challenges - Fundamentals of Physical Servers - Types, Categories, and Tiers of Servers - Clusters and Grids - Implementing a Green and Virtual Data Center - PCFE and Green Areas of Opportunity- 12 Green Computer Companies- What's in Green computer science-Green off the Grid aimed for data center energy evolution-Green Grid Consortium- Green Applications- Green Computing Making Great Impact On Research

Theory: 45

6. Marty Poniatowski, "Foundation of Green IT: Consolidation, Virtualization, Efficiency, and ROI in the Data Center", Printice Hall, ISBN: 9780-1-3704-375-0, 2009.

OUTCOMES:

Students who complete this course will be able to

- Demonstrate issues relating to a range of available technologies, systems and practices to support green computing.
- Select appropriate technologies that are aimed to reduce energy consumption.
- Address design issues needed to achieve an organizations' green computing objectives.
- Analyze the functionality of Data Centers.
- Critically evaluate technologies and the environmental impact of computing resources for a given scenario.
- Compare the impact of Green Computing with other computing techniques.

GECY105 GAMING DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To master event-based programming
- To learn resource management as it relates to rendering time, including level-of-detail and culling.
- To become familiar with the various components in a game or game engine.
- To explore leading open source game engine components.
- To become familiar of game physics.
- To be compatible with game animation.

MODULE I INTRODUCTION 09

Magic Words – What Skills Does a Game Designer Need? – The Most Important Skill -The Five Kinds of Listening-The Secret of the Gifted.

MODULE II THE DESIGNER CREATES AN EXPERIENCE 09

The Game Is Not the Experience -Is This Unique to Games? -Three Practical Approaches to Chasing Rainbows -Introspection: Powers, Perils, and Practice -Dissect Your Feelings -Defeating Heisenberg -Essential Experience.

MODULE III THE EXPERIENCE IN THE PLAYER MIND AND GAME MECHANICS 08

Modeling – Focus -Empathy – Imagination – Motivation – Space – Objects, Attributes, and States – Actions – Rules.

MODULE IV GAMES THROUGH AN INTERFACE 09

Breaking it Down – The Loop of Interaction – Channels of Information – Other Interface.

MODULE V BALANCED GAME MECHANICS 10

Balance – The Twelve Most Common Types of Game Balance – Game Balancing Methodologies - Balancing Game Economies.

Theory: 45

4. James M. Van Verth, Lars M. Bishop "Essential Mathematics for Games and Interactive Applications", Third Edition,A K Peters/CRC Press, ISBN-10: 1482250926, 2015.

OUTCOMES:

Students who complete this course will be able to

- Realize the basic history and genres of games
- Demonstrate an understanding of the overall game design process
- Explain the design tradeoffs inherent in game design
- Design and implement basic levels, models, and scripts for games
- Describe the mathematics and algorithms needed for game programming
- Design and implement a complete three-dimensional video game

GECY106 SOCIAL COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To create original social applications, critically applying appropriate theories and effective practices in a reflective and creative manner.
- To critically analyze social software in terms of its technical, social, legal, ethical, and functional features or affordances.
- To encourage the development of effective communities through the design, use, and management of social software.
- To give students with a base of knowledge and advances for them to critically examine existing social computing services.
- To plan and execute a small-scale research project in social computing in a systematic fashion.
- To become familiar with the concept of computational thinking.

MODULE I BASIC CONCEPTS 09

Networks and Relations: Relations and Attributes, Analysis of Network Data, Interpretation of network data -New Social Learning – Four Changes that Shift Work - Development of Social Network Analysis: Sociometric analysis and graph theory, Interpersonal Configurations and Cliques – Analysing Relational Data.

MODULE II SOCIAL LINK 09

Individual Actors, Social Exchange Theory, Social Forces, Graph Structure, Agent Optimization Strategies in Networks – Hierarchy of Social Link Motivation- Social Context.

MODULE III SOCIAL MEDIA 08

Trends in Computing – Motivations for Social Computing – Social Media: Social relationships, Mobility and Social context – Human Computation – Computational Models- Business use of social Media.

MODULE IV SOCIAL INFORMATION FILTERING 09

Mobile Location Sharing – Location based social media analysis – Social Sharing and Social Filtering – Automated recommender Systems – Traditional and Social Recommender Systems.

MODULE V SOCIAL NETWORK STRATEGY 10

Application of Topic Models – Opinions and Sentiments – Recommendation Systems – Language Dnamics and influence in online communities – Psychometric analysis – Case Study: Social Network Strategies for surviving the zombie apocalypse.

Theory: 45

REFERENCES:

6. Jennifer Golbeck, “Analyzing the Social Web”, Elsevier Publication, 2013.
7. Huan Liu, John Salerno, Michael J. Young, “Social computing and Behavioral Modeling”, Springer Publication, 2009.

OUTCOMES:

Students who complete this course will be able to

- Realize the range of social computing applications and concepts.
- Analyze data left after in social media.

- Recognize and apply the concepts of computational models underlying social computing.
- Take out simple forms of social diagnostics, involving network and language models, applying existing analytic tools on social information.
- Evaluate emerging social computing applications, concepts, and techniques in terms of key principles.
- Design and prototype new social computing systems.

GECY107 SOFT COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To become familiar with AI and neural networks that can learn from available examples and generalize to form appropriate rules for inferencing systems.
- To introduce the ideas of fuzzy sets, fuzzy logic and use of heuristics based on human experience.
- To provide the mathematical background for carrying out the optimization associated with neural network learning.
- To familiarize with genetic algorithms and other random search procedures useful while seeking global optimum in self-learning situations.
- To introduce case studies utilizing the above and illustrate the intelligent behavior of programs based on soft computing.

MODULE I INTRODUCTION 09

Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence : Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies. Knowledge representation issues, Prepositional and predicate logic, monotonic and non-monotonic reasoning, forward Reasoning, backward reasoning.

MODULE II INTRODUCTION TO NEURAL NETWROK 09

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb"s learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BPA, momentum, limitation, characteristics and application of EBPA.

MODULE III FUZZY LOGIC 09

Fuzzy set theory, Fuzzy set versus crisp set, crisp relation & fuzzy relations,

Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system: fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference systems, fuzzy decision making & Applications of fuzzy logic.

MODULE IV GENETIC ALGORITHM 09

Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

MODULE V APPLICATION OF COMPUTATIONAL INTELLIGENCE 09

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency Prediction – Soft Computing for Color Recipe Prediction.

Total Hours: 45

6. Kosko: “Neural Network & Fuzzy System”, PHI Publication, 1992.

OUTCOMES:

On completion of the programme students will be able to:

- Learn about soft computing techniques and their applications
- Analyze various neural network architectures and able to Understand perceptrons model

- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems.
- Apply genetic algorithms to combinatorial optimization problems.
- Evaluate and compare solutions by various soft computing approaches for a given problem.

GECY108 EMBEDED SYSTEM PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- This course provides an introduction to the design of embedded computing systems including their hardware and software architectures.
- Entire software development lifecycle and examine the various issues involved in developing software for embedded systems.
- To analyze the I/O programming and Embedded C coding techniques
- This course will equip students with the software development skills necessary for practitioners in the embedded systems field.

MODULE I INTRODUCTION OF EMBEDDED SYSTEM 09

Embedded computing - characteristics and challenges - embedded system design process-Overview of Processors and hardware units in an embedded system-Compiling, Linking and locating – downloading and debugging –Emulators and simulators processor – External peripherals – Memory testing – Flash Memory.

MODULE II SOFTWARE TECHNOLOGY 09

Software Architectures, Software development Tools, Software Development Process Life Cycle and its Model, Software Analysis, Design and Maintenance.

MODULE III INPUT/OUTPUT PROGRAMMING 09

I/O Instructions, Synchronization, Transfer Rate & Latency, Polled Waiting Loops, Interrupt – Driven I/O, Writing ISR in Assembly and C, Non Maskable and Software Interrupts

MODULE IV DATA REPRESENTATION IN EMBEDDED SYSTEMS 09

Data representation ,Twos complement, Fixed point and Floating Point Number Formats ,Manipulating Bits in -Memory, I/O Ports, Low level programming in C ,Primitive data types , Arrays, Functions ,Recursive Functions, Pointers, Structures & Unions ,Dynamic Memory Allocation ,File handling ,Linked lists, Queues, Stacks.

MODULE V EMBEDDED C 09

Embedded Systems programming in C – Binding & Running Embedded C program in Keil IDE – Dissecting the program -Building the hardware. Basic techniques for

reading & writing from I/O port pins – switch bounce - LED Interfacing using Embedded C.

Total Hours: 45

REFERENCES:

1. Marilyn Wolf, "Computers as components ", Elsevier, 2012.
2. Qing Li and Carolyn Yao, "Real-Time Concepts for Embedded Systems", CMP Books, 2003.
3. Daniel W. Lewis, "Fundamentals of embedded software where C and assembly meet", Pearson Education
4. Michael Bass, "Programming Embedded Systems in C and C++", Oreilly, 2003.

OUTCOMES:

On completion of this course the student will be able to

- Design the software and hardware components in embedded system
- Describe the software technology
- Use interrupt in effective manner
- Use keil IDE for programming
- Program using embedded C for specific microcontroller
- Design the embedded projects

GECY109 PRINCIPLES OF SUSTAINABLE DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge in the concepts and dimensions of sustainable development.
- To gain knowledge on the framework for achieving sustainability.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 09

Environment and Development - Population poverty and Pollution –Global and Local environmental issues –Resource Degradation- Greenhouse gases- Desertification-industrialization –Social insecurity, Globalization and environment. History and emergence of the concept of sustainable development-Objectives of Sustainable Development.

MODULE II COMPONENTS AND DIMENSIONS OF SUSTAINABLE DEVELOPMENT 09

Components of Sustainability –Complexity of growth and equity – Social economic and environmental dimensions of sustainable development – Environment- Biodiversity- Natural -Resources- Ecosystem integrity- Clean air and water- Carrying capacity- Equity, Quality of Life, Prevention, Precaution-Preservation and Public Participation Structural and functional linking of developmental dimensions.

MODULE III FRAMEWORK FOR ACHIEVING SUSTAINABILITY 09

Operational guidelines- interconnected prerequisites for sustainable development Empowerment of Women, children, Youth, Indigenous People, Non-Governmental Organizations Local Authorities, Business and industry-Science and Technology for sustainable development- performance indicators of sustainability and assessment mechanism- Constraints and barriers for sustainable development.

MODULE IV SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 09

Demographic dynamics of sustainability – Policies for socio-economic development -Strategies for implementing eco-development programmes Sustainable development through trade –Economic growth –Action plan for implementing sustainable development –Urbanization and sustainable Cities – Sustainable Energy and Agriculture –sustainable livelihoods.

MODULE V SUSTAINABLE DEVELOPMENT AND INTERNATIONAL RESPONSE 09

Role of developed countries in the development of developing countries – international summits – Stockholm to Johannesburg – Rio principles – Agenda-Conventions – Agreements – Tokyo Declaration – Doubling statement – Tran boundary issues integrated approach for resources protection and management

Total Hours: 45

REFERENCES:

1. Sayer J. and Campbell, B., The Science of Sustainable Development: Local Livelihoods and the Global environment - Biological conservation restoration & Sustainability, Cambridge university Press, London, 2003.

3. Mackenthun K.M., Concepts in Environmental Management, Lewis Publications London,1999.
4. APJ Abdul Kalam and Srijan Pal Singh, Target 3 Billion: Innovative Solutions Towards Sustainable Development, Penguin India, 2011

OUTCOMES:

At the end of the course the student will be able to

- Describe the concepts of sustainable development
- Define the components and dimensions of sustainable development
- Outline the Frame work for achieving sustainability.
- State the policies and strategies for implementing sustainable development for Socio economic programmes.
- Examine the role of developed countries in sustainable development.

GECY110	QUANTITATIVE TECHNIQUES IN MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart knowledge on

- operations research
- production management
- financial management
- decision theory and managerial economics

MODULE I OPERATIONS RESEARCH 09

Introduction to Operations research-Linear programming-Graphical and Simplex Methods, Duality and Post-Optimality Analysis-Transportation and Assignment Problems

MODULE II PRODUCTION MANAGEMENT 09

Inventory control, EOQ, Quantity Discounts, Safety Stock-Replacement Theory-PERT and CPM-Simulation Models-Quality Control.

MODULE III FINANCIAL MANAGEMENT 09

Working Capital Management-Compound Interest and Present Value methods-Discounted Cash Flow Techniques-Capital Budgeting.

MODULE IV DECISION THEORY 09

Decision Theory-Decision Rules-Decision making under conditions of certainity, risk and uncertainity-Decision trees-Utility Theory.

MODULE V MANAGERIAL ECONOMICS 09

Cost concepts-Break-even -Analysis-Pricing techniques-Game Theory applications.

Total Hours: 45

REFERENCES:

1. Vohra, N.D. , Quantitative Techniques in Management, Tata McGraw Hill Co., Ltd, New Delhi, 2009.

2. Seehroeder, R.G., Operations Management, McGraw Hill, USA, 2002.

4. Frank Harrison, E., The Managerial Decision Making Process, Houghton Miffin Co. Boston, 2005.

5. Hamdy A. Taha, Operations Research- An Introduction, Prentice Hall, 2002.

OUTCOME:

At the end of the course, the students will be able to

- Apply the concepts of operations research for various applications
- Create models for inventory control in production management
- Compute the cash flow for a project
- Choose a project using decision theory based on the risk criterion.
- Apply the concepts of managerial economics in construction management

GECY111 PROGRAMMING USING MATLAB & SIMULINK

L	T	P	C
1	0	2	2

OBJECTIVES:

The aim of this course is to:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION MATLAB DATA PRESENTATION 03+06

Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts-Making clear and compelling plots-Solving systems of linear equations numerically and symbolically- Least squares regression -Curve fitting.

MODULE II MATLAB PLOT FUNCTION 03+06

Introduction- Plot Function – Animation- 3D Plots-Customizing Plots – Plot Applications- Saving &Painting Plots.

MODULE III ROOT FINDING AND COMPUTER REPRESENTATION OF NUMBERS 03+06

Linearization and solving non-linear systems of equations- The Newton-Rapson method- Integers and rational numbers in different bases- Floating point numbers-Round off and errors in basic arithmetic-Significant digits when reporting results

MODULE IV ORDINARY DIFFERENTIAL EQUATIONS 03+06

Numerical integration and solving 1^{st} order, ordinary differential equations (Euler's method and Runge-Kutta) – Use of ODE function in MATLAB

MODULE V NON-LINEAR DIFFERENTIAL EQUATIONS 03+06

Converting 2^{nd} order and higher ODEs to systems of 1^{st} order ODEs- Solving systems of ODEs via Euler's method and Runge-Kutta) – Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations

MODULE VI INTRODUCTION OF SIMULINK 03+06

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- Modeling the solution of three equations with three unknowns- Representing a model as a subsystem-Simulink demos.

Total Hours: 45

REFERENCE:

1. Griffiths D V and Smith I M, Numerical Methods for Engineers, Blackwell, 1991.
2. Laurene Fausett, Applied Numerical Analysis Using MATLAB, Pearson 2008.
3. Moin P, Fundamentals of Engineering Numerical Analysis, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB. CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving, Mathematical Exploration with MATLAB, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

- Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
- Write programs using first principles without automatic use of built-in ones.
- Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
- Be fluent in exploring Matlab's capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
- Make use of Maltab visual capabilities for all engineering applications.
- An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECY112 JAVA PROGRAMMING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the fundamentals of Java programming such as data types, variables and arrays.
- To study the syntax and necessity of decision making and iterative statements.
- To create a class and invoke the methods.
- To instigate programming in overloading of methods.
- To emphasize the concept of packages.
- To learn the exception handling routines.

MODULE I INTRODUCTION TO JAVA PROGRAMMING 15

History and Evolution of Java – Overview of Java – Data types, variables and arrays – Operators – Control statements.

MODULE II METHODS AND CLASSES 15

Class fundamentals – Declaring objects – Methods – Constructors – Garbage collection – Overloading methods – Constructor overloading – Access control – Inheritance – Packages - Exception handling.

Total Hours: 30

REFERENCES:

1. Herbert Schildt, Java The Complete Reference, 9th Edition, Oracle Press, 2014, ISBN: 978007180855-2.
2. Nicholas S. Williams, Professional Java for Web Applications: Featuring WebSockets, Spring Framework, JPA Hibernate and Spring Security (WROX), John Wiley & Sons, 2014, ISBN:978111865651-8.

4. Yashavant Kanetka**,** Let Us Java, 2nd Edition, BPB Publications, 2012**.**

OUTCOMES:

Students to complete this course will be able to

- Implement basic Java programming.
- Create a class and invoke methods for real world problems.
- Construct simple overloading of methods programs.
- Implement various types of inheritance concepts.
- Describe the access control mechanism.

GECY113 PYTHON PROGRAMMING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the list and records of python programming.
- To study the control statements and string functions of python.
- To instigate the fundamental python programming.
- To emphasize GUI in python.
- To integrate python with embedded systems.
- To implement programs in python.

MODULE I INTRODUCTION TO PYTHON PROGRAMMING 15

Installation and environment set up – syntax used in python – variable types – operators – Loops – decision making – string functions - formatted files - GUI basics.

MODULE II EMBEDDED PROGRAMMING USING PYTHON 15

Web interface – system tools – script execution context - Motion-triggered LEDs-Python-arduino prototyping-storing and plotting arduino data-Remote home monitoring system.

Total Hours : 30

REFERENCES:

5. Michael Barr, Anthony Massa, “Programming Embedded Systems”, 2nd Edition, O'Reilly Media, 2006.

OUTCOMES:

Students to complete this course will be able to

- Implement date and time function programming using python.
- Write formatted file programming.
- Construct simple python programs.
- Create web interface using python programming
- Develop embedded system with python programming.
- Build arduino prototype using python programming.

GECY114 INTELLECTUAL PROPERTY RIGHTS (IPR)

L	T	P	C
1	0	0	1

OBJECTIVES:

- To study about Intellectual property rights and its need
- To explore the patent procedure and related issues

MODULE I INTRODUCTION 07

Introduction and the need for intellectual property right (IPR) – IPR in India – Genesis and Development – IPR in abroad – Important examples of IPR – Copyrights, Trademarks, Patents, Designs, Utility Models, Trade Secrets and Geographical Indications – Industrial Designs

MODULE II PATENT 08

Concept of Patent – Product / Process Patents & Terminology – Duration of Patents – Law and Policy Consideration Elements of Patentability –- Patentable Subject Matter – Procedure for Filing of Patent Application and types of Applications – Procedure for Opposition – Revocation of Patents – Working of Patents- Patent Agent – Qualification and Registration Procedure – Patent databases and information system – Preparation of patent documents – Process for examination of patent application- Patent infringement – Recent developments in patent system

Total Hours: 15

REFERENCES

7. Deborah E. Bouchoux, Intellectual Property: The Law of Trademarks, Copyrights, Patents, and Trade Secrets, 2015
8. Jatindra Kumar Das, Law of Copyright, PHI Learning, 2015

COURSE OUTCOMES:

Students should be able to

- Identify the various types of intellectual property and their value
- Apply the procedure to file a patent and to deal the related issues
- Search and extract relevant information from various intellectual database

REGULATIONS, CURRICULAM AND SYLLABUS

M. TECH.
INFORMATION TECHNOLOGY

(As approved by the 9th Academic Council)

JULY 2016

B.S.ABDUR RAHMAN
UNIVERSITY
B.S.ABDUR RAHMAN INSTITUTE OF SCIENCE & TECHNOLOGY
(Estd.u/s 3 of the UGC Act, 1956)

(FORMERLY B.S.ABDUR RAHMAN CRESCENT ENGINEERING COLLEGE)
Seethakathi Estate, G.S.T. Road, Vandalur, Chennai - 600 048.

VISION AND MISSION OF THE DEPARTMENT OF INFORMATION TECHNOLOGY

VISION

To be leader in providing quality education and training in the field of Information Technology at Undergraduate and Postgraduate levels and undertake Research activities thereby contributing to the progress of the country.

MISSION

- To impart quality education and include professionalism to suit the needs of the industries and society.
- To involve graduates in undertaking need based Research activities and disseminate the knowledge to develop entrepreneur skills.
- To improve the professionalism through extension activities, industrial visits and in-plant training.
- To improve communication effectively both in documentation and presentation.
- To create awareness of social & economic responsibilities ethically.

PROGRAMME EDUCATIONAL OBJECTIVES AND PROGRAMME OUTCOMES

M.Tech. (Information Technology)

PROGRAMME EDUCATIONAL OBJECTIVES:

- To impart broad spectrum of knowledge and skill in the analysis, design, implementation and testing of software systems.
- To focus on need based research in different domains relevant to Information Technology and carry out research projects of national and social relevance.
- To provide problem solving capability through IT tools and techniques with adequate hands on experience to meet industry/ societal needs.
- To develop communication, problem solving, team spirit and leadership skills for a successful professional career.

PROGRAMME OUTCOMES:

On completion of the programme students will be able to :

- Analyze, design, test and implement software systems required for IT industry.
- Apply relevant tools and techniques to solve software problems and undertake research activities.
- Prepare necessary software documentation and present with effective communication skills.
- Manage, organize and lead a team of highly competent Information technologists.

CURRICULUM & SYLLABI FOR
M. Tech (Information Technology)

SEMESTER I

ITC6101	COMPUTER FORENSICS AND INFORMATION SECURITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To have a fundamental understanding of security techniques.
- To apply appropriate skills and knowledge to identify and solve security issues in network.
- To apply theoretical and practical knowledge to provide security for operating systems and database.
- To understand the basics of computer forensics.
- To apply theoretical and practical knowledge in computer forensics for investigation.

MODULE I CRYPTOGRAPHY 09

Security problem in computing – Elementary Cryptography – Symmetric Key Encryption Public Key Encryption – Uses of Encryption.

MODULE II PROGRAM & NETWORK SECURITY 09

Security Programs – Non-malicious program Errors – Virus and other Malicious Code – Targeted Malicious Code – Control against program threats - Threats in Networks – Network Security Controls – firewalls – Intrusion Detection Systems – Secure E-Mail.

MODULE III OPERATING SYSTEM AND DATABASE 09

Memory and Address Protection – File Protection Mechanisms – User Authentication – Trusted Operating Systems – Designing Trusted Operating Systems - Database Security Requirements – Multilevel Databases and Multilevel Security.

MODULE IV INTRODUCTION TO COMPUTER FORENSICS 09

History of Forensics – Computer Forensic Flaws and Risks – Rules of Computer Forensics – Legal issues – Digital Forensic Principles – Digital Environments – Digital Forensic Methodologies - Forensics Software and Hardware tools.

MODULE V AN OVERVIEW OF COMPUTER FORENSICS INVESTIGATION 09

Router Forensics and Network Forensics – An overview of Routers – Hacking Routers – Investigating Routers – Investigating Wireless Attacks – Basics of wireless – Wireless Penetration Testing – Direct Connections to Wireless Access Point – Wireless Connect to a Wireless Access Point.

Total Hours : 45

REFERENCES:

4. John Sammons, “The Basics of Digital Forensics”, Elesvier 2012.
5. Linda Volonins, Reynalds Anzaldua, “Computer Forensics for dummies”, Wiley Publishing 2008.

OUTCOMES:

On completion of the course students will be able to :

- Have a fundamental understanding of cryptographic techniques.
- Display their competence in choosing securing mechanisms to protect the
- networks from threats.
- Apply security techniques to protect operating systems and databases.
- Have a fundamental understanding of computer forensics.
- Perform computer forensic investigation in an organization.

CSC6101 ADVANCED COMPUTER ARCHITECTURE

L	T	P	C
3	1	0	4

OBJECTIVES :

- To understand the functional requirements and their role in the system design
- To understand the various parameters that contribute to the performance of a computer system and the technology of achieving the best performance through these parameters
- To acquire essential knowledge to measure or predict system performance
- To understand how the memory hierarchy and optimization contribute to the performance of the system
- To understand the approaches in designing a new system through Instruction level parallel processing and to improve the Performance overcoming the hazards-meeting the functionality.
- To understand the data level parallel processing and Vector Processing for performance

MODULE I FUNDAMENTALS OF COMPUTER DESIGN 09+04

Functional Requirements and architecture - Measuring and reporting performance - Quantitative principles of computer design - Classifying instruction set architecture - Operands and operations for media and signal processing –Graphic processing - Encoding an instruction set - Example architecture - MIPS and TM32.

MODULE II MEMORY HIERARCHY DESIGN 09+03

Memory Hierarchy - Cache performance - Reducing cache miss penalty and miss rate - Reducing hit time - Main memory and performance - Memory technology and optimization-Virtual memory and Virtual Machine and protection.

MODULE III INSTRUCTION LEVEL PARALLELISM 09+03

Concepts of ILP - Pipelining and hazards –Compiler techniques for exposing ILP-Dynamic scheduling - Dynamic hardware prediction - Multiple issues - Hardware based speculation - Limitations of ILP - Case studies: lP6 Micro architecture. Compiler techniques for exposing ILP - Static branch prediction - Static multiple issues: VLIW - Advanced compiler support –Hardware VS software speculation.– Case study: Intel core i7 and ARM Cortex-A8

MODULE IV DATA-LEVEL PARALLELISM 09+02

Vector Architecture - SIMD Instruction Set Extensions for Multimedia - Graphic Processing Units- Detecting and Enhancing Loop Level Parallelism - Mobile verses Server GPUs - Case Studies

MODULE V THREAD LEVEL PARALLELISM 09+03

Centralized Symmetric and shared memory Multiprocessor architectures - Performance issues - Distributed Shared Memory architecture- Directory based architecture-Synchronization - Cache Coherence and memory consistency - Trends in processor design- Need for multi-core processor – difference between multiprocessor and multicore processor- Thread level processing – Simultaneous multi-threading.

Total Hours : 60

5. B.Govindarajalu, “Computer Architecture and Organization”, Tata McGraw Hill Education Pvt. Ltd., 2010.

OUTCOMES :

Students who complete this course will be able to

- Suggest the requirements for a new instruction set, to meet the functional requirement and to contribute to performance.
- To test the performance of a computer system
- To analyze changes in performance with various configurations and Memory Hierarchy
- Analyze code for instruction level Parallel Processing and modify the code for out of order execution for better performance
- Modify the code to exploit SIMD architecture and improve the performance of the system.

- Analyze how multi-threading in multiple processors and multi-core processors will share the resources for performance.

MAC6181	APPLIED ALGEBRA AND DISCRETE ALGORITHMS	L	T	P	C
		3	1	0	4

OBJECTIVES :

The aim of this course is to

- Make the students familiarize on the concepts of mathematical induction and codes.
- Motivate the students to solve problems applying techniques of logic.
- To have a knowledge on the concepts of Formal languages and Automata theory.
- Familiarize students with basics of graph theory.
- Train the students in applying the basic concepts of Cryptography.

MODULE I INTEGERS, COMPUTER ALGEBRA AND CODES 09+03

Integers – computer algebra versus numerical analysis – sums and products – mathematical induction – Binary, Hexadecimal, ASCII, Morse, Braille, Two out of Five and Hollerith Codes.

MODULE II LOGIC 09+03

Propositional logic – logical connectives – truth tables – normal forms (conjunctive and disjunctive) – solving word problems - predicate logic - universal and existential quantifiers - proof techniques – direct and indirect – proof by contradiction – applications.

MODULE III MODELING, COMPUTATION AND LANGUAGES 09+03

Finite state machines - deterministic and non-deterministic finite state machines - classes of grammars - phrase structure grammar - context sensitive - context-free - regular grammars - formal languages - ambiguity - Turing machines.

MODULE IV GRAPH THEORY 09+03

Multigraphs - applications of graph theory - classes of graphs - subgraphs and morphisms - Hamilton circuits – planar graphs – shortest paths and spanning.

MODULE V CIPHERS 09+03

Cryptography - cryptanalysis - substitution and permutation ciphers – block cipher – the playfair cipher – unbreakable ciphers – applications.

Total Hours : 60

2. Kenneth H. Rosen, "Discrete Mathematics and its Applications", 7th edition, Tata McGraw-Hill Publishing Company Limited, New Delhi, 2015.
3. J.P. Tremblay and R. Manohar, "Discrete Mathematical Structures with Applications to Computer Science", Tata McGraw Hill, 1997.

REFERENCES:

1. JurajHromkovic, Theoretical Computer Science: Introduction to Automata, Computability, Complexity, Algorithmics, Randomization, Communication and Cryptography, Springer, 2003.
2. Darel W. Hardy, Fred Richman, Carol L. Walker, Applied Algebra: Codes, Ciphers and Discrete Algorithms, Second Edition (Discrete Mathematics and Its Applications), CRC Press, Newyork, 2009.
3. David Gries and Fred B. Schneider, A Logical Approach to Discrete Math, Springer, 3rdEdition, 1993.

OUTCOMES :

At the end of the course students will be able to

- Authenticate the correctness of the a given statement using mathematical induction.
- Test and analyze the logic of a program.
- Apply the concept of finite state machines and to generate languages.
- Analyze the types of graphs solve problems using the concepts of graph theory.
- Apply encryption and decryption techniques to send messages securely.

ITC6102 ADVANCED DATA STRUCTURES

L	T	P	C
3	0	2	4

OBJECTIVES:

- Introduce the student to the concept of data structures through abstract data structures including lists, stacks, queues, sets/maps, trees, and graphs.
- To introduce the fundamental concept of data structures and to emphasize the importance of data structures.
- To choose the appropriate data structure for a specified application.
- Solve problems using data structures such as linear lists, stacks, queues, hash tables, binary trees, heaps, binary search trees, and graphs and writing programs for these solutions.

MODULE I LISTS, STACKS & QUEUES 09

Abstract Data Types - The List ADT – Implementation of List - The Stack ADT – Stack Model - Implementation of Stacks – Applications - The Queue ADT – Queue Model - Array Implementation of Queues – Applications of Queues.

MODULE II TREES 10

Preliminaries – Binary Trees – Expression Trees - Binary Search Trees – AVL Trees – Splay Trees – Tree Traversals - B trees.

MODULE III HASHING & HEAPS 08

General idea of Hashing – Hash function – Separate Chaining – Hash Tables without Linked lists – Rehashing - Binary Heap – Applications of Priority Queues – d-Heaps.

MODULE IV SORTING & THE DISJOINT SETS CLASS 07

Insertion Sort – Shell Sort – Heap Sort – Merge Sort – Quick Sort – The Disjoint Sets Class – Equivalence Relations – The Dynamic Equivalence Problem – Basic Data Structure – Path Compression.

MODULE V ADVANCED DATA STRUCTURES: GRAPHS & TREES 11

Graphs - Definitions – Topological Sort – Shortest Path Algorithm – Network Flow Problems – Minimum Spanning Tree – Trees - Sets – Maps - Top Down Splay Trees – Red Black Trees – Treaps.

Total Hours : 45

REFERENCES:

1. Mark Allen Weiss, “Data Structures and Algorithm Analysis in C++”, 4th Ed., Addison Wesley, 2012.

3. Narasimha Karumanchi, “Data Structures And Algorithms Made Easy”, CareerMonk Publications, 2014.

OUTCOMES:

On completion of the course students will be able to :

- Discuss the abstract properties of various data structures such as lists, stacks and queues.
- Demonstrate the working of different types of trees.
- Outline the concepts of hashing and heaps.
- Explain the various sorting techniques and assess the working of disjoint sets class.
- Assess the different techniques employed by various types of graphs and trees.

CSC6103	COMPUTER NETWORKS AND MANAGEMENT	L	T	P	C
		2	0	2	3

OBJECTIVES :

Outline the basic concepts of computer networks

- Illustrate the operations of network traffic, congestion, controlling and Queuing delay models
- Compare different mechanism for Quality of Service and Internet protocols
- Describe the concept and architecture of Network Management
- Showcase the different network management protocols like SNMP and RMON
- Identify various network tools to simulate the working of connection oriented and connectionless networks.

MODULE I INTRODUCTION TO COMPUTER NETWORKS 09

Introduction – Reliable Transmission via Redundancy – Reliable transmission by retransmission - Routing and addressing – Link Layer Protocols and Technologies – Quality of Service overview

MODULE II TRANSMISSION CONTROL PROTOCOL (TCP) AND SWITCHING AND QUEUING DELAY MODELS 09

Introduction to UDP and TCP – User Datagram Protocol (UDP) – TCP and Reliable Byte Stream Service – Congestion Control – Fairness – Recent TCP Versions – TCP Wireless Links - Packet Switching in Routers - Queuing Model – Networks of Queues

MODULE III MECHANISMS FOR QUALITY OF SERVICE AND INTERNET PROTOCOLS 09

Queue Scheduling – Policing – Active Queue Management – MPLS - Internet Protocol Version (IPV6) – Routing Protocols – Address Translation Protocols – Domain Name System (DNS) – Network Management Protocols – Network Tools

MODULE IV NETWORK MANAGEMENT AND SNMP 09

Network Management : goals , Organization and Functions – Network Management Architecture and organization – Network Management perspective – NMS platform – Current Status & future of Network Management – SNMP V1 Network Management- Basic Foundation standards, Models and languages – Organization and information Models - Communication and functional Models – SNMP V2 – SNPV3

MODULE V RMON, NETWORK MANAGEMENT TOOLS AND APPLICATIONS 09

Remote Monitoring – RMON SMI & MIB –RMON1-RMON2-ATM Remote Monitoring – A Case Study of Internet Traffic using RMON – Network Management Tools, Systems and Engineering –System utilities for Management – Network Statistics Measurement Systems – MIB Engineering – NMS Design – Network Management Applications

Total Hours : 45

OUTCOMES :

Students who complete this course will be able to

- Describe the network services, protocols and architectures
- Identify the different congestion control techniques
- Develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery Etc.
- Apply SNMP and RMON for Managing Network.
- Access MIBS from devices using SNMP on a workstation
- Analyze and interpret the data provided by an NMS and take suitable actions

ITC6103	SOFTWARE DEVELOPMENT METHODOLOGIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To learn various software process model
- To understand the analysis and design concept
- To learn how to improve the software development process

MODULE I SOFTWARE PROCESS MODELS 10

Software Life Span Models – Software Technologies – Software Models – Specialized Process Models – The Unified Process – Agile Development – Software Processes – Team Iterative Processes – Initial Development – Final Stages

MODULE II SOFTWARE REQUIREMENTS ANALYSIS & DESIGN 10

Unified Modeling Language – Object Oriented Analysis Process: Identifying Classes – Object Analysis: Classification – Identifying Object Relationships, Attributes and Methods – Designing Classes – Design Pattern

MODULE III SOFTWARE PROCESS IMPROVEMENT 10

Testing Conventional Applications – Testing Web Applications – Software Process Improvement – Emerging Trends in Software Engineering

Total Hours : 30

REFERENCES:

1. Roger S. Pressman, “software engineering” 7th edition, Mc Graw Hill Education, 2014
2. Vaclav Rajlich, “Software Engineering: The Current Practice”, CRC Press, 2012
3. Ali Bahrami, "Object Oriented Systems Development", Tata McGraw-Hill, 1999.

OUTCOMES:

On completion of the course students will be able to:

- Choose most appropriate software process model
- Analyze the given requirements and prepare the design document
- Outline the different methods for software process improvement

ITC6104	INDUSTRY ORIENTED CASE STUDY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To give students the experience of writing an industry oriented case study that meets the technical requirements of a research journal.
- To impress upon the student an understanding of research issues in industries and importance of research in education.
- To give students the experience of evaluating new and current knowledge.

COURSE DESCRIPTION:

In this course the student will prepare a written case study. The selection of an appropriate case, a thorough review of the elements of a case study report, how to review the appropriate literature for the reference section, and the systematic construction of the report will be covered in a combination of lecture and self study format. It is expected that the case study will meet the technical requirements for consideration to publish in a research journal. This industry oriented case study course is intended to give the student hands-on experience writing a case study report coupled with an appreciation of the importance, necessity and benefits of case study reporting to their professional experience.

INDUSTRY ORIENTED CASE STUDY:

- Introduction to the Industry Oriented Case Study Research Report - **Objectives**
- Literature survey on research issues in industries - **Strategic research and analysis**
- Writing research proposal – Case study for research issue in Industry - **Approach**
- Review of a Case Study Research Report – **Deliverables & Impacts**
- Presentation on Case Study Report

5. http://www.tcs.com/resources/white_papers/Pages/default.aspx

6. http://www.tcs.com/resources/case_studies/pages/tcs_on-demand_watermarking_system_studio.aspx

OUTCOMES:

On completion of the course students will be able to:

- Perform a literature review.
- Develop the intervention and outcomes components of the case study report.
- Construct a case study report with various sections.
- Recognize the importance of ethics in the conduct of research in industries.
- Prepare properly a formatted reference.
- Choose an appropriate journal for submission of case study work.

SEMESTER II

ITC6201	CLOUD COMPUTING TECHNOLOGIES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To gain understanding of the basic concepts of cloud computing.
- To learn various types of cloud services, technologies and service providers.
- To know the design challenges of cloud infrastructure.
- To have knowledge about different programming models and cloud software.
- To understand the privacy and security issues in cloud environments.

MODULE I CLOUD COMPUTING BASICS 08

Introduction to Cloud Computing – Cloud computing reference model- Essential Characteristics - Benefits and challenges of cloud computing- Cloud Delivery Models - Deployment models -Cloud computing vendors

MODULE II CLOUD COMPUTING TECHNOLOGY 10

Virtualization-Types of virtualization-Virtualization and cloud computing- Client- thin, thick, mobile clients- Cloud Providers and Consumers-Various Cloud Services- Accessing the Cloud- Frameworks- AJAX, Python- Web Hosting Services- Web Applications- Web API's and Web Browsers.

MODULE III CLOUD INFRASTRUCTURE 09

Architectural Design of Compute and Storage Clouds – Layered Cloud Architecture Development– Design Challenges - Inter Cloud Resource Management – Resource Provisioning and Platform Deployment – Global Exchange of Cloud Resources.

MODULE IV PROGRAMMING MODEL 10

Map Reduce programming model - Map reduce and extensions - Relational operations – Parallel Efficiency of Map Reduce- Cloud File Systems - GFS and HDFS –Cloud platforms in Industry – Google App Engine, Amazon AWS- Cloud Software Environments -Eucalyptus, Open Nebula.

MODULE V SECURITY IN CLOUD 08

Cloud security fundamentals- Privacy and Security in cloud - Software-as-a-Service Security Risk Management – Security Monitoring – Security Architecture Design –

Data Security – Application Security – Virtual Machine Security.

Total Hours: 45

6. Tim Malhar, S.Kumaraswammy, Shahed Latif , ” Cloud Security & Privacy”, O’Reilly media , 2009.

OUTCOMES:

On completion of the course students will be able to:

- Articulate the main concepts, key technologies, strengths and limitations of cloud computing
- Identify the architecture, infrastructure and delivery models of cloud computing
- Discuss the cloud technologies including virtualization and web based technologies.
- Explain the cloud file systems and their applications in industry.
- Explain the core issues of cloud computing such as security, privacy and interoperability

GEC6201	RESEARCH METHODOLOGY FOR ENGINEERS	L	T	P	C
		3	0	0	3

COURSE EDUCATIONAL OBJECTIVES:

- To provide a perspective on research to the scholars
- To educate on the research conceptions for designing the research
- To impart knowledge on statistical techniques for hypothesis construction
- To gain knowledge on methods of data analysis and interpretation
- To learn about the effective communication of research finding

MODULE I RESEARCH PROBLEM 07

Research – objectives – types, Research process, Solving engineering problems, Identification of research topic, Formulation of research problem, Literature survey and review.

MODULE II HYPOTHESIS FORMULATION 08

Research design – meaning and need – basic concepts, Different research designs, Experimental design – principle – important experimental designs, Design of experimental setup, Mathematical modeling, Simulation – validation and experimentation, Dimensional analysis and similitude.

MODULE III STATISTICAL TECHNIQUES 12

Statistics in research – concept of probability – popular distributions –Hypothesis testing- sample design- Design of experiments – factorial designs -– orthogonal arrays- ANOM - ANOVA - Multivariate analysis - Use of optimization techniques – traditional methods – evolutionary optimization techniques –Transportation model.

MODULE IV STATISTICAL ANALYSIS OF DATA 10

Research Data analysis – interpretation of results – correlation with scientific facts- Accuracy and precision – error analysis, limitations - Curve fitting, Correlation and regression.

MODULE V RESEARCH REPORT 08

Purpose of written report – audience, synopsis writing, preparing papers for International journals, Thesis writing – organization of contents – style of writing – graphs and charts – referencing, Oral presentation and defence, Ethics in research, Patenting, Intellectual Property Rights.

Total Hours: 45

11. Scheffer. R.L. and James T. Mc Clave, Probability and Statistics for Engineers, PWS – Kent Publishers Co., Boston, USA, 1990.

COURSE OUTCOMES:

Students should be able to

- Formulate the research problem
- Design and Analyse the research methodology
- Construct and optimize the research hypothesis
- Analyse and interpret the data
- Report the research findings

ITC6202 MOBILE APPLICATION DEVELOPMENT

L	T	P	C
1	0	2	2

OBJECTIVES:

- To know the importance of mobile applications.
- To learn the fundamentals of Android application development.
- To learn the fundamentals of iOS application development.
- To develop simple mobile applications using Android and iOS.

THEORETICAL STUDY

ANDROID APPLICATION DEVELOPMENT **07**

Android Basics - Android Architecture - Application Framework - The Manifest file - Libraries – Developing - Managing Virtual Devices - Building and Running – Debugging – Testing - Building Blocks - Application Components - Content Providers - Broadcast Receiver - Processes and Threads - Data storage - SQLite Databases - Localization - User Interface.

iOS APPLICATION DEVELOPMENT **08**

iOS Basics - iOS Architecture - Integrated development Tools - Objective C - Frame work and Libraries - Project templates - Resource & Application Settings - Views & Controls - Debugging & Running - Building Block Approach - Application Life cycle - MVC – Pattern - View - Data Management - Core Data - Application Storage - External Storage - Memory Management - UI Design - Design Tools - Interface Builders - Story board - View Controllers - Drawing model – Windows - Event Handling - View data Source and delegates.

LABORATORY PRACTICE **30**

- Developing Simple Android Applications (2 exercises)
- Developing Simple iOS Applications (2 exercises)
- Mobile application development in Android and iOS. (Students can select their own problem to develop an Application)

  Sample applications
  - Scientific calculator
  - Home Automation
  - Live Chat

- Currency converter
- To do list
- Games

Total Hours : 45

REFERENCES:

1. Frank Ableson.W, Robi Sen, Chris King, Enrique Ortiz, “Android in Action”, Dreamtech Press, 2012.
2. DiMarzio. J.F. “Android: A Programmer’s Guide”, McGraw Hill, 2008.
3. Rob Napier, Mugunth kumar, “iOS 7 Programming”, Wiley, 2014.
4. Erica Sadun, “The iOS 5 Developer’s Cookbook”, Pearson, Third Edition, 2012.

OUTCOMES:

On completion of the course students will be able to :

- Describe the limitations and challenges of working in a mobile and wireless environment as well as the commercial and research opportunities presented by these technologies.
- Apply the different types of application models/architectures used to develop mobile software applications.
- Describe the components and structure of a mobile development frameworks (Android SDK and Eclipse Android Development Tools (ADT)) and learn how and when to apply the different components to develop a working system.
- Work within the capabilities and limitations of a range of mobile computing devices.
- Design, implement and deploy mobile applications using an appropriate software development environment.

ITC6203	SOFTWARE DEVELOPMENT AND TESTING LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To practice software engineering concepts using automated tools.
- To practice object oriented system development methodologies.

List of Sample Exercises

1. Health Insurance Management System
2. Mobile Recharging System
3. Tour Management System
4. Conference Management System
5. E-Banking System

Develop the following for the above applications using Object Oriented System Development Methodologies:

1.

Total Hours : 30

OUTCOMES:

On completion of the course students will be able to :

- Develop any software in a systematic manner.
- To test software using automated tools.

SEMESTER III

ITC7102	INTERNET OF THINGS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the basics of Internet of things.
- Utilize IoT features and create applications based on IoT protocols.
- To discuss the features of cloud of things and web of things.
- Outline the embedded prototyping and design and apply the use of Devices in IoT Technology.
- To explain Real World IoT Design and compile the same.

MODULE I INTRODUCTION 10

Definitions and Functional Requirements –Motivation – Architecture - Web 3.0 View of IoT– Ubiquitous IoT Applications – Four Pillars of IoT – DNA of IoT - The Toolkit Approach for End-user Participation in the Internet of Things. Middleware for IoT: Overview – Communication middleware for IoT.

MODULE II IOT PROTOCOLS 09

Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Issues with IoT Standardization – Unified Data Standards – Protocols – IEEE 802.15.4 – BACNet Protocol – Modbus – KNX – ZigBee Architecture – Network layer – APS layer.

MODULE III CLOUD OF THINGS 08

Cloud of Things: Grid/SOA and Cloud Computing – Cloud Middleware – Cloud Standards – Cloud Providers and Systems – Mobile Cloud Computing – The Cloud of Things Architecture **–** Web of Things - Web of Things versus Internet of Things – Two Pillars of the Web – Architecture Standardization for WoT– Platform Middleware for WoT – Unified Multitier WoT Architecture – WoT Portals and Business Intelligence.

MODULE IV DESIGN PRINCIPLES OF CONNECTED DEVICES 09

Technology for design –Privacy in storing data – Internet principles for connected devices-Prototypes and production –Changing embedded platform - open source

versus closed source- prototyping embedded devices – Electronics- Sensors – Actuators – Arduino – Raspberry PI – Beagle Bone Black – Electric Imp.

MODULE V PROTOTYPING ONLINE COMPONENTS AND EMBEDDED CODING 09

Sketch – Iterate and Explore – Preparation of physical prototype – Getting started with API – Writing New API - Writing New API – Real Time Reactions – Other Protocols - Techniques for Writing Embedded code –Memory Management – Performance and Battery Life – Libraries and Debugging.

Total Hours : 45

REFERENCES:

1. The Internet of Things in the Cloud: A Middleware Perspective - Honbo Zhou – CRC Press –2012
2. Architecting the Internet of Things - Dieter Uckelmann; Mark Harrison; Florian Michahelles-(Eds.) – Springer – 2011.
3. Designing internet of things –Adrian McEwen & Hakim Cassimally – Jhon Wiley and sons – 2014.
4. Olivier Hersent, David Boswarthick, Omar Elloumi , “The Internet of Things – Key applications and Protocols”, Wiley, 2012.

OUTCOMES:

On completion of the course students will be able to :

- Identify and design the new models for market strategic interaction
- Analyze various protocols for IoT
- Analyze and compare Cloud of things and Web of things
- Design a middleware for IoT
- Analyze and design different models for embedded devices.

PROFESSIONAL ELECTIVES
SEMESTER II

ITCY201	MULTICORE PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the recent trends in the field of Computer Architecture and identify performance related parameters.
- To appreciate the need for parallel processing.
- To expose the students to the problems related to multiprocessing
- To expose the students to warehouse-scale and embedded architectures
- To understand the different types of multicore architectures.

MODULE I FUNDAMENTALS OF QUANTITATIVE DESIGN & ANALYSIS 09

Classes of Computers – Trends in Technology, Power, Energy and Cost – Dependability – Measuring, Reporting and Summarizing Performance – Quantitative Principles of Computer Design – Classes of Parallelism - ILP, DLP, TLP and RLP - Multithreading - SMT and CMP Architectures – Limitations of Single Core Processors - The Multicore era – Case Studies of Multicore Architectures.

MODULE II DLP IN VECTOR, SIMD AND GPU ARCHITECTURES 09

Vector Architecture - SIMD Instruction Set Extensions for Multimedia – Graphics Processing Units - Detecting and Enhancing Loop Level Parallelism - Case Studies.

MODULE III TLP AND MULTIPROCESSORS 09

Symmetric and Distributed Shared Memory Architectures – Cache Coherence Issues -performance Issues – Synchronization Issues – Models of Memory Consistency – Interconnection Networks – Buses, Crossbar and Multi-stage Interconnection Networks.

MODULE IV RLP AND DLP IN WAREHOUSE-SCALE ARCHITECTURES 09

Programming Models and Workloads for Warehouse-Scale Computers – Architectures for Warehouse-Scale Computing – Physical Infrastructure and Costs – Cloud Computing – Case Studies.

MODULE V ARCHITECTURES FOR EMBEDDED SYSTEMS 09

Features and Requirements of Embedded Systems – Signal Processing and Embedded Applications – The Digital Signal Processor – Embedded Multiprocessors - Case Studies.

Total Hours : 45

REFERENCES:

1. John L. Hennessey and David A. Patterson, “Computer Architecture – A Quantitative Approach”, Morgan Kaufmann / Elsevier, 5th edition, 2012.
2. Shameem Akhter and Jason Roberts, “Multi-core Programming”, Intel Press, 2006.
3. Michael J Quinn, “Parallel programming in C with MPI and OpenMP”, Tata McGraw Hill, 2003.
4. Wesley Petersen and Peter Arbenz, “Introduction to Parallel Computing”, Oxford University Press, 2004.

OUTCOMES:

On completion of the course students will be able to :

- Identify the limitations of Instruction-level parallelism and the need for multi-core
- architectures.
- Analyze the salient features of different multicore architectures and how they exploit
- Parallelism.
- Critically analyze the different types of inter connection networks.
- Discuss the architecture of GPUs, warehouse-scale computers and embedded processors
- Solve the issues related to multiprocessing and suggest solutions.

ITCY202 SOFTWARE REQUIREMENTS MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To overview about the requirements engineering.
- To learn requirements elicitation technique.
- To study about analyzing the requirements.
- To develop requirements specification document.
- To learn requirement validation technique.

MODULE I REQUIREMENTS ENGINEERING OVERVIEW 09

Introduction to Requirements Managements – Requirements and Software Life Cycle – Requirements from Customer's Perspective - .Good Practice for Requirements Engineering – The Business Analyst

MODULE II REQUIREMENTS ELICITATION 09

Establishing the Business Requirements – Finding the Voice of the User – Requirements Elicitation – Interviewing – Requirements Workshop – Brainstorming and Idea Reduction – Storyboarding

MODULE III REQUIREMENTS ANALYSIS 09

Identification of Functional and Non Functional Requirements – Understanding User Requirements - The Five Steps in Problem Analysis – Business Modeling – A Use Case Primer – Organizing Requirements Information

MODULE IV REQUIREMENTS DEVELOPMENT 09

The Vision Document – Establishing Project Scope – Playing by the Rules – Documenting the Requirements – Writing Excellent Documents – A Picture is worth 1024 Words – Specifying Data Requirements -

MODULE V REQUIREMENTS VALIDATION & MANAGEMENT 09

Risk Reduction Through Prototyping – Setting Requirements Priorities – Validating Requirements – Requirements Management Practice – Change Happens – Tools for Requirements Engineering

Total Hours : 45

REFERENCES:

1. Karl Eugene Wiegers, “Software Requirements”, Microsoft Press, 2013.
2. Dean Leffingwell, Don Widrig, “Managing Software Requirements,: A Use Case Approach”, Second Edition Addison Wesley, 2003.
3. Ian Sommerville, Pete Sawyer, “Requirements Engineering: A Good Practice Guide”, John Wiley and sons, 2009.
4. Ian Graham, “Requirements Engineering and Rapid Development”, Addison Wesley, 1998.

OUTCOMES:

On completion of the course students will be able to :

- Outline the fundamental concepts of requirements engineering
- Elucidate the complete software requirements
- Analyze the software requirements
- Prepare a Software Requirements Specification document
- Validate the software requirements

ITCY203 SOCIAL NETWORK ANALYSIS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the components of the social network
- To model and visualize the social network.
- To mine the users in the social network..
- To understand the evolution of the social network.
- To mine the interest of the user.

MODULE I INTRODUCTION 09

Introduction to Web – Limitations of current Web – Development of Semantic Web – Emergence of the Social Web – Statistical properties of Social Networks – Network analysis – Development of Social Network Analysis – key concepts and measures in network analysis – Discussion networks – Blogs and online communities – Web – based networks.

MODULE II MODELING AND VISUALIZATION 09

Visualizing Online Social Networks – A Taxonomy of Visualizations – Graph Representation – Centrality Clustering – Node-Edge Diagrams – Visualizing Social Networks with Matrix-Based representations – Node-link Diagrams – Hybrid Representations – Modeling and aggregating social network data – Random walks and their applications – Use of Hadoop and Map Reduce – Ontological representation of social individuals and relationships.

MODULE III INVESTIGATION 09

Aggregating and reasoning with social network data, Advanced Representations – Extracting evolution of Web community from a series b Archive – Detecting Communities in Social Networks – Evaluating Communities – Core Methods for Community Dtection & Mining – Applications of Community Mining Algorithms – Node Classification in Social Networks.

MODULE IV EVOLUTION 9

Evolution in Social Networks – Framework – Tracing Smoothly Evolving Communities – Models and Algorithms for Social Influence Analysis – Inflence Related Statistics – Social Similarity and Influence – Influence Maximization in Viral Marketing – Algorithms and Systems for Expert Location in Social Networks – Expert Location without Graph Constraints – with Score propagation – Expert Team Formation – Link Prediction in Social Networks – Feature based Link

Prediction – Bayesian Probablistic Models – Probablistic Relational Models.

MODULE V LAWS AND ACTS 09

Text Mining in Social Networks – Opinion extraction – Sentiment classification and clustering – Temporal sentiment analysis – Irony detection in opinion mining – Wish analysis – Product review mining – Review Classification – Tracking sentiments towards topics over time.

Total Hours : 45

REFERENCES:

1. Charu C. Aggarwal, “Social Network Dta Analytics”, Springer, 2011.
2. Peter Mika, “Social Networks and the Semantic Web”, Springer, First Edition, 2007.
3. Borko Furht, “Handbook of Social Network Technologies and Applications”, Springer, First Edition, 2010.

6. Ajith Abraham, Aboul Ella Hassanien, Vaclav Snasel, “Computational Social Network Analysis: Trends, Tools and Research Advances”, Springer, 2009.

OUTCOMES:

Upon completion of the course, the student will be able to

- Work on the internal components of the social network.
- Model and visualize the social network.
- Mine the behavior of the users in the social network.
- Predict the possible next outcome of the social network.
- Mine the opinion of the user.

ITCY204	MULTIMEDIA TECHNOLOGY AND APPLICATIONS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce students to various multimedia elements along with the theoretical underpinnings and to expose them to integration of these elements.
- Gives the technological knowledge necessary for creating multimedia content for the web, video, DVD and cellular phones, 2D and 3D graphics, sound and programming.
- Provides an insight into digital technologies, media authoring, storage and distribution tools.
- Keep up with the current development of contemporary systems of multimedia technology.

MODULE I MULTIMEDIA COMPONENTS 09

Introduction to Multimedia: Multimedia Elements - Multimedia System Architecture - Evolving technologies for Multimedia - Defining objects for Multimedia systems - Multimedia Data interface standards - Multimedia Databases.

MODULE II MULTIMEDIA COMPONENTS 09

Overview of Text and Character representations - Audio: Basic Concepts - Data acquisition and digitization - Audio Formats - Image : Image Representation Formats and compression techniques - Color Schemes - Video : Analogue and Digital Video - Recording Formats and Standards - Transmission of Video Signals - Video Capture - Video compression techniques.

MODULE III DOCUMENT ARCHITECTURE & CONTENT MANAGEMENT 09

Content Management: Content Design and Development - General Design Principles - Hypertext Concepts - Open Document Architecture (ODA) - Multimedia and Hypermedia Coding Expert Group (MHEG) - Standard Generalized Markup Language (SGML) - Document Type Definition (DTD) - Hypertext Markup Language (HTML) in Web Publishing.

MODULE IV MULTIMEDIA NETWORKS 09

- Multimedia Networks: Basics of Multimedia Networks - Multimedia Network Communications and Applications - Quality of Multimedia Data Transmission - Multimedia over IP - Multimedia over ATM Networks - Transport of MPEG-4 - Media-on-Demand (MOD).

MODULE V APPLICATIONS 09

Multimedia in the Real World: Video conferencing - Virtual reality - Interactive video - video on demand - Training and Education - Kiosks - Image Processing - The Multimedia Office - Multimedia in the Home - Case Study: Application for Industrial - Educational and Medical Domains.

Total Hours : 45

3. Ze-Nian Li and Mark S. Drew, Fundamentals of Multimedia, Pearson Education, 2008.
4. Andleigh P.K., Thakrar K., Multimedia Systems Design (PHI).2003.

OUTCOMES:

On completion of the course students will be able to :

- Outline and critically analyze the different elements of multimedia systems
- Apply and demonstrate the features of text, audio, images, video and active contents of multimedia elements.
- Outline the concepts of document architecture and develop user friendly web pages using HTML and DTD.
- Discuss the multimedia network communications and applications.
- Apply the various applications of multimedia.

ITCY205 DISTRIBUTED SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the importance of communication in distributed environment and the actual implementation of various communication mechanisms.
- To study how a distributed operating system works and how it differs from the single processor OS.
- To learn how to manage the resources in a distributed environment.
- To learn how to make a distributed systems fault tolerant.
- To study how the above-mentioned techniques have been used in actual, real-life distributed systems.

MODULE I COMMUNICATION IN DISTRIBUTED ENVIRONMENT 09

Introduction - Client - Server Paradigm - Threads in distributed Systems - Remote Procedure Call - Remote Object Invocation - Message-Oriented Communication - Unicasting - Group Communication - Reliable and Unreliable Multicasting.

MODULE II DISTRIBUTED OPERATING SYSTEMS 09

Issues in Distributed Operating System - Lamport's Logical clock - Vector Clock - Causal Ordering - Global States - Election Algorithms - Distributed Mutual Exclusion - Distributed Transaction - Distribute Deadlock

MODULE III DISTRIBUTED SHARED MEMORY 09

Introduction - Data - Centric Consistency Models - Client - Centric Consistency Models - Distribution Protocols - Consistency Protocols - IVY - Munin - Atomic Transaction.

MODULE IV FAULT TOLERENCE & DISTRIBUTED FILE SYSTEM 09

Introduction to fault Tolerance - Distributed Commit Protocol - Distributed File System Architecture - Issues in Distributed File Systems - Sun NFS

MODULE V CASE STUDIES 09

Distributed Object - Based System - CORBA - COM - Distributed Coordination Based System – JINI - Distributed Web Based System - Google.

Total Hours : 45

3. Mukesh Singhal, “Advanced Concepts in Operating Systems”, McGraw Hill Series in Computer Science, 1994.
4. M.L.Liu, “Distributed Computing Principles and Applications”, Pearson Addison Wesley, 2004.

OUTCOMES:

On completion of the course students will be able to :

- On completion of the programme students will be able to :
- Identify the communication issues in the distributed systems and how it can be used in remote procedure calls, remote objects and message-oriented communication.
- Analyze the principles of distributed operating systems through various algorithms.
- Select suitable consistency model for distributed shared memory.
- Predict the faults and find the solutions in distributed systems.
- Create the distributed file system architecture for real world needs.
- Compare and demonstrate various case studies in distributed systems.

ITCY206 IT INFRASTRUCTURE AND MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To familiarize with overview of IT infrastructure management.
- To analyze IT service management with different architectures
- To discuss and practice about storage, backup and recovery in an organization.
- To utilize security techniques and patterns available in market.
- To explore recent trends and apply it in real time.

MODULE I INTRODUCTION 09

Introduction – Network basics – Computer basics - IT Infrastructure Management – Challenges in IT infrastructure – Design issues of IT organization and IT Infrastructure – Determining customer's requirement- IT Systems management Process – Systems Management Building Blocks-IT Service Management Process – Patterns for IT Systems Management –Information System design process – IT Infrastructure Library (ITIL).

MODULE II IT SERVICE MANAGEMENT 09

Service level management – Financial Management – IT service continuity Management – capacity Management – Availability Management – Configuration Management – Incident Management – Change Management – Release Management – IT service management architecture – Overview of ITSM Architecture – Technology Infrastructure – Physical facilities – Network – Hardware -Virtualization Platforms–ITIL Service Architecture - Service Lifecycles – IT-Service Lifecycle Overview – Setting Objectives – Utility and Warranty

MODULE III DATA STORAGE AND NETWORKING MANAGEMENT 09

Introduction to storage – Backup and Storage – Archive and Retrieve – Disaster Recovery – Space Management – Bare Machine Recovery (BMR) – Data Retention – Storage Devices – RAID – Fiber Channel SAN-Replication Technologies – Storage Virtualization – Backup and Recovery management- Back Architecture and Policies – Storage management – Capacity and Performance Management-Management protocols and Interfaces.

MODULE IV SECURITY MANAGEMENT 09

Introduction - Computer Security – Internet Security –Risk Management- CIA Classification-Countermeasures based on CIA-Cryptography-Hash functions-Theft of information- Identity Management- Installing malicious softwares- Intrusion

Detection -Social Engineering-Phishing and Bating –Security Patterns -Layered Security- Ethical Hacking - IPR – Privacy and law – Computer Forensics – Cyber Crimes.

MODULE V TRENDS IN IT INFRASTRUCTURE 09

Cloud Computing – The cloud Model – Deployment Models – Service Models – IaaS – PaaS – SaaS – DaaS – Green IT – Data Centers – Enhance efficiency of Data center – BYOD – Big Data – DFS – GFS – HDFS – Hadoop – Configuration and Scheduling– Global system for mobile communication using cloud- Case study of networking using emerging trends - Deployment using Cloud / Hadoop / Mobile communications.

7. Clyde Bank Technology, ITIL For Beginners - The Complete Beginner's Guide To ITIL (ITIL, ITIL Foundation, ITIL Service Operation) ,ClydeBank media , 2011.

OUTCOMES:

On completion of the course students will be able to:

- To discuss the introduction of IT infrastructure management.
- To outline different service architectures and asses each one of them.
- To predict the storage techniques for different infrastructures.
- To utilize the security techniques and apply it in appropriate places.
- To analyze the recent trends in IT infrastructure and apply it in real time case study

ITCY207 APPLIED CRYPTOGRAPHY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the classical cryptographic algorithms.
- To study the block cipher and advanced encryption standard.
- To learn RSA cryptosystem and issues in key distribution.
- To analyze the identification and authentication mechanisms.
- To understand the various secret sharing schemes.

MODULE I CLASSICAL CRYPTOGRAPHY 09

The Shift Cipher, The Substitution Cipher, The Affine Cipher Cryptanalysis-Cryptanalysis of the Affine Cipher, Cryptanalysis of the Substitution Cipher, Cryptanalysis of the Vigenere Cipher, Shannon's Theory.

MODULE II BLOCK CIPHER AND THE ADVANCED ENCRYPTION STANDARD 09

Substitution - Permutation Networks, Linear Cryptanalysis, Differential Cryptanalysis, The Data Encryption Standard, The Advanced Encryption Standard, Modes of Operation, Cryptography Hash Function - Hash Function and Data Integrity, Security of Hash Function, Iterated Hash Functions, Message Authentication Codes.

MODULE III RSA CRYPTOSYSTEM AND FACTORING INTEGERS 09

Introduction to Public –key Cryptography, Number theory, The RSA Cryptosystem ,Other Attacks on RSA, The ElGamal Cryptosystem, Shanks' Algorithm, Finite Fields, Elliptic Curves over the Reels, Elliptical Curves Modulo a Prime, Signature Scheme –Digital Signature Algorithm.

MODULE IV IDENTIFICATION SCHEME AND ENTITY AUTHENTICATION 09

Challenge and Response in the Secret-key Setting, Challenge and Response in the Public key Setting, The Schnorr Identification Scheme, Key distribution-Diffie-Hellman Key, Predistribution, Unconditionaly Secure key Predistribution, Key Agreement Scheme Diffie-Hellman Key agreement, Public key infrastructure-PKI, Certificates, Trust Models.

MODULE V SECRET SHARING SCHEMES 09

The Shamir Threshold Scheme, Access Structure and General Secret key sharing, Information Rate and Construction of Efficient Schemes, Multicast Security and Copyright production - Multicast Security, Broadcast Encryption, Multicast Re-keying, Copyright Protection, Tracing illegally redistribution keys.

Total Hours : 45

REFERENCES:

1. Douglas R. Stinson, “Cryptography Theory and Practice”, Third Edition, Chapman & Hall / CRC, 2006.
2. Menezes A. J, Oorschot P, Vanstone S.A, “Handbook of Applied Cryptography” CRC Press, 1997.
3. William Stallings, “Cryptography and Network Security: Principles and Practices”, Third Edition, Pearson Education, 2006.
4. Wenbo Mao, “Modern Cryptography – Theory and Practice”, Pearson Education, First Edition, 2006.
5. Charles B. Pfleeger, Shari Lawrence Pfleeger, “Security in Computing”, Fourth Edition, Pearson Education, 2007.

OUTCOMES:

On completion of the course students will be able to :

- Apply the suitable substitution cipher algorithm for a real world problem.
- Compute the security of data using DES and AES.
- Use the RSA algorithm and factoring integers for secured data transfer.
- Analyze the challenges and responses in secret key distribution.
- Evaluate the secret sharing schemes as per the real world needs.

ITCY208 VIDEO PROCESSESING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Implement video processing techniques in new applications.
- Demonstrate an understanding of both theoretical and applications-related problems of the video processing systems.
- Know basic features of MPEG-2, MPEG-4, and H.264 video compression standards.

MODULE I VIDEO ACQUISITION AND REPRESENTATION 09

Spatial Temporal Sampling –Sampling Structure Conversion – Interpolation – Colour spaces – video formats.

MODULE II MOTION ANALYSIS 09

2D and 3D Motion Estimation and Compensation –Optical Flow methods – Block based – Point correspondences Gradient based – Intensity matching – Feature matching – Frequency domain Motion estimation.

MODULE III MOTION ANALYSIS APPLICATIONS VIDEO OBJECTRACKING AND SEGMENTATION 09

Video Summarization, Video Surveillance, Video Watermarking, Video Mosaicing.– 2D and 3D motion tracking –blob tracking – kernel based – Control tracking – Feature matching– Video Segmentation – Mean Shift based –Video shot boundary detection.

MODULE IVVIDEO FILTERING 9

Motion Compensation – Noise Filtering – Enhancement and Restoration – Video Stabilization and Super Resolution.

MODULE V VIDEO CODING REPRESENTATION AND VIDEO STANDARDS 09

MPEG 1, MPEG 2, MPEG 4, MPEG7, H.261, H.263, H.264. Video compression – Interframe Compression – 3D Waveform based – Motion Compensation.

Total Hours : 45

REFERENCES:

1. Handbook of Image and Video processing – Al Bovik (Alan C Bovik),Academic Press, Second Edition, 2005.
2. Digital Image Sequence Processing, Compression, and Analysis –Todd R. Reed, CRC Press, 2004.
3. H.264 and MPEG4 Video Compression: Video Coding for Next Generation Multimedia – Iain E. G. Richardson, Wiley, 2003
4. Digital Video Processing – A Murat Takalp, Prentice Hall, 1995.

OUTCOMES:

On completion of the course students will be able to :

- Solve practical problems with some basic image and video signal processing techniques.
- Analyze the 2D and 3D motion estimation and feature matching
- Evaluate the performance of video object segmentation and tracking methods
- Apply filtering and analyze the enhancement and restoration of video processing
- Design simple systems for realizing some multimedia applications with some basic video processing techniques.

ITCY209 HIGH SPEED NETWORKS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To get an introduction about ATM and Frame relay.
- To provide an up-to-date sur vey of developments in High Speed Networks.
- To enable the students to know techniques involved to support real-time traffic and congestion control.
- To provide the different levels of Quality of Service (QoS) to different applications.
- Students will be able to design high speed networks with Quality of Services.

MODULE I HIGH SPEED NETWORKS 09

Frame Relay Networks - Asynchronous transfer mode - ATM Protocol Architecture, ATM logical Connection, ATM Cell - ATM Service Categories - AAL. High Speed LAN's: Fast Ethernet, Gigabit Ethernet, Fibre Channel - Wireless LAN's: applications, requirements - Architecture of 802.11.

MODULE II CONGESTION AND TRAFFIC MANAGEMENT 09

Queuing Analysis- Queuing Models - Single Server Queues - Effects of Congestion - Congestion Control - Traffic Management - Congestion Control in Packet Switching Networks - Frame Relay Congestion Control.

MODULE III TCP AND ATM CONGESTION CONTROL 09

TCP Flow control - TCP Congestion Control - Retransmission - Timer Management -Exponential RTO backoff - KARN's Algorithm - Window management - Performance of TCP over ATM. Traffic and Congestion control in ATM - Requirements - Attributes - Traffic Management Frame work, Traffic Control - ABR traffic Management - ABR rate control, RM cell formats, ABR Capacity allocations - GFR traffic management.

MODULE IV INTEGRATED AND DIFFERENTIATED SERVICES 09

Integrated Services Architecture - Approach, Components, Services- Queuing Discipline, FQ, PS, BRFQ, GPS, WFQ - Random Early Detection, Differentiated Services.

MODULE V PROTOCOLS FOR QOS SUPPORT 09

RSVP - Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms - Multiprotocol Label Switching - Operations, Label Stacking, Protocol details - RTP - Protocol Architecture, Data Transfer Protocol, RTCP.

Total Hours : 45

2. William Stallings, 'High Speed Networks And Internet', Pearson Education, Second Edition, 2002.
3. Warland&PravinVaraiya, 'High Performance Communication Networks', Jean Harcourt Asia Pvt. Ltd., II Edition, 2001.

OUTCOMES:

On completion of the course students will be able to :

- Define the various high-speed networking technologies and their design issues.
- Manage projects involving any of the high-speed networking technologies.
- Design high speed networks with quality of service (QoS).
- Apply techniques involved to support real-time traffic and congestion control.
- Apply the concept learnt in this course to optimize and troubleshoot high-speed network.

CSCY01 MOBILE COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES :

- To discuss about advanced learning in the field of wireless communication.
- To elaborate upon the basic concepts and principles in mobile computing.
- To expose the students to the concepts of wireless devices.
- To explain the structure and components for Mobile IP and Mobility Management
- To create awareness about various operating systems available for mobile computing
- To discuss various issues related to security of mobile computing environment

MODULE I INTRODUCTION 15

Mobile Computing- Networks- Application and Services supporting - Developing Mobile Computing Applications-Security in Mobile Computing Mobile Computing Architecture-GSM-Wireless Internet- Wireless Vehicular Networks-Architecture-Vehicular Applications-Standards-Challenges

MODULE II APPLICATION DEVELOPMENT 15

Three tier architecture -Model View Controller Architecture -Memory Management –Information Access Devices –PDAs and Smart Phones –Smart Cards and Embedded Controls –J2ME –Programming for CLDC –GUI in MIDP –Application Development ON Android and iPhone

.

Total Hours : 30

REFERENCES :

OUTCOMES :

Students who complete this course will be able to

- Acquire capability to work with heterogeneous networks.
- Apply the knowledge of various mobile operating systems like Android to develop mobile computing applications.
- Develop mobile computing applications by analyzing their requirements.
- Identify the security algorithms to be used for mobile computing environment.
- Analyze business practices in mobile computing applications and their technical feasibility.
- Comparatively evaluate deployment platforms for mobile computing applications.

CSCY10 ADVANCED DATABASES

L	T	P	C
3	0	0	3

OBJECTIVES :

- To comprehend the different issues involved in the design and implementation of a database system
- To analyze the physical and logical database designs, database modeling, relational and object oriented models.
- To describe the techniques involved in the design of distributed databases.
- To recognize the various database techniques used in cloud and big data applications.
- To develop an understanding of emerging DBMS for various applications

MODULE I ADVANCED SQL QUERIES AND DATABASE TUNING 08

Relational model conformity and Integrity- Advanced SQL programming- Query optimization- Concurrency control and Transaction management- Database performance tuning-Distributed relational systems -Security issues in Databases.

MODULE II THE EXTENDED ENTITY RELATIONSHIP MODEL AND OBJECT MODEL 09

The ER model-Motivation for complex data types-User defined abstract data types and structured types- Subclasses- Super classes- Inheritance-Specialization and Generalization-Constraints and characteristics of specialization and Generalization-Relationship types of degree higher than two.

MODULE III DISTRIBUTED DATABASES 10

Distributed Systems- Parallel Databases: I/O Parallelism -Inter and Intra Query Parallelism -Inter and Intra operation Parallelism- Design of Parallel Systems. Distributed Database Concepts- Distributed Data Storage -Distributed Transactions -Commit Protocols - Concurrency Control -Distributed Query Processing - Case Studies.

MODULE IV INTRODUCTION TO CLOUD DATABASES AND BIG DATA 09

Cloud Based Databases: Data Storage Systems on the Cloud- Cloud Storage Architectures-Cloud Data Models- Query Languages- Introduction to Big Data-Storage-Analysis. Batch computing models for Big Data computing- Key-value storage systems -- Scalable prediction models - Distributed file systems - Scalable data analytics-- Data models – Real time data stream analytics.

MODULE V EMERGING DATABASE MANAGEMENT SYSTEM TECHNOLOGIES 09

Object Oriented database concepts-Object Relational database concepts-Active database concepts; Temporal database concepts-Spatial database concepts and architecture- Deductive databases and Query processing- Mobile Databases-Geographic Information Systems. Multimedia Databases; Multidatabases- Native XML databases (NXD)-Genome Data management.

Total Hours : 45

REFERENCES :

1. Henry F Korth, Abraham Silberschatz, S. Sudharshan, “Database System Concepts”, Fifth Edition, McGraw Hill, 2011.
2. Jeff Hoffer, Ramesh Venkataraman, HeikkiTopi, “Modern Database Management Systems”, Pearson Education Limited, 12th edition, 2016.

4. Carlos Coronel and Steven Morris, “Database Systems: Design, Implementation, & Management”, Cengage Learning, 12th edition, 2016.

OUTCOMES :

Students who complete this course will be able to

- Define the terminology, features, classifications, and characteristics in database systems.
- Illustrate the design strategies, query processing techniques and algorithms for advanced databases.
- Analyze an information storage problem and derive at an appropriate data model for the problem.
- Assess the Database techniques for designing intelligent information retrieval system for any application.
- Describe the database techniques used in Cloud and Big data environment.
- Appraise the emerging technologies in Databases and propose suitable model for any given application

CSCY54 SERVICE ORIENTED ARCHITECTURE

L	T	P	C
3	0	0	3

OBJECTIVES :

- To establish the fundamentals and issues relating to Service Oriented Architecture.
- To bring out the importance of service orientation and web services.
- To teach appropriate tools as technique on how to build the Service Oriented Architecture with web services.
- To gain knowledge of basic principles of Service-Oriented Architecture and apply these concepts to develop a sample application
- To assess emerging and proposed standards for the main components of Web services architectures.
- To become skilled at standards related to Web services: Web Services Description Language (WSDL), Simple Object Access Protocol (SOAP), and Universal Description, Discovery and Integration (UDDI).

MODULE I INTRODUCTION 09

Basic definition - Fundamentals of SOA - Characteristics about SOA-Benefits and pitfalls of SOA. Evolution of SOA - Web service and primitive SOA - The extension of SOA - Web service extension.

MODULE II WEB SERVICE AND CONTEMPORARY SOA 09

Message Exchange Pattern- Service Activity- Coordination- Atomic Transaction- Business Activity- Orchestration – Choreography- Addressing Reliable Messaging- Correlation and Policies- Meta data Exchange- Security Notification and Eventing.

MODULE III PRINCIPLES OF SERVICE ORIENTATION 09

Principles of service orientation -Building SOA-Planning and Analysis- SOA delivery strategies -Service Oriented Analysis Introduction -Service Modeling of Service Oriented Analysis.

MODULE IV SERVICE ORIENTED DESIGN 09

Introduction to service oriented design - WSDL related XML Schema language - WSDL Language Basics - SOAP Language Basics - Service interface design tools - Steps to composing SOA - Consideration for choosing service layers - SOA extension - Service design and business process design.

MODULE V WEB SERVICE EXTENSION AND SOA PLATFORM 09

WS Addressing language Basics - WS Reliable Messaging language Basics- policy Language Basics- WS Metadata Exchange Language Basics- WS security Language Basics -SOA Platform basics- SOA Support in J2EE, SOA Support in .NET- Case Studies.

Total Hours : 45

REFERENCES :

1. Thomas Erl, “Service Oriented Architecture, Concepts, Technology and Design”, Pearson Education, 2009. ISBN-13: 007-6092038498
2. Thomas Erl, “Service Oriented Architecture, Design Patterns”, Prentice Hall, 2009: ISBN-13: 978-0-13-613516-6
3. Shankar Kambhampaty, “Service Oriented Architecture for Enterprise Architecture for Enterprise Application”, 1st Edition, Wiley Publication, 2008.

OUTCOMES :

- Students who complete this course will be able to
- Relate web services with service oriented architecture.
- Analyze the issues related to SOA.
- Apply the tools and technique for Service Oriented Architecture.
- Develop service design using WSDL and XML schema languages.
- Choose appropriate SOA extensions for a particular design
- Assess SOA platform supported by J2EE and .NET.

ITCY210 VIRTUALIZATION TECHNIQUES

L	T	P	C
2	0	0	2

OBJECTIVES:

- To understand the concept of virtualization and how to apply virtualization for server consolidation.
- To impart knowledge on software defined networks (SDN), network and storage virtualization
- To understand applications and virtual devices in virtual machines.

MODULE I VIRTUALIZATION & SERVER CONSOLIDATION 10

Understanding Virtualization - Virtualization Advantages - Virtual Machine Basics - Creating and Working with Virtual Machines - System Virtual Machines - Hypervisor - Hardware Virtualization - Sever Virtualization - Business cases for Sever Virtualization - Uses of Virtual Server Consolidation - Selecting Server Virtualization Platform.

MODULE II NETWORK & STORAGE VIRTUALIZATION 11

Networking for a Virtual Machine – SDN Software Stack – Data-Plane Verification – Testing and Debugging - Network Virtualization - Design of Scalable Enterprise Networks - WAN Virtualization – VLANs - Classical Storage Model - SNIA Shared Storage Model - Host based Architecture - Configuring VM Storage Options - Tuning Practices for VM Storage.

MODULE III DEVICES AND APPLICATIONS IN VIRTUAL MACHINES 09

Using Virtual Machine Tools - Understanding Virtual Devices-Configuring a CD/ DVD Drive -Configuring a Sound Card - Configuring USB Devices - Configuring Graphic Displays - Configuring Other Devices - Deploying Applications in a Virtual Environment - Understanding Virtual Appliances and vApps.

Total Hours : 30

REFERENCES:

1. James E. Smith, Ravi Nair, "Virtual Machines: Versatile Platforms for Systems and Processes", Elsevier/Morgan Kaufmann, 2005.
2. Kumar Reddy, Victor Moreno, “Network virtualization”, Cisco Press, July, 2006.
3. Thomas D.Nadeau and Ken Gray, “SDN: Software Defined Networks”, O’Relly Publications, Kindle Edition, 2013.

4. Chris Wolf, Erick M. Halter, “Virtualization: From the Desktop to the Enterprise”, A Press 2005.

OUTCOMES:

On completion of the course students will be able to:

- Discuss virtualization and analyze types of server virtualization & consolidation.
- Outline network virtualization, SDN paradigm and storage architecture to manage devices and applications in virtual machines.
- Configure and deploy applications in virtual machines.

ITCY211	PROGRAMMING WITH HADOOP	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To make the students familiar with Hadoop distributed file system and can learn how to configure Hadoop.
- To create single node and multinode using Hadoop and to learn programming using Map Reduce paradigm.
- To provide a complete knowledge about Hadoop echo system with key components like Pig, Hive and Sqoop.
- To analyze NOSQL concepts and compare it with RDBMS.
- To explore NoSQL database MongoDB with its basic features.

LIST OF EXERCISES:

1. Introduction to HDFS and Hadoop Ecosystem. Configuration and Installation of Hadoop 1.0 Single node with Name node and Data node.
2. Configuration of Hadoop 1.0 with SSH key for security for Name and Data Node with Demo of Pseudo distributed Node and Case Study of Multinode set up.
3. Study of Map reduce Java API. Simple programs in Map Reduce paradigm with java concepts.
4. Working on Input functions, mapper & reducer functions. Simple program for text extraction and title extraction.
5. Program for searching key word and extract it from the given text paragraph.
6. Program for extracting link from a HTML page using Map and Reduce.
7. Implementation of Pig using Hadoop Ecosystem for processing structured Data.
8. Implementation of Sqoop for transferring schema format to NOSQL format.
9. Implementation and configuration of Hive in Hadoop ecosystem for querying.
10. Installation of Mongo DB and practicing CURD operations in MongoDB.Connecting MongoDB with Hadoop.

OUTCOMES:

On completion of the course students will be able to:

- Demonstrate single node and multinode Hadoop 1.0 with installation and configuration.
- Compute simple programs in Hadoop using Map reduce Paradigm.

- Analyze Hadoop Ecosystem using simple components like Pig, Hive and Sqoop.
- Create SQL and NOSQL Databases and compare processing of data in both.

PROFESSIONAL ELECTIVES
SEMESTER III

ITCY101	MACHINE LEARNING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the machine learning theory
- To implement learning models
- To implement distance based clustering techniques
- To build tree and rule based models
- To apply reinforcement learning techniques

MODULE I FOUNDATIONS OF LEARNING 09

Components of learning–learning models-geometric models-probabilistic models - logic models –grouping and grading –learning versus design –types of learning – supervised –unsupervised –reinforcement –theory of learning –feasibility of learning –error and noise –training versus testing–theory of generalization - generalization bound –approximation-generalization tradeoff–bias and variance – learning curve

MODULE II LINEAR MODELS 09

Linear classification –univariate linear regression –multivariate linear regression – regularized regression –Logistic regression –perceptrons –multilayer neural networks –learning neural networks structures –support vector machines –soft margin SVM –going beyond linearity –generalization and overfitting –regularization –validation

MODULE III DISTANCE BASED MODELS 09

Nearest neighbor models –K-means –clustering around medoids–silhouttes – hierarchical clustering –k-d trees –locality sensitive hashing –non-parametric regression –ensemble learning –bagging and random forests –boosting –meta learning.

MODULE IV TREE AND RULE MODELS 09

Decision trees –learning decision trees –ranking and probability estimation trees – regression trees –clustering trees –learning ordered rule lists –learning unordered

rule lists –descriptive rule learning –association rule mining –first-order rule learning.

MODULE V REINFORCEMENT LEARNING 09

Passive reinforcement learning –direct utility estimation –adaptive dynamic programming –temporal-difference learning –active reinforcement learning – exploration –learning an action-utility function –Generalization in reinforcement learning –policy search –applications in game playing–applications in robot control.

4. C. M. Bishop, “Pattern Recognition and Machine Learning”, Springer, 2007.
5. D. Barber, “Bayesian Reasoning and Machine Learning”, Cambridge University Press, 2012.
6. M. Mohri, A. Rostamizadeh, and A. Talwalkar, “Foundations of Machine Learning”, MIT Press, 2012.
7. T. M. Mitchell, “Machine Learning”, McGraw Hill, 1997.
8. S. Russel and P. Norvig, “Artificial Intelligence: A Modern Approach”, Third Edition, Prentice Hall, 2009.

OUTCOMES:

On completion of the course students will be able to:

- Explain theory underlying machine learning
- Construct algorithms to learning models
- Implement data clustering algorithms
- Construct algorithms to learn tree and rule-based models
- Apply reinforcement learning techniques

ITCY102 WIRELESS NETWORKS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn fundamentals of wireless communication.
- To understand the various components of wireless Internet.
- To learn the issues of Ad hoc wireless network and wireless sensor networks.
- To understand the applications of sensor networks.
- To study an awareness of trends and developments in wireless networks.

MODULE I **09**

Introduction, fundamentals of WLAN -technical issues, network architecture, IEEE 802.11- physical layer, Mac layer mechanism, CSMA/CA, Bluetooth-specification, transport layer, middleware protocol group, Bluetooth profiles, WLL -generic WLL architecture, technologies, broadband wireless access, IEEE 802.16 -differences between IEEE 802.11 and 802.16,physical layer, data link layer.

MODULE II **09**

Introduction -wireless internet, address mobility, inefficiency of transport layer and application layer protocol, mobile IP - simultaneous binding, route optimization, mobile IP variations, handoffs, IPv6 advancements, IP for wireless domain, security in mobile IP, TCP in wireless domain - TCP over wireless , TCPs - traditional, snoop, indirect, mobile, transaction- oriented, impact of mobility.

MODULE III **09**

Introduction, issues in ad-hoc Wireless Networks, Designing a MAC Protocol for adhoc Wireless Networks, Classification of MAC Protocols, Designing a routing protocol for adhoc Wireless Networks, Classification of routing Protocols- Table – Driven, On-demand and Hybrid routing Protocols, ad-hoc wireless internet.

MODULE IV **09**

Introduction - applications of sensor network, comparisons with MANET, issues and design challenges, architecture - layered and clustered , data dissemination, data gathering, Mac protocols, location discovery, quality of sensor network - coverage and exposure, zigbee standard.

MODULE V **09**

UWB radio communication- operation of UWB systems, comparisons with other technologies, major issues, advantages and disadvantages, Wi-Fi systems-service provider models, issues, interoperability of Wi-Fi and WWAN, multimode 802.11 - IEEE 802.11a/b/g - software radio-based multimode system, meghadoot architecture -802.11 phone, fundamentals of UMTS.

Total Hours : 45

REFERENCES:

1. C.Siva Ram Murthy and B.S. Manoj, “Ad-hoc wireless networks-architecture and protocols”, Pearson education, 2nd, 2005.
2. Jochen Schiller, 'Mobile Communication', Pearson education, 2nd edition 2005.
3. Wlliam Stallings, 'Wireless Communication and Networks', Prentice Hall, 2nd edition,2005

OUTCOMES:

On completion of the course students will be able to:

- Identify the basic concept of wireless networks;
- Identify and fix the vulnerabilities in different types of wireless networks as MANETS and WSN.
- Demonstrate knowledge of protocols used in wireless communications
- Classify network protocols, ad hoc and sensor networks, wireless MANs, LANs and PANs;
- Design, deploy and manage wireless local area networks.

ITCY103 ENTERPRISE RESOURCE PLANNING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To build an understanding of the fundamental business processes used to runcompanies with a focus on supply chain processes.
- To expose the students to the implementation issues and future trends
- associated with ERP
- To provide hands on exposure to a live ERP system, achieving an intermediate level of comfort using SAP ERP enterprise software.
- To learn how to effectively analyze information from an ERP system to make business decisions

MODULE I INTRODUCTION TO ERP 09

Overview - Benefits of ERP - ERP and Related Technologies – Business Process Reengineering - Data Warehousing - Data Mining - On-line Analytical Processing - Supply Chain Management.

MODULE II ERP IMPLEMENTATION 09

Implementation Life Cycle - Implementation Methodology - Hidden Costs - Organizing Implementation - Vendors, Consultants and Users - Contracts - IT91 Project Management and Monitoring.

MODULE III BUSINESS MODULES 09

Business Modules in an ERP Package - Finance - Manufacturing – Human Resource - Plant Maintenance - Materials Management - Quality Management- Sales and Distribution.

MODULE IV ERP MARKET 09

ERP Market Place - SAP AG - PeopleSoft - Baan Company - JD Edwards World Solutions Company - Oracle Corporation - QAD - System Software Associates.

MODULE V ERP - PRESENT AND FUTURE 09

Turbo Charge the ERP System - EIA - ERP and E-Commerce - ERP and Internet - Future Directions in ERP

Total Hours : 45

REFERENCES:

1. Alexis Leon, Enterprise Resource Planning, second edition, Tata McGraw-Hill, 2008.
2. Alexis Leon, ERP demystified, second Edition Tata McGraw-Hill, 2006.
3. Jagan Nathan Vaman, ERP in Practice, Tata McGraw-Hill, 2008
4. Vinod Kumar Grag and N.K. Venkitakrishnan, ERP- Concepts and Practice, Prentice Hall of India,2 nd edition, 2006.

OUTCOMES:

On completion of the course students will be able to:

- Apply the process modeling techniques in one or more modeling environments.
- Know and be able to apply key technical terminology different ERP products and development methods.
- Understand key differences between the major ERP applications (such as SAP R/3, and Oracle/PeopleSoft/Sibel) and issues specific to these applications their configuration and management.
- Synthesize prior theoretical and experiential knowledge in IT development and project management with the current literature on Enterprise System development.
- Be able to evaluate the progress of an ongoing ERP implementation project.

ITCY104 WEB DESIGN AND MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To familiarize the web page authoring fundamentals.
- To explore the web languages using client side script.
- To demonstrate and configure web servers and discuss about services.
- To design the website with different designing methodology.
- To publish the website by applying design technologies.

MODULE I WEB PAGE AUTHORING FUNDAMENTALS 09

Introduction to Web Site Development -Markup Language and Site Development Essentials-XHTML Coding - Elements -Hyperlinks -Tables -Web Forms -Image Techniques -Frames -GUI HTML 5 Editors- Introduction to Networking -TCP/IP Suite and Internet Addressing.

MODULE II WEB LANGUAGES **09**

JavaScript Introduction -Functions, Methods and Events -Program Flow -Object Model - Browser Objects -Language Objects -Interactive Forms -Cookies and JavaScript Security -Client-Side JavaScript Getting Started with Perl- Intro-Arrays - Matching and Substitution -Subroutines –References-Packages –Modules-J query - Bootstrap - Angular Java Script.

MODULE III SERVICES, SERVERS, INTEGRITY **09**

Web servers - IIS & Apache -Windows 2000 DNS Server -Configuring DNS in Windows NT –NetBIOS -Managing WINS -Introduction to FTP -Virtual FTP Servers -FTP Access -Telnet -Xinetd -Web Applications -Perl and E-Commerce Web Servers -Web Servers and Gateways Web Server and Gateway Overview - Streaming Media Servers -Configuring a News Server -Optimizing Servers- Introduction to Security -SSL -Proxy Servers -Introduction to Fault Tolerance - Disaster Assessment and Recovery

MODULE IV DESIGN METHODOLOGY **09**

Overview of Web Design Concepts -Web Project Management Fundamentals - Web Page Layout and Elements -Web Site Usability and Accessibility -Navigation Concepts -Web Graphics -Multimedia and The Web -Ethical and Legal Issues in Web Development -XML and XHTML -Web Page Structure - Tables and Framesets -Cascading Style Sheets -Site Content and Metadata -JSON.

MODULE V DESIGN TECHNOLOGY **09**

Development with Macromedia Dream weaver 10 - Advanced Features -Image Editing with Macromedia Fireworks -Multimedia with Macromedia Flash 11 - Timeline, Layers, Symbols and Buttons - Tweens - Movie Clips - Action script, Masks and Practical Uses -JavaScript and DHTML Fundamentals -Plus-ins and Java Applets -HTTP Servers and Web Applications -Databases -Web Site Publishing and Maintenance.

Total Hours : 45

REFERENCES:

4. Jason Hunter and William Crawford, 'Java Servlet Programming', O'Reilly Pub1999.
5. Anders Miller, Michael Schwartzbach, 'An Introduction to XML and Web Technologies', Addison Wesley, 2006.

OUTCOMES:

On completion of the course students will be able to:

- Discuss the web authoring fundamentals.
- Demonstrate web languages and implement client side scripting.
- Configure web servers and evaluate services.
- Design the website by using specific methodologies.
- Publish the website by applying design technologies.

ITCY105 DESIGN PATTERNS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explore the overview of patterns, prototyping and testing.
- To familiarize with different kinds of design patterns.
- To analyze the use of pattern algorithms in software engineering.
- To use the patterns in real world applications with the help of case study.
- To apply case study examples in UML.

MODULE I INTRODUCTION 09

History and origin of patterns – Applying Design Patterns - Prototyping - Testing.

MODULE II DESIGN PATTERNS 09

Kinds of pattern - Quality and elements - patterns and rules - Creativity and patterns – Creational patterns – Structural Patterns – Behavioral Patterns - Factory Patterns.

MODULE III FRAMEWORKS 09

State and Strategy of Patterns, Singleton, Composite, Functions and the Command Patterns, Adaptor, Proxy Patterns, Decorator Pattern – Pattern Frameworks and Algorithms.

MODULE IV CATALOGS 09

Pattern catalogs and writing patterns, Patterns and Case Study.

MODULE V ADVANCED PATTERNS 09

Anti-patterns - Case studies in UML and CORBA, Pattern Community.

Total Hours : 45

REFERENCES:

1. Eric Gamma, Richard Helm, Ralph Johnson, John Vissides, Grady Booch, “Design Patterns: Elements of Reusable Object-Oriented Software”, 2002.
2. James W-Cooper, “Java Design Patterns – A Tutorial”, Addison Wesley 2000.

4. Thomas Mowbray and Raphel Malveaux, “CORBA and Design Patterns”, John Wiley, 1997.
5. William J Brown et al. “Anti-Patterns: Refactoring Software, Architectures and Projects in Crisis”, John Wiley, 1998.

OUTCOMES

On completion of the course students will be able to:

- Discuss the overview of design patterns in software engineering.
- Use different kinds of patterns and its features.
- Compare frameworks and patterns and compute pattern algorithm.
- Apply pattern catalogs and practice case study.
- Use patterns in UML.

ITCY106 DATA WAREHOUSING AND DATA MINING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the concepts of data warehousing architecture and implementation.
- To study the data mining principles and techniques.
- To learn to use association rule mining for handling large data sets.
- To know the concepts of classification for the retrieval process.
- To understand the clustering techniques for different methods.
- To identify business applications and trends in data mining.

MODULE I DATA WAREHOUSE & BUSINESS ANALYSIS 09

Data Warehousing - Operational Database Systems vs. Data Warehouses - Data Warehouse Architecture-Components - Multidimensional Data Model - Schemas for Multidimensional Databases - OLAP Operations - Indexing – OLAP Queries & Tools.

MODULE II DATA MINING & DATA PREPROCESSING 09

Introduction to KDD process - Knowledge Discovery from Databases - Classifications of Data Mining Systems - Need for Data Preprocessing - Data Cleaning - Data Integration and Transformation - Data Reduction - Data Discretization - Data Generalization and Concept Hierarchy Generation.

MODULE III ASSOCIATION RULE MINING 09

Association Rule Mining - Mining Frequent Item sets with and without Candidate Generation - Mining Various Kinds of Association Rules - Single and Multi-Level Association Rules from Transaction Databases - Correlation Analysis - Constraint Based Association Mining - Advanced Association Rule Techniques

MODULE IV CLASSIFICATION & PREDICITION 09

Classification vs. Prediction - Data preparation for Classification and Prediction - Classification by Decision Tree Introduction - Bayesian Classification - Rule Based Classification - Classification by Back Propagation - Support Vector Machines - Associative Classification - Lazy Learners - Other Classification Methods - Prediction - Evaluating the Accuracy of a Classifier or Predictor - Ensemble Methods - Model Section.

MODULE V CLUSTERING & TRENDS IN DATA MINING 09

Cluster Analysis - Types of Data in Cluster Analysis - Categorization of Major Clustering Methods - Partitioning Methods - Hierarchical methods - Density-Based Methods - Grid-Based Methods - Model-Based Clustering Methods - Clustering High-Dimensional Data - Constraint- Based Cluster Analysis - Outlier Analysis – Data Mining Applications.

Total Hours : 45

REFERENCES:

1. Jiawei Han and Micheline Kamber, “Data Mining Concepts and Techniques” Second Edition, Elsevier, Reprinted 2008.
2. Pang-Ning Tan, Michael Steinbach and Vipin Kumar, “Introduction to Data Mining”,Pearson Education, 2007.

4. Paulraj Ponniah, 'Data Warehousing Fundamentals', John Wiley & Sons, New Delhi, 2012.

OUTCOMES:

On completion of the course students will be able to:

- Analyze the concepts of data warehousing and architecture.
- Discuss data mining principles and techniques and preprocess the data for mining applications.
- Apply association rules for mining the data.
- Outline appropriate classification and prediction methods.
- Discuss clustering methods for high-dimensional data and analyze data mining applications on modern organization.

ITCY107 WIRELESS & MOBILE COMMUNICATION

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To understand the different cellular systems and their advancements from one generation to other.
- To know the different basic propagation mechanisms.
- To have a knowledge about designing a mobile system.
- To recognize various multipath propagation models
- To study the various mobile modulation and demodulation techniques.
- To realize how to alleviate fading effects, and multiple access techniques

MODULE I INTRODUCTION TO MOBILE COMMUNICATION SYSTEMS 09

Evolution of Mobile Radio Communications – Present Day mobile communication – Fundamental Techniques – How a mobile call is made? – Modern Mobile communication systems – 1G, 2G, 3G, Beyond 3G – Wireless Transmission Protocols.

MODULE II MOBILE SYSTEM DESIGN FUNDAMENTALS AND RADIO WAVE PROPAGATION 09

What is a cell? – Frequency reuse – Channel assignment strategies – Handoff strategies – Interference and system capacity – Trunking and Grade of service – Improving coverage and capacity in cellular systems – Free Space Propagation Model – The Three Basic Propagation Mechanisms: Reflection , Diffraction and Scattering – Link Budget Design – Outdoor Propagation Models – Indoor Propagation Models.

MODULE III WAVE PROPAGATION AND FADING 09

Multipath Propagation – Multipath and Small Scale Fading – Types of Small Scale Fading – Multipath Channel Parameters – Statistical Models for Multipath Propagation – Simulations of Clarke and Ganes Fading Model.

MODULE IV MOBILE MODULATION TECHNIQUES 09

Amplitude Modulation – Angle Modulation – Digital Modulation – Line coding – Pulse Shaping Techniques – Linear Modulation Techniques – Spread Spectrum Modulation Techniques – Modulation Performance in Fading and Multipath Channels.

MODULE V TECHNIQUES TO ALLEVIATE FADING EFFECTS AND MULTIPLE ACCESS TECHNIQUES 09

Equalization: – Linear and Non-linear Equalization – Algorithms for Adaptive Equalization Diversity: Polarization Diversity, Frequency Diversity, Time Diversity – Channel Coding: Fundamentals, Block Codes, Convolutional Codes, Coding Gain – Multiple Access Techniques: FDMA, TDMA, SSMA, SDMA.

Total Hours : 45

REFERENCES:

1. Theodore S. Rappaport, " Wireless Communications Principles and Practice", Second Edition, Pearson, 2010.
2. Andreas F.Molich, "Wireless Communications", Second Edition, John Wiley, 2011.
3. Jorge L.OleneWA, "Guide to Wireless Communications", Third Edition, Cengage Learning, 2014.
4. Cory Beard and William Stallings, "Wireless Communication Networks and Systems", First Edition, Pearson, 2015.
5. Nishith Tripathi and Jeffrey H. Reed , "Cellular Communications: A Comprehensive and Practical Guide", Wiley, 2014.

OUTCOMES:

On completion of the course students will be able to:

- Explain the fundamentals of cellular radio system design and increase the coverage capacity.
- Discuss various multipath propagation models and different types of fading.
- Demonstrate various mobile transmitter and receiver techniques.
- Apply various techniques to mitigate fading effects.
- Compare and contradict various multiple access techniques.

ITCY108 SOFTWARE METRICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To be aware of Core metrics for product, quality, process.
- To familiarize with the concepts of Software quality and tools for quality metrics.
- To learn more about software reliability.
- To understand important concepts of complexity metrics and OO metrics.
- To analyze and identify metrics for software project.

MODULE I MEASUREMENTS THEORY 09

Fundamentals of measurement - Measurements in Software Engineering - Scope of Software metrics - measurements theory - Goal based framework - Software Measurement validation.

MODULE II DATA COLLECTION AND ANALYSIS 09

Empirical investigation - Planning experiments - Software metrics data Collection - Analysis methods - statistical methods.

MODULE III PRODUCTS METRICS 09

Measurement of internet product attributes - size and structure - External product attributes - measurement of quality.

MODULE IV QUALITY METRICS 09

Software quality metrics - Product quality - Process quality - metrics forsoftware maintenance - Case studies of Metrics program - Motorola - Hp and IBM.

MODULE V MANAGEMENT METRICS 09

Quality management models - Rayleigh Model - Problem Tracking report (PTR)model - Reliability growth model - model evaluation - Orthogonal classification.

Total Hours : 45

REFERENCES:

1. Norman E - Fentar and Share Lawrence Pflieger, 'Software metrics', International Thomson Computer Press, 2013.
2. Norman Fenton, James Bieman, “Software Metrics: A Rigorous and Practical Approach“, 3rd edition, CRC Press, 2015

3. Stephen H.Kan, 'Metric and models in software quality engineering', 2nd edition, Addison Wesley 2003
4. William A. Florac and Areitor D. Carletow, 'Measuring Software Process', Addison - Wesley, 1999.

OUTCOMES:

On completion of the course students will be able to:

- Explain the concept of measurement theory
- Collect the data to measure metrics and analyze the metrics
- Identify the software product metrics
- Outline the software quality metrics
- Develop the software management metrics

ITCY109 SECURITY IN BIG DATA

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce security problem in computing and cryptography, and uses of
- Encryption.
- To explore about program security, non-malicious code and control against
- Program threats.
- To analyze the XML Encryption and security.
- To identify security challenges in distributed system and analyze various policies and guidelines to meet the challenges for securing data.
- To discuss the security in analytics and to identify secure provisioning in Hadoop.
- To demonstrate the security in various components of hadoop eco system.

MODULE I DATA SECURITY OVERVIEW - CRYPTOGRAPHY 09

Security problem in computing- Elementary Cryptography-Symmetric Key Encryption –Public Key Encryption-Uses of Encryption.

MODULE II DATA SECURITY -PROGRAM AND XML SECURITY 09

Security Programs-Non-Malicious program errors-Virus and other Malicious Code-Targeted Malicious Code-Control against program threats. Security Overview in XML – Canonicalization-XML security framework- XML encryption-XML Digital Signature.

MODULE III SECURITY IN DISTRIBUTED SYSTEMS 09

Security in DFS -Threat Categories – Unauthorized access-Risk assessment-Vulnerabilities – System Architecture- Operating environment – Network security – Network segmentation-Intrusion detection and prevention – Operating system security-Kerberos – Workflow-Identity theft –Authentication and Authorization.

MODULE IV DATA SECURITY IN BIGDATA ANALYTICS 09

Introduction to security in analytics –Data for security analytics -Security analytics process –Incident response and Intrusion Detection – Security and Text Mining – Simulations and Security process-Access Analytics.

MODULE V HADOOP SECURITY 09

Overview of Hadoop security – Hadoop components and Ecosystem – Authentication – Provisioning of Hadoop users – Hadoop users to group mapping- Mapping Kerberos principles to usernames – HDFS authorization-Map reduce and yarn authorization – Oozie authorization – Hbase authorization – Data protection in Hadoop- Case Study in Hadoop security.

Total Hours : 45

5. Tim Mather, SubraKumaraswamy, and ShahedLatif “Cloud Security and Privacy: An Enterprise Perspective on Risks and Compliance”, O’Reilly Media Inc, 2009.

OUTCOMES:

On completion of the course students will be able to:

- To explain basics of Security problems in Big data and Hadoop.
- To compare XML Security with program security with pros and cons.
- To outline the security challenges in bigdata and the standards which are used to meet the
- Challenges.
- To analyze security in various Hadoop components and apply it to case study.
- To utilize the security techniques and apply it in a real time project.

ITCY110	MULTIMEDIA COMMUNICATION AND NETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the basics concepts of multimedia communications.
- To study the technical issues and system solutions for providing multimedia communications on the Internet.
- To understand the Multimedia Communication Models
- To explore real-time multimedia network applications.

MODULE I IP NETWORKS 09

Open Data Network Model – Narrow Waist Model of the Internet - Success and Limitations of the Internet – Suggested Improvements for IP and TCP – Significance of UDP in modern Communication – Network level Solutions – End to End Solutions - Best Effort service model – Scheduling and Dropping policies for Best Effort Service model

MODULE II ADVANCED ROUTING 09

Intra AS routing – Inter AS routing – Router Architecture – Switch Fabric – Active Queue Management – Head of Line blocking – Transition from IPv4 to IPv6 – Multicasting – Abstraction of Multicast groups – Group Management – IGMP – Group Shared Multicast Tree – Source based Multicast Tree – Multicast routing in Internet – DVMRP and MOSPF – PIM – Sparse mode and Dense mode

MODULE III GUARANTEED SERVICE MODEL 09

Best Effort service model – Scheduling and Dropping policies – Network Performance Parameters – Quality of Service and metrics – WFQ and its variants – Random Early Detection – QoS aware Routing – Admission Control – Resource Reservation – RSVP - Traffic Shaping Algorithms – Caching – Laissez Faire Approach - Possible Architectures - An Overview of QoS Architectures

MODULE IV MULTIMEDIA COMMUNICATION 09

Stream characteristics for Continuous media – Temporal Relationship – Object Stream Interactions, Media Levity, Media Synchronization – Models for Temporal Specifications - Streaming of Audio and Video – Jitter – Fixed playout and Adaptive playout – Recovering from packet loss – RTSP –– Multimedia Communication Standards – RTP/RTCP – SIP and H.263

MODULE V WIRELESS MULTIMEDIA COMMUNICATION 09

End to End QoS provisioning in Wireless Multimedia Networks – Adaptive Framework – MAC layer QoS enhancements in Wireless Networks – A Hybrid MAC protocol for Multimedia Traffic – Call Admission Control in Wireless Multimedia Networks – A Global QoS Management for Wireless Networks.

Total Hours : 45

REFERENCES:

1. Jean Warland and Pravin Vareya, 'High Performance Networks', Morgan Kauffman Publishers, 2002
2. Mahbub Hassan and Raj Jain, 'High Performance TCP/IP Networking', Pearson Education, 2004.
3. William Stallings, 'High Speed Networks: Performance and Quality of Service', 2nd Edition, Pearson Education, 2002.

5. Aura Ganz, Zvi Ganz and Kitti Wongthawaravat, 'Multimedia Wireless Networks: Technologies, Standards and QoS', Prentice Hall, 2003.
6. Ellen Kayata Wesel, 'Wireless Multimedia Communications: Networking Video, Voice and Data', Addision Wesley, 1998

OUTCOMES:

On completion of the course students will be able to:

- Outline the current state-of-the-art developments in Internet technologies for multimedia communications and deploy the right multimedia communication models
- Identify different routing techniques
- Discuss the guaranteed service model
- Solve the security threats in the multimedia networks
- Apply QoS to multimedia network communication

ITCY111 AD-HOC AND SENSOR NETWORKS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the issues related with MAC protocols Ad-Hoc and wireless sensor networks.
- To discuss the various routing protocols used in Ad-Hoc and wireless sensor networks.
- Knowledge of sensor networks and their characteristics. This includes design of MAC layer protocols.
- To introduce the concept of QOS.
- To provide an overview of the various Mesh networks and the issues in them.

MODULE I AD-HOC MAC 09

Introduction – Issues in Ad-Hoc Wireless Networks. MAC Protocols – Issues, Classifications of MAC protocols, Multi channel MAC & Power control MAC protocol.

MODULE II AD-HOC NETWORK ROUTING & TCP 09

Issues – Classifications of routing protocols – Hierarchical and Power aware. Multicast routing – Classifications, Tree based, Mesh based. Ad Hoc Transport Layer Issues. TCP Over Ad Hoc – Feedback based, TCP with explicit link, TCP-BuS, Ad Hoc TCP, and Split TCP.

MODULE III WSN –MAC 09

Introduction – Sensor Network Architecture, Data dissemination, Gathering. MAC Protocols – self-organizing, Hybrid TDMA/FDMA and CSMA based MAC.

MODULE IV WSN ROUTING, LOCALIZATION & QOS 09

Issues in WSN routing – OLSR, AODV. Localization – Indoor and Sensor Network Localization. QoS in WSN.

MODULE V MESH NETWORKS 09

Necessity for Mesh Networks – MAC enhancements – IEEE 802.11s Architecture – Opportunistic routing – Self configuration and Auto configuration – Capacity Models – Fairness – Heterogeneous Mesh Networks – Vehicular Mesh Networks.

Total Hours : 45

REFERENCES:

1. C.Siva Ram Murthy and B.Smanoj, " Ad Hoc Wireless Networks – Architectures and Protocols", Pearson Education, 2004.
2. Feng Zhao and Leonidas Guibas, "Wireless Sensor Networks", Morgan Kaufman Publishers, 2004.
3. C.K.Toh, "Ad Hoc Mobile Wireless Networks", Pearson Education, 2002. Thomas Krag and Sebastin Buettrich, "Wireless Mesh Networking", O'Reilly Publishers, 2007.

OUTCOMES:

On completion of the course students will be able to:

- Explain the concept of Ad-Hoc and wireless sensor networks.
- Identify the design issues related with MAC protocols in Ad-Hoc and wireless sensor networks.
- Understand and explain issues related with routing protocols in Ad-Hoc and wireless sensor networks.
- Understand the necessity of various Mesh Networks.
- Understand the limitations of wireless sensor networks and the workarounds needed to develop real-life applications

ITCY112 ONTOLOGY AND SEMANTIC WEB

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce semantic web and ontology architectures.
- To familiarize with the languages for semantic web and ontologies.
- To analyze the use of ontology in semantic web.
- To demonstrate the use of tools for ontology.
- To apply the ontology and semantic web in real time applications.

MODULE I INTRODUCTION 0**8**

Components – Types – Ontological Commitments – Ontological Categories – Philosophical Background -Sample - Knowledge Representation Ontologies – Top Level Ontologies – Linguistic Ontologies – Domain Ontologies – Semantic Web – Need – Foundation – Layers – Architecture.

MODULE II LANGUAGES FOR SEMANTIC WEB AND ONTOLOGIES 12

Web Documents in XML – RDF - Schema – Web Resource Description using RDF- RDF Properties – Topic Maps and RDF – Overview – Syntax Structure – Semantics – Pragmatics - Traditional Ontology Languages – LOOM- OKBC – OCML – Flogic Ontology Markup Languages – SHOE – OIL - DAML + OIL- OWL.

MODULE III ONTOLOGY LEARNING FOR SEMANTIC WEB 12

Taxonomy for Ontology Learning – Layered Approach – Phases of Ontology Learning – Importing and Processing Ontologies and Documents – Ontology Learning Algorithms - Evaluation.

MODULE IV ONTOLOGY MANAGEMENT AND TOOLS 08

Overview – need for management – development process – target ontology – ontology mapping – skills management system – ontological class – constraints – issues. Volution – Development of Tools and Tool Suites – Ontology Merge Tools – Ontology based Annotation Tools.

MODULE V APPLICATIONS 05

Web Services – Semantic Web Services - Case Study for specific domain – Security issues – current trends.

Total Hours : 45

9. Dean Allemang (Author), James Hendler (Author) "Semantic Web for the Working Ontologist: Effective Modeling in RDFS and OWL" (Paperback), Morgan Kaufmann, 2008.

OUTCOMES:

On completion of the course students will be able to:

- Outline the architectures of semantic web and ontology.
- Utilize the languages used for ontology and semantic web.
- Analyze the use of ontology in semantic web.
- Use tools for ontology and semantic web.
- Apply the semantic web and ontology in web services.

ITCY113 SOFTWARE PROJECT MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn the basic concepts of software project management and software estimation methods.
- To know the software cost estimation methods.
- To learn how to allocate resources for software projects.
- To learn how to manage a project
- To manage peoples

MODULE I PROJECT MANAGEMENT CONCEPT 09

Evolution of Software Economics – Improving Software Economics – Life-Cycle Phases – Manage People – Implement Process – Leverage Tools – Utilize Measurements

MODULE II SOFTWARE ESTIMATION & COSTING 10

Form Vision - Algorithmic Cost Estimation Process, Function Points, SLIM (Software Life cycle Management), COCOMO II(Constructive Cost Model) – Estimating Web Application Development – Organize Resources – Sketch Schedule – Write Plan.

MODULE III RISK MANAGEMENT 07

Risk Definition – Risk Categories – Risk Assessment (Identification / Analysis / Prioritization) – Risk Control (Planning / Resolution / Monitoring) – Failure Mode and Effects Analysis (FMEA)

MODULE IV SOFTWARE PROJECT MANAGEMENT 10

Monitor Project – Engineer a Great Product – Deliver System – Assess Project – Managing Global Software Projects

MODULE V PEOPLE MANAGEMENT 09

PCMM – Team Management – Motivating Software Engineers Working in Virtual Teams Across Glob – Agile Project management

Total Hours : 45

5. Joel Henry, “Software Project Management: A Real-World Guide To Success”, Pearson Education, 2004

OUTCOMES:

On completion of the course students will be able to :

- Explain the software project management concepts
- Estimate the cost and prepare project plan document.
- Identify and analyze risks.
- Express how to manage projects
- Lead a team and manage the people

ECCY001 DIGITAL IMAGE PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Describe and explain basic principles of digital image processing;
- Design and implement algorithms that perform basic image processing
- Design and implement algorithms for advanced image analysis
- Assess the performance of image processing algorithms and systems.

MODULE I DIGITAL IMAGE FUNDAMENTALS 09

Elements of digital image processing systems, Basics of visual perception, Psycho, visual model, Color image fundamentals, Brightness, contrast, hue, saturation, GB,HSI models, Image sampling & quantization.

MODULE II IMAGE TRANSFORMS 09

2D discrete transforms, DFT, DCT, WHT, KLT, DWT, Simulation of 2D transform by 1D transform.

MODULE III IMAGE ENHANCEMENT, RESTORATION, SEGMENTATION & RECOGNITION 12

Histogram modification and specification techniques, Noise distributions, Low and High Pass filters, Color image enhancement, Image degradation model – Unconstrained and constrained restoration, Geometric transformations, Spatial transformations, Gray level interpolation, Image Segmentation & its types, Pattern and Pattern classes.

MODULE IV IMAGE COMPRESSION 08

Need for image compression, Vector Quantization, Run Length Encoding, Shiftcodes, Block Truncation Coding, DCT and Wavelet Transform coding, Simulation of basic concepts.

MODULE V IMAGE PROCESSING APPLICATIONS 07

Biometric identification, Satellite image processing, Industrial machine vision application, Neural Networks in image processing, Medical image processing and Motion Analysis, Augmented\Virtual reality.

Total Hours : 45

8. Sonka,Hlavac,Boyle,Digital Image Processing and Computer Vision, Cengage Learning, India, 2008 Edition
9. Madhuri A.Joshi, Digital Image Processing-An Algorithmic approach, Prentice Hall of India, 2008

OUTCOMES:

At the completion of the course, students will be able to

- Acquire the knowledge of fundamental concepts of a digital image processing system
- Analyze 2D signals in the frequency domain through the various transforms.
- Describe various techniques for image enhancement and restoration.
- Recognize and apply suitable image segmentation techniques
- Identify and use of appropriate image compression techniques.
- Implement concepts of image processing using simulation technique.
- Apply suitable image processing techniques for various applications

ITCY114 HUMAN COMPUTER INTERFACE

L	T	P	C
2	0	0	2

OBJECTIVES:

- To understand the concept of menus, windows, interfaces and business functions.
- To know the various characteristics and components of windows.
- To study about various problems in windows design with color, text, graphics.

MODULE I **10**

Introduction-Importance- Human -Computer interface - characteristics of graphics interface- web user interface- characteristic & principles. User interface design process- obstacles -human characteristics in design - Human interaction speed-business functions-requirement analysis- basic business functions- Human consideration in screen design

MODULE II **10**

Structures of menus -functions of menus -contents of menu -formatting - phrasing the menu - selecting menu choice-navigating menus -graphical menus-Windows: Characteristics –components -presentation styles -types-managements –organizations –operations -web systems

MODULE III **10**

Device-based controls:characteristics-Screen -based controls: operate control - text boxes-selection control-combination control-custom control-presentation control-Text for web pages – Icons -Image -Multimedia –coloring- Windows layout-test: prototypes - kinds of tests – retest.

Total Hours: 30

REFERENCES:

2. Alan Cooper, "The Essential of User Interface Design", Wiley – Dream Tech Ltd., 2002.
3. Sharp, Rogers, Preece, "Interaction Design", Wiley India, 2007.
4. Ben Sheiderman, "Design the User Interface", Pearson Education, 1998.

OUTCOMES:

On completion of the course students will be able to:

- Identify design elements from analysis of existing interfaces
- Use HCI concepts and principles to design and implement user interfaces for new applications
- Practical experience in iterative, user-centered design of graphical user interfaces and evaluate interface designs

ITCY115 DATA SCIENCE AND ANALYTICS

L	T	P	C
2	0	0	2

OBJECTIVES

- To explore the fundamental concepts of big data analytics.
- To learn the life cycle of data analytics
- To analyze the big data using intelligent techniques.

MODULE I INTRODUCTION TO BIG DATA 10

Introduction to BigData Platform – Analyst perspective on data repository-BI versus Data science- Current Analytical architecture- Drivers of Big Data- Emerging Big Data Ecosystem and a New Approach to Analytics- Examples of Big Data .

MODULE II DATA ANALYTICS LIFECYCLE 10

Data Analytics Lifecycle Overview- Key Roles for a Successful Analytics Project- Discovery- Data Preparation- Model Planning – Model Building – Communicate Results- Operationalize- Case Study: Global Innovation Network and Analysis (GINA).

MODULE III DATA ANALYTIC METHODS 10

Introduction to R 64- R Graphical User Interfaces- Data Import and Export- Attribute and Data Types- Descriptive Statistics – Descriptive Statistics- Exploratory Data Analysis – Visualization Before Analysis 8- Dirty Data – Visualizing a Single Variable- Examining Multiple Variables- Statistical Methods for Evaluation- Hypothesis Testing.

Total Hours-30

REFERENCES:

1. “Data Science and Big Data Analytics: Discovering, Analyzing, Visualizing and Presenting Data”, EMC Education Services, Wiley, 2015
2. Chris Eaton, Dirk DeRoos, Tom Deutsch, George Lapis, Paul Zikopoulos, “Understanding Big Data: Analytics for Enterprise Class Hadoop and Streaming Data”, McGrawHill Publishing, 2012.
3. Anand Rajaraman and Jeffrey David Ullman, “Mining of Massive Datasets”, Cambridge University Press, 2012.
4. PeteWarden, “Big Data Glossary”, O’Reilly, 2011.

OUTCOMES

On completion of the course students will be able to:

- Explain the fundamentals of various big data analytics techniques.
- Deploy a structured lifecycle approach to data analytics problems
- Apply appropriate analytic techniques and methods for analyzing big data

ITCY116 BIG DATA ANALYTICS TOOLS

L	T	P	C
1	0	0	1

OBJECTIVES

- To understand the basics concepts of text analysis methods.
- To know the framework applications on big data tools.

MODULE I ADVANCED ANALYTICAL THEORY AND METHODS-TEXT ANALYSIS **08**

Text Analysis Steps- A Text Analysis Example- Collecting Raw Text- Representing Text- Term Frequency—Inverse Document Frequency (TFIDF)- Categorizing Documents by Topics- Determining Sentiments- Gaining Insights-exercises.

MODULE II TECHNOLOGY AND TOOLS **07**

Analytics for Unstructured Data - Use Cases - MapReduce - Apache Hadoop - The Hadoop Ecosystem – Hive – HBase –Flume- Mahout – Apache Spark- SOLR-NoSQL.

Total Hours- 15

REFERENCES:

1. “Data Science and Big Data Analytics: Discovering, Analyzing, Visualizing and Presenting Data”, EMC Education Services, Wiley, 2015
2. Tom White “ Hadoop: The Definitive Guide” Third Edition, O’reilly Media, 2012.
3. Anand Rajaraman and Jeffrey David Ullman, “Mining of Massive Datasets”, Cambridge University Press, 2012.

OUTCOMES

On completion of the course students will be able to:

- Design efficient algorithms for mining the data from large volumes.
- Explore on Big Data applications Using Pig and Hive.

ITCY117 GREEN TECHNOLOGY

L	T	P	C
1	0	0	1

OBJECTIVES:

- To acquire knowledge to adopt green computing practices to minimize negative impacts on the environment.
- To learn to minimize energy consumption.
- To examine technology for energy management in real-time systems.

MODULE I GREEN IT FUNDAMENTALS, ASSETS & MODELING 07

Green IT Fundamentals: Business, IT, Environment - Green IT Strategies: Drivers, Dimensions, Goals - Green Assets: Buildings, Data Centers, Networks, and Devices - Green Business Process Management: Modeling, Optimization, and Collaboration – Green Enterprise Architecture - Green Information Systems: Design and Development Models – Power management in power-aware real time systems – Green Applications.

MODULE II GREEN IT FRAMEWORK & GREEN COMPLIANCE 08

Data center virtualization – Implementing Green Data Center – Saving energy – Enabling transparency, Telecommuting, Teleconferencing and Teleporting – Going paperless - Materials recycling – Green Data center – Green Grid framework – Green Compliance: Protocols, Standards, and Audits – Emergent Carbon Issues: Technologies and Future.

Total Hours : 15

5. Marty Poniatowski, “Foundation of Green IT: Consolidation, Virtualization, Efficiency, and ROI in the Data Center”, Printice Hall, ISBN: 9780-1-3704-375-0, 2009.

OUTCOMES:

On completion of the course students will be able to:

- Discuss Green Computing concepts, assets and business process management.
- Outline Green data center framework, Green compliance in IT systems.

GENERAL ELECTIVES

GECY101 PROJECT MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

The objectives of the course would be to make the students

- Learn to evaluate and choose an optimal project and build a project profile.
- Attain knowledge on risk identification and risk analysis
- Gain insight into a project plan and components
- Familiar with various gamut of technical analysis for effective project implementation
- Learn to apply project management techniques to manage resources.

MODULE I INTRODUCTION & PROJECT INITIATION 09

Introduction to project and project management - projects in contemporary organization – The project life cycle - project initiation - project evaluation methods & techniques - project selection criteria - project profile.

MODULE II RISK ANALYSIS 09

Sources of risk: project specific - competitive - industry specific - market and international risk – perspectives of risk – risk analysis: sensitivity analysis - scenario analysis - breakeven analysis - simulation analysis - decision tree analysis – managing/mitigating risk – project selection under risk.

MODULE III PROJECT PLANNING & IMPLEMENTATION 09

Project planning – importance – functions - areas of planning - project objectives and policies - steps in planning process - WBS – capital requirements - budgeting and cost estimation - feasibility analysis - creation of project plan – project implementation: pre-requisites - forms of project organization

MODULE IV TECHNICAL ANALYSIS 09

Technical analysis for manufacturing/construction/infrastructure projects – process/technology - materials and inputs - product mix - plant capacity – plant location and site selection – plant layout - machinery and equipment – structures and civil works – schedule of project implementation – technical analysis for software projects.

MODULE V PROJECT MANAGEMENT TECHNIQUES 09

Project scheduling - network construction – estimation of project completion time – identification of critical path - PERT & CPM – crashing of project network - complexity of project scheduling with limited resources - resource allocation - resource leveling – resource smoothing – overview of project management software.

Total Hours: 45

REFERENCES:

1. Projects: Planning, Analysis, Financing, Implementation and Review, Prasanna Chandra, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2004.
2. Project Management and Control, Narendra Singh, Himalaya Publishing, New Delhi, 2015.
3. A Management Guide to PERT/CPM, Jerome, D. Weist and Ferdinand K. Levy, Prentice Hall of India, New Delhi, 1994.

OUTCOMES:

On successfully completing this course, the student will be able to:

- Evaluate & select a project as well as develop a project profile.
- Identify various risks associated with the project and manage it effectively.
- Prepare a detailed project plan addressing its components.
- Perform technical analysis for effective project implementation
- Apply project management techniques for maximizing resource utilization.

GECY102 SOCIETY, TECHNOLGY & SUSTAINABILITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- Aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- Understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

MODULE I TECHNOLOGY AND ITS IMPACTS 09

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life – Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT 09

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change.

MODULE III SOCIETY AND TECHNOLOGY 09

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of technology – Impact of technology on developer and consumers – Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE 09

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media Technology – Information Systems Technology – Nanotechnology – Space

Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY 09

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

Total Hours: 45

REFERENCES:

1. Volti Rudi, “Society and Technology Change”, 6th Edition, Worth publishers Inc, USA, 2009.
2. Arthur W.A, “The nature of Technology: What it is and how it evolves”, Free Press, NY, USA, 2009.
3. Winston M and Edelbach R, “Society, Ethics and Technology”, 3rd Edition, San Francisco, USA, 2005.
4. Martin A.A Abraham, “Sustainability Science and Engineering: Defining Principles”, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

OUTCOMES:

At the end of this course, the students will be able to

- Understand the benefits of modern technology for the well-being of human life.
- Connect sustainability concepts and technology to the real world challenges.
- Find pathway for sustainable society.

GECY103 ARTIFICIAL INTELLIGENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- Expose the history and foundations of artificial intelligence.
- Showcase the complexity of working on real time problems underlying the need for intelligent approaches.
- Illustrate how heuristic approaches provide a good solution mechanism.
- Provide the mechanisms for simple knowledge representation and reasoning.
- Highlight the complexity in working with uncertain knowledge.
- Discuss the current and future applications of artificial intelligence.

MODULE I HISTORY AND FOUNDATIONS 08

History – Scope – Influence from life – Impact of computing domains - Agents in environments - Knowledge representation – Dimensions of Complexity – Sample application domains – Agent structure.

MODULE II SEARCH 10

Problem solving as search – State spaces – Uninformed Search – Heuristic search – Advanced search – Constraint satisfaction - Applications.

MODULE III KNOWLEDGE REPRESENTATION AND REASONING 10

Foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

MODULE IV REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE 08

Probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference, sample applications.

MODULE V CASE STUDY AND FUTURE APPLICATIONS 09

Design of a game/Solution for problem in student's domain. Natural Language processing, Robotics, Vehicular automation – Scale, Complexity, Behaviour – Controversies.

Theory: 45

TEXT BOOK:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2010.
2. David Poole, Alan Mackworth, Artificial Intelligence: Foundations of Computational Agents, Cambridge University Press, 2010.
3. Nils J. Nilsson, The Quest for Artificial Intelligence, Cambridge University Press, Online edition, 2013.
4. Keith Frankish, William M. Ramsey (eds) The Cambridge Handbook of Artificial Intelligence, Cambridge University Press, 2014.

OUTCOMES:

Students who complete this course will be able to

- Discuss the history, current applications, future challenges and the controversies in artificial intelligence.
- Apply principle of AI in the design of an agent and model its actions.
- Design a heuristic algorithm for search problems.
- Analyze and represent the fact using logic for a given scenario
- Represent uncertainty using probabilistic models
- Develop a simple game or solution using artificial intelligence techniques.

GECY104 GREEN COMPUTING **L T P C**
3 0 0 3

OBJECTIVES:

- To focus on the necessity of green computing technology.
- To expose to various issues with information technology and sustainability.
- To attain knowledge on the technologies for enabling green cloud computing.
- To elaborate on the energy consumption issues
- To illustrate a Green and Virtual Data Center
- To develop into a Green IT Technologist.

MODULE I INTRODUCTION 08

Trends and Reasons to Go Green - IT Data Center Economic and Ecological Sustainment - The Growing Green Gap: Misdirected Messaging, Opportunities for Action - IT Data Center “Green” Myths and Realities - PCFE Trends, Issues, Drivers, and Related Factors - Green Computing and Your Reputation- Green Computing and Saving Money- Green Computing and the Environment

MODULE II CONSUMPTION ISSUES 10

Minimizing power usage – Cooling - Electric Power and Cooling Challenges - Electrical – Power -Supply and Demand Distribution - Determining Energy Usage - From Energy Avoidance to Efficiency - Energy Efficiency Incentives, Rebates, and Alternative Energy Sources - PCFE and Environmental Health and Safety Standards- Energy-exposed instruction sets- Power management in power-aware real-time systems.

MODULE III NEXT-GENERATION VIRTUAL DATA CENTERS 09

Data Center Virtualization - Virtualization beyond Consolidation - Enabling Transparency - Components of a Virtual Data Center - Datacenter Design and Redesign - Greening the Information Systems - Staying Green- Building a Green Device Portfolio- Green Servers and Data Centers- Saving Energy

MODULE IV TECHNOLOGIES FOR ENABLING GREEN AND VIRTUAL DATA CENTERS 08

Highly Effective Data Center Facilities and Habitats for Technology - Data Center Electrical Power and Energy Management - HVAC, Smoke and Fire Suppression

- Data Center Location - Virtual Data Centers Today and Tomorrow - Cloud Computing, Out-Sourced, and Managed Services.

MODULE V SERVERS AND FUTURE TRENDS OF GREEN COMPUTING 10

Server Issues and Challenges - Fundamentals of Physical Servers - Types, Categories, and Tiers of Servers - Clusters and Grids - Implementing a Green and Virtual Data Center - PCFE and Green Areas of Opportunity- 12 Green Computer Companies- What's in Green computer science-Green off the Grid aimed for data center energy evolution-Green Grid Consortium- Green Applications- Green Computing Making Great Impact On Research

Theory: 45

REFERENCES:

5. Greg Schulz, "The Green and Virtual Data Center", CRC Press, ISBN-13:978-1-4200-8666-9, 2009.
6. Marty Poniatowski, "Foundation of Green IT: Consolidation, Virtualization, Efficiency, and ROI in the Data Center", Printice Hall, ISBN: 9780-1-3704-375-0, 2009.

OUTCOMES:

Students who complete this course will be able to

- Demonstrate issues relating to a range of available technologies, systems and practices to support green computing.
- Select appropriate technologies that are aimed to reduce energy consumption.
- Address design issues needed to achieve an organizations' green

computing objectives.

- Analyze the functionality of Data Centers.
- Critically evaluate technologies and the environmental impact of computing resources for a given scenario.
- Compare the impact of Green Computing with other computing techniques.

GECY105 GAMING DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To master event-based programming
- To learn resource management as it relates to rendering time, including level-of-detail and culling.
- To become familiar with the various components in a game or game engine.
- To explore leading open source game engine components.
- To become familiar of game physics.
- To be compatible with game animation.

MODULE I INTRODUCTION 09

Magic Words – What Skills Does a Game Designer Need? – The Most Important Skill -The Five Kinds of Listening-The Secret of the Gifted.

MODULE II THE DESIGNER CREATES AN EXPERIENCE 09

The Game Is Not the Experience -Is This Unique to Games? -Three Practical Approaches to Chasing Rainbows -Introspection: Powers, Perils, and Practice -Dissect Your Feelings -Defeating Heisenberg -Essential Experience.

MODULE III THE EXPERIENCE IN THE PLAYER MIND AND GAME MECHANICS 08

Modeling – Focus -Empathy – Imagination – Motivation – Space – Objects, Attributes, and States – Actions – Rules.

MODULE IV GAMES THROUGH AN INTERFACE 09

Breaking it Down – The Loop of Interaction – Channels of Information – Other Interface.

MODULE V BALANCED GAME MECHANICS 10

Balance – The Twelve Most Common Types of Game Balance – Game Balancing Methodologies - Balancing Game Economies.

Theory: 45

REFERENCES:

1. Jesse Schell, "The Art of Game Design: A Book of Lenses", Second Edition 2nd Edition ISBN-10: 1466598646, 2014.
2. Ashok Kumar, Jim Etheredge, Aaron Boudreaux, “Algorithmic and Architectural Gaming Design: Implementation and Development", 1st edition, Idea Group, U.S ISBN-10: 1466616342, 2012.

4. James M. Van Verth, Lars M. Bishop "Essential Mathematics for Games and Interactive Applications", Third Edition,A K Peters/CRC Press, ISBN-10: 1482250926, 2015.

OUTCOMES:

Students who complete this course will be able to

- Realize the basic history and genres of games
- Demonstrate an understanding of the overall game design process
- Explain the design tradeoffs inherent in game design
- Design and implement basic levels, models, and scripts for games
- Describe the mathematics and algorithms needed for game programming
- Design and implement a complete three-dimensional video game

GECY106 SOCIAL COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To create original social applications, critically applying appropriate theories and effective practices in a reflective and creative manner.
- To critically analyze social software in terms of its technical, social, legal, ethical, and functional features or affordances.
- To encourage the development of effective communities through the design, use, and management of social software.
- To give students with a base of knowledge and advances for them to critically examine existing social computing services.
- To plan and execute a small-scale research project in social computing in a systematic fashion.
- To become familiar with the concept of computational thinking.

MODULE I BASIC CONCEPTS 09

Networks and Relations: Relations and Attributes, Analysis of Network Data, Interpretation of network data -New Social Learning – Four Changes that Shift Work - Development of Social Network Analysis: Sociometric analysis and graph theory, Interpersonal Configurations and Cliques – Analysing Relational Data.

MODULE II SOCIAL LINK 09

Individual Actors, Social Exchange Theory, Social Forces, Graph Structure, Agent Optimization Strategies in Networks – Hierarchy of Social Link Motivation- Social Context.

MODULE III SOCIAL MEDIA 08

Trends in Computing – Motivations for Social Computing – Social Media: Social relationships, Mobility and Social context – Human Computation – Computational Models- Business use of social Media.

MODULE IV SOCIAL INFORMATION FILTERING 09

Mobile Location Sharing – Location based social media analysis – Social Sharing and Social Filtering – Automated recommender Systems – Traditional and Social Recommender Systems.

MODULE V SOCIAL NETWORK STRATEGY 10

Application of Topic Models – Opinions and Sentiments – Recommendation Systems – Language Dnamics and influence in online communities – Psychometric analysis – Case Study: Social Network Strategies for surviving the zombie apocalypse.

Theory: 45

REFERENCES:

6. Jennifer Golbeck, “Analyzing the Social Web”, Elsevier Publication, 2013.
7. Huan Liu, John Salerno, Michael J. Young, “Social computing and Behavioral Modeling”, Springer Publication, 2009.

OUTCOMES:

Students who complete this course will be able to

- Realize the range of social computing applications and concepts.
- Analyze data left after in social media.
- Recognize and apply the concepts of computational models underlying social computing.
- Take out simple forms of social diagnostics, involving network and language models, applying existing analytic tools on social information.
- Evaluate emerging social computing applications, concepts, and techniques in terms of key principles.
- Design and prototype new social computing systems.

GECY107 SOFT COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To become familiar with AI and neural networks that can learn from available examples and generalize to form appropriate rules for inferencing systems.
- To introduce the ideas of fuzzy sets, fuzzy logic and use of heuristics based on human experience.
- To provide the mathematical background for carrying out the optimization associated with neural network learning.
- To familiarize with genetic algorithms and other random search procedures useful while seeking global optimum in self-learning situations.
- To introduce case studies utilizing the above and illustrate the intelligent behavior of programs based on soft computing.

MODULE I INTRODUCTION 09

Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence : Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies. Knowledge representation issues, Prepositional and predicate logic, monotonic and non-monotonic reasoning, forward Reasoning, backward reasoning.

MODULE II INTRODUCTION TO NEURAL NETWROK 09

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb"s learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BPA, momentum, limitation, characteristics and application of EBPA.

MODULE III FUZZY LOGIC 09

Fuzzy set theory, Fuzzy set versus crisp set, crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system: fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference

systems, fuzzy decision making & Applications of fuzzy logic.

MODULE IV GENETIC ALGORITHM 09

Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

MODULE V APPLICATION OF COMPUTATIONAL INTELLIGENCE 09

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency Prediction – Soft Computing for Color Recipe Prediction.

Total Hours: 45

REFERENCES:

5. Klir & Yuan, “Fuzzy sets & Fuzzy Logic: Theory & Application”, Prentice Hall of India Pub, 1995.
6. Kosko: “Neural Network & Fuzzy System”, PHI Publication, 1992.

OUTCOMES:

On completion of the programme students will be able to:

- Learn about soft computing techniques and their applications
- Analyze various neural network architectures and able to Understand perceptrons model
- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems.
- Apply genetic algorithms to combinatorial optimization problems.
- Evaluate and compare solutions by various soft computing approaches for a given problem.

GECY108 EMBEDED SYSTEM PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- This course provides an introduction to the design of embedded computing systems including their hardware and software architectures.
- Entire software development lifecycle and examine the various issues involved in developing software for embedded systems.
- To analyze the I/O programming and Embedded C coding techniques
- This course will equip students with the software development skills necessary for practitioners in the embedded systems field.

MODULE I INTRODUCTION OF EMBEDDED SYSTEM 09

Embedded computing - characteristics and challenges - embedded system design process-Overview of Processors and hardware units in an embedded system-Compiling, Linking and locating – downloading and debugging –Emulators and simulators processor – External peripherals – Memory testing – Flash Memory.

MODULE II SOFTWARE TECHNOLOGY 09

Software Architectures, Software development Tools, Software Development Process Life Cycle and its Model, Software Analysis, Design and Maintenance.

MODULE III INPUT/OUTPUT PROGRAMMING 09

I/O Instructions, Synchronization, Transfer Rate & Latency, Polled Waiting Loops, Interrupt – Driven I/O, Writing ISR in Assembly and C, Non Maskable and Software Interrupts

MODULE IV DATA REPRESENTATION IN EMBEDDED SYSTEMS 09

Data representation ,Twos complement, Fixed point and Floating Point Number Formats ,Manipulating Bits in -Memory, I/O Ports, Low level programming in C ,Primitive data types , Arrays, Functions ,Recursive Functions, Pointers, Structures & Unions ,Dynamic Memory Allocation ,File handling ,Linked lists, Queues, Stacks.

MODULE V EMBEDDED C 09

Embedded Systems programming in C – Binding & Running Embedded C program in Keil IDE – Dissecting the program -Building the hardware. Basic techniques for reading & writing from I/O port pins – switch bounce - LED Interfacing using Embedded C.

Total Hours: 45

REFERENCES:

1. Marilyn Wolf, "Computers as components ", Elsevier, 2012.
2. Qing Li and Carolyn Yao, "Real-Time Concepts for Embedded Systems", CMP Books, 2003.
3. Daniel W. Lewis, "Fundamentals of embedded software where C and assembly meet", Pearson Education
4. Michael Bass, "Programming Embedded Systems in C and C++", Oreilly, 2003.

