1.1.2 Percentage of Programmes where syllabus revision was carried out during the last five years

The Curriculum and Syllabi of all the revised programmes are enlisted herewith:

B.S. Abdur Rahman Crescent Institute of Science & Technology
Deemed to be University u/s 3 of the UGC Act, 1956

CURRICULUM AND SYLLABI FOR UG & PG

PROGRAMMES OFFERED DURING THE LAST FIVE YEARS

TABLE OF CONTENTS

S.No.	Name of the Programme
	UG Programmes
1	B.Tech Civil Engineering
2	B.Tech Mechanical Engineering
3	B.Tech Electrical and Electronics Engineering
4	B.Tech Electronics and Communications Engineering
5	B.Tech Computer Science Engineering
6	B.Tech Electronics and Instrumentation Engineering
7	B.Tech Polymer Engineering
8	B.Tech Information Technology
9	B.Tech Aeronautical Engineering
10	B.Tech Automobile Engineering
11	B.Tech Biotechnology
12	B.A. Islamic Studies
13	B.Com General
14	B.Com Accounts and Finance
15	BBA LLB (Hons.)
16	B.Com LLB (Hons.)
17	BBA Financial Services
18	B.Sc. Biotechnology
19	B. Pharm
20	BCA
21	B. Arch
22	B.Sc. Computer Science
23	B. Des
	P.G. Programmes
1.	MBA
2.	MCA
3.	M.Tech CAD-CAM
4.	M. Tech Computer Science Engineering
5.	M.Tech Power Systems Engineering
6.	M.Tech Communication Systems

7.	M.Tech VLSI and Embedded System
8.	M. Tech Construction Engineering & Project Management
9.	M.Tech Power Electronics Drive
10.	M.Tech Manufacturing
11.	M. Tech Electronics and Instrumentation Engineering
12.	M. Tech Information Technology
13.	M.Tech Structural Engineering
14.	M.Sc. Actuarial Science
15.	M.Sc. Chemistry
16.	M.Sc. Physics
17.	M.Sc. Biotechnology
18.	M.Sc. Microbiology
19.	M.A. Islamic Studies
20.	M.Tech Network Security
21.	M.Tech Software Engineering
22.	M.Tech. Biotechnology
23.	M.Sc Biochemistry and Molecular Biology
24.	M.Arch

Deemed to be University u/s 3 of the UGC Act, 1956

REGULATIONS 2017

CURRICULUM AND SYLLABI

B.TECH.

CIVIL ENGINEERING

DEPARTMENT OF CIVIL ENGINEERING

VISION AND MISSION

VISION

To be a leading school for Education, Training and Research in Civil Engineering for a better future and over-all Socio-Economic progress of the Country in a sustainable manner

MISSION

- To nurture Civil Engineers into ethically strong and responsible leaders to address Global challenges through Quality Education, Application oriented research, innovation, inspiration, motivation and sustainable growth.
- To enrich and enhance knowledge for the best practices in various disciplines of Civil Engineering through Collaborations with Global Institutions of Excellence, Industries and Research Organizations.

PROGRAMME EDUCATIONAL OBJECTIVES

- To provide fundamental knowledge in science and mathematics to understand civil engineering concepts.
- To equip with knowledge to plan, design, analyze, construct, maintain and manage civil engineering systems.
- To provide understanding of various codes and standards in the field of design and construction.
- To impart knowledge in theory and skills in practice on structural, geo-technical, geo-informatics, water resources, environmental and transportation engineering in solving civil engineering problems.
- To inculcate knowledge of sustainability in various aspects of civil engineering.
- To provide broad exposure on managerial, economic and ethical issues.

PROGRAMME OUTCOMES

On successful completion of the programme, the graduates will be able to

- Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Identify, formulate, research literature, and analyses complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Use research –based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.
- Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

- Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

PROGRAMME SPECIFIC OUTCOMES

- Identify suitable construction materials, techniques and practices for Civil Engineering construction.
- Plan, analyze, design and estimate civil engineering structures using relevant software and appropriate codal provisions.
- Characterize water & wastewater and design sustainable water supply & sanitation schemes.

B.S. ABDUR RAHMAN CRESCENT INSTITUTE OF SCIENCE AND TECHNOLOGY

B.TECH. CIVIL ENGINEERING

CURRICULUM & SYLLABUS, REGULATIONS 2017

SEMESTER I

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C	
1.	BS	MAC 1181	Differential Calculus and Geometry	3	1	0	4	
2.	HS	ENC 1181/ ISC 1181/ LNC 1181/ LNC 1182 / LNC 1183	English / Arabic / Mandarin / German / Japanese	3	0	0	3	
3.	BS	PHC 1181	Physics	3	0	2	4	
4.	BS	CHC 1181	Chemistry	3	0	2	4	
5.	ESF	GEC 1101	Engineering Graphics	2	0	2	3	
6.	ESF	GEC 1102	Engineering Design	2	0	0	2	
7.	ESF	GEC 1103	Basic Engineering Practices Laboratory	0	0	2	1	
8.	ESF	GEC 1104	Computer Programming I	1	0	2	2	**23**

SEMESTER II

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C
1.	BS	MAC 1281	Advanced Calculus	3	1	0	4
2.	BS	-	Physics Elective	2	0	2	3
3.	BS	-	Chemistry Elective	2	0	2	3
4.	ESF	GEC 1211	Basic Engineering Mechanics	3	1	0	4
5.	BS	GEC 1212	Environmental Studies	2	0	0	2
6.	ESF	GEC 1213	Computer Programming II	1	0	2	2

7.	EC	CEC 1211	Engineering Geology	2	0	0	2	
8.	EC	CEC 1212	Building Construction and Practices	3	0	0	3	
9.	EC	CEC 1213	Civil Engineering Drawing	0	0	2	1	**24**

SEMESTER III

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C	
1.	BS	MAC2181	Partial Differential Equations and Transforms	3	1	0	4	
2.	HS	-	Humanities Elective I	2	0	0	2	
3.	HS	ENC 2181	Oral Communication	0	0	2	1	
4.	EC	CEC2101	Mechanics of Solids	3	0	2	4	
5.	EC	CEC2102	Surveying	3	0	0	3	
6.	EC	CEC2103	Mechanics of Fluids	3	0	0	3	
7.	EC	CEC2104	Concrete Technology	3	0	2	4	
8.	EC	CEC2105	Surveying Lab	0	0	2	1	**22**

SEMESTER IV

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C
1.	BS	-	Mathematics Elective I	3	1	0	4
2.	HS	-	Humanities Elective II	2	0	0	2
3.	HS	ENC2282	Written Communication	0	0	2	1
4.	EC	CEC2211	Hydraulic and Hydraulic Machinery	3	0	2	4
5.	EC	CEC2212	Water and Wastewater Engineering	3	0	0	3
6.	EC	CEC2213	Strength of Materials	3	0	0	3
7.	EC	CEC2214	Transportation Engineering I	3	0	0	3
8.	EC	CEC2215	Environmental Engineering Lab	0	0	2	1

9.	PE	Programme Elective		3*	**24**

SEMESTER V

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C	
1.	MS	MSC 3181 MSC 3182	Leadership and CEO Training/ Social Entrepreneurship	3	0	0	3	
2.	GE	-	General Elective I	3	0	0	3	
3.	HS	ENC3181	Communication and soft skill I – Career Choice	0	0	2	1	
4.	EC	CEC3101	Structural Analysis I	3	0	0	3	
5.	EC	CEC3102	Design of Reinforced Concrete Structures	3	0	0	3	
6.	EC	CEC3103	Transportation Engineering II	3	0	0	3	
7.	EC	CEC3104	Geotechnical Engineering I	3	0	2	4	
8.	PE	-	Programme Elective III				4**	**24**

SEMESTER VI

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C
1.	MS	MSC 3181 MSC 3182	Leadership and CEO Training/ Social Entrepreneurship	3	0	0	3
2.	BS	-	Mathematics Elective II	2	0	0	2
3.	HS	ENC3281	Communication and soft skill II – Confidence Building	0	0	2	1
4.	EC	CEC3211	Structural Analysis – II	3	0	0	3
5.	EC	CEC3212	Geotechnical Engineering II	3	0	0	3
6.	EC	CEC3213	Design of Steel Structures	3	0	0	3
7.	EC	CEC3214	Computer Modeling and Structural Design Laboratory	0	0	2	1

8.	EC	CEC3215	Survey and Geotechnical Investigation Camp	0	0	2	1	
9.	PE	-	Programme Elective				6#	**23**

SEMESTER VII

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C	
1.	GE	-	General Elective II	3	0	0	3	
2.	EC	CEC4101	Estimation and Costing	2	0	2	3	
3.	EC	CEC4102	Design of Hydraulic Structures	2	0	0	2	
4.	EC	CEC4103	Prestressed Concrete	3	0	0	3	
5.	EC	CEC4104	Construction Management	3	0	0	3	
6.	PE	-	Programme Elective	3	0	0	8##	
7.	EC	CEC4105	Internship				1***	**23**

SEMESTER VIII

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C	
1.	EC	CEC4211	Project Work	0	0	24	12	**12**

Total credits – 175

* Student has to take courses for a minimum of 3 credits from the list of electives for the corresponding semester.

** Student has to take courses for a minimum of 4 credits from the list of electives for the corresponding semester.

Student has to take courses for a minimum of 6 credits from the list of electives for the corresponding semester.

Student has to take courses for a minimum of 8 credits from the list of electives for the corresponding semester.

*** Industrial training will be undertaken during Third year summer vacation for 15 days. The credit will be awarded in the 7th Semester.

PROGRAMME ELECTIVES
IV SEMESTER

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C
1.	PE	CECX01	Modern Construction Materials	2	0	0	2
2.	PE	CECX02	Construction Equipment and Techniques	2	0	0	2
3.	PE	CECX03	Principles of Architecture	2	0	0	2
4.	PE	CECX04	Safety in Construction	1	0	0	1
5.	PE	CECX05	Real Estate Laws	1	0	0	1
6.	PE	CECX06	Vaastu Satra and Architectural Design	1	0	0	1

V SEMESTER

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C
1.	PE	CECX10	Hydrology	3	0	0	3
2.	PE	CECX11	Air Pollution and Control	3	0	0	3
3.	PE	CECX12	Traffic Engineering	3	0	0	3
4.	PE	CECX13	Solid Waste Management	3	0	0	3
5.	PE	CECX14	Rock Mechanics	2	0	0	2
6.	PE	CECX15	Form Work	2	0	0	2
7.	PE	CECX16	Industrial Waste Water Treatment	2	0	0	2
8.	PE	CECX17	Hazardous Waste Management	2	0	0	2
9.	PE	CECX18	Environmental Geotechnology	2	0	0	2
10.	PE	CECX19	Durability properties of Concrete	2	0	0	2
11.	PE	CECX20	Industrial health & Safety	2	0	0	2

12.	PE	CECX21	Urban Design	2	0	0	2
13.	PE	CECX22	Water proofing of RCC structures	1	0	0	1
14.	PE	CECX23	Construction chemicals for repair works	1	0	0	1
15.	PE	CECX24	Geo Synthetics	1	0	0	1

VI SEMESTER

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C
1.	PE	CECX30	Dynamics of Structures	3	0	0	3
2.	PE	CECX31	Advanced Concrete Design	3	0	0	3
3.	PE	CECX32	Repair and Rehabilitation of Structures	3	0	0	3
4.	PE	CECX33	Ground Improvement Techniques	3	0	0	3
5.	PE	CECX34	Pavement Design	3	0	0	3
6.	PE	CECX35	Housing, Planning and Management	3	0	0	3
7.	PE	CECX36	Building Services	3	0	0	3
8.	PE	CECX37	Engineering Ethics	3	0	0	3
9.	PE	CECX38	Environmental Risk Assessment	3	0	0	3
10.	PE	CECX39	Remote Sensing	3	0	0	3
11.	PE	CECX40	Modern Surveying	3	0	0	3

VII SEMESTER

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C
1.	PE	CECX45	Bridge Engineering	3	0	0	3
2.	PE	CECX46	Earthquake Engineering	3	0	0	3
3.	PE	CECX47	Industrial Structures	3	0	0	3
4.	PE	CECX48	Prefabricated Structures	3	0	0	3

5.	PE	CECX49	Tall Structures	3	0	0	3
6.	PE	CECX50	Design of Machine Foundation	3	0	0	3
7.	PE	CECX51	Ground Water Engineering	3	0	0	3
8.	PE	CECX52	Environmental Impact Assessment	3	0	0	3
9.	PE	CECX53	Coastal Engineering	3	0	0	3
10.	PE	CECX54	GIS & its Applications	3	0	0	3
11.	PE	CECX55	Geodesy	2	0	0	2
12.	PE	CECX56	Building Information Modeling	2	0	0	2
13.	PE	CECX57	Design of cold formed Steel Structures	2	0	0	2
14.	PE	CECX58	Corrosion Control of Steel in Concrete	2	0	0	2
15.	PE	CECX59	Flood Management	2	0	0	2
16.	PE	CECX60	Urban & Indoor Air Quality Management	2	0	0	2
17.	PE	CECX61	Contract laws and Regulations	2	0	0	2
18.	PE	CECX62	Smart Cities	2	0	0	2
19.	PE	CECX63	Environmental Monitoring	2	0	0	2

Physics Elective Courses

(To be offered in II Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	PHCX 01	Fundamentals of Engineering Materials	2	0	2	3
2.	PHCX 02	Heat and Thermodynamics	2	0	2	3
3.	PHCX 03	Introduction to Nanoscience and Technology	2	0	2	3
4.	PHCX 04	Lasers and their applications	2	0	2	3
5.	PHCX 05	Materials Science	2	0	2	3
6.	PHCX 06	Non-Destructive Testing	2	0	2	3
7.	PHCX 07	Properties of Matter and Acoustics	2	0	2	3
8.	PHCX 08	Properties of Matter and Nondestructive Testing	2	0	2	3
9.	PHCX 09	Semiconductor Physics and Optoelectronics	2	0	2	3

Chemistry Elective Courses

(To be offered in II Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	CHCX01	Analytical Instrumentation	2	0	2	3
2.	CHCX02	Corrosion and its Control	2	0	2	3
3.	CHCX03	Electrical Materials and Batteries	2	0	2	3
4.	CHCX04	Engineering Materials	2	0	2	3
5.	CHCX05	Fuels and Combustion	2	0	2	3
6.	CHCX06	Fundamentals of Physical Chemistry	2	0	2	3
7.	CHCX07	Green Technology	2	0	2	3
8.	CHCX08	Organic Chemistry of Biomolecules	2	0	2	3
9.	CHCX09	Polymer Science and Technology	2	0	2	3

Maths Elective Courses

(To be offered in IV Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	MACX 01	Discrete Mathematics And Graph Theory	3	1	0	4
2.	MACX 02	Probability And Statistics	3	1	0	4
3.	MACX 03	Random Processes	3	1	0	4
4.	MACX 04	Applied Numerical Methods	3	1	0	4

Maths Elective Courses

(To be offered in VI Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	MACX 05	Mathematical Programming	2	0	0	2
2.	MACX 06	Statistical Methods for Data Analysis	2	0	0	2
3.	MACX 07	Numerical Methods for Integral and Differential Equations	2	0	0	2
4.	MACX 08	Mathematical Modelling	2	0	0	2
5.	MACX 09	Graph Theory	2	0	0	2

Humanities Elective I

(To be offered in III Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	SSCX01	Fundamentals of Economics	2	0	0	2
2.	SSCX02	Principles of Sociology	2	0	0	2
3.	SSCX03	Sociology of Indian Society	2	0	0	2

Humanities Elective II

(To be offered in IV Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	SSCX04	Economics of Sustainable Development	2	0	0	2
2.	SSCX05	Industrial Sociology	2	0	0	2
3.	SSCX06	Law for Engineers	2	0	0	2

General Elective

Group I Courses

(To be offered in V semester)

Sl. No.	Course Code	Course Title	Offering Department
1.	GECX101	Disaster Management	Civil
2.	GECX102	Total Quality Management	Mechanical
3.	GECX103	Energy Studies	Mechanical
4.	GECX104	Robotics	Mechanical
5.	GECX105	Transport Management	Automobile
6.	GECX106	Control Systems	EEE
7.	GECX107	Introduction to VLSI Design	ECE
8.	GECX108	Plant Engineering	EIE
9.	GECX109	Network Security	CSE
10.	GECX110	Knowledge management	CSE
11.	GECX111	Cyber security	IT
12.	GECX112	Genetic Engineering	LS
13.	GECX113	Fundamentals of Project Management	CBS
14.	GECX114	Operations Research	Mathematics
15.	GECX115	Nano Technology	Physics / Chemistry
16.	GECX116	Vehicle Maintenance	Automobile
17.	GECX117	Fundamentals of Digital Image Processing	ECE

Group II Courses

(To be offered in VII semester)

Sl. No.	Course Code	Course Title	Offering Department
1.	GECX201	Green Design and Sustainability	Civil
2.	GECX202	Appropriate Technology	Civil / Mechanical
3.	GECX203	Engineering System Modelling and Simulation	Mechanical
4.	GECX204	Value Analysis and Engineering	Mechanical
5.	GECX205	Industrial Safety	Mechanical
6.	GECX206	Advanced Optimization Techniques	Mechanical
7.	GECX207	Mat Lab Simulation	EEE
8.	GECX208	Embedded Systems and its Applications	ECE
9.	GECX209	Usability Engineering	CSE
10.	GECX210	Supply Chain Management	CBS
11.	GECX211	System Analysis and Design	CA
12.	GECX212	Advanced Materials	Physics & Chemistry
13.	GECX213	National Service Scheme	School of Humanities
14.	GECX214	Automotive Pollution and Control	Automobile
15.	GECX215	Motor Vehicle Act, Insurance and Policy	Automobile
16.	GECX216	Principles of Communication Systems	ECE
17.	GECX217	Lean Management	Civil
18.	GECX218	Spatial Data Modeling & Analysis	Civil

SEMESTER I

MAC 1181	DIFFERENTIAL CALCULUS AND GEOMETRY	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- introduce eigen values and eigenvectors of matrix algebra.
- make the student knowledgeable in the area of Three Dimensional Analytical Geometry.
- demonstrate the application of Differential Calculus.
- familiarize the student with the functions of several variables.
- develop the use of ODE solvable techniques necessary for engineering applications.
- motivate the students with some basic engineering application problems in ODE.

MODULE I **MATRICES** **8+2**

Characteristic Equation- Eigenvalues and Eigenvectors of a real matrix –Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton Theorem (without proof) – Orthogonal matrices – orthogonal transformations of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation.

MODULE II **THREE DIMENSIONAL ANALYTICAL GEOMETRY** **7+3**

Direction cosines and ratios – angle between two lines – equations of a plane – equations of a straight line, coplanar lines - shortest distance between skew lines - sphere – tangent plane – plane section of a sphere – orthogonal spheres.

MODULE III **DIFFERENTIAL GEOMETRY** **7+3**

Curvature – Cartesian and polar coordinates – centre and radius of curvature – circle of curvature – involutes and evolutes – envelopes.

MODULE IV **DIFFERENTIAL CALCULUS OF SEVERAL VARIABLES** **8+2**

Functions of two variables – partial derivatives – total differential – Implicit Functions – Jacobian - Taylor’s series expansion – Optima of two variables – Lagrange’s multiplier method.

MODULE V **ORDINARY DIFFERENTIAL EQUATIONS** **8+2**

Linear equations of second order with constant and variable coefficients – Simultaneous first order linear equations with constant coefficients – homogeneous equations of Euler's type – method of undetermined coefficients, method of variation of parameters

MODULE VI **APPLICATIONS OF ORDINARY DIFFERENTIAL EQUATIONS** **7+3**

Solution of Ordinary Differential Equation Related to Electric Circuits – Bending of Beams- Motion of a Particle in a resisting medium – Simple harmonic motion.