OUTCOMES:

On completion of this course the student will be able to

- Design the software and hardware components in embedded system
- Describe the software technology
- Use interrupt in effective manner
- Use keil IDE for programming
- Program using embedded C for specific microcontroller
- Design the embedded projects

GECY109 PRINCIPLES OF SUSTAINABLE DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge in the concepts and dimensions of sustainable development.
- To gain knowledge on the framework for achieving sustainability.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 09

Environment and Development - Population poverty and Pollution –Global and Local environmental issues –Resource Degradation- Greenhouse gases- Desertification-industrialization –Social insecurity, Globalization and environment. History and emergence of the concept of sustainable development-Objectives of Sustainable Development.

MODULE II COMPONENTS AND DIMENSIONS OF SUSTAINABLE DEVELOPMENT 09

Components of Sustainability –Complexity of growth and equity – Social economic and environmental dimensions of sustainable development – Environment- Biodiversity- Natural -Resources- Ecosystem integrity- Clean air and water- Carrying capacity- Equity, Quality of Life, Prevention, Precaution-Preservation and Public Participation Structural and functional linking of developmental dimensions.

MODULE III FRAMEWORK FOR ACHIEVING SUSTAINABILITY 09

Operational guidelines- interconnected prerequisites for sustainable development Empowerment of Women, children, Youth, Indigenous People, Non-Governmental Organizations Local Authorities, Business and industry-Science and Technology for sustainable development- performance indicators of sustainability and assessment mechanism- Constraints and barriers for sustainable development.

MODULE IV SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 09

Demographic dynamics of sustainability – Policies for socio-economic development -Strategies for implementing eco-development programmes Sustainable development through trade –Economic growth –Action plan for implementing sustainable development –Urbanization and sustainable Cities – Sustainable Energy and Agriculture –sustainable livelihoods.

MODULE V SUSTAINABLE DEVELOPMENT AND INTERNATIONAL RESPONSE 09

Role of developed countries in the development of developing countries – international summits – Stockholm to Johannesburg – Rio principles – Agenda-Conventions – Agreements – Tokyo Declaration – Doubling statement – Tran boundary issues integrated approach for resources protection and management

Total Hours: 45

REFERENCES:

1. Sayer J. and Campbell, B., The Science of Sustainable Development: Local Livelihoods and the Global environment - Biological conservation restoration & Sustainability, Cambridge university Press, London, 2003.
2. M.K. Ghosh Roy. and Timberlake, Sustainable Development, Ane Books Pvt. Ltd, 2011.
3. Mackenthun K.M., Concepts in Environmental Management, Lewis Publications London,1999.
4. APJ Abdul Kalam and Srijan Pal Singh, Target 3 Billion: Innovative Solutions Towards Sustainable Development, Penguin India, 2011

OUTCOMES:

At the end of the course the student will be able to

- Describe the concepts of sustainable development
- Define the components and dimensions of sustainable development
- Outline the Frame work for achieving sustainability.
- State the policies and strategies for implementing sustainable development for Socio economic programmes.
- Examine the role of developed countries in sustainable development.

GECY110	QUANTITATIVE TECHNIQUES IN MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart knowledge on

- operations research
- production management
- financial management
- decision theory and managerial economics

MODULE I OPERATIONS RESEARCH 09

Introduction to Operations research-Linear programming-Graphical and Simplex Methods, Duality and Post-Optimality Analysis-Transportation and Assignment Problems

MODULE II PRODUCTION MANAGEMENT 09

Inventory control, EOQ, Quantity Discounts, Safety Stock-Replacement Theory-PERT and CPM-Simulation Models-Quality Control.

MODULE III FINANCIAL MANAGEMENT 09

Working Capital Management-Compound Interest and Present Value methods-Discounted Cash Flow Techniques-Capital Budgeting.

MODULE IV DECISION THEORY 09

Decision Theory-Decision Rules-Decision making under conditions of certainity, risk and uncertainity-Decision trees-Utility Theory.

MODULE V MANAGERIAL ECONOMICS 09

Cost concepts-Break-even -Analysis-Pricing techniques-Game Theory applications.

Total Hours: 45

REFERENCES:

1. Vohra, N.D. , Quantitative Techniques in Management, Tata McGraw Hill Co., Ltd, New Delhi, 2009.
2. Seehroeder, R.G., Operations Management, McGraw Hill, USA, 2002.

4. Frank Harrison, E., The Managerial Decision Making Process, Houghton Miffin Co. Boston, 2005.
5. Hamdy A. Taha, Operations Research- An Introduction, Prentice Hall, 2002.

OUTCOME:

At the end of the course, the students will be able to

- Apply the concepts of operations research for various applications
- Create models for inventory control in production management
- Compute the cash flow for a project
- Choose a project using decision theory based on the risk criterion.
- Apply the concepts of managerial economics in construction management

GECY111 PROGRAMMING USING MATLAB & SIMULINK

L	T	P	C
1	0	2	2

OBJECTIVES:

The aim of this course is to:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION MATLAB DATA PRESENTATION 03+06

Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts-Making clear and compelling plots-Solving systems of linear equations numerically and symbolically- Least squares regression -Curve fitting.

MODULE II MATLAB PLOT FUNCTION 03+06

Introduction- Plot Function – Animation- 3D Plots-Customizing Plots – Plot Applications- Saving &Painting Plots.

MODULE III ROOT FINDING AND COMPUTER REPRESENTATION OF NUMBERS 03+06

Linearization and solving non-linear systems of equations- The Newton-Rapson method- Integers and rational numbers in different bases- Floating point numbers-Round off and errors in basic arithmetic-Significant digits when reporting results

MODULE IV ORDINARY DIFFERENTIAL EQUATIONS 03+06

Numerical integration and solving 1st order, ordinary differential equations (Euler's method and Runge-Kutta) – Use of ODE function in MATLAB

MODULE V NON-LINEAR DIFFERENTIAL EQUATIONS 03+06

Converting 2nd order and higher ODEs to systems of 1st order ODEs- Solving systems of ODEs via Euler's method and Runge-Kutta) – Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations

MODULE VI INTRODUCTION OF SIMULINK 03+06

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- Modeling the solution of three equations with three unknowns- Representing a model as a subsystem-Simulink demos.

Total Hours: 45

REFERENCE:

1. Griffiths D V and Smith I M, Numerical Methods for Engineers, Blackwell, 1991.
2. Laurene Fausett, Applied Numerical Analysis Using MATLAB, Pearson 2008.
3. Moin P, Fundamentals of Engineering Numerical Analysis, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB. CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving, Mathematical Exploration with MATLAB, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

- Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
- Write programs using first principles without automatic use of built-in ones.
- Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
- Be fluent in exploring Matlab's capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
- Make use of Maltab visual capabilities for all engineering applications.
- An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECY112 JAVA PROGRAMMING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the fundamentals of Java programming such as data types, variables and arrays.
- To study the syntax and necessity of decision making and iterative statements.
- To create a class and invoke the methods.
- To instigate programming in overloading of methods.
- To emphasize the concept of packages.
- To learn the exception handling routines.

MODULE I INTRODUCTION TO JAVA PROGRAMMING 15

History and Evolution of Java – Overview of Java – Data types, variables and arrays – Operators – Control statements.

MODULE II METHODS AND CLASSES 15

Class fundamentals – Declaring objects – Methods – Constructors – Garbage collection – Overloading methods – Constructor overloading – Access control – Inheritance – Packages - Exception handling.

Total Hours: 30

REFERENCES:

1. Herbert Schildt, Java The Complete Reference, 9th Edition, Oracle Press, 2014, ISBN: 978007180855-2.
2. Nicholas S. Williams, Professional Java for Web Applications: Featuring WebSockets, Spring Framework, JPA Hibernate and Spring Security (WROX), John Wiley & Sons, 2014, ISBN:978111865651-8.

4. Yashavant Kanetka**,** Let Us Java, 2nd Edition, BPB Publications, 2012**.**

OUTCOMES:

Students to complete this course will be able to

- Implement basic Java programming.
- Create a class and invoke methods for real world problems.
- Construct simple overloading of methods programs.
- Implement various types of inheritance concepts.
- Describe the access control mechanism.

GECY113 PYTHON PROGRAMMING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the list and records of python programming.
- To study the control statements and string functions of python.
- To instigate the fundamental python programming.
- To emphasize GUI in python.
- To integrate python with embedded systems.
- To implement programs in python.

MODULE I INTRODUCTION TO PYTHON PROGRAMMING 15

Installation and environment set up – syntax used in python – variable types – operators – Loops – decision making – string functions - formatted files - GUI basics.

MODULE II EMBEDDED PROGRAMMING USING PYTHON 15

Web interface – system tools – script execution context - Motion-triggered LEDs-Python-arduino prototyping-storing and plotting arduino data-Remote home monitoring system.

Total Hours : 30

5. Michael Barr, Anthony Massa, “Programming Embedded Systems”, 2nd Edition, O'Reilly Media, 2006.

OUTCOMES:

Students to complete this course will be able to

- Implement date and time function programming using python.
- Write formatted file programming.
- Construct simple python programs.
- Create web interface using python programming
- Develop embedded system with python programming.
- Build arduino prototype using python programming.

GECY114 INTELLECTUAL PROPERTY RIGHTS (IPR)

L	T	P	C
1	0	0	1

OBJECTIVES:

- To study about Intellectual property rights and its need
- To explore the patent procedure and related issues

MODULE I INTRODUCTION 07

Introduction and the need for intellectual property right (IPR) – IPR in India – Genesis and Development – IPR in abroad – Important examples of IPR – Copyrights, Trademarks, Patents, Designs, Utility Models, Trade Secrets and Geographical Indications – Industrial Designs

MODULE II PATENT 08

Concept of Patent – Product / Process Patents & Terminology – Duration of Patents – Law and Policy Consideration Elements of Patentability –- Patentable Subject Matter – Procedure for Filing of Patent Application and types of Applications – Procedure for Opposition – Revocation of Patents – Working of Patents- Patent Agent – Qualification and Registration Procedure – Patent databases and information system – Preparation of patent documents – Process for examination of patent application- Patent infringement – Recent developments in patent system

Total Hours: 15

7. Deborah E. Bouchoux, Intellectual Property: The Law of Trademarks, Copyrights, Patents, and Trade Secrets, 2015
8. Jatindra Kumar Das, Law of Copyright, PHI Learning, 2015

COURSE OUTCOMES:

Students should be able to

- Identify the various types of intellectual property and their value
- Apply the procedure to file a patent and to deal the related issues
- Search and extract relevant information from various intellectual database

REGULATIONS, CURRICULAM AND SYLLABUS

M. TECH. STRUCTURAL ENGINEERING

(As approved by the 9th Academic Council)

JULY 2016

B.S.ABDUR RAHMAN
UNIVERSITY
B.S.ABDUR RAHMAN INSTITUTE OF SCIENCE & TECHNOLOGY
(Estd.u/s 3 of the UGC Act, 1956)
(FORMERLY B.S.ABDUR RAHMAN CRESCENT ENGINEERING COLLEGE)
Seethakathi Estate, G.S.T. Road, Vandalur, Chennai - 600 048.

VISION & MISSION OF THE DEPARTMENT OF CIVIL ENGINEERING

VISION

To be a leading department for Education, Training and Research in Civil Engineering for a better future and overall socio-economic progress of the country in a sustainable manner.

MISSION

- To offer world class undergraduate, postgraduate and research programs of industrial and societal relevance in civil engineering.
- To nurture ethically strong civil engineers to address global challenges through quality education and application oriented research.
- To educate our students on design, construction, maintenance and advancements in civil engineering for providing solutions to the betterment of the society.
- To prepare competitive and responsible future citizens with good communication, leadership and managerial skills.
- To enrich and enhance the knowledge base for the best practices in various areas of civil & allied engineering through collaborations with Global Institutions of Excellence, Industries and Research organizations.
- To provide a healthy ambience for teaching, research, consultancy and extension activities.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

M.TECH. (STRUCTURAL ENGINEERING)

PROGRAMME EDUCATIONAL OBJECTIVES

- To impart knowledge and develop analytical skills to design structural components and systems based on codal provisions and create an urge for lifelong learning.
- To impart skills in the usage of state of the art software tools for modeling and evaluation of structural systems.
- To improve the analytical skills of the graduates through supportive teaching tools and methodologies as solution providers.
- To develop research skills with full exposure to appropriate real time projects in the field of structural engineering.
- To educate graduates in the use of sustainable, cost effective construction materials and practices.
- To inculcate in students the ethical attitude, team work and effective communication skills.

PROGRAMME OUTCOMES

Structural Engineering Graduates will be able to

- Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Identify, formulate, research literature, and analyses complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Use research – based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.
- Create, select, and apply appropriate techniques, resources, and modern engineering including prediction and modelling to complex engineering

activities with an understanding of the limitations.

- Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES

- Analyse and design structural components & systems using appropriate software and standards.
- Apply engineering techniques and relevant software tools for solving structural engineering problems.
- Undertake real time projects and research in the field of structural engineering.

CURRICULUM & SYLLABI FOR M.TECH. (STRUCTURAL ENGINEERING)

CURRICULUM

Sl. No.	Course Code	Course Title	L	T	P	C
		SEMESTER I				
1	MAC6184	Probability, Matrix Theory and Linear Programming	**3**	**1**	**0**	**4**
2	CEC6101	Theory of Elasticity and Plasticity	**3**	**0**	**0**	**3**
3	CEC6102	Advanced Concrete Design	**3**	**1**	**0**	**4**
4	CEC6103	Structural Dynamics	**3**	**0**	**0**	**3**
5	CEC6104	Advanced Concrete Technology	**3**	**0**	**2**	**4**
6	CEC6105	Design of Substructures	**3**	**0**	**0**	**3**
						21
		SEMESTER II				
1	GEC6201	Research Methodology for Engineers	**3**	**0**	**0**	**3**
2	CEC6211	Finite Element Analysis in Structural Engineering	**3**	**0**	**0**	**3**
3	CEC6212	Advanced Steel Structures	**3**	**1**	**0**	**4**
4	CEC6213	Experimental Techniques and Instrumentation	**2**	**0**	**2**	**3**
5		Professional Electives #				**6**
6	CEC6214	Seminar	**0**	**0**	**2**	**1**
						20
		SEMESTER III				
1		General Elective###	**3**	**0**	**0**	**3**
2		Professional Electives##				**9**
3	CEC7101	Project Phase I***	**0**	**0**	**12**	**6**
4	CEC7102	Internship*/Mini Project**	**0**	**0**	**2**	**1**
						13
		SEMESTER IV				
1	CEC7101	Project Phase II	**0**	**0**	**36**	**18**
						6+18=24
		Total				**78**

Student has to take a minimum of 6 credits from even semester professional elective courses

Student has to take a minimum of 9 credits from odd semester professional elective courses

Student has to take a minimum of 3 credits from general elective courses

* 15 days of Industrial training will be undertaken by regular candidates during first year summer vacation and the credit will be awarded in the 3rd semester.

** Mini project will be taken by working Professionals only.

*** Credits for Project Work Phase I to be accounted along with Project Work Phase II in IV Semester

ELECTIVE

SEMESTER – I

		L	T	P	C
MAC6184	**PROBABILITY, MATRIX THEORY AND LINEAR PROGRAMMING**	**3**	**1**	**0**	**4**

OBJECTIVE:

The aim of this course is to

- provide a comprehensive introduction to the probability distributions used in engineering.
- familiarize students with advanced matrix theory and variational problems.
- expose the students to Operations Research using concepts of linear programming.

MODULE I PROBABILITY DISTRIBUTIONS 10+03

Axioms of probability – addition and multiplication theorem – conditional probability – total probability – random variables - moments – moments generating functions and their properties- Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

MODULE II TWO DIMENSIONAL RANDOM VARIABLES 08+03

Joint distributions - marginal and conditional distributions - functions of random variables - covariance - correlation and regression - Central limit theorem.

MODULE III ADVANCED MATRIX THEORY 09+03

Matrix norms - singular value decomposition - QR algorithm - pseudo inverse - least square approximations.

MODULE IV LINEAR PROGRAMMING 10+03

Formation - graphical method - simplex method - Big-M method - Two Phase method - transportation and assignment problems.

MODULE V CALCULUS OF VARIATIONS 08+03

Variation and its properties – Euler's equation – functional dependant on first and higher order derivatives – functional dependant on functions of several independent variables – variational problems with moving boundaries – isoperimetric problems – Ritz and Kantorovich methods.

L – 45; T – 15; Total – 60

TEXT BOOKS:

1. S.M.Ross, “A First Course in Probability”, 9th edition, Pearson Education, 2013.
2. Lewis.D.W., “Matrix Theory”, Allied Publishers, Chennai, 1995.
3. Taha, H.A., “Operations Research - An Introduction ", 10th edition, Pearson Prentice Hall, 2016.
4. A.S. Gupta, “Calculus of variations with applications”, PHI Pvt. Ltd, New Delhi, 2011.

REFERENCES:

1. H. Cramer., “Random Variables and Probability Distributions”, Cambridge University Press (2004).
2. Roger A. Horn, Charles R. Johnson, “Matrix Analysis”, Cambridge University Press; 2nd edition (2012).

4. David. J. Rader., “Deterministic Operations Research”, Wiley (2010).
5. Elsgolts, “Differential Equations and Calculus of Variations", University Press of the Pacific (2003).

OUTCOME:

At the end of the course students will be able to

- Solve problems using concept of standard, discrete and continuous distributions.
- Solve problems using one dimensional and two dimensional random variables.
- Find eigenvalues and eigen vectors of a higher order matrix.
- Solve problems of linear programming.
- Solve problems of calculus of variations by direct methods and using Euler’s formulae.

CEC6101 THEORY OF ELASTICITY AND PLASTICITY

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart knowledge on the general features of elastic systems and to analyze two-dimensional state of stresses and strains.
- To familarise the students to solve the torsion of non-circular cross-sections by various approaches.
- To understand the fundamental concepts to solve problems in structural members by various energy methods.
- To provide sufficient background on the theory of plasticity.

MODULE I ANALYSIS OF STRESS & STRAIN 09

Basic equations - stress and strain at a point - generalized Hookes law - plane stress and plane strain - equilibrium conditions - compatibility conditions.

MODULE II TWO DIMENSIONAL PROBLEMS 09

Two dimensional problems in Cartesian and polar coordinates - solution of two-dimensional problems with different loading conditions by using polynomials.

MODULE III TORSION OF PRISMATIC BARS 09

Torsion of non circular sections- St.Venants approach – Parndtl,s approach - methods of analysis - membrane analogy - torsion of thin rectangular section and hollow thin walled sections - bars with Elliptical Cross Section – torsion of thin walled and multiple cell closed sections.

MODULE IV ENERGY METHODS 09

Castiglianos theorem - principle of Virtual work - principle of stationary potential energy - principle of least work - Rayleighs method - Rayleigh-Ritz method- finite difference method - simple applications.

MODULE V PLASTICITY 09

Plastic deformation - mechanism - factors affecting plastic deformation - strain hardening - theory of plastic flow - concept of plastic potential - yield criteria - yield conditions - experimental evidence - geometric representation of yield criteria-plastic bending of beams and Plastic torsion

Total Hours : 45

REFERENCES:

1. Timoshenko and Goodier, Theory of Elasticity, 3rd Edition, McGraw Hill, 2010.
2. Sadhusingh, Theory of Elasticity, Khanna Publishers, New Delhi 2012
3. Kachanov L M, Fundamentals of the Theory of Plasticity, Dover Publications, 2013.

OUTCOME:

On successful completion of this course, students will be able to

- critically describe the mathematical and physical foundations of the continuum mechanics of solids, including deformation, stress measures and constitutive relations.
- solve the two dimensional problems in cartesian and polar coordinates
- apply the principles to evaluate the problems related to torsion of non-circular cross-sections.
- analyse the structural members by various energy methods
- describe the basic concepts on the theory of plasticity.

CEC6102 ADVANCED CONCRETE DESIGN

L	T	P	C
3	1	0	4

OBJECTIVE:

- To impart knowledge on the design of RCC beams under combined shear, torsion and bending, limit state of serviceability for structural members.
- To provide exposure on the design of slender columns, deep beams, yield line analysis and flat plates.
- To expand the knowledge in studying the inelastic response of reinforced concrete structural members.

MODULE I DESIGN OF BEAMS 09+03

Overall review on behaviour of RC beams in flexure and shear - behaviour and design of RCC beams under combined Shear, Torsion and Bending - serviceability limit states - computation of deflections and crack width as per codal provisions.

MODULE II DESIGN OF SLENDER COLUMNS 09+03

Behaviour of slender RCC Columns - failure modes - calculation of design moments for braced and unbraced columns - design of slender columns.

MODULE III DESIGN OF SPECIAL RC ELEMENTS 09+03

Design of RC walls – ordinary and shear walls - strut and tie method of analysis for corbels and deep beams

MODULE IV DESIGN OF FLAT SLABS AND PLATES 09+03

Yield line theory and Hillerberg method of design of slabs - design of flat slabs and flat plates according to BIS method - shear in flat slabs and flat plates - design of Grid floors

MODULE V INELASTIC BEHAVIOUR OF CONCRETE STRUCTURES 09+03

Inelastic behaviour of concrete beams - moment-rotation curves - moment redistribution - concept of Ductility – detailing for ductility – design of beams, columns for ductility - design of cast-in-situ joints in frames.

L – 45; T – 15; Total Hours - 60

11. SP 16, Design Aids for IS 456-1978.
12. IS 13920- 1993- Ductile Detailing of Reinforced Concrete Structures Subjected to Seismic Forces — Code Of Practice.

OUTCOME:

On successful completion of these modules, students will be able to

- describe the behavior of reinforced concrete structural members and compute serviceability response of structural elements.
- employ the Indian code of practice for the design the slender RC columns.
- design the special structural elements such as RC walls, deep beams and corbels
- appropriately choose and design the two-way slab system for buildings.
- critically describe the inelastic behaviour of structures and ductile detailing of RC structures.

CEC6103 STRUCTURAL DYNAMICS

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart knowledge about theory of vibrations and vibration parameters to analyse the dynamic forces caused by an earthquake.
- To introduce the design of buildings for blast and impact forces as per BIS codes of practice.

MODULE I SINGLE DEGREE OF FREEDOM SYSTEMS 09

Formulation of equations of motion by different methods - free and forced vibrations, effect of damping.

MODULE II MULTI DEGREE OF FREEDOM SYSTEMS 09

Formulation of structure property matrices, eigen value problems, mode shapes and orthonormality of modes, approximate methods of extraction of eigen values.

MODULE III CONTINUOUS SYSTEMS 09

Modeling - free and forced vibration of bars and beams. Rayleigh –Ritz method –formulation using conservation of energy –formulation using virtual work

MODULE IV DIRECT INTEGRATION METHODS FOR DYNAMIC RESPONSE 09

Damping in MDOF systems - Nonlinear MDOF systems - Wilson Theta method, Newmark's beta method - step-by-step numerical integration techniques.

MODULE V DESIGN AGAINST BLAST AND IMPACT 09

Characteristics of internal and external blast - Impact and impulse loads - pressure distribution on buildings above ground due to external blast - underground explosion - design of buildings for blast and impact as per BIS codes of practice.

Total Hours : 45

REFERENCES:

3. Roy R Craig, Structural Dynamics – An Introduction to Computer Methods, John Wiley and Sons, 2005.
4. Humar J. L., Dynamics of Structures, Prentice Hall, 1990.

OUTCOME:

At the end of the course, students will be able to

- develop the equation of motion for single degree of freedom
- analyze the dynamic response of multi degree of freedom systems
- analyze the free and forced vibration of bars and beams
- find the dynamic response of structures using numerical integration procedure
- design the buildings for blast and impact forces using BIS codes of practice.

CEC6104 ADVANCED CONCRETE TECHNOLOGY

L	T	P	C
3	0	2	4

OBJECTIVE:

- To impart sufficient knowledge to students about properties of various concrete constituent materials, mix design for different types of concrete, fresh and hardened properties of concrete.
- To provide students knowledge on durability properties of concrete and different types of special concretes.

MODULE I CONCRETE CONSTITUENT MATERIALS 09+06

Cement - Grades and types - properties and testing as per Indian standards. Fine aggregate - coarse aggregate - classification - properties - testing as per Indian standards. Water - quality, properties and requirements. Mineral admixtures - fly ash, silica fume, metakaoline, ground granulated blast furnace slag, rice husk ash, titanium dioxide. Chemical admixtures - Super plasticizers, water reducers, set accelerators, set retarders, air entraining agents, viscosity modifying agents, corrosion inhibiting admixtures - working mechanism and application areas.

MODULE II CONCRETE MIX DESIGN 09+06

Principles of concrete mix design- mix design for different types of concrete - control concrete, self compacting concrete, high performance concrete and ready mix concrete - Indian standards - ACI method - relevant standards. Design concrete mix for a desired application and subsequent validation.

MODULE III PROPERTIES OF FRESH AND HARDENED CONCRETE 09+06

Fresh concrete properties of control concrete, self compacting concrete and high performance concrete – workability related tests - slump, compaction factor, vee bee consistometer, flow test, L-box test, U-box test, V-funnel test, J-ring test. Hardened concrete properties – strength – modulus of elasticity – creep – shrinkage - bond strength.

MODULE IV DURABILITY PROPERTIES OF CONCRETE 09+06

Deteriorating mechanism : sulphate attack, alkali aggregate reaction, corrosion of steel rebar - mechanism, causes and consequences. Tests related to durability properties - water absorption, permeability, sorptivity, resistance to chemical attack, freeze and thaw resistance, accelerated corrosion test, RCPT test, half-cell potential test and macrocell corrosion test.

MODULE V SPECIAL CONCRETE 09+06

High performance concrete – fibre reinforced concrete – self compacting concrete - polymer concrete composites - light weight concrete – pervious concrete – ferrocement – shotcrete – coloured concrete – heavy density concrete.

L – 45; T – 30; Total Hours - 75

17. BIS 13311 - 1992, Non destructive testing of concrete - Method of test, Part -2 : Rebound Hammer, Bureau of Indian Standards.

OUTCOME:

On completion of these modules, students will be able to

- conduct tests to assess the properties of concrete constituent materials and its validation for the desired application.
- perform mix design for normal concrete, self compacting concrete and high performance concrete as per specified standards.
- conduct tests as per codal provisions to assess the fresh and hardened concrete properties.
- carryout durability studies on different types of concrete.
- suggest type of concrete based on application and durability requirements.

GEC6201	RESEARCH METHODOLOGY FOR ENGINEERS	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To provide a perspective on research to the scholars
- To educate on the research conceptions for designing the research
- To impart knowledge on statistical techniques for hypothesis construction
- To gain knowledge on methods of data analysis and interpretation
- To learn about the effective communication of research finding

MODULE I RESEARCH PROBLEM FORMULATION 07

The research problem – Sources of research problem – Information, how to deal with it – Criteria / characteristics of a good research problem – Errors in selecting a good research problem – Types of research – Nature and use of arguments.

MODULE II HYPOTHESIS FORMULATION 08

Research design – meaning and need – basic concepts, Different research designs, experimental design – principle – important experimental designs, Design of experimental setup, mathematical modeling, simulation – validation and experimentation, dimensional analysis and similitude.

MODULE III STATISTICAL TECHNIQUES 12

Statistics in research – concept of probability – popular distributions –hypothesis testing- sample design- design of experiments – factorial designs -– orthogonal arrays- ANOM - ANOVA - Multivariate analysis - use of optimization techniques – traditional methods – evolutionary optimization techniques –transportation model

MODULE IV STATISTICAL ANALYSIS OF DATA 10

Research Data analysis – interpretation of results – correlation with scientific facts- Accuracy and precision – error analysis, limitations - Curve fitting, Correlation and regression.

MODULE V RESEARCH REPORT 08

Purpose of written report – audience, synopsis writing, preparing papers for International journals, thesis writing – organization of contents – style of writing – graphs and charts – referencing, oral presentation and defence, ethics in research, Patenting, Intellectual Property Rights.

Total Hours: 45

11. Scheffer. R.L. and James T. Mc Clave, Probability and Statistics for Engineers, PWS – Kent Publishers Co., Boston, USA, 1990.

OUTCOME:

Students who complete this course will be able to

- identify the research problem.
- become capable of analyzing the data using mathematical techniques.
- learn to apply the statistical concepts in research.
- demonstrate the different research methods applicable to a specific problem.

CEC6105 DESIGN OF SUBSTRUCTURES

L	T	P	C
3	0	0	3

OBJECTIVE:

- To familiarize the students with various site investigation programme, geotechnical terminology and important concepts for design of shallow and deep foundations.
- To help the students to utilize their knowledge in soil mechanics and to perform various types of engineering calculations
- To perform the geotechnical engineering design functions for shallow and deep foundations.

MODULE I SUB SURFACE EXPLORATION 08

Engineering properties of soil - Purpose of soil exploration- Programme and Procedures – Interpretation of bore logs, soil data and exploration reports.

MODULE II SHALLOW FOUNDATIONS 10

Types of foundations and their specific applications – depth of foundation – bearing capacity and settlement estimates – structural design of isolated, strip, rectangular and trapezoidal and combined footings – strap – balanced footings – raft foundation – Approximate flexible method of raft design - Compensated foundations.

MODULE III DEEP FOUNDATIONS 09

Types of piles and their applications - load capacity - settlements - group action - design of piles and pile caps.

MODULE IV FOUNDATIONS FOR BRIDGES AND OTHER MISCELLANEOUS STRUCTURES 09

Drilled shaft foundations and caissons for bridges - foundations for towers – chimneys – silos.

MODULE V MACHINE FOUNDATIONS 09

Types - general requirements and design criteria - general analysis of machine foundations-soil system - stiffness and damping parameters - tests for design parameters - guidelines for design of reciprocating engines, impact type machines, rotary type machines, framed foundations.

Total Hours : 45

6. Bowels J. E., Foundation Analysis and Design, Mc Graw-Hill International Book Co., 1996.

OUTCOME:

At the end of the course students will be able to

- interpret subsurface information to report soil properties.
- Determine bearing capacity and design shallow foundations for various types of structures.
- Recommend a suitable type of pile foundation and determine the load carrying capacity of pile foundations.
- Design foundations for bridges
- Design a suitable type of machine foundation for a machine,

CEC6211	FINITE ELEMENT ANALYSIS IN STRUCTURAL ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To introduce the fundamental concepts of finite element method, specifically the conception of an idea that involved in the finite element analysis of a structure.
- To incorporate overview of matrix techniques and plane stress and plane strain concepts.
- To expose the finite element software to analyse the structural members

MODULE I CONCEPTS OF FINITE ELEMENT METHOD 09

General description of the finite element method – overview of matrix techniques - basic equations from solid mechanics - variational formulation - approximate methods – Rayleigh Ritz, Weighted residual (Galerkin) and finite difference methods.

MODULE II PLANE STRESS AND PLANE STRAIN 09

The concept of an element - derivation of Elemental Equations – assembly - imposition of boundary Conditions - solution of the equations – basic functions and shape functions – one dimensional elements - two dimensional problems in plane stress and plain strain.

MODULE III AXISYMMETRIC STRESS ANALYSIS AND 3D STRESS ANALYSIS 09

Axisymmetric problems - triangular and quadrilateral Elements - natural coordinates - isoparametric formulation - numerical Integration - plate bending and shell elements - brick elements - Higher Order Elements.

MODULE IV MESHING AND SOLUTION PROBLEMS 09

Pre and post processor interpretations - p and h methods of refinement - iil conditioned elements - discretisation errors – patch test - auto and adaptive mesh generation techniques - error evaluation - finite element programming and FEA Software – ANSYS.

MODULE V NONLINEAR AND VIBRATION PROBLEMS 09

Material and geometric non-linearity - consistent system matrices – dynamic condensation - eigen value extraction - modal methods – integration methods - application to thermal analysis.

Total Hours : 45

6. Cook Robert. D., Plesha, Michael. E & Witt, Robert.J. Concepts and Applications of Finite Element Analysis, Wiley Students Edition, 2004.

OUTCOME:

On the successful completion of these modules, students will be able to

- solve the boundary value problems using approximate methods.
- derive and elemental equations and shape function for one and two dimensional elements.
- form the isparametric functions for various elements.
- perform the mesh refinement and error evaluation for various elements.
- model and analyse 2D and 3D systems using finite element software.

CEC6212 ADVANCED STEEL STRUCTURES

L	T	P	C
3	1	0	4

OBJECTIVE:

- To impart sufficient knowledge to students on various codal provisions for steel structural design.
- To offer knowledge to analyse and design different types of bolted and welded connections; industrial structural members; cold formed structural elements; and special structures such as chimney etc.
- To give exposure to students on plastic analysis of structures.

MODULE I BEHAVIOUR AND DESIGN OF CONNECTIONS 09+03

Types of connection - importance - codal provisions as per IS: 800 - behaviour and design of bracket connection - unsiffened and stiffened seated connections – framed connections - connections for force and moment transmission – tee stub and end plate connections - stiffeners and other reinforcement.

MODULE II ANALYSIS AND DESIGN OF INDUSTRIAL BUILDINGS 09+03

Review of loads on structures - dead, live wind and seismic loads as per standards - requirements of industrial buildings - structural framing - braced frames & unbraced frames - analysis and design of Industrial building components such as roof truss, rafter bracing, purlin, eave girder, stanchions, gable column and bents - analysis and design of gable frames - design of moment resisting base plates.

MODULE III ANALYSIS AND DESIGN OF COLD–FORMED STEEL STRUCTURES 12+05

Types of cross sections – concepts of local buckling and effective width – codal provisions as per IS : 801 - analysis and design of unstiffened and stiffened compression elements - design of webs of beams - design of flexural members - economic design for beam strength - concept of lateral buckling of beams - concept of lateral bucking and bracing requirement – concept of shear lag and flange curling - design of compression members - design of wall studs and connection details.

MODULE IV ANALYSIS AND DESIGN OF SPECIAL STRUCTURES 09+03

Design of self supporting chimney (lined and unlined) - codal provisions of IS 6533 - stresses due to wind and earthquake forces – design of base plate, anchor bolts

and foundation - check for deflection - design for dynamic effects - wind effects on chimney - gust factor Method - design of guyed chimneys.

MODULE V PLASTIC ANALYSIS OF STRUCTURES 06+01

Introduction - concepts of plastic design - shape factor - redistribution of moments - plastic collapse load - conditions of plastic analysis - methods of plastic analysis - plastic design of portal frames – problems. Connections - requirement - design of straight and haunched connections.

13. BIS 6533 **:** 1971**,** Code of practice for design and construction of steel chimney, Bureau of Indian Standards.

OUTCOME:

At the end of course work, students will be able to

- design connections for the expected shear force and bending moment
- design components of industrial building such as roof truss, purlins, columns, bracing based on application requirement.
- analyse and design cold formed flexural members, compression members and wall studs.
- design self supporting and guyed chimney for the various loading conditions.
- describe the concepts of plastic design, methods of plastic analysis and plastic collapse mechanism.

and materials. Direct model analysis - theory of similitude for modeling - Buckingham Pi theorem for analysis. Testing large scale structures – wind tunnel.

4. Sadhu Singh, Experimental Stress Analysis, Khanna Publishers, New Delhi, 1996.
5. Renganathan S, Transducer Engineering, Allied Publishers Limited, Chennai, 1999.

OUTCOME:

At the end of course work, students will be able to

- employ load cell, sensitive dial gauges and LVDT for different application areas and interpret the results.
- measure static and dynamic strain using electrical resistance strain gauges by understanding principles of rosette analysis.
- acquire load-deflection and load-strain behaviour using data acquisition systems.
- employ NDT techniques such as rebound hammer, UPV test, half-cell potential technique and interpret the test results.
- describe the importance of model analysis in predicting structural behaviour of large scale structures.

CEC6214	SEMINAR	L	T	P	C
		0	0	2	1

GENERAL GUIDELINES:

- Seminar is an important component of learning where the student gets acquainted with preparing and presentation of a technical report.
- The students are advised to collect peer reviewed journal papers relevant to their proposed project work and prepare a report in consultation with a faculty having expertise in that field.
- Presentation schedules will be prepared by the course faculty in line with the academic calendar.
- The students shall be required to present a technical report in PPT and submit a relevant report.
- At the end of each presentation, the class students are encouraged to ask questions to clarify their queries and finally the course faculty give his/her comments to improve the quality in subsequent presentations.
- The marks will be awarded based on technical content, report preparation and presentation skills and in depth knowledge of the student in the subject.
- The marks awarded shall be intimated to the students at the completion of one cycle of presentation by all the students and communicated to the Class Advisor in the specified format.
- Each student shall be given at least two opportunities to exhibit his/her presentation skills.

LIST OF ODD SEMESTER PROFESSIONAL ELECTIVES

CECY101 DESIGN OF BRIDGES

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart students knowledge on classification of bridges & investigation procedures, IRC specification for road bridges and load distribution theories.
- To offer knowledge on design of short span bridges, design of T-Beam and slab bridges, prestressed concrete bridges and plate girder bridges.
- To give exposure to design principles of continuous, box girder and balanced cantilever bridges, types of bearings and design of sub structures.

MODULE I SHORT SPAN BRIDGES 12

Classification - investigation and planning - choice of type - I.R.C. specifications for road bridges - standard live loads - other forces acting on bridges - general design considerations - load distribution theories - analysis and design of slab culverts. Design of T-beam and slab bridges - deck slab - cantilever slab - longitudinal girder - cross girder- end beams.

MODULE II LONG SPAN GIRDER BRIDGES 09

Design principles of continuous bridges - box girder bridges - balanced cantilever bridges.

MODULE III PRESTRESSED CONCRETE BRIDGES 08

Types of prestressed concrete bridges - types of prestressing - typical cross section detailing - over view of design principles of prestressed concrete - design of post-tensioned prestressed concrete slab bridge deck - design of post-tensioned prestressed concrete T-beam and slab bridge deck.

MODULE IV PLATE GIRDER BRIDGES 08

Types of plate girder bridges - design principles - codal provisions and loading standards - design of plate girder bridges - intermediate stiffeners - end bearing stiffeners.

MODULE V BEARINGS, SUBSTRUCTURE AND FOUNDATION FOR BRIDGES 08

Bridge bearings – types - design principles – design of steel rocker roller bearing. Design of pile cap and pier - foundation – types – construction procedure - design of well foundation – design of pile foundation.

Total Hours : 45

7. Edwin H.Gaylord Jr., Charles N.Gaylord, James, E.,Stallmeyer "Design of Steel Structures", McGraw Hill International Editions, 1992

OUTCOME:

At the end of course work, students will be able to

- design slab culverts and T-beam bridge superstructure for the IRC loading conditions.
- design post tensioned prestressed T-beam bridge superstructure for the IRC loading.
- design steel plate girder bridge superstructure based on IRS loading conditions.
- design steel rocker cum roller bearing and substructure for pile foundation and well foundation as per IRC.
- describe the design principles of continuous bridges, box girder and balanced cantilever bridges for its use in real time conditions.

CECY102 INDUSTRIAL STRUCTURES

L	T	P	C
3	0	0	3

OBJECTIVE:

- To provide relevant knowledge on functional requirements of industrial buildings and to design various industrial building components.
- To design various special structures and transmission line towers.

MODULE I GENERAL 09

Classification of industries and industrial structures – general requirements of various industries – engineering, textiles, chemicals etc, - planning and layout of buildings and components.

MODULE II FUNCTIONAL REQUIREMENTS 09

Lighting – illumination levels – characteristics of good lighting – principles of day lighting design – artificial lighting – ventilation – natural and mechanical ventilation – evaporate cooling design – measurement – contaminant control – installation and operation - acoustics – fire safety – guidelines from factories act.

MODULE III INDUSTRIAL BUILDINGS 09

Industrial building frames - analysis of industrial bents – design of gable frames - industrial roofs - crane girders - machine foundations

MODULE IV SPECIAL STRUCTURES 09

Design of corbels and nibs - analysis and design of bunkers and silos – design of chimneys –– design of cooling towers

MODULE V POWER TRANSMISSION STRUCTURES 09

Tower configuration and bracings – loads acting on towers – analysis and design of lattice towers – transmission line towers – tower foundations

Total Hours : 45

REFERENCES:

1. SP 32: 1986, Handbook on Functional Requirements of Industrial buildings.
2. Manohar S.N., Tall Chimneys; Design and Construction, Tata McGraw Hill, 1985.
3. Santhakumar A.R. and Murthy S.S, Transmission Line Structures, McGraw-Hill, 1990.

6. New Delhi, 1996.
7. Dayaratnam P., Design of Steel Structures, Wheeler and Co., New Delhi,
8. 1999.

OUTCOME:

Upon successful completion of the course, students will be able to

- plan for general requirements in an industry and prepare a layout on buildings and structural components for various industries
- make an appropriate lighting & ventilation and identify a suitable measures to control fire as per factories act in an industrial structure.
- design an industrial building with bents along with crane girder; describe suitable foundations for the various types of machines/equipment in an industry.
- analyse and design a rc structure such as corbels, bunkers, silos, chimneys and cooling towers in an industry.
- identify suitable tower configurations for power transmission, analyse and design a lattice tower with suitable foundations.

CECY103	MAINTENANCE AND REHABILITATION OF STRUCTURES	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To impart students sound knowledge on various causes of failures, detailed assessment procedure for evaluating a distressed structure, materials available for effecting repair and techniques for effective rehabilitation.
- To offer knowledge to students on rehabilitation of real time distressed structures through case studies.

MODULE I CAUSES FOR FAILURES 09

Effects due to climate, temperature, chemicals, wear and erosion - design and construction errors- corrosion – mechanism, causes, consequences and remedial measures - effect of cover thickness and cracking on durability of concrete.

MODULE II MAINTENANCE AND ASSESSMENT PROCEDURE 09

Definition : maintenance, repair and rehabilitation - facets of maintenance - importance of maintenance- assessment procedure for evaluating a damaged structure - various aspects of inspection - destructive and non–destructive testing techniques.

MODULE III MATERIALS FOR REPAIR 09

Special concretes and mortar - concrete chemicals - elements for accelerated strength gain - expansive cement - polymer concrete composites - ferro cement - fibre reinforced concrete- fibre reinforced polymer composites - micro concrete. methods of corrosion protection - corrosion inhibitors - protective coating materials for rebar and concrete - corrosion resistant steel - cathodic protection.

MODULE IV TECHNIQUES FOR REPAIR 09

Rust converters and polymer coating for rebars during repair - repair mortar for cracks - bonding agents - epoxy injection - guniting and shotcrete - FRP and ferro cement jacketing - vacuum concreting - bonding plates - overlays - protective coatings - shoring and underpinning technique.

MODULE V REHABILITTION OF STRUCTURES - CASE STUDIES 09

Case studies on repairs to overcome low member strength - deflection - cracking - chemical attack - damage due to wear - leakage - fire - marine exposure and

corrosion- engineered demolition techniques for dilapidated structures - case study.

7. Michael T. Kubal, Waterproofing the Building Envelope, Mc-Graw Hill Inc., 1993.

OUTCOME:

At the end of course work students will be able to

- Specify the various causes for distress in reinforced concrete structures.
- Conduct systematic condition assessment of damaged structures using conventional and non-destructive testing methods.
- Suggest suitable materials for repair based on damage level, deterioration mechanism and durability requirements of the distressed structures.
- Recommend repair techniques for rehabilitation of damaged structural elements based on deterioration level, serviceability and durability requirements.
- Specify rehabilitation procedure for fire affected, corrosion affected and other structurally distressed members and engineered demolition techniques

CECY104 PLATES AND SHELLS

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart knowledge on the behavior of thin and thick plates in cartesian and polar coordinates.
- To understand the behaviour of reinforced concrete plate and shell elements at material level, element level and system level.

MODULE I THIN AND THICK PLATES 09

Plate equation and behaviour of thin plates in cartesian- polar coordinates- isotropic and orthotropic plates- bending and twisting of plates.

MODULE II ANALYSIS & DESIGN OF PLATES 10

Navier's solution and energy method, rectangular, circular plates with various end conditions - design steps - minimum thickness and reinforcements as per I.S. specifications for R.C. folded plates.

MODULE III BEHAVIOUR OF SHELLS 08

Shell behaviour, shell surfaces and characteristics, classifications of shells, equilibrium equations in curvilinear coordinates, force displacement relations.

MODULE IV ANALYSIS OF SHELLS 08

Membrane analysis and bending theory of shells of revolution, cylindrical shells under different loads, shallow shells, solutions of typical problems.

MODULE V DESIGN OF SHELLS 10

Design of spherical, conical, paraboloid, ellipsoid, cylindrical hyperbolic paraboloid, northlight shells.

Total Hours : 45

REFERENCES:

5. Reddy, J.N., Mechanics of Laminated Composites Plates and Shells, CRC Publishers, 2nd Edition, 2003.
6. Philip L Gould, Analysis of Shells and Plates, Prentice Hall, 1998.

OUTCOME:

Upon successful completion of this course, students will be able to

- describe the behaviour of thin and thick plates.
- solve and establish classical solutions for various types of plates.
- illustrate the characteristics on different types of shells and develop equilibrium equations and force displacement relations.
- analyse the various types of shells under different loading conditions
- design the various types of shells structures.

CECY105 STABILITY OF STRUCTURES

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart students sufficient knowledge about basic concepts of elastic structural stability, analytical approaches to stability and analysis of inelastic buckling of columns.
- To give exposure on the stability analysis of beam columns and frames using FEM and other methods and analysis of buckling of beams and thin plates.

MODULE I STABILITY OF COLUMNS 09

Concepts of elastic structural stability- analytical approaches to stability - characteristics of stability analysis- elastic buckling of columns- equilibrium; energy and imperfection approaches – non-prismatic columns- built up columns- orthogonality of buckling modes- effect of shear on buckling load - large deflection theory.

MODULE II METHODS OF ANALYSIS AND IN ELASTIC BUCKLING 09

Approximate methods – rayleigh and galerkin methods – numerical methods – finite difference and finite element - analysis of columns – experimental study of column behaviour – south well plot - column curves - derivation of column design formula - effective length of columns - inelastic behaviour- tangent modulus and double modulus theory

MODULE III BEAM COLUMNS AND FRAMES 09

Beam column behaviour- standard cases- continuous columns and beam columns – column on elastic foundation – buckling of frames – single storey portal frames with and without side sway – classical and stiffness methods – approximate evaluation of critical loads in multistoried frames – use of wood’s charts.

MODULE IV BUCKLING OF BEAMS 09

Lateral buckling of beams – energy method- application to symmetric and simply symmetric I beams – simply supported and cantilever beams - narrow rectangular cross sections- – numerical solutions – torsional buckling – uniform and non uniform torsion on open cross section - flexural torsional buckling – equilibrium and energy approach.

MODULE V BUCKLING OF THIN PLATES 09

Isotropic rectangular plates - governing differential equations - simply supported on all edges – use of energy methods – plates with stiffeners – numerical techniques.

Total Hours : 45

5. Gambhir, M.L, *Stability* Analysis and Design of *Structures*, Springer, 2004.
6. Chai H Yoo, Sung Lee, Stability of Structures - Principles and Applications, Elsevier, 2011.

OUTCOME:

At the end of the course work, the students will be able to

- describe the basic concepts of elastic structural stability and identify suitable analytical approaches to stability of structures.
- analyse the inelastic buckling of structures by various approximate methods.
- Illustrate the buckling behaviour of various structural components and evaluate under critical loading conditions.
- develop stability analysis by different approaches for various types of beams.
- establish differential equations for thin plates under different edge conditions.

CECY106 TALL STRUCTURES

L	T	P	C
3	0	0	3

OBJECTIVE:

- To understand the problems associated with large heights of structures with respect to different loads.
- To gain knowledge on the behaviour, analysis and design of various structural systems.
- To impart knowledge on stability of tall buildings and also on dynamic analysis of wind and earthquake loadings.

MODULE I DESIGN CRITERIA & LOADING 09

General - factors affecting growth, height and structural form - design philosophy - loading - gravity loading - wind loading - earthquake loading - combinations of loading - strength and stability - stiffness and drift limitations - human comfort criteria- creep effects - shrinkage effects - temperature effects - fire - foundation settlement - soil-structure interaction

MODULE II STRUCTURAL FORMS 09

Structural forms – braced frame, rigid frame, infilled frame, shear wall structures, wall- frame structures, framed tube structures, outrigger braced structures, space structures, hybrid structures, R.C.floor systems - one-way slab on beams and girders - two-way flat slab - two-way flat plate - waffle flat slabs - two-way slab and beam - steel framing floor systems - one-way beam system - two-way beam system - three-way beam system - composite steel - concrete floor systems.

MODULE III MODELING, BEHAVIOUR & ANALYSIS OF STRUCTURAL SYSTEMS 09

Modeling for analysis - assumptions - modeling for approximate analyses - modeling for accurate analysis - reduction technique. types, behaviour and analysis methods of braced frames - behaviour and analysis of rigid frame structures - behaviour, analysis & design of infilled frame structures - behaviour and analysis of shear wall, coupled shear wall and wall-frame structures - behaviour of tubular structures, core structures and outrigger-braced structures

MODULE IV STABILITY OF TALL BUILDINGS 09

Overall buckling analysis of frames (approximate methods) - overall buckling analysis of wall frames - second order effects of gravity loading - translational -

torsional instability - out-of-plumb effects - effects of foundation rotation - creep and shrinkage effects - temperature effects.

MODULE V DYNAMIC ANALYSIS 09

Response to wind loading - along-wind response - across-wind response - estimation of natural frequencies & damping - types of excitation - design to minimise dynamic response - response to earthquake motions - response to ground accelerations - response spectrum analysis - estimation of natural frequencies and damping - human response to building motions.

Total Hours : 45

4. Lynn.S. Beedle, Advances in Tall Buildings, CBS Publishers and Distributors, 1996
5. Lawson T V, Wind Effects on Buildings, Applied Science Publishers, 1980.

OUTCOME

On successful completion of these modules, students will be

- compute the different types of loading acting on tall structures and identify the different factors affecting the tall structures.
- classify and use appropriate types of structural systems in tall structures.
- construct modeling using various analysis techniques and describe its behaviour for various structural systems.
- manipulate the second order effects of gravity loading, translational and torsional instability in the analysis of tall structures
- analyze the response of wind and seismic motions on tall structures.

CECY107	WIND AND CYCLONE EFFECTS ON STRUCTURES	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To impart sufficient knowledge on the concepts of wind effects on structures.
- To familiarise on the modeling and designing the structures for wind and cyclone effects as per the codal recommendations.

MODULE I INTRODUCTION 09

Types of wind – characteristics of wind – wind velocity, method of measurement, variation of speed with height, shape factor, aspect ratio, drag effects - dynamic nature of wind – pressure and suctions - spectral studies, gust factor.

MODULE II WIND TUNNEL STUDIES 09

Wind tunnel studies- types of tunnels, prediction of acceleration – load combination factors – wind tunnel data analysis – calculation of period and damping value for wind design - modeling requirements – interpretation of results-aero dynamic and aero-elastic models

MODULE III WIND EFFECTS ON STRUCTURES 09

Classification of structures - rigid structures, flexible structures - static and dynamic effects on tall buildings - chimneys.

MODULE IV DESIGN OF STRUCTURES FOR WIND LOAD 09

Design principles for wind loading on structures as per IS and NBC codal provisions – design of tall buildings – chimneys – transmission towers – industrial sheds.

MODULE V CYCLONE EFFECTS ON STRUCTURES 09

Cyclone effect on low rise structures – sloped roof structures - tall buildings -effect of cyclone on claddings and design of cladding as per codal provisions in cladding design –procedure and modeling of cladding.

Total Hours : 45

2. Kolousek., et.al., Wind Effects on Civil Engineering Structures, Elsevier Publications, 1994.

3. Lawson T.V., Wind Effects on Building Vol. I and II, Applied Science Publishers, London, 1980.

OUTCOME:

On successful completion of this course, students will have the ability to

- describe the concepts on the wind effects on structures.
- perform the wind tunnel studies, analyse and compute the various parameters for wind design.
- critically describe the behavior of various types of structures due to wind loading.
- Employ the standards for the design of various structures due to wind loading.
- Describe and perform the design of structures against cyclone.

CECY109 DESIGN OF OFFSHORE STRUCTURES

L	T	P	C
2	0	0	2

OBJECTIVE:

- To impart knowledge on wave generalized process and wave theories.
- To understand the forces on offshore structure.
- To expand the idea on foundation and structural modeling and familiarize with foundation analysis on offshore structures
- To design of offshore structures with failure probability

MODULE I WAVE THEORIES 06

Wave generation process-small- finite amplitude and nonlinear wave theories.

MODULE II FORCES OF OFFSHORE STRUCTURES 06

Wind forces- wave forces on small bodies and large bodies current forces and use of morison equation.

MODULE III OFFSHORE SOIL AND STRUCTURE MODELLING 06

Different types of offshore structures- foundation modeling- fixed jacket platform structural modeling.

MODULE IV ANALYSIS OF OFFSHORE STRUCTURES 06

Static method of analysis-foundation analysis and dynamics of offshore structures.

MODULE V DESIGN OF OFFSHORE STRUCTURES 06

Design of platforms –helipads- Jacket tower- analysis and design of mooring cables and pipe lines.

Total Hours : 30

REFERENCES:

1. Cakrabarti, S.K. Hydrodynamics of Offshore Structures, Computational Mechanics Publications, 1987.
2. Dawson.T.H., Offshore Structural Engineering, Prentice Hall Inc Englewood Cliffs, N.J. 1983

5. Reddy, D.V. and Arockiasamy, M., Offshore Structures, Vol.1 and Vol.2, Krieger Publishing Company, Florida, 1991

OUTCOME:

On completion of this course students will be able to

- determine the constants involved in the wave theories.
- solve various types of forces due to ocean waves.
- describe the foundation for offshore structures.
- perform and analyze the dynamics of offshore structures.
- design offshore structures like platform, helipads, jackets, towers etc.,

CECY110	DESIGN OF STEEL CONCRETE COMPOSITE STRUCTURES	L	T	P	C
		2	0	0	2

OBJECTIVE:

- To introduce the behaviour of composite beams, columns and connections.
- To understand the behaviour and design concepts of composite box girder bridges and composite trusses.

MODULE I CONCEPTS OF STEEL CONCRETE COMPOSITE CONSTRUCTION 07

Introduction to steel-concrete composite construction - theory of composite structures - introduction to steel-concrete - steel sandwich construction.

MODULE II DESIGN OF COMPOSITE MEMBERS 08

Behaviour of composite beams - columns - design of composite beams - steel - concrete composite columns - design of composite trusses

MODULE III DESIGN OF CONNECTIONS 08

Types of connections - design of connections in the composite structures - shear connections - design of connections in composite trusses.

MODULE IV COMPOSITE BOX GRIDER BRIDGERS 07

Introduction - behaviour of box girder bridges - design concepts.

Total Hours : 30

REFERENCES:

1. Johnson R.P., Composite Structures of Steel and Concrete, Blackwell Scientific Publications (Second Edition), UK, 2005.
2. Owens, G.W. and Knowels. P., Steel Designers Manual (Fifth edition), Steel Concrete Institute (UK), Oxford Blackwell Scientific Publications, 1992.
3. Course Notes, Institute of Steel Development and Growth (INSDAG), Kolkatta,.

OUTCOME:

At the end of the course, students will be able to

- Describe the composite structures using various theories.
- design the composite beams and columns.
- analyse and design the connections in composite structures.
- design composite box girder bridges.

CECY111	CASE STUDIES ON PERFORMANCE AND EVALUATION OF STRUCTURES	L	T	P	C
		1	0	0	1

OBJECTIVE:

- To impart knowledge on the various causes of deterioration of structures
- To expand the knowledge on repair, retrofit and strengthening of structures through case studies.

MODULE I CASE STUDIES ON PERFORMANCE OF STRUCTURES 07

Durability assessment of structures - seismic performance of configuration of buildings – seismic performance of concrete, steel and composite structures- blast and wind resistant structures

MODULE II CASE STUDIES ON REPAIR AND REHABILITATION OF STRUCTURES 08

Degradation of concrete structures in marine environment - durability problems on heritage structures - structural appraisal and evaluation of fire damaged structures- engineered demolition techniques for dilapidated structures – retrofit on non-engineered buildings - strengthening of concrete and steel structures.

Total Hours : 15

OUTCOME:

On successful completion of these modules, students will be able to

- identify different types of damages and repair strategies on structures
- apply the suitable repair and rehabilitation techniques to evaluate the performance of structures.

LIST OF EVEN SEMESTER PROFESSIONAL ELECTIVES

CECY201	COMPOSITE MATERIALS	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To impart sufficient knowledge about classification and characteristics of composite materials used in structures.
- To develop an understanding on analysis of laminated composites, netting analysis, manufacturing and fabrication processes of fibres.

MODULE I CLASSIFICATION AND CHARACTERISTICS OF COMPOSITE MATERIALS 09

Need for the composite materials – types of composite materials and their use in structures.

MODULE II BASIC CONCEPTS 09

Hooke's law for orthotropic and anisotropic materials – micromechanics and macro mechanics – lamina stress-strain relations referred and principal material directions and arbitrary axes.

MODULE III ANALYSIS OF LAMINATED COMPOSITES 09

Governing equations for anisotropic and orthotropic plates – angle-ply and cross-ply laminates – static, dynamic and stability analysis for simpler cases of composite plates – interlaminar stresses

MODULE IV FAILURE THEORY 09

Netting analysis – failure criteria – sandwich construction.

MODULE V MANUFACTURING AND FABRICATION PROCESSES 09

Manufacturing of glass – boron and carbon fibres – open mould and closed mould processes.

Total Hours : 45

REFERENCES:

1. Jones R.M., Mechanics of composite materials, CRC Press, 1998.
2. Lubin G, Handbook on Fibre glass and advanced plastic composites, Van
3. Nostrand Co., New York, 1989.

5. Calcote L.R, Analysis of limited structures, Van Nostrand Reinhold Co., 1989.

OUTCOME:

On successful completion of these modules, students will be able to

- classify the composite materials and their use in structures.
- identify the priniciple material direction and arbitrary axes
- apply the various theories for analysis of laminated composites
- perform netting analysis in sandwich construction
- analyse, manufacture and fabricate the composite materials.

CECY202 CORROSION OF STEEL IN CONCRETE

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart students sound knowledge on mechanism of corrosion of steel in concrete, its causes, consequences and control measures.
- To offer students knowledge on codal provisions for enhancing durability and corrosion rate measurement in distressed structures including rehabilitation techniques.

MODULE I CORROSION MECHANISM 09

Corrosion mechanism – black rust - pits - stray current - bacterial corrosion- causes of corrosion – carbonation - chloride attack - influence of concrete cover- corrosion damage – damage in conventionally reinforced concrete and prestressed concrete - stress corrosion cracking - hydrogen embrittlement- cost of corrosion - worldwide scenario.

MODULE II CORROSION CONTROL IN REINFORCED CEMENT CONCRETE09

Control of carbonation - control of chlorides - high performance concrete- corrosion inhibitors – anodic, cathodic and mixed Inhibitors-protective coatings to steel rebars – fusion bonded epoxy coating, galvanization, cement polymer composite coating, inhibited cement slurry coating and anticorrosive polymer cementious coatings - stainless steel reinforcement - sealers and membranes - cathodic protection.

MODULE III CONDITION EVALUATION AND CORROSION RATE MEASUREMENT 09

Preliminary survey - visual Inspection - detailed survey - delamination, - cover - half cell potential measurements - carbonation depth measurement - chloride determination and resistivity measurement - corrosion rate measurement – linear polarization resistance techniques - impedance studies - macrocell techniques - potential-time behavior studies and accelerated corrosion studies.

Module IVREHABILITATION TECHNIQUES 09

Physical and chemical rehabilitation techniques - concrete removal and surface preparation - patches - coatings and sealers - membranes and barriers - encasement and overlays - sprayed concrete - corrosion inhibitors -

electrochemical repair techniques – basic principles – cathodic protection - chloride removal and realkalization

MODULE V CODAL REQUIREMENTS FOR DURABILITY 09

Indian standard codal requirements for enhancing durability of R.C.C. structures - Indian and ASTM codal provisions for coated rebars - galvanized reinforcement - corrosion inhibitors - bond strength test.

Total Hours : 45

REFERENCES:

1. Arnon Bentur, Sidney Diamond and Neal S. Berke, Steel Corrosion in Concrete – Fundamentals and Civil Engineering Practice, E & FN SPON Publications, Madras,1997.
2. John P.Broomfield, Corrosion of steel in concrete - Understanding, investigation and repair, E & FN SPON Publications, Madras,1997.
3. Mars G. Fontana, Corrosion Engineering Mc-Graw Hill Publishers, New Delhi, 2001.
4. Philip H. Perkins, Repair, Protection and Waterproofing of Concrete Structures, Elsevier Applied Science Publishers, London, 1986.

OUTCOME:

At the end of course work, students will be able to

- describe the corrosion mechanism of steel in concrete including its causes and consequences.
- suggest active and passive measures to control corrosion of steel rebars in concrete environment.
- perform condition evaluation studies on corrosion damaged structures by employing conventional and electrochemical corrosion rate measurement techniques.
- recommend physical and chemical rehabilitation techniques based on serviceability needs.
- specify standards to conduct performance evaluation tests on coated rebars and corrosion inhibitors.

CECY203 EARTHQUAKE ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVE:

- To provide the basic understanding on the theory of vibrations.
- To introduce the phenomena of earthquakes and its measurements, factors that affect the design of structures in seismic areas.
- To impart knowledge on the fundamentals of load calculation, various structural systems, design and detailing aspects of structures subject to earthquake loading.
- To provide insight knowledge on the seismic retrofitting techniques of structures.

MODULE I THEORY OF VIBRATIONS 09

Concepts of vibrations – response of the system – simple harmonic motion – damped and undamped -free and forced vibration- natural frequencies and modes shapes.

MODULE II ENGINEERING SEISMOLOGY 09

Earthquake characterizations – causes of earthquake - types of earthquake – seismic waves – magnitude and intensity – measurement of earthquake – seismic zones – architectural features – indian seismic codes– liquefaction of soil - indian and world seismicity

MODULE III SEISMIC BEHAVIOUR OF STRUCTURES 09

Seismic design philosophy – earthquake resistant design of RC members – beams – columns – beam column joints – slabs – staircases – shear wall – seismic coefficient – load combinations - response spectrum method - steel frames – steel panel zones – bracing members–connection design and joint behavior.

MODULE IV DUCTILE DETAILING 09

IS 13920 codal provisions for detailing – beams – columns – beam column joints – footing – staircases – shear wall – special confining reinforcements.

MODULE V SEISMIC RETROFITTING OF STRUCTURES 09

Base isolation – seismic dampers – retrofitting and strengthening of structural members.

Total Hours : 45

REFERENCES:

1. Duggal S.K., Earthquake Resistant Design of Structures. Oxford university press, 2007.

5. Paulay,T. and Priestly, M.N.J., “Aseismic Design of Reinforced Concrete and Masonry Building”, John Wiley and Sons, 1991.

OUTCOME:

At the end of this course, students will be able to

- evaluate the natural frequencies and modes shapes for structures.
- identify the types of seismic waves and measure the magnitude of earthquake.
- perform seismic analysis of structures using various methods.
- describe and design the ductile detailing for structures.
- suggest retrofitting and strengthening methods for structural members.

CECY204 FATIGUE & FRACTURE OF STRUCTURES

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart knowledge on the behaviour on fatigue and damage tolerance problems in structures.
- To provide in-depth knowledge on the stress distribution and energy theories related to fatigue load.

MODULE I INTRODUCTION TO FATIGUE 09

Loads – cyclic loads – high cycle fatigue – low cycle fatigue- stress-life approach: S-N curve – size effect – loading effect – surface , plating, thermal and mechanical –temperature – environment.

MODULE II STRAIN-LIFE APPROACH 09

Introduction – material behaviour – monotonic stress-strain behaviour, basic definition – true and engineering stress-strain relationship, cyclic stress-strain behaviour, cyclic strain hardening and softening, cyclic stress-strain curve determination, stress-strain power law relation.

MODULE III FATIGUE LIFE CALCULATION 09

Prediction of fatigue life using S-N and miner's approach – general calculation of equivalent stress range, stresses to be considered, S-N curves and joint classifications, – prediction of crack propagation– general, constant amplitude loading, variable amplitude loading, geometric functions and crack growth integrals– general, load calculation, stress calculation, probability of failure – design formats – general, allowable stresses, allowable cumulative damage ratio, comments on the design formats

MODULE IV STRESS DISTRIBUTION & ENERGY THEORIES 09

Stress distribution at discontinuities – stress concentration factors – cracks linear elastic fracture mechanics, stress intensity factor – monotonic and cyclic loads - fracture toughness – energy theories – J-integral; crack growth studies: fatigue crack growth -constant amplitude loading – variable amplitude loading – crack growth models –remaining life-prediction – residual strength evaluation – plastic collapse condition, yield condition, remaining life approach

MODULE V FRACTURE OF CONCRETE STRUCTURES 09

Fracture mechanics approach for concrete – limitations – non-linear fracture models with tension softening – fracture energy – size effect – remaining life prediction – residual strength evaluation.

Total Hours : 45

REFERENCES:

1. Prashanth Kumar, Elements of Fracture Mechanics, Tata McGraw-Hill Education, 2009.

5. ncrete, CRC Press, 1992.
6. ACI 215R-74, Considerations for Design of Concrete Structures Subjected to Fatigue Loading, ACI Committee.

OUTCOME:

On successful completion of these modules, students will able to

- develop S-N curve for structures failed due to fatigue loading.
- apply strain-life approach to calculate fatigue damage.
- calculate fatigue life of structures.
- apply various theories and fracture models related to fatigue response of structures.
- describe and compute fracture energy of concrete structures

CECY205	MATRIX METHODS OF STRUCTURAL ANALYSIS	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To understand the difference between matrix based flexibility and stiffness approaches in structural analysis.
- To impart knowledge to compute deflections and forces in statically determinate and indeterminate structures using matrix methods.
- To provide an in-depth analytical knowledge on the physical interpretation of stiffness matrices to assemble stiffness matrices.

MODULE I FUNDAMENTAL CONCEPTS AND TRANSFORMATION 09

Introduction – forces and displacement measurements – principle of superposition – methods of structural analysis – betti's Law – stiffness and flexibility matrices of the elements - indeterminate structures – transformation of system force to element forces – element flexibility to system flexibility – system displacement to element displacement – transformation of forces and displacement in general – normal and orthogonal transformation.

MODULE II FLEXIBILITY METHOD 10

Choice of redundant – ill and well-conditioned equations – automatic choice of redundant – rank technique – transformation of one set of redundant to another set – thermal expansion – lack of fit – application to pin jointed plane truss – continuous beams - frames and grids.

MODULE III STIFFNESS METHOD 10

Development of stiffness method – analogy between flexibility and stiffness – analysis due to thermal expansion, lack of fit – application to pin-jointed plane and space trusses – continuous beams – frames and grids – problem solving.

MODULE IV MATRIX DISPLACEMENT METHODS - SPECIAL TOPICS 8

Static condensation technique – substructure technique - transfer matrix method – symmetry & anti symmetry of structures – reanalysis technique.

MODULE V DIRECT STIFFNESS METHOD 08

Discrete system – direct stiffness approach – application to two and three dimensional pin-jointed trusses - plane frames – grids – three dimensional space frames.

Total Hours : 45

7. Kanchi M. B., Matrix methods of Structural analysis, New Age International, 1993.

OUTCOME:

On successful completion of these modules, students will be able to

- transform the different kinds of matrices.
- apply the matrix flexibility method for planar trusses, beams, and frames.
- compute reactions, internal forces and deflections for planar trusses, beams, and frames using matrix stiffness method.
- analyze the matrix displacement method for symmetry and anti-symmetry of structures using various techniques.
- extend the direct stiffness method for three dimensional framed structure.

CECY206 OPTIMIZATION IN STRUCTURAL DESIGN

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart sufficient knowledge on basic concepts of optimization and classical methods.
- To give detailed overview of queuing theory, exposure to various optimization techniques for design of structural elements and linear programming methods for plastic design.

MODULE I BASIC CONCEPTS IN OPTIMIZATION 09

Basic concepts of minimum weight - minimum cost design - objective function – constraints - classical methods.

MODULE II QUEUING THEORY 09

Queuing model - poisson and exponential distributions - queues with combined arrivals and departures - random and series queues

MODULE III OPTIMIZATION TECHNIQUES AND ALGORITHMS 09

Linear programming - integer programming - quadratic programming - dynamic programming and geometric programming methods for optimal design of structural elements.

MODULE IV COMPUTER SEARCH METHODS 09

Linear programming methods for plastic design of frames - computer search methods for univariate and multivariate minimization.

MODULE V OPTIMIZATION THEOREMS 09

Optimization by structural theorems – Maxwell - mitchell and heyman's Theorems for trusses and frames - fully stresses - design with deflection constraints-optimality criterion methods.

Total Hours : 45

4. Richard Bronson, Operation Research, Schaum's Outline Series, McGraw-Hill Book Co., Singapore, 1983.

OUTCOME:

At the end of the course work, students will be able to

- describe the various basic concepts in optimization.
- perform the queuing theory in structural analysis.
- execute different optimization techniques for the design of structural elements.
- appropriately use the computer search methods for the analysis of structures.
- describe the various optimization theorems for the analyzing of structures.

CECY207 PRESTRESSED CONCRETE

L	T	P	C
3	0	0	3

OBJECTIVE:

- To understand the behaviour and performance of prestressed concrete structures.
- To impart knowledge to analyze and design prestressed concrete flexural and shear members.
- To expand knowledge to design the prestressed concrete structures such as circular prestressing, composite construction members.

MODULE I BASIC CONCEPTS & ANALYSIS OF STRESSES 09

Basic concepts – advantages of PSC – materials required – systems and methods of prestressing – analysis of sections – stress concept – strength concept – load balancing concept –stresses in tendons - losses of prestress –deflections of prestressed concrete members - factors influencing deflections –effect on tendon profile on deflections - short term and long term deflections as per codal provisions.

MODULE II DESIGN OF PSC MEMBERS 09

Flexural strength – simplified procedures as per codes – shear and principal stresses – ultimate shear resistance of PSC members - design of shear reinforcement – behaviour under torsion – modes of failure - design for torsion, shear and bending - design of PSC sections for flexure - transmission of prestress in pre-tensioned members –bond and transmission length – end zone reinforcement – anchorage zone stresses - stress distribution - design of anchorage zone reinforcement.

MODULE III STATICALLY INDETERMINATE STRUCTURES 09

Analysis of indeterminate structures – continuous beams – concept of concordance and linear transformations.

MODULE IV DESIGN OF TENSION AND COMPRESSION MEMBERS 09

Design of tension members - application in the design of prestressed concrete pipes and cylindrical water tanks - design of compression members with and without flexure - application in the design piles

MODULE V DESIGN OF COMPOSITE MEMBERS 09

Composite beams - analysis and design, ultimate strength - their applications - partial prestressing - its advantages and applications.

Total Hours : 45

9. IS 456-2000, Code of Practice for Plain and Reinforced Concrete.
10. SP 16, Design Aids for IS 456-1978.

OUTCOME:

On successful completion of the course, students will be able to

- apply the principles for analyzing the prestressed concrete structures; evaluate the short and long term losses and deflection for PSC members
- establish appropriate approaches to calculate the design strength for flexure, shear & torsion and design the PSC members.
- analyse the indeterminate PSC structures
- apply the principles and techniques for the design of circular prestressing and demonstrate the various structures such as poles, piles.
- analyse and design the composite structural members.

CECY208 SOIL -STRUCTURE INTERACTION

L	T	P	C
3	0	0	3

OBJECTIVE:

- To provide graduate students and practicing engineers with the fundamental concepts and theory of dynamic soil-structure interaction(SSI), with special focus on analysis, influence of SSI in the design parameters.
- To expose the students to various design charts.

MODULE I SOIL- FOUNDATION INTERACTION 09

Introduction to soil-foundation interaction problems – soil behaviour, foundation behaviour, interface behaviour-scope of soil foundation interaction analysis-soil response models-winkler, elastic continuum, two parameter elastic models - elastic plastic behaviour-time dependent behaviour

MODULE II BEAM ON ELASTIC FOUNDATION- SOIL MODELS 09

Infinite beam - two parameters - isotropic elastic half-space - analysis of beams of finite length - classification of finite beams in relation to their stiffness.

MODULE III PLATE ON ELASTIC MEDIUM 09

Infinite plate- winkler - two parameters - isotropic elastic medium -thin and thick plates - analysis of finite plates - rectangular and circular plates -numerical analysis of finite plates -simple solutions.

MODULE IV ELASTIC ANALYSIS OF PILE 09

Elastic analysis of single pile-theoretical solutions for settlement and load distributions - analysis of pile group, interaction analysis - load distribution in groups with rigid cap.

MODULE V LATERALLY LOADED PILE 09

Load deflection prediction for laterally loaded piles - sub grade reaction and elastic analysis - interaction analysis - pile raft system - solutions through influence charts

Total Hours : 45

REFERENCES:

1. Selvadurai, A.P.S., Elastic Analysis of Soil Foundation Interaction, Elsevier, 1979.
2. Poulos, H.G., and Davis, E.H., Pile Foundation - Analysis and Design, John Wiley, 1980.

3. Scott, R.F., Foundation Analysis, Prentice Hall, 1981.
4. Structure-Soil Interaction - State of Art Report, Institution of Structural Engineers, 1978.
5. ACI 336, Suggested Analysis and Design Procedures for combined footings and Mats, American Concrete Institute, Delhi, 1988

OUTCOME:

At the end of this course the students will be able to

- analyse the soil foundation interaction using soil response models.
- perform elastic analysis of foundation and consider soil structure interaction in design.
- perform the numerical analysis of finite plates
- perform the interaction analysis of pile group
- predict the load deflection behavior for laterally loaded piles

CECY224	GREEN BUILDING AND ENERGY EFFICIENT STRUCTURES	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart the knowledge on

- Design of energy efficient buildings
- Thermal performance of building sections by providing a mix of passive solar design strategies
- Usage of materials with low embodied energy to increase the thermal comfort

MODULE I INTRODUCTION 09

Energy required for building construction - heat transfer – measuring conduction – thermal storage – measurement of radiation – the green house effect – psychrometry chart – measuring latent and sensible heat - thermal comfort – site planning and development – temperature – humidity – wind – optimum site location sun protection – types of shading devices – conservation – heating and cooling loads - IGBC's rating systems - sustainable sights - water efficiency - energy efficiency - materials and resources - indoor environmental quality.

MODULE II PASSIVE SOLAR HEATING AND COOLING 09

General principles of passive solar heating – key design elements - direct gain trombe walls - water walls - convective air loops – concepts – case studies – general principles of passive cooling – ventilation – predicting ventilation in building-window ventilation calculations - radiation – evaporation and dehumidification –mass effect – load control – air filtration and odour removal – heat recovery in large buildings

MODULE III DAYLIGHTING AND ELECTRICAL LIGHTING 09

Materials- components and details - insulation – optical materials – radiant barriers glazing materials - day lighting – sources and concepts – building design strategies – case studies – electric lighting –light distribution – electric lighting control for day lighted buildings – illumination requirement – components of daylight factor – recommended daylight factors – day lighting analysis – supplementary artificial lighting design

MODULE IV HEAT CONTROL AND VENTILATION 09

Requirements – heat transmission through building sections – thermal performance of building sections – orientation of buildings – building characteristics for various climates – thermal design of buildings influence of design parameters – mechanical controls – examples - ventilation – requirements – minimum standards for ventilation – ventilation design – energy conservation in ventilating systems – design for natural ventilation.

MODULE V DESIGN FOR CLIMATIC ZONES 09

Energy efficiency – an overview of design concepts and architectural interventions – energy efficient buildings for various zones – cold and cloudy – cold and sunny – composite – hot and dry – moderate – warm and humid – case studies of residences, office buildings and other buildings in each zones – energy audit – certification.

Total Hours: 45

REFERENCES:

2. Brown, GZ Sun, Wind and Light: Architectural design strategies, John Wiley,2013.
3. Cook. J, Award –Winning passive Solar Design, Mc-Graw Hill, 1984.

OUTCOME:

At the end of the course, the students will be able to

- identify the required energy for building construction.
- design and analyse the passive solar cooling and heating techniques.
- identify the required amount of daylight and electrical lighting for a building.
- analyse the ventilation and thermal design of a building.
- design a specific type of building for a special climatic zones.

CECY209	COMPUTER AIDED ANALYSIS FOR STRUCTURES	L	T	P	C
		2	0	0	2

OBJECTIVE:

- To impart required knowledge about modeling of curves and surfaces and solid modeling
- To familiarise on the use of typical software packages and computer methods of analysis such as FEM and computer aided design of steel and RC structural elements.
- To provide exposure on computer aided project scheduling such as CPM and PERT applications.
- To understand the concepts on the knowledge based expert systems and principles of neural network.

MODULE I COMPUTER GRAPHICS 06

Graphic primitives - transformations - basics of 2-D drafting - modeling of curves and surfaces – solid modeling - graphic standards - drafting software packages and usage.

MODULE II STRUCTURAL ANALYSIS 06

Computer methods of structural analysis - finite element programming - analysis through application packages.

MODULE III STRUCTURAL DESIGN 06

Computer aided design of steel and RC structural elements - detailed drawing - bill of materials.

MODULE IV OPTIMIZATION 06

Linear programming - simplex algorithm - post-optimality analysis - project scheduling - CPM and PERT applications - genetic algorithm and applications.

MODULE V EXPERT SYSTEMS 06

Introduction - heuristic search - knowledge based expert systems - architecture and applications of KBES - expert system shells - principles of neural network.

Total Hours : 30

REFERENCES:

1. Krishnamoorthy, C.S.,and Rajeev, S.,Computer Aided Design, Narosa Publishing House, New Delhi, 1991.
2. Ian M. Smith, D. V. Griffiths Programming the Finite Element Method, John Wiley & Sons, 2005.
3. Harrison,H.B., Structural Analysis and Design Vol. I & II, Pergamon Press, 1991.
4. Richard Forsyth (Ed.), Expert System Principles and Case studies,
5. Chapman & Hall , 1989.

OUTCOME:

At the end of course, students will be able to

- apply the drafting techniques with the use of software packages
- analyse the structural members through FEA software packages.
- design the steel and RC structural elements using computer aided analysis packages.
- apply various optimization techniques in project management systems
- describe and apply the expert systems for the analysis of structural members.

CECY210 PREFABRICATED STRUCTURES

L	T	P	C
2	0	0	2

OBJECTIVE:

- To impart required knowledge about the behavior of prefabricated RC structures
- To understand the concepts in the construction of prefabricated structural components for industrial buildings

MODULE I DESIGN PRINCIPLES 06

General civil engineering requirements, specific requirements for planning and layout of prefabrication plant. IS code specifications- modular co-ordination, standardization, disuniting of prefabricates, production, transportation, erection, stages of loading and code provisions, safety factors, material properties, deflection control, lateral load resistance, location and types of shear walls.

MODULE II REINFORCED CONCRETE 06

Prefabricated structures - long wall and cross-wall large panel buildings, one way and two way prefabricated slabs, framed buildings with partial and curtain walls - connections – beam to column and column to column.

MODULE III FLOORS, STAIRS AND ROOFS 06

Types of floor slabs, analysis and design example of cored and panel types and two-way systems, staircase slab design, types of roof slabs and insulation requirements, description of joints, their behaviour and reinforcement requirements, deflection control for short term and long term loads, ultimate strength calculations in shear and flexure.

MODULE IV WALLS 06

Types of wall panels, blocks and large panels, curtain, partition and load bearing walls, load transfer from floor to wall panels, vertical loads, eccentricity and stability of wall panels, design curves, types of wall joints, their behaviour and design, leak prevention, joint sealants, sandwich wall panels, approximate design of shear walls.

MODULE V INDUSTRIAL BUILDINGS AND SHELL ROOFS 06

Components of single-storey industrial sheds with crane gantry systems, R.C. roof trusses, roof panels, corbels and columns, wind bracing design - cylindrical, folded

plate and hyper-prefabricated shells, erection and jointing, joint design, hand book based design.

Total Hours : 30

5. Warszawski, A., Industrialization and Robotics in Building - A managerial approach, Harper and Row, 1990.

OUTCOME:

Upon successful completion of this course, students will be able to

- apply the design principles used to construct prefabricated structures.
- create a panel and framed buildings with their connections of prefabricated RC structures.
- Classify the types of floors, stairs and roofs and describe their behaviour of structures.
- Critically describe the various of types wall panels of prefabricated structures.
- Construct a prefabricated structural components for industrial buildings.

CECY211	ANALYSIS OF STRUCTURES USING FEA SOFTWARE	L	T	P	C
		1	0	0	1

OBJECTIVE:

- To expand the knowledge on the preparation of structural design and drawings for concrete and steel structures using STAAD Pro software.
- To impart knowledge on the various structural systems and general behavior of structures using ETABS.
- To provide a practical training to analyse the various types of structures using ANSYS.

MODULE I ANALYSIS OF STRUCTURES USING STAAD PRO SOFTWARE 05

Analysis and design of beams subjected to various loading systems - analysis of plane and space frames - design of foundation for the structure

MODULE II ANALYSIS OF STRUCTURES USING ETABS SOFTWARE 05

Working with analytical model view - introducing grid system - object based meshing tools - creating building and applying gravity, wind and seismic loads - buckling analysis - p-delta analysis - generating live mode shapes

MODULE III ANALYSIS OF STRUCTURES USING ANSYS SOFTWARE 05

Introduction to ANSYS - problem formulation– pre & post - processing - plane pin-jointed truss – redundant truss - cantilever beam - simply supported and continuous beam with different types of loads – dynamic analysis of a beam and frame.

Total Hours : 15

REFERENCES:

1. Krishna Raju N, Structural Design & Drawing (Reinforced Concrete & Steel), Universities Press, 2004.
2. ETABS, Three Dimensional Analysis and Design of Building Systems, Computers and structures, 2003.

5. Revathy J, Gajalakshmi P and Vinu S.K, Manual for Analysis of Structures Using FEA Software, 2016.

OUTCOME:

On successful completion of these modules, students will be able to

- analyse and design steel /concrete structural components and prepare relevant structural drawings as per I.S Specifications using STAAD Pro software.
- design and analyze high rise buildings using ETABS software .
- analyse the non-linear behaviour of structures using ANSYS software.

GENERAL ELECTIVES

GECY101 PROJECT MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

The objectives of the course would be to make the students

- Learn to evaluate and choose an optimal project and build a project profile.
- Attain knowledge on risk identification and risk analysis
- Gain insight into a project plan and components
- Familiar with various gamut of technical analysis for effective project implementation
- Learn to apply project management techniques to manage resources.

MODULE I INTRODUCTION & PROJECT INITIATION 09

Introduction to project and project management - projects in contemporary organization – The project life cycle - project initiation - project evaluation methods & techniques - project selection criteria - project profile.

MODULE II RISK ANALYSIS 09

Sources of risk: project specific - competitive - industry specific - market and international risk – perspectives of risk – risk analysis: sensitivity analysis - scenario analysis - breakeven analysis - simulation analysis - decision tree analysis – managing/mitigating risk – project selection under risk.

MODULE III PROJECT PLANNING & IMPLEMENTATION 09

Project planning – importance – functions - areas of planning - project objectives and policies - steps in planning process - WBS – capital requirements - budgeting and cost estimation - feasibility analysis - creation of project plan – project implementation: pre-requisites - forms of project organization

MODULE IV TECHNICAL ANALYSIS 09

Technical analysis for manufacturing/construction/infrastructure projects – process/technology - materials and inputs - product mix - plant capacity – plant location and site selection – plant layout - machinery and equipment – structures and civil works – schedule of project implementation – technical analysis for software projects.

MODULE V PROJECT MANAGEMENT TECHNIQUES 09

Project scheduling - network construction – estimation of project completion time – identification of critical path - PERT & CPM – crashing of project network - complexity of project scheduling with limited resources - resource allocation - resource leveling – resource smoothing – overview of project management software.

Total Hours: 45

REFERENCES:

1. Projects: Planning, Analysis, Financing, Implementation and Review, Prasanna Chandra, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2004.
2. Project Management and Control, Narendra Singh, Himalaya Publishing, New Delhi, 2015.
3. A Management Guide to PERT/CPM, Jerome, D. Weist and Ferdinand K. Levy, Prentice Hall of India, New Delhi, 1994.

OUTCOMES:

On successfully completing this course, the student will be able to:

- Evaluate & select a project as well as develop a project profile.
- Identify various risks associated with the project and manage it effectively.
- Prepare a detailed project plan addressing its components.
- Perform technical analysis for effective project implementation
- Apply project management techniques for maximizing resource utilization.

GECY102 SOCIETY, TECHNOLGY & SUSTAINABILITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- Aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- Understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

MODULE I TECHNOLOGY AND ITS IMPACTS 09

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life – Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT 09

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change.

MODULE III SOCIETY AND TECHNOLOGY 09

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of technology – Impact of technology on developer and consumers – Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE 09

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media Technology – Information Systems Technology – Nanotechnology – Space

Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY 09

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

Total Hours: 45

REFERENCES:

2. Arthur W.A, “The nature of Technology: What it is and how it evolves”, Free Press, NY, USA, 2009.
3. Winston M and Edelbach R, “Society, Ethics and Technology”, 3rd Edition, San Francisco, USA, 2005.
4. Martin A.A Abraham, “Sustainability Science and Engineering: Defining Principles”, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

OUTCOMES:

At the end of this course, the students will be able to

- Understand the benefits of modern technology for the well-being of human life.
- Connect sustainability concepts and technology to the real world challenges.
- Find pathway for sustainable society.

GECY103 ARTIFICIAL INTELLIGENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- Expose the history and foundations of artificial intelligence.
- Showcase the complexity of working on real time problems underlying the need for intelligent approaches.
- Illustrate how heuristic approaches provide a good solution mechanism.
- Provide the mechanisms for simple knowledge representation and reasoning.
- Highlight the complexity in working with uncertain knowledge.
- Discuss the current and future applications of artificial intelligence.

MODULE I HISTORY AND FOUNDATIONS 08

History – Scope – Influence from life – Impact of computing domains - Agents in environments - Knowledge representation – Dimensions of Complexity – Sample application domains – Agent structure.

MODULE II SEARCH 10

Problem solving as search – State spaces – Uninformed Search – Heuristic search – Advanced search – Constraint satisfaction - Applications.

MODULE III KNOWLEDGE REPRESENTATION AND REASONING 10

Foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

MODULE IV REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE 08

Probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference, sample applications.

MODULE V CASE STUDY AND FUTURE APPLICATIONS 09

Design of a game/Solution for problem in student's domain. Natural Language processing, Robotics, Vehicular automation – Scale, Complexity, Behaviour – Controversies.

Theory: 45

TEXT BOOK:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, Prentice Hall, Third Edition, 2010.
2. David Poole, Alan Mackworth, Artificial Intelligence: Foundations of Computational Agents, Cambridge University Press, 2010.
3. Nils J. Nilsson, The Quest for Artificial Intelligence, Cambridge University Press, Online edition, 2013.
4. Keith Frankish, William M. Ramsey (eds) The Cambridge Handbook of Artificial Intelligence, Cambridge University Press, 2014.

OUTCOMES:

Students who complete this course will be able to

- Discuss the history, current applications, future challenges and the controversies in artificial intelligence.
- Apply principle of AI in the design of an agent and model its actions.
- Design a heuristic algorithm for search problems.
- Analyze and represent the fact using logic for a given scenario
- Represent uncertainty using probabilistic models
- Develop a simple game or solution using artificial intelligence techniques.

GECY104 GREEN COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To focus on the necessity of green computing technology.
- To expose to various issues with information technology and sustainability.
- To attain knowledge on the technologies for enabling green cloud computing.
- To elaborate on the energy consumption issues
- To illustrate a Green and Virtual Data Center
- To develop into a Green IT Technologist.

MODULE I INTRODUCTION 08

Trends and Reasons to Go Green - IT Data Center Economic and Ecological Sustainment - The Growing Green Gap: Misdirected Messaging, Opportunities for Action - IT Data Center “Green” Myths and Realities - PCFE Trends, Issues, Drivers, and Related Factors - Green Computing and Your Reputation- Green Computing and Saving Money- Green Computing and the Environment

MODULE II CONSUMPTION ISSUES 10

Minimizing power usage – Cooling - Electric Power and Cooling Challenges - Electrical – Power -Supply and Demand Distribution - Determining Energy Usage - From Energy Avoidance to Efficiency - Energy Efficiency Incentives, Rebates, and Alternative Energy Sources - PCFE and Environmental Health and Safety Standards- Energy-exposed instruction sets- Power management in power-aware real-time systems.

MODULE III NEXT-GENERATION VIRTUAL DATA CENTERS 09

Data Center Virtualization - Virtualization beyond Consolidation - Enabling Transparency - Components of a Virtual Data Center - Datacenter Design and Redesign - Greening the Information Systems - Staying Green- Building a Green Device Portfolio- Green Servers and Data Centers- Saving Energy

MODULE IV TECHNOLOGIES FOR ENABLING GREEN AND VIRTUAL DATA CENTERS 08

Highly Effective Data Center Facilities and Habitats for Technology - Data Center Electrical Power and Energy Management - HVAC, Smoke and Fire Suppression

- Data Center Location - Virtual Data Centers Today and Tomorrow - Cloud Computing, Out-Sourced, and Managed Services.

MODULE V SERVERS AND FUTURE TRENDS OF GREEN COMPUTING 10

Server Issues and Challenges - Fundamentals of Physical Servers - Types, Categories, and Tiers of Servers - Clusters and Grids - Implementing a Green and Virtual Data Center - PCFE and Green Areas of Opportunity- 12 Green Computer Companies- What's in Green computer science-Green off the Grid aimed for data center energy evolution-Green Grid Consortium- Green Applications- Green Computing Making Great Impact On Research

Theory: 45

6. Marty Poniatowski, "Foundation of Green IT: Consolidation, Virtualization, Efficiency, and ROI in the Data Center", Printice Hall, ISBN: 9780-1-3704-375-0, 2009.

OUTCOMES:

Students who complete this course will be able to

- Demonstrate issues relating to a range of available technologies, systems and practices to support green computing.
- Select appropriate technologies that are aimed to reduce energy consumption.
- Address design issues needed to achieve an organizations' green

computing objectives.

- Analyze the functionality of Data Centers.
- Critically evaluate technologies and the environmental impact of computing resources for a given scenario.
- Compare the impact of Green Computing with other computing techniques.

GECY105 GAMING DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To master event-based programming
- To learn resource management as it relates to rendering time, including level-of-detail and culling.
- To become familiar with the various components in a game or game engine.
- To explore leading open source game engine components.
- To become familiar of game physics.
- To be compatible with game animation.

MODULE I INTRODUCTION 09

Magic Words – What Skills Does a Game Designer Need? – The Most Important Skill -The Five Kinds of Listening-The Secret of the Gifted.

MODULE II THE DESIGNER CREATES AN EXPERIENCE 09

The Game Is Not the Experience -Is This Unique to Games? -Three Practical Approaches to Chasing Rainbows -Introspection: Powers, Perils, and Practice -Dissect Your Feelings -Defeating Heisenberg -Essential Experience.

MODULE III THE EXPERIENCE IN THE PLAYER MIND AND GAME MECHANICS 08

Modeling – Focus -Empathy – Imagination – Motivation – Space – Objects, Attributes, and States – Actions – Rules.

MODULE IV GAMES THROUGH AN INTERFACE 09

Breaking it Down – The Loop of Interaction – Channels of Information – Other Interface.

MODULE V BALANCED GAME MECHANICS 10

Balance – The Twelve Most Common Types of Game Balance – Game Balancing Methodologies - Balancing Game Economies.

Theory: 45

REFERENCES:

4. James M. Van Verth, Lars M. Bishop "Essential Mathematics for Games and Interactive Applications", Third Edition,A K Peters/CRC Press, ISBN-10: 1482250926, 2015.

OUTCOMES:

Students who complete this course will be able to

- Realize the basic history and genres of games
- Demonstrate an understanding of the overall game design process
- Explain the design tradeoffs inherent in game design
- Design and implement basic levels, models, and scripts for games
- Describe the mathematics and algorithms needed for game programming
- Design and implement a complete three-dimensional video game

GECY106 SOCIAL COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To create original social applications, critically applying appropriate theories and effective practices in a reflective and creative manner.
- To critically analyze social software in terms of its technical, social, legal, ethical, and functional features or affordances.
- To encourage the development of effective communities through the design, use, and management of social software.
- To give students with a base of knowledge and advances for them to critically examine existing social computing services.
- To plan and execute a small-scale research project in social computing in a systematic fashion.
- To become familiar with the concept of computational thinking.

MODULE I BASIC CONCEPTS 09

Networks and Relations: Relations and Attributes, Analysis of Network Data, Interpretation of network data -New Social Learning – Four Changes that Shift Work - Development of Social Network Analysis: Sociometric analysis and graph theory, Interpersonal Configurations and Cliques – Analysing Relational Data.

MODULE II SOCIAL LINK 09

Individual Actors, Social Exchange Theory, Social Forces, Graph Structure, Agent Optimization Strategies in Networks – Hierarchy of Social Link Motivation- Social Context.

MODULE III SOCIAL MEDIA 08

Trends in Computing – Motivations for Social Computing – Social Media: Social relationships, Mobility and Social context – Human Computation – Computational Models- Business use of social Media.

MODULE IV SOCIAL INFORMATION FILTERING 09

Mobile Location Sharing – Location based social media analysis – Social Sharing and Social Filtering – Automated recommender Systems – Traditional and Social Recommender Systems.

MODULE V SOCIAL NETWORK STRATEGY 10

Application of Topic Models – Opinions and Sentiments – Recommendation Systems – Language Dnamics and influence in online communities – Psychometric analysis – Case Study: Social Network Strategies for surviving the zombie apocalypse.

Theory: 45

REFERENCES:

6. Jennifer Golbeck, “Analyzing the Social Web”, Elsevier Publication, 2013.
7. Huan Liu, John Salerno, Michael J. Young, “Social computing and Behavioral Modeling”, Springer Publication, 2009.

OUTCOMES:

Students who complete this course will be able to

- Realize the range of social computing applications and concepts.
- Analyze data left after in social media.
- Recognize and apply the concepts of computational models underlying social computing.
- Take out simple forms of social diagnostics, involving network and language models, applying existing analytic tools on social information.
- Evaluate emerging social computing applications, concepts, and techniques in terms of key principles.
- Design and prototype new social computing systems.

GECY107 SOFT COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To become familiar with AI and neural networks that can learn from available examples and generalize to form appropriate rules for inferencing systems.
- To introduce the ideas of fuzzy sets, fuzzy logic and use of heuristics based on human experience.
- To provide the mathematical background for carrying out the optimization associated with neural network learning.
- To familiarize with genetic algorithms and other random search procedures useful while seeking global optimum in self-learning situations.
- To introduce case studies utilizing the above and illustrate the intelligent behavior of programs based on soft computing.

MODULE I INTRODUCTION 09

Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing. Artificial Intelligence : Introduction, Various types of production systems, characteristics of production systems, breadth first search, depth first search techniques, other Search Techniques like hill Climbing, Best first Search, A* algorithm, AO* Algorithms and various types of control strategies. Knowledge representation issues, Prepositional and predicate logic, monotonic and non-monotonic reasoning, forward Reasoning, backward reasoning.

MODULE II INTRODUCTION TO NEURAL NETWROK 09

Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference between ANN and human brain, characteristics and applications of ANN, single layer network, Perceptron training algorithm, Linear separability, Widrow & Hebb"s learning rule/Delta rule, ADALINE, MADALINE, AI v/s ANN. Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BPA, momentum, limitation, characteristics and application of EBPA.

MODULE III FUZZY LOGIC 09

Fuzzy set theory, Fuzzy set versus crisp set, crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions, Fuzzy rule base system: fuzzy propositions, formation, decomposition & aggregation of fuzzy rules, fuzzy reasoning, fuzzy inference

systems, fuzzy decision making & Applications of fuzzy logic.

MODULE IV GENETIC ALGORITHM 09

Fundamentals, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods.

MODULE V APPLICATION OF COMPUTATIONAL INTELLIGENCE 09

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency Prediction – Soft Computing for Color Recipe Prediction.

Total Hours: 45

6. Kosko: “Neural Network & Fuzzy System”, PHI Publication, 1992.

OUTCOMES:

On completion of the programme students will be able to:

- Learn about soft computing techniques and their applications
- Analyze various neural network architectures and able to Understand perceptrons model
- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems.
- Apply genetic algorithms to combinatorial optimization problems.
- Evaluate and compare solutions by various soft computing approaches for a given problem.

GECY108 EMBEDED SYSTEM PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- This course provides an introduction to the design of embedded computing systems including their hardware and software architectures.
- Entire software development lifecycle and examine the various issues involved in developing software for embedded systems.
- To analyze the I/O programming and Embedded C coding techniques
- This course will equip students with the software development skills necessary for practitioners in the embedded systems field.

MODULE I INTRODUCTION OF EMBEDDED SYSTEM 09

Embedded computing - characteristics and challenges - embedded system design process-Overview of Processors and hardware units in an embedded system-Compiling, Linking and locating – downloading and debugging –Emulators and simulators processor – External peripherals – Memory testing – Flash Memory.

MODULE II SOFTWARE TECHNOLOGY 09

Software Architectures, Software development Tools, Software Development Process Life Cycle and its Model, Software Analysis, Design and Maintenance.

MODULE III INPUT/OUTPUT PROGRAMMING 09

I/O Instructions, Synchronization, Transfer Rate & Latency, Polled Waiting Loops, Interrupt – Driven I/O, Writing ISR in Assembly and C, Non Maskable and Software Interrupts

MODULE IV DATA REPRESENTATION IN EMBEDDED SYSTEMS 09

Data representation ,Twos complement, Fixed point and Floating Point Number Formats ,Manipulating Bits in -Memory, I/O Ports, Low level programming in C ,Primitive data types , Arrays, Functions ,Recursive Functions, Pointers, Structures & Unions ,Dynamic Memory Allocation ,File handling ,Linked lists, Queues, Stacks.

MODULE V EMBEDDED C 09

Embedded Systems programming in C – Binding & Running Embedded C program in Keil IDE – Dissecting the program -Building the hardware. Basic techniques for reading & writing from I/O port pins – switch bounce - LED Interfacing using Embedded C.

Total Hours: 45

REFERENCES:

1. Marilyn Wolf, "Computers as components ", Elsevier, 2012.
2. Qing Li and Carolyn Yao, "Real-Time Concepts for Embedded Systems", CMP Books, 2003.
3. Daniel W. Lewis, "Fundamentals of embedded software where C and assembly meet", Pearson Education
4. Michael Bass, "Programming Embedded Systems in C and C++", Oreilly, 2003.

OUTCOMES:

On completion of this course the student will be able to

- Design the software and hardware components in embedded system
- Describe the software technology
- Use interrupt in effective manner
- Use keil IDE for programming
- Program using embedded C for specific microcontroller
- Design the embedded projects

GECY109 PRINCIPLES OF SUSTAINABLE DEVELOPMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge in the concepts and dimensions of sustainable development.
- To gain knowledge on the framework for achieving sustainability.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 09

Environment and Development - Population poverty and Pollution –Global and Local environmental issues –Resource Degradation- Greenhouse gases- Desertification-industrialization –Social insecurity, Globalization and environment. History and emergence of the concept of sustainable development-Objectives of Sustainable Development.

MODULE II COMPONENTS AND DIMENSIONS OF SUSTAINABLE DEVELOPMENT 09

Components of Sustainability –Complexity of growth and equity – Social economic and environmental dimensions of sustainable development – Environment- Biodiversity- Natural -Resources- Ecosystem integrity- Clean air and water- Carrying capacity- Equity, Quality of Life, Prevention, Precaution-Preservation and Public Participation Structural and functional linking of developmental dimensions.

MODULE III FRAMEWORK FOR ACHIEVING SUSTAINABILITY 09

Operational guidelines- interconnected prerequisites for sustainable development Empowerment of Women, children, Youth, Indigenous People, Non-Governmental Organizations Local Authorities, Business and industry-Science and Technology for sustainable development- performance indicators of sustainability and assessment mechanism- Constraints and barriers for sustainable development.

MODULE IV SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 09

Demographic dynamics of sustainability – Policies for socio-economic development -Strategies for implementing eco-development programmes Sustainable development through trade –Economic growth –Action plan for implementing sustainable development –Urbanization and sustainable Cities – Sustainable Energy and Agriculture –sustainable livelihoods.

MODULE V SUSTAINABLE DEVELOPMENT AND INTERNATIONAL RESPONSE 09

Role of developed countries in the development of developing countries – international summits – Stockholm to Johannesburg – Rio principles – Agenda-Conventions – Agreements – Tokyo Declaration – Doubling statement – Tran boundary issues integrated approach for resources protection and management

Total Hours: 45

REFERENCES:

1. Sayer J. and Campbell, B., The Science of Sustainable Development: Local Livelihoods and the Global environment - Biological conservation restoration & Sustainability, Cambridge university Press, London, 2003.
2. M.K. Ghosh Roy. and Timberlake, Sustainable Development, Ane Books Pvt. Ltd, 2011.
3. Mackenthun K.M., Concepts in Environmental Management, Lewis Publications London,1999.
4. APJ Abdul Kalam and Srijan Pal Singh, Target 3 Billion: Innovative Solutions Towards Sustainable Development, Penguin India, 2011

OUTCOMES:

At the end of the course the student will be able to

- Describe the concepts of sustainable development
- Define the components and dimensions of sustainable development
- Outline the Frame work for achieving sustainability.
- State the policies and strategies for implementing sustainable development for Socio economic programmes.
- Examine the role of developed countries in sustainable development.

GECY110	QUANTITATIVE TECHNIQUES IN MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVE:

To impart knowledge on

- operations research
- production management
- financial management
- decision theory and managerial economics

MODULE I OPERATIONS RESEARCH 09

Introduction to Operations research-Linear programming-Graphical and Simplex Methods, Duality and Post-Optimality Analysis-Transportation and Assignment Problems

MODULE II PRODUCTION MANAGEMENT 09

Inventory control, EOQ, Quantity Discounts, Safety Stock-Replacement Theory-PERT and CPM-Simulation Models-Quality Control.

MODULE III FINANCIAL MANAGEMENT 09

Working Capital Management-Compound Interest and Present Value methods-Discounted Cash Flow Techniques-Capital Budgeting.

MODULE IV DECISION THEORY 09

Decision Theory-Decision Rules-Decision making under conditions of certainity, risk and uncertainity-Decision trees-Utility Theory.

MODULE V MANAGERIAL ECONOMICS 09

Cost concepts-Break-even -Analysis-Pricing techniques-Game Theory applications.

Total Hours: 45

REFERENCES:

1. Vohra, N.D. , Quantitative Techniques in Management, Tata McGraw Hill Co., Ltd, New Delhi, 2009.
2. Seehroeder, R.G., Operations Management, McGraw Hill, USA, 2002.

4. Frank Harrison, E., The Managerial Decision Making Process, Houghton Miffin Co. Boston, 2005.
5. Hamdy A. Taha, Operations Research- An Introduction, Prentice Hall, 2002.

OUTCOME:

At the end of the course, the students will be able to

- Apply the concepts of operations research for various applications
- Create models for inventory control in production management
- Compute the cash flow for a project
- Choose a project using decision theory based on the risk criterion.
- Apply the concepts of managerial economics in construction management

GECY111 PROGRAMMING USING MATLAB & SIMULINK

L	T	P	C
1	0	2	2

OBJECTIVES:

The aim of this course is to:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION MATLAB DATA PRESENTATION 03+06

Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts-Making clear and compelling plots-Solving systems of linear equations numerically and symbolically- Least squares regression -Curve fitting.

MODULE II MATLAB PLOT FUNCTION 03+06

Introduction- Plot Function – Animation- 3D Plots-Customizing Plots – Plot Applications- Saving &Painting Plots.

MODULE III ROOT FINDING AND COMPUTER REPRESENTATION OF NUMBERS 03+06

Linearization and solving non-linear systems of equations- The Newton-Rapson method- Integers and rational numbers in different bases- Floating point numbers-Round off and errors in basic arithmetic-Significant digits when reporting results

MODULE IV ORDINARY DIFFERENTIAL EQUATIONS 03+06

Numerical integration and solving 1^{st} order, ordinary differential equations (Euler's method and Runge-Kutta) – Use of ODE function in MATLAB

MODULE V NON-LINEAR DIFFERENTIAL EQUATIONS 03+06

Converting 2^{nd} order and higher ODEs to systems of 1^{st} order ODEs- Solving systems of ODEs via Euler's method and Runge-Kutta) – Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations

MODULE VI INTRODUCTION OF SIMULINK 03+06

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- Modeling the solution of three equations with three unknowns- Representing a model as a subsystem-Simulink demos.

Total Hours: 45

REFERENCE:

1. Griffiths D V and Smith I M, Numerical Methods for Engineers, Blackwell, 1991.
2. Laurene Fausett, Applied Numerical Analysis Using MATLAB, Pearson 2008.
3. Moin P, Fundamentals of Engineering Numerical Analysis, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB. CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving, Mathematical Exploration with MATLAB, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

- Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
- Write programs using first principles without automatic use of built-in ones.
- Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
- Be fluent in exploring Matlab's capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
- Make use of Maltab visual capabilities for all engineering applications.
- An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECY112 JAVA PROGRAMMING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the fundamentals of Java programming such as data types, variables and arrays.
- To study the syntax and necessity of decision making and iterative statements.
- To create a class and invoke the methods.
- To instigate programming in overloading of methods.
- To emphasize the concept of packages.
- To learn the exception handling routines.

MODULE I INTRODUCTION TO JAVA PROGRAMMING 15

History and Evolution of Java – Overview of Java – Data types, variables and arrays – Operators – Control statements.

MODULE II METHODS AND CLASSES 15

Class fundamentals – Declaring objects – Methods – Constructors – Garbage collection – Overloading methods – Constructor overloading – Access control – Inheritance – Packages - Exception handling.

Total Hours: 30

REFERENCES:

1. Herbert Schildt, Java The Complete Reference, 9th Edition, Oracle Press, 2014, ISBN: 978007180855-2.
2. Nicholas S. Williams, Professional Java for Web Applications: Featuring WebSockets, Spring Framework, JPA Hibernate and Spring Security (WROX), John Wiley & Sons, 2014, ISBN:978111865651-8.

4. Yashavant Kanetka**,** Let Us Java, 2nd Edition, BPB Publications, 2012**.**

OUTCOMES:

Students to complete this course will be able to

- Implement basic Java programming.
- Create a class and invoke methods for real world problems.
- Construct simple overloading of methods programs.
- Implement various types of inheritance concepts.
- Describe the access control mechanism.

GECY113 PYTHON PROGRAMMING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the list and records of python programming.
- To study the control statements and string functions of python.
- To instigate the fundamental python programming.
- To emphasize GUI in python.
- To integrate python with embedded systems.
- To implement programs in python.

MODULE I INTRODUCTION TO PYTHON PROGRAMMING 15

Installation and environment set up – syntax used in python – variable types – operators – Loops – decision making – string functions - formatted files - GUI basics.

MODULE II EMBEDDED PROGRAMMING USING PYTHON 15

Web interface – system tools – script execution context - Motion-triggered LEDs-Python-arduino prototyping-storing and plotting arduino data-Remote home monitoring system.

Total Hours : 30

5. Michael Barr, Anthony Massa, “Programming Embedded Systems”, 2nd Edition, O'Reilly Media, 2006.

OUTCOMES:

Students to complete this course will be able to

- Implement date and time function programming using python.
- Write formatted file programming.
- Construct simple python programs.
- Create web interface using python programming
- Develop embedded system with python programming.
- Build arduino prototype using python programming.

GECY114 INTELLECTUAL PROPERTY RIGHTS (IPR)

L	T	P	C
1	0	0	1

OBJECTIVES:

- To study about Intellectual property rights and its need
- To explore the patent procedure and related issues

MODULE I INTRODUCTION 07

Introduction and the need for intellectual property right (IPR) – IPR in India – Genesis and Development – IPR in abroad – Important examples of IPR – Copyrights, Trademarks, Patents, Designs, Utility Models, Trade Secrets and Geographical Indications – Industrial Designs

MODULE II PATENT 08

Concept of Patent – Product / Process Patents & Terminology – Duration of Patents – Law and Policy Consideration Elements of Patentability –- Patentable Subject Matter – Procedure for Filing of Patent Application and types of Applications – Procedure for Opposition – Revocation of Patents – Working of Patents- Patent Agent – Qualification and Registration Procedure – Patent databases and information system – Preparation of patent documents – Process for examination of patent application- Patent infringement – Recent developments in patent system

Total Hours: 15

7. Deborah E. Bouchoux, Intellectual Property: The Law of Trademarks, Copyrights, Patents, and Trade Secrets, 2015
8. Jatindra Kumar Das, Law of Copyright, PHI Learning, 2015

COURSE OUTCOMES:

Students should be able to

- Identify the various types of intellectual property and their value
- Apply the procedure to file a patent and to deal the related issues
- Search and extract relevant information from various intellectual database

REGULATIONS, CURRICULUM AND SYLLABI

M.Sc.
ACTUARIAL SCIENCE

(As approved by the 9th Academic Council)

JULY 2016

B.S.ABDUR RAHMAN
UNIVERSITY
B.S. ABDUR RAHMAN INSTITUTE OF SCIENCE & TECHNOLOGY
(Estd. u/s 3 of the UGC Act, 1956)
(FORMERLY B.S. ABDUR RAHMAN CRESCENT ENGINEERING COLLEGE)
Rated with A Grade by National Assessment and Accreditation Council
Seethakathi Estate, G.S.T. Road, Vandalur, Chennai - 600 048
www.bsauniv.ac.in

VISION AND MISSION OF THE DEPARTMENT OF ACTUARIAL SCIENCE

VISION

To be a leader in providing quality education and to carryout research in the field of Mathematics and its application in Science, Engineering and Technology

MISSION

- To provide quality education in higher mathematics through well designed programs
- To provide quality mathematical foundation for all science and engineering programs
- To offer programs in specialized areas such as Actuarial Science to meet the needs of Insurance and other Industries
- To undertake fundamental, applied and interdisciplinary research

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

M. Sc. (Actuarial Science)

PROGRAMME EDUCATIONAL OBJECTIVES:

- To provide opportunities of higher studies in the professional area of Actuarial Science.
- To impart knowledge on various theoretical and practical aspects of Actuarial Science.
- To enable the students to apply their newly gained knowledge and skills in their workplace.
- To develop independent learning skills and transferable skills among the students.
- To help the students extend and develop their career plan and pursue their own professional development.
- To provide the students with a structured programme of study covering all Core Actuarial Science subject contents.
- To contribute to the education of academics, allowing the University to play an active role in the production of advanced studies in the areas of the Master in Actuarial Science.

PROGRAMME OUTCOMES:

On Completion of the Programme, the students will be able to

- understand the fundamental probability tools for quantitatively assessing risk and demonstrate an ability to apply these tools to problems encountered in Actuarial Science.
- use the fundamental concepts of Financial Mathematics and demonstrate an ability to use those concepts to calculate present and accumulated values for various streams of cash flows as a basis for future use.
- demonstrate an understanding of the financial instruments, including derivatives, and the concept of no–arbitrage as it relates to financial mathematics.
- understand the theoretical bases of certain Actuarial Models and Life Contingent models and can apply those models to insurance and other financial risks.
- understand the frequency and severity models and an ability to carry out the steps involved in the modeling process in solving Actuarial Science problems.

- demonstrate the ability to summarize and communicate, orally and in writing, Actuarial problems and the ability to communicate solutions to Actuarial problems to specialized and non-specialized audiences, and,
- demonstrate highest standards of Actuarial ethical conduct and Professional Actuarial behavior, critical, interpersonal and communication skills as well as a commitment to life-long learning.

CURRICULUM & SYLLABI FOR
M. Sc. (Actuarial Science)
(Four Semesters / Full Time)

Curriculum

Total Credit (18+23+23+16) = 80

SEMESTER I

MAC 6101 FUNDAMENTALS OF FINANCIAL MATHEMATICS

L	T	P	C
3	1	0	4

OBJECTIVE:

- The aim of this course is to provide basic grounding in basic financial mathematics like simple interest, compound interest and their simple applications to calculate accumulate value, present value and loan calculation.

MODULE I CASH FLOW MODEL 07+02

Cash flow model: Cash flow process, outflows-Cash flow model for a zero coupon bond – Time value of money – Simple and Compound interest problems-Present value and Simple discount- Investing over a period.

MODULE II INTEREST RATES 07+02

Interest rates: Nominal and effective rate of interest. Accumulation factors- Principle of consistency- The force of interest- Present values- The basic compound interest functions- Interest payable monthly.

MODULE III REAL AND MONEY INTEREST RATES 07+02

Real and money interest rates: Definition- Deflationary conditions- Usefulness. Discounting and accumulating: Present value of continuous cash flows- Valuing cashflows- Interest income.

MODULE IV Level ANNUITIES 08+03

Level annuities: Present values and Accumulations -Payments made in arrear- Payments made in advance- Continuously payable annuities- Annuities payable monthly- Non-integer values- Perpetuities.

MODULE V DEFERRED AND INCREASING ANNUITIES 08+03

Deferred and increasing annuities: Deferred annuities- Varying annuities- Decreasing payments- Irregular payments- Sudden changes in interest rates- Simple and Compound increasing annuities.

MODULE VI LOAN SCHEDULES 08+03

Equations of value: Uncertain payment or receipt- Loan schedules- Calculation of capital outstanding- Calculation of interest and capital elements- Installments payable more frequently than annually- Consumer credit: flat rates and APRs.

L: 45, T: 15, Total: 60

7. Ingersoll, Jonathan E. Rowman & Littlefield, “Theory of financial decision making” 1987.
8. Kellison, Stephen G. “The theory of interest”.2nd ed. Irwin, 1991.

OUTCOME:

On completion of the course the students will be able to

- describe how to use a generalised cash-flow model to describe financial transactions
- describe how to take into account the time value of money using the concepts of compound interest and discounting.
- show how interest rates or discount rates may be expressed in terms of different time periods.
- demonstrate a knowledge and understanding of real and money interest rates.
- calculate the present value and the accumulated value of a stream of equal or unequal payments using specified rates of interest and the net present value at a real rate of interest, assuming a constant rate of inflation.
- define and use the more important compound interest functions, including annuities certain.
- describe how a loan may be repaid by regular installments of interest and capital.

MAC 6102 PROBABILITY AND DISTRIBUTIONS

L	T	P	C
3	1	0	4

OBJECTIVE:

- The aim of this subject is to provide grounding in the aspects of Basic probability, Random variables, probability distributions, joint distribution that are of relevance to actuarial work.

MODULE I BASIC PROBABILITY 09+03

Types of data- Frequency distributions-Bar chart- Histogram- Stem and leaf diagram- Dotplot / Lineplot- Cumulative frequency curves- Boxplot- Location- Spread. Set theory, Venn diagrams, Basics of probability- The addition and multiplication rule – Conditional Probability- and Total probability – Baye's Theorem.

MODULE II RANDOM VARIABLES 06+02

Random Variables and Expectation of a random variable – Moment inequalities (Tchebyshev, Markov, Jensen)- Continuous random variables Functions of a random variable

MODULE III PROBABILITY DISTRIBUTIONS 09+03

Discrete distributions- Uniform, Bernoulli, Binomial, Geometric, Negative binomial, Hypergeometric and Poisson distribution. Continuous distributions- Uniform, Gamma, exponential, chi-square, Beta, Normal distribution, Lognormal distribution, t-distribution, F-distribution. Deriving the Poisson process, Random number simulation.

MODULE IV GENERATING FUNCTIONS 06+02

Probability generating functions, Moment generating functions, Cumulant generating functions, Linear functions

MODULE V JOINT DISTRIBUTIONS 07+02

Joint distributions- Expectations of functions of two variables- Convolutions- Using generating functions to derive distributions of linear combinations of independent random variables.

MODULE VI CONDITIONAL EXPECTATION AND LAW OF LARGE NUMBERS 08+03

Conditional expectation and Conditional variance - Compound distributions- Functions of vector random variables. Weak and strong law of large numbers - Central Limit Theorems - Normal approximations. The continuity correction,

5. Chin Long chiang “ Statistical Methods of Analysis “ World Scientific Books, 2003

OUTCOME:

On completion of the course the students will be able to

- summarize the main features of a data set (exploratory data analysis).
- explain the concepts of probability.
- explain the concepts of random variable, probability distribution, distribution function, expected value, variance and higher moments, and calculate expected values and probabilities associated with the distributions of random variables.
- define a probability generating function, a moment generating function, a cumulant generating function and cumulants, derive them in simple cases, and use them to evaluate moments.
- explain the concepts of independence, jointly distributed random variables and conditional distributions, and use generating functions to establish the distribution of linear combinations of independent random variables.
- state the central limit theorem, and apply it.

MAC 6103 BUSINESS ECONOMICS

L	T	P	C
2	1	0	3

OBJECTIVE:

- The aim of the Business Economics subject is to provide a grounding in the fundamental concepts of economics as they affect the operation of insurance and other financial systems, both from the point of view of individuals and their requirements for financial security, and from the point of view of financial institutions and their ability to provide products that meet customer needs.

MODULE I ECONOMIC CONCEPTS 05+03

Economic concepts- the macroeconomic Environment- microeconomics choices- Demand and supply- Price and output determination- Business in a competitive market Elasticity and uncertainty- Price elasticity of demand- The time dimension of market adjustment-Consumer demand and uncertainty- Marginal utility theory- Demand under conditions of risk and uncertainty- utility and insurance.

MODULE II PRODUCTION AND COSTS 05+02

Production and costs- Costs in the short run and long run- Revenue and profit maximization- Perfect competition and monopoly- Comparing monopoly with perfect competition- contestable markets-Imperfect competition- Monopolistic competition- Oligopoly- Collusive oligopoly- Non-collusive oligopoly.

MODULE III PRODUCTS, MARKETING AND ADVERTISING 05+03

Products, marketing and advertising- Growth strategy and globalization- Growth and profitability- Constraints on growth- Alternative growth strategies- Internal and External growth- Globalization-Pricing strategies- Pricing and market structure- Price discrimination- Multiple product pricing.

MODULE IV GOVERNMENT INTERVENTION IN MARKETS 05+02

Government intervention in markets- objectives- Types of market failure- Types of government intervention- Government and the firm- Competition policy- Policies towards R&D- Supply-side policy- Market-orientation- Industrial policy.

MODULE V INTERNATIONAL TRADE 05+03

International trade- Trading patterns- advantages- The world trading system and the WTO-Balance of payments and exchange rates- The balance of payments account- Fixed versus floating exchange rates- Business activity, unemployment and Inflation- Keynesian model- The “disappearance” of the Phillips curve- Business cycles.

MODULE VI THE MACROECONOMIC ENVIRONMENT 05+02

The macroeconomic environment- objectives- The circular flow of income- The measurement and determination of national income- Economic growth- The AD-AS model Money and interest rates- The financial system- The supply and demand of money- Equilibrium in the money market- The effect of a change in the money supply- Demand-side macroeconomic policy- Fiscal policy- Monetary policy- The supply-side problem.

L: 30, T: 15, Total: 45

REFERENCES:

1. Sloman, John; Hinde, Kevin. "Economics for business"- 4th ed.- Prentice Hall, 2007. ISBN: 9780273709084. [No: 38420]
2. Frederik Mishkin " Economics of Money banking and Financial Markets ", Prentice Hall, July , 2009

OUTCOME:

On completion of the course the students will be able to

- discuss the interaction between supply and demand in the provision of a product and the way in which equilibrium market prices are determined, define elasticity of demand and supply and discuss the effects on a market of different levels of elasticity.
- describe how profit maximizing firms make short run and long run production choices. Describe what is meant by different sorts of competition, or lack of it, and discuss the practical effect on supply and demand.
- define what is meant by GDP, GNP and net national product, show how these concepts may be useful in describing the economy and in making comparisons between countries, and discuss their limitations.
- describe how the propensity to save or to consume by the private sector or the corporate sector affects the economy. describe and discuss the impact of fiscal and monetary policy and other forms of government intervention on different aspects of the economy, and in particular on financial markets.
- discuss the role of exchange rates and international trade in the economy and the meaning of the term balance of payments.
- describe the major factors affecting the rate of inflation, the level of interest rates, the exchange rate, the level of unemployment, and the rate of economic growth in the economy of an industrialized country.

MAC 6104 FINANCIAL REPORTING AND ACCOUNTING

L	T	P	C
2	1	0	3

OBJECTIVE:

- The aim of this subject is to provide a basic understanding of corporate finance including knowledge of the instruments used by companies to raise finance and manage financial risk.
- To provide the ability to interpret the accounts and financial statements of companies and financial institutions.

MODULE I THE KEY PRINCIPLES OF FINANCE 05+03

The key principles of finance- Finance and the real resources of an organisation-Business objectives- The maximisation of shareholder wealth- Company ownership- Types of business entity - Types of medium-term company finance- Types of short-term company finance- Taxation- Personal taxation- Corporation tax- Capital gains Tax- Double taxation relief.

MODULE II FINANCIAL INSTRUMENTS 05+03

Financial instruments- Debenture - Unsecured loan stocks- Subordinated debt- Eurobond loan capital- Share capital-Convertible- Warrants- Use of derivatives- Financial futures- Options- Interest rates and currency swaps- Issue of shares- Obtaining stock exchange quotation- Rights issues- Scrip issues.

MODULE III INTRODUCTION TO ACCOUNTS 05+02

Introduction to accounts- Users- regulation- requirements- Accounting Standards Board- The auditors' report- Accounting concepts- The main accounts- balance sheet- income statement- cash flow statement- Statement of changes in equity- Notes to the accounts.

MODULE IV GENERATING ACCOUNTS 05+02

Depreciation- purpose of depreciation- straight line basis -reducing balance method- Generating accounts -The trial balance- Constructing financial statements.

MODULE V GROUP ACCOUNTS 05+02

Group accounts and insurance company accounts- Subsidiary companies- Consolidated balance sheets- Goodwill on consolidation- Minority interests- Associated companies.

MODULE VI INTERPRETATION OF ACCOUNTS 05+03

Interpretation of accounts- security of loan capital - Income cover and income priority percentages- Asset cover and asset priority percentages- Gearing-shareholder analysis-

Ratios involving share information- Profitability ratios- Liquidity ratios- Efficiency ratios- Limitations in the interpretation of accounts.

L: 30, T: 15, Total: 45

8. Brealey, Richard A; Myers, Stewart C. – "Principles of corporate finance" - 7th Edition -McGraw-Hill, 2003.

OUTCOMES:

On completion of the course the students will be able to

- demonstrate a knowledge and understanding of the principal terms which is used in investment and asset management.
- demonstrate an awareness of the key principles of finance and basic principles of personal and corporate taxation.
- describe the structure of a joint stock company and the different methods by which it may be financed.
- demonstrate a knowledge and understanding of the characteristics of the principal forms of financial instrument issued or used by companies and the ways in which they may be issued.
- describe the basic construction of accounts of different types and the role and principal features of the accounts of a company.
- interpret the accounts of a company or a group of companies and discuss the limitations of such interpretation and show how financial techniques can be used in the assessment of capital investment projects.

MAC 6105 PRINCIPLES OF INSURANCE

L	T	P	C
2	0	0	2

OBJECTIVE:

- The objective of the paper Principles of Insurance is to give introduction about the various types of insurable risk, principle of insurance, insurance products and markets with a brief history of Insurance.

MODULE I THE CONCEPT OF RISK 05

The concept of risk- kinds and classification of risk – assessment – transfer- risk appraisal-risk selection- underwriting risk appraisal – Mortality tables- physical and moral hazards- representations- warranties- conditions.

MODULE II THE BUSINESS OF INSURANCE 05

The business of insurance-risk managed by individuals- risk managed by insurers-premium fixing- reinsurance and its important-role of insurance in economic development-the insurance market-role of-intermediaries-specialists-regulator.

MODULE III INSURANCE CUSTOMERS 05

Insurance customers-types of customers-customer mindset and customer satisfaction-importance of ethical behavior-History of insurance- History of insurance in India.

MODULE IV BASIC PRINCIPLES OF INSURANCE 05

Basic principles of Insurance – Utmost good faith- Insurable Interest- Material facts-Economic principles of Insurance- Sharing – Subrogation – contribution –Legal principles of Insurance –Actuarial principles.

MODULE V INSURANCE TERMINOLOGY, LIFE INSURANCE 05

Insurance terminology-terms that are specific to life insurance-traditional product offered by life insurance companies-features of MODULE linked policies-features of annuities and group policies.

MODULE VI INSURANCE TERMINOLOGY, GENERAL INSURANCE 05

Insurance terminology-terms that are specific to general insurance- product offered by non-life insurance companies-fire insurance-marine insurance-various product under miscellaneous category.

L: 30, T: 0, Total: 30

2. Harriett E Jones “Principles of Insurance “FLMI Insurance Education Program. Life Management Institute LOMA, (Dec 1995).
3. Robert I Mehr “Principles of Insurance” Richar D Irwin edition,(8th edition, 1985).
4. Ben G Baldwin “The New Life Insurance Investment Advisor” 2nd Edition. Mc Graw Hill.

OUTCOME:

On completion of the course students will be able to

- describe the basic principle of insurance.
- identify different kind of insurable risk.
- demonstrate the insurance terminology.
- describe the history of insurance.
- plan new products based market need.

MAC 6106 R PROGRAMMING

L	T	P	C
0	0	4	2

R: A Language and Environment for Statistical Computing

OBJECTIVE:

- The objective of the R-Programming is to give the basic knowledge of a system for statistical computation and graphics.

PROBLEMS FROM THE FOLLOWING TOPICS

1. Introduction and preliminaries
2. Simple manipulations; numbers and vectors
3. Objects, their modes and attributes
4. Ordered and unordered factors
5. Arrays and matrices
6. Lists and data frames
7. Reading data from files
8. Probability distributions
9. Grouping, loops and conditional execution
10. Writing own functions
11. Statistical models in R

OUTCOME:

On completion of the course the students will be able to use the statistical procedures. Among these are:

- linear and generalized linear models.
- nonlinear regression models.
- time series analysis.
- classical parametric and nonparametric tests.
- clustering and smoothing.

SEMESTER II

MAC 6201 APPLICATIONS OF FINANCIAL MATHEMATICS

L	T	P	C
3	1	0	4

OBJECTIVE:

- The aim of this course is to provide advance knowledge on financial mathematics like project evaluation, calculation of bond price in tax environment, Investment decision, and calculation of forward price and idea of stochastic interest rate model.

MODULE I PROJECT APPRAISAL 08+02

Project appraisal- Accumulated value- Net present values-Internal rate of return-Comparison of two investment projects-Different interest rates for lending and borrowing-payback periods-Measurement of investment performance-Money-weighted rate of return-Time-weighted rate of return-Linked internal rate of return.

MODULE II INVESTMENTS 07+02

Investments-Fixed interest borrowings- government bonds-Government bills-Characteristics of corporate debt-Debentures-Unsecured loan stocks-Eurobonds-Certificates of deposit-Shares and other equity-type borrowing-Property-Derivatives-Futures-Options-Swaps.

MODULE III ELEMENTARY COMPOUND INTEREST PROBLEMS 08+03

Elementary compound interest problems-Fixed interest securities-Calculating the price-Calculating yields-The effect of the term to redemption on the yield-Optional redemption dates-Deferred income tax-Uncertain income securities-Equities-Property-Real rates of interest-Inflation adjusted cash flows-Calculating real yields using an inflation index-Index-linked bonds-Capital gains tax.

MODULE IV ARBITRAGE AND FORWARD CONTRACTS 07+02

Arbitrage and forward contracts-The “No Arbitrage” assumption-Why do we assume “No Arbitrage”?-Forward contracts-Calculating the forward price for a security with no income-Calculating the forward price for a security with fixed cash income-Calculating the forward price for a security with known dividend yield-Hedging-The value of a forward contract.

MODULE V TERM STRUCTURE OF INTEREST RATES 08+03

Term structure of interest rates-Discrete time-spot rates-forward rates-Continuous time-spot rates-forward rates-Instantaneous forward rates-Theories of the term structure of interest rates-Yields to maturity-Pay yields-Duration, convexity and immunization.

MODULE VI STOCHASTIC INTEREST RATE MODELS 07+03

Stochastic interest rate models-Simple models-Preliminary remarks-Fixed interest rate model-Varying interest rate model-Log-normal distribution

L: 45, T: 15, Total: 60

7. Ingersoll, Jonathan E. Rowman & Littlefield, “Theory of financial decision making” 1987.
8. Kellison, Stephen G. “The theory of interest”.2nd ed. Irwin, 1991.

OUTCOME:

On completion of the course the students will be able to

- show how discounted cash flow techniques can be used in investment project appraisal.
- describe the investment and risk characteristics of the following types of asset available for investment purposes.
- calculate the delivery price and the value of a forward contract using arbitrage free pricing methods.
- show an understanding of the term structure of interest rates.
- show an understanding of simple stochastic interest models for investment returns.

MAC 6202 FUNDAMENTALS OF LIFE CONTINGENCIES

L	T	P	C
3	1	0	4

OBJECTIVE:

- The aim of the Life Contingencies subject is to provide grounding in the mathematical techniques which can be used to model and value cash flows dependent on death, survival, or other uncertain risks and also help to calculate premium and reserve for the insurance company.

MODULE I THE LIFE TABLE 07+02

The life table-Constructing a life table-Using the life table-The pattern of human mortality-Life table functions at non-integer ages-uniform distribution of deaths (UDD)- constant force of mortality (CFM)-The general pattern of mortality-Select mortality-Constructing select and ultimate life tables-Evaluation of assurances and annuities-Premium conversion equations-Variance of benefits-Expected present values of annuities payable m times each year.

MODULE II LIFE ASSURANCE CONTRACTS 08+03

Life assurance contracts: Pricing of life insurance contracts, Whole life assurance contracts, Term assurance contracts, Pure endowment contracts, Endowment assurance contracts, Critical illness assurance contracts, Deferred assurance benefits, Mean and Variance of the present value random variable Claim acceleration approximation.

MODULE III LIFE ANNUITY CONTRACTS 08+03

Life annuity contracts: Whole life annuities payable annually in arrears, Whole life annuities payable annually in advance, Temporary annuities payable annually in arrear, Temporary annuities payable annually in advance, Deferred annuities, Deferred annuities-due, Continuous annuities, Immediate annuity, Mean and Variance of the present value random variable approximations.

MODULE IV NET PREMIUMS AND RESERVES 08+03

Net premiums and reserves-The basis-The net premium-The insurer’s loss random variable-Reserves- Prospective reserve-Retrospective reserves-Conditions for equality of prospective and retrospective reserves-Net premium reserves-Recursive calculation of reserves-Mortality profit-Death strain at risk (DSAR)-Expected death strain (EDS) for a single policy-Actual death strain (ADS) for a single policy-Mortality profit.

MODULE V WITH-PROFIT POLICIES 07+02

Variable benefits and with-profit policies-Variable payments-Payments varying at a constant compound rate-Payments changing by a constant monetary amount-With-profit

contracts-Types of bonus-Calculating net premiums and net premium reserves for with-profit contracts- Accumulating with-profits contracts.

MODULE VI GROSS PREMIUMS AND RESERVES 07+02

Gross premiums and reserves for fixed and variable benefit contracts-Types of expenses incurred in writing a life insurance contract-The influence of inflation on expenses-Gross future loss random variable for standard contracts- Determining gross premiums using the equivalence principle-Gross premium reserves-Equality of gross premium prospective and retrospective reserves.

L: 45, T: 15, Total: 60

7. Gerber, Hans U. – “Life insurance mathematics” 3rd Edition– Springer. Swiss Association of Actuaries, 1997.
8. Booth, Philip Metal. “Modern actuarial theory and practice”– Chapman & Hall,1999.

OUTCOME:

On completion of the course the students will be able to

- define simple assurance and annuity contracts, and develop formulae for the means and variances of the present values of the payments under thesecontracts, assuming constant deterministic interest.
- describe practical methods of evaluating expected values and variances of the simple contracts defined in objective.
- describe and calculate, using ultimate or select mortality, net premiums and net premium reserves of simple insurance contracts.
- describe the calculation, using ultimate or select mortality, of net premiums and net premium reserves for increasing and decreasing benefits and annuities.
- describe the calculation of gross premiums and reserves of assurance and annuity contracts.

MAC 6203 DESCRIPTIVE STATISTICAL METHODS IN ACTUARIAL SCIENCE

L	T	P	C
3	1	0	4

OBJECTIVE:

- The objective of this subject is to provide grounding in Decision theory, Bayesian statistics, Loss distributions, Reinsurance, and Credibility theory which have particular relevance to General Insurance.

MODULE I DECISION THEORY 06+02

Decision theory-Zero-sum two-player games-Domination- the Minimax criterion-Randomised Strategies-Statistical games-Decision criteria-The Bayes criterion.

MODULE II BAYESIAN STATISTICS 06+02

Bayesian statistics-Bayes' Theorem- Prior and posterior distributions- Conjugate priors-Improper prior distributions-The loss function-Quadratic loss-Absolute error loss-All-or-nothing loss.

MODULE III LOSS DISTRIBUTIONS 07+02

Loss distributions- MGFs and basic loss distributions- exponential-gamma-normal-Pareto and generalised Pareto distributions- lognormal distribution-Weibull distribution- The Burr distribution-Estimation-The method of moments-Maximum Likelihood Estimation-Goodness-of-fit-tests-Mixture distributions.

MODULE IV REINSURANCE 08+03

Reinsurance- Reinsurance arrangements- Excess of loss reinsurance – the insurer-Excess of loss reinsurance – the reinsurer-Proportional reinsurance-Particular distributions-Lognormal distribution-Normal distribution-Inflation-Estimation-Policy excess.

MODULE V CREDIBILITY THEORY 09+03

Credibility theory-Credibility-The credibility premium formula-The credibility factor-Bayesian credibility-The Poisson/gamma model-The normal/normal model-Bayesian approach to credibility. Empirical Bayes credibility theory - EBCT Model to estimate risk premium - EBCT Model to estimate claim frequency

MODULE VI RISK MODELS 09+03

Risk models-General features of a product -Insurable interest- Insurable risk- types of cover and types of product-Products liability-Property damage-Financial loss-Fixed benefits-Models for short term insurance contracts-The collective risk model- Aggregate

claim distributions under proportional and excess of loss reinsurance-The individual risk model-Parameter variability/uncertainty.

L: 45, T: 15, Total: 60

REFERENCES:

7. G.S. Maddala C.R Rao" Statistical methods in Finance", Jan 1996, Elsevier Science and technology.
8. Philip J Boland "Statistical and Probabilistic Methods in Actuary Science", Chapman & Hall Press, 2007.

OUTCOME:

On completion of the course the students will be able to

- explain the concepts of decision theory and apply them.
- calculate probabilities and moments of loss distributions both with and without limits and risk-sharing arrangements.
- construct risk models involving frequency and severity distributions and calculate the moment generating function and the moments for the risk models both with and without simple reinsurance arrangements.
- explain the fundamental concepts of bayesian statistics and use these concepts to calculate bayesian estimators.
- describe the fundamental concepts of rating and apply them to simple experience rating systems.
- Construct risk models involving frequency and severity distributions and calculate the moment generating function and the moments for the risk models both with and without simple reinsurance arrangements.

MAC 6204 STOCHASTIC MODELS

L	T	P	C
2	1	0	3

OBJECTIVE:

- The objective of this subject is to provide grounding in actuarial modeling, stochastic processes, Markov chains and its application in framing NCD, HSD models.

MODULE I PRINCIPLES OF ACTUARIAL MODELING 05+02

Principles of actuarial modelling-Models-Modelling - the benefits and limitations-Stochastic and deterministic models-Discrete and continuous state spaces and time sets-Suitability of a model-Short-term and long-term properties of a model-Analysing the output of a model-Sensitivity testing-Communication of the results.

MODULE II STOCHASTIC PROCESSES 05+02

Stochastic processes-Types of stochastic processes-Defining a stochastic process-Sample paths-Stationarity-Increments-The Markov property-Filtrations-White noise-General random walk-Poisson process-Compound Poisson process.

MODULE III MARKOV CHAINS 05+03

Markov chains-The Chapman-Kolmogorov equations-Time-homogeneous Markov chains-No Claims Discount policy-Simple random walk on Z = {... − 2, − 1, 0,1, 2, ...} and {0,1, 2, ... , b}-A model of accident proneness-The long-term distribution of a Markov chain-The stationary probability distribution-Estimating transition probabilities-Assessing the fit-Simulation.

MODULE IV TWO-STATE MARKOV MODEL 05+02

The two-state Markov model-Assumptions underlying the model-Comparison with other models-Probabilities-Statistics-Joint density function-The maximum likelihood estimators-The distribution of $\bar{\mu}$.

MODULE V TIME-HOMOGENEOUS MARKOV JUMP PROCESSES 05+03

Time-homogeneous Markov jump processes: Poisson process- Chapman-Kolmogorov equations- transition matrix- Transition rates- health-sickness-death model- Kolmogorov's forward and backward differential equations- Holding times and occupancy probabilities- Expected time to reach state k starting from state i- Jump chain- Two-decrement model- MLE.

MODULE VI TIME-INHOMOGENEOUS MARKOV JUMP PROCESSES 05+03

Time-inhomogeneous Markov jump processes: Chapman-Kolmogorov equations- Transition rates- Kolmogorov's forward and backward differential equations- Occupancy probabilities- Residual holding times- Integrated form of the Kolmogorov forward and backward equations-Applications.

7. Vlamidir I Rotar "Actuarial Models" Chapman & Hall, 2006.
8. A.C. Davison "Statistical models "Cambridge University Press, 2008.

OUTCOME:

On completion of the course the students will be able to

- describe the principles of actuarial modeling.
- describe the general principles of stochastic processes, and their classification into different types.
- define and apply markov chain.
- define and apply markov process.
- Solve insurance related problem based on markov chain.

MAC 6205 MATHEMATICAL STATISTICS

L	T	P	C
3	1	0	4

OBJECTIVE:

- The aim of the Mathematical Statistics subject is to provide grounding in Advance Probability and in particular sampling, Hypothesis testing, correlation-regression and Analysis of variance that are of relevance to actuarial work.

MODULE I SAMPLING 07+02

Types of Sampling - Moments of the sample mean and variance, Sampling distributions for the normal, t-test, F-test.

MODULE II POINT ESTIMATION 07+02

Point estimation - method of moments- method of maximum likelihood- one and two parameter cases-Incomplete samples, Unbiasedness- Mean square error- Asymptotic distribution of MLEs.

MODULE III CONFIDENCE INTERVALS 08+03

Confidence intervals in general, Derivation of confidence intervals, Confidence intervals for the normal distribution, Confidence intervals for binomial & Poisson, Confidence intervals for two-sample problems, Paired data

MODULE IV HYPOTHESIS TESTING 08+03

Hypothesis testing- Hypotheses, test statistics, decisions and errors- Classical testing, significance and p-values- Basic tests — single samples- two independent samples- paired data- Tests and confidence intervals- Chi square test.

MODULE V CORRELATION AND REGRESSION 08+03

Correlation and regression- Scatter plots- Correlation- linear correlation- Regression- Regression line- deriving the least squares estimates- Bivariate data- Correlation analysis- Regression analysis- The multiple linear regression model-

MODULE VI ANALYSIS OF VARIANCE 07+02

Analysis of variance- One-way analysis of variances- Estimation of the parameters- Partitioning the variability-Examining the treatment means- Confidence intervals for a single treatment mean and pair of treatment means.

L: 45, T: 15, Total: 60

REFERENCES:

3. Chin Long chiang “Statistical Methods of Analysis “World Scientific Books, 2003.

OUTCOME:

On completion of the course the students will be able to

- explain the concepts of random sampling, statistical inference and sampling distribution, and state and use basic sampling distributions.
- Describe the main methods of estimation and the main properties of estimators, and apply them.
- Construct confidence intervals for unknown parameters and Test hypotheses.
- Investigate linear relationships between variables using correlation analysis and regression analysis.
- Explain the concepts of analysis of variance and use them.

ENC 6281 COMMUNICATION SKILLS

L	T	P	C
1	0	2	2

OBJECTIVE:

- To orient students in communication skills.
- To train students making effective presentations and discussion various topics.
- To develop active listening skills among students.
- To encourage them to read important documents by using the sub – skills of reading.
- To train them to write project reports with confidence.

MODULE I INTRODUCTION TO LANGUAGE SKILLS 02

Orientation to communication skills - Introduction to business vocabulary - Integration of grammatical elements in business English

MODULE II SPEAKING IN FORMAL AND INFORMAL SCENARIO 02

Orientation to presentation skills – Introducing one-self - Presentation skills -Talking on a familiar topic.(JAM) - Making presentations - Getting into conversations- Role play

MODULE III ACTIVE LISTENING 02

Listening to basic conversations - Listening for specific information - Note-taking and developing points

MODULE IV READING COMPREHENSION 02

Introduction to reading skills & sub – skills - Developing comprehension skills - Reading circulars and important notices - Reading advertisement and responding

MODULE V WRITING SKILLS 02

Writing a letter of application & resume - Writing a brochure - Writing a report to a periodical - eg.newspaper.

MODULE VI INTEGRATION OF SKILLS 02

Implications of communication skills in work life - Discussion on current topics- newspaper items, current issues - Reading a newspaper article - Report writing - Project proposal and report.

6. Withrow, J., Brookes, G.& Cummings, M.C. “Inspired to write. Reading and Tasks to Develop Writing Skills”, Cambridge University Press, U.K (2004).

OUTCOME:

On completion of the course the students will be able to

- communicate effectively.
- present their ideas with confidence.
- listen and respond effectively.
- read all types of documents effectively.
- write project reports.

MAC 6206	ACTUARIAL COMPUTATIONAL LABORATORY (MS-EXCEL)	L	T	P	C
		0	0	4	2

OBJECTIVE:

- The objective of this laboratory is to provide grounding in Microsoft Excel so that they can perform the actuarial calculation in an effective way.

Review: Custom Toolbar/Custom Menu Bar-Paste Options/Paste List/Paste Special-Managing Comments/Protect Worksheet-Create Lists/Data Form-Custom Sort/Auto Filters/Subtotals-Labels in Formulas-IF/AND/OR Conditions-Pivot Table-V Lookup-H Lookup.

PROBLEMS FROM THE FOLLOWING TOPICS

- Presenting data in tables and charts
- Numerical descriptive measures
- Basic probability
- Some important discrete probability distributions
- The normal distribution and other continuous distributions
- Sampling and sampling distributions
- Confidence interval estimation
- Fundamentals of hypothesis testing
- Simple linear regression
- Introduction to multiple regression

REFERENCES:

1. D.M. Levine, D.F.Stephan, T.C. Krehbiel, M.L. Berenson. “Statistics for Managers Using
2. Microsoft Excel” 5th Edition, Pearson Education Ltd., 2008.

OUTCOME:

On completion of the course the students will be able to

- entering data.
- calculating a set of data.
- displaying the data in a meaningful way.
- Sharing data so that other can understand.
- formatting cells for the need.
- using functions and formulae and inserting charts and graphs.

SEMESTER III

MAC 7101 APPLICATIONS OF LIFE CONTINGENCIES

L	T	P	C
3	1	0	4

OBJECTIVE:

- The objective of the subject is to give the basic knowledge of different types of insurance contract involving two life's, Idea of Pension Scheme and ULIP policies.

MODULE I SIMPLE ANNUITIES AND ASSURANCES INVOLVING TWO LIVES 08+03

Simple annuities and assurances involving two lives-Random variables to describe joint life functions-Determining simple probabilities involving two lives-Determining present values involving two lives-Contingent and reversionary benefits-Contingent probabilities of death-Present values of contingent assurances-Present values of reversionary annuities-Present values of functions with specified terms- Expected present value of annuities payable m times a year-Premium conversion relationships.

MODULE II PROFIT TESTING 07+02

Profit testing-Unit-linked contracts-Evaluating expected cashflows for various contract types-profit tests for annual premium contracts-Determining premiums using a profit test.

MODULE III DETERMINING RESERVES USING PROFIT TESTING 07+02

Determining reserves using profit testing-Pricing and reserving bases-Determining reserves for a unit-linked policy using cashflow techniques-Determining reserves for a conventional policy using cashflow techniques-Effect of pricing and reserving bases on a profit test.

MODULE IV COMPETING RISKS 08+03

Competing risks**-**Multiple state modelling-Valuing benefits that are contingent upon competing risks-Multiple decrement tables-Multiple decrement service table for pensions calculations-Updating a service table-How to obtain multiple decrement table rates under the assumption of uniformity in the single decrement tables-Consistency with the multiple state approach.

MODULE V PENSION FUNDS 08+03

Pension funds**-**Salary scales-Salary-related pensions benefits and contributions-Expected cashflows generated by pensions benefits and contributions-Using commutation functions to value salary related benefits and contributions-Valuing health and care insurance benefits using multiple decrement tables-Non-life contingencies.

MODULE VI MORTALITY, SELECTION AND STANDARDIZATION 07+02

Mortality, selection and standardization-Principal factors contributing to variation in mortality and morbidity-Selection-Selection in life assurance and pensions business-different mortality tables for different classes of lives-Crude mortality rate-Directly standardised mortality rate-Indirectly standardised mortality rate-Standardised mortality ratio.

L: 45, T: 15, Total: 60

8. Booth, Philip M *et al*. “Modern actuarial theory and practice”– Chapman & Hall, 1999.

OUTCOME:

On completion of the course the students will be able to

- define and use straightforward functions involving two lives.
- describe methods which can be used to model cash flows contingent upon competing risks.
- describe the technique of discounted emerging costs, for use in pricing, reserving, and assessing profitability.
- describe the principal forms of heterogeneity within a population and the ways in which selection can occur.

MAC 7102 FINANCIAL ECONOMICS

L	T	P	C
3	1	0	4

OBJECTIVE:

- The objective of the Financial Economics subject is to provide basic grounding in Financial Economics such as efficient market hypothesis, Measures of investment risk, Utility theory and portfolio theory with Brownian motion- Martingales which help them to understand the economic environment and value the security price in different situation.

MODULE I INTRODUCTION TO FINANCIAL ECONOMICS 07+02

Introduction to financial economics- Economic models- Mathematical models- Efficient market hypothesis- The three forms of the efficient markets hypothesis- The evidence for or against each form of the efficient markets hypothesis- Informational efficiency- Volatility tests.

MODULE II CONSUMER CHOICE THEORY 08+03

Consumer choice theory- Utility theory- The expression of economic characteristics in terms of utility functions- Measuring risk aversion-Construction of utility functions-Stochastic dominance-Relationship between dominance concepts and utility theory.

MODULE III MEASURES OF INVESTMENT RISK 07+02

Measures of investment risk- Measures of risk-Variance of return-Semi-variance of return-Shortfall probabilities-Value at risk-Tail value at risk (TailVar) and expected shortfall-Relationship between risk measures and utility functions.

MODULE IV PORTFOLIO THEORY 08+03

Portfolio theory-Lagrangian function-Benefits of diversification-Models of asset returns-Multifactor models- Macroeconomic factor models-Fundamental factor models-Statistical factor models-Construction of models- The single-index model- The capital asset pricing model (CAPM)-Limitations of CAPM-Arbitrage pricing theory.

MODULE V BROWNIAN MOTION AND MARTINGALES 08+03

Introduction to Brownian motion- standard Brownian motion- Properties of Brownian motion- Geometric Brownian motion- Martingales- Martingales in discrete time-Martingales in continuous time.

MODULE VI STOCHASTIC CALCULUS 07+02

Stochastic calculus- The Ito Integral- Ito's lemma- Stochastic differential equations- Diffusion and Ito process models- The Ornstein-Uhlenbeck process.

L: 45, T: 15, Total: 60

REFERENCES:

1. Baxter, Martin & Andrew Rennie, Financial calculus; "An introduction to derivative pricing" Cambridge University Press, 1996.
2. Panjer, Harry H (ed), "Financial economics: with applications to investments, insurance and pensions", The Actuarial Foundation, 1998.

4. Hull, John C, "Options, futures and other derivatives" (5th edition), Prentice Hall, 2002.

OUTCOME:

On completion of the course the students will be able to

- discuss the various forms of the efficient markets hypothesis and discuss the evidence for and against the hypothesis.
- discuss the advantages and disadvantages of different measures of investment risk.
- describe and discuss the assumptions of mean-variance portfolio theory and its principal results.
- describe and discuss the properties of single and multifactor models of asset returns.
- describe asset pricing models, discussing the principal results and assumptions and limitations of such models.
- define and apply the main concepts of Brownian motion, Martingales, and Ito integral.

MAC 7103 APPLIED STATISTICAL METHODS IN ACTUARIAL SCIENCE

L	T	P	C
3	1	0	4

OBJECTIVE:

- The objective of this subject is to provide grounding in Risk models, Ruin theory, Run-off triangles and Time series which have particular relevance to fix the premium and calculation of reserve in General Insurance.

MODULE I RUIN THEORY 07+02

Ruin theory-Basic concepts-The surplus process-The probability of ruin in continuous time-The probability of ruin in discrete time-Probability of ruin in the short term-Premium security loadings-Reinsurance.

MODULE II GENERALISED LINEAR MODELS 07+02

Generalised linear models-Exponential families-Normal distribution-Poisson distribution-Binomial distribution-Gamma distribution-Link functions and linear predictors-Deviance of model fitting-Residuals analysis and assessment of model fit.

MODULE III RUN-OFF TRIANGLES 08+03

Run-off triangles-Projections using development factors-Run-off patterns-The chain ladder method-Model checking-Other methods of deriving development factors-Adjusting for inflation-The inflation adjusted chain ladder method-The average cost per claim method-Loss ratios-The Bornhuetter-Ferguson method.

MODULE IV TIME SERIES I 08+03

Time series-Properties of a univariate time series-Stationary random series-Main linear models of time series- Autoregressive process (AR)- Moving average process (MA)-Autoregressive moving average process (ARMA)- ARIMA Model

MODULE V TIME SERIES II 08+03

Compensating for trend and seasonality-Identification of MA(q) and AR(p) models- Box-Jenkins method-Forecasting-Multivariate time series models- Bilinear models-Threshold autoregressive models-Random coefficient autoregressive models-Autoregressive models with conditional heteroscedasticity.

MODULE V MONTE CARLO SIMULATION 07+02

Monte Carlo simulation-Generation of pseudo-random numbers using a computer-Inverse transform method-Inverse transform method for discrete variates-Acceptance-

rejection method-Generating normal variates-Numerical evaluation of derivatives-Comparative simulations, performance evaluation.

L: 45, T: 15, Total: 60

7. G.S. Maddala C.R Rao" Statistical methods in Finance", Jan 1996, Elsevier Science and technology.
8. Philip J Boland "Statistical and Probabilistic Methods in Actuary Science", Chapman & Hall Press, 2007.

OUTCOME:

On completion of the course the students will be able to

- Explain the concept of ruin for a risk model.
- describe and apply techniques for analyzing a delay (or run-off) triangle and projecting the ultimate position.
- explain the fundamental concepts of a generalized linear model (glm), and describe how a glm may apply.
- define and apply the main concepts underlying the analysis of time series models.
- explain the concepts of "monte carlo" simulation using a series of pseudorandom numbers.

MAC 7104 SURVIVAL MODELS

L	T	P	C
2	1	0	3

OBJECTIVE:

- The objective of the Survival Models subject is to provide grounding in survival models such as Estimating the lifetime distribution function, calculating crude mortality rate and testing for best feet which will help the Insurance companies to model the premium rates.

MODULE I SURVIVAL MODELS AND THE LIFE TABLE 05+02

Survival models and the life table-Future Lifetime-Probabilities of death and survival The force of mortality μ_x-Survival probabilities-The probability density function of T_x Initial rates and central rates of mortality-Complete and curtate expectation of life-Gompertz' and Makeham's laws-Calculating the parameter values-Survival probabilities.

MODULE II ESTIMATING THE LIFETIME DISTRIBUTION FUNCTION 05+03

Estimating the lifetime distribution function – the Kaplan-Meier and Nelson-Aalen models-Statistical Inference-Censoring mechanisms-The Kaplan-Meier (product-limit) estimator-Comparing lifetime distributions-The Nelson-Aalen estimate-Relationship between the Kaplan-Meier and Nelson-Aalen estimates.

MODULE III THE COX REGRESSION MODEL 05+02

The Cox regression model-Fully parametric models-Parametric models for the hazard function-Covariates-The Cox model-Estimating the regression parameters-The partial likelihood-Model fitting.

MODULE IV BINOMIAL-TYPE MODELS 05+03

Binomial-type models-The actuarial estimate-Central exposed to risk-Strengths and weakness of the binomial model-Poisson models- Estimating the underlying force of mortality- Comparison of multiple-state, binomial and Poisson models- Exposed to risk-Homogeneity-The principle of correspondence-Exact calculation of E_x^c-Census approximations to E_x^c-Different definitions of age.

MODULE V GRADUATION AND STATISTICAL TESTS 05+03

Graduation and statistical tests-The need for graduation-Reasons for graduation-Desirable features of a graduation-Testing the smoothness of a graduation- Statistical tests of a mortality experience-Chi square (χ^2) test-Standardised deviations test-Signs test-Cumulative deviations-Grouping of signs test-Serial correlations test-Testing actual versus expected rates.

MODULE VI METHODS OF GRADUATION 05+02

Methods of graduation-Graduation by parametric formula-Graduation by reference to a standard table-Graphical graduation-Comparison of different methods- Statistical tests of a graduation- The effect of duplicate policies.

L: 30, T: 15, Total: 45

4. A.C. Davison “Statistical models “Cambridge University Press, 2008.
5. Regina C Elandt Johnson “Survival models and data Analysis”, Wiley, Inter science, 1999.

OUTCOME:

On completion of the course the students will be able to

- explain the concept of survival models and estimation for lifetime distributions.
- derive maximum likelihood estimators for the transition intensities in models of transfers between states with piecewise constant transition intensities.
- describe the binomial model of mortality, derive a maximum likelihood estimator for the probability of death and compare the binomial model with the multiple state models.
- describe how to estimate transition intensities depending on age, exactly or using the census approximation and test crude estimates for consistency with a standard table or a set of graduated estimates, and describe the process of graduation.

MAC 7105	ACTUARIAL COMPUTATIONAL LABORATORY (SPSS)	L	T	P	C
		0	0	4	2

OBJECTIVE:

- The aim of the SPSS lab is to provide the practical knowledge of the various Actuarial aspects

[S P S S (STATISTICAL PACKAGE FOR SOCIAL SCIENCES)]

- Data Analysis
- Basic Data Analysis and graphs
- Regression Analysis
- Sampling (Normal, F, Students- t, chi-square distributions)
- Analysis of Variance (One way, Two Way, Latin square, factorial Methods)
- Contingency tables
- Risk Analysis Using Monte-Carlo Method
- Insurance Claims Severity and frequency

REFERENCES:

1. George A. Morgan, Nancy L. Leech, Gene W. Gloeckner, Karen C. Barrett: SPSS *for Introductory Statistics: Use and Interpretation,* (Second Edition), Lawrence Erlbaum Associates Publishers, New Jersey, 2004.

OUTCOME:

- Will have the thorough knowledge SPSS and they can use this idea to calculate premium and reserve using similar software which is widely used in actuarial evaluation process in industries.

LIST OF ELECTIVES
SEMESTER I

MACY 001 FINANCIAL MANAGEMENT OF LIFE OFFICE

L	T	P	C
3	0	0	3

OBJECTIVE:

- The objective of the subject is to provide the basic idea about the financial management of companies in particular Life insurance companies.

MODULE I ETHIC OF FINANCIAL MANAGEMENT 07

Financial Management development - scientific management - Management Vs Administration, Ethics in management – Social responsibilities of managers-roles & responsibilities – duties.

MODULE II ROLE OF ACTUARY 08

Role of Actuary : Investment policy – Product pricing and design Control cycle Profit testing- Model office and uses – Analysis of surplus - marketing- underwriting and reinsurance policies- reserving – profit distribution – sales policy – Surrender and transfer policy.

MODULE III LIABILITY AND FISCAL RESPONSIBILITY 08

Liability and fiscal responsibility – Budgeting - Financial ledgers – Accounts expenditure requests – Petty cash - Limited purchase orders (LPO) - Direct pay/cheque request – Journal vouchers – funding opportunities – Resources and services.

MODULE IV ASSET TYPES OF LIFE COMPANIES 07

Reversionary and terminal bonuses- Solvency for a life insurance company – Mechanical and model based solvency margins – fair values of life insurance liabilities.

MODULE V REVERSIONARY AND TERMINAL BONUSES 08

Asset types of life companies - Insurer’s liabilities - surplus on portfolio of insurance - Nonprofit premiums- owner ship of surplus and types of bonus system – Asset shares and uses.

MODULE VI RESERVING 07

Mismatching reserves- capital requirements for life office – lognormal and Willkie models of equity returns - asset/liability investigation.

L: 45, T: 0, Total: 45

REFERENCES:

1. Peter J Booth " Modern actuary theory and practice " 2nd Edition (2004)CRC Press.
2. http://www.ma.hw.ac.uk/~niall/lopcourse/
3. J David Cummins "Financial management of Life Insurance Companies", June 1993, Huebner International.

OUTCOME:

On completion of the course the students will be able to

- explain the role of actuary and their work.
- explain what are the asset and liabilities of an insurance companies.
- differentiate the different type of bonuses.
- explain why insurance companies need to keep reserve.

MACY 002 ISLAMIC INVESTMENTS

L	T	P	C
3	0	0	3

OBJECTIVE:

- The objective of the subject is to provide the basic idea about Islamic investment in insurance sector and how it differs from other investment.

MODULE I ISLAMIC INVESTMENT AND GLOBAL TRENDS 08

Innovation, globalization and diversification- strengths and resilience of the Islamic banking sector- Growth and development of Islamic capital market.

MODULE II ISLAMIC LAW 07

Objectives and Sources of Islamic law – principle of business contracts in Islamic law- Islamic banking Models.

MODULE III ISLAMIC DERIVATIVES 08

Hedging and Islamic derivatives – Islamic Bonds (Sukuk) – Islamic Fund Management – Islamic Structured products- risk management for Islamic funds, derivatives, structured products.

MODULE IV ISLAMIC INSURANCE 08

Islamic Insurance (Takaful): Introduction–Takaful models and Mechanism – Reinsurance (Re takaful) – Concerns in the provision of Takaful – Business models – retailing.

MODULE V JURISPRUDENCE AND ARBITRAGE 07

Jurisprudence and Arbitrage – Sale based Islamic Finance – Derivatives like sales – Partnership and Equity Investment.

MODULE VI ISLAMIC ASSET MANAGEMENT 07

Islamic Asset management: Screening criteria for Islamic Equity funds- Islamic Indexes- Equities- Sukuk – Private equity investment – Investing in real estate and leasing funds.

L: 45, T: 0, Total: 45

REFERENCES

5. Aly Khorshid “Islamic Insurance” Routledge Curzon, London, 2004.
6. Sohail Jaffar “Islamic Insurance” Euromoney books, London, 2006.

OUTCOME:

On completion of the course the students will be able to

- describe the fundamental concept of islamic law
- use islamic derivatives to reduce the risk in investment
- demonstrate the concept of islamic asset management

MACY 003 CORPORATE FINANCE

L	T	P	C
3	0	0	3

OBJECTIVE:

- The objective of the subject is to provide the basic idea about corporate finance and Capital project appraisal.

MODULE I FINANCIAL INSTITUTIONS 08

Government agencies- The Stock Exchange- The roles of the Stock Exchange- Derivatives exchanges- Institutional investors- Investment banks- Clearing banks- Building societies- Investment trusts- Unit trusts- Open-ended investment companies (OEICs)- Investment management companies- Self-administered pension schemes- Life insurance companies- General insurance companies.

MODULE II USE OF DERIVATIVES 07

Financial futures- Types of futures- Uses of financial futures- Forwards- Options- Types of options- Uses of options- Interest rate and currency swaps- Types of swaps- Uses of swaps.

MODULE III WEIGHTED AVERAGE COST OF CAPITAL 08

Importance and definetion of WACC- Theoretical background- The traditional view- Modigliani and Miller- Cost of equity- The capital asset pricing model (CAPM) and risk- Specific risk- Systematic risk- Beta as a measure of systematic risk- Adjusting beta for gearing- Measuring beta- Cost of debt- calculation of WACC.

MODULE IV CAPITAL STRUCTURE AND DIVIDEND POLICY 07

Components of capital structure- aims of the financial manager- Theoretical background to the gearing decision- Factors affecting the gearing decision- Fundamentals of dividend policy- Factors influencing the decision on dividend policy- Other methods of reward- Scrip or stock dividends- Share buybacks.

MODULE V CAPITAL PROJECT APPRAISAL I 08

capital project- Initial appraisal- Evaluation of cashflows- Methods of project evaluation- Net present value (NPV)- Internal rate of return (IRR)- Annual capital charge- Shareholder value approach- Payback period- Nominal returns- Strategic fit- Opportunity cost- Hurdle rates- Receipts/costs ratio- Results of the evaluation- Simulations.

MODULE VI CAPITAL PROJECT APPRAISAL II 07

Choice of discount rate- Risk analysis – an overview- Identification of risks- Analysis of risks- Obtaining a distribution of NPVs in practice- Risk mitigation- investment submission.

5. IIBF “International Corporate Finance”, Macmillan (I) Publishing , Delhi,2007.

OUTCOME:

On completion of the course the students will be able to

- explain the basic concepts of corporate finance.
- explain the various financial institutions and its purpose.
- identify the components and factors of capital structure.
- identify the factors and important of didivent policies.
- interpret the accounts of a company or a group of companies and discuss the limitations of such interpretation and show how financial techniques can be used in the assessment of capital investment projects.

SEMESTER II

MACY 004 FINANCIAL MARKETS

L	T	P	C
3	0	0	3

OBJECTIVE:

The objective of the subject is to provide the basic idea about the production, investment, risk process and market treading in financial market.

MODULE I FACTS OF FINANCIAL MARKETS 07

Facts of financial markets – time variation and business cycle – equity premiums – consumption models

MODULE II INTEREST RATE MODEL 08

The rate of interest - liquidity preference theory- structure of interest rates- Market segmentation theory- Forward interest rates and yield curve.

MODULE III PRODUCTION, INVESTMENT AND GENERAL EQUILIBRIUM 08

Production, investment and general equilibrium – labour income - Idiosyncratic risk – challenges for the future.

MODULE IV FINANCIAL RISK PROCESSES 07

Financial risk processes- risk measurement – team structure dynamics – financial risk management.

MODULE V SCIENCE OF MARKET TRADING 07

Science of Market trading: Signals and indicators – trending, oscillator, vertex indicators – various time frames- wavelet analysis – trading systems.

MODULE VI ISLAMIC FINANCE 08

Islamic banking and finance: Socio economic responses – resilience and stability – current developments – Islamic structured products – Islamic capital markets- trust and wealth managements.

L: 45, T: 0, Total: 45

REFERENCES:

5. Stepeh G Cecchetti “Money banking and Financial Markets “, 1st edition, 2005, Mc Graw hill
6. Natalie Schoon “Islamic banking and Finance” Spiramus Press Ltd., Jan, 2009.

OUTCOME:

On completion of the course the students will be able to

- explain the basic concept of financial market.
- demonstrate the concept of financial risk management.
- explain the treading procedure in financial market.
- explain the importance of Islamic finance.

MACY 005 ISLAMIC ASSET AND FUND MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVE:

- The objective of the subject is to provide the basic idea about the Islamic asset and fund management.

MODULE I THE CAPITAL MARKET 07

The Capital Market: Functions and Objective – Risk return principle in Islam: Cost of Capital – Shariah Principles for Capital Market.

MODULE II ISLAMIC STOCKS AND WEALTH MANAGEMENT 08

Islamic Stocks and Wealth Management- Equity shares and funds- Business and Structure of Islamic enterprise: Indebtedness- Earnings from impermissible activities.

MODULE III SHARIAH SCREENING IN ISLAM 07

Norms for Shariah screening in Islam- Dow Jones Islamic investment criteria – Norms used in India, Pakistan and Middle East.

MODULE IV ISLAMIC SCREENING NORMS 07

Critical assessment of Islamic Screening norms- Suitability of Market cap – Purification and Zakah.

MODULE V ESTATE AND PROJECT FINANCING 08

Islamic Real Estate and Project financing – Characteristics of Real Estate – Islamic REITS & REMFs – Islamic MODULE Trusts and Mudaraba Certificates.

MODULE VI ISLAMIC BANKING 08

Islamic Banking – Introduction: Riba – Modern Islamic Banking – Largest Islamic banks- Principles of Islamic Banking.

L: 45, T: 0, Total: 45

REFERENCES

1. Munawar Iqbal “A Guide to Islamic Finance “Risk Books ,UK, 2007.

5. Aly Khorshid “Islamic Insurance“ Routledge Curzon, London, 2004.
6. Sohail Jaffar “Islamic Insurance” Euromoney books, London, 2006.

OUTCOME:

On completion of the course the students will be able to

- explain the concept of capital market.
- demonstrate the concept of Islamic stocks and wealth management.
- explain the concept of real estate and project financing.
- explain the idea of Islamic banking .

MACY 006 PORTFOLIO AND CREDIT RISK MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVE:

- The objective of the subject is to provide the basic idea about portfolio theory and credit risk management.

MODULE I VALUATION OF DERIVATIVE SECURITIES 08

Arbitrage-European options-American options-Factors affecting option price-Pricing forward contracts-Bounds for option prices-Put-call parity.

MODULE II THE BINOMIAL MODEL 08

The one-period model-Two-period binomial tree-n-period binomial tree-Recombining binomial trees-Calibrating binomial models-state price deflator approach

MODULE III BLACK-SCHOLES OPTION PRICING FORMULA 07

Assumptions of Black-Scholes model-The Black-Scholes model- Black-Scholes model for dividend-paying shares

MODULE IV THE 5-STEP METHOD IN DISCRETE & CONTINUOUS TIME 08

Tradeable assets-Self-financing strategies-Replicating strategies and complete markets-Cameron-Martin-Girsanov theorem-martingale representation theorem-Diffusion models-The martingale approach (the 5-step method)- The 5-step approach with dividends

MODULE V THE TERM STRUCTURE OF INTEREST RATES 07

Relationships between interest rates and bond prices-The risk-neutral approach to pricing-The state price deflator approach to pricing-Models for the term structure of interest rates

MODULE VI CREDIT RISK 07

Credit events and recovery rates- Structural models- Reduced-form models- Intensity-based models- The Merton model- Two-state models for credit ratings- The Jarrow-Lando-Turnbull (JLT) model

L: 45, T: 0, Total: 45

4. Greg N Gregoriou, Critisian Hoppe “The Handbook of Credit Portfoilo .Management”, 2008, Mc Graw Hill.

OUTCOME

On completion of the course the students will be able to

- Demonstrate a knowledge and understanding of the properties of option prices, valuation methods and hedging techniques.
- Show how to use binomial trees and lattices in valuing options and solve simple examples.
- Show how to use the Black-Scholes model in valuing options and solve simple examples.
- Demonstrate a knowledge and understanding of models of the term structure of interest rates.
- Demonstrate a knowledge and understanding of simple models for credit risk.

SEMESTER I

CHC6101 ORGANIC CHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student conversant with

- The basic concepts in stereochemistry.
- Reactive intermediates in organic reactions
- Mechanism of nucleophilic substitution reaction
- concepts of aromaticity and aromatic electrophilic substitution reaction
- mechanism of addition reaction
- mechanism of elimination reactions

MODULE I STEREOCHEMISTRY I 09

Introduction to molecular symmetry and point groups – optical isomerism – conditions for optical activity – Newmann, Sawhorse and Fisher projection formulae – Interconversion – concept of chirality – R,S-nomenclature - geometrical isomerism – E,Z nomenclature – determination of configuration of geometrical isomers using physical and chemical methods - optical activity of biphenyls, allenes and spiranes, cyclophanes, helical chirality - ANSA compounds.

MODULE II REACTIVE INTERMEDIATES & REACTION MECHANISM 09

Formation and stability of carbonium ions, norbornyl cation and other non-classical carbocations and classical carbocations, Bredt's rule - carbanions, carbenes, nitrenes, free radicals, arynes, ylides - methods of generation and reactivity and applications - Kinetic and nonkinetic methods to determine the reaction mechanism: Thermodynamic and Kinetic controlled reactions Non-kinetic methods -Kinetic methods – methods of determining mechanism

MODULE III NUCLEOPHILIC SUBSTITUTIONS 09

S_N1, S_N2, Neighboring group participation and S_Ni, S_NAr mechanisms – effects of substrate, attacking nucleophile, leaving group and solvent – stereochemistry of nucleophilic substitution reactions – substitutions at carbonyl, bridgehead, vinylic and allylic carbons, Ambident nucleophiles - O versus C alkylation – activated aromatic nucleophilic substitution

MODULE IV AROMATICITY and AROMATIC ELECTROPHILIC SUBSTITUTION REACTIONS 09

Aromaticity – concept – Huckel and Craig rules – Aromatic and anti aromatic compounds

– benzenoid, non-benzenoid and homo aromatic compounds – anti-aromaticity - Annulenes – Aromaticity in cyclopentadienyl anion, tropolone, ferrocenes, fullerenes, azulenes, fulvenes, azirines, heteroaromatic systems and charged ring systems – NMR and aromaticity - Reactions of aryl diazonium salts – aromatic electrophilic substitution reactions and mechanisms.

MODULE V ADDITION AND ELIMINATION REACTIONS 09

Addition to carbon-carbon and carbon-hetero multiple bonds – electrophilic, nucleophilic and free radical additions – stereochemistry of addition to carbon-carbon multiple bonds – orientation and reactivity, addition to conjugated systems and orientation – addition to α,β-unsaturated carbonyl groups – E1, E2 and $E1_{CB}$ mechanisms – stereochemistry of E2 elimination – competition between elimination and substitution reactions – orientation effects in elimination reactions – effects of substrate structures, attacking base, leaving group and medium on E1 and E2 reactions – pyrolytic eliminations - Chugaev and Cope eliminations – Peterson's and Julia elimination.

Total Hours: 45

7. Kalsi P.S., Stereochemistry of Organic Compounds, Wiley Eastern Ltd., New Delhi, 1992.
8. Peter Sykes, Guidebook to Mechanism in Organic Chemistry, Orient Longman, 2005.

OUTCOMES:

The students will be able to

- assign stereochemical configuration
- Distinguish the different types of organic reaction intermediates

- Postulate the mechanism of nucleophilic substitution reaction
- recognize the aromaticity and aromatic electrophilic substitution reaction
- suggest the mechanism of addition reaction
- depict the mechanism of elimination reactions

CHC6102 THERMODYNAMICS AND ELECTROCHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student conversant with

- laws of chemical thermodynamics
- applications of Vant Hoff's equation in chemical thermodynamics
- application of partition function
- applications of onsager reciprocal relation
- various models of electrical double layer
- applications of Butler-Volmer equation and Tafel equation

MODULE I CHEMICAL THERMODYNAMICS-1 09

First law of thermodynamics – Joule-Thomson effect – thermochemistry – standard enthalpy changes – standard enthalpies of formation – second law of thermodynamics – free energy and work function – Maxwell relations – third law of thermodynamics – evaluation of absolute entropies of solids, liquids and gases.

MODULE II CHEMICAL THERMODYNAMICS-2 09

Clausius-Clapeyron equation - determination of partial molar quantities - thermodynamic aspects of extract ion of metals- reduction of oxides and sulphides - Ellingham diagram and its significances - partial molar properties – chemical potential – vant Hoff's equation – Gibbs-Duhem equation.

MODULE III STATISTICAL THERMODYNAMICS 09

Objectives of statistical thermodynamics – probability – microstates and macrostates for distinguishable and indistinguishable particles – permutation and combinations – Maxwell-Boltzmann statistics – third law of thermodynamics and exception to this law – use of partition function for obtaining thermodynamic functions.

MODULE IV NON-EQUILIBRIUM THERMODYNAMICS 09

Steady state – conservation of energy and mass – entropy production and entropy flow in open system – fluxes and forces – transformation of properties of rates and affinity – microscopic reversibility and Onsager reciprocal relation – thermokinetic effect – irreversible thermodynamics for non-linear regime.

MODULE V ELECTROCHEMISTRY 09

Ion-solvent and ion-ion interactions, ion transport in solutions – electrochemical cells electrical double layer – various models – electrocapillary phenomena – electrokinetic phenomena – electro osmosis – streaming potential and electrophoresis – Tiselius

apparatus – kinetics of electrode processes – Butler-Volmer equation - Tafel equation.

Total Hours: 45

5. Crow D.R., Principles and Application of Electrochemistry, Chapman and Hall, 1988.

OUTCOMES:

The students will be able to comprehend the

- laws of chemical thermodynamics
- applications vant Hoff's equation in chemical thermodynamics
- application of partition function
- applications of onsager reciprocal relation and microscopic reversibility
- various models of electrical double layer
- applications of Butler-Volmer equation and Tafel equation

CHC6103 INORGANIC CHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student conversant with

- Periodic properties of elements ,
- Bonding in inorganic molecules
- Molecular orbital theory for diatomic and poly atomic molecules
- Types of non-valence forces,
- Concepts of non-aqueous solvents,
- Types of crystal structure.

MODULE I ATOMIC STRUCTURE 09

Modern views on atomic structure – Wave equation – hydrogen atom and poly electron atoms, electronic configuration and term symbols, periodic properties of elements – atomic size, ionization energy, electron affinity, electro negativity, covalent and ionic radii and magnetic properties.

MODULE II COVALENT BOND 09

Valence bond theory – hybridization and resonance – diatomic and polyatomic systems - VSEPR theory - molecular orbital theory – LCAO approximation for diatomic and polyatomic systems.

MODULE III IONIC AND NON-VALENCE FORCES 09

vander waals' forces – hydrogen bond – clathrates, metallic bond – free electron theory of metals, ionic solids – lattice energy – Born-Haber cycle.

MODULE IV AQUEOUS AND NON-AQUEOUS CHEMISTRY 09

Acid-base concepts, HSAB theory, super acids, non-aqueous solvents – reactions in liquid ammonia, sulphuric acid, aprotic solvents - molten salts - electrode potentials and applications in inorganic systems.

MODULE V CRYSTAL STRUCUTRE 09

Radius ratio – structures of AX, AX_2, A_2X_3, ABX_3 and A_2BX_4 type solids – layer structure – cadmium iodide - covalent solids – diamond and graphite - Polymorphism and X-Ray Diffraction.

Total Hours: 45

REFERENCES:

2. Atkins P.W., Overton T., Rourke, J., Weller, M. and Armstrong, F. Shriver and Atkins inorganic chemistry, 4th edition, Oxford University Press, 2006.
3. Huheey J.E., Keiter E.A. and Keiter R.L., Inorganic Chemistry, 4th Edition, Addision Wesley Publication, London, 1993.
4. Jolly W.L., Modern Inorganic Chemistry, 2nd Edition, McGraw – Hill, Inc., 1991.
5. Lee J.D., Concise Inorganic Chemistry, 5th Edition, Blackwell Science, 2003.

OUTCOMES:

Students will be able to

- Demonstrate the basic principles of periodicity.
- Demonstrate VSEPR theory.
- Depict the molecular orbital diagram for diatomic and polyatomic systems.
- Recognize the different non valence forces and their influence on the physical & chemical properties
- Demonstrate the basic principles of acid – base chemistry in non aqueous solvents.
- Acquire the knowledge of structure of different types of solids and their diffraction pattern.

CHC6104 ANALYTICAL CHEMISTRY

L	T	P	C
3	0	2	4

OBJECTIVES:

To make the student

- identify the right analytical method for a given sample and information required
- state the principles and applications of different wet chemical methods
- study the principles, instrumentation and applications of spectroscopic methods
- describe the principles, instrumentation and applications of electro analytical techniques
- state the principles and instrumentation of different separation techniques
- describe the different thermal analytical methods and their applications

MODULE I QUANTITATIVE ANALYSIS 09

Volumetric analysis – neutralization, precipitation, complexometric and redox titrations - Gravimetric analysis – volatilization and precipitation methods - Types of error – evaluation of analytical data - estimation of Na/K/Ca by flame photometer

MODULE II SEPARATION TECHNIQUES 09

Chromatography – paper, column, TLC, GC, HPLC and GPC techniques – ion exchange techniques – Capillary electrophoresis – principle, instrumentation and applications- gel electrophoresis.

MODULE III INTRODUCTION TO MOLECULAR SPECTROSCOPY 09

Molecular spectroscopy: Colorimetric analysis- , principle and applications UV, Visible, IR absorption - Fluorescence, phosphorescence and chemiluminescence methods - Atomic absorption and atomic fluorescence spectroscopy - Emission spectroscopy, flame photometry and ICP-AES principle, instrumentation and analytical applications.

MODULE IV ELECTROANALYTICAL TECHNIQUES 09

Conductometry and high frequency titrations - potentiometry, pH-metry and ion-selective electrodes - coulometry – voltammetry - polarography, amperometric titrations and anodic stripping voltammetry - principle, practice and applications.

MODULE V THERMAL METHODS OF ANALYSIS 09

Thermal analytical techniques – TGA, DTA, DSC,.DEA (dielectric thermal analysis) TOA (thermo optical analysis) Temperature-programmed Desorption/ Reduction/ Oxidation/ Sulfidation (TPD / TPR / TPO / TPS), – principle, instrumentation and applications

Total Hours: 45

6. Settle F. (Editor), Handbook of Instrumental Techniques for Analytical Chemistry, Pearson Education, Singapore, 2004.

OUTCOMES:

The student will be able to

- Identify the proper method and do the various chemical analysis
- isolate the compounds in a mixture by chromatographic techniques
- interpret the spectral data like UV-Visible, IR, apply electro analytical techniques
- interpret the thermal analysis data

CHC6105 ORGANIC CHEMISTRY PRACTICAL

L	T	P	C
0	0	4	2

OBJECTIVES:

To make the student conversant with

- Separation of two component mixture
- analyze the functional groups present in simple organic compounds.
- Purification techniques of organic solvents and reagents

LIST OF EXPERIMENTS:

1. Qualitative analysis of simple organic compounds
2. Separation of organic compounds with two component mixtures and its qualitative analysis.
3. Purification of organic solvents and reagents - Purification of liquids by distillation – Purification of solids by recrystallization – Determination of melting point – Determination of boiling point by capillary method.

Total Hours: 60

REFERENCES:

1. A.I. Vogel, Vogel's Textbook of Practical Organic Chemistry, 5th Edition, Prentice Hall, 2008.
2. V.K Ahluwalia, R. Agarwal Comprehensive Practical Organic Chemistry: Preparation and Quantitative Analysis, University Press, 2000.

OUTCOMES:

At the end of the course, the student will be able to

- Separate the different component mixtures of simple organic compounds.
- Analyze the functional groups present in simple organic compounds
- Purify the organic compounds by using recrystallisation and distillation techniques

CHC6106 INORGANIC CHEMISTRY PRACTICAL-I

L	T	P	C
0	0	4	2

OBJECTIVES:

The students will be trained

- the purification process such as distillation, extraction, etc.
- to identify individual common and rare cations present in the given mixture
- to estimate the chloride ions present in water
- to estimate the various ions by titrimetry
- to estimate the ions such as iron, cobalt, nickel, chromium and manganese and spectral techniques

LIST OF EXPERIMENTS:

1. Water distillation and solvent extraction
2. Semi-micro qualitative analysis: Analysis and identification of two common and two rare cations in a mixture including spot test confirmation
3. Estimation of chloride in water by Mohr's method
4. Complexometric tirtrations: Estimation of Ca^{2+}, Mg^{2+}, $Mn^{2+}$and Zn^{2+}
5. Spectrophotometric analysis of iron, cobalt, nickel, chromium and manganese

Total Hours: 60

REFERENCES:

1. Monograph on Green Chemistry Laboratory Experiments, Green Chemistry Task Force Committee, Department of Science and technology, India.
2. Rakesh K. Sharma, Indu Tucker Sidhwani and Mihir K. Chaudhuri, Green Chemistry Experiments: A Monograph, I K International Publishing House; 1st Edition, 2012.

5. Mukhopadhyay R and Chatterjee P, Advanced Practical Chemistry, Books & Allied (P) Ltd., 2007.
6. Dinesh Sharma, A Handbook of Analytical Inorganic Chemistry, International Scientific Publishing Academy, India, 2005.

OUTCOMES:

The students will be able to

- Distill water and other organic solvents
- Analyze the common and rare cations present in the given mixture
- Estimate the ions present in the sample by titrimetry
- Estimate the ions such as iron, cobalt, nickel, chromium and manganese present in the sample by spectral methods

CHC6107 PHYSICAL CHEMISTRY PRACTICAL- I

L	T	P	C
0	0	4	2

OBJECTIVES:

To make the students trained to

- Determine the equivalent conductance of strong electrolytes
- Verify the Ostwald dilution law
- do conductometric titrations
- Determine the rate constant of first and second order reactions
- Verify Beer –Lambert law
- Determine the molecular weight of a polymer

LIST OF EXPERIMENTS:

1. Equivalent conductance of strong electrolytes and verification of Debye Huckel Onsager equation
2. Verification of Ostwald dilution law using weak acid and determination of its dissociation constant
3. Conductometric titrations: acid-base and precipitation titrations
4. Determination of rate constant
5. Saponification of oils and fats
6. Temperature dependence of solubility of benzoic acid in water and DMSO
7. Determination of activity coefficients of an electrolyte at different molalities
8. Verification of Beer-Lambert equation
9. Determination of molecular weight of a polymer by viscometry

Total Hours: 60

REFERENCES:

1. V.D. Athawale, Experimental Physical Chemistry, New Age International, 2007.
2. B.D. Khosla, Senior Practical Physical Chemistry, R. Chand and Co., New Delhi, 2007.

4. D.R. Satiya, Practical Chemistry, 2nd Edition, Allied Publishers, Madras, 1991.
5. D.P. Shoemaker and C.W. Garland, Experiments in Physical Chemistry, McGraw Hill, London, 1962.

OUTCOMES:

The students will be able to

- Determine the equivalent conductance of strong electrolytes
- Verify the Ostwald dilution law
- do conductometric titrations
- Determine the rate constant of first and second order reactions
- Verify Beer –Lambert law
- Determine the molecular weight of a polymer

SEMESTER II

CHC6202	RESEARCH METHODOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

The students will be trained to

- Select and Define a research problem
- Describe the Methodology of Research
- Acquire good laboratory practices
- Operate the software for Programming techniques
- Analyze and Interpret the Results
- Demonstrate the Plagiarism check by turtin

MODULE I RESEARCH METHODOLOGY- AN INTRODUCTION 09

Research: Objectives, Motivation and types - Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Research Process, Criteria of Good Research, Problems Encountered by Researchers - Introduction to ethics, scientific conduct and misconduct, Misconduct and why it occurs, Fabrication, Authorship issues, The investigation and punishment of scientific misconduct.

MODULE II GOOD LABORATORY PRACTICES AND SAFETY 09

Introduction: History, definition, Principles, Good Laboratory Practices (GLP) and its application GLP training: Resources, Rules, Characterization, Documentation, quality assurance, Resources, Facilities: building and equipment, Personnel, GLP and FDA, Stepwise implementation of GLP and compliance monitoring. Safety Symbols, Science Safety Rules- Dress Code, First Aid, Heating and Fire Safety

MODULE III PROGRAMMING TECHNIQUES 09

Data analysis using Excel, Origin and Sigma plot Analyzing the chemical data and drawing chemical structures using Chemdraw and Chemsketch. Basics of C and C++ programme – MATLAB – Numerical Methods – Ordinary Differential Equation – Partial Differential Equation – Runge Kutta Method.

MODULE IV INTERPRETATION OF RESULTS AND ANALYSIS 09

Importance and scientific methodology in recording results, importance of negative results, different ways of recording, industrial requirement, artifacts versus true results, types of analysis (analytical, objective, subjective) and cross verification, correlation with

published results, discussion, outcome as new idea, hypothesis, concept, theory, model etc.

Conceptions of error of measurement, true score theory and generalisability theory. Measures of central tendency or averages – mean median and mode. Measures of dispersion – range, variance, and standard deviation: The normal distribution and the normal probability curve.

MODULE V SCIENTIFIC WRITING, TECHNICAL PUBLICATION AND RESEARCH PROPOSAL 09

Different types of scientific and technical publications in the area of research, and their specifications, Ways to protect intellectual property – Patents, technical writing skills, definition and importance of impact factor and citation index - assignment in technical writing, The research problem, finding related literature, computer generated references sources and the research project, model research proposal. Plagiarism checking by Turtin -demonstration

Total Hours: 45

REFERENCES:

8. Willa Y. Garner, Maureen S. Barge, James, P, Good Laboratory Practice Standards: Applications for Field and Laboratory Studies (ACS Professional References Book).

OUTCOMES:

At the end of this course, the students should be able to:

- recognize the basic concepts of research and its methodologies
- Identify appropriate research topics
- Select and define appropriate research problem and parameters
- Prepare a project proposal (to undertake a project)
- Organize and conduct research (advanced project) in a more appropriate manner
- Write a research report and thesis

CHC6201 SYNTHETIC ORGANIC CHEMISTRY

L	T	P	C
3	2	0	4

OBJECTIVES:

To impart

- Knowledge of the increasingly important role played by organic and transition metals reagents and catalysts with their corresponding proposed reaction mechanisms.
- Knowledge for rational mechanism-based design of synthetic strategies for new and novel organic reactions.

MODULE I STEREOCHEMISTRY II 09

Conformational analysis and reactivity of cyclic and acyclic systems – topicity – prochirality - enantiotopic and diastereotopic atoms, groups and faces –asymmetric synthesis - stereoselective, stereospecific reactions - enantioselective synthesis - optical purity and enantiomeric excess - Cram's rule – Prelog's rule – Fehn Anns model - methods of resolution – kinetic, dynamic kinetic resolution - Sharpless epoxidation

MODULE II MOLECULAR REARRANGEMENTS 09

General mechanistic considerations, nature of migration, migratory aptitude - nucleophilic, electrophilic and free radical rearrangements – Wagner-Meerwein, Demyanov, Favorskii, Fritsch-Butternberg - Wiechell, Neber, Hofmann, Curtius, Beckmann, Schmidt, Lossen, Wolff, Baeyer – Villiger, Stevens, Wittig, Chapman, Wallach, Orton, Bamberger, Pummerer and Von Ritchter rearrangements.

MODULE III REAGENTS IN ORGANIC SYNTHESIS 09

Synthesis and application of - Diborane, $LiAlH_4$, $NaBH_4$, DIBAH, Bu_3SnH, SeO_2, NBS, DCC, PCC, Swern, Dess Martin, DDQ, LDA, Gilman's reagent, phase transfer catalysts, Wittig, Tebbe, Wilkinson's catalysts, Palladium and copper catalysts in coupling (Suzuki, Heck), Low valent titanium(McMurry), Co(Salen) complex (Jacobsen), BINAL(H), BINAP, Grubb and Schrock catalyst (Olefin Metathesis).

MODULE IV MULTISTEP SYNTHESIS 09

Strategies for synthetic analysis and planning – functional group introduction, removal and interconversion - activating groups – protection and deprotection of hydroxyl, amino, carbonyl and carboxylic acid groups - retrosynthetic analysis, synthons and synthetic equivalent groups - C-C, C=C, C-O bond forming reactions – linear and convergent synthesis - control of stereochemistry – reactive umpolung - analysis and synthesis of a few target molecules.

MODULE V APPLICATIONS OF ORGANIC SPECTROSCOPY 09

Structure determination of organic compounds - introduction to NMR spectroscopy-interpretation of molecular structure by ^{1}H, ^{13}C and Mass spectroscopic techniques.

Total Hours: 45

REFERENCES:

9. Francis A. Carey and Richard J. Sundberg, Advanced Organic Chemistry, Part B: Reactions and Synthesis, 5th Edition, Springer, 2007.

OUTCOMES:

The student will

- acquire the skills for correct stereo chemical assignment and interpretation in the cases of complex organic molecules.
- be equipped as a more competent synthetic organic chemist due to being capable of correct mechanistic approach and design of a synthesis.

CHC6202 QUANTUM CHEMISTRY

L	T	P	C
3	1	0	4

OBJECTIVES:

To make the student

- understand the origin of classical mechanics and the background of quantum mechanics
- derive and use of Schrodinger equation to simple systems
- able to construct the molecular orbital for molecules
- gain the basics of quantum statistics and how it is applied to systems of chemical interest
- learn the concepts symmetry elements and operations, able to assign the point group of molecules

MODULE I INTRODUCTION TO QUANTUM CHEMISTRY 09

Review of essential mathematical concepts. General introduction to classical and quantum mechanics. Classical mechanics: black body radiation, photo electric effect, heat capacity of solids and inadequacy of classical mechanics. Quantum mechanics: historical background, principles and postulates. Operators and their properties. Eigen value – Eigen functions.

MODULE II SOLUTIONS OF SCHRODINGER EQUATION AND APPROXIMATE METHODS 09

Schrodinger equation, Discussion of solutions of the Schrodinger equation to few systems: particle in a box, the rigid rotor, the harmonic oscillators and the hydrogen atom. Approximate methods: The variation theorem, linear variation principle. Perturbation theory (introductory concept, degenerate and non-degenerate). Application of variation methods to the helium atom. Concept of Hartree Fock/SCF methods.

MODULE III QUANTUM AND PHOTOCHEMISTRY OF MOLECULES 09

Born Oppenheimer approximation; VB and MO theory; Applications to $H2^+$ and H2 molecules. MO treatment of homo- and hetero nuclear diatomic molecules. Hukel molecular orbital theory and its application to ethylene, butadiene, benzene and cyclic systems.

Photochemistry: Law of photochemistry, Jablonski diagram, quantum yield, excimer and exciplex and quenching, Stern-Volmer relation, Photo induced electron and energy transfer, FRET (concept only); Measurement of fluorescence, phosphorescence and lifetime (introductory concept), chemiluminescence – fluorescence based sensors and imaging applications.

MODULE IV QUANTUM STATISTICS 09

Recapitulation of classical statistics and partition function, relationship between partition and thermodynamic functions, thermodynamic probability, derive the expression for translational, rotational, vibrational and electronic partition functions and its simple application to mono atomic gases (ortho-para hydrogen) and solids, Compare and distinguish between Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics. Applications of Bose-Einstein and Fermi-Dirac statistics.

MODULE V MOLECULAR SYMMETRY AND GROUP THEORY 09

Symmetry elements and symmetry operations – types of groups- group postulates - classification of point groups- Schoenflies symbol –matrix representation of symmetry operations and point groups, representation of point group, reducible and irreducible representations, the great orthogonal theorem – character table, construction of character table for C_{2v} and C_{3v} groups- symmetry adopted linear combinations (SALCs), assignments of point groups and geometry of various molecules- applications of group theory.

Total Hours: 45

10. A. Vincent., Molecular Symmetry and Group theory, A programmed introduction to chemical applications, 2nd Edition, Wiley,.2001

OUTCOMES:

The student will gain:

- Basic aspects of quantum chemistry of atoms and molecules
- Importance of quantum chemistry and how to apply this knowledge to atomic and molecular structure
- Able to understand clearly the microscopic and inner details of chemical reactions in chemistry point of view
- In depth knowledge and understanding of photochemical reactions
- Assign the symmetry elements and point group of molecules/ion/complexes
- Indentify the symmetry in molecules and explain the character table of C_{2v} and C_{3v} point groups

CHC6203 CO-ORDINATION CHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the students conversant with the

- Nomenclature and isomerism of coordination compounds
- Bonding theories of coordination compounds
- Spectra of coordination compounds
- Magnetic properties of coordination compounds
- Various reactions of coordination compounds
- Chemistry of lanthanides and actinides

MODULE I COORDINATION COMPOUNDS 09

Nomenclature, structure and stability – geometry and isomerism - absolute configuration – ORD and CD spectra - stability of complexes – thermodynamic aspects, successive and overall formation constants – experimental methods.

MODULE II THEORIES OF METAL- LIGAND BOND 09

Valence bond theory – hybridization - crystal field theory – crystal field splitting, crystal field stabilization energy – thermodynamic and structural implications, Jahn Teller effects, ligand field theory - molecular orbital theory – pi bonding.

MODULE III SPECTRA OF CO-ORDINATION COMPOUNDS 09

Free ion terms, transformation in crystal field, energy diagrams in weak and strong field cases – Tanabe – Sugano diagrams, selection rules - magnetic properties – Van Vleck equation, magnetic susceptibility – experimental methods - ESR spectra of transition metal ions.

MODULE IV REACTIONS OF CO-ORDINATION COMPOUNDS 09

Inert and labile complexes - substitution reactions in square-planar and octahedral complexes - electron transfer reactions - photochemical reactions.

MODULE V COMPARATIVE CHEMISTRY OF OXIDATION STATES OF d AND f BLOCK ELEMENTS 09

Lanthanides-occurrence, isolation, lanthanide contraction, oxidation states, spectral and magnetic properties, co-ordination complexes, actinides, comparative chemistry with transition metals and lanthanides.

Total Hours: 45

REFERENCES:

6. Meissler G.L. and Tarr D.A., Inorganic Chemistry, 3rd Edition, Pearson Education, Singapore, 2004.

OUTCOMES:

Students will be able to

- Write the nomenclature of a coordination complex
- Find the number of isomers possible for coordination compound
- illustrate an understanding of the principles of theories of metal-ligand bond.
- demonstrate an understanding of spectra of coordination compounds.
- analyze the spectra of transition metal ions.
- analyze Tanabe – Sugano diagrams.
- interpret the stability of complexes.
- understand the substitution reactions in transition metal complexes.
- demonstrate an understanding of chemistry of ‘d’ and ‘f’ block elements.
- analyze and compare the transition metals and lanthanides

CHC6204	SYNTHETIC ORGANIC CHEMISTRY PRACTICAL	L	T	P	C
		0	0	4	2

OBJECTIVES:

To make the students

- Identify organic compounds by TLC technique and purify them by column chromatography.
- expertise in multi step synthesis of organic compounds.

LIST OF EXPERIMENTS:

1. Identification and purification of organic compounds by thin layer and column chromatographic techniques.
2. Single step and multistep synthesis of organic compounds - isolation and characterization of the products by various spectroscopic techniques.

Total Hours: 60

REFERENCES:

1. A.I. Vogel, Vogel's Textbook of Practical Organic Chemistry (4th Edition), Longmann group, 2008.

5. Kemp W., Organic Spectroscopy, 3rd Edition, ELBS, McMillan, London, 1991.

OUTCOMES:

The students will be able to

- Independently perform multi step organic synthesis.
- Identify the synthesized compounds by TLC and purify it by column chromatography.

CHC6205 INORGANIC CHEMISTRY PRACTICAL-II

L	T	P	C
0	0	4	2

OBJECTIVES:

The students will be trained to

- estimate the metal components present in alloys
- prepare different complexes
- characterize the complexes by spectral techniques
- synthesis of green reagents

LIST OF EXPERIMENTS:

1. Estimation of alloys by gravimetry and titrimetry: brass (Cu & Zn), bronze (Cu & Sn) and ferro nickel (Fe & Ni)
2. Complex preparation and characterisation by UV-Visible and FT-IR spectroscopic techniques
   - (i) Preparation of 1-acetyl ferrocene
   - (ii) Preparation of bis(acetylacetanato)copper(II)
   - (iii) Preparation of tris(acetylacetanato)iron(III)
   - (iv) Preparation of tris(acetylacetanato)manganese(III)
   - (v) Solvent free and one pot synthesis of phthalocyanine complex of copper(II)
   - (vi) Synthesis of tetrabutyl ammonium tribromide (TBATBP) - A green reagent and its application

Total Hours: 60

REFERENCES:

5. Mukhopadhyay R and Chatterjee P, Advanced Practical Chemistry, Books & Allied (P) Ltd., 2007.
6. Dinesh Sharma, A Handbook of Analytical Inorganic Chemistry, International Scientific Publishing Academy, India, 2005.

OUTCOMES:

The students will be able to

- estimate the various metal ions present in alloys by titrimetry and gravimetry
- prepare different complexes
- characterize the complexes by spectral techniques
- synthesis green reagents

CHC6206 PHYSICAL CHEMISTRY PRACTICAL- II

L	T	P	C
0	0	4	2

OBJECTIVES:

To make the students

- expertise in the applied concepts of volumetric titrations, electrochemistry, phase equilibrium, adsorption, etc.
- draw structures and graph using softwares and prepare reports

LIST OF EXPERIMENTS:

1. EMF measurement
2. Potentiometric titrations
3. Acid base titration by pH metry
4. Redox and precipitation titrations
5. Determination of CST in phenol-water system
6. Determination of activity coefficients of an electrolyte at different molalities
7. Determination of sucrose content in cane sugar by polarimetry
8. Determination of DEp of a redox system by cyclic voltametry
9. Verification of Freundlich isotherm - Adsorption of acetic acid, oxalic acid on activated carbon
10. Experiments on electroplating and electroless plating.
11. Uses of computer packages: Microsoft (word, excel and powerpoint), origin, chemsketch and chemdraw

Total Hours: 60

REFERENCES:

1. V.D. Athawale, Experimental Physical Chemistry, New Age International, 2007.
2. B.D. Khosla, Senior Practical Physical Chemistry, R. Chand and Co., New Delhi, 2007.

4. D.R. Satiya, Practical Chemistry, 2nd Edition, Allied Publishers, Madras, 1991.
5. D.P. Shoemaker and C.W. Garland, Experiments in Physical Chemistry, McGraw Hill, London, 1962.

OUTCOMES:

The students will be able to

- determine the EMF of any cell
- measure the adsorption capacity of various materials

- draw the phase diagram for 2 and 3 component systems and analyze it
- draw chemical structures using chemsketch and chemdraw
- draw graphs using excel and origin software
- prepare the final dissertation report using MS word by themselves

SEMESTER III

CHC7101 ADVANCED ORGANIC CHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the students conversant with

- the structure and synthesis of various natural compounds.
- all major types of organic name reaction with mechanisms.
- all types of pericyclic and photochemicals reactions with its applications.

MODULE I CARBOHYDRATES, PROTEINS, NUCLEIC ACIDS 09

Monosaccharides – classification – cyclic structure of monosaccharides – mutarotation – epimers – glycals - glycosides – Ferrier rearrangement – anomers – Hudson rules – derivatives of monosaccharides – Vitamin C - disaccharides – trisaccharides – polysaccharides – nucleic acids : amino acids – classification – peptides - proteins – classification - structure .

MODULE II NAME REACTIONS 09

Stork enamine, Birch reduction - Aldol, Claisen, Benzoin, Stobbe condensations - Michael addition, Mannich reaction, Wittig, Robinson annulation, Dieckmann, Shapiro, Koenigs-Knorr, Polonowski, Hofmann-Loffler, Reformatsky, Darzen's, Simmons-Smith, Gattermann-Koch, Mitsunobu reaction, Buchwald and Hartwig.

MODULE III ORGANIC PHOTOCHEMISTRY 09

Thermal vs photochemical reactions – n-pi* and pi-pi* transitions - allowed and forbidden transitions – Jablonski Diagram - fluorescence and phosphorescence – internal conversion and intersystem crossing -– sensitization, quenching and quantum efficiency – photochemical reaction of ketones – Norrish type I and II, Paterno-Buchi and Barton reactions - photochemical oxidation and reduction, photochemical reactions of olefins - cis-trans isomerisation, di-pi-methane and Fries rearrangements.

MODULE IV PERICYCLIC REACTIONS 09

Definition – electrocyclic, cycloaddition, sigmatropic, chelotropic and ene reactions - Woodward-Hoffmann rules – Frontier orbital, Mobius-Huckel and orbital symmetry correlation approaches - Stereospecificity and regiospecificity of pericyclic reactions – pericyclic reactions in organic synthesis – Diels-Alder reaction, 1,3-dipolar cycloaddition, Claisen, Cope, Aza cope.

MODULE V HETEROCYCLES, ALKALOIDS, TERPENOIDS AND STEROIDS 09

Nomenclature of condensed heterocycles - Synthesis and reactivity of indoles, quinolines, isoquinolines, benzopyran, chromones, coumarins - Alkaloids – classification - synthesis of cocaine and atropine - terpenoids - Classification – isoprene rule – stereochemistry and synthesis of car-3-ene, menthol, zingiberene – Steroids – classification – structure and stereochemistry of cholesterol, synthesis of cortisone, estrone.

Total Hours: 45

5. Sankararaman S., Pericyclic reactions – a Textbook: Reactions, Applications and Theory, Wiley-VCH, 2005.
6. Francis A. Carey and Richard J. Sundberg, Advanced Organic Chemistry, Part A – Structure and Mechanisms, 5th Edition, Springer, 2007.
7. Francis A. Carey and Richard J. Sundberg, Advanced Organic Chemistry, Part B: Reactions and Synthesis, 5th Edition, Springer, 2007.

OUTCOMES:

The student will

- acquire the skill of relating all the biomolecules /natural products and propose synthetic routes.
- be skilled in photochemical and pericyclic reaction mechanism.

CHC7102 PHYSICAL CHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student learn

- the basic aspects of both experimental and theoretical chemical kinetics
- derive rate expressions for acid-base catalytic systems and enzyme catalysed systems
- Different type of phase equilibria
- write mechanisms for reactions catalysed by transition metal complexes
- relate the catalytic activity of heterogeneous catalysts to their physicochemical properties
- learn the principle and instrumentation of surface characterization techniques

MODULE I KINETICS 09

Methods of determining rate laws – reversible, consecutive and competing reactions – Vant Hoff's rule, Collision theory, *Bodenstein's* Theory, theory of absolute reaction rates – transmission coefficient – thermodynamic formulation of reaction rates – kinetics – classical treatment – principle of microscopic reversibility - photochemical kinetics, – fast reactions – luminescence and energy transformations –study of kinetics by stopped flow techniques – flash photolysis.

MODULE II MECHANISM OF SOLUTION PHASE REACTION 09

Lindeman's theory – Hinshelwood, Kassel and Slater treatments, reaction rates in solution – effect of dielectric constant and ionic strength – kinetic isotope effect – linear free energy relationships – Hammett equation – Taft equation

MODULE III PHASE EQUILBRIA 09

Two component systems – classification – solid-gas (dehydration and rehydration of $CuSO_4$, $5H_2O$), solid-liquid systems – benzene-picric acid system, salt-water system fractional distillation – three component systems involving liquid-liquid equilibria.

MODULE IV CATALYSIS 09

Acid-base catalysis – general scheme – Arrhenius complex – Vant Hoff's complex – specific and general catalysis – catalytic constants – Bronsted relationship – Hammett acidity functions – mechanism of acid-base catalysed reaction – catalysis by transition metal ions and their complexes – supported transition metal complexes as catalysts – enzyme catalysis – theory and applications.

MODULE V SURFACE PHENOMENA AND HETEROGENEOUS CATALYSIS 09

Diffusion – adsorption – surface reaction – various adsorption isotherms – determination of surface area – pore volume and pore size – thermodynamics of interfaces – solid catalysts – metal-metal oxides – geometric factor – electronic factor - zeolites – phase transfer catalysis – colloidal electrolytes – reactions on surfaces – surface characterization techniques – ESCA, AES and SIMS.

Total Hours: 45

REFERENCES:

7. Rohatgi, Mukharjii K.K., Fundamentals of Photochemistry- Wiley Eastern

OUTCOMES:

The student will be acquainted with

- differential rate laws, integrated rate laws, temperature dependence of reaction rates,
- Derivation of rate law for the complex reactions such as parallel ,reversible and consecutive reactions
- the knowledge of phase equilibria for various systems
- different types of catalysts and catalyzed reactions
- Basic analytical techniques to analyze the catalyst

CHC7103 ADVANCED INORGANIC CHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student conversant with the

- structure and bonding of organometallic compounds
- catalytic reactions of organometallic compounds
- role of metals and non-metals inside the living organisms
- molecular polyhedra in inorganic solids
- inorganic solid state
- basics of photochemistry

MODULE I ORGANOMETALLIC COMPOUNDS 09

18 electron rule: metal carbonyls, metal nitrosyls, metal alkyl and aryl complexes - preparation, structure, bonding, stereochemical non-rigidity.

MODULE II METAL CARBON PI COMPLEXES 09

Metal-alkene, alkyne and allyl complexes, cyclopentadiene and benzene complexes – preparation, structure and bonding - catalysis by organometallic compounds – hydrogenation, hydroformylation, stereoregular polymerization – Wacker process.

MODULE III BIO-INORGANIC CHEMISTRY 09

Metals and non-metals in biological systems - metal ion transport - oxygen carriers – haemoglobin, myoglobin - metallo-enzymes – carboxypeptidase-A, carbonic anhydrase, vitamin B_{12}, nitrogenase - electron transfer and redox systems - photosynthesis.

MODULE IV BONDING AND MOLECULAR POLYHEDRA IN INORGANIC SOLIDS 09

Boranes, borazines, silicates, phosphorous-nitrogen, sulphur-nitrogen compounds, metal clusters - inert gas compounds.

MODULE V INORGANIC SOLID STATE AND PHOTOCHEMISTRY 09

Preparation of non-molecular solids - band theory of solids - defects and non-stoichiometry, electrical and magnetic properties, superconductivity, amorphous solids, nonsolids - photochemistry – photophysical processes, spontaneous and stimulated emission of radiation, chemical actinometry, solar energy conversion and applications.

Total Hours: 45

5. Jolly W.L., Modern Inorganic Chemistry, 2nd Edition, McGraw-Hill, Inc., 1991.

OUTCOMES:

Students will be able to

- demonstrate basic principles of organometallic compounds.
- illustrate reactivity and stereochemistry of organometallic compounds.
- demonstrate the basic principles of bioinorganic chemistry.
- demonstrate the bonding in inorganic polyhedral solids.
- illustrate the basic principles of inorganic solid state.
- learn the basic principles of photochemistry
- illustrate the basic principles of band theory of solids.

LIST OF ELECTIVES

BASIC CHEMISTRY

CHCY001 GREEN CHEMISTRY	L	T	P	C
	3	0	2	4

OBJECTIVES:

To make the students conversant with the

- principle and advantages of green chemistry.
- principle and uses of microwave as a green technology.
- Applications of ionic liquids and phase transfer catalyst
- Application of supported catalysts and bio catalyst for green synthesis
- various alternative reagents and chemicals for green synthesis.

MODULE-I INTRODUCTION TO GREEN CHEMISTRY 09

Green chemistry-relevance and goals, Anastas' twelve principles of green chemistry - Tools of green chemistry: alternative starting materials, reagents, catalysts, solvents and processes with suitable examples.

MODULE-II MICROWAVE ASSISTED ORGANIC SYNTHESIS (MAOS) 09

Microwave activation – advantage of microwave exposure – specific effects of microwave – Neat reactions – solid supports reactions _ Functional group transformations – condensations reactions – oxidations – reductions reactions – multi-component reactions.

MODULE III IONIC LIQUIDS AND PHASE TRANSFER CATALYSIS 09

Introduction – synthesis of ionic liquids – physical properties – applications in alkylation – hydroformylations – epoxidations – synthesis of ethers – Friedel-craft reactions – Diels-Alder reactions – Knoevenegal condensations – Wittig reactions – Phase transfer catalyst - Synthesis – applications.

MODULE IV SUPPORTED CATALYSTS AND BIO-CATALYSTS FOR GREEN CHEMISTRY 09

Introduction – the concept of atom economy – supported metal catalysts – mesoporous silicas –the use of Biocatalysts for green chemistry - modified bio catalysts – fermentations and biotransformations – fine chemicals by microbial fermentations – vitamins and amino acids – Baker's yeast mediated biotransformations – Bio-catalyst mediated Baeyer-Villiger reactions – Microbial polyester synthesis.

MODULE V ALTERNATIVE SYNTHESIS, REAGENTS AND REACTION CONDITIONS 09

Photochemical alternative to Friedel-crafts reactions - Dimethyl carbonate as a methylating agent – the design and applications of green oxidants – super critical carbon dioxide for synthetic chemistry.

Total Hours: 45

REFERENCES:

1. Green Chemistry – Environmentally benign reactions – V. K. Ahluwalia. Ane Books India (Publisher). (2006).
2. Green Chemistry – Designing Chemistry for the Environment – edited by Paul T. Anastas & Tracy C. Williamson. Second Edition, (1998).
3. Green Chemistry – Frontiers in benign chemical synthesis and processes- edited by Paul T. Anastas & Tracy C. Williamson. Oxford University Press, (1998).
4. Green Chemistry – Environment friendly alternatives- edited by Rashmi Sanghi & M. M. Srivastava, Narora Publishing House, (2003).

OUTCOMES:

The students will demonstrate the

- principles and advantages of green chemistry.
- principles and uses of microwave as a green technology.
- Applications of ionic liquids and phase transfer catalyst
- Supported catalysts and bio catalyst for green synthesis
- various alternative reagents and chemicals for green synthesis

CHCY002 MOLECULAR SPECTROSCOPY

L	T	P	C
3	0	2	4

OBJECTIVES:

To make the students

- learn molecular spectroscopy as an important tool to understanding molecular structure and its characteristics.
- acquire a basic idea of different electromagnetic regions and instrumentation of various modern spectrometers
- demonstrate an understanding of the rotational, vibrational and electronic spectroscopy of diatomic and polyatomic molecules
- acquire the skill to determine the functional groups present in unknown molecules using vibrational (IR) spectra and to calculate maximum (λmaximum) absorption of molecules in Electronic (UV-Visible) region using Woodward-Fischer rule
- learn the magnetic properties of electrons and nucleus of atoms and free radicals, using spin angular momentum with the help of nuclear magnetic resonance and electron spin resonance spectra
- identify the unknown molecular formula of fragmented metastable ions of organic Compounds
- learn hyperfine interactions of nuclei present in a molecule

MODULE I ELECTROMAGNETIC RADIATION AND ROTATIONAL SPECTROSCOPY 09

Characterization of electromagnetic radiation – regions of the spectrum – basic elements of practical spectroscopy – enhancement of spectra – Applications of group theory – Microwave spectroscopy – rotational spectra of molecules – applications.

MODULE II INFRA-RED & RAMAN SPECTROSCOPY 09

Infra-red spectroscopy – harmonic and unharmonic vibrations – dissociation energy of diatomics – vibrating rotator – PQR branches in IR spectra – Fermi resonance – Raman spectroscopy – mutual exclusion principle.

MODULE III ELECTRONIC SPECTROSCOPY 09

Electronic spectra of diatomic molecules: Born Oppenheimer approximation,Franck-Condon principle, selection rules, intensity of electronic transition, vibronic coupling, types of electronic transition - UV-Visible spectroscopy –solvent effects – Woodward-Fischer rule to conjugated dienes.

MODULE IV SPIN RESONANCE SPECTROSCOPY 09

Proton magnetic resonance spectroscopy – relaxation processes – chemical shift – coupling – ^{13}C NMR spectra – Electron spin resonance spectroscopy – hyperfine interactions.

MODULE V MASS SPECTROMETRY 09

Reactions of ions in gas phase – effect of isotopes – nitrogen rule –determination of molecular formula – fragmentations and rearrangements –metastable ions – fragmentation of organic compounds. Application of Massspectroscopy with GC.

Total Hours: 45

7. Robert M. Silverstein, Francis X. Webster, David Kiemle, Spectrometric Identification of Organic Compounds, 7th Edition, Wiley, 2005.

OUTCOMES:

The students will be able to

- gain the theoretical knowledge of the various spectroscopic methods on the basis of the examples from the science and industry.
- become familiar with modern spectrometers and methods, which are applied in industrial and scientific laboratories in the field of synthesis and structural determination.

CHCY003 PHOTOPHYSICS AND PHOTOCHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the students conversant with the

- basic laws of photophysics and photochemistry.
- principle and instrumentation of different types of spectrofluorimeter.
- Basics of fluorescence spectroscopy
- Different types of photochemical reactions
- Applications of solar energy materials.

MODULE I BASICS OF PHOTOPHYSICS AND PHOTOCHEMISTRY: **09**

Basic laws, Einstein Laws – absorption, Fundamentals of absorption- absorption coefficients, electronic transitions. Excited state energy relaxations – Jablonski diagram, Radiative and non-radiative relaxations, fluorescence, phosphorescence, Lifetime and quantum yield, Stokes Shift, Kasha's rule.

MODULE II INSTRUMENTATION TECHNIQUES: 09

Spectrophotometer, light Sources, photochemical quauntum yield and intensity measurements, detectors-PMT, Diode-array. Spectrofluorimeter – Steady state and Time-resolved fluorimeter. Study using time resolved techniques – pump-probe methods and instrumentation: Lasers-nanosecond, picosecond and femtosecond. Measurement of – Triplet quantum yield and Time resolved absorption spectrum. Fluorescence standards – lifetime and quantum yield.

MODULE III FLUORESCENCE SPECTROSCOPY: **09**

Quenching of fluorescence, fluorescence lifetime, fluorescence quantum yield-method of determination, Rotation diffusion, Time resolved anisotropy, environmental influence on fluorescence properties and photo-bleaching. Solvent effect-Lippert equation, excited state acidity constants, Fluorescence analysis of excited state reactions. Ultrafast solvation dynamics.

MODULE IV PHOTOCHEMICAL REACTIONS: **09**

Norrish type reactions. Paterno-Büchi Reaction. Quenching by excitation transfer (Förster and Dexter), electron transfer, excited state complex formation, heavy atoms and paramagnetic effects, Proton transfer, addition reactions, elimination reactions, photoisomerisation, photosensitisation, Distance dependence of electron transfer (superexchange). Electron transfer to metals and semiconductors.

MODULE V APPLICATIONS: SOLAR ENERGY MATERIALS: **09**

Photovoltaic cells – 1st,2nd, 3rd generation cells - Organic Solar Cells-Single Layer, Double layer, Bulk heterojunction, DSSC, Tandem structured – Fabrication, Key Processes and issues – Materials – Low molecular weight – Polymeric – Donor-acceptor polymeric systems – Devices- Characteristics.

Total Hors:

OUTCOMES:

After completing the course the student should be able to

- describe and explain common photochemical and photophysical processes and mechanisms with suitable theoretical models, and apply established experimental methods for the investigation of these processes
- describe the interaction of excited states with their surroundings and analyse photoinduced electron transfer and excitation energy transfer with quantitative models
- describe the structure and function of photosynthetic reaction centres, and explain the function of photosynthetic antenna systems
- describe photoinduced processes in semiconductors and at molecule-semiconductor interfaces, and explain how these can be used for photophysical energy conversion and in photocatalysis
- describe and explain the impact and applications of photochemistry

REFERENCES::

1. Principles of Fluorescence Spectroscopy by Joesph R. Lakowicz
2. Fundamentals of photochemistry by k. k. Rohatgi-Mukherjee
3. Modern molecular Photochemistry of Organic molecules by N. J. Turro

OUTCOMES:

The students will acquainted with the

- basic laws of photophysics and photochemistry.
- principle and instrumentation of different types of spectrofluorimeter.
- Basics of fluorescence spectroscopy
- Different types of photochemical reactions
- Applications of solar energy materials.

CHCY004 PHOTOCHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the students conversant with the

- Principles and concepts of photochemistry.
- Measurement of fluorescence and phosphorescence
- Different types of photochemical reactions
- Different types of photochemical reactions
- Applications of solar energy materials.

MODULE I PRINCIPLES AND CONCEPTS

An overview of: Laws of photochemistry, Beer-Lambert law, electronic energy levels, atomic and molecular term symbols, singlet-triplet state, intensity and strength of electronic transition, selection rules for electronic transition, Jablonski diagram and photophysical processes, Franck-Condon principle.

Excited state lifetime, steady state and time resolved emission, factors affecting excited state energy: solvent effect, TICT.

Excited state kinetics, quantum yield expressions, excimer and exciplex, kinetics of luminescence quenching: static and dynamic, Stern-Volmer analysis, deviation from Stern-Volmer kinetics. Photoinduced electron transfer rates, free energy dependence of electron transfer on rate, Photoinduced energy transfer, FRET, rate and efficiency calculation of FRET.

MODULE II METHODS

Measurement of fluorescence and phosphorescence and lifetimes. Introduction to time-resolved techniques for absorption and emission measurements, detection and kinetics of reactive intermediates. Examples of low temperature matrix isolation of reactive intermediates.

MODULE III REACTIONS

Photochemistry of alkene, cis-trans isomerization, photocycloaddition reactions of alkene, photochemical electrocyclic and sigmatropic reactions, di-pi-methane rearrangment, electron transfer mediated reactions of alkene. Photochemistry of carbonyl compounds, Norrish type I and type II reactions, enone and dienone cycloadditions. Photochemistry of aromatic systems, electron transfer and nucleophilic substitution reactions. Photochemistry of nitro, azo and diazo compounds. Photochemistry involving molecular oxygen, generation and reactions of singlet oxygen. Photo-fragmentation reactions (Barton, Hofmann-Loffler-Freytag)

MODULE IV REACTIONS IN AROMATIC COMPOUNDS

Photochemistry of aromatic systems, electron transfer and nucleophilic substitution reactions. Photochemistry of nitro, azo and diazo compounds. Photochemistry involving molecular oxygen, generation and reactions of singlet oxygen. Photo-fragmentation reactions (Barton, Hofmann-Loffler-Freytag)

MODULE V APPLICATIONS

Fluorescence based sensors – examples of molecular and supramolecular systems. Conversion of solar energy to chemical and other forms of energies, solar photovoltaic cell, basic principle and design of the cell.

OUTCOMES:

To make the students acquainted with the

- Principles and concepts of photochemistry.
- Measurement of fluorescence and phosphorescence
- Different types of photochemical reactions
- Different types of photochemical reactions
- Applications of solar energy materials.

MEDICINAL, PHARMACEUTICAL AND BIOLOGICAL CHEMISTRY

CHCY005 BIOCHEMISTRY	L	T	P	C
	3	0	2	4

OBJECTIVES:

The student are trained about

- Mechanism of enzymes and coenzymes.
- Carbohydrate metabolism
- Lipid metabolism and biological oxidation.
- Biochemistry of amino acids
- Biochemistry of proteins

MODULE I ENZYMES AND COENZYMES 08

Enzymes: Nomenclature, enzymes-kinetics and mechanism of action, mechanism of inhibition of enzymes and isoenzymes in chemical diagnosis. Co-enzymes: Vitamins as co-enzymes and their significance - Metals as co-enzymes and their significance.

MODULE II CARBOHYDRATE METABOLISM 08

Glycolysis, gluconeogenesis and glycogenolysis - metabolism of galactose and galactosemia - role of sugar nucleotides in biosynthesis and pentose phosphate pathway - citric acid cycle, significance, reactions and energetics of the cycle.

MODULE III LIPID METABOLISM AND BIOLOGICAL OXIDATION 08

Oxidation of fatty acids-oxidation and energetics, biosynthesis of ketone bodies and their utilization, biosynthesis of saturated and unsaturated fatty acids, regulation of lipid metabolism, essential fatty acids. The respiratory chain, its role in energy capture and control, energetics of oxidative phosphorylation, mechanism of oxidative phosphorylation.

MODULE IV BIOCHEMISTRY OF AMINOACIDS 08

Biosynthesis of amino acids, catabolism of amino acids and conversion of amino acids to specialized products, biosynthesis of purine and pyrimidine - formation of deoxyribonucleotides.

Biosynthesis of RNA, DNA replication, carcinogensis and DNA repair mechanism.

MODULE V BIOCHEMISTRY OF PROTEINS 08

Genetic code and protein synthesis, components of protein synthesis, inhibition of protein synthesis. Regulation of gene expression (Prokaryote and Eukaryote).

PRACTICAL **20**

1. Preparation of standard buffers (citrate, phosphate and carbonate) and measurement of pH.
2. Titration curve for amino acids.
3. Separation of amino acids by chromatography.
4. The separation of lipids by TLC.
5. Quantitative estimation of amino acids.
6. The determination of glucose by means of the enzyme glucose oxidase.
7. Enzymatic hydrolysis of glycogen by α and β-amylase.
8. Effects of temperature on the activity of α- amylase.
9. Estimation of cholesterol in Blood.
10. Estimation of Glucose in blood and urine.
11. Estimation of Urea in blood.
12. Estimation of ketone bodies in blood.
13. Qualitative analysis of inorganic as well as organic constituents of Urine.

Total Hours:

2. Nelson D.L. and Cox M.M., Lehninger Principles of Biochemistry, Macmillan Worth Publishers.
3. Stryer L., Biochemistry, W.H., Freeman and Company, San Francisco.
4. Harrow B. and Mazur A., Text book of Biochemistry, W.B. Saunders Co., Philadephia.
5. Harpers Review of Biochemistry, Lange Medical Publication.
6. Jayaraman J., Laboratory Manual in Biochemistry, Wiley Eastern Limited.
7. Plummer David J., An Introduction to Practical Biochemistry, McGraw Hill, New Delhi.
8. Singh S.P., Practical Manual to Biochemistry, CBS Publisher, New Delhi.

OUTCOMES:

The students are acquainted with the

- Mechanism of enzymes and coenzymes.
- Carbohydrate metabolism
- Lipid metabolism and biological oxidation.
- Biochemistry of amino acids
- Biochemistry of proteins
- Different types of textile mat

CHCY007 PHARMACEUTICAL TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student learn about the

- pre formulation studies
- additives used in formulations
- evaluation of drug and packaging
- cosmetic preparations

MODULE I PRE-FORMULATION STUDIES 09

Study of physical properties of drug like physical form, particle size, shape, density, wetting, dielectric constant, solubility, dissolution and organoleptic properties and their effect on formulation, stability and bioavailability – Drug delivery types and methods including nano-delivery system.

MODULE II LIQUID DOSAGE FORMS 09

Introduction, types of additives used in formulations, vehicles, stabilizers, preservatives, suspending agents, emulsifying agents, solubilizers, colors, flavours and others, manufacturing packaging and evaluation of clear liquids, suspensions and emulsions.

MODULE III SEMISOLID DOSAGE FORMS 09

Definitions, types, mechanisms of drug penetration, factors influencing penetration, semisolid bases and their selection, general formulation of semisolids, clear gels and manufacturing procedure, evaluation and packaging.

MODULE IV SUPPOSITORIES 09

Ideal requirements, bases, manufacturing procedure, packaging and evaluation.
Pharmaceutical Aerosols: Definition, propellants, general formulation, manufacturing and packaging methods, pharmaceutical applications.

MODULE V COSMETOLOGY AND COSMETIC PREPARATIONS 09

Structure of skin, formulation of cold cream, vanishing cream, cleansing cream, all purpose cream, protective cream, antiperspirants, deodorant, face powder - Hair structure, Shampoos, Conditioner, Shaving and after shaving products, Dentrifice and Mouthwash, Lipstick, Nail lacquer.

Total Hours: 45

REFERENCES:

1. Remington's Pharmaceutical Sciences, Volume I and Volume II, Mack Publishing Co., USA.
2. Cooper J.W., and Gunn G., Tutorial Pharmacy, Petman Books Ltd., London.
3. Lachman L., Lieberman H.A, Kanig J.L, Theory and Practice of Industrial Pharmacy, Lea and Febiger, Philadelphia, USA.
4. Ansel H.C., Introduction to Pharmaceutical Dosage Forms, Lea and Febiger, Philadelphia, USA.
5. R.L. Juliano, Drug Delivery Systems, Oxford University Press, Oxford.
6. Harrys Cosmetology.
7. Balsam and Sagarin, Cosmetics: Science and Technology.
8. Thomssen E.G., Modern Cosmetics, Universal Publishing Corporation.
9. Mittal B.M. and Saha R.N., A Handbook of Cosmetics, Vallabh Prakashan.

OUTCOMES:

The students will be familiar with the

- pre formulation studies
- additives used in formulations
- evaluation of drug and packaging
- preparations of cosmetic

CHCY007 GMP, QUALITY ASSURANCE and VALIDATION

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student learn about the

- good manufacturing practices
- documentation, quality management and control
- Validation methods
- IPQC problems
- Sampling and operating characteristics curves

MODULE I GOOD MANUFACTURING PRACTICE 09

Requirements of GMP, CGMP1, GLP, USFDA, WHO guidelines and ISO 9000 series.

MODULE II DOCUMENTATION AND 09

Documentation - Protocols, Forms and maintenance of records in Pharmaceutical industry - Preparation of documents for new drug approval and export registration.

MODULE III QUALITY ASSURANCE 09

Basic concept of C, Quality assurance systems, Sources and control of quality variation - raw materials, containers, closures, personnel, environment etc.

MODULE IV VALIDATION 09

Concepts in validation, validation of manufacturing and analytical equipment, Process validation in manufacturing dosage formulations, applications of process validation.

MODULE V QUALITY CONTROL 09

In process quality control tests, IPQC problems in pharmaceutical industries - Sampling plans, Sampling and operating characteristics curves.

Total Hours:

REFERENCES:

1. Willing, Tuckerman and Hitchings, Good Manufacturing Practices for Pharmaceuticals.
2. OPPI, Quality Assurance.
3. Loftus and Nash, Pharmaceutical Process Validation.
4. Florey, Analytical Profile of Drugs (All volumes).
5. Indian Pharmacopoeia.
6. MODULEed States Pharmacopoeia.

7. British Pharmacopoeia.
8. Garfield, Quality Assurance Principles for Analytical Laboratories.

OUTCOMES:

The student will be able to demonstrate the

- good manufacturing practices
- documentation, quality management and control
- Validation methods
- IPQC problems
- Sampling and operating characteristics curves

CHCY008 MEDICINAL AND PHARMACEUTICAL CHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student to learn

- The basic factors governing drug design
- The synthesis and drug action of anti-malarial, anti-bacterial and anti-tuberculosis drugs, etc.

MODULE I INTRODUCTION TO DRUG DESIGN 09

Factors governing drug design – advantages – types of drug – literature survey for preparation of drugs – characterization and structural elucidation of drugs using different spectral methods.

MODULE II ANALGESICS, ANTIHISTAMINES AND ANTIMALARIALS 09

Analgesics – narcotic analgesics – morphine analogues – synthesis of codeine – synthetic narcotic analgesics –– antipyretic analgeics – salicyclic acid analogues –– para amino phenol derivatives – Antihistamines-structure, synthesis, activity promethazine, chlorpheneraminemaleate - Antimalerials – classification- structure, synthesis, drug action - quinine-4-amino and 8-amino quinolines – chloroquine.

MODULE III ANTIBIOTICS AND ANTIBACTERIALS 09

Synthesis and mode of action -Antibiotics – pencillin, D-pencillamine, semisythetic pencillin – chloramphenicol streptomycin, tetracyclines, cephalosporins,-Antibacterials – norfloxacin, ciprofloxacin, clotrimazole,

MODULE IV ANTIHYPERTENSIVE, Anti-Infectives and Antivirals 09

Synthesis and drug action - Antihypertensive drugs-methyldopa - antiseptics and disinfectants: benzalkonium chloride - anthelmintics: mebendazole - antivirals: amantadine, acyclovir.

MODULE V STEROIDS AND RELATED DRUGS 09

Introduction, classification, nomenclature and stereochemistry - (A) Androgens - testosterone (B) Estrogens and progestational agents – progesterone, estradiol, (C) Adrenocorticoids – prednisolone, dexamethasone- prostaglandins: misoprostol,

Total Hours: 45

5. J. B. Stenlake, The Chemical Basis of Drug Action Volume 2, Viva /b S Publication, 1979.

OUTCOMES:

The student will be familiar with

- The drug design,
- The functions of various drugs
- the drug action and uses

MATERIALS AND TECHNOLOGY

CHCY009	POLYMER CHEMISTRY	L	T	P	C
		3	0	2	4

OBJECTIVES:

To make the student conversant with the

- basic concepts of polymers, molecular weight and its distribution
- kinetics and mechanism of Addition, Coordination and Condensation polymerization
- various polymerization techniques
- various testing methods for mechanical, thermal and electrical properties
- preparation, properties and applications of polymeric materials.

MODULE I BASIC CONCEPTS OF POLYMERS 09

Basic concepts of polymers – classification of polymers: source, structure, processing behavior, composition and structure, mechanism, application – copolymer: types – terpolymer: Definition - nomenclature of polymers - tacticity – crystalline and amorphous polymers - thermal transitions – Molecular weight of polymer – number, weight and viscosity average molecular weights – molecular weight distribution (problems)

MODULE II KINETICS AND MECHANISM OF POLYMERISATION REACTIONS 09

Kinetics and mechanism of addition polymerization: free radical, cationic and anionic polymerizations – Trommsdroff effect – living polymers – Ziegler-Natta catalysts – coordination polymerization – Kinetics of polycondensation reactions – copolymer equation-Reactivity ratio and copolymerization behavior.

MODULE III POLYMERISATION TECHNIQUES 09

Polymerisation techniques – homogenous and heterogeneous polymerization – bulk, solution, suspension and emulsion polymerization – merits and demerits – interfacial, and melt polycondensation

MODULE IV POLYMER TESTING AND ANALYSIS 09

Mechanical properties : tensile strength, Flexural strength, Compressive strength, Izod impact, Rockwell hardness – thermal properties : TGA and DSC - electrical properties: dielectric constant, dissipation factor, and dielectric strength – molecular weight: determination by GPC and viscometry.

MODULE V POLYMERIC MATERIALS 09

Preparation, properties and applications – thermoplastics : LDPE, HDPE, PVC, PTFE, PET and Nylons – thermosets : phenolic resins, epoxy resins, unsaturated polyesters and polyurethanes – polymer blends and alloys – reinforced plastics.

Total Hours:

REFERENCES:

1. Billmeyer F.N., Text Book of Polymer Science, 3rd Edition, John Wiley and Sons, New York, 1994.
2. George Odian, Principles of Polymerisation, 3rd Edition, McGraw Hill Book Company, New York, 1991.

4. P. J. Flory., Principles of Polymer Chemistry, Cornell Press (recent edition).
5. Vishu shah., Handbook of plastics testing and failure analysis, John Wiley and Sons, New Jersey, 2007.
6. I.M. Ward and D.W. Hadley, An Introduction to the Mechanical Properties of Solid Polymers, John Wiley and Sons, Chichester, England, 1993.
7. C.C. Ku and R. Liepins, Electrical Properties of Polymers, Hanser Publications, Munich, 1987.
8. Jacqueline I., Kroschwitz, Concise Encyclopedia of Polymer Science and Engineering, John Wiley and Sons, New York, 1998.
9. Michael L. Berins, Plastics Engineering Hand Book, 5th Edition, Chapman and Hall, New York, 1991.
10. Gowarikar V.R., Viswanathan N.V and Jayadev Sreedhar, Polymer Science, Wiley Eastern Limited, Madras, 1981.

OUTCOMES:

The student will be able to

- classify various polymers, calculate molecular weight of polymers, explain the theory of crystallinity and thermal transitions.
- derive the rate equations and explain the mechanism of polymerization reactions
- compare and contrast the various polymerization techniques with its merits and demerits.
- analyze and test the polymers for the mechanical, thermal and electrical properties
- summarize the preparation, properties and applications of different polymeric materials

CHCY010 NANOTECHNOLOGY

L	T	P	C
3	0	2	4

OBJECTIVES:

To make the students conversant with the

- definition and significance of nanoscale materials and their properties
- different methods of preparation of nanomaterials
- various tools for characterizing nanomaterials
- applications and impacts of nanotechnology

MODULE I INTRODUCTION OF NANOMATERIALS 12

Definition of nano - significance of the nanoscale - nanomaterials - Classification - nanoscale in one dimension -thin films, layers and surfaces - nanoscale in two dimensions - carbon nanotubes- inorganic nanotubes, nanowires, biopolymers- nanoscale in three dimensions – nanoparticles, fullerenes, carbon 60, dendrimers, quantum dots; Nanomachines and Devices. Properties of nanomaterials: Size and shape dependent optical (quantum confinement in semiconductors), electronic, emission, transport, photonic, refractive index, dielectric, mechanical, magnetic, catalytic and photocatalytic, non-linear optical properties.

MODULE II PREPARATION OF NANOMATERIALS 15

Methods of preparation of nanomaterials, top-down approach and bottom-up: Mechanical milling, laser ablation, electrodeposition, sputtering and microwave plasma synthesis, inert gas condensation - Chemical reduction and oxidation, hydrothermal, micelles, sol-gel processes, photolysis, radiolysis and metallo-organic chemical vapour deposition.

MODULE III CHARACTERIZATION TECHNIQUES 12

Structural Characterization: Atomic Force Microscopy (AFM): Contact and Tapping Mode – Scanning Electron microscopy (SEM), Transmission electron microscopy (TEM), and Powder XRD. Chemical Characterization: Optical spectroscopy, X-ray Photoelectron spectroscopy (XPS). Physical properties: Melting point, Lattice constant. Electrical and magnetic characterization: Mechanical properties- Nanoindentation and nanotribology.
Introduction to advanced Scanning Probe Microscopy - Electrostatic Force Microscopy (EFM) - Magnetic Force Microscopy (MFM) - Scanning Thermal Microscopy (SThM), Scanning Tunnelling Mode (STM), Piezoelectric force microscopy (PFM), Scanning Capacitance Microscopy (SCM).

MODULE IV APPLICATIONS AND ENVIRONMENTAL IMPACTS 11

Current applications - sunscreens and cosmetic, composites, clays, coatings and surfaces, tougher and harder cutting tools. Short-term Applications – Paints, remediation,

fuel cells, displays, batteries, fuel additives, catalysts. Long - term Applications - lubricants, magnetic materials, medical implants machinable ceramics, water purification, military battle suits. Biomedical applications – Photodynamic therapy in targeted drugs, biosensors, quantum dot technology in cancer treatment, nanoparticles as a drug carrier. Environmental Impacts: toxicological health effects, relevant parameters in nanoparticle toxicology, integrated concept of risk assessment of nanoparticles

MODULE V CARBON NANOSTRUCTURES 15

History – Carbon nanotubes, carbon clusters, production methods - arc method, laser method, chemical vapour deposition, purification methods- gas phase, liquid phase, intercalation, - dispersion - fuctionalization -chopping, oxidation, and “wrapping” of CNTs. Properties of carbon nanotubes: Electrical conductivity, strength and elasticity, thermal conductivity and expansion, field emission, high aspect ratio, highly absorbent.

Applications of carbon nanostructures - field emission, conductive or reinforced plastics, energy storage, conductive adhesives and connectors, molecular electronics, thermal materials, structural composites, fibers and fabrics, catalyst support, CNT ceramics, biomedical applications, air, water and gas filtration.

Total Hours: 60

REFERENCES:

2. Mark Ratner and Daniel Ratner, Nano Technology, Pearson Education, New Delhi, 2003.
3. Tlusty J, Machining Processes and Equipment, 2nd Edition, Prentice Hall, 2000. Viswanathan B., Nano Materials
4. Nanobiotechnology by Subbiah balagi, MJP Publishers, India (2010)

OUTCOMES:

The students will be able to

- differentiate the nanomaterials based on their dimensions
- acquire knowledge of various synthetic methods and characterization techniques
- select the appropriate nanomaterials for specific applications

CHCY011	ELECTRICAL PROPERTIES OF POLYMERIC MATERIALS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To make the student to learn

- The blend morphology
- Effect of structural features
- Resistivity, thermal behavior and electrical behavior of polymeric materials

MODULE I POLYMER BLENDS 09

Introduction – equilibrium phase – polymer behaviour – effect of polymer structure, polymer – polymer interaction – special structural effects – blend morphology – chemical reactions – properties – miscible blends – immiscible blends – toughened polymers - Commercial blends – applications.

MODULE II RESISTIVITY 09

General features – polymer as wide band gap insulators – theories –trapping – carrier injection – effects of structural features – effects of additives.

MODULE III DIELECTRIC BEHAVIOUR 09

Mechanism of laws – relaxation – non-polar polymers – amorphous dipolar polymers – crystalline dipolar polymers – effects of structures, additives and impurities – testing of degradation in polymers.

MODULE IV THERMAL PROPERTIES 09

Specification of thermal evaluation and classification of electrical insulation – determination of resistivity – relating resistance of solid insulating materials – relating resistance of insulating materials to breakdown by surface discharges – artificial pollution tests of HV insulator – AC, DC.

MODULE V BREAKDOWN TESTING ANALYSIS 09

Breakdown test methods – statistical analysis – graphical techniques – numerical techniques.

Total Hours:

REFERENCES:

5. L.A. Dissado and J.C. Fothergil, Electrical Degradation and Breakdown in Polymers, Peter Perenguins Ltd., London, 1992.

OUTCOMES:

The student will be familiar with the electrical behavior of polymeric materials

CHCY012 POLYMER STRUCTURE AND PROPERTY RELATIONSHIP

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student to learn the

- structure of polymers
- various properties of polymers

MODULE I STRUCTURE OF POLYMERS 09

Linear, branched, cross linked, and network polymers - homochain and hetero atomic chain polymers - Copolymers - Linear and cyclic arrangement - Prediction of polymer properties, group contribution techniques, topological techniques - Volumetric properties - molar volume, density, vanderWaals volume - Coefficient of linear thermal expansion and volumetric thermal expansion - Pressure volume temperature (PVT) relationship.

MODULE II MECHANICAL PROPERTIES 09

Stress-strain properties of polymers - Effect of polymer structure on modulus of elasticity, tensile strength, flexural strength, impact strength, yield strength, fracture toughness - Crazing in glassy polymers - Ductile brittle transition - Effect of additives on mechanical properties of polymers - Creep, stress relaxation and fatigue.

MODULE III THERMODYNAMIC AND TRANSITION PROPERTIES 09

Transition temperature in polymers, glass transition (Tg), melt transition (Tm), relationship between Tg and Tm - other transitions like β-transitions, upper and lower glass transition temperatures - Prediction of Tg and Tm of polymers by group contributions. Calorimetric properties - Heat capacity, specific heat, latent heat of crystallization and fusion, enthalpy and entropy - Calculation of heat capacities of polymers.

MODULE IV ELECTRICAL AND OPTICAL PROPERTIES 09

Effect of polymer structure on dielectric constant, power factor, dissipation factor, and loss factor - effect of frequency of voltage and temperature on dielectric properties - Prediction of molar polarization and effective dipole moment - Effect of …additives on electrical properties of polymers - Optical properties - Effect of polymer structure on optical properties - clarity, transparency, haze, transmittance, reflectance, and gloss - Prediction of refractive indices of polymers by group contributions.

MODULE V CHEMICAL PROPERTIES 09

Cohesive energy, cohesive energy density, solubility parameter, determination of solubility parameter of polymers - Prediction of solubility parameter - Effect of polymer structure on solubility in solvents and oils - Influence of structure in prediction of flame

retardancy, water repellency - Chemical resistance of polymers - Polymer toxicity.

10. J. Mort and G. Pfister, (Editor), Electronic Properties of Polymers, Wiley Interscience, New York, 1982.

OUTCOMES:

At the end of the course, the students will be familiar with the

- structure of polymers
- effect of polymer structure on the properties such as mechanical, electrical and optical properties

CHCY013 CONCEPTS AND TECHNIQUES IN CATALYSIS

L	T	P	C
3	0	0	3

OBJECTIVES:

The objectives of this course is to

- impart the basic concepts involved in catalytic processes.
- learn the different preparation methods of catalysts such as by precipitation, impregnation, mixing method, ion-exchange, etc.
- develop a knowledge in the physic-chemical and spectral characterization methods for catalytic materials.
- evaluate the catalysts using different catalytic reactors
- use different types catalysts for various organic reactions in detail.

MODULE I CONCEPTS OF CATALYSIS 09

acid-base catalysis – catalysis by transition metal ions and their complexes – supported transition metal complexes as catalysts – catalysis by enzymes – phase transfer catalysis - photocatalysis – adsorption – chemisorption on metals, metal oxides and semiconductors - kinetics of unimolecular and bimolecular surface reactions - Contact time - WHSV - time on stream - Catalyst deactivation and regeneration

MODULE II HETEROGENEOUS CATALYSTS AND THEIR SYNTHESIS 09

Metals, metal oxides, mixed metal oxides, supported metals, spinels, perovskites, super acids, hydrotalcites, zeolites and zeotypes (small, medium, large), shape selective catalysts, mesoporous materials (SBA, MCM, KIT, AlPOs)

Hydrothermal synthesis, sol-gel process, impregnation method, ion-exchange method - MODULE operations in catalyst manufacture - drying, calcination, spray drying

MODULE III CATALYSTS CHARACTERIZATION 09

Diffuse Reflectance Infrared Fourier Transform Spectroscopy (DRIFT), Diffuse Reflectance UV-Visible Spectroscopy (DRSUV), X-ray Powder Diffraction (XRD), Brunauer-Emmett-Teller (BET) Surface Area Analysis, Barrett-Joyner-Halenda (BJH) Pore Size and Volume AnalysisMagic Angle Spinning Nuclear Magnetic Resonance (MAS NMR) (^{209}Si, ^{27}Al, ^{31}P), Auger Electron Spectroscopy (AES), Scanning Electron Microscopy and Energy Dispersive Spectroscopy (SEM/EDAX), Electron Probe Micro-Analyzer (EPMA), Inductively Coupled Plasma Atomic Emission Spectroscopy (ICP-AES), X-ray Photoelectron Spectroscopy (XPS), Extended X-ray Absorption Fine Structure Spectroscopy (EXAFS), Transmission Electron Microscopy (TEM), Electron Spin Resonance Spectroscopy (ESR).

MODULE IV CATALYTIC REACTORS 09

Integral and fixed bed reactors - differential reactors - stirred flow reactors - microcatalytic reactors of pulse type - static reactors – high pressure reactors - reaction monitoring by GC and GC-MS

MODULE V CATALYTIC REACTIONS 09

Catalytic asymmetric synthesis - C-C, C-H bond formation, oxidation - acid catalysed isomerisation - heterogeneous hydrogenation, dehydrogenation, cyclo dehydrogenation, oxidation - Homogeneous catalysis by transition metal complexes - metathesis of olefins - synthetic fuels

Total Hours: 45

13. Michel Che and Jacques C. Védrine (Editors), Characterization of Solid Materials and Heterogeneous Catalysts: From Structure to Surface Reactivity, John Wiley and Sons, 2012.

OUTCOMES:

At the end of the course, the students will be able to

- Distinguish different types of catalyzed and uncatalysed reactions, homogeneous and heterogeneous catalyzed reactions
- Synthesize the catalysts by different methods
- Adopt the suitable characterization techniques and interpret the data
- Carry out reactions with different type of reactors
- Perform different reactions with the prepared catalysts and choose a catalyst for a particular reaction

CHCY014 POLYMER TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student to learn about

- Classification of polymeric materials.
- the process of elastomers
- different types of moulding
- characterization of polymers
- effect of structure on polymer properties

MODULE I POLYMERIC MATERIALS 09

Introduction – classification – thermoplastics – cellulose derivatives – LDPE, HDPE, PVC, PMMA, PTFE, PET and Nylons – thermosetting resins – phenolic resins, epoxy resins, silicones and polyurethanes – polymer blends and alloys – reinforced plastics.

MODULE II ELASTOMERS 09

Natural rubber – processing – vulcanization – synthetic rubber – SBR, neoprene, butyl and thiocol rubbers – thermoplastic elastomers – high performance polymers – polythers – PEEK, polysulphones and polyimides.

MODULE III MOULDING TECHNIQUES 09

Moulding constituents – functions – moulding techniques – compression – injection – extrusion – blow moulding – thermoforming – Vacuum forming – pultrusion – casting – calendaring – RIM – lamination.

MODULE IV CHARACTERISATION AND TESTING 09

Characterisation of polymers by IR and NMR – Thermal properties by TGA and DSC – Testing tensile strength, Izod impact, Compressive strength, Rockwell hardness, Vicot softening point – Test for electrical resistance, dielectric constant, dissipation factor, arc resistance and dielectric strength – water absorption.

MODULE V POLYMER PROPERTIES 09

Effect of structure on mechanical, chemical, thermal, electrical and optical properties.

Total Hours: 45

REFERENCES:

1. Michael L. Berins, Plastics Engineering Hand Book, 5th Edition, Chapman and Hall, New York, 1991.

2. Jacqueline I., Kroschwitz, Concise Encyclopedia of Polymer Science and Engineering, John Wiley and Sons, New York, 1998.
3. Iyson R.W., Specialty Polymers, Blackie Academic and Professional, London, 1992.
4. Maurice Morton, Rubber Technology, van Nostrand, Reinhold, New York, 1987.

OUTCOMES:

The students will be familiar with the

- classification of polymeric materials.
- the process of elastomers
- different types of moulding
- characterization of polymers
- effect of structure on polymer rproperties

CHCY015 INORGANIC CHEMICAL TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student to learn about the

- fuel and industrial gases
- chemicals used in fertilizers and glass industries
- principles of metallurgic processes

MODULE I FUEL AND INDUSTRIAL GASES 09

Fuel and industrial gases – production and uses of producer gas, water gas, coke oven gas, acetylene, natural gas and LPG: Liquefaction of gases – noble gases, carbon dioxide, hydrogen, oxygen, nitrogen.

MODULE II HEAVY CHEMICALS 09

Chloralkali industry – soda ash, caustic soda and chlorine. Chemicals from sea – sodium chrloride, magnesium chloride and bromine.

MODULE III ACIDS AND FERTILIZERS 09

Sulphur and sulphuric acid – nitric acid – ammonia – nitrogenous fertilizers – phosphorous – phosphoric acid – phosphatic fertilizers – potassic fertilizers.

MODULE IV SILICATE INDUSTRIES 09

Silicate industries – refractories – abrasives – ceramics – glass – cement, lime and gypsum.

MODULE VPRINCIPLES OF METALLURGICAL PROCESSES 09

Principles of Metallurgical Processes – ore benefication- pyrometallurgy, hydrometallurgy, powder metallurgy and electrometallurgy - Explosives and propellants – nuclear materials.

Total Hours: 45

REFERENCES:

1. B. Norris Shreve and Joseph A. Brink, Chemical Process Industries, McGraw Hill, Kogakusha Ltd., 1991.
2. M. Gopala Rao and Marshall Sitty (Editors), Dryden's Outlines of Chemical Technology, Affiliated East West Press Pvt. Ltd., 1992.
3. B.K. Sharma, Industrial Chemistry, GOEL Publishing House, 1991.
4. James A. Kent (Editors), Riegel's Industry Chemistry, Asia Publishing House, 1989.

OUTCOMES:

The student will be familiar with the

- use of caustic soda, sodium chloride
- N,P and K fertilizers
- Ceramics, glass, etc.
- Powder and extractive metallurgy

CHCY016 ORGANIC CHEMICAL TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student to learn about the

- industrial organic synthesis
- pharmaceuticals, pesticides and dyes

MODULE I BASIC PRINCIPLES OF CHEMICAL TECHNOLOGY 09

Classification of chemical technological processes – chemical equilibrium in technological processes – rates of technological processes – designing and modeling chemical technological processes and reactors.

MODULE II INDUSTRIAL ORGANIC SYNTHESIS 09

Raw materials – manufacture of methyl alcohol, ethyl alcohol, ethylene, 1,3-butadiene, acetylene, ethyl benzene, cumene, linear alkyl benzenes and alkyl phenols.

MODULE III SYNTHETIC ORGANIC CHEMICALS 09

Chemicals derived from ethylene – polyethylene, ethylene oxide, ethylene dichloride chlorinated hydrocarbons – chemicals derived from propylene – isopropyl alcohol, polypropylene, acrylontrile, propylene oxide – oxidation of butane – esters – maleic anhydride – acetone – ethyl methyl ketone – disphenol – DDT – aniline.

MODULE IV PHARMACEUTICALS AND PESTICIDES 09

Introduction – manufacture – aspirin, Phenobarbital, penicillin, malathion, parathion and naled.

MODULE V DYES 09

Classification – raw materials – intermediates – manufacture – azodyes – triphenylmethane dyes – xanthene dyes. Indigoid and thioindigoid dyes, sulphur dyes, phthalcoanines – optical brighteners.

Total Hours: 45

REFERENCES:

1. P.H. Groggins, MODULE Processes in Organic Synthesis, McGraw Hill Book Co., Kogakusha, 1984.
2. Peter Wiseman, An Introduction to Industrial Organic Chemistry, 2nd Edition, Applied Science Publishers Ltd., London, 1979.
3. J.A. Kent, Reigel's Hand Book of Industrial Chemistry, 7th Edition, vanNostrand Reinhold Co., New York, 1974.

OUTCOMES:

The student will be familiar with the

- industrial organic processes with enes, alcohols, esters, ketones, etc.
- Manufacture of aspirin, penicillin xanthenes dyes, etc.

CHCY017 CHLOR-ALKALI TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student to learn about the

- Electrode materials
- Membrane cells
- Process control and instrumentation

MODULE I ELECTODES 09

Anodes, cathodes and separators for chlor-alkali production: graphite, metal anodes, steel cathodes, coated cathodes, asbestos diaphragms, Improved diaphragms, cation exchange membranes - different types - preparation-characteristics.

MODULE II DIAPHRAGM CELL PROCESS 09

Diaphragm cell process, different cell designs, deposition of diaphragm, mercury cell process - different cell designs, reasons for hydrogen evolution in the primary cells, denuder vertical and horizontal types, design aspects.

MODULE III MEMBRANE CELL PROCESS 09

Membrane cell process, different designs of membrane cell, monopolar and bipolar cells - conversion of mercury and diaphragm cells to membrane cells - factors affecting the performance of the membrane cells.

MODULE IV MODULE operations 09

MODULE operations in chlor-alkali industry, salt washing, saturation - brine dechlorination - primary brine purification - secondary brine purification, caustic concentration - separation of salt from diaphragm cell liquor, handling of hydrogen, chlorine and caustic, chlorine liquefaction.

MODULE V ENERGY CONSERVATION IN CHLOR-ALKALI INDUSTRY 09

Energy conservation in chlor-alkali industry, chlorine utilization - materials of construction - electrode protection devices - environmental pollution and its control - analytical techniques - process control and instrumentation - safety aspects.

Total Hours: 45

REFERENCES:

1. Ullmann’s Encyclopedia of Industrial Chemistry, Volume 6, 1986.
2. Krik and Othmer, Encyclopedia of Chemical Technology, 4th Edition, 1991.

3. N.M. Prout and J.S. Moorhouse, Modern Chlor-Alkali Technology, Volume IV, Elsevier Applied Science, London, 1990.
4. T. Wellington, Modern Chlor-Alkali Technology, Volume V, Elsevier Science, Essex, 1992.

OUTCOMES:

The students will be familiar with the

- anode, cathode and membrane cells
- MODULE operations in chlor-alakli industry and instrumentation

CHCY018 MODULE OPERATIONS AND MODULE PROCESSES

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student conversant with

- Chemical engineering concepts
- Fouriers law and HETP concepts
- Laws of crushing and types of Crushers

MODULE I BASIC CONCEPTS 09

Stoichiometric principle – material and energy balances - Combustion, Theoretical air for combustion, Flue gas analysis - water treatment - environmental protection.

MODULE II HEAT AND MASS TRANSFER 09

Modes of Heat Transfer - Fourier's law – simple numerical problems on conduction – natural and forced convection – heat transfer equipment – Drying, Distillation – vapour-liquid equilibria – distillation methods – continuous rectification of binary systems.

MODULE III MASS TRANSFER OPERATIONS 09

Adsorption and adsorption principle – equilibrium relationships – methods of calculation – various types of equipment - Extraction and Leaching – liquid extraction – ternary diagram – selection of solvent and equipment – method of calculation of co-current and counter-current extraction operations - Crystallization – types of crystallization equipment – material and energy balances.

MODULE IV MECHANICAL OPERATIONS 09

Laws of crushing – closed and open circuit grinding – various types of crushers and grinders – settling, floatation and filtration concepts.

MODULE V MODULE PROCESSES 09

Nitration, sulphonation, halogenation, esterification, amination, saponification and hydrogenation – role of the above MODULE processes in such industries as petroleum, drugs, pharmaceuticals and organic synthesis.

Total Hours: 45

REFERENCES:

1. Groggins P.H., MODULE Processes in Organic Synthesis, McGraw Hill Book Co., Kogakusha, 5th Edition, 2007.
2. McCabe W.L., Smith J.C. and Harriot P., MODULE Operations of Chemical

Engineering, 6th Edition, McGraw Hill Book Co. 2001.
3. Perry J.H., Handbook of Chemical Engineers, McGraw Hill Book Co., 2006.
4. Badger W.I. and Banchero I.T., Introduction to Chemical Engineering, McGraw Hill Book Co. Inc., Kogakusha, 1988.

OUTCOMES:

The students will be familiar with

- Bernoullis equation & its applications and
- demonstrate the role of MODULE processes in various industries.

ENERGY, WATER AND ENVIRONMENT

CHCY019	WATER AND WASTEWATER TREATMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

To make the student to learn about the

- Quality standard for drinking water
- Industrial water treatment methods
- Waste Water analysis and treatment
- Adsorption and oxidation process

MODULE I REQUIREMENTS OF WATER AND PRELIMINARY TREATMENT 09

Requirements of water – quality standards for drinking water – object of water treatment – conventional treatment – turbidity removal – cause of turbidity – coagulation – common coagulants – theory of coagulation – mixing basins – flocculation – principle and design of flocculators – sedimentation – settling tanks – settling velocity – surface loading rate – efficiency of settling tanks – sludge removal mechanism.

MODULE II INDUSTRIAL WATER TREATMENT 09

Filtration – size and shape characteristics of filtering media – sand filters – hydraulics of filtration – design considerations – radial, upflow, high rate and multimedia filters – pressure filter - Water softening – lime soda, zeolite and demineralization processes – industrial water treatment for boilers.

MODULE III TREATMENT METHODS 09

Taste and odour control – absorption – activated carbon treatment – removal of colour – iron and manganese removal – aeration, oxidation, ion exchange and other methods – effects of fluorides – fluoridation and defluoridation – desalination – corrosion prevention and control – factors influencing corrosion – Langelier index – corrosion control measures.

MODULE IV WASTEWATER TREATMENT 09

Wastewater treatment – pre and primary treatment – equalization neutralization – screening and grid removal – sedimentation – oil separation gas stripping of volatile organics – biological oxidation – lagoons and stabilization basins – aerated lagoons – activated sludge process – trickling filtration – anaerobic decomposition.

MODULE V ADSORPTION AND OXIDATION PROCESSES 09

Chemical process – adsorption – theory of adsorption – ion exchange process – chemical

oxidation – advanced oxidation process – sludge handling and disposal – miscellaneous treatment processes.

Total Hours: 45

5. Howard S. Peavy, Donald R. Rowe and George Tchobanoglous, Environmental Engineering, McGraw Hill Inc., 1985.

OUTCOMES:

The student will be familiar with the

- quality requirement of water,
- analysis and treatment methods.

CHCY020	SOLID WASTE MANAGEMENT AND AIR POLLUTION	L	T	P	C
		3	0	0	3

OBJECTIVES:

To make the student to learn about the

- Solid waste collection and disposal
- Air quality and air pollution control
- Energy recovery

MODULE I SOLID WASTE 09

Solid waste – definition – characteristics – perspectives – types of solid waste – sources – properties of solid waste – physical and chemical composition – changes in composition – solid waste management – materials flow – reduction in raw materials usages and solid waste quantities – reuse of solid waste materials.

MODULE II SOLID WASTE COLLECTION AND DISPOSAL 09

Solid waste generation – on-site handling, storage and processing – collection of solid waste – transfer and transport – processing techniques – ultimate disposal.

MODULE III ENERGY RECOVERY 09

Energy recovery – processing techniques – materials recovery systems – recovery of biological conversion products and thermal conversion products – materials and energy recovery system.

MODULE IV AIR POLLUTION 09

Air pollution – global implication of air pollution – MODULEs of measurement – sources of pollutants – classification of pollutants – meteorology and natural purification processes – influence of meteorological phenomena on air quality – effects on man and vegetation - Effects of pollutants on human beings, animals, vegetation, buildings and materials.

MODULE V ANALYSIS AND CONTROL DEVICES 09

Sampling and analysis – particulars and gaseous pollutants – methods for monitoring air pollutants – air quality control devices for particulate and gaseous contaminants – major polluting industries – measures to check industrial pollution.

Total Hours: 45

REFERENCES:

1. Howard S. Revay, Donald R. Rowe and George Technobanoglous, Environmental Engineering, McGraw Hill Inc., 1985.

2. Gilbut M. Masters, Introduction to Environmental Engineering and Science, Prentice-Hall of India Pvt. Ltd., 1991.

5. M.N. Rao and H.V.N. Rao, Air Pollution, Tata McGraw Hill Publishing Company Ltd., 1994.

OUTCOMES:

The students will be familiar with the types of

- solid waste, collection and disposal
- air pollutants and control measures

CHCY021 INDUSTRIAL ELECTROCHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student to learn about the

- basics of electrolysis
- electrometallurgy
- metal refining
- electrosynthesis
- industrial electrochemical process

MODULE I CHLORALKALI INDUSTRY 09

General concepts of brine electrolysis – modern technological developments – chlorine cell technologies – mercury and diaphragm cell – membrane – cell.

MODULE II ELECTROMETALLURGY 09

Metal extraction and refining – electrowinning – aluminium extraction – manufacture of sodium, lithium and magnesium – hydrometallurgical processes – electrorefining – aqueous and molten salt electrorefining.

MODULE III METAL FINISHING 09

Pretreatment – conversion coatings – phosphating – types, methods, properties and influencing factors – evaluation and testing – applications – anodizing – principle and applications - electroplating – objectives, theory and method – electroplating of nickel – electroless plating – galvanizing – tinning.

MODULE IV ELECTROSYNTHESIS 09

Electrolytic preparation of inorganic compounds – fluorine – peracids and their salts – $KMnO_4$ – $K_2Cr_2O_7$ - Organic electrosynthesis – hydromerisation of acrylonitrile – Monsanto process – manufacture of ethylene glycol – electrolysis of organic compounds with the use of ion – exchange membranes.

MODULE V INDUSTRIAL ELECTROCHEMICAL PROCESSES 09

Water treatment and environmental protection – metal ion removal and metal recovery – electro-filtration of particulates from gases – electrodialysis – desalination – electroflotation.

Total Hours: 45

REFERENCES:

1. P.H. Rieger, Electrochemistry, Prentice Hall, Inc., New York, 1987.
2. D. Fletcher, Industrial Electrochemistry, Chapman and Hall, London, 1982.
3. J. Bockris and A.K.M. Reddy, Modern Electrochemistry, Volume II, Mac Donold, London, 1970.
4. C. Rajagopal and K. Vasu, Conversion Coatings, 1st Edition, Tata McGraw Hill, New Delhi, 2000.

OUTCOMES:

The student will be familiar with the

- electrowinning,
- electrorefining,
- electrochemical metal finishing,
- electrosynthesis
- electrodialysis.

CHCY022 CORROSION AND CORROSION CONTROL

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student conversant with the

- Causes and theories of corrosion
- Different types of corrosion
- Basic concepts to prevent corrosion and testing of corrosion by various diagrams.
- Factors influencing corrosion
- Control of corrosion using various methods.

MODULE I CORROSION 09

Causes and effects of corrosion – theories of corrosion – oxidation – direct atmospheric effect – electrochemical corrosion – hydrogen evolution – presence and absence of oxygen – corrosion by gaseous reduction.

MODULE II FORMS OF CORROSION 09

Galvanic bimetal corrosion – differential aeration corrosion – concentration cell corrosion – erosion corrosion – pitting corrosion – underground soil corrosion – intergranular corrosion – stress corrosion – seasonal cracking of alloys – caustic embrittlement – corrosion fatigue.

MODULE III CORROSION TESTING 09

Rate of corrosion – calculation of ΔG and other related thermodynamic parameters – potential measurement – electrochemical series – redox reactions – EMF measurement and corrosion current – anodic and cathodic behaviour of metals – passivity – testing of virgin metals – alloy – Pourbaix and Evans diagrams.

MODULE IV FACTORS INFLUENCING CORROSION 09

Nature of metal – over voltage – areas of anodic/cathodic – purity of metal – physical state of metals – passive nature of metal – solubility – volatility of corrosion products – corroding environment – influence of pH – ions – formations of cells – polarization of electrodes.

MODULE V CORROSION CONTROL 09

Design – selection of materials – pure metals and alloys – annealing – elimination of galvanic action – cathodic protection – sacrificial anodic protection – impressed current cathodic protection – modification of environment – deaeration – dehumidification – inhibitors – protective coatings – preparation of materials for coating – metallic and non-

metallic – organic coatings – special paints – varnish, enamel and lacquers.

Total Hours: 45

REFERENCES:

1. M.G. Fontana and N.G. Green, Corrosion Engineering, McGraw Hill Book Company, New York, 1984.
2. J.H. Brophy, R.M. Rose and J. Walf, The Structure and Properties of Materials, Wiley Inter Science Inc., New York, 1984.
3. B.T. Kelly, Irradiation Diamagneto Solids, Pergamon Press, New York, 1992.
4. D.R. Cross, Principles and Applications of Electrochemistry, Chapman and Hall, UK, 1988.

OUTCOMES:

Students will become familiar with the

- basic concepts of corrosion,
- factors which influence the corrosion
- mechanism of corrosion
- control of corrosion in real situation.

CHCY023 ELECTROCHEMICAL PROTECTION SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student to learn about the

- cathodic protection
- Sacrificial anode system
- Impressed current cathodic protection
- Design of Anodic and cathodic protection

MODULE I CATHODIC PROTECTION 09

Fundamental aspects, Definition of cathodic protection using Evans diagram and Pourbaix diagram, Derivation of protective potential for steel protective potentials of different metals. Criteria for cathodic protection, half cells used in cathodic protection potential measuring devices, rectifiers, zero current ammeter, automatic control MODULEs, holiday detectors.

MODULE II SACRIFICIAL ANODE SYSTEM 09

Principle of sacrificial anodes, required properties of galvanic anodes, anode life, current output. Advantages and limitations of sacrificial anodes-shape - and size of anodes, inserts, back-fills: Magnesium anode-electrochemical properties, current density, anode consumption, composition field of application. Aluminium anode - electrochemical properties, composition, field of application - Zinc alloy anodes - electrochemical properties, composition, field of application.

MODULE III IMPRESSED CURRENT CATHODIC PROTECTION 09

Principle of impressed current system - DC power sources, cables, advantages and limitation, required properties of impressed current anode. Consumable anodes, Scrap steel, Aluminum -properties consumption - field of application. Permanent anodes, Graphite, High Silicon Iron, magnetite, platinum and platinum alloys platinised titanium, platinised Niobium, platinised tantalum, Metal oxide anodes lead alloy anode, properties, composition, consumption, field of application. Back fills for impressed current anodes.

MODULE IV DESIGN OF CATHODIC PROTECTION 09

Cathodic protection to buried structures - Field data, soil resistivity, pH determination redox potential measurement, potential measurement, long line current survey, coating resistance, current drainage survey - Designing of sacrificial anode system, designing of impressed current system - Designing of CP to buried pipe line, ship hull and storage tank.

MODULE V DESIGN OF ANODIC PROTECTION 09

Anodic protection: Principles of anodic protection-description of electrochemical passivity, characteristics of anodic polarisation curves, the passive metal layer and mechanism of iron passivity, passivity breakdown. Equipments for anodic protection-characteristics of cathodes, platinum clad cathode, Hastelloy - cathodes, stainless steel cathode. Reference electrodes-calomel half cell, silver/silver chloride half cell, mercury/mercury sulphate half cell, metal oxide and metals as reference electrodes. Design, operation and maintenance of anodic protection system. Establishing electrochemical parameters, operation and maintenance applications.

Total Hours: 45

REFERENCES:

1. John H. Morgan, Cathodic Protection, New Age International, 2nd Edition, 1987.
2. Glen, L. Riggs, Anodic Protection, Kluwer Academic Publication, 1981.

OUTCOMES:

The students will be familiar with the

- cathodic protection
- Sacrificial anode system
- Impressed current cathodic protection
- Design of Anodic and cathodic protection

CHCY024 METAL COATING TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student to know about

- the different surface coating methods to preserve the metal surface
- different methods of coating
- electron beam coating

MODULE I SURFACE CHEMISTRY OF ALLOYS 09

Basic physical chemistry, surface chemistry, pretreatment principle - technology and control of electro deposition systems such as alloy plating, electrolysis, composites and non aqueous.

MODULE II METHODS OF COATING I 09

Hot dip coatings - principle, surface preparation, methods, applications, Diffusion coatings - Principle - Cementation - Cladding - case hardening - structures.

MODULE III Methods of coating II 09

Chemical vapor deposition - classification-techniques, metal organic type, plasma assisted, layer assisted, applications.

MODULE IV Methods of coating III 09

Sputtering techniques, methods, applications, plasma treatments, nitriding, carbonizing, boriding, titanizing methods and applications.

MODULE V LASER ALLOY AND ELECTRON BEAM COATING 09

Laser alloying - sources, variables, methods, applications, Electron beam coating - evaporation materials, methods, applications.

Total Hours: 45

REFERENCES:

1. T.S. Sudarsan, Surface Modification Technologies, Marcel Dekker Inc., 1989
2. D.R. Gabe, Principles of Metal Surfaces Treatment and Protection, Pergmon Press 1972.

OUTCOMES:

The student will be familiar with the

- pretreatment methods before coating
- Galvanizing and tinning and cladding
- Chemical vapour deposition
- Sputtering and laser alloying methods to preserve the metal surface.

CHCY025 PROTECTIVE COATINGS

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student to learn the

- organic and inorganic coatings to protect the surface.
- Electroplating
- Evaluation of paints
- Special paints
- Inorganic coating materials

MODULE I PIGMENTS AND RESINS 09

Pigments and additives used in paints - properties and functions - Inorganic, organic and metallic pigments - Extenders - Driers. Natural resins - chemistry and properties - shellac Rosin, rubber oils used for surface coatings - preparation and properties of synthetic resins - alkyds - phenolic - vinyls - amino resins - acrylics - epoxies - urethanes - silicones. Formulation of paints and rheological characteristics - Importance of pigment volume concentration, volume solids etc., water based paints, composition and properties - factors affecting water solubility.

MODULE II ELECTROPLATING 09

Surface preparation for paint applications, methods of surface preparation - methods of application of paints brushing - roller coating - compressed air spraying - airless spraying - electrostatic spraying - Electrodeposition of Paints and Electropolymerization Electrokinetic phenomena involved in electrodeposition fundamental principle, formulation of bath - anodic and cathodic deposition - advantages over conventional methods.

MODULE III TESTING AND EVALUATION OF PAINTS 09

Testing and evaluation of liquid paints and coatings - specific gravity - viscosity - time of grind - thickness - hardness, abrasion - flexibility - electrochemical and accelerated tests - field exposure tests - paint film defects - identification and remedial measures.

MODULE IV PAINTS FOR FUNCTIONAL APPLICATIONS 09

Paints for automobiles - aircrafts - marine paints (ships) chemical resistant coatings - Paints for pipe line, paints for various substrates other than metals - paints for concrete - wood - plastic - powder coatings - basic and application principle.

MODULE V INORGANIC COATINGS 09

Conversion coatings - phosphating, chromating of ferrous and non-ferrous metals - ceramic coatings.

Total Hours: 45

REFERENCES:

1. John Williams, Organic Coating Technology Payne, Volume I and II, Henry Fleming Sons Inc., New York London, 1961.
2. Gosta Wranglen, An Introduction to Corrosion and Protection Of Metals, Institute for Metals Kgdd, Stockholm, 1972.

4. H.W. Chatfield, (Editor)s, The Science of Surface Coating, Published: Ernest Benn Limited London, 1962.
5. Willibald Machu, Hand Book of Electropainting Technology, Electrochemical Publication Limited 1978.

OUTCOMES:

The students will be familiar with the

- Surface preparation methods
- Different types of paints, their constituents and fictions
- Constituents and functions of paints
- Inorganic coating methods

CHCY026 FUEL CELLS AND APPLICATIONS

L	T	P	C
3	0	0	3

OBJECTIVES:

The primary objective of the course is make the student conversant with

- classification and types of fuel cell
- outline components of fuel cells
- performance for fuel cells
- hydrogen storage and production
- the applications of fuel cells

MODULE I INTRODUCTION AND TYPES OF FUEL CELLS 09

Introduction - definition - history - difference between batteries and fuel cells - chemistry of fuel cells - classification of fuel cell (based on temperature and electrolyte) – types of fuel cell: polymer electrolyte membrane or proton exchange membrane fuel cell (PEMFC), direct methanol fuel cell (DMFC), alkaline fuel cell (AFC), phosphoric acid fuel cell (PAFC), molten carbonate fuel cell (MCFC) and solid oxide fuel cells (SOFC).

MODULE II FUEL CELL COMPONENTS 09

Membrane electrode assembly components : membranes and ionomers , fuel cell electrodes and gas diffusion layer, fuel cell electrocatalysts - bi-polar plates, humidifiers and cooling plates - fuel cell stack

MODULE III FUEL CELLS PERFORMANCE AND APPLICATIONS 09

Thermodynamics of fuel cells - electrochemical kinetics of fuel cells - Fuel cell efficiency - performance characteristics:, voltage efficiency - effect of voltage with current density for low and high temperature fuel cells- causes for voltage losses- introduction to fuel cycle analysis

MODULE IV PRODUCTION AND STORAGE OF HYDROGEN FUEL 09

Hydrogen as energy source -its merit as a fuel - hydrogen storage: compressed hydrogen, liquid hydrogen, metal hydrides, carbon fibers – hydrogen production : steam reforming, partial oxidation, coal gasification/thermal reforming, fuel cell technology based on bio-mass.

MODULE V FUEL CELL APPLICATIONS

Automotive applications – road map to market – automotive industry and the environment – distributed power generation – grid-connect applications – non-grid connect applications – residential power – portable power – combined heat and power

Total Hours: 45

REFERENCES:

1. R.H. Thring (Editor), Fuel Cells for Automotive Applications, Professional Engineering Publishing UK, 2004.
2. Gregor Hoogers (Editor), Fuel Cell Technology Handbook, SAE International, CRC Press, 2003.

5. Supramaniam Srinivasan, From Fundamentals to Applications, Springer, 2006.
6. Prospects for Hydrogen and Fuel Cells, International Energy Agency, OECD Publishing, 2005.

OUTCOMES:

The student will be able to

- classify fuel cells and elaborate the different types of fuel cells.
- explain the various components of the fuel cells
- calculate the open circuit voltage, efficiency and voltage losses, explain fuel cycle analysis and prove the laws of thermodynamics for fuel cell.
- describe the various methods for production and storage of hydrogen.
- list out the applications of fuel cells.

CHCY027 ADVANCED BATTERIES AND SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

The students will be trained about the

- different types of batteries
- design and operation of different types of batteries

MODULE I **09**

Advanced Ni-MH Batteries: Introduction to Ni-MH batteries, overview of Ni MH, Improvement in hydrogen storage alloys, improvement in Cathode materials, improvement in separator and cell design.

MODULE II **09**

Advanced Li-ion Batteries: Lithium-ion battery, The Principle carbonaceous anode materials, cathode material Electrolyte, separator.

MODULE III **09**

Advanced Cathode materials for Lithium Batteries: The intercalative reactions, relationships between performance requirements and materials characteristics D stability, capacity, voltage, energy, power, cycle life, shelf life.

MODULE IV **09**

Li/polymer Batteries: Polymer cathode for Li battery, Polymer Cathode in SPE, conductivity, ion transport mechanisms, plasticized electrolytes.

MODULE V **09**

Ultra capacitors: Double layer, Metal Oxide, conducting polymers energy and power densities, voltage limitation and self discharge.

Total Hours: 45

REFERENCES:

1. Energy Storage Systems for Electronics Edited by Tetsuya Osaka, Department of Applied Chemistry, Wasuda University, Tokyo, Japan and Madhav Dutta, Intel Corporation, Hillsboro, USA.
2. M. Barak, Electrochemical Power Sources, IEEE Series, Peter Peregrinus Ltd.
3. Lindar D., Handbook on Batteries and Fuel Cells, McGraw Book Co., New York, 1955.

OUTCOMES:

The student will have

- A thorough understanding about batteries and their components
- Understand the working up of the batteries

CHCY028 ELECTROCHEMICAL MATERIAL SCIENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

To make the student to learn about the

- Different types of semiconductors
- Preparation and properties of the semiconductors
- Application in photovoltaic cells

MODULE I SEMICONDUCTORS 09

Semiconductors, n-type and p-type semiconductors, conductivity of semiconductors, applications, of semiconductors, Photo conductivity, Photo conducting materials, electronic transitions in photoconductors, trapping and recombination, general mechanism of photoconductivity, life-time of majority carriers, preparation of CdS photoconductors by the sintering technique, ohmic contacts, fabrication of photo conductive cells and their applications.

MODULE II METHODS OF PREPARATION 09

Thin films of semiconductors, methods of preparation: vacuum evaporation, sputtering, molecular beam epitaxy, hot wall epitaxy, chemical bath deposition, spray pyrolysis, electrodeposition, liquid phase epitaxy, chemical vapor deposition, structural, electrical and optical characterization, mechanical properties of thin films, effect of grain boundaries.

MODULE III LUMINESCENCE 09

Luminescence, various types of luminescence (definitions only) model of luminescence in sulphide phosphors, applications, basic aspects of superconductivity, super conducting materials, high temperature, super conducting materials, method of preparation and applications.

MODULE IV PHOTOVOLTAICS 09

Basic of photovoltaics, homo and heterojunctions, preparation of single crystals and polycrystalline silicon solar cells, Metal-Insulator-Metal and semiconductors - Insulator-semiconductors solar cells, photovoltaic measurements - I-V characteristics, spectral response and capacitance measurements.

MODULE V SOLAR CELLS AND PEC CELLS 09

Preparation of CdS/CU_2S solar cells by screen printing technique and their characteristics, amorphous Si solar cells GaAs solar cells, Semiconductors electrolyte interface. Photoelectrochemical (PEC) cells for conversion of light energy to electrical

energy, PEC cells based on CdSe Si and GaAs and their output characteristics, Estimation of flat band potential from Mott-Schottky plots.

Total Hours: 45

8. W.E. Hatified and J.H. Miller (Editors), High Temperature Superconducting Materials, Marcel Dekker, New York 1988.

OUTCOMES:

The students will be familiar with

- p & n type semiconductors
- luminescence and photovoltaic properties of semiconductors
- application in solar cells.

CHCY029	ELECTROCHEMICAL ENERGY CONVERSION AND STORAGE	L	T	P	C
		3	0	0	3

OBJECTIVES:

To make the student to learn about the

- electrochemical cells and their types
- factors affecting battery performance
- application of batteries
- testing in fuel cells

MODULE I FUNDAMENTALS 09

EMF, Reversible cells, Reversible electrodes, relationship between electrical energy and energy content of a cell, force energy changes and EMF in cells, relationship between the energy changes accompanying a cell reaction and concentration of the reactants, effect of sulphuric acid concentration on EMF in the lead acid battery, effect of cell temperature in lead acid battery, derivation of number of electrons involved in a cell reactions, thermodynamic calculation of the capacity of a battery, calculation of the capacity of a battery, calculation of operating parameters for a lead acid battery from calorimetric measurements, calculations of energy density of cells, heating effects in batteries, spontaneous reaction in electrochemical cells, pressure development in sealed batteries.

MODULE II FACTORS AFFECTING BATTERY PERFORMANCE 09

Factors affecting battery capacity, voltage level current drain of discharge, types of discharge continuous, intermittent, constant current, constant load, constant power, temperature of battery during discharge, service life, voltage regulation, changing voltage, effect of all design, battery age and storage condition, effect of battery design.

MODULE III SELECTION AND APPLICATION OF BATTERIES 09

Major consideration in selecting a battery, battery applications, comparative features and performance characteristics, characteristics of batteries for portable equipment, cost effectiveness, other comparison of performance criteria for battery selection D probable equipment.

MODULE IV TESTING AND EVALUATION 09

Evaluation of active masses, Porosity - mercury porosity meter, liquid absorption method, Surface area measurement - BET method (nitrogen absorption), internal resistance of cells - D.C. methods, polarization elimination method - I.E. polarization and flash current method A.C. methods, A.C. impedance method, testing of storage batteries - capacity test for retention of charge, vibration test, life test, efficiency test, leakage test for sealed

cells, testing of separators, HRD at normal and low temperature.