L – 45; T – 15; Total Hours –60

2. Kreyszig, E., "Advanced Engineering Mathematics", 10th edition, John Wiley and Sons (Asia) Pvt Ltd., Singapore, 2001.
3. Peter V. O'Neil, "Advanced Engineering Mathematics", 7th edition, Cengage Learning, 2011.
4. Dennis G. Zill, Warren S. Wright, "Advanced Engineering Mathematics", 4th edition, Jones and Bartlett publishers, Sudbury, 2011.
5. Alan Jeffrey, "Advanced Engineering Mathematics", Academic Press, USA, 2002.
6. Venkataraman, M.K., "Engineering Mathematics", Volume I, 2nd edition, National Publishing Co., Chennai, 2003.
7. James Stewart ".Calculus" (7th edition),Brooks/Cole cengage learning,UK

OUTCOMES:

After completing the course, student will be able to

- Understand the matrix techniques and compute eigen values and eigenvectors of a given matrix.
- Do the problems based on three dimensional analytic geometry.
- Apply differential calculus in engineering problems.
- Differentiate more than one variable and their applications.
- Solve the differential equations with constant coefficient and variable coefficient.
- Form and solve differential equations.

ENC 1181	ENGLISH	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To train students to use appropriate vocabulary in academic and technical contexts.
- To facilitate students to speak effectively while exchanging ideas and making presentations.
- To develop students' listening skill for comprehending and analyzing information.
- To develop their reading skill through sub skills like skimming , scanning and critical reading of a text.
- To sharpen their academic writing skills.
- To expose them to the correct usage of language and help them to apply that knowledge appropriately.

MODULE I **8**

L: Listening for general information

S : Self Introduction, Introducing one another.

R: Predicting the content

W: Paragraph Writing

Language Focus: Affixes, Simple Present tense , Connective & Prepositions.

MODULE II **8**

L: Listening for specific information (from dialogues)

S:Exchanging opinion.

R: Skimming technical Passages

W: Argumentative Writing (using the concept of Flipped Learning), Letter to the Editor.

Language Focus: Idioms, use of Modals, Simple Past tense & use of "Wh" and question tags.

MODULE III **7**

L: Learning the ways of describing images and presenting specific information (focusing on note making)

S: Making Presentations using visuals.

R : Scanning short texts for gist of information

W: Letter of Invitation, Expository Writing

Language Focus: Homophones, Homographs, Simple Future & Collocations.

MODULE IV **7**

L: Understanding prepared presentation techniques through videos

S: Short Presentations.

R: Reading for coherence and cohesion

W: Letter seeking permission for Industrial Visit

Language Focus: S-V agreement, Euphemism

MODULE V **8**

L : Understanding Non- Verbal Communications while listening to narration of incidents.

S: Narrating an expereince

R: Inferential Reading

W: Process Description – Transcoding a Flow chart.

Language Focus: Interchange of Active & passive voice, Impersonal Passive voice.

MODULE VI **7**

L: Learning Story telling techniques (stories & visuals) through audio files

S: Discussion in groups

R: Reading for critical appreciation

W: Developing an idea, Slogan writing, Interpreting a Bar Chart.

Language Focus: If clause and phrasal verbs.

TOTAL HOURS :45

OUTCOMES:

After completion of the course, students will have the ability to

- Demonstrate their range of vocabulary in academic and technical contexts
- Exchange ideas and make presentations
- Comprehend and respond appropriately to listening tasks.
- Read a text efficiently and process information.
- Create and draft different kinds of academic documents
- Communicate effectively using grammatically correct expressions.

ISC1181	ARABIC	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To read and write in Arabic language.
- To learn vocabulary of different fields
- To develop situational communication skills.

MODULE I PREPARATORY ARABIC **7**

Introducing Arabic Alphabets.
Listening and Reading.
Audio & Video aided listening, Tajweed listening,
Writing Arabic Alphabets (connected & unconnected).
Introducing words.
Reading simple sentences.
Learning names of the things in and around the class room.
Exercises.

MODULE II FUNCTIONAL ARABIC **7**

Listening Arabic texts, stories and action verbs
Communicating Simple sentences.
Jumla' Ismiyya and Jumla' Fi'liyya
Situational Conversation:
Greetings, Introduction.
Classroom, College, Picnic.
Dining and Kitchen.
Reading skills.
Exercises

MODULE III FUNCTIONAL ARABIC **8**

Implication of effective listening.
Audio aids.
Writing Simple sentences.
Communicating ordinal and cardinal numbers.
Situational communication:

Playground, library.
Forms of plural – Sample sentences.
Introduction to tenses.
Exercises.

MODULE IV FUNCTIONAL ARABIC 8

Communication:
Family, travel
Market, Prayer hall
Writing skills:
Note making.
Sequencing of sentences.
Developing answers from the questions.
Exercises.

MODULE V TECHNICAL ARABIC 8

Importance of technical communication.
Reading and writing skills.
Audio & Video aided listening.
Introduction to Arabic terms related to administration.
Situation communication:
Air travel, Office administration, passport, visa.
Exercises

MODULE VI TECHNICAL ARABIC 7

Situation communication:
Contractual work, machineries and equipments..
Computer, internet browsing.
Banking,
Exercises.

TOTAL HOURS :45

TEXT BOOKS:

1. Arabic for professionals and employees, Kilakarai Bukhari Aalim Arabic College, Chennai, India, 2013.

REFERENCES:

1. Arabic Reader for Non Arabs (Ummul Qura University, Makkah), Kilakarai Bukhari Aalim Arabic College, 2005.

OUTCOMES:

On successful completion of the course, the student will be able to:

- Write correct sentences in Arabic.
- Communicate in Arabic at primary level in working situations in the fields of engineering and administration.

LNC1181	MANDARIN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To improve the proficiency of students in Mandarin language.
- To develop their knowledge of vocabulary.
- To train them in using appropriate grammatical forms during communications.
- To empower them for successful communication in social and academic contexts.
- To make them appreciate the language usage in real life situations.

MODULE I **8**

· General Introduction to Chinese • Pinyin and Tones • Introduction to the Writing System: basic strokes and stroke order · Numbers 1-100, song · Days of the Week · Months of the Year

MODULE II **8**

· Chinese names and related culture · Chinese family structures and values · Greetings · Introducing Yourself · Family members · Occupations

MODULE III **7**

· Languages and Nationalities · Daily Routine · Chinese breakfast · Negative Sentences and Interrogative Sentences · Asking for Personal Information · The Verb *shi* and Basic Sentence Structures

MODULE IV **7**

· Answering an Affirmative-negative Question · Food and drinks · Transportation · Likes and dislikes · Adverbs *bu*, *jiu* and *dou* · Verb-absent Sentences

MODULE V **8**

·*Jisui* and *duoda* Questions · S+V+O Construction · Routines and Daily Activities ·*Haishi* Questions · Modal Verbs · Hobbies and Habits

MODULE VI **7**

· Making Suggestions with *haoma* ·Colors · Clothing · Body parts · Talking about Likes and Dislikes · Measurement Words in Chinese

TOTAL HOURS :45

TEXT BOOKS:

1.Ma, Yanmin, and Li, Xinying. *Easy Steps to Chinese, Vol*. *1 Textbook*. Beijing: Beijing Language and Culture University Press, 2006. Print.

2. Ma, Yanmin, and Li, Xinying. *Easy Steps to Chinese, Vol. 1 Workbook*. Beijing: Beijing Language and Culture University Press, 2006. Print.

OUTCOMES:

On completion of the course, students will be able to

- Exhibit proficiency in Chinese Language.
- Use vocabulary in appropriate contexts.
- Use appropriate grammatical forms effectively.
- Use the language in social and academic contexts.
- Appreciate the use of language forms.

LNC1182	GERMAN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To improve the proficiency of students in German language.
- To create awareness of using vocabulary among students.
- To expose them to correct grammatical forms of the language.
- To empower them for successful communication in social and academic contexts.

MODULE I **8**

Introduction to German alphabets, phonetics and pronunciation- Introducing themselves and others using simple sentences and answer to some basic personal questions-: Introduction to different types of articles and verbs, Nouns

MODULE II **8**

Understanding and responding to everyday queries like instruction, questions, - number & gender, pronouns, present and past tense.

MODULE III **7**

Short telephone messages, requests etc., if spoken slowly and clearly-- Detailed overview of articles, adjectives with/without articles, Prepositions

MODULE IV **7**

Ask and giving directions using simple prepositions- Ability to fill basic information on forms while registering for courses / classes.

MODULE V **8**

Ability to extract and understand relevant information in a public announcement, broadcast, newspaper, radio etc-- dative & accusative

MODULE VI **7**

Ability to describe about people, work, immediate environment, education and other topics related to personal needs in a concise manner-- Understanding of matters that are familiar and are encountered regularly like instances at school, work, at public places, places of leisure etc.

4. Willkommen! Beginner's course. Paul Coggle, Heiner Schenke. ISBN: 978-1-444-16518-0
5. An Introduction to the German Language and Culture for Communication, Updated Edition Lovik, Thomas A., J. Douglas Guy & Monika Chavez. Vorsprung -. New York, Houghton Mifflin Company, 1997/2002. ISBN 0-618-14249-5.

OUTCOMES:

On completion of the course, students will be able to

- Show their proficiency in German Language.
- Use appropriate vocabulary in real life contexts.
- Use appropriate grammatical forms while communicating with people.
- Effectively use the language in social and academic contexts.

LNC1183	JAPANESE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To train students to use appropriate vocabulary in academic and technical contexts.
- To facilitate students to speak effectively while exchanging ideas and making presentations.
- To develop their reading skill through sub skills like skimming, scanning and critical reading of a text.
- To sharpen their academic writing skills.
- To expose them to the correct usage of language and help them to apply that knowledge appropriately.

MODULE I **7**

Introduction of the Japanese writing system, i.e. *Hiragana*, *Katakana* and *Kanji*, word-building, writing foreign names and loan words in Katakana.

MODULE II **8**

Oral practice of pronunciation and intonation of Japanese sounds, Japanese greetings, self introduction, identifying things, time of the day, calendar; counting using Japanese numerical classifiers; describing things;

MODULE III **7**

Making comparisons; talking of daily activities, kinship terms used for address and reference, seasons, giving and receiving, shopping; making requests, talking of one's likes and dislikes.

MODULE IV **8**

Extensive practice of basic patterns at the lower intermediate level through drills and exercises.

MODULE V **7**

Comprehension of passages in simple Japanese and writing of composition in Japanese applying lower intermediate grammatical patterns.

MODULE VI **8**

Diverse texts based on Japanese culture, customs, history, food habits, and science etc, for the development of communicative competence of students; skimming, scanning of texts with emphasis on advanced sentence patterns, grammatical structures and idiomatic phrases, reading and writing of approximately

2. Exersice book 1of Nihongo 1, and other supplementary material
3. Nippon, the Land and its People & Encyclopedia of Contemporary Japanese
4. Japani: Japanese Conversation for Improving Spoken Proficiency, By P.A. George, Inoue Yoriko and Itsuko Nandi, Books Plus.
5. Chukyu Nihongo, Tokyo Gaikokugo Daigaku; Nihongo II, Kokusaigakuyukai, and other supplementary material.

OUTCOMES:

After completion of the course, students will have the ability to

- Demonstrate their range of vocabulary in academic and technical contexts
- Exchange ideas and make presentations
- Comprehend and respond appropriately to listening tasks.
- Read a text efficiently and process information.
- Create and draft different kinds of academic documents
- Communicate effectively using grammatically correct expressions.

PHC 1181	PHYSICS	L	T	P	C
		3	0	2	4

OBJECTIVES:

To make students conversant with the

- basic concepts of crystal physics and its structures
- production and applications of ultrasonic waves
- study of thermal conductivities of good and bad conductors
- phenomenon of wave optics and its applications
- principle of fibre optic communication and its applications to sensors
- wave mechanics principle and its applications in electron microscopy
- green energy physics and its environmental impacts to society

MODULE I CRYSTAL PHYSICS **8**

Crystalline and amorphous solids – Unit Cell – Seven Crystal Systems – Bravais Lattice – Miller Indices – Interplanar Spacing – Characteristics of Unit Cell - Calculation of Number of atoms per unit cell, Atomic Radius, Coordination Number and Packing Factor for SC, BCC, FCC and HCP and Diamond structures –Defects in crystals-Point defects –Edge and screw dislocations and their significance - Surface Defects.

MODULE II ULTRASONICS AND THERMAL PHYSICS **8**

Introduction to Ultrasonics - Properties - Production methods - Magnetostriction Oscillator method- Piezoelectric Oscillator method – Detection of Ultrasonics – Thermal method – Piezoelectric method – Kundt's tube method – Applications of Ultrasonics – Acoustic Grating – SONAR – Depth of sea – Velocity of blood flow, Ultrasonic Flaw detector (qualitative).

Transmission of heat – Conduction, Convection and Radiation – Thermal Conductivity of good Conductor – Forbe's method- Thermal Conductivity of bad Conductor – Lee's Disc method.

MODULE III APPLIED OPTICS **8**

Interference – Air Wedge – Michelson's Interferometer – Determination of wavelength of light and thickness of thin transparent sheet.

Introduction to Laser – Characteristics of Laser – Spontaneous and Stimulated Emissions – Einstein's Coefficients - Population inversion – Pumping Mechanism – Laser Action – Types of Laser: He-Ne laser, CO2 laser and Nd:YAG laser - Applications : Laser Materials

Processing .

MODULE IV FIBRE OPTICS 7

Optical fibre – Principle and propagation of light in optical fibre – Numerical aperture and acceptance angle – Types of optical fibres – Attenuation – Absorption, Scattering losses, Bending losses and Dispersion in Optical fibres – Fiber Connectors and Couplers - Applications – Fibre optic communication system (block diagram only)- Fibre optic sensors - displacement and pressure sensors (qualitative) - Medical endoscope.

MODULE V QUANTUM MECHANICS 7

Black body radiation – Planck's theory of radiation – Deduction of Wien's displacement law and Rayleigh – Jean's law from Planck's theory –Dual nature of matter – de Broglie's wavelength- Physical significance of wave function – Schrodinger wave equation – Time independent and time dependent wave equation – Particle in one dimensional box – Harmonic oscillator(qualitative).

MODULE VI RENEWABLE ENERGY SOURCES 7

Present Energy sources and sustainability - Solar energy - Solar photovoltaics - Solar cells – Bioenergy - Biomass – production of liquid fuels from biomass – Wind energy – Wind turbines – energy and power from wind turbines - Geothermal energy - Ocean energy: Wave energy – Wave energy conversion devices – Tidal energy – Tidal power basics – power generation –Tidal energy potential – Environmental benefits and impacts of renewable energy sources

PRACTICALS

1. Determination of Velocity of Ultrasonic waves in a given liquid using Ultrasonic Interferometer.
2. Determination of wavelength of ultrasonic waves using Kundt's tube method.
3. Determination of thickness of a thin wire using Air Wedge method.
4. Determination of wavelength of light using spectrometer diffraction grating.
5. Determination of angle of divergence of a laser beam using He-Ne laser.
6. Determination of particle size of lycopodium powder using semiconductor laser.
7. Determination of wavelength of laser light using semiconductor laser diffraction.
8. Determination of Acceptance angle and Numerical Aperture using fiber optic cable.
9. Determination of thermal conductivity of a good conductor by Forbe's method.
10. Determination of thermal conductivity of a bad conductor by Lee's disc method.
11. Determination of solar cell characteristics.

L – 45; P – 30; TOTAL HOURS – 75

REFERENCES :

6. Godfrey Boyle, “Renewable Energy: Power for sustainable future”, 2nd edition, Oxford University Press, UK, 2009.

OUTCOMES:

At the end of the course, students will be able to

- understand the different types of crystal structures
- apply the concept of ultrasonic principle in engineering and medical field
- calculate thermal conductivities of good and bad conductors
- differentiate the various laser systems and its applications in engineering and medical field
- apply the principle of fibre optics for communication and sensor applications
- formulate wave mechanics principle for applications in electron microscopy
- Correlate the different renewable energy sources for societal needs.
- To complement the knowledge acquired in the theory class.
- To correlate the experimental results for application.

CHC1181	CHEMISTRY	L	T	P	C
		3	0	2	4

OBJECTIVES:

The students should be conversant with

- the basic problems like hardness, alkalinity, dissolved oxygen associated with the water used for domestic and industrial purpose and treatment process involved.
- the synthesis, properties and applications of nanomaterials.
- the importance of renewable energy sources like solar, wind, biogas, biomass, geothermal, ocean and their limitations.
- the basic analytical techniques like UV-Visible, FT-IR, NMR, AAS, AES, Circular Dichroism and XRD etc.
- photochemistry concepts related to physical processes and chemical reactions induced by photon absorption and their applications.
- basic principles of electrochemistry, cell construction and evaluation and to understand general methodologies for construction & design of electrochemical cell

MODULE I WATER TECHNOLOGY 9

Impurities present in water, hardness : types of hardness, demerits of hard water in boilers, estimation of hardness by EDTA method (problems) – alkalinity : estimation of alkalinity (problems) – dissolved oxygen: estimation of dissolved oxygen – conditioning methods : external treatment method: – lime soda and zeolite process (principle only), Ion exchange process – Internal treatment : colloidal, carbonate, phosphate and calgon methods – drinking water: standards (BIS), treatment of domestic water {screening, sedimentation, coagulation, filtration, disinfection }– desalination: electrodialysis, reverse osmosis.

MODULE II NANOCHEMISTRY 6

Introduction – distinction between molecules, bulk materials and nanoparticles – classification based on dimension with examples – synthesis (top-down and bottom-up approach} : sol-gel, thermolysis (hydrothermal and solvothermal), electrodeposition, chemical vapour deposition, laser ablation – properties and applications (electronic, magnetic and catalytic) – risk factors and future perspectives.

MODULE III ENERGY SOURCES 8

Energy: past, today, and future – a brief history of energy consumption – present energy scenario of conventional and renewable energy sources – renewable energy : needs of renewable energy, advantages and limitations of renewable energy – solar energy: basics, solar energy in the past , photovoltaic, advantages and disadvantages – bioenergy: conversion, bio degradation, biogas generation, biomass gasifier, factors affecting biogas generation, advantages and disadvantages – geothermal energy: geothermal resources (hot dry rock and magma resources, natural and artificial), advantages and disadvantages – wind energy: wind resources, wind turbines, advantages and disadvantages – ocean energy: wave energy, wave energy conversion devices, ocean thermal energy, advantages and disadvantages.

MODULE IV PHOTOCHEMISTRY 7

Introduction: absorption and emission, chromophores, auxochromes – laws of photochemistry : Grotthus-Draper law, Stark Einstein law – quantum yield (problems) –photo physical processes : fluorescence and phosphorescence - Jablonski diagram (electronic states and transitions) – quenching, annihilation – photosensitization: principle and applications – chemiluminescence, bioluminescence.

MODULE V ANALYTICAL TECHNIQUES 7

Spectroscopy: electromagnetic radiation and spectrum – types of transitions – types of spectra (atomic and molecular with their chemical usefulness) – Beer-Lamberts law (problems) – principles, instrumentation and applications of: Colourimetry – UV-Vis spectrophotometer – atomic absorption spectroscopy – atomic emission spectroscopy – principles and applications of: IR, NMR, mass and X-ray diffraction analysis.

MODULE VI ELECTROCHEMISTRY 8

Electrochemistry - types of electrodes (principle and working) : gas (SHE), metal/metal ion electrode, metal-metal insoluble salt (calomel electrode), ion-selective (glass electrode and fluoride ion selective electrode) – Electrolytic and galvanic cells, construction of cell, EMF measurement and applications (problems), standard cell (Weston-cadmium), reversible and irreversible cell, concentration cell. Determination of fluoride ion using fluoride ion selective electrode – Chemically modified electrodes (CMEs) : concept, approaches and applications.