MODULE V FUEL CELLS AND SUPER CAPACITOR 09

Introduction, Types of Fuel cells, figure of merit, electro catalysts for hydrogen oxidation and oxygen reduction, electrochemical double layer capacitors, ruthenium oxide as capacitor electrode, manual capacitors with proton conducting solid polymer electrolytes.

Total Hours: 45

REFERENCES:

2. N. Corey Cahoon and George W. Heise, Primary Battery (Volume I and II), John Wiley New York, 1971 and 1976 London.
3. Linden D. Hand Book on Batteries and Fuel Cell, McGraw Hill Book Co., New York 1955.
4. J.P. Gabano, Lithium Batteries, Academic Press, London, 1983
5. T.R. Crompton, Batteries Reference Book, Batterworths, London.
6. G.W. Vinal, Storage Batteries, John Wiley, New York 1955.

OUTCOMES:

The students will be familiar with

- electrochemical cells and their types
- factors affecting battery performance
- application of batteries
- testing in fuel cells

CHCY030 SOLAR ENERGY

L	T	P	C
3	0	0	3

OBJECTIVES:

The students will be conversant with the

- sustainable energy conversion proceses
- fundamentals of solar cells
- solar electrical energy conversion
- nanomaterials as photovoltaics
- different types of solar cells

MODULE I INTRODUCTIONS TO SUSTAINABLE ENERGY CONVERSION PROCESSES

Photovoltaic, Photothermal, Photoelectrochemical, Biofuel, Wind Power, and Geothermal Systems. Insolation vs. world energy demand, Current energy consumption from different sources, Renewable Energy Resources; Utilization, Storage, and Economic limitations Solar energy: Thermonuclear energy source, Planck's Law, Thermal radiation fundamentals, Solar Radiation Table: extraterrestrial and terrestrial radiations; Solar constant, Air Mass, Spectral Irradiance, Mean annual irradiance on horizontal surface across the world, Radiation on an inclined surface: direct, reflected, and diffused radiations, Global solar radiation data.

MODULE II SOLAR CELL FUNDAMENTALS 15

Photovoltaic effect - Principle of direct solar energy conversion into electricity in a solar cell. Semiconductor properties, energy levels, basic equations. Solar cell, p-n junction, structure.

MODULE III SOLAR ELECTRICAL ENERGY CONVERSION 15

Solar photovoltaic energy conversion - Principles - Physics and operation of solar cells. Classification of solar PV systems, Solar cell energy conversion efficiency, I-V characteristics, effect of variation of solar insolation and temperature, losses. Solar PV power plants.

MODULE IV NANOMATERIALS FOR PHOTOVOLTAICS 09

Photochemical solar cells, PV panels with nanostructures. Phase compositions on nanoscale microstructures – role of nanostructures and materials – nanomaterials in solar photovoltaic technology- band gap engineering and optical engineering - tandem structures - quantum well and quantum dot solar cells - photo-thermal cells – organic solar cells. Performance and reliability of nanomaterials based solar cells.

MODULE V MODULE III SOLAR CELLS

Formation of a pn – junction - Space charge and internal field - Quasi - Fermi levels - The Shockley diode equation - Structure of a solar cell - The solar cell equation - Fill factor and maximum power - Various electron - hole-pair recombination mechanisms - Crystalline silicon solar cells - Thin film solar cells: CIGS, Cite and a – silicon - Tandem solar cells - Dye - sensitized solar cells - Organic solar cells. Thin film solar cells, Amorphous silicon (a-Si) solar cells, Cadmium Telluride (Cd-Te) Solar cells, Cu(InGa)Se2 solar cells, Dye-sensitized solar cells, Organic and polymer solar cells. Photoelectrochemical hydrogen production, photoelectrochemical cells, solar-to-hydrogen efficiency; Hydrogen storage, hydrogen economy, Electrochemical Storage of energy, Current developments in energy storage.

4. A.F. Fahrenbruch and R.H. Bube, Fundamentals of Solar Cells, Academic Press, London 1983.

OUTCOMES:

The students will be acquainted with the

- sustainable energy conversion processes
- fundamentals of solar cells
- solar electrical energy conversion
- nanomaterials as photovoltaics
- different types of solar cells

REGULATIONS, CURRICULUM AND SYLLABI

M.Sc.
PHYSICS

(As approved by the 9th Academic Council)

JULY 2016

B.S.ABDUR RAHMAN
UNIVERSITY
B.S. ABDUR RAHMAN INSTITUTE OF SCIENCE & TECHNOLOGY
(Estd. u/s 3 of the UGC Act, 1956)
(FORMERLY B.S. ABDUR RAHMAN CRESCENT ENGINEERING COLLEGE)
Rated with A Grade by National Assessment and Accreditation Council
Seethakathi Estate, G.S.T. Road, Vandalur, Chennai - 600 048

VISION AND MISSION OF THE DEPARTMENT OF PHYSICS

VISION

To be a leader in providing quality higher education through well designed programs and undertake research in Physical Sciences and related interdisciplinary areas.

MISSION

- To provide quality education in the field of Physical Sciences through well designed programs.
- To provide necessary knowledge in Physical Sciences required for all programs in science and engineering.
- To offer quality programs in advanced and applied physical sciences.
- To undertake fundamental, applied and interdisciplinary research in emerging areas.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

M. Sc. (Physics)

PROGRAMME EDUCATIONAL OBJECTIVES:

- To identify, formulate, analyze and optimize variety of problems related to various fields of Physics through basic knowledge and to apply the skills and knowledge acquired during the UG studies.
- To acquire knowledge of fundamental laws and principles in wide areas of Physics along with their applications so as to develop strong student competencies in Physics and its applications in a technology-rich, interactive environment.
- To prepare for the successful pursuit of Post Graduate studies and shall have abilities to engage in life-long learning in various fields of Physics and General Science.
- To understand the challenges of a dynamically and globalised changing world adapting their skills through continuous learning and self-improvement.
- To work effectively in bringing interdisciplinary ideas related to diverse environmental skills to excel in technical careers and thrive in Post Graduate and research studies using scientific principles and applications of Physical Science.
- To become effective researcher who will be able to provide lucid summation of the scientific literature on a given topic of study.
- To develop their skills to plan, execute and report the results of extended computational techniques, experimental and theoretical Physics based projects in a research environment.
- To inculcate the sense of ethics, professionalism and effective communication skills amongst graduates improve their workplaces, communities and the society through professional and personal responsibilities and activities of their work.
- To prepare the students to successfully compete for employment and to offer a wide range of experience in research methods, data analysis to meet the industrial needs.

PROGRAMME OUTCOMES:

After the completion of PG programme, graduates will be able to

- Design and conduct experiments, as well as to analyze and interpret data.
- Function on interdisciplinary teams with professional and ethical responsibility.
- Use the modern techniques, skills and sophisticated equipment necessary for research.

- Apply knowledge and skill in the design and development of Electronics circuits to cater to the needs of Electronic Industry.
- Become professionally trained in the area of optical communication, lasers, nonlinear circuits, materials development and characterization including nanomaterials.
- Demonstrate highest standards of actuarial ethical conduct and professional actuarial behavior, critical, interpersonal and communication skills as well as a commitment to life-long learning.
- Successfully compete for employment in the field of Teaching, Research and Industries.

CURRICULUM & SYLLABI FOR
M. Sc. (Physics)
(Four Semesters / Full Time)

Curriculum

Sl. No.	Course Code	Course Title	L	T	P	C
		SEMESTER I				
1	PHC6101	Classical Mechanics and Relativity	4	0	0	4
2	PHC6102	Mathematical Physics	3	1	0	4
3	PHC6103	Solid state Physics	3	0	0	3
4	PHC6104	Physics of semiconductor devices	3	0	0	3
5		Elective – I	3	0	0	3
6		Elective – II	3	0	0	3
7	PHC6105	Materials Science lab	0	0	4	2
8	PHC6106	Semiconductor devices and circuits lab	0	0	4	2
					Total	**24**
		SEMESTER II				
1	PHC6201	Quantum Mechanics	3	0	0	3
2	PHC6202	Thermodynamics and Statistical Physics	4	0	0	4
3	PHC6203	Atomic Physics and Molecular Spectroscopy	4	0	0	4
4	GEC6202	Research Methodology	3	0	0	3
5		Elective – III	3	0	0	3
6		Elective – IV	3	0	0	3
7	PHC6204	Thermal Physics lab	0	0	4	2
8	PHC6205	Mini project – I			2	1
					Total	**23**
		SEMESTER III				
1	PHC7101	Digital Electronics and Microprocessors	4	0	0	4
2	PHC7102	Electromagnetic Theory & Electrodynamics	3	1	0	4
3	PHC7103	Nuclear and Particle Physics	3	0	0	3
4		Elective – V	3	0	0	3
5		Elective – VI	3	0	0	3
6	PHC7104	Advanced Electronics Lab	0	0	4	2
7	PHC7105	Advanced optics lab	0	0	4	2
8	PHC7106	Seminar			2	1
9	PHC7201	Project phase – I			4	2*
					Total	**24**

Sl. No.	Course Code	Course Title	L	T	P	C
		SEMESTER IV				
1	PHC7201	Project Phase – II			20	10
			Total		**10+2=12**	
			Total number of credits			**81**

*Note: Credit will be awarded along with phase-II

LIST OF ELECTIVES

Sl. No.	Course Code	Course Title	L	T	P	C
		SEMESTER I				
1	PHCY101	Crystal Growth Techniques	3	0	0	3
2	PHCY102	Materials processing	3	0	0	3
3	PHCY103	Characterization of materials	3	0	0	3
4	PHCY104	Functional materials and structures	3	0	0	3
5	PHCY105	Advanced Optics & Laser Technology	3	0	0	3
6	PHCY106	Nonlinear optics	3	0	0	3
7	PHCY107	Optical Fiber communication	3	0	0	3
8	PHCY108	Optical computing	3	0	0	3
		SEMESTER II				
1	PHCY201	Electro-Optic materials and devices	3	0	0	3
2	PHCY202	Ferroelectric materials and devices	3	0	0	3
3	PHCY203	Structure and properties of alloys	3	0	0	3
4	PHCY204	Photonic materials and devices	3	0	0	3
5	PHCY205	Numerical methods and programming	3	0	0	3
6	PHCY206	Ultrasonics and Non-Destructive Testing	3	0	0	3
7	PHCY207	Optoelectronics and its devices	3	0	0	3
8	PHCY208	Biophotonics	3	0	0	3
		SEMESTER III				
1	PHCY111	Mathematical methods for nonlinear science	3	0	0	3
2	PHCY112	Measurements and Instrumentation	3	0	0	3
3	PHCY113	Biomedical Instrumentation	3	0	0	3
4	PHCY114	Radiation Physics	3	0	0	3
5	PHCY115	Laser spectroscopy and its applications	3	0	0	3
6	PHCY116	Nanophotonics	3	0	0	3
7	PHCY117	Nanoscience and Technology	3	0	0	3
8	PHCY118	Thin film science and technology	3	0	0	3
9	PHCY119	Corrosion science and technology	3	0	0	3
10	PHCY120	Biomaterials	3	0	0	3

SEMESTER I

PHC6101 CLASSICAL MECHANICS AND RELATIVITY

L	T	P	C
4	0	0	4

OBJECTIVES:

- To understand the basic concepts in Classical Mechanics
- To train in the Lagrangian and the Hamiltonian formalisms
- To understand the dynamics of Rigid body and small oscillations
- To solve real world problems including problems from Nonlinear dynamics
- To lay foundations for further studies in Relativistic Physics and Engineering

MODULE I FUNDAMENTAL PRINCIPLES AND LAGRANGIAN FORMULATION 12

Conservation of linear momentum – Energy – Angular momentum – Degree of freedom – Constraints – Generalised coordinates- Principle of Virtual work- D'Alembert's Principle – Lagrange's equations of motion – conservative and Non-conservative forces- Applications : L-C circuit – one dimensional harmonic oscillator. Central force and motion in a plane – Equation of motion under central force and first integrals-Differential equation for an orbit – Inverse square law of force- Kepler's laws of planetary motion and their deduction-Virial theorem.

MODULE II HAMILTONIAN FORMULATION 12

Hamiltonian function - Physical significance-Hamilton's canonical equations of motion - Applications :simple pendulum – Motion of a particle in a central force field- charged particle in an electromagnetic field- Hamilton's variational principle- proof-Derivation of Lagrange's equations-Principle of Least Action – its deduction- Canonical Transformations-Generating function-Poisson's and Lagrange's brackets-properties-relation between them- The Hamilton – Jacobi equation – Kepler's problem -solution by Hamilton – Jacobi method - Action and angle variables.

MODULE III RIGID BODY DYNAMICS AND SMALL OSCILLATIONS 12

Independent coordinates- Euler's angles – Components of Angular velocity in terms of Euler's angles –Angular momentum of a rigid body –Moments and products of inertia-Euler's equations of motion for a rigid body. Theory of small oscillations-frequencies of free vibration and normal coordinates-two coupled harmonic oscillators-vibrations of a linear triatomic molecule.

MODULE IV RELATIVISTIC MECHANICS 12

Basic postulates of special theory of relativity – variation of mass with velocity– Relativistic energy – Mass- energy relation – Force in relativistic mechanics – The Lagrangian and Hamiltonian of a particle in relativistic mechanics - Minkowski space and Lorentz transformations – four vectors.

MODULE V NONLINEAR DYNAMICS 12

Dynamical systems – mathematical implications of nonlinearity – definition and effects of nonlinearity – Linear vs Nonlinear oscillators – classification of equilibrium points – Logistic map- stability analysis – Period doubling – definition of chaos- initial conditions – KdV equations -solitary waves & solitons : Linear waves and Non Linear Waves.

Total Hours: 60

8. Tamás Tél, Márton Gruiz, Chaotic Dynamics: An Introduction Based on Classical Mechanics, Cambridge University Press, 2006

OUTCOMES:

At the end of the course, the students will be able to

- Explain the basic concepts in Classical Mechanics and Relativistic Mechanics.
- Solve real world problems.
- Apply theorems relating to the nonlinear bodies to analyze the various aspects of dynamics and oscillations of bodies.

PHC6102 MATHEMATICAL PHYSICS

L	T	P	C
3	1	0	4

OBJECTIVES:

- To understand the basic concepts in Mathematical Physics
- To have an overall knowledge about the use of mathematical methods such as Vectors, Matrices, Tensors, Fourier transform, Green function and Group Theory in physics
- To develop expertise in mathematical techniques that are required to solve problems in Physics

MODULE I VECTORS AND MATRICES 12

Vector analysis: Gradient – Divergence – Curl – vector spaces – linear dependence and independence of vectors - second order derivatives Gauss's theorem - Stoke's theorem - Green's theorem – Curvilinear coordinates-spherical polar-cylindrical coordinates.Matrices: Orthogonal and Unitary Matrices, Matrix diagonalization, eigen values and eigen vectors.

MODULE II SECOND ORDER LINEAR DIFFERENTIAL EQUATIONS SPECIAL FUNCTIONS 12

Physical Legendre, Bessel and Laguerre differential equations –series solutions-generating functions-recurrence relations- Sturm Liouville theorem - Orthogonality of eigen function. Hyper geometric functions – generating functions.

MODULE III COMPLEX VARIABLES 12

Functions of complex variables – single and many valued functions- analytic functions –Cauchy – Riemann equations –conjugate functions – complex line integrals-Cauchy's integral theorem-integral formula – Taylor and Laurent expansions –zeros and singularities – residues –Cauchy's Residue theorem and its applications for evaluation of integrals.

MODULE IV FOURIER TRANSFORM AND GREEN FUNCTIONS 12

Fourier Transform: Fourier transform – sine and cosine transform – properties Faultung's theorem- application in heat conduction and spectroscopy. Laplace transforms – Inverse transforms – Linearity and Shifting theorems. Linear spaces – Basis-change of basis – Inner product space – Schmidt's orthogonalisation procedure – Schwartz's inequality – Hilbert spaces - properties. Green's function: Definition and construction – symmetry properties - expression for Green's functions in terms of Eigen functions - Green's functions for simple and second order operator.

MODULE V TENSORS AND GROUP THEORY 12

Tensor analysis : Cartesian tensors – law of transformation of first and second order tensors- addition, subtraction and multiplication (inner and outer product) of tensors –rank ,covariant, contravariant and mixed tensors- symmetric and antisymmetric tensors- Quotient law. Group Theory: Basic definitions- subgroups- permutation groups-Cyclic groups - cosets - Normal Subgroups-Isomorphism - Homomorphsim-Rotation groups - Reducible – Irreducible representations – Applications.

6. Murray Spiegel, Schaum's Outline of Advanced Mathematics for Engineers and Scientists, Schaum's Outline Series, McGraw-Hill, 2009.

OUTCOMES:

At the end of the course, the students will be able to

- explain basic concepts in Mathematical Physics
- solve differential equations that are appearing in Physical science
- solve problems in other courses such as Classical Mechanics, Quantum Mechanics, etc.,

PHC6103 SOLID STATE PHYSICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce crystal structure, band theory and lattice vibrations
- To have comprehensive idea on properties of materials
- To provide a sound knowledge of macroscopic properties derived from microscopic considerations

MODULE I CRYSTAL STRUCTURE AND BINDING 09

General Description of Crystal Structures – Bravais lattices- Cubic Structures, NaCl, CsCl, Diamond, Zincblende, HCP structures- Miller Indices- interplanar distance(derivation) - The Reciprocal Lattice - defects and dislocations-Quasi crystals - Force between atoms-cohesive energy –bonding in solids - binding energy of ionic crystals(derivation)-Madelung constant – Born Haber cycle.

MODULE II TRANSPORT PROPERTIES AND BAND THEORY OF SOLIDS 09

Free electron theory (Sommerfeld theory) – electronic specific heat- electrical and thermal conductivity of metals – Wiedemann Franz law (derivation)- Hall effect and Thermoelectric power - Effective mass and concept of hole- electron motion in periodic potential – Bloch’s theorem - band theory of solids -construction of Brillouin zone - Fermi surface in metals – characteristics of Fermi surface- De Haas van Alphen effect - Kronig Penney model (derivation).

MODULE III PHONONS : CRYATAL VIBRATIONS AND THERMAL PROPERTIES 08

Vibrations of crystals with monoatomic lattice(derivation) - Vibrations of crystals with diatomic lattice (derivation)– optical and acoustical modes – number of normal modes of vibrations in a band-Phonon momentum- inelastic scattering of photons by phonons – Debye's theory of lattice specific heat(derivation) - anharmonic effects.

MODULE IV MAGNETIC AND DIELECTRIC PROPERTIES 10

Types of magnetic materials –Diamagnetism – Langevin's theory(derivation)- Paramagnetism – Hund’s rules – rare earth ions-iron group ions-crystal field splitting- Pauli paramagnetism- Ferromagnetism – domain theory- Curie-Weiss law (derivation)- antiferromagnetism-ferrites. Polarization and polarizability- types of polarization (qualitative) and dependence on frequency and temperature-local electric field in an atom- Clausius Mossotti relation(derivation) - Piezo, pyro and ferroelectric properties of crystals.

MODULE V SUPERCONDUCTIVITY AND OPTICAL PROPERTIES 09

Properties of superconductor – critical magnetic field – Meissner effect (derivation) – Type I and Type II super conductors – superfluidity - entropy and heat capacity –energy gap-quantum tunneling - London equations (derivation) – coherence length - BCS theory – RVB - AC and DC Josephson effect – SQUID. Traps – Excitons – coloration of crystals - types of colour centers - Luminescence: fluorescence and phosphorescence– activators - Emission and absorption spectra – Efficiency of phosphor.

Total Hours: 45

6. Raghavan.V, Materials science and Engineering: a first course, PHI Learning 5th Ed, 2004
7. Kashab S.O, Principles of Electrical Engineering Materials and Devices, McGraw Hill Int National publishers, 2000

OUTCOMES:

At the end of the course, the students will be able to illustrate the

- basic concepts on properties of materials in solid state physics.
- phenomenon of superconductivity and its properties.
- different techniques used for synthesis and fabrication of nanomaterials.
- properties of solids with relevant theoretical knowledge
- knowledge for specialization in condensed matter physics

PHC6104 PHYSICS OF SEMICONDUCTOR DEVICES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the fundamentals of physics of semiconducting materials
- To construct and study the operations of semiconductor devices in the family of diodes and transistors under different operating conditions
- To expose to circuit design of different types of amplifiers, oscillators and IC fabrication
- To understand and analyze complex practical circuits and to have strong basic knowledge to design electronic circuits.

MODULE I SEMICONDUCTOR DIODES 09

Semiconductors: N and P type, mass action law - continuity equation –
PN junction diode under forward and reverse bias – Band structure – Einstein's diode equation – Zener diode - Varactor diode – Schottky diode – Tunnel diode – Gunn diode – Optoelectronic diodes – LED,LASER diode and photo diode.

MODULE II SPECIAL DEVICES 09

BJT construction and characteristics – biasing circuits – current components - JFET-structure and working –V-I Characteristics – pinch off voltage derivation –Depletion and Enhancement type MOSFFT – UJT – SCR–DIAC, TRIAC - applications.

MODULE III AMPLIFIERS 09

BJT single stage amplifier - FET single stage amplifier – small signal analysis - Operational amplifier - inverting and non-inverting amplifier – instrumentation amplifier – voltage follower –comparator - integrating and differential circuits – log & antilog amplifiers –active filters : lowpass, high pass, band pass & band rejection filters-solving simultaneous and differential equations.

MODULE IV OSCILLATORS and CONVERTORS 09

Colpitt's oscillator – Hartley oscillator - Wien bridge, phase shift oscillators - – triangular, sawtooth and square wave generators-Schmitt's trigger – sample and hold circuits – phase locked loops. Basic D to A conversion and A to D conversion.

MODULE V IC FABRICATION AND IC TIMER 09

Basic monolithic ICs – epitaxial growth – masking – etching impurity diffusion fabricating monolithic resistors, diodes, transistors and capacitors – circuit layout – contacts and inter connections – charge coupled device –555 timer – description of the functional diagram

– mono stable operation – applications of mono shots – astable operation and pulse generation.

8. S. Salivahanan, N.Suresh Kumar and A.Vallavaraj, Electronic devices and circuits, Tata McGraw Hill, Third Edition, 2012.

OUTCOMES:

At the end of the course, the students will be able to explore the

- Fundamentals of working of semiconductor diodes and special devices
- Applications of electronic devices in amplifier and oscillator circuits.

PHC6105 MATERIALS SCIENCE LAB

L	T	P	C
0	0	4	2

OBJECTIVES:

- To make the student understand the basics of materials science.
- To enable the student to explore the concepts involved in various instrumentation techniques
- To make the student understand the basic concepts of electronic band structures and some applications
- To allow the student to understand the fundamentals of nonlinear optics.

LIST OF EXPERMENTS

(ANY TEN)

1. Crystal growth – Constant temperature bath
    a. Solubility Test
    b. Metastable zone width
    c. Slow evaporation technique
2. Determination of susceptibility of liquid using Quinckie's method.
3. Determination of type of semiconductor by Hall Effect method.
4. Determination of Conductivity of a material using four probe method.
5. Determination of dielectric constant of material using LCR meter.
6. Determination of Young's Modulus using Flexural vibration
7. Determination of Band structure and Density of States (DOS)
8. Determination of magnetic properties using density functional theory (DFT).
9. Study of Nonlinear behaviors – Numerical simulation
10. Determination of Velocity and Compressibility of ultrasonic waves in liquid
11. Characteristics of solar cell
12. Comparative study of Compound pendulum and Torsion pendulum
13. Determination of Magnetic moment using materials modelling.
14. Measurement of Line intensities in Iron Arc Spectrum by spectrograph
15. Basic programing using UNIX and C++.

OUTCOMES:

At the end of the course, the students will be able to

- demonstrate experiments related to Materials Science
- obtain electronic band structure through computational methods and investigate materials properties

PHC6106 SEMICONDUCTOR DEVICES AND CIRCUITS LAB

L	T	P	C
0	0	4	2

OBJECTIVES:

- To make the student understand the basics of electronics.
- To enable the student to explore the concepts involved in the oscillators
- To make the student understand the basic concepts in IC's and digital devices
- To allow the student to understand the fundamentals of multivibrators

LIST OF EXPERMENTS

(ANY TEN)

1. Characteristics of PN Junction diode and Zener diode. Design of clipper and clamper circuits.
2. Input and Output characteristics of BJT in CB and CE configurations and comparison.
3. Characteristics of JFET and MOSFET
4. UJT and SCR characteristics
5. Characteristics of photodiode and photo transistor.
6. Design of single stage amplifier using BJT and JFET for small signal applications and comparison.
7. Design of Colpitt's and Hartley oscillators using BJT for a given frequency
8. Design of Wien bridge and Phase shift oscillators using OPAMP.
9. Schmitt's trigger: Triangular, sawtooth and square wave generators.
10. Design of Adder, Subtractor, Multiplier, Differentiator and Integrator circuits using OPAMP
11. Construction of Astable, Monostable and Bistable multivibrators using BJT / OPAMP.
12. Construction of Dual power supply.
13. Design of A / D and D / A convertors.
14. Design of modulation and demodulation circuits.

OUTCOMES:

At the end of the course, the student will be able to

- classify the characteristics of semiconductor devices
- design amplifier, oscillator and other circuits using OP AMP

SEMESTER II

PHC6201 QUANTUM MECHANICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To study the basic concepts of quantum mechanics.
- To understand the different approximation methods used in quantum mechanics.

MODULE I BASIC FORMULATION 09

Postulates of quantum mechanics - Schrodinger time independent and dependent equations– physical Interpretation of wave function Ψ - expectation values - Ehrenfest theorem-Basic postulates - Operators: Definition and properties- Eigen values and Eigen functions - self adjoint operators – Parity operator- uncertainty principle. (Statement and Proof) - Quantum pictures: Schroedinger, Heisenberg and Interaction.

MODULE II EXACTLY SOLVABLE SYSTEMS 09

One dimensional linear harmonic oscillator – solutions to a square well potential – rigid rotator -Particle in a central potential – Particle in a periodic potential - Central forces and reduction of two body problem – Particle in a spherical well – Hydrogen atom.

MODULE III APPROXIMATION METHODS 09

Equations in various orders of time independent perturbation theory for non- degenerate case: first and second order– Stark effect – Zeeman effect- Application to ground state of Helium atom – time dependent perturbation theory– harmonic perturbation (Fermi-Golden Rule) - Adiabatic, Sudden Approximation perturbation.

MODULE IV ANGULAR MOMENTUM 09

Commutation rules for angular momentum operators – eigen values and eigen functions of L2 and Lz – Ladder operators - raising and lowering operators- eigen states and eigen values of J2 and Jz - addition of angular momentum - Clebsch Gordan coefficients - Symmetry and anti symmetry of wave functions - Pauli's spin matrices.

MODULE V RELATIVISTIC QUANTUM MECHANICS 09

Klein Gordon equation – probability and current densities – Dirac's equation for free particles – Dirac matrices- covariant form of Dirac's equation - Spin of Dirac's particle- Interpretation of negative energy states - Magnetic moment of an electron due to spin - Energy values in a coulomb potential.

Total Hours: 45

REFERENCES:

5. Sl Gupta, Kumar V, Hv Sharma, Quantum Mechanics, Jai Prakash Nath Publications
6. P M Mathews, K.Venkatesan ,Text Book of Quantum Mechanics, 2nd Ed, Tata McGraw-Hill Education

OUTCOMES:

At the end of the course, the students will be able to

- Comphrend the basics of quantum mechanics and to apply it in different branches of Physics
- Undertake applied research in quantum mechanics

PHC6202 THERMODYNAMICS AND STATISTICAL PHYSICS

L	T	P	C
4	0	0	4

OBJECTIVES:

- To understand the concepts of thermodynamics
- To know the fundamentals of statistical physics
- To understand the quantum laws governing particles

MODULE I REVIEW OF THERMODYNAMICS 12

Energy and first law of thermodynamics – entropy and second law of thermodynamics – Nernst heat theorem and third law of thermodynamics Enthalpy – consequences of Nernst heat theorem – heat capacity and specific heat – Maxwell's thermodynamic relations and potentials - Gibb's - Helmholtz relations - thermodynamic equilibria.

MODULE II STATISTICAL DESCRIPTION OF SYSTEM OF PARTICLES 12

Statistical formulation of a state system – calculation of pressure using time independent scenario-phase space – density distribution in phase space – Liouville's theorem-equation of motion and Liouville's theorem – ensembles-types and ensemble average-equal apriori probability – statistical equilibrium– isolated system – system in contact with heat reservoir - calculation of meanvalues in a canonical ensemble and connection with thermo dynamics.

MODULE III SIMPLE APPLICATIONS OF THERMODYNAMICS 12

Concept of partition function – their properties- ideal monatomic Gas - calculation of thermo dynamic quantities – Gibb's paradox- equipartition theorem – proof – simple application - Harmonic oscillator- characteristics of crystalline solids – specific heat by Einstein model- Debye's modification.

MODULE IV QUANTUM STATISTICS OF IDEAL GASES 12

Identical particles- symmetry requirements – formulation of statistical problems – quantum distribution functions from partition function: Photon, Fermi-Dirac and Bose – Einstein statistics- chemical potential – Bose- Einstein condensation.

MODULE V PHASE TRANSITIONS 12

General remarks on phase transitions- First and Second order – non ideal gas – calculation of partition function for low densities – equation of state and Virial coefficients-derivation of Vander Wall's equation – spin – spin interaction – one dimensional model – Weiss molecular field approximation.

Total Hours: 60

5. Bhattacharjee J.K, Statistical Mechanics: An Introductory Text, Allied Publication, New Delhi, 1996.

OUTCOMES:

At the end of the course, the students will be able to explain the

- Fundamentals of thermodynamic systems
- Various statistical laws governing the particles
- the physics of thermodynamics applied in solids

PHC6203 ATOMIC PHYSICS AND MOLECULAR SPECTROSCOPY

L	T	P	C
4	0	0	4

OBJECTIVES:

- To have a basic knowledge of modern atomic and molecular physics
- To understand different spectroscopic studies on matter on the basis of quantum mechanics
- To master the experimental and theoretical methods in atomic and molecular spectroscopy

MODULE I ATOMIC AND MOLECULAR STRUCTURE 12

Atomic models: Vector atom model – Pauli's exclusion principle –Heisenberg's uncertainty principle – Types of spectra - Equation of motion of matters waves – operators - momentum and energy operators - eigen functions and eigen values –– Many electron atoms – coupling schemes – Spin orbit interaction -energy levels – Spin functions of two and three electrons - Central field approximation: Thomas Fermi statistical model –– Paschen back effect – Covalent bond - Hybridization: sp, sp2, sp3 - molecular orbital theory –Heitler London theory of Hydrogen ion and Helium molecule.

MODULE II INFRARED AND MICROWAVE SPECTROSCOPY 12

Characteristic features of pure rotation – vibration – rotation and vibration of a diatomic molecule – theory – evaluation of molecular constants – IR spectra of polyatomic molecules – experimental techniques of IR – Dipole moment studies – molecular structure determination. Microwave spectra of polyatomic molecules – experimental techniques of microwave spectroscopy – inversion spectrum of ammonia – Maser principles – Ammonia Maser– applications of Masers.

MODULE III RAMAN SPECTROSCOPY 12

Semi classical treatment of emission and absorption of radiation – emission and absorption coefficients – spontaneous and induced emission of radiation – polarisability – Rayleigh scattering – Raman effect – basic principles of Raman scattering – vibrational and rotational Raman spectra – Experimental techniques of Raman Spectroscopy- – molecular structure studies – Laser as a Raman source.

MODULE IV NMR AND ESR SPECTROSCOPY 12

NMR spectroscopy Basic principles- classical and quantum mechanical techniques - Bloch equations- spin- spin and spin- lattice relaxation times-experimental technique - single coil and double coil methods- pulse method-high resolution method. ESR spectroscopy- basic principles- ESR spectrometer- Nuclear interaction and hyperfine structure- Relaxation effects- 'g' factor- biological applications.

MODULE V NQR AND MOSSBAUER SPECTROSCOPY 12

NQR spectroscopy- basic principles- quadrupole Hamiltonian- Nuclear quadrupole energy levels- for axial and non axial symmetry- NQR spectrometer-chemical bonding-molecular structure and molecular symmetry studies. Mossbauer spectroscopy-principle experimental arrangement - chemical shift-quadrupole splitting-applications.

Total Hours: 60

REFERENCES:

6. Jeanne L. McHale, Molecular spectroscopy, Prentice Hall, 1994.

OUTCOMES:

At the end of the course, the students will be able to

- explain the basic ideas about the various energy levels in matter and the concepts of spectroscopy
- Compare different spectroscopic studies
- carry out theoretical and experimental studies on molecular spectroscopy with focus on structure and dynamics of atoms and molecules

GEC6202 RESEARCH METHODOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To inculcate the importance and the process of research methodology
- To train the students to define a research problem and to collect data
- To guide in the analysis and interpretation of results

MODULE I RESEARCH METHODOLOGY-AN INTRODUCTION 09

Research: Objectives, Motivation and types - Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Research Process, Criteria of Good Research, Problems Encountered by Researchers - Introduction to ethics, scientific conduct and misconduct, Misconduct and why it occurs, Fabrication, Authorship issues, The investigation and punishment of scientific misconduct.

MODULE II GOOD LABORATORY PRACTICES AND SAFETY 09

Introduction: History, definition, Principles, Good Laboratory Practices (GLP) and its application GLP training: Resources, Rules, Characterization, Documentation, quality assurance, Resources, Facilities: building and equipment, Personnel, GLP and FDA, Stepwise implementation of GLP and compliance monitoring. Safety Symbols, Science Safety Rules- Dress Code, First Aid, Heating and Fire Safety

MODULE III PROGRAMMING TECHNIQUES 09

FORTRAN-77 - C and C++ programme – MATLAB – Numerical Methods – Ordinary Differential Equation – Partial Differential Equation – Runge Kutta Method.

MODULE IV INTERPRETATION OF RESULTS AND ANALYSIS 09

Importance and scientific methodology in recording results, importance of negative results, different ways of recording, industrial requirement, artifacts versus true results, types of analysis (analytical, objective, subjective) and cross verification, correlation with published results, discussion, outcome as new idea, hypothesis, concept, theory, model etc. Data analysis using Excel, Origin and Sigma plot Analyzing the chemical data and drawing chemical structures using Chemdraw and Chemsketch. Conceptions of error of measurement, true score theory and generalisability theory. Measures of central tendency or averages – mean median and mode. Measures of dispersion – range, variance, and standard deviation: The normal distribution and the normal probability curve.

MODULE V SCIENTIFIC WRITING, TECHNICAL PUBLICATION AND RESEARCH PROPOSAL 09

Different types of scientific and technical publications in the area of research, and their specifications, Ways to protect intellectual property – Patents, technical writing skills, definition and importance of impact factor and citation index - assignment in technical writing, The research problem, finding related literature, computer generated references sources and the research project, model research proposal.

8. Willa Y. Garner, Maureen S. Barge, James, P, Good Laboratory Practice Standards:Applications for Field and Laboratory Studies (ACS Professional References Book).

OUTCOMES:

At the end of this course, the students will be able to:

- select and define appropriate research problems
- analyze and interpret the results of the research problem
- prepare project proposals

PHC6204 THERMAL PHYSICS LAB

L	T	P	C
0	0	4	2

OBJECTIVES:

- To make the student familiarize with the basics of experimental physics .
- To enable the student to explore the concepts involved in the thermodynamics and heat
- To allow the student to apply the fundamentals of instruments involved in thermal process.

LIST OF EXPERMENTS

(ANY TEN)

1. Radiation from a black body: Stefan-Boltzmann Law
2. Thermal conductivity of good conductors by Forbe's method.
3. To determine the Coefficient of Thermal Conductivity of Copper by Searle's and Angstrom's method.
4. To determine the Coefficient of Thermal Conductivity of a bad conductor by Lee disc method.
5. To study the variation of Thermo-Emf of a Thermocouple with Difference of Temperature of its Two Junctions.
6. Measurement of Planck's constant using black body radiation.
7. Determination of Stefan's constant.
8. Specific heat of liquid – Newtons law of cooling
9. EMF of a thermocouple – Mirror galvanometer – Direct deflection method.
10. Verification of Newton's Law of cooling.
11. Thermal conductivity of a good conductor by Searle's method.
12. Temperature characteristics of thermistor.
13. Specific heat of liquid – Joule's Calorimeter
14. Thermal expansion by Fizeau's method (Coefficient of linear expansion of brass).
15. Determination of co-efficient of thermal conductivity of a single crystal.

OUTCOMES:

At the end of the course, the student will be able to

- have a thorough knowledge on the different experimental techniques in thermal physics.
- grasp the basic ideas involved in thermal experiments
- apply the concepts of physics and do the interpretation and acquire the result

SEMESTER III

PHC7101 DIGITAL ELECTRONIC AND MICROPROCESSORS

L	T	P	C
4	0	0	4

OBJECTIVES:

- To understand the concepts of microprocessors and microcontrollers.
- To comprehend the ideas about the digital electronics

MODULE I LOGIC GATES 12

Logic gates - block diagram - truth table - XOR gate - equivalent functions -combinational logic - half adder / subtractor - full adder / subtractor – De Morgan's laws-Boolean algebra - Karnaugh maps - max and min terms -encoders and decoders - multiplexers and demultiplexers.

MODULE II COUNTERS 12

Sequential logic – flip flops – sequential circuit analysis – state diagram – state equation – registers – counters – up down counters – timing sequences – the memory MODULE – Random Access Memory (RAM) – Magnetic core memory.

MODULE III INTRODUCTION TO MICROPROCESSOR 12

Common microprocessor characteristics - pin diagram and functions for generic microprocessor - microprocessor architecture - the intel 8085 microprocessor - the 8085 pin diagram and functions - 8085 architecture - different addressing modes - 8085 instruction set - arithmetic, logical and branch instructions - the 8085 stack, I/O and control instructions.

MODULE IV 8085 MICROPROCESSOR 12

Programming the 8085 microprocessor - 8 bit addition, subtraction, multiplication and division - looping programs - sum of data - maximum,
minimum values of the given array - ascending / descending - data transfer- 16 bit addition – relay generation – multiple precision arithmetic decimal arithmetic - subroutine programs - ASCII to decimal multiple precision addition subroutine.

MODULE V MICROPROCESSOR INTERFACING 12

Timing diagram - instruction cycle, machine cycle, R/W cycle – interfacing the microprocessor - interfacing with ROM - interfacing with RAM - I/O interfacing basics.

Total Hours: 60

REFERENCES:

2. Anokh Singh, A.k.Chhabra, Fundamental of Digital Electronics and Microprocessors, 2nd Edition, S. Chand Limited, 2005.
3. Anokh Singh, Chhabra A.k, Fundamental of Digital Electronics and its application, S. Chand Limited, 2005.
4. Sumit Kumar Singh, Fundamental of Digital Electronics and Microprocessors, Coronet Books Incorporated, 2008.
5. Jain, Modern Digital Electronics, 3rd Edition, Tata McGraw Hill, 2003.

OUTCOMES:

At the end of the course, the students will be able to illustrate

- the working of digital electronic devices.
- the concepts of working model of microprocessors and microcontrollers.

PHC7102 ELECTROMAGNETIC THEORY AND ELECTRODYNAMICS

L	T	P	C
3	1	0	4

OBJECTIVES:

- To know the principles of electrostatics and magnetostatics.
- To understand the basic concepts in electromagnetic wave and radiation.
- To study the laws governing the propagation of electromagnetic waves.
- To enable the student to explore the field of electrodynamics

MODULE I ELECTROSTATICS 12

Coulomb's law, Gauss's law and applications, Electrostatic potential – Laplace and Poisson's equation – Laplace equation in three dimensions - Boundary value problems and uniqueness theorem, Polarization and displacement vectors - Boundary conditions - Dielectric sphere in a uniform field – Molecular polarisability and electrical susceptibility – Electrostatic energy in the presence of dielectric – Multipole expansion.

MODULE II MAGNETOSTATICS 12

Biot-Savart Law and its Applications, Ampere's circuital Law – Applications – Magnetic vector and scalar potential - Magnetic moment, force and torque on a current distribution in an external field - Magnetostatic energy - Magnetic induction and magnetic field in macroscopic media - Boundary conditions.

MODULE III MAXWELL'S EQUATION 12

Faraday's laws of Induction - Maxwell's displacement current - Maxwell's equations – free space and linear isotropic media - Vector and scalar potentials - Gauge invariance - Wave equation in one dimension - Coulomb and Lorentz gauges - Energy and momentum of the field - Poynting's theorem - Lorentz force - Conservation laws for a system of charges and electromagnetic fields.

MODULE IV ELECTROMAGNETIC WAVES & INTERACTION WITH MATTER 12

Plane waves in non-conducting media - Linear and circular polarization, reflection and refraction at a plane interface- Fresnel's law, interference, coherence and diffraction - Waves in a conducting medium - Propagation in linear media – Reflection and transmission at Normal incidence – Reflection and Transmission at Oblique incidence – Laws of incidence and reflectance, Snell's law, Brewster law – Fresnel's equations.

MODULE V RELATIVISTIC AND QUANTUM ELECTRODYNAMICS 12

Four vectors - Lorentz transformation - invariance of Maxwell's equations under Lorentz transformation - invariance of D'Alembertian operator – invariance of Maxwell's field

equations in terms of four vector - Quantum Electrodynamics (QED) – Introduction - S-Matrix and its expansion. Ordering theorems, Feynman graph and Feynman rules - Application - Rutherford scattering and Compton scattering.

Total Hours: 60

REFERENCES:

1. David J.Griffith, Introduction to Electrodynamics, 4th Edition, Pearson New International Edition, New Delhi, 2014.
2. John David Jackson, Classical electrodynamics, 3rd edition, Wiley Eastern Ltd. (1999).

6. Matthew N.O, Sadiku, Elements of Electromagnetics, 3rd Ed. 2006

OUTCOMES:

At the end of the program, the students will

- Familiarize with the concepts of electrostatics, magnetostatics and electromagnetic theory.
- Apply Maxwell's equations to circuit theory.
- Gain knowledge on the propagation of electromagnetic waves.

PHC7103 NUCLEAR AND PARTICLE PHYSICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To acquire the knowledge of basic properties of nucleus.
- To have an idea on the nature of nuclear forces.
- To gain the knowledge on elementary particles.
- To introduce the concepts of radioactivity
- To get an insight into nuclear reactions

MODULE I NUCLEAR STRUCTURE 09

Basic properties: nuclear size-nuclear radius, nuclear structure, Rutherford's experiment - magnetic moments - systematics of stable nuclei - semi empirical mass formula of Weizsacker - nuclear stability - mass parabolas- liquid drop model- shell model.

MODULE II NUCLEAR FORCES 09

Ground state of deutron- magnetic dipole moment of deutron- charge independence of nuclear forces- exchange forces. Scattering Processes: The scattering problem-formulation- scattering amplitude- expression in terms of Green’s function- Born approximation and its validity- method of partial waves - phase shifts-low energy scattering- scattering length and effective range.

MODULE III RADIOACTIVITY 09

Alpha particle emission- Geiger Nuttal law- Gamow’s theory of alpha decay-fine structure of alpha spectra-beta decay- Neutrino hypothesis- Fermi’s theory of beta decay-Fermi and G.T.Slection rules- Non- Conservation of parity in gamma decay- Gamma emission-selections rules- transition probability-internal conversion- nuclear isomerism.

MODULE IV NUCLEAR REACTIONS 09

Energies of Nuclear reaction- level widths - cross sections- compound nucleusmodel-resonance scattering- Breit- Wigner one level formula- optical model- direct reactions-Stripping and pick- up reactions- Fission and fusion reactions- elementary ideas of fission reaction- theory of fission- elementary ideas of fusion- controlled thermonuclear reactions- ideas of nuclear reactors- plasma confinement- fusion power.

MODULE V ELEMENTARY PARTICLES 09

Classification of fundamental forces- isospin strangeness- GellMann Nishijima’s formula-quark model- SU (3) symmetry- CPT invariance in different interactions-parity non

conservation-k meson- complex and time reversal invariance- elementary ideas of gauge theory of strong and weak interactions – Higg's boson particle.

Total Hours: 45

2. Khanna M.P., Introduction to Particle Physics, Prentice Hall of India, 2004.
3. Williams W. S. C., Nuclear and Particle Physics, Oxford University Press, 1991.
4. Brian Martin, Nuclear and Particle Physics: An Introduction, Wiley Publishers, 2011.
5. I. S. Hughes, Elementary Particles, Cambridge University Press.
6. Roy and Nigam, Nuclear Physics, Wiley.

OUTCOMES:

At the end of the course, the students will be able to

- explore the basic concepts of nucleus and its properties
- explore the basic ideas and comprehend concepts of Nuclear forces
- get an exposure of radioactivity concepts
- apply the concepts of quantum forces in nuclear reactions
- gain the knowledge on elementary particles.

PHC7104 ADVANCE ELECTRONICS LAB

L	T	P	C
0	0	4	2

OBJECTIVES:

- To understand basic analog circuit designs
- To know the working of amplifiers
- To study transistor biasing

LIST OF EXPERMENTS

(ANY TEN)

1. Combinational circuit (Half Adder, Hall - Subtractor, Full Adder and Full-Subtractor)
2. Design a BCD to Excess 3 code converter using combinational circuits.
3. Design a combinational circuit whose output is the 2’s complement of the input number.
4. To design and construct of a 4-bit parallel Binary Adder
5. To design and construct multiplexer and demultiplexer
6. To design and verify encoder and decoder
7. To Verification of Flip-Flop (JK, RS,T& D)
8. To verify the operation of a 4 bit shift register using IC 7495
9. To design and construct Synchronous Counter
10. To verify the operation of a ring counter
11. To verify the operation of a decade counter
12. Addition and subtraction of two numbers using 8085 Microprocessor.
13. Multiplication of 2 - 8 numbers using 8085 Microprocessor

OUTCOMES:

- Students can simulate building and test basic analog circuit
- Students can simulate building and test amplifier circuits
- Students can simulate building and test Transistor biasing

PHC7105 ADVANCED OPTICS LA

L	T	P	C
0	0	4	2

OBJECTIVES:

- To gain in-depth knowledge in the field of optics
- To apply the concepts learnt through laboratory in various applications to meet the epithetical needs of the society.

LIST OF EXPERMENTS

(ANY TEN)

1. Determination of wavelength of light using Michelson interferometer
2. Refractive index of a given liquid using Hollow prism method
3. Air – wedge experiment
4. Numerical aperture and acceptance angle of an optical fibre.
5. Particle size determination of different materials
6. Spectrometer experiment – determination of wavelength of prominent line of mercury spectrum.
7. Determination of Brewster angle using fibre optics
8. Fraunhoffer diffraction experiment
9. Fresnel diffraction experiment
10. Beam divergence of He - Ne laser semiconductor diode laser
11. Single mode fibre characteristics
12. Nonlinear optical studies using Pulsed Nd: YAG Laser
13. Demonstrate the principle of Rayleigh Scattering
14. Polarization experiments using polarimeter

OUTCOMES:

At the end of the course, the student will be able to

- have a thorough knowledge on the different experimental techniques in Advanced optics
- grasp the basic ideas involved in laser experiments
- apply the concepts of physics and do the interpretation on interference, diffraction, polarization experiment results

LIST OF ELECTIVES
SEMESTER I

PHCY101 CRYSTAL GROWTH TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand and compare the various Crystal Growth techniques.
- To know the principle in the methods involved in the growth of crystal.

MODULE I CRYSTALLOGRAPHY 09

Symmetry elements, operations - translational symmetries - point groups - space groups - equivalent positions –close packed structures - voids - important crystal structures – Paulings rules - defects in crystals, – polymorphism and twinning - polarizing microscope and uses.

MODULE II CRYSTAL GROWTH THEORY & TECHNIQUES 09

Introduction to crystal growth - nucleation – Gibbs-Thomson equation - kinetic theory of nucleation – limitations of classical nucleation theory - homogeneous and heterogeneous nucleation – different shapes of nuclei – spherical, cap, cylindrical and orthorhombic, Bridgman technique - Czochralski methods - Verneuil technique - zone melting – gel growth – solution growth methods – low and high temperature solution growth methods – vapour growth.

MODULE III GROWTH FROM SOLUTIONS 09

Measurement of supersaturation – Low temperature solution growth – High temperature solution growth – Accelerated crucible rotation technique (ACRT) – Electrocrystallization – Crystal growth in gel – Growth of biological crystals – Hydrothermal technique – Sol-gel growth – Chemical bath deposition (CBD) – Photochemical deposition (PCD) – unidirectional growth of crystals from solution.

MODULE IV MELT GROWTH 09

Temperature measurement and control – Starting materials and purification – conservative and non-conservative process – Bridgman method – Czochralski method – Verneuil method – Zone melting – Skull melting – Fluid flow analysis in melt growth – theory and experiment.

MODULE V APPLICATIONS OF LINEAR AND NON-LINEAR CRYSTALS 09

Nonlinear Optics in Linear Photonic Crystals - Guided Modes in Photonic Crystals Slab. Photonic crystal optical circuitry - 1-D Quasi Phase Matching - Nonlinear Photonic Crystal

Analysis – Nonlinear photonic crystals – photonic crystal fibers – photonic crystal sensor - Materials: LiNbO3, Chalcogenide Glasses, etc., Wavelength Converters, etc.

Total Hours: 45

REFERENCES:

1. Brice J.C., Crystal Growth Processes, John Wiley and Sons, New York, 1987.
2. SanthanaRagavan P. and Ramasamy P., Crystal Growth Processes and Methods, KRU Publications, Kumbakonam, 2001.
3. Scheel, Hans J. and Fukuda, Crystal Growth Technology, Wiley publishers, 2003.
4. Hans J. Scheel and Peter Capper, Crystal Growth Technology: From Fundamentals and Simulation to Large-scale Production, Wiley publishers, 2008.

OUTCOME:

- At the end of the course, the students will be able to understand the various techniques involved in Crystal Growth.

PHCY102 MATERIALS PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the basic concepts of physics of materials processing
- To provide knowledge of various material processing techniques.

MODULE I BASIC MANUFACTURING PROCESSES 09

Fundamental analysis of Manufacturing processes, casting, casting processes, forging, methods of forging, extrusion, rolling, spinning, turning, planning and shaping, milling, grinding.

MODULE II SURFACE TREATMENT PROCESSES 09

Necessity for surface modification, surface cladding, surface alloying, hard facing, shock hardening, conventional methods, carburizing, nitriding, cyaniding, advantages of laser surface treatment over conventional methods, typical laser variables used in surface alloying, laser cladding, experimental set up.

MODULE III WELDING PROCESSES 09

Various processes of welding, fusion welding, pressure welding, oxyacetylene welding, resistance welding, spot welding, thermite welding, projection welding, seam welding, butt welding, thermal effects of welding, effects on grain size and microstructure, internal stresses effect, corrosion effect, high energy beam welding, laser beam and electron beam welding, key hole effect.

MODULE IV MECHANICAL WORKING OF METALS 09

Hot working, cold working, normalizing, full annealing, tempering, theory of tempering, effect of tempering temperature on mechanical properties of carbon steels, different tempering process, deformation of metals, elastic deformation, plastic deformation, slip, twinning.

MODULE V POWDER METALLURGICAL PROCESS 09

Production of powders, powder mixing, compacting, types of presses, sintering, soaking, finishing process, limitations and advantages of powder metallurgy, applications, production of cemented carbide cutting tools, self-lubricating bearings, magnets, cermets, ultrasonic ceramic transducers.

Total Hours: 45

REFERENCES:

1. Rajan T.V, Sharma C.P and Ashok Sharma Heat treatment - Principles and Techniques, Prentice Hall of India Pvt. Ltd. New Delhi, 1995.
2. Muralidhara, M.K., Materials Science and Processes, Dhanpat Rai Publishing Co., New Delhi, 1998.
3. Rykalin, Uglov A, Kokona, A Laser and Electron beam material processing hand book, MIR Publishers, 1987.
4. Gupta, R.B. Materials Science and Processes, Satya Prakashan, New Delhi, 1995.

OUTCOMES:

At the end of the course the students will be able to

- illustrate the manufacturing process, surface treatment process, welding process and mechanical working of metals and powder metallurgical process.

PHCY103 CHARACTERISATON OF MATERIALS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To know the principle and working of various techniques involved in the characterization of materials.
- To learn to analyze data of these techniques

MODULE I THERMAL ANALYSIS 08

Introduction – thermogravimetric analysis (TGA) –instrumentation – determination of weight loss and decomposition products – differential thermal analysis (DTA)- cooling curves - differential scanning calorimetry (DSC) – instrumentation – specific heat capacity measurements – determination of thermomechanical parameters .

MODULE II MICROSCOPIC METHODS 12

Optical Microscopy: optical microscopy techniques – Bright field optical microscopy – Dark field optical microscopy – Dispersion staining microscopy - phase contrast microscopy -differential interference contrast microscopy - fluorescence microscopy - confocal microscopy - scanning probe microscopy (STM, AFM) - scanning new field optical microscopy - digital holographic microscopy - oil immersion objectives - quantitative metallography - image analyzer.

MODULE III ELECTRON MICROSCOPY AND OPTICAL CHARACTERISATION 08

SEM, EDAX, EPMA, TEM: working principle and Instrumentation – sample preparation – data collection, processing and analysis- Photoluminescence – light – matter interaction – instrumentation – electroluminescence – instrumentation – Applications.

MODULE IV ELECTRICAL METHODS 08

Two probe and four probe methods- van der Pauw method – Hall probe and measurement – scattering mechanism – C-V characteristics – Schottky barrier capacitance – impurity concentration – electrochemical C-V profiling – limitations.

MODULE V SPECTROSCOPY 09

Principles and instrumentation for UV-Vis-IR, FTIR spectroscopy, Raman spectroscopy, ESR, NMR, NQR, XPS, AES and SIMS-proton induced X-ray Emission spectroscopy (PIXE) –Rutherford Back Scattering (RBS) analysis-application.

Total Hours: 45

5. Hobart Hurd Willard, Lynne Lionel Merritt, Instrumental Methods of Analysis, 6th ed, CBS Publishers & Distributors, 1986.

OUTCOMES:

At the end of the course, the students will be able to

- illustrate various characterization techniques
- interpret data obtained through the characterization techniques

PHCY104 PHCY104

L	T	P	C
3	0	0	3

OBJECTIVES:

- To enable the students understand importance and structure of smart materials
- To make the students understand the applications of smart materials

MODULE I INTRODUCTION AND HISTORICAL PERSPECTIVE 09

Classes of materials and their usage – Intelligent /Smart materials – Evaluation of materials Science – Structural material – Functional materials – Poly functional materials – Generation of smart materials – Diverse areas of intelligent materials – Primitive functions of intelligent materials – Intelligent inherent in materials – Examples of intelligent materials, structural materials, Electrical materials, bio-compatible materials etc. – Intelligent biological materials – Biomimetics – Wolff's law – Technological applications of Intelligent materials.

MODULE II FUNCTIONAL MATERIALS AND STRUCTURAL SYSTEMS 09

The principal ingredients of smart materials – Thermal materials – Sensing technologies – Micro sensors – Intelligent systems – Hybrid smart materials – An algorithm for synthesizing a smart material – Passive sensory smart structures–Reactive actuator based smart structures – Active sensing and reactive smart structures – Smart skins – Aero elastic tailoring of airfoils – Synthesis of future smart systems.

MODULE III ELECTRO-RHEOLOGICAL (FLUIDS) FUNCTIONAL MATERIALS 09

Suspensions and electro-rheological fluids – Bingham-body model – Newtonian viscosity and non-Newtonian viscosity – Principal characteristics of electro rheological fluids – The electro-rheological phenomenon – Charge migration mechanism for the dispersed phase – Electro-rheological fluid domain – Electrorheological fluid actuators – Electro-rheological fluid design parameter – Applications of Electrorheological fluids.

MODULE IV PIEZOELECTRIC FUNCTIONAL MATERIALS 09

Background – Electrostriction – Pyro electricity – Piezoelectricity – Industrial piezoelectric materials – PZT – PVDF – PVDF film – Properties of commercial Piezoelectric materials – Properties of piezoelectric film (explanation) – Smart materials featuring piezoelectric elements – Smart composite laminate with embedded piezoelectric actuators – SAW filters.

MODULE V SHAPE – MEMORY (ALLOYS) FUNCTIONAL MATERIALS 09

Background on shape – Memory alloys (SMA) Nickel – Titanium alloy (Nitinol) – Materials characteristics of Nitinol – Martensitic transformations – Austenitic transformations –

Thermoelastic martensitic transformations – Cu based SMA, chiral materials – Applications of SMA – Continuum applications of SMA fastners – SMA fibers – reaction vessels, nuclear reactors, chemical plants, etc. – Micro robot actuated by SMA – SMA memorization process (Satellite antenna applications) SMA blood clot filter – Impediments to applications of SMA – SMA plastics – Primary molding – secondary molding – Potential applications of SMA plastics.

Total Hours: 45

2. T.W. Deurig, K.N.Melton, D.Stockel and C.M.Wayman, Engineering aspects of Shape Memory alloys, Butterworth –Heinemann, 1990
3. C.A.Rogers, Smart Materials, Structures and Mathematical issues, TechnomicPublising Co., USA, 1989.

OUTCOMES:

At the end of the course the students will be able to

- illustrate structure and properties of smart materials and their applications in Science & Technology

PHCY105 ADVANCED OPTICS AND LASER TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To know the role of advanced optics in laser technology
- To understand the various mechanisms involving operation of laser.

MODULE I THEORY OF DIFFRACTION 09

Kirchoff's theorem – Fresnel – Kirchoff integral formula and its application to diffraction problems - Wave propagation in free space - Fraunhofer and Fresnel diffraction, Fraunhofer diffraction by a single slit, double slit, diffraction grating, circular aperture - Fresnel diffraction, Fresnel zones, Fresnel integrals.

MODULE II FOURIER OPTICS 09

Concept of spatial Frequencies, Impulse response and transfer functions-Fourier Transform properties of lens - spatial filtering - theory of imaging (Focused and non-focused) - Pupil functions - Abbe's principle.

MODULE III LASER SYSTEMS 09

Laser systems – General description-Laser structure-excitation mechanism-Different laser systems- He-Ne laser, Argon-ion laser, Nitrogen laser, Carbon-dioxide laser - Excimer laser - X-ray laser - Free electron laser, Nd:YAG; Nd:Glass, Alexandrite laser - Ti-Sapphire laser – Diode pumped solid state laser, Pulsed-CW dye laser.

MODULE IV Q-SWITCHING, MODE LOCKING AND COHERENCE OF LASER 09

Theory of Q-switching and experimental methods - cavity dumping -Theory of Mode locking and experimental methods - Spatial and Temporal coherence - Methods of detection and measurement of ultrashort pulses.

MODULE V LASER APPLICATIONS 09

Cooling and Trapping of Atoms, Principles of Doppler and Polarization Gradient Cooling, Qualitative Description of Ion Traps, Optical Traps and Magneto-Optical Traps, Evaporative Cooling and Bose Condensation. Medical applications - laser and tissue interaction – laser instrument of surgery.

Total Hours: 45

REFERENCES:

1. Born and Wolf, Principles of Optics, Cambridge University press, 1999.
2. Saleh and Tiech, Fundamentals of photonics, Wiley-Interscience Publishers, 2007.
3. Guenther. R.D., Modern Optics, John Wiley Publishers, 1990.
4. William T. Silfvast, Laser Fundamentals, Cambridge University press, 1996.
5. Robert Boyd. W, Non Linear Optics, 3rd edition, Academic Press, 2008.

OUTCOMES:

At the end of the course, the students will be able to

- illustrate the characteristics of the laser systems and various applicatons of laser systems.

PHCY106 NONLINEAR OPTICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To teach the students the principles of nonlinear optics and origin of optical nonlinearities.
- To analyze various types of nonlinearities in optics and its applications.

MODULE I INTRODUCTION TO NONLINEAR OPTICS 09

Wave propagation in an anisotropic crystal – Polarization response of materials to light – Harmonic generation – Second harmonic generation – Sum and difference frequency generation – Phase matching – Third harmonic generation – bistability – self focusing.

MODULE II NONLINEAR PROCESSES 09

Propagation of Electromagnetic Waves in Nonlinear medium, Self Focusing, Phase matching condition, Fiber Lasers, Stimulated Raman Scattering and Raman Lasers, CARS, Saturation and Two photon Absorptions.

MODULE III THIRD ORDER NONLINEARITIES 09

Two photon process – Theory and experiment – Three photon process Parametric generation of light – Oscillator – Amplifier – Stimulated Raman scattering – Intensity dependent refractive index optical Kerr effect – photorefractive, electron optic effects.

MODULE IV MULTIPHOTON PROCESSES 09

Electro-optic effects – Electro-optic modulators - Photorefractive effect - Two beam coupling in Photorefractive materials – Four wave mixing in Photorefractive materials.

MODULE V STIMULATED SCATTERING PROCESSES 09

Stimulated scattering processes – Stimulated Brillouin scattering – Phase conjugation – Spontaneous Raman effect – Stimulated Raman Scattering – Stokes – Anti-Stokes Coupling in SRS – Stimulated Rayleigh - Wing Scattering.

Total Hours: 45

REFERENCES:

2. A.Yariv, Opto Electronics, Third Edition, John Wiley and Sons, New York,1990. (Unit II)
3. P.N.Butcher and D.Cotter, “The Elements of Nonlinear Optics”, Cambridge Univ. Press, New York, 1990. (Unit I & V)

OUTCOMES:

At the end of the course the students will able to

- explain the principles of nonlinear optics, different nonlinear phenomena and its applications.
- apply the knowledge for harmonic conversion and evaluate nonlinear susceptibility of materials.

PHCY107 OPTICAL FIBER COMMUNICATION

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the principles and technologies of fiber optic communication.
- To introduce the various optical fiber modes, configurations and various signal degradation factors associated with optical fiber.
- To study about various optical sources and optical detectors and their use in the optical communication system.

MODULE I FIBER OPTICS 08

Total internal reflection - Phase shift & attenuation during total internal reflection - Hybrid modes - cutoff frequencies - meridinal rays & skew rays - different types of fibers.

MODULE II TRANSMISSION CHARACTERISTICS OF OPTICAL FIBERS 08

Dispersion - Fiber attenuation, absorption loss & scattering loss measurement - Optical Time Domain Reflectometer (OTDR) and its uses - Interferometric method to measure fiber refractive index profile.

MODULE III OPTICAL FIBERS CABLES & CONNECTORS 08

Fiber materials - Fiber fabrication- fiber optic cables design - fiber connectors - fiber splices - Lensing schemes for coupling improvements.

MODULE IV METHODS OF MODULATION AND DETECTION 11

Advantages - Elements of an optical fiber communication system - and detectors for communication - Injection laser - Homojunction and Heterojunction lasers - Injection laser to fiber coupling - Fiber lasers - Surface Emitting, edge emitting and superluminescent LEDs - Optical Detectors - Pin photodiodes - Avalanche photodiodes - Multiplexers - wavelength division multiplexing - Electrooptic and Acoustooptic modulation - Coherent optical fiber communication system - ASK, FSK and PSK modulated waveforms - Basic coherent receiver model - heterodyne and homodyne detections.

MODULE V OPTICAL FIBER COMMUNICATION NETWORKS 10

Local Area Networks - Bus, ring and star topologies - optical fiber regenerative repeater - optical amplifiers - basic applications - Active and passive taps - Low speed industrial optical fiber networks - Integrated optical switches.

Total Hours - 45

REFERENCES:

2. Allen H. Cherin, "An Introduction to Optical Fibers", Mc Graw Hill Inc., Tokyo, 1995.
3. John M. Senior, "Optical Fiber Communications", Prentice Hall International Ltd., London 1992.
4. Govind P. Agrawal, "Fiber Optic Communication Systems", John Wiley & Sons Inc., New York, 1997.

OUTCOME:

On completion of this course the student will be able to

- Design optimization of SM fibers, RI profile and cut-off wave length.
- explain the various optical source material (LED, LASER), fiber amplifiers and receivers.
- illustrate fiber slicing and connectors, noise effects on system performance, operational principles WDM and solutions.

PHCY108 OPTICAL COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the concepts of digital images and optical computation on digital images.
- To provide knowledge of advanced digital communications areas.
- To introduce the students to neural networks and on advanced memory techniques such as associative memory and artificial intelligence.

MODULE I DIGITAL IMAGE PROCESSING FUNDAMENTALS 05

Digital Image fundamentals - sampling and Quantization - Image Enhancement – Image Restoration – image filtering

MODULE II ANALOG OPTICAL COMPUTING 07

Optical Computing 4f - fourier system - Spatial filtering - Inverse filtering - Deblurring - Analog Optical Arithmetic - Halftone processing - Non-linearOptical processing - Matched filter - Joint transform correlation - Phase only filter - Amplitude-modulated recognition filters - Generalized correlation filter.

MODULE III DIGITAL LOGIC 14

Number Systems - Number representations - Codes - Arithmetic Operations - Logic elements and Operations - Basic Logic Operations - Logic function formulations - Boolean Algebra - Minimization of function using K-map - Universal Logic gates - Logic functions using Multiplexers - Threshold Logic - Combinational Logic- Binary Adders - Carry-Look Ahead adder - Arithmetic Logic Unit- Decoders and encoders - Sequential Logic -Flip-flops- Synchronous sequential circuits - Counters.

MODULE IV DIGITAL OPTICAL COMPUTING 14

Non-linear devices - Integrated Optics - Threshold Devices - Spatial Light Modulators - Theta Modulation Devices - Shadow casting and Symbolic substitution - Design Algorithm - POSC Logic operations - POSC Multiprocessor Parallel and Sequential ALU using POSC - POSC Image Processing - Symbolic Substitution- Optical Implementation-Limitations and Challenges - Optical Matrix Processing - Multiplication using Convolution - Matrix Operations - Cellular Logic Architecture - Programmable Logic Array.

MODULE V OPTICAL NEURAL NETWORKS 05

Neural Networks - Associative Memory - Optical Implementations - Interconnections - Artificial Intelligence.

Total Hours - 45

5. Morris Mano, "Fundamentals of Digital Logic Circuits", Prentice Hall, 2002.

OUTCOME:

At the end of the course, the student will be able to

- explain digital image fundamentals and various imaging techniques

SEMESTER II

PHCY201 ELECTRO-OPTIC MATERIALS AND DEVICES

L	T	P	C
3	0	0	3

OBJECTIVE:

- To make the students to understand the various electro optic materials and devices.

MODULE I PHYSICS OF LASER 09

Laser beam characteristics, Spontaneous and stimulated emission - Population inversion - Threshold condition - Gain profile – super-radiance Laser - Rate equation for 3 level and 4 level systems - conditions for CW and pulsed laser action. Methods of detection and measurement of ultrashort pulses.

MODULE II OPTICAL ACTIVITY OF CRYSTALS 09

Anisotropic media - index ellipsoid, propagation in uniaxial crystals, Birefringence, wave plates and compensators, optical activity.

MODULE III ELECTRO-OPTIC EFFECT 09

E-O effect in KDP E-O retardation, E-O modulation - longitudinal and transverse E-O effect in cubic crystals, E-O Q- switching (Experimental) Beam deflectors.

MODULE IV ACOUSTO-OPTIC AND ELASTO-OPTIC EFFECTS 09

Materials and devices based on these effects – modulators - SHG, mode locking and frequency mixing - materials and devices.

MODULE V NON LINEAR OPTICAL MATERIALS AND DEVICES 09

Origin of optical nonlinearities – second and third order optical non-linearities-Optical switching devices employing optical non-linearities -Photorefractive effect - Two beam coupling in Photorefractive materials – Four wave mixing in Photorefractive materials.

Total Hours: 45

REFERENCES:

1. Munn R W and Ironsid C N, "Non - Linear Optical Materials", Blackie Academic & Professional, Glassgow, 1993.
2. Kochner W, "Solid State Laser Engineering", Springer-Verlag, New York, 1976.
3. Yariv A, "Quantum Electronics", John Wiley & Sons, 1975.

4. Ivan P Kaminov, " Introduction to Electro-Optic Devices", Academic press, New York, 1974.

OUTCOMES:

At the end of the course the students will be able to explain

- electrooptic effect and Acoustooptic effect
- electro optics and Acousto-Optics devices.
- non linear optical materials and devices

PHCY202 FERROELECTRIC MATERIALS AND DEVICES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To enable the students understand the principles behind ferroelectric materials.
- To make the students understand materials, devices and applications.

MODULE I INTRODUCTION 09

Maxwell equations – Polarization – Macroscopic electric field – Local electric field at an atom – Dielectric constant and polarizability – Structural phase transitions – Classification of ferroelectric crystals – Displacive transitions – Soft optical phonons – Landau theory of the phase transition – Second order transition – First order transition – Antiferroelectricity – Ferroelectric domains – Piezoelectricity – Ferroelectricity – Optical ceramics.

MODULE II THEORY OF FERROELECTRICS 09

Ferroelectricity, piezoelectricity and pyroelectricity – definitions – classification of ferroelectrics – oxygen octahedral and order – disorder ferroelectronics. Characteristics of typical ferroelectrics, barium titanate, potassium dihydrogen phosphate and triglycine sulphate – applications of ferroelectrics. Theories of ferroelectrics – dipole theory – thermodynamic theory – first order and second order transitions – local field theory of $BeTiO_3$ – Slater's theory of KH_2PO_4 – ferroelectric domains.

MODULE III HIGH PERMITTIVITY DIELECTRICS 09

Ceramic capacitors. Chip capacitors. Hybrid substrate.Relaxor ferroelectrics – High permittivity – Diffuse phase transition – Dielectric relaxation -IK dielectric materials.

FERROELECTRIC MEMORY DEVICES: DRAM – Ferroelectric DRAM – Non- volatile ferroelectric memory – FRAM (inversion current type) – MFSFET

PYROELECTRIC DEVICES: Pyroelectric materials – pyroelectric effect – responsivity – figures of merit. Temperature / infrared light sensors, infrared image sensors.

MODULE IV PIEZOELECTRIC DEVICES 09

Piezoelectric materials and properties – Figures of Merit. - Single crystal – polycrystalline materials - relaxer ferroelectrics polymers – composites – Thin films. Pressure sensors, accelerometers, gyroscopes. Piezoelectric vibrators – piezoelectric resonance – equivalent circuits, ultrasonic transducers – Resonators/filters. Surface acoustic wave devices.Piezoelectric transformers.Piezoelectric actuators. Ultrasonic motors.

MODULE V ELECTRO-OPTIC DEVICES 09

Electro-optic effect, transparent electro-optic ceramics, bulk electro-optic devices. Wave-guide modulators.

COMPOSITES: Composite piezoelectric materials, connectivity, composite effects. PZT polymer composites.

Total Hours: 45

5. Jack C Burfoot, "Ferroelectrics – Introduction to the Physical Principles", D Van Nostrand Co., 1967.

OUTCOMES:

At the end of the course the students will be able to understand

- the principles of ferroelectric materials.
- ferroelectric materials, devices and applications

PHCY203 STRUCTURE AND PROPERTIES OF ALLOYS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To enable the students understand importance of phase diagrams and their relationship with properties of alloys
- To make the students understand the basic structure and property relationship of the alloy
- To make students to learn the application of the alloys with respect to their phase diagram and properties

MODULE I SOLID SOLUTIONS 09

Concept of solid solution - Solid solutions of Copper and Iron - Cu-Ni phase diagram - cast cupro nickel microstructures - Properties of annealed copper solid solution alloys - Soft magnetic alloys - Stainless steels.

MODULE II EUTECTIC ALLOYS 09

Pb-Sb phase diagram and microstructure - Pb-Sn phase diagram - Cu:O system - Ternary Pb-Sn-Sb phase diagram - Characteristic properties of eutectic system alloys - Applications of Pb-Sn and Pb-Sn-Sb alloys.

MODULE III CAST AND WROUGHT ALLOYS 09

Al-Si phase diagram - Al-Cu phase diagram -coherency theory of age hardneing - Microstructures – Cast aluminium alloy -properties-residual stresses and relaxation.

MODULE IV TWO PHASE ALLOYS 09

Cu-Zn phase diagram – Cu-Zn alloy structure - Cu-Sn and Cu-Al alloy systems and their microstructures - Properties of brasses, tin brasses and aluminium bronzes.

MODULE V IRON-CARBON ALLOYS 09

Fe-Fe3C phase diagram - Solubility of carbon in austenite and ferrite-terminology-Equilibrium and non equilibrium - Microstructures-properties of normalized steels - Grain size of steels - Engineering applications of low carbon steels and low alloy high strength steels.

Total Hours: 45

7. William D. Callister, David G. Rethwisch,“Materials Science and Engineering : AN Introduction” Wiley Publishing, 9th Edition, 2013.

OUTCOMES:

At the end of the course the students will be able to explain

- importance of phase diagrams and their relationship with properties of alloys
- basic structure and property relationship of the alloys
- applications of phase diagram and their importance

PHCY204 PHOTONIC MATERIALS AND DEVICES

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart knowledge on photonic devices by going over the fundamentals of semiconductor physics and optical processes in semiconductors.

MODULE I SEMICONDUCTING MATERIALS 07

Band gaps - density of states – materials - optical and electronic properties - carrier generation and recombination - mobility and diffusion - low dimensional structures - quantum wells - wires and dots - heterostructures.

MODULE II OPTICAL PROCESSES IN SEMICONDUCTORS 10

Electron-Hole formation and recombination – absorption in semiconductors – effect of electric field on absorption – absorption in quantum wells and the quantum-confined Stark effect – Kramer-Kroning relations – radiation in semiconductors – deep level transitions – auger recombination – Luminescence from quantum wells – measurement of absorption and luminescence spectra – time resolved photoluminescence.

MODULE III SEMICONDUCTOR DEVICE FABRICATION 10

Types of photonic materials –III-V compound-II-VI compounds-Wafer preparation-interface quality- interdiffusion and doping. Quantum wells and bandgap engineering (examples of structures).Post-growth processing-Photolithography-different methodologies – patterning - fabrication of semiconductor devices.

MODULE IV PHOTONIC DEVICES 10

Photodiodes: current-voltage equation – operation-spectral response of Ge and Si – quantum efficiency – response time – diffusion time – drift – capacitance of diodes, measurement - device configuration and efficiency – device performance.

MODULE V INSTRUMENTATION OF PHOTONIC MATERIALS 08

Measurements using lenses, monochromators, spectrometers, grating, mirrors, lock-in amplifiers – characterization of photodiodes, LEDs and laser diodes – modulation of lasers – rate equations.

Total Hours: 45

6. Ajoy Ghatak and K Thyagarajan, “An Introduction on Fibre Optics”, Cambridge University Press, 2012.

OUTCOMES:

At the end of the course, the students would be able to

- understand the properties of a photonic materials.
- fabricate photonic devices and its characterization techniques.

PHCY205 NUMERICAL METHODS AND PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the basic numerical methods and programming.
- To have an idea to apply numerical methods into research areas.

MODULE I ERRORS AND THE MEASUREMENTS 09

Errors and their computations – General formula for errors – Errors of observation and measurement – Round of errors and Computer Arithmetic – Empirical formula – Graphical method – method of averages – Least square fitting – curve fitting – parabola, exponential – Algorithms and convergence.

MODULE II NUMERICAL SOLUTION OF ALGEBRAIC AND TRANSCENDENTAL EQUATIONS 09

The iteration method – the bisection method – the method of false position – Newton – Raphson method.SimultaneousLinear algebraic equations: Direct methods – Gauss elimination method – Gauss – Jordan method – Iterative method – Jacobi's method – Gauss Seidel iterative method.

MODULE III INTERPOLATION 09

Finite differences – Interpolation – Gregory – Newton forward interpolation of Newton's formula – Backward differences – Newton's Backward interpolation formula – central differences – Gauss's forward and backward formula – Stirling's formula – Divided differences – Newton's divided difference formula – Lagrange's interpolation formula.

MODULE IV NUMERICAL DIFFERENTIATION AND INTEGRATION 09

Introduction – Numerical differentiation – Errors in numerical differentiation – The cubic spline method – Maximum and Minimum values of a tabulated function – Numerical integration – Trapezoidal rule – simpson's rule – Extended Simpson's rule – Use of cubic splines – Romberg integration – Newton – Cotes Integration formulae – Euler – Maclaurin formula – Adaptive quadrature method – Gaussian integration.

MODULE V PROGRAMMING WITH C 09

Introduction to C programming-program control-logical compares-functions, variables and prototypes-C preprocessor- strings, arrays-pointers- standard input & output-structures, Unions-bitwise operators.

5. Balagurusamy, E, Programming in Ansi C, 4th Edition, Tata McGraw Hill, 2008.

OUTCOME:

- At the end of the course, the students will be able to understand the basic concepts of numerical methods and programming

PHCY206 ULTRASONIC AND NON-DESTRUCTIVE TESTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce students with the recent advances in the field of ultrasonics and to equip them with the knowledge of different process for a better evaluation in complex geometries.
- To introduce the other NDT techniques like LPI to equip the students to understand the evaluation method

MODULE I FUNDAMENTALS OF ULTRASONIC WAVES 09

Nature of sound waves, wave propagation in metals– modes of sound wave generation – longitudinal waves, transverse waves, surface waves, lamb waves –Velocity, frequency and wavelength of ultrasonic waves – Ultrasonic pressure, intensity and impedance – Attenuation of ultrasonic waves – reflection, refraction and mode convection – Snell's law and critical angles – Fresnel and Fraunhofer effects – ultrasonic beam split – wave propagation in other engineering materials

MODULE II ULTRASONIC INSPECTION METHODS AND EQUIPMENT 09

Principle of pulse echo method, through transmission method, resonance method – Advantages, limitations – contact testing, immersion testing, couplants – Data presentation A, B and C scan displays, comparison of contact and immersion method. Pulse Echo instrumentation, controls and circuits, pulse generation, signal detection, display and recording methods, gates, alarms and attenuators, detectability of defects

MODULE III ULTRASONIC GUIDED WAVES 09

Types of guided waves – Generation of guided waves – Plate theory – Rayleigh-Lamb Equation, Guided waves in Plates, Pipes and rods – Wave structure analysis – Dispersion curves –Modes in guided waves – Air coupled ultrasonic guided waves – advantages and limitations – Applications, few case studies. Electro Magnetic Acoustic Transducer (EMAT)-Basic principles – types of coil and design – Generation and defect detection of guided waves using EMATS- - advantages and limitations – Applications- case studies

MODULE IV OPTICAL METHODS IN ULTRASONICS 9

Laser Ultrasonics – Laser fundamentals – types of lasers – bulk wave and lamb wave generation mechanisms – optical detection of ultrasound – measurement of in plane displacement and velocity – holographic NDT – recording and reconstruction of a hologram – Two wave mixing interferometry – Laser shearography – Applications (Laser ultrasonics for flaw detection and material characterization) – Case studies.

MODULE V LIQUID PENETRANT TESTING 09

Principles – types and properties of liquid penetrants – developers – advantages and limitations of various methods - Preparation of test materials – Application of penetrants to parts, removal of excess penetrants, post cleaning – Control and measurement of penetrant process variables – selection of penetrant method – solvent removable, water washable, post emulsifiable – Units and lighting for penetrant testing – Interpretation and evaluation of test results - dye penetrant process, applicable codes and standards.

Total Hours: 45

REFERENCE:

6. A.S. Birks and R.E. Green, Ultrasonic Testing, Nondestructive Handbook, Vol. 7, American Society for Nondestructive Testing, 2nd edition (1991).

OUTCOMES:

After successful completion of this course the student will be able to

- have a basic knowledge of ultrasonic testing and NDT, this enables them to perform inspection of samples.
- calibrate the instrument and evaluate the component for imperfections.
- differentiate various defect types and select the appropriate NDT methods for the specimen.
- document a written procedure paving the way for further training in specific techniques.

PHCY207 OPTO ELECTRONICS & ITS DEVICES

L	T	P	C
3	0	0	3

OBJECTIVE:

- To make the students learn the fundamentals of Photo-luminous-semiconductors, Optoelectronic devices, Optical modulators/detectors
- To make them understand the technology behind latest Display devices like LCD, Plasma and LED Panels.

MODULE I INTRODUCTION TO OPTOELECTRONIC MATERIALS 09

Energy bands in solids, Electrical conductivity, Semiconductors, carrier concentrations, Work function, Excess carrier in semiconductors, Junctions, , Metal-semiconductor junctions - Preparation of junctions wafer selection, Oxidation, lithography photolithography, doping, metalisation, terminals, packaging Metal - semiconductor junctions: energy-band relation, surface states and depletion layer, Schottky-effect current transport process – thermo ionic emission, tunneling, device structures.

MODULE II OPTOELECTRONIC DEVICES 09

Light-Emitting Diodes, Liquid crystal displays, Photo detectors, Photodiode materials, Phototransistor, Solar cells, Materials and design considerations, Thin film solar cells, amorphous silicon solar cells, Semiconductor Lasers, Optical processes in semiconductor lasers - LED – power and efficiency - double hetero LED - LED structure - LED characteristics - White LED – Applications.

MODULE III OPTICAL MODULATORS 09

Modulation of light – birefringence - electro optic effect - EO materials - Kerr modulators - scanning and switching - self electro optic devices - MO devices, AO devices - AO modulators.

MODULE IV OPTICAL DETECTORS 09

Photo detectors - thermal detectors – photoconductors – detectors - photon devices - PMT- photodiodes - photo transistors - noise characteristics - PIN diode - APD characteristics - APD design of detector arrays – CCD - Solar cells

MODULE V PHOTONIC DEVICES 09

Photo detectors : photoconductors – absorption coefficient, D.C. and A.C. conductors. Junction photo detectors – Photo voltaic effect: Photodiodes, PIN diodes, quantum efficiency and frequency response, noise, hetero junction diodes, avalanche diode, Solar

cells – basic principles, spectral response, efficiency, materials and cascaded solar cells, thin film solar cells, manufacturing and design characteristics.

Total Hours: 45

REFERENCES:

6. Jasprit Singh, “Semiconductor optoelectronics”, McGraw–Hill, Inc, 1995.R. P.
7. Khare, “Fiber optics and Optoelectronics”, Oxford University Press, 2004.

OUTCOME:

On completion of this course the student will explore

- the concepts of LED, Laser drive circuits.
- the modulation of light,birefringence,MO devices.
- the working of optical detectors and various optical devices.

PHCY208 BIOPHOTONICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To know the importance of spectroscopic studies in Biophotonics
- To understand the role of Biophotonic materials in applications.

MODULE I INTERACTION OF LIGHT WITH BIOLOGICAL SYSTEMS 09

Interaction of light with cells, tissues, nonlinear optical processes with intense laser beams, photo-induced effects in biological systems.

MODULE II IMAGING TECHNIQUES 09

Imaging techniques: Light microscopy, wide-field, laser scanning - confocal, multiphoton, fluorescence lifetime imaging, FRET imaging - Frequency-Domain lifetime imaging. Cellular Imaging - Imaging of soft and hard tissues and other biological structures.

MODULE III SINGLE MOLECULE SPECTROSCOPY 09

Single molecule spectroscopy: UV-VIS spectroscopy of biological systems, single molecule spectra and characteristics – IR and Raman spectroscopy and Surface Enhanced Raman Spectroscopy for single molecule applications.

MODULE IV OPTICAL FORCE SPECTROSCOPY 09

Optical Force Spectroscopy: Generation optical forces – Optical trapping and manipulation of single molecules and cells in optical confinement - Laser trapping and dissection for biological systems - single molecule biophysics, DNA protein interactions.

MODULE V BIOSENSORS 09

Biosensors, Principles- DNA based biosensors – Protein based biosensors – materials for biosensor applications- fabrication of biosensors.

Total Hours: 45

REFERENCES:

1. Prasad. P.N., Introduction to Biophotonics, John Wiley & Sons, 2003
2. Michael P. Sheetz, Laser Tweezers in Cell Biology (Methods in Cell Biology), Vol.55, Academic Press Publishers, 1997.
3. Ranier .W, Nanoelectronics and Information Technology, Wiley Publishers, 2012.
4. Drexler. K.E., Nanosystems: Molecular Machinery, Manufacturing, and Computation, Wiley Publishers, 1992.

OUTCOMES:

At the end of the course, the students will be able to illustrate

- the basic concepts about the Biophotonics
- the importance of use of spectroscopy in design of biophotonic devices.

SEMESTER III

PHCY111	MATHEMATICAL METHODS FOR NONLINEAR SCIENCE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the basic concepts of different mathematical methods useful for nonlinear sciences.
- To have a comprehensive idea on solitons and soliton equation.
- To understand the methods to solve Nonlinear Schrodinger type equations.

MODULE I FOURIER ANALYSIS AND OPTICS 08

Fourier series – Harmonic analysis – Fourier Transform and applications – Convolution Theorem – Sampling Theorem and applications – Fourier Optics – Holographic filters.

MODULE II DISCRETE FOURIER TRANSFORM 07

Discrete time signals – Discrete Fourier Transform – Butterfly algorithm – Fast Fourier Transform.

MODULE III DIFFERENTIAL EQUATIONS 10

Ordinary differential equations (ODEs) – Partial differential equations (PDEs) – Nonlinear ordinary differential equations – Nonlinear partial differential equations.

MODULE IV SOLITON EQUATIONS 10

Korteweg de Vries (K-dV) type equations – modified K-dV equation (MK-dV) – sine-Gordon m-Nonlinear Schrodinger type equations – Burger's equations.

MODULE V COHERENT STRUCTURES 10

Solitons – Generating soliton equations (AKNS method) – Inverse scattering method – Backlund transformation – Hirotabi linearization method – Painleve Analysis – Lax pair.

Total Hours: 45

REFERENCES:

6. Steven H.Strogatz, Nonlinear Dynamics and Chaos: With Applications to Physics, Biology, Chemistry, and Engineering (Studies in Nonlinearity) 2nd Edition, 2015.

OUTCOMES:

At the end of the course, the students will be able to

- use different mathematical methods to study problems in nonlinear sciences.
- apply various methods to solve ordinary differential equations, nonlinear schroedinger type equations.
- understand the concepts and applications of solitons.

PHCY112 MEASUREMENT AND INSTRUMENTATION

L	T	P	C
3	0	0	3

OBJECTIVES:

- To enable the students understand the importance of measurements.
- To make the students understand the principle behind instrumentation for measurement.

MODULE I PHYSICAL MEASUREMENT 07

Measurement – result of a measurement – uncertainty and experimental error– systematic error – random error – repeated measurements – data distribution functions; mathematical description, derivation and properties – propagation error – analysis of data – multi parameter experiments.

MODULE II TRANSDUCERS0 10

Classification of Transducers - Principle, construction and working of Thermistor - LVDT, Electrical strain gauges and capacitive transducers, Photoelectric transducer, Piezoelectric transducer - Measurement of non-electrical quantities - Strain, Displacement, temperature, Pressure, Magnetic fields, vibration, optical and particle detectors.

MODULE III BRIDGES AND RECORDERS 10

DC bridges - Wheatstone's bridge – Kelvin's bridge – double bridge –AC bridges – bridges for capacitance and inductance comparison – Wien bridge – Schering bridge – Maxwell's inductance bridge – Maxwell – Wein bridge - Hay bridge – Anderson bridge – De sauty bridge – Owen bridge - resonance bridge – types of detectors– strip chart recorders – X-Y recorders – digital data recording – recorder specifications.

MODULE IV INSTRUMENTATION ELECTRONICS 08

Op-amps – instrumentation amplifier – signal conditioning – filters – analog signal processing – high speed A/D conversion – D/A conversion – digital logic levels –digital instrumentation – frequency measurements – FFT –sampling time and analyzing – IEEE 488 interface bus – LabView (basics).

MODULE V ADVANCED MEASUREMENTS 10

Spectroscopic instrumentation –UV – Vis spectrometer IR spectroscopy – spectrometer design – refraction and diffraction –– dispersive elements – lasers – fiber optics – X-ray fluorescence: line spectra and fine structure – absorption and emission processes – X-

ray production – X-ray crystallography –neutron diffraction – TEM – SEM – atomic force and tunneling scanning microscope.

2. R.F. Coughlin and F.F. Driscoll, “Operational amplifiers and linear integrated circuits”, Pearson Education, New Delhi, 2001.
3. E.O. Doebelin, “Measurement systems: Applications and design”, McGraw-Hill, New York, 2002.Rangan Sharma and Mani, “Instrumentation devices and systems”, Tata McGraw-Hill, New Delhi, 2000.

OUTCOMES:

At the end of the course, the students will be able to

- acquire the knowledge about the different errors occurring during measurement
- understand the principle behind the instrumentation for measurement.
- Identify the various transducers involved in measurement.

PHCY113 BIOMEDICAL INSTRUMENTATION

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the biomedical instrumentation techniques.
- To know the importance methods, instruments available for biomedical field.
- To analyze the biomedical instrumentation systems, and the application specific biomedical sensor and instrumentation design.

MODULE I HUMAN PHYSIOLOGICAL SYSTEMS 09

Cells and their structure – Nature of Cancer cells – Transport of ions through the cell membrane – Resting and action potentials – Bio-electric potentials – Nerve tissues and organs – Different systems of human body. Biopotential Electrodes and Transducers Design of Medical instruments – components of the biomedical instrument system – Electrodes – Transducers.

MODULE II BIOSIGNAL ACQUISITION 09

Physiological signal amplifiers – Isolation amplifiers – Medical preamplifier design – Bridge amplifiers – Line driving amplifier – Current amplifier – Chopper amplifier – Biosignal analysis – Signal recovery and data acquisition – Drift Compensation in operational amplifier – Pattern recognition – Physiological Assist Devices. Pacemakers – Pacemakers batteries – Artificial heart valves – Defibrillators – nerve and muscle stimulators Heart – Lung machine – Kidney machine.

MODULE III BIOPOTENTIAL RECORDERS 09

Characteristics of the recording system – Electrocardiography (ECG) – Electroencephalography (EEG) – Electromyography (EMG) – Electroethinogrphy (ERG) and Electroculography (EOG) – Recorders with high accuracy – recorders for OFF line analysis.

MODULE IV OPERATION THEATRE EQUIPMENT 09

Surgical diathermy- shortwave diathermy – Microwave diathermy – Ultrasonic disathermy – Therapeutic effect of heat – Range and area of irritation of different techniques – Ventilators – Anesthesia machine – Blood flowmeter – Cardiac Output measurements – Pulmonary function analyzers – Gas analyzers – Blood gas analyzers – Oximeters – Elements of intensive care monitoring.

MODULE V SPECIALISED MEDICAL EQUIPMENTS 09

Blood Cell counter – Electron microscope – Radiation detectors – Photometers and colorimeters – digital thermometer – audiometers – X-rays tube – X-ray machine – image

intensifiers – Angiography – Application of X-ray examination. Safety instrumentation: Radiation safety instrumentation – Physiological effects due to 50Hz current passage – Microshock and macroshock – electrical accident Hospitals – Devices to protect against electrical hazards – Hospitals architecture.

Total Hours: 45

1. Arumugam M., Biomedical Instrumentaion, Anurada Agencies Publishers, 1992.
2. Khandpur R.S., Handbook of Biomedical Instrumentation, Third Edition, Tata McGraw-Hill Education, 2014.
3. Shakti Chatterjee and Aubert Miller, Biomedical Instrumentation Systems, Cengage Learning Publisher, 2010.
4. Gromwell L., Fred J. Weibell, Erich A. Pfeiffer, Biomedical Instrumentation and Measurements, Second Edition, Prentice Hall, 1980.

OUTCOMES:

At the end of the course, the students will be able to understand

- different biomedical instruments involved in medicine field.
- the various methods available in the use of new modern techniques in biomedicine.

PHCY114 RADIATION PHYSICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the theory of electromagnetic radiation
- To know the difference between natural and artificial radioactivity
- To study the interaction of radiation with matter and its effects.

MODULE I ELECTROMAGNETIC RADIATION 09

Wave model – Quantum Model– visible light and fluorescence particulate radiation – inverse square law.

MODULE II NATURAL AND ARTIFICIAL RADIOACTIVITY 09

Radioactivity – General properties of alpha, beta and gamma rays – Laws Of radioactive disintegration – Radioactive decay constant – Half-life period – average life – Isotopes, Isobars, Isomers – Isotones and Isodiapheres – Natural radioactive series – Radioactive equilibrium –Radioactive decay - a particle decay – ß particle decay – Theory of beta decay – Gamma emission – Electron capture – Internal conversion – Nuclear isomerism – Artificial radioactivity - Nuclear reactions –a, p reaction - a, n reaction- Proton bombardment – deuteron bombardment- neutron bombardment – photo disintegration – Activation of nuclides - Elementary ideas of fission, fusion and nuclear reactors.

MODULE III RADIATION FACTORS 09

Quantities to describe a radiation beam - particle flux and fluence- Photon flux and fluence- cross section- linear and mass absorption coefficient-stopping power and LET Activity – Curie – Becquerel. Exposure and its measurements – Roentgen, Radiation absorbed Dose- Gray - kerma- kerma rate constant -Electronic equilibrium - relationship between kerma, exposure and absorbed dose – Relative biological effectiveness (RBE)-radiation weighting factors.

MODULE IV INTERACTION OF RADIATION WITH MATTER 09

Interaction of electromagnetic radiation with matter: Ionization – Photon beam exponential attenuation – Rayleigh scattering – Photoelectric effect – Compton effect - energy absorption – Pair production – Attenuation, energy transfer and mass energy absorption coefficients – Relative importance of various types of interactions.

MODULE V INTERACTION OF CHARGED PARTICLES WITH MATTER 09

Classical theory of inelastic collisions with atomic electrons – Energy loss per ion pair by primary and secondary ionization – Dependence of collision energy losses on the physical and chemical state of the absorber – Cerenkov radiation – Electron absorption process –

scattering excitation and ionization – Radiative collision – Bremmstrahlung – Range energy relation – Continuous slowing down approximation (CSDA) – straight ahead approximation and detour factors – transmission and depth dependence methods for determination of particle penetration - empirical relations between range and energy – Back scattering.

4. Oliver R., Radiation Physics in Radiology, Blackwell Scientific Publication, 1974.
5. Frank Herbert Attix, Introduction to Radiological Physics and Radiation Dosimetry, Wiley-VCH Publishers, 1991.

OUTCOMES:

At the end of course, students will be able to understand

- concepts of electromagnetic radiation
- theory of artificial and natural radioactivity
- interaction of radiation with matter.

PHCY115 LASER SPECTROSCOPY AND ITS APPLICATIONS

L	T	P	C
3	0	0	3

OBJECTIVE:

- To endow the students with the knowledge of the fundamentals of spectroscopy and about different types of spectroscopy and applications of laser spectroscopy in various fields.
- To provide the information in a way that the student can learn about laser tissue interaction, photobiology and thermal and non-thermal applications of lasers and create awareness about the safety of lasers.

MODULE I TIME-RESOLVED SPECTROSCOPY 10

Generation of short optical pulses - generation of ultra short optical pulses - Measurement techniques for Optical Transcients: Transient - Digitizer - Boxcar - Delayed coincidence- Streak-camera & Pump-probe techniques. Basics of lifetime measurements - Methods of measuring radiative properties - linewidth measurements - ODR and LC - Beam foil techniques - Beam laser techniques - Time resolved spectroscopy with pulsed lasers - Phase- shift method and emission method - The hook method - Quantum-Beat spectroscopy.

MODULE II HIGH RESOLUTION SPECTROSCOPY 08

Spectroscopy on collimated atomic beams: Detection through fluorescence - detection by photoionization - detection by the recoil effect - detection by magnetic deflection. Saturation spectroscopy and related techniques -Doppler-free two-photon absorption - spectroscopy of trapped ions and atoms.

MODULE III APPLICATIONS OF LASER-SPECTROSCOPY 10

Diagnostics of combustion processes: Background - Laser-inducedfluorescence and related techniques - Raman spectroscopy - coherent anti- stokes Raman scattering - Velocity measurements. Laser remote sensing of the atmosphere: Optical heterodyne detection - long path absorption techniques - LIDAR techniques. Laser-induced fluorescence and Raman spectroscopy in liquids and solids: Hydrospheric remote sensing - monitoring of surface layers. Laser-induced chemical processes: Laser-induced chemistry - laser isotope separation - spectroscopic aspects of lasers in medicine.

MODULE IV PHOTOBIOLOGY AND MEDICAL LASERS 09

Study of biological functions - Microradiation of cells - optical properties of tissues (normal and diseased state) - Experimental methods to determine the reflectance, absorption, transmittance and emission properties of tissues - Laser systems in medicine and biology

- Nd: YAG, Ar ion, CO2, Excimer, N2, Gold Vapour laser - Beam delivery and measuring systems

MODULE V THERMAL APPLICATIONS 09

Surgical applications of lasers - Sterilization - hermostasis - Cancer Liver stomach gynecological surgeries - Performance evaluation - Lasers in Opthalmology - Dermatology and Dentistry - Cosmetic Surgery.

Total hours: 45

7. T. Kaluylu and M. Tsukakoshi, "Laser Microradiation of cells", Harward Academic publishers, New York, 1990.

OUTCOME:

- At the end of the cousre the student will get knowledge in different types spectroscopy and applications of laser spectroscopy in various fields.
- At the end of the course the student will get knowledge in laser tissue interaction, photobiology and thermal and non-thermal applications of lasers and safety of lasers.

PHCY116 NANO PHOTONICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the concepts of Nano Photonics.
- To know the importance of photonics materials.
- To use the ideas of nano photonics and apply in research

MODULE I QUANTUM CONFINED MATERIALS 09

Quantum dots – optical transitions – absorption-inter-band transitions-quantum confinement intraband transitions-fluorescence / luminescence– photoluminescence / fluorescence optically excited emission – electroluminescence emission.

MODULE II PLASMONICS 09

Internal reflection and evanescent waves- plasmons and surface plasmon resonance (SPR)- Attenuated total reflection- Grating SPR coupling- Optical waveguide SPR coupling- SPR dependencies and materials- plasmonics and nanoparticles.

MODULE III NEW APPROACHES IN NANOPHOTONICS 09

Near-Field Optics- Aperture near-field optics- Apertureless near-field optics-Near-field scanning optical microscopy (NSOM or SNOM)- SNOM based detection of plasmonic energy transport- SNOM based visualization of waveguide structures- SNOM in nanolithography- SNOM based optical data storage and recovery.

MODULE IV ELECTRONIC& PHOTONIC MOLECULAR MATERIALS 9

Preparation –Electroluminescent Organic materials - Laser Diodes - Quantum well lasers:- Quantum cascade lasers- Cascade surface-emitting photonic crystal laser- Quantum dot lasers- Quantum wire lasers:- White LEDs - LEDs based on nanowires - LEDs based on nanotubes- LEDs based on nanorods High Efficiency Materials for OLEDs- High Efficiency Materials for OLEDs - Quantum well infrared photo detectors.

MODULE V ELEMENTS OF PLASMONICS 9

Introduction to Plasmonics, merging photonics and electronics at nanoscale dimensions, single photon transistor using surface plasmon, nanowire surface plasmons-interaction with matter, single emitter as saturable mirror, photon correlation, and integrated systems. All optical modulation by plasmonic excitation of quantum dots, Channel plasmon-polariton guiding by subwavelength metal grooves, Near-field photonics: surface plasmon polaritons and localized surface plasmons, Slow guided surface plasmons at telecom frequencies.

5. Ranier. W, Nano Electronics and Information Technology, Wiley, 2003.

OUTCOMES:

At the end of the course, the students will be able to explain

- the concepts of nano photonics and its uses
- the importance of applications of Nano photonics in design of devices

PHCY117 NANOSCIENCE AND TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To give thorough knowledge of the general principles of physics, chemistry, electronics and biology that play a role on the nanometer scale.
- To get into Insight of the materials, fabrication and other experimental techniques that can be used on the nanoscale, as well as their limitations.
- To get in-depth knowledge of at least one specialisation area within the field of nanoscience and nanotechnology.
- To gain Sufficient scientific background to undertake research.

MODULE I NANOMATERIALS AND STRUCTURES 09

Nanomaterials and types: nanowires, nanotubes, fullerenes, quantum dots, nanocomposites – properties – Methods of preparation: top-down, bottom-up.

MODULE II CHARACTERIZATION TOOLS 09

Electron Microscopy Techniques – SEM, TEM, X ray methods – optical methods Fluorescence Microscopy – Atomic Force Microscopy, STM and SPM.

MODULE III NANOMAGNETISM 09

Mesoscopic magnetism – Magnetic measurements: miniature Hall detectors, integrated DC SQUID Microsusceptometry – magnetic recording technology, biological magnets.

MODULE IV NANOELECTRONICS AND INTEGRATED SYSTEMS 09

Basics of nanoelectronics – Single Electron Transistor – quantum computation – tools of micro-nanofabrication – nanolithography – quantum electronic devices – MEMS and NEMS – dynamics of NEMS – limits of integrated electronics.

MODULE V BIOMEDICAL APPLICATIONS OF NANOTECHNOLOGY 09

Biological structures and functions – drug delivery systems – organic-inorganic nanohybrids – inorganic carriers – nanofluidics.

Total Hours: 45

5. Wilson M., Kannangara K., Smith G., Simmons M. and Raguse B., Nanotechnology: Basic Sciences and Energy Technologies, Overseas Press, 2005.

OUTCOMES:

At the end of the course, the students will be able to understand

- the basic concepts about the Nano materials
- the importance of use of nano materials in design and synthesis of novel materials.

PHCY118 THIN FILM SCIENCE AND TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To familiarize with preparation and properties of Thin films
- To understand the preparation and characterization of Thin films.
- To apply the knowledge of Thin film technology into applications.

MODULE I PREPARATION OF THIN FILMS 09

Kinetic aspects of gases in a vacuum chamber – classifications of vacuum ranges – production of vacuum - pressure measurement in vacuum systems– thin film (epitaxy) – definition – types of epitaxy. Different Growth Techniques: Liquid phase epitaxy – vapour phase epitaxy – molecular beam epitaxy – metal organic vapour phase epitaxy – sputtering (RF & DC) – pulsed laser deposition. Thickness Measurement: Microbalance technique – photometry-ellipsometry– interferometry.

MODULE II KINETICS OF THIN FILMS 09

Nucleation Kinetics: types of nucleation – kinetic theory of nucleation – energy formation of a nucleus – critical nucleation parameters; spherical and non spherical (cap, disc and cubic shaped) Growth Kinetics: Kinetics of binary (GaAs, InP, etc.), ternary (Al1-xGaxAs, Ga1-xInxP, InAs1-xPx, etc.) and quaternary (Ga1-xInxAs1 -yPy, etc.) semiconductors – derivation of growth rate and composition expressions.

MODULE III CHARACTERIZATION 09

X-ray diffraction – photoluminescence – UV-Vis-IR spectrophotometer – Atomic Force Microscope – Scanning Electron Microscope – Hall effect – Vibrational Sample Magnetometer – Secondary Ion Mass Spectrometry – X-ray Photoemission Spectroscopy.

MODULE IV PROPERTIES OF THIN FILMS 09

Dielectric properties – experimental technique for the determination of dielectric properties – optical properties – experimental technique for the determination of optical constants – mechanical properties – experimental technique for the determination of mechanical properties of thin films – magnetic and superconducting properties.

MODULE V APPLICATIONS 09

Optoelectronic devices: LED and Solar cell – Micro Electromechanical Systems (MEMS) – Fabrication of thin film capacitor – application of ferromagnetic thin films; data storage,

Giant Magnetoresistance (GMR) – sensors – fabrication and characterization of thin film transistor and FET – quantum dot - Cryptography.

Total Hours: 45

5. K.L.Chopra, “Thin Film Phenomena”, Malabar : Robert E. Krieger Publishing Company, 1979.

OUTCOMES:

At the end of the course, the students will be able to understand

- the basic concepts about the thin film technology
- the importance of use of thin films in application and research.

PHCY119 CORROSION SCIENCE AND TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To enable the students understand principles behind corrosion science.
- To make the students understand various corrosion processes and engineering applications

MODULE I CORROSION PROCESSES 12

Basic principles of electrochemistry and aqueous corrosion processes - Electrochemical Thermodynamics and Electrode Potential - Electrochemical Kinetics of Corrosion Cathodic and anodic behavior - Faraday's Law - Nernst equation; standard potentials Pourbaix diagram - Tafel equations, corrosion rate - Evans diagram - pitting, crevice and exfoliation corrosion; influence of deposits and anaerobic conditions; corrosion control; high temperature oxidation and hot corrosion; corrosion/mechanical property interactions.

MODULE II INSTRUMENTAL TECHNIQUES 09

X-ray diffraction, TEM, SEM and EDX, WDX analysis, surface analysis by AES, XPS and SIMS, overview of other techniques.

MODULE III COATING MANUFACTURE 09

Electrodeposition; flame and plasma spraying; thermal, HV of detonation gun, gas dynamic spray, physicalvapour deposition; chemical vapour deposition; HIP surface treatments.

MODULE IV CORROSION IN SELECTED ENVIRONMENTS 07

Atmospheric Corrosion, Corrosion in Automobiles, Corrosion in Soils, Corrosion of Steel in Concrete, Corrosion in Water, Microbiologically Induced Corrosion, Corrosion in the Body, Corrosion in the Petroleum Industry, Corrosion in the Aircraft Industry, Corrosion in the Microelectronics Industry

MODULE V COATING APPLICATIONS 08

Abrasive, erosive and sliding wear.The interaction between wear and corrosion. Coating systems for corrosion and wear protection; new coating concepts including multi-layer structures, functionally gradient materials, intermetallic barrier coatings and thermal barrier coatings.

Total Hours: 45

OUTCOMES:

At the end of the course the students will be able to understand the

- corrosion process and analytical technique
- applications of coatings.
- coating manufacture technique and corrosion environment

PHCY120 BIOMATERIALS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To enable the students understand importance of and properties of Biomaterials
- To make the students understand applications of various biomaterials

MODULE I BIOLOGICAL PERFORMANCE OF MATERIALS 09

Biocompatibility- Introduction to the biological environment – Material response: swelling and leaching, corrosion and dissolution, deformation and failure, friction and wear – Host response: the inflammatory process - coagulation and hemolysis- approaches to thrombo- resistant materials development.

MODULE II ORTHOPAEDIC MATERIALS 09

Bone composition and properties - temporary fixation devices - joint replacement – Biomaterials used in bone and joint replacement: metals and alloys – Stainless steel, cobalt based alloys, titanium based materials – Ceramics: carbon, alumina, zirconia, bioactive calcium phosphates, bioglass and glass ceramics – polymers: PMMA, UHMWPE/HDPE, PTFE – Bone cement – Composites.

MODULE III CARDIOVASCULAR MATERIALS 09

Blood clotting – Blood rheology – Blood vessels – The heart – Aorta and valves – Geometry of blood circulation – The lungs - Vascular implants: vascular graft, cardiac valve prostheses, cardiac pacemakers – Blood substitutes – Extracorporeal blood circulation devices.

MODULE IV DENTAL MATERIALS 09

Teeth composition and mechanical properties – Impression materials – Bases, liners and varnishes for cavities – Fillings and restoration materials – Materials for oral and maxillofacial surgery – Dental cements and dental amalgams – Dental adhesives.

MODULE V MATERIALS IN OPTHALMOLOGY 09

Biomaterials in ophthalmology – Viscoelastic solutions, contact lenses, intraocular lens materials – Tissue grafts – Skin grafts – Connective tissue grafts – Suture materials – Tissue adhesives – Drug delivery: methods and materials – Selection, performance and adhesion of polymeric encapsulants for implantable sensors-biomemtic materials-Technology from nature.

VISION AND MISSION OF THE DEPARTMENT OF SCHOOL OF LIFE SCIENCES

VISION

To attain new heights in biotechnology research, shaping life sciences into a premier precision tool for the future for creation of wealth and ensuring social justice-specially for the welfare of the poor

MISSION

The mission of the School of Life Sciences is to maximize the benefits of biotechnology to the University, the nation and the globe by being an excellent quality, comprehensive, multidisciplinary school that supports, coordinates, disseminates and advances biotechnology in the areas of social welfare and entrepreneurship.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

M. Sc. (Biotechnology)

PROGRAMME EDUCATIONAL OBJECTIVES:

The course aims to provide an advanced understanding of the core principles and topics of Biotechnology and their experimental basis, and to enable students to acquire a specialized knowledge and understanding of selected aspects by means of a lecture series and a research project. Hence, the main objectives of the program are:

- To provide an introduction to the basic concepts of Biotechnology and its recent advances.
- For the basic understanding, this course includes biochemistry, cell and molecular biology, animal and plant biochemistry, and immunology.
- Moreover, several laboratory courses given in the individual sections of the curriculum with detailed information on the importance of biotechnology in basic and applied research.
- Finally this course explains the advanced sections of biotechnology like recombinant DNA technology, nanobiotechnology, Pharmaceutical biotechnology, plant and animal biotechnology and bioinformatics.
- This course provides necessary theoretical and practical experience in all divisions of biotechnology to become an effective professional.
- To provide broad exposure to various societal, ethical and commercial issues in the various aspects of biotechnology.

PROGRAMME OUTCOMES:

After successfully completing this course, the student should be able to:

- Apply their knowledge of biotechnology into high end research.
- Advanced sections of like Immunology, boinformatics, nano-biotechnology will give broad information on applications and opportunities in the field of biotechnological research.
- Identify research and solve biochemistry, cell and molecular biology related problems related to the different types of animal and plant diseases.

SEMESTER I

LSC6101 ADVANCED BIOCHEMISTRY

L	T	P	C
4	0	0	4

OBJECTIVES:

This course aims to develop in the students' mind a concept regarding

- The diversity of metabolic processes occurring in biological system.
- The effect of the structural and functional role of the enzymes governing the metabolic processes.
- Importance of the metabolic pathways in maintaining homeostasis in biological system.
- The clinical implications of the metabolic pathway.

MODULE I AMINO ACIDS & PROTEIN: STRUCTURE AND FUNCTIONS 05

Amino acids- Classification, structure and function, proteins- primary, secondary, tertiary and quaternary structure, Ramachandran plot, super secondary structures and helix loop.

MODULE II ENZYMOLOGY 10

Classification of enzymes. How do enzymes work: activation energy, substrate specificity. Enzyme-substrate interaction: Lock and Key mechanism and Induced Fit mechanism. Effect of temperature and pH on enzyme action. Enzyme Kinetics: Michaelis-Menten Equation, Km, Measurement of Km and Vmax (Lineweaver-Burk equation). Kinetics of multisubstrate reaction: Sequential reactions and ping-pong reactions. Enzyme inhibition: reversible (competitive, uncompetitive and mixed) and irreversible. Allosteric regulation of enzyme activity. Multienzyme complex and multifunctional enzymes.

MODULE III ENERGY PRODUCTION AND OXIDATIVE PHOSPHORYLATION 14

Introduction to metabolism: Anabolism, catabolism, metabolic pathways. Characteristics of metabolic pathways

Glycolysis: glycolytic pathway. Molecular mechanism of action of the glycolytic enzymes. Energetic of glycolysis. Glycolysis and cancer biology—Warburg Hypothesis and PET scanning. Fates of Pyruvate under anaerobic conditions: alcohol and lactic acid fermentation. Importance of lactic acid fermentation.

TCA Cycle: Formation of Acetyl CoA and reactions of citric acid cycle. Molecular mechanism of pyruvate dehydrogenase complex and enzymes involved in Kreb's cycle. Energetic of TCA cycle and substrate level phosphorylation.

Lipid metabolism: Hormonal regulation of the mobilization of triglycerides from adiposities. Transport of fatty acid into mitochondria. Beta oxidation of saturated fatty acid (both even and odd). Regulation. Energetic.

Electron Transport Chain: structure and function of Electron carriers: Complex I—V. Passage of electrons from complex I to IV. Mitchell's chemiosmotic hypothesis and proton gradient. Structure of complex V or ATP synthase, Catalytic sites of ATP synthesis. Mechanism of ATP generation by Boyer's binding change mechanism—rotational catalysis. Energetic of ATP synthesis and efficiency of ATP synthase.

MODULE IV METABOLIC INTERRELATIONSHIP 09

Starve-Fed cycle. Glucose homeostasis. Switching of metabolism of liver between starve and fed cycle. Metabolic relationship of tissues in various nutritional and hormonal states—insulin resistance, diabetes, exercise, pregnancy, lactation, stress, liver and renal diseases, alcohol consumption.

MODULE V REGULATORY MECHANISMS OF METABOLIC PATHWAYS 07

Feedback inhibition by allosteric modulation of enzymes. Covalent modifications of enzymes. Isozymes. Propetolytic cleavage. Regulationg the amount of enzyme—regulation gene expression in prokaryotes and eukaryotes.

Total Hours: 45

REFERENCES:

2. Biochemistry by Lubert Stryer 7th ed. W. H. Freeman & Company.
3. Textbook of Biochemistry with Clinical Correlations. 4th Ed. Thomas M. Devlin. Wiley-Liss publication. 1997.

OUTCOMES:

At the completion of the course the student will develop an understanding about the

- Various metabolic processes occurring in biological system and their role in governing homeostasis and normal physiology.
- The importance of enzymes as a regulatory molecule in metabolism.
- The interrelationship of metabolic pathways different physiological conditions.
- The role of liver in regulating metabolism.

LSC6102 CELL & MOLECULAR BIOLOGY

L	T	P	C
4	0	0	4

OBJECTIVES:

- To get overview of classes of cells and structural and function aspects of plasma membrane and cell organelle.
- To develop skill to understand molecular aspects of cell cycle and cell division.
- To get familiar with transcription and translation in details.
- To understand the signaling pathways in cell functioning

MODULE I INTRODUCTION TO CELL 08

Basic properties of cell, Different classes of cell: Prokaryotic, animal and plant cell.Plasma membrane- structure and function, Chemical composition of membranes, membrane lipids and proteins, fluid mosaic model, Transport across the membranes- diffusion, osmosis, facilitated diffusion,passive and active transport; membrane potential and nerve impulses.

MODULE II MEMBRANE TRANSPORT 07

Endoplasmic Reticulum, Golgi complex- glycosylation, Vesicle transport- COPI and COPII; Lysosomes-autophagy;Endocytic pathway- endocytosis and phagocytosis,transport of proteins into peroxisomes, mitochondria and chloroplast;

MODULE III ENERGY CONVERSION 10

Structure of mitochondria and organization of respiratory chain; Proton Pump and ATP generation in mitochondria; Structure of chloroplast and Photosynthesis, photorespiration; Genetic system of mitochondria and chloroplast.

MODULE IV BASIC GENETIC MECHANISMS 10

The structure and function of DNA, DNA packaging and Chromosomes, chromatin structure and function, DNA replication mechanisms, DNA damage and repair and homologous recombination and transposable elements, Telomeres, telomerase and end replication. Role of telomerase in aging and cancer.

MODULE V TRANSCRIPTION AND TRANSLATION 10

Transcription- Prokaryotic and eukaryotic Transcription- RNA polymerases- general and specific transcription factors- regulatory elements- mechanism of transcription, Transcription termination Post transcriptional modification- splicing- editing- nuclear export of mRNA- mRNA stability; Translation- Genetic code, Mechanism of initiation-elongation andtermination- Regulation of translation.

Total Hours: 45

REFERENCES

2. The Cell by Cooper. ASM Press, 4Ed, 2007
3. Cell and Molecular Biology by Karp. John Wiley & Sons, 7Ed, 2013
4. Lodish H. F.Cell and Molecular Biology. W.H. Freeman & Co Ltd, 7Ed, 2000.

OUTCOMES:

- On the completion of the above objectives student will be able to get the overview of classes of cells and structural and function aspects of plasma membrane and cell organelle. They can develop skill to understand molecular aspects of cell cycle, cell division, transcription and translation.

LSC6103 GENETIC ENGINEERING

L	T	P	C
4	0	0	4

OBJECTIVES:

- To learn about genetic engineering, principles involved in manipulating genes and DNA.
- To know about cloning strategies and expression systems.
- To acquire basic understanding of techniques in genetic engineering.

MODULE I BASICS CONCEPTS 09

DNA Structure and properties; Restriction Enzymes; DNA ligase, Klenow enzyme, T4 DNA polymerase, Polynucleotide kinase, Alkaline phosphatase; Cohesive and blunt end ligation; Linkers; Adaptors; Homopolymeric tailing; Labeling of DNA: Nick translation, Random priming, Radioactive and non-radioactive probes, Hybridization techniques: Northern, Southern and Colony hybridization, Fluorescence in situ hybridization; Chromatin Immunoprecipitation; DNA-Protein Interactions-Electromobility shift assay; DN a selfoot printing

MODULE II CLONING VECTORS 09

Plasmids; Bacteriophages; M13 mp vectors; PUC19 and Bluescript vectors, Phagemids; Lambda vectors; Insertion and Replacement vectors; Cosmids; Artificial chromosome vectors (YACs; BACs); Animal Virus derived vectors-SV-40; vaccinia/bacculo& retroviral vectors; Expression vectors; pMal; GST; pET-can be omitted vectors; Protein purification; His-tag; GST-tag; MBP-tag etc.; Intein-based vectors; Inclusion bodies; Methodologies to reduce formation of inclusion bodies; Baculovirus and pichia vectors system, Plant based vectors, Ti and Ri as vectors, Yeast vectors, Shuttle vectors. Criteria for selection of vectors.

MODULE III CLONING METHODOLOGIES 09

Insertion of Foreign DNA into Host Cells; Transformation; Transfection, Transduction, Construction of libraries; Isolation of mRNA and total RNA; cDNA and genomic libraries; cDNA and genomic cloning; Expression cloning; Jumping and hopping libraries; Southwestern and Far-western cloning; Protein-protein interactive cloning and Yeast two hybrid system; Phage display; Principles in maximizing gene expression. Methods to confirm cloning and reporter genes and proteins.

MODULE IV PCR AND ITS APPLICATIONS 09

Primer design; Fidelity of thermostable enzymes; DNA polymerases; Types of PCR – multiplex, nested, reverse transcriptase, real time PCR, touchdown PCR, hot start PCR, colony PCR, cloning of PCR products; Tvectors; Proof reading enzymes; PCR in gene

recombination; Deletion; addition; Overlap extension; and SOEing; Site specific mutagenesis; PCR in molecular diagnostics; Viral and bacterial detection; PCR based mutagenesis detection. Sequencing methods; Enzymatic DNA sequencing; Chemical sequencing of DNA; Automated DNA sequencing; RNA sequencing; Chemical Synthesis of oligonucleotides.

MODULE V APPLICATION OF GENETIC ENGINEERING 09

Gene silencing techniques; Introduction to siRNA; siRNA technology; Micro RNA; Construction of siRNA vectors; Principle and application of gene silencing; Gene knockouts and Gene Therapy; Creation of knock out mice; Disease model; Somatic and germ-line therapy- in vivo and ex-vivo; Suicide gene therapy; Gene replacement; Gene targeting; Transgenics; cDNA and intragenic arrays; Differential gene expression and protein array. Ethics in genetic engineering and global policy.

Total Hours:

4. Selected papers from scientific journals.
5. Desmond S. T. Nicholl An Introduction to Genetic Engineering Cambridge University Press 2008
6. Technical Literature from Stratagene, Promega, Novagen, New England Biolab etc.

OUTCOMES:

- On completion of the course the scholars will acquire knowledge on the concepts and terminology in genetic engineering.
- Students will be familiar with various cloning strategies in prokaryotes as well as in eukaryotes.
- Students will learn various techniques in genetic engineering.
- They will also get awareness about the social and ethical issues concerning cloning by genetic engineering

LSC6104	LAB I (BIOCHEMISTRY, MOLECULAR BIOLOGY AND GENETIC ENGINEERING)	L	T	P	C
		0	0	6	3

OBJECTIVES:

- To learn basic techniques in molecular biology
- To study and differentiate the electrochemical properties of nucleic acids
- To learn the preliminary methods in biochemistry by preparing buffer and adjusting pH.
- To estimate various biomolecules by biochemical assays

EXPERIMENTS:

1. Laboratory safety guidelines.
2. To determine an unknown protein concentration by plotting a standard graph of BSA using UV-Vis Spectrophotometer and validating the Beer- Lambert's Law.
3. Effect of temperature on enzyme activity.
4. Separation techniques for amino acids and sugar:
    a. paper chromatography
    b. thin layer chromatography.
5. Separation of proteins by native and SDS-PAGE.
6. Preparation of slides from onion root tip for mitosis
7. Isolation & Purification of genomic DNA from bacteria
8. Isolation & Purification of plasmid DNA
9. Isolation of RNA
10. Agarose gel electrophoresis of chromosomal & plasmid DNA
11. Restriction Digestion of chromosomal & plasmid DNA
12. Isolation of DNA fragment from agarose gel
13. Competent cell preparation
14. Transformation and Efficiency of competent cells
15. SDS PAGE
16. Polymerase Chain Reaction
17. Isolation of Genomic DNA from Plants

REFERENCES:

4. Holtzhauer M, Basic Methods for the Biochemical Lab, Springer, 2006.

Nigam, Lab Manual in Biochemistry: Immunology and Biotechnology, Tata McGraw-Hill Education, 2007.
5. Lab manual

OUTCOMES:

- On the completion of the above experiments students will be able to handle DNA samples and also to isolate, purify and visualize nucleic acid.
- On performing the above experiments students will be able to know and perform the routine biochemical assays.
- Students will be able to isolate culture and identify microbes and also to efficiently use light microscope.

SEMESTER II

GEC6202	RESEARCH METHODOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

MODULE I RESEARCH METHODOLOGY-AN INTRODUCTION 09

Meaning of Research, Objectives of Research, Motivation in Research, Types of Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Research Process, Criteria of Good Research, Problems Encountered by Researchers. Ethics and scientific conduct, Introduction to ethics, scientific conduct and misconduct, Misconduct and why it occurs, Fabrication, Authorship issues, the investigation and punishment of scientific misconduct.

MODULE II GOOD LABORATORY PRACTICES AND SAFETY 09

Introduction: History, definition, Principles, Good Laboratory Practices (GLP) and its application GLP training: Resources, Rules, Characterization, Documentation, quality assurance, Resources, Facilities: building and equipment, Personnel, GLP and FDA, Stepwise implementation of GLP and compliance monitoring.

MODULE III LABORATORY SAFETY AND EXPERIMENTAL RESEARCH 09

Safety in the Biology Laboratory, Safety Symbols, Science Safety Rules- Dress Code, First Aid, Heating and Fire Safety, Using Chemicals and glassware's, Handling living organisms, handling human blood and some other body fluids and tissue, disposal of bio hazardous waste.Precision, accuracy, sensitivity and specificity; variables, experimental planning – general guidelines

MODULE IV INTERPRETATION OF RESULTS AND ANALYSIS: 09

Importance and scientific methodology in recording results, importance of negative results, different ways of recording, industrial requirement, artifacts versus true results, types of analysis (analytical, objective, subjective) and cross verification, correlation with published results, discussion, outcome as new idea, hypothesis, concept, theory, model etc. Data analysis using Excel, Origin and Sigma plot Analyzing the chemical data and drawing chemical structures using Chemdraw and Chemsketch. Conceptions of error of measurement, true score theory and generalisability theory. Measures of central tendency or averages – mean median and mode. Measures of dispersion – range, variance, and standard deviation: The normal distribution and the normal probability curve.

MODULE V SCIENTIFIC WRITING, TECHNICAL PUBLICATION AND RESEARCH PROPOSAL 09

Different types of scientific and technical publications in the area of research, and their specifications, Ways to protect intellectual property – Patents, technical writing skills, definition and importance of impact factor and citation index - assignment in technical writing, The research problem, finding related literature, computer generated references sources and the research project, model research proposal.

OUTCOMES:

LSC6201 IMMUNOLOGY

L	T	P	C
4	0	0	4

OBJECTIVES:

- The course is aimed at introducing the science of immunology and detailed study of various types of immune systems and their classification structure and mechanism of immune activation**.**

MODULE I OVERVIEW OF IMMUNE SYSTEM 04

Innate, adaptive and Comparative ImmModule y, Immune dysfunction and its consequences, Cells & Tissues of Immune System: Hematopoisesis, Apoptosis and Necrosis, systemic function of Immune system, organs of immune systems, Lymphoid cells and organs Evolutionary comparision. Cytokines- Properties of Cytokines, Cytokine Receptors, Cytokine Antagonists, Cytokine Secretion by TH1 and TH2 Subsets, Cytokine-Related Diseases, Therapeutic Uses of Cytokines and Their Receptors, Cytokines in Hematopoiesis

MODULE II MOLECULAR IMMUNOLOGY 05

Immunogenicity Versus Antigenicity, Factors that influence immunogenicity, Epitopes, Haptens and the Study of Antigenicity, Pattern-Recognition Receptors, drugs allegies-when medicine become immunogens, Molecular structure of antibody, Obstacles to Antibody Sequencing, Immunoglobulin Fine Structure, Antibody-Mediated Effector Functions, Antibody Classes and Biological Activities, Antigenic Determinants on Immunoglobulins, The B-Cell Receptor, The Immunoglobulin Superfamily, Monoclonal Antibodies.

MODULE III ORGANIZATION AND EXPRESSION OF IMMUNOGLOBULIN GENES 09

Genetic Model Compatible with Ig Structure, Multigene Organization of Ig Genes, Variable-Region Gene Rearrangements, Mechanism of Variable-Region DNA Rearrangements, Generation of Antibody Diversity, Class Switching among Constant-Region Genes, Expression of Ig Genes, Synthesis, Assembly, and Secretion of Immunoglobulins, Regulation of Ig-Gene Transcription, Antibody Genes and Antibody Engineering

MODULE IV ANTIGEN PROCESSING AND PRESENTATION 09

General organization and inheritance of the major histocompatibility complex (MHC), MHC molecules and genes, detailed genomic map of MHC genes, cellular distribution of MHC molecules, regulation of MHC expression, MHC and immune responsiveness, MHC and disease susceptibility self-MHC restriction of T cells, role of antigen-presenting cells,

evidence for two processing and presentation pathways, endogenous antigens: the cytosolic pathway,exogenous antigens: the endocytic pathway presentation of nonpeptide antigens

MODULE V GENERATION OF T AND B CELL RESPONSE 09

T-Cell Receptor, Early Studies of the T-Cell Receptor and αβ andγΔ T-Cell Receptors: Structure and Roles, Organization and Rearrangement of TCR Genes, T-Cell Receptor Complex: TCR-CD3,T-Cell Accessory Membrane Molecules, Three-Dimensional Structures of TCR-Peptide-

MHC Complexes,Alloreactivity of T Cells, T-Cell Maturation and the Thymus,Thymic Selection of the T-Cell Repertoire,T_H-Cell Activation, T-Cell Differentiation, Cell Death and T-Cell Populations Peripheral γΔ T-Cells, B-Cell Maturation,B-Cell Activation and Proliferation, The Humoral Response, In Vivo Sites for Induction of Humoral Responses, Germinal Centers and Antigen-Induced B-Cell Differentiation, Regulation of B-Cell Development, Regulation of the Immune Effectors Response.

Total Hours: 45

REFERENCES:

3. Janeway et al., Immunobiology, 4th Edition, Current Biology publications., 1999.
4. Paul, Fundamental of Immunology, 4th edition, Lippenco

OUTCOMES:

After completing the course students will:

- have a detailed understanding of Component of immModule y
- know antigen presentation on a detailed molecular level
- understand the concept immunology and the immune system .
- have a in depth knowledge of the cellular and molecular basis for autoimmune disease and allergies.
- have basic knowledge of tumor immunology and the development of novel recombinant antibodies for treatment of cancer and autoimmune disease

LSC6202 BIOINFORMATICS

L	T	P	C
4	0	0	4

OBJECTIVES:

- To understand the programming languages applied in computational biology.
- To understand the methods and applications for sequence analysis, Phylogenetics and Protein modelling.

MODULE I INTRODUCTION TO PROGRAMMINB LANGUAGE 09

Introduction –Programming languages – Problem solving Technique: Algorithm, Flowchart, Compiling, Testing and Debugging - Basic Perl Data Types, File handle and File Tests – Perl Modules – SQL.

MODULE II PROGRAMMING IN C, C++ AND OOPS 09

C language Introduction – Tokens – Keywords, Identifier, Variables, Constants, Operators – Structure of a 'C' program - Expression – Data types – Control Statement - C++ programming – Object Oriented Concept: Encapsulation, Inheritance, Polymorphism.

MODULE III COMPUTATIONAL BIOLOGY AND SEQUENCE ANALYSIS 09

Molecular sequences, Genome sequencing: pipeline and data, Next generation sequencing data, Biological databases: Protein and Nucleotide databases, Sequence Alignment, Dynamic Programming for computing edit distance and string similarity, Local and Global Alignment, Needleman Wunsch Algorithm, Smith Waterman Algorithm, BLAST family of programs, FASTA algorithm, Functional Annotation, Progressive and Iterative Methods for Multiple sequence alignment, Applications.

MODULE IV PHYLOGENETICS 09

Introduction to Phylogenetics, Distance and Character based methods for phylogenetic tree construction: UPGMA, Neighbour joining, Ultrametric and Min ultrametric trees, Parsimonous trees, Additive trees, Bootstrapping.

MODULE V PROTEIN STRUCTURE, MODELLING AND SIMULATIONS 09

Protein Structure Basics, Visualization, Prediction of Secondary Structure and Tertiary Structure, Homology Modeling, Structural Genomics, Molecular Docking principles and applications, Molecular dynamics simulations

Total Hours: 45

7. Baxevanis A.D. and Oullette, B.F.F. A Practical Guide to the Analysis of Genes and Proteins, 2nd ed., John Wiley, 2002

OUTCOMES:

- At the end of this course, students will have been familiarized with language skills and their applications in analyzing Protein structure , sequence analysis which can be used in analyzing the binding effect of drugs on proteins.

LSC6203	LAB II (IMMUNOLOGY/ BIOINFORMATICS)	L	T	P	C
		0	0	6	3

OBJECTIVES:

- To acquire knowledge on immunological techniques
- To train in various techniques involving antigen and antibody reactions
- To get hands on experience on plasmid construction, mappings and analysis.
- To explore to various tools in bioinformatics.

LIST OF EXPERIMENTS:

1. Double diffusion, Immuno-electrophoresis and Radial Immuno diffusion.
2. Antibody titre by ELISA method.
3. ELISA for detection of antigens and antibodies-DOT ELISA
4. Blood group mapping
5. Preparation of antigens from pathogens and parasites
6. Slide and tube agglutination reaction
7. Plasmid Construction/Restriction Mapping
8. PCR Primer Designing
9. Sequence Retrieval and Format Conversion
10. Homology Search/ Multiple Sequence Alignment
11. Motif finding in DNA and Protein Sequences
12. Protein Secondary Structure Prediction
13. Accessing Data- Use FORMATTED, LIST and COLUMN input to read raw data files, Combine SAS data sets using the DATA step.
14. Creating Data Structures- Create temporary and permanent SAS data sets, Control with observations and variables in a SAS data set are processed and output Managing Data- Investigate SAS data libraries using base SAS utility procedures.
15. Generating Reports- Generate list reports using the PRINT and REPORT procedures, Generate HTML reports using ODS statements.
16. Handling Errors- Identify and resolve programming logic errors, syntax errors, data errors.

REFERENCES:

1. Rose et al., Manual of Clinical laboratory Immunology, 6th Ed ASM Publications, 2002.

6. Krawetz S. A, Womble D. D. Introduction to Bioinformatics: A Theoretical and Practical Approach. Humana press, 2003

OUTCOMES:

- Students could independently perform diagnostics assays involving antigen-antibody reaction. They also learn to perform the qualitative and quantitative analysis using antibody.
- Students will be familiar with various soft skills/tool used in understating modern biology. They will also be able to analyze and interpolate data starting from PCR primer designing to structure predictions.

SEMESTER III

LSC7102	PLANT AND ANIMAL BIOTECHNOLOGY	L	T	P	C
		4	0	0	4

OBJECTIVES:

- This course gives students about the fundamentals of totipotency, plant tissue and animal cell culture techniques for in vitro manipulations and transgenic technology. It also familiarizes them with the use of plants for production of biologically active therapeutic proteins. The students will get an idea about animal cell culture their preservation and stem cells.

MODULE I PLANT TISSUE CULTURE 09

Totipotency, organogenesis, somatic embryogenesis, artificial seed production, Micropropagation, somaclonal variation, Germplasm conservation and cryopreservation. Protoplast Culture and Somatic Hybridization Protoplast isolation- its culture and usage, Somatic hybridization and its applications.

MODULE II AGROBIOLOGY 09

Agrobacterium-plant interaction; Virulence; Ti and Ri plasmids; Opines and their significance; T-DNA transfer, Genetic Transformation Agrobacterium-mediated gene delivery, Direct gene transfer - PEG-mediated, electroporation, particle bombardment and alternative methods; Screenable and selectable markers, Characterization of transgenics, Gene targeting.

MODULE III MOLECULAR MAPPING & MARKER ASSISTED SELECTION (MAS) 09

Marker assisted selection for genes of agronomic importance, e.g. insect resistance, grain quality and grain yield, Molecular polymorphism, RFLP, RAPD, STS, AFLP, SNP markers; Construction of genetic and physical map, Gene mapping and cloning, strategies for Introducing Biotic and Abiotic Stress Resistance/Tolerance Bacterial resistance; Viral resistance; Fungal resistance; Insects and pathogens resistance; Herbicide resistance; Drought, salinity, thermal stress, flooding and submergence tolerance.

MODULE IV INTRODUCTION TO ANIMAL BIOTECHNOLOGY 09

Animal cell culture; media composition and growth conditions; Animal cell and tissue preservation; Anchorage and non-anchorage dependent cell culture; Kinetics of cell growth; Micro & macro-carrier culture; Hybridoma technology; Stem cell technology; Animal cloning; Transgenic animals

MODULE V PRESERVATION AND APPLICATION 09

Cryopreservation, IVF, Cell banking, Gene transfer technology in animals, Stem cells, Application,Disease, Management through biotechnology, Genetic councelling. Hybridomas, human hybridoma, commercial scale production of monoclonal antibodies.

Total Hours: 45

REFERENCES:

OUTCOMES:

- At the end of the course students will be able to understand the advantages of in vitro propagation of plants in various areas and methods used for production of transgenic plants with their applications in different areas. At the end the students will be able to learn about primary cell culture. They could assess the effect of factors and their role in cell functions.

LSC7103 BIOPROCESS TECHNOLOGY

L	T	P	C
4	0	0	4

OBJECTIVES:

- To learn about the History and scope of bioprocess technology.
- To understand the mechanism of enzyme reactions,
- To know about the Bioreactors

MODULE I INTRODUCTION 09

Types, cells, production strains, preservation- history, industrial applications,chemical technology vis-a-vis biotechnology, commercial evalution potential.

MODULE II ENZYMES 09

Mechanism of enzyme reactions, Michaelis Menten kinetics, enzyme inhibition, factors affecting rate, parameter estimations, growth characterstics of microbial cells, Monod model, batch culture.

MODULE III PHYSICAL FACTORS FOR BIOPROCESS 09

Agitation and mixing, transport in cells, transfer resistances, mass transfer coefficients, enhancement of oxygen transfer, heat transfer correlations, batch and continuous sterilisation.

MODULE IV BIOREACTORS 09

Ideal bioreactors, Batch, fed batch, CSTR, PFR, Multiphase bioreactors,packed bed, bubble column fluidized trickle bed, immobilization. Aseptic, septic and anaerobic fermentors.

MODULE V DOWN STREAM METHODS 09

Filtration, centrifugation, sedimentation, extraction, sorption, reverse osmosis, ultra filtration, electrophoresis, waste water treatment.

Total Hours: 45

REFERENCES:

1. Shuler M and Kargi F. Bioprocess Engineering. Prentice Hall (I) Ltd., 2002.
2. Doran P. M. Bioprocess Engineering Principles. Academic Press,1995
3. Bailey J. E and Ollis D. F. Biochemical Engineering fundamentals. 2nd Ed., McGraw-Hill 1986.

OUTCOMES:

- On Completion of the course the scholars will be able to determine the scope and features of bioprocess technology. Students will also be familiar with the downstream process and scaling -up and scaling down.

LSC7104	LAB III (PLANT AND ANIMAL BIOTECHNOLOGY/ BIOPROCESS TECHNOLOGY)	L	T	P	C
		0	0	6	3

OBJECTIVES:

- To establish animal cell line cultures
- To test drugs toxicity in the cultured cells
- To study cell morphology and also to perform different staining procedures to identify the active status of the cells.

EXPERIMENTS:

1. MTT assay
2. Morphological characterization of cell death
3. Acridine orange/Ethidium bromide staining
4. Biochemical characterization of cell death
5. Isolation of proteolytic organism from soil sample
6. Glucose assay by DNS method
7. Evaluations of enzyme kinetic parameters
8. Enzyme activity calculation
9. Determination of optimum pH for enzyme
10. Determination of optimum temperature for an enzyme
11. Enzyme immobilized by alginate gel method
12. Hydrolysis of starch by immobilized method
13. Effect of substrate concentration on biomass yield
14. Solvent extraction techniques for product recovery
15. Micropropagation of plant by leaf disc culture
16. Electroelution of insert DNA from agarose gel slice.
17. Molecular analysis of putative transformed plants by Polymerase Chain Reaction

5. Laimer M, Rcker. W. Plant Tissue Culture. Springer, 2003.
6. Reinert J, Yeoman M. M. MacDonald P. Plant Cell and Tissue Culture: A Laboratory Manual. Springer. 2012

OUTCOMES:

- By performing the mentioned experiments students will be able to culture and maintain animal and plant cells/tissues. Students will also be able to screen drugs in the cultured animal cells.

LIST OF ELECTIVES

SEMESTER I

		L	T	P	C
LSCY101	**BIOSAFETY, BIOETHICS, BIOENTREPRENEURSHIP, INTELLECTUAL PROPERTY RIGHTS**	**3**	**0**	**0**	**3**

OBJECTIVES:

- Developing a good work ethics and laboratory working condition
- Understanding the importance of following and maintaining laboratory safety guidelines

MODULE I ETHICS IN BIOLOGY 09

The legal and socioeconomic impacts of biotechnology - Public education of the processes of biotechnology involved in generating new forms of life for informed decision making - Biosafety regulation and national and international guidelines - rDNA guidelines

MODULE II BIOSAFETY 09

Experimental protocol approvals - levels of containment - Environmental aspects of biotech applications - Use of genetically modified organisms and their resistance in environment - Special procedures for r-DNA based product production

MODULE III MARKETING 09

Assessment of market demand for potential product(s) of interest; Market conditions, segments; Prediction of market changes; Identifying needs of customers including gaps in the market, packaging the product; Market linkages, branding issues; Developing distribution channels; Pricing/Policies/Competition; Promotion/Advertising; Services Marketing

MODULE IV INTELLECTUAL PROPERTY RIGHTS 09

Intellectual property rights - TRIP International conventions patents and methods of application of patents - Legal implications - Biodiversity and farmers rights - Beneficial applications' and development of research focus to the need of the poor - Identification of directions for yield effect in agriculture, aquaculture Bioremediation etc.

MODULE V PATENT SYSTEM 09

Objectives of the patent system - basic principles and general requirements of patent law - biotechnological inventions and patent law - legal development - patentable subjects and protection in biotechnology - The patentability of microorganisms - IPR and WTO

regime - consumer protection and IPR - IPR and plant genetic resources - GATT and TRIPS.

Total Hours: 45

REFERENCES:

1. Beier,F.K.,Crespi,R.S. and Straus,J. *Biotechnology and Patent protection*-Oxford and IBH Publishing Co.New Delhi.
2. Sasson A, *Biotechnologies and Development*, UNESCO Publications.
3. Singh K, *Intellectual Property rights on Biotechnology*, BCIL,NewDelhi.

OUTCOMES:

- At the end of the course student will develop an idea about the importance of good laboratory practice in high quality research. They will also develop awareness about the basic fundamental safety measures that a researcher should follow in laboratory.

LSCY102 MICROBIOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To expose the fundamentals and scope of microbiology.
- To learn the classification of bacteria, Virus, Fungi & Protozoa
- Learn microbial culture and disease related to microbes.

MODULE I INTRODUCTION TO MICROBIOLOGY 09

History and scope of microbiology- Classification of microorganisms-bacteria, fungi, virus, alga, protozoa- sterilization techniques, disinfectant and antiseptic agents. Microscopy - types of microscopes and their applications-simple and compound, bright field, dark field, fluorescence, phase-contrast and electron microscopes.

MODULE II BACTERIOLOGY 09

Major groups of bacteria- Archaebacteria, Actinomycetes, chemoautotrophs, eubacteria, Pseudomonads, cyanobacteria, rickettsias, chlamydias and spirochetes- Bacterial cell-structure and functions of cellular components cell wall composition of Gram positive and Gram negative bacteria, sub-cellular organizations, flagella, capsule and spores-bacterial staining-antimicrobial agents-antibiotics, chemotherapeutic drugs-antibacterial agents-mode of action- antibiotic resistance.

MODULE III VIROLOGY 09

Classification, morphology and characteristics of virus, fungi and Protozoa. Structure of DNA and RNA viruses, viral replication, Bacteriophages- lysogeny and lytic cycle- virus like agents-satellites, viroids and prions, antiviral and antifungal drugs. Classification of Helminthic parasites- Life cycle of malarial and filarial parasites.

MODULE IV CULTURING OF MICROORGANISMS 08

Microbial culture, continuous and synchronous culture- composition of culture media - solid and liquid media, chemically defined media, complex and differential media- Effect of PH, temperature and radiation on microbial growth.

MODULE V MICROBES AND DISEASES 10

Major human diseases caused by bacterial, viral and fungal pathogens Diseases of the respiratory tract-diphtheria, tuberculosis, pneumonia, influenza, mumps- Diseases of the skin-systemic mycoses, candidiasis- herpes viral infections, chicken pox, zoster and small pox- Genito-urinary infections- Gonorrhea, syphilis, leptospirosis, and AIDS-trichomoniasis- Diseases of GITCholera, ETEC and EIEC infections- shigellosis-Typhoid- Hepatitis,

gasteroenteritis. Major human protozoan diseases-Malaria, Amebiasis, Toxoplasmiases.

Total Hours: 45

REFERENCES:

3. Kenneth J. R,George R, John C. S, Medical Microbiology: An Introduction to Infectious Diseases, mcgraw-Hill Professional, 2003.

OUTCOMES:

- On the completion of the above objectives student will be able to learn the fundamentals and scope of microbiology, classification of Protozoa, bacteria, Fungi Virus, microbial culture and diseases.

LSCY103 FOOD PROCESS TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explore about food process and technology.
- To get overview of processing of various types of food
- To expose themselves to storage and handling of food and food products.

MODULE I STORAGE AND HANDLING OF CEREALS 09

Infestation control; Drying of grains, Processing of rice and rice products. Milling of wheat and production of wheat products, including flour and semolina. Milling of corn, barley, oat, coarse grains including sorghum, ragi and millets; Processing of tea, coffee and cocoa.

MODULE II FRESH FRUITS AND VEGETABLES 09

Preservation of fruits and vegetable by heat treatment. Production and preservation of fruits and vegetable juices, preservation of fruit juice by hurdle technology. Non-alcoholic beverages; Food Laws, food rules and standards, Statistical Quality Control; Various types of packaging.

MODULE III SEA FOOD 09

Commercial handling, storage and transport of raw fish; Average composition of fish; Freshness criteria and quality assessment of fish; Spoilage of Fish; Methods of Preservation of fish: Canning, Freezing, Drying, Salting, Smoking and Curing. Quality control of processed fish; Fish processing industries in India.

MODULE IV ANIMAL PRODUCT 09

Slaughtering technique of animal; Meat cuts and portions of meat, muscle; Color of meat; Post mortem changes of meat; Meat processing - curing and smoking; fermented meat products (meat sausages & sauces); Frozen meat & meat storage. Classification of poultry meat; Composition and nutritional value of poultry meat & eggs ; Processing of poultry meat and eggs; Spoilage and control; Byproduct utilization and future prospects; Poultry farms in India.

MODULE V DIARY PRODUCT 09

Composition of milk; Varieties of milk; Checks for purity of milk; Handling of fresh milk. Pasteurization of milk; HTST and UHT techniques; Packaging of milk; Fermentation of milk and fermented milk products. Manufacture of milk products like evaporated milk, powder milk, condensed milk, cream butter, cheese, yogurt, ice cream, ghee, baby food

and sweet meat. Quality control of milk and milk products; Milk plant hygiene and sanitation.

Total Hours: 45

OUTCOMES:

- On the completion of the above objectives student will have a sound knowledge on the various techniques involved in food processing, storage and handling of food and food products.

LSCY104 ANALYTICAL TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES

- The students will be exposed to basic concepts related with techniques and instrumentation widely used in Biotechnology.

MODULE I CALORIMETRY AND SPECTROSCOPY 09

Properties of electromagnetic radiations, interaction with matter. Ultraviolet spectroscopy: Origin of UV spectra, types of transition, chromophore & related terms, choice of solvent, instrumentation and applications Infra-red spectroscopy: Origin of infra-red spectra, modes of vibrations, instrumentation, sampling technique and applications; Nuclear magnetic resonance spectroscopy: Mass Spectroscopy: Origin, Instrumentation, types of ions produced, interpretation and applications of mass spectra GCMS, LCMS & MSMS.

MODULE II CENTRIFUGATION AND MICROSCOPY 09

Principle of centrifugation, rotors, different types of centrifuges, preparative and analytical centrifugation, ultra centrifugation. Optical microscopy, Bright field, Dark field, phase contrast and fluorescence microscopy. Electron microscopy: Transmission and scanning electron microscopy, Atomic force microscopy.

MODULE III ELECTROPHORESIS 09

General principle, support media. Agarose gels, polyacrylamide gels. SDS PAGE, 2D PAGE Pulsed field gel electrophoresis Iso-electric focusing Capillary electrophoresis

MODULE IV RADIOISOTOPE TECHNIQUES 09

Study of radioisotopes in biological samples, proportional and GM counter, scintillation counters, autoradiography, radio –immunoassay.

MODULE V CHROMATOGRAPHY 09

Introduction: Chromatography theory and practice. Paper chromatography. Thin layer chromatography. Ion exchange chromatography. Affinity chromatography. Partition chromatography. Adsorption chromatography. Introduction to gas chromatography and HPLC. Permeation.

Total Hours:

REFERENCES

1. Pierre C. ORD and CD in chemistry and biochemistry: An Introduction. Academic Press, 1972.
2. Paddock S. W. Confocal Microscopy methods & protocols.1st Ed., Human Press, 1999.
3. Murphy D. B. Fundamental of Light Microscopy & Electron Imaging. 1st Ed., Wiley-Liss, 2001.

OUTCOMES:

- At the end of the course, the students will have sufficient scientific understanding of the basic concepts in instrumentation used in Biotechnology.

LSCY105 ENVIRONMENTAL BIOTECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn the environment protection Act and Law related to environmental biotechnology
- To give basic idea on environmental sample analysis
- To understand the basic principles involved in waste water management
- To get the information on usage of Bioremediation-biotechnology
- To inform students about Biooxidation & microbial leaching

MODULE I INTRODUCTION TO ENVIRONMENTAL BIOTECHNOLOGY 09

Water, Soil and Air: their sources and effects. Removal of Specific Pollutants : Sources of Heavy Metal Pollution, Microbial Systems for Heavy Metal Accumulation, Biosorption & detoxification mechanisms. Environment protection Act: Environmental laws, Environmental policies, Environmental ethics. UN declaration. Environmental protection and conservation. Environmental Impact Assessment, Ecoplanning and Sustainable Development

MODULE II ENVIRONMENTAL SAMPLE ANALYSIS 09

Physicochemical and bacteriological analysis of soil and water, Problems associated with soil alkali soils, sodic soils, and solid waste, Fate of insecticides fungicides, pesticides in soil, use of genetically modified (insect- , pest- and pathogen resistant) plants. Ecotoxicology of soil pollutants, Municipal solid waste treatment strategies.

MODULE III WASTE WATER MANAGEMENT 09

Waste water constituents, Analysis and selection of flow rates and loadings, Process Selection, Physical unit operations, Chemical unit operations, Fundamentals of biological treatment, Role of biotechnology in water purification systems. Types and kinetics of biological treatment, Advanced waste water treatment, Biological Processes for Industrial and domestic effluent, Treatment, Aerobic Biological Treatment,Anaerobic Biological Treatment.

MODULE IV BIOREMEDIATION-09

Bioremediation-Biotechnology for clean environment, Biomaterials as substitutes for non-degradable materials, Metal microbe interactions: Heavy Metal Pollution and impact on environment, Microbial Systems for Heavy Metal Accumulation, Biosorption, molecular mechanisms of heavy metal tolerance Bioindicators and biosensors for detection of pollution. Biotechnology for Hazardous Waste Management, Persistent organic

pollutants, Xenobiotics, Biological Detoxification of PAH, Biotechniques for Air Pollution Control. Solid Waste Management

MODULE V BIOOXIDATION & MICROBIAL LEACHING 09

Biooxidation – Direct and Indirect Mechanisms – Biooxidation Kinetics; Bacterial oxidation of Sphalerite, Chalcopyrite and Pyrite.; Extraction of metals from ores; Recovery of metals from solutions; Microbes in petroleum extraction; Microbial desulfurization of coal.

Total Hours: 45

REFERENCES:

1. Amann, R.I. Stromley, J. Stahl : Applied & Environmental Microbiology
2. Environmental Microbiology, W.D. Grant & P.E. Long, Blakie, Glassgow and London.
3. Microbial Gene Technology, H. Polasa (ED.) South Asian Publishers, New Delhi.
4. Biotreatment Systems, Vol. 22, D. L. Wise (Ed.), CRC Press, INC.
5. Standard Methods for the Examination of Water and Waste Water (14 th Education), 1985. American Public health Association

OUTCOMES:

On successful completion of this module, learners will be able to have:

- An understanding of environment protection regulations and source of environmental pollutions.
- The capability to apply advanced knowledge on environmental sample analysis
- The capability to apply avalanched discipline in waste water management
- The ability to formulate technique for bioremediation process
- An understanding of how biooxidation & microbial leaching helping in the industries.

LSCY106 SIRNA/RNA INTERFERENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- To get overview of gene regulation by gene silencing.
- To develop a detailed knowledge of siRNA and miRNA.
- To develop skill to understand molecular aspects of RNAi biology.
- To get familiar with technical applications of RNAi.

MODULE I INTRODUCTION TO GENE SILENCING 09

History of RNA interference, antisense RNA, mechanism, cosuppression in Petunia

MODULE II BASIC MECHANISM 09

dsRNA cleavage, RISC activation, dicer, argonaute, gene regulation by silencing,

MODULE III PHYSIOLOGY OF RNA INTERFERENCE 09

RNAi and immunity- antiviral mechanisms in plants, Drosophila, C. elegans, Downregulation and upregulation of genes

MODULE IV APPLICATIONS 09

Gene knockdown, functional genomics, medicine, therapeutic gen modulation, antiviral therapies, cancer, biosafety issues

MODULE V RNAI BIOTECHNOLOGY 09

Food industry- production of plant toxins, production of non-narcotic natural products, development as an insecticide, generation of transgenic plants, genome wide screening

Total Hours:

REFERENCES:

1. RNAi Technology. R K Gaur, CRC Press, 2011
2. RNA Interfernce: From biology to clinical applications by Wei Ping Min. Humana Press
3. RNA Silencing by Esra Galun. World Scientific Publishing Co. Pte. Ltd.

OUTCOMES:

At the end of this course students will be able to:

- Understand gene silencing mechanisms
- Understand types of RNAi
- Understand the applications of RNAi

SEMESTER II

LSCY201	RECOMBINANT DNA TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To understand the basics of Recombinant DNA
- To learn applications of Recombinant DNA Technology

MODULE I CLONING & CLONING VECTOR 09

Types of cloning vectors viz. Plasmids, cosmids, ssDNA Phages, Yeast cloning vectors, Animal viruses, Ti plasmids and Cauliflower Mosaic Virus. Structural and Functional Organization of Plasmids, Plasmid Replication, Stringent and Relaxed Plasmids, Incompatibility of Plasmid Maintenance.

MODULE II MANIPULATION OF PURIFIED DNA 09

Enzymes involved in DNA Manipulation- Nucleases, Ligases, Polymerases and DNA modifying enzymes, Restriction endonucleases-Types, Blunt and sticky ends, Liagtion-Mode of action of DNA Ligase.

MODULE III CONSTRUCTION OF RECOMBINANT DNA 09

Preparation of competent cell-Transformation, transfection – Recombinant selection and screening- Genomic DNA library- cDNA synthesis strategies - Linkers - Adapters - Homopolymer tailing- Making genomic and cDNA libraries in plasmids and phages. PCR product cloning (TA cloning). Cloning strategies in yeast, E. coli and B. subtilis.

MODULE IV HYBRIDIZATION TECHNIQUES & MUTAGENESIS 09

DNA hybridization, colony hybridization and in-situ hybridization (Southern, Northern and Dot blots and immunological techniques Western blotting), Mutagenesis - Deletion mutagenesis, Oligonucletoide derived mutagenesis, Site directed mutagensis - Its applications- Applications of rDNA technology in Diagnostics.

MODULE V APPLICATIONS OF rDNA TECHNOLOGY 09

Gene Cloning and DNA analysis in Agriculture, Forensic Science and Medicine-Production of Recombinant pharmaceuticals, identification of genes responsible for human disease, Genetic Finger printing, Gene Therapy, Plant Genetic engineering, Problems with Genetically modified plants.

Total Hours: 45

REFERENCES:

1. Recombinat DNA Second eition by Watson
2. Gene Cloning and DNA analysis: An Introduction by T. A. Brown.

OUTCOMES:

- This course will introduce the students with the basics about genes, and approaches to manipulate the gene according to need such as production of therapeutic proteins in plants.

LSCY202	ADVANCED INSTRUMENTATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn the electrochemical techniques and principles of centrifugation and spectrophotometry.
- To learn the principles of chromatography and microscopy and their several aspects.
- To understand the information of radioactive methods, detection and measurement of radioactivity.

MODULE I ELECTROCHEMICAL TECHNIQUES 09

Basic principles of Electrochemical Techniques- - pH electrode, Ion selective- gas-sensing and oxygen electrodes- biosensors. Centrifugation- basic principles-instrumentation- Centrifugation- centrifugation units-types of centrifuges-colloidal nature of particles-centrifugation methods and accessories- sedimentation velocity-sedimentation equilibrium-cell fractionation methods.

MODULE II SPECTROPHOTOMETRY 09

Principles and techniques of colorimetry and spectrophotometry-Beer-Lamberts Law -instrumentation - qualitative and quantitative methods of analysis- hypo and hyper chromicity- coupled assays –Spectrofluorimetry-Turbidimetry - Flame and Atomic absorption Spectrophotometer and Mass spectrometer. Chromatography- types- column, thin layer, paper, adsorption, partition, gas, liquid, ion exchange, affinity, HPLC-principles of each type- instrumentation and accessories- detection methods and systems qualitative and quantitative aspects-applications.

MODULE III MICROSCOPY 09

Basic principles of Microscopy and application of Light, Compound, Phase contrast inverted microscopy; Scanning Electron Microscopy (SEM)- Transmission Electron Microscopy, (TEM)- Fluorescence Microscopy- Scanning Tunneling Microscopy-(STM)- Automated Fluorescence Microscopy - Confocal Microscopy.

MODULE IV ELECTROPHORESIS 09

Types of Electrophoresis- paper and gel-agarose and PAGE-pulsed field-capillary - isoelectric focusing- 2 D electrophoresis; blotting methods-Western- Southern and Northern- application-methods in life sciences.

MODULE V RADIOACTIVE METHODS 09

Types of radioisotopes-half life- units of radioactivity- uses of radioisotopes in life

sciences and biotechnology- detection and measurement of Radioactivity- liquid scintillation counting- solid state counting- Geiger counter - Radiation hazards Techniques and applications of Electron spin resonance- Nuclear magnetic resonance- Circular Dichroism (CD) - Optical Rotary Dispersion (ORD).

Total Hours:

REFERENCES:

1. Pierre C. ORD and CD in chemistry and biochemistry: An Introduction. Academic Press, 1972.
2. Paddock S. W. Confocal Microscopy methods & protocols.1st Ed., Human Press, 1999.
3. Murphy D. B. Fundamental of Light Microscopy & Electron Imaging. 1st Ed., Wiley-Liss, 2001.
4. Horst F. Basic One and Two-dimensional spectroscopy. VCH Publisher, 1991.
5. West E. S, Todd W. R, Mason H. S, Bruggen J. Textbook of Biochemistry. 4th Ed, Oxford and IBH Publishing Co, 1995.
6. Freifelder D. M. Physical Biochemistry- Application to Biochemistry and Molecular Biology, 2nd Ed., W.H. Freeman, 1982.

OUTCOMES:

- On the completion of the above objectives student will be able to know the electrochemical techniques and principles of centrifugation, spectrophotometry, chromatography and microscopy. They will have the information of radioactive methods.

LSCY203	MOLECULAR DIAGNOSTICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Developing the basic concept of molecular diagnostics
- Understanding the common procedures and which are used in disease diagnosis
- To be familiar with various types of diseases diagnosis methods and progression of diagnosed disease.

MODULE I INTRODUCTION TO MOLECULAR DIAGNOSTICS 09

Collection, preservation and storage of clinical samples, biopsy, Principles, application and limitations of Biological assays used in diagnosis- PCR, ELISA, FISH, gene sequencing, microarrays, protein arrays. GLP, SOP and ethics in molecular diagnostics.

MODULE II INFECTIONS 09

Infection and mode of transmission, types of infectious diseases- bacterial and fungal infections, diagnosis of infections caused by Streptococcus, Coliforms, Salmonella, Shigella, Vibrio, and Mycobacterium- diagnosis of fungal infections, major fungal diseases, Dermetophytoses, Candidiosis and Aspergillosis. Diagnosis of DNA and RNA viruses- pox virus, rhabdo virus, hepatitis; virus diagnosis of protozoan diseases- amoebiosis, malaria, trypanosomiosis, leishmaniasis- study of helminthic diseases- Fasciola hepatica and Ascaris lumbricoides. Filariasis and Schistosomiasis. Diagnosis of chicken guinea and swine flu.

MODULE III CLINICAL GENETICS 09

Chromosomes chemistry and packaging, Cytogenetic, Structural and numerical abnormalities of chromosomes, Chromosome bands, banding techniques , mutation and polymorphism analysis, human genome project, cancer genetics- oncogenes, tumor suppressor genes- gene therapy, genetic counseling, nucleic acid hybridization techniques, Disease linked with mitochondrial DNA Genetic linkage and chromosome and genetic mapping in human diseases, Prenatal

MODULE IV IMMUNODIAGNOSTICS 09

Introduction to immunodiagnostics, antigen-antibody reactions, antibody production, antibody markers, CD markers, FACS, Human Leukocyte Antigen (HLA) typing, agglutination (ABO/Bacterial), immunoprecipitation, immunodiffusion, flocytometer.

MODULE V FORENSIC SCIENCE 09

Introduction to Forensic Science, DNA fingerprinting / DNA Profiling / DNA Testing in Forensic Science.; Ethics, Rules and Procedures in DNA analysis. Autopsy and

toxicological diagnosis. Determination of Paternity- Human identification and sex determination. semen analysis , Case study.

Total Hours: 45

REFERENCES:

1. Tietz Textbook of Clinical Chemistry, Carl A. Burtis, Edward R. Ashwood,
2. Harcourt Brace & Company Aisa Pvt. Ltd.
3. Essentials of Diagnostic Microbiology, Lisa Anne Shimeld
4. The Science of Laboratory Diagnosis, Crocker Burnett

OUTCOMES:

- Learners will be able to define basic terminology and describes basic concepts in molecular diagnostics
- The students will know the importance and the relevance of molecular diagnostic techniques and applications of molecular diagnostics in various field including medical, forescenic, etc..

LSCY204 OMICS

L	T	P	C
3	0	0	3

OBJECTIVES:

MODULE I GENOMICS: **09**

Structural organization of genome in Prokaryotes and Eukaryotes; Organelle DNA-mitochondrial, chloroplast; DNA sequencing-principles and translation to large scale projects; Recognition of coding and non-coding sequences and gene annotation; Tools for genome analysis-RFLP, DNA fingerprinting, RAPD, PCR, Linkage and Pedigree analysis-physical and genetic mapping. Physical and Genetic Map, Genome Sequencing, Next generation sequencing methods, Genome Annotation, Functional Genomics.

MODULE II TRANSCRIPTOMICS AND PHARMACOGENETICS 09

Search for transcription factor binding sites,RNA-Seq, Microarrays, Regulatory RNAs: small or large, Computational prediction of miRNA target genes, RNA Darkmatter. High throughput screening in genome for drug discovery-identification of gene targets, Pharmacogenetics and drug development

MODULE III PROTEOMICS 09

Protein analysis (includes measurement of concentration, amino-acid composition, N-terminal sequencing); 2-D electrophoresis of proteins; Microscale solution isoelectricfocusing; Peptide fingerprinting; LC/MS-MS for identification of proteins and modified proteins; MALDI-TOF; SAGE and Differential display proteomics, Protein identification by peptide mass fingerprinting, Protein-protein interactions, Yeast two hybrid system, Applications of proteomics.

MODULE IV METABOLOMICS AND LIPIDOMICS 09

Fundamental concept - Carbohydrate, Lipid, Protein and Nucleic Acid metabolism. Plant Metabolism. Tools of metabolomics- Capillary electrophoresis, Gas chromatography, Electrochemical detectors, mass spectrometry, Case studies. Lipidomics - Basic concepts and tools Case studies

MODULE V SYSTEMS BIOLOGY AND BIOINFORMATICS. DEGRADOMICS 09

Techniques and concepts, Approaches to identify the protease and protease-substrate repertoires, or 'degradomes', on an organism-wide scale, Uncover new roles for proteases in vivo. Identification of new pharmaceutical targets to treat disease (Emerging degradomics)

Total Hours:

REFERENCES:

1. Introduction to Proteomics -Tools for the New Biology by Daniel C. Liebler, Humana Press.
2. Mass Spectrometry for Biotechnology by Gary Siuzdak, Academic Press.
3. Proteomics for Biological Discovery by Timothy Veenstra and John Yates, Wiley.
4. Metabolomics- Methods and Protocols by Wolfram Weckwerth, Humana Press.
5. Lipidomics- Technologies and Applications by Kim Ekroos, Wiley-VCH.
6. Web/Journal Resources.
7. Transcriptomics: Expression Pattern Analysis, Virendra Gomase, Somnath Tagore; VDM Publishing, 2009 – Science

OUTCOMES:

LSCY205 BIOFUELS AND BIOENERGY

L	T	P	C
3	0	0	3

OBJECTIVE

- This course will provide learning in various The course will provide students, with hands-on technical exposure to various Biofuels related science & technology topics, background & literature information besides addressing the environmental, economical, social and other Biofuels related issues.

MODULE I BIOCHEMISTRY OF BIOMASS 09

biomass (e.g. wood waste, forestry residues, agricultural residues, perennial annual crops, organic municipal solid waste). Long-term sustainability and reliability of feedstock supply; feedstock quality, minimizing feedstock cost and regional/climatic considerations of the process chain. Composition of lignocellulose (lignin, hemicellulose, cellulose); energy crops; chemical pretreatment; enzymatic pretreatment; degradation of lignocellulose by fungi and bacteria; degradation of lignin; the role of peroxidases; degradation of cellulose; trichoderma cellulases; bacterial cellulases; and comparison with degradation of high starch crops.

MODULE II BIO DIESEL 09

sources and processing of biodiesel (fatty acid methyl ester); nature of lipids, especially fatty acids and triglycerides. Sources and characteristics of lipids for use as biodiesel feedstock; and conversion of feedstock into biodisel (transesterification). Use of vegetable oil (SVO) and waste vegetable oil (WVO). Engineering, economics and environmental issues of biodisel; components and operation of a biodiesel processing system; standards for biodiesel quality; safety procedures needed to work with biodiesel in both domestic and shop environments; and major policies and regulations pertaining to the production, distribution, and use of biodiesel.

MODULE III BIOENERGY SYSTEMS 09

Course content includes overview of bioenergy systems from resource, conversion technologies to final product. Bioenergy conversion technologies and systems for heat, power, and bio-fuels. Cogeneration and polygeneration. Innovative cycles (such as biomass integrated gasification combined cycles, biomass air turbines, humid air turbines etc) for biomass resources. Evaluation of the bioenergy system performance. Economic and environmental assessments of bioenergy systems.

MODULE IV BIOFUELS & ALCOHOL TECHNOLOGY 09

Introduction to Alcohol Technology, Raw Material of AlcoholIndustry, Storage & handling of Raw material in detail, Study of different yeast strains used in alcohol industries, Study

of yeastproduction as single protein cell. Study of different recycling process, Biochemistry of alcoholproduction, The management of fermentation in the production of alcohol.

MODULE V POLICIES AND FUTURE R&D OF BIOFUELS & BIOENERGY 09

Course content includes analysis of both current and future EU regulations and directives on biofuels and bioenergy. Tax regulations. Evaluation of different production alternatives to produce bioenergy; competitiveness of bioenergy alternatives in agriculture compared to other energy sources. Evaluation of current and future R&D needs; legal framework to support sustainable development and increased use of biofuels; government policies and programs with regard to biofuels and investment opportunities worldwide. Biomass feedstocks - how do we produce them cost-effectively and for which end-use? Biofuels for transportation - what will make them technically and economically competitive? Market penetration of biofuels - how do we remove barriers?

Total Hours:

REFERENCES:

1. Biorenewable Resources: Engineering New Products from Agriculture. Robert C. Brown. Wiley-Blackwell Publishing (2003).
2. Anaerobic Biotechnology for Bioenergy Production: Principles and Applications. Samir K. Khanal. Wiley-Blackwell (2008).

OUTCOMES:

Students will be able to describe:

- How petroleum and bio-based fuels affect the global carbon cycle
- The attributes of biofuels that make them suitable as a fuel for a specific application
- Limitations of biofuels
- Global impacts of biofuels on food and energy supplies
- Technological advances and challenges to be overcome for wide-scale biofuel adoption

LSCY206 MOLECULAR FARMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce molecular farming.
- To create complete knowledge about the recombinant protein production.
- To create awareness about the production of pharmaceutical proteins in plants.

MODULE I INTRODUCTION AND FOREIGN PROTEIN EXPRESSION 09

Introduction, foreign protein production systems- plant tissue culture, suspended cultures, hairy root cultures, shoot teratoma cultures. Strategies for improving FP production in tissue culture, expression systems, modifications to existing expression constructs, secretion of foreign proteins, foreign protein stability, stability inside the cells.

MODULE II RECOMBINANT PROTEIN PRODUCTION 09

Biology of sprouting, dicotyledonous seeds, germination, sprout, rubisco synthesis, rubisco promoters, inhibition of endogenous gene expression, expression cassette design, sprouting- equipments, conditions, sterilization, time and temperature, light, inhibition of endogenous gene expression, growth regulators, nitrogen fertilizer, seed production,quality and environmental aspects.

MODULE III PLANT VIRAL EXPRESSION SYSTEMS 10

Cereal production crops, Technical aspects, cereal transformation, expression construct design, Prodigene and Maize. Recombinant proteins expressed in Rice, Wheat, Barley. Plant RNA viruses as expression vectors- TMV, PVX, CPMV, AIMV. Biological activity of target molecules, efficacy of plant virus antigens, vaccine antigens- particle based.

MODULE IV ANTIBODIES, BIOPHARMACEUTICALS AND EDIBLE VACCINES 10

Introduction, expression of therapeutic and human proteins in plants, transgenic chloroplast system, chloroplast derived human antibodies, biopharmaceuticals, Human Serum Albumin, Human insulin like growth factor-1, Human interferon, Antimicrobial peptides, chloroplast derived vaccine antigens, cholera toxin B subModule , Bacillus anthracis protective antigen, Yersinia pestis F1-V fusion antigen, Canine Parvovirus VP2 protein.

MODULE V PLANT DERIVED RECOMBINANT THERAPEUTIC PROTEINS 07

Similarities and differences in the processing of pharmaceutical proteins from different sources, process scale, individual steps of a Downstream process, Initial processing and

extraction, chromatographic purification, regulatoryrequirements for downstream processing of plant derived products.

Total Hours: 45

REFERENCES:

1. Molecular Farming – Plant-made Pharmaceuticals and Technical Proteins, Rainer Fischer and Stefan Schillberg.
2. Wiley.VCH Verlag GmbH and Co. KGaA. 2004.

OUTCOMES:

SEMESTER III

LSCY111	BIOPHARMACEUTICALS	L	T	P	C
		3	0	0	3

OBJECTIVE:

- The purpose of this course is to provide a framework of the drug development process and its regulation as well as its impact on workers and the environment. Graduate students in toxicology, pharmaceutics, comparative medicine, bioengineering, occupational and environmental health as well as professional disciplines such as medicine, pharmacology, and nursing interested in working with the biotechnology industry will find this course particularly useful.

MODULE I INTRODUCTION TO BIOPHARMACEUTICAL 09

Introduction to Biopharmaceutical, Biogenerics and Biosimilars; The role of patents in the drug industry; Protein-based biopharmaceuticals; Manufacturing processes; Global market; International Non-proprietary Names (INN) nomenclature system biosimilars.

MODULE II CONCEPTS OF BIOPHARMACEUTICAL 09

Approved follow-on proteins/Biosimilars; Characteristics of high-selling peptides and proteins,; Products with expired patents; Challenging originator's patents; Target products for FOB (follow-on biologicals)/ Biosimilars development peptides; Recombinant non-glycosylated proteins; Recombinant glycosylated proteins; Industries dealing with biogenerics and its market value; World scenario; Indian scenario.

MODULE III PHARMACOKINETICS; PHARMACODYNAMICS 09

Problems in characterizing biologics (Types of biologic, Peptides, Non-glycosylated proteins, Glycosylated proteins, Monoclonal antibodies); Equivalence issues; Post-translational modifications; Effect of microheterogeneity; Pharmacokinetics; Pharmacodynamics; and Clinical efficacy; Analytical methods for the characterization of biosimilars (Chromatography, Protein sequencing, Mass spectrometry, UV absorption, Circular dichroism, X-ray techniques, Nuclear magnetic resonance, Electrophoresis, Western blotting, Bioassays, ELISA, Immunoprecipitation and other procedures)

MODULE IV IMMUNOGENICITY OF BIOPHARMACEUTICALS 09

Immunogenicity of biopharmaceuticals: Immunogenicity; Factors contributing to immunogenicity (product- related factors, host- related factors), Consequence of immunogenicity to biopharmaceuticals; Measurement of immunogenicity

MODULE V CASE STUDIES **09**

Case studies: Erythropoietin, Insulin, Somatotropin, Interleukin-2, Interferon Granulocyte-macrophage- CSF, DNase, Factor VIIa, Factor IX, Factor VIII, Activated protein C, Tissue plasminogen activator, Monoclonal antibodies etc.

Total Hours:

REFERENCES:

1. Sarfaraz K. Niazi, Handbook of Biogeneric Therapeutic Proteins: Regulatory, Manufacturing, Testing, andPatent Issues, CRC Press, 2006.
2. Rodney J Y Ho, MILO Gibaldi, Biotechnology & Biopharmaceuticals Transforming proteins and genes intodrugs, 1stEdition, Wiley Liss, 2003.

OUTCOMES:

- Explain the therapeutic mode of action, and understand structural considerations of at least four classes of biopharmaceutical agent.
- Outline the drug manufacturing process including the role of quality control and quality assurance in protecting the public, workers, and the environment.
- Give an oral presentation to scientific audience on the biological mechanism of action and proposed evaluation of safety, efficacy and manufacturing controls on a biopharmaceutical age

LSCY112 MOLECULAR & IMMUNO DIAGNOSTICS

L	T	P	C
3	0	0	3

OBJECTIVE:

- Identify the important parameters in the design of a laboratory to conduct the most commonly-used molecular diagnostics protocols.
- Identify the important parameters in the design of a quality system for molecular analyses.
- Become proficient with the techniques required in order to perform the most commonly-used molecular diagnostics protocols.
- Identify the important parameters in the design of a molecular diagnostic test.
- Identify the components of a well-controlled diagnostic test.
- Use critical thinking skills to trouble shoot problems as they occur and determine possible causes.

MODULE I MOLECULAR BIOLOGY AND DIAGNOSTICS 09

Molecular Biology and Diagnostics: Atomic bonds and Molecular interactions; Small organic molecules, Macromolecules; Compartmentalization of cells: transport of molecules between nucleus and cytosol, Transport of proteins into mitochondria and chloroplasts, Endoplasmic Reticulum; General principles of cell communication: Signalling - Extracellular, Intracellular, Autocrine, Signaling through G-protein- linked cell surface receptors, Signaling through enzyme-linked cell surface receptors, Signaling pathways that depend on regulated proteolysis; Cell Cycle; DNA repair pathways and methods of detection – Flow cytometry

MODULE II GENETICS AND DIAGNOSTICS 09

Genetics and Diagnostics: Origin and direction of human cytogenetics; General features of chromosomes, Chemistry and packaging of chromosomes, Chromosome bands, banding techniques and their molecular correlates; Structural and numerical abnormalities of chromosomes and their causes, Sex determination and differentiation, Y chromosome evolution and variations and X-inactivation mechanism and phenotypic effects of sex chromosome imbalances, Fragile sites, Trinucleotide repeat expansion, mechanism and associated disorders, Genomic imprinting and their disorders; Fluorescence In situ hybridization, chromosome Comparative Genomic Hybridization arrays; Genetic linkage and chromosome and genetic mapping in human diseases.

MODULE III BIOCHEMISTRY IN DIAGNOSTICS 09

Biochemistry in Diagnostics: Proteins and Amino acids, Qualitative and quantitative techniques: Protein stability, denaturation; amino acid sequence analysis; Metabolism of lipids, carbohydrates, amino acids; In-born errors of metabolism; energy requirements,

nutritional disorders; vitamins & minerals - biochemical function and deficiency manifestation. GLP and GMP.

MODULE IV TECHNIQUES IN DIAGNOSTICS 09

Nucleic acid extraction – principle and methods; Polymerase Chain Reaction – principle, types (including RT-PCR, real-time PCR, QF-PCR) and applications; DNA sequencing methods – principle, types, automated process, DNA sequencers; Hybridization techniques – Southern, Northern, in-situ (including FISH), microarrays – types and applications; Protein extraction and analysis (including PAGE and its variations); Western Blot

MODULE V IMMUNODIAGNOSTICS 09

Immunodiagnostics : Introduction, antigen-antibody binding interactions and assays; Immunoassays – types [RIA, ELISA, Chemiluminescent, IA, FIA] and specific applications; Immunohistochemistry – principle and techniques. Various drug delivery systems, targeting potentials; systems used for delivery of biotechnological products (Liposomes, microspheres, nanoparticles, immobilization techniques, etc.)

Total Hours:

REFERENCE:

1. Molecular Diagnostics: George P Patrinos and Wilhelm Ansorge, Elsevier Academic Press

OUTCOMES:

- Gain knowledge of cellular structure and function, especially DNA and RNA, to molecular diagnostic procedures.
- Gain a thorough working knowledge of nucleic acid extraction, resolution and detection.
- Gain a solid foundation in the most commonly utilized molecular diagnostic testing protocols.
- Apply the knowledge of molecular testing to the most commonly performed applications in the clinical laboratory such as: nucleic acid extraction, resolution and detection, analysis and characterization of nucleic acids and proteins, nucleic acid amplification and DNA sequencing.

LSCY113 TISSUE AND ANTIBODY ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Understand the fundamental and quantitative principles of tissue and antibody engineering and the basic elements of the tissue engineering approach. Appreciate the important contribution of tissue and antibody engineering in producing/growing organs that can be used for therapeutic applications.Be able to discuss the use of stem cell in tissue engineering for wound healing. Appreciate the need for compatible biomaterials to support growth and differentiation of stem cells into functional organ.

MODULE I INTRODUCTION TO TISSUE ENGINEERING 09

Introduction to tissue engineering, Cells as therapeutic Agents with examples, Cell numbers and growth rates. Tissue organization, Tissue Components, Tissue types, Functional subunits. Tissue Dynamics, Dynamic states of tissues, Homeostasis in highly prolific tissues and Tissue repair. Angiogenesis. Cellular fate processes, Cell differentiation, Cell migration - underlying biochemical process.

MODULE II CELL-EXTRACELLULAR MATRIX INTERACTIONS 09

Cell-extracellular matrix interactions - Binding to the ECM, Modifying the ECM, Malfunctions in ECM signaling. Direct Cell-Cell contact - Cell junctions in tissues, malfunctions in direct cell-cell contact signaling. Response to mechanical stimuli. Cell and tissue culture - types of tissue culture, media, culture environment and maintenance of cells in vitro, cryopreservation. Basis for Cell Separation, characterization of cell separation, methods of cell separation.

MODULE III BIOMATERIALS IN TISSUE ENGINEERING 09

Biomaterials in tissue engineering - biodegradable polymers and polymer scaffold processing. Growth factor delivery, Stem cells. Gene therapy. In vivo cell & tissue engineering case studies: Artificial skin, Artificial blood vessels. Bioreactors for Tissue Engineering.

MODULE IV IMMUNOGLOBULIN 09

Immunoglobulin Genetic Locus: Generation of antibody diversity, Antibody Discovery Methodologies: Hybidoma, Display, and Direct B-cell cloning technology, Antibody structure and function.

MODULE V ANTIBODY ENGINEERING 09

Antibody engineering: humanization, Affinity maturation, Effector function, Generation of high titer cell lines1: Expression vector and Host systems, Cell culture optimization, Downstream processing , Analytical characterization, : Cell line genetic analysis Purification, formulation and stability, Antibody composition

Total Hours:

REFERENCES:

1. "Tissue Engineering", Bernhard O. Palsson, Sangeeta N. Bhatia, Pearson Prentice Hall Bioengineering.
2. Nanotechnology and Tissue engineering - The Scaffold", Cato T. Laurencin, Lakshmi S. Nair, CRC Press.

OUTCOMES:

- Execute the engineering design process: identify problem, identify design constraints on bioengineering problem, create solutions, and evaluate solutions with respect to these constraints.) In this course, students learn and then execute key steps of the engineering design process, including identification of the problem, exploration of the problem, and design of a solution. Students will learn how to identify and conduct thorough research on current tissue engineering and antibody problems, and will ultimately work in teams to propose solutions to those identified problems.

LSCY114	BIONANOTECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide an introduction to nanobiotechnology.
- To make the students understand about the functional principles of nanobiotechnology

MODULE I FUNDAMENTALS OF NANOSCIENCE 09

Introduction, the nanoscale dimension and paradigm, definitions and historical evolution (colloids etc.) and current practice, types of nanomaterials and their classifications (1D, 2D and 3D etc. nanocrystal, Nanoparticle, Quantum dot, Quantum Wire and Quantum Well etc), Polymer, Carbon, Inorganic, Organic and Biomaterials –Structures and characteristics.

MODULE II CHARACTERIZATIONS IN BIONANOTECHNOLOGY 09

Optical (UV-Vis/Fluorescence), X-ray diffraction, Imaging and size (Electron microscopy, light scattering, Zeta potential), Surface and composition (ECSA, EDAX, AFM/STM etc), Vibration (FT-IR and RAMAN), SERS -3, Magnetic, Electrical and Electrochemical**.**

MODULE III APPLICATIONS OF BIONANOTECHNOLOGY 09

Materials in Biosystems: Proteins - Lipids - RNA and DNA, Protein Targeting – Small Molecule/Nanomaterial - Protein Interactions Nanomaterial-Cell interactions-Manifestations of Surface Modification (Polyvalency),Drugs-Photodynamic therapy, molecular motors, neuroelecronic interphases, development of nanoluminiscent tags**.**

MODULE IV NANOMATERIALS AND DIAGNOSTICS 09

Drug Delivery and Therapeutics, MRI, Imaging, Surface Modified Nanoparticles, MEMS/NEMS, based on Nanomaterials, Peptide/DNA Coupled Nanoparticles, Lipid Nanoparticles For Drug Delivery, Inorganic Nanoparticles For Drug Delivery, Metal/Metal Oxide Nanoparticles (antibacterial/anti fungal/anti viral), Anisotropic and Magnetic Particles (Hyperthermia).

MODULE V NANOMATERIALS AND TOXICITY EVALUATION 09

Designer biopolymers, Procollagen, DNA Polynode, RNA topoisomerase, Protein – magnetic materials, Cyto-toxicity, Geno-toxicity, In vivo tests/assays.

Total Hours: 45

REFERENCES:

1. C. M. Niemeyer, C. A. Mirkin, Nanobiotechnology: Concepts, Applications and Perspective, Wiley – VCH, 2004.
2. 2 T. Pradeep, —Nano: The Essentials, McGraw – Hill education, 2007.
3. Nicholas A. Kotov, Nanoparticle Assemblies and Superstructures, CRC, 2006.
4. David S Goodsell, “Bionanotechnology”, John Wiley & Sons, 2004.

OUTCOMES:

- After the completion of the course the student will have the basic knowledge of nanotechnology in biotechnology. In detail understanding of the application of Nanomaterials in biotechnology and acquire the knowledge about the DNA, proteins, amino acids, drug delivery, biomedicine etc.

LSCY115 PROTEIN ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- This course aims to develop in the students' mind a concept regarding the structure and function of proteins of particular importance, the student will know the production of recombinant protein and in general how to engineer protein to be used as therapeutics.

MODULE I INTRODUCTION TO PROTEIN ENGINEERING 09

Forces stabilizing proteins – Van der waals, electrostatic, hydrogen bonding and weakly polar interactions, hydrophobic effects; Entropy – enthalpy compensation, Protein engineering and its applications, features or characteristics of proteins that can be engineered (definition and methods of study) – affinity and specificity; Spectroscopic properties; Stability to changes in parameters as pH, temperature and amino acid sequence, aggregation propensities, etc.

MODULE II TECHNIQUES FOR PROTEIN ENGINEERING 09

Methods of measuring the stability of a protein; Spectroscopic methods to study physicochemical properties of proteins: far-UV and near-UV CD; Fluorescence; UV absorbance; ORD; Hydrodynamic properties–viscosity, hydrogen-deuterium exchange.

MODULE III SITE DIRECTED MUTAGENESIS AND PROTEIN ENGINEERING 09

Altering Proteins by mutagenesis methods, techniques for Oligonucleotide directed mutagenesis by using single stranded DNA as template, Denatured double stranded DNA as template, PCR based mutagenesis, Engineering proteins by chemical modifications, Genetic fusion of domains, alteration of function by selection and screens, deletion mutagenesis. Introduction of selected mutagenesis by Oligonucleotide directed mutagenesis, Scanning mutagenesis, Insertion of unnatural mutagenesis.

MODULE IV ENGINEERING PROTEINS FOR PURIFICATION 09

Introducing cleavage sites, engineering Proteins for Chromatography, Immunoaffinity chromatography, Ion exchange chromatography, Metal affinity chromatography.

MODULE V STABILIZATION AND MODIFICATION OF PROTEINS 09

Principles of structure stabilization by solvent components, sources of exclusion, Balance between cosolvent exclusion and binding, cosolvent intertactions in the denaturation reaction, Practical considerations, Post translational modifications- Involving peptide

bond, C-terminal, side chain. Modification methods- Enzymatic, Non enzymatic, Specificity, chaperones mediated. Applications of Post translational modifications.

Total Hurs:

2. Baxevanis A. D, Ouellette B. F. F. Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins. 3nd edition Wiley, John & Sons, Incorporated, 2004.

OUTCOMES:

- After the completion of the course the student will have the basic concept regarding the structure and function of proteins of particular importance, the student will know the production of recombinant protein and in general how to engineer protein to be used as therapeutics.

LSCY116 STEM CELL TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To obtain knowledge on wide-ranging topics related to stem cell
- To learn about the application of stem cells in health care
- To get familiar with the issues and challenges of stem cell political and ethical issues surrounding the stem cell debate.

MODULE I GENESIS OF CELLS 09

Concept of stem cells: types, self-renewal and pluripotency, isolation and characterization, Niche and its role on differentiation of stem cells, Stem cells and restorative biology, Reprogramming of genome function through epigenetic inheritance.

MODULE II STEM CELLS 09

Embryonic stem cells, Stem Cells from adults. Pluripotency necessary, or is unipotency enough? What are the mechanisms? Stem-cell plasticity, Regulators of pluripotency and differentiation of stem cell. The isolation, expansion, genetic manipulation, genomic reprogramming, and cloning of stem cells. The problem of differentiation of stem cells. Stem Cells and imprinted genes. Differences between adult and embryonic stem cells, what types of cells adult stem cells can become.

MODULE III CELL & TISSUES 09

From single to multicellular components **-** Regulation of cell division and cytoskeleton, Stem cells in regeneration, Cell specification and early signaling events during morphogenesis, Development of cell adhension and motility , Cellular imprinting**.**

MODULE IV CELL GROWTH & DEVELOPMENT 09

Factors controlling cell development **-** Environmental factors like temperature, oxeygen, location, time, cell number , Chemical factors like growth factors, hormones, cytokines, microRNAs , Genetic factors**.**

MODULE V STEM CELLS AND THERAPEUTICS 09

Cancer stem cells , Stem cells treatment to diseases , Current stem cell therapies, how we can use stem cells for studying cancer and finding cures to other diseases, Correlation between stem cells and cancer, Stem cells and aging. Clinical applications of hematopoietic stem cells from cord blood first successful transplantation of cord blood in a child with Fanconi’s anemia. Treatment of neural diseases such as Parkinson's disease,

Huntington’s disease and Alzheimer's disease. Repair of damaged organs such as the liver and pancreas. Ethical issues associated with stem cells.

VISION AND MISSION OF THE DEPARTMENT OF SCHOOL OF LIFE SCIENCES

VISION

To attain new heights in biotechnology research, shaping life sciences into a premier precision tool for the future for creation of wealth and ensuring social justice-specially for the welfare of the poor

MISSION

The mission of the School of Life Sciences is to maximize the benefits of biotechnology to the University, the nation and the globe by being an excellent quality, comprehensive, multidisciplinary school that supports, coordinates, disseminates and advances biotechnology in the areas of social welfare and entrepreneurship.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

M. Sc. (Microbiology)

PROGRAMME EDUCATIONAL OBJECTIVES:

The course aims to provide an advanced understanding of the core principles and topics of Microbiology and their experimental basis to enable students in acquiring a specialized knowledge by means of dedicated lecture series and subject-oriented research project. Hence, the main objectives of the program are:

- To communicate the basic knowledge in general microbiology with detailed subdivision of microbiology.
- For the basic understanding this course includes microbial biochemistry, physiology and molecular Biology to give basic understanding of the microbiology.
- Further bacteriology, virology, mycology give individual sections of microbiology with detailed information on economic importance of microbiology
- Finally this course explains the advanced sections of microbiology like Immunology, Microbial genetics, food microbiology, medical microbiology, Environmental microbiology, industrial microbiology and bioinformatics.
- This course provides necessary theoretical and practical experience in all divisions of microbiology to become an effective professional.
- This course provides broad exposure to various communities, ecological and commercial issues in the field microbiology.

PROGRAMME OUTCOMES:

- On completion of the program the graduates will have applied knowledge in microbiology and the subdivision of microbiology.
- Microbial Biochemistry, Physiology and Molecular Biology will give basic understanding of the microbiology.
- Individual sections like bacteriology, virology, mycology give will give knowledge detailed information on economic importance of microbiology.
- Advanced sections of microbiology like Immunology, Microbial genetics, food microbiology, medical microbiology, Environmental microbiology, industrial microbiology and bioinformatics will give broad information on microbiological applications and opportunities in the field of microbiology.
- Identify research and solve microbiology related problems related to the different types of microbial derived diseases.
- Ability to communicate and function effectively in multi-disciplinary team related to the microbiology.

SEMESTER I

LSC6102 CELL & MOLECULAR BIOLOGY

L	T	P	C
4	0	0	4

OBJECTIVES:

- To get overview of classes of cells and structural and function aspects of plasma membrane and cell organelle.
- To develop skill to understand molecular aspects of cell cycle and cell division.
- To get familiar with transcription and translation in details.
- To understand the signaling pathways in cell functioning

MODULE I INTRODUCTION TO CELL 08

Basic properties of cell, Different classes of cell: Prokaryotic, animal and plant cell. Plasma membrane- structure and function, Chemical composition of membranes, membrane lipids and proteins, fluid mosaic model, Transport across the membranes- diffusion, osmosis, facilitated diffusion, passive and active transport; membrane potential and nerve impulses.

MODULE II MEMBRANE TRANSPORT 07

Endoplasmic Reticulum, Golgi complex- glycosylation, Vesicle transport- COPI and COPII; Lysosomes - autophagy; Endocytic pathway- endocytosis and phagocytosis, transport of proteins into peroxisomes, mitochondria and chloroplast;

MODULE III ENERGY CONVERSION 10

Structure of mitochondria and organization of respiratory chain; Proton Pump and ATP generation in mitochondria; Structure of chloroplast and Photosynthesis, photorespiration; Genetic system of mitochondria and chloroplast.

MODULE IV BASIC GENETIC MECHANISMS 10

The structure and function of DNA, DNA packaging and Chromosomes, chromatin structure and function, DNA replication mechanisms, DNA damage and repair and homologous recombination and transposable elements, Telomeres, telomerase and end replication. Role of telomerase in aging and cancer.

MODULE V TRANSCRIPTION AND TRANSLATION 10

Transcription- Prokaryotic and eukaryotic Transcription- RNA polymerases- general and specific transcription factors- regulatory elements- mechanism of transcription, Transcription termination Post transcriptional modification- splicing- editing- nuclear export of mRNA- mRNA stability; Translation- Genetic code, Mechanism of initiation-

elongation andtermination- Regulation of translation.

Total Hours: 45

REFERENCES

1. Molecular Biology of Cell by Alberts et.al. John Wiley & Sons, 6Ed, 2015
2. The Cell by Cooper. ASM Press, 4Ed, 2007
3. Cell and Molecular Biology by Karp. John Wiley & Sons, 7Ed, 2013
4. Lodish H. F.Cell and Molecular Biology. W.H. Freeman & Co Ltd, 7Ed, 2000.

OUTCOMES:

- On the completion of the above objectives student will be able to get the overview of classes of cells and structural and function aspects of plasma membrane and cell organelle. They can develop skill to understand molecular aspects of cell cycle, cell division, transcription and translation.

LSC6121 BIOCHEMISTRY

L	T	P	C
4	0	0	4

OBJECTIVES:

This course aims to develop in the students' mind a concept regarding

- The diversity of metabolic processes occurring in biological system.
- The effect of the structural and functional role of the enzymes governing the metabolic processes.
- Importance of the metabolic pathways in maintaining homeostasis in biological system.
- The clinical implications of the metabolic pathway.

MODULE I AMINO ACIDS & PROTEIN: STRUCTURE AND FUNCTIONS 05

Amino acids- Classification, structure and function, proteins- primary, secondary, tertiary and quaternary structure, Ramachandran plot, super secondary structures and helix loop.

MODULE II ENZYMOLOGY 10

Classification of enzymes. How do enzymes work: activation energy, substrate specificity. Enzyme-substrate interaction: Lock and Key mechanism and Induced Fit mechanism. Effect of temperature and pH on enzyme action. Enzyme Kinetics: Michaelis-Menten Equation, Km, Measurement of Km and Vmax (Lineweaver-Burk equation). Kinetics of multisubstrate reaction: Sequential reactions and ping-pong reactions. Enzyme inhibition: reversible (competitive, uncompetitive and mixed) and irreversible. Allosteric regulation of enzyme activity. Multienzyme complex and multifunctional enzymes.

MODULE III ENERGY PRODUCTION AND OXIDATIVE PHOSPHORYLATION 14

Introduction to metabolism: Anabolism, catabolism, metabolic pathways. Characteristics of metabolic pathways

Glycolysis: glycolytic pathway. Molecular mechanism of action of the glycolytic enzymes. Energetic of glycolysis. Glycolysis and cancer biology—Warburg Hypothesis and PET scanning. Fates of Pyruvate under anaerobic conditions: alcohol and lactic acid fermentation. Importance of lactic acid fermentation.

TCA Cycle: Formation of Acetyl CoA and reactions of citric acid cycle. Molecular mechanism of pyruvate dehydrogenase complex and enzymes involved in Kreb's cycle. Energetic of TCA cycle and substrate level phosphorylation.

Lipid metabolism: Hormonal regulation of the mobilization of triglycerides from adiposities. Transport of fatty acid into mitochondria. Beta oxidation of saturated fatty acid (both even and odd). Regulation. Energetic.

Electron Transport Chain: structure and function of Electron carriers: Complex I—V. Passage of electrons from complex I to IV. Mitchell's chemiosmotic hypothesis and proton gradient. Structure of complex V or ATP synthase, Catalytic sites of ATP synthesis. Mechanism of ATP generation by Boyer's binding change mechanism—rotational catalysis. Energetic of ATP synthesis and efficiency of ATP synthase.

MODULE IV METABOLIC INTERRELATIONSHIP 09

Starve-Fed cycle. Glucose homeostasis. Switching of metabolism of liver between starve and fed cycle. Metabolic relationship of tissues in various nutritional and hormonal states—insulin resistance, diabetes, exercise, pregnancy, lactation, stress, liver and renal diseases, alcohol consumption.

MODULE V REGULATORY MECHANISMS OF METABOLIC PATHWAYS 07

Feed back inhibition by allosteric modulation of enzymes. Covalent modifications of enzymes. Isozymes. Propetolytic cleavage. Regulationg the amount of enzyme—regulation gene expression in prokaryotes and eukaryotes.

Total Hours: 45

REFERENCE:

1. Nelson D.L, Cox M. M. Lehninger's Principle of Biochemistry. 5th Ed.,W. H. Freeman, 2008.
2. Biochemistry by Lubert Stryer 7th ed. W. H. Freeman & Company.
3. Textbook of Biochemistry with Clinical Correlations. 4th Ed. Thomas M. Devlin. Wiley-Liss publication. 1997.

OUTCOMES:

At the completion of the course the student will develop an understanding about the

- Various metabolic processes occurring in biological system and their role in governing homeostasis and normal physiology.
- The importance of enzymes as a regulatory molecule in metabolism.
- The interrelationship of metabolic pathways different physiological conditions.
- The role of liver in regulating metabolism.

LSC6122 MICROBIAL GENETICS

L	T	P	C
4	0	0	4

OBJECTIVES:

- To get overview on microbial genetics, concepts, theories and genetic tools.
- To learn about the genetics of bacteriophage
- To get knowledge on fungal and viral genetics.
- To understand the concept of operon gene expression and different types of operons.

MODULE I BACTERIOPHAGE 10

Structure, Life Cycle and Lytic-Lysogenic Options of A Bacteriophage. The lambda Lifecycle, Genes involved in lysogeny and lytic cycle of lambda phage. Lifecycle Of M13-M13 Adsorption And Injection, Protection of The M13 Genome. Lifecycle of P1, Adsorption, Injection And
P1 Transducing Particles. Lifecycle of T4-T4 Adsorption And Injection.

MODULE II METHODS OF GENE TRANSFER IN BACTERIA 10

Genetics of Bacteria, Mutations and growth in bacteria. Mechanisms of Genetic Exchange in Bacteria- Transformation, conjugation, Properties of the F plasmid, F+ x F - mating, F' x F- conjugation. Hfr bacteria and chromosome mapping, Transduction: Generalized and specialized transduction.

MODULE III TRANSPOSABLE GENETIC ELEMENTS 08

Transposable elements in bacteria and yeast, Inseretion sequences- structure and occurrence, Mechanism of transpositions –Replicative, Non replicative, regulation and activation. Conjugative transpositions, Phase variation.

MODULE IV FUNGAL GENETICS 08

Fungi as Model for genetic studeis, Structure and Organization of Fungal Genome, Life Cycles, Mating Systems and Genetic Exchange in Fungi: Life cycles and sexual process, Mating system and promotion of outcrossing, Systems restricting outcrossing, Sexual differentiation and relationship to outcrossing, Hetrokaryosis, the parasexual cycle and Vegetative incompatibility, Role and consequences of Vegetative incompatibility, Sex and Outcrossing, Neurospora and Classical Genetics, Applied molecular genetics of fungi.

MODULE V REGULATION OF GENE EXPRESSION 09

Constitutive, Inducible, and Repressible Gene expression, positive and negative control of gene expression operons: coordinately regulated units of gene expression. The lactose operon in e. coli: induction and catabolite repression. The tryptophan operon in e. coli:

repression and attenuation. Translational control of gene expression, posttranslational regulatory mechanisms

Total Hours: 45

REFERENCES

4. Streips U. N, Yasbin R. E. Modern Microbial Genetics, 2nd Ed., Wiley-Liss, Inc. 2002.

OUTCOMES:

- After completion of this course, scholars will get knowledge on the microbial genetics, concepts, theories and genetic tools and also on the operon, viral, bacteriophage and fungal genetics.

LSC6123	LAB I (BIOCHEMISTRY, MOLECULAR BIOLOGY AND MICROBIAL GENETICS)	L	T	P	C
		04	0	6	3

OBJECTIVES:

- To learn basic techniques in molecular biology
- To study and differentiate the electrochemical properties of nucleic acids
- To learn the preliminary methods in biochemistry by preparing buffer and adjusting pH.
- To estimate various biomolecules by biochemical assays

EXPERIMENTS:

1. Laboratory safety guidelines.
2. To determine an unknown protein concentration by plotting a standard graph of BSA using UV-Vis Spectrophotometer and validating the Beer- Lambert's Law.
3. Effect of temperature on enzyme activity.
4. Separation techniques for amino acids and sugar:
    a. apaper chromatography
    b. thin layer chromatography.
5. Separation of proteins by native and SDS-PAGE.
6. Preparation of slides from onion root tip for mitosis
7. Isolation & Purification of genomic DNA from bacteria
8. Isolation & Purification of plasmid DNA
9. Isolation of RNA
10. Agarose gel electrophoresis of chromosomal & plasmid DNA
11. Restriction Digestion of chromosomal & plasmid DNA
12. Isolation of DNA fragment from agarose gel
13. Staining Techniques (Gram staining, spore staining)
14. Antibiotic Assay - Antimicrobial Sensitivity Test (Disc Diffusion Method)
15. Growth Kinetics (Bacterial Growth Curve)
16. Isolation of antibiotic resistant mutants by chemical mutagenesis.
17. Ampicillin selection method for isolation of auxotrophic mutant. 5. Extraction and Purification of RNA from S. cerevisiae.
18. Studies on gene expression in E.coli with reference to lac operon.
19. Study of conjugation in E. coli.
20. Restriction digestion and agarose gel electrophoresis of DNA.
21. Generalized transduction in E. coli using P1 phage.

4. Holtzhauer M, Basic Methods for the Biochemical Lab, Springer, 2006.
Nigam, Lab Manual in Biochemistry: Immunology and Biotechnology, Tata McGraw-Hill Education, 2007.
5. Lab manual

OUTCOME:

- On the completion of the above experiments students will be able to handle DNA samples and also to isolate, purify and visualize nucleic acid.
- On performing the above experiments students will be able to know and perform the routine biochemical assays.
- Students will be able to isolate culture and identify microbes and also to efficiently use light microscope.

SEMESTER II

GEC6202 RESEARCH METHODOLOGY

L	T	P	C
3	0	0	3

MODULE I RESEARCH METHODOLOGY-AN INTRODUCTION 09

Meaning of Research, Objectives of Research, Motivation in Research, Types of Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Research Process, Criteria of Good Research, Problems Encountered by Researchers. Ethics and scientific conduct, Introduction to ethics, scientific conduct and misconduct, Misconduct and why it occurs, Fabrication, Authorship issues, The investigation and punishment of scientific misconduct.

MODULE II GOOD LABORATORY PRACTICES AND SAFETY 09

Introduction: History, definition, Principles, Good Laboratory Practices (GLP) and its application GLP training: Resources, Rules, Characterization, Documentation, quality assurance, Resources, Facilities: building and equipment, Personnel, GLP and FDA, Stepwise implementation of GLP and compliance monitoring.

MODULE III LABORATORY SAFETY AND EXPERIMENTAL RESEARCH 09

Safety in the Biology Laboratory, Safety Symbols, Science Safety Rules- Dress Code, First Aid, Heating and Fire Safety, Using Chemicals and glassware's, Handling living organisms, handling human blood and some other body fluids and tissue, disposal of bio hazardous waste.Precision, accuracy, sensitivity and specificity; variables, experimental planning – general guidelines

MODULE IV INTERPRETATION OF RESULTS AND ANALYSIS: 09

Importance and scientific methodology in recording results, importance of negative results, different ways of recording, industrial requirement, artifacts versus true results, types of analysis (analytical, objective, subjective) and cross verification, correlation with published results, discussion, outcome as new idea, hypothesis, concept, theory, model etc. Data analysis using Excel, Origin and Sigma plot Analyzing the chemical data and drawing chemical structures using Chemdraw and Chemsketch. Conceptions of error of measurement, true score theory and generalisability theory. Measures of central tendency or averages – mean median and mode. Measures of dispersion – range, variance, and standard deviation: The normal distribution and the normal probability curve.

MODULE V SCIENTIFIC WRITING, TECHNICAL PUBLICATION AND RESEARCH PROPOSAL 09

Different types of scientific and technical publications in the area of research, and their specifications, Ways to protect intellectual property – Patents, technical writing skills, definition and importance of impact factor and citation index - assignment in technical writing, The research problem, finding related literature, computer generated references sources and the research project, model research proposal.

Total Hours: 45

OUTCOMES:

LSC6201 IMMUNOLOGY

L	T	P	C
4	0	0	4

OBJECTIVES:

- The course is aimed at introducing the science of immunology and detailed study of various types of immune systems and their classification structure and mechanism of immune activation**.**

MODULE I OVERVIEW OF IMMUNE SYSTEM 04

Innate, adaptive and Comparative ImmModule y, Immune dysfunction and its consequences, Cells & Tissues of Immune System: Hematopoisesis, Apoptosis and Necrosis, systemic function of Immune system, organs of immune systems, Lymphoid cells and organs Evolutionary comparision. Cytokines- Properties of Cytokines, Cytokine Receptors, Cytokine Antagonists, Cytokine Secretion by TH1 and TH2 Subsets, Cytokine-Related Diseases, Therapeutic Uses of Cytokines and Their Receptors, Cytokines in Hematopoiesis

MODULE II MOLECULAR IMMUNOLOGY 05

Immunogenicity Versus Antigenicity, Factors that influence immunogenicity, Epitopes, Haptens and the Study of Antigenicity, Pattern-Recognition Receptors, drugs allegies-when medicine become immunogens, Molecular structure of antibody, Obstacles to Antibody Sequencing, Immunoglobulin Fine Structure, Antibody-Mediated Effector Functions, Antibody Classes and Biological Activities, Antigenic Determinants on Immunoglobulins, The B-Cell Receptor, The Immunoglobulin Superfamily, Monoclonal Antibodies.

MODULE III ORGANIZATION AND EXPRESSION OF IMMUNOGLOBULIN GENES 09

Genetic Model Compatible with Ig Structure, Multigene Organization of Ig Genes, Variable-Region Gene Rearrangements, Mechanism of Variable-Region DNA Rearrangements, Generation of Antibody Diversity, Class Switching among Constant-Region Genes, Expression of Ig Genes, Synthesis, Assembly, and Secretion of Immunoglobulins, Regulation of Ig-Gene Transcription, Antibody Genes and Antibody Engineering

MODULE IV ANTIGEN PROCESSING AND PRESENTATION 09

General organization and inheritance of the major histocompatibility complex (MHC), MHC molecules and genes, detailed genomic map of MHC genes, cellular distribution of MHC molecules, regulation of MHC expression, MHC and immune responsiveness, MHC and disease susceptibility self-MHC restriction of T cells, role of antigen-presenting cells,

evidence for two processing and presentation pathways, endogenous antigens: the cytosolic pathway,exogenous antigens: the endocytic pathway presentation of nonpeptide antigens

MODULE V GENERATION OF T AND B CELL RESPONSE 09

T-Cell Receptor, Early Studies of the T-Cell Receptor and αβ andγΔ T-Cell Receptors: Structure and Roles, Organization and Rearrangement of TCR Genes, T-Cell Receptor Complex: TCR-CD3,T-Cell Accessory Membrane Molecules, Three-Dimensional Structures of TCR-Peptide-

MHC Complexes,Alloreactivity of T Cells, T-Cell Maturation and the Thymus,Thymic Selection of the T-Cell Repertoire,T_H-Cell Activation, T-Cell Differentiation, Cell Death and T-Cell Populations Peripheral γΔ T-Cells, B-Cell Maturation,B-Cell Activation and Proliferation, The Humoral Response, In Vivo Sites for Induction of Humoral Responses, Germinal Centers and Antigen-Induced B-Cell Differentiation, Regulation of B-Cell Development, Regulation of the Immune Effectors Response.

Total Hours: 45

3. Janeway et al., Immunobiology, 4th Edition, Current Biology publications., 1999.
4. Paul, Fundamental of Immunology, 4th edition, Lippenco

OUTCOMES:

After completing the course students will:

- have a detailed understanding of Component of immModule y
- know antigen presentation on a detailed molecular level
- understand the concept immunology and the immune system .
- have a in depth knowledge of the cellular and molecular basis for autoimmune disease and allergies.
- have basic knowledge of tumor immunology and the development of novel recombinant antibodies for treatment of cancer and autoimmune disease

LSC6202 BIOINFORMATICS

L	T	P	C
4	0	0	4

OBJECTIVES:

- To understand the programming languages applied in computational biology.
- To understand the methods and applications for sequence analysis, Phylogenetics and Protein modelling.

MODULE I INTRODUCTION TO PROGRAMMINB LANGUAGE 09

Introduction –Programming languages – Problem solving Technique: Algorithm, Flowchart, Compiling, Testing and Debugging - Basic Perl Data Types, File handle and File Tests – Perl Modules – SQL.

MODULE II PROGRAMMING IN C, C++ AND OOPS 09

C language Introduction – Tokens – Keywords, Identifier, Variables, Constants, Operators – Structure of a 'C' program - Expression – Data types – Control Statement - C++ programming – Object Oriented Concept: Encapsulation, Inheritance, Polymorphism.

MODULE III COMPUTATIONAL BIOLOGY AND SEQUENCE ANALYSIS 09

Molecular sequences, Genome sequencing: pipeline and data, Next generation sequencing data, Biological databases: Protein and Nucleotide databases, Sequence Alignment, Dynamic Programming for computing edit distance and string similarity, Local and Global Alignment, Needleman Wunsch Algorithm, Smith Waterman Algorithm, BLAST family of programs, FASTA algorithm, Functional Annotation, Progressive and Iterative Methods for Multiple sequence alignment, Applications.

MODULE IV PHYLOGENETICS 09

Introduction to Phylogenetics, Distance and Character based methods for phylogenetic tree construction: UPGMA, Neighbour joining, Ultrametric and Min ultrametric trees, Parsimonous trees, Additive trees, Bootstrapping.

MODULE V PROTEIN STRUCTURE, MODELLING AND SIMULATIONS 09

Protein Structure Basics, Visualization, Prediction of Secondary Structure and Tertiary Structure, Homology Modeling, Structural Genomics, Molecular Docking principles and applications, Molecular dynamics simulations

Total Hours: 45

7. Baxevanis A.D. and Oullette, B.F.F. A Practical Guide to the Analysis of Genes and Proteins, 2nd ed., John Wiley, 2002

OUTCOMES:

- At the end of this course, students will have been familiarized with language skills and their applications in analyzing Protein structure, sequence analysis which can be used in analyzing the binding effect of drugs on proteins.

LSC6203 LAB II (IMMUNOLOGY / BIOINFORMATICS)

L	T	P	C
0	0	6	3

OBJECTIVES:

- To acquire knowledge on immunological techniques
- To train in various techniques involving antigen and antibody reactions
- To get hands on experience on plasmid construction, mappings and analysis.
- To explore to various tools in bioinformatics.

LIST OF EXPERIMENTS:

1. Double diffusion, Immuno-electrophoresis and Radial Immuno diffusion.
2. Antibody titre by ELISA method.
3. ELISA for detection of antigens and antibodies-DOT ELISA
4. Blood group mapping
5. Preparation of antigens from pathogens and parasites
6. Slide and tube agglutination reaction
7. Plasmid Construction/Restriction Mapping
8. PCR Primer Designing
9. Sequence Retrieval and Format Conversion
10. Homology Search/ Multiple Sequence Alignment
11. Motif finding in DNA and Protein Sequences
12. Protein Secondary Structure Prediction
13. Accessing Data- Use FORMATTED, LIST and COLUMN input to read raw data files, Combine SAS data sets using the DATA step.
14. Creating Data Structures- Create temporary and permanent SAS data sets, Control with observations and variables in a SAS data set are processed and output Managing Data- Investigate SAS data libraries using base SAS utility procedures.
15. Generating Reports- Generate list reports using the PRINT and REPORT procedures, Generate HTML reports using ODS statements.
16. Handling Errors- Identify and resolve programming logic errors, syntax errors, data errors.

REFERENCES:

1. Rose et al., Manual of Clinical laboratory Immunology, 6th Ed ASM Publications, 2002.
2. Lefkovis and Pernis. Immunological methods. Academic Press, 1978.

6. Krawetz S. A, Womble D. D. Introduction to Bioinformatics: A Theoretical and Practical Approach. Humana press, 2003

OUTCOMES:

- Students could independently perform diagnostics assays involving antigen-antibody reaction. They also learn to perform the qualitative and quantitative analysis using antibody.
- Students will be familiar with various soft skills/tool used in understating modern biology. They will also be able to analyze and interpolate data starting from PCR primer designing to structure predictions.

SEMESTER III

LSC7122	INDUSTRIAL, FOOD, AGRICULTURAL MICROBIOLOGY	L	T	P	C
		4	0	0	4

OBJECTIVES:

- To understand the principles of the underlying the properties and reactions of various Microorganisms and their various development strategies with a clear understanding in terms of agricultural and food Biotechnology and to update students knowledge of new developments in biology of industrial relevance.

MODULE I INDUSTRIAL BIOTECHNOLOGY- AN INTRODUCTION 09

Exploitation of microorganisms and their products, screening, strain development strategies, immobilization methods, fermentation media, raw material used in media production, antifoaming agents, buffers, downstream processing.

MODULE II FERMENTATION 09

Fermentation equipment and its uses, fermentor design, Types of fermentors and fermentations- single, batch, continuous, multiple, surface, submerged and solid state.

MODULE III MICROORGANISMS IN AGRICULTURE AND PLANT DISEASES 09

Microorganisms as biofertilizers (Rhizobial, Cyanobacterial, Mycorrhizal, Azotobacter): production and application of Microbial biopesticides, recombinant pesticides, GMO and their impact. Microbial diseases of crops: transmission of pathogens, Citrus canker, little leaf of brinjal, red rot of sugarcane, brown rot of potato, black rot, mosaic virus, tomato spot, early and late blight, wilt disease. Control of plant diseases.

MODULE IV MICROORGANISMS IN FOOD 09

Microorganisms important in food microbiology – molds, yeasts, bacteria,principles of food preservation – high and low temperatures, drying, chemical preservatives, food additives. Food spoilage and food borne infections, general principles underlying food spoilage and contamination, canned food spoilage, spoilages of vegetables, fruits, meat and meat products, milk and milk products, fish, seafood and poultry.

MODULE V FOOD PRODUCTS 09

Food produced by microbes: bread, cheese, fermented dairy products, microbial cells as food – single cell proteins, mushroom, fermented Indian foods.

Total Hours: 45

REFERENCES:

1. Principles of Food Science, Vol-I by Fennma Karrel
2. Modern Dairy Products, Lampert LH; 1970, Chemical Publishing Company
3. Casida, L.E. “Industrial Microbiology”, New Age International (P) Ltd, 1968.
4. Presscott, S.C. and Cecil G. Dunn, “Industrial Microbiology”, Agrobios (India), 2005.

OUTCOMES:

- At the end of the course the students will be able to acquire knowledge on the concepts and facts and theories relevant to the broad areas of biotechnology and the techniques applicable to the area of Biotechnology

LSC7123 ENVIRONMENTAL AND MEDICAL MICROBIOLOGY

L	T	P	C
4	0	0	4

OBJECTIVES:

- To learn the basic principles of environment and medical microbiology and be able to apply these principles to understanding and solving problems in water quality.
- To become familiar with current research in environmental microbiology and its applications.
- Develop knowledge of microbial organisms and their relevance of infectious diseases.
- Understand the principles of prevention and treatment of pathogenic microorganism infection in humans.

MODULE I INTRODUCTION TO ENVIRONMENTAL MICROBIOLOGY

Environmental Microbiology: Waste treatment - Wastes - types and characterization. Treatment of solid wastes - composting, vermiform composting, silage, pyrolysis and saccharifications. Treatment of liquid wastes - primary, secondary (anaerobic and aerobic) - trickling, A-9 21 activated sludge, oxidation pond, and oxidation ditch-tertiary - disinfection.

MODULE II DEGRADATION USING MICROBES

Degradation of of Xenobiotic compounds: Simple aromatics, chlorinated polyaromatic petroleum products, pesticides and surfactants. Biodeterioration of materials - paper, leather, wood, textiles and paint. Metal corrosion - Bioaccumulation of heavy metals. Biofouling and Bioleaching.

MODULE III MICROBIAL ASSESMENT OF WATER

Physical, chemical and microbial assessment of water and potability test for water. Physical and chemical - colour, pH, alkalinity, acidity, COD, BOD, anions and cations. Microbiological - MPN index - presumptive, completed and confirmatory tests.

MODULE IV EPIDEMOLOGY AND PATHOGENECITY OF DISEASES

Epidemiology, pathogenicity and treatment of diseases caused by Haem. influenzae, C. diphtheriae, E. coli, Pseudomonas, Bacillus anthracis, Cl. tetani, Cl. walchi, Leptospira icterohaemmorhagiae, N. gonorrhea, Mycoplasma, compylobacter. Rickettsia -cox, burneti, Chlamidiae -trachoma, New Bacterial diseases- Helicobacter, Lyme diseases, Legionella.

MODULE V INFECTION & DRUGS

Infections in Vulnerable hosts, antimicrobial drugs, Bauer Kirby test, Broth dilution test, minimum inhibitory and lethal concentrations. Mechanism of action and activity spectrum of penicillin, streptomycin, tetracycline, sulfonamides, rifampicin, polymixin - B, Amphotericin – B. Drug resistance.

Total Hours: 45

REFERENCES:

OUTCOMES:

At the end of the course students will be able to understand the basic concepts and advantages of environmental and medical microbiology. The students will be understand the different test for infection, disease and drugs.

LSC7124 LABORATORY 3

L	T	P	C
0	0	6	3

OBJECTIVES:

- To understand the principles of the underlying the properties and reactions of various Microorganisms and their various development strategies with a clear understanding in terms of agricultural and food Biotechnology and to update students knowledge of new developments in biology of industrial relevance.
- To learn the basic principles of environment and medical microbiology and be able to apply these principles to understanding and solving problems in water quality. To become familiar with current research in environmental microbiology and its applications. Develop knowledge of microbial organisms and their relevance of infectious diseases. Understand the principles of prevention and treatment of pathogenic microorganism infection in humans.

EXPERIMENTS:

1. Production and estimation of lactic acid by Lactobacillus Sp. Or Streptococcus Sp.
2. Extraction and estimation of diacetyl.
3. Sauerkraut fermentation
4. Isolation of food poisoning bacteria from contaminated foods, Dairy products
5. Extraction and detection of afla toxin for infected foods.
6. Preservation of potato/onion by UV radiation
7. Production of fermented milk by Lactobacillus acidophilus.
8. Rapid analytical techniques in food quality control using microbial Biosensors.
9. Microbial production , Extraction , purification and Confirmation of alpha amylase/ Lipase
10. Immobilization of cells and enzyme using Sodium alginate and egg albumin and measurement of enzyme activity [amylase/ /Lipase]
11. Cell disruption for endoenzymes by sonication.
12. Physical analysis of sewage/industrial effluent by measuring total solids, total dissolved solids and total suspended solids.
13. Determination of indices of pollution by measuring BOD/COD of different effluents. 3. Bacterial reduction of nitrate from ground waters
14. Microbial dye decolourization/adsorption.
15. Comparison of ethanol production using various Organic wastes /raw Material [Free cells/ immobilized cells].

11. Bacterial Pathogenesis A Molecular Approach. 2nd Edition. 2001 by Abigail A.Salyers and Dixie D. Whitt. ASM Publications.
12. Advances in Applied Microbiology by D. Pearlman, Academic Press.

OUTCOMES:

- At the end of the practically the students will be able to acquire knowledge on the concepts and facts and theories relevant to the broad areas of biotechnology and the techniques applicable to the area of Biotechnology
- Students will be able to perform experimental confirm and synthesis the different test for infection, disease and drugs.

LIST OF ELECTIVES

SEMESTER I

		L	T	P	C
LSCY101	**BIOSAFETY, BIOETHICS, BIOENTREPRENEURSHIP, INTELLECTUAL PROPERTY RIGHTS**	**3**	**0**	**0**	**3**

OBJECTIVES:

- Developing a good work ethics and laboratory working condition
- Understanding the importance of following and maintaining laboratory safety guidelines

MODULE I ETHICS IN BIOLOGY 09

The legal and socioeconomic impacts of biotechnology - Public education of the processes of biotechnology involved in generating new forms of life for informed decision making - Biosafety regulation and national and international guidelines - rDNA guidelines

MODULE II BIOSAFETY 09

Experimental protocol approvals - levels of containment - Environmental aspects of biotech applications - Use of genetically modified organisms and their resistance in environment - Special procedures for r-DNA based product production

MODULE III MARKETING 09

Assessment of market demand for potential product(s) of interest; Market conditions, segments; Prediction of market changes; Identifying needs of customers including gaps in the market, packaging the product; Market linkages, branding issues; Developing distribution channels; Pricing/Policies/Competition; Promotion/Advertising; Services Marketing

MODULE IV INTELLECTUAL PROPERTY RIGHTS 09

Intellectual property rights - TRIP International conventions patents and methods of application of patents - Legal implications - Biodiversity and farmers rights - Beneficial applications' and development of research focus to the need of the poor - Identification of directions for yield effect in agriculture, aquaculture Bioremediation etc.

MODULE V PATENT SYSTEM 09

Objectives of the patent system - basic principles and general requirements of patent law - biotechnological inventions and patent law - legal development - patentable subjects and protection in biotechnology - The patentability of microorganisms - IPR and WTO

regime - consumer protection and IPR - IPR and plant genetic resources - GATT and TRIPS.

Total Hours: 45

REFERENCES:

1. Beier,F.K.,Crespi,R.S. and Straus,J. *Biotechnology and Patent protection*-Oxford and IBH Publishing Co.New Delhi.
2. Sasson A, *Biotechnologies and Development*, UNESCO Publications.
3. Singh K, *Intellectual Property rights on Biotechnology*, BCIL,NewDelhi.

OUTCOMES:

- At the end of the course student will develop an idea about the importance of good laboratory practice in high quality research. They will also develop awareness about the basic fundamental safety measures that a researcher should follow in laboratory.

LSCY104 ANALYTICAL TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES

- The students will be exposed to basic concepts related with techniques and instrumentation widely used in Biotechnology.

MODULE I CALORIMETRY AND SPECTROSCOPY 09

Properties of electromagnetic radiations, interaction with matter. Ultraviolet spectroscopy: Origin of UV spectra, types of transition, chromophore & related terms, choice of solvent, instrumentation and applications Infra-red spectroscopy: Origin of infra-red spectra, modes of vibrations, instrumentation, sampling technique and applications; Nuclear magnetic resonance spectroscopy: Mass Spectroscopy: Origin, Instrumentation, types of ions produced, interpretation and applications of mass spectra GCMS, LCMS & MSMS.

MODULE II CENTRIFUGATION AND MICROSCOPY 09

Principle of centrifugation, rotors, different types of centrifuges, preparative and analytical centrifugation, ultra centrifugation. Optical microscopy, Bright field, Dark field, phase contrast and fluorescence microscopy. Electron microscopy: Transmission and scanning electron microscopy, Atomic force microscopy.

MODULE III ELECTROPHORESIS 09

General principle, support media. Agarose gels, polyacrylamide gels. SDS PAGE, 2D PAGE Pulsed field gel electrophoresis Iso-electric focusing Capillary electrophoresis

MODULE IV RADIOISOTOPE TECHNIQUES 09

Study of radioisotopes in biological samples, proportional and GM counter, scintillation counters, autoradiography, radio –immunoassay.

MODULE V CHROMATOGRAPHY 09

Introduction: Chromatography theory and practice. Paper chromatography. Thin layer chromatography. Ion exchange chromatography. Affinity chromatography. Partition chromatography. Adsorption chromatography. Introduction to gas chromatography and HPLC. Permeation.

Total Hours:

REFERENCES

1. Pierre C. ORD and CD in chemistry and biochemistry: An Introduction. Academic Press, 1972.

2. Paddock S. W. Confocal Microscopy methods & protocols.1st Ed., Human Press, 1999.
3. Murphy D. B. Fundamental of Light Microscopy & Electron Imaging. 1st Ed., Wiley-Liss, 2001.

OUTCOME

- At the end of the course, the students will have sufficient scientific understanding of the basic concepts in instrumentation used in Biotechnology.

LSCY121 ANIMAL BIOTECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

The student will learn about

- The basic idea about animal cell culture, drug toxicity and its application.
- Vaccines production and other technology related to antibody production.
- The basic concept of cloning and several issues related with that.
- Genomics and the role of DNA forensics.

MODULE I ANIMAL CELL CULTURE 09

Morphology and ultra-structure of animal cell, requirements for animal cell culture, media and reagents, Primary culture, secondary culture, maintaining cell line, Suspension cultures, Somatic cell cloning and hybridization, transfection and transformation, Stem cells and their application, Animal cell culture application for in vitro testing of drugs, toxicity of environmental pollutants in cell culture.

MODULE II ANIMAL HEALTH BIOTECHNOLOGY 09

Introduction to immune system, History of vaccines development, concept of vaccines, vaccine production, conventional methods and recombinant approaches, technology for antibody production, Phage display technology, radio immunoassays and enzyme immunoassays, Immunoblotting, Nucleic acid based diagnostic methods including nucleic acid probe hybridization.

MODULE III ANIMAL REPRODUCTIVE BIOTECHNOLOGY 09

Culture of embryos, Cryopreservation of embryos, Embryo transfer, Micromanipulation of animal embryos, Artificial insemination, in vitro fertilization, Transgenic animal technology and its different applications, Animal cloning- basic concepts, Cloning from embryonic cells and adult cells; Cloning of farm animals; Cloning for conservation of endangered species, Ethical, social and moral issues related to cloning, Human Cloning.

MODULE IV ANIMAL GENOMICS 09

Introduction to animal genomics; Different methods for characterization of animal genomes, SNP, STR, QTLS, RFLP, RAPD, proteomics, metobolomics, different breeds of cattle, buffalo, sheep, goats, pigs, camels, horses, canines and poultry, characterization of livestock breeds; Marker assisted breeding of livestock and poultry, Genetic basis for disease resistance; Gene knock out technology and animal models for human genetic disorders.

MODULE V DNA FORENSICS 09

Nucleic acid based methods for identification of animal species, Detection of food/feed adulteration with animal protein, adulteration detection in meat using DNA based methods, Identification of wild animal species using DNA based methods using different parts including bones, hair, blood, skin and other parts confiscated by anti-poaching agencies; Human forensics; Microbial forensics; Bioterror agents; Biocrimes and Bioterrorism.

Total Hours: 45

REFERENCES:

1. Animal Cell Culture - Practical Approach, 3rd Edition, Oxford University, Ed. John R.W. Masters, Press, 2000.
2. Ed. Martin, Clynes Animal Cell Culture Techniques, Springer, 1998.

4. A. Puller (ed), Genetic engineering in Animals, VCH Publishers.
5. Gordon, Reproductive Technologies in Farm Animals, CAB Intl., 2005.
6. Pinkert, Transgenic animal technology, Academic Press, 2006.

OUTCOMES:

on the completion of the above course student will learn about

- basic of animal cell culture and the production of antibodies.
- how vaccines is being produced and its importance in several aspects
- the social and moral issues related to cloning. the importance of studying Forensic science.

LSCY122 PLANT BIOTECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES

- This course gives students about the fundamentals of totipotency, plant tissue culture techniques for in vitro manipulations and transgenic technology. It also familiarizes them with the use of plants for production of biologically active therapeutic proteins.

MODULE I PLANT TISSUE CULTURE 09

Totipotency, organogenesis, somatic embryogenesis, artificial seed production, Micropropagation, somaclonal variation, Germplasm conservation and cryopreservation. Protoplast Culture and Somatic Hybridization Protoplast isolation- its culture and usage, Somatic hybridization and its applications.

MODULE II AGROBIOLOGY 09

Agrobacterium-plant interaction; Virulence; Ti and Ri plasmids; Opines and their significance; T-DNA transfer, Genetic Transformation Agrobacterium-mediated gene delivery, Direct gene transfer - PEG-mediated, electroporation, particle bombardment and alternative methods; Screenable and selectable markers, Characterization of transgenics, Gene targeting.

MODULE III MOLECULAR MAPPING & MARKER ASSISTED SELECTION (MAS) 09

Marker assisted selection for genes of agronomic importance, e.g. insect resistance, grain quality and grain yield, Molecular polymorphism, RFLP, RAPD, STS, AFLP, SNP markers; Construction of genetic and physical map, Gene mapping and cloning, strategies for Introducing Biotic and Abiotic Stress Resistance/Tolerance Bacterial resistance; Viral resistance; Fungal resistance; Insects and pathogens resistance; Herbicide resistance; Drought, salinity, thermal stress, flooding and submergence tolerance.

MODULE IV PLANT ARCHITECTURE AND METABOLISM 09

Protein engineering, Post-harvest bioengineering, Plants as Biofactories, concept of biofactories, Fermentation and production of industrial enzymes, vitamins and antibiotics and other biomolecules, secondary metabolite production, Production of pharmaceutically important compounds.

MODULE V PLANT GENOMICS 09

Positional cloning, using biochemical and expression analysis-microarray analysis, metabolomics, Characterization and functional analysis of candidate genes: transformation, mutant populations, knockout systems; Heterologous expression systems; Protein analysis; Bioinformatics and databases; Genoinformatics, Patenting of biological material; Plant breeders rights (PBRs) and farmers rights and Biosafety.

Total Hours:

REFERENCES:

2. Edited by BR Jordan, 2nd Edition, The Molecular Biology and Biotechnology of Flowering, CABI, 2006.
3. Neil Wille, Phytoremediation: Methods and Reviews, 1st Edition, Humana Press, 2007.
4. Denis Murphy, Plant Breeding and Biotechnology: Societal Context and the Future of Agriculture, Cambridge University Press, 2007.

OUTCOMES:

- At the end of the course students will be able to understand the advantages of in vitro propagation of plants in various areas and methods used for production of transgenic plants with their applications in different areas.

LSCY123 PARASITOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand animal association, parasitic diseases, lifecycle and mode infection.
- To get an overview on important parasites and charactertics.
- To understand survival adaptations and significance of important parasites.

MODULE I FUNDAMENTAL OF PARASITOLOGY 08

Introduction to parasitology; type of parasites, animal associations and host – parasite relationship; distribution of diseases and Zoonoses caused by animal parasites.

MODULE II COMMON PARASITES 10

Plasmodium - morphology, life-cycle and mode of infection. Molecular biology of Plasmodium – drug targets, mechanism of drug resistance, vaccine strategies and proteomic approaches; Leishmania - morphology, life-cycle and mode of infection. Molecular biology of Leishmania – drug targets, drug resistance and vaccine strategies.

MODULE III COMMON PARASITES 09

Entamoeba - morphology, biology, life-cycle and mode of infection. Giardia - morphology, biology, life-cycles, mode of infection. Gastro-intestinal nematodes - morphology, biology, life-cycles and modes of entry of Schistosoma, Wuchereria, Brugia, Ancylostoma, Trichinella and Dracanculus; molecular biology of nematodes and vaccine strategies.

MODULE IV PARASITE IMMUNOLOGY 09

Immune response and self-defense mechanisms, immune evasion and biochemical adaptations of parasites; parasites of veterinary importance.

MODULE V INSECT PARASITES 09

Parasites of insects and their significance; nematode parasites of plants, morphology, biology, lifecycle and infection of crop plants by plant parasitic nematodes, plant parasitic nematodes, host parasite interactions.

Total Hours: 45

REFERENCES

1. Roberts L.S. and Janovy J.Foundations of Parasitology. McGraw-Hill Publishers, New York, 2008.
2. Cox F. E. G. Modern Parasitology: A Textbook of Parasitology, FEG Cox., Wiley-Blackwell, 1993.

OUTCOMES:

- After finishing this course, scholars will get knowledge on parasites causing sever ailments in humans. Students will also know parasite's lifecycle, survival adaptations and also to prevention and treatment strategies.

LSCY124 VIROLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- This course aims to develop in the students' mind a concept regarding scope of virology, Diagnostic virology, Emerging virus and challenges and applied virology.

MODULE I CONCEPT AND SCOPE OF VIROLOGY 09

Foundations of virology: Virus prehistory, discovery of viruses. Definitive properties of viruses: Morphology, Ultra structure, Chemical composition -proteins, nucleic acids, and enzymes. Classification and nomenclature of viruses; Trends in virology; Evolutionary importance of viruses. Epidemiology of Virus infection. Principles of diagnosis of virology.

MODULE II DIAGNOSTIC VIROLOGY 09

Biological activity of viruses, Physical, chemical and structural components of viruses, Visualization and enumeration of virus particles, Detection of viruses: physical, biological, immunological and molecular methods. Cultivation of viruses in embryonated eggs, laboratory animals and cell cultures. Serological methods – haemaglutinin and HAI, complement fixation, immunofluorescence methods, ELISA and RIA: Physical, chemical and molecular methods- protein, radioactive tracers, electron microscopy, nucleic acid - PCR based assays, flowcytometry and immunohistochemistry. Infectivity assays for phages and plant viruses. Characterization of viral product expressed in the infected cells. Isolation and purification of viruses.

MODULE III STUDY OF VIRUS 09

Morphology, ultra structure, chemical composition and replication of: Group I – T2 Bacteriophage, Group II – Banana bunchy top virus, Group III – Reovirus, Group IVTMV, Group V – Rhabdovirus, Group VI – HIV, Group VII – HBV. Sub-viral particles: Discovery, Structure, Classification, replication and diseases caused by Satellite, Satellites virus, Virusoids, Viroids and Prions. Cellular interactions—clathrin coated pits, lipid rafts, caveolae, endocytosis and virus uncoating mechanisms. Oncogenesis: oncogenic viruses, viral transformation by activation of cellular signal transduction pathways, viral transformation via cell cycle control pathways.

MODULE IV APPLIED VIROLOGY 09

General aspects of plant and animal viral diseases. Introduction to viral vaccines, preparation of vaccines, new vaccine technology; antiviral drugs, antiviral gene therapy, antiviral libraries, antiretrovirals—mechanism of action and drug resistance. Modern approaches of virus control: Antisense RNA, siRNA, ribozymes, in silico approaches for drug designing. T-phages, Cyanophages, Baculovirus.

MODULE V EMERGING VIRUS AND CHALLENGES 09

Mechanism of host cell damage- Host cell 'shut off',apoptosis, necrosis, alteration of signaling pathways. Viruses and the future: Promises and problems. Emerging diseases, sources and causes of emergent virus diseases. Prospectus using medical technology to eliminate specific viral and other infectious diseases. Silver lining: viruses as therapeutic agents, viruses for gene delivery, viruses to destroy other viruses. Importance of studying modern virology.

Total Hours: 45

11. Wagner, E.K. and Hewlett, M.J. 1999. Basic Virology. Blackwell Science. Inc.

OUTCOMES:

- At the completion of the course the student will develop an understanding about the scope of virology, Diagnostic virology, Emerging virus and challenges and applied virology.

SEMESTER II

LSCY201 RECOMBINANT DNA TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVE:

- To understand the basics of Recombinant DNA
- To learn applications of Recombinant DNA Technology

MODULE I CLONING & CLONING VECTOR 09

Types of cloning vectors viz. Plasmids, cosmids, ssDNA Phages, Yeast cloning vectors, Animal viruses, Ti plasmids and Cauliflower Mosaic Virus. Structural and Functional Organization of Plasmids, Plasmid Replication, Stringent and Relaxed Plasmids, Incompatibility of Plasmid Maintenance.

MODULE II MANIPULATION OF PURIFIED DNA 09

Enzymes involved in DNA Manipulation- Nucleases, Ligases, Polymerases and DNA modifying enzymes, Restriction endonucleases-Types, Blunt and sticky ends, Liagtion-Mode of action of DNA Ligase.

MODULE III CONSTRUCTION OF RECOMBINANT DNA 09

Preparation of competent cell-Transformation, transfection – Recombinant selection and screening- Genomic DNA library- cDNA synthesis strategies - Linkers - Adapters - Homopolymer tailing- Making genomic and cDNA libraries in plasmids and phages. PCR product cloning (TA cloning). Cloning strategies in yeast, E. coli and B. subtilis.

MODULE IV HYBRIDIZATION TECHNIQUES & MUTAGENESIS 09

DNA hybridization, colony hybridization and in-situ hybridization (Southern, Northern and Dot blots and immunological techniques Western blotting), Mutagenesis - Deletion mutagenesis, Oligonucletoide derived mutagenesis, Site directed mutagensis - Its applications- Applications of rDNA technology in Diagnostics.

MODULE V APPLICATIONS OF rDNA TECHNOLOGY 09

Gene Cloning and DNA analysis in Agriculture, Forensic Science and Medicine-Production of Recombinant pharmaceuticals, identification of genes responsible for human disease, Genetic Finger printing, Gene Therapy, Plant Genetic engineering, Problems with Genetically modified plants.

Total Hours: 45

REFERENCES:

1. Recombinat DNA Second eition by Watson
2. Gene Cloning and DNA analysis: An Introduction by T. A. Brown.

OUTCOMES:

- This course will introduce the students with the basics about genes, and approaches to manipulate the gene according to need such as production of therapeutic proteins in plants.

LSCY203 MOLECULAR DIAGNOSTICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- Developing the basic concept of molecular diagnostics
- Understanding the common procedures and which are used in disease diagnosis
- To be familiar with various types of diseases diagnosis methods and progression of diagnosed disease.

MODULE I INTRODUCTION TO MOLECULAR DIAGNOSTICS 09

Collection, preservation and storage of clinical samples, biopsy, Principles, application and limitations of Biological assays used in diagnosis- PCR, ELISA, FISH, gene sequencing, microarrays, protein arrays. GLP, SOP and ethics in molecular diagnostics.

MODULE II INFECTIONS 09

Infection and mode of transmission, types of infectious diseases- bacterial and fungal infections, diagnosis of infections caused by Streptococcus, Coliforms, Salmonella, Shigella, Vibrio, and Mycobacterium- diagnosis of fungal infections, major fungal diseases, Dermetophytoses, Candidiosis and Aspergillosis. Diagnosis of DNA and RNA viruses- pox virus, rhabdo virus, hepatitis; virus diagnosis of protozoan diseases- amoebiosis, malaria, trypanosomiosis, leishmaniasis- study of helminthic diseases- Fasciola hepatica and Ascaris lumbricoides. Filariasis and Schistosomiasis. Diagnosis of chicken guinea and swine flu.

MODULE III CLINICAL GENETICS 09

Chromosomes chemistry and packaging, Cytogenetic, Structural and numerical abnormalities of chromosomes, Chromosome bands, banding techniques , mutation and polymorphism analysis, human genome project, cancer genetics- oncogenes, tumor suppressor genes- gene therapy, genetic counseling, nucleic acid hybridization techniques, Disease linked with mitochondrial DNA Genetic linkage and chromosome and genetic mapping in human diseases, Prenatal

MODULE IV IMMUNODIAGNOSTICS 09

Introduction to immunodiagnostics, antigen-antibody reactions, antibody production, antibody markers, CD markers, FACS, Human Leukocyte Antigen (HLA) typing, agglutination (ABO/Bacterial), immunoprecipitation, immunodiffusion, flocytometer.

MODULE V FORENSIC SCIENCE 09

Introduction to Forensic Science, DNA fingerprinting / DNA Profiling / DNA Testing in Forensic Science.; Ethics, Rules and Procedures in DNA analysis. Autopsy and

toxicological diagnosis. Determination of Paternity- Human identification and sex determination. semen analysis , Case study.

Total Hours: 45

REFERENCES:

1. Tietz Textbook of Clinical Chemistry, Carl A. Burtis, Edward R. Ashwood,
2. Harcourt Brace & Company Aisa Pvt. Ltd.
3. Essentials of Diagnostic Microbiology, Lisa Anne Shimeld
4. The Science of Laboratory Diagnosis, Crocker Burnett

OUTCOMES:

- Learners will be able to define basic terminology and describes basic concepts in molecular diagnostics
- The students will know the importance and the relevance of molecular diagnostic techniques and applications of molecular diagnostics in various field including medical, forescenic, etc..

LSCY205 BIOFUELS AND BIOENERGY

L	T	P	C
3	0	0	3

OBJECTIVE

- This course will provide learning in various The course will provide students, with hands-on technical exposure to various Biofuels related science & technology topics, background & literature information besides addressing the environmental, economical, social and other Biofuels related issues.

MODULE I BIOCHEMISTRY OF BIOMASS 09

biomass (e.g. wood waste, forestry residues, agricultural residues, perennial annual crops, organic municipal solid waste). Long-term sustainability and reliability of feedstock supply; feedstock quality, minimizing feedstock cost and regional/climatic considerations of the process chain. Composition of lignocellulose (lignin, hemicellulose, cellulose); energy crops; chemical pretreatment; enzymatic pretreatment; degradation of lignocellulose by fungi and bacteria; degradation of lignin; the role of peroxidases; degradation of cellulose; trichoderma cellulases; bacterial cellulases; and comparison with degradation of high starch crops.

MODULE II BIO DIESEL 09

sources and processing of biodiesel (fatty acid methyl ester); nature of lipids, especially fatty acids and triglycerides. Sources and characteristics of lipids for use as biodiesel feedstock; and conversion of feedstock into biodisel (transesterification). Use of vegetable oil (SVO) and waste vegetable oil (WVO). Engineering, economics and environmental issues of biodisel; components and operation of a biodiesel processing system; standards for biodiesel quality; safety procedures needed to work with biodiesel in both domestic and shop environments; and major policies and regulations pertaining to the production, distribution, and use of biodiesel.

MODULE III BIOENERGY SYSTEMS 09

Course content includes overview of bioenergy systems from resource, conversion technologies to final product. Bioenergy conversion technologies and systems for heat, power, and bio-fuels. Cogeneration and polygeneration. Innovative cycles (such as biomass integrated gasification combined cycles, biomass air turbines, humid air turbines etc) for biomass resources. Evaluation of the bioenergy system performance. Economic and environmental assessments of bioenergy systems.

MODULE IV BIOFUELS & ALCOHOL TECHNOLOGY 09

Introduction to Alcohol Technology, Raw Material of AlcoholIndustry, Storage & handling of Raw material in detail, Study of different yeast strains used in alcohol industries, Study

of yeastproduction as single protein cell. Study of different recycling process, Biochemistry of alcoholproduction, The management of fermentation in the production of alcohol.

MODULE V POLICIES AND FUTURE R&D OF BIOFUELS & BIOENERGY 09

Course content includes analysis of both current and future EU regulations and directives on biofuels and bioenergy. Tax regulations. Evaluation of different production alternatives to produce bioenergy; competitiveness of bioenergy alternatives in agriculture compared to other energy sources. Evaluation of current and future R&D needs; legal framework to support sustainable development and increased use of biofuels; government policies and programs with regard to biofuels and investment opportunities worldwide. Biomass feedstocks - how do we produce them cost-effectively and for which end-use? Biofuels for transportation - what will make them technically and economically competitive? Market penetration of biofuels - how do we remove barriers?

Total Hours:

REFERENCES:

1. Biorenewable Resources: Engineering New Products from Agriculture. Robert C. Brown. Wiley-Blackwell Publishing (2003).
2. Anaerobic Biotechnology for Bioenergy Production: Principles and Applications. Samir K. Khanal. Wiley-Blackwell (2008).

OUTCOMES:

Students will be able to describe:

- How petroleum and bio-based fuels affect the global carbon cycle
- The attributes of biofuels that make them suitable as a fuel for a specific application
- Limitations of biofuels
- Global impacts of biofuels on food and energy supplies
- Technological advances and challenges to be overcome for wide-scale biofuel adoption

LSCY211 DIAGNOSTICS OF INFECTIOUS DISEASES

L	T	P	C
3	0	0	3

MODULE I DIAGNOSTIC BACTERIOLOGY 09

Epidemiology of bacterial infections, Guidelines for the collection, Transport, Processing analysis, isolation of bacterial pathogens and reporting of cultures from specimens for bacterial infections Bacterial infections of respiratory tract. Bacterial infections of gastro intestinal tract and food poisoning. Bacterial urinary tract infections. Bacterial infections of genital tract and reproductive organs. Bacterial infections of central nervous system. Skin and soft tissue infections. Bone and joint infections Eye ear and sinus infections Cardiovascular infections Tissue samples for culture Anaerobic infections Zoonotic infections. Infections associated with immunodeficiency and immune suppression Pyrexia of unknown origin.

MODULE II BACTERIAL IMMUNO SEROLOGY 09

Enteric fever Streptococal infections Syphilis Rickettsial infections B rucellosis Primary atypical pneumonia; New rapid serological diagnostic methods for bacterial infections.

Module III DIAGNOSTIC BACTERIOLOGY VIROLOGY 09

Immunodiagnostics and immunotherapy in virology – Serological methods for detection and quantitation of viruses including Hepatitis, Influenza, HIV and others. Immuno-assays: SRID, ELISA, ELISA-PCR, RIA, Western Blotting, Immunofluroscens and their application. Immune deficiencies and autoimmunity.

MODULE IV DIAGNOSTIC PARASITOLOY 09

Systematic study of following parasites (Geographical distribution, habitat, morphology and life cycle, risk of infection, pathogenesis, laboratory diagnosis prophylaxis and serological diagnosis)

MODULE V DIAGNOSTIC MYCOLOGY 09

Epidemiology, Pathogenesis, Laboratory Diagnosis of Fungal Infections. Specimen collection, preservation, Transportation & Identification of Mycological Agent. Biochemical tests for fungal identification Anti fungal agents, invitro tests. Serological tests for mycotic infections. Use of laboratory animals in Mycology.

Total Hours:

REFERENCES:

OUTCOMES:

LSCY212 METAGENOMICS

L	T	P	C
3	0	0	3

PURPOSE:

The purpose of this course is to provide focus on next generation DNA sequencing technology to describe the ecological roles of microbial communities in different environments. It also provides how the metabolic functions, taxonomic distribution, diversity, evenness and species richness of microbial communities varies across environment.

OBJECTIVES:

- To use metagenomic data to describe the taxonomic make-up, functional potential and ecological processes of microbial communities from a range of environments
- To apply next generation sequencing technology.
- To assemble and annotate genomes by identifying genes.

MODULE I ENVIRONMENTAL GENOMICS 0**9**

Environmental Metagenomics – Introduction; Pure culture and in consortium ; Cultivable and Non-cultivable microbial analysis; Recombination DNA technology and DNA cloning; Types of vectors, applications of recombination DNA technology; Molecular fingerprinting techniques (RFLP, T-RFLP, ARISA, DGGE, rDNA library, and FISH); Stable isotope probing (SIP); Suppressive subtractive hybridization (SSH); Differential expression analysis (DEA); Microarrays & Metagenome sequencing; Next-generation sequencing approaches to metagenomics.

MODULE II ISOTOPE PROBING & OLIGONUCLEOTIDE MICROARRAYS 09

Direct linking of microbial populations to specific biodegradation and biotransformation processes by stable isotope probing of biomarkers- PhyloChip & GeoChip-Detection of xenobiotic-degrading bacteria by using oligonucleotide microarrays

MODULE III CONSTRUCTION & ANALYSIS OF METAGENOMIC LIBRARIES 09

Cataloging microbes: phylogenetic tree and construction - Construction of a metagenomic library; Analysis of Metagenomic Libraries; Sequence-based Metagenomics Analysis; Functionbased Metagenomics Analysis; Phylogenetic analysis and Comparative genomics Softwares & Tools.

MODULE IV METAGENOMICS CASE STUDIES 09

Metagenomic analysis of soil microbial communities; Metagenomic analysis of marine microbial communities; Metagenome of the Microbial Community in Acid Mine Drainage ; Metagenomic Analysis of Bacteriophage; Metagenomics and Its Applications to the

Study of the Human Microbiome; Archaeal Metagenomics: Bioprospecting Novel Genes and Exploring New Concepts.

MODULE V METAGENOMICS IN ENVIRONMENTAL STUDIES 09

Application of Metagenomics to Bioremediation; Applications of Metagenomics for Industrial Bioproducts; Escherichia coli host engineering for efficient metagenomic enzyme discovery; Next-generation sequencing approaches to metagenomics; Stable isotope probing: uses in metagenomics; DNA sequencing of uncultured microbes from single cells.

4. Beebee T.J.C., D G. Rowe,” An Introduction to Molecular Ecology”, Mc Graw Hill, 2004.

OUTCOMES:

LSCY213 BIOPROCESS (MICROBIAL)

L	T	P	C
3	0	0	3

OBJECTIVES:

- This course is formulated with an objective to familiarize the students with the fundamentals of material balance, energy balance, media optimization techniques and variousmodels of microbial growth.

MODULE I INTRODUCTION TO MICROBIAL BIOTECHNOLOGY 09

Introduction to biotechnology and biochemical engineering, bioprocess techniques, biotechnology products. Thermodynamic preliminaries, system and process, steady state and equilibrium, law of conservation of mass, types of material balance problem, material balances with recycle and bypass streams.

MODULE II MATERIAL BALANCE 09

Stoichiometry of bioreaction and energetic of microbial growth, ATP and redox potential balance, Yield coefficients, productivity and the correlation with the stoichiometry, Growth stoichiometry and elemental balances, electron balances, Biomass yield, product stoichiometry, Theoritical oxygen demand, Maximum possible Yield. Energy Balance: Basic energy concepts, intensive & extensive properties, Studies of enthalpyfor reactive & non reactive processes. Heat of combustion, heat of reaction at Non standard conditions. Thermodynamics of microbial growth, energy balance equation for cell culture, unsteady state energy balance equations.

MODULE III MEDIUM OPTIMIZATION 09

Medium optimization techniques with special emphasize on statistical techniques, placket-Burman design, ANOVA, central; composite design, response surface methodology.Sterilization:

Media sterilization, kinetics of thermal death of cells & spores, design of batch and continuous thermal sterilization, coupling of Arhenious equation and cell death kinetics, sterilization of air and filter design, Radiation and chemical sterilization.

MODULE IV UNSTRUCTURED MODEL FOR MICROBIAL GROWTH 09

The development of different microbial growth kinetics like Malthus, Pearl and read, Monod Model, Konark Model. The limitation of Monod model and development of other constitutive models. Multisubstrate model, inhibition models for substrate, Product and toxic substances. Development of logistic equation. Maintenance and endogenous metabolism kinetics.

MODULE V STRUCTURED MODEL FOR MICROBIAL GROWTH 09

Kinetics based on molecular mechanism, Compartment models, Model of cellular Energetics and metabolism, Model of product formation, singles cell model, Model of gene expression and regulation, Plasmid Expression and Replication, Model of plasmid stability, parameter estimation, Model validation and bioprocess optimization.

Total Hours: 45

4. 4.Schugerl K: Bellgart K H (Eds); Bioreaction Engineering, Modeling and control; Springer –verlog, berlin (2000)
5. Introduction to Biochemical Engineering by D G Rao. Tata, Mc Graw Hill, New Delhi

OUTCOME:

- After the completion of the course students will gain awareness of various media optimization techniques. Students will gain expertise in quantitative estimation of the biomass growth and product formation rate, which will help them to design bioreactor and product in

SEMESTER III

LSCY111	BIOPHARMACEUTICALS	L	T	P	C
		3	0	0	3

OBJECTIVE:

- The purpose of this course is to provide a framework of the drug development process and its regulation as well as its impact on workers and the environment. Graduate students in toxicology, pharmaceutics, comparative medicine, bioengineering, occupational and environmental health as well as professional disciplines such as medicine, pharmacology, and nursing interested in working with the biotechnology industry will find this course particularly useful.

MODULE I INTRODUCTION TO BIOPHARMACEUTICAL 09

Introduction to Biopharmaceutical, Biogenerics and Biosimilars; The role of patents in the drug industry; Protein-based biopharmaceuticals; Manufacturing processes; Global market; International Non-proprietary Names (INN) nomenclature system biosimilars.

MODULE II CONCEPTS OF BIOPHARMACEUTICAL 09

Approved follow-on proteins/Biosimilars; Characteristics of high-selling peptides and proteins,; Products with expired patents; Challenging originator's patents; Target products for FOB (follow-on biologicals)/ Biosimilars development peptides; Recombinant non-glycosylated proteins; Recombinant glycosylated proteins; Industries dealing with biogenerics and its market value; World scenario; Indian scenario.

MODULE III PHARMACOKINETICS; PHARMACODYNAMICS 09

Problems in characterizing biologics (Types of biologic, Peptides, Non-glycosylated proteins, Glycosylated proteins, Monoclonal antibodies); Equivalence issues; Post-translational modifications; Effect of microheterogeneity; Pharmacokinetics; Pharmacodynamics; and Clinical efficacy; Analytical methods for the characterization of biosimilars (Chromatography, Protein sequencing, Mass spectrometry, UV absorption, Circular dichroism, X-ray techniques, Nuclear magnetic resonance, Electrophoresis, Western blotting, Bioassays, ELISA, Immunoprecipitation and other procedures)

MODULE IV IMMUNOGENICITY OF BIOPHARMACEUTICALS 09

Immunogenicity of biopharmaceuticals: Immunogenicity; Factors contributing to immunogenicity (product- related factors, host- related factors), Consequence of immunogenicity to biopharmaceuticals; Measurement of immunogenicity

MODULE V CASE STUDIES 09

Case studies: Erythropoietin, Insulin, Somatotropin, Interleukin-2, Interferon Granulocyte-macrophage- CSF, DNase, Factor VIIa, Factor IX, Factor VIII, Activated protein C, Tissue plasminogen activator, Monoclonal antibodies etc.

Total Hours : 45

REFERENCES:

1. Sarfaraz K. Niazi, Handbook of Biogeneric Therapeutic Proteins: Regulatory, Manufacturing, Testing, andPatent Issues, CRC Press, 2006.
2. Rodney J Y Ho, MILO Gibaldi, Biotechnology & Biopharmaceuticals Transforming proteins and genes intodrugs, 1stEdition, Wiley Liss, 2003.

OUTCOMES:

- Explain the therapeutic mode of action, and understand structural considerations of at least four classes of biopharmaceutical agent.
- Outline the drug manufacturing process including the role of quality control and quality assurance in protecting the public, workers, and the environment.
- Give an oral presentation to scientific audience on the biological mechanism of action and proposed evaluation of safety, efficacy and manufacturing controls on a biopharmaceutical age

LSCY112 MOLECULAR & IMMUNO DIAGNOSTICS

L	T	P	C
3	0	0	3

OBJECTIVE:

- Identify the important parameters in the design of a laboratory to conduct the most commonly-used molecular diagnostics protocols.
- Identify the important parameters in the design of a quality system for molecular analyses.
- Become proficient with the techniques required in order to perform the most commonly-used molecular diagnostics protocols.
- Identify the important parameters in the design of a molecular diagnostic test.
- Identify the components of a well-controlled diagnostic test.
- Use critical thinking skills to trouble shoot problems as they occur and determine possible causes.

MODULE I MOLECULAR BIOLOGY AND DIAGNOSTICS 09

Molecular Biology and Diagnostics: Atomic bonds and Molecular interactions; Small organic molecules, Macromolecules; Compartmentalization of cells: transport of molecules between nucleus and cytosol, Transport of proteins into mitochondria and chloroplasts, Endoplasmic Reticulum; General principles of cell communication: Signalling - Extracellular, Intracellular, Autocrine, Signaling through G-protein- linked cell surface receptors, Signaling through enzyme-linked cell surface receptors, Signaling pathways that depend on regulated proteolysis; Cell Cycle; DNA repair pathways and methods of detection – Flow cytometry

MODULE II GENETICS AND DIAGNOSTICS 09

Genetics and Diagnostics: Origin and direction of human cytogenetics; General features of chromosomes, Chemistry and packaging of chromosomes, Chromosome bands, banding techniques and their molecular correlates; Structural and numerical abnormalities of chromosomes and their causes, Sex determination and differentiation, Y chromosome evolution and variations and X-inactivation mechanism and phenotypic effects of sex chromosome imbalances, Fragile sites, Trinucleotide repeat expansion, mechanism and associated disorders, Genomic imprinting and their disorders; Fluorescence In situ hybridization, chromosome Comparative Genomic Hybridization arrays; Genetic linkage and chromosome and genetic mapping in human diseases.

MODULE III BIOCHEMISTRY IN DIAGNOSTICS 09

Biochemistry in Diagnostics: Proteins and Amino acids, Qualitative and quantitative techniques: Protein stability, denaturation; amino acid sequence analysis; Metabolism of lipids, carbohydrates, amino acids; In-born errors of metabolism; energy requirements,

nutritional disorders; vitamins & minerals - biochemical function and deficiency manifestation. GLP and GMP.

MODULE IV TECHNIQUES IN DIAGNOSTICS 09

Nucleic acid extraction – principle and methods; Polymerase Chain Reaction – principle, types (including RT-PCR, real-time PCR, QF-PCR) and applications; DNA sequencing methods – principle, types, automated process, DNA sequencers; Hybridization techniques – Southern, Northern, in-situ (including FISH), microarrays – types and applications; Protein extraction and analysis (including PAGE and its variations); Western Blot

MODULE V IMMUNODIAGNOSTICS 09

Immunodiagnostics : Introduction, antigen-antibody binding interactions and assays; Immunoassays – types [RIA, ELISA, Chemiluminescent, IA, FIA] and specific applications; Immunohistochemistry – principle and techniques. Various drug delivery systems, targeting potentials; systems used for delivery of biotechnological products (Liposomes, microspheres, nanoparticles, immobilization techniques, etc.)

Total Hours:

REFERENCE:

1. Molecular Diagnostics: George P Patrinos and Wilhelm Ansorge, Elsevier Academic Press

OUTCOMES:

- Gain knowledge of cellular structure and function, especially DNA and RNA, to molecular diagnostic procedures.
- Gain a thorough working knowledge of nucleic acid extraction, resolution and detection.
- Gain a solid foundation in the most commonly utilized molecular diagnostic testing protocols.
- Apply the knowledge of molecular testing to the most commonly performed applications in the clinical laboratory such as: nucleic acid extraction, resolution and detection, analysis and characterization of nucleic acids and proteins, nucleic acid amplification and DNA sequencing.

LSCY113 TISSUE AND ANTIBODY ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Understand the fundamental and quantitative principles of tissue and antibody engineering and the basic elements of the tissue engineering approach. Appreciate the important contribution of tissue and antibody engineering in producing/growing organs that can be used for therapeutic applications.Be able to discuss the use of stem cell in tissue engineering for wound healing. Appreciate the need for compatible biomaterials to support growth and differentiation of stem cells into functional organ.

MODULE I INTRODUCTION TO TISSUE ENGINEERING 09

Introduction to tissue engineering, Cells as therapeutic Agents with examples, Cell numbers and growth rates. Tissue organization, Tissue Components, Tissue types, Functional subunits. Tissue Dynamics, Dynamic states of tissues, Homeostasis in highly prolific tissues and Tissue repair. Angiogenesis. Cellular fate processes, Cell differentiation, Cell migration - underlying biochemical process.

MODULE II CELL-EXTRACELLULAR MATRIX INTERACTIONS 09

Cell-extracellular matrix interactions - Binding to the ECM, Modifying the ECM, Malfunctions in ECM signaling. Direct Cell-Cell contact - Cell junctions in tissues, malfunctions in direct cell-cell contact signaling. Response to mechanical stimuli. Cell and tissue culture - types of tissue culture, media, culture environment and maintenance of cells in vitro, cryopreservation. Basis for Cell Separation, characterization of cell separation, methods of cell separation.

MODULE III BIOMATERIALS IN TISSUE ENGINEERING 09

Biomaterials in tissue engineering - biodegradable polymers and polymer scaffold processing. Growth factor delivery, Stem cells. Gene therapy. In vivo cell & tissue engineering case studies: Artificial skin, Artificial blood vessels. Bioreactors for Tissue Engineering.

MODULE IV IMMUNOGLOBULIN 09

Immunoglobulin Genetic Locus: Generation of antibody diversity, Antibody Discovery Methodologies: Hybidoma, Display, and Direct B-cell cloning technology, Antibody structure and function.

MODULE V ANTIBODY ENGINEERING 09

Antibody engineering: humanization, Affinity maturation, Effector function, Generation of high titer cell lines1: Expression vector and Host systems, Cell culture optimization, Downstream processing , Analytical characterization, : Cell line genetic analysis Purification, formulation and stability, Antibody composition

Total Hours:

REFERENCES:

1. "Tissue Engineering", Bernhard O. Palsson, Sangeeta N. Bhatia, Pearson Prentice Hall Bioengineering.
2. Nanotechnology and Tissue engineering - The Scaffold", Cato T. Laurencin, Lakshmi S. Nair, CRC Press.

OUTCOMES:

- Execute the engineering design process: identify problem, identify design constraints on bioengineering problem, create solutions, and evaluate solutions with respect to these constraints.) In this course, students learn and then execute key steps of the engineering design process, including identification of the problem, exploration of the problem, and design of a solution. Students will learn how to identify and conduct thorough research on current tissue engineering and antibody problems, and will ultimately work in teams to propose solutions to those identified problems.

LSCY114 BIONANOTECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide an introduction to nanobiotechnology.
- To make the students understand about the functional principles of nanobiotechnology

MODULE I FUNDAMENTALS OF NANOSCIENCE 09

Introduction, the nanoscale dimension and paradigm, definitions and historical evolution (colloids etc.) and current practice, types of nanomaterials and their classifications (1D, 2D and 3D etc. nanocrystal, Nanoparticle, Quantum dot, Quantum Wire and Quantum Well etc), Polymer, Carbon, Inorganic, Organic and Biomaterials –Structures and characteristics.

MODULE II CHARACTERIZATIONS IN BIONANOTECHNOLOGY 09

Optical (UV-Vis/Fluorescence), X-ray diffraction, Imaging and size (Electron microscopy, light scattering, Zeta potential), Surface and composition (ECSA, EDAX, AFM/STM etc), Vibration (FT-IR and RAMAN), SERS -3, Magnetic, Electrical and Electrochemical**.**

MODULE III APPLICATIONS OF BIONANOTECHNOLOGY 09

Materials in Biosystems: Proteins - Lipids - RNA and DNA, Protein Targeting – Small Molecule/Nanomaterial - Protein Interactions Nanomaterial-Cell interactions-Manifestations of Surface Modification (Polyvalency),Drugs-Photodynamic therapy, molecular motors, neuroelecronic interphases, development of nanoluminiscent tags**.**

MODULE IV NANOMATERIALS AND DIAGNOSTICS 09

Drug Delivery and Therapeutics, MRI, Imaging, Surface Modified Nanoparticles, MEMS/NEMS, based on Nanomaterials, Peptide/DNA Coupled Nanoparticles, Lipid Nanoparticles For Drug Delivery, Inorganic Nanoparticles For Drug Delivery, Metal/Metal Oxide Nanoparticles (antibacterial/anti fungal/anti viral), Anisotropic and Magnetic Particles (Hyperthermia).

MODULE V NANOMATERIALS AND TOXICITY EVALUATION 09

Designer biopolymers, Procollagen, DNA Polynode, RNA topoisomerase, Protein – magnetic materials, Cyto-toxicity, Geno-toxicity, In vivo tests/assays.

Total Hours: 45

REFERENCES:

1. C. M. Niemeyer, C. A. Mirkin, Nanobiotechnology: Concepts, Applications and Perspective, Wiley – VCH, 2004.
2. 2 T. Pradeep, —Nano: The Essentials, McGraw – Hill education, 2007.
3. Nicholas A. Kotov, Nanoparticle Assemblies and Superstructures, CRC, 2006.
4. David S Goodsell, “Bionanotechnology”, John Wiley & Sons, 2004.

OUTCOMES:

- After the completion of the course the student will have the basic knowledge of nanotechnology in biotechnology. In detail understanding of the application of Nanomaterials in biotechnology and acquire the knowledge about the DNA, proteins, amino acids, drug delivery, biomedicine etc.

LSCY115 PROTEIN ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- This course aims to develop in the students' mind a concept regarding the structure and function of proteins of particular importance, the student will know the production of recombinant protein and in general how to engineer protein to be used as therapeutics.

MODULE I INTRODUCTION TO PROTEIN ENGINEERING 09

Forces stabilizing proteins – Van der waals, electrostatic, hydrogen bonding and weakly polar interactions, hydrophobic effects; Entropy – enthalpy compensation, Protein engineering and its applications, features or characteristics of proteins that can be engineered (definition and methods of study) – affinity and specificity; Spectroscopic properties; Stability to changes in parameters as pH, temperature and amino acid sequence, aggregation propensities, etc.

MODULE II TECHNIQUES FOR PROTEIN ENGINEERING 09

Methods of measuring the stability of a protein; Spectroscopic methods to study physicochemical properties of proteins: far-UV and near-UV CD; Fluorescence; UV absorbance; ORD; Hydrodynamic properties–viscosity, hydrogen-deuterium exchange.

MODULE III SITE DIRECTED MUTAGENESIS AND PROTEIN ENGINEERING 09

Altering Proteins by mutagenesis methods, techniques for Oligonucleotide directed mutagenesis by using single stranded DNA as template, Denatured double stranded DNA as template, PCR based mutagenesis, Engineering proteins by chemical modifications, Genetic fusion of domains, alteration of function by selection and screens, deletion mutagenesis. Introduction of selected mutagenesis by Oligonucleotide directed mutagenesis, Scanning mutagenesis, Insertion of unnatural mutagenesis.

MODULE IV ENGINEERING PROTEINS FOR PURIFICATION 09

Introducing cleavage sites, engineering Proteins for Chromatography, Immunoaffinity chromatography, Ion exchange chromatography, Metal affinity chromatography.

MODULE V STABILIZATION AND MODIFICATION OF PROTEINS 09

Principles of structure stabilization by solvent components, sources of exclusion, Balance between cosolvent exclusion and binding, cosolvent intertactions in the denaturation reaction, Practical considerations, Post translational modifications- Involving peptide

bond, C-terminal, side chain. Modification methods- Enzymatic, Non enzymatic, Specificity, chaperones mediated. Applications of Post translational modifications.

2. Baxevanis A. D, Ouellette B. F. F. Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins. 3nd edition Wiley, John & Sons, Incorporated, 2004.

OUTCOMES:

- After the completion of the course the student will have the basic concept regarding the structure and function of proteins of particular importance, the student will know the production of recombinant protein and in general how to engineer protein to be used as therapeutics.

LSCY131 BIOREMEDIATION

L	T	P	C
3	0	0	3

OBJECTIVES

- To impart sufficient scientific understanding of the current environmental tribulations and global concern.
- To focus the process of bioremediation, mechanisms, types, success stories & monitoring strategies.
- To focus the advance molecular techniques to facilitate bioremediation technology.
- To focus on advanced nuclear remediation program.
- To apply the concepts of bioremediation technology to the real time problems.

MODULE I BIOREMEDIATION 09

Introduction to Bioremediation: Types of Bioremediation, Factors affection Bioremediation. Bioremediation - Mechanisms.Limitations of Bioremediations. Microbes for Bioremediation: Essential Chararcteristics of Microbes for Bioremediation, Microbial Adapadation for Adverse conditions. Microbes involved in Bioremediation. Metabolic process involved in bioremediation. Bioremediation Techniques : Insitu & Exsitu bioremediation techniques. Phytoremediation.

MODULE II SPECIFIC BIOREMEDIATION TECHNOLOGIES 09

Application, specific advantages and disadvantages of specific bioremediation technologies - land farming, prepared beds, biopiles, composting, bioventing, biosparging, pump and treat method, constructed wet lands, use of bioreactors for bioremediation.

MODULE III BIOREMEDIATION OF CHLORINATED COMPOUNDS AND MOLECULAR TECHNIQUES IN BIOREMEDIATION 09

Bioremediation of phenols, chlorinated phenols, chlorinated aliphatic compounds, heterocyclic compounds, cyanides, dyes; Rhizoremediation: a beneficial plant-microbe interaction; Molecular techniques in bioremediation- Enhanced biodegradation through pathway engineering; Biodegradation of polyhalogenated compounds by genetically engineered bacteria.

MODULE IV NUCLEAR WASTE BIOREMEDIATION 09

Spent fuel characterisation, storage and disposal; Partitioning, transmutation and conditioning; Measurement of Radioactivity in the environment; Basic actinide research.

MODULE V HEAVY METAL AND OIL SPILL BIOREM EDIATION 09

Heavy metal pollution & sources; Microbial interactions with heavy metals - resistance &tolerance ;Microbial transformation; Accumulation and concentration of metals. Biosorption of heavy metals by microbial biomass and secondary metabolites – Biosurfactants. Advantages of biosurfactants over chemical surfactants.; Biotechnology and oil spills; Improved oil recovery.

Total Hours: 45

OUTCOMES:

- After the completion of the course the student will have sufficient scientific understanding of the current environmental tribulations, global concern

B.S. Abdur Rahman Crescent Institute of Science & Technology
Deemed to be University u/s 3 of the UGC Act, 1956
GST Road, Vandalur, Chennai 600 048

REGULATIONS - 2017

FOR

DEGREE OF MASTER OF ARTS

M.A. ISLAMIC STUDIES

VISION AND MISSION OF THE SCHOOL OF ISLAMIC STUDIES

VISION

The School looks forward to be a pioneer in the field of Islamic Studies to promote Scholars, capable of bringing about positive change for the betterment of self, family, society and humanity on the basis of moderate approach derived from the Holy Quran and Sunnah - Tradition of the Prophet (PBUH).

MISSION

The School is committed:

- To empower the younger generation through quality education in both revealed and scientific knowledge.
- To promote competent, creative scholars in the field through scientific research.
- To provide excellent ambience for language skill development and leadership qualities through various training programmes.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

M.A ISLAMIC STUDIES

OBJECTIVES:

The programme objectives covering all two years of post graduate courses are as follows:

1. To acquire revealed knowledge of Quran and Hadeeth (Traditions of Prophet (PBUH).
2. To develop students' ability in analyzing texts of Quran and Hadeeth as sources of Islamic Jurisprudence.
3. To train students in finding solutions for modern issues of family life and social life in the light of Quran and Hadeeth.
4. To develop students' language skills in both Arabic and English.
5. To learn about Muslims achievements and contributions to science and technology.

OUTCOME:

A successful learner of this programme will be able to:

1. Demonstrate Islamic viewpoints to people from all walks of life.
2. Derive principles and theories from the sources of Islamic jurisprudence.
3. Compare views of different schools of thought by applying principles of jurisprudence.
4. Address modern issues related to family and social life in the Islamic perspective.
5. Translate and interpret texts from Arabic to English and vice versa.
6. Pursue higher studies in Islamic studies, Arabic language and other fields.

B.S.Abdur Rahman Crescent Institute of Science and Technology

School of Arabic and Islamic Studies

Curriculum and Syllabus - M.A. Islamic Studies (Revised 2017)

Semester I

S.No.	Course Code	Name of the Course	L	T	P	C
Core Courses						
1	ISC 6101	Thematic Tafseer : Commentary of Holy Qur'aan	3	0	0	3
2	ISC 6102	Analysis of Hadeeth Literature	3	0	0	3
Allied Courses						
3	ISC 6103	Advent of Islam in India	3	0	0	3
4	ISC 6104	Communicative Arabic	3	0	0	3
5	ISC 6105	Early Muslim Society & Biography of great companions	3	0	0	3

Semester II

S.No.	Course Code	Name of the Course	L	T	P	C
Core Courses						
1	ISC 6211	Uloom - Sciences of Qur'aan and Hadeeth	3	0	0	3
2	ISC 6212	Usool al Fiqh: Maslaha Mursalah (Welfare) & Maqaasid al Sharee'ah (Objectives of Shareeah)	3	0	0	3
3	ISC 6213	Evolution of Islamic Jurisprudence	3	0	0	3
Allied Courses						
4	ISC 6214	Islamic Economics	3	0	0	3
5	ISC 6215	Advanced Arabic Grammar	3	0	0	3

Semester III

S.No.	Course Code	Name of the Course	L	T	P	C
Core Courses						
1	ISC 7101	Comparative Fiqh - Jurisprudence	3	0	0	3
2	ISC 7102	Law of Administration in Shari'ah: Al Siyasah al Sharayiyyah	3	0	0	3
Allied Courses						
3	ISC 7103	Islam in Spain - Andalusia	3	0	0	3
4	ISC 7104	History of Muslim Civilization: Contribution to Science and Technology	3	0	0	3
5	ISC 7105	Muslim Thinkers & Reform Movements in Modern Era	3	0	0	3

Semester IV

S.No.	Course Code	Name of the Course	L	T	P	C
Core Courses						
1	ISC 7211	A Study of Shari'ah Rulings in Qur'aan: Ahkaamul Qur'aan	3	0	0	3
2	ISC 7212 / ISC 7216	Ijthihad and Research Methodology of Imams (Or) Research Methodology	4	0	0	4
Allied Courses						
3	ISC 7213	Interest Free Banking	3	0	0	3
4	ISC 7214	Business Arabic and Translation	3	0	0	3
5	ISC 7215	Research / Dissertation	4	0	0	4

SEMESTER I

CORE COURSES:

ISC 6101	THEMATIC TAFSEER : COMMENTARY OF HOLY QUR'AAN	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Introduce the General Themes of the Holy Qur'aan.
- Imparting main and sub themes in Chapters: Al A'raf, Al Israa & Al Qasas
- Focus on teaching of the Divine messages about the last day of Judgement and signs.

MODULE I		**8**

Evolution of Thematic Tafseer- commentary of Qur'an - Modern authors and their contribution to the field - Shaik Al Ghazzali – General Themes, Sub Themes and the messages in different portion of Surah Al A'raf.

MODULE II		**7**

Introduction to Main Themes of Sura al Israa - Sub Themes and the messages in different portion of Surah Al Israa - Introduction to Main Themes of Sura al Qasas- Sub Themes and the messages in different portion of Surah Al Qasas.

MODULE III		**8**

Introduction to Main Themes of Sura al Hujuraath - Discussion about the various ethics and values taught in Sura Al Hujurath – Discussion on Main themes and Sub Themes of Sura al Munafiqoon- Drawing the different moral lessons from Sura Al Munafiqoon - General Themes, Sub Themes and the messages in different portion of Surah Al Mulk.

MODULE IV		**7**

Discussion about the signs of last day of Judgement in Sura Al Haaqqah- Debate about the signs of last day of Judgement in Sura Al Muddassir - Conversation about the signs of last day of Judgement in Sura Al Qiyamah - Discussion about the signs of last day of Judgement in Sura ad Dahr.

MODULE V		**8**

Discussion about the Themes and sub themes of Sura An Naba – Evaluation of

Themes of Sura al Nazi'ath – Assessment of Themes and Sub Themes in Sura Abas – Discussion about the signs of Qiyama in Sura at Thakveer - Conversation about the indications of Qiyama in Sura al Infithar.			
MODULE VI			**7**
Discussion about the signs of Qiyama in Sura al Inshiqaq – Discusion about the signs of Qiyamah in Sura al Ghashiya – Debate on the themes of Sura az Zilzal - Discussion about the themes of Sura al Qari'a and Sura al Thakasur.			
			L – 45; Total Hours –45

TEXT BOOKS:

1. Nahwa Thafseer Mawdoo'yee li suwaril Qur'aanil Kareem, Sheik Mohammed Gazzali, 4th edition, 2000, Daarus Shurooq, Cairo.

REFERENCES:

1. At Tafseerul Mawdooyi Li Suwar Al Quran Al Kareem, Nukhbathun Min Ulamayit Tafseer Wa Uloomul Quran, University of Sharjah.

OUTCOMES:

On successful completion of the course, the student will be able to:

- **Define the concepts and Themes of Qur'aan.**
- **Analyze the main and sub themes in Chapters: Al A'raf, Al Israa & Al Qasas.**
- **Discuss about Divine messages about the last day of Judgement and its indications.**

ISC 6102	ANALYSIS OF HADEETH LITERATURE	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Introduction to the Textual criticism of Hadheeth.
- Difference between Textual criticism and criticism of Sanad- Reporters Textual criticism of companions especially like Ayisha (rali).

MODULE I		8

Definition of an-naqd - Textual criticism – An Naqd Indal Muhaddiseen - Evolution Textual criticism - An naqd at the time of prophet - Al kizb ala Rasool - Naqd of meanin Hadees - Naqd of Ruwath on the aspect of labth - Bayanuth thaftheesh an adalath ruwath - Al Muthalaba bil Isnad - Knowledge of Ilm ul jarah Wa Tha'deel - Signifi dispute in jarah va tha'deel - Ilalul Reasons of Hadeeth - Famous authors in jarah tha'deel.

MODULE II		7

Imams in the field of Hadeeth criticism - Sahaabas who criticized Narrators - Tex criticism in period of Thaabiyeen - Reasons for emerging criticism of Hadeeth - Labt rawi va asaruhu in Hadheeth text - Definition of al-labth - Mujrihathul-labth - Riway Report text with original wording and reporting only meaning - Slow teaching by proph Naqdu of Prophet - Report by meaning and its kinds - Al-mufassar - Al-muhkam - mushkil - Al-mujmal - Al-muthashabih - An-nass - Al-dhahir.

MODULE III		8

Definition of At-tha'arudh- conflict- Conditions of tha'arudh – The True conflict -tha'aru Different Hadeeth texts- Method of defending the conflicts- Methodology of Shaafi Sch Methodology of Hanafi School- Methodology of Ibn Al Hajar- Combining the diffe Hadeeth - Definition and conditions- Principles of Combining the different Hadeeths types- Examples- Examples from Book of Shafi kithabi Ikhthilafi al hadeeth - Combi the different Hadheeth in ibadaath- Combining the different Hadheeth between al Aa and khass.

MODULE IV		7

Definition of Hadheeth preference -tharjeeh- Masayil fee tharjeeh- Almurajjahathu baina al ahadeeth - Almu'aradha- Preference based on reporters- sanad- Preference

based on reasons - Preference based on attributes of Narrators - Preference based on text- Preference based on external facts - Examples- Definition of Naskh & Its conditions - Difference between al naskhi va thaqyeedh- Difference between al naskhi va thakhsees- Signs of al naskh- Different opinions in mansookh- Examples of Naasikh and Mansookhih.

MODULE V		**8**

Definition of hadeesul mushkil- Difference between mushkil and muthashabih- Reasons of ishkaal- Ranks of Hadeeth of al mushkil- Solving ishkaal of hadeeth- Conflict with reason – Conflict with reality - Interpretation of ibn quthiba- Hadheeth Qudsi and modern criticism.

MODULE VI		**7**

Metodology of muhadhiseen in textual criticism - Yard stick of textual criticism in the period of sahaba- Referring Hadeeth text to Qur'aanic concept- The First Example- The second example- The third example- The fourth example - The fifth example - The sixth example - The seventh example.

			L – 45; Total Hours –45

TEXT BOOKS:

1. Juhoodul Muhaddeetheen Fee Naqdu Mathan Al Hadeeth An Nabawiyyi As Shareef, Dr. Mohammed Thahir Al Jawabi, 1986, Muassasaathu Abdul Kareem, Tunis.