PRACTICALS

1. Estimation of hardness in given water sample.
2. Estimation of the alkalinity of the given water sample.
3. Estimation of strong acid by conductometry.
4. Estimation of Fe^{2+} present in the given sample by potentiometry.
5. Verification of Beer-Lamberts law and estimation of Cu^{2+} present in unknown sample.
6. Estimation of sodium and potassium present in the given sample by flame photometry.
7. Determination of molecular weight and degree of polymerisation of a polymer by viscosity method.
8. Synthesis of thermosetting polymer.

L – 45; P – 30; TOTAL HOURS – 75

7. Principles of molecular photochemistry: An introduction, Nicholas J. Turro, V.Ramamurthy and Juan C. Scaiano, University Science Books, Sausalito, CA, 2009.

OUTCOMES:

The students will be able to

- solve problems related to hardness, alkalinity, dissolved oxygen associated with the water and describe the treatment processes.
- classify nanomaterials and apply the nanochemistry approach to synthesize the

nanomaterials.

- explain the principle and enumerate the advantages and disadvantages of various renewable energy sources.
- state the principle and illustrate the instrumentation of various analytical techniques.
- apply the concepts of photochemistry to elaborate various photo-physical and photochemical reactions.
- construct a electrochemical cell and describe the various types of electrodes and determine the fluoride content.

GEC 1101	ENGINEERING GRAPHICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To introduce the students of all engineering programs, the basic concepts of engineering drawing, which is the basic communication medium for all engineers
- To provide practical exposure on important aspects like drawing analytic curves, orthographic projections, section of solids, development of surfaces, isometric projection, perspective projection and free hand drawing.
- To introduce computerized drafting.

MODULE I BASICS AND ENGINEERING CURVES 10

Drawing instruments, dimensioning, BIS conventions, types of lines, simple geometric constructions.

Conic sections: ellipse, parabola, hyperbola.

Special curves: cycloid, epicycloid, hypocycloid and involutes.

MODULE II ORTHOGRAPHIC PROJECTION 8

Orthographic projection – first angle, second angle, third angle and fourth angle projections –setup - assumptions, principle. Free hand sketching of orthographic views of simple machine parts as per first angle projection. Orthographic projection of points in all quadrants. Some commands and demonstration of drafting packages.

MODULE III PROJECTION OF STRAIGHT LINES AND PLANES 10

Projection of straight lines in first quadrant – true length and true inclinations – Rotating line and trapezoidal methods –traces of straight line.

Projection of plane lamina in first quadrant and its traces

MODULE IV PROJECTION OF SOLIDS 10

Projection of solids in first quadrant: Axis inclined to one reference plane only- prism, pyramid, cone, cylinder – change of position and auxiliary projection methods.

MODULE V SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES 12

Section of solids: prism, pyramid, cone, cylinder, and sphere – sectional view – true shape of section Solids in simple position and cutting plane inclined to one reference

plane only.

Development of surface of truncated solids: prism, pyramid, cone cylinder – frustum of cone, pyramid and simple sheet metal parts.

MODULE VI PICTORIAL PROJECTIONS 10

Isometric projection: Isometric scale – isometric axes- iso sheet - Isometric projection and view of prism, pyramid, cylinder, cone, frustums, truncated solids and simple products

Perspective projection: station point – vanishing point – Perspective projection and views of prism, pyramid, cylinder and frustums by Visual ray method.

L – 30; P – 30; TOTAL HOURS – 60

TEXT BOOKS:

1. N.D. Bhatt, 'Engineering Drawing' Charotar Publishing house, 53rd Edtion, (2014)

REFERENCES:

1. K.V. Natarajan, 'A text book of Engineering Graphics', Dhanalakshmi publishers, Chennai. (2009)
2. Venugopal. K, and V. Prabhu Raja, Engineering Graphics, New Age International (P) Ltd., Publication, Chennai. (2011)

OUTCOMES:

- Students should be able to read the specifications and standards of technical drawing and able to draw conic sections and special curves.
- Students should be able to understand the insight of orthographic projection and to draw the various views of orthographic projection of a point and various components.
- Students should be able to draw the orthographic views of straight lines and plane figures.
- Students should be able to draw the orthographic views of simple solids.
- Students should be able to draw the sections of solids and development of solid surfaces.
- Students should be able to draw the isometric and perspective projection of simple solids and components.

GEC 1102	ENGINEERING DESIGN	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To understand the role of design in Engineering
- To understand the basic design concepts
- To understand the role of innovation in design

MODULE I DESIGN AS A CENTRAL ACTIVITY IN ENGINEERING 08

Product design – products and processes – product design methodology Design of systems; Software design

MODULE II NEED ANALYSIS AND CONCEPT DEVELOPMENT 07

Voice of customers – product specification - need analysis Bench marking Product architecture – concept generation and evaluation;

MODULE III CASE STUDIES IN ENGINEERING DESIGN 08

Product design – process design; system design; software design -Ergonomics – usability

MODULE IV INNOVATION AND DESIGN 07

Role of innovation in Engineering – incremental changes and systemic changes; scientific approach to driving innovation – case studies.

TOTAL HOURS – 30

REFERENCES:

1. Clive L. Dym and David C. Brown,“Engineering Design: Representation and Reasoning”, 2nd Edition, Cambridge University Press, New Delhi, 2011.
2. Daniel G. Dorner, G. E. Gorman and Philip J. Calvert, “Information Needs Analysis: Principles and practice in information organizations”, Published by Faced Publishing, London. 2015.

4. Bengt-Arne Vedin, “The Design-Inspired Innovation Workbook”, World Scientific, 2011.
5. Navi Radjou, Jaideep Prabhu and Simone Ahuja, “Jugaad Innovation”, Published

by Random House India, 2012.

OUTCOMES:

The students will be able to

- Apply the basic knowledge of design in engineering products / process / service.
- Analyse the problems and give innovative solutions.
- Correlate the basic knowledge of design in the real world problems.
- Apply innovative approaches to engineering design.

GEC1103	BASIC ENGINEERING PRACTICES LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To provide a practical exposure to basic engineering practices like carpentry, fitting, plumbing, welding and making of simple electrical and electronic circuits
- To have an understanding on the use of various tools, instruments and methods
- To enable the students to appreciate the practical difficulties and safety issues

CIVIL ENGINEERING PRACTICE

1. Study of plumbing in general household and industrial systems
2. Making a small window frame with Lap and Mortise & Tenon Joints
3. Introduction to power tools

MECHANICAL ENGINEERING PRACTICE

1. Fabrication of a small Table frame with Butt, Lap and Fillet Joints
2. Machining of a simple component like a table weight using lathe
3. Mold preparation for simple component

ELECTRICAL ENGINEERING PRACTICE

1. Comparison of incandescent, Fluorescent, CFL and LED lamps.
2. Study of Protection Circuits (small relay, fuse, MCB, HRC, MCCB, ECCB).
3. Familiarization of households Electrical Gadgets (Iron Box, Wet Grinder).
4. Understanding of Domestic and Industrial wiring.
5. Earthing and its significance.
6. Troubleshooting in Electrical Circuits.
7. Study of inverter fed UPS/Emergency lamp

ELECTRONICS ENGINEERING PRACTICE

1. Identifications symbolic representation of active and passive electronic components
2. Soldering and tracing of electronic circuits and checking its continuity
3. Assembling of A.C. to D.C, D.C to A.C. Circuits in bread Board and Mini project.

TOTAL HOURS – 30

OUTCOMES:

Upon the completion of the course, students should be able to

- Appreciate the practical skills needed even in making of simple objects, assemblies and circuits
- Attend minor defects especially in items used in day to day life
- Aware of the safety aspects involved in using tools and instruments

GEC 1104	COMPUTER PROGRAMMING I	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To identify the hardware and software components of the computer.
- To know the basic concept of operating system and get knowledge about different operating systems.
- To learn various database concepts and operations
- To develop efficient algorithms for solving a problem.
- To implement the algorithms in C language.
- To use arrays in solving problems.

MODULE I COMPUTER FUNDAMENTALS **7**

Introduction -. Number System - Planning the computer program - Computer Software - Basic operating system concepts - Database Operations

MODULE II PROGRAMMING IN C **8**

Introduction to C Programming Language – Operators - Control statements -Iterative statements - Arrays.

LIST OF EXPERIMENTS:

1. Computer organization –Hardware in a typical computer Identification – Booting- error messages and what it means
2. Types of Operating systems – Windows and Linux
3. Structure of a basic program - Hello world program – Debugging it
4. Data types: Type conversions
5. Input / Output: Formatted functions – Unformatted functions – Library functions
6. Properties of operators – Priority of operators – Arithmetic relational logical and bitwise operators
7. If – if else- nested if else- goto- switch case – nested switch case – for loops – nested for loops – while loop – do-while loop – break and continue statement
8. Arrays – Operation with arrays
9. Sorting and searching.

L – 15; P – 30; TOTAL HOURS – 45

REFERENCES:

1. Ashok N Kamthane, “Computer Programming”, Pearson Education, 2nd Edition, ISBN 13: 9788131704370, 2012
2. Paul J. Deitel, Deitel & Associates, “C How to Program”, Pearson Education, 7th Edition, ISBN-13: 978-0132990448, 2012

OUTCOMES:

Students who complete this course will be able to

- Recognize Modular design, logic flow, data abstraction
- Analyze the working of the programming constructs, functions, and I/O.
- Write down programs for sorting and searching algorithms
- Write down programs developing cycle for different applications
- Debug the programs and solve some practical problems in programming
- Develop programs using arrays.

SEMESTER II

MAC 1281	ADVANCED CALCULUS	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- train the students in solving problems using multiple integration.
- provide knowledge in using special functions to find out the area and volume of a region.
- acquire knowledge in tangent and normal vectors.
- gain knowledge in finding the areas of a curve and surface using vector integration.
- learn about the analytic functions and their properties along with bilinear transformation.
- know complex integration using Cauchy's theorems.

MODULE I MULTIPLE INTEGRATION AND ITS APPLICATIONS 8+2

Multiple integrals– Cartesian and Polar coordinates – change of order of integration – Multiple integral to compute area and volume.

MODULE II TRANSFORMATION OF COORDINATES AND SPECIAL FUNCTIONS 7+3

Change of variables between Cartesian, polar, cylindrical and spherical coordinates - Beta and Gamma functions – Properties and applications.

MODULE III VECTOR DIFFERENTIATION 7+3

Operations on vectors – Scalar Product, Vector Product, Projection of Vectors - Angle between two vectors - Gradient, divergence and curl

MODULE IV VECTOR INTEGRATION 8+2

Line, surface and volume integrals – Green's Theorem, Gauss Divergence Theorem and Stokes Theorem (statement only) – verification and evaluation of integrals.

MODULE V

ANALYTIC FUNCTION 8+2

Analytic function - Necessary and Sufficient condition (statement only) – Cauchy-Riemann equations in polar coordinates - properties of analytic function – determination of analytic function – conformal mapping (w = z+a, az and 1/z) and bilinear transformation.

MODULE VI COMPLEX INTEGRATION **7+3**

Statement and application of Cauchy's integral theorem – Cauchy's integral formula – Taylor's series and Laurent's series expansion – singularities - classification – residues - Cauchy's residue theorem – contour integration – Unit circle and semi circular contours (excluding poles on the real axis).

7. James Stewart ".Calculus" (7th edition),Brooks/Cole cengage learning,UK.

OUTCOMES:

After completing the course, student will be able to

- compute the area and volume using multiple integrals.

- apply special functions to solve integration problems.
- apply differentiation in scalar and vector fields.
- find area and volume of a region using vector integration.
- verify analyticity, conformity and bilinearity of complex functions.
- evaluate complex integrals.

GEC 1211	BASIC ENGINEERING MECHANICS	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To impart knowledge about the basic laws of statics and dynamics and their applications in problem solving
- To acquaint both with scalar and vector approaches for representing forces and moments acting on particles and rigid bodies and their equilibrium
- To give on exposure on inertial properties of surfaces and solids
- To provide an understanding on the concept of work energy principle, friction, kinematics of motion and their relationship

MODULE I VECTOR APPROACH TO MECHANICS **07**

Introduction - Units and Dimensions- Vectors – Vectorial representation of forces and moments –Vector Algebra and its Physical relevance in Mechanics - Laws of Mechanics – Parallelogram and triangular Law of forces -Lame's theorem, Coplanar Forces – Resolution and Composition of forces- Equilibrium of a particle.

MODULE II EQUILIBRIUM OF PARTICLE **06**

Forces in space - Equilibrium of a particle in space - Equivalent systems of forces – Principle of transmissibility – Single equivalent force

MODULE III EQUILIBRIUM OF RIGID BODY **06**

Free body diagram – Types of supports and their reactions – requirements of stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis –Vectorial representation of moments and couples – Scalar components of a moment – Varignon's theorem - Equilibrium of Rigid bodies in two dimensions -Examples

MODULE IV PROPERTIES OF SURFACES **08**

Determination of Areas – First moment of area and the Centroid of sections – Rectangle, circle, triangle from integration – T section, I section, Angle section, Hollow section by using standard formula – second and product moments of plane area – Physical relevance - Rectangle, triangle, circle from integration - T section, I section, Angle section, Hollow section by using standard formula – Parallel axis theorem and perpendicular axis theorem – Polar moment of inertia- Mass moment of Area

MODULE V FRICTION **08**

Introduction to friction- types of friction- Laws of Coloumb friction- Frictional force – simple contact friction – Rolling resistance –ladder friction

MODULE VI LAWS OF MOTION 10

Review of laws of motion – Newton's law – Work Energy Equation of particles– Impulse and Momentum – Impact of elastic bodies.

L – 45; T – 15; TOTAL HOURS – 60

REFERENCES:

1. Beer, F.P and Johnston Jr. E.R, "Vector Mechanics for Engineers, Dynamics & Statics", Third SI Metric Edition, Tata McGraw-Hill International Edition, 2001.

3. Irving H. Shames, Engineering Mechanics – Statics and Dynamics, IV Edition Pearson Education Asia Pvt. Ltd., 2003.

OUTCOMES:

On completion of this course students should be able

- Analyse and resolve forces, moments and solve problems using various principles and laws of Mechanics
- Apply the concept of equilibrium to particles and solve problems
- Apply the concept of equilibrium to rigid bodies and solve problems
- Analyse and determine the properties of surfaces
- Analyse and evaluate the fractional forces between the bodies
- Apply the laws of motion in solving dynamics problems

GEC 1212	ENVIRONMENTAL STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

The student will be conversant with the

- various natural resources, availability, utilisation and its current scenario
- different ecosystems, energy transfer, values, threats and conservation of biodiversity
- levels of different pollutants and its impact and the causes and effects of natural disasters
- impacts of human population, impact assessment, human rights and environmental acts and sustainable development

MODULE I NATURAL RESOURCES 8

Land resources: land degradation, soil erosion and desertification - Forest resources: use and over-exploitation, deforestation - Water resources: use and over-utilisation of surface and ground water, conflicts over water (inter-state and international), dams (benefits and problems), water conservation (rainwater harvesting and watershed management) - Mineral resources: use and exploitation, environmental effects of extracting and using mineral resources, mining - Food resources: world food problems, changes in land use by agriculture and overgrazing, modern agriculture and its effects, fertilizer and pesticide problems, water logging and salinity - Energy resources: increasing energy needs, renewable and non-renewable, use of alternate energy sources.

MODULE II ECOSYSTEM AND BIODIVERSITY 8

Ecosystem- energy flow in the ecosystem - food chains, food webs and ecological pyramids - characteristics, structure and function of (a) Terrestrial ecosystems (forest, grassland, desert) and (b) Aquatic fresh water ecosystems (pond, lake, river) (c) Aquatic salt water ecosystems (ocean, estuary) - ecological succession.

Biodiversity - genetic, species and ecosystem diversity – hot-spots of biodiversity – biogeographic classification of India - endangered, endemic, extinct and invasive species of India - red data book - values of biodiversity: consumptive, productive, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - conservation of biodiversity: in-situ and ex-situ conservation of biodiversity

MODULE III ENVIRONMENTAL POLLUTION AND NATURAL DISASTER **8**

Definition, cause, effects and control measures of (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards - ill-effects of fireworks and upkeep of clean environment - solid waste management: types (urban, industrial, biomedical and electronic wastes), collection, processing and disposal (incineration, composting and land-fill) - natural disaster and management: flood, cyclone, drought, landslide, avalanche, volcanic eruptions, earthquake and tsunami.

MODULE IV HUMAN POPULATION, HEALTH AND SOCIAL ISSUES **6**

Population and population growth, population variation among nations, population explosion, family welfare programme.

Human health: air-borne, water borne diseases, infectious diseases, risks due to chemicals in food and environment.

Sustainable development - environmental legislation and laws: water act, air act, wildlife protection act, forest conservation act, environment protection act - environmental impact assessment, steps in EIA - human rights - women and child welfare.

Case studies related to current situation

TOTAL HOURS – 30

TEXT BOOKS:

1. Erach Bharucha, Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education for University Grants Commission, Orient Blackswan Pvt Ltd, Hyderabad, India, 2013.

3. Miller T.G. Jr., Environmental Science, Wadsworth Publishing Co. Boston, USA, 2016.

OUTCOMES:

The student will be able to

- predict the scenario of various natural resources and suggest remedies to curb the exploitation of these resources.
- identify food chain and web and its role in various ecosystems, assess the impacts on biodiversity and provide solutions to conserve it.
- analyse the impacts of pollutants in the environment and propose suitable method to alleviate the pollutants and the natural disasters.
- assess on the impact of human population and the health related issues and the ethics to be followed for sustainable life.

GEC 1213	COMPUTER PROGRAMMING II	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To provide knowledge about the benefits of Object Oriented Programming over Procedure oriented programming.
- To learn various File operations
- To expose fundamental concepts of object-oriented programming in classes, invoking methods and functions.
- To prepare students to get full use of code reusability using object oriented programming.
- To implement the basic concepts of object oriented programming using C++concepts.
- To focus on solving problems based on analyzing, designing and implementing programs in C and C++.

MODULE I PROGRAMMING IN C 7

Functions - Storage Classes - Structures and Unions – Pointers -Self Referential Structures and Linked Lists - File Processing.

MODULE II PROGRAMMING IN C++ 8

Programming in C++ - Overview of OOP in C – Inheritance - Polymorphism - Type Casting – Exceptions.

LIST OF EXPERIMENTS:

1. Functions
2. One dimensional arrays, Pointers
3. Recursion
4. Multi dimensional arrays, Linked lists.
5. Operating on Files.
6. Simple C++ program with Control statements.
7. Getting input from user console.
8. Classes, Object and Constructors.
9. Method overloading.
10. Inheritance

L – 15; P – 30; TOTAL HOURS – 45

OUTCOMES:

Students who complete this course will be able to

- Develop efficient algorithms for solving problems
- Handle files in C
- Use simple data structures like arrays and linked lists in solving problems.
- Write simple programs using concepts of object oriented programming.
- Implement algorithms in C++ Language.
- Demonstrate the Object Oriented Programming concepts applied in networking, web development and Database applications.

CEC1211	ENGINEERING GEOLOGY	L	T	P	C
		2	0	0	2

OBJECTIVES:

The objective of the course is to

- Impart knowledge of earth processes to consider them during the planning and execution of civil engineering projects
- Equip the students with the knowledge to demarcate and differentiate various rock types and minerals to be used as construction materials
- Impart knowledge on the areas of weakness in a zone and to identify the geological conditions of tunnels, dams & reservoirs.

MODULE I PHYSICAL GEOLOGY **6**

Branches of geology – Earth Internal structure – Earth processes -Weathering, volcanism, earthquake and plate tectonics

MODULE II MINERALOGY & PETROLOGY **9**

Introduction – Mineralogy, Physical properties of minerals, Rocks - Classification of rocks – igneous, sedimentary and metamorphic rocks

MODULE III STRUCTURAL GEOLOGY **9**

Types of geologic structures – Folds – Faults and Joints, classification and their effect on civil engineering projects

MODULE IV GEOLOGY FOR CIVIL ENGINEERING **6**

Geological conditions necessary for construction of tunnels, dams, reservoirs

TOTAL HOURS – 30

TEXT BOOKS:

1. Parbin Singh, “Engineering and General Geology”, Katson Publication House, 2009.
2. P.C.Varghese, “Engineering Geology for Civil Engineers”, PHI Learning Private Ltd, New Delhi, 2012.