REFERENCES:

1. Dhiraasat fee Uloom Al Tafseer wal Hadeeth Al Nabawi by Dr. Nisar Ahmad, Chennai, India.
2. Nukhbah al Fikr by Ibn Hajar al Asqalaani, Deoband, India.

OUTCOMES:

On successful completion of the course, the student will be able to:

- **Differentiate between Textual criticism and criticism of Sanad- Reporters**
- **Demonstrate the level and extend of Textual criticism**

ALLIED COURSES:

ISC 6103	ADVENT OF ISLAM IN INDIA	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Introduction to the advent of Islam in India
- Familiarize the student with arrival of Muslims to Indian Sub continent
- Teach about the contribution of early Arab trades and Sufis to spread of Islam in India.
- Impart the brief history of Muslim rulers in India

MODULE I		8

Pre-Islamic History: An Overview – Persian and Roman Empire – Outline of Islamic His - Muslim traders at Malabar & Maldep coast in the era of Umar (ra) - First battle Usman As Saqfi - Arrival of Muhammad Bin Qasim (712 AD) – Ghaznavi and his expeditions.

MODULE II		7

Shahab-ud-din Ghori - Delhi Sultanates - Qutab ud din Abik (1206-1210) – Altmish (1211-1236) - Razia Sultana (1236-1239) - Ghias ud din Balban (1266-1286) – Khilji Dynasty - Jalaludin khilji (1290-1295) - Alauddin Khilji (1295-1315).

MODULE III		7

Tughlaq Dynasty - Ghias ud din Tughlaq (1320-1325) - Mohammad Tughlaq (1325-1351) - Feroz Tughlaq (1351-1388) - Sadat Family - Mubarak Shah (1421-1434) - Lodhi Family: Behlol Lodhi (1451- 1489) - Sikandar Lodhi (1489-1517) - Ibrahim Lodhi (1517-1526).

MODULE IV		8

Mughal Dynasty - Zaheerudin Babar (1526-1530) - Naseer ud din Humayun (1530-1540) – Sher Shah Suri (1540 – 1555) - Jalaluddidn Akbar (1556-1605) - Nooruddin Jahangir (1605-1627) – Muhammad ShahJahan (1627-1658) - Aurangzeb Alamgir (1658-1707) – Decline of Mughals - Bahadur Shah Zafar (1837-1857) - Reasons for Decline of Mughals.

MODULE V		7

Impact of Islam in Sub Continent – Prominent Muslim Preachers - Khawaja Moeen Ud Din Chishti - Khawaja Nizam Ud Din Aulia - Civilization of Sub-Continent before Islam - Caste system, Usury, drinking and gambling - Status of women.

MODULE VI			**8**
Influence of Islam - Human Equality, Social justice, Ethical life - Muslim Reformers & movements - Shah Wali Ullah - Jihadi Movement- Faraizi Movement- Educational Movements - Aligarh Movement.			
			L – 45; Total Hours –45

TEXT BOOKS:

1. Advent of Islam in India, compiled by School of Arabic and Islamic Studies, 2017.

REFERENCES:

1. A Short History of Muslim Rule in India, Dr. Ishwari Prasad, 1931, The Indian Press, Allahabad.

2. Taareekhul Mughal Fil Hind, Dr. Yoosuf Koken, 1978, Haafiza Press, Chennai.

3. History of Early India, Dr. Romila Thapar, 2001, Penguin Books, London

OUTCOMES:

At the end of the course, the student is expected to:

- **Explain way and mean of spread of Islam in Indian Sub Continent.**
- **Estimate the contribution of Arab traders and Sufis and rulers**
- **Demonstrate the administration of Muslim rulers in India**

ISC 6104	COMMUNICATIVE ARABIC	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Enable the students to develop the interpersonal and communicative skills in Ara Language through learning basic vocabulary and phrase/sentence structures.
- Familiarize the student the use of the language according to context, purpose an audience.

MODULE I		**8**
Lesson 1: Al Qur'aan wa Kaif Jumia – Lesson 2: Adhwaa ala al Thareekh		
MODULE II		**7**
Lesson 3: Al Muslimoon fil Aalam – Lesson 4: Ibn Seena		
MODULE III		**8**
Lesson 5: Risalah Ila Waladi – Lesson 6: Fee Bait al Maqdis		
MODULE IV		**7**
Lesson 7: Al Shaja'ah al Adabiyah – Lesson 8: Sihhatul Bee'ah fil Islam		
MODULE V		**8**
Lesson 9: Awqaat al Faraagh – Lesson 10: Al Usus al Ijthimaiyyah fil Islam		
MODULE VI		**7**
Lesson 9: Awqaat al Faraagh – Lesson 10: Al Usus al Ijthimaiyyah fil Islam		
		L – 45; Total Hours –45

TEXT BOOKS:

1. 1. Al Arabiyah Lin Nashieen - Part :6 - (Education Ministry, K.S.A.), Bukhari Aalim Arabic College, 2005.

REFERENCES:

1. Durus Al Lugathil Arabiyya by Dr. F. Abdur Raheem, Published by Islamic Foundation Trust, Chennai, 2002.

2. Al Qirathul Arabiyya Lil Mubtadiyeen (Ummul Qura University, Makkah), Bukhari Aalim Arabic College, 2005.

OUTCOMES:

At the end of the course, the student is expected to:

- **Read and understand Arabic language elements that have been recombined**

in new ways to achieve different meanings at a similar level of simplicity.

- **Articulate minimum courtesy requirements and maintain very simple face-to-face conversations.**
- **Formulate and respond to simple questions.**

ISC 6105	EARLY MUSLIM SOCIETY & BIOGRAPHY OF GREAT COMPANIONS	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Introduction to companions of the prophet
- Impart various personalities of Sahaabah and their contribution to different field.

MODULE I		**8**
Introduction to the Muslim society in madinah – Kulafa- Abubakker siddiq – Umer ibnul Kadab- Usman ibn Affan – Ali ibn abithalib		
MODULE II		**7**
Commanders – Khalid bin Walid - Abu Ubaidha – Sa'd bin Abi Waqqas -Jafar bin Abi Thalib		
MODULE III		**8**
Traders - Abdur Rahman bin Awf- Abu sufyan- Thalah - Hudhaifa bin al Yaman – zaid ibn Harida		
MODULE IV		**7**
Fuqaha- Abdullah ibn Masood – Abdullah ibn Umer- Abdullah ibn Abbas – Muad ibn Jabal – Amr ibnul Aas		
MODULE V		**7**
Hufful Qur'aan & Hadeeth – Ubai ibn qab- Zaid ibn thabid – Abu Huraira - Abu Musa al-Ashari		
MODULE VI		**8**
Safiyyah binth Abdil Muthalib – Ayisah binth Abi Bakr – Hunasa – Fathima raliyallah - Asmaa binth Abi Bakr. Ramlah binth Abi Sufyan (Ummu Habeebah).		
		L – 45; Total Hours –45

TEXT BOOKS:

1. Suwarum min Hayath al Sahabah by Dr. Abdur Rahman Ra'fath Basha, World assembly of Muslim youth, Saudi Arabia.

REFERENCES:

1. Usudul Ghaaba Fee M'arifat As Sahaba, Abul Hasan Al Jazari, 1st Edition, 1996, Daru Ihyau at Turath Al Arabi, Beirut.

OUTCOMES
At the end of the course, the student is expected to: - **Analyze personalities of companions of the prophet** - **Extract inspiration of role models of Companions** - **Demonstrate their valuable contribution to various fields.**

SEMESTER II

CORE COURSES:

ISC 6211	ULOOMUL QUR'AAN AND HADEETH	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Introduce the students the Qur'aanic science – Usool Al Tafseer and Science of Hadith – Usool Al Hadith.
- Teach the basic themes of Qur'aan: classified into five points.
- Provide the student with classification of authenticity of Hadith.

MODULE I		8

Wahy: Divine Revelation – types of Makki & Madani - Difference between makkan and madeenan - Asbaab an-Nuzool- Benefits of sababun nuzool - Total revelation and Intermittent revelation – Wisdom of Intermittent revelation - Collection and Arrangement of the Qur'aan.

MODULE II		7

Compilation of the Qur'aan in the period of Abu Bakr – Compilation of the Qur'aan in the period of Usman - Arrangement & order of the Verses and chapters – Revelation of Qur'aan in seven dialects and its wisdom - The rules needed by the interpreter - Almuhkam (Clear) and muthashabih (Obscure) - Difference in knowledge of similarity – Aam (general) Khaas (specific)

MODULE III		8

Naskh: Abrogation - Knowledge Of abrogation - Conditions For abrogation **-** Sections And Kinds Of Naskh- Mutlaq (Absolute) Muqayyad (Qualified) - Mantooq (Stated) Mafhoom (Implied) Meanings - The Miracle Of The Qur'aan - Scientific Literary and Legislation Miracle - Translation Of Qur'aan Tafseer And Ta'weel- Conditions Of Interpreters And Standard Behaviours.

MODULE IV		7

Definition of Prophetic Tradition - Hadith Al-Qudsi and the difference between Al-Qur'aan and Al-Hadith Al-Qudsi - Prophetic Tradition and its status in the Islamic legislation - Compilation of Prophetic Tradition - Traditions regarding prohibition and permissible of Hadith compilation - Uloomul Hadith, its origin and development -

Knowledge of Hadith narrators - Knowledge about Criticism of Narrators.		
MODULE V		**8**
Origin of Ilmul Jarh wat ta'dil - Stages of Jarh wat ta'dil - Aahaad Hadith - Types of Khabarul Aahaad with regard to its strength and weakness - Classification of AlKhabar AlMaqbul Ilaa Mamool wa gairi mamool - Nasikh and Mansukh -Weak Hadith.		
MODULE VI		**7**
Al-Mardud based on missing narrator - Al-Mardud based on criticized narrator – Types of Hadith: Ilaa man usnida ilaihi - Turqut tahammul wa siyagul adaai - Ilmut takhreej - Turqut takhreej – Study on chain of narrators.		
		L – 45; Total Hours –45

TEXT BOOKS:

1. Al Itqaan fee Uloom al Qur'aan by Imam Suyuthi/ Idarah Rasheediya, Deoband, India.

REFERENCES:

1. An approach to the Qur'aanic Science by Justice Mufti Mohamed Taqi Usmani , Ed-2007, Adam Publishers, Delhi
2. Mabaahith fee Uloom al Qur'aan by Manna' al Qattan, Ed. 1995, Maktabah Wahbah, Cairo, Egypt.
3. Al Fauzul Kabeer fee Usool al Tafseer by Imam Shah Waliullah Dehlavi, Fourth Edition-2002, Darus Sunnah, Lucknow, India.

OUTCOMES:

At the end of the course the student will be able to:

- **Classify the Qur'aanic science – Usool Al Tafseer and Science of Hadith – Usool Al Hadith.**
- **Analyze the five points which are considered as basic themes of Holy Qur'aan.**
- **Explain the various kinds of authenticated and unauthenticated Hadiths.**

ISC 6212	USOOL AL FIQH: MASLAHA MURSALAH (WELFARE) & MAQAASID AL SHAREE'AH (OBJECTIVES OF SHAREEAH)	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Introduce the students the Shariah rulings based on public welfare (Maslaha Mursala).
- Teach the objectives of Shariah and its various kinds.
- Impart the application of Maqaasid in modern issues with examples of fatwas and resolutions of Fiqh academy.

MODULE I		8

Sources of Islamic Jurisprudence – Introduction to Maslaha Mursala - The difference of opinion among the scholars in Maslaha Mursala – The evidences presented by those who accept Maslaha Mursala - The evidences and arguments presented by Imam Malik towards Maslaha Mursala – The arguments of those who reject Maslaha Mursala.

MODULE II		7

The rulings derived by Imam Malik based on Maslaha Mursala - The objectives of rulings – The considerable welfare – The five points of Hujjatul Islam Imam Ghazzali in terms of Maqaasid.

MODULE III		8

All rulings based on the reasons – Ranks of Maslaha – The rank variation in the religious obligations (Takleefat) – Legal Provisions for Removal of harm and avoiding loss & damage.

MODULE IV		7

Maqasid Tashree': Introduction – Dharooriyat - Hajiat – Tahseeniyat – Mukmilat – The rulings derived based on Customary Law (Urf and Aada') , Al Istihsan and Sadd Dhareeah.

MODULE V		8

Orders of Maqaasid - Qawaid Kulliyah - The fundamental five Qawaaid – Application of Maqaasid Shariah in deriving modern Shariah rules by Muftis and Fiqh Academy – Examples and analysis.

MODULE VI			**7**
Introduction to Ijthihad - Qualification and conditions for Mujtahid - Individual Ijthihad and collective Ijthihad - Ijthihad on new issues - Ijthihad for preferring the opinions – Difference between fatwa and judgement.			
			L – 45; Total Hours –45
TEXT BOOKS:			
1. Usool al Fiqh al Islami by Wahbah Zuhaili , Second Edition 1998 , Dar al Fikr al Muasir, Beirut, Lebanon			
REFERENCES:			
1. Usoolul Al fiqh, Mohammed abu Zahra, 1958. 2. Al Muwafaqaat Fee Usool Al Ahkaam, Part II, Imam Al Shaatiby, 1969, Maktabathul Mohammed Ali wa Awladuhu, Cairo.			
OUTCOMES:			
At the end of the course the student will be able to: - Realize the importance of Maslaha Mursala in Shariah rulings. - Demonstrate various kinds of Objectives of Shariah and their application in issuing Fatwa on modern issues.			

ISC 6213	EVOLUTION OF ISLAMIC JURISPRUDENCE	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Introduce the evolution of Fiqh (Islamic Jurisprudence).
- Explain various stages of development after the Prophet.
- Familiarize the student with modern codification of Islamic Jurisprudence in vario Muslim countries.

MODULE I		**8**

Introduction to the Legislation - Wahi revelation: Makkan Period, Madinan Period - Ijthih of prophet and his companions during his life time.

MODULE II		**7**

Compilation of Holy Qur'aan - Methodology of companions - Ijthihad of Umar, Ibn Masood, Ibn Umar and Ijthihad of next generation.

MODULE III		**7**

Development of four madh-habs: Maliki, Hanafi, Shafi, Hanbali

MODULE IV		**8**

Development of Fiqh after Four Imams – Various countries where the Madaahib were practiced.

MODULE V		**7**

Codification of Muslim personal Law in Turkey, Egypt and other Muslim nations.

MODULE VI		**8**

Codification of Muslim personal Law in Turkey, Egypt and other Muslim nations.

			L – 45; Total Hours –45

TEXT BOOKS:

1. Tareekh Tashree' al Islami by Manna' al Qattan, Maktabah Wahbah, Cairo. 1989.

REFERENCES:

1. The Evolution of Fiqh by Abu Ameenah Bilal Philips, Tawheed Publications, Riyadh, 1988.

OUTCOMES:

At the end of the course, the student is expected to:

- **Describe the evolution of Fiqh and its stages.**

- **Demonstrate the development of Fiqh in the golden period of Imams.**
- **Analyze the Modern codifications of Fiqh.**

ALLIED COURSES:

ISC 6214	ISLAMIC ECONOMICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Introduce the students the basic concepts of Islamic economics in modern scenario.
- Enable the students to understand the significance of historical changes that take place in global economy
- Teach the students to use appropriate Islamic financial transaction concepts to provide solutions to the modern economic crisis
- Familiarize with the various kinds of financial terms.

MODULE I		8

An overview of Islamic Economics – Human nature, Materialism, Ownership and Universalism – Economic power – Islamic Economic Organization – Role of Money – Interest and Public debt – Islamic concept of Money – Banking in Islamic Economy.

MODULE II		7

Consumer Behaviour – Islamic values and consumer behaviour – Conservation of Resources – Contemporary Economic order – Social and political underdevelopment – Over population – Urbanization.

MODULE III		7

Social security system – Fighting poverty in an Islamic framework - Fiscal Management – Islamic principles of taxation – Deficit financing – diffusion of knowledge – Nature of Islamic Economics.

MODULE IV		8

Definition of Islamic Economics – Sources of Islamic Economics – Approach of Islamic Economics - Methodology of Islamic Economics – Need for the methodology – Inductive or deductive reasoning – Problem solving – Process of theorizing.

MODULE V		7

Assumption of an Ideal Islamic Society – General theory of Islamic Economy - Islamic economics in practice – Islamic Banks – Zakath – Waqf – Insurance – Al Hisbah.

MODULE VI		8

Islamic Approach to contemporary economic problems – Unemployment and inflation

– Economic power – Consumer sovereignty – Role of public policy - Holistic approach – Interest free international economic order.			
			L – 45; Total Hours –45
TEXT BOOKS:			
1. An Introduction to Islamic Economics. Muhammad Akram Khan, International institute of Islamic thought, Islamabad.			
REFERENCES:			
1. What is Islamic Economics, Chaper M. Umar, Jeddah 2. Relevance, definition and methodology of Islamic Economics, Dr. Monzer Kahf.			
OUTCOMES:			
At the end of the course the student will be able to: - **Describe the concept of Islamic economic system in modern scenario.** - **Distinguish the Islamic financial concepts from conventional financial system** - **Relate the concepts of Islamic interest free finance in modern financial transactions** - **Apply the various Islamic economic instruments to modern transactions.**			

ISC 6215	ADVANCED ARABIC GRAMMAR	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Familiarize the students with the advanced rules of grammar.
- Learn grammatical rules of Naaib Faayil, Masdhar, Qasam, Idhafah etc.

MODULE I		8

Sentence: Nominal and verbal - Inna and its sisters - Kaana and its sisters - Na't wal Man'ut - Na't haqeeqi – Na't sababi

MODULE II		8

Al Idhafah: Idhafah al Lafdhiyah – Idhafa al Ma'nawiyah – Al mudhaf ila ya al muthkallim – Maa yudhaafu ilal jumla.

MODULE III		7

Ahkaam al Adad wal Ma'dud with masculine and feminine genders - Numerals: Cardinal and Ordinal numarals.

MODULE IV		7

Al Thasgheer, Al Nasab, Al Ighraa wa al Thahdheer.

MODULE V		7

Al Ikhthisaas, Al Ishthighaal, Al Nudbah.

MODULE VI		8

Al waqf, l'raabul jumal: Al jumal allathee laha mahal min al l'raab, al jumal allathee laa mahalla lahaa min al l'raab.

			L – 45; T – 15; Total Hours –45

TEXT BOOKS:

1. An Nahwul Wadhih (Secondary) by Ali Jarim & Mustafa Ameen (Part: I, II & III) / Faisal Publications, Deoband, India.

REFERENCES:

1.Hidayatun Nahv by Sirajuddin bin Usman al Awdhi & Nizamuddin Mohamed Dahlavi

OUTCOMES:

On successful completion of the course, students will be able to:

- **Explain the various advanced rules of Arabic grammar in a proper manner.**

- **Apply the grammatical rules like Naaib Faayil, Masdhar, Qasam, Idhafah etc on Arabic writing and speaking.**

SEMESTER III

CORE COURSES:

ISC 7101	COMPARATIVE FIQH – JURISPRUDENCE	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Compare the fiqh rulings as per the four madhabs.
- Familiarize the student with the concept of rulings in Islamic Shariah.

MODULE I	Jinaayath: (Crimes)	8

Punishable crimes in Shariah are four (1) crime on person, or organs, it is called MURDER. (2) crimes by the genetic organs, it is called ADELTERY. (3) crimes done on property, they are called THEFT, ROBARY, and BURGLARY. (4) Crimes done against the respect and dignity of a person, it is called ACCU SA TION. Revenge (Qisaas). Diyaath.(Blood money). Willful murder. Murder by mistake.

MODULE II		8

Different opinions of Imaams on a Murderer who did the rime by the compulsion of someone, who deserves the punishment? The partner in a murder. The helper to the murder. Definition of Willful murder. Different opinions of Imaams on similar willful murder and similar mistake murder. The condition to be found in the victim. Revenge on many for killing one person. Revenge on male for killing female and vice-versa. Different opinions of Imaam on taking revenge on father for his killing his son and vice-versa. Is receiving Blood money compulsory on the heir of the victim ?

MODULE III		8

Different opinions of Imaam on it. Different opinions of Imaams on what is the rule if the victim excuses the murderer before his death ? The injured person excused the person who injured him, then the injured person died of that injuries. Opinions of Imaams on it. Injuring is two types, one is which deserves the revenge, another one is which deserve excuse. Different opinions of Imaams about the punishment for a group who cut one part of a person. The conditions to be found in the victim. Injuries deserve the revenge. The injuries made in the way of playing or teaching the discipline . injuries that can not be revenged equally.

MODULE IV		**7**
If a person who is right eye blind injured the right eye of another person, what to do ? How to fix the ransom ? If a unmetered boy\girl participates in a murder or causing injury who would deserve the punishment ? Will a doctor deserve punishment if the patient died of his treatment? Will a farmer deserve punishment if a person fell into the well he digged for cultivation? Will a person, who damaged the property of another person, carry the responsibility ?		
MODULE V		**7**
The ransom for each part of body which is injured. How to take revenge on a person who assaulted the eye of another person, the second one lost his sight but the eye is in good condition? Definition of adultery.		
MODULE VI		**7**
The punishment s for who commit it, married and unmarried. A married person, who lost his wife\husband , will be considered as unmarried or married ? How to prove the adultery ? can photo graph, or video clip be accepted as witness for this crime ? A person who was compelled to do this crime.		

			L – 45; Total Hours –45

TEXT BOOKS:

1. Bidayathul Mujthahid va Nihaayathul Muqthasid, By Muhammad bin Ahmad bin Rushd Al qurthubi, Volume 1.

REFERENCES:

1. Al Hidayah – By Burhanuddin Al murghinanai, Volume 1.
2. Fathhul Muieen – By Zainuddin Makhdoom, Al ponnani Al Malabari, Volume 1.

OUTCOMES:

At the end of the course, the student is expected to:

- **Understand the basic ideology of four Madhabs.**
- **Discuss about the Islamic rulings and their framework.**

ISC 7102	LAW OF ADMINISTRATION IN SHARI'AH: AL SIYASAH AL SHARAYIYYAH	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Teach the student the basic principles of politics in Islamic Perspective.
- Familiarize the student with the concept of governance in Islamic Shariah.

MODULE I		8

Mahna seyashiya lukatthan va sharahan - Al hadin nabawi fee seyasthu saraeya - Hadhil al kulafa fee seyasthu saraeya - Nubudath min kalamil imam ahmed fee seyasthu saraeya - Raeil imam - Wa mada eithibarihe wa mazalathi el amal bi hi - Ar raei wa mada eithibarihe shrahan - Ma la nassa feehi - Ma ehthimalu ujoohan eddathan.

MODULE II		7

Maslahathul mursalaha - Raeil imam - Matha yamalu bi hi fee seyasthu saraeya - Man huwal imam - Kaifa tusasu ad dawlathul muslima - Akwalus shahabathu fee dimmi raei - Radda ashabu raei ala hazihi nukul

MODULE III		8

Ar raeil bathilu wa anwahu - Arraeil mahmood wa anwahu - Ar raeil allathi ufassherun nusus - Ar raeil allathi tawatha ala shalafil ummathi khalafiha - Ezthihadu rraei fee laus sharaei

MODULE IV		8

Maslahathul mursalaha - Eithibars shabha lilmuslaha - Muda eithibar maslahathu feel mazhibul matbuha - Ikthilafil madahibil arbaha feel isthidlal bil maslahathil murshala - Alkarafi wal maslaha - Tazeekul gazzali - As shathibi wal maslaha - Takayyaral ahkamil mabniya alal muslaha

MODULE V		7

Fukhaul asri wal maslaha - Hazathun naas fee asrena - Suruthil amali bi raeil imam - Takayyru raeil imamai be takayyari lurufe - Takayyru raein nbawi fee seysathu sharaeiya - Takayyar raei rasheedin - Al-thafreeq bainal Ebadhaath wal aadhathul - adhuyath wal Mua'malath endhuru ela elaliha wa maqasidhiha.

MODULE VI			**7**
Al-rasool yugayyiru raiyahu thab'an limaslahathi ra'e umar fil jizyath - Ra'e umar fil jizyath - Mawqiful fuqahae minal akhdhi bi-ra'e umar - Ra'aina fee thakeefi ra'e umar - Hagathuna ela hadhal ezthihadhil umari - Ma'aarilil nusoosi wal masalihi - Munaqashathu dha'wa tha'theel umar linnusoosil qath'eyya bi-esmil masalihi - Radhu aami ala ma edha'hoohu alal farooq - Fiqhul waqe' - Fiqhul muwaajanath - Fiqhul awlawiyyath - Fiqhuth thakhyeer.			
			L – 45; Total Hours –45

TEXT BOOKS:

1. As Siyasa ash Sharayiyya, Bukhari Aalim Arabic College, 2017.

REFERENCES:

1. Al-siyasathus shara'eya fee zaw'e nusoosi sharee'athi wa maqasithiha, Yousuf Al-qarzawi.

OUTCOMES:

At the end of the course, the student is expected to:

- **Understand the basic ideology of politics in Islamic view.**
- **Discuss about the Islamic governance and its framework.**

ALLIED COURSES:

ISC 7103	ISLAM IN SPAIN – ANDALUSIA	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to

- Introduce the Islamic History, specially the contribution of Umayyads in Spain to civilization, Culture and social life.

- Familiarize the students with the Muslim rulers in Spain and the important events & the achievements in their period.

- Provide the students the reasons behind the downfall of Muslim dynasty in Spain.

MODULE I		**8**
Andalusia (Spain) – Exploits of Muslims in Spain – Tariq Ibn Ziyad.		
MODULE II		**8**
Establishment of Umayyad dynasty in Spain – Abdur Rahman Ad Daakhil -		
MODULE III		**7**
Different eras of the Muslim governments in Spain – Ali Bin Hamood – Qasim Bin Hamood.		
MODULE IV		**8**
Last days of Banu Umayyads in Spain – Murabitoon – Yousuf Bin Tashifein and battle of Zalaka – Domination of Spain by Yousuf Bin Tashifein.		
MODULE V		**7**
Al Muwahhidoon – Kingdom of Granada – Death of Abu Abdullah – Represssion and Tyranny of Granada Muslims.		
MODULE VI		**7**
Masacre of Muslims – Burning of Muslims and Islamic Books – End of Muslim rule in Spain.		

L – 45; Total Hours –45

TEXT BOOKS:

1. Al Islamu Fil Andalus, Bukhari Aalim Arabic college, 2017.

REFERENCES:

1. The Rise and Fall of Muslims, Saeed Akbarabadi, Adam Publishers and Distributors, New Delhi, 2010.

OUTCOMES:

At the end of the course, the student is expected to:

- **Describe the Islamic history in detail especially the Umayyad history in Spain.**
- **Compile the factors behind the establishment of Umayyad dynasty in Spain.**
- **Discuss the social, economic, cultural and political developments happened during the period.**
- **Analyze the reasons behind the decline of Muslims in Spain.**

ISC 7104	HISTORY OF MUSLIM CIVILIZATION: CONTRIBUTION TO SCIENCE AND TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- impart Muslim civilization and scientific contribution
- improve understanding of Muslim civilization
- acquaint students with development of various field of sciences

MODULE I		**8**
Translation Movement in the 7th , 8th and 9th centuries AD from Greek and Syriac, Baithul Hikma, Mu'thazilah Movement		
MODULE II		**7**
Contribution of Thabith bin Kurrah, Ibn Al-Muqaffa' and Al-Kindhi		
MODULE III		**8**
History of Bimaristan in the Abbasid Period, Contribution of Ibn Sina and Ibn Nafis		
MODULE IV		**7**
Development of Astronomy and Abbasid Period, Contribution of Nasirudin Tusi and Ibn Shatir: Recent researches and their contribution		
MODULE V		**8**
Development of Arts, Crafts , Architecture and Calligraphy in the Medieval Period		
MODULE VI		**7**
Translation from Arabic to Latin from 11th century onwards and its impact on modern European renaissance		
		L – 45; Total Hours –45

TEXT BOOKS:

1. Contribution of Muslims to Technology, Bukhari Aalim Arabic College, 2017.

REFERENCES:

1. History of Islamic Civilization, John Arthur, London.
OUTCOMES:
At the end of the course, the student will be able to: • **describe the Muslim civilization** • **Identify the scientific contribution made by Muslims.** • **conduct independent research on this topic**

ISC 7105	MUSLIM THINKERS & REFORM MOVEMENTS IN MODERN ERA	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to :

- improve students' understanding of trend in Muslims' thought
- Acquaint students with various modern movements.
- impart the differences in the ideology of movements

MODULE I		**8**
Khilafat Movement of 19th century, Jamaludin Afghani and his contribution towards awakening Muslim ummah		
MODULE II		**7**
Muslim brotherhood: Establishment, Leaders and Ideology		
MODULE III		**8**
Salafi and Wahabi Movements, Iran revolution under Ayathullah Khomaini		
MODULE IV		**7**
Jamate Islami: Ideology, History, Contribution of Maududi		
MODULE V		**8**
Tabligh Jamath: Ideology, Establishment, System of functioning and leaders		
MODULE VI		**7**
Muslim Political Parties in India after Independence and their contribution to the Indian democracy		
		L – 45; Total Hours –45

TEXT BOOKS:

REFERENCES:

1. Islam and the promotion of Knowledge, A.R. Momin, Institute of Objective Studies, New Delhi.

OUTCOMES:

At the end of the course, the student will be able to:

- **identify the origin and establishment of modern Muslim movements**
- **Describe the main ideological differences among the movements.**
- **conduct independent research on the subject**

SEMESTER IV

CORE COURSES:

ISC 7211	A STUDY OF SHARI'AH RULINGS IN QUR'AAN: AHKAAMUL QUR'AAN	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Impart the rulings explained in the Holy Quraan
- Train the students to derive the rulings from Quranic texts.

MODULE I		**8**
Introduction to Ahkamul Quran – Historical development of Ahkaamul Quran – Renowned authors in the subject.		
MODULE II		**7**
Various types of Ahkaam – Definition and debate on Faraaidh, Waajibaath, Ibaaha, Tahreem, Makrooh		
MODULE III		**8**
Examples from various Quranic verses for Ahkaam -		
MODULE IV		**7**
Rulings from Sura Al Baqara – Rulings from Sura An Nisa		
MODULE V		**8**
Rulings from Al Maidah – Rulings mentioned in Chapter An'aam		
MODULE VI		**7**
Methodology of deriving Ahkaam from the Quran – Examples from the experiences of Imaams.		
		L – 45; Total Hours –45

TEXT BOOKS:

1. Ahkaamul Quran, Imam Abu Bakr Jassas, Beirut. Lebanon, 1994.

REFERENCES:

1. Tafseeru Aayathil Ahkaam, Abdul Qadir Shaiba Al Hamd, Muassassathu Uloomul Quran, Damascus.

OUTCOMES:

At the end of the course, the student will be able to:

- **Demonstrate the rulings of Quranic texts.**

- **Derive the various rulings from the Quranic texts.**

ISC 7212	IJTHIHAD AND RESEARCH METHODOLOGY OF IMAMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- acquaint students with methodology followed by renowned Imams in their Ijthihad – research
- impart the different aspects of methodology adopted by Imams.
- impart the impact of their methodology on formation of their schools of thought

MODULE I		**8**
Intoduction to the Ijthihad – Ijthihad in the period of Prophet (Sal) - Ijthihad in the period of Shahabah.		
MODULE II		**7**
Shurut al Ijthihad - Ahl al Hadeeth and Ahl al Ra'i – Al Ifta and its conditions.		
MODULE III		**8**
Imam Abu Haneefah: Biography – Principles of Ijthihad – Brief introduction to Hanafi Madh-hab – Spread of Hanafi Madh-hab.		
MODULE IV		**7**
Imam Malik bin Anas: Biography – Principles of Ijthihad – Brief introduction to Maliki Madh-hab – Spread of Maliki Madh-hab.		
MODULE V		**8**
Imam Shafi'i: Biography – Principles of Ijthihad – Brief introduction to Shafi'i Madh-hab – Spread of Shafi'i Madh-hab.		
MODULE VI		**7**
Imam Ahmad bin Hanbal: Biography – Principles of Ijthihad – Brief introduction to Hanbali Madh		

			L – 45;; Total Hours –45

TEXT BOOKS:

REFERENCES:

1. Tareekh Al Madhaahib al Islamiya by Abu Zahrah / darul Fikr al Arabi, Cairo, Egypt.
2. Tareekh al Tashree' al Islami by Dr. P.S.Syed Masood, Bukhari Aalim Arabic College, Chennai.

OUTCOMES:

At the end of the course, the student will be able to:

- **describe the major elements of Ijthihad methodology**
- **Demonstrate the differences.**
- **identify the different impact of the methodology on Schools of thought**

ISC 7213	INTEREST FREE BANKING	L	T	P	C
		3	0	0	3

OBJECTIVES:

To make the students understand

- basic concepts, sharia'h principles and guidelines on financial transaction
- Foundation and Characteristics of Islamic Finance
- Various aspects of Fiqh-al Muamalath applied to resolve contemporary issues of finance and business transactions.
- To explain the concepts, theories, the origins and development of Islamic banking products
- To expose the students to a wider range of Islamic financing instruments used by Islamic Banks and Financial institutions

The course aims to:

-

MODULE I	INTRODUCTION TO SOURCES OF ISLAMIC LAW (SHARI'AH)	

Shariah & Fiqh : Definition and Concept; Sources of Shari'ah: Quran, Sunnah, Ijma, Qiyas; Objectives of Shariah; Concept of Ijtihad and the necessary conditions; Principles of Fiqh: Introduction and importance.

MODULE II	MAJOR PROHIBITIONS IN ISLAMIC FINANCE	

Riba(Interest): Definition and Classification; Gharar (Ambiguity/ Uncertainty): Definition and Classification; Maysir & Qimar (Gambling): Definition and Classification

MODULE III		

Islamic Finance: Definition, Concept, Foundation, Features, Objectives; Islamic Finance Vs Conventional Finance; A Brief introduction of Islamic Financial Instruments and Glossary Of Islamic Finance Terminologies

MODULE IV	DEPOSIT PRODUCTS IN ISLAMIC BANKS	

Islamic Banks Deposits: Current Account, Saving Account, Investment Deposit Account: General Investment Deposit Account, Special Investment Deposit Account; Deposit Management

MODULE V	ISLAMIC MODES OF FINANCING - I	

Equity Based Products: Musharakah, Mudarabah; Deferred sale Financing – Bai

Muajjal & Murabahah;			
MODULE VI	**ISLAMIC MODES OF FINANCING - II**		
Advance Sale Financing Product – Salam & Parallel Salam, Financing Asset under Construction: Istisna & Parallel istisna;			
			L – 45; T – 15; Total Hours –45

TEXT BOOKS:

1. Understanding Islamic Finance By Muhammad Ayub
2. An introduction to Islamic finance By M. Taqi Usmani

REFERENCES:

.

1. Islamic Financial Services by Mohammed Obaidullah
2. An Introduction to Islamic Banking & Finance- Abdel Fattah M.Farah
3. Meezan's Bank's Guide to Islamic Bank

OUTCOMES:

Students will be able to:

- **Understand ethical underpinning of Islamic Finance**
- **Develop an appropriate level of understanding of the main principles of interest free banking**
- **Asses the nature and characteristics of different types of contracts, their applications and implication in business transactions.**
- **Differentiate between conventional and Islamic finance products.**
- **Appreciate and apply various Islamic financing techniques used by modern Islamic banks like Musharakah, Mudarabah, Murabahah, Salam & Parallel Salam**

ISC 7214	BUSINESS ARABIC AND TRANSLATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to

- Teach the significance of Arabic communication.
- Train for communication in various situations.
- Develop reading, writing and translation skills.

MODULE I	**Comprehension – Letter writing**	**8**
Personal, Official & Commercial letters.		
MODULE II	**Audio and video listening**	**7**
Introducing technical terms in Arabic.		
MODULE III	**Situational communication**	**8**
In Commercial field, administrative field Vocabularies and examples of usage.		
MODULE IV	**Situational communication**	**7**
In Engineering field and various work fields.		
MODULE V	**Introduction to Translation**	**8**
Translation Method, Comparison of Arabic and English sentence structures, Sample Study.		
MODULE VI	**Translation skill development**	**7**
Arabic to English and vice versa.		
		L-45; Total Hours –45

TEXT BOOKS:

1. Arabic for professional and employees, Bukhari Aalim Arabic College, 2013.

REFERENCES:

1. Secretarial Practice in Arabic by Haneef Palliyath, Darul Huda Book Stall, Calicut, 1996.

OUTCOMES:

At the end of the course, the student is expected to:

- **Describe the importance of commercial communication in Arabic.**
- **Communicate in Arabic in different working fields.**
- **Write letters and translate texts from Arabic to English and vice versa.**

ISC 7215	RESEARCH/ DISSERTATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- Teach the student to do a project on any topic related to Islamic Studies.
- Train him the research methodology and practices.

OUTCOMES:

At the end of the course, the student is expected to:

- **Prepare the dissertation on the prescribed topic.**
- **Analyze the various aspects of the research.**

ISC 7216	RESEARCH METHODOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to:

- impart basic concepts, types of research and methodologies
- train to select appropriate research topics
- train to identify research problem and parameters
- prepare a project proposal (to undertake a project)
- train to organize and conduct research
- highlight forms of plagiarism

MODULE I		8

Meaning of Research – Objective of Research – Motivation in Research – Significance of Research

MODULE II		7

Characteristics of Research – Characteristics of good research – Basic Types of Research: Exploratory research – Testing out research – Problem solving research

MODULE III		8

Primary and Secondary sources – Data collection and computing

MODULE IV		7

Using Library – Taking notes – Documentary bibliography – Footnotes

MODULE V		8

Definition of Plagiarism, Forms of Plagiarism – Consequence of Plagiarism - Copyright

MODULE VI		7

Drafting and writing – Synopsis and Abstracts – Format of thesis

			L – 45; Total Hours –45

TEXT BOOKS:

REFERENCES:

1. MLA Handbook for Writers of Research Papers, Seventh Edition, Affiliated East-West Press Pvt Ltd., New Delhi.

2. Manaahij Al-Bahs Al-Ilmi, Amman University, Jordan, 2006

OUTCOMES:

At the end of the course, the student will be able to:

- **demonstrate basic concepts, types of research and methodologies**
- **select appropriate research topics**
- **identify research problem and parameters**
- **undertake a project**
- **organize and conduct research**
- **refrain from plagiarism in preparing thesis**

VISION AND MISSION OF THE DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

VISION

The vision of the Department of Computer Science and engineering is to impart quality education, inculcate professionalism and enhance the problem solving skills of the students in the domain of Computer Science and Engineering with a focus to make them industry ready, involve in possible areas of research, to pursue and have continual professional growth.

MISSION

- Equip the students with strong fundamental concepts, analytical capability, programming and problem solving skills.
- Create an ambience of education through faculty training, self learning, sound academic practices and research endeavors.
- Facilitate a research culture in the department leading to high quality publications and funded projects.
- To identify potential areas of research and create centre of excellence in those areas.
- Provide opportunities to promote organizational and leadership skills in students through various extra – curricular activities.
- Expose the students to emerging and upcoming technologies through co-curricular events.
- To make the students as for as possible industry ready to enhance their employability in the industries.
- To improve department industry collaboration through internship programme and interaction with professional society through seminar/workshops.
- Imbibe social awareness and responsibility in students to serve the society.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES
M.Tech. (Network Security)

PROGRAMME EDUCATIONAL OBJECTIVES

- To provide advanced knowledge and skills required in the area of network security.
- To equip the graduates with required strategies and tools for design and development of secure network systems.
- To impart knowledge to analyze and propose new schemes for the protection system relevant to industry.
- To undertake research in network security.

PROGRAMME OUTCOMES

On completion of the programme the graduates will

- Have knowledge in practices and procedures adopted for software development in security domains.
- Be able to apply tools and techniques for solving problems of network security relevant to the society.
- Be able to undertake need based research with a focus on industry related issues in network security.
- Work as a team exhibiting effective system administrative skills.

CURRICULUM & SYLLABI FOR
M.TECH. (NETWORK SECURITY)
(FOUR SEMESTERS / FULL TIME)

CURRICULUM

SEMESTER I

Sl. No	Course Code	Course Title	L	T	P	C
1	MAB6190	Statistical Techniques for Network Security	3	1	0	4
2	CSB6103	Data Structures & Analysis of Algorithms	3	0	2	4
3	CSB6104	Computer Networks & Management	3	0	2	4
4	CSB6142	Computer Security	3	0	0	3
5		Elective - I	3	0	0	3
6	CSB6101	Research Methodology for Engineers	3	1	0	4

1	CSB7241	Project - Phase II	0	0	36	18*
					Total	**18+6=24**

*Credits for Project Work (Phase I) to be accounted along with Project work (Phase II) in IV Semester

TOTAL CREDITS : 80

LIST OF ELECTIVES

Sl. No	Course Code	Course
1	CSBY51	Intrusion Detection
2	CSBY52	Game theory and its Applications
3	MAB6194	Operations Research
4	CSBY53	Public Key Infrastructure & Key management
5	CSBY54	Mobile & Wireless Network security
6	CSBY55	Technical Foundation of E-commerce
7	CSBY56	Biometric Security
8	CSBY02	Soft Computing
9	CSBY08	Embedded Systems
10	CSBY57	Security issues in Cloud Computing
11	CSBY24	Service Oriented Architecture
12	CSBY58	Secure Software Systems
13	CSBY59	Advanced Digital Forensics
14	CSBY60	Advanced Algorithms
15	CSBY61	Human Aspects of Computer Security
16	CSBY18	Hacking Techniques & Digital Forensics
17	CSBY22	Object Oriented Software Engineering
18	CSBY25	Cloud Computing
19	SSBY01	Society, Technology and sustainability

SEMESTER - I

MAB6190	**STATISTICAL TECHNIQUES FOR NETWORK SECURITY**	**L**	**T**	**P**	**C**
		3	**1**	**0**	**4**

OBJECTIVES:

- To become familiar with the state -of - the - art in network measurement.
- To study the use of measurements in modelling, understanding and improving a network.
- To learn several statistical tools for the analysis of network measurements.

PREREQUISITES:

- Engineering Mathematics

MODULE I FOUNDATIONS **7**

Statistical Approaches and Opportunities – Fundamental Statistical Roles and Challenges in Network Security – Statistical Analysis Software.

MODULE II NETWORK TRAFFIC AND DATA CHARACTERISTICS **7**

System Specific Data- User Specific Data – Publicly Available Data – Random Variables – Variable Distributions – Network Data Modules

MODULE III NETWORK DATA MINING AND MODELING **7**

Exploring Network Data – Descriptive Analysis – Visualizing Analysis – Data Transformation – Data Reduction – Data Structure Detection – Sampling Network Traffic – Sample Size

MODULE IV ASSOCIATION AND PREDICTION **8**

Bivariate Analysis – Linear Regression Modeling – Robustness Association – Use Behaviour Pattern – Scoring Methods – Profiling Models.

MODULE V CLASSIFICATION **8**

Supervised Learning – Generalized Linear Methods – Nonparametric Methods – Nonlinear Methods – Unsupervised Learning – Probability Models – Similarity Models – Multidimensional Models.

MODULE VI DECISION ANALYSIS AND EVALUATION **8**

Analysis of Uncertainity – Statistical Control Chart – Ranking –Data Evaluation – Data Reliability, Validity and Quality – Goodness of Classification – Performance Assessment.

2. Eric D. Kolaczyk, “Statistical Analysis of Network Data: Methods and Models”, Springer Series in Statistics, Springer, 2009.

OUTCOMES:

Students who complete this course will be able to

- state applications of statistics in Network Security and apply them in Network Security problems.
- analyze and process the data.
- explain the procedures to predict, classify and evaluate Network Data.

CSB6103	DATA STRUCTURES AND ANALYSIS OF ALGORITHMS	L	T	P	C
		3	0	2	4

(Common to M.Tech (CSE, NS, CPA, CSE-BDA))

OBJECTIVES:

- To develop proficiency in the specification, representation, and implementation of Data Types and Data Structures.
- To carry out the Analysis Time and Space Complexity in different algorithms.
- To explain the applications of Data Structures for various scenarios.
- To relate data structures and algorithms with advanced computer science topics.

PREREQUISITES:

- Discrete Mathematics
- Programming languages

MODULE I INTRODUCTION **9**

The Need for Data Structures - Costs and Benefits - Abstract Data Types and Data Structures - Mathematical Preliminaries - Sets and Relations - Miscellaneous Notation - Logarithms -Summations and Recurrences - Recursion - Mathematical Proof Techniques - Direct Proof - Proof by Contradiction - Proof by Mathematical Induction – Algorithm Analysis – Best, Worst, and Average Cases - Asymptotic Analysis - Upper Bounds - Lower Bounds - Notation - Calculating the Running Time for a Program - Analyzing Problems - Empirical Analysis

MODULE II ELEMENTARY DATA STRUCTURES **7**

List – Stacks – Queues – Binary Trees – Binary Search Trees – Huffman Coding Trees – Non – Binary Trees.

MODULE III SORTING AND SEARCHING **8**

Internal Sorting Techniques – Heap Sort – Quick sort – Merge Sort – Binsort and Radix Sort – Multi Way Merging - Time complexity Analysis of Sorting Techniques – Searching Unsorted and Sorted Arrays – Self – Organizing Lists – Hashing.

MODULE IV ADVANCED DATA STRUCTURES **7**

Elementary Graph Algorithms – Minimum Spanning Tree – Single Source Shortest Path – All-Pairs shortest Path – Balanced Trees – AVL Trees- Red-Black Trees – Splay Trees – B-Trees – 1-2-3 Trees.

MODULE V ALGORITHMIC TECHNIQUES **7**

Dynamic Programming – Greedy Algorithms – Number-Theoretic Algorithms – String Matching algorithms.

MODULE VI LIMITS TO COMPUTATION **7**

Reductions - Hard Problems - The Theory of NP -Completeness – NP - Completeness Proofs - Coping with NP -Complete Problems - Impossible Problems – Uncountability.

L-45; P-15; Total Hours: 60

REFERENCES:

2. Clifford A. Shaffer, “Data Structures and Algorithm Analysis in C++”, 3rd Edition, Dover Publications, 2011.
3. Mark Allen Weiss, “Data Structure and Algorithm Analysis in C++”, 3rd Edition, Prentice Hall, 2006.

OUTCOMES:

Students who complete this course will be able to

- design correct and efficient algorithm for common computational tasks.
- analyze and design existing algorithms and data structures.
- apply amortized analysis on data structures, including binary search trees, mergable heaps and disjoint sets.

CSB6104 COMPUTER NETWORKS AND MANAGEMENT **L T P C**

(Common to M.Tech (CSE, NS,SE, CSE-BDA)) **3 0 2 4**

OBJECTIVES:

- To gain knowledge on the basic concepts of computer networks and OSI network model.
- To introduce the operation and management of computer networks.
- To understand the paradigms and functions of network management.
- To study the underlying applications and tools for network management.
- To acquire knowledge on broadband networks and its services.

PREQUISITES:

- Operating System

MODULE I FUNDAMENTALS OF COMPUTER NETWORK TECHNOLOGY 7

Network Topology, LAN, Network node components- Hubs, Bridges, Routers, Gateways, Switches, WAN, ISDN Transmission Technology, Communications protocols and standards.

MODULE II OSI NETWORK MANAGEMENT 7

OSI Network management model- Organizational model -Information model, Communication model. Abstract Syntax Notation - Encoding structure, Macros Functional model CMIP/CMIS.

MODULE III INTERNET MANAGEMENT 7

SNMP-Organizational model-System Overview - The information model - Communication Model - Functional model - SNMP proxy server- Management information, protocol remote monitoring.

MODULE IV BROADBAND NETWORK MANAGEMENT 8

Broadband networks and services - ATM Technology-VP,VC - ATM Packet - Integrated service - ATMLAN emulation - Virtual LAN - ATM Network Management-ATM Network reference model, integrated local management Interface- ATM Management Information base-Role of SNMD and ILMI in

ATM Management- M1, M2, M3, M4 Interface- ATM Digital Exchange Interface Management.

MODULE V NETWORK MANAGEMENT APPLICATIONS 8

Configuration management - Fault management - Performance management - Event Correlation Techniques security Management - Accounting management - Report Management- Policy Based Management Service Level Management.

MODULE VI APPLIED NETWORK MANAGEMENT 8

The Need for Management Integration- Management Integration challenge - Approaches to Management Integration- Service Level Management-The Motivation for Service Level Agreements - Identification of Service Level Parameters - Defining a Service Level Agreement- Managing for a Service Level.

L-45; P-15; Total Hours: 60

REFERENCES:

1. Mani Subramanian, "Network Management: Principles and Practices", 2nd Edition, Prentice Hall, 2012.
2. Alexander Clemm, "Network Management Fundamentals", 1st Edition, Cisco Press, 2006.
3. Adrian Farrell, "Network Management Know It All", 1st Edition, Elsevier India, 2008.
4. Richard Burke, "Network Management: Concepts & Practice, A Hands on Approach", 1st Edition, Prentice Hall, 2003.

OUTCOMES:

Students who complete this course will be able to

- correlate the fundamental importance of network information management related to the business objectives of an organization.
- use computer network management tools and the systems.
- apply the basic knowledge of current developments in information and communication technologies, standards and applications to network related applications.
- visualize the effectiveness of Broadband networks and services.

CSB6142	COMPUTER SECURITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide the student with a foundation covering computer security issues
- To determine appropriate mechanisms for protecting networked systems.
- To help organizations increase awareness of security policies and procedures.

PREREQUISITES:

- Cryptography and Network Security

MODULE I INTRODUCTION **7**

Physical Security – Viruses – Worms – Trojan Horses –Principles of Computer Security.

MODULE II IDENTITY THEFT AND PRIVACY **7**

Identity Theft- Shredding – Internet Cookies –Phishing – Homograph Threat – Privacy Issues- Trust.

MODULE III ELEMENTS OF CRYPTOGRAPHY **7**

Principles of Cryptography - Modular Arithmetic - Integrity Check Functions - Kirchoff's Principle – Monoalphabetic -Polyalphabetic Cipher – One Time Pad – Key distribution Problem – Diffie Hellman Key Merkle Keys- Public Key Cryptography – RSA – SSL - Digital Signatures – Encryption - Strength of Mechanisms –Performance.

MODULE IV NETWORK SECURITY **9**

Internet Vulnerabilities- Port Scanning – Spoofs – Spams - Denial of Service – Firewall Basics - Authentication – Local Authentication – Biometric Techniques – Passwords - Access Control Background - Authentication and Authorization - Access Operations - Access Control Structures- Ownership-Intermediate Control - Policy Instantiation - Comparing Security Attributes.

MODULE V DATABASE SECURITY **8**

Introduction - Relational Databases- Access Control - Statistical Database Security – Integration with the Operating System - Privacy.

MODULE VI COMMUNICATION AND WEB SECURITY **7**

Protocol Design Principles - IP Security - IPsec and Network Address Translation-SSL/TLS – Xtensible Authentication Protocol - Web Services Security.

Total Hours: 45

REFERENCES:

5. Bruce Schneider, “Applied Cryptography Protocols, Algorithms, and Source Code in C”, 2nd Edition, John Wiley & Sons, 2007.

OUTCOMES:

Students who complete this course will be able to

- identify fundamental concepts of computer security.
- use the World Wide Web to research the latest security alerts and information.
- compare and contrast types of malicious code, including worms, Trojan horses, and viruses.

CSB6101 RESEARCH METHODOLOGY FOR ENGINEERS **L T P C**

(Common to M.Tech (CSE, SE, NS, IT, IS & DF, CPA, CSE-BDA)) **3 1 0 4**

OBJECTIVES:

- To make the students well versed in Data analysis.
- To describe the steps involved in research process.
- To explain them how to formalize research problems.
- To discuss clearly the approaches for research through some case studies.

PREQUISITES:

- Engineering Mathematics
- Operation Research

MODULE I RESEARCH PROBLEM **8**

The research problem – Sources of research problem – Information, how to deal with it – Criteria / characteristics of a good research problem – Errors in selecting a good research problem – Types of research – Nature and use of arguments.

MODULE II SAMPLING DESIGN AND SCALING TECHNIQUES **7**

Census and Sample survey – Steps in Sampling Design – Different types of Sample Designs – Complex Random Sampling Designs – Measurement scales – Techniques of Developing Measurement Tools – Scaling – Important Scaling Techniques.

MODULE III METHODS OF DATA COLLECTION AND ANALYSIS OF DATA 8

Collection of Primary Data – different types – Some other methods of Data Collection – Collection of Secondary Data – Processing Operations – Types of Analysis – Measures of Central tendency – Measures of Dispersion.

MODULE IV LINEAR PROGRAMMING **10**

Basic of Operations Research (OR): Characteristics of Operations Research – OR and Decision making- Linear programming – Stimulation and Graphical

solution of canonical and standard forms of Linear programming problem – Algebraic solution – Simplex method – Charne's method of penalties – Concept of duality – Properties of duality.

MODULE V TRANSPORTATION AND ASSIGNMENT MODELS 6

Transportation Problem – Assignment Problem – Travelling Salesman Problem.

MODULE VI CASE STUDIES 6

Presentation by students on their area of research.

L-45; T-15; Total Hours: 60

REFERENCES:

1. Kothari, C.R., "Research Methodology: Methods and Techniques", 2nd Edition, New Age International, New Delhi, 2012.

4. Richard A. Johnson, "Miller and Freund's Probability and Statistics for Engineers", 8th Edition, Pearson Education, Asia, 2011.

OUTCOMES:

Students who complete this course will be able to

- identify the research problem.
- become capable of analyzing the data using mathematical techniques.
- learn to apply the probability concepts in research.
- complete simple problems on apply linear programming and transportation models.

CSB6143	COMPUTER SECURITY LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To familiar with network security threats and countermeasures, including common attacks and defensive strategies.
- To work in the real world by applying networking concepts to solve real business problems.
- To explain common vulnerabilities in programs, such as buffer overflows, lack of input sanitization, etc.

PREREQUISITES:

- Network Security

LIST OF EXERCISES :

1. "Networking Basics", how do networks work?
   a) Workstation Network Configuration and Connectivity
   b) TCP/UDP Basics
   c) Network Applications
2. "Vulnerabilities and Threats", how can networks be compromised?
   a) Scanning and Enumerating the Network for Targets
   b) Attacks-Web Server, Email, DOS and Trojan Attacks
   c) Escalating Privilege-Sniffing, Key logging, Password Cracking Attacks
3. "Prevention" How do we prevent Harm to Networks?
   a) Hardening the Host Computer
   b) Securing Network Communications
4. "Detection and Response" How do we detect and respond to attacks?
   a) Preparing for and Detecting Attacks
   b) Digital Forensics

OUTCOMES:

Students who complete this course will be able to

- gain practical experience of analyzing, designing, implementing and validating solutions to computer network security challenges using common network security tools.
- explain how threats to an organization are discovered, analyzed and dealt with.
- use current tools and techniques for assessing network attacks and vulnerability.

SEMESTER II

CSB6251 MODERN DISTRIBUTED NETWORK SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To gain knowledge on distributed communication.
- To understand the working functionality of remote procedure calls.
- To understand the resource utilization in distributed computing environment.
- To study the various network simulators to analyze various functionalities in the networking system.

PREREQUISITES:

- Computer networks

MODULE I FOUNDATIONS OF DISTRIBUTED COMPUTING 8

Distributed computing systems – Evolution of distributed computing systems – Distributed computing system models – What is distributed operating system – Issues in designing distributed operating systems-Message passing – Issues in IPC by message passing –Synchronization –Buffering – Group communication.

MODULE II REMOTE PROCEDURE CALLS 8

RPC Models –Transparency of RPC – Implementing RPC mechanism – Stub generation – RPC messages–Marshaling arguments & results – Server Management – Parameter-passing semantics – Call semantics – Communication protocols for RPCs.

MODULE III DISTRIBUTED SHARED MEMORY AND FILE SYSTEMS 8

General architecture of DSM systems – Design & implementation issues of DSM – Granularity – Structure of shared memory space- Desirable features of good distributed file systems – File accessing models – File sharing– File caching schemes – Fault tolerance.

MODULE IV NETWORK & APPLICATION LAYER 7

Repeaters – Bridges – Routers – Gateway – Routing algorithms – TCP/IP – Overview – Network layer – Transport and application layers of TCP/IP – DNS – SMTP – HTTP – WWW.

MODULE V ISDN & ATM **7**

History of analog and digital network – Access to ISDN – ISDN layers – Broadband ISDN – Packet layer protocol – ATM – ATM architecture – ATM layers – Congestion control – Leaky bucket algorithm.

MODULE VI STUDY OF SIMULATION TOOLS **7**

Study of various network simulators –Designing and evaluating the performance of various Transport and Routing protocols of Wireless networks using any network simulator.

Total Hours: 45

REFERENCES:

6. Kasera and Seth, “ATM Networks: Concepts and Protocols”, 2nd Edition, Tata McGraw Hill, 2005.

OUTCOMES:

Students who complete this course will be able to

- Recognize the advantages and limitations of modern high speed networks.
- Evaluate various technologies and identify the most suitable one to meet a given set of requirements for typical corporate networks.
- Use simulation tool kits for analyzing the network and transport protocols in modern distributed networks.

CSB6252	APPLIED CRYPTOGRAPHY AND NETWORK SECURITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide a practical survey of both the principles and practice of cryptography and network security.
- To know the methods of conventional encryption, concepts of public key encryption and number theory.
- To understand authentication and Hash functions, network security tools and applications, system level security.

PREREQUISITES:

- Cryptography and Network Security

MODULE I CRYPTOGRAPHIC PROTOCOLS **7**

Purpose of cryptographic protocols- protocol Building blocks-Basic Protocols-Intermediate Protocols-Advanced Protocols-Esoteric Protocols.

MODULE II CRYPTOGRAPHIC TECHNIQUES AND ALGORITHMS **8**

Key Length-Key Management-Algorithm Types and Modes-Data Encryption Standard-Other Block Ciphers- Other Stream Ciphers--Public key digital signature algorithms- key Exchange algorithms.

MODULE III SECURITY AND PRIVACY **8**

Security and Privacy in Computing and Communication Networks-Preserving Authentication Protocols for Wireless Mesh Networks-Security from Location-Anonymous Authentication Protocols for Vehicular Ad Hoc Networks.

MODULE IV NETWORK SECURITY **8**

Secure Platform Over Wireless Sensor Networks-Privacy-Secure Digital Watermarking for Fair Content Trading-Lightweight Secure Data Communication Framework Using Authenticated Encryption in Wireless Sensor Networks-Key Establishment Protocol for Wireless Sensor Networks.

MODULE V QUANTUM CRYPTOGRAPHY **7**

Quantum Cryptography-Quantum Key Management-Securing a Telecom Services Using Quantum Cryptographic Mechanisms- Applied cryptography in E-mail, web services and Electronic commerce.

MODULE VI EVOLUTIONARY CONCEPTS AND TECHNIQUES IN SECURITY **7**

Notions of Chaotic Cryptography-Sketch of a Chaos Based Cryptosystem-Chaotic Electronic Circuits in Cryptography-An En/Decryption Machine Based on Statistical Physics-Modern Technologies Used for Security of Software Applications- DNA Cryptography.

Total Hours : 45

REFERENCES:

1. Jaydip Sen, “Applied Cryptography and Network Security”, InTech, 2012.
2. Bruce Schneider, “Applied Cryptography Protocols, Algorithms, and Source Code in C”, John Wiley & Sons, 2nd Edition, 2008.
3. Hamid R. Nemati & Liyang, “Applied Cryptography for cyber security and Defense: Information Encryption and Ciphering”, Information Science Reference, 2011.

OUTCOMES:

Students who complete this course will be able to

- Compare and contrast various conventional and public key cryptographic algorithms.
- apply the concepts of various cryptographic techniques in different research areas.
- compare the modern cryptographic tools and analyse its performance in various network layers.

CSB6253 DIGITAL AND CYBER FORENSICS L T P C

3 0 0 3

OBJECTIVES:

To enable students to

- Understand key terms and concepts in cyber law, intellectual property and cyber crimes
- Understand issues associated with the nature of cyber and digital forensics.
- Undertake a simple forensic investigation using current forensic tools.

PREREQUISITES:

- Computer Security

MODULE I CYBER FORENSICS 9

Introduction to Cyber forensics - Information Security Investigations - Corporate Cyber Forensics - Scientific method in forensic analysis - Investigating large scale Data breach cases -Analyzing Malicious software.

MODULE II ETHICAL HACKING 6

Essential Terminology - Windows Hacking -Malware, Scanning, Cracking.

MODULE III DIGITAL EVIDENCE IN CRIMINAL INVESTIGATIONS 9

The Analog and Digital World -Training and Education in digital evidence - The digital crime scene - Investigating Cybercrime - Duties Support Functions and Competencies.

MODULE IV NETWORK FORENSICS 7

Investigating Network Intrusions and Cyber Crime - Network Forensics and Investigating logs – Investigating network Traffic - Investigation Web attacks - Router Forensics.

MODULE V COMPUTER FORENSICS 9

File Systems (File system organization; Memory; Registry; System logs) - Disk imaging - Programs and their traces - Searching and analysis - Investigative tools (Open Source and Proprietary) - Email & Browsers.

MODULE VI CONTEXT, LEGAL AND PRACTICAL CONSIDERATIONS 5

Cybercrime - Forensic process - Legal process and law enforcement - ACPO guidelines - Digital evidence - Incident response.

Total Hours: 45

REFERENCES:

1. Altheide, C & Carvey, H., Syngress, “Digital Forensics with Open Source Tools”, 1st Edition, Elsevier Publication, 2011.

5. EC – Council, “Computer Forensics: Investigating Network Intrusions and Cyber Crime”, 1st Edition, EC-Council Press Series: Computer Forensics, 2010.

OUTCOMES:

Students who complete this course will be able to

- list the varieties and describe impact of cybercrime.
- demonstrate the use of various computer forensic software tools and techniques as well as follow proper legal procedures for obtaining, analyzing, and reporting digital forensic evidence.
- understand the need to maintain the chain of evidence in cyber investigations and apply this in the context of simple case studies.
- explain the nature of live forensics and network-based detection techniques.

CSB6232	INFORMATION SECURITY	L	T	P	C
	(Common to M.Tech (SE, NS))	3	0	0	3

OBJECTIVES:

- To explain clearly about security policies and the major mechanisms for implementing security policies.
- To disseminate how threats to an organization are discovered, analyzed and dealt with.
- To train on procedures and practices for information security services.

PREREQUISITES:

- Computer Security and Computer Networks

MODULE I INTRODUCTION TO INFORMATION SECURITY 8

Introduction - History of information security - What is security - Need for security - CNSS security model - Components of an information system - Balancing information security and access - System development life cycle - Security systems development life cycle – Threats –Attacks - Secure software development.

MODULE II RISK MANAGEMENT 7

Introduction - isk identification – Assessment - Control strategies - Selecting a risk control strategy – Quantitative versus qualitative risk control practices.

MODULE III PLANNING FOR SECURITY 8

Introduction - Information security planning and governance - Information security policy, standards and practices - Cryptographic tools - Protocols for secure communications - Attacks on cryptosystems.

MODULE IV PHYSICAL SECURITY 7

Introduction - Physical access controls - Fire Security and safety - Failure of supporting utilities and structural collapse - Interception of Data - Remote computing security.

MODULE V IMPLEMENTING INFORMATION SECURITY 7

Information security project management - Technical aspects of implementation - Non technical aspects of implementation - Positioning and staffing the security function.

MODULE VI SOCIAL AND HUMAN ELEMENTS OF INFORMATION SECURITY 8

Human and Social Aspects of Password Authentication - Impact of the Human Element on Information Security - Social and Human Elements of Information Security: A Case Study-Security Configuration for Non-Experts: A Case Study in Wireless Network Configuration.

Total Hours: 45

REFERENCES:

1. James Michael Stewart, Ed Tittel and Mike Chapple, “Principles of Information Security”, 3rd Edition, John Wiley & Sons, 2011.
2. Jason Andress, “The Basics of Information Security”, 1st Edition, Syngress Press, Elsevier Publications, 2011.
3. Merkow, “Information Security: Principles and Practices”, 2nd Edition, Pearson Education India, 2007.

OUTCOMES:

Students who complete this course will be able to

- analyze the major information security threats to any organization.
- apply security policies, standards and practices.
- implement authorization techniques to reduce security threats.

CSB6254	CRYPTOGRAPHY LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To provide experience on different enciphering and deciphering techniques.
- To identify solutions for different cryptographic problems.
- To understand authentication protocols.

PREREQUISITES:

- Cryptography and Network Security

List of Experiments

1. Write program for Mono alphabetic cipher.
2. Encryption using classical techniques / binary/byte addition / binary/byte addition.
3. Implementation of S-DES algorithm for data encryption.
4. Implement RSA asymmetric (public key and private key)-Encryption. Encryption key (e, n) & (d, n).
5. Short Message RSA attacks and Padding.
6. Hash generation and sensitivity of hash functions to plaintext modifications.
7. Generate Digital signature using Hash code / MAC code.
8. RSA signature.
9. Attack on Digital signature/ Hash collision.
10. Writing a simple certificate Authority.

OUTCOMES:

Students who complete this course will be able to

- implement different data encryption and decryption algorithms.
- analyze on different crypto tools and apply them to overcome network attacks.
- experiment solutions for cryptographic problems using different key establishment techniques.

CSB6255 INFORMATION SECURITY (CASE STUDY) **L T P C**
0 0 3 1

OBJECTIVES:

- To empathize the basic principles and practices in information systems security.
- To gain knowledge on preparation of Document.
- To study the cryptographic tools, authentication and legal issues in security.

PREREQUISITES:

- Computer Security

Methodology of Assessment

- The class can be grouped as teams of not more than three in a team.
- Each team can present their observations based on the parameters given.
- Each team should prepare and deliver a presentation on the contents of the documents such as the SRS and Design document.

Case Study Topics

- Information security concepts
- Common attacking techniques
- Common security policies
- Basic cryptographic tools
- Authentication, Access control
- Software Security , Operating system security
- Legal and ethical issues in information systems security.
- Case study topics may be selected as per the choice of the students and the Case study may be evaluated on the following parameters
- Problem description and Analysis.
- Preparation of case study design document.
- Communication and clarity of presentation.

OUTCOMES:

Students who complete this course will be able to

- analyze the various information security threats to an organization.
- prepare an information security policy document for an organization.
- implement information security policies using various cryptographic tools.

SEMESTER - III

CSB7201	SOFTWARE PROJECT MANAGEMENT	L	T	P	C
	(Common to M.Tech (CSE, NS, SE, CPA, CSE-BDA))	3	0	0	3

OBJECTIVES:

- To highlight the importance of software project management.
- To discuss various processes in Software Project Management.
- To provide tools and techniques for project monitoring.
- To expose different project management life cycles.

PREREQUISITES:

- Software Engineering

MODULE I FUNDAMENTALS OF PROJECT MANAGEMENT 8

Defining a project- Sequence of Activities – Complex Activities – A Business focused definition - Understanding the Scope Triangle - Managing the Creeps -Importance of Classifying Projects - Fundamentals of Project Management - Introducing Project Management Life Cycles - Choosing the Best-Fit PMLC Model.

MODULE II PROJECT MANAGEMENT PROCESS GROUPS 8

Defining the Five Process Groups - Nine Knowledge Areas - Mapping Knowledge Areas to Process Groups - Using Tools, Templates, and Processes to Scope a Project - Managing Client Expectations .

MODULE III TPM PROJECT 8

Using Tools, Templates, and Processes to Plan a Project - Application Software Packages- Project Planning Tools – Planning and Conducting Joint Project - Building the WBS - Estimating - Constructing the Project Network Diagram - Effective Project Proposal - Launch a TPM Project- Monitor and Control a TPM Project.

MODULE IV ESTABLISHING PROJECT MANAGEMENT LIFE CYCLES 7

Understanding the Complexity/Uncertainty - Traditional Project Management - Incremental Project Management Life Cycle - Agile Project Management -

Iterative Project Management Life Cycle- Adaptive Project Management Life Cycle – Adapting and Integrating the APM Toolkit.

MODULE V BUILDING AN EFFECTIVE PROJECT MANAGEMENT 7

Establishing and Managing a Project Portfolio Management Process - The Project Portfolio Management Life Cycle - Establishing and Managing a Continuous Process Improvement Program - Defining Process and Practice Maturity - Using Process Improvement Tools, Templates and Processes.

MODULE VI MANAGING THE REALITIES OF PROJECTS 7

Prevention and Intervention Strategies for Distressed Projects - Using Tools, Templates, and Processes to Prevent Distressed Projects - Organizing Multiple Team Projects - Managing the Professional Development of Project Teams.

Total Hours: 45

REFERENCES:

1. Robert K. Wysocki, “Effective Project Management – Traditional, Agile, Extreme”, 6th Edition, Wiley Publication, 2011.
2. Robert K. Wysocki, “Effective Software Project Management”, 3rd Edition, Wiley Publication, 2010.

OUTCOMES:

Students who complete this course will be able to

- design a project management plan using different project management life cycles.
- find a suitable project management life cycle model for effective project execution.
- analyze the risks associated with the projects.

LIST OF ELECTIVES

CSBY51	INTRUSION DETECTION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide detailed theoretical foundation of attack detection approaches, data collection, evaluation, and intrusion response.
- To provide an overview of some of the commercially/publicly available intrusion detection and response systems.
- To study auditing systems, monitoring techniques, and various Intrusion Detection Processes and technologies that can be used for discovery of Hackers and Attacks.

PREREQUISITES:

- Computer Security

MODULE I INTRODUCTION **9**

Introduction - Intrusion detection and prevention basics – Network Attacks-Attack taxonomies-Probes-Privelege Escalation attacks-DDoS attacks-Worms Attacks - Routing attacks-Detection approaches-Data collection.

MODULE II THEORETICAL FOUNDATIONS OF DETECTION **9**

Taxonomy of Anomaly Detection system-fuzzy logic – Bayes theory – Artificial Neural networks – Support vector machine – Evolutionary computation – Association rules – Clustering-Signal processing techniques based models-Comparative study of anomaly Detection techniques.

MODULE III CORRELATION ANALYSIS OF INTRUSION ALERT **8**

Introduction - Approaches based on similarity between Alert Attributes, predefined attack scenarios, prerequisites and consequences of attacks, multiple information sources - Privacy issues in Alert correlation.

MODULE IV NETWORK ATTACKS **7**

Introduction-Preliminaries-Hardening Network to prevent multistep attacks-Response: building the link between intrusion detection alerts and security

policies-problem statement-Security policy formalism-Applying Or-BAC for thread response-The threats response system-From alerts to new policies.

MODULE V INTRUSION DETECTION AND REACTION 7

Introduction-Related work-Proposed framework-An Architecture for intrusion detection-Intrusion reaction: a system for attack source detection-Conclusions and future work.

MODULE VI APPLICATIONS AND TOOLS 5

Tool Selection and Acquisition Process - Bro Intrusion Detection – Prelude Intrusion Detection - Cisco Security IDS - Snorts Intrusion Detection – NFR security.

Total Hours: 45

REFERENCES:

1. Carl Enrolf, Eugene Schultz, Jim Mellander, “Intrusion detection and Prevention”, 1st Edition, McGraw Hill, 2004.
2. Paul E. Proctor, “The Practical Intrusion Detection Handbook”, 1st Edition, Prentice Hall, 2001.
3. Ankit Fadia and Mnu Zacharia, “Intrusiion Alert”, 2nd Edition, Vikas Publishing house Pvt., Ltd, 2007.
4. Earl Carter, Jonathan Hogue, “Intrusion Prevention Fundamentals”, 1st Edition, Pearson Education, 2006.

OUTCOMES:

Students who complete this course will be able to

- Examine the components of Intrusion Detection Systems and describe how these interact to accomplish the goals of intrusion detection.
- develop predictive measures to assess and prevent intrusion.
- understand the need to maintain Intrusion Detection System and apply this in the context of simple case studies.
- learn how to defend against computer and network attacks, multiple, complementary security devices such as intrusion detection systems (IDSs), and firewalls.

CSBY52 GAME THEORY AND ITS APPLICATIONS L T P C

3 0 0 3

OBJECTIVES:

- To provide a theoretical basis to the field of multi-agent systems.
- To provide the base for rational decision making.
- To provide a knowledge on different strategies and models for game development.

PREREQUISITES:

- Artificial Intelligence

MODULE I INTRODUCTION 8

Matrix – person games – The von Neumann Minimax Theorem – Mixed strategies – Dominated Strategies – Solving 2 x 2 games graphically – Graphical solution of 2 x m and n x 2 games – Problems.

MODULE II SOLUTION METHODS FOR MATRIX GAMES 8

2 x 2 games – Invertible matrix games – Symmetric games – A direct formulation without transforming – Linear Programming – Simplex Method – A Game Theory Model of Economic Growth.

MODULE III TWO PERSON NONZERO SUM GAMES 8

Basics – 2 x 2 Bimatrix Games – Interior Mixed Nash Points by Calculus – Nonlinear Programming Method – Choosing among several Nash Equilibria – Problems.

MODULE IV N PERSON NONZERO SUM GAMES 8

Economics applications of Nash equilibria – Duels – Auctions – Complete Information – Incomplete Information – Symmetric Independent Private Value Auctions – Symmetric Individual private value auctions – Problems.

MODULE V COOPERATIVE GAMES 8

Coalitions and Characteristic Functions – Finding the least core – The Nucleolus – The Shapley value – Bargaining – The Nash model with security point – Threats – Problems.

MODULE VI EVOLUTION AND APPLICATIONS **5**

Evolutionary Stable Strategies and Population games – Problems – Applications.

Total Hours: 45

REFERENCES:

1. E. N. Barron, “Game Theory: An Introduction”, 2nd Edition, Wiley India Pvt Ltd, 2013.
2. Steven Tadelis, “Game Theory: An Introduction”, 2nd Edition, Princeton University Press, 2012.

4. Thomas J Webster, “Introduction to Game Theory in Business and Economics”, 1st Edition, Segment Books, 2009.

OUTCOMES:

Students who complete this course will be able to

- recollect basic computer graphics and multimedia concepts and build animated programs.
- solve advanced and interesting games without spending time on the theory of linear programming.
- construct game theoretic models in applied fields.

MAB 6194 OPERATIONS RESEARCH L T P C

3 0 0 3

OBJECTIVES:

- To teach about linear programming techniques, transportation and assignment problems.
- To study the concept of queuing models and advanced queuing models which provides models for a number of situations that arise in real life.
- To gain the knowledge of simulation and non-linear programming of scheduling algorithms.

PREREQUISITES:

- Engineering Mathematics

MODULE I LINEAR PROGRAMMING 8

Formulation – Graphical solution – Simplex method – Two phase method – Transportation and Assignment Problems.

MODULE II SCHEDULING BY PERT AND CPM 8

Network Construction – Critical Path Method – Project Evaluation and Review Technique – Resource Analysis in Network Scheduling.

MODULE III INVENTORY MODELS 8

Inventory models – Deterministic models – Production models – Economic ordering quantity – Buffers stock – Shortage and quantity discount – Probabilistic inventory model – EOQ and safety stock calculation.

MODULE IV QUEUEING MODELS 7

Poisson Process – Markovian Queues – Single and Multi-server Models – Little's formula – Machine Interference Model – Steady State analysis – Self Service Queue – Network Optimal Path.

MODULE V SIMULATION 7

Discrete Event Simulation – Monte-Carlo Simulation – Stochastic Simulation – Applications to Queuing systems.

MODULE VI NON-LINEAR PROGRAMMING **7**

Lagrange multipliers – Equality constraints – Inequality constraints – KuhnTucker conditions – Quadratic Programming.

Total Hours: 45

5. Ross. S.M., "Probability Models for Computer Science", 2nd Edition, Academic Press, 2002.

OUTCOMES:

Students who complete this course will be able to

- use various queuing models in various domains.
- complete simple exercises on linear programming techniques, transportation and assignment problems.
- apply simulation to various situations and scheduling techniques.

CSBY53	PUBLIC KEY INFRASTRUCTURE AND KEY MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn about how the information security is deployed in an organization.
- To understand the various network security design methodologies available for providing secure solutions.
- To gain knowledge about the advanced security issues and technologies.

PREREQUISITES:

- Cryptography and Network Security

MODULE I INTRODUCTION **8**

Basic security concepts – Public key cryptography – Concept of an Infrastructure – Core PKI services: Authentication, Integrity, and confidentiality – PKI enabled Services.

MODULE II SECURITY ISSUES **8**

Certificate and Certification – Key and Certificate Management – Certificate revocation – Trust models – PKI operational Considerations – Electronic Legislation and Considerations.

MODULE III PKI STANDARDS **6**

General PKIX standardization Requirements – X.509 – PKIX – X.500 – LDAP – S/MIME – IPSec – TLS – SPKI – Open PGP EDIF ACT.

MODULE IV CONTENTS OF A SET OF PROVISIONS **8**

Introduction – Publication and Repository Responsibilities – Identification and Authentication (I&A) – Certificate Life – Cycle Operational Requirements – Facility, Management, and Operational Controls – Technical Security Controls.

MODULE V PUBLIC KEY MANAGEMENT **8**

Key Management fundamentals – Certification of public keys – Certificate life cycle – Key pair changes – Public key certificate management models – Alternate approaches.

MODULE VI CRYPTOGRAPHIC APPLICATIONS **7**

Cryptography on: Internet–Wireless local area networks – Mobile telecommunications– Security payment card transactions – Video broadcasting – Identity cards – Home users.

Total Hours: 45

REFERENCES:

1. Keith M. Martin, “Everyday Cryptography: Fundamental Principles and Applications”, Oxford University press, 2012.
2. John R. Vacca, “Public Key Infrastructure: Building Trusted Applications and Web Services”, 1st Edition, Auerbach Publications, 2004.
3. Carlisle Adams, Steve. Lloyd, “Understanding PKI: Concepts, Standards, and Deployment Considerations”, 2nd Edition, Pearson Education, 2003.

OUTCOMES:

Students who complete this course will be able to

- Identify the Infrastructure design and create a certificate template for it.
- Analyze the performance of the various certificate management tasks and deploy it.
- Summarize how security is implemented in a Web environment and correlate it using various security mechanisms.

CSBY54 MOBILE AND WIRELESS NETWORK SECURITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn physical as wireless MAC layer alternatives techniques.
- To understand planning and operation of wireless networks.
- To gain knowledge about various wireless LAN and WAN concepts.
- To learn security issues in wireless networks.
- To identify the different security issues in wireless networks.

PREREQUISITES:

- Mobile Ad hoc Networks

MODULE I MULTIPLE RADIO ACCESS **7**

Medium Access Alternatives: Fixed-Assignment for Voice Oriented Networks Random Access for Data Oriented Networks, Handoff and Roaming Support, Security and Privacy.

MODULE II WIRELESS WANS **8**

First Generation Analog, Second Generation TDMA – GSM, Short Messaging Service in GSM, Second Generation CDMA – IS-95, GPRS - Third Generation Systems (WCDMA/CDMA 2000) - Fourth Generation Systems (OFDM).

MODULE III WIRELESS LANS **7**

Introduction to wireless LANs - IEEE 802.11 WLAN – Architecture and Services, Physical Layer- MAC sub layer- MAC Management Sub layer, Other IEEE 802.11 standards, HIPERLAN, Wi-Max standard.

MODULE IV ADHOC AND SENSOR NETWORKS **7**

Characteristics of MANETs, Table-driven and Source-initiated On Demand routing protocols, Hybrid protocols, Wireless Sensor networks- Classification, MAC and Routing protocols.

MODULE V WIRELESS MANS AND PANS **8**

Wireless MANs – Physical and MAC layer details, Wireless PANs – Architecture of Bluetooth Systems, Physical and MAC layer details, Standards – Standard Introduction to PANs – Commercial Alternatives to PANs.

MODULE VI SECURITY IN WIRELESS NETWORKS **8**

The need for wireless security – Attacks on Wireless Networks – Security Services – Wired Equivalent Privacy (WEP) Protocol – Mobile IP – Weakness in the WEP Scheme –Virtual Private Network.

Total Hours: 45

REFERENCES:

1. William Stallings, "Wireless Communications and networks", 2nd Edition, Pearson / Prentice Hall of India, 2007.

6. Clint Smith, P.E. & Daniel Collins, “3G Wireless Networks”, 2nd Edition, Tata McGraw Hill, 2007.

OUTCOMES:

Students who complete this course will be able to

- Determine the basic functionalities and working principles of cellular networks.
- comprehend different generation of wireless networks and protocol architectures.
- examine various security threats to Wireless & Mobile networks and provide appropriate solutions.

CSBY55 TECHNICAL FOUNDATION OF E-COMMERCE **L T P C**

3 0 0 3

OBJECTIVES:

- To study technical aspects of Internet Commerce/ Web-based Electronic Business.
- To learn internet computing technologies in detail.
- To gain knowledge on different applications of E-Commerce.

PREREQUISITES:

- Web Technology

MODULE I INTRODUCTION **6**

Electronic commerce and Physical Commerce- Different type of ecommerce- some e-commerce scenario- Advantages of e-commerce.

MODULE II BASIC TECHNOLOGIES OF ECOMMERCE **8**

E-Commerce infrastructure-Client side Programming, Server Side Programming-Database connectivity- session tracking techniques.

MODULE III ADVANCE TECHNOLOGIES OF E-COMMERCE **8**

Mobile Agent- WAP- XML- Data Mining- Rich Internet Application- Web 2.0, REST Web Services- Web Mash up- Working of Search Engines- Internet Security.

MODULE IV INTERNET PAYMENT SYSTEM **7**

Characteristics of payment system- SET Protocol for credit card payment- E-cash- E-check-Micropayment system.

MODULE V E-COMMERCE STRATEGIES **8**

Strategies for marketing- Sales and Promotions- Strategies for Purchasing and support activities-Strategies for Web Auctions-Virtual Communities and web portals.

MODULE VI E-BUSINESS INTRODUCTION **8**

E-Business Vs E-commerce - Characteristics of e-Business- E-Business role and their challenges, e-business Requirements, impacts of e-business.

Total Hours: 45

REFERENCES:

1. Henry Chan, Raymond Lee, Tharam Dillon, Elizabeth Chang , “E-Commerce, Fundamentals And Applications”,1st Edition, John Wiley & Sons, 2007.

2. William S. Davis Miami University, Oxford, Ohio John Benamati Ohiol , “E-Commerce Basics: Technology Foundations and E-Business Applications” , 1st Edition, Miami University, Oxford, 2002.

OUTCOMES:

Students who complete this course will be able to

- comprehend the basic economic mechanisms and driving forces of E-Commerce.
- formulate E-Commerce strategies and provide a business solution.
- analyze ethical, social and political issues in E-Commerce.

CSBY56	BIOMETRIC SECURITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To enable the students to understand the fundamentals of biometric security.
- To understand the working principle and technologies behind various biometric areas.
- To develop the skills of the students with this technology for improving security and trust in different fields of modern society.

PREREQUISITES:

- Image Processing
- Statistical Techniques for Network Security

MODULE I INTRODUCTION **7**

Biometric fundamentals – Biometric technologies – Biometrics Vs traditional techniques – Characteristics of a good biometric system – Benefits of biometrics – Key biometric processes: verification, identification and biometric matching – Performance measures in biometric systems: FAR, FRR, FTE rate, EER and ATV rate.

MODULE II PHYSIOLOGICAL BIOMETRICS **9**

Leading technologies : Finger-scan – Facial-scan – Iris-scan – Voice-scan – Components, working principles, competing technologies, strengths and weaknesses – Other physiological biometrics : Hand-scan, Retina-scan – Components, working principles, competing technologies, strengths and weaknesses – Automated fingerprint identification systems.

MODULE III BEHAVIOURAL BIOMETRICS **7**

Leading technologies: Signature-scan – Keystroke scan – Components, working principles, strengths and weaknesses.

MODULE IV BIOMETRIC APPLICATIONS **8**

Categorizing biometric applications – Application areas: criminal and citizen identification, surveillance, PC/network access, e-commerce and retail/ATM – Costs to deploy – Other issues in deployment.

MODULE V PRIVACY AND STANDARDS IN BIOMETRICS **7**

Assessing the Privacy Risks of Biometrics – Designing Privacy-Sympathetic Biometric Systems – Need for standards – Different biometric standards.

MODULE VI BIOMETRIC TRANSACTION **7**

Securing and trusting a Biometric Transaction – User – Biometric Reader – Trusted Biometric Devices – Non Trusted Biometric Devices - Matching Location – Local host – Authentication Server – Match on Card (MOC).

Total Hours: 45

REFERENCES:

1. Paul Reid, “Biometrics for Network Security “, 1st Edition, Pearson Education, 2008.
2. Samir Nanavathi, Michel Thieme, and Raj Nanavathi, “Biometrics -Identity verification in a network”, 1st Edition, Wiley Eastern, 2002.
3. John Chirillo and Scott Blaul,” Implementing Biometric Security”,1st Edition, Wiley Eastern Publications, 2003.
4. John Berger,” Biometrics for Network Security”, 1st Edition, Prentice Hall, 2004.

OUTCOMES:

Students who complete this course will be able to

- summarize the concepts of biometrics and its applications in various fields.
- recollect the working principles of various biometric systems based on fingerprints, face, palm print, iris, retina, and other modalities.
- design a biometric system for more secure and reliable transmission.

CSBY02	SOFT COMPUTING	L	T	P	C
	(Common to M.Tech (CSE, SE , NS,CSE-BDA))	3	0	0	3

OBJECTIVES:

- To introduce new ideas of neural networks, fuzzy logic and use of heuristics based on human experience.
- To highlight the role of soft computing algorithm.
- To understand the concepts of Genetic algorithm and its applications.

PREREQUISITES:

- Artificial Intelligence and Neural Networks

MODULE I NEURO FUZZY AND SOFT COMPUTING **7**

Soft computing constituents and Conventional Artificial Intelligence - Neuro fuzzy and soft computing characteristics - Fuzzy sets - Basic definitions - Fuzzy union, intersection and complement - Introduction to Classical Sets and Fuzzy sets – Classical Relations and Fuzzy Relations – Tolerance and Equivalence Relations –Membership Functions: Fuzzification – Methods of Membership Value Assignments – Defuzzification – Lambda-Cuts for Fuzzy sets and Fuzzy Relations – Defuzzification Methods.

MODULE II ARTIFICIAL NEURAL NETWORK **7**

Introduction – Machine Learning Basics - Fundamental concept – Evolution of Neural Networks – Basic Models of Artificial Neural Networks – Important Terminologies of ANNs – McCulloch-Pitts Neuron – Supervised Learning Network: – Multiple Adaptive Linear Neurons – Back-Propagation Network – Radial Basis Function Network.

MODULE III ARTIFICIAL NEURAL NETWORK- II **7**

Associative Memory Networks: Training Algorithms for Pattern Association – Auto associative Memory Network – Hetero associative Memory Network – Bidirectional Associative Memory – Hopfield Networks – Iterative Auto associative Memory Networks – Temporal Associative Memory Network. Unsupervised Learning Networks: Fixed weight Competitive Nets – Kohonen Self-Organizing Feature Maps – Learning Vector Quantization – Counter propagation Networks – Adaptive Resonance Theory Networks – Special Networks.

MODULE IV GENETIC ALGORITHM **8**

Introduction – Basic Operators and Terminologies in GAs – Traditional Algorithm vs. Genetic Algorithm – Simple GA – General Genetic Algorithm – The Scheme Theorem – Classification of Genetic Algorithm – Holland Classifier Systems – Genetic Programming.

MODULE V NEURO FUZZY MODELING **8**

ANFIS Architecture - Hybrid Learning Algorithm - Learning Methods that Cross-fertilize ANFIS and RBFN - ANFIS as a Universal Approximator - Simulation Examples - Extensions and Advanced Topics.

MODULE VI APPLICATIONS OF SOFT COMPUTING **8**

A Fusion Approach of Multispectral Images with SAR Image for Flood Area Analysis – Optimization of Travelling Salesman Problem using Genetic Algorithm Approach – Genetic Algorithm based Internet Search Technique – Soft Computing based Hybrid Fuzzy Controllers – Soft Computing based Rocket Engine – Control.

Total Hours: 45

REFERENCES:

1. Simon O Haykin, “Neural Networks and Learning Machines”, 3rd Edition, Pearson Higher Education, 2008.
2. S.N. Sivanandan and S.N. Deepa, “Principles of Soft Computing”, 1st Edition, Wiley India, 2007.

4. S. Rajasekaran and G.A.V.Pai, “Neural Networks, Fuzzy Logic and Genetic Algorithms”, 1st Edition, PHI, 2003.
5. J.S.R.Jang, C.T.Sun and E.Mizutani, “Neuro-Fuzzy and Soft Computing”, 2nd Edition, PHI, 2004.
6. James A. Freeman and David M. Skapura, “Neural Networks Algorithms, Applications, and Programming Techniques”, 1st Edition, Pearson Edition., 2003.

OUTCOMES:

Students who complete this course will be able to

- apply the theoretical and practical knowledge on design and development of basic intelligent systems.
- develop an application using various soft computing algorithms.
- solve various real world problems using neural Fuzzy tools and technologies.

CSBY08	EMBEDDED SYSTEMS	L	T	P	C
	(Common to M.Tech (CSE, SE, NS))	3	0	0	3

OBJECTIVES:

- To provide basic understanding about embedded systems.
- To understand the various building components of an embedded system.
- To give exposure to the embedded programming concepts and study the procedures for development and testing.

PREREQUISITES:

- Digital Signal Processing

MODULE I INTRODUCTION TO EMBEDDED SYSTEMS 6

Definitions – Embedded hardware components – Embedded Software – System on Chip (SoC) – VLSI Circuits – Fundamentals of Embedded System Design.

MODULE II REAL-TIME OPERATING SYSTEMS 8

Overview – Pseudo kernels to Operating Systems – Scheduling Fundamentals – System Services: Buffers - Mailboxes – Semaphores – Deadlock and Starvation Problems- Priority Inversion - Timer and Clock Services – Memory Management Issues.

MODULE III DEVICES, COMMUNICATION BUSES AND PROTOCOLS 8

I/O Devices – Device I/O Types and Examples – Synchronous Communication – ISO-Synchronous Communication – Asynchronous Communication – Serial Bus Communication Protocols – Parallel Bus Communication Protocols– Wireless and Mobile System Protocols.

MODULE IV EMBEDDED PROGRAMMING CONCEPTS 8

Assembly Language Programming Vs High Level Programming – Embedded C Programming Elements and Fundamentals – Object Oriented Programming for Embedded Systems – Cross Compliers – Memory Footprint optimization - Program Modeling Concepts.

MODULE V DEVELOPMENT AND TESTING **8**

Embedded Software Development Process - Development Tools – Hardware and Software Design Issues – Techniques and Tools for Testing, Simulation and Debugging - Design Examples and Case Studies of Program Modeling and Programming with RTOS.

MODULE VI PERFORMANCE ANALYSIS OF EMBEDDED SYSTEMS **7**

Real Time Performance Analysis – Applications of Queuing Theory – Input/ output Performance - Analysis of Memory Requirements – Metrics - Fault Tolerance – Inherent Uncertainly – Performance optimization Techniques.

Total Hours: 45

REFERENCES:

1. Phillip A. Laplante, Seppo J. Ovaska, “Real-Time Systems Design and Analysis: Tools for the Practitioner”, 4th Edition, Wiley-IEEE Press, 2011.
2. Raj Kamal, “Embedded Systems: Architecture, Programming and Design”, 2nd Edition, McGraw-Hill Education, India, 2009.
3. Kai Qian, David Den Haring, Li Cao, “Embedded Software Development with C”, 1st Edition, Springer, 2009.

OUTCOMES:

Students who complete this course will be able to

- possess the basics of embedded system and its building blocks.
- design an embedded systems by applying the embedded programming concepts.
- analyze a real time scenario and trace its performance.

CSBY57 SECURITY ISSUES IN CLOUD COMPUTING L T P C

3 0 0 3

OBJECTIVES:

This course

- introduces the students to the world of cloud computing security.
- provides a consistent way of developing cloud security competency.
- provides the knowledge and confidence to build/adopt secure cloud solutions.

PREREQUISITES:

- Cloud Computing
- Computer Security

MODULE I INTRODUCTION TO CLOUD COMPUTING AND SECURITY 7

Terminology - Risk, Perception of Risk and Cloud Computing - Introduction to Cloud Computing and Security - Understanding Cloud Computing -The IT Foundation for Cloud - The Bottom Line - An Historical View: roots of Cloud Computing - A Brief Primer on Security - A Brief Primer on Architecture - Security Architecture.

MODULE II CLOUD COMPUTING ARCHITECTURE 6

Cloud Reference Architecture - Control over Security in the Cloud Model - Making Sense of Cloud Deployment - Making Sense of Services Models - Cloud Formation and Key Examples - Cloud Reference Architecture - Real-world Cloud Usage Scenarios.

MODULE III SECURING THE CLOUD: ARCHITECTURE 8

Cloud Computing: Security Concerns - Assessing Your Risk Tolerance in Cloud Computing - Legal and Regulatory Issues - Security Requirements for the Architecture - Security Patterns and Architectural Elements - Cloud Security Architecture - Planning Key Strategies for Secure Operation.

MODULE IV DATA SECURITY 8

Overview of Data Security in Cloud Computing - Data Encryption: Applications and Limits - Cloud Data Security: Sensitive Data Categorization - Cloud Data

Storage - Cloud Lock-in - Effectively Managing Risk - Overview of Security Controls - The Limits of Security Controls - Security Monitoring.

MODULE V BUILDING AN INTERNAL CLOUD **8**

Private Clouds: Motivation and Overview - Security Criteria for Ensuring a Private Cloud - Selecting a CSP: Overview of Assurance - Selecting a CSP: Overview of Risks - Selecting a CSP: Security Criteria.

MODULE VI AN INFORMATION SECURITY FRAMEWORK **8**

Evaluating Cloud Security - Checklists for Evaluating Cloud Security - From Architecture to Efficient and Secure Operations - Security Operations Activities.

Total Hours: 45

REFERENCES:

1. Vic J.R. Winkler, “Securing the Cloud: Cloud Computer Security Techniques and Tactics”,1st Edition, Elsevier Syngress, 2011.
2. Hamid Nemati, “Optimizing Information Security and Advancing Privacy Assurance”,1st Edition, IGI Global, 2012.
3. Ronald L. Krutz, Russell Dean Vines, “Cloud Security: A Comprehensive Guide to Secure Cloud Computing”, 1st Edition, Wiley Publications, 2010.

OUTCOMES:

Students who complete this course will be able to

- enumerate Cloud Computing Architectural Frameworks.
- discuss the major security considerations for building or selecting a cloud model.
- examine security criteria to enable selection of a CSP.
- evaluate the conditions under which one should adopt Cloud Computing services and technologies.

CSBY24	SERVICE ORIENTED ARCHITECTURE	L	T	P	C
	Common to M.Tech (CSE, SE, NS,CSE-BDA))	3	0	0	3

OBJECTIVES:

- To introduce the fundamentals and issues relating to Service Oriented Architecture
- To bring out the importance of service orientation and web services.
- To teach appropriate tools as technique on how to build the Service Oriented Architecture with web services.

PREREQUISITES:

- Web Technology
- Computer Networks

MODULE I INTRODUCTION **7**

Basic definition - Fundamentals of SOA - Characteristics and misperceptions about SOA -Benefits and pitfalls of SOA.

MODULE II EVOLUTION OF SOA **7**

The evolution of SOA - Web service and primitive SOA - The extension of SOA - Web service extension.

MODULE III WEB SERVICE AND CONTEMPORARY SOA **7**

Message Exchange Pattern - Service Activity – Coordination - Atomic Transaction - Business Activity- Orchestration – Choreography – Addressing - Reliable Messaging - Correlation and Policies - Meta data Exchange - Security-Notification and Eventing.

MODULE IV PRINCIPLES OF SERVICE ORIENTATION **8**

Principles of service orientation -Building SOA - Planning and Analysis - SOA delivery strategies - Service Oriented Analysis Introduction - Service Modeling of Service Oriented Analysis.

MODULE V SERVICE ORIENTED DESIGN **8**

Introduction to service oriented design - WSDL related XML Schema language Basics - WSDL Language Basics - SOAP Language Basics - Service interface

design tools - Steps to composing SOA - Consideration for choosing service layers, positioning core SOA standards and choosing SOA extension - Service design and business process design.

MODULE VI WEB SERVICE EXTENSION AND SOA PLATFORM 8

WS Addressing language Basics - WS Reliable Messaging language Basics- WS policy Language Basics - WS Metadata Exchange Language Basics-WS security Language Basics -SOA Platform basics - SOA Support in J2EE,SOA Support in .NET- Case Studies of Rail Co ltd and Oasis Car Wash service.

Total Hours: 45

REFERENCES:

1. Thomas Erl, Pearson Education, “Service Oriented Architecture, Concepts, Technology and design”, 2009.
2. Shankar Kambhampaty, “Service Oriented Architecture for Enterprise Architecture for Enterprise Application”, 1st Edition, Wiley Publication 2008.

OUTCOMES:

Students who complete this course will be able to

- relate web services with service oriented architecture.
- apply the tools and technique for Service Oriented Architecture.
- build an SOA platform supported by J2EE and .NET.

CSBY58 SECURE SOFTWARE SYSTEMS L T P C

3 0 0 3

OBJECTIVES:

- To understand the secure software analysis.
- To describe the various thread models in software systems.
- To use UML case tools to extend security business process.

PREREQUISITES:

- Software Engineering.

MODULE I SOFTWARE RELIABILITY 8

Problem, Process, and Product - Problems of software practitioners– Approach through software reliability engineering - Experience with SRE – SRE process- Defining the product – Testing acquired software – Reliability concepts- Software and hardware reliability- Implementing Operational Profiles.

MODULE II SOFTWARE AVAILABILITY 8

Developing, identifying, crating, reviewing the operation – Concurrence rate – Occurrence probabilities- Applying operation profiles Engineering “Just Right” Reliability- Defining “failure” for the product - Choosing a common measure for all associated systems. - Setting system failure intensity objectives - Determining user needs for reliability and availability- Overall reliability and availability objectives, common failure intensity objective.

MODULE III TEST CASES 9

Developed software failure intensity objectives. - Engineering software reliability strategies - Preparing for Test - Preparing test cases. - Planning number of new test cases for current release. - Allocating new test cases. - Distributing new test cases among new operations - Detailing test cases - Preparing test procedures-Executing Test - Planning and allocating test time for the current release - Invoking test.

MODULE IV IDENTIFYING 7

Identifying failures - Analyzing test output for deviations – Determining which deviations are failures - Establishing when failures occurred. Guiding Test -

Tracking reliability growth - Estimating failure intensity - Using failure intensity patterns to guide test - Certifying reliability- Deploying SRE- Core material - Persuading your boss, your coworkers, and stakeholders. - Executing the deployment - Using a consultant.

MODULE V SECURE SYSTEMS **7**

Using UML for Security - UM L diagrams for security requirement -Security business process- Physical security - Security critical interaction - Security state - Analyzing Model - Notation - formal semantics - Security analysis - Important security opportMODULEies - Model based security engineering with UML - UML sec profile- Design principles for secure systems - Applying security patterns.

MODULE VI UML **6**

Applications - Secure channel - Developing Secure Java program- more case studies - Tool support for UML Sec - Extending UML CASE TOOLS with analysis tools - Automated tools for UML SEC- Formal Foundations - UML machines - Rely guarantee specifications- reasoning about security properties.

Total Hours: 45

REFERENCES:

1. John Musa D, “Software Reliability Engineering”, 2nd Edition, Tata McGraw-Hill, 2008 (unit I, II , III).

2. Jan Jürjens, “Secure Systems Development with UML”, 2nd Edition, Springer; 2010 (unit IV, V, VI).

OUTCOMES:

Students who complete this course will be able to

- identify current security issues in software engineering.
- analyze the requirements analysis, object-oriented design, implementation, testing in software engineering.
- implement professionalism, project management, and the legal framework for software development.

CSBY59 ADVANCED DIGITAL FORENSICS L T P C

3 0 0 3

OBJECTIVES:

- To lay down the fundamentals of digital forensics from the viewpoint of courtroom legalities.
- To introduce forensics concepts and practices focusing on networks and internet.
- To establish the know-how needed for digital forensics investigator role.
- To elaborate upon the evidence gathering over the internet.

PREREQUISITES:

- Hacking Techniques and Digital forensics.

MODULE I INTRODUCTION 8

Foundations of digital Forensics-Language of Computer Crime Investigation-Digital Evidence in the courtroom-Cybercrime law.

MODULE II DIGITAL CRIME 8

Conducting Digital investigations-Handling a Digital Crime Scene-Investigative reconstruction with Digital Evidence-Modus Operandi motive and technology.

MODULE III DIGITAL EVIDENCE AND CYBER TALKING 7

Violent Crime and Digital Evidence –Digital Evidence as Alibi-Computer Intrusions-Cyber Talking.

MODULE IV DIGITAL INVESTIGATORS 7

Computer Basics for Digital investigators-Applying Forensics Science to computers-Digital Evidence on Windows System-Digital Evidence on UNIX System-Digital Evidence on Macintosh System.

MODULE V FORENSICS AND NETWORKS 8

Network basics for Digital Investigators-Applying Forensic science to Networks-Digital Evidence on the internet.

MODULE VI DIGITAL EVIDENCE ON THE INTERNET **7**

Digital Evidence on Physical and Data link layers-Digital Evidence on Network and Transport layers.

Total Hours: 45

REFERENCES:

1. Eoghan Casey, “Digital Evidence and Computer Crime: Forensic Science, Computers and the Internet“, 3rd Edition ,Published by Elsevier, 2011.
2. Keith John Jones, Richard Bejtlich, Curtis W. Rose, “Real Digital Forensics. Mit DVD: Computer Security and Incident Response”, 5th printing, Addison Wesley Professional, 2008.
3. Terrence V. Lillard, Clint P. Garrison, “Digital Forensics for Network, Internet, and Cloud Computing: A Forensic evidence Guide for Moving Targets and Data”, 1st Edition, Elsevier 2010.

OUTCOMES:

Students who complete this course will be able to

- identify and extract digital evidence from varied networking layers.
- apply forensics techniques for analyzing computer systems and networks.
- assess digital evidence and conduct forensic investigation.
- describe the legalities, penalties and punishment associated with cyber crime.

CSBY60	ADVANCED ALGORITHMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To explore the relevance of analysis to the design of efficient computer algorithms.
- To demonstrate and apply the algorithms, prove their correctness, and analyze their time complexity in a mathematically rigorous manner.
- To elucidate the basic idea behind the techniques, so that you are able to develop algorithms for new problems where these techniques can be applied.

PREREQUISITES:

- Data Structures
- Design Analysis of Algorithms

MODULE I INTRODUCTION **8**

The role of Algorithms in Computing – Getting Started – Analyzing algorithms- Designing Algorithms–Growth of Functions – Divide and conquer – Probabilistic Analysis and Randomized Algorithms.

MODULE II SORTING AND SEARCHING **8**

Heap sort – Priority Queue – Quick Sort –Performance and analysis of quick sort- Sorting in Linear time – Counting sort-Radix Sort- Bucket Sort – Binary search.

MODULE III ADVANCED DESIGN AND ANALYSIS TECHNIQUES **8**

Dynamic Programming–Rod cutting-Matrix-chain multiplication- Optimal Binary search trees – Greedy Algorithms- An activity-selection problem- Elements of the greedy strategy –Huffman codes – Matroids – Amortized Analysis – Aggregate analysis – The accounting method - Potential method.

MODULE IV GRAPH ALGORITHMS **7**

Elementary Graph Algorithms –Breadth-first search- Depth-first search – Topological sort - Minimum Spanning Trees – The algorithms of Kruskal and Prim - Single-Source Shortest Paths Bellman-Ford algorithms- Dijkstra's algorithm– All-pairs Shortest Paths – Maximum Flow.

MODULE V NUMBER-THEORETIC ALGORITHMS 7

Elementary number-theoretic notions – Greatest common divisor – Modular arithmetic – Solving modular arithmetic – Solving modular linear equations- The Chinese remainder theorem- The RSA public-key cryptosystem – Primality testing – Integer factorization.

MODULE VI STRING MATCHING AND MAXIMUM FLOW 7

The naïve-matching algorithm – the Rabin-Karp algorithm – String matching with finite automata- The Knuth-Morris-Pratt algorithm – Flow networks – The Ford-Fulkerson method – Maximum bipartite matching – Push-relabel algorithms.

Total Hours: 45

REFERENCES:

2. Thomas H.Cormen “Algorithms Unlocked”, MIT Press, 2013.
3. Michael Soltys, “An Introduction to the Analysis of Algorithm”, 2nd Edition, World Scientific, 2012.
4. Jon Kleinberg, Eva Tardos,” Algorithm Design”, 1st Edition, Pearson/Addison-Wesley, 2006.
5. Sara Baase, Computer algorithms - Introduction to design and analysis, 3rd Edition, Addison-Wesley, 1999.
6. Robert Sedgewik,Kevin wayne,“Algorithms”, 4th Edition, Pearson Education, 2011.

OUTCOMES:

Students who complete this course will be able to

- explain the importance of algorithmic design.
- analyze current problems and research issues in the field of complexity theory and abstract discrete algorithms.
- identify for research resources and later identify (discover), as well as formulate, new research problems.

CSBY61 HUMAN ASPECTS OF COMPUTER SECURITY **L T P C**

3 0 0 3

OBJECTIVES:

- To identify possible countermeasures against threats and vulnerabilities in a given security scenario.
- To develop a basic understanding of cryptography, how it has evolved, and some key encryption techniques used today.
- To compare and contrast the underlying security mechanisms needed to implement security countermeasures.

PREREQUISITES:

- Computer Networks
- Computer Security

MODULE I THREATS AND SECURITY **8**

Basic concepts: threats – Vulnerabilities – Controls – Risk - Confidentiality, integrity, availability- Security policies, security mechanisms – Assurance - Prevention, detection, deterrence.

MODULE II BASIC CRYPTOGRAPHY **8**

Basic cryptographic terms: Historical background - Symmetric crypto primitives - Modes of operation - Cryptographic hash functions - Asymmetric crypto primitives.

MODULE III PROGRAM SECURITY **8**

Flaws - Malicious code: viruses, Trojan horses, worms, Program flaws: buffer overflows, time-of-check to time-of-use flaws, incomplete mediation – Defences - Software development controls Testing techniques.

MODULE IV AUTHENTICATION **7**

Memory, time, file, object protection requirements and techniques - Protection in contemporary operating systems - Identification and authentication - Identification goals - Authentication requirements - Human authentication - Machine authentication.

MODULE V TRUSTED OPERATING SYSTEMS **6**

Assurance – trust: Design principles - Evaluation criteria - Evaluation process - Database management systems security - Database integrity - Database secrecy - Inference control - Multilevel databases.

MODULE VI NETWORK SECURITY **8**

Network threats: eavesdropping, spoofing, modification, denial of service attacks - Introduction to network security techniques: firewalls, virtual private networks - Intrusion detection - Management of security - Security policies - Risk analysis - Physical threats and controls.

Total Hours: 45

REFERENCES:

1. William Stallings, “Cryptography and Network security”, 5th Edition, Pearson Publication, 2011.
2. Charles P.Pfleeger (Consulting Group Pfleeger), Shari Lawrence(RAND Corporation Pfleeger), “Security in Computing”, 4th Edition, Prentice Hall, 2009.

OUTCOMES:

Students who complete this course will be able to

- differentiate threats to information systems from attacks against information systems.
- identify and explain symmetric and asymmetric algorithms for encryption-based security of information.
- examine the issues related to administration security, physical security, and program security.
- describe the requirements and mechanisms for identification and authentication.
- determine appropriate mechanisms for protecting information systems ranging from operating systems to database management systems and to applications.

CSBY18 HACKING TECHNIQUES AND DIGITAL FORENSICS **L T P C**

(Common to M.Tech (CSE, NS)) **3 0 0 3**

OBJECTIVES:

- To educate upon the security threats.
- To understand the different vulnerabilities and modes of preventing them.
- To learn about security attacks and tools available to curtail them.

PREREQUISITES:

- Computer Security

MODULE I APPLICATION SECURITY **7**

Problem factors - Defence mechanisms - Handling user access - User input - Handling attackers - Managing the application - Web application technologies - The HTTP protocol - Web functionality - Encoding schemes.

MODULE II AUTHENTICATION AND SESSION MANAGEMENT **7**

Mapping the application - Bypassing client side control - Transmitting data via the Client - Capturing user data, HTML forms and thick-client components - Active X controls - Prevention - Attacking authentication - Design flaws in authentication - Implementation flaws in authentication - Prevention - Attacking session management - Weakness in session management generation and handling, Its prevention - Attacking access control.

MODULE III VULNERABILITIES AND PREVENTION **8**

Common vulnerabilities, Its prevention - Code injection - Injection into SQL, OS commands, web scripting techniques, SOAP, XPath, SMDP, LDAP - Attacking path traversal - Finding and exploiting path traversal vulnerabilities, Its prevention - Attacking application logic - Logic flaws - Attacking other users - XSS - Redirection attacks - HTTP header injection - Frame injection- Request forgery- JSON hijacking - Session fixation - Local privacy attacks - Advanced exploiting techniques -Its prevention.

MODULE IV SECURITY ATTACKS **8**

Burp proxy - Automating bespoke attacks - Uses for bespoke automation - Enumerating valid identifier - Fuzzing common vulnerabilities, Its prevention-

Exploiting information disclosure - Exploiting error message, Its prevention - Attacking compiled application - Buffered overflow attacks - Integer and format string vulnerabilities, Its prevention - Architectural attacks – Tiered architecture - Shared hosting and Application service providers, Its prevention - Server attack - Vulnerable application configuration and Software - Source code vulnerabilities - Different languages, Its prevention.

MODULE V HACKING AND SECURITY **7**

Hacker's toolkit - Web browsers - Integrated testing suites – Vulnerability scanners -Nikto-hydra-custom Scripts - Hacker's methodology – Mapping application content -Analyzing application-testing - Client side controls - Authentication mechanism - Session management mechanism – Access controls - Input based vulnerabilities- Logic flaws- Sharing hosting vulnerabilities- Web server vulnerabilities- Miscellaneous checks.

MODULE VI TOOLS AND TECHNOLOGIES **8**

Security tools and services - Time-based one-time passwords - Challenge/ response one-time password - Lamport's one-time password algorithm - Smart cards - RADIUS - SASI - Host-to-host authentication - PKI – Firewalls - Kinds of firewalls- Filtering services - Firewall engineering - Tunneling and VPNs - Secure communications over insecure networks - Kerberos authentication system - Link level encryption - Network level encryption - Application-level Encryption - Hidden markov model.

Total Hours: 45

2. William R.Cheswick, Steven M. Bellovin and Aviel D.Rubin, "Firewalls and Internet Security – Repelling the Wily hacker", 2nd Edition, Pearson Education, 2008.

OUTCOMES:

Students who complete this course will be able to

- utilize the latest technology that are widely used by the digital forensic experts.
- analyze on system vulnerabilities and provide solutions to overcome them.
- apply suitable tools and techniques for enforcing system security.

CSBY22 OBJECT ORIENTED SOFTWARE ENGINEERING L T P C

(Common to M.Tech (CSE, NS,CSE-BDA)) 3 0 0 3

OBJECTIVES:

- To introduce concepts that underlies object orientation.
- To study about classical software engineering life cycle models.
- To discuss the implications of various aspects of object oriented software engineering.
- To learn techniques at each stage of development, including use cases, UML.

PREREQUISITES:

- Object Oriented Programming
- Data Structures

MODULE I SOFTWARE ENGINEERING CONCEPTS 8

Software engineering concepts and development activities –Managing Software development - Software life cycle models – Iteration and Incrementation – Other life cycle models – Comparison of life cycle models.

MODULE II OBJECT ORIENTATION AND REQUIREMENT 8

Object Orientation Concepts - Requirement Elicitation Concepts – Activities – Negotiating Specifications with Clients – Maintaining Traceability – Documenting Requirements Elicitation.

MODULE III TEAM ORGANIZATION AND MODELLING WITH UML 7

Team Organization – Approaches – Choosing an appropriate Team Organization- People Capability Maturity Model Overview of UML – Modelling Concepts – A deeper view into UML.

MODULE IV ANALYSIS AND DESIGN 8

Overview of Analysis – Concepts – Activities – Managing Analysis – Design Concepts -From Modules to Objects - Cohesion- Coupling.

MODULE V TESTING **7**

Testing Concepts – Testing Activities – Managing Testing – Object Oriented Testing Strategies – Challenges and issues.

MODULE VI MANAGING CHANGE AND CONFIGURATION **7**

Rationale Management – Concepts – Activities – Documenting Rationale – Overview of Configuration Management.

Total Hours: 45

REFERENCES:

1. Stephen R.Schach "Object Oriented and Classical Software Engineering", 8th Edition, Mc Graw Hill Education, 2010.
2. Bernd Bruegge & Allen H. Dutoit, "Object-Oriented Software Engineering Using UML, Patterns, and Java", 3rd Edition, Prentice Hall, 2010.

4. Craig Larman "Applying UML and Patterns: An Introduction to Object-Oriented Analysis and Design and Iterative Development", 3rd Edition, Prentice Hall, 2004.

OUTCOMES:

Students who complete this course will be able to

- Compare the different life cycle models and select the appropriate one for a project.
- Investigate principles of object oriented software engineering, from requirements through testing.
- Illustrate the different UML diagrams using various tools.
- Identify the different artifacts produced during software development and develop the team skills required to build software applications.

CSBY25	CLOUD COMPUTING	L	T	P	C
	(Common to M.Tech (CSE, SE, NS,CPA,CSE-BDA))	3	0	0	3

OBJECTIVES:

- To provide a comprehensive and in-depth knowledge of Cloud Computing concepts, technologies, architecture and applications.
- To provide an insight into the core of cloud computing that revolves around Internet architecture and virtualization.
- To expose the students to frontier areas of Cloud Computing and information systems.

PREREQUISITES:

- Distributed Operating System

MODULE I SYSTEMS MODELING, CLUSTERING AND VIRTUALIZATION 8

Scalable Computing Service over The Internet - Technologies for Network-based Computing - System Models for Distributed and Cloud Computing - Software Environments for Distributed Systems and Clouds - Performance, Security, and Energy-Efficiency - Clustering for Massive Parallelism - Computer Clusters and MPP Architectures - Design Principles of Computer Clusters - Cluster Job and Resource Management.

MODULE II VIRTUALIZATION 7

Implementation Levels of Virtualization - Virtualization Structures/Tools and Mechanisms - Virtualization of CPU, Memory and I/O Devices - Virtual Clusters and Resource Management - Virtualization for Datacenter Automation.

MODULE III CLOUD FUNDAMENTALS 7

Origins and Influences - Basic Concepts and Terminology - Goals and Benefits - Risks and Challenges - Roles and Boundaries - Cloud Characteristics - Cloud Delivery Models - Cloud Deployment Models- Broadband Networks and Internet Architecture - Virtualization Technology - Web Technology - Multitenant Technology - Service Technology.

MODULE IV CLOUD COMPUTING ARCHITECTURE **8**

Fundamental Cloud Architectures - Workload Distribution Architecture - Resource Pooling Architecture - Dynamic Scalability Architecture - Elastic Resource Capacity Architecture -Service Load Balancing Architecture - Cloud Bursting Architecture - Elastic Disk Provisioning Architecture - Redundant Storage Architecture.

MODULE V ADVANCED CLOUD ARCHITECTURES **8**

Hypervisor Clustering Architecture - Load Balanced Virtual Server Instances Architecture - Non-Disruptive Service Relocation Architecture - Zero Downtime Architecture - Cloud Balancing Architecture -Resource Reservation Architecture - Dynamic Failure Detection and Recovery Architecture -Bare-Metal Provisioning Architecture - Rapid Provisioning Architecture - Storage Workload Management Architecture.

MODULE VI WORKING WITH CLOUDS **7**

Cloud Delivery Models: The Cloud Provider Perspective - Cloud Delivery Models: The Cloud Consumer - Cost Metrics and Pricing Models - Business Cost Metrics - Cloud Usage Cost Metrics - Cost Management Considerations.

Total Hours: 45

3. Micheal Miller, “Cloud computing”, 1st Edition, Pearson, 2009.

OUTCOMES:

Students who complete this course will be able to

- Articulate the concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for state-of-the-art cloud computing.
- Identify problems, explain, analyze and evaluate various cloud computing solutions.
- Demonstrate the various tools used in the cloud environment.
- Provide the appropriate cloud computing solutions according to the applications used.

SSBY01 SOCIETY, TECHNOLOGY AND SUSTAINABILITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- Aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- Understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

PREREQUISITES:

- Advanced Sciences

MODULE I TECHNOLOGY AND ITS IMPACTS **9**

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life –Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT **9**

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change

MODULE III SOCIETY AND TECHNOLOGY **9**

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of

technology – Impact of technology on developer and consumers – Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE **9**

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media Technology – Information Systems Technology – Nanotechnology – Space Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY **9**

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

4. Martin A.A Abraham, ‘Sustainability Science and Engineering: Defining Principles’, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

OUTCOMES:

At the end of this course, the students will be able to

- implement the benefits of modern technology for the well-being of human life.
- connect sustainability concepts and technology to the real world challenges.
- find pathway for sustainable society.

VISION AND MISSION OF THE DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

VISION

The vision of the Department of Computer Science and engineering is to impart quality education, inculcate professionalism and enhance the problem solving skills of the students in the domain of Computer Science and Engineering with a focus to make them industry ready, involve in possible areas of research, to pursue and have continual professional growth.

MISSION

- Equip the students with strong fundamental concepts, analytical capability, programming and problem solving skills.
- Create an ambience of education through faculty training, self learning, sound academic practices and research endeavors.
- Facilitate a research culture in the department leading to high quality publications and funded projects.
- To identify potential areas of research and create centre of excellence in those areas.
- Provide opportunities to promote organizational and leadership skills in students through various extra – curricular activities.
- Expose the students to emerging and upcoming technologies through co-curricular events.
- To make the students as for as possible industry ready to enhance their employability in the industries.
- To improve department industry collaboration through internship programme and interaction with professional society through seminar/workshops.
- Imbibe social awareness and responsibility in students to serve the society.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES
M.Tech. (Software Engineering)

PROGRAMME EDUCATIONAL OBJECTIVES

- To impart advanced concepts of software engineering design and development.
- To train the graduates in process methodologies and techniques for software development.
- To provide in depth knowledge on the application of software engineering CASE tools and their relevance to industry practices.
- To pursue research in software modeling and design for solving complex problems.

PROGRAMME OUTCOMES

On completion of the programme the graduates will

- have the knowledge and skills in the processes and practices adopted in software development.
- be able to apply software engineering tools for solving real life problems.
- be able to undertake need based research focus on issues related to industries.
- be equipped with necessary skills for technical documentation and presentation.

CURRICULUM & SYLLABI FOR M.Tech. (SOFTWARE ENGINEERING)

(FOUR SEMESTERS / FULL TIME)

CURRICULUM

SEMESTER I

Sl. No	Course Code	Course Title	L	T	P	C
1	MAB6189	Statistical Methods and Queuing Theory	3	1	0	4
2	CSB6122	Advanced Database Technology	3	0	2	4
3	CSB6123	Software Requirement Analysis and Estimation	3	0	0	3
4	CSB6104	Computer Networks And Management	3	0	2	4
5		Elective-I	3	0	0	3
6	CSB6101	Research Methodology for Engineers	3	1	0	4
7	CSB6124	Case Tools lab	0	0	3	1
8	CSB6125	Term Paper	0	0	2	1
						24

SEMESTER II

Sl. No	Course Code	Course Title	L	T	P	C
1	CSB6231	Software Design and Architecture	3	0	0	3
2	CSB6232	Information Security	3	0	0	3
3	CSB6233	Software Testing and Quality Assurance	3	0	0	3
4	CSB6234	Formal Methods for Software Engineering	3	0	0	3
5		Elective - II	3	0	0	3
6		Elective - III	3	0	0	3

SEMESTER I

MAB 6189 STATISTICAL METHODS AND QUEUING THEORY

L	T	P	C
3	1	0	4

OBJECTIVES:

- To teach about the probability and Random variable of the various functions. It also helps to understand the various statistical methods including the Design of experiments.
- To expose the students to apply certain probability, statistical and operational research concepts in practical applications of computer science areas.

PREREQUISITES:

- Engineering Mathematics

MODULE I BASIC PROBABILITY **8**

Axioms of probability – Addition and Multiplication theorem – Conditional probability – Total Probability – Random variables.

MODULE II DISTRIBUTIONS **8**

Binomial, Poisson, Geometric, Uniform, Normal, Exponential distributions – Moments – Moments generating functions and their properties – Function of random variables.

MODULE III ESTIMATION THEORY **8**

Partial and Multiple correlations – Partial and multiple regressions – Estimation of parameters using maximum likelihood estimator and method of moments.

MODULE IV TESTING OF HYPOTHESIS **7**

Basic definitions of statistical hypothesis – Tests based on Normal, T, Chi – square and F distributions for mean, variance and proportion.

MODULE V DESIGN OF EXPERIMENTS **7**

Analysis of variance – One way and two way classifications – Completely randomized design – Randomized block design – Latin square design – 22 factorial designs.

MODULE VI QUEUING THEORY **7**

Characteristics of Queuing Models – Poisson Queues - (M / M / 1): (FIFO / 8 /8), (M/M/C): (FIFO / 8 / 8), models.

L – 45; T – 15; Total Hours: 60

7. R. Lyman Ott, Michael Longnecker, "An Introduction to Statistical Methods and Data Analysis", 6th Edition, Brooks/Cole Cengage Learning, USA, 2010.

OUTCOMES:

Students who complete this course will be able to

- acquire skills in handling situations involving more than one random variable and functions of random variables.
- explain the notion of sampling distributions and complete simple problems using statistical techniques useful in making rational decisions in management problems.
- apply the statistical methods designed to contribute to the process of making scientific judgments in the face of uncertainty and variation.
- apply the basic queuing models.

CSB6122 ADVANCED DATABASE TECHNOLOGY L T P C

3 0 2 4

OBJECTIVES:

- To emphasize the practical and theoretical aspects of advanced topics in databases, such as object-relational databases and data warehouses.
- To disseminate the various data analysis techniques.
- To expose the main techniques for developing database systems.

PREREQUISITES:

- Database Management System

MODULE I DATABASE MANAGEMENT 8

Relational data model - SQL - Database design - Entity-Relationship model - Relational normalization - Embedded SQL - Dynamic SQL - JDBC – ODBC.

MODULE II ADVANCED DATABASES 7

Object databases - Conceptual object data model - XML and Web Data - XML Schema - Distributed data bases - OLAP and Data Mining - ROLAP and MOLAP.

MODULE III QUERY AND TRANSACTION PROCESSING 7

Query processing basics - Heuristic optimization - Cost, size estimation - Models of transactions - Architecture - Transaction processing in a centralized and distributed system - TP monitor.

MODULE IV IMPLEMENTING AND ISOLATION 8

Schedules - Concurrency control - Objects and semantic commutatively - Locking -Crash, Abort and Media failure - Recovery - Atomic termination - Distributed deadlock - Global serialization - Replicated databases - Distributed transactions in real world.

MODULE V DATABASE DESIGN ISSUES 7

Security - Encryption - Digital signatures - Authorization - Authenticated RPC - Integrity - Consistency - Database tuning - Optimization and research issues.

MODULE VI CURRENT ISSUES **8**

Rules - Knowledge Bases - Active and Deductive Databases – Multimedia Databases – Multimedia Data Structures – Multimedia Query languages - Spatial Databases.

L-45; P-15; Total Hours: 60

4. Raghu Ramakrishna and Johannes Gehrke,"Database Management Systems, 3rd Edition, Tata McGraw Hill, 2003.

OUTCOMES:

Students who complete this course will be able to

- identify an automated database design tool to design complex database systems.
- apply object-relational data model concepts in database modeling and design.
- optimize recovery of database transactions in relevant application.

CSB6123	SOFTWARE REQUIREMENTS ANALYSIS AND ESTIMATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To enable the students to identify understand the role of requirement engineering in software engineering.
- To make the students to be aware of the fundamentals of software costing and pricing.
- To analyze the concept of risk management.

PREREQUISITES:

- Software Engineering

MODULE I THE CONTEXT OF SOFTWARE REQUIREMENTS 7

The Software Crisis – Software Estimation – Software Lifecycle – Software Projects – Management Activities in a Software Project – Requirement Engineering – Software Engineering.

MODULE II SOFTWARE REQUIREMENT DEVELOPMENT 7

Establishing the product vision and project scope – Finding the voice of customer hearing the voice of customer – Understanding user requirements – Documenting the requirements - Risk reduction through prototyping – Setting requirement priorities – Validating the requirements-Software Process model.

MODULE III SOFTWARE REQUIREMENT AND RISK MANAGEMENT 8

Elements of Risk Management – Documenting Project Risks – Planning For Risk Management – Requirements Elicitation – Requirements Analysis – Requirements Specification – Requirements Validation – Requirements Management.

MODULE IV SOFTWARE REQUIREMENTS ANALYSIS 8

Size Estimation - Two Views of Sizing- Function Point Analysis- Mark II FPA- Full Function Points – Other Function Point Extensions – Approximate Function Point Computations – Directions in Functional Size Measurements - LOC Estimation - Conversion between Size Measures.

MODULE V EFFORT, SCHEDULE AND COST ESTIMATION 7

Productivity - Estimation Factors - Approaches to Effort and Schedule Estimation - COCOMO II - Putnam Estimation Model – Using Complexity As Estimator – Estimation By Analogy - Algorithmic Models –Bottom Up Estimation - Cost Estimation – Validating Software Estimates.

MODULE VI SOFTWARE ESTIMATION TOOLS 8

Desirable features in software estimation tools- IFPUG- USC's COCOMO II - SLIM (Software Life Cycle Management) Tools.

Total Hours: 45

REFERENCES:

1. Ian Sommerville,"Software Engineering", 8th Edition, Pearson Education India, 2008.
2. Karl E Wiegers , Joy Beatty ," Software Requirements", 3rd Edition, Microsoft, 2012.
3. Swapna Kishore, Rajesh Naik, "Software Requirements and Estimation", 1st Edition, Tata McGraw Hill , 2001.

OUTCOMES:

Students who complete this course will be able to

- explain the role of software requirements development.
- explore the costs and risks of the requirements process and its relationships to the rest of the software development life cycle.
- develop different design solutions to a given problem and recommend the best one within limitations of cost, time, knowledge, existing systems and organizations.

CSB6104	COMPUTER NETWORKS AND MANAGEMENT	L	T	P	C
	(Common to M.Tech (CSE, NS,SE, CSE-BDA))	3	0	2	4

OBJECTIVES:

- To gain knowledge on the basic concepts of computer networks and OSI network model.
- To introduce the operation and management of computer networks.
- To understand the paradigms and functions of network management.
- To study the underlying applications and tools for network management.
- To acquire knowledge on broadband networks and its services.

PREREQUISITES:

- Operating System

MODULE I FUNDAMENTALS OF COMPUTER NETWORK TECHNOLOGY **7**

Network Topology, LAN, Network node components- Hubs, Bridges, Routers, Gateways, Switches, WAN, ISDN Transmission Technology, Communications protocols and standards.

MODULE II OSI NETWORK MANAGEMENT **7**

OSI Network management model- Organizational model -Information model, Communication model. Abstract Syntax Notation - Encoding structure, Macros Functional model CMIP/CMIS.

MODULE III INTERNET MANAGEMENT **7**

SNMP-Organizational model-System Overview - The information model - Communication Model - Functional model - SNMP proxy server- Management information, protocol remote monitoring.

MODULE IV BROADBAND NETWORK MANAGEMENT **8**

Broadband networks and services - ATM Technology-VP,VC - ATM Packet - Integrated service - ATMLAN emulation - Virtual LAN - ATM Network Management - ATM Network reference model, integrated local management Interface - ATM Management Information base-Role of SNMD and ILMI in

ATM Management- M1, M2, M3, M4 Interface- ATM Digital Exchange Interface Management.

MODULE V NETWORK MANAGEMENT APPLICATIONS 8

Configuration management - Fault management - Performance management - Event Correlation Techniques security Management - Accounting management - Report Management- Policy Based Management Service Level Management.

MODULE VI APPLIED NETWORK MANAGEMENT 8

The Need for Management Integration- Management Integration challenge - Approaches to Management Integration- Service Level Management-The Motivation for Service Level Agreements - Identification of Service Level Parameters - Defining a Service Level Agreement- Managing for a Service Level.

L- 45; P-15; Total Hours: 60

REFERENCES:

1. Mani Subramanian, "Network Management: Principles and Practices", 2nd Edition, Prentice Hall, 2012.
2. Alexander Clemm, "Network Management Fundamentals", 1st Edition, Cisco Press, 2006.
3. Adrian Farrell, "Network Management Know It All", 1st Edition, Elsevier India, 2008.
4. Richard Burke, "Network Management: Concepts & Practice, A Hands on Approach", 1st Edition, Prentice Hall, 2003.

OUTCOMES:

Students who complete this course will be able to

- correlate the fundamental importance of network information management related to the business objectives of an organization.
- use computer network management tools and the systems.
- apply the basic knowledge of current developments in information and communication technologies, standards and applications to network related applications.
- visualize the effectiveness of Broadband networks and services.

CSB6101 RESEARCH METHODOLOGY FOR ENGINEERS **L T P C**

(Common to M.Tech (CSE, SE, NS, IT, IS & DF, CPA,CSE-BDA)) **3 1 0 4**

OBJECTIVES:

- To make the students well versed in Data analysis.
- To describe the steps involved in research process.
- To explain them how to formalize research problems.
- To discuss clearly the approaches for research through some case studies.

PREREQUISITES:

- Engineering Mathematics
- Operational Research

MODULE I RESEARCH PROBLEM **8**

The research problem – Sources of research problem – Information, how to deal with it – Criteria / characteristics of a good research problem – Errors in selecting a good research problem – Types of research – Nature and use of arguments.

MODULE II SAMPLING DESIGN AND SCALING TECHNIQUES **7**

Census and Sample survey – Steps in Sampling Design – Different types of Sample Designs – Complex Random Sampling Designs – Measurement scales – Techniques of Developing Measurement Tools – Scaling – Important Scaling Techniques.

MODULE III METHODS OF DATA COLLECTION AND ANALYSIS OF DATA **8**

Collection of Primary Data – different types – Some other methods of Data Collection – Collection of Secondary Data – Processing Operations – Types of Analysis – Measures of Central tendency – Measures of Dispersion.

MODULE IV LINEAR PROGRAMMING **10**

Basic of Operations Research(OR): Characteristics of Operations Research – OR and Decision making- Linear programming – Stimulation and Graphical

solution of canonical and standard forms of Linear programming problem – Algebraic solution – Simplex method – Charne's method of penalties – Concept of duality – Properties of duality.

MODULE V TRANSPORTATION AND ASSIGNMENT MODELS 6

Transportation Problem – Assignment Problem – Travelling Salesman Problem.

MODULE VI CASE STUDIES 6

Presentation by students on their area of research.

L – 45; T – 15; Total Hours: 60

REFERENCES:

1. Kothari, C.R., "Research Methodology: Methods and Techniques", 2nd Edition, New Age International, New Delhi, 2012.
2. Nicholas Walliman, "Your Research Project", 2nd Edition, Vistaar Publication, New Delhi, 2005.
3. Taha H.A., "Operations Research: An Introduction", 7th Edition, Pearson Education Edition, Asia, New Delhi, 2002.
4. Richard A. Johnson, "Miller and Freund's Probability and Statistics for Engineers", 8th Edition, Pearson Education, Asia, 2011.

OUTCOMES:

Students who complete this course will be able to

- identify the research problem.
- become capable of analyzing the data using mathematical techniques.
- learn to apply the probability concepts in research.
- demonstrate the different research methods applicable to a specific problem.

CSB6124	CASE TOOLS LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To know how CASE (Computer Aided Software Engineering) tools are used in various stages of the Software Development Life Cycle.
- To give the analysis elements of the project and define the association between them.
- To become familiar with UML(Unified Modeling Language).
- To learn how to test the developed software using Rational Rose.

1. Problem Analysis and Project Planning Thorough study of the problem – Identify project scope, Objectives, infrastructure
2. Software Requirement Analysis Describe the individual Phases/ modules of the project, Identify deliverables.
3. Data Modelling Use work products – data dictionary, use case diagrams and activity diagrams, build and test class diagrams, sequence diagrams and add interface to class diagrams.
4. Software Development and Debugging.
5. Software Testing Prepare test plan, perform validation testing, coverage analysis, memory leaks, develop test case hierarchy, Site check and site monitor.

PREREQUISITES:

- Object Oriented Analysis and Design

List of Experiments:

1. Quiz System.
2. Online ticket reservation system.
3. Remote computer monitoring.
4. Student marks analysing system.
5. Expert system to prescribe the medicines for the given symptoms.

6. ATM system.
7. Platform assignment system for the trains in a railway station.
8. Stock maintenance.
9. E-mail Client system.
10. Payroll System.
11. Course Registration System.
12. Real-Time Scheduler.

Software Required:

Case Tools: Rational Suite, Win runner, Empirix.

Languages: C/C++/JDK 1.3, JSDK, INTERNET EXPLORER, UML. Front End: VB, VC++, Developer 2000.

Back End: Oracle, MS-Access, SQL.

OUTCOMES:

Students who complete this course will be able to

- analyze a problem using different UML diagrams and design the architecture for a problem.
- develop coding and apply CASE tool in all the phases of software development.
- draw Use case diagram, Class diagram, Sequence diagram and collaboration diagram.
- test the software, memory usage of the software and validate the Test cases using Rational Rose.

SEMESTER II

CSB6231	SOFTWARE DESIGN AND ARCHITECTURE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To gain knowledge on the challenges of advanced software design and various issues relating to software design.
- To understand the tools and techniques for the automatic analysis and evaluation of software.
- To introduce various software design techniques.
- To acquire knowledge on the various Architectural styles and patterns.

PREREQUISITES:

- Software Engineering

MODULE I INTRODUCTION 8

The Architecture Business Cycle: Where do architectures come from - Software processes and the architecture business cycle - what makes a “good” architecture? - What software architecture is and what it is not, other points of view - Architectural patterns, reference models and reference architectures - Importance of software architecture - Architectural structures and views.

MODULE II ARCHITECTURAL STYLES AND CASE STUDIES 8

Architectural styles - Pipes and filters - Data abstraction and object-oriented organization - Event-based, implicit invocation - Layered systems – Repositories – Interpreters - Process control - Other familiar architectures - Heterogeneous architectures. Case Studies: Keyword in Context - Instrumentation software - Mobile robotics - Cruise control - Three vignettes in mixed style.

MODULE III NON FUNCTIONAL REQUIREMENTS 9

Functionality and architecture - Architecture and quality attributes - System quality attributes - Quality attribute scenarios in practice - Other system quality attributes - Business qualities - Architecture qualities. Achieving Quality: Introducing tactics - Availability tactics - Modifiability tactics - Performance

tactics - Security tactics - Testability tactics - Usability tactics - Relationship of tactics to architectural patterns - Architectural patterns and styles.

MODULE IV ARCHITECTURAL PATTERNS – 1 **6**

Introduction from mud to structure: Layers, Pipes and Filters, Blackboard.

MODULE V ARCHITECTURAL PATTERNS – 2 **7**

Distributed Systems: Broker - Interactive Systems: MVC, Presentation-Abstraction-Control.

MODULE VI DESIGN PATTERNS **7**

Structural decomposition: Whole – Part; Organization of work: Master – Slave - Access Control: Proxy.

Total Hours: 45

REFERENCES:

1. Paul Clements, Rick Kazman, “Software Architecture in Practice – Len Bass”, 2nd Edition, Pearson Education, 2003.
2. Frank Buschmann, Regine Meunier, Hans Rohnert, Peter Sommerlad, Michael Stal, “Pattern-Oriented Software Architecture, A System of Patterns”, 2nd Edition, Volume 1, John Wiley and Sons, 2008.
3. Mary Shaw and David Garlan,”Software Architecture- Perspectives on an Emerging Discipline”, Prentice-Hall of India, 2007.

OUTCOMES:

Students who complete this course will be able to

- apply the principles behind software patterns to design real time applications.
- acquire practical competence in the usage and application of tools to support automated software analysis.
- adopt different architectural styles for designing a system.

CSB6232	INFORMATION SECURITY	L	T	P	C
	(Common to M.Tech (SE, NS))	3	0	0	3

OBJECTIVES:

- To explain clearly about security policies and the major mechanisms for implementing security policies.
- To disseminate how threats to an organization are discovered, analyzed and dealt with.
- To train on procedures and practices for information security services.

PREREQUISITES:

- Computer security and Computer Networks

MODULE I INTRODUCTION TO INFORMATION SECURITY 8

Introduction-History of information security-What is security-Need for security-CNSS security model-Components of an information system-Balancing information security and access-System development life cycle-Security systems development life cycle- Threats-Attacks-Secure software development.

MODULE II RISK MANAGEMENT 7

Introduction- Risk identification- Assessment- Control strategies- Selecting a risk control strategy – Quantitative versus Qualitative risk control practices.

MODULE III PLANNING FOR SECURITY 8

Introduction-Information security planning and governance- Information security policy, standards and practices-Cryptographic tools-protocols for secure communications-Attacks on cryptosystems.

MODULE IV PHYSICAL SECURITY 7

Introduction-Physical access controls-Fire Security and safety-Failure of supporting utilities and structural collapse-Interception of Data-Remote computing security.

MODULE V IMPLEMENTING INFORMATION SECURITY 7

Information security project management-Technical aspects of implementation-Non technical aspects of implementation- Positioning and staffing the security function.

MODULE VI SOCIAL AND HUMAN ELEMENTS OF INFORMATION SECURITY 8

Human and Social Aspects of Password Authentication- Impact of the Human Element on Information Security-Social and Human Elements of Information Security: A Case Study-Security Configuration for Non-Experts: A Case Study in Wireless Network Configuration.

Total Hours: 45

REFERENCES:

1. James Michael Stewart, Ed Tittel and Mike Chapple, “Principles of Information Security”, 3rd Edition, John Wiley & Sons, 2011.
2. Jason Andress, “The Basics of Information Security”, 1st Edition, Syngress Press, Elsevier Publications, 2011.
3. Merkow, “Information Security: Principles and Practices”, 2nd Edition, Pearson Education India, 2007.

OUTCOMES:

Students who complete this course will be able to

- analyze the major information security threats to any organization.
- apply security policies, standards and practices.
- implement authorization techniques to reduce security threats.

CSB6233	SOFTWARE TESTING AND QUALITY ASSURANCE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the theoretical aspects of software testing.
- To demonstrate the knowledge of the existing testing methods.
- To expose to various industrial practices on software testing and quality assurance strategies
- To develop into a software tester and quality controller

PREREQUISITES:

- Software Engineering

MODULE I TESTING PRINCIPLES 8

Testing as an Engineering activity – TMM – Testing fundamentals – Testing as a process - Defects – Defect hypotheses and tests - Strategies and methods for test case design – Black Box approach – Random testing – Equivalence class partitioning – Boundary value analysis – Other approaches – White box approach – Test adequacy criteria – Mapping white box testing methods with TMM.

MODULE II LEVELS OF TESTING AND TEST PLAN 8

Need for levels of testing – Unit testing – Test harness – Integration test – Strategies and procedures – Integration test plan – Different types of system tests – Regression test – alpha beta acceptance test – Role of use cases – mapping levels of testing with TMM - Test planning – components and attachments – reporting test results – Test specialist – Tester certifications – study on testing software.

MODULE III DEFECT ANALYSIS AND PREVENTION 5

Processes and Defects - History of Defect Analysis and Prevention - Necessary Support for a Defect Prevention Program - Techniques for Defect Analysis - Defect Causal Analysis - The Action Team: Making Process Changes - Monitoring Actions and Process Changes - Benefits of a Defect Prevention Program - Defect Prevention and the Three Critical Views- Defect removal analysis – Defect removal effectiveness and process maturity level.

MODULE IV SOFTWARE METRICS **8**

Scope of software metrics, Classifying software measures, Measurement basics – representational theory, scales, meaningfulness, What to measure – GOM technique, Control flow structure, product quality metrics – MTTF, defect density, customer problems, customer satisfaction, function point, Metrics for software maintenance, In-process quality metrics.

MODULE V QUALITY ASSURANCE **8**

Quality concepts – quality, quality control, quality assurance, cost of quality Software quality assurance – SQA activities, software reviews, inspections, audits, Software reviews, inspections, audits, Software reliability Quality Attributes: correctness, reliability, usability, integrity, portability, maintainability, interoperability. Ishikawa's Seven Basic Tools.

MODULE VI QUALITY STANDARDS **8**

Basic concept of – ISO 9000 & 9001, CMM, six sigma.- Real time case study on testing practices in the industry – Study on various certification procedures to become a professional tester

TOTAL HOURS: 45

REFERENCES :

1. Ilene Burnstein, practical Software Testing: A Process-Oriented Approach, Springer Professional Computing, 2003.
2. William Perry, "Effective Methods For Software Testing", 3rd Edition, Wiley publications, 2006.

4. Stephen Kan, "Metrics and Models in Software Quality Engineering", 2nd Edition, Addison-Wesley Professional, 2003.
5. Patton, "Software Testing", 2nd Edition, Pearson Education India, 2006.

OUTCOMES

Students who complete this course will be able to

- understand and apply the various software testing strategies and apply the same in industrial practices.
- apply software quality controls and ensure quality in a software process.
- design and implement software quality standards and take up a career as a professional software tester

CSB6234	FORMAL METHODS FOR SOFTWARE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the notion of formal methods in software engineering.
- To understand the theoretical foundations of software engineering in terms of basic style, constructs and notations.
- To expose the students to the tools used for formal semantic analysis.

PREREQUISITES:

- Discrete Mathematics

MODULE I INTRODUCTION **6**

Need for formal Methods – Formal Vs Informal Programming- Software Engineering to Formal Methods – Advantages of Formal Methods – Weaknesses of Formal Methods – A Survey of Formal Methods.

MODULE II LOGICAL TOOLS **8**

Applications of Logic – Antecedents - Branches of Logic - Propositional Logic – Predicate Logic - Mathematical Reminders – Relationships and Ordinals - Computability - Hoare Logic.

MODULE III Z NOTATION **8**

The Interchange Language – User Defined Identifiers – Data Types – Basic Types – Compound Types – Schemas – Additional Constructs.

MODULE IV VDM **8**

Introduction to VDM – Basic Types – Quote Types – Compound Types – Optional Types - Functions - Operations – Additional Constructs.

MODULE V FORMAL SEMANTICS AND TOOLS **8**

Operational Semantics – Denotation Semantics – Axiomatic Semantics – Proof Editors - Proof Analyzer – Symbolic Simulators –Translators – Test Generation Tools.

MODULE VI FORMAL METHODS FOR COMPLEX SOFTWARE SYSTEMS **7**

Formal Specification Techniques and Software Architectures - Formal Analysis Techniques – Element Level Analysis – Composition Analysis – Refinement Analysis.

Total Hours: 45

REFERENCES:

1. Hossam A. Gabbar, “Modern Formal Methods and Applications”, 1st Edition, Springer, 2010.
2. Jean-Francois Monin, “Understanding Formal Methods”, 1st Edition, Springer, 2003.

OUTCOMES:

Students who complete this course will be able to

- apply the notations for requirement specifications.
- use formal semantic tools for software documentation.
- analyze complex software systems using formal methods.

CSB6235	SOFTWARE DESIGN (CASE STUDY)	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To give hands on experience on tools and techniques for design practices.
- To acquire training on the preparation of Software Requirement Specification document
- To give training on the preparation of design document.
- To highlight various design methods used for solving real life problems.
- To enhance soft skills, team building and technical writing skills.

PREREQUISITES:

- Software Engineering

METHODOLOGY OF ASSESSMENT

- The class can be grouped as teams of not more than three in a team.
- Each team can present their observations based on the parameters given.
- Each team should prepare and deliver a presentation on the contents of the documents such as the SRS and Design document.
- Case Study problems may be selected as per the choice of the students and the Case study may be evaluated on the following parameters
- Problem description and Analysis.
- Requirements Gathering Activities
- Different Techniques adopted for requirements gathering
- Software Requirement Specification Document
- Design Representations.
- Selection of appropriate design methods for the problem.
- Steps Taken to Address the Problem and the Inferences.
- Preparation of design document.
- Challenges and How They were Met
- Communication and clarity of presentation.

OUTCOMES:

Students who complete this course will be able to

- prepare an effective SRS document for the given problem
- select and apply appropriate software design methodologies for the problem chosen.
- make use of various tools for design representations.
- adopt the various methods of requirement elicitation and apply them.
- co-ordinate the work in teams in a better manner.

CSB6236	SOFTWARE QUALITY ASSURANCE LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To provide hands on experience on various software testing tools like Rational Rose Suite, Rational Functional Tester, Rational Performance Tester, Load Runner.
- To plan and design test cases and create test documentation.
- To understand and make use of tools to calculate various software quality metrics.

PREREQUISITES:

- Software Engineering

SOFTWARE TESTING LAB

1. Study of types of testing :
   a. Unit Testing
   b. Regression Testing
   c. Integration Testing
   d. Validation Testing
   e. Acceptance Testing
   f. System Testing
2. Study of testing Tools:
   a. Study of Any Testing Tool (Win Runner)
   b. Study of any web testing tool (e.g. Selenium)
   c. Study of Any Bug Tracking Tool (Bugzilla, Bugbit)
   d. Study of Any Test Management Tool (Test Director)
   e. Study of any open source testing tool (Test Link)
3. Prepare test plan and develop test case hierarchy
4. Generate Test cases and Test Documentation in the following case studies
   a. Library System

b. Course Registration System

c. Banking System

d. Student Marks Analyzing System

e. Online Ticket Reservation System

MEASUREMENTS LAB

1. Study of software measurements analysis and parameters
2. Object oriented programming development: Compute method inheritance factor weighted method for class.
3. Web application to calculate the following Weighted Method Count (WMC)
   - No of Children (NoC)
   - Depth of Inheritance (DIT)
   - Response for a Class (RFC)
   - Coupling and Cohesion between Objects (CCBO)

OUTCOMES:

Students who complete this course will be able to

- demonstrate the various software testing techniques on various software testing tools.
- develop test cases and test documentation.
- implement various levels of testing for any practical application.
- estimate the various factors (such as Weighted Mount Count, Depth of Inheritance, No of Children, etc.,) on a typical web application.

SEMESTER III

CSB7201	SOFTWARE PROJECT MANAGEMENT	L	T	P	C
	(Common to M.Tech (CSE, NS, SE, CPA, CSE-BDA))	3	0	0	3

OBJECTIVES:

- To highlight the importance of software project management.
- To discuss various processes in Software Project Management.
- To provide tools and techniques for project monitoring.
- To expose different project management life cycles.

PREREQUISITES:

- Software Engineering

MODULE I FUNDAMENTALS OF PROJECT MANAGEMENT 8

Defining a project- Sequence of Activities – Complex Activities – A Business focused definition - Understanding the Scope Triangle - Managing the Creeps- Importance of Classifying Projects - Fundamentals of Project Management - Introducing Project Management Life Cycles - Choosing the Best-Fit PMLC Model.

MODULE II PROJECT MANAGEMENT PROCESS GROUPS 8

Defining the Five Process Groups - Nine Knowledge Areas - Mapping Knowledge Areas to Process Groups - Using Tools, Templates, and Processes to Scope a Project - Managing Client Expectations.

MODULE III TPM PROJECT 8

Using Tools, Templates, and Processes to Plan a Project - Application Software Packages- Project Planning Tools – Planning and Conducting Joint Project - Building the WBS - Estimating - Constructing the Project Network Diagram - Effective Project Proposal - Launch a TPM Project- Monitor and Control a TPM Project.

MODULE IV ESTABLISHING PROJECT MANAGEMENT LIFE CYCLES 7

Understanding the Complexity/Uncertainty - Traditional Project Management - Incremental Project Management Life Cycle - Agile Project Management -

Iterative Project Management Life Cycle- Adaptive Project Management Life Cycle – Adapting and Integrating the APM Toolkit.

MODULE V BUILDING AN EFFECTIVE PROJECT MANAGEMENT 7

Establishing and Managing a Project Portfolio Management Process - The Project Portfolio Management Life Cycle - Establishing and Managing a Continuous Process Improvement Program - Defining Process and Practice Maturity - Using Process Improvement Tools, Templates and Processes.

MODULE VI MANAGING THE REALITIES OF PROJECTS 7

Prevention and Intervention Strategies for Distressed Projects - Using Tools, Templates and Processes to Prevent Distressed Projects - Organizing Multiple Team Projects - Managing the Professional Development of Project Teams.

Total Hours: 45

REFERENCES:

1. Robert K. Wysocki, “Effective Project Management – Traditional, Agile, Extreme”, 6th Edition, Wiley Publication, 2011.
2. Robert K. Wysocki, “Effective Software Project Management”, 3rd Edition, Wiley Publication, 2010.

OUTCOMES:

Students who complete this course will be able to

- design a project management plan using different project management life cycles.
- find a suitable project management life cycle model for effective project execution.
- analyze the risks associated with the projects.

ELECTIVES

CSBY01	**THEORY OF COMPUTATION**	**L**	**T**	**P**	**C**
	(Common to M.Tech(CSE, SE, CSE-BDA))	**3**	**0**	**0**	**3**

OBJECTIVES:

- To explain different abstract machine models of computations mathematically.
- To introduce students to the models of computation, including Turing machines, pushdown automata and deterministic and non-deterministic finite automata.
- To enhance/develop students ability to understand and conduct mathematical proofs for computation.

PREREQUISITES:

- Computer Architecture

MODULE I INTRODUCTION TO FINITE AUTOMATA 8

Strings – Alphabets – Languages – Inductive Proofs – Finite Automata – Deterministic Finite Automata – Non Deterministic Finite Automata – Equivalence of NFA and DFA – Finite Automata with e–Moves.

MODULE II REGULAR LANGUAGES 6

Regular Languages – Regular Expressions and regular Languages – Applications of Regular Expressions – Equivalence of Regular Expressions and NFA with -Moves – Properties of Regular Languages – Pumping Lemma.

MODULE III CONTEXT FREE GRAMMAR & LANGUAGES 8

Context Free Grammar – Derivations using Grammar – Leftmost and Rightmost Derivation – Ambiguity – Derivation Trees / Parse Trees – Relationship between Derivation and Derivation Trees – Simplification of Context Free Grammars – Normal forms for Context Free Grammars – CNF and GNF.

MODULE IV PUSH DOWN AUTOMATA 8

Definition of PDA – Languages of PDA – Equivalence of Pushdown Automata and Context Free Languages – Deterministic Pushdown Automata - Pumping Lemma for Context Free Language.

MODULE V COMPUTABILITY **8**

Turing machine – Storage in State, Multiple Tracks, Subroutines – Turing Machine Construction Techniques – Two Way Infinite Tape – Multitape Turing Machine – Universal Turing machine – Turing Machine and Computers.

MODULE VI UNDECIDABILITY **7**

Halting Problem for Turing Machines - Rice Theorem – Unsolvable Problem - Post Correspondence Problem – Properties of Recursive and Recursively Enumerable Languages.

Total Hours: 45

REFERENCES:

1. John E. Hopcroft, Rajeev Motwani, Jeffery D. Ullman, "Introduction to Automata Theory, Languages and Computation", 3rd Edition, Pearson Education, 2011.
2. John.C.Martin, "Introduction to languages and Theory of Computation", 3rd Edition, Tata Mc Graw Hill Education, 2010.
3. A.M.Natarajan, A.Tamilarasi and P.Balasubramani, "Theory of Computation", 1st Edition, New Age International Publishers, 2003.

5. Peter Linz, "An Introduction to Formal Languages and Automata", 3rd Edition, Narosa Publishing House, 2011.

OUTCOMES:

Students who complete this course will be able to

- apply principles to minimize finite automata and grammars of context free languages.
- develop abstract models to simulate complex systems and solve problems on a model of computation.
- categorize problems into solvable and unsolvable constructs.

CSBY02	SOFT COMPUTING	L	T	P	C
	(Common to M.Tech (CSE, SE, NS, CSE-BDA))	3	0	0	3

OBJECTIVES:

- To introduce new ideas of neural networks, fuzzy logic and use of heuristics based on human experience.
- To highlight the role of soft computing algorithm.
- To understand the concepts of Genetic algorithm and its applications.

PREREQUISITES:

- Artificial Intelligence
- Neural Networks

MODULE I NEURO FUZZY AND SOFT COMPUTING 7

Soft computing constituents and Conventional Artificial Intelligence - Neuro fuzzy and soft computing characteristics - Fuzzy sets - Basic definitions - Fuzzy union, intersection and complement - Introduction to Classical Sets and Fuzzy sets – Classical Relations and Fuzzy Relations – Tolerance and Equivalence Relations –Membership Functions: Fuzzification – Methods of Membership Value Assignments – Defuzzification – Lambda-Cuts for Fuzzy sets and Fuzzy Relations – Defuzzification Methods.

MODULE II ARTIFICIAL NEURAL NETWORK 7

Introduction – Machine Learning Basics - Fundamental concept – Evolution of Neural Networks – Basic Models of Artificial Neural Networks – Important Terminologies of ANNs – McCulloch-Pitts Neuron – Supervised Learning Network: – Multiple Adaptive Linear Neurons – Back-Propagation Network – Radial Basis Function Network.

MODULE III ARTIFICIAL NEURAL NETWORK- II 7

Associative Memory Networks: Training Algorithms for Pattern Association – Auto associative Memory Network – Hetero associative Memory Network – Bidirectional Associative Memory – Hopfield Networks – Iterative Auto associative Memory Networks – Temporal Associative Memory Network. Unsupervised Learning Networks: Fixed weight Competitive Nets – Kohonen Self-Organizing Feature Maps – Learning Vector Quantization – Counter

propagation Networks – Adaptive Resonance Theory Networks – Special Networks.

MODULE IV GENETIC ALGORITHM 8

Introduction – Basic Operators and Terminologies in GAs – Traditional Algorithm vs. Genetic Algorithm – Simple GA – General Genetic Algorithm – The Scheme Theorem –Classification of Genetic Algorithm – Holland Classifier Systems – Genetic Programming.

MODULE V NEURO FUZZY MODELING 8

ANFIS Architecture - Hybrid Learning Algorithm - Learning Methods that Cross-fertilize ANFIS and RBFN - ANFIS as a Universal Approximator - Simulation Examples - Extensions and Advanced Topics.

MODULE VI APPLICATIONS OF SOFT COMPUTING 8

A Fusion Approach of Multispectral Images with SAR Image for Flood Area Analysis – Optimization of Travelling Salesman Problem using Genetic Algorithm Approach – Genetic Algorithm based Internet Search Technique – Soft Computing based Hybrid Fuzzy Controllers – Soft Computing based Rocket Engine – Control.

Total Hours: 45

REFERENCES:

6. James A. Freeman and David M. Skapura, “Neural Networks Algorithms, Applications, and Programming Techniques”, 1st Edition, Pearson Edition, 2003.

OUTCOMES:

Students who complete this course will be able to

- apply the theoretical and practical knowledge for the development of basic intelligent systems.
- develop an application using various soft computing algorithms.
- solve various real world problems using neural Fuzzy tools and technologies.

CSBY03	MOBILE COMPUTING	L	T	P	C
	(Common to M.Tech (CSE, SE, CSE-BDA))	3	0	0	3

OBJECTIVES:

- To discuss about advanced learning in the field of wireless communication.
- To expose the students to the concepts of wireless devices and mobile computing.
- To provide a knowledge about various operating systems available currently for developing mobile computing applications.
- To discuss various issues related to security of mobile computing environment.

PREREQUISITES:

- Mobile Communication

MODULE I MOBILE COMPUTING APPLICATIONS 5

Overview – mobile business, mobile government, mobile life – Mobile computing applications supporting M- Business and M- Government – Platforms to support mobile computing applications.

MODULE II OVERVIEW OF WIRELESS NETWORKS 7

Classification – Standard bodies – IEEE 802.11, IETF – GSM – GPRS - Wireless security, architecture and management – Wireless business.

MODULE III MOBILE COMPUTING PLATFORMS 8

Introduction – Local platform services for mobile devices – Wireless middleware –Wireless gateways and mobile application servers – Wireless application protocol (WAP) – Toolkits for implementing wireless environment – Voice communication browsers – Case studies: OMAP, platform and middleware for wireless sensor networks.

MODULE IV WIRELESS PERSONAL AREA NETWORKS 8

Bluetooth – Ultra Wide Band (UWB) – Wireless Sensor Networks (Zigbee) – Generation of cellular networks (From 1G to 5G).

MODULE V MOBILE COMPUTING APPLICATIONS 10

Introduction – Key characteristics – Messaging for mobile users – Mobile commerce – Mobile portal – Mobile Customer Relationship Management - Mobile supply chain management – Special mobile applications – Mobile agent applications.

MODULE VI SECURITY ISSUES IN MOBILE COMPUTING 7

Introduction – Information security – Security techniques and algorithms – Security protocols – Public key infra structure – Trust – Security models – Security framework for mobile environment.

Total Hours: 45

REFERENCES:

1. Amjad Umar. "Mobile Computing and Wireless Communications", 2nd Edition, Age solutions, Inc, 2004.
2. Asoke K Talukder, Hasan Hasan Ahmed and Roopa R Yavagal, "Mobile Computing Technology, Applications and Service Creation", 2nd Edition, McGraw-Hill Communications Engineering, 2011.
3. Jelena Misic, Vojislav Misic, "Wireless Personal Area Networks: Performance, Interconnection and Security with IEEE 802.15.4", 1st Edition, Wiley publications, 2008.

OUTCOMES:

Students who complete this course will be able to

- acquire capability to work with heterogeneous networks.
- apply the knowledge of various mobile operating systems like Android to develop mobile computing applications.
- develop mobile computing applications by analyzing their characteristics and requirements.
- identify the security algorithms to be used for mobile computing environment.

CSBY26 DISTRIBUTED SYSTEMS L T P C

3 0 0 3

OBJECTIVES:

- To provide tools and techniques to model a distributed system principal models and to acquire knowledge on how to model a distributed system.
- To introduce the higher level abstractions such as distributed file systems and peer-to-peer networks.
- To highlight the important issues pertaining to distributed environments.

PREREQUISITES:

- Computer Networks
- Distributed Computing

MODULE I INTRODUCTION TO DISTRIBUTED SYSTEMS 8

Introduction – Examples of distributed systems–Challenges-System models-Architectural models-Fundamental models-Networking and internetworking-Types of network-Network principles-Internet protocols-Ethernet-Wi-Fi-Bluetooth-ATM.

MODULE II DISTRIBUTED OBJECTS 8

API for internet protocols-External data representation-Marshalling-Client server communication-Group communication-Communication between distributed objects – Remote procedure call-Events and notifications-Case study-Java RMI.

MODULE III DISTRIBUTED FILE SYSTEMS 8

File service architecture- Case study: Sun network file system – Andrew File system-Name services-Domain name system-Directory services-Case study of global name service-Peer-To-Peer systems.

MODULE IV DISTRIBUTED TRANSACTIONS 7

Transactions-Nested transactions-Locks-Optimistic concurrency control-Timestamp ordering-Comparison of methods for concurrency control in distributed transactions-Distributed deadlocks-Transaction recovery.

MODULE V DISTRIBUTED MULTIMEDIA SYSTEMS 7

Characteristics of multimedia data-Quality of service management-Resource management-stream adaptation-Case study-Web services-IDL for web services-XML security-Coordination of web services.

MODULE VI DISTRIBUTED SHARED MEMORY 7

Design and implementation issues-Sequential consistency and Ivy case study-Release consistency and Munin case study-Other consistency models-CORBA case study.

Total Hours: 45

REFERENCES:

1. George Coulouris, Jean Dollimore,Tim Kindberg, “Distributed Systems-concepts and Design”, 4th Edition, Pearson Education, 2011.
2. Coulouris, Dollimore, Kindberg and Blair “Distributed Systems: Concepts and Design”, 5th Edition, Addison-Wesley, 2012.

OUTCOMES:

Students who complete this course will be able to

- acquire the ability to apply knowledge of distributed concepts to design and develop a solution for a given distributed application.
- apply the concepts in the design of distributed application.
- model connection-oriented and connectionless communication in 2 tier Client Server architecture.
- differentiate between client centric and data centric consistency models and describe protocols for implementing consistency models and updating replicas in a Distributed System.

CSBY04	WEB TECHNOLOGY	L	T	P	C
	(Common to M.Tech (CSE, SE, CSE-BDA))	3	0	0	3

OBJECTIVES:

- To acquire knowledge on Core technologies that are needed for the web like HTML and XML.
- To facilitate how to build XML applications with DTD and style sheets that span multiple domains ranging from finance to vector graphics to genealogy for use with legacy browsers.
- To get the knowledge on developing web sites which are secure and dynamic in nature.

PREREQUISITES:

- Web Programming Languages

MODULE I INTRODUCTION **7**

HTML Common tags: List, Tables, images, forms, Frames - Cascading Style sheets - Introduction to Java Scripts - Objects in Java Script - Dynamic HTML with Java Script.

MODULE II VBSCRIPT LANGUAGE ELEMENTS **7**

Constants - Variables and Data Types - Mathematical Operations - Logical Operators - Looping and Decision Structures - VBScript Functions and Objects: Data Conversion Functions - Mathematical Functions - Data Formatting Functions -Text Manipulation Functions - Data and Time Functions - Built-in Objects.

MODULE III ASP FUNDAMENTALS **7**

Using Server – Side Includes- Learning the SSI Directives – Creating Modular ASP Code -Using the Request Object: Using Form Information - Using Query String Information – Using Server Variables - Using the Response Object: Create Output – Managing Output – Managing the Connection.

MODULE IV USING COOKIES **8**

Introduction to Cookies: Cookies and Your Browser – Creating a Cookie – Modifying and removing Cookies – Tracking Preferences with Cookies Using

the Application, Session and Server Objects: The application Object - The Session Object – The Server Object –Using the global as a file - Active Data Objects Essentials: Microsoft's Universal Data Access Strategy – The Connection Object – The Record set and Field Objects – The Command and Parameter Objects – Using the Errors Collection.

MODULE V INTRODUCING XML 8

XML: The Life of an XML documents - Related technologies- First XML Document: Hello XML – Exploring the Simple XML Document – Assigning Meaning to XML Tags – Writing a Style Sheet for an XML Document – Attaching a Style Sheet to an XML Document – Style Languages: CSS Style Sheets, CSS Layouts, CSS Text Styles.

MODULE VI ATTRIBUTES, EMPTY TAGS & XSL 8

Attributes – Attributes versus Elements – Empty Elements and Empty Element Tags – XSL-DTDs and Validity: Document Type Definitions - Element Declarations – DTD Files – Document Type Declarations – Validating Against a DTD-Element Declaration - Entity Declarations: What Is an Entity – Internal General Entities – External General Entities – Internal Parameter Entities – External Parameter Entities – Building a Document from Places-Attribute Declaration: What is an Attribute – Declaring Attributes in DTDs - Declaring Multiple Attributes – Specifying Default Values for Attributes – Attribute Types – Predefined Attributes – A DTD for Attribute- Based Baseball Statistics.

Total Hours: 45

REFERENCES:

1. Dave Mercer, "ASP 3.0 Beginners Guide", Tata McGraw-Hill Edition, Sixth reprint, 2004.

2. Rajkamal, "Web Technology", 1st Edition, Tata McGraw - Hill, 2001.

OUTCOMES:

Students who complete this course will be able to

- utilize entry-level system analysis and design principles to solve business problems.
- analyze and create a web page and identify its elements and attributes.
- create XML documents and XML Schema.
- build and consume web services.

CSBY05	XML AND WEB SERVICES	L	T	P	C
	(Common to M.Tech (CSE, SE, CPA, CSE-BDA))	3	0	0	3

OBJECTIVES:

- To understand the basics of XML.
- To provide the background for web services.
- To explain the role of XML in web services.
- To examine the role of different technologies pertaining to web services.

PREREQUISITES:

- Web Programming Languages

MODULE I WEB SERVICES **6**

Introduction: SOAP WSDL UDDI – Origin of web services - Web Technology stack - Web services in reality - Limitations of web services.

MODULE II XML FUNDAMENTALS **9**

XML Fundamentals - XML Documents-XML namespaces Explicit and Default namespaces - Inheriting namespaces and not inheriting namespaces - Attributes and namespaces -XML Schema XML schema and namespaces - A first schema - Implementing XML schema types.

MODULE III OVERVIEW OF SOAP **7**

Overview of SOAP – HTTP – XML-RPC – SOAP: Protocol – Message Structure – Intermediaries – Actors – Design Patterns And Faults – SOAP With Attachments.

MODULE IV UDDI **8**

UDDI at a glance- The UDDI Business registry- UDDI under the covers – Accessing UDDI- How UDDI is playing out.

MODULE V SEMANTICS AND META DATA **6**

Role of semantics and meta data: Web 1.0, 2.0 and 3.0 - Types of semantics: Implicit, formal and Soft semantics - Application and Types of semantics - Models of semantics - Ontology and ontology development.

MODULE VI SEMANTICS AND APPLICATIONS **9**

Semantics for services: Nature of web services - Role of semantics in web services - Creation of Semantic meta data models and annotations – Example applications - Semantics for social data: Nature of social data -Role of semantics - Creation of semantic meta data models and annotations - Semantics for cloud computing.

Total Hours: 45

2. Ramesh Nagappan, Robert Skoczylas and Rima Patel Sriganesh, “Developing Java Web Services”, Wiley Publishing Inc., 2004.

OUTCOMES:

Students who complete this course will be able to

- write an XML Document along with DTD and XSD.
- design applications based on web services using XML.
- identify appropriate technology for web services based application.

CSBY06	MULTIMEDIA SYSTEMS	L	T	P	C
	(Common to M.Tech (CSE, SE,CSE-BDA))	3	0	0	3

OBJECTIVES:

- To introduce principles and current technologies in multimedia systems.
- To explain multimedia concepts such as color theory and compression schemes.
- To describe the ways of processing multimedia information.
- To introduce the multimedia Quality of Service (QoS).

PREREQUISITES:

- Computer graphics and Multimedia

MODULE I INTRODUCTION TO MULTIMEDIA 8

Introduction: Multimedia – Historical Perspective – Multimedia Data and Multimedia Systems – The Multimedia Revolution – Digital Data Acquisition: Analog and digital Signals – Signals and Systems – Sampling Theorem and Aliasing – Filtering – Fourier Theory. Media Representation and Media Formats: Digital Images – Digital Video – Digital Audio – Graphics.

MODULE II COLOR THEORY AND MULTIMEDIA AUTHORING 7

The Color Problem – Trichromaticity Theory – Color Calibration – Color Spaces – Gamma Correction and Monitor Calibration – Multimedia Authoring: Requirements for Multimedia Authoring Tools – Intramedia Processing – Intermedia Processing – Multimedia Authoring Paradigms and User Interfaces – Role of User Interfaces – Device Independent Content Authoring – Multimedia Services and Content Management – Asset Management.

MODULE III MULTIMEDIA COMPRESSION: VIDEO 8

Need for Compression – A Taxonomy of Compression – Lossless compression – Lossy Compression – Media Compression Images: Redundancy and Relevancy of Image Data – Classes of Image Compression Techniques – Lossless Image Coding – Transform Image Coding – Wavelet Based Coding – Fractal Image Coding – Transmission Issues in Compressed Images. Media Compression Video: General Theory of Video Compression – Types of

Predictions – Complexity of Motion Compensation – Video-Coding Standards – VBR Encoding, CBR Encoding, and Rate Control.

MODULE IV MULTIMEDIA COMPRESSION: AUDIO-GRAPHICS 7

Media Compression Audio: Audio-Compression Theory – Audio as a waveform – Audio Compression using Psychoacoustics – Model-Based Audio Compression – Audio Compression using Event Lists. Media Compression Graphics: 2D Graphics Objects – 3D Graphics Objects – Graphics Compression in Relation to Other Media Compression – Mesh Compression using Connectivity Encoding – Mesh Compression Using Polyhedral Simplification – Multi resolution Techniques – Wavelet Based Encoding – Progressive Encoding and Level of Detail.

MODULE V MULTIMEDIA DISTRIBUTION 8

Multimedia Networking: The OSI Architecture – LAN – Modes of Communication – Routing – Multimedia Traffic Control – Multimedia Networking Performance and Quality of Service – Multimedia Communication Standards and Protocols. Wireless Multimedia Networking: Basics of Wireless Communications – Wireless Generations and Protocols – WAP – QoS over Wireless Networks. Digital Rights Management: Watermarking Techniques – Encryption Techniques – Digital Rights Management in the media industry.

MODULE VI MULTIMEDIA DATABASES AND FRAMEWORK 7

Multimedia Databases and Querying: Multimedia Data versus Multimedia Content – Multimedia Metadata – Multimedia Systems and Databases – Standards for Metadata – User Interfaces and Browser Paradigms. Multimedia Framework: Need for Unified Framework – MPEG-21 Objectives – Digital Item Identification – Digital Item Adaptation – Digital Item Processing – Digital Rights Management in Digital Items.

Total Hours: 45

2. Ralf Steinmetz, Klara Nahrstedt, “Multimedia systems”, 1st Edition, Springer Verlag, 2004.

OUTCOMES:

Students who complete this course will be able to

- identify different multimedia data types and multimedia databases.
- apply various multimedia standards and authoring techniques for application development.
- use multimedia compression techniques for real time applications.

CSBY27	SOFTWARE AGENTS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the concepts, techniques and applications of software agents.
- To discuss some security issues.
- To understand the functions of intelligent software agents.

PREREQUISITES:

- Object Oriented Software Engineering

MODULE I AGENTS - OVERVIEW **8**

Agent definition - Agent programming paradigms - Agent Vs Object - Aglet - Mobile agents - Agent frameworks - Agent reasoning.

MODULE II JAVA AGENTS **8**

Processes - Threads - Daemons - Components - Java Beans - ActiveX - sockets - RPCs - Distributed computing - Aglets programming - Jini architecture - Actors and Agents - Typed and proactive messages.

MODULE III MULTI AGENT SYSTEMS **8**

Interaction between agents - Reactive agents - Cognitive agents - Interaction protocols - Agent coordination - Agent negotiation - Agent cooperation - Agent organization - Self-interested agents in Electronic commerce applications.

MODULE IV INTELLIGENT SOFTWARE AGENTS **7**

Interface agents - Agent communication languages - Agent knowledge representation - Agent adaptability - Belief desire intension - Mobile agent applications.

MODULE V AGENTS AND SECURITY **7**

Agent security issues - Mobile agents security - Protecting agents against malicious hosts - Untrusted agent - Black box security - Authentication for agents - Security issues for aglets.

MODULE VI MARKET PLACE APPLICATION **7**

Introduction – Facilitator Agent Buy Sell Message – Buyer Agent Seller Agent – Enhanced Buyers and Sellers- Market Place Application. – Agent Building and Learning Environment.

Total Hours: 45

4. Richard Murch, Tony Johnson, "Intelligent Software Agents", Prentice Hall, 2000.
5. Gerhard Weiss, "Multi Agent Systems - A Modern approach to Distributed Artificial Intelligence", 2nd Edition, MIT Press, 2013.

OUTCOMES:

Students who complete this course will be able to

- summarize and remember the basic concepts of software agents.
- classify and categorize software agents.
- provide authentication for agents.
- apply agent communication languages for developing simple mobile agent applications.

CSBY08	EMBEDDED SYSTEMS	L	T	P	C
	(Common to M.Tech (CSE, SE, NS))	3	0	0	3

OBJECTIVES:

- To provide basic understanding about embedded systems.
- To understand the various building components of an embedded system.
- To give exposure to the embedded programming concepts and study the procedures for development and testing.

PREREQUISITES:

- Digital Signal Processing

MODULE I INTRODUCTION TO EMBEDDED SYSTEMS 6

Definitions – Embedded hardware components – Embedded Software – System on Chip (SoC) – VLSI Circuits – Fundamentals of Embedded System Design.

MODULE II REAL-TIME OPERATING SYSTEMS 8

Overview – Pseudo kernels to Operating Systems – Scheduling Fundamentals – System Services: Buffers - Mailboxes – Semaphores – Deadlock and Starvation Problems- Priority Inversion - Timer and Clock Services – Memory Management Issues.

MODULE III DEVICES, COMMUNICATION BUSES AND PROTOCOLS 8

I/O Devices – Device I/O Types and Examples – Synchronous Communication – ISO Synchronous Communication – Asynchronous Communication – Serial Bus Communication Protocols – Parallel Bus Communication Protocols– Wireless and Mobile System Protocols.

MODULE IV EMBEDDED PROGRAMMING CONCEPTS 8

Assembly Language Programming vs High Level Programming – Embedded C Programming Elements and Fundamentals – Object Oriented Programming for Embedded Systems – Cross Compliers – Memory Footprint optimization - Program Modeling Concepts

MODULE V DEVELOPMENT AND TESTING 8

Embedded Software Development Process - Development Tools – Hardware and Software Design Issues – Techniques and Tools for Testing, Simulation and Debugging - Design Examples and Case Studies of Program Modeling and Programming with RTOS.

MODULE VI PERFORMANCE ANALYSIS OF EMBEDDED SYSTEMS 7

Real Time Performance Analysis – Applications of Queuing Theory – Input/ Output Performance - Analysis of Memory Requirements – Metrics - Fault Tolerance – Inherent Uncertainly – Performance optimization Techniques.

Total Hours: 45

REFERENCES:

3. Kai Qian, David Den Haring, Li Cao, “Embedded Software Development with C”, 1st Edition, Springer, 2009.

OUTCOMES:

Students who complete this course will be able to

- possess the basics of embedded system and its building blocks.
- design an embedded systems by applying the embedded programming concepts.
- analyze a real time scenario and trace its performance.

CSBY28 IT SYSTEMS MANAGEMENT L T P C

3 0 0 3

OBJECTIVES:

- To focus on the importance of information systems management and their leadership issues
- To provide knowledge on the Technologies for developing and managing information resources and systems
- To Support Decision Making followed by the Challenges Ahead for rising societal risks of IT and messaging.

PREREQUISITES:

- Information Technology
- Management Information System

MODULE I INTRODUCTION 5

Importance of information systems management- History - The organizational environment - Technology environment - Mission of IS organizations – Model.

MODULE II LEADERSHIP ISSUES 6

ISO organization – CIO's responsibilities – Strategic uses of information technology – Information systems planning.

MODULE III MANAGING THE ESSENTIAL TECHNOLOGIES 10

Distributed systems – Overall architecture – Seven types of distributed systems - Defining the overall IT architecture – Importance of IT infrastructure – Managing telecommunications – Managing information resources – Managing operations- Case study.

MODULE IV MANAGING SYSTEM DEVELOPMENT 9

Technologies for developing systems – Management issues in system development – Case study.

MODULE V SYSTEMS FOR SUPPORTING KNOWLEDGE BASED WORK 8

Supporting Decision Making – Supporting Collaboration – Supporting Knowledge Work – Case study.

MODULE VI THINKING AHEAD **7**

The Challenges Ahead - Business continuity and disaster recovery – Problem management – Exception management.

Total Hours: 45

REFERENCES:

1. Barbara McNurlin, Ralph Sprague and Tung Bui," Information systems management in practice", 8th Edition, Prentice Hall, 2008.
2. Schiesser and Rich, "IT Systems Management", 2nd Edition, Prentice Hall of India, New Delhi, 2010.
3. Turban, Efraim, Rainer, R.Kelly, Potter and Richard E.," Introduction to Information Technology", 3rd Edition, John Wiley, 2005.

OUTCOMES:

Students who complete this course will be able to

- select and apply bullet-proof processes in areas ranging from change management to production acceptance, technology environment and information systems planning.
- use appropriate technology for managing operations and systems more efficiently and effectively.
- apply information resources to develop systems for supporting knowledge based work in business.

CSBY10	MOBILE AD HOC NETWORKS	L	T	P	C
	(Common to M.Tech (CSE, SE,CSE-BDA))	3	0	0	3

OBJECTIVES:

- To provide a broad overview of the state of wireless and mobile ad hoc networking.
- To discuss physical, networking and architectural issues of mobile ad hoc networks.
- To elaborate the functions of various routing protocols under unicast, multicast and transport layer protocols.
- To give a knowledge about issues in QoS, energy management and security of ad hoc wireless networks.

PREREQUISITES:

- Computer Networks

MODULE I INTRODUCTION **9**

Introduction – Fundamentals of wireless communication technology – The Electromagnetic spectrum – Radio propagation mechanisms – Characteristics of the wireless channel – IEEE 802.11a,b standard – Origin of Ad hoc: Packet radio networks – Technical challenges – Architecture of PRNETs – Components of packet radios – Adhoc wireless networks – Heterogeneity in mobile devices – Wireless sensor networks – Traffic profiles – Types of Ad hoc mobile communications – Types of mobile host movements – Challenges facing Ad hoc mobile networks – Ad hoc wireless internet.

MODULE II ROUTING PROTOCOLS **8**

Introduction – Issues in designing a routing protocol for Ad hoc wireless networks – Classifications of routing protocols – Table-Driven routing protocols – Destination Sequenced Distance Vector (DSDV) – Source-Initiated On-Demand approaches – Ad hoc On-Demand Distance Vector Routing (AODV) – Dynamic Source Routing (DSR) –Temporally Ordered Routing Algorithm (TORA) –Location–Aided Routing (LAR) – Power-Aware Routing (PAR) – Zone Routing Protocol (ZRP).

MODULE III MULTICASTING PROTOCOLS **7**

Introduction – Issues in designing a multicast routing protocol – Operation of multicast routing protocols – An architecture reference model for multicast routing protocols –Classifications of multicast routing protocols – Tree-Based multicast routing protocols – Mesh-based multicast routing protocols – Summary of tree and mesh based protocols – Energy–efficient multicasting– Comparisons of multicast routing protocols.

MODULE IV TRANSPORT LAYER PROTOCOLS **7**

Introduction – Issues in designing a transport layer protocol for Ad hoc wireless networks – Design goals of a transport layer protocol for Ad hoc wireless networks –Classification of transport layer solutions – TCP over Ad hoc wireless networks – Other transport layer protocols for Ad Hoc wireless networks.

MODULE V QOS AND ENERGY MANAGEMENT **7**

Introduction – Issues and challenges in providing QoS in Ad hoc wireless networks –Classifications of QoS solutions – MAC layer solutions – Network layer solutions – QoS frameworks for Ad hoc wireless networks energy management in Ad hoc wireless networks –Introduction – Need for energy management in Ad hoc wireless networks – Classification of energy management schemes – Battery management schemes – Transmission power management schemes – System power management schemes.

MODULE VI SECURITY PROTOCOLS **7**

Security in Ad hoc wireless networks – Network security requirements – Issues and challenges in security provisioning – Network security attacks – Key management – Secure routing in Ad hoc wireless networks.

Total Hours: 45

REFERENCES:

1. C.Siva Ram Murthy and B.S. Manoj, ”Ad hoc Wireless Networks Architectures and Protocols”, 2nd Edition, Pearson Education, 2007.

2. Charles E. Perkins, “Ad hoc Networking”, 1st Edition, Addison Wesley, 2000.

4. Mohammad Ilyas, “The handbook of Adhoc wireless networks”, 1st Edition, CRC press, 2002.

OUTCOMES:

Students who complete this course will be able to

- assess the platform architectures that are suitable for Mobile Adhoc networks.
- identify the issues in wireless networks and how they can be addressed.
- examine various security threats to ad hoc networks and propose solutions.

CSBY11	DATA WAREHOUSING AND DATA MINING	L	T	P	C
	(Common to M.Tech (CSE, SE))	3	0	0	3

OBJECTIVES:

- To provide students with basic knowledge of tools and techniques for understanding the system performance and technologies for storing and mining large databases.
- To explain the computational tools and techniques for Data mining and Data Warehousing.

PREREQUISITES:

- DatabaseTechnology

MODULE I DATA WAREHOUSING AND BUSINESS ANALYSIS 8

Data warehousing Components –Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools – Metadata – reporting – Query tools and Applications – Online Analytical Processing (OLAP) – OLAP and Multidimensional Data Analysis.

MODULE II DATA MINING AND ASSOCIATION RULE MINING 7

Data Mining Functionalities – Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation - Efficient and Scalable Frequent Item set Mining Methods – Mining Various Kinds of Association Rules – Association Mining to Correlation Analysis – Constraint-Based Association Mining.

MODULE III CLASSIFICATION AND PREDICTION 8

Issues Regarding Classification and Prediction – Classification by Decision Tree Introduction – Bayesian Classification – Rule Based Classification – Classification by Back propagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – Ensemble Methods – Model Section.

MODULE IV CLUSTER ANALYSIS **7**

Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods – Density-Based Methods – Grid-Based Methods – Model-Based Clustering Methods – Clustering HighDimensional Data – Constraint-Based Cluster Analysis – Outlier Analysis.

MODULE V MINING STREAMS, TIME SERIES AND SEQUENCE DATA **7**

Mining Data Streams - Mining Time-Series Data - Mining Sequence Patterns in Transactional Databases - Mining Sequence Patterns in Biological Data - Graph Mining - Social Network Analysis and Multi relational Data Mining.

MODULE VI APPLICATIONS **8**

Mining Object, Spatial, Multimedia, Text and Web Data: Multidimensional Analysis and Descriptive Mining of Complex Data Objects – Spatial Data Mining – Multimedia Data Mining – Text Mining – Mining the World Wide Web. Applications and Trends in Data Mining: Data Mining Applications, Data Mining System Products and Research Prototypes, Additional Themes on Data Mining and Social Impacts of Data Mining.

Total Hours: 45

REFERENCES:

1. Jiawei Han & Micheline Kamber, “Data Mining – Concepts and Techniques”, 3rd Edition, Morgan Kaufmann Publishers, Elsevier, 2011.

2. Pang-Ning Tan, Michael Steinbach and Vipin Kumar, “Introduction to Data Mining”, 1st Edition, Pearson education, 2006.

OUTCOMES:

Students who complete this course will be able to

- distinguish between database and data warehouse, and design appropriate data warehouse multi dimensional model.
- perform basic data mining operations and apply standard data mining algorithms for association rule mining, clustering and classification and solve real time problems.

- correlate data mining techniques to current scenarios in various fields and inculcate the ability to apply tools for mining and analysis.
- review the various latest research activities going on in the field of Data Mining, thereby creating an interest for research.

CSBY12 PERFORMANCE EVALUATION OF COMPUTER SYSTEMS AND NETWORKS

L	T	P	C
3	0	0	3

(Common to M.Tech (CSE, SE))

OBJECTIVE:

- To explain the different metric for measuring the performance of the system.
- To understand the importance of workloads and to predict the nature of future loads.
- To provide students with basic knowledge and understanding of queuing theory, petrinets and test beds.
- To train the students on the basics of simulation modeling.

PREREQUISITES:

- Probability and Queuing Theory

MODULE I INTRODUCTION **8**

Need for performance evaluation - Role of performance evaluation - Performance evaluation methods - Performance metrics and evaluation criteria - CPU and I/O architectures - Distributed and network architectures-Secondary storage - Topologies - Computer architecture - Fundamental concepts and performance measures.

MODULE II PROBABILITY AND STOCHASTIC PROCESSES **8**

Scheduling algorithms - Workloads - Random variables - Probability distributions - Densities - Expectation - Stochastic processes - Poisson process - Birth-Death process - Markov process.

MODULE III QUEUING THEORY **7**

Queuing systems - Networks of queues - Estimating parameters and distributions - Computational methods - Simulation process - Time control - Systems and modeling.

MODULE IV PETRINETS AND SYSTEM PERFORMANCE **8**

Petri nets - Classical Petri nets - Timed Petri nets - Priority-based Petri nets - Colored Petri nets - Generalized Petri nets - Tool selection - Validation of

results - Performance metrics -Evaluation - Multiple server computer system analysis.

MODULE V ANALYSIS **7**

OS components - System architecture - Workloads - Design – Simulation Analysis - Database system performance - Computer networks components - Simulation modeling of LAN.

MODULE VI DISCRETE EVENT SIMULATION **7**

Simulation - Simulation Techniques - Computing the Accuracy of Stochastic Simulations - Monte Carlo Simulation Random Number Generators - CDF Inversion.

Total Hours: 45

REFERENCES :

1. Paul J. Fortier and Howard E. Michael, “Computer Systems Performance Evaluation and Prediction", 1st Edition, Elsevier Science, USA, 2003.

2. Jean-Yves Le Boudec, “Performance Evaluation of Computer and Communication Systems”, 1st Edition, EPFL press, Lausanne, Switzerland, 2010.

OUTCOMES:

Students who complete this course will be able to

- carry out the performance analysis of their computer systems.
- categorize the different queuing models and algorithms for the analysis of networks.
- design a test bed and a simulator for a particular problem.

CSBY13 AGENT BASED INTELLIGENT SYSTEMS L T P C

(Common to M.Tech (CSE, SE, CPA, CSE-BDA)) 3 0 0 3

OBJECTIVES:

- To provide basic knowledge of employing intelligent agents in solving complex problems.
- To give the awareness of the building blocks of agents and working of different types of agents.
- To analyze the reasons for uncertainty and ability to design agents to handle them.

PREREQUISITES:

- Software Agents

MODULE I INTRODUCTION 7

Definitions – History – Hybrid Intelligent Agents – Agents vs Multi Agent Systems– Structure – Environment – Basic Problem Solving Agents – Complex Problem Solving Agents – Formulating Search Strategies – Intelligent Search.

MODULE II CONCEPTS FOR BUILDING AGENTS 6

Situated Agents: Actions and Percepts - Proactive and Reactive Agents: Goals and Events- Challenging Agent Environments: Plans and Beliefs - Social Agents - Agent Execution Cycle.

MODULE III KNOWLEDGE BASED AGENTS 8

Knowledge Representation – Logic – First Order Logic – Reflex Agent – Building a Knowledge Base – General Ontology – Interference – Logical Recovery.

MODULE IV PLANNING AGENTS 8

Situational Calculus – Representation of Planning – Partial Order Planning – Practical Planners– Conditional Planning - Preplanning Agents.

MODULE V AGENTS AND UNCERTAINITY 8

Acting under uncertainty – Probability – Baye's Rule – Belief Networks – Utility

Theory - Decision Network- Value of Information – Decision Theoretic Agent Design.

MODULE VI HIGHER LEVEL AGENTS **8**

Learning Agents – General Model – Inductive Learning – Learning Decision Tree – Reinforcement Learning – Knowledge in Learning – Communicative Agents – Types of Communicative Agents – Future of AI.

Total Hours: 45

REFERENCES:

1. Stuart Russell and Peter Norvig, “Artificial Intelligence: A Modern Approach”, 3rd Edition, Prentice Hall, 2010.
2. Lin Padgham, Michael Winikoff, “Developing Intelligent Agent Systems: A Practical Guide”, 1st Edition, John Wiley & Sons, 2004.
3. Zili Zhang,Chengqi Zhang, “Agent-Based Hybrid Intelligent Systems: An Agent-Based Framework for Complex Problem Solving”, 1st Edition, Springer-Verlag New York, LLC , 2004.
4. Ngooc Thanh Nguyaaen, Lakhmi C. Jain, “Intelligent Agents in the Evolution of Web and Applications”, 4th Edition, Springer, 2009.

OUTCOMES:

Students who complete this course will be able to

- differentiate the types of agents and learn how to apply them in different problem based on requirements.
- design knowledge based agents for challenging environment.
- explore the scenarios of uncertainty and design planning agents to handle them.

CSBY29	PERSONAL SOFTWARE PROCESS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To explain how the estimating and planning skills can be improved.
- To discuss ways to measure the size, time, and defects in their work.
- To elaborate on the PSP quality strategy to manage the defects in the work and support the team's quality goals.

PREREQUISITES:

- Software Engineering

MODULE I INTRODUCTION **6**

Personal Process Strategy – Baseline Personal Process - Software Engineers Job.

MODULE II TIME MANAGEMENT **6**

Time Management - Tracking Time - Period and Product Planning – Product Planning.

MODULE III ESTIMATION AND MANAGEMENT **8**

Measuring Software Size – Software Estimating – Probe Estimating Model – Product size - Function points.

MODULE IV MANAGING AND PLANNING **8**

Managing your time – Managing commitments – Managing Schedules – Planning – Project Plan.

MODULE V DEFECT HANDLING **9**

Defects – Finding Defects – Code Review Checklist – Projecting Defects – Economics of Defect Removal – Design Defects.

MODULE VI QUALITY **8**

Product Quality – Process Quality – Personal Commitment to Quality – PSP Design Templates.

Total Hours : 45

REFERENCES:

1. Humphrey, Watts S. “Introduction to the Personal Software Process”, 2nd Edition, Pearson Education, 2009.
2. Humphrey, Watts S., “PSP: A Self - Improvement Process for Software Engineers”, 1st Edition, Boston, MA: Addison - Wesley, 2005.
3. Steve McConnell, “Code Complete: A Practical Handbook of Software Construction”, 2nd Edition, Microsoft Press, 2004.
4. Roger S Pressman, “Software Engineering: A Practitioner's Approach”, 6th Edition, Tata McGrawhill, 2005.

OUTCOMES:

Students who complete this course will be able to

- apply the time management skills in personal software development process.
- analyze and improve the quality of personal software development process.
- identify the various kinds of software defects in defect development life cycle.

CSBY30 TEAM SOFTWARE PROCESS L T P C

3 0 0 3

OBJECTIVES:

- To provide a comprehensive introduction to term software development.
- To expose the students to realistic team work problems and give a practical teamwork experience.

PREREQUISITES:

- Software Engineering

MODULE I INTRODUCTION 7

TSP overview - TSP process - Logic of the TSP - Launching a Team project – SCM

MODULE II THE MANAGER AND THE TEAM ROLES 8

Team leader role - Development manager role - Planning manager role - Quality/ process manager role - support manager role.

MODULE III STRATEGY AND PLANNING 8

Development strategy - Development plan - Software inspections.

MODULE IV DESIGNING AND DEVELOPMENT 7

Defining the requirements – Designing with teams – Product implementation.

MODULE V TESTING AND IMPLEMENTATION 7

Product Implementation – Integration and System testing-Postmortem.

MODULE VI MANAGING A TEAM 8

Managing yourself- Being on a team – Teamwork- Case Study.

Total Hours : 45

REFERENCES:

1. Watts S Humphrey," Introduction to the Team Software Process", Boston MA: Addison – Wesley, 2008.

2. Roger S Pressman, "Software Engineering: A practitioner's Approach", 6th edition, R.S. Pressman and Associates, 2005.

OUTCOMES:

Students who complete this course will be able to

- explain role of team software process in programming.
- describe role of team manager in software development Apply principles of TSP for effective software development List the conflicts that undermine team work.

CSBY31	SOFTWARE ENGINEERING FOR IMAGE PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To describe the use of object oriented programming for the implementation of image processing and analysis software.
- To get the knowledge of basic principles of object oriented analysis, design and programming.
- To discuss software engineering issues which are relevant for image processing.

PREREQUISITES:

- Software Engineering
- Image Processing

MODULE I SOFTWARE ENGINEERING AND IMAGING SOFTWARE 6

Introduction – A Case for a Software Engineering Approach to Building Imaging Systems – Classification of Software Qualities – Basic Software Engineering.

MODULE II SOFTWARE PROCESS AND LIFE CYCLE MODELS 10

Software Processes and Methodologies – Software Life Cycle Models – Software Standards – Software Requirements: Requirements Engineering Process – Types of Requirements – Requirements Users – Formal Methods in Software Specification – Specification of Imaging Systems: A Survey of Current Practices – Case Study– Object Oriented Analysis – Object– Oriented vs. Structured Analysis – Organizing the Requirements Document – Requirements Validation and Review.

MODULE III SOFTWARE SYSTEM DESIGN 8

The Design Activity – Procedural– Oriented Design– Object– Oriented Design – Hardware Considerations in Imaging System Design – Fault– Tolerant Design– The Software Production Process– Programming – Writing and Testing Code– Coding – Reviews and Audits– Documentation.

MODULE IV SOFTWARE MEASUREMENT AND TESTING 5

The Role of Metrics – Faults, Failures, and Bugs – The Role of Testing – Testing Techniques– Design of Testing Plans.

MODULE V HARDWARE– SOFTWARE INTEGRATION 8

Goals of System Integration – System Unification – System Verification – System Integration Tools – Software Integration– Post integration Software Optimization – A Software Reengineering Process Model – Software Reuse.

MODULE VI MANAGEMENT OF SOFTWARE PROJECTS 8

Concept– Software Project Management Themes – General Project Management Basics – Software Project Management – Managing and Mitigating Risks – Personnel Management – Assessment of Project Personnel– Tracking and Reporting Progress.

Total Hours: 45

REFERENCES:

1. Phillip A. Laplante, “Software Engineering For Image Processing Systems”, 2nd Edition, CRC Press, 2005.
2. Alejandro C Frery, Talita Perciano, “Introduction to Image Processing Using R”, 1st Edition, Springer, 2013.

OUTCOMES:

Students who complete this course will be able to

- become familiar with the basic principles of object oriented analysis, design and programming.
- apply various Image Processing Techniques in real world problems.
- solve interface problem when integrating various Multimedia objects.

CSBY24	SERVICE ORIENTED ARCHITECTURE	L	T	P	C
	(Common to M.Tech (CSE, SE, NS, CSE-BDA))	3	0	0	3

OBJECTIVES:

- To introduce the fundamentals and issues relating to Service Oriented Architecture.
- To bring out the importance of service orientation and web services.
- To teach appropriate tools as technique on how to build the Service Oriented Architecture with web services.

PREREQUISITES:

- Web Technology
- Computer Networks

MODULE I INTRODUCTION **7**

Basic definition - Fundamentals of SOA - Characteristics and misperceptions about SOA -Benefits and pitfalls of SOA.

MODULE II EVOLUTION OF SOA **7**

The evolution of SOA - Web service and primitive SOA - The extension of SOA - Web service extension.

MODULE III WEB SERVICE AND CONTEMPORARY SOA **7**

Message Exchange Pattern - Service Activity – Coordination - Atomic Transaction - Business Activity- Orchestration – Choreography – Addressing - Reliable Messaging - Correlation and Policies - Meta data Exchange - Security-Notification and Eventing.

MODULE IV PRINCIPLES OF SERVICE ORIENTATION **8**

Principles of service orientation -Building SOA - Planning and Analysis - SOA delivery strategies - Service Oriented Analysis Introduction - Service Modeling of Service Oriented Analysis.

MODULE V SERVICE ORIENTED DESIGN **8**

Introduction to service oriented design - WSDL related XML Schema language

Basics - WSDL Language Basics - SOAP Language Basics - Service interface design tools - Steps to composing SOA - Consideration for choosing service layers, positioning core SOA standards and choosing SOA extension - Service design and business process design.

MODULE VI WEB SERVICE EXTENSION AND SOA PLATFORM 8

WS Addressing language Basics - WS Reliable Messaging language Basics- WS policy Language Basics - WS Metadata Exchange Language Basics-WS security Language Basics -SOA Platform basics - SOA Support in J2EE,SOA Support in .NET- Case Studies of Rail Co ltd and Oasis Car Wash service.

Total Hours: 45

REFERENCES:

1. Thomas Erl, “Service Oriented Architecture, Concepts, Technology and Design”, Pearson Education, 2009.

2. Shankar Kambhampaty, “Service Oriented Architecture for Enterprise Architecture for Enterprise Application”, 1st Edition, Wiley Publication, 2008.

OUTCOMES:

Students who complete this course will be able to

- relate web services with service oriented architecture.
- apply the tools and technique for Service Oriented Architecture.
- build an SOA platform supported by J2EE and .NET.

CSBY32 PRINCIPLES OF GRID COMPUTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce necessary fundamentals that enable the students for advanced studies in the area of grid computing.
- To trace the evolution and progress of models of computation, from clusters to grid computing.

PREREQUISITES:

- Distributed Computing

MODULE I INTRODUCTION **8**

Basic Concepts - Entering into Grid - Definitions - Grid projects - Grid Layered Architecture - Distributed Computing - Computational Grids - Data Grids. Dynamic Virtual Organization – Distributed Shared Memory in Grid.

MODULE II GRID COMPUTING TECHNOLOGIES **8**

Service Oriented Architecture (SOA) - Web Services in Grid - Xml, Related Technologies and their role in Grid.

MODULE III GRID PLATFORMS **7**

Open Grid Service Architecture (OGSA) – OGSA Basic Services – Open Grid Services infrastructure (OGSI).

MODULE IV GRID IMPLEMENTATIONS **8**

Grid Computing Security – Globus Tool kit – Grid Technologies, Systems and Scheduling- Case study: Mobile Grid Computing.

MODULE V GRID COMPUTING MODELS **7**

Cluster Computing Models – Grid Models – Mobile grid Models – Applications.

MODULE VI STIMULATED ALGORITHMS **7**

Distributed Algorithms for Job Shop Scheduling - Parallel Stimulated Annealing algorithms- Case Studies.

Total Hours: 45

REFERENCES:

1. P.Venkata Krishna,M.Rajasekara babu,V Saritha, “Principles of Grid computing”, 1st Edition, Ane Books Pvt Lmt, 2010.
2. D.Janakiram, “Grid Computing Models”, 1st Edition, Tata McGraw-Hill Education, 2005.
3. Joshy Joseph, Craig Fellenstein, “Grid Computing”, 1st Edition, IBM Press, 2009.

OUTCOMES:

Students who complete this course will be able to

- apply the technologies such as high-speed links and storage area networks for building computational and data grids.
- utilize grid computing and cluster computing middleware, such as Globus Tool kits and HPC Portals for implementing virtual super computing resources.
- apply parallel and distributed computing algorithms in collaborated problem solving methodologies.
- apply the new ideas to solve open problems in distributed computing applications.

CSBY33 PERVASIVE COMPUTING L T P C

3 0 0 3

OBJECTIVES:

- To give an insight knowledge about the principles of pervasive computing , its elements and architecture.
- To highlight the role of sensor networks, wireless protocols in the design of pervasive applications.

PREREQUISITES:

- Distributed Systems
- User Interface Design

MODULE I ARCHITECTURE 8

Relationship of Wireless Computing - Ubiquitous Computing - Internet Computing - Related Ideas: Ambient Computing - Elements of Pervasive architecture - Requirements of computational infrastructure - Failure management - General issues: security, performance, dependability - Web architectures - Local networks - Store and forward - Multi-network architectures.

MODULE II DEVICES TECHNOLOGY 7

Device and network technologies - Devices categories - Devices characteristic Heterogeneity and Interoperability - Mobile Agents - Device management - Compaq iPAQ - 3G devices - Palm Tungsten - WindowsCE devices - Symbian devices - J2ME-enabled devices.

MODULE III SENSOR NETWORKS AND RFIDS 8

Introduction to Sensor networks - Types of sensor networks - Berkeley Motes - Sensor network organization - Sensor network routing mechanisms - Platforms for Wireless sensor networks - Sensor Node Architecture - Sensor Network Architecture- RFID: Introduction, transponder and reader architecture- Types of tags and readers- Frequencies of operation- Selection criteria for RFID systems- Information processing in the transponder and reader- Fundamental Operating principles- Antennas for RFIDs.

MODULE IV LOCAL AND WIDE AREA TECHNOLOGIES 8

Local area wireless networks: IEEE 802.11 technologies - Mobile IP- Infrared technologies. Bluetooth networks (OBEX Protocol) - Messaging Systems - Personal Area Networks - Network Management - Quality of Service - Wireless protocols - Establishing Wide area wireless networks: Concept and structure of "cell"- Call establishment and maintenance - Channel management- Frequency Assignment techniques- Difference from a wired network.

MODULE V PROTOCOLS 7

Protocols: Networking protocols - Packet switched protocols - Routing Protocols for Sensor Networks - Data Centric Protocols - Hierarchical Protocols Location-based protocols - Multimedia Messaging Service (MMS) Protocols Wireless Application Protocol (WAP).

MODULE VI APPLICATIONS 7

Applications: Mobile access to patient information in a hospital, sales support, retailing- Services support, tracking applications - Designing for small screen devices - Search interfaces - Context- awareness - Determining "locality".

Total Hours: 45

2. Jochen Burkhardt, Horst Henn, Stefan Hepper, Klaus Rindtorff, Thomas Schack, "Pervasive Computing: Technology and Architecture of Mobile Internet Applications", 1st Edition, Addison-Wesley, 2002.

OUTCOMES:

Students who complete this course will be able to

- differentiate pervasive computing from normal computing applications.
- explain the architecture of pervasive computing.
- describe how the devices (sensors and RFIDs) operate in a pervasive computing environment.
- identify the performance of various data dissemination techniques and compare the algorithms for mobile real-time applications.
- apply the basic techniques, algorithms, protocols of different types of networks for designing pervasive computing system.

CSBY34 USER INTERFACE DESIGN L T P C

3 0 0 3

OBJECTIVES:

- To learn the prototyping and testing of user interfaces.
- To understand the importance of iterative design in producing usable software.
- Comprehend the techniques for evaluating the usability of an interface.

PREREQUISITES:

- Graphics and Multimedia

MODULE I INTRODUCTION 7

Human–Computer Interface – Characteristics of Graphics Interface – Direct Manipulation Graphical System – Web User Interface – Popularity – Characteristic & Principles.

MODULE II HUMAN COMPUTER INTERACTION 7

User Interface Design Process – Obstacles – Usability – Human Characteristics In Design – Human Interaction Speed – Business Functions – Requirement Analysis – Direct – Indirect Methods – Basic Business Functions– Design Standards – System Timings – Human Consideration In Screen Design.

MODULE III STRUCTURES OF MENUS 7

Functions of Menus– Contents of Menu – Formatting – Phrasing The Menu – Selecting Menu Choice – Navigating Menus – Graphical Menus.

MODULE IV WINDOWS 8

Characteristics – Components – Presentation Styles – Types – Managements– Organizations – Operations – Web Systems – Device – Based Controls Characteristics – Screen – Based Controls – Operate Control – Text Boxes– Selection Control – Combination Control – Custom Control – Presentation Control.

MODULE V MULTIMEDIA 9

Expansion of functions - Multi-resolution analysis - Scaling functions – MRA

refinement equation – Wavelet series expansion – Discrete Wavelet Transform (DWT) – Continuous Wavelet Transform – Fast Wavelet Transform – 2-D wavelet Transform – JPEG-2000 encoding – Digital Image Watermarking – Basics, SE, Erosion, Dilation, Opening, Closing – Hit-or-Miss Transform – Boundary Detection – Hole filling – Connected components, convex hull, thinning, thickening, skeletons, pruning – Geodesic Dilation – Erosion – Reconstruction by dilation and erosion.

MODULE VI WINDOWS LAYOUT– TEST 7

Prototypes – Kinds of Tests – Retest – Information Search – Visualization – Hypermedia – WWW– Software Tools.

Total Hours: 45

1. Wilbent. O. Galitz, "The Essential Guide To User Interface Design", 3rd Edition, John Willey & Sons Publication, 2007.
2. Ben Shneiderman, "Design the User Interface", 5th Edition, Pearson Education, 2009.

OUTCOMES:

Students who complete this course will be able to

- apply design principles, guidelines and heuristics to create a user-interaction strategy that solves a real-world problem.
- design a usable and compelling user-interface for given set of requirements.
- conduct an evaluation of a user-interface by employing a series of evaluation methods.

CSBY35 SOFTWARE MAINTENANCE L T P C

3 0 0 3

OBJECTIVES:

- To describe the importance of software maintenance.
- To demonstrate the software maintenance processes and tools for maintenance
- To explain the normal and special practices for software maintenance.

PREREQUISITES:

- Software Engineering

MODULE I INTRODUCTION 7

Introduction - Issues in software maintenance - Body of knowledge – Definition - Difference between operations - development and Maintenance - standards, process and Activity – Categories - Maintenance Measurement - Service measurement and benchmarking – Maturity models in Software Engineering.

MODULE II PROCESS MODEL AND MANAGEMENT DOMAIN 7

Context of software Maintenance - Classification of software maintenance processes - Process domain and key process areas in software Maintenance– Goals – Links - Expected results and service definition - Training-Performance and Deployment of KPA.

MODULE III MANAGEMENT AND EVOLUTION ENGINEERING DOMAIN 8

Event Request Management KPA - Maintenance Planning KPA - Request Software Monitoring and Control KPA -SAM KPA - Pre delivery and Transition services KPA - Operational Support services KPA - Correction Services KPA - Verification and Validation KPA.

MODULE IV ENGINEERING DOMAIN AND PROCESS MANAGEMENT 8

Configuration and Version Management KPA - SQA KPA - MMA KPA - Casual Analysis and Problem Resolution - Software Rejuvenation - Migration and Retirement - Maintenance Process Focus - Service Definition – Training - Process Performance - Innovation and Deployment.

MODULE V DETAILED EXEMPLARY PRACTICES 8

Event Request Management KPA - Maintenance Planning KPA - Requests/ Software monitoring and Control KPA - SLA SAM KPA - Pre Delivery and Transition to software Maintenance - Operational Support services KPA - Software Evolution and Correction and services KPA - Verification and Validation KPA.

MODULE VI SUPPORT AND CASE STUDIES 7

Configuration and Change Management – Process - Service and Software Quality Assurance - Maintenance Measurement and Analysis - Casual Analysis and Problem Resolution - Evolution process and Support and Case Studies.

Total Hours: 45

REFERENCES:

1. Alain April, Alain Abrain, “Software Maintenance Management Evaluation and Continuous Improvement”, IEEE computer Society Publication, 2008.

2. Penny Grubb, Armstrong A .Takang, “Software Maintenance Concepts and Practice”, 3rd Edition, World Scientific Publishing Company, 2008.

OUTCOMES:

Students who complete this course will be able to

- formulate the maintenance procedures in routine maintenance.
- apply process models and software maintenance tools in Software maintenance.
- apply methods to solve software problems and analyze the case studies in Software maintenance.

CSBY36 MULTIMODAL COMPUTING L T P C

3 0 0 3

OBJECTIVES:

- To introduce the concept of multimodal systems and interfaces.
- To make them understand the importance of audio attention modeling and recognition.
- To give good rearing on the issues in the design and implementation of multimodal system.

PREREQUISITES:

- Programming Languages

MODULE I INTRODUCTION TO MULTIMODAL SYSTEMS 9

Introduction to Multimodal systems, Multimodal Interfaces: Unimodal - Multimedia interfaces - GUI. Interaction Modalities: Acoustic - Tactile - Visual - Basics of data acquisition: Audio - Video - Single microphone source separation - Admissibility of audio evidence - Acquisition of digital evidence.

MODULE II AUDIO ATTENTION MODELLING AND DATA FUSION 9

Audio attention modelling and data fusion: Types of attention - Measuring attention - Fusion of audiovisual attention – Multimodal integration and understanding: Early approaches - Unification multimodal integration and Parsing.

MODULE III AUDIO RECOGNITION AND CLASSIFICATION 9

Audio recognition and classification: Feature extraction - Hidden Markov Modelling - Training and pattern matching - Training and pattern matching. Audio enhancement techniques for forensics: Objectives of forensic analysis– Case study: Gaze recognition.

MODULE IV ISSUES IN THE DESIGN AND IMPLEMENTATION 8

Issues in the design and implementation of Multimodality: Multimodal user interface client - Modality recognition - Modality integration and understanding - Multimodal generation: Multimodal output planning - Multimodal synchronization - Multimodal Dialog management.

MODULE V SECURITY AND SURVEILLANCE APPLICATIONS 5

Security and surveillance applications: Requirements analysis - Challenges - Audio analysis as part of larger systems.

MODULE VI HUMAN COMPUTER INTERACTION 5

Audio-based human computer interaction: Audio scene analysis - Source localisation - Source separation - Performance analysis and comparison – Case Study involving Gesture recognition.

Total Hours: 45

REFERENCES:

1. Pradipta Biswas, Carlos Duarte, Patrick Langdon, Luis Almeida, Christoph Jung, “A Multimodal End-2-End Approach to Accessible Computing”,1st Edition, Springer 2013.

3. D. Wang, G. Brown, “Computational Auditory Scene Analysis: Principles, Algorithms, and Applications”, Wiley - IEEE Press, 2006.

OUTCOMES:

Students who complete this course will be able to

- identify the strengths and weaknesses of multimodal interfaces by proper comparison of different types.
- apply the human-computer interaction interfaces in employing new interaction techniques for restricted tasks.
- analyze and understand the various the security issues in the design and implementation of multimodal system tools.

CSBY25	CLOUD COMPUTING	L	T	P	C
	(Common to M.Tech (CSE, SE, NS,CPA.CSE-BDA))	3	0	0	3

OBJECTIVES:

- To provide a comprehensive and in-depth knowledge of Cloud Computing concepts, technologies, architecture and applications.
- To provide an insight into the core of cloud computing that revolves around Internet architecture and virtualization.
- To expose the students to frontier areas of Cloud Computing and information systems.

PREREQUISITES:

- Distributed Operating System

MODULE I SYSTEMS MODELING, CLUSTERING AND VIRTUALIZATION 8

Scalable Computing Service over The Internet - Technologies for Network-based Computing - System Models for Distributed and Cloud Computing - Software Environments for Distributed Systems and Clouds - Performance, Security, and Energy-Efficiency - Clustering for Massive Parallelism - Computer Clusters and MPP Architectures - Design Principles of Computer Clusters - Cluster Job and Resource Management.

MODULE II VIRTUALIZATION 7

Implementation Levels of Virtualization - Virtualization Structures/Tools and Mechanisms - Virtualization of CPU, Memory and I/O Devices - Virtual Clusters and Resource Management - Virtualization for Datacenter Automation.

MODULE III CLOUD FUNDAMENTALS 7

Origins and Influences - Basic Concepts and Terminology - Goals and Benefits - Risks and Challenges - Roles and Boundaries - Cloud Characteristics - Cloud Delivery Models - Cloud Deployment Models- Broadband Networks and Internet Architecture - Virtualization Technology - Web Technology - Multitenant Technology - Service Technology.

MODULE IV CLOUD COMPUTING ARCHITECTURE 8

Fundamental Cloud Architectures - Workload Distribution Architecture -

Resource Pooling Architecture - Dynamic Scalability Architecture – Elastic Resource Capacity Architecture -Service Load Balancing Architecture - Cloud Bursting Architecture - Elastic Disk Provisioning Architecture - Redundant Storage Architecture.

MODULE V ADVANCED CLOUD ARCHITECTURES 8

Hypervisor Clustering Architecture – Load Balanced Virtual Server instances Architecture – Non-Disruptive service relocation Architecture – Zero Downtime Architecture- Cloud Balancing architecture – Resource reservation Architecture- Dynamic failure detection and recovery Architecture- Bare-Metal provisioning Architecture – Rapid Provisioning Architecture- Storage Workload Management Architecture.

MODULE VI WORKING WITH CLOUDS 7

Cloud Delivery Models: The Cloud Provider Perspective - Cloud Delivery Models: The Cloud Consumer - Cost Metrics and Pricing Models - Business Cost Metrics - Cloud Usage Cost Metrics - Cost Management Considerations.

Total Hours: 45

3. Micheal Miller, “Cloud computing”, 1st Edition, Pearson, 2009.

OUTCOMES:

Students who complete this course will be able to

- Articulate the concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for state-of-the-art cloud computing.
- Identify problems, explain, analyze and evaluate various cloud computing solutions.
- Demonstrate the various tools used in the cloud environment.
- Provide the appropriate cloud computing solutions according to the applications used.

SSBY01 SOCIETY, TECHNOLOGY AND SUSTAINABILITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- Aware of new technologies through advances in Science and Engineering.
- To make them realise the profound impact on society.
- Understand the ethical issues raised by technological changes and its effect on society.
- To introduce students a broad range of perspectives on the adoption and use of technologies.
- To make them realize the need of sustainability in the context of emerging technologies.

PREREQUISITES:

- Advanced Sciences

MODULE I TECHNOLOGY AND ITS IMPACTS **9**

Origin and evolution of technologies – Nature of technology- Innovation – Historical Perspective of technology – Sources of technological change - Co-evolution of technology and economy – Scientific knowledge and technological advance – Science and Engineering aspects of Technology – Impact on the Society – Social and Ethical Issues associated with technological change – Social and environmental consequences - Impact of technological change on human life –Technology and responsibility – Technology and social justice.

MODULE II TECHNOLOGY AND ITS ADVANCEMENT **9**

Sociological aspects of technology – Ethics and technology – Technology and responsibility – International Economics, Globalisation and Human Rights – Sustainability and Technology – Population and environment - Technology, Energy and Environment – Organisations and technological change.

MODULE III SOCIETY AND TECHNOLOGY **9**

Impact of technologies on contemporary society – Role of society in fostering the development of technology – Response to the adaption and use of technology – Impact of technology on developer and consumers Technological change and globalisation.

MODULE IV IMPACT OF A SPECIFIC TECHNOLOGY ON HUMAN WELFARE 9

Impact of the following technologies on Human life – Medical and Biomedical – Genetics Technology – Electronics and Communications – Electronic media Technology – Information Systems Technology – Nanotechnology – Space Technology and Energy Technology.

MODULE V THE IMPORTANCE OF SUSTAINABILITY 9

Sustainability – A brief history – Concepts and contexts for sustainability – Ecological imbalance and biodiversity loss – Climate change – Population explosion. Industrial ecology – systems approach to sustainability – Green engineering and technology- sustainable design- sustainable manufacturing- Green consumer movements – Environmental ethics – Sustainability of the planet Earth – Future planning for sustainability.

4. Martin A.A Abraham, ‘Sustainability Science and Engineering: Defining Principles’, Elsevier Inc, USA, 2006.
5. R.V.G.Menon, “Technology and Society”, Pearson Education, India, 2011.

OUTCOMES:

At the end of this course, the students will be able to

- implement the benefits of modern technology for the well-being of human life.
- connect sustainability concepts and technology to the real world challenges.
- find pathway for sustainable society.

VISION AND MISSION OF THE SCHOOL OF LIFE SCIENCES

VISION

To attain new heights in biotechnology research, shaping life sciences into a premier precision tool for the future for creation of wealth and ensuring social justice-specially for the welfare of the poor.

MISSION

- The mission of the school of life sciences and Technology is to maximize the benefits of biotechnology to the University, the nation and the globe by being an excellent quality, comprehensive, multidisciplinary school that supports, coordinates, disseminates and advances biotechnology in the areas of social welfare and entrepreneurship.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES
M.Tech. BIOTECHNOLOGY

PROGRAMME EDUCATIONAL OBJECTIVES

The course aims to provide an advanced understanding of the core principles and topics of Biotechnology and their experimental basis, and to enable students to acquire a specialized knowledge and understanding of selected aspects by means of a lecture series and a research project. Hence, the main objectives of the program are:

- To provide an introduction to the basic concepts of Biotechnology and its recent advances.
- For the basic understanding, this course includes advanced biochemistry, cell and molecular biology, immunotechnology, and microbial biotechnology.
- Moreover, several laboratory courses given in the individual sections of the curriculum with detailed information on the importance of biotechnology in basic and applied research.
- Finally this course explains the advanced sections of biotechnology like genetic engineering, nanobiotechnology, computational biology and medical biotechnology.
- This course provides necessary theoretical and practical experience in all divisions of biotechnology to pursue a professional career in this field.
- To provide broad exposure to various societal, ethical and commercial issues in the various aspects of biotechnology.

PROGRAMME OUTCOMES

After successfully completing this course, the student should be able to:

- Apply their knowledge of biotechnology into high end research.
- Advanced sections of like Immunology, bioinformatics, nano-biotechnology will give broad information on applications and opportunities in the field of biotechnological research.

- Identify research and solve biochemistry, cell and molecular biology related problems related to the different types of animal and plant diseases.
- Ability to work with multidisciplinary subjects in industries and research.
- Ability to communicate and function effectively in multi-disciplinary team related to the biochemistry and molecular biology.

CURRICULUM & SYLLABI FOR M.TECH. (BIOTECHNOLOGY) (FOUR SEMESTERS / FULL TIME)

SEMESTER I

Sl. No	Course Code	Course Title	L	T	P	C
1	LSB6101	Advanced Biochemistry	4	0	0	4
2	LSB6102	Cell & Molecular Biology	3	0	0	3
3	LTB6101	Applied Biostatistics for Biotechnologists	3	0	0	3
4	LTB6102	Immunotechnology	4	0	0	4
5	LSB6105	Biomedical Instrumentation Technology	3	0	0	3
6	LTB6103	Microbial Biotechnology	3	0	0	3
7	LSB6107	Biochemistry Lab	0	0	3	1
8	LSB6108	Cell Biology Lab	0	0	3	1

SEMESTER I

LSB6101	**ADVANCED BIOCHEMISTRY**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

This course aims to develop in the students' mind a concept regarding

- The diversity of metabolic processes occurring in biological system.
- The effect of the structural and functional role of the enzymes governing the metabolic processes.
- Importance of the metabolic pathways in maintaining homeostasis in biological system.
- The clinical implications of the metabolic pathway.

MODULE I AMINO ACIDS & PROTEIN: STRUCTURE AND FUNCTIONS 5

Amino acids- Classification, structure and function, proteins- primary, secondary, tertiary and quaternary structure, Ramachandran plot, super secondary structures and helix loop.

MODULE II ENZYMOLOGY 10

Classification of enzymes. How do enzymes work: activation energy, substrate specificity. Enzyme-substrate interaction: Lock and Key mechanism and Induced Fit mechanism. Effect of temperature and pH on enzyme action. Enzyme Kinetics: Michaelis-Menten Equation, Km, Measurement of Km and Vmax (Lineweaver-Burk equation). Kinetics of multisubstrate reaction: Sequential reactions and ping-pong reactions. Enzyme inhibition: reversible (competitive, uncompetitive and mixed) and irreversible. Allosteric regulation of enzyme activity.Multienzyme complex and multifunctional enzymes.

MODULE III ENERGY PRODUCTION AND OXIDATIVE PHOSPHORYLATION 14

Introduction to metabolism: Anabolism, catabolism, metabolic pathways. Characteristics of metabolic pathways

Glycolysis: glycolytic pathway. Molecular mechanism of action of the glycolytic enzymes.Energetic of glycolysis. Glycolysis and cancer biology—Warburg

Hypothesis and PET scanning. Fates of Pyruvate under anaerobic conditions: alcohol and lactic acid fermentation. Importance of lactic acid fermentation.

TCA Cycle: Formation of Acetyl CoA and reactions of citric acid cycle. Molecular mechanism of pyruvate dehydrogenase complex and enzymes involved in Kreb's cycle.Energetic of TCA cycle and substrate level phosphorylation.

Lipid metabolism: Hormonal regulation of the mobilization of triglycerides from adiposities. Transport of fatty acid into mitochondria.Beta oxidation of saturated fatty acid (both even and odd).Regulation.Energetic.

Electron Transport Chain: structure and function of Electron carriers: Complex I—V. Passage of electrons from complex I to IV. Mitchell's chemiosmotic hypothesis and proton gradient.Structure of complex V or ATP synthase, Catalytic sites of ATP synthesis. Mechanism of ATP generation by Boyer's binding change mechanism—rotational catalysis. Energetic of ATP synthesis and efficiency of ATP synthase.

MODULE IV METABOLIC INTERRELATIONSHIP 9

Starve-Fed cycle.Glucose homeostasis. Switching of metabolism of liver between starve and fed cycle. Metabolic relationship of tissues in various nutritional and hormonal states—insulin resistance, diabetes, exercise, pregnancy, lactation, stress, liver and renal diseases, alcohol consumption.

MODULE V REGULATORY MECHANISMS OF METABOLIC PATHWAYS 7

Feed back inhibition by allosteric modulation of enzymes. Covalent modifications of enzymes.Isozymes.Propetolytic cleavage.Regulationg the amount of enzyme—regulation gene expression in prokaryotes and eukaryotes.

Total Hours : 45

REFERENCE:

1. Nelson D.L, Cox M. M. Lehninger's Principle of Biochemistry. 5th Ed.,W. H. Freeman, 2008.
2. Biochemistry by LubertStryer 7th ed. W. H. Freeman & Company.
3. Textbook of Biochemistry with Clinical Correlations. 4th Ed. Thomas M. Devlin. Wiley-Liss publication. 1997.

OUTCOMES:

At the completion of the course the student will develop an understanding about the

- Various metabolic processes occurring in biological system and their role in governing homeostasis and normal physiology.
- The importance of enzymes as a regulatory molecule in metabolism.
- The interrelationship of metabolic pathways different physiological conditions.
- The role of liver in regulating metabolism.

LSB6102 CELL & MOLECULAR BIOLOGY L T P C

3 0 0 3

OBJECTIVES:

- To get overview of classes of cells and structural and function aspects of plasma membrane and cell organelle.
- To develop skill to understand molecular aspects of cell cycle and cell division.
- To get familiar with transcription and translation in details.
- To understand the signaling pathways in cell functioning

MODULE I INTRODUCTION TO CELL 8

Basic properties of cell, Different classes of cell: Prokaryotic, animal and plant cell.Plasma membrane- structure and function, Chemical composition of membranes, membrane lipids and proteins,fluid mosaic model, Transport across the membranes- diffusion, osmosis, facilitated diffusion,passive and active transport; membrane potential and nerve impulses.

MODULE II MEMBRANE TRANSPORT 7

Endoplasmic Reticulum, Golgi complex- glycosylation, Vesicle transport- COPI and COPII; Lysosomes-autophagy;Endocytic pathway- endocytosis and phagocytosis,transport of proteins into peroxisomes, mitochondria and chloroplast.

MODULE III ENERGY CONVERSION 10

Structure of mitochondria and organization of respiratory chain; Proton Pump and ATP generation in mitochondria; Structure of chloroplast and Photosynthesis, photorespiration; Genetic system of mitochondria and chloroplast.

MODULE IV BASIC GENETIC MECHANISMS 10

The structure and function of DNA, DNA packaging and Chromosomes, chromatin structure and function, DNA replication mechanisms, DNA damage and repair and homologous recombination and transposable elements, Telomeres, telomerase and end replication.Role of telomerase in aging and cancer.

MODULE V TRANSCRIPTION AND TRANSLATION 10

Transcription- Prokaryotic and eukaryotic Transcription- RNA polymerases- general and specific transcription factors- regulatory elements- mechanism of transcription, Transcription termination Post transcriptional modification- splicing- editing- nuclear export of mRNA- mRNA stability; Translation- Genetic code, Mechanism of initiation- elongation andtermination- Regulation of translation.

Total Hours : 45

3. Cell and Molecular Biology by Karp. John Wiley & Sons, 7th Ed, 2013
4. Lodish H. F.Cell and Molecular Biology. W.H. Freeman & Co Ltd, 7th Ed, 2000.

OUTCOMES:

- On the completion of the above objectives student will be able to get the overview of classes of cells and structural and function aspects of plasma membrane and cell organelle. They can develop skill to understand molecular aspects of cell cycle, cell division, transcription and translation.

LTB6101 APPLIED BIOSTATISTICS FOR BIOTECHNOLOGISTS **L T P C**

3 0 0 3

OBJECTIVES:

This course aims to provide students with fundamental knowledge of statistical issues arising in biomedical research, and of important methods for the analysis of biostatistical data.

- Students will be able to make informed decisions based on data
- Students will be able to correctly apply a variety of statistical procedures and tests
- Students will know the uses, capabilities and limitations of various statistical procedures
- Students will be able to interpret the results of statistical procedures and tests

MODULE I CONCEPTS IN STATISTICS **9**

Population and sample, qualitative and quantitative data, nominal, ordinal, ratio, interval data; cross sectional and time series data; discrete and continuous data. Descriptive statistics and Random variables; Measures of central tendency: mean, median, mode; the uses of measure of central tendency, Measures of spread: range, percentile, standard deviation, some properties of variance and standard deviation, the coefficient of variation, group data.

MODULE II INFERENTIAL STATISTICS **9**

Displaying data: frequency table, line graph, bar chart, histograms, stem and-leaf plots, dot plot, scatter plot, box plots, frequency distributions; definition of probability, rules for calculating probability, definition from epidemiology, Bayes' theorem, probability in sampling, Bernoulli, Binomial, Poisson; Geometric distributions; Continuous random variables: Normal; Exponential distributions; Standard normal distribution. Counting and Probability, Permutations; Combinations.

MODULE III INTERVAL ESTIMATION **9**

Prediction, confidence and tolerance Intervals, distribution free interval, confidence interval based on normal distribution, confidence interval and

sample size, Point and interval estimates; the relation between population and sample, Random-Number tables, randomized clinical trials, estimation of the Mean of Distribution, estimation of -variance of distribution, binominal distribution and poisson distribution.

MODULE III HYPOTHESIS TESTING 9

Hypothesis testing: null and alternative hypotheses, decision criteria, critical values, type I and type II errors, Meaning of statistical significance; Power of a test; One sample hypothesis testing: Normally distributed data: z, t and chi-square tests; Binomial proportion testing, nonparametric hypothesis testing, Two sample hypothesis testing; Nonparametric methods: signed rank test, rank sum test; Kruskal-Wallis test;

MODULE IV CURVE FITTING AND ANOVA 9

Regression and correlation: simple linear regression; Least squares method; Analysis of enzyme kinetic data; Michaelis-Menten; Lineweaver-Burk and the direct linear plot; Logistic Regression; Polynomial curve fitting. Analysis of variance: One-way ANOVA, two-way ANOVA. Fixed effect model, Random effect model, the intraclass correlation coefficient.

MODULE V ANALYSIS OF SURVEY DATA 9

Introduction, study design, measures of effect for categorical data, attribution risk, confounding and standardization, methods of inference for stratified categorical data-The Mantel-Haenszel test, power and sample, multiple logistic regression, meta Analysis, equivalence study, the cross-over design, longitudinal data analysis, measurement-error Methods.

Total Hours : 45

REFERENCES:

4. E. Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Wiley, 2006.

OUTCOMES:

At the end of the course students will be able to

- Explain how the Central Limit Theorem applies in inference
- Interpret the meaning of condence intervals in context
- Interpret the results of hypothesis tests
- Make an informed decision, based on the results of inferential procedures

LTB6102 IMMUNOTECHNOLOGY L T P C

3 0 0 3

OBJECTIVES:

- Learn the structural features of the components of the immune system and their functions.
- Understanding the mechanisms involved in immune system development and responsiveness.
- To understand about how immunologists think and work.

MODULE I IMMUNOLOGY: CONCEPT AND COMPONENTS OF IMMUNE SYSTEM 7

Overview and Concepts, Discovery of humoral and cellular immunity, Components of innate and acquired immunity, Hematopoiesis, Organs and cells of the immune system- primary and secondary lymphoid organs, Lymphocyte circulation; Lymphocyte homing; Mucosal and Cutaneous associated Lymphoid Tissue.(MALT&CALT); Mucosal Immunity.

MODULE II ANTIGENS & ANTIBODY: BASIC PROPERITIES AND THEIR INTERACTIONS 9

Properities of antigens and antibodies, Epitopes, Heptens, Immunogenicity versus antigenecity, Antibody structure, classes and subclasses of Immunoglobulin, Theories of antibody formation.structural basis of antibody diversity; properties of immunoglobulins, subtypes. Immunoglobulins as antigens, monoclonal antibody techniques Hybridoma, Production of murine hybridoma, antigen antibody interactions.

MODULE III REGULATION OF IMMUNE RESPONSE BY B AND T LYMPHOCYTES 10

Major Histocompatibility Complex - MHC genes, MHC and immune responsiveness and disease susceptibility, HLA typing, Cellular distribution of MHC molecule, Antigen processing and presentation – exogenous and endogenous antigen processing. Self -MHC restriction of T cells. Presentation of non-peptide antigens. B-cell receptor; B cell maturation, activation and differentiation; Generation of antibody diversity; T-cell maturation, activation and differentiation and T-cell receptors; Functional T Cell Subsets;

MODULE III UNDERSTANDING CLINICAL IMMUNOLOGY 9

Cellular Immunity, Immune Tolerance and suppression, Immunity to infection : Bacteria, viral, fungal and parasitic infection. Hypersensitivity Reactions, Types of Hypersensitivity, Autoimmunity, Immune Dysfunction and Its component Cytokines -Properties, receptors, antagonists, diseases, Cytokine secretion by TH1and TH2 subsets therapeutic use of Cytokines. Cytokine related diseases, Cytokines in hematopoisesis. Complement system - Activation, Regulation, Biological consequence of complement activation and Complement deficiency, inflammation, and opsonization

MODULE V IMMUNOTECHNIQUES 10

Introduction: scope of Immunotechnology, Strength of antigen and antibody reaction- cross reactivity, precipitation and agglutination reactions, Radioimmunoassay and ELISA, Markers of immunocompetant cells, separation and purification of immunocompetant cells. Functional tests for immunocompetant cells and histocompatibility testing.Immunological assays- Complementfixation tests, In-vivo tests/ neutralization tests, immunodiffusion, immunoblotting, immunohistochemistry and immunofluorescenece techniques. Biosenor assays for assessing ligand –receptor interaction, CMI techniques- lymphoproliferation assay, Mixed lymphocyte reaction, Cell Cytotoxicity assays, Apoptosis, Microarrays, Transgenic mice, Gene knock outs

Total Hours : 45

REFERENCES:

1. Kuby, RA Goldsby, Thomas J. Kindt, Barbara, A. Osborne Immunology, 6th Edition, Freeman, 2002.
2. Brostoff J, Seaddin JK, Male D, Roitt IM., Clinical Immunology, 6th Edition, Gower Medical Publishing, 2002.
3. Janeway et al., Immunobiology, 4th Edition, Current Biology publications., 1999.
4. Paul, Fundamental of Immunology, 4th edition, Lippenco

OUTCOMES:

After completing the course students will:

- have a detailed understanding of Component of immunity
- know antigen presentation on a detailed molecular level
- understand the concept immunology and the immune system .
- have a in depth knowledge of the cellular and molecular basis for autoimmune disease and allergies.
- have basic knowledge of tumor immunology and the development of novel recombinant antibodies for treatment of cancer and autoimmune disease.

LSB6105 BIOMEDICAL INSTRUMENTATION L T P C

3 0 0 3

OBJECTIVES:

- To understand the application of Biomedical instrumentation.
- To introduce the student to the various devices of electrical origin and non electrical origin.
- To provide awareness of electrical safety of medical equipments.
- To know the important and modern methods of imaging techniques.

MODULE I FUNDAMENTALS OF MEDICAL INSTRUMENTATION 10

Role of technology in medicine, landmark developments in biomedical instrumentation, physiological systems of the body, sources of biomedical signals, basic medical instrumentation system, performance requirements of medical instrumentation systems, intelligent medical instrumentation systems, consumer and portable medical equipment, implantable medical devices, Basic components of a biomedical system, Transducers, Piezoelectric, ultrasonic transducers, Temperature measurements, Fibre optic temperature sensors. Amplifiers: Preamplifiers, differential amplifiers, chopper amplifiers Isolation amplifier.

MODULE II BIOELECTRIC SIGNALS AND ELECTRODES 9

Origin of bioelectric signals, recording electrodes, silver-silver chloride electrodes, Electrodes, Limb electrodes, floating electrodes, pregelled disposable electrodes, electrodes for ECG, electrodes for EEG, electrodes for EMG, electrical conductivity of electrode jellies and creams, microelectrodes, Micro, needle and surface electrodes, Typical waveforms, Electrical safety in medical environment: shock hazards, leakage current-Instruments for checking safety parameters.

MODULE III BIOMEDICAL RECORDER 8

Measurement of blood pressure, Heart rate, Pulmonary function measurements, spirometer, Photo Plethysmography, Body Plethysmography, Blood Gas analysers : pH of blood measurement of blood pCO2, pO2, finger-tip oxymeter - ESR, GSR measurements, Electrocardiograph, vector cardiograph (VCG), phonocardiograph (PCG),digital stethoscope,

electroencephalograph (EEG), electromyography, other biomedical recorders, biofeedback instrumentation.

MODULE IV CLINICAL INSTRUMENTS AND PATIENT MONITORING SYSTEMS 9

Medical diagnosis with chemical tests, spectrophotometry, spectrophotometer type instruments, colorimeters, spectrophotometers, clinical flame photometers, selective-ion electrodes based electrolytes analyser, automated biochemical analysis systems, Radio graphic and fluoroscopic techniques, Computer tomography, MRI, Ultrasonography, X-ray Machines and Digital Radiography, Blood cell counter.

MODULE V THERAPEUTIC EQUIPMENTS AND PATIENT SAFETY 9

Audiometers and Hearing Aids, Pacemakers, Defibrillators, Ventilators, Nerve and muscle stimulators, Diathermy, Heart – Lung machine, Dialysers, Lithotripsy, electric shock hazards, leakage currents, safety codes for electromedical equipment, electrical safety analyzer, testing of biomedical equipment.

Total Hours : 45

OUTCOMES:

After the completion of the course

- The student acquires an adequate knowledge and could co relates the human body to the parameters that have clinical importance.
- The student learn the fundamental principles of medical equipment and patient safety.

LTB6103 MICROBIAL BIOTECHNOLOGY L T P C

3 0 0 3

OBJECTIVES:

- To learn the microbial growth kinetics, isolation and screening
- To understand the principles of bioprocess
- To get the protein expression strategies &recombinant production
- To give basic idea on metagenomics & risk management
- To inform students about application in microbial biotechnology

MODULE I MICROBIAL GROWTH KINETICS, ISOLATION AND SCREENING 9

Microbial growth kinetics: batch cultures, continuous cultures, fed-batch culture. Isolation and screening of industrially important microbes; Large scale cultivation of industrial microbes; Strain improvement to improve yield of selected compounds e.g. antibiotics, enzymes or recombinant proteins. Biofilms, immobilized enzymes and immobilized cells as biocatalysts.

MODULE II PRINCIPLES OF BIOPROCESS 9

Basic principles of bioprocess as applied to selected microbes; Process optimization of selected products. Thermo-bacteriology: Thermal microbial destruction kinetic. Decimal reduction time.

MODULE III PROTEIN EXPRESSION STRATEGIES&RECOMBINANT PRODUCTION 9

Overview of protein expression strategies – choosing a heterologous host. Protein folding and inclusion bodies – the problem of protein refolding. Protein expression in E. coli and other Gram negative hosts.Recombinant protein production in microbes; Commercial issues pertaining to the production of recombinant products from microbes; Downstream processing approaches; Industrial microbes as cloning hosts (Streptomyces/Yeast).

MODULE IV METAGENOMICS & RISK MANAGEMENT 9

Culture Collections and Gene Banks. Microbial resources.Establishment of culture collections.Taxonomic Terminology. How are the strains preserved

Patent depository. Seed lot and cell bank system. Metagenomics in Biotechnology: understanding and exploiting microbial diversity. Risk management solutions to indoor biological contamination.Risk management solutions to indoor biological contamination.

MODULE V APPLICATION IN MICROBIAL BIOTECHNOLOGY 9

Pathways of microbial biotech product development, compliance, and regulation.Microbial monitoring during bacterial vaccine manufacturing processes and rapid microbial identification in a pharmaceutical Quality Control (QC) microbiology laboratory. Industrial enzymes for biopolymer degradation: starch, pectin, biomass applications. Industrial biocatalysis: sweetener, detergent, textile, lipid hydrolysis applications. Environmental application of microbes; Ore leaching; Toxic waste removal; soil remediation.

Total Hours : 45

REFERENCES:

2. Demain AL, Davies JE, editors in chief 1999. Manual of Industrial Microbiology and Biotechnology. ASM Press Washington, D.C. second edition.
3. Microbial Biotechnology, Second Edition, 2007. Alexander N. Glazer, Hiroshi Nikaido. ISBN 9780521842105, Cambridge University Press.

OUTCOMES:

At the end of this course, students will:

- Describe microbial growth kinetics, isolation and screening and metabolic pathway engineering approaches to engineer microbes for the over-production of metabolic intermediates and to generate novel compounds.
- Explain how microbial enzymes and genetically engineered microbes are used in industrial biocatalysis.
- The capability to apply principles of bioprocess to the enzyme production.
- Explain the advantages and disadvantages of production of peptides, proteins, glycoproteins, in Gram negative, Gram positive, yeast expression systems.

- Mathematically describe microbial growth and product formation in batch, fed-batch, continuous cultures and immobilized cells. Explain how each of these methods is used in microbial biotechnology and environmental remediation.
- An understanding of how science relates application in microbial biotechnology

LSB6107	BIOCHEMISTRY LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To learn the preliminary methods in biochemistry by preparing buffer and different solutions.
- To learn about the factors affecting enzymatic activity.
- learn about several techniques of separations of sugar and amino acids.

1. Laboratory safety guidelines.
2. To prepare an Acetic-Na Acetate Buffer system and validate the Henderson-Hasselbach equation.
3. To determine an unknown protein concentration by plotting a standard graph of BSA using UV-Vis Spectrophotometer and validating the Beer- Lambert's Law.
4. Determination of pH optima of an enzyme.
5. Determination of Km and Kcat of a particular enzyme.
6. Effect of temperature on enzyme activity.
7. Separation techniques for amino acids and sugar:
   (a) paper chromatography
   (b) thin layer chromatography.
8. Separation of proteins by native and SDS-PAGE.
9. Quantification of reducing sugar in different food material.
10. Estimation of different biochemical parameters of blood
    (a) sugar (b) cholesterol (c) urea.

OUTCOMES:

On performing the above experiments students will be able to:

- quantify different biomolecules from unknown samples.
- develop an idea about the separation of different biomolecules like proteins and carbohydrate.

- develop an idea about the factors regulating enzyme activity.
- determine the various parameters defining enzyme activity.
- estimate the concentration of various biomolecules in a wide range of samples.

LSB6108	CELL BIOLOGY LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To learn basic techniques in molecular biology
- To study and differentiate the electrochemical properties of nucleic acids

EXPERIMENTS **30**

1. Preparation of competent cell by calcium chloride method and checking its efficiency
2. Preparation of slides from onion root tip for mitosis
3. Isolation & Purification of genomic DNA from bacteria
4. Isolation & Purification of plasmid DNA
5. Isolation of RNA
6. Agarose gel electrophoresis of chromosomal & plasmid DNA
7. Restriction Digestion of chromosomal & plasmid DNA
8. Isolation of DNA fragment from agarose gel

REFERENCES

1. Michel R. G and Sambrook J. Molecular Coning- A laboratory manual. Cold spring harbor laboratory press, 2012.

OUTCOMES:

- On the completion of the above experiments students will be able to handle DNA samples and also to isolate, purify and visualize nucleic acid.

LSB6109	IMMUNOTECHNOLOGY LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To acquire knowledge on immunological techniques
- To train in various techniques involving antigen and antibody reactions

LIST OF EXPERIMENTS:

1. Double diffusion, Immuno-electrophoresis and Radial Immuno diffusion.
2. Rocket electrophoresis
3. Antibody titre by ELISA method.
4. ELISA for detection of antigens and antibodies-DOT ELISA
5. Sandwich ELISA
6. Blood group mapping
7. Separation of leucocytes by dextran method
8. Separation of mononuclear cells by Ficoll-Hypaque
9. Preparation of antigens from pathogens and parasites
10. Slide and tube agglutination reaction
11. Complement fixation test.
12. Immunofluorescence technique
13. Lymphoproliferation by mitogen / antigen induced
14. SDS-PAGE, Immunoblotting, Dot blot assays

REFERENCES:

1. Rose et al., Manual of Clinical laboratory Immunology, 6th Ed ASM Publications, 2002.
2. Lefkovis and Pernis. Immunological methods. Academic Press, 1978.
3. Hudson L. and Hay F.C. Practical Immunology. Black Well publishers, 1989

OUTCOMES:

- Students could independently perform diagnostics assays involving antigen-antibody reaction. They also learn to perform the qualitative and quantitative analysis using antibody.

SEMESTER II

LTB6201	GENOMICS AND PROTEOMICS	L	T	P	C
		4	0	0	4

OBJECTIVES:

- To provide information about genomics and proteomics and
- To offer basic knowledge of genome sequencing, major differences between prokaryotic and eukaryotic genomes.
- To understand the basic proteomics and its potential application of both genomics and proteomics.

MODULE I INTRODUCTION **10**

Genomics classification, Prokaryotic and Eukaryotic genome; mitochondrial and chloroplast genome; DNA sequencing-principles and methods, Sanger Dideoxy and fluorescence method; coding and non-coding sequences and gene annotation; Tools for genome analysis-RFLP, DNA fingerprinting, RAPD, PCR, Linkage and Pedigree analysis-physical and genetic mapping.

MODULE II GENOME SEQUENCING PROJECTS **8**

Gene database for Microbes, plants and animals; Accessing and retrieving genome project; Comparative genomics, Identification and classification using molecular markers-16S rRNA typing/sequencing, ESTs and SNPs.

MODULE III PROTEOMICS TECHNIQUES **9**

Introduction to proteomics; Protein separation techniques: chromatography-ion-exchange, size-exclusion and affinity chromatography; Protein analysis-Polyacrylamide gel electrophoresis, Isoelectric focusing (IEF), Two dimensional PAGE for proteome analysis and image analysis of 2D gels; measurement of protein concentration, amino-acid composition, N-terminal sequencing.

MODULE IV PROTEIN ENGINEERING **9**

Peptide fingerprinting; LC/MS-MS for identification of proteins and modified proteins; MALDI-TOF; SAGE and Differential display proteomics, Protein-protein interactions, Yeast two hybrid system. High throughput screening in genome for drug discovery-identification of gene targets, Pharmacogenetics and drug development.

MODULE V FUNCTIONAL GENOMICS AND PROTEOMICS 9

Recombinant DNA technology: Fundamentals of DNA cloning, Polymerase chain reaction, Human genome project; Analysis of microarray data; Protein and peptide microarray-based technology; PCR-directed protein in situ arrays.

Total Hours : 45

OUTCOMES:

- After completing the course the student will have a better understanding to the basics of the genomic and proteomic principles.
- The course will provide an updated knowledge about the different tools and applications of genomics and proteomics.

REFERENCES:

1. Brown TA, Genomes, 3rd Edition. Garland Science 2006

LTB6202 BIOPROCESS TECHNOLOGY & DOWNSTREAM PROCESSING

L	T	P	C
4	0	0	4

OBJECTIVES:

- To develop the skills in the area of bioprocess technology and downstream processing and understand different types of fermentors, the separation and isolation steps involved in downstream process and methods in product purification and formulation.

MODULE I BIOPROCESS TECHNOLOGY **9**

Design features of bioreactors / fermenters, Fundamentals of bioprocess technology, Principles underlying product formation, Principles underlying product recovery and purification, Large scale production of fermentation products, Fermentation kinetics: Reaction kinetics, Scale up of fermentation process, Downstream processing, Biosynthetic pathways for some secondary metabolites.

MODULE II MODELING AND DESIGN OF FERMENTATION PROCESSES **9**

Principles of model building for biotechnological processes, modeling of recombinant systems. biomass growth and product formation, Kinetics of substrate utilization, inhibition on cell growth and product formation. Design and operation of continuous cultures, chemostat in series, batch and fed batch cultures, total cell retention cultivation, Case studies on Production of green chemicals, algal biofuels, recombinant Insulin. Case studies should deal with medium design, reactor design & process optimization etc.

MODULE III DOWNSTREAM PROCESSING **9**

Introduction-downstream processing, biomolecules and bioprocesses, biomass removal and disruption technique- centrifugation, sedimentation, flocculation, ficrofiltration, sonication, Homogenizers, chemical lysis, enzymatic lysis , pretreatment and stabilisation of bioproducts.

MODULE IV SEPERATION AND ISOLATION **9**

Unit operations for solid-liquid separation - filtration and centrifugation. Membrane based purification: Ultrafiltration; Reverse osmosis; Dialysis; Diafiltration; Pervaporation; Perstraction Adsorption and chromatography: size,

charge, shape, hydrophobic interactions, Biological affinity; Process configurations (packed bed, expanded bed, simulated moving beds)

MODULE V PRODUCT PURIFICATION AND FORMULATION 9

Ammonium Sulfate-precipitation, solvent),Chromatography, principles, instruments and practice, adsorption, reverse phase, ionexchange, size exclusion, hydrophobic interaction, bioaffinity and pseudo affinity chromatographic techniques. Crystallization, drying and lyophilization in final in product formulation.

Total Hours : 45

OUTCOMES:

After the completion of the course

- The student will be able to learn about bioprocess techniques and downstream processing.
- The student will learn types of fermentors
- The student will be able to understand various techniques involved in the a product isolation, purification and formulation.

LTB6203 GENETIC ENGINEERING L T P C

3 0 0 3

OBJECTIVES:

- To learn about genetic engineering, principles involved in manipulating genes and DNA.
- To know about cloning strategies and expression systems.
- To acquire basic understanding of techniques in genetic engineering.

MODULE I BASICS CONCEPTS 9

DNA Structure and properties; Restriction Enzymes; DNA ligase, Klenow enzyme, T4 DNA polymerase, Polynucleotide kinase, Alkaline phosphatase; Cohesive and blunt end ligation; Linkers; Adaptors; Homopolymeric tailing; Labeling of DNA: Nick translation, Random priming, Radioactive and non-radioactive probes, Hybridization techniques: Northern, Southern and Colony hybridization, Fluorescence in situ hybridization; Chromatin Immuno precipitation; DNA-Protein Interactions-Electromobility shift assay; DNaselfootprinting.

MODULE II CLONING VECTORS 9

Plasmids; Bacteriophages; M13 mp vectors; PUC19 and Bluescript vectors, Phagemids; Lambda vectors; Insertion and Replacement vectors; Cosmids; Artificial chromosome vectors (YACs; BACs); Animal Virus derived vectors-SV-40; vaccinia/bacculo& retroviral vectors; Expression vectors; pMal; GST; pET-can be omitted vectors; Protein purification; His-tag; GST-tag; MBP-tag etc.; Intein-based vectors; Inclusion bodies; Methodologies to reduce formation of inclusion bodies; Baculovirus and pichia vectors system, Plant based vectors, Ti and Ri as vectors, Yeast vectors, Shuttle vectors. Criteria for selection of vectors.

MODULE III CLONING METHODOLOGIES 9

Insertion of Foreign DNA into Host Cells; Transformation; Transfection, Transduction, Construction of libraries; Isolation of mRNA and total RNA; cDNA and genomic libraries; cDNA and genomic cloning; Expression cloning; Jumping and hopping libraries; South western and Far-western cloning;

Protein-protein interactive cloning and Yeast two hybrid system; Phage display; Principles in maximizing gene expression. Methods to confirm cloning and reporter genes and proteins.

MODULE IV PCR AND ITS APPLICATIONS 9

Primer design; Fidelity of thermostable enzymes; DNA polymerases; Types of PCR – multiplex, nested, reverse transcriptase, real time PCR, touchdown PCR, hot start PCR, colony PCR, cloning of PCR products; Tvectors; Proof reading enzymes; PCR in gene recombination; Deletion; addition; Overlap extension; and SOEing; Site specific mutagenesis; PCR in molecular diagnostics; Viral and bacterial detection; PCR based mutagenesis detection. Sequencing methods; Enzymatic DNA sequencing; Chemical sequencing of DNA; Automated DNA sequencing; RNA sequencing; Chemical Synthesis of oligonucleotides.

MODULE V APPLICATION OF GENETIC ENGINEERING 9

Gene silencing techniques; Introduction to siRNA; siRNA technology; Micro RNA; Construction of siRNA vectors; Principle and application of gene silencing; Gene knockouts and Gene Therapy; Creation of knock out mice; Disease model; Somatic and germ-line therapy- in vivo and ex-vivo; Suicide gene therapy; Gene replacement; Gene targeting; Transgenics; cDNA and intragenic arrays; Differential gene expression and protein array. Ethics in genetic engineering and global policy.

Total Hours : 45

5. Desmond S. T. Nicholl An Introduction to Genetic Engineering Cambridge University Press 2008.

5. Technical Literature from Stratagene, Promega, Novagen, New England Biolab etc.

OUTCOMES:

- On completion of the course the scholars will acquire knowledge on the concepts and terminology in genetic engineering.
- Students will be familiar with various cloning strategies in prokaryotes as well as in eukaryotes.
- Students will learn various techniques in genetic engineering.
- They will also get awareness about the social and ethical issues concerning cloning by genetic engineering

LSB6204 COMPUTATIONAL BIOLOGY L T P C

3 0 0 3

OBJECTIVES:

- To understand the programming languages applied in computational biology.
- To understand the methods and applications for sequence analysis, Phylogenetics and Protein modelling.

MODULE I INTRODUCTION TO PROGRAMMINB LANGUAGE 9

Introduction –Programming languages – Problem solving Technique: Algorithm, Flowchart, Compiling, Testing and Debugging - Basic Perl Data Types, File handle and File Tests – Perl Modules – SQL.

MODULE II PROGRAMMING IN C, C++ AND OOPS 9

C language Introduction – Tokens – Keywords, Identifier, Variables, Constants, Operators – Structure of a 'C' program - Expression – Data types – Control Statement - C++programming – Object Oriented Concept: Encapsulation, Inheritance, Polymorphism.

MODULE III COMPUTATIONAL BIOLOGY AND SEQUENCE ANALYSIS 9

Molecular sequences, Genome sequencing: pipeline and data, Next generation sequencing data, Biological databases: Protein and Nucleotide databases, Sequence Alignment, Dynamic Programming for computing edit distance and string similarity, Local and Global Alignment, Needleman Wunsch Algorithm, Smith Waterman Algorithm, BLAST family of programs, FASTA algorithm, Functional Annotation, Progressive and Iterative Methods for Multiple sequence alignment, Applications.

MODULE IV PHYLOGENETICS 9

Introduction to Phylogenetics, Distance and Character based methods for phylogenetic tree construction: UPGMA, Neighbour joining, Ultrametric and Min ultrametric trees, Parsimonous trees, Additive trees, Bootstrapping.

MODULE V PROTEIN STRUCTURE, MODELLING AND SIMULATIONS 9

Protein Structure Basics, Visualization, Prediction of Secondary Structure and Tertiary Structure, Homology Modeling, Structural Genomics, Molecular Docking principles and applications, Molecular dynamics simulations.

Total Hours : 45

7. Baxevanis A.D. and Oullette, B.F.F. A Practical Guide to the Analysis of Genes and Proteins, 2nd ed., John Wiley, 2002

OUTCOMES:

- At the end of this course, students will have been familiarized with language skills and their applications in analyzing Protein structure , sequence analysis which can be used in analyzing the binding effect of drugs on proteins.

LTB6204 ENVIRONMENTAL BIOTECHNOLOGY L T P C

3 0 0 3

OBJECTIVES:

- To learn the environment protection Act and Law related to environmental biotechnology
- To give basic idea on environmental sample analysis
- To understand the basic principles involved in waste water management
- To get the information on usage of Bioremediation-biotechnology
- To inform students about Biooxidation& microbial leaching

MODULE I INTRODUCTION TO ENVIRONMENTAL BIOTECHNOLOGY 9

Water, Soil and Air: their sources and effects. Removal of Specific Pollutants: Sources of Heavy Metal Pollution, Microbial Systems for Heavy Metal Accumulation, Biosorption& detoxification mechanisms. Environment protection Act: Environmental laws, Environmental policies, Environmental ethics. UN declaration.Environmental protection and conservation. Environmental Impact Assessment, Ecoplanning and Sustainable Development.

MODULE II ENVIRONMENTAL SAMPLE ANALYSIS 9

Physicochemical and bacteriological analysis of soil and water, Problems associated with soil alkali soils, sodic soils, and solid waste, Fate of insecticides fungicides, pesticides in soil, use of genetically modified (insect- , pest- and pathogen resistant) plants. Ecotoxicology of soil pollutants, Municipal solid waste treatment strategies.

MODULE III WASTE WATER MANAGEMENT 9

Waste water constituents, Analysis and selection of flow rates and loadings, Process Selection, Physical unit operations, Chemical unit operations, Fundamentals of biological treatment, Role of biotechnology in water purification systems. Types and kinetics of biological treatment, Advanced waste water treatment, Biological Processes for Industrial and domestic effluent, Treatment, Aerobic Biological Treatment,Anaerobic Biological Treatment.

MODULE IV BIOREMEDIATION-BIOTECHNOLOGY 9

Bioremediation-Biotechnology for clean environment, Biomaterials as substitutes for non-degradable materials, Metal microbe interactions: Heavy Metal Pollution and impact on environment, Microbial Systems for Heavy Metal Accumulation, Biosorption, molecular mechanisms of heavy metal tolerance Bioindicators and biosensors for detection of pollution. Biotechnology for Hazardous Waste Management, Persistent organic pollutants, Xenobiotics, Biological Detoxification of PAH, Biotechniques for Air Pollution Control. Solid Waste Management.

MODULE V BIOOXIDATION & MICROBIAL LEACHING 9

Biooxidation – Direct and Indirect Mechanisms – Biooxidation Kinetics; Bacterial oxidation of Sphalerite, Chalcopyrite and Pyrite.; Extraction of metals from ores; Recovery of metals from solutions; Microbes in petroleum extraction; Microbial desulfurization of coal.

Total Hours : 45

4. Biotreatment Systems, Vol. 22, D. L. Wise (Ed.), CRC Press, INC.
5. Standard Methods for the Examination of Water and Waste Water (14th Education), 1985. American Public health Association

OUTCOMES:

On successful completion of this module, learners will be able to have:

- An understanding of environment protection regulations and source of environmental pollutions.
- The capability to apply advanced knowledge on environmental sample analysis
- The capability to apply avalanched discipline in waste water management
- The ability to formulate technique for bioremediation process
- An understanding of how biooxidation& microbial leaching helping in the industries.

LSB6205	COMPUTATIONAL BIOLOGY LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To get hands on experience on plasmid construction, mappings and analysis.
- To explore to various tools in bioinformatics.

EXPERIMENTS **30**

1. Plasmid Construction
2. Restriction Mapping
3. PCR Primer Designing
4. Sequence Retrieval and Format Conversion
5. ORF Finding
6. Homology Search
7. Multiple Sequence Alignment
8. Gene Prediction in prokaryotes
9. Motif finding in DNA and Protein Sequences
10. Structure Visualization
11. Phylogenetic Analysis
12. Protein Secondary Structure Prediction

REFERENCES

1. Rashidi H, Buehler L. K. Bioinformatics Basics: Applications in Biological Science and Medicine. 2nd Ed., CRC Press, 2005.
2. Baxevanis A. D, Ouellette B. F. F. Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins. 3nd edition Wiley, John & Sons, Incorporated, 2004.
3. Krawetz S. A, Womble D. D. Introduction to Bioinformatics: A Theoretical and Practical Approach. Humana press, 2003.

OUTCOMES:

- Students will be familiar with various soft skills/tool used in understating modern biology. They will also be able to analyze and interpolate data starting from PCR primer designing to structure predictions.

LSB6206	GENETIC ENGINEERING LABORATORY	L	T	P	C
		0	0	3	3

OBJECTIVES:

- To practice the earned theoretical knowledge in genetic engineering techniques
- To get acquainted with DNA/gene products know about cloning strategies and expression systems.
- To get familiarize with the sequential processes in genetic engineering.

LIST OF EXPERIMENTS:

1. Isolation of desired DNA/gene by PCR or restriction enzymes
2. Gel elution and purification of inserts
3. Ligation
4. Transformation
5. Verification of cloning by PCR or reporter gene or by patching the positive colonies
6. Plasmid isolation from PCR positive colonies
7. Confirmation of cloning by restriction digestion
8. Set up DNA sequencing reaction
9. Cleaning the sequencing reaction product
10. Automated DNA sequencing
11. Sequence Editing
12. Sequence analysis by BLAST

REFERENCES:

Laboratory Manual

OUTCOMES:

- Students will be familiar with various techniques globally used in engineering DNA and gene.
- Students will also be able to analyze the successfully cloned products.
- Students will be able to independently plan and execute the cloning of desired gene.

SEMESTER III

LTB7101	**PHARMACOGENOMICS**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- Learn the basic principles of genetic variation in treatment response.
- Learn the molecular and cellular biology to explain the genetic basis of variability in drug response.
- Understand the concept of pharmacogenomics in different therapeutic areas.
- To identify important sources and reliable databases with pharmacogenomics knowledge base.

MODULE I GENOMIC APPROACHES TO BIOLOGY 9

Principles of Human Genomics, Organization, human Population Genomics, Application of Population Genomics to Genomic Medicine, Genomic Approaches to Complex Disease, Identifying Common and Rare Genomic Variations in the Population, Relating DNA Variation to Phenotypes, Human Health and Disease: Introduction to basic concept of pharmacogenomics. Importance, clinical application and challenges in Pharmacogenomics. Basic principles and paradigms of molecular biology (DNA?RNA?Protein) information on gene promoters, miRNA, identification of targets, splicing/ alternate splicing. Introduction to genetic variation, types of variants, SNPs, coding and cis/trans regulatory variants, insertion/deletions, copy number variants SNPs, allele nomenclature, databases, National pharmacogenetics resources/efforts (PGRN).

MODULE II EPIGENETICS AND THE ENVIRONMENT 9

DNA Methylation Patterns Chromatin Modification DNA Methylation and Chromatin StatesCo-operatively Determine the State of Activityof Genes, Epigenetics and Human Disease, Systems Biology and the Emergence of Systems Medicine, Multi -parameter Blood-bourne Biomarkers, Emerging in vivo and in vitro Technologies,Technology Platforms for GenomicMedicine, DNA Sequencing for the Detection of Human Genome Variation and Polymorphism, DNA Sequencing, Other Methodologies for Polymorphism

Detection, Genome-Wide Association Studies and Genotyping, Copy Number Variation and Human Health, Detecting CNVs in a Genome-wide Manner, Association of CNVs to Disease and Disease Susceptibility, Implications of CNVs.

MODULE III PROTEOMICS: THE DECIPHERING OF THE FUNCTIONAL GENOME 9

Gel-based and Solution-based Proteomics, Mass Spectrometry, Bioinformatics, Impact of Proteomics on Understanding Diseases, Comprehensive Metabolic Analysis for Understanding of Disease Mechanisms Comparison of NMR and MS Technologies for Unbiased Metabolic Profiling, MS Methods for Targeted Metabolic Profiling, Examples of NMR-based Metabolic Profiling in, Disease Research, Examples of Targeted MS-based Metabolic Profiling for Understanding of Disease Mechanisms, Comprehensive Analysis of Gene Function: RNAinterference and Chemical Genomics Chemical Genomics Gene Function Studies.

MODULE IV INFLUENCE OF PHARMACOGENOMICS BASED DRUG INTERACTIONS 9

Introduction to proteins of importance in drug pharmacokinetics. Understanding the role of proteins involved in phase I drug metabolism in pharmacogenomics, Proteins Involved in Pharmacogenetics, Pharmacogenetics of Phase I drug metabolizing enzymes, CYP2C9 Pharmacogenetic, CYP2D6 Pharmacogenomics, CYP2D19 Pharmacogenetics, PhaseII Drug Metabolizing Enzymes, The role of proteins involved in phase I drug metabolism in pharmacogenomics, drug transporter pharmacogenetics, how genetic variation in drug transporters contribute to inter-individual differences in drug PK and PD.

MODULE V PHARMACOGENOMICS IN THERAPEUTIC AREAS 9

Role of Pharmacogenomics in Drug Development, Pharmacokinetic profiles for metabolic CYP2D6 metabolizers (Metoprolol as Example Compound), Pharmacodynamic response profiles for metabolic CYP2D6 metabolizers (Metoprolol as Example Compound) Combined consideration and Clinical interpretation of significance of CYP2D6 metabolizer status for metoprolol, Cardiovascular Example of pharmacogenomic based drug drug interaction differential for statin based therapy, Other Cardiovascular based examples

of the significance of pharmocogenomics, Pharmacogenomics of Tamoxifin Epidermal Growth Factor Receptors and KRAS,Irinotecan and UGT1A1 Capecitabine and 5-FU in solid tumors, pharmacogenomics and adverse drug reaction, Carbamazepine and Abacavir induced ADRs

Total Hours : 45

REFERENCE:

1. McLeod, et. al (eds.) (2009). Pharmacogenomics: Applications to Patient Care, 2nd Ed. American Association of Colleges of Pharmacy

OUTCOMES:

- After the completition of the course the student will be able
- Understand and use pharmacogenomic concepts to a particular drug therapy.
- Recognize ethical implication of genetic testing and the resultant individualization of drug therapy.
- Understand how variability in genes encoding drug metabolizing enzymes, drug transporting proteins, and drug receptors (targets) may result in drug disposition leading to changes in pharmacokinetics, pharmacodynamics, and clinical outcome.

LSB7102 PLANT AND MEDICAL BIOTECHNOLOGY L T P C

3 0 0 3

OBJECTIVES:

- to learn about embryogenesis and other type of hybridization techniques.
- to know about genetic transformation and techniques about gene delivery.
- to have an idea about gene mapping and cloning and different type of biotic and abiotic stress.
- to know about protein engineering and different type of bioinformatics analysis.

MODULE I PLANT TISSUE CULTURE 9

Totipotency, organogenesis, somatic embryogenesis, artificial seed production, Micropropagation, somaclonal variation, Germplasm conservation and cryopreservation.Protoplast Culture and Somatic Hybridization Protoplast isolation- its culture and usage, Somatic hybridization and its applications.

MODULE II AGROBIOLOGY 9

Agrobacterium-plant interaction; Virulence; Ti and Ri plasmids; Opines and their significance; T-DNA transfer, Genetic Transformation Agrobacterium-mediated gene delivery, Direct gene transfer - PEG-mediated, electroporation, particle bombardment and alternative methods; Screenable and selectable markers, Characterization of transgenics, Gene targeting.

MODULE III MOLECULAR MAPPING & MARKER ASSISTED SELECTION (MAS) 9

Marker assisted selection for genes of agronomic importance, e.g. insect resistance, grain quality and grain yield, Molecular polymorphism, RFLP, RAPD, STS, AFLP, SNP markers; Construction of genetic and physical map, Gene mapping and cloning, strategies for Introducing Biotic and Abiotic Stress Resistance/Tolerance Bacterial resistance; Viral resistance; Fungal resistance; Insects and pathogens resistance; Herbicide resistance; Drought, salinity, thermal stress, flooding and submergence tolerance.

MODULE IV MOLECULAR THERAPEUTICS **9**

Basic concept of stem cell therapy, neutraceuticals, nanotechnology and clinical trials, revolution in diagnosis, changing approaches of therapy, FDA Organization chart and regulatory measures for drug discovery. Drug discovery - Overview, rational drug design, combinatorial chemistry in drug development, computer assisted drug design, role of bioinformatics in genome based therapy, antisense DNA technology for drug designing. Stem cells in therapy.

MODULE V VACCINES **9**

Biotechnological approaches to obtain blood products: Tissue plasminogen activator and erythropoietin, Vaccine technology: Subunit vaccines, drawbacks of existing vaccines, criteria for successful vaccine, peptide vaccine, minicells as vaccines, impact of genetic engineering on vaccine production, viral vector vaccines and AIDS vaccine chiral technology.

Total Hours : 45

3. Neil Wille, Phytoremediation: Methods and Reviews, 1st Edition, Humana Press, 2007.
4. Denis Murphy, Plant Breeding and Biotechnology: Societal Context and the Future of Agriculture, Cambridge University Press, 2007.

OUTCOMES:

On the completion of course student will be able to understand

- different hybridization techniques and basics of embrogenesis.
- they will be able to learn about different gene delivery techniques.
- they will learn about genomics, protein engineering and other bioinformatics tools.

ELECTIVES-I

LSBY021	BIO-ENTREPRENEURSHIP	L	T	P	C
		3	0	0	3

OBJECTIVES:

The objective of the course is to

- To understand concepts and process involved with bio-entrepreneurship
- To make the students aware of the importance of entrepreneurship opportunities available in the society for the entrepreneur.
- Acquaint them with the challenges faced by the entrepreneur

MODULE I ACCOUNTING AND FINANCE 9

Taking decision on starting a venture; Assessment of feasibility of a given venture/new venture; Approach a bank for a loan; Sources of financial assistance; Making a business proposal/Plan for seeking loans from financial institution and Banks; Funds from bank for capital expenditure and for working; Statutory and legal requirements for starting a company/venture; Budget planning and cash flow management; Basics in accounting practices: concepts of balance sheet, P&L account, and double entry bookkeeping; Estimation of income, expenditure, profit, income tax etc.

MODULE II MARKETING 9

Assessment of market demand for potential product(s) of interest; Market conditions, segments; Prediction of market changes; Identifying needs of customers including gaps in the market, packaging the product; Market linkages, branding issues; Developing distribution channels; Pricing/Policies/ Competition; Promotion/ Advertising; Services Marketing.

MODULE III NEGOTIATIONS/STRATEGY 9

With financiers, bankers etc.; with government/law enforcement authorities; with companies/ Institutions for technology transfer; Dispute resolution skills; External environment/changes; Crisis/ Avoiding/Managing; Broader vision– Global thinking

MODULE IV INFORMATION TECHNOLOGY &HUMAN RESOURCE DEVELOPMENT 9

How to use IT for business administration; Use of IT in improving business performance; Available software for better financial management; E-business setup, management. Human Resource Development (HRD)- Leadership skills; Managerial skills; Organization structure, pros & cons of different structures; Team building, teamwork; Appraisal; Rewards in small scale set up.

MODULE V ROLE OF KNOWLEDGE CENTRE AND R&D 9

Support mechanism for entrepreneurship in India; Knowledge centres like universities and research institutions; Role of technology and upgradation; Assessment of scale of development of Technology; Managing Technology Transfer; Regulations for transfer of foreign technologies; Technology transfer agencies.

Total Hours : 45

8. Vasant Desai Small Scale Industries and Entrepreneurship, Himalaya 2008.
9. Dr. V. B. Angadi, Dr. H. S. Cheema & Dr. M. R. Das Entrepreneurship, Growth, and Economic Integration A linkage, Himalaya 2009.

OUTCOMES:

On successful completion of this module, learners will be able to have:

- An understanding of accounting and finance related to bio-entrepreneurship.
- The capability to apply advanced assessment strategies on marketing of product.
- The capability to apply knowledge on negotiations strategy related to bio-entrepreneurship.
- The ability to apply and handle information technology & human resource development.
- Addressing the problems associated with role of knowledge centre and R&D.

LSBY022 INTELLECTUAL PROPERTY RIGHTS & PATENT LAW L T P C

3 0 0 3

OBJECTIVES:

- To learn about the Intellectual Property Rights
- To understand about criteria in applying and maintaining patents.
- To be familiarized with the law and enforcement in Intellectual Property Rights

MODULE I INTRODUCTION TO IPR 9

General regime of intellectual property rights and law.Theories of Intellectual Property Rights, Kinds of Intellectual Property.Intellectual Property as an Instrument of Development, Economic importance of Intellectual Property.Need for Protecting Intellectual Property.National and international perspectives.

MODULE II TRADE MARK 9

Introduction to Trade mark, Trade mark registration and maintenance Process, Transfer of Rights, Inter parties Proceeding, Infringement, Dilution Ownership of Trade mark, Likelihood of confusion, Trademarks claims, Trademarks Litigations and International Trade mark Law. Trade Secret, Employee Limitation, Unfair Competition and Trade Secret Litigations.

MODULE III COPYRIGHTS 9

Introduction to Copyrights, Principles of Copyright, Copyright Law, Copy right Ownership, Transfer and duration, Right to prepare Derivative works, Rights of Distribution, Rights of Perform the work Publicity Copyright Formalities and Registrations, Limitions, Copyright disputes and International Copyright Law.

MODULE IV GEOGRAPHICAL INDICATIONS 9

Registration, Duration of Protection and Renewal; Infringement, Penalties and Remedies. Layout designs of Integrated Circuits- Semiconductor Integrated Circuits Layout-Design Act, 2000, Registration and Effect of Registration, Assignment and Transmission. Protection of Plant Varieties and Farmers' Rights - Authority and Registry, Duration, Effect of Registration and

Benefit Sharing, Farmers' Rights, Plant Varieties Protection Appellate Tribunal, Infringement, Offences and Penalties.

MODULE V IPR LEGISTLATION AND PATENTING 9

World Intellectual property organization WIPO – establishment, role, membership, etc., Indian IPR legislation, Indian patent act, national intellectual property policy. Rationale for Intellectual Property Protection in Biotechnology, Patenting Biotechnology Inventions-Objective, Concept of Novelty, Concept of inventive step, Microorganisms, Moral Issues in Patenting Biotechnological inventions. Protection of Plant Varieties.Protection of Traditional Knowledge. Case studies on Basmati rice, turmeric, neem and also current cases.

Total Hours : 45

2. Prabhuddha G. Intellectual Property Rights. Tata Mc-Graw–Hill, New Delhi.
3. Gopalakrishnan N. S. and Agitha, T. G. Principles of Intellectual Property, Eastern Book Company, Lucknow 2009.
4. Subbaram N. R. Handbook of Indian patent law and practice, S. Viswanathan printers and publishers Pvt Ltd, 1998.

OUTCOMES:

- On the completion of the above objectives student will be able to know about IPR and also the importance of protecting their innovation. They will be familiar with international and national law practiced and also recent issues on it.

LSBY023	BIOSAFETY AND BIOETHICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Developing a good work ethics and laboratory working condition.
- Understanding the importance of following and maintaining laboratory safety guidelines.

MODULE I ETHICS IN BIOLOGY **9**

Principles and purpose of studying bioethics, legal, moral and ethical issues in biological research, human rights, privacy and justice, IPR and technology transfer.

MODULE II BIOSAFETY **9**

Biosafety in laboratory practices, laboratory associated infections and other hazards, assessment of biological hazards and levels of biosafety, biosafety regulations in handling of recombinant DNA processes and products.

MODULE III GENETICALLY MODIFIED CROPS AND FOOD **9**

Genetically modified food and biosafety assessment procedures for GM foods and related consumables, including transgenic food crops, ecological safety assessment of recombinant organisms and transgenic crops, case studies of relevance (e.g. BT cotton).

MODULE IV ETHICAL ISSUES IN LABORATORY RESEARCH **9**

Ethical issues and guidelines for research with laboratory animals, current uses of laboratory animals in biomedical research, animal experimentation using hazardous chemicals, animal care and maintenance, CPSEA guidelines for laboratory animals.

MODULE V ETHICAL ISSUES IN CLINICAL RESEARCH **9**

Ethical issues and guidelines for research with clinical samples and humans studies, Role of Institutional Human ethical board, ICMR's ethical guidelines and clinical trials registration in India and challenges in clinical trials.

Total Hours : 45

2. Fleming, D.A., Hunt, D.L. Biological safety Principles and practices (3rd Ed). ASM Press, Washington, 2000.

3. H.-J. Rehm and G. Reed, Biotechnology - A comprehensive treatise (Vol. 12). Legal economic and ethical dimensions VCH.

OUTCOMES:

- At the end of the course student will develop an idea about the importance of good laboratory practice in high quality research. They will also develop an awareness about the basic fundamental safety measures that a researcher should follow in laboratory.

LSBY028 BIONANOTECHNOLOGY L T P C

3 0 0 3

OBJECTIVES:

- To provide an introduction to nanobiotechnology.
- To make the students understand about the functional principles of nanobiotechnology

MODULE I FUNDAMENTALS OF NANOSCIENCE 9

Introduction, the nanoscale dimension and paradigm, definitions and historical evolution (colloids etc.) and current practice, types of nanomaterials and their classifications (1D, 2D and 3D etc. nanocrystal, Nanoparticle, Quantum dot, Quantum Wire and Quantum Well etc), Polymer, Carbon, Inorganic, Organic and Biomaterials –Structures and characteristics.

MODULE II CHARACTERIZATIONS IN BIONANOTECHNOLOGY 9

Optical (UV-Vis/Fluorescence), X-ray diffraction, Imaging and size (Electron microscopy, light scattering, Zeta potential), Surface and composition (ECSA, EDAX, AFM/STM etc), Vibration (FT-IR and RAMAN), SERS -3, Magnetic, Electrical and Electrochemical.

MODULE III APPLICATIONS OF BIONANOTECHNOLOGY 9

Materials in Biosystems: Proteins - Lipids - RNA and DNA, Protein Targeting – Small Molecule/Nanomaterial - Protein Interactions Nanomaterial-Cell interactions-Manifestations of Surface Modification (Polyvalency), Drugs-Photodynamic therapy, molecular motors, neuroelecronic interphases, development of nanoluminiscent tags.

MODULE IV NANOMATERIALS AND DIAGNOSTICS 9

Drug Delivery and Therapeutics, MRI, Imaging, Surface Modified Nanoparticles, MEMS/NEMS, based on Nanomaterials, Peptide/DNA Coupled Nanoparticles, Lipid Nanoparticles For Drug Delivery, Inorganic Nanoparticles For Drug Delivery, Metal/Metal Oxide Nanoparticles (antibacterial/anti fungal/ anti viral), Anisotropic and Magnetic Particles (Hyperthermia).

MODULE V NANOMATERIALS AND TOXICITY EVALUATION 9

Designer biopolymers, Procollagen, DNA Polynode, RNA topoisomerase, Protein –magnetic materials, Cyto-toxicity, Geno-toxicity, In vivo tests/assays.

Total Hours : 45

REFERENCES:

3. Nicholas A. Kotov, Nanoparticle Assemblies and Superstructures, CRC, 2006.
4. David S Goodsell, “Bionanotechnology”, John Wiley & Sons, 2004.

OUTCOMES:

- After the completion of the course the student will have the basic knowledge of nanotechnology in biotechnology. In detail understanding of the application of Nanomaterials in biotechnology and acquire the knowledge about the DNA, proteins, amino acids, drug delivery, biomedicine etc.

ELECTIVES II

LSBY024	MOLECULAR DIAGNOSTICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Developing the basic concept of molecular diagnostics
- Understanding the common procedures and which are used in disease diagnosis.
- To be familiar with various types of diseases diagnosis methods and progression of diagnosed disease.

MODULE I INTRODUCTION TO MOLECULAR DIAGNOSTICS 9

Collection, preservation and storage of clinical samples, biopsy, Principles, application and limitations of Biological assays used in diagnosis- PCR, ELISA, FISH, gene sequencing, microarrays, protein arrays. GLP, SOP and ethics in molecular diagnostics.

MODULE II INFECTIONS 9

Infection and mode of transmission, types of infectious diseases- bacterial and fungal infections, diagnosis of infections caused by Streptococcus, Coliforms, Salmonella, Shigella, Vibrio, and Mycobacterium- diagnosis of fungal infections, major fungal diseases, Dermetophytoses, Candidiosis and Aspergillosis. Diagnosis of DNA and RNA viruses- pox virus, rhabdo virus, hepatitis; virus diagnosis of protozoan diseases- amoebiosis, malaria, trypanosomiosis, leishmaniasis- study of helminthic diseases- Fasciola hepatica and Ascarislumbricoides. Filariasis and Schistosomiasis.Diagnosis of chicken guinea and swine flu.

MODULE III CLINICAL GENETICS 9

Chromosomes chemistry and packaging, Cytogenetic, Structural and numerical abnormalities of chromosomes, Chromosome bands, banding techniques , mutation and polymorphism analysis, human genome project, cancer genetics- oncogenes, tumor suppressor genes- gene therapy, genetic counseling, nucleic acid hybridization techniques, Disease linked with mitochondrial DNA Genetic linkage and chromosome and genetic mapping in human diseases, Prenatal.

MODULE IV IMMUNODIAGNOSTICS **9**

Introduction to immunodiagnostics, antigen-antibody reactions, antibody production, antibody markers, CD markers, FACS, Human Leukocyte Antigen (HLA) typing, agglutination (ABO/Bacterial), immunoprecipitation, immunodiffusion, flocytometer.

MODULE V FORENSIC SCIENCE **9**

Introduction to Forensic Science, DNA fingerprinting / DNA Profiling / DNA Testing in Forensic Science; Ethics, Rules and Procedures in DNA analysis. Autopsy and toxicological diagnosis.Determination of Paternity- Human identification and sex determination.semen analysis, Case study.