5. P.T.Sawant, “Engineering & General Geology”, New India Publishing Agency, 2011.
6. Alan.E.Kehew, “General Geology for Engineers”, Prentice Hall, 2000.

REFERENCES:

1. Todd D K., “Groundwater Hydrology”, John Wiley & Sons, New York,2006
2. Tyrrel, GW, ”The Principles of Petrology”, Asia Publishing House, Bombay, 1970

OUTCOMES:

On completion of this course students will be able to

- Identify the geological parameters required for construction, planning and design of civil engineering structures.
- Demarcate and differentiate between rock types and minerals to be used as construction materials.
- Identify the areas of weakness in a zone and consider and eradicate the weakness during the civil engineering projects.
- Identify the necessary geological conditions of tunnels, dams and reservoirs.

CEC1212	BUILDING CONSTRUCTION AND PRACTICES	L	T	P	C
		3	0	0	3

OBJECTIVES:

The main objective of this course is

- To impart the students, overview knowledge of various construction materials such as stone, brick, timber, bitumen, cement, steel etc with respect to type, mechanical properties and applications in industry.
- To impart the knowledge on various components of building and different construction activities

MODULE I LIME - CEMENT - STONES **7**

Lime – Preparation of lime mortar - Cement Ingredients – Manufacturing process – Types and Grades – Properties of cement – Hydration – Test on Cement -– Stone as building material – Criteria for selection – Tests on stones – Deterioration and Preservation of stone work - Test on Coarse Aggregates – Test on fine Aggregates – Mortar – Grades – Types

MODULE II BRICKS – BLOCKS **8**

Bricks – Classification – Manufacturing of clay bricks – Tests on bricks – Concrete – Ingredients – Manufacturing –Types - Concrete Blocks – Gypsum Blocks Applications – Properties - Tiles – Manufacturing – Properties - Industrial byproducts – Fly ash Bricks

MODULE III TIMBER AND OTHER BUILDING MATERIALS **7**

Timber – Properties – Seasoning – Defects – Preservation – Asphalt and Bituminous materials – Types – Properties – Bituminous concrete for pavement application – Types of structural steels, special steel, alloy steel, stainless steel, light gauge steel, Polymers in Civil Engineering – composites and smart materials –– Properties –- Aluminum and Other Metallic Materials – Composition – Aluminium composite panel – Uses – Market forms

MODULE IV BUILDING ELEMENTS **8**

Overview of building process - elements of a building - basic requirements of a building - planning suitable orientation - planning for energy efficiency

Types of structures – Load Bearing – Non Load Bearing – Steel – Composite- Foundation – safe bearing capacity of soil, Function and requirements of good foundation, types of foundation- Shallow – Deep Foundation - Types of walls - load

bearing, partition walls, cavity walls . Doors, Windows and Ventilators - Location of doors and windows, technical terms, Materials for doors and windows, Paneled door, Flush door, Collapsible door, Rolling shutter, PVC Door, Panelled and glazed Window, Bay Window, French window. Ventilators.

MODULE V ROOFS, FLOORS AND STAIRS 8

Floors - Requirement of good floor - Components of ground floor - Selection of flooring material - Types of floor - Roof - Requirement of good roof, Types of roof, Different roofing materials

Lintels and Arches **-**Balconies, chajjas and canopy. Arches; Elements and Stability of an Arch.

Stairs - Definitions, technical terms and types of stairs, Requirements of good stairs.

MODULE VI MASONRY AND FINISHES 7

Masonry - Definition and terms used in masonry - Mortar – Ingredients – Mixing – Grades - mortar. Brick masonry - characteristics and requirements of good brick masonry - Types of Bonds in brick work - Stone masonry, Requirements of good stone masonry – Classification - characteristics of different stone masonry - Joints in masonry.

Plastering and Pointing - purpose, materials and methods of plastering and pointing - defects in plastering- Stucco plastering - lathe plastering - Damp proofing - causes, effects and methods.Temporary structures - Scaffoldings – types –slip forms.

Painting - Purpose, types, ingredients and defects - Preparation and applications of paints to new and old plastered surfaces, wooden and steel surfaces.

TOTAL HOURS – 45

TEXT BOOKS:

1. Varghese.P.C, “Building Materials”, PHI Learning Pvt. Ltd, New Delhi, 2012.

3. S.S. Bhavikatti., “ Basic Civil Engineering’, New Age International (p) Limited, New Delhi, 2010
4. IS456 – 2000: Indian Standard specification for plain and reinforced concrete.
5. IS4926–2003: Indian Standard specification for ready–mixed concrete.
6. IS383–1970: Indian Standard specification for coarse and fine aggregate from natural Sources for concrete.
7. IS1542–1992: Indian standard specification for sand for plaster.

OUTCOMES:

On completion of the course the student will be able to

- Select the type of cement, and stones to be used based on the application, properties and test results.
- Perform the tests on brick, clay and concrete products.
- Explain the properties and types of timber, bitumen, steel, aluminum, polymers and composites.
- Identify the different components in a building and its functions
- Choose the type of roofs, slabs, windows and doors used in the construction of a building.
- Suggest the type of construction practices to be followed in site for various situations.

CEC1213	CIVIL ENGINEERING DRAWING	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To enable the students to understand the fundamental and basic principles of building drawing
- To impart knowledge in basic commands of a drafting package.
- To provide training to plan and draw different views of buildings according to building rules.

MODULE I INTRODUCTION TO BUILDING COMPONENTS 6

Building components – Substructure –Superstructure – Total area of site –- plinth area- Total built up area- Arrangements of building components -Types of staircase- Drawing of conventional signs and symbols.

MODULE II BASIC PLANS 6

Drawing of simple house plans -site plan – floor plans – elevation - sectional views of a residential building.

MODULE III BUILDINGS WITH INCLINED ROOF 9

Buildings with inclined roof – Plan, Elevation & Section of an inclined roof building.

MODULE IV MULTI STOREYED STRUCTURES 9

Plan – Orientation of beams and columns - elevation - Sectional view of multi storyed buildings - drawings of the structural frame - reinforcement detail drawing of slab, beams, column, and foundation.

MODULE V INDUSTRIAL STRUCTURES 9

Plan - elevation - sectional view of Industrial structures

MODULE VI SERVICE PLANS 6

Electrical, plumbing (water and sewerage lines), gas lines for a residential building as per B.I.S

TOTAL HOURS – 45

TEXT BOOKS:

1. Venugopal, K., “Engineering Drawing And Graphics”, 5th Edition, New Age International (P) Ltd., New Delhi, 2011.
2. Gurcharan Singh, “Civil Engineering Drawing”, Standard Publishers and Distributors, 2009.
3. 3. Kumara Swamy, N. and Kameswara Rao, A., “Building Planning and Drawing”, 6th Edition, Charotar Publishing House (P) Ltd, Gujarat, India, 2012.

REFERENCES:

2. Gurcharan Singh, “Building Planning and Scheduling”,Standard Publishers and Distributors, 2012.
3. 3. Shah, M.G., Kale, C.M., Patki, S.Y., “Building Drawing: With an Integrated Approach to Built Environment”, Tata McGraw-Hill Publishing Company (P) Ltd., New Delhi, 2002.

OUTCOMES:

At the end of the course, the students will be able to

- Prepare plan, elevation of the various substructure and superstructure components of a building.
- Identify the sign and symbols as per B.I.S. and develop a simple House plan and their sectional views.
- Prepare a plan, elevation and sectional view of a masonry wall for a residential building. Develop a plan and sectional view for different types of R.C.C Buildings using cad software.
- Recognise and construct a plan and sectional view of an industrial building using drafting software.
- Locate and plan various service lines for a residential building as per codal provisions.

SEMESTER III

MAC 2181	**PARTIAL DIFFERENTIAL EQUATIONS AND TRANSFORMS**	**L**	**T**	**P**	**C**
		3	**1**	**0**	**4**

OBJECTIVES:

The aims of this course are to

- Familiarize in solving partial differential equation of first, second and higher orders.
- Introduce basics and engineering applications of Fourier series, Laplace Transform, Fourier Transform and Z- Transform.

MODULE I PARTIAL DIFFERENTIAL EQUATIONS 8 + 2

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

MODULE II FOURIER SERIES 8+2

Fourier Series and Dirichlet's conditions - General Fourier series - Half range Fourier series - Parseval's identity - Harmonic Analysis.

MODULE III FOURIER TRANSFORMS 7+3

Fourier integral theorem (without proof) - Fourier transform pair - Fourier Inverse Transform – Properties - Convolution theorem - Parseval's identity.

MODULE IV APPLICATIONS OF FOURIER SERIES AND FOURIER TRANSFORMS 7+3

Applications of Fourier series and Fourier Transform to solution of PDEs having constant coefficients with special reference to Heat & Wave equations, Discrete & point Spectrum and Single pulse.

MODULE V LAPLACE TRANSFORM 8+2

Introduction to Laplace transform - Existence of Laplace Transform - Properties of Laplace Transforms - Initial & Final Value Theorems - Inverse Laplace Transform - Convolution Theorem – Circuits to signal square wave: Integral equations with unrepeated complex factors – Damped forced vibrations: repeated complex

factors – Resonance - Solution of differential equations

MODULE VI Z – TRANSFORM 7+3

Introduction and Definition of Z-transform - Properties of Z- Transform - Convolution Theorem of Z-Transform - Inverse Z–transform - Convolution Theorem of Inverse Z-Transform - Formation of difference equations - Solving Difference Equations using Z-Transform.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

3. Dennis G. Zill, Warren S. Wright, “Advanced Engineering Mathematics”, 4th edition, Jones and Bartlett publishers, Sudbury, 2011.
4. Alan Jeffrey, “Advanced Engineering Mathematics”, Academic Press, USA, 2002.

OUTCOMES:

After completing the course, student will be able to

- solve the partial differential equations.
- derive a Fourier series of a given periodic function by evaluating Fourier coefficients.
- apply integral expressions for the forward and inverse Fourier transform to a range of non-periodic waveforms.
- solve wave equation and heat flow equation.
- solve ordinary differential equations using Laplace transform.
- solve difference equation using Z-transform.

ENC 2181 ORAL COMMUNICATION

L	T	P	C
0	0	2	1

OBJECTIVES:

- To expose students to a range of professional contexts through podcasts for learning appropriate expressions.
- To train them in making poster presentations.
- To enable them to make effective business presentations.
- To help them learn persuasive and negotiation skills.
- To train them to debate on issues of current relevance
- To train them to participate in group discussions on current affairs

MODULE I **4**

Orientation to the Importance of Oral Communication -– Verbal and non-verbal communication -Paralinguistic features.

One-minute presentations (using Audacity/Voicethread) – Just a minute (JAM) on random topics

MODULE II **4**

Negotiating and persuading through effective arguments – to arrive at a conclusion (pair-work)

Understanding Negotiation, persuasion and marketing skills through Podcasts

Listening to short conversations and monologues for understanding real life conversations

MODULE III **4**

Making Poster presentations on current issues

Understanding nuances of making effective presentations (TED Videos)

MODULE IV **6**

Deliberation on social and scientific issues – Debates (focus on rebuttal skills and deconstructing arguments)

Viewing videos on debates (NDTV Discussions)

MODULE V **6**

Discussing social issues or current affairs in groups

Viewing group discussions and listening for specific information

MODULE VI **6**

Making full length presentation (through Voicethread) with the focus on one's career plans and prospects (discipline specific)

Listening to interviews for understanding speakers' perception (on industry related issues)

P – 30; Total Hours –30

REFERENCES:

OUTCOMES:

On completion of the course, students will be able to

- Listen to business conversations and do related tasks.
- Deliver effective poster presentations.
- Make effective business presentations.
- Use persuasive and negotiating skills for justifying arguments.
- Participate effectively in debates.
- Speak English intelligibly, fluently and accurately in group discussions.

CEC 2101	MECHANICS OF SOLIDS	L	T	P	C
		3	0	2	4

OBJECTIVES:

The objective of the course is

- To impart knowledge on the basic concepts of stresses, strains and deformation due to internal forces.
- To provide knowledge on the computation of bending moment, shear force and deflection for various types of beams under transverse loading.
- To explain the theory of torsion in shafts and springs.
- To understand the principal stresses and strains
- To impart knowledge to analyze the two dimensional plane trusses.

MODULE I STRESS, STRAIN AND DEFORMATION OF SOLIDS 8

Rigid and deformable bodies - Stress and Strain – Hooke's Law – Elastic constants and their relationship – Deformation of simple and compound bars - Bar with uniform and varying section - Thermal Stresses.

MODULE II STRESSES IN BEAMS 9

Beams – Types of loading on beams– Shear force and Bending moment in cantilever beams, simply supported beams and over hanging beams – Theory of simple bending – Bending stress distribution - Shear stress distribution.

MODULE III DEFLECTION OF BEAMS 8

Double Integration method – Macaulay's method – Moment area method for computation of slopes and deflection in determinate beams.

MODULE IV TORSION 8

Theory of simple torsion – Stresses and deformation in circular and hollow shafts – Stepped shafts – Shafts fixed at both ends – Stresses and deflection of Leaf springs and helical springs.

MODULE V BIAXIAL STRESSES 6

Principal Stresses, strain and maximum shear stresses - Analytical methods - Volumetric Strain.

MODULE VI ANALYSIS OF PLANE TRUSS 6

Stability and equilibrium of trusses – Types of trusses – Analysis of forces in truss members - Method of joints - Method of sections**.**

LIST OF EXPERIMENTS:

1. Properties of steel rebar by tension test
2. Determination of hardness of metal by Rockwell and Brinell hardness test.
3. Determination of impact strength of metal by Izod and Charpy method.
4. Bending test on simply supported and cantilever beam for different types of materials.
5. Determination of Young's modulus of timber and steel.
6. Determination of Stiffness and Modulus of rigidity of steel specimen by torsion test.
7. Determination of Stiffness and Modulus of rigidity of open coil spring by compression test.
8. Determination of Stiffness and Rigidity modulus of closed coil spring by tension test.

4. Timoshenko . S and young, D.H “Elements of strength of materials”, Vol.I and Vol. II, 5th edition, East west press, New Delhi, 2011.

OUTCOMES:

At the end of the course, the student will be able to

- describe stress, strain, elastic constants and their relationship.
- draw bending moment, shear force and axial force diagrams for statically determinate beams and sketch the deflected shapes.
- determine the stresses and deflection for various types of beams using various methods.
- determine the torsion equation and solve the problems based on torsion.
- determine the principal stresses and strains based on various methods.
- analyze the two-dimensional truss by using various methods.

CEC2102	SURVEYING	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims to

- impart knowledge about the basic concepts of surveying and to differentiate map and plan.
- categorize the linear measurement; explore the concept of angular measurement and usage of theodolite.
- use the dumpy level with the help of leveling concept and properties of contours.
- categorize the methods of plane tabling and solve the triangulation and trilateration problems.
- use the EDM and total station for the measurement of angles and distances.
- analyze the concepts of engineering surveys and to set out works.

MODULE I INTRODUCTION TO SURVEYING 7

Basic definitions, objectives, divisions and Importance of Surveying to Engineers; Plane and geodetic surveys; Classification and principles of Surveying; Concept of Geoid and reference spheroids, coordinate systems Output of Survey – Maps, Plans, Scales.

MODULE II LINEAR AND ANGULAR MEASUREMENTS 8

Direct and indirect methods of linear measurement; Obstacles in chaining and ranging, Angular Measurements - Basic Definitions- meridians, local attraction, Theodolite – Different types and their salient parts, Temporary and Permanent Adjustments, Methods of repetition and reiteration.

MODULE III LEVELING AND CONTOURING 8

Basic Definitions, Curvature & Refraction, Level – Types and salient parts, working principle, Temporary and Permanent Adjustments, Leveling Staff, Methods of leveling - Differential leveling and field book note, Reciprocal Leveling; Profile leveling; Trigonometric leveling, Errors & Mistakes in leveling, Contouring - definition, characteristics, methods and applications.

MODULE IV TRAVERSING, TRIANGULATION AND TRILATERATION **9**

Plane Tabling - Merits and demerits, accessories; orientation and resection; methods of plane tabling; Traversing, Triangulation and Trilateration - Purpose and classification of each; Horizontal and vertical control methods, Triangulation-network, field work, selection of stations, measurements and computations. Heights and distances - Tacheometry- Introduction, Basic definitions, Methods, subtense bar, fundamental principles; Stadia system and Tangential system – methods.

MODULE V EDM AND TOTAL STATION **7**

Electronic distance Measurement (EDM) - Measuring principle, Working principle, Sources of Error, Types of EDM; Total Station – Working Principle, sources of errors in total station and types of total station instruments, Advantages of total station.

MODULE VI PROJECT AND ENGINEERING SURVEYS **6**

General requirements and specifications for engineering project surveys; Reconnaissance, preliminary, location survey and surveys for highway, railway, Setting out works for buildings and simple circular curves, Applications of GPS and GIS in surveying – case studies.

L- 45 ; Total Hours : 45

TEXT BOOKS:

1. Punmia, B.C., Ashok Kumar Jain and Arun Kumar Jain “Surveying”, Vol. I, II and III, 15th Edition, Laxmi Publications, New Delhi, 2005.
2. Kanetkar, T.P., “Surveying and Levelling”, Vol. I and II, Standard Publication, 2008.
3. Arora, K.R., “Surveying”, Vol. I & II, Standard Book House, New Delhi, 1996.

REFERENCES:

1. Clark, D., “Plane and Geodetic Surveying”, Vol. I and II, 6th Edition, C.B.S. Publishers and Distributors, New Delhi, 1983.

2. James M. Anderson and Edward M. Mikhail "Introduction to Surveying", 7th Edition, McGraw Hill, 1997.
3. Heribert Kahmen and Wolfgang Faig, “Surveying”, Walter de Gruyter, 1995.
4. Bannister, A., Raymond, S. and Raymond Baker, “Surveying”, 7th Edition, Prentice Hall, 1998.

OUTCOMES:

- Differentiate between map and plan, to classify different types of surveying and to identify map symbols.
- Obtain linear measurements and to correct the error using chain or tape.
- Correct the angular measurements with the help of theodolite & compass, use tacheometer to compute distances.
- Determine the elevation of poonits and generate the surfaces of a given
- terrain
- Map an area using plane table and to use the method of triangulation to measure area using EDM.
- Set out curves to prepare engineering projects and prepare preliminary and
- location survey for highways, railways and tunnel

CEC2103 MECHANICS OF FLUIDS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart understanding of key concepts and fundamental principles pertaining to fluid behavior, both in static and flowing conditions.
- To provide sufficient knowledge to analyze and design engineering systems and devices involving fluids and flow.
- To enhance student's interest in fluid phenomena and its applications.

MODULE I FLUID PROPERTIES AND PRESSURE MEASUREMENT **8**

Dimensions and units - Properties of Fluids - ideal and real fluid - Definition of pressure - Pressure at a point- Pascal's law- Absolute and Gauge pressure - Measurement of pressure - Simple and differential Manometer theory and problems - pressure gauges

MODULE II FLUID STATICS **8**

Hydrostatic law - Definition of total pressure, Center of pressure, Metacentric height, buoyant force - Equation for hydrostatic force and depth of center of pressure on plane surfaces (vertical and inclined) - Problems on hydrostatic force on vertical, inclined and curved submerged surfaces.

MODULE III FLUID KINEMATICS **7**

Fluid Kinematics – velocity and acceleration- Stream, streak and path lines – Classification of flows – Continuity equation (one, two and three dimensional forms) – Stream and potential functions – flow nets and its properties.