Total Hours : 45

REFERENCES:

1. Tietz Textbook of Clinical Chemistry, Carl A. Burtis, Edward R. Ashwood,
2. Harcourt Brace & Company AisaPvt. Ltd.
3. Essentials of Diagnostic Microbiology, Lisa Anne Shimeld
4. The Science of Laboratory Diagnosis, Crocker Burnett

OUTCOMES:

- Learners will be able to define basic terminology and describes basic concepts in molecular diagnostics
- The students will know the importance and the relevance of molecular diagnostic techniques and applications of molecular diagnostics in various field including medical, forescenic, etc..

LSBY025 FOOD PROCESS TECHNOLOGY L T P C

3 0 0 3

OBJECTIVES:

- To explore about food process and technology.
- To get overview of processing of various types of food
- To expose themselves to storage and handling of food and food products.

MODULE I STORAGEA & HANDLING OF CEREALS 9

Infestation control; Drying of grains, Processing of rice and rice products.Milling of wheat and production of wheat products, including flour and semolina.Milling of corn, barley, oat, coarse grains including sorghum, ragi and millets; Processing of tea, coffee and cocoa.

MODULE II FRESH FRUITS AND VEGETABLES 9

Preservation of fruits and vegetable by heat treatment.Production and preservation of fruits and vegetable juices, preservation of fruit juice by hurdle technology.Non-alcoholic beverages; Food Laws, food rules and standards, Statistical Quality Control; Various types of packaging.

MODULE III SEA FOOD 9

Commercial handling, storage and transport of raw fish; Average composition of fish; Freshness criteria and quality assessment of fish; Spoilage of Fish; Methods of Preservation of fish: Canning, Freezing, Drying, Salting, Smoking and Curing. Quality control of processed fish; Fish processing industries in India.

MODULE IV ANIMAL PRODUCT 9

Slaughtering technique of animal; Meat cuts and portions of meat, muscle; Color of meat; Post mortem changes of meat; Meat processing - curing and smoking; fermented meat products (meat sausages & sauces); Frozen meat & meat storage. Classification of poultry meat; Composition and nutritional value of poultry meat &eggs ; Processing of poultry meat and eggs; Spoilage and control; Byproduct utilization and future prospects; Poultry farms in India.

MODULE V DIARY PRODUCT **9**

Composition of milk; Varieties of milk; Checks for purity of milk; Handling of fresh milk.Pasteurization of milk; HTST and UHT techniques; Packaging of milk; Fermentation of milk and fermented milk products. Manufacture of milk products like evaporated milk, powder milk, condensed milk, cream butter, cheese, yogurt, ice cream, ghee, baby food and sweet meat. Quality control of milk and milk products; Milk plant hygiene and sanitation.

Total Hours : 45

14. Milk & Milk Processing; Herrington BL; 1948, McGraw-Hill Book Company.
15. Fox PF; Applied Science Pub Ltd. Outlines of Dairy Chemistry, De S; Oxford.

OUTCOMES:

- On the completion of the above objectives student will have a sound knowledge on the various techniques involved in food processing, storage and handling of food and food products.

LSBY026 ANIMAL BIOTECHNOLOGY L T P C

3 0 0 3

OBJECTIVES:

The student will learn about

- The basic idea about animal cell culture, drug toxicity and its application.
- Vaccines production and other technology related to antibody production.
- The basic concept of cloning and several issues related with that.
- Genomics and the role of DNA forensics.

MODULE I ANIMAL CELL CULTURE 9

Morphology and ultra-structure of animal cell, requirements for animal cell culture, media and reagents, Primary culture, secondary culture, maintaining cell line, Suspension cultures, Somatic cell cloning and hybridization, transfection and transformation, Stem cells and their application, Animal cell culture application for in vitro testing of drugs, toxicity of environmental pollutants in cell culture.

MODULE II ANIMAL HEALTH BIOTECHNOLOGY 9

Introduction to immune system, History of vaccines development, concept of vaccines, vaccine production, conventional methods and recombinant approaches, technology for antibody production, Phage display technology, radio immunoassays and enzyme immunoassays, Immunoblotting, Nucleic acid based diagnostic methods including nucleic acid probe hybridization.

MODULE III ANIMAL REPRODUCTIVE BIOTECHNOLOGY 9

Culture of embryos, Cryopreservation of embryos, Embryo transfer, Micromanipulation of animal embryos, Artificial insemination, in vitro fertilization, Transgenic animal technology and its different applications, Animal cloning- basic concepts, Cloning from embryonic cells and adult cells; Cloning of farm animals; Cloning for conservation of endangered species, Ethical, social and moral issues related to cloning, Human Cloning.

MODULE IV ANIMAL GENOMICS **9**

Introduction to animal genomics; Different methods for characterization of animal genomes, SNP, STR, QTLS, RFLP, RAPD, proteomics, metobolomics, different breeds of cattle, buffalo, sheep, goats, pigs, camels, horses, canines and poultry, characterization of livestock breeds; Marker assisted breeding of livestock and poultry, Genetic basis for disease resistance; Gene knock out technology and animal models for human genetic disorders.

MODULE V DNA FORENSICS **9**

Nucleic acid based methods for identification of animal species, Detection of food/feed adulteration with animal protein, adulteration detection in meat using DNA based methods, Identification of wild animal species using DNA based methods using different parts including bones, hair, blood, skin and other parts confiscated by anti-poaching agencies; Human forensics; Microbial forensics; Bioterror agents; Biocrimes and Bioterrorism.

Total Hours : 45

5. Gordon, Reproductive Technologies in Farm Animals, CAB Intl., 2005.
6. Pinkert, Transgenic animal technology, Academic Press, 2006.

OUTCOMES:

On the completion of the above course student will learn about

- basic of animal cell culture and the production of antibodies.
- how vaccines is being produced and its importance in several aspects
- the social and moral issues related to cloning.
- the importance of studying Forensic science.

LSBY029 INDUSTRIAL BIOTECHNOLOGY L T P C

3 0 0 3

OBJECTIVES:

- To obtain knowledge on wide-ranging topics related to applications of biotechnology in industries.
- To learn about bioprocess technology and its applications
- To get familiar with enzymes and microbes used for industrial purposes.

MODULE I FERMENTATION & PROCESSING 7

Introduction to fermentation technology: Upstream and downstream processing of biomolecules. Isolation, Preservation and Improvement of Industrial Micro-Organisms; Medium requirements for fermentation process; Criteria for good medium; Sterilization - batch and continuous heat sterilization of liquid media, filter sterilization of liquid media and Air. Design of sterilization equipment

MODULE II KINETICS OF SUBSTRATE UTILIZATION, PRODUCT FORMATION AND BIOMASS PRODUCTION 10

Phases of cell growth in batch cultures - transient growth kinetics, Simple unstructured kinetic Models for microbial growth, Growth of filamentous organisms; Environmental conditions affecting growth kinetics, substrate and product inhibition on cell growth and product formation; structured kinetic Models, segregated kinetic Models of growth. Production of primary and secondary metabolites. The production of some commercially important Organic acids, amino acids and alcohols, study of production processes for various classes of low molecular weight secondary metabolites: Antibiotics, quinones, aromatics, Vitamins and Steroid.

MODULE III BIOPROCESSING 9

Industrial use of micro organisms; Microbes exploited commercially-Saccharomyces, Lactobacillus, Penicillium, Acetobactor, Bifidobacterium, Lactococcus, Streptococcus etc; Fermentation-process, media and systems; Upstream and downstream processing; Product development; Dairy fermentation and fermented products.

MODULE III BIOREACTORS **9**

Animal Cells as bioreactors, characteristics of bioreactors, expression and over production of targeted proteins –human growth hormones – production of α and interferon's. Good manufacturing practice bio safety issues bioethics, Intellectual Property patenting issues.

MODULE V INDUSTRIAL APPLICATION OF ENZYMES **10**

Immobilized enzymes - principles & techniques of immobilization - commercial production of enzymes; amylases, proteases, cellulose, artificial enzymes, industrial applications, fermentation, enzymes Modification, site directed mutagenesis; immobilized enzyme in industrial processes.Structure and function of coenzyme - reactions involving TPP, pyrodoxal phosphate, nicotinamide, flavin nucleotide, coenzyme A and biotin.Industrial utilization of enzymes, food, detergents, energy, waste treatment, pharmaceuticals and medicine.

3. Waites, M.J. et. al., Industrial Biotechnology: An Introduction, Blackwell publishing, UK, 2007.

OUTCOMES:

- After the completion of the course the student will have overall knowledge of scientific industrial biotechnology and applications of microbes and enzymes used in industry.

REGULATIONS, CURRICULUM AND SYLLABI

M.Sc.
BIOCHEMISTRY AND MOLECULAR BIOLOGY

(As approved by the 9th Academic Council)

JULY 2016

B.S.ABDUR RAHMAN
UNIVERSITY
B.S. ABDUR RAHMAN INSTITUTE OF SCIENCE & TECHNOLOGY
(Estd. u/s 3 of the UGC Act, 1956)
(FORMERLY B.S. ABDUR RAHMAN CRESCENT ENGINEERING COLLEGE)
Rated with A Grade by National Assessment and Accreditation Council
Seethakathi Estate, G.S.T. Road, Vandalur, Chennai - 600 048
www.bsauniv.ac.in

UNIVERSITY VISION AND MISSION

VISION

B.S. Abdur Rahman Institute of Science and Technology aspires to be a leader in Education, Training and Research in Engineering, Science, Technology and Management and to play a vital role in the Socio-Economic progress of the Country.

MISSION

- To blossom into an internationally renowned University
- To empower the youth through quality education and to provide professional leadership
- To achieve excellence in all its endeavors to face global challenges
- To provide excellent teaching and research ambience
- To network with global institutions of Excellence, Business, Industry and Research Organizations
- To contribute to the knowledge base through Scientific enquiry, Applied research and Innovation

VISION AND MISSION OF THE DEPARTMENT OF SCHOOL OF LIFE SCIENCES

VISION

To be a leader in providing quality education and to carryout research in the field of Mathematics and its application in Science, Engineering and Technology

MISSION

- To provide quality education in higher mathematics through well designed programs
- To provide quality mathematical foundation for all science and engineering programs
- To offer programs in specialized areas such as Actuarial Science to meet the needs of Insurance and other Industries
- To undertake fundamental, applied and interdisciplinary research

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

M. Sc. (Biochemistry and Molecular Biology)

PROGRAMME EDUCATIONAL OBJECTIVES:

The course aims to provide an advanced understanding of the core principles and topics of Biochemistry and Molecular Biology, and to enable students to acquire a specialized knowledge and understanding of selected aspects by means of a lecture series and a research project. Hence, the main objectives of the program are:

- To provide an introduction to the basic concepts of biochemistry and molecular biology necessary for biochemical and biotechnology studies.
- For the basic understanding, this course includes biochemistry, cell and molecular biology, animal and plant biochemistry and immunology which will impart basic understanding of the biochemistry and molecular biology.
- Moreover, several laboratory courses given in the individual sections of the curriculum with detailed information on the importance of biochemistry and molecular biology in various fields of biological importance.
- Finally this course explains the advanced sections of molecular biology like Immunology, recombinant DNA technology, nanobiotechnology, stem cells research, Pharmaceutical biotechnology and bioinformatics which will strengthen the academic foundation of the student.
- This course provides necessary theoretical and practical experience in all divisions of biochemistry and molecular biology to become an effective professional in biotechnology sector.
- To provide broad exposure to various societal, ethical and commercial issues in the biochemistry and molecular biology.

PROGRAMME OUTCOMES:

After successfully completing this course, the student should be able to:

- Demonstrate a clear understanding of the properties of biomolecules and be able to predict behavior of molecules from in various biological environments.
- Apply their knowledge of cell and molecular biology into high end research.

- Advanced subject areas like Immunology, bioinformatics, nano-biotechnology will give broad information on applications and opportunities in the field of biochemistry and molecular biology.
- Identify research and solve biochemistry and molecular biology related problems related to the different types of human diseases.
- Ability to communicate and function effectively in multi-disciplinary team related to the biochemistry and molecular biology.

REGULATIONS – 2016
FOR
M.Tech. / MCA / M.Sc. DEGREE PROGRAMMES

1.0 PRELIMINARY DEFINITIONS AND NOMENCLATURE

In these Regulations, unless the context otherwise requires

i. **"Programme"** means a Post Graduate Degree Programme (M.Tech./ MCA/ M.Sc.)

ii. **"Course"** means a theory or practical subject that is normally studied in asemester, like Applied Mathematics, Structural Dynamics, Computer Aided Design, etc.

iii. **"University"** means B.S.Abdur Rahman University, Chennai, 600048.

iv. **"Institution"** unless otherwise specifically mentioned as an autonomousor off campus institution means B.S.Abdur Rahman University.

v. **"Academic Council"** means the Academic Council, which is the apex body on all academic matters of this University

vi. **"Dean (Academic Affairs)"** means Dean (Academic Affairs) ofB.S.Abdur Rahman University, who administers the academic matters.

vii. **"Dean (P.G. Studies)"** meansDean (P.G. Studies) of B.S. Abdur Rahman University who administers all P.G Programmes of the University in coordination with Dean (Academic Affairs)

viii. **"Dean (Student Affairs)"** means Dean (Student Affairs) of B.S.Abdur Rahman University, who looks after the welfare and discipline of the students.

ix. **"Controller of Examinations"** means the Controller of Examinations ofB.S.Abdur Rahman University who is responsible for conduct of examinations and declaration of results.

2.0 PROGRAMMES OFFERED, MODE OF STUDY AND ADMISSION REQUIREMENTS

2.1 P.G. Programmes Offered

The various P.G. Programmes and their modes of study are as follows:

Degree	Mode of Study
M. Tech. /M.C.A. / M.Sc.	Full Time & Part Time – Day / Evening / Weekends

2.2 Modes of Study

2.2.1 Full-time

Students admitted under "Full-Time" shall be available in the Institution during the

complete working hours for curricular, co-curricular and extra-curricular activities assigned to them.

2.2.2 A full time student, who has completed all non-project courses desiring to do the Project work in part-time mode for valid reasons, shall apply to the Dean (Academic Affairs) through the Head of the Department. Permission may be granted based on merits of the case. Such conversion is not permitted in the middle of a semester.

2.2.3 Part-time

In this mode of study, the students are required to attend classes for the courses in the time slots selected by them, during the daytime (or) evenings (or) weekends.

2.3 Admission Requirements

2.3.1 Students for admission to the first semester of the Master's Degree Programme shall be required to have passed the appropriate degree examination of this University as specified in the Table shown for eligible entry qualifications for admission to P.G. programmes or any other degree examination of any University or authority accepted by this University as equivalent thereto.

2.3.2 Eligibility conditions for admission such as class obtained, number of attempts in the qualifying examination and physical fitness will be as prescribed by this Institution from time to time.

2.3.3 All part-time students should satisfy other conditions regarding experience, sponsorship etc., which may be prescribed by this Institution from time to time.

2.3.4 Student eligible for admission to M.C.A under lateral entry scheme shall be required to have passed three year degree in B.Sc (Computer Science) / B.C.A / B.Sc (Information Technology)

3.0 DURATION AND STRUCTURE OF THE P.G. PROGRAMME

3.1 The minimum and maximum period for completion of the P.G. Programmes are given below:

Programme	Min. No. of Semesters	Max. No. of Semesters
M.Tech. (Full Time)	4	8
M.Tech. (Part Time)	6	12
M.C.A. (Full Time)	6	12
M.C.A. (Part Time)	9	18
M.C.A. (Full Time) – (Lateral Entry)	4	8
M.C.A. (Part Time) – (Lateral Entry)	6	12
M.Sc. (Full Time)	4	8

M. Sc. (Part Time)	6	12

3.2 The PG. programmes consist of the following components as prescribed in the respective curriculum

i. Core courses
ii. General Elective courses
iii. Professional Elective courses
iv. Project work / thesis / dissertation
v. Laboratory Courses
vi. Case studies
vii. Seminars
viii. Mini Project
ix. Industrial Internship

3.3 The curriculum and syllabi of all PG. programmes shall be approved by the Academic Council of this University.

3.4 The minimum number of credits to be earned for the successful completion of the programme shall be specified in the curriculum of the respective specialization of the P.G. programme.

3.5 Each academic semester shall normally comprise of 80 working days. Semester-end examinations will follow immediately after the last working day.

ELIGIBLE ENTRY QUALIFICATIONS FOR ADMISSION TO P.G. PROGRAMMES

Sl. No.	Name of the Department	P.G. Programmes offered	Qualifications for admission
01	Civil Engineering	M. Tech. (Structural Engineering)	B.E / B. Tech. (Civil Engineering) / (Structural Engineering)
		M. Tech. (Construction Engineering and Project Management)	
02	Mechanical Engineering	M. Tech. (Manufacturing Engineering)	B.E. / B. Tech. (Mechanical / Auto / Manufacturing / Production / Industrial / Mechatronics / Metallurgy / Aerospace /Aeronautical / Material Science / Marine Engineering)
		M. Tech. (CAD/CAM)	
03	Polymer Engineering	M. Tech. (Polymer Technology)	B. E. / B. Tech. Mechanical / Production /Polymer Science or Engg or Tech / Rubber Tech / M.Sc. (Polymer Sc./ Chemistry Appl. Chemistry)
04	Electrical and Electronics Engineering	M. Tech. (Power Systems Engg)	B.E / B.Tech (EEE / ECE / E&I / I&C / Electronics / Instrumentation)
		M. Tech. (Power Electronics & Drives)	B.E / B.Tech (EEE / ECE / E&I / I&C / Electronics / Instrumentation)
05	Electronics and Communication	M. Tech. (Communication Systems)	B.E / B.Tech (EEE/ ECE / E&I / I&C / Electronics / Instrumentation)

Sl. No.	Name of the Department	P.G. Programmes offered	Qualifications for admission
	Engineering	M. Tech. (VLSI and Embedded Systems)	B.E. / B. Tech. (ECE / Electronics / E&I / I&C / EEE)
06	ECE Department jointly with Physics Dept.	M. Tech. (Optoelectronics and Laser Technology)	B.E. / B. Tech. (ECE / EEE / Electronics / EIE / ICE) M.Sc. (Physics / Materials Science / Electronics / Photonics)
07	Electronics and Instrumentation Engineering	M. Tech. (Electronics and Instrumentation Engineering)	B.E. / B. Tech. (EIE / ICE / Electronics / ECE / EEE)
08	Computer Science and Engineering	M. Tech. (Computer Science and Engineering)	B.E. / B. Tech. (CSE / IT / ECE / EEE / EIE / ICE / Electronics / MCA)
		M. Tech. (Software Engineering)	B.E. / B. Tech. (CSE / IT) MCA
		M. Tech. (Network Security)	B.E. / B. Tech. (CSE / IT / ECE / EEE / EIE / ICE / Electronics / MCA)
		M. Tech. (Computer Science and Engineering with specialization in Big Data Analytics)	B.E. / B. Tech. (CSE / IT / ECE / EEE / EIE / ICE / Electronics / MCA)
09	Information Technology	M. Tech. (Information Technology)	B.E / B. Tech. (IT / CSE / ECE / EEE / EIE / ICE / Electronics) MCA
		M. Tech. (Information Security & Digital Forensics)	B.E / B. Tech. (IT / CSE / ECE / EEE / EIE / ICE / Electronics) MCA
10	Computer Applications	M.C.A.	Bachelor Degree in any discipline with Mathematics as one of the subjects (or) Mathematics at +2 level
		M.C.A. – (Lateral Entry)	B.Sc. Computer Science / B.Sc. Information Technology / B.C.A
		M. Tech. (Systems Engineering and Operations Research)	BE / B. Tech. (Any Branch) or M.Sc., (Maths / Physics / Statistics / CS / IT / SE) or M.C.A.
		M. Tech. (Data & Storage Management	BE / B. Tech. (Any Branch) or M.Sc., (Maths / Physics / Statistics / CS / IT / SE) or M.C.A.
11	Mathematics	M.Sc. (Actuarial Science)	Any Degree with Mathematics / Statistics as one of the subjects of study.
		M.Sc. Mathematics	B.Sc. (Mathematics)
12	Physics	M.Sc.(Physics)	B.Sc.(Physics / Applied Science / Electronics / Electronics Science / Electronics & Instrumentation)
		M.Sc. (Material Science)	B.Sc.(Physics / Applied Science / Electronics / Electronics Science / Electronics & Instrumentation)

Sl. No.	Name of the Department	P.G. Programmes offered	Qualifications for admission
13	Chemistry	M.Sc.(Chemistry)	B.Sc. (Chemistry / Applied Science)
14	Life Sciences	M.Sc. Molecular Biology & Biochemistry	B.Sc. in any branch of Life Sciences
		M.Sc. Genetics	B.Sc. in any branch of Life Sciences
		M.Sc. Biotechnology	B.Sc. in any branch of Life Sciences
		M.Sc. Microbiology	B.Sc. in any branch of Life Sciences
		M.Sc. Bioscience	B.Sc. in any branch of Life Sciences
		M. Tech. Biotechnology	B. Tech. (Biotechnology / Chemical Engineering) / M.Sc. in any branch of Life Sciences

3.6 The curriculum of PG programmes shall be so designed that the minimum prescribed credits required for the award of the degree shall be within the limits specified below:

Programme	Minimum prescribed credits
M.Tech.	73
M.C.A.	120
M.Sc.	72

3.7 Credits will be assigned to the courses for all P.G. programmes as given below:

- One credit for one lecture period per week (or) 15 periods per semester
- One credit for one tutorial period per week
- One credit each for seminar/practical session/project of two or three periods per week
- One credit for two weeks of industrial internship
- One credit for 15 periods of lecture (can even be spread over a short span of time)

3.8 The number of credits registered by a student in non-project semester and project semester should be within the range specified below:

P.G. Programme	Full Time		Part Time	
	Non-project Semester	Project semester	Non-project Semester	Project semester
M. Tech.	9 to 28	12 to 28	6 to 12	12 to 28
M.C.A.	9 to 29	12 to 29	6 to 12	12 to 29
M.Sc.	9 to 25	12 to 20	6 to 12	12 to 20

3.9 The student may choose a course prescribed in the curriculum from any department depending on his /her convenient time slot. All attendance will be maintained course-wise only.

3.10 The electives from the curriculum are to be chosen with the approval of the Head of the Department.

3.11 A student may be permitted by the Head of the Department to choose electives from other PG programmes either within the Department or from other Departments up to a maximum of nine credits during the period of his/her study, with the approval of the Head of the Departments offering such courses.

3.12 To help the students to take up special research areas in their project work and to enable the department to introduce courses in latest/emerging areas in the curriculum, "Special Electives" may be offered. A student may be permitted to register for a "Special Elective" up to a maximum of three credits during the period of his/her study, provided the syllabus of this course is recommended by the Head of the Department and approved by the Chairman, Academic Council before the commencement of the semester, in which the special elective course is offered. Subsequently, such course shall be ratified by the Board of Studies and Academic Council.

3.13 The medium of instruction, examination, seminar and project/thesis/ dissertation reports will be English.

3.14 Industrial internship, if specified in the curriculum shall be of not less than two weeks duration and shall be organized by the Head of the Department.

3.15 Project Work / Thesis / Dissertation

3.15.1 Project work / Thesis / Dissertation shall be carried out under the supervision of a Faculty member in the concerned Department.

3.15.2 A student may however, in certain cases, be permitted to work for the project in an Industrial/Research Organization, on the recommendation of the Head of the Department. In such cases, the project work shall be jointly supervised by a faculty of the Department and an Engineer / Scientist from the organization and the student shall be instructed to meet the faculty periodically and to attend the review committee meetings for evaluating the progress.

3.15.3 Project work / Thesis / Dissertation (Phase - II in the case of M.Tech.) shall be pursued for a minimum of 16 weeks during the final semester, following the preliminary work carried out in Phase-1 during the previous semester.

3.15.4 The Project Report/Thesis / Dissertation report / Drawings prepared according to approved guidelines and duly signed by the supervisor(s) and the Head of the Department shall be submitted to the concerned department.

3.15.5 The deadline for submission of final Project Report / Thesis / Dissertation is within 30 calendar days from the last working day of the semester in which Project / Thesis / Dissertation is done.

3.15.6 If a student fails to submit the Project Report / Thesis / Dissertation on or before the specified deadline he / she is deemed to have not completed the Project Work / Thesis / dissertation and shall re-register the same in a subsequent semester.

4.0 CLASS ADVISOR AND FACULTY ADVISOR

4.1 Class Advisor

A faculty member will be nominated by the HOD as Class Advisor for the whole class.

He/she is responsible for maintaining the academic, curricular and co-curricular records of all students throughout their period of study.

4.2 Faculty Advisor

To help the students in planning their courses of study and for general counseling on the academic programme, the Head of the Department of the students will attach a certain number of students to a faculty member of the department who shall function as Faculty Advisor for the students throughout their period of study. Such Faculty Advisor shall offer advice to the students on academic and personal matters and guide the students in taking up courses for registration and enrolment every semester.

5.0 CLASS COMMITTEE

5.1 Every class of the PG Programme will have a Class Committee constituted by the Head of the Department as follows:

i. Teachers of all courses of the programme
ii. One senior faculty preferably not offering courses for the class, as Chairperson.
iii. Minimum two students of the class, nominated by the Head of the Department.
iv. Class Advisor / Faculty Advisor of the class - Ex-Officio Member
v. Professor in-charge of the PG Programme - Ex-Officio Member.

5.2 The Class Committee shall be constituted by the respective Head of the Department of the students.

5.3 The basic responsibilities of the Class Committee are to review periodically the progress of the classes to discuss problems concerning curriculum and syllabi and the conduct of classes. The type of assessment for the course will be decided by the teacher in consultation with the Class Committee and will be announced to the students at the beginning of the semester. Each Class Committee will communicate its recommendations to the Head of the Department and Dean (Academic Affairs). The class committee, **without the student members,** will also be responsible for finalization of the semester results and award of grades.

5.4 The Class Committee is required to meet at least thrice in a semester, first within a week of the commencement of the semester, second, after the first assessment and the third, after the semester-end examination to finalize the grades.

6.0 COURSE COMMITTEE

Each common theory course offered to more than one group of students shall have a "Course Committee" comprising all the teachers teaching the common course with one of them nominated as Course coordinator. The nomination of the Course coordinator shall be made by the Head of the Department / Dean (Academic Affairs) depending upon whether all the teachers teaching the common course belong to a single department or to several departments. The Course Committee shall meet as often as possible and ensure uniform evaluation of the tests and arrive at a common scheme of evaluation for the tests. Wherever it is feasible, the Course Committee may also prepare a common question paper for the test(s).

7.0 REGISTRATION AND ENROLMENT

7.1 For the first semester every student has to register for the courses within one week from the commencement of the semester

7.2 For the subsequent semesters registration for the courses will be done by the student one week before the last working day of the previous semester. The curriculum gives details of the core and elective courses, project and seminar to be taken in different semester with the number of credits. The student should consult his/her Faculty Advisor for the choice of courses. The Registration form shall be filled in and signed by the student and the Faculty Advisor.

7.3 From the second semester onwards all students shall pay the prescribed fees and enroll on a specified day at the beginning of a semester.

7.4 A student will become eligible for enrolment only if he/she satisfies clause 9 and in addition he/she is not debarred from enrolment by a disciplinary action of the Institution. At the time of enrolment a student can drop a course registered earlier and also substitute it by another course for valid reasons with the consent of the Faculty Advisor. Late enrolment will be permitted on payment of a prescribed fine up to two weeks from the date of commencement of the semester.

7.5 Withdrawal from a course registered is permitted up to one week from the date of the completion of the first assessment test.

7.6 Change of a course within a period of 15 days from the commencement of the course, with the approval of Dean (Academic Affairs), on the recommendation of the HOD, is permitted.

7.7 Courses withdrawn will have to be taken when they are offered next if they belong to the list of core courses.

7.8 A student undergoing a full time PG Programme should have enrolled for all preceding semesters before registering for a particular semester

7.9 A student undergoing the P.G. programme in Part Time mode can choose not to register for any course in a particular semester with written approval from the head of the department. However the total duration for the completion of the programme shall not exceed the prescribed maximum number of semesters (vide clause 3.1)

8.0 TEMPORARY BREAK OF STUDY FROM THE PROGRAMME

A student may be permitted by the Dean (Academic Affairs) to avail temporary break of study from the programme up to a maximum of two semesters for reasons of ill health or other valid grounds. Such student has to rejoin only in the same semester from where he left. However the total duration for completion of the programme shall not exceed the prescribed maximum number of semesters (vide clause 3.1).

9.0 MINIMUM REQUIREMENTS TO REGISTER FOR PROJECT / THESIS / DISSERTATION

9.1 A student is permitted to register for project semester, if he/she has earned the minimum number of credits specified below:

Programme	Minimum No. of credits to be earned to enroll for project semester
M.Tech. (Full time / Part time)	18
M.C.A. (Full time / Part time)	45
M.C.A. (Full time / Part time) – (Lateral Entry)	22
M.Sc.(Full time / Part time)	18

9.2 If the student has not earned minimum number of creditsspecified, he/she has to earn the required credits, at least to the extent of minimum credits specified in clause 9.1 and then register for the project semester.

10.0 DISCIPLINE

10.1 Every student is required to observe discipline and decorous behavior both inside and outside the campus and not to indulge in any activity, which will tend to bring down the prestige of the Institution.

10.2 Any act of indiscipline of a student reported to the Head of the Institution will be referred to a Discipline and Welfare Committee for taking appropriate action.

11.0 ATTENDANCE

11.1 Attendance rules for all Full Time Programme and Part time Programmes are given in the following sub-clause.

11.2 Ideally every student is expected to attend all classes and earn 100% attendance in the contact periods of every course, subject to a maximum relaxation of 25% for genuine reasons like on medical grounds, representing the University in approved events etc., to become eligible to appear for the semester-end examination in that course, failing which the student shall be awarded "I" grade in that course. If the course is a core course, the student should register for and repeat the course when it is offered next. If the course is an elective, either he/she can register and repeat the same elective or can register for a new elective.

11.3 The students of Full Time mode of study, who have not attended a single hour in all courses in a semester and awarded ‘I’ grade are not permitted to write the examination and also not permitted move to next higher semester. Such students should repeat all the courses of the semester in the next Academic year.

12.0 SUMMER TERM COURSES

12.1 Summer term courses may be offered by a department on the recommendation of the Departmental Consultative Committee and approved by the Dean (Academic Affairs). No student should register for more than three courses during a summer term.

12.2 Summer term courses will be announced by the Head of the department at the end of the even semester before the commencement of the end semester examinations. A student will have to register within the time stipulated in the announcement. A student has to pay the fees as stipulated in the announcement.

12.3 The number of contact hours and the assessment procedure for any course during summer term will be the same as those during regular semesters.

Students with U grades will have the option either to write semester end arrears exam or to redo the courses during summer / regular semesters, if they wish to improve their continuous assessment marks subject to the approval of the Head of the department.

12.4 Withdrawal from a summer term course is not permitted. No substitute examination will be conducted for the summer term courses.

12.5 The summer term courses are not applicable for the students of Part Time mode.

13.0 ASSESSMENTS AND EXAMINATIONS

13.1 The following rule shall apply to all the PG programmes (M.Tech./ M.C.A. / M.Sc.)

For lecture-based courses, normally a minimum of two assessments will be made

during the semester. The assessments may be combination of tests and assignments. The assessment procedure as decided in the Class Committee will be announced to the students right from the beginning of the semester by the course teacher.

13.2 There shall be one examination of three hours duration, at the end of the semester.

13.3 In one (or) two credit courses that are not spread over the entire semester, the evaluation will be conducted at the completion of the course itself. Anyhow approval for the same is to be obtained from the HoD and the Dean of Academic Affairs.

13.4 The evaluation of the Project work will be based on the project report and a Viva-Voce Examination by a team consisting of the supervisor concerned, an Internal Examiner and External Examiner to be appointed by the Controller of Examinations.

13.5 At the end of industrial internship, the student shall submit a certificate from the organization and also a brief report. The evaluation will be made based on this report and a Viva-Voce Examination, conducted internally by a Departmental Committee constituted by the Head of the Department.

14.0 WEIGHTAGES

14.1 The following shall be the weightages for different courses:

i) Lecture based course

Two continuous assessments	50%
Semester-end examination	50%

ii) Laboratory based courses

Laboratory work assessment	75%
Semester-end examination	25%

iii) Project work

Periodic reviews	50%
Evaluation of Project Report by	
External Examiner	20%
Viva-Voce Examination	30%

14.2 Appearing for semester end examination for each course (Theory and Practical) is mandatory and a student should secure a minimum of 40% marks in semester end examination for the successful completion of the course.

14.3 The markings for all tests, tutorial, assignments (if any), laboratory work and examinations will be on absolute basis. The final percentage of marks is calculated in each course as per the weightages given in clause 13.1.

15.0 SUBSTITUTE EXAMINATION

15.1 A student who has missed for genuine reasons any one of the three assessments including semester-end examination of a course may be permitted to write a substitute examination. However, permission to take up a substitute examination will be given under exceptional circumstances, such as accident or admissions to a hospital due to illness, etc.

15.2 A student who misses any assessment in a course shall apply in a prescribed form to the Dean (Academic Affairs) through the Head of the department within a week from the date of missed assessment. However the substitute tests and examination for a course will be conducted within two weeks after the last day of the semester-end examinations.

16.0 COURSEWISE GRADING OF STUDENTS AND LETTER GRADES

16.1 Based on the semester performance, each student is awarded a final letter grade at the end of the semester in each course. The letter grades and the corresponding grade points are as follows, but grading has to be relative grading

Letter grade	Grade points
S	10
A	9
B	8
C	7
D	6
E	5
U	0
W	-
I	-
AB	-

- Flexible range grading system will be adopted
- **“W”** denotes withdrawal from the course.
- **"I"** denotes inadequate attendance and hence prevention from semester-end examination
- **"U"** denotes unsuccessful performance in a course.
- **“AB”** denotes absent for the semester end examination

16.2 A student is considered to have completed a course successfully if he / she secure five grade points or higher. A letter grade ‘U’ in any course implies unsuccessful performance in that course.

16.3 A course successfully completed cannot be repeated for any reason.

17.0 AWARD OF LETTER GRADE

17.1 A final meeting of the Class Committee without the student member(s) will be convened within ten days after the last day of the semester end examination. The letter grades to be awarded to the students for different courses will be finalized at the meeting.

17.2 After finalization of the grades at the class committee meeting the Chairman will forward the results to the Controller of Examinations, with copies to Head of the Department and Dean (Academic Affairs).

18.0 DECLARATION OF RESULTS

18.1 After finalization by the Class Committee as per clause 16.1 the Letter grades awarded to the students in the each course shall be announced on the departmental notice board after duly approved by the Controller of Examinations.

18.2 In case any student feels aggrieved about the results, he/she can apply for revaluation after paying the prescribed fee for the purpose, within one week from the announcement of results.

A committee will be constituted by the concerned Head of the Department comprising of the Chairperson of the concerned Class Committee (Convener), the teacher concerned and a teacher of the department who is knowledgeable in the concerned course. If the Committee finds that the case is genuine, it may jointly revalue the answer script and forward the revised marks to the Controller of Examinations with full justification for the revision, if any.

18.3 The “U” and “AB” grade once awarded stays in the grade sheet of the students and is not deleted when he/she completes the course successfully later. The grade acquired by the student later will be indicated in the grade sheet of the appropriate semester.

19.0 COURSE REPETITION AND ARREARS EXAMINATION

19.1 A student should register to re-do a core course wherein"I" or "W" grade is awarded. If the student is awarded "I" or "W" grade in an elective course either the same elective course may be repeated or a new elective course may be taken.

19.2 A student who is awarded “U” or “AB” grade in a course shall write the semester-end examination as arrear examination, at the end of the next semester, along with the regular examinations of next semester courses.

19.3 A student who is awarded “U” or “AB” grade in a course will have the option of either to write semester end arrear examination at the end of the subsequent semesters, or to redo the course whenever the course is offered. Marks earned during the redo period in the continuous assessment for the course, will be used

for grading along with the marks earned in the end-semester (re-do) examination.

19.4 If any student obtained "U" or "AB" grade, the marks earned during the redo period for the continuous assessment for that course will be considered for further appearance as arrears.

19.5 If a student with "U" or "AB" grade prefers to redo any particular course fails to earn the minimum 75% attendance while doing that course, then he/she will not be permitted to write the semester end examination and his / her earlier 'U' grade and continuous assessment marks shall continue.

20.0 GRADE SHEET

20.1 The grade sheet issued at the end of the semester to each student will contain the following:

(i) the credits for each course registered for that semester.

(ii) the performance in each course by the letter grade obtained.

(iii) the total credits earned in that semester.

(iv) the Grade Point Average (GPA) of all the courses registered for that semester and the Cumulative Grade Point Average (CGPA) of all the courses taken up to that semester.

20.2 The GPA will be calculated according to the formula

$$GPA = \frac{\sum_{i=1}^{n}(C_i)(GP_i)}{\sum_{i=1}^{n}(C_i)}$$

where n = number of courses

where C_i is the number of credits assigned for i^{th} course

GP_i - Grade point obtained in the i^{th} course

for the cumulative grade point average (CGPA) a similar formula is used except that the sum is over all the courses taken in all the semesters completed up to the point of time.

'I' and 'W' grades will be excluded for GPA calculations.

'U', 'AB' 'I' and 'W' grades will be excluded for CGPA calculations.

20.3 Classification of the award of degree will be as follows:

20.3.1 For students under full time mode of study

CGPA	Classification
8.50 and above, having completed all courses in first appearance	First class with Distinction
6.50 and above, having completed within a period of 2 semesters beyond the programme period	First Class
All others	Second Class

However, to be eligible for First Class with Distinction, a student should not have obtained U or I grade in any course during his/her study and should have completed the PG Programme within a minimum period covered by the minimum duration (clause 3.1) plus authorized break of study, if any (clause 8). To be eligible for First Class, a student should have passed the examination in all courses within the specified minimum number of semesters reckoned from his/her commencement of study plus two semesters. For this purpose, the authorized break of study will not be counted. The students who do not satisfy the above two conditions will be classified as second class. For the purpose of classification, the CGPA will be rounded to two decimal places. For the purpose of comparison of performance of students and ranking, CGPA will be considered up to three decimal places.

20.3.2 For students under part timemode of study

CGPA	Classification
8.50 and above, having completed all courses in first appearance	First class with Distinction
6.50 and above	First Class
All others	Second Class

For the purpose of classification, the CGPA will be rounded to two decimal places.

21.0 ELIGIBILITY FOR THE AWARD OF THE MASTERS DEGREE

21.1 A student shall be declared to be eligible for the award of the Masters Degree, if he/she has:

i) successfully acquired the required credits as specified in the Curriculum corresponding to his/her programme within the stipulated time,

ii) no disciplinary action is pending against him/her.

21.2 The award of the degree must be approved by the University.

22.0 POWER TO MODIFY

Notwithstanding all that have been stated above, the Academic Council has the right to modify any of the above regulations from time to time.

CURRICULUM & SYLLABI FOR
M. Sc. (Actuarial Science)
(Four Semesters / Full Time)

Curriculum

Sl. No.	Course Code	Course Title	L	T	P	C
		SEMESTER I				
1	LSC6101	Advanced Biochemistry	**4**	**0**	**0**	**4**
2	LSC6102	Cell and Molecular Biology	**4**	**0**	**0**	**4**

SEMESTER I

LSC6101 ADVANCED BIOCHEMISTRY

L	T	P	C
4	0	0	4

OBJECTIVES:

This course aims to develop in the students' mind a concept regarding

- The diversity of metabolic processes occurring in biological system.
- The effect of the structural and functional role of the enzymes governing the metabolic processes.
- Importance of the metabolic pathways in maintaining homeostasis in biological system.
- The clinical implications of the metabolic pathway.

MODULE I AMINO ACIDS & PROTEIN: STRUCTURE AND FUNCTIONS 05

Amino acids- Classification, structure and function, proteins- primary, secondary, tertiary and quaternary structure, Ramachandran plot, super secondary structures and helix loop.

MODULE II ENZYMOLOGY 10

Classification of enzymes. How do enzymes work: activation energy, substrate specificity. Enzyme-substrate interaction: Lock and Key mechanism and Induced Fit mechanism. Effect of temperature and pH on enzyme action. Enzyme Kinetics: Michaelis-Menten Equation, Km, Measurement of Km and Vmax (Lineweaver-Burk equation). Kinetics of multisubstrate reaction: Sequential reactions and ping-pong reactions. Enzyme inhibition: reversible (competitive, uncompetitive and mixed) and irreversible. Allosteric regulation of enzyme activity. Multienzyme complex and multifunctional enzymes.

MODULE III ENERGY PRODUCTION AND OXIDATIVE PHOSPHORYLATION 14

Introduction to metabolism: Anabolism, catabolism, metabolic pathways. Characteristics of metabolic pathways

Glycolysis: glycolytic pathway. Molecular mechanism of action of the glycolytic enzymes. Energetic of glycolysis. Glycolysis and cancer biology—Warburg Hypothesis and PET scanning. Fates of Pyruvate under anaerobic conditions: alcohol and lactic acid fermentation. Importance of lactic acid fermentation.

TCA Cycle: Formation of Acetyl CoA and reactions of citric acid cycle. Molecular mechanism of pyruvate dehydrogenase complex and enzymes involved in Kreb's cycle. Energetic of TCA cycle and substrate level phosphorylation.

Lipid metabolism: Hormonal regulation of the mobilization of triglycerides from adiposities. Transport of fatty acid into mitochondria. Beta oxidation of saturated fatty acid (both even and odd). Regulation. Energetic.

Electron Transport Chain: structure and function of Electron carriers: Complex I—V. Passage of electrons from complex I to IV. Mitchell's chemiosmotic hypothesis and proton gradient. Structure of complex V or ATP synthase, Catalytic sites of ATP synthesis. Mechanism of ATP generation by Boyer's binding change mechanism—rotational catalysis. Energetic of ATP synthesis and efficiency of ATP synthase.

MODULE IV METABOLIC INTERRELATIONSHIP 09

Starve-Fed cycle. Glucose homeostasis. Switching of metabolism of liver between starve and fed cycle. Metabolic relationship of tissues in various nutritional and hormonal states—insulin resistance, diabetes, exercise, pregnancy, lactation, stress, liver and renal diseases, alcohol consumption.

MODULE V REGULATORY MECHANISMS OF METABOLIC PATHWAYS 07

Feedback inhibition by allosteric modulation of enzymes. Covalent modifications of enzymes. Isozymes. Propetolytic cleavage. Regulationg the amount of enzyme—regulation gene expression in prokaryotes and eukaryotes.

Total Hours: 45

REFERENCE:

1. Nelson D.L, Cox M. M. Lehninger's Principle of Biochemistry. 5th Ed.,W. H. Freeman, 2008.
2. Biochemistry by LubertStryer 7th ed. W. H. Freeman & Company.
3. Textbook of Biochemistry with Clinical Correlations. 4th Ed. Thomas M. Devlin. Wiley-Liss publication. 1997.

OUTCOMES:

At the completion of the course the student will develop an understanding about the

- Various metabolic processes occurring in biological system and their role in governing homeostasis and normal physiology.
- The importance of enzymes as a regulatory molecule in metabolism.
- The interrelationship of metabolic pathways different physiological conditions.
- The role of liver in regulating metabolism.

LSC6102 CELL & MOLECULAR BIOLOGY

L	T	P	C
4	0	0	4

OBJECTIVES:

- To get overview of classes of cells and structural and function aspects of plasma membrane and cell organelle.
- To develop skill to understand molecular aspects of cell cycle and cell division.
- To get familiar with transcription and translation in details.
- To understand the signaling pathways in cell functioning

MODULE I INTRODUCTION TO CELL 08

Basic properties of cell, Different classes of cell: Prokaryotic, animal and plant cell.Plasma membrane- structure and function, Chemical composition of membranes, membrane lipids and proteins, fluid mosaic model, Transport across the membranes-diffusion, osmosis, facilitated diffusion,passive and active transport; membrane potential and nerve impulses.

MODULE II MEMBRANE TRANSPORT 07

Endoplasmic Reticulum, Golgi complex- glycosylation, Vesicle transport- COPI and COPII; Lysosomes-autophagy;Endocytic pathway- endocytosis and phagocytosis,transport of proteins into peroxisomes, mitochondria and chloroplast;

MODULE III ENERGY CONVERSION 10

Structure of mitochondria and organization of respiratory chain; Proton Pump and ATP generation in mitochondria; Structure of chloroplast and Photosynthesis, photorespiration; Genetic system of mitochondria and chloroplast.

MODULE IV BASIC GENETIC MECHANISMS 10

The structure and function of DNA, DNA packaging and Chromosomes, chromatin structure and function, DNA replication mechanisms, DNA damage and repair and homologous recombination and transposable elements, Telomeres, telomerase and end replication. Role of telomerase in aging and cancer.

MODULE V TRANSCRIPTIONAND TRANSLATION 10

Transcription- Prokaryotic and eukaryotic Transcription- RNA polymerases-general and specific transcription factors- regulatory elements- mechanism of transcription, Transcription termination Post transcriptional modification- splicing-editing- nuclear export of mRNA- mRNA stability; Translation- Genetic code,

Mechanism of initiation-elongation andtermination- Regulation of translation.

Total Hours: 45

REFERENCES

1. Molecular Biology of Cell by Alberts et.al. John Wiley & Sons, 6Ed, 2015
2. The Cell by Cooper. ASM Press, 4Ed, 2007
3. Cell and Molecular Biology by Karp. John Wiley & Sons, 7Ed, 2013
4. Lodish H. F.Cell and Molecular Biology. W.H. Freeman & Co Ltd, 7Ed, 2000.

OUTCOMES:

- On the completion of the above objectives student will be able to get the overview of classes of cells and structural and function aspects of plasma membrane and cell organelle. They can develop skill to understand molecular aspects of cell cycle, cell division, transcription and translation.

LSC6103 GENETIC ENGINEERING

L	T	P	C
4	0	0	4

OBJECTIVES:

- To learn about genetic engineering, principles involved in manipulating genes and DNA.
- To know about cloning strategies and expression systems.
- To acquire basic understanding of techniques in genetic engineering.

MODULE I BASICS CONCEPTS 09

DNA Structure and properties; Restriction Enzymes; DNA ligase, Klenow enzyme, T4 DNA polymerase, Polynucleotide kinase, Alkaline phosphatase; Cohesive and blunt end ligation; Linkers; Adaptors; Homopolymeric tailing; Labeling of DNA: Nick translation, Random priming, Radioactive and non-radioactive probes, Hybridization techniques: Northern, Southern and Colony hybridization, Fluorescence in situ hybridization; Chromatin Immunoprecipitation; DNA-Protein Interactions-Electromobility shift assay; DNaseIfootprinting

MODULE II CLONING VECTORS 09

Plasmids; Bacteriophages; M13 mp vectors; PUC19 and Bluescript vectors, Phagemids; Lambda vectors; Insertion and Replacement vectors; Cosmids; Artificial chromosome vectors (YACs; BACs); Animal Virus derived vectors-SV-40; vaccinia/bacculo& retroviral vectors; Expression vectors; pMal; GST; pET-can be omitted vectors; Protein purification; His-tag; GST-tag; MBP-tag etc.; Intein-based vectors; Inclusion bodies; Methodologies to reduce formation of inclusion bodies; Baculovirus and pichia vectors system, Plant based vectors, Ti and Ri as vectors, Yeast vectors, Shuttle vectors. Criteria for selection of vectors.

MODULE III CLONING METHODOLOGIES 09

Insertion of Foreign DNA into Host Cells; Transformation; Transfection, Transduction, Construction of libraries; Isolation of mRNA and total RNA; cDNA and genomic libraries; cDNA and genomic cloning; Expression cloning; Jumping and hopping libraries; Southwestern and Far-western cloning; Protein-protein interactive cloning and Yeast two hybrid system; Phage display; Principles in maximizing gene expression. Methods to confirm cloning and reporter genes and proteins.

MODULE IV PCR AND ITS APPLICATIONS 09

Primer design; Fidelity of thermostable enzymes; DNA polymerases; Types of PCR – multiplex, nested, reverse transcriptase, real time PCR, touchdown PCR, hot start PCR, colony PCR, cloning of PCR products; Tvectors; Proof reading enzymes; PCR in gene

recombination; Deletion; addition; Overlap extension; and SOEing; Site specific mutagenesis; PCR in molecular diagnostics; Viral and bacterial detection; PCR based mutagenesis detection. Sequencing methods; Enzymatic DNA sequencing; Chemical sequencing of DNA; Automated DNA sequencing; RNA sequencing; Chemical Synthesis of oligonucleotides.

MODULE V APPLICATION OF GENETIC ENGINEERING 09

Gene silencing techniques; Introduction to siRNA; siRNA technology; Micro RNA; Construction of siRNA vectors; Principle and application of gene silencing; Gene knockouts and Gene Therapy; Creation of knock out mice; Disease model; Somatic and germ-line therapy- in vivo and ex-vivo; Suicide gene therapy; Gene replacement; Gene targeting; Transgenics; cDNA and intragenic arrays; Differential gene expression and protein array. Ethics in genetic engineering and global policy.

Total Hours:

TEXT/REFERENCES

1. S.B. Primrose, R.M. Twyman and R.W.Old; Principles of Gene Manipulation. 6th Edition, S.B.University Press, 2001.
2. J. Sambrook and D.W. Russel; Molecular Cloning: A Laboratory Manual, Vols 1-3, CSHL, 2001.
3. Brown TA, Genomes, 3rd ed. Garland Science 2006
4. Selected papers from scientific journals.
5. Desmond S. T. Nicholl An Introduction to Genetic Engineering Cambridge University Press 2008
6. Technical Literature from Stratagene, Promega, Novagen, New England Biolab etc.

OUTCOMES:

- On completion of the course the scholars will acquire knowledge on the concepts and terminology in genetic engineering.
- Students will be familiar with various cloning strategies in prokaryotes as well as in eukaryotes.
- Students will learn various techniques in genetic engineering.
- They will also get awareness about the social and ethical issues concerning cloning by genetic engineering

LSC6104	LAB I (BIOCHEMISTRY, MOLECULAR BIOLOGY AND GENETIC ENGINEERING)	L	T	P	C
		0	0	6	3

OBJECTIVES:

- To learn basic techniques in molecular biology
- To study and differentiate the electrochemical properties of nucleic acids
- To learn the preliminary methods in biochemistry by preparing buffer and adjusting pH.
- To estimate various biomolecules by biochemical assays

EXPERIMENTS:

1. Laboratory safety guidelines.
2. To determine an unknown protein concentration by plotting a standard graph of BSA using UV-Vis Spectrophotometer and validating the Beer- Lambert's Law.
3. Effect of temperature on enzyme activity.
4. Separation techniques for amino acids and sugar:
    a. paper chromatography
    b. thin layer chromatography.
5. Separation of proteins by native and SDS-PAGE.
6. Preparation of slides from onion root tip for mitosis
7. Isolation & Purification of genomic DNA from bacteria
8. Isolation & Purification of plasmid DNA
9. Isolation of RNA
10. Agarose gel electrophoresis of chromosomal & plasmid DNA
11. Restriction Digestion of chromosomal & plasmid DNA
12. Isolation of DNA fragment from agarose gel
13. Competent cell preparation
14. Transformation and Efficiency of competent cells
15. SDS PAGE
16. Polymerase Chain Reaction
17. Isolation of Genomic DNA from Plants

REFERENCES:

4. Holtzhauer M, Basic Methods for the Biochemical Lab, Springer, 2006.

Nigam, Lab Manual in Biochemistry: Immunology and Biotechnology, Tata McGraw-Hill Education, 2007.

5. Lab manual

OUTCOME:

- On the completion of the above experiments students will be able to handle DNA samples and also to isolate, purify and visualize nucleic acid.
- On performing the above experiments students will be able to know and perform the routine biochemical assays.
- Students will be able to isolate culture and identify microbes and also to efficiently use light microscope.

SEMESTER II

GEC6202 RESEARCH METHODOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

MODULE I RESEARCH METHODOLOGY-AN INTRODUCTION 09

Meaning of Research, Objectives of Research, Motivation in Research, Types of Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Research Process, Criteria of Good Research, Problems Encountered by Researchers. Ethics and scientific conduct, Introduction to ethics, scientific conduct and misconduct, Misconduct and why it occurs, Fabrication, Authorship issues, The investigation and punishment of scientific misconduct.

MODULE II GOOD LABORATORY PRACTICES AND SAFETY 09

Introduction: History, definition, Principles, Good Laboratory Practices (GLP) and its application GLP training: Resources, Rules, Characterization, Documentation, quality assurance, Resources, Facilities: building and equipment, Personnel, GLP and FDA, Stepwise implementation of GLP and compliance monitoring.

MODULE III LABORATORY SAFETY AND EXPERIMENTAL RESEARCH 09

Safety in the Biology Laboratory, Safety Symbols, Science Safety Rules- Dress Code, First Aid, Heating and Fire Safety, Using Chemicals and glassware's, Handling living organisms, handling human blood and some other body fluids and tissue, disposal of bio hazardous waste.Precision, accuracy, sensitivity and specificity; variables, experimental planning – general guidelines

MODULE IV INTERPRETATION OF RESULTS AND ANALYSIS: 09

Importance and scientific methodology in recording results, importance of negative results, different ways of recording, industrial requirement, artifacts versus true results, types of analysis (analytical, objective, subjective) and cross verification, correlation with published results, discussion, outcome as new idea, hypothesis, concept, theory, model etc. Data analysis using Excel, Origin and Sigma plot Analyzing the chemical data and drawing chemical structures using Chemdraw and Chemsketch. Conceptions of error of measurement, true score theory and generalisability theory. Measures of central tendency or averages – mean median and mode. Measures of dispersion – range,

variance, and standard deviation: The normal distribution and the normal probability curve.

MODULE V SCIENTIFIC WRITING, TECHNICAL PUBLICATION AND RESEARCH PROPOSAL 09

Different types of scientific and technical publications in the area of research, and their specifications, Ways to protect intellectual property – Patents, technical writing skills, definition and importance of impact factor and citation index - assignment in technical writing, The research problem, finding related literature, computer generated references sources and the research project, model research proposal.

Total hours: 45

OUTCOMES:

LSC6201 IMMUNOLOGY

L	T	P	C
4	0	0	4

OBJECTIVES:

- The course is aimed at introducing the science of immunology and detailed study of various types of immune systems and their classification structure and mechanism of immune activation**.**

MODULE I OVERVIEW OF IMMUNE SYSTEM 04

Innate, adaptive and Comparative ImmModule y, Immune dysfunction and its consequences, Cells & Tissues of Immune System:Hematopoisesis, Apoptosis and Necrosis, systemic function of Immune system, organs of immune systems, Lymphoid cells and organs Evolutionary comparision. Cytokines- Properties of Cytokines, Cytokine Receptors, Cytokine Antagonists, Cytokine Secretion by TH1 and TH2 Subsets, Cytokine-Related Diseases, Therapeutic Uses of Cytokines and Their Receptors, Cytokines in Hematopoiesis

MODULE II MOLECULAR IMMUNOLOGY 05

Immunogenicity Versus Antigenicity, Factors that influence immunogenicity, Epitopes, Haptens and the Study of Antigenicity, Pattern-Recognition Receptors, drugs allegies-when medicine become immunogens, Molecular structure of antibody, Obstacles to Antibody Sequencing, Immunoglobulin Fine Structure, Antibody-Mediated Effector Functions, Antibody Classes and Biological Activities, Antigenic Determinants on Immunoglobulins, The B-Cell Receptor, The Immunoglobulin Superfamily, Monoclonal Antibodies.

MODULE III ORGANIZATION AND EXPRESSION OF IMMUNOGLOBULIN GENES 09

Genetic Model Compatible with Ig Structure, Multigene Organization of Ig Genes, Variable-Region Gene Rearrangements, Mechanism of Variable-Region DNA Rearrangements, Generation of Antibody Diversity, Class Switching among Constant-Region Genes, Expression of Ig Genes, Synthesis, Assembly, and Secretion of Immunoglobulins, Regulation of Ig-Gene Transcription, Antibody Genes and Antibody Engineering

MODULE IV ANTIGEN PROCESSING AND PRESENTATION 09

General organization and inheritance of the major histocompatibility complex (MHC), MHC molecules and genes, detailed genomic map of MHC genes, cellular distribution of MHC molecules, regulation of MHC expression, MHC and immune responsiveness, MHC and disease susceptibility self-MHC restriction of T cells, role of antigen-

presenting cells, evidence for two processing and presentation pathways, endogenous antigens: the cytosolic pathway,exogenous antigens: the endocytic pathway presentation of nonpeptide antigens

MODULE V GENERATION OF T AND B CELL RESPONSE 09

T-Cell Receptor, Early Studies of the T-Cell Receptor and αβ andγΔ T-Cell Receptors: Structure and Roles, Organization and Rearrangement of TCR Genes, T-Cell Receptor Complex: TCR-CD3,T-Cell Accessory Membrane Molecules, Three-Dimensional Structures of TCR-Peptide-

MHC Complexes,Alloreactivity of T Cells, T-Cell Maturation and the Thymus,Thymic Selection of the T-Cell Repertoire,T_H-Cell Activation, T-Cell Differentiation, Cell Death and T-Cell Populations Peripheral γΔ T-Cells, B-Cell Maturation,B-Cell Activation and Proliferation, The Humoral Response, In Vivo Sites for Induction of Humoral Responses, Germinal Centers and Antigen-Induced B-Cell Differentiation, Regulation of B-Cell Development, Regulation of the Immune Effectors Response.

Total hours: 45

REFERENCES

3. Janeway et al., Immunobiology, 4th Edition, Current Biology publications., 1999.
4. Paul, Fundamental of Immunology, 4th edition, Lippenco

OUTCOMES:

After completing the course students will:

- have a detailed understanding of Component of immModule y
- know antigen presentation on a detailed molecular level
- understand the concept immunology and the immune system .
- have a in depth knowledge of the cellular and molecular basis for autoimmune disease and allergies.
- have basic knowledge of tumor immunology and the development of novel recombinant antibodies for treatment of cancer and autoimmune disease

LSC6202 BIOINFORMATICS

L	T	P	C
4	0	0	4

OBJECTIVES:

- To understand the programming languages applied in computational biology.
- To understand the methods and applications for sequence analysis, Phylogenetics and Protein modelling.

MODULE I INTRODUCTION TO PROGRAMMINB LANGUAGE 09

Introduction –Programming languages – Problem solving Technique: Algorithm, Flowchart, Compiling, Testing and Debugging - Basic Perl Data Types, File handle and File Tests – Perl Modules – SQL.

MODULE II PROGRAMMING IN C, C++ AND OOPS 09

C language Introduction – Tokens – Keywords, Identifier, Variables, Constants, Operators – Structure of a ‘C’ program - Expression – Data types – Control Statement - C++programming – Object Oriented Concept: Encapsulation,Inheritance, Polymorphism.

MODULE III COMPUTATIONAL BIOLOGY AND SEQUENCE ANALYSIS 09

Molecular sequences, Genome sequencing: pipeline and data, Next generation sequencing data, Biological databases: Protein and Nucleotide databases, Sequence Alignment, Dynamic Programming for computing edit distance and string similarity, Local and Global Alignment, Needleman Wunsch Algorithm, Smith Waterman Algorithm, BLAST family of programs, FASTA algorithm, Functional Annotation, Progressive and Iterative Methods for Multiple sequence alignment, Applications.

MODULE IV PHYLOGENETICS 09

Introduction to Phylogenetics, Distance and Character based methods for phylogenetic tree construction: UPGMA, Neighbour joining, Ultrametric and Min ultrametric trees, Parsimonous trees, Additive trees, Bootstrapping.

MODULE V PROTEIN STRUCTURE, MODELLING AND SIMULATIONS 09

Protein Structure Basics, Visualization, Prediction of Secondary Structure and Tertiary Structure, Homology Modeling, Structural Genomics, Molecular Docking principles and applications, Molecular dynamics simulations

Total Hours: 45

7. Baxevanis A.D. and Oullette, B.F.F. A Practical Guide to the Analysis of Genes and Proteins, 2nd ed., John Wiley, 2002

OUTCOMES:

- At the end of this course, students will have been familiarized with language skills and their applications in analyzing Protein structure , sequence analysis which can be used in analyzing the binding effect of drugs on proteins.

LSC6203 LAB II (IMMUNOLOGY/ BIOINFORMATICS)

L	T	P	C
0	0	6	3

OBJECTIVES:

- To acquire knowledge on immunological techniques
- To train in various techniques involving antigen and antibody reactions
- To get hands on experience on plasmid construction, mappings and analysis.
- To explore to various tools in bioinformatics.

LIST OF EXPERIMENTS:

1. Double diffusion, Immuno-electrophoresis and Radial Immuno diffusion.
2. Antibody titre by ELISA method.
3. ELISA for detection of antigens and antibodies-DOT ELISA
4. Blood group mapping
5. Preparation of antigens from pathogens and parasites
6. Slide and tube agglutination reaction
7. Plasmid Construction/Restriction Mapping
8. PCR Primer Designing
9. Sequence Retrieval and Format Conversion
10. Homology Search/ Multiple Sequence Alignment
11. Motif finding in DNA and Protein Sequences
12. Protein Secondary Structure Prediction
13. Accessing Data- Use FORMATTED, LIST and COLUMN input to read raw data files, Combine SAS data sets using the DATA step.
14. Creating Data Structures- Create temporary and permanent SAS data sets, Control with observations and variables in a SAS data set are processed and output Managing Data- Investigate SAS data libraries using base SAS utility procedures.
15. Generating Reports- Generate list reports using the PRINT and REPORT procedures, Generate HTML reports using ODS statements.
16. Handling Errors- Identify and resolve programming logic errors, syntax errors, data errors.

REFERENCES:

6. Krawetz S. A, Womble D. D. Introduction to Bioinformatics: A Theoretical and Practical Approach. Humana press, 2003

OUTCOMES:

- Students could independently perform diagnostics assays involving antigen-antibody reaction. They also learn to perform the qualitative and quantitative analysis using antibody.
- Students will be familiar with various soft skills/tool used in understating modern biology. They will also be able to analyze and interpolate data starting from PCR primer designing to structure predictions.

SEMESTER III

LSC7142 CLINICAL BIOCHEMISTRY

L	T	P	C
3	0	0	3

OBJECTIVES:

- This course aims to elucidate the clinical implications of the different metabolic pathways of biochemistry thus enable the students to understand the physiological implications of the different biochemical pathways.

MODULE I CELL STRUCTURE AND CLINICAL CORRELATION OF ORGANELLES 09

Eukaryotic Cell Compartments and Their Major Functions. Clinical correlations of Mitochondrial (Luft's disease), Lysosomal (Gout, lysosomal acid lipase deficiency) and Peroxisomal (Zellweger Syndrome) disfunction. Membrane fluidity in diseases conditions. Ion Channels and cystic fibrosis and Mitochondrial Myopathies.

MODULE II PROTEINS AND ENZYMES—CLINICAL CORRELATIONS 09

Plasma Proteins in Diagnosis of Disease. Use of Amino Acid Analysis in Diagnosis of Disease—Phenylketoneuria, Cystinuria, Hartnup disease and Fanconi's syndrome. Clinical implications of abnormal protein synthesis-- Ehlers–Danlos syndrome, osteogenesis imperfecta, and scurvy. Alteration in protein structure and its clinical impact—Sickle Cell Anemia and Glycosylated Hemoglobin.

Physiological effect of Km (alcohol sensitivity), Coenzyme Binding Site (Cystathioninuria), thermal stability (Hemolytic Anemia), pH optima (alcohol sensitivity) of an enzyme.

MODULE III CARBOHYDRATE METABOLISM—CLINICAL CORRELATIONS 09

Impaired glycolysis and TCA cycle--Arsenic Poisoning, Lactic Acidosis, Pyruvate Kinase Deficiency and Hemolytic Anemia, Pyruvate Dehydrogenase Deficiency, Fumarase Deficiency,Leigh disease, Cyanide Poisoning and Hypoxic Injury. Glycogen Storage Diseases and Von Gierke's Disease.

MODULE IV LIPID METABOLISM—CLINICAL CORRELATIONS 09

Genetic Deficiencies in—Carnitine Transport or Carnitine Palmitoyltransferase, AcylCoA Dehydrogenases and Diabetic Ketoacidosis.

Physiological implications of lipid levels—Respiratory Distress Syndrome, Atherosclerosis and Treatment of Hypercholesterolemia.

MODULE V METABOLIC INTERRELATIONSHIP 09

Pathogenesis, laboratory diagnosis, prophylaxis and treatment of the diseases caused by Bacteria, (Staphylococcus; Streptococcus; Neisseria; Bacillus; Corynebacterium; Clostridium; Enterobacteriaceae family) fungi (Entamoeba; Giardia; Trichomonas; Plasmodium; Trypanosoma) and viruses (Chicken pox, Rabies virus, common cold, hepatitis, meningitis, encephalitis, AIDS, SARS).

Total Hours: 45

REFRENCES

1. Textbook of Biochemistry with Clinical Correlations: Fourth Edition; Edited by Thomas M. Devlin, Ph.D. WileyLiss, Inc.
2. Nelson D.L, Cox M. M. Lehninger's Principle of Biochemistry. 5th Ed.,W. H. Freeman, 2008.
3. Biochemistry by LubertStryer 7th ed. W. H. Freeman & Company.

OUTCOMES:

- At the end of the course students will be able to demonstrate an in-depth knowledge about the role of the various metabolic processes involving the different biomolecules and their role in maintaining the physiological homeostasis of human body.

LSC7143 GENOMICS, PROTEOMICS AND METABOLOMICS

L	T	P	C
4	0	0	4

OBJECTIVES:

- Genomics, proteomics and metabolomics with their applications deals with a rapidly evolving scientific area that introduces students into genomes, proteomes and metabolites that store various data about genes, proteins, genomes and proteomes. The main objective is to organize the large amount of information about genomics, proteomics and metabolomics and offer basic knowledge of genome sequencing, major differences between prokaryotic and eukaryotic genomes, basic proteomics and its applications.

MODULE I STRUCTURAL PROPERTIES 09

Structural organization of genome in Prokaryotes and Eukaryotes; Organelle DNA-mitochondrial, chloroplast; DNA sequencing-principles and translation to large scale projects; Recognition of coding and non-coding sequences and gene annotation; Tools for genome analysis-RFLP, DNA fingerprinting, RAPD, PCR, Linkage and Pedigree analysis-physical and genetic mapping.

MODULE II GENOMICS 09

Genome sequencing projects Microbes, plants and animals; Accessing and retrieving genome project information from web; Comparative genomics, Identification and classification using molecular markers-16S rRNA typing/sequencing, ESTs and SNPs.

MODULE III PROTEOMICS 09

Proteomics, Protein analysis (includes measurement of concentration, amino-acid composition, N-terminal sequencing); 2-D electrophoresis of proteins; Microscale solution isoelectricfocusing; Peptide fingerprinting; LC/MS-MS for identification of proteins and modified proteins; MALDI-TOF; SAGE and Differential display proteomics, Protein-protein interactions, Yeast two hybrid system.

MODULEIV PHARMACOGENETICS 05

Pharmacogenetics High throughput screening in genome for drug discovery-identification of gene targets, Pharmacogenetics and drug development

MODULEV FUNCTIONAL GENOMICS, PROTEOMICS AND METABOLOMICS 13

Analysis of microarray data; Protein and peptide microarray-based technology; PCR-directed protein in situ arrays; Structural proteomics, Proteomics and metabolomics, Medical focus: Ovarian cancer. How proteomics can be used to find biomarkers for

diseases for which none exist., Different spectroscopic methods, Data produced by each method, Protein identification, quantitation, function. The US Food and Drug Administration criteria for biomarkers,Future technologies.

Total Hours:

REFERENCES:

1. Voet D, Voet JG & Pratt CW, Fundamentals of Biochemistry, 2nd Edition. Wiley 2006
2. Brown TA, Genomes, 3rd Edition. Garland Science 2006
3. Campbell AM &Heyer LJ, Discovering Genomics, Proteomics and
4. Bioinformatics, 2nd Edition. Benjamin Cummings 2007
5. Primrose S &Twyman R, Principles of Gene Manipulation and Genomics, 7th Edition,

OUTCOMES:

- The information obtained during the course should be helpful to those students who want to work in core facilities and commercial biological laboratories as well as in postgraduate studies.

LSC7144 LAB III (CLINICAL BIOCHEMISTRY /OMICS)

L	T	P	C
0	0	6	3

OBJECTIVES:

- To give hands-on training on the clinical biochemistry parameters like SGOT, SGPT, alkaline phosphatase, acid phosphatase, bilirubin etc….
- To understand the mechanism of enzyme reactions,

EXPERIMENTS:

1. Estimation of SGOT in blood sample
2. Estimation of SGPT in blood sample
3. Estimation of alkaline phosphatase in blood sample
4. Estimation of acid phosphatase in blood sample
5. Estimation of bilirubin in blood sample
6. Estimation of Na+, K+ & Ca++
7. Estimation of common parameters in urine
8. Biochemical tests for anemia.
9. Detection / Estimation of C-reactive proteins.
10. Preparation of DNA from prokaryotes and eukaryotes.
11. Synthesis and sequencing of DNA.
12. Isolation of plasmids from E.coli cells.
13. Agarose gel electrophoresis of plasmid and chromosomal DNA.
14. Restriction endonuclease digestion of plasmid and chromosomal DNA of E. coli cells.
15. DNA ligation methods. Construction of recombinant DNA.
16. Transformation of competent E. coli cells. Colony hybridisation. Southern blotting.

REFERENCES:

1. Lab Manual

OUTCOMES:

- At the end of the course students will be able to demonstrate an in-depth knowledge about the role of the various metabolic processes involving the different biomolecules and their role in maintaining the physiological homeostasis of human body.

LIST OF ELECTIVES

SEMESTER I

		L	T	P	C
LSCY101	**BIOSAFETY, BIOETHICS, BIOENTREPRENEURSHIP, INTELLECTUAL PROPERTY RIGHTS**	**3**	**0**	**0**	**3**

OBJECTIVES:

- Developing a good work ethics and laboratory working condition
- Understanding the importance of following and maintaining laboratory safety guidelines

MODULE I ETHICS IN BIOLOGY 09

The legal and socioeconomic impacts of biotechnology - Public education of the processes of biotechnology involved in generating new forms of life for informed decision making - Biosafety regulation and national and international guidelines - rDNA guidelines

MODULE II BIOSAFETY 09

Experimental protocol approvals - levels of containment - Environmental aspects of biotech applications - Use of genetically modified organisms and their resistance in environment - Special procedures for r-DNA based product production

MODULE III MARKETING 09

Assessment of market demand for potential product(s) of interest; Market conditions, segments; Prediction of market changes; Identifying needs of customers including gaps in the market, packaging the product; Market linkages, branding issues; Developing distribution channels; Pricing/Policies/Competition; Promotion/Advertising; Services Marketing

MODULE IV INTELLECTUAL PROPERTY RIGHTS 09

Intellectual property rights - TRIP International conventions patents and methods of application of patents - Legal implications - Biodiversity and farmers rights - Beneficial applications' and development of research focus to the need of the poor - Identification of directions for yield effect in agriculture, aquaculture Bioremediation etc.

MODULE V PATENT SYSTEM 09

Objectives of the patent system - basic principles and general requirements of patent law - biotechnological inventions and patent law - legal development - patentable

subjects and protection in biotechnology - The patentability of microorganisms - IPR and WTO regime - consumer protection and IPR - IPR and plant genetic resources - GATT and TRIPS.

Total Hours: 45

REFERENCES:

1. Beier,F.K.,Crespi,R.S. and Straus,J. *Biotechnology and Patent protection*-Oxford and IBH Publishing Co.New Delhi.
2. Sasson A, *Biotechnologies and Development*, UNESCO Publications.
3. Singh K, *Intellectual Property rights on Biotechnology*, BCIL,NewDelhi.

OUTCOMES:

- At the end of the course student will develop an idea about the importance of good laboratory practice in high quality research. They will also develop awareness about the basic fundamental safety measures that a researcher should follow in laboratory.

LSCY102 MICROBIOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To expose the fundamentals and scope of microbiology.
- To learn the classification of bacteria, Virus, Fungi & Protozoa
- Learn microbial culture and disease related to microbes.

MODULE I INTRODUCTION TO MICROBIOLOGY 09

History and scope of microbiology- Classification of microorganisms-bacteria, fungi, virus, alga, protozoa- sterilization techniques, disinfectant and antiseptic agents. Microscopy - types of microscopes and their applications-simple and compound, bright field, dark field, fluorescence, phase-contrast and electron microscopes.

MODULE II BACTERIOLOGY 09

Major groups of bacteria- Archaebacteria, Actinomycetes, chemoautotrophs, eubacteria, Pseudomonads, cyanobacteria, rickettsias, chlamydias and spirochetes- Bacterial cell-structure and functions of cellular components cell wall composition of Gram positive and Gram negative bacteria, sub-cellular organizations, flagella, capsule and spores-bacterial staining-antimicrobial
agents-antibiotics, chemotherapeutic drugs-antibacterial agents-mode of action-antibiotic resistance.

MODULE III VIROLOGY 09

Classification, morphology and characteristics of virus, fungi and Protozoa. Structure of DNA and RNA viruses, viral replication, Bacteriophages- lysogeny and lytic cycle- virus like agents-satellites, viroids and prions, antiviral and antifungal drugs. Classification of Helminthic parasites- Life cycle of malarial and filarial parasites.

MODULE IV CULTURING OF MICROORGANISMS 08

Microbial culture, continuous and synchronous culture- composition of culture media - solid and liquid media, chemically defined media, complex and differential media- Effect of PH, temperature and radiation on microbial growth.

MODULE V MICROBES AND DISEASES 10

Major human diseases caused by bacterial, viral and fungal pathogens Diseases of the respiratory tract-diphtheria, tuberculosis, pneumonia, influenza, mumps- Diseases of the skin-systemic mycoses, candidiasis- herpes viral infections, chicken pox, zoster and small pox- Genito-urinary infections- Gonorrhea, syphilis, leptospirosis, and AIDS-

trichomoniasis- Diseases of GITCholera, ETEC and EIEC infections- shigellosis- Typhoid- Hepatitis,
gasteroenteritis. Major human protozoan diseases-Malaria, Amebiasis, Toxoplasmiases.

Total Hours: 45

REFERENCES:

1. Prescott, Harley and Klein, Microbiology, 5th Edition- Publisher: mcgraw Hill science 2002.
2. Gerard J. T, Berdell R. F, Christine L. C, Microbiology: An Introduction, 8th Edition, Benjamin Cummings, 2004.
3. Kenneth J. R,George R, John C. S, Medical Microbiology: An Introduction to Infectious Diseases, mcgraw-Hill Professional, 2003.

OUTCOMES:

- On the completion of the above objectives student will be able to learn the fundamentals and scope of microbiology, classification of Protozoa, bacteria, Fungi Virus, microbial culture and diseases.

LSCY10 FOOD PROCESS TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explore about food process and technology.
- To get overview of processing of various types of food
- To expose themselves to storage and handling of food and food products.

MODULEI STORAGE AND HANDLING OF CEREALS 09

Infestation control; Drying of grains, Processing of rice and rice products. Milling of wheat and production of wheat products, including flour and semolina. Milling of corn, barley, oat, coarse grains including sorghum, ragi and millets; Processing of tea, coffee and cocoa.

MODULE II FRESH FRUITS AND VEGETABLES 09

Preservation of fruits and vegetable by heat treatment. Production and preservation of fruits and vegetable juices, preservation of fruit juice by hurdle technology. Non-alcoholic beverages; Food Laws, food rules and standards, Statistical Quality Control; Various types of packaging.

MODULEIII SEA FOOD 09

Commercial handling, storage and transport of raw fish; Average composition of fish; Freshness criteria and quality assessment of fish; Spoilage of Fish; Methods of Preservation of fish: Canning, Freezing, Drying, Salting, Smoking and Curing. Quality control of processed fish; Fish processing industries in India.

MODULEIV ANIMAL PRODUCT 09

Slaughtering technique of animal; Meat cuts and portions of meat, muscle; Color of meat; Post mortem changes of meat; Meat processing - curing and smoking; fermented meat products (meat sausages & sauces); Frozen meat & meat storage. Classification of poultry meat; Composition and nutritional value of poultry meat &eggs ; Processing of poultry meat and eggs; Spoilage and control; Byproduct utilization and future prospects; Poultry farms in India.

MODULE V DIARY PRODUCT 09

Composition of milk; Varieties of milk; Checks for purity of milk; Handling of fresh milk. Pasteurization of milk; HTST and UHT techniques; Packaging of milk; Fermentation of milk and fermented milk products. Manufacture of milk products like evaporated milk, powder milk, condensed milk, cream butter, cheese, yogurt, ice cream, ghee, baby food

and sweet meat. Quality control of milk and milk products; Milk plant hygiene and sanitation.

14. Milk & Milk Processing; Herrington BL; 1948, McGraw-Hill Book Company.
15. Fox PF; Applied Science Pub Ltd. Outlines of Dairy Chemistry, De S; Oxford.

OUTCOMES:

- On the completion of the above objectives student will have a sound knowledge on the various techniques involved in food processing, storage and handling of food and food products.

LSCY104 ANALYTICAL TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- The students will be exposed to basic concepts related with techniques and instrumentation widely used in Biotechnology.

MODULE I CALORIMETRY AND SPECTROSCOPY 09

Properties of electromagnetic radiations, interaction with matter. Ultraviolet spectroscopy: Origin of UV spectra, types of transition, chromophore & related terms, choice of solvent, instrumentation and applications Infra-red spectroscopy: Origin of infra-red spectra, modes of vibrations, instrumentation, sampling technique and applications; Nuclear magnetic resonance spectroscopy: Mass Spectroscopy: Origin, Instrumentation, types of ions produced, interpretation and applications of mass spectra GCMS, LCMS & MSMS.

MODULE II CENTRIFUGATION AND MICROSCOPY 09

Principle of centrifugation, rotors, different types of centrifuges, preparative and analytical centrifugation, ultra centrifugation. Optical microscopy, Bright field, Dark field, phase contrast and fluorescence microscopy. Electron microscopy: Transmission and scanning electron microscopy, Atomic force microscopy.

MODULE III ELECTROPHORESIS 09

General principle, support media. Agarose gels, polyacrylamide gels. SDS PAGE, 2D PAGE Pulsed field gel electrophoresis Iso-electric focusing Capillary electrophoresis

MODULE IV RADIOISOTOPE TECHNIQUES 09

Study of radioisotopes in biological samples, proportional and GM counter, scintillation counters, autoradiography, radio –immunoassay.

MODULE V CHROMATOGRAPHY 09

Introduction: Chromatography theory and practice. Paper chromatography. Thin layer chromatography. Ion exchange chromatography. Affinity chromatography. Partition chromatography. Adsorption chromatography. Introduction to gas chromatography and HPLC. Permeation.

Total Hours:

REFERENCES:

1. Pierre C. ORD and CD in chemistry and biochemistry: An Introduction. Academic

Press, 1972.
2. Paddock S. W. Confocal Microscopy methods & protocols.1st Ed., Human Press, 1999.
3. Murphy D. B. Fundamental of Light Microscopy & Electron Imaging. 1st Ed., Wiley-Liss, 2001.

OUTCOMES:

- At the end of the course, the students will have sufficient scientific understanding of the basic concepts in instrumentation used in Biotechnology.

LSCY105 ENVIRONMENTAL BIOTECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn the environment protection Act and Law related to environmental biotechnology
- To give basic idea on environmental sample analysis
- To understand the basic principles involved in waste water management
- To get the information on usage of Bioremediation-biotechnology
- To inform students about Biooxidation& microbial leaching

MODULE I INTRODUCTION TO ENVIRONMENTAL BIOTECHNOLOGY 09

Water, Soil and Air: their sources and effects. Removal of Specific Pollutants : Sources of Heavy Metal Pollution, Microbial Systems for Heavy Metal Accumulation, Biosorption& detoxification mechanisms. Environment protection Act: Environmentallaws, Environmentalpolicies, Environmentalethics. UN declaration. Environmental protection and conservation. Environmental Impact Assessment, Ecoplanning and Sustainable Development

MODULE II ENVIRONMENTAL SAMPLE ANALYSIS 09

Physicochemical and bacteriological analysis of soil and water, Problems associated with soil alkali soils, sodic soils, and solid waste, Fate of insecticides fungicides, pesticides in soil, use of genetically modified (insect- , pest- and pathogen resistant) plants. Ecotoxicology of soil pollutants, Municipal solid waste treatment strategies.

MODULE III WASTE WATER MANAGEMENT 09

Waste water constituents, Analysis and selection of flow rates and loadings, Process Selection, Physical unit operations, Chemical unit operations, Fundamentals of biological treatment, Role of biotechnology in water purification systems. Types and kinetics of biological treatment, Advanced waste water treatment, Biological Processes for Industrial and domestic effluent, Treatment, Aerobic Biological Treatment,Anaerobic Biological Treatment.

MODULE IV BIOREMEDIATION-BIOTECHNOLOGY 09

Bioremediation-Biotechnology for clean environment, Biomaterials as substitutes for non-degradable materials, Metal microbe interactions: Heavy Metal Pollution and impact on environment, Microbial Systems for Heavy Metal Accumulation, Biosorption, molecular mechanisms of heavy metal tolerance Bioindicators and biosensors for detection of pollution. Biotechnology for Hazardous Waste Management, Persistent

organic pollutants, Xenobiotics, Biological Detoxification of PAH, Biotechniques for Air Pollution Control. Solid Waste Management

MODULE V BIOOXIDATION & MICROBIAL LEACHING 09

Biooxidation – Direct and Indirect Mechanisms – Biooxidation Kinetics; Bacterial oxidation of Sphalerite, Chalcopyrite and Pyrite.; Extraction of metals from ores; Recovery of metals from solutions; Microbes in petroleum extraction; Microbial desulfurization of coal.

Total Hours: 45

REFERENCES:

1. Amann, R.I. Stromley, J. Stahl : Applied & Environmental Microbiology
2. Environmental Microbiology, W.D. Grant & P.E. Long, Blakie, Glassgow and London.
3. Microbial Gene Technology, H. Polasa (ED.) South Asian Publishers, New Delhi.
4. Biotreatment Systems, Vol. 22, D. L. Wise (Ed.), CRC Press, INC.
5. Standard Methods for the Examination of Water and Waste Water (14 th Education), 1985. American Public health Association

OUTCOMES:

On successful completion of this module, learners will be able to have:

- An understanding of environment protection regulations and source of environmental pollutions.
- The capability to apply advanced knowledge on environmental sample analysis
- The capability to apply avalanched discipline in waste water management
- The ability to formulate technique for bioremediation process
- An understanding of how biooxidation& microbial leaching helping in the industries.

LSCY106 SIRNA/RNA INTERFERENCE

L	T	P	C
3	0	0	3

OBJECTIVES:

- To get overview of gene regulation by gene silencing.
- To develop a detailed knowledge of siRNA and miRNA.
- To develop skill to understand molecular aspects of RNAi biology.
- To get familiar with technical applications of RNAi.

MODULE I INTRODUCTION TO GENE SILENCING 09

History of RNA interference, antisense RNA, mechanism, cosuppression in Petunia

MODULE II BASIC MECHANISM 09

dsRNA cleavage, RISC activation, dicer, argonaute, gene regulation by silencing,

MODULE III PHYSIOLOGY OF RNA INTERFERENCE 09

RNAi and immunity- antiviral mechanisms in plants, Drosophila, C. elegans, Downregulation and upregulation of genes

MODULE IV APPLICATIONS 09

Gene knockdown, functional genomics, medicine, therapeutic gen modulation, antiviral therapies, cancer, biosafety issues

MODULE V RNAI BIOTECHNOLOGY 09

Food industry- production of plant toxins, production of non-narcotic natural products, development as an insecticide, generation of transgenic plants, genome wide screening

Total Hours:

REFERENCES:

1. RNAi Technology. R K Gaur, CRC Press, 2011
2. RNA Interfernce: From biology to clinical applications by Wei Ping Min. Humana Press
3. RNA Silencing by EsraGalun. World Scientific Publishing Co. Pte. Ltd.

OUTCOMES:

At the end of this course students will be able to:

- Understand gene silencing mechanisms
- Understand types of RNAi
- Understand the applications of RNAi

SEMESTER II

LSCY201 RECOMBINANT DNA TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVE:

- To understand the basics of Recombinant DNA
- To learn applications of Recombinant DNA Technology

MODULE I CLONING & CLONING VECTOR 09

Types of cloning vectors viz. Plasmids, cosmids, ssDNA Phages, Yeast cloning vectors, Animal viruses, Ti plasmids and Cauliflower Mosaic Virus. Structural and Functional Organization of Plasmids, Plasmid Replication, Stringent and Relaxed Plasmids, Incompatibility of Plasmid Maintenance.

MODULE II MANIPULATION OF PURIFIED DNA 09

Enzymes involved in DNA Manipulation- Nucleases, Ligases, Polymerases and DNA modifying enzymes, Restriction endonucleases-Types, Blunt and sticky ends, Liagtion-Mode of action of DNA Ligase.

MODULE III CONSTRUCTION OF RECOMBINANT DNA 09

Preparation of competent cell-Transformation, transfection – Recombinant selection and screening- Genomic DNA library- cDNA synthesis strategies - Linkers - Adapters - Homopolymer tailing- Making genomic and cDNA libraries in plasmids and phages. PCR product cloning (TA cloning). Cloning strategies in yeast, E. coli and B. subtilis.

MODULE IV HYBRIDIZATION TECHNIQUES & MUTAGENESIS 09

DNA hybridization, colony hybridization and in-situ hybridization (Southern, Northern and Dot blots and immunological techniques Western blotting), Mutagenesis - Deletion mutagenesis, Oligonucletoide derived mutagenesis, Site directed mutagensis - Its applications- Applications of rDNA technology in Diagnostics.

MODULE V APPLICATIONS OF RDNA TECHNOLOGY 09

Gene Cloning and DNA analysis in Agriculture, Forensic Science and Medicine-Production of Recombinant pharmaceuticals, identification of genes responsible for human disease, Genetic Finger printing, Gene Therapy, Plant Genetic engineering, Problems with Genetically modified plants.

Total Hours: 45

REFERENCES:

1. Recombinat DNA Second eition by Watson
2. Gene Cloning and DNA analysis: An Introduction by T. A. Brown.

OUTCOMES:

- This course will introduce the students with the basics about genes, and approaches to manipulate the gene according to need such as production of therapeutic proteins in plants.

LSCY202 ADVANCED INSTRUMENTATION

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn the electrochemical techniques and principles of centrifugation and spectrophotometry.
- To learn the principles of chromatography and microscopy and their several aspects.
- To understand the information of radioactive methods, detection and measurement of radioactivity.

MODULE I ELECTROCHEMICAL TECHNIQUES 09

Basic principles of Electrochemical Techniques- - pH electrode, Ion selective- gas-sensing and oxygen electrodes- biosensors. Centrifugation- basic principles-instrumentation- Centrifugation- centrifugation units-types of centrifuges-colloidal nature of particles-centrifugation methods and accessories- sedimentation velocity-sedimentation equilibrium-cell fractionation methods.

MODULE II SPECTROPHOTOMETRY 09

Principles and techniques of colorimetry and spectrophotometry-Beer-Lamberts Law -instrumentation - qualitative and quantitative methods of analysis- hypo and hyper chromicity- coupled assays –Spectrofluorimetry-Turbidimetry - Flame and Atomic absorption Spectrophotometer and Mass spectrometer. Chromatography- types-column, thin layer, paper, adsorption, partition, gas, liquid, ion exchange, affinity, HPLC- principles of each type- instrumentation and accessories- detection methods and systems qualitative and quantitative aspects-applications.

MODULE III MICROSCOPY 09

Basic principles of Microscopy and application of Light, Compound, Phase contrast inverted microscopy; Scanning Electron Microscopy (SEM)- Transmission Electron Microscopy, (TEM)- Fluorescence Microscopy- Scanning Tunneling Microscopy-(STM)- Automated Fluorescence Microscopy - Confocal Microscopy.

MODULE IV ELECTROPHORESIS 09

Types of Electrophoresis- paper and gel-agarose and PAGE-pulsed field-capillary - isoelectric focusing- 2 D electrophoresis; blotting methods-Western- Southern and Northern- application-methods in life sciences.

MODULE V RADIOACTIVE METHODS 09

Types of radioisotopes-half life- units of radioactivity- uses of radioisotopes in life

sciences and biotechnology- detection and measurement of Radioactivity- liquid scintillation counting- solid state counting- Geiger counter - Radiation hazards Techniques and applications of Electron spin resonance- Nuclear magnetic resonance- Circular Dichroism (CD) - Optical Rotary Dispersion (ORD).

Total Hours:

REFERENCES:

1. Pierre C. ORD and CD in chemistry and biochemistry: An Introduction. Academic Press, 1972.
2. Paddock S. W. Confocal Microscopy methods & protocols.1st Ed., Human Press, 1999.
3. Murphy D. B. Fundamental of Light Microscopy & Electron Imaging. 1st Ed., Wiley-Liss, 2001.
4. Horst F. Basic One and Two-dimensional spectroscopy. VCH Publisher, 1991.
5. West E. S, Todd W. R, Mason H. S, Bruggen J. Textbook of Biochemistry. 4th Ed, Oxford and IBH Publishing Co, 1995.
6. Freifelder D. M. Physical Biochemistry- Application to Biochemistry and Molecular Biology, 2nd Ed., W.H. Freeman, 1982.

OUTCOMES:

- On the completion of the above objectives student will be able to know the electrochemical techniques and principles of centrifugation, spectrophotometry, chromatography and microscopy. They will have the information of radioactive methods.

LSCY203 MOLECULAR DIAGNOSTICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- Developing the basic concept of molecular diagnostics
- Understanding the common procedures and which are used in disease diagnosis
- To be familiar with various types of diseases diagnosis methods and progression of diagnosed disease.

MODULE I INTRODUCTION TO MOLECULAR DIAGNOSTICS 09

Collection, preservation and storage of clinical samples, biopsy, Principles, application and limitations of Biological assays used in diagnosis- PCR, ELISA, FISH, gene sequencing, microarrays, protein arrays. GLP, SOP and ethics in molecular diagnostics.

MODULE II INFECTIONS 09

Infection and mode of transmission, types of infectious diseases- bacterial and fungal infections, diagnosis of infections caused by Streptococcus, Coliforms, Salmonella, Shigella, Vibrio, and Mycobacterium- diagnosis of fungal infections, major fungal diseases, Dermetophytoses, Candidiosis and Aspergillosis. Diagnosis of DNA and RNA viruses- pox virus, rhabdo virus, hepatitis; virus diagnosis of protozoan diseases- amoebiosis, malaria, trypanosomiosis, leishmaniasis- study of helminthic diseases- Fasciola hepatica and Ascarislumbricoides. Filariasis and Schistosomiasis. Diagnosis of chicken guinea and swine flu.

MODULE III CLINICAL GENETICS 09

Chromosomes chemistry and packaging, Cytogenetic, Structural and numerical abnormalities of chromosomes, Chromosome bands, banding techniques , mutation and polymorphism analysis, human genome project, cancer genetics- oncogenes, tumor suppressor genes- gene therapy, genetic counseling, nucleic acid hybridization techniques, Disease linked with mitochondrial DNA Genetic linkage and chromosome and genetic mapping in human diseases, Prenatal

MODULE IV IMMUNODIAGNOSTICS 09

Introduction to immunodiagnostics, antigen-antibody reactions, antibody production, antibody markers, CD markers, FACS, Human Leukocyte Antigen (HLA) typing, agglutination (ABO/Bacterial), immunoprecipitation, immunodiffusion, flocytometer.

MODULE V FORENSIC SCIENCE 09

Introduction to Forensic Science, DNA fingerprinting / DNA Profiling / DNA Testing in Forensic Science.; Ethics, Rules and Procedures in DNA analysis. Autopsy and

toxicological diagnosis. Determination of Paternity- Human identification and sex determination. semen analysis , Case study.

Total Hours: 45

REFERENCES:

1. Tietz Textbook of Clinical Chemistry, Carl A. Burtis, Edward R. Ashwood,
2. Harcourt Brace & Company Aisa Pvt. Ltd.
3. Essentials of Diagnostic Microbiology, Lisa Anne Shimeld
4. The Science of Laboratory Diagnosis, Crocker Burnett

OUTCOMES:

- Learners will be able to define basic terminology and describes basic concepts in molecular diagnostics
- The students will know the importance and the relevance of molecular diagnostic techniques and applications of molecular diagnostics in various field including medical, forescenic, etc..

LSCY204 OMICS

L	T	P	C
3	0	0	3

MODULE I GENOMICS: **09**

Structural organization of genome in Prokaryotes and Eukaryotes; Organelle DNA-mitochondrial, chloroplast; DNA sequencing-principles and translation to large scale projects; Recognition of coding and non-coding sequences and gene annotation; Tools for genome analysis-RFLP, DNA fingerprinting, RAPD, PCR, Linkage and Pedigree analysis-physical and genetic mapping. Physical and Genetic Map, Genome Sequencing, Next generation sequencing methods, Genome Annotation, Functional Genomics.

MODULE II TRANSCRIPTOMICS AND PHARMACOGENETICS 09

Search for transcription factor binding sites,RNA-Seq, Microarrays, Regulatory RNAs: small or large, Computational prediction of miRNA target genes, RNA Darkmatter. High throughput screening in genome for drug discovery-identification of gene targets, Pharmacogenetics and drug development

MODULE III PROTEOMICS 09

Protein analysis (includes measurement of concentration, amino-acid composition, N-terminal sequencing); 2-D electrophoresis of proteins; Microscale solution isoelectricfocusing; Peptide fingerprinting; LC/MS-MS for identification of proteins and modified proteins; MALDI-TOF; SAGE and Differential display proteomics, Protein identification by peptide mass fingerprinting, Protein-protein interactions, Yeast two hybrid system, Applications of proteomics.

MODULE IV METABOLOMICS AND LIPIDOMICS 09

Fundamental concept - Carbohydrate, Lipid, Protein and Nucleic Acid metabolism. Plant Metabolism. Tools of metabolomics- Capillary electrophoresis, Gas chromatography, Electrochemical detectors, mass spectrometry, Case studies. Lipidomics - Basic concepts and tools Case studies

MODULE V SYSTEMS BIOLOGY AND BIOINFORMATICS. DEGRADOMICS 09

Techniques and concepts, Approaches to identify the protease and protease-substrate repertoires, or 'degradomes', on an organism-wide scale, Uncover new roles for proteases in vivo. Identification of new pharmaceutical targets to treat disease (Emerging degradomics)

Total Hours:

REFERENCES:

1. Introduction to Proteomics -Tools for the New Biology by Daniel C. Liebler, Humana Press.
2. Mass Spectrometry for Biotechnology by Gary Siuzdak, Academic Press.
3. Proteomics for Biological Discovery by Timothy Veenstra and John Yates, Wiley.
4. Metabolomics- Methods and Protocols by Wolfram Weckwerth, Humana Press.
5. Lipidomics- Technologies and Applications by Kim Ekroos, Wiley-VCH.
6. Web/Journal Resources.
7. Transcriptomics: Expression Pattern Analysis, VirendraGomase, Somnath Tagore; VDM Publishing, 2009 – Science

OUTCOMES:

LSCY205 BIOFUELS AND BIOENERGY

L	T	P	C
3	0	0	3

OBJECTIVE

- This course will provide learning in various The course will provide students, with hands-on technical exposure to various Biofuels related science & technology topics, background & literature information besides addressing the environmental, economical, social and other Biofuels related issues.

MODULE I BIOCHEMISTRY OF BIOMASS 09

biomass (e.g. wood waste, forestry residues, agricultural residues, perennial annual crops, organic municipal solid waste). Long-term sustainability and reliability of feedstock supply; feedstock quality, minimizing feedstock cost and regional/climatic considerations of the process chain. Composition of lignocellulose (lignin, hemicellulose, cellulose); energy crops; chemical pretreatment; enzymatic pretreatment; degradation of lignocellulose by fungi and bacteria; degradation of lignin; the role of peroxidases; degradation of cellulose; trichodermacellulases; bacterial cellulases; and comparison with degradation of high starch crops.

MODULE II BIO DIESEL 09

sources and processing of biodiesel (fatty acid methyl ester); nature of lipids, especially fatty acids and triglycerides. Sources and characteristics of lipids for use as biodiesel feedstock; and conversion of feedstock into biodisel (transesterification). Use of vegetable oil (SVO) and waste vegetable oil (WVO). Engineering, economics and environmental issues of biodisel; components and operation of a biodiesel processing system; standards for biodiesel quality; safety procedures needed to work with biodiesel in both domestic and shop environments; and major policies and regulations pertaining to the production, distribution, and use of biodiesel.

MODULE III BIOENERGY SYSTEMS 09

Course content includes overview of bioenergy systems from resource, conversion technologies to final product. Bioenergy conversion technologies and systems for heat, power, and bio-fuels. Cogeneration and polygeneration. Innovative cycles (such as biomass integrated gasification combined cycles, biomass air turbines, humid air turbines etc) for biomass resources. Evaluation of the bioenergy system performance. Economic and environmental assessments of bioenergy systems.

MODULEIV BIOFUELS & ALCOHOL TECHNOLOGY 09

Introduction to Alcohol Technology, Raw Material of AlcoholIndustry, Storage & handling of Raw material in detail, Study of different yeast strains used in alcohol

industries, Study of yeastproduction as single protein cell. Study of different recycling process, Biochemistry of alcoholproduction, The management of fermentation in the production of alcohol.

MODULE V POLICIES AND FUTURE R&D OF BIOFUELS& BIOENERGY 09

Course content includes analysis of both current and future EU regulations and directives on biofuels and bioenergy. Tax regulations. Evaluation of different production alternatives to produce bioenergy; competitiveness of bioenergy alternatives in agriculture compared to other energy sources. Evaluation of current and future R&D needs; legal framework to support sustainable development and increased use of biofuels; government policies and programs with regard to biofuels and investment opportunities worldwide. Biomass feedstocks - how do we produce them cost-effectively and for which end-use? Biofuels for transportation - what will make them technically and economically competitive? Market penetration of biofuels - how do we remove barriers?

Total Hours:

REFERENCES:

1. Biorenewable Resources: Engineering New Products from Agriculture. Robert C. Brown. Wiley-Blackwell Publishing (2003).
2. Anaerobic Biotechnology for Bioenergy Production: Principles and Applications. Samir K. Khanal. Wiley-Blackwell (2008).

OUTCOMES:

Students will be able to describe:

- How petroleum and bio-based fuels affect the global carbon cycle
- The attributes of biofuels that make them suitable as a fuel for a specific application
- Limitations of biofuels
- Global impacts of biofuels on food and energy supplies
- Technological advances and challenges to be overcome for wide-scale biofuel adoption

LSCY206 MOLECULAR FARMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce molecular farming.
- To create complete knowledge about the recombinant protein production.
- To create awareness about the production of pharmaceutical proteins in plants.

MODULE I INTRODUCTION AND FOREIGN PROTEIN EXPRESSION 09

Introduction, foreign protein production systems- plant tissue culture, suspended cultures, hairy root cultures, shoot teratoma cultures. Strategies for improving FP production in tissue culture, expression systems, modifications to existing expression constructs, secretion of foreign proteins, foreign protein stability, stability inside the cells.

MODULEII RECOMBINANT PROTEIN PRODUCTION 09

Biology of sprouting, dicotyledonous seeds, germination, sprout, rubisco synthesis, rubisco promoters, inhibition of endogenous gene expression, expression cassette design, sprouting- equipments, conditions, sterilization, time and temperature, light, inhibition of endogenous gene expression, growth regulators, nitrogen fertilizer, seed production,quality and environmental aspects.

MODULE III PLANT VIRAL EXPRESSION SYSTEMS 10

Cereal production crops, Technical aspects, cereal transformation, expression construct design, Prodigene and Maize. Recombinant proteins expressed in Rice, Wheat, Barley. Plant RNA viruses as expression vectors- TMV, PVX, CPMV, AIMV. Biological activity of target molecules, efficacy of plant virus antigens, vaccine antigens- particle based.

MODULEIV ANTIBODIES, BIOPHARMACEUTICALS AND EDIBLE VACCINES 10

Introduction, expression of therapeutic and human proteins in plants, transgenic chloroplast system, chloroplast derived human antibodies, biopharmaceuticals, Human Serum Albumin, Human insulin like growth factor-1, Human interferon, Antimicrobial peptides, chloroplast derived vaccine antigens, cholera toxin B subModule , Bacillus anthracis protective antigen, Yersinia pestis F1-V fusion antigen, Canine Parvovirus VP2 protein.

MODULE V PLANT DERIVED RECOMBINANT THERAPEUTIC PROTEINS 07

Similarities and differences in the processing of pharmaceutical proteins from different sources, process scale, individual steps of a Downstream process, Initial processing

and extraction, chromatographic purification, regulatoryrequirements for downstream processing of plant derived products.

Total Hours: 45

REFERENCES:

1. Molecular Farming – Plant-made Pharmaceuticals and Technical Proteins, Rainer Fischer and Stefan Schillberg.
2. Wiley.VCHVerlag GmbH and Co. KGaA. 2004.

OUTCOMES:

SEMESTER III

LSCY111 BIOPHARMACEUTICALS

L	T	P	C
3	0	0	3

OBJECTIVE:

- The purpose of this course is to provide a framework of the drug development process and its regulation as well as its impact on workers and the environment. Graduate students in toxicology, pharmaceutics, comparative medicine, bioengineering, occupational and environmental health as well as professional disciplines such as medicine, pharmacology, and nursing interested in working with the biotechnology industry will find this course particularly useful.

MODULE I INTRODUCTION TO BIOPHARMACEUTICAL 09

Introduction to Biopharmaceutical, Biogenerics and Biosimilars; The role of patents in the drug industry; Protein-based biopharmaceuticals; Manufacturing processes; Global market; International Non-proprietary Names (INN) nomenclature system biosimilars.

MODULE II CONCEPTS OF BIOPHARMACEUTICAL 09

Approved follow-on proteins/Biosimilars; Characteristics of high-selling peptides and proteins,; Products with expired patents; Challenging originator's patents; Target products for FOB (follow-on biologicals)/ Biosimilars development peptides; Recombinant non-glycosylated proteins; Recombinant glycosylated proteins; Industries dealing with biogenerics and its market value; World scenario; Indian scenario.

MODULE III PHARMACOKINETICS; PHARMACODYNAMICS 09

Problems in characterizing biologics (Types of biologic, Peptides, Non-glycosylated proteins, Glycosylated proteins, Monoclonal antibodies); Equivalence issues; Post-translational modifications; Effect of microheterogeneity; Pharmacokinetics; Pharmacodynamics; and Clinical efficacy; Analytical methods for the characterization of biosimilars (Chromatography, Protein sequencing, Mass spectrometry, UV absorption, Circular dichroism, X-ray techniques, Nuclear magnetic resonance, Electrophoresis, Western blotting, Bioassays, ELISA, Immunoprecipitation and other procedures)

MODULE IV IMMUNOGENICITY OF BIOPHARMACEUTICALS 09

Immunogenicity of biopharmaceuticals: Immunogenicity; Factors contributing to immunogenicity (product- related factors, host- related factors), Consequence of immunogenicity to biopharmaceuticals; Measurement of immunogenicity

MODULE V CASE STUDIES **09**

Case studies: Erythropoietin, Insulin, Somatotropin, Interleukin-2, Interferon Granulocyte- macrophage- CSF, DNase, Factor VIIa, Factor IX, Factor VIII, Activated protein C, Tissue plasminogen activator, Monoclonal antibodies etc.

Total Hours:

REFERENCES:

1. Sarfaraz K. Niazi, Handbook of Biogeneric Therapeutic Proteins: Regulatory, Manufacturing, Testing, andPatent Issues, CRC Press, 2006.
2. Rodney J Y Ho, MILO Gibaldi, Biotechnology & Biopharmaceuticals Transforming proteins and genes intodrugs, 1stEdition, Wiley Liss, 2003.

OUTCOMES:

- Explain the therapeutic mode of action, and understand structural considerations of at least four classes of biopharmaceutical agent.
- Outline the drug manufacturing process including the role of quality control and quality assurance in protecting the public, workers, and the environment.
- Give an oral presentation to scientific audience on the biological mechanism of action and proposed evaluation of safety, efficacy and manufacturing controls on a biopharmaceutical age

L	T	P	C
3	0	0	3

OBJECTIVE:

- Identify the important parameters in the design of a laboratory to conduct the most commonly-used molecular diagnostics protocols.
- Identify the important parameters in the design of a quality system for molecular analyses.
- Become proficient with the techniques required in order to perform the most commonly-used molecular diagnostics protocols.
- Identify the important parameters in the design of a molecular diagnostic test.
- Identify the components of a well-controlled diagnostic test.
- Use critical thinking skills to trouble shoot problems as they occur and determine possible causes.

MODULE I OLECULAR BIOLOGY AND DIAGNOSTICS 09

Molecular Biology and Diagnostics: Atomic bonds and Molecular interactions; Small organic molecules, Macromolecules; Compartmentalization of cells: transport of molecules between nucleus and cytosol, Transport of proteins into mitochondria and chloroplasts, Endoplasmic Reticulum; General principles of cell communication: Signalling - Extracellular, Intracellular, Autocrine, Signaling through G-protein- linked cell surface receptors, Signaling through enzyme-linked cell surface receptors, Signaling pathways that depend on regulated proteolysis; Cell Cycle; DNA repair pathways and methods of detection – Flow cytometry

MODULE II GENETICS AND DIAGNOSTICS 09

Genetics and Diagnostics: Origin and direction of human cytogenetics; General features of chromosomes, Chemistry and packaging of chromosomes, Chromosome bands, banding techniques and their molecular correlates; Structural and numerical abnormalities of chromosomes and their causes, Sex determination and differentiation, Y chromosome evolution and variations and X-inactivation mechanism and phenotypic effects of sex chromosome imbalances, Fragile sites, Trinucleotide repeat expansion, mechanism and associated disorders, Genomic imprinting and their disorders; Fluorescence In situ hybridization, chromosome Comparative Genomic Hybridization arrays; Genetic linkage and chromosome and genetic mapping in human diseases.

MODULE III BIOCHEMISTRY IN DIAGNOSTICS 09

Biochemistry in Diagnostics: Proteins and Amino acids, Qualitative and quantitative techniques: Protein stability, denaturation; amino acid sequence analysis; Metabolism of lipids, carbohydrates, amino acids; In-born errors of metabolism; energy requirements,

nutritional disorders; vitamins & minerals - biochemical function and deficiency manifestation. GLP and GMP.

MODULE IV TECHNIQUES IN DIAGNOSTICS 09

Nucleic acid extraction – principle and methods; Polymerase Chain Reaction – principle, types (including RT-PCR, real-time PCR, QF-PCR) and applications; DNA sequencing methods – principle, types, automated process, DNA sequencers; Hybridization techniques – Southern, Northern, in-situ (including FISH), microarrays – types and applications; Protein extraction and analysis (including PAGE and its variations); Western Blot

MODULE V IMMUNODIAGNOSTICS 09

Immunodiagnostics : Introduction, antigen-antibody binding interactions and assays; Immunoassays – types [RIA, ELISA, Chemiluminescent, IA, FIA] and specific applications; Immunohistochemistry – principle and techniques. Various drug delivery systems, targeting potentials; systems used for delivery of biotechnological products (Liposomes, microspheres, nanoparticles, immobilization techniques, etc.)

Total Hours:

REFERENCE:

1. Molecular Diagnostics: George P Patrinos and Wilhelm Ansorge, Elsevier Academic Press

OUTCOMES:

- Gain knowledge of cellular structure and function, especially DNA and RNA, to molecular diagnostic procedures.
- Gain a thorough working knowledge of nucleic acid extraction, resolution and detection.
- Gain a solid foundation in the most commonly utilized molecular diagnostic testing protocols.
- Apply the knowledge of molecular testing to the most commonly performed applications in the clinical laboratory such as: nucleic acid extraction, resolution and detection, analysis and characterization of nucleic acids and proteins, nucleic acid amplification and DNA sequencing.

LSCY113 TISSUE AND ANTIBODY ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Understand the fundamental and quantitative principles of tissue and antibody engineering and the basic elements of the tissue engineering approach. Appreciate the important contribution of tissue and antibody engineering in producing/growing organs that can be used for therapeutic applications.Be able to discuss the use of stem cell in tissue engineering for wound healing. Appreciate the need for compatible biomaterials to support growth and differentiation of stem cells into functional organ.

MODULE I INTRODUCTION TO TISSUE ENGINEERING 09

Introduction to tissue engineering, Cells as therapeutic Agents with examples, Cell numbers and growth rates. Tissue organization, Tissue Components, Tissue types, Functional subunits. Tissue Dynamics, Dynamic states of tissues, Homeostasis in highly prolific tissues and Tissue repair. Angiogenesis. Cellular fate processes, Cell differentiation, Cell migration - underlying biochemical process.

MODULE II CELL-EXTRACELLULAR MATRIX INTERACTIONS 09

Cell-extracellular matrix interactions - Binding to the ECM, Modifying the ECM, Malfunctions in ECM signaling. Direct Cell-Cell contact - Cell junctions in tissues, malfunctions in direct cell-cell contact signaling. Response to mechanical stimuli. Cell and tissue culture - types of tissue culture, media, culture environment and maintenance of cells in vitro, cryopreservation. Basis for Cell Separation, characterization of cell separation, methods of cell separation.

MODULE III BIOMATERIALS IN TISSUE ENGINEERING 09

Biomaterials in tissue engineering - biodegradable polymers and polymer scaffold processing. Growth factor delivery, Stem cells. Gene therapy. In vivo cell & tissue engineering case studies: Artificial skin, Artificial blood vessels. Bioreactors for Tissue Engineering.

MODULE IV IMMUNOGLOBULIN 09

Immunoglobulin Genetic Locus: Generation of antibody diversity, Antibody Discovery Methodologies: Hybidoma, Display, and Direct B-cell cloning technology, Antibody structure and function.

MODULE V ANTIBODY ENGINEERING 09

Antibody engineering: humanization, Affinity maturation, Effector function, Generation of high titer cell lines1: Expression vector and Host systems, Cell culture optimization, Downstream processing , Analytical characterization, : Cell line genetic analysis Purification, formulation and stability, Antibody composition

Total Hours:

REFERENCES:

1. "Tissue Engineering", Bernhard O. Palsson, Sangeeta N. Bhatia, Pearson Prentice Hall Bioengineering.
2. Nanotechnology and Tissue engineering - The Scaffold", Cato T. Laurencin, Lakshmi S. Nair, CRC Press.

OUTCOMES:

- Execute the engineering design process: identify problem, identify design constraints on bioengineering problem, create solutions, and evaluate solutions with respect to these constraints.) In this course, students learn and then execute key steps of the engineering design process, including identification of the problem, exploration of the problem, and design of a solution. Students will learn how to identify and conduct thorough research on current tissue engineering and antibody problems, and will ultimately work in teams to propose solutions to those identified problems.

LSCY114 BIONANOTECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide an introduction to nanobiotechnology.
- To make the students understand about the functional principles of nanobiotechnology

MODULE I FUNDAMENTALS OF NANOSCIENCE 09

Introduction, the nanoscale dimension and paradigm, definitions and historical evolution (colloids etc.) and current practice, types of nanomaterials and their classifications (1D, 2D and 3D etc. nanocrystal, Nanoparticle, Quantum dot, Quantum Wire and Quantum Well etc), Polymer, Carbon, Inorganic, Organic and Biomaterials –Structures and characteristics.

MODULE II CHARACTERIZATIONS IN BIONANOTECHNOLOGY 09

Optical (UV-Vis/Fluorescence), X-ray diffraction, Imaging and size (Electron microscopy, light scattering, Zeta potential), Surface and composition (ECSA, EDAX, AFM/STM etc), Vibration (FT-IR and RAMAN), SERS -3, Magnetic, Electrical and Electrochemical**.**

MODULE III APPLICATIONS OF BIONANOTECHNOLOGY 09

Materials in Biosystems: Proteins - Lipids - RNA and DNA, Protein Targeting – Small Molecule/Nanomaterial - Protein Interactions Nanomaterial-Cell interactions-Manifestations of Surface Modification (Polyvalency),Drugs-Photodynamic therapy, molecular motors, neuroelecronic interphases, development of nanoluminiscent tags**.**

MODULE IV NANOMATERIALS AND DIAGNOSTICS 09

Drug Delivery and Therapeutics, MRI, Imaging, Surface Modified Nanoparticles, MEMS/NEMS, based on Nanomaterials, Peptide/DNA Coupled Nanoparticles, Lipid Nanoparticles For Drug Delivery, Inorganic Nanoparticles For Drug Delivery, Metal/Metal Oxide Nanoparticles (antibacterial/anti fungal/anti viral), Anisotropic and Magnetic Particles (Hyperthermia).

MODULE V NANOMATERIALS AND TOXICITY EVALUATION 09

Designer biopolymers, Procollagen, DNA Polynode, RNA topoisomerase, Protein – magnetic materials, Cyto-toxicity, Geno-toxicity, In vivo tests/assays.

Total Hours: 45

2. 2 T. Pradeep, —Nano: The Essentials, McGraw – Hill education, 2007.
3. Nicholas A. Kotov, Nanoparticle Assemblies and Superstructures, CRC, 2006.
4. David S Goodsell, “Bionanotechnology”, John Wiley & Sons, 2004.

OUTCOMES:

- After the completion of the course the student will have the basic knowledge of nanotechnology in biotechnology. In detail understanding of the application of Nanomaterials in biotechnology and acquire the knowledge about the DNA, proteins, amino acids, drug delivery, biomedicine etc.

LSCY115 PROTEIN ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

This course aims to develop in the students' mind a concept regarding the structure and function of proteins of particular importance, the student will know the production of recombinant protein and in general how to engineer protein to be used as therapeutics.

MODULE I INTRODUCTION TO PROTEIN ENGINEERING 09

Forces stabilizing proteins – Van der waals, electrostatic, hydrogen bonding and weakly polar interactions, hydrophobic effects; Entropy – enthalpy compensation, Protein engineering and its applications, features or characteristics of proteins that can be engineered (definition and methods of study) – affinity and specificity; Spectroscopic properties; Stability to changes in parameters as pH, temperature and amino acid sequence, aggregation propensities, etc.

MODULE II TECHNIQUES FOR PROTEIN ENGINEERING 09

Methods of measuring the stability of a protein; Spectroscopic methods to study physicochemical properties of proteins: far-UV and near-UV CD; Fluorescence; UV absorbance; ORD; Hydrodynamic properties–viscosity, hydrogen-deuterium exchange.

MODULE III SITE DIRECTED MUTAGENESIS AND PROTEIN ENGINEERING 09

Altering Proteins by mutagenesis methods, techniques for Oligonucleotide directed mutagenesis by using single stranded DNA as template, Denatured double stranded DNA as template, PCR based mutagenesis, Engineering proteins by chemical modifications, Genetic fusion of domains, alteration of function by selection and screens, deletion mutagenesis. Introduction of selected mutagenesis by Oligonucleotide directed mutagenesis, Scanning mutagenesis, Insertion of unnatural mutagenesis.

MODULE IV ENGINEERING PROTEINS FOR PURIFICATION 09

Introducing cleavage sites, engineering Proteins for Chromatography, Immunoaffinity chromatography, Ion exchange chromatography, Metal affinity chromatography.

MODULE V STABILIZATION AND MODIFICATION OF PROTEINS 09

Principles of structure stabilization by solvent components, sources of exclusion, Balance between cosolvent exclusion and binding, cosolventintertactions in the denaturation reaction, Practical considerations, Post translational modifications-

Involving peptide bond, C-terminal, side chain. Modification methods- Enzymatic, Non enzymatic, Specificity, chaperones mediated. Applications of Post translational modifications.

2. Baxevanis A. D, Ouellette B. F. F. Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins. 3nd edition Wiley, John & Sons, Incorporated, 2004.

OUTCOMES:

- After the completion of the course the student will have the basic concept regarding the structure and function of proteins of particular importance, the student will know the production of recombinant protein and in general how to engineer protein to be used as therapeutics.

LSCY116 STEM CELL TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To obtain knowledge on wide-ranging topics related to stem cell
- To learn about the application of stem cells in health care
- To get familiar with the issues and challenges of stem cell political and ethical issues surrounding the stem cell debate.

MODULE I GENESIS OF CELLS 09

Concept of stem cells: types, self-renewal and pluripotency, isolation and characterization, Niche and its role on differentiation of stem cells, Stem cells and restorative biology, Reprogramming of genome function through epigenetic inheritance.

MODULE II STEM CELLS 09

Embryonic stem cells, Stem Cells from adults. Pluripotency necessary, or is unipotency enough? What are the mechanisms? Stem-cell plasticity, Regulators of pluripotency and differentiation of stem cell. The isolation, expansion, genetic manipulation, genomic reprogramming, and cloning of stem cells. The problem of differentiation of stem cells. Stem Cells and imprinted genes. Differences between adult and embryonic stem cells, what types of cells adult stem cells can become.

MODULE III CELL &TISSUES 09

From single to multicellular components **-** Regulation of cell division and cytoskeleton, Stem cells in regeneration, Cell specification and early signaling events during morphogenesis, Development of cell adhension and motility , Cellular imprinting**.**

MODULE IV CELL GROWTH &DEVELOPMENT 09

Factors controlling cell development **-** Environmental factors like temperature, oxeygen, location, time, cell number , Chemical factors like growth factors, hormones, cytokines, microRNAs , Genetic factors**.**

MODULE V STEM CELLS AND THERAPEUTICS 09

Cancer stem cells , Stem cells treatment to diseases , Current stem cell therapies, how we can use stem cells for studying cancer and finding cures to other diseases, Correlation between stem cells and cancer, Stem cells and aging. Clinical applications of hematopoietic stem cells from cord blood first successful transplantation of cord blood in a child with Fanconi’s anemia. Treatment of neural diseases such as

Parkinson's disease, Huntington’s disease and Alzheimer's disease. Repair of damaged organs such as the liver and pancreas. Ethical issues associated with stem cells.

Total Hours: 45

5. Potten C. S. Stem Cells, Elsevier, 2006.

OUTCOMES:

- After the completion of the course the student will have overall knowledge of scientific research, management, implications and exploitation in Stem Cells in Health care.

REGULATIONS - 2018
(With Amendments Incorporated till March 2019)

M.ARCH (GENERAL)

REGULATIONS - 2018

FOR

M. ARCH DEGREE PROGRAMME

1.0 PRELIMINARY DEFINITIONS & NOMENCLATURE

In these Regulations, unless the context otherwise requires:

i) "Programme" means Post Graduate Degree Programme (M.Arch degree)

ii) "Branch" means specialization or discipline of M. Arch degree programmes.

iii) "Course" means a theory or studio or theory cum studio that is normally studied in a semester, like Architectural Reading, Architectural Studio, etc.

iv) "Institute" means B.S.Abdur Rahman Crescent Institute of Science and Technology

v) "Dean (Academic Affairs)" means the Dean (Academic Affairs) of B.S.Abdur Rahman Crescent Institute of Science and Technology

vi) "Dean (Student Affairs)" means the Dean (Students Affairs) of B.S.Abdur Rahman Crescent Institute of Science and Technology

vii) "Controller of Examinations" means the Controller of Examination of B.S.Abdur Rahman Crescent Institute of Science and Technology who is responsible for conduct of examinations and declaration of results.

2.0 PROGRAMMES OFFERED, MODE OF STUDY AND ADMISSION REQUIREMENTS

2.1 Post graduate degree of M. Arch (General) is offered in full-time in Crescent School of Architecture.

2.2 MODE OF STUDY

2.2.1 Students admitted under “Full-time” shall be available in the Institution during the complete working hours for curricular, co-curricular and extra-curricular activities assigned to them.

2.3 ADMISSION REQUIRMENTS:

2.3.1 The candidate with a minimum of 50 % marks in aggregate in a Bachelor of Architecture degree course or equivalent courses recognized by the Council of Architecture shall be admitted to the programme in architecture.

2.3.2 The eligibility criteria such as marks, number of attempts and physical fitness shall be

as prescribed by the Institute from time to time.

3.0 DURATION AND STRUCTURE OF THE PROGRAMME

3.1 The minimum and maximum period of completion for the PG degree programme is as given below:

Programme	Minimum No of semesters	Maximum No of Semesters
M. Arch	4	8

3.2 The curriculum structure of M. Arch Degree programme shall consists of:

i. "Theory" courses
ii. "Theory cum studio" courses iii.
"Studio" courses

3.3 Every semester curriculum shall normally have a blend of theory, theory cum studio and studio courses.

3.4 Theory courses shall carry one credit per lecture period per week and studio courses carry one credit per two/three periods. All theory courses will be having evaluated through the continuous assessment and semester end examinations. Theory cum studio & Studio courses will be evaluated through continuous assessments and Semester end Viva-voce Examinations.

3.5 For the award of the degree a student should have earned all credits mentioned in the curriculum.

4.0 CLASS ADVISOR

A faculty member will be nominated by the HOD as Class Advisor for the class throughout the period of study.

The Class Advisor shall be responsible for maintaining the academic, curricular and co-curricular records of students of the class throughout their period of study.

5.0 COURSE COMMITTEE

Any course commonly offered to more than one discipline or group, shall have a "Course Committee", comprising all the faculty members teaching the common course with one among them nominated as Course Coordinator. The nomination of the course coordinator shall be made by the Head of the Department / Dean (Academic Affairs), depending on whether all the faculty members teaching the common course belong to the same department or different departments.

6.0 CLASS COMMITTEE

A class committee comprising faculty members handling the classes, student representatives and a senior faculty member not handling the courses as chairman will be constituted branch-wise and semester-wise

6.1 The composition of the class committee will be as follows:

- One senior faculty member preferably not handling courses for the concerned semester, appointed as chairman by the Head of the Department
- Faculty members of all courses of the semester
- Two student representatives (male and female) of each class nominated by the Head of the Department in consultation with the relevant faculty advisors
- All faculty advisors and the class advisors.
- Head of the Department

6.2 The class committee shall meet at least four times during the semester. The first meeting will be held within two weeks from the date of commencement of classes, in which the nature of continuous assessment for various courses and the weightages for each component of assessment will be decided for the first and second assessment. The second meeting will be held within a week after the date of first assessment report, to review the students' performance and for follow up action. The third meeting will be held within a week after the second assessment report, to review the students' performance and for follow up action.

6.3 During these three meetings the student members representing the entire class, shall meaningfully interact and express opinions and suggestions to improve the effectiveness of the teaching-learning process.

6.4 The fourth meeting of the class committee, excluding the student members, shall meet within 10 days from the last day of the semester end examination to analyze the performance of the students in all the components of assessments and decide their grades in each course. The grades for a common course shall be decided by the concerned course committee and shall be presented to the class committee(s) by the concerned course coordinator.

7.0 REGISTRATION AND ENROLMENT

7.1 Except for the first semester, every student shall register for the ensuing semester during a specified week before the semester end examination of the ongoing semester. Every student shall submit a completed registration form indicating the list of courses intended to be enrolled during the ensuing semester. Late registration with the approval of the Dean (Academic Affairs) along with a late fee will be permitted up to the last working day of the current semester.

7.2 From the second year onwards, all students shall pay the prescribed fees for the year on a specific day at the beginning of the semester confirming the registered courses. Late enrolment along with a late fee will be permitted up to two weeks from the date of commencement of classes. If a student does not enroll, his/her name will be removed from rolls.

7.3 The students of first semester shall register and enroll at the time of admission by paying the prescribed fees.

7.4 A student should have registered for all preceding semesters before registering for a particular semester.

7.5 A student can change an enrolled course within 10 working days from the commencement of the course, with the approval of the Dean (Academic Affairs), on the

recommendation of the Head of the Department of the student.

7.6 A student can withdraw from an enrolled course at any time before the first assessment for genuine reasons, with the approval of the Dean (Academic Affairs), on the recommendation of the Head of the Department of the student.

8.0 TEMPORARY BREAK OF STUDY FROM A PROGRAMME

A student can avail a one time temporary break of study covering the current semester and/or next semester period with the approval of the Head of the Institution at any time before the start of first assessment of the ongoing semester, within the maximum period of two semester as the case may be. If any student is debarred for want of attendance or suspended due to any act of indiscipline, it will not be considered as break of study. A student who has availed break of study has to rejoin in the same semester only.

8.1 A student can avail one time temporary break of study covering the current semester and/or next semester period. However if a student intends to temporarily discontinue the programme in the middle for valid reasons (such as accident or hospitalization due to prolonged ill health) and to rejoin the programme in a later semester he/she shall apply to the Dean in advance, in any case, not later than the last date of registering for the semester-end examinations, through the Dean stating the reasons therefore.

8.2 A student availed break of study has to rejoin only in the same semester from where he left.

8.3 If any student is detained for want of requisite attendance, progress and good conduct, the period spent in that semester shall not be considered as permitted "Break of Study".

9.0 CONDITION FOR ENROLMENT & MOVEMENT TO HIGHER SEMESTER

9.1 A student who has arrears in the studio course in

- I semester cannot move to the III semester
- II semester cannot move to the IV semester

10.0 ASSESSMENT PROCEDURE AND PERCENTAGE WEIGHTAGE OF MARKS

10.1 Every Teacher shall maintain an Attendance and Assessment record, which consists of attendance marked for each lecture or studio sessions, the test marks and the topic covered. This should be submitted to the Dean as the case may be at regular intervals (at least two times in a semester) for checking the syllabus covered and the assessments made. At the end of the semester the Dean shall verify and keep the Attendance and Assessment records in safe custody for a period of five years.

10.2 A minimum of three continuous assessments and an semester end examination for Theory and elective courses will be conducted. The weightage for the semester end examination shall be 50% and the continuous assessments shall be 50%. The three continuous assessments for the courses may be in the form of assignments,

seminars, skill development, etc.

10.3 Assessment for Theory cum studio and Studio subjects shall have 70% weightage for continuous assessments and 30% weightage for semester end examination in the form of viva-voce by an external examiner proposed by the Dean.

10.4 Dissertation:

Every student shall undertake a project on a topic approved by the Review Committee. The Review Committee shall comprise of the Dean, Supervisor of the project and two internal members appointed by the Dean in the beginning of the semester. The progress of the student in the project shall be reviewed by the review committee at least three times during the semester for a weightage of 70% and 30 % weightage for semester end examination in the form of viva-voce by a team consisting of the supervisor concerned, Internal and External Examiners proposed by the Dean and appointed by the Controller of Examinations.

10.5 Architectural Thesis:

- Every student shall undertake a project on a topic approved by the Review Committee. The Review Committee shall comprise of the Dean, Supervisor of the project and two External members appointed by the Dean in the beginning of the semester. The progress of the student in the project shall be reviewed by the review committee at least three times during the semester for a weightage of 70%.
- The student shall submit the thesis at the end of the IV semester. The evaluation of the Project work will be based on the thesis and a viva-voce examination by a team consisting of the supervisor concerned, external examiner nominated by the Dean and appointed by the Controller of Examinations. Viva-voce examination shall carry a weightage of 3**0%.**

Weightage of Marks for continuous assessment and semester-end examination

Sl. No.	Courses	Weightage of Continuous Assessment	Weightage for Semester End Examination
1	Theory and Elective courses	5	50%
2	Theory cum Studio courses	7	30%
3.	Studio Courses	7	30%
4.	Dissertation	7	30%
5.	Architectural Thesis	7	30%

10.5 For the Theory cum studio & Studio courses, Architectural thesis, a minimum of 45 % marks in continuous assessment is mandatory, without which the student will not be eligible to appear for the semester end viva voce.

10.6 In all courses a student has to secure a minimum of 45% marks in Semester End

Examination / viva voce and a minimum of 45% marks in continuous assessment and semester end examination / viva voce put together.

10.7 If a student fails to secure a minimum 45% marks in the continuous assessment in the studio course - he/she shall improve the internal assessment by resubmitting the improved drawings during the subsequent year, obtain minimum 45% marks in the continuous assessment and appear for viva voce examination. Securing 45% in internals is mandate to appear for External viva voce Examination.

10.8 If a student fails to secure a minimum 45% marks in the viva voce examinations he/she shall appear for viva voce examination during the subsequent year.

10.9 For Architectural thesis, a student who secures less than 45% marks in the continuous assessment shall not be permitted to submit the thesis and take the Viva Voce Examinations at the end of the Semester. He/she shall redo the thesis with the same topic or in a different topic in the subsequent year and secure fresh internal assessment marks.

10.10 If a student fails to secure a pass in the Architectural thesis, having obtained not less than 45% of the total marks prescribed for the continuous assessment but less than
45% of the total marks prescribed for the Viva voce Examinations, he / she shall improve the thesis on the same topic and resubmit the thesis at the end of the subsequent semester. In such cases, the continuous internal assessment marks already secured by the candidate shall remain valid. The resubmitted thesis shall be assessed through a viva voce examination as in the case of a regular candidate.

10.11 If a candidate wishes to change the topic of architectural thesis in case of a failure or in the case of a prevention, he/she shall join the course when in session next, get the topic approved, secure fresh internal assessment marks and submit the new thesis as in the case of a regular candidate.

11.0 SUBSTITUTE EXAMINATIONS

11.1 A student who has missed, for genuine reasons, a maximum of one of the three continuous assessments of a course may be permitted to write a substitute examination paying the prescribed substitute examination fees. However, permission to take up a substitute examination will be given under exceptional circumstances, such as accidents, admission to a hospital due to illness, etc. by a committee constituted by the Dean of School for that purpose. However there is no Substitute Examination for Semester End examination.

11.2 A student who misses any continuous assessment test in a course shall apply for substitute exam in the prescribed form to the Head of the Department / Dean of School within a week from the date of missed assessment test. However the Substitute Examination will be conducted after the last working day of the semester and before Semester End Examination.

12.0 ATTENDANCE REQUIREMENT AND SEMESTER / COURSE REPETITION

12.1 A student shall earn 100% attendance in the contact periods of every course, subject to a maximum relaxation of 25% (for genuine reasons such as medical grounds or representing the University in approved events etc.) to become eligible to appear for the semester-end examination in that course, failing which the student shall be awarded "I" grade in that course. If the course is a core course, the candidate should register for and repeat the course when it is offered next.

12.2 The faculty member of each course shall cumulate the attendance details for the semester and furnish the names of the students who have not earned the required attendance in that course to the Class Advisor. The Class Advisor will consolidate and furnish the list of students who have earned less that 85% attendance, in various courses, to the Dean (Academic Affairs) through the Head of the Department/ Dean of School. Thereupon, the Dean (Academic Affairs) shall announce, course-wise, the names of such students prevented from writing the semester end examination in each course.

12.3 A student should register to re-do a core course wherein "I" or "W" grade is awarded. If the student is awarded, "I" or "W" grade in an elective course either the same elective course may be repeated or a new elective course may be taken with the approval of Head of the Department / Dean of School.

12.4 A student who is awarded "U" grade in a course will have the option to either write the semester end arrear examination at the end of the subsequent semesters, or to redo the course in the evening when the course is offered by the department. Marks scored in the continuous assessment during the redo classes shall be considered for grading along with the marks scored in the semester-end (redo) examination. If any student obtained "U" grade in the redo course, the marks scored in the continuous assessment test (redo) for that course will be considered as internal mark for further appearance of arrear examination.

12.5 If a student with "U" grade, who prefers to redo any particular course, fails to earn the minimum 85% attendance while doing that course, then he / she will not be permitted to write the semester end examination and his / her earlier "U" grade and continuous assessment marks shall continue.

12.6 A student who has obtained 'I' grade in all the courses in a semester is not permitted to move to next higher semester. Such student shall repeat all the courses of the semester in the subsequent academic year.

13.0 REDO COURSES

13.1 A student can register for a maximum of two redo courses per semester in the evening after regular college hours, if such courses are offered by the concerned department. Students may also opt to redo courses offered during regular semesters.

13.2 The Head of the Department with the approval of Dean Academic Affairs may arrange for the conduct of a few courses during the evening, depending on the availability of faculty members and subject to a specified minimum number of students registering for each of such courses.

13.3 The number of contact hours and the assessment procedure for any redo course will be the same as those during regular semesters except that there is no provision for any substitute examination and withdrawal from an evening redo course.

14.0 PASSING AND DECLARATION OF RESULTS AND GRADE SHEET

14.1 All assessments of a course will be made on absolute marks basis. However, the Class Committee without the student members shall meet within 10 days after the semester- end examination and analyze the performance of students in all assessments of a course and award letter grades. The letter grades and the corresponding grade points are as follows:

Mark interval	Letter Grade	Grade Points
85 – 100	S	10
75 – 84	A	9
65 – 74	B	8
57 – 64	C	7
51 – 56	D	6
45 – 50	E	5
< 44	U	0
	W	0

	I	0
	AB	0

"W" denotes withdrawal from the course.
"I" denotes inadequate attendance and hence prevention from semester- end examination
"U" denotes unsuccessful performance in the course.
"AB" denotes absence for the semester-end examination.

14.2 A student who earns a minimum of five grade points ('E' grade) in a course is declared to have successfully completed the course. Such a course cannot be repeated by the student for improvement of grade.

14.3 The results, after awarding of grades, shall be signed by the Chairman of the Class Committee and Head of the Department/Dean of Schools and the results shall be declared by the Controller of Examinations.

14.4 Within one week from the date of declaration of result, a student can apply for revaluation of his / her semester-end theory examination answer scripts of one or more courses, on payment of prescribed fee, through proper application to Controller of Examination. Subsequently the Head of the Department/ Dean of School offered the course shall constitute a revaluation committee consisting of Chairman of the Class Committee as Convener, the faculty member of the course and a senior member of faculty knowledgeable in that course. The committee shall meet within a week to revalue the answer scripts and submit its report to the Controller of Examinations for consideration and decision.

14.5 After results are declared, grade sheets shall be issued to each student, which will contain the following details. The list of courses enrolled during the semester including redo courses, if any, and the grade scored, the Grade Point Average (GPA) for the semester and the Cumulative Grade Point Average (CGPA) of all courses enrolled from first semester onwards. GPA is the ratio of the sum of the products of the number of credits of courses registered and the points corresponding to the grades scored in those courses, taken for all the courses, to the sum of the number of credits of all the courses in the semester.

If Ci, is the number of credits assigned for the i^{th} course and GPi is the Grade Point in the i^{th} course

$$GPA = \frac{\sum_{i=1}^{n}(C_i)(GPi)}{\sum_{i=1}^{n} C_i}$$

Where n = number of courses
The Cumulative Grade Point Average CGPA shall be calculated in a similar manner, considering all the courses enrolled from first semester.
"I" and "W" grades will be excluded for calculating GPA .
"U", "I", "AB" and **"W"** grades will be excluded for calculating CGPA.
The formula for the conversion of CGPA to equivalent percentage of marks shall be as follows:
Equivalent Percentage of Marks = CGPA X 10

14.6 After successful completion of the programme, the Degree will be awarded with the following classifications based on CGPA.

Classification	**CGPA**

First Class with Distinction	8.50 and above and passing all the courses in first appearance and completing the programme within the prescribed period of 8 semester for normal entry and 6 semesters for lateral entry
First Class	6.50 and up to 8.5 and completing the programme within a maximum of 8 semester for normal entry and 6 semesters for lateral entry
Second Class	Others

However, to be eligible for First Class with Distinction, a student should not have obtained 'U' or 'I' grade in any course during his/her study and should have completed the P.G. programme within a minimum period (except break of study). To be eligible for First Class, a student should have passed the examination in all the courses within the specified minimum number of semesters reckoned from his/her commencement of study. For this purpose, the authorized break of study will not be counted. The students who do not satisfy the above two conditions will be classified as second class. For the purpose of classification, the CGPA will be rounded to two decimal places. For the purpose of comparison of performance of students and ranking, CGPA will be considered up to three decimal places.

15.0 ELECTIVE CHOICE:

15.1 Apart from the various elective courses listed in the curriculum for each branch of specialization, the student can choose a maximum of two electives from any other specialization under any department, during the entire period of study, with the approval of the Head of the parent department and the Head of the other department offering the course.

15.2 Online / Self Study Courses

Students are permitted to undergo department approved online/ self study courses not exceeding a total of six credits with the recommendation of the Head of the Department / Dean of School and with the prior approval of Dean Academic Affairs during his/ her period of study. In case of credits earned through online mode ratified by the respective Board of Studies, the credits may be transferred following the due approval procedures. The students shall undergo self study courses on their own with the mentoring of a member of the faculty. The online/ self study courses can be considered in lieu of elective courses.

16.0 SUPPLEMENTARY EXAMINATION

Final Year students can apply for supplementary examination for a maximum of two courses thus providing an opportunity to complete their degree programme. Like wise students with less credits can also apply for supplementary examination for a maximum of two courses to enable them to earn minimum credits to move to higher semester. The students can apply for supplementary examination within two weeks of the declaration of results.

17.0 PERSONALITY AND CHARACTER DEVELOPMENT

All students shall enrol, on admission, in any of the personality and character development programmes, NCC / NSS / NSO / YRC / Rotaract and undergo practical training.

- **National Cadet Corps (NCC)** will have to undergo specified number of parades.
- **National Service Scheme (NSS)** will have social service activities in and around Chennai.

- **National Sports Organization (NSO)** will have sports, games, drills and physical exercises.
- **Youth Red Cross (YRC)** will have social service activities in and around Chennai.
- **Rotaract** will have social service activities in and around Chennai.

18.0 DISCIPLINE

18.1 Every student is required to observe disciplined and decorous behaviour both inside and outside the campus and not to indulge in any activity which will tend to affect the prestige of the Institute.

18.2 Any act of indiscipline of a student, reported to the Dean (Student Affairs), through the Dean will be referred to a Discipline and Welfare Committee nominated by the Vice- Chancellor, for taking appropriate action.

19.0 ELIGIBILITY FOR THE AWARD OF DEGREE

19.1 A student shall be declared to be eligible for the award of M. Arch degree provided the student has:

i) successfully Should have passed all the courses specified in the programme curriculum and earned the required number credits prescribed for the programme within a maximum period of 4 semesters (2 years) from the date of admission, including the break of study.