MODULE IV FLUID DYNAMICS AND FLOW THROUGH PIPES **8**

Euler and Bernoulli's equations – Application of Bernoulli's equation – Venturimeter–Orifice meter- Laminar flow through pipes– Hagen Poiseuille equation – Turbulent flow – Darcy-Weisbach formula – Major and minor losses of flow in pipes – Pipes in series and in parallel – Moody diagram.

MODULE V BOUNDARY LAYER 7

Definition of boundary layer – Thickness and classification – Displacement and momentum thickness – Separation of boundary layer – Development of laminar and turbulent flows in circular pipes.

MODULE VI SIMILITUDE AND MODEL STUDY 7

Dimensional Analysis – Rayleigh's method, Buckingham's Pi- theorem – Similitude and models-dimensionless numbers – Scale effect and distorted models

Total Hours : 45

TEXT BOOKS:

1. Bansal, R.K., "Text book of Fluid Mechanics and Hydraulic Machines", Laxmi Publications Ltd., New Delhi, 2005.
2. Modi, P.N. and Seth, S.M., "Hydraulics and Fluid Mechanics including Hydraulics Machines", Standard Book House, New Delhi, 2002.
3. Molykutty, M.V., "Fluid Mechanics and Machinery", D1 Publications, Chennai, 2008.
4. Nagaratnam, S., "Fluid Mechanics", Khanna Publishers, New Delhi, 1989.
5. Kumar, K.L., "Engineering Fluid Mechanics", 7th Edition, Eurasia Publishing House (P) Ltd., New Delhi, 1995.

REFERENCES:

1. Streeter Victor, L., Benjamin Wylie, E. and Bed Ford Keith, W., "Fluid Mechanics", 9th Edition, McGraw-Hill Ltd., 1997.
2. Jain, A.K., "Fluid Mechanics", Khanna Publishers, New Delhi, 1996.
3. Pernard Messay, "Mechanics of Fluids", 7th Edition, Nelson Thornes Ltd., U. K., 1998.
4. Jagdish, "Hydraulics Machines", Metropolitan Book Co. Pvt. Ltd, New Delhi, 1973.

OUTCOMES:

At the end of the course, the student will be able to

- Describe fluid properties, forces causing flow and will be able to solve problems involving fluid properties and fluid pressure measurements.
- Compute the magnitude and location of hydrostatic forces on vertical, inclined and curved submerged surfaces and analyze the equilibrium of floating bodies.
- Analyze the flow using principles of fluid kinematics
- Solve fluid problems using principle of fluid dynamics.
- Describe the concepts of boundary layer theory, application off the concepts in determining the separation of boundary layer and to analyze the laminar and turbulent flows in circular pipes.
- Apply the principles of dimensional analysis for fluid flow problems.

CEC2104 CONCRETE TECHNOLOGY

L	T	P	C
3	0	2	4

OBJECTIVES:

- To impart adequate knowledge on concrete constituent materials, fresh and hardened properties of concrete and durability of concrete.
- To make students understand the concepts involved in concrete mix design as per Indian Standards and ACI Method.
- To give exposure to quality control procedures, testing of concrete specimens, special concretes and concreting methods.

MODULE I CONCRETE CONSTITUENT MATERIALS 7

Cement – Grades and types as per IS and ASTM Classification – Testing of cement for quality assurance – Chemical compounds - Hydrated structure – Special cements. Coarse aggregates – Properties, classification and IS recommendations. Fine aggregate – Properties, classification and IS provisions. M Sand - Properties, classification and IS provisions. Water – Quality and IS recommendations. Mineral admixtures and chemical admixtures for concrete. –Concrete - Types – Manufacturing - , mixing, placing, compacting and curing of concrete - form work.

MODULE II PROPERTIES OF CONCRETE 8

Properties of Concrete Selection of materials for concrete - water cement ratio - Properties of fresh concrete - workability - measurement of workability - Admixtures - process of various stages of concrete - Statistical and quality control of concrete. Properties of concrete – strength, modulus of elasticity, creep, shrinkage -Testing of hardened concrete – destructive test - Compressive strength, Tensile strength, Flexural strength. – non destructive test – rebound hammer test, Windsor probe test, ultrasonic pulse velocity test, acoustic emission method, pulse-echo method, initial surface absorption test, infrared thermography, quantum test, carbonation test.

MODULE III MIX DESIGN 8

Mix design Concrete mix design - concepts of mix design - variables in

proportioning - Different methods of mix design - Indian Standard method IS 10262 - Mix design for High Strength and High performance concrete – Ready mix concrete

MODULE IV DURABILITY OF CONCRETE 8

Durability of concrete- Permeability of concrete – Shrinkage - plastic shrinkage - drying shrinkage - Chemical attack - Sulpahte attack of concrete structures - chloride attack – Alkali Aggregate Reaction – Carbonation

MODULE V SPECIAL CONCRETE 8

Special concretes - High performance concrete - high strength concrete, high density concrete - light weight concrete - Fibre reinforced concrete - self-compacting concrete - Polymer concrete – Underwater concrete – Mass concrete – Cold weather concrete – Hot weather concrete – Shotcrete – Self compacting concrete – Reactive powder concrete.

MODULE VI CONCRETE UNDER SPECIAL CIRCUMSTANCES 6

Underground construction – concrete construction in marine environment – underwater construction – piles – diaphragm walls – hot weather concreting – cold weather concreting.

LIST OF EXPERIMENTS:

1. Tests on cement, fine aggregate, coarse aggregate for concrete
2. Concrete mix design with and without admixtures as per Indian Standards for the given parameters.
3. Workability of concrete : Slump test, compaction factor test, flow table test and Vee-Bee consistometer test.
4. Compressive strength test on cubes and cylinder specimen
5. Splitting tensile strength test on concrete cylinder specimen
6. Flexural strength test on concrete prism
7. Study on the flow properties for Self-Compacting concrete
8. Tests for assessing the performance of hardened concrete to find its stress - strain relationship and Young's Modulus.

9. Non-destructive Testing on existing beams, columns & slabs.

L- 45 ; P- 30; Total Hours : 60

TEXT BOOKS:

1. Gambir M.L, ConcreteTechnology, Tata MC-Graw Hill-Education, 2013.
2. Shetty M.S., Concrete Technology, S. Chand & Company Ltd., 2010
3. Metha P.K, "Concrete: Microstructure, properties and Materials", McGraw-Hill, 2014.

REFERENCES:

1. Zongjin Li, Advanced Concrete Technolgy, John Wiley & Sons – 2011.
2. IS : 12269-1987, Specification for 53 grade ordinary Portland Cement, BIS, New Delhi.
3. IS : 383 – 1970, Specification for Coarse and fine natural sources for Concrete, BIS, New Delhi.
4. IS 10262-2009, Concrete Mix Proportioning - Guidelines.

OUTCOMES:

At the end of the course, students will be able to

- describe the manufacturing process of concrete
- determine fresh concrete and hard concrete properties as per procedures outline in Indian standards.
- perform concrete mix design as per Indian Standards and ACI Method.
- recognize various parameters influencing durability performance of RCC structure.
- apply the knowledge gained on special concrete in different civil engineering applications and appreciate various connecting method adopted in site.

CEC2105	SURVEYING LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To make the students understand the working of theodolite, and enable them to make angular measurements using a theodolite.
- To enable the students to compute the height of a building using the measure angle using trigonometrical leveling
- To enable the students to determine distances between two points and the difference in elevation between points using the tacheometric measurements.
- To enable the students to mark foundation of any structures and to set out curves.
- To enable students to use a total station to take measurements such as angles and distances and to determine area.
- To introduce GPS to students

MODULE I THEODOLITE SURVEYING 12

1. Introduction to Surveying Lab II
2. Measurement of Horizontal Angle by Direct Method
3. Measurement of Horizontal Angle by the Method of Repetition
4. Measurement of Horizontal Angle by Method of Reiteration
5. Measurement of Vertical Angles – Direct Method

MODULE II HEIGHTS AND DISTANCES 12

1. Measurement of Distances – Single Plane Method
2. Measurement of Distances – Double Plane Method
3. Determination of Constants of a Tacheometer
4. Determination of Distance using a Tacheometer – Stadia System – at an Angle of Elevation or Depression
5. Determination of Distance using a Tacheometer – Tangential System

MODULE III SETTING OUT WORKS 6

1. Foundation Marking
2. Simple Curve

MODULE IV TRIANGULATION 9

1. Determination of Area of the field
2. Trigonometric surveying

MODULE V TOTAL STATION AND GPS 6

1. Determination of Heights and Distances using a Total Station
2. Determination of RL of the given point using a Total Station
3. Demonstration of GPS

Total Hours : 45

TEXT BOOKS:

1. Bannister, A. and Raymond, S., "Surveying", 6th Edition, ELBS Publishers,1992.
2. Kanetkar, T.P., "Surveying and Levelling", Vol. I and II, United Book Corporation, Pune, 1994.
3. Punmia, B.C., "Surveying", Vol. I, II and III, Laxmi Publications, NewDelhi, 2007.

REFERENCES:

1. Clark, D.,"Plane and Geodetic Surveying", Vol. I and II, C.B.S. Publishers and Distributors, Delhi, Sixth Edition, 1971.
2. James M. Anderson and Edward M. Mikhail, "Introduction to Surveying", McGraw- Hill Book Company, 1985.
3. Heribert Kahmen and Wolfgang Faig, "Surveying", Walter de Gruyter,1995.

OUTCOMES:

At the end of the course, the students will be able to

- To measure horizontal and vertical angles using a theodolite by different methods.
- To measure the height of a building using the angles measured from a

theodolite.

- To compute distances and reduced levels between points using the tacheometric measurements.
- To prepare foundation marking and to set out curves.
- To measure the area using triangulation method and determine distances using
- trigonometric surveying
- To measure angles and distances using a total station and to determine the area of a given field using a total station. To take measurements using a GPS.

IV SEMESTER

		L	T	P	C
ENC 2282	**WRITTEN COMMUNICATION**	**0**	**0**	**2**	**1**

OBJECTIVES:

- To help students identify content specific vocabulary and learn its usage.
- To expose them to reading for specific purposes, especially in professional contexts.
- To expose them to the process of different kinds of formal writing.
- To help them learn corporate correspondence for different purposes.
- To train them in preparing effective applications with résumé
- To make them write different types of reports.

MODULE I **4**

Introduction - process of writing – Fundamentals of academic and professional writing – Understanding short, real world notices, messages, etc.

MODULE II **4**

Reading industry related texts (ex. Manufacturing, textile, hospitality sector etc.) for specific information.

Writing Instructions and recommendations

MODULE III **6**

Understanding format and conventions of writing email, memo, fax, agenda and minutes of the meeting.

Writing email, memo, fax, agenda and minutes of the meeting for various purposes (industry specific)

MODULE IV **6**

Viewing letter of application and Résumé, letter calling for an interview, letter of inquiry and Promotional letter

Writing Functional résumé and letter of application using Edmodo,

MODULE V **6**

Viewing a Video and reading a case study (industry specific) – collaborative writing using Edmodo –reading and information transfer

Writing reports- Survey, feasibility and progress – exposure to discipline

specific reports

MODULE VI **4**

Writing Statement of purpose (Higher Education)-- Justifying and writing about one's preparedness for job (Statement of Purpose highlighting strengths and weaknesses) – Peer evaluation skills through Edmodo.

P – 30; Total Hours –30

REFERENCES:

5. Macknish, C. (2010). *Academic and Professional Writing for Teachers*. McGraw-Hill Education. USA.
6. Whitby, Norman (2014). *Business Benchmark: Pre-Intermediate to Intermediate.* Cambridge University Press, UK.

OUTCOMES:

On completion of the course, the students will have the ability to

- Identify content specific vocabulary and also use them in appropriate contexts.
- Demonstrate reading skills with reference to business related texts.
- Draft professional documents by using the three stages of writing.
- Create different types of documents for various corporate correspondences.
- Write effective letter of applications, résumé and statement of purpose.
- Write business related reports efficiently.

CEC2211 HYDRAULIC AND HYDRAULIC MACHINERY

L	T	P	C
3	0	2	4

OBJECTIVES:

To familiarize the students with the flow through open channels and working of hydraulic machines such as various types of turbines and pumps.

MODULE I FLOW MEASUREMENTS 8

. Flow through Orifices, mouthpieces - classification - hydraulic coefficients - problems, Flow over notches and weirs - classification - Equation for discharge over rectangular, trapezoidal notches, V-notch-- Cippoletti notch - ventilation of weirs - discharge over Broad crested weirs, narrow crested, Submerged weirs – problems – velocity measurement using floats, currentmeter.

MODULE II FLOW IN OPEN CHANNELS 8

Definition of open channels – classification - types of flow -Geometric properties of open channels - Uniform flow- velocity measurements -Chezy's and Manning's formulae- Most economical sections - Derivation of conditions for rectangular, triangular, trapezoidal and circular sections - Specific energy - definitions- specific energy curve - conditions for minimum specific energy and maximum discharge - Critical flow and its computation.

MODULE III VARIED FLOW 8

Dynamic equations of gradually varied flow – Assumptions – Characteristics of flow profiles – Draw down and backwater curves – Profile determination – Graphical integration, direct step method - Hydraulic jump in rectangular channels – applications - derivations with Froude number concept- Problems on Hydraulic Jump, venturi flume.

MODULE IV IMPACT OF JET ON VANES 7

Impulse momentum principle and its applications- Derivation for force exerted by a jet on normal, inclined and curved surfaces for stationary and moving vanes and on a series of curved vanes- Concept of velocity triangles - Equation for work done & efficiency.

MODULE V PUMPS 7

Centrifugal pump –work done and efficiency- minimum speed to start the pump – multistage Pumps – Jet and submersible pumps - Positive displacement

pumps - reciprocating pump – work done and efficiency - negative slip - flow separation conditions - air vessels - indicator diagram and its variation - savings in work done – characteristic curves- Introduction to rotary pumps.

MODULE VI TURBINES 7

Turbines - classification - radial flow turbines - axial flow turbines – Impulse and Reaction turbines – work done and efficiency - draft tube theory - performance of turbines - similarity laws.

L – 45; P – 30;Total Hours : 75

LIST OF EXPERIMENTS:

1. FLOW MEASUREMENTS:

i) Determination of discharge for Orifice and Mouth piece fitted in a tank by constant and variable head method.

ii) Determination of co-efficient of discharge for venturimeter and orificemeter.

iii) Determination of coefficient of discharge for notches.

2.MEASUREMENT OF LOSSES IN PIPES:

i) Study on friction in pipes

ii) Study on minor losses in pipes.

3.PERFORMANCE CHARACTERISTICS OF PUMPS:

i) Performance characteristics of Jet Pump

ii) Performance characteristics of Centrifugal Pump

iii) Performance characteristics of Reciprocating Pump

iv) Performance characteristics of Submersible Pump

4.PERFORMENCE CHARACTERISTICS OF TURBINES:

i) Performance characteristics of Pelton turbine

ii) Performance characteristics of Francis turbine.

TEXT BOOKS:

1. P.N., and Seth, S.M., “Hydraulics & Fluid Mechanics including Hydraulics Machines”, 14th Edition, Standard Book House, New Delhi, 2002.
2. Bansal.R.K., “A Text Book of Fluid mechanics & Hydraulic Machines”, 9th Edition, Laxmi publications (P) Ltd., New Delhi, 2005.
3. Subramanya, K., "Flow in Open channels", 3rd Edition, Tata McGraw- Hill Publishing Company, New Delhi, 2009.

4. Jain, A.K., "Fluid Mechanics (including Hydraulic Machines)", 8th Edition, Khanna Publishers, New Delhi, 1995.
5. Molykutty, M.V., "Fluid Mechanics and Machinery", D1 Publications, Chennai, 2008.

REFERENCES:

3. Ramamrutham, S., "Fluid Mechanics, Hydraulics and Fluid Machines", Dhanpat Rai & Sons, New Delhi, 1998.
4. Kumar, K.L., "Engineering Fluid Mechanics", 7th Edition, Eurasia Publishing House (P) Ltd., New Delhi, 1995.

OUTCOMES:

At the end of the course, the student will be able to

- Describe the concepts of flow measurements and the use of flow measurement devices.
- Demonstrate various theories dealing with the flow phenomenon of fluid in an open channel.
- Analyze the various gradually varied flow profiles in an open channel flow and solve problems related to it.
- Describe the concepts behind the working of hydraulic machines and the force exerted by a jet on fixed target, moving target and curved vanes.
- List down different types of pumps, describe their working principle and compute the work done, efficiency and performance characteristics.
- Classify turbines in various categories, describe their working principle and compute the work done, efficiency and performance characteristics.

CEC2212 WATER AND WASTEWATER ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To make the student to forecast population for the design period, estimate quantity of water demand, possess knowledge on sources & intake structures
- To make the student to characterize water quality and design treatment units
- To impart knowledge on advanced treatments of water
- To impart knowledge on sewerage systems, estimation of wastewater flows & storm runoff, characterization of quality of wastewater and knowledge on primary treatment of sewage
- To make the student design secondary treatment of sewage and possess knowledge on advanced treatment of wastewater
- To impart knowledge on wastewater disposal & sludge handling.

MODULE I WATER SUPPLY SCHEME & SOURCES OF WATER 7

Water supply engineering – quantity of water, types of water demand, fluctuation in demand, factors affecting consumption, forecasting population – design period. Sources of water – surface water sources & intakes – ground water sources.

MODULE II WATER QUALITY & TREATMENT 8

Characteristics of water – treatment of water – unit operations & processes – theory & design of sedimentation, coagulation & flocculation, filtration units – theory & principle of disinfection methods.

MODULE III ADVANCED WATER TREATMENT, STORAGE & DISTRIBUTION 7

Miscellaneous & advanced treatment methods – water softening – removal of iron & manganese, fluoridation & de-fluoridation, desalination, membrane filtration. Water storage facilities – distribution networks & analysis.

MODULE IV WASTEWATER SCHEME & PRIMARY TREATMENT 7

Introduction to sanitary & sewerage systems, wastewater types & flows – estimation & variation, storm water estimation – characteristics of wastewater – treatment of wastewater – preliminary & primary – theory & principles of screens, grit chambers, sedimentation, coagulation & flocculation.

MODULE V SECONDARY & ADVANCED WASTEWATER TREATMENT 8

Theory & design of trickling filter and activated sludge process – theory & principle of aerated lagoons, stabilization ponds, oxidation ditches, constructed wetlands & root zone technology, anaerobic processes & reactors – fluidized bed, expanded bed and up-flow anaerobic sludge blanket (UASB).

MODULE VI WASTEWATER DISPOSAL & SLUDGE HANDLING 8

Disposal of treated wastewater – disposal into water bodies – self-purification of water bodies and oxygen sag curve – land disposal & sewage farming. Sludge characterization – sludge thickening & digestion – biogas recovery – sludge conditioning and dewatering – disposal.

Total Hours : 45

TEXT BOOKS:

1. Modi.P.N., “Sewage Treatment and Disposal and Wastewater Engineering”, Standard Book House, New Delhi, 2008.
2. Garg.S.K., “Environmental Engineering”, Vol. II, Khanna Publications, New Delhi, 2009.
3. Duggal.K.N., “Elements of Environmental Engineering”, S Chand and Co. Ltd., New Delhi, 2008.
4. Jain.A.K., “Fluid Mechanics (including Hydraulic Machines)", 8th Edition, Khanna Publishers, New Delhi, 1995.
5. Birdie.G.S., and Birdie, J.S., “Water Supply and Sanitary Engineering”, Dhanpat Rai and Sons, New Delhi, 2007.

REFERENCES:

1. Mark J. Hammer and Mark J. Hammer Jr., “Water and Wastewater Technology”, Prentice Hall of India Pvt. Ltd., New Delhi, 2009.
2. Metcalf and Eddy, “Wastewater Engineering Treatment, Disposal and Reuse”, Tata McGraw Hill, 2007.
3. Fair, Geyer and Okun, “Water and Wastewater Engineering”, John Wiley and sons, Inc., 2010.
4. Kiely, G., “Environmental Engineering”, McGraw Hill, 2009.

OUTCOMES:

At the end of the course, the student will be able to

- Forecast population for the design period, estimate quantity of water demand, possess knowledge on sources & intake structures
- Characterize water quality and design treatment units
- Possess knowledge on advanced treatments of water
- Possess knowledge on sewerage systems, estimate wastewater flows & storm runoff , characterize quality of wastewater and knowledge on primary treatment of sewage
- Design secondary treatment of sewage and possess knowledge on advanced treatment of wastewater
- Possess knowledge on wastewater disposal & sludge handling.

CEC2213	STRENGTH OF MATERIALS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide basic knowledge in analysis of truss and beams using energy principles.
- To calculate the bending moment and shear force for indeterminate beams.
- To understand the concepts of axially loaded member and its behaviour under eccentric loading conditions.
- To provide exposure on theories of failure and analysis of three dimensional stress.
- To introduce the students about the curved bars and unsymmetrical bending.
- To provide knowledge in the analysis of thick cylinders and spherical vessels.

MODULE I ENERGY PRINCIPLES 8

Strain energy – strain energy in axial force – flexure, shear and torsion – Castigliano's theorems –Application of energy theorems for computing deflections in beams and trusses – Maxwell's reciprocal theorem – Betti's theorem.

MODULE II INDETERMINATE BEAMS 8

Static determinacy and indeterminacy of beams - Fixing moments for a fixed beam of uniform section, slope and deflection. Continuous Beams: Analysis, Reaction at the supports, and Effect of sinking of supports.

MODULE III COLUMNS AND STRUTS 7

Classification of Columns - Euler's theory of long columns – Critical loads for prismatic columns with different end conditions - Rankine- Gordon formula - Eccentrically loaded columns.

MODULE IV THEORIES OF FAILURE 7

Theories of failure – strain energy and distortion energy theories – Application in analysis of stress, load carrying capacity and design of members.

MODULE V BENDING OF CURVED BARS AND UNSYMMETRICAL BENDING 8

Stresses on Curved beams for simple solid sections – Winkler Bach formula- Unsymmetrical bending of beams - Symmetrical and unsymmetrical sections.

MODULE VI THICK CYLINDERS AND SPHERICAL SHELLS 7

Stresses in Thick cylinders subjected to internal and external pressure and compound cylinders - Stresses and strains in thin spherical shell.

Total Hours : 45

TEXT BOOKS:

1. Bedi, D.S., "Strength of Materials", Khanna Book Publishing Co. (P) Ltd., New Delhi, 2000

4. Vazirani, V.N., Ratwani, M.M., and Duggal, S.K., "Analysis of Structures", Vol. II, 16th Edition, Khanna Publishers, New Delhi, 2002
5. Rajput, R.K., "Strength of Materials", S.Chand & Company Ltd., New Delhi, 2006.

REFERENCES:

1. Kazimi, S.M.A., "Solid Mechanics", Tata McGraw-Hill Publishing Co., New Delhi, 2003.
2. William.A.Nash, "Theory and Problems of Strength of Materials", Schaum's Outline Series, Tata McGraw Hill Publishing Company Ltd., 2007.
3. Srinath,L.S., "Advanced Mechanics and Solids", Tata-McGraw Hill publishing company Ltd., 2005.
4. Punmia, B . C . ,"Theory of Structures (SMTS)" Vol. I & II, Laxmi Publishing Pvt. Ltd., New Delhi, 2004.

OUTCOMES:

At the end of the course, the student will be able to

- explain the various energy principles and theorems for the applications of beams and frames.
- analyse the indeterminate structures
- solve axially loaded members for buckling under different boundary conditions.
- describe the various of theories of failure for a material.
- determine the stresses in curved bars.

- demonstrate the development of stresses and strains in thick cylinders and thin spherical shells.

CEC2214 TRANSPORTATION ENGINEERING I

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge on the concepts of geometric design of highways, highway materials and hill roads.
- To understand the traffic management and airport engineering.

MODULE I INTRODUCTION TO HIGHWAY ENGINEERING 7

Role of Transportation Engineering; Modes of transportation- Their importance and limitations; Importance of Highway Transportation; Highway Planning- Principle of Highway Planning, Road developments -Jayakar Committee and Recommendations, Twenty year Road Development Plan, IRC, Institutions - HRB, NHAI, MORTH and CRRI) - Financing, Privatization of Highways, Highway Alignment Requirements, Engineering Surveys for Highway locations.

MODULE II GEOMETRIC DESIGN OF HIGHWAYS 8

Classification and Cross section of Urban and Rural Roads (IRC),Highway Cross sectional Elements – Right of way, Carriage way, Road Width, Camber, Kerbs, Shoulders and Footpaths (IRC Standards), Sight distances – Factors affecting sight distances – PIEV theory, Stopping Sight Distance (SSD), Overtaking Sight Distance (OSD), Sight Distance at Intersections, Intermediate Sight Distance and Illumination Sight Distance (Derivations and Problems in SSD and OSD), Design of Horizontal Alignments – Super elevation, Widening of pavements – Gradient – Horizontal Curves and Transition Curves (Derivation of Formulae and Problems) - Design of Vertical Alignments, Geometry design of hill roads – hairpin bends.

MODULE III HIGHWAY MATERIALS AND PAVEMENTS 7

Material Characterization and Testing of Highway Materials - Sub grade soil – California Bearing Ratio Test and Field Density Test, Aggregates – Crushing, Abrasion, Impact Test, Water absorption, Flakiness and Elongation indices and Stone Polishing value Test, Bitumen – Penetration, Ductility, Viscosity, Binder Content and Softening Point Tests- Types of Pavement, Design Practice for flexible pavements – empirical, semi-empirical method -Design Practice for Rigid pavements – stresses in concrete pavement- Design procedure as per IRC method – different joints in concrete pavement.

MODULE IV HIGHWAY CONSTRUCTION AND MAINTENANCE 7

Construction Procedure Earth work, Water bound macadam, Bituminous Road and Cement Concrete Road (as per IRC and MORTH specification) – Distress in flexible pavements – Distress in rigid pavements – Highway Maintenance - Highway Drainage- Surface drainage and Sub-soil drainage.

MODULE V AIRPORT PLANNING 8

Introduction: Advantages and limitations of air transportation - Aeroplane component parts and important technical terms - Airport planning - Aircraft characteristics, which influence judicious and scientific planning of airports - Selection of sites - survey and drawings to be prepared for airport planning - Airport layout - Characteristics of good layout - Airport configuration, Components of airport - airport obstruction - location of terminal buildings, aprons and hangers. Zoning requirements regarding permissible heights of constructions and landing within the airport boundary, wind rose diagram.

MODULE VI RUNWAY, TAXIWAYS AND APRON GEOMETRIC DESIGN STANDARDS 8

Runways and taxiways: Runway orientation, basic runway length, corrections for elevation, temperature and gradient as per ICAO and FAA recommendation - Airport classification by ICAO- geometric standards – taxiway layout – design consideration – exit taxiways, aprons , holding aprons, fillets, blast pads- air traffic control – control aids – airport markings and lighting - aircraft parking systems, planning and development of terminal building.

3. Fred L. Mannering and Walter P. Kilareski, “Principles of Highway Engineering and Traffic Analysis”, Wiley, 1998.
4. Norman J. Ashford, Saleh Mumayiz, Paul H. Wright, “Airport Engineering : Planning, Design and Development of 21st Century Airports”, 2011.
5. IRC-SP: 48-1998, Hill Road Manual, Indian Road Congress, 2003.

OUTCOMES:

At the end of the course, the student will be able

- To gain knowledge on highway planning
- To understand geometric design of highways
- To identify suitable materials for highway and perform mix design
- To conceptualize the layout of hill roads, their construction and maintenance activity
- To prepare the layout of airport
- To gain knowledge on airport design

CEC2215	ENVIRONMENTAL ENGINEERING LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To impart the skill & knowledge to assess the physical, chemical and biological characteristics of water & wastewater.

MODULE I WATER QUALITY STANDARDS & SAMPLING TECHNIQUES 9

General - Drinking water standards - Quality requirement for industrial use - Quality standards for boiler water - Quality standards for cooling water – Quality of water requirement for specific industries - Quality requirement for irrigation water - Quality requirement for bathing waters - Quality requirement for fishery waters - Quality standards for water in concrete usage.

MODULE II PHYSICAL ANALYSIS 9

Temperature, Color, Odor, Taste, Turbidity, pH, Conductivity, Total Solids, Total Suspended Solids, Total Dissolved Solids, Total Volatile Solids, Total fixed Solids.

MODULE III INORGANIC OR CHEMICAL ANALYSIS 9

Hardness, Calcium, Magnesium, Chloride, Sulphate, Fluoride, Alkalinity, Nitrate, Phosphate, Residual Chlorine & Available Chlorine, Jar Test for Coagulant.

MODULE IV ORGANIC ANALYSIS 9

Dissolved Oxygen, Biological Oxygen Demand, Chemical Oxygen Demand, Phenols, Oil & grease, Pesticides, Nitrate.

MODULE V TOXIC METALS 6

Copper, Chromium, Cadmium, Zinc, Lead, Mercury, Iron, Manganese (AAS)

MODULE VI BACTERIOLOGICAL ANALYSIS (DEMO) 3

Total Coliform, Feacal Coliform.

Total Hours : 45

TEXT BOOKS:

1. Garg.S.K., “Water Supply Engineering”, Khanna Publishers, Delhi, September 2001.

2. Birdie.G.S., “Water Supply and Sanitary Engineering”, Dhanpet Rai and sons, 1991.

REFERENCES:

1. APHA., “Standard methods for the examination of Water and Waste Water”, American Public Health Association, United States, 2013.
2. CPCC, “Water and Waste analysis – Manual”, Central Pollution Control Board, New Delhi, 2011.

OUTCOMES:

At the end of the course, the student will be able to

- determine the suitability and characteristics of water for various purposes
- determine the different physical characteristics of water/wastewater
- determine the different chemical or inorganic characteristics of water/wastewater
- determine the different biological or organic characteristics of water/wastewater
- determine the different toxic/ heavy metals present in the water/wastewater
- determine the bacterial count and types of microorganism present in the water/wastewater.

V SEMESTER

		L	T	P	C
MSC 3181	**LEADERSHIP & CEO TRAINING**	**3**	**0**	**0**	**3**

OBJECTIVES:

The course aims at

- Bringing about positive transformation in students' attitude.
- Building unique leadership competencies that would ensure successful transition of students across all career stages.
- Sensitizing students to identify their strengths & weakness and training them to deal with it
- Assisting students in enhancing their expressive ability and inducing a high level of self confidence to manage both business and emotions
- Training students to become more adaptable and flexible to changing business environment

MODULE I INTRODUCTION TO LEADERSHIP 12

Leadership concept - meaning, definitions, importance of leadership, leadership traits. Leadership functions- general functions, listening, observing, managing and decision making. Components of leadership - leaders, followers and situation. Leadership theories – Trait theory, Skills theory, Style theory, Situational theory, Transformational theory, Transactional theory, Path Goal Theory and LMX. Assessing emotional intelligence and exploring the capabilities and inherent traits through psychometric tests - Multi factor leadership questionnaire and personal reflections

MODULE II LEADERSHIP STYLE AND COMMUNICATION 08

Leadership styles-visionary, Coaching, Affiliative, Democratic, Pacesetting Commanding, Transformational, Transactional. Autocratic, Participative, Laissez-Faire Leader versus Managers. Leadership communication - Rationale, tactic, assertive, formal, informal, communication in crisis- leadership and negotiations, Leadership Presentations-convincing and impressive style

MODULE III LEADERSHIP ROLES 08

Facets of leadership- Leader as an individual – personality and leadership, values, attitudes and ethics of a leader. Leader as a relationship builder-empowering people to meet higher order needs, initiating organization wide

motivational programs, involvement with all stakeholders- focusing on organization growth. Leader as an inspirer- motivation and leadership, recognizing and appreciating contributions, empowering others to lead Leader as an innovator –leader's role in shaping culture and values in an organization. Leader as a Liaison- Leader as team player

MODULE IV LEADERSHIP CHALLENGES AND STRATEGIES 09

Challenges in leadership: Perception of organization culture and values, interpreting the power dynamics in the organization, establishing work life balance. Bad leadership – Reasons and impact.-Case Study of Marissa Mayer-Yahoo.Inc Organizational transformation through efficient leaders-Case study of Apple Inc. Blue Ocean Leadership-Steps to Blue ocean Leadership-Four Pillars of Blue Ocean leadership-Blue Ocean leadership grid

MODULE V LEADERSHIP AND CEO TRAINING 08

Leader as a CEO: Traits of a successful CEO, Key responsibilities of a CEO, the path to be a CEO ,Training on Board Room Discussions, Meeting the CEO –Live sessions with industry CEO's. Requirements of Leadership: - Cognitive skills, Interpersonal skills, Business skills, Strategic skills. Role of Emotional Intelligence in taking up key-positions in the organization.

Teaching Pedagogy:

Nurturing – Based on the identified strengths and weaknesses, training will be given to enhance the strengths and overcome the weakness.

Assessment - Continuous evaluation will be effected through group discussions, oratory assignments and situational enactments. Pre-and post-training assessment through peer reviews and faculty feedback.

Sustained development – Training will be imparted for self-development and monitoring of leadership skills to ensure sustained applicability of the skills learnt.

L – 45; Total Hours – 45

3. Kim, W. C., & Mauborgne, R. A. (2014). Blue ocean strategy, expanded edition: How to create uncontested market space and make the competition irrelevant. Harvard business review Press.
4. Leadership Wisdom by Robin Sharma Jaico Publishing House;

OUTCOMES:

The students will be able to

- Explore through self-introspection one’s own leadership style, their strength and weakness
- Gain self confidence to lead a team in the organization
- Realize the role of leadership in making or breaking of an organization
- Acquire the practice of self introspection and development of leadership competencies thorough continuous efforts
- Manage their own emotions as well as other resulting in successful relationship building with all stakeholders

MSC 3182 SOCIAL ENTREPRENEURSHIP

L	T	P	C
3	0	0	3

OBJECTIVES:

- To be able to understand the field of social entrepreneurship and Social problems
- To be able to describe and understand the traits of social entrepreneurs
- To recognize the social business opportunities
- To synthesize the resource mobilization ways for social entrepreneurship
- To understand the social entrepreneurship models
- To recognize the impact of social entrepreneurship on societies

MODULE I INTRODUCTION TO SOCIAL ENTREPRENEURSHIP 07

Introduction - Emergence and Development of Social Entrepreneurship. Social Problems in India: An Overview. Social Development: The Indian Scenario. Emergence of Social Entrepreneurs and Sustainable Solutions to Social Problem. Characteristics and Context of Social Entrepreneurship .The Role of Social Entrepreneurship in Societies & Economies.

MODULE II SOCIAL ENTREPRENEURSHIP: DRIVERS AND CHALLENGES 07

The Drivers of Social Entrepreneurship. Elements of the Social Entrepreneurial Personality. Challenges of financial constraints. Challenge to attract and cultivate talented workers. Challenge of evaluation of social entrepreneur impact. Challenge of scaling and its impact. Cases

MODULE III SOCIAL ENTREPRENEURSHIP: OPPORTUNITY RECOGNITION 07

Opportunity Recognition and Planning Process. Opportunities for Social Entrepreneurs. The Nature of Social Entrepreneurial Opportunities. Social Problems into Opportunities. Idea development and conceptualization of social problem. Cases

MODULE IV RESOURCE MOBILIZATION FOR SOCIAL VENTURE 08

Resources at Initial Stage. Social Network as a role of Social Capital. Team

and Collective Efforts. Need and Determination of Important Resources. Resource of Knowledge, Skills and Abilities. overview of venture capital and angel investment. Cases

MODULE V BUSINESS MODELS AND BUSINESS PLAN FOR SOCIAL ENTERPRISES **08**

Design Principles of Social Entrepreneurship Business Models , Evaluation of the Root Cause of a Societal Problem. Developing business plan for social ventures. Developing an investor presentation. Feasibility study and report. How to start a business - Procedures for registration of small scale industry

MODULE VI THE IMPACT OF SOCIAL ENTREPRENEURSHIP ON SOCIETY **08**

Static Impact of Social Entrepreneurship. Impact of Charitable NGOs vs. Social Entrepreneurship, Impact of For-Profit Companies vs. Social Entrepreneurship. Social entrepreneurship report preparation by students.
Case Study of Social Entrepreneurs

L – 45; Total Hours – 45

REFERENCES:

1. “Social Entrepreneurship : New models of sustainable social change” . Alex Nicholls, Oxford University Press 2006
2. The Process of social value creation : A multiple case study on Social Entrepreneurship in India , Archana Singh Springer 2016
3. “Social Entrepreneurship and social business” Christine K Volkmann, Springer Gabler 2012
4. “Social Entrepreneurship” Manuel London ,Routlege, 2010

OUTCOMES:

The students can able to

- Conceptualize social entrepreneurship in terms of a theoretical framework between changing social values and institutions
- Think and communicate about social values
- Learn about practical models of social change to launch, lead, manage, and evaluate a social venture
- Analyze funding needs and sources for the social venture
- Experience the ideas can be critically and collaboratively examined prior to commitment

ENC 3181	COMMUNICATION AND SOFT SKILLS - I CAREER CHOICE	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To create awareness of industrial trends and market demands.
- To encourage students to explore career opportunities in an industry and evaluate themselves in relation to industry preparedness

MODULE I **6**

Knowledge about specific industry-Discussion with industry experts --Self evaluating career prospects through survey questionnaire (based on his/her eligibility for taking up a job (industry preparedness)

MODULE II **6**

. Knowing case studies of industries(pertaining to students' choice of career)- Reading and discussing about job markets-goal setting, working on creativity.

MODULE III **4**

SWOC analysis and discussing outcomes--exploring mini projects or case studies of latest industries.

MODULE IV **6**

Writing statement of purpose pertaining to career choice---- Outcomes

MODULE V **8**

Project or case study presentations (Presentation in pairs) -mini project report or case study report.

Total Hours – 30

REFERENCES:

1. Brown,D.(2002). Career Choice and Development. Wiley,J. & Sons.USA
2. Lore,N.(1998). The Pathfinder: How to Choose or Change Your Career for a Lifetime of Satisfaction and Success. Simon & Schuster.USA.
3. Shell, G.R.(2013). Springboard Launching your Personal Search for Success.Portfolio.USA

OUTCOMES:

After the completion of the course, students would be able to

- Speak about their career choice.
- Self evaluate their strengths and weaknesses and speak about it.

- Make effective presentations on case studies or relating to projects.
- Write the statement of purpose relating to their career choice.

CEC3101 STRUCTURAL ANALYSIS – I

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge on the various structural systems and general behavior of structures.
- To impart knowledge on analysis of determinate and indeterminate structures to determine structural reactions, member forces, deflections using various methods.
- To expose students to analyze the structure using influence lines.

MODULE I DEFLECTION OF DETERMINATE STRUCTURES 8

Equations of Equilibrium, Displacements, Compatibility, Boundary Conditions, Principles of Superposition, Degrees of Freedom, Determinate and indeterminate Structures, Deflections of pin-jointed plane frames and rigid plane frames- Principles of virtual work- Williot diagram - Mohr's correction.

MODULE II SLOPE DEFLECTION METHOD 8

Continuous beams and rigid frames (with and without sway) – Symmetry and anti-symmetry - Simplification for hinged end - Support displacements.

MODULE III MOMENT DISTRIBUTION METHOD 8

Stiffness and carry-over factors - Distribution and carryover of moments - Analysis of continuous Beams - Plane rigid frames with and without sway - Naylor's simplification.

MODULE IV ARCHES 8

Arches structural forms – Examples of arch structures – Types of arches – Analysis of three-hinged and two-hinged arches – fixed, parabolic and circular arches – Settlement and temperature effects.

MODULE V MOVING LOADS AND INFLUENCE LINES 8

Influence lines for reactions in statically determinate structures – Influence lines for member forces in pin jointed frames – Influence lines for shear force and bending moment in beam sections – Calculation of critical stress resultants due to concentrated and distributed moving loads.

MODULE VI INFLUENCE LINES FOR INDETERMINATE STRUCTURES 5

Muller Breslau's principle – Application of Muller Breslau's principle to determinate beams and continuous beams.

Total Hours : 45

TEXT BOOKS:

1. Bhavikatti, S. S., "Structural Analysis", Vol. I & II, Vikas Publishing House Pvt.Ltd., New Delhi, 2003.
2. Arya, A.S. and Jain, O.P., "Theory and Analysis of Structures", NemChand & Bros., Roorke, 1992.
3. Wang, C.K., "Statically Indeterminate Structures", Tata McGraw Hill, New York, 1953.
4. Punmia, B.C., Ashok Kumar Jain & Arun Kumar Jain, "Theory of structures", Laxmi Publications, New Delhi, 1999.

REFERENCES:

1. Ashok K. Jain., "Advanced Structural Analysis", Nem Chand & Sons, Roorkee, 1996.
2. Pandit, G.S. and Gupta, S.P., "Structural Analysis – A Matrix Approach", Tata McGraw Hill Publishing Company Ltd., 2006.
3. Vaidhiyanathan, R. and Perumal, P., "Structural Analysis - I", Lakshmi Publications, New Delhi, 2004.
4. Reddy, C.S., "Basic Structural Analysis", Tata McGraw Hill Publishing Company, New Delhi, 2005.

OUTCOMES:

At the end of the course, student will be able to

- analyze the concepts such as degree of freedom, boundary conditions of various structures.
- solve a statically determinate beams, trusses and frames by using principle of virtual work method.
- plot the bending moment diagram and shear force diagram of indeterminate structures by using slope deflection method.
- construct the bending moment diagram and shear force diagram of indeterminate structures by using moment distribution method.

- evaluate and construct statically determinate and indeterminate structures from the influence lines.
- generate influence line diagram for continuous beam using Muller Breslau's Principle.

CEC3102 DESIGN OF REINFORCED CONCRETE STRUCTURES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the fundamental concepts of reinforced concrete with emphasis on design of rectangular and flanged beams, slabs, columns and footings.
- To impart knowledge to students about the design of reinforced concrete structural members under bending, shear, and/or axial loads as per Indian Standards.
- To give exposure to the design of staircases.

MODULE I DESIGN CONCEPTS 5

Concept of elastic method, ultimate load method and limit state method – Advantages of Limit State method over other methods – Limit State philosophy as per IS Code recommendations.

MODULE II DESIGN OF BEAMS 8

Fundamental assumption –Linear elastic analysis of composite sections – Flexural and shear behaviour of reinforced concrete – Analysis and Design of singly and doubly reinforced rectangular and flanged sections – Behaviour and design of torsion – Mechanisms of bond resistance – Flexural bond – Anchorage bond.

MODULE III DESIGN OF SLABS 8

Behaviour of slabs spanning in one and two directions - Design of one way simply supported and continuous slabs - Design of two-way slabs for various edge conditions.

MODULE IV DESIGN OF COMPRESSION MEMBERS 8

Classification of columns – Behaviour of RC columns - Design of short columns under axial compression, combined axial compression with uniaxial and biaxial bending.

MODULE V DESIGN OF FOOTINGS 8

Types of footings – Pressure distribution under footings – Code requirements for design of footings – Design of axially and eccentrically loaded square and

rectangular footings – Design of combined rectangular footings.

MODULE VI DESIGN OF STAIRCASES 8

Dimensioning and Types of staircases – Structural behaviour of staircases – loads on staircases - Design of dog- legged, open newel, circular staircases.

Total Hours : 45

TEXT BOOKS:

1. Unnikrishna Pillai and Devadas Menon., “Reinforced Concrete Design”, Tata McGraw Hill Publishing Company Ltd., New Delhi.2003.
2. Varghese, P.C., “Limit State Design of Reinforced Concrete”, Prentice Hall of India, New Delhi, 2004.
3. Punmia, B.C., “Limit State Design of Reinforced Concrete Structures”, Laxmi Publications (P) Limited, New Delhi, 2007.
4. Krishna Raju, N., “Design of RC Structures”, CBS Publishers and Distributors, New Delhi, 2008.
5. Sinha, S.N., “Reinforced Concrete Design”, Tata-McGraw-Hill, New Delhi, 2002.

REFERENCES:

1. Syal, I.C. and Goel, A.K., “Reinforced Concrete Structures”, A.H. Wheelers & Co. Pvt. Ltd., New Delhi, 2008.
2. Purushothaman, P., “Reinforced Concrete Structural Elements – Behavior, Analysis & Design”, Tata McGraw Hill Publishing Co. Ltd., New Delhi, 1984.
3. Mallick, D.K. and Gupta, A.P., “Reinforced Concrete”, Oxford and IBH Publishing Company, New Delhi, 1987.

OUTCOMES:

Students will be able to

- identify concrete material properties relevant to design and demonstrate on various design philosophies in concrete structures.
- describe the behaviour and design the beams for flexure and shear as per Indian standards.
- apply the IS codal provisions for the design of slab.
- employ the Indian code of practice for the design of reinforced

concrete columns.

- identify suitable type of footing for structures and design as per standards.
- design and construct an appropriate staircase for RC buildings.

CEC3103 TRANSPORTATION ENGINEERING II

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explain the elements of railway track and role of railways in development of nation.
- To describe the geometric design of railways tracks.
- To illustrate the construction, maintenance and operation of railway track
- To explain the layout of harbours and construction of lock gates and various break water types
- To impart knowledge on urban transportation planning
- To explain the modern techniques used in urban transportation planning.

MODULE I INTRODUCTION TO RAILWAY ENGINEERING 7

Railways: Role of Railway Transportation, Advantages and Disadvantages of Railway Transportation, Elements of permanent track way: Rails, Rail Gauges, Sleepers, Ballast, Rail Joints, Fittings, Principal of Traction: Tractive Effort, Train resistances.

MODULE II GEOMETRIC DESIGN OF RAILWAYS 7

Elements of Geometric Design: Gradients and Grade compensation on Curves, Cant, Transition Curve, Vertical curve, Sub grade and Embankments: Cutting, Level, Function, Formation of sub grade, Materials used, Slope and Stability of Embankment, Points and Crossings: Turnouts, Diamond crossings, Crossovers, Stations and Yards.

MODULE III RAILWAY SIGNALS & MAINTENANCE 7

Signals: Signaling and interlocking, Necessity, Mechanical Devices, Detectors, Stretcher bar, Point lock, Slotting of signals, Connecting Devices, Temperature compensation, Track Drainage, Safety in Railways, Modernization of Track for High Speeds, Modern Methods for Track Maintenance, Railway Expenses, Rates and Fares.

MODULE IV HARBOUR ENGINEERING 8

Role of water transportation, Basic consideration- Ocean Winds, Waves, Tides, Wharf, Pier, Harbour, Port, Layout of Harbour, Port entrance, Construction and operation of Lock gates, Dock: Wet, dry and floating docks, Break water-different types, dredging.

MODULE V URBAN TRANSPORTATION PLANNING 8

Urban Transportation Planning Process, Urban Travel and Transportation Systems Characteristics, Function and form of urban structures, services, classification of urban centres, growth patterns, Travel Demands Forecasting-trip generation, trip distribution, modal split and trip assignment, urban transport problems, Transport Behavior of Individuals and Households, Land use/ Transportation systems, land value and congestion, access and business migration.

MODULE VI MODERN URBAN TRANSPORTATION 8

Introduction to Urban Freight Transportation and Urban Mass Transportation Systems. Characteristics of buses, bicycle, para transit, rapid transit, Traffic Restraint Techniques and methods. Classification, mass and rapid transit system, Introduction to Intelligent Transportation System (ITS), Public Transport policy, intermediate. Introduction to BRT, Mono rail, sky bus, metro projects, grade separated interchanges such as flyovers, underpasses, overpasses, concept of Integrated Inter Model transit system.

Total Hours : 45

TEXT BOOKS:

1. Satish Chandra, M.M. Agarwal, Railway Engineering, Oxford University press, 2013.
2. Dr. S. P. Bindra, A course in docks and harbor Engineering, Dhonpat rai publication, 2012.
3. D. Johnson victor, S. Ponnuswamy, Urban Transportation, Planning, Operation and Management, Mcgrawhill Pvt.Ltd, 2012.

REFRENCES:

1. Vassilios Profillidis, “Railway Management and Engineering”, Ashgate Publishing Ltd., Surrey U.K. & Burlingtion U.S, 2006.
2. Srinivasan, R., "Harbour, Dock and Tunnel Engineering”, Charotar Publishing House Pvt. Limited, Anand, Gujarat, 2009.
3. Sigurd Grava, “Urban Transportation Systems”, McGraw Hill Professional, 2003.
4. Vukan R. Vuchic, “Urban Transit Systems and Technology”, John Wiley &

Sons, New Jersey, 2007.
5. Alan Black, “Urban Mass Transportation Planning”, McGrawHill, New Delhi, 1995.

OUTCOMES:

At the end of the course, student will be able to

- sort the components of permanent way and know their purpose.
- design railway tracks with proper cant and curves
- locate the railway signals according to standards and maintenance at the railway network.
- plan a layout of harbour.
- prepare a traffic survey report for planning of an urban area.
- apply a suitable modern technique to solve the given traffic problem.

CEC3104 GEOTECHNICAL ENGINEERING I

L	T	P	C
3	0	2	4

OBJECTIVE:

- To familiarize the students with geotechnical terminology and theoretical and experimental concepts commonly encountered in engineering practice.
- To impart knowledge on the behavior of soil water and its stress behavior.
- To provide knowledge on the stress distribution for the different loading condition.
- To understand concepts in compaction and consolidation of soil.
- To enable the students to analyze the shear strength of the soil.
- To provide an understanding on slope stability and slope failure in soil.

MODULE I INTRODUCTION TO SOIL 7

Nature of Soil – Problems with soil – Phase relation – sieve analysis – sedimentation analysis- Atterberg limits - classification for engineering purposes – BIS Classification System

MODULE II SOIL WATER AND WATER FLOW 7

Soil water – Various forms- Influence of clay minerals – Capillary rise – Suction - Effective stress concepts in soil – Total, neutral and effective stress distribution in soil – Permeability – Darcy's Law- Permeability measurement in the laboratory – quick sand condition.

MODULE III STRESS DISTRIBUTION IN SOIL 7

Stress distribution in soil media – Boussinesque formula- stress due to line load, circular and rectangular loaded area – approximate methods – Use of influence charts –Westergaard equation for point load.

MODULE IV COMPACTION AND CONSOLIDATION 8

Soil compaction – factors affecting compaction – field compaction methods and monitoring – Terzaghi's one dimensional consolidation theory- governing differential equation – laboratory consolidation test – Field consolidation curve. Components of settlement – Immediate and consolidation settlement.

MODULE V SHEAR STRENGTH 8

Shear strength of cohesive and cohesion less soils – Mohr – Coulomb failure theory – Saturated soil and unsaturated soil (basics only)- Strength parameters – Measurement of shear strength, direct shear, triaxial compression, UCC and Vane

shear tests-types of shear tests based on drainage and their applicability - Drained and undrained behavior of clay and sand.

MODULE VI SLOPE STABILITY 8

Slope failure mechanisms – Modes of failure- Infinite slopes – Finite slopes – Total and effective stress analysis – Stability analysis for purely cohesive and c-f soils – Method of slices – Modified Bishop's method – Friction circle method – Stability number – problems – Slope protection measures.

LIST OF EXPERIMENTS:

1. Grain size distribution by Sieve analysis and Hydrometer analysis,
2. Specific gravity of soil grains, Relative density of sands and Atterberg limits test.
3. Field density test (Core cutter and sand replacement methods).
4. Permeability determination (constant head and falling head methods)
5. Determination of moisture – density relationship using Standard Proctor Compaction test.
6. One dimensional consolidation test (Determination of co-efficient of consolidation only).
7. Determination of shear strength parameters –Direct shear test on cohesion less soil, Unconfined compression test on cohesive soil, Triaxial compression test.

L – 45; P – 30; Total Hours : 75

TEXTBOOKS:

1. Punmia, B.C., "Soil Mechanics and Foundations", Laxmi Publications Pvt. Ltd., New Delhi, 1995.
2. Gopal Ranjan and Rao, A.S.R., "Basic and Applied Soil Mechanics", New Age International Publishers, New Delhi, 2000.
3. Venkatramaiah,C., "Geotechnical Engineering", New Age International Publishers, New Delhi, 1995.

7. Vasanthi, P., “Soil Laboratory Manual”, B.S. Abdur Rahman Crescent Institute of Science & Technology, Chennai, 2012.

OUTCOMES:

At the end of this course, the student will be able to

- classify the the soil for engineering purpose based on index properties of soil.
- determine the permeability of soil by field and laboratory method and also stress distribution in soil.
- analyze the stress behavior under various loading.
- identify compaction and consolidation characteristics for different type of soils.
- determine shear strength parameters of soil based on different drainage condition.
- analyze the stability of slope by different methods.

VI SEMESTER

MSC 3181	**LEADERSHIP & CEO TRAINING**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

The course aims at

- Bringing about positive transformation in students' attitude.
- Building unique leadership competencies that would ensure successful transition of students across all career stages.
- Sensitizing students to identify their strengths & weakness and training them to deal with it
- Assisting students in enhancing their expressive ability and inducing a high level of self confidence to manage both business and emotions
- Training students to become more adaptable and flexible to changing business environment

MODULE I INTRODUCTION TO LEADERSHIP 12

Leadership concept - meaning, definitions, importance of leadership, leadership traits. Leadership functions- general functions, listening, observing, managing and decision making. Components of leadership - leaders, followers and situation. Leadership theories – Trait theory, Skills theory, Style theory, Situational theory, Transformational theory, Transactional theory, Path Goal Theory and LMX. Assessing emotional intelligence and exploring the capabilities and inherent traits through psychometric tests - Multi factor leadership questionnaire and personal reflections

MODULE II LEADERSHIP STYLE AND COMMUNICATION 08

Leadership styles-visionary, Coaching, Affiliative, Democratic, Pacesetting Commanding, Transformational, Transactional. Autocratic, Participative, Laissez-Faire Leader versus Managers. Leadership communication - Rationale, tactic, assertive, formal, informal, communication in crisis- leadership and negotiations, Leadership Presentations-convincing and impressive style

MODULE III LEADERSHIP ROLES 08

Facets of leadership- Leader as an individual – personality and leadership, values, attitudes and ethics of a leader. **Leader as a relationship builder**- empowering people to meet higher order needs, initiating organization wide

motivational programs, involvement with all stakeholders- focusing on organization growth. **Leader as an inspirer**- motivation and leadership, recognizing and appreciating contributions, empowering others to lead **Leader as an innovator** –leader's role in shaping culture and values in an organization. **Leader as a Liaison- Leader as team player**

MODULE IV LEADERSHIP CHALLENGES AND STRATEGIES 09

Challenges in leadership: Perception of organization culture and values, interpreting the power dynamics in the organization, establishing work life balance. Bad leadership – Reasons and impact.-Case Study of Marissa Mayer-Yahoo.Inc Organizational transformation through efficient leaders-Case study of Apple Inc. Blue Ocean Leadership-Steps to Blue ocean Leadership-Four Pillars of Blue Ocean leadership-Blue Ocean leadership grid

MODULE V LEADERSHIP AND CEO TRAINING 08

Leader as a CEO: Traits of a successful CEO, Key responsibilities of a CEO, the path to be a CEO ,Training on Board Room Discussions, Meeting the CEO –Live sessions with industry CEO's. Requirements of Leadership: - Cognitive skills, Interpersonal skills, Business skills, Strategic skills. Role of Emotional Intelligence in taking up key-positions in the organization.

Teaching Pedagogy:

Nurturing – Based on the identified strengths and weaknesses, training will be given to enhance the strengths and overcome the weakness.

Assessment - Continuous evaluation will be effected through group discussions, oratory assignments and situational enactments. Pre-and post-training assessment through peer reviews and faculty feedback.

Sustained development – Training will be imparted for self-development and monitoring of leadership skills to ensure sustained applicability of the skills learnt.

- Gain self confidence to lead a team in the organization
- Realize the role of leadership in making or breaking of an organization
- Acquire the practice of self introspection and development of leadership competencies thorough continuous efforts
- Manage their own emotions as well as other resulting in successful relationship building with all stakeholders

MSC 3182 SOCIAL ENTREPRENEURSHIP

L	T	P	C
3	0	0	3

OBJECTIVES:

- To be able to understand the field of social entrepreneurship and Social problems
- To be able to describe and understand the traits of social entrepreneurs
- To recognize the social business opportunities
- To synthesize the resource mobilization ways for social entrepreneurship
- To understand the social entrepreneurship models
- To recognize the impact of social entrepreneurship on societies

MODULE I INTRODUCTION TO SOCIAL ENTREPRENEURSHIP 07

Introduction - Emergence and Development of Social Entrepreneurship. Social Problems in India: An Overview. Social Development: The Indian Scenario. Emergence of Social Entrepreneurs and Sustainable Solutions to Social Problem. Characteristics and Context of Social Entrepreneurship .The Role of Social Entrepreneurship in Societies & Economies.

MODULE II SOCIAL ENTREPRENEURSHIP: DRIVERS AND CHALLENGES 07

The Drivers of Social Entrepreneurship. Elements of the Social Entrepreneurial Personality. Challenges of financial constraints. Challenge to attract and cultivate talented workers. Challenge of evaluation of social entrepreneur impact. Challenge of scaling and its impact. Cases

MODULE III SOCIAL ENTREPRENEURSHIP: OPPORTUNITY RECOGNITION 07

Opportunity Recognition and Planning Process. Opportunities for Social Entrepreneurs. The Nature of Social Entrepreneurial Opportunities. Social Problems into Opportunities. Idea development and conceptualization of social problem. Cases

MODULE IV RESOURCE MOBILIZATION FOR SOCIAL VENTURE 08

Resources at Initial Stage. Social Network as a role of Social Capital. Team and Collective Efforts. Need and Determination of Important Resources. Resource of Knowledge, Skills and Abilities. overview of venture capital and

angel investment. Cases

MODULE V BUSINESS MODELS AND BUSINESS PLAN FOR SOCIAL ENTERPRISES **08**

Design Principles of Social Entrepreneurship Business Models , Evaluation of the Root Cause of a Societal Problem. Developing business plan for social ventures. Developing an investor presentation. Feasibility study and report. How to start a business - Procedures for registration of small scale Industry

MODULE VI THE IMPACT OF SOCIAL ENTREPRENEURSHIP ON SOCIETY **08**

Static Impact of Social Entrepreneurship. Impact of Charitable NGOs vs. Social Entrepreneurship, Impact of For-Profit Companies vs. Social Entrepreneurship. Social entrepreneurship report preparation by students.

Case Study of Social Entrepreneurs

L – 45; Total Hours – 45

REFERENCES:

1. “Social Entrepreneurship : New models of sustainable social change” . Alex Nicholls, Oxford University Press 2006
2. The Process of social value creation : A multiple case study on Social Entrepreneurship in India , Archana Singh Springer 2016
3. “Social Entrepreneurship and social business” Christine K Volkmann, Springer Gabler 2012
4. “Social Entrepreneurship” Manuel London ,Routlege, 2010

OUTCOMES:

The students can able to

- Conceptualize social entrepreneurship in terms of a theoretical framework between changing social values and institutions
- Think and communicate about social values
- Learn about practical models of social change to launch, lead, manage, and evaluate a social venture
- Analyze funding needs and sources for the social venture
- Experience the ideas can be critically and collaboratively examined prior to commitment.

ENC 3281	COMMUNICATION AND SOFT SKILLS - II	L	T	P	C
	CONFIDENCE BUILDING	0	0	2	1

OBJECTIVES:

- To develop professional skills like work ethics, analytical skills, presentation skills etc.
- To train them in problem solving skills and leadership skills pertaining to industries.
- To train them in team building skills.
- To train in setting up career goals

MODULE I **6**

Brief about Multinational companies- Analysing work ethics of multinational companies and small industries- discussing as pairs-Knowledge about etiquette (different types)

MODULE II **6**

Visit to an Industry and prepare reports --Critically reading of industry specific journal articles and write ups-- preparing reports.

MODULE III **4**

Analysing problem solving situations in industries (relating to application of core subject to specific jobs) and discussing about them- working on a sample case

MODULE IV **6**

Developing Leadership in team projects-- debating about various aspects of leadership: for example, responsibility and reliability-time management

MODULE V **8**

Team building skills-- group discussions pertaining to industries-- presenting career goals. -- preparing for interviews- interpersonal skills

Total Hours – 30

REFERENCES:

1. Covey,S.R. (2004). The 7Habits of Highly Effective People: Powerful Lessons in Personal Change. Free Press.UK
2. Fine, P.M.& Alice Olins. (2016).Step up: Confidence, Success and Your Stellar Career in 10 Minutes a Day. Vermilion.UK
3. Pai, A. (1993).How to Develop Self-Confidence. Amazon.com
4. Wentz,F.H.(2012). Soft skills training: A Workbook to Develop Skills for Employment. Amazon.com

OUTCOMES:

After completing the course students would be able to

- Exhibit critical reading skills through review of industry specific articles.
- Provide solutions to problem based situations.
- Exhibit leadership qualities by debating over industry specific issues.
- Participate in group discussions confidently.
- Present their career goals.

CEC3211 STRUCTURAL ANALYSIS - II

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide in-depth knowledge on structural mechanics with emphasis on matrix methods for analysis of beams and framed structures.
- To enable the students to analyse the curved beams and various types of suspension bridges.
- To provide knowledge on the concepts of plastic theory to analyze beams and rigid frames
- To give exposure to finite element method.

MODULE I FLEXIBLITY MATRIX METHOD 8

Primary structure - Compatibility conditions - Analysis of indeterminate beams, pin-jointed frames, rigid jointed frames.

MODULE II MATRIX STIFFNESS METHOD 8

Element and global stiffness matrices– Co-ordinate transformations – Rotation matrix- Compatibility matrix – transformations of stiffness matrices, load vectors and displacement vectors – Analysis of Continuous Beams – Analysis of pin-jointed frames and rigid jointed frames.

MODULE III BEAMS CURVED IN PLAN 8

Introduction to curved beams- Analysis of beams curved in plan- circular arc cantilever- semicircular beams fixed at two ends and subjected to central concentrated load- circular ring beams.

MODULE IV SUSPENSION BRIDGES 8

Analysis of suspension bridges – Unstiffened cables and cables with three hinged stiffening girders – Influence lines for three hinged stiffening girders.

MODULE V PLASTIC ANALYSIS OF STRUCTURES 8

Introduction to plastic theory – assumptions in plastic analysis - Plastic moment of resistance – Plastic modulus – Shape factor – Load factor – Plastic hinge and mechanism – Basic theorems – Methods of plastic analysis – Plastic analysis of indeterminate beams and frames.

MODULE VI FINITE ELEMENT METHOD 5

Introduction - Discretisation of a structure - Displacement functions – Truss

element - Beam element - Triangular elements.

Total Hours : 45

TEXTBOOKS:

1. Vaidhiyanathan, R. and Perumal, P., “Structural Analysis II”, Lakshmi Publications, New Delhi, 2004.
2. Bhavikatti, S. S., “Structural Analysis”, Vol.1 and 2, Vikas Publishing House Pvt. Ltd., New Delhi, 2003.
3. Punmia, B.C., Ashok Kumar Jain and Arun Kumar Jain, “Theory of structures”, Laxmi Publications, New Delhi, 1999.

REFERENCES:

1. Ashok K. Jain, “Advanced Structural Analysis”, Nem Chand & Sons, New Delhi,1996.
2. Pandit, G.S. and Gupta, S.P., “Structural Analysis – A Matrix Approach”, Tata McGraw Hill Publishing Company Ltd., New Delhi, 2006.
3. Jain, A.K. and Arya, A.S., “Structural Analysis”, Vol.II, Nem chand Publishers, Roorkee, 1996.
4. Reddy, C.S., “Basic Structural Analysis”, Tata McGraw Hill Publishing Company, New Delhi, 2005.

OUTCOMES:

Students will be able to:

- determine the statically degree of indeterminacy and analyze the beams & frames by flexibility matrix method.
- compute the degree of freedom and apply stiffness matrix method to analyze indeterminate beams & frames.
- categorize and analyze the various structural forms of arches.
- analyze the cables & suspension bridges and apply influence line analysis for three hinged stiffening girders.
- use appropriate assumptions to establish plastic hinge analysis of beams & frames.
- apply the concept of finite element analysis and generate displacement functions for various elements.

CEC3212 GEOTECHNICAL ENGINEERING II

L	T	P	C
3	0	0	3

OBJECTIVES:

- To give exposure in soil exploration and site investigation.
- To provide knowledge to determine bearing capacity of soil under shallow foundation.
- To impart knowledge in contact pressure distribution and design and proportioning of Shallow foundation.
- To introduce concepts in settlement of foundation under load.
- To enable the students to analyze the types and design of pile foundation.
- To provide an understanding on earth pressure theories in retaining structures.

MODULE I SITE INVESTIGATION AND SELECTION OF FOUNDATION **7**

Scope and objectives- Methods of exploration-auguring and boring- Water boring and rotary drilling-Depth of boring-Spacing of bore hole- Sampling-Representative and undisturbed sampling - Sampling techniques- Split spoon sampler, Thin tube sampler, Stationary piston sampler-Bore log report - Penetration tests (SPT and SCPT)- Data interpretation (Strength parameters)- Selection of foundation based on soil condition.

MODULE II SHALLOW FOUNDATION **7**

Introduction-Location and depth of foundation- Codal provisions - bearing capacity of shallow foundation on homogeneous deposits- Terzaghi's formula and BIS formula - factors affecting bearing capacity-problems - Bearing Capacity from in situ tests (SPT, SCPT and plate load) - Allowable bearing pressure.

MODULE III FOOTINGS AND RAFTS **7**

Types of foundation - Contact pressure distribution below footings & raft - Isolated and combined footings- types- proportioning - mat foundation - types - use - proportioning - floating foundation.

MODULE IV SETTLEMENT OF FOUNDATIONS **8**

Settlement - Components of settlement - Determination of settlement of foundations on granular and clay deposits - Allowable settlements - Codal provision - Methods of minimizing settlement, differential settlement.

MODULE V PILES 8

Types of piles and their function - Factors influencing the selection of pile-Load carrying capacity of single pile in granular and cohesive soil – Static formula - dynamic formulae (Engineering news and Hiley's) - Capacity from insitu tests (SPT and SCPT) - Negative skin friction- uplift capacity- Group capacity by different methods (Feld's rule, Converse Labarra formula and block failure criterion)- Settlement of pile groups - Interpretation of pile load test - Forces on pile caps - under reamed piles - Capacity under compression and uplift.

MODULE VI RETAINING WALLS 8

Plastic equilibrium in soils – active and passive states – Rankine's theory – cohesion less and cohesive soil - Coulomb's wedge theory – condition for critical failure plane - Earth pressure on retaining walls of simple configurations – Graphical methods (Rebhann and Culmann) - pressure on the wall due to line load – Stability of retaining walls.

Total Hours : 45

TEXTBOOKS:

1. Punmia, B.C., "Soil Mechanics and Foundations", Laxmi Publications Pvt. Ltd., New Delhi, 1995.
2. Gopal Ranjan and Rao, A.S.R., "Basic and Applied Soil Mechanics", New Age International Publishers, New Delhi, 2000.
3. Venkatramaiah, C., "Geotechnical Engineering", New Age International Publishers, New Delhi, 1995.
4. Khan, I.H., "A text book of Geotechnical Engineering", Prentice Hall of India, New Delhi, 1999.

REFERENCES:

1. Coduto, D.P., "Geotechnical Engineering Principles and Practices", Prentice Hall of India Private Limited, New Delhi, 2002.
2. McCarthy, D.F., "Essentials of Soil Mechanics and Foundations - Basic Geotechniques", 6th Edition, Prentice-Hall, New Jersey, 2002.
3. Das, B.M, "Principles of Geotechnical Engineering", 5th Edition, Thomas Brooks/ Cole Publishing House, 2002.

4. Muni Budhu, “Soil Mechanics and Foundations”, John Willey & Sons, Inc., New York, 2000.

OUTCOMES:

At the end of the course, students will be able to,

- recommend an appropriate site investigation programme for any construction.
- explore the bearing capacity of the soil for different types of shallow foundation.
- propose the size and depth of shallow foundation according to the contact pressure distribution.
- analyze the settlement for various types of foundation based on soil condition.
- examine the load carrying capacity & settlement of piles.
- determine the various types of earth pressure and stability of retaining structures.

CEC3213 DESIGN OF STEEL STRUCTURES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge to students on the significance of steel structures, structural steel sections for industry applications and limit state design concept.
- To enable the students to design the bolted and welded connections.
- To provide knowledge to design the compression members, tension members, beams and roof trusses as per IS 800 – 2007 codal provisions.

MODULE I INTRODUCTION TO STEEL STRUCTURES 4

Importance of steel structures - chemical composition and properties - various form - Indian standard structural steel sections. Review of IS 800 : 2007 : General design requirements - Loads and forces - Limit state design concept - Limit state of strength - Limit state of serviceability.

MODULE II BOLTED AND WELDED CONNECTION 9

Metal joining methods - types of connections. Bolted connection - classification of bolts - advantages and disadvantages - failure modes - IS 800 codal provisions - Shear, bearing and tension capacity of bolts - Design of lap joint, butt joint -types of eccentric connection - Design of bracket connection - bolts subjected to combined shear and tension. Welded connection : Importance - advantages and disadvantages - types of welded joints - IS 800 codal provisions - strength of weld - Design of welded lap joint - bracket connection.

MODULE III DESIGN OF TENSION MEMBERS 9

Types of sections - behaviour of tension members - Design strength due to yielding, rupture of critical section and block shear - IS 800 :2007 codal provisions for design - importance of lug angle - concept of shear lag - Design tensile strength of plate, angle and roof truss member - Design of tension members - Design of tension splice.

MODULE IV DESIGN OF COMPRESSION MEMBERS 8

Types of members and forms - short column, long column and buckling phenomenon - slenderness ratio - effective length – buckling class - IS 800 : 2007 codal provisions for design - Design of simple column - Design of laced and

battened columns - Column bases - Design of slab base and gusseted base - connection details.

MODULE V DESIGN OF BEAMS 8

Importance and functions - behaviour of steel beams - IS 800 codal provisions - design of simply supported beams - web crippling and web buckling - design of laterally unsupported beams - built up beams - beams subjected to biaxial bending - Design of plate girder - bolted and welded type - intermediate and bearing stiffeners - web splices sand.

MODULE VI ROOF TRUSSES 7

Types of roof trusses - components - load combinations - IS 875 :1987 codal provisions - Design wind speed, wind pressure and wind loads - Wind pressure calculation on buildings in hilly terrain - Design of purlin for load combinations - design load on roof truss.

Total Hours : 45

TEXTBOOKS:

1. Bhavikatti, S.S., "Design of Steel Structures", I.K. International Publishing House Pvt. Ltd., New Delhi, 2010.
2. Shah, V.L. and Veena Gore, "Limit State Design of Steel Structures", Structures Publications, Pune, 2010.
3. Duggal, S.K., “Design of Steel Structures", Tata McGraw-Hill Publishers, New Delhi, 2009.

REFERENCES:

1. Subramanian, N., "Steel Structures - Design and Practice", Oxford University Press, Chennai, 2011.
2. Haji Sheik Mohammed, M.S., "Lecture Notes on Design of Steel Structures", B.S. Abdur Rahman Crescent Institute of Science & Technology, Chennai, 2011.

OUTCOMES:

Students will be able to

- recognize the composition, properties and sections used for steel structures and describe the design philosophy with an emphasis on limit state method.
- classify and design appropriate connections between structural members as IS

codal provisions.

- identify the different failure modes in tension members and select the most suitable section shape and size for the design of tension members.
- determine the lateral buckling length of compression members and design the column & column bases with suitable connection details.
- analyze and design the beams, built-up sections and plate girders in accordance to the Indian standards.
- estimate the wind pressure as per Indian standards, analyze and design the members of a steel roof truss under gravity and wind loads.

CEC3214	COMPUTER MODELING AND STRUCTURAL DESIGN LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To provide hands on experience in preparation of structural design and drawings for concrete and steel structures using latest software.

MODULE I BEAMS **9**

Analysis and Design of a continuous beam subjected to various loading systems

MODULE II PLANE FRAMES **9**

Analysis and Design of plane frames with two bay five-storey (G+4).

MODULE III SPACE FRAMES **9**

Analysis and Design of space frames with single bay two-storey (G+1).

MODULE IV FOUNDATION AND STAIRCASE **9**

Design of foundation for the space frames with single bay two storeys (G+1).Design of staircase with single bay two-storey (G+1).

MODULE V TRUSSES **9**

Analysis and Design of steel roof truss frame for industrial buildings.

Total Hours : 45

TEXT BOOKS:

1. Krishna Raju, N., “Structural Design & Drawing (Concrete & Steel)”, CBS Publishers, New Delhi, 2005.
2. Krishnamurthy, D., “Structural Design & Drawing – Vol. II”, CBS Publishers & Distributors, New Delhi,1992.
3. Krishnamurthy, D., “Structural Design & Drawing – Vol. III Steel Structures”, CBS Publishers & Distributors, New Delhi, 1992.

REFERENCES:

1. Punmia, B.C., Ashok Kumar Jain and Arun Kumar Jain, “Design of steel structures”, Lakshmi publications Pvt. Ltd., Chennai, 2008

Duggal, S.K., “Design of Steel Structures", Tata McGraw-Hill Publishers, New Delhi, 2009.

2. Unnikrishna Pillai and Devdas Menon., “Reinforced Concrete Design”, Tata McGraw Hill Publishing Company Ltd., New Delhi.2003.
3. Varghese, P.C., “Limit State Design of Reinforced Concrete”, Prentice Hall of India, New Delhi, 2004.

OUTCOMES:

At the end of the course, the students will be able to

- analyse and design the continuous beams subjected to various kinds of loadings.
- analyse and design the plane frames with two bay five-storey structures.
- analyse and design the space frames with single bay two-storey structures.
- design the foundation for the space frame structures and staircase for single bay two-storey.
- analyse and design the steel roof truss frame for industrial buildings.
- prepare relevant structural drawings as per I.S specifications using latest software.

CEC3215	SURVEY AND GEOTECHNICAL INVESTIGATION CAMP	L	T	P	C
		0	0	2	1

OBJECTIVE:

- To impart the skill & knowledge to execute real-time survey and soil investigations.

MODULE I TOPOGRAPHY & CONTOURING **7**

Preparation of Elevation Contour Map & Digital Elevation Model.

MODULE II PROFILE LEVELING **7**

Preparation of Longitudinal Profile & Cross-sectional Profiles for a new road alignment and computation of Volume of Cutting and filling required.

MODULE III CARTOGRAPHY **7**

Preparation of Map for a small area & reporting the statistics of the area.

MODULE IV TACHOMETRIC TRAVERSING **7**

Determination of shortest distance between two points and its gradient by tachometric traversing.

MODULE V SETTING OUT WORKS **7**

i) Setting out of a Curve for a new road or rail alignment

ii) Marking of foundation for a multi-storey building.

MODULE VI SOIL TESTING **10**

Conduction of SPT, Plate Load Test, Preparation of Bore log & Soil Profile.

Total Hours : 45

OUTCOMES:

At the end of the course, student: will be able to

- plan and execute a survey for topography modeling of a terrain and create an Elevation Contour Map and Digital Terrain Model
- plan and execute the survey for the formation of a new road alignment by longitudinal sectioning and cross sectioning profiles and compute the volumes of embankment and excavation.

- plan and execute a survey for preparing a map of the given area and plot a map
- plan and execute a tacheometric survey to find shortest distance between inaccessible points on terrain
- compute the characteristics of a highway curve and set out the same by appropriate method and also sketch out the excavation markings of a residential building and setout the same
- execute a soil investigation programme, sketch the soil profile and compute the safe bearing capacity of the soil.

VII SEMESTER

CEC4101	ESTIMATION AND COSTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To impart knowledge on various methods of estimation of buildings, roads, and irrigation structures
- To introduce the concepts of rate analysis and tendering process.
- To provide understanding on valuation engineering and report preparation.

MODULE I METHODS OF ESTIMATION 7

Types of estimates – Units of measurements – Methods of estimates – Advantages - Specifications- Sources- Detailed and general specifications.

MODULE II ESTIMATE OF BUILDINGS 8

Load bearing and framed structures - Calculation of quantities of brick work, RCC, PCC, Plastering, white washing, colour washing and painting / varnishing for shops, rooms, Various types of arches - Calculation of brick work and RCC works in arches - Estimate of joineries for panelled and glazed doors, windows, ventilators, handrails.

MODULE III ESTIMATE OF WATER SUPPLY AND SANITARY INSTALLATIONS 7

Sanitary and water supply installations- Estimating of septic tank, soak pit - Water supply pipe line - Sewer line - Tube well - Open well.

MODULE IV ESTIMATE OF OTHER STRUCTURES 7

Estimate of bituminous and cement concrete roads - Estimate of retaining walls - Culverts.

MODULE V RATE ANALYSIS AND TENDERS 8

Data- Schedule of rates- Analysis of rates- Tenders- Contracts-Types of contracts-Arbitration and legal requirements.

MODULE VI VALUATION & REPORT PREPARATION 8

Necessity - Basics of value engineering - Capitalized value – Depreciation-Escalation - Value of building - Calculation of Standard rent - Mortgage - Lease -

Principles for report preparation -Report preparation for residential buildings.

L – 30; P – 30; Total Hours : 60

TEXTBOOKS:

1. Dutta, B.N., “Estimating and Costing in Civil Engineering”, UBS Publishers & Distributors Pvt. Ltd., New Delhi, 2003.
2. Chakraborti.M., “Estimating Costing”, Specification and Valuation in Civil Engineering, 2001.

REFERENCES:

1. Kohli, D.D and Kohli, R.C., “A Text Book of Estimating and Costing (Civil)”, S.Chand & Company Ltd., New Delhi, 2004.

OUTCOMES:

At the end of the course the students will be able to

- make measurements of various quantities involved in the construction of building using central line method and long wall & short wall method
- categorize and estimate different items of work for buildings
- prepare estimate for septic tank, water supply and sanitary works
- generate estimation for road works, retaining wall and culverts
- prepare tender documents, rate analysis, schedule of rates specifications and contracts
- evaluate the value of building, fix rent and prepare report for construction of residential building.

CEC4102 DESIGN OF HYDRAULIC STRUCTURES

L	T	P	C
2	0	0	2

OBJECTIVES:

To provide appropriate knowledge for the planning and designing of various Components of an irrigation structures on various project scheme.

MODULE I TANK IRRIGATION STRUCTURES 8

Detailed design of Tank bunds – Tank surplus weirs – Tank sluices weirs on pervious foundations - Percolation ponds.

MODULE II IMPOUNDING STRUCTURES 8

Design of Gravity Dams – Design concepts of Earth dams – Arch dams – Spill ways – Energy dissipation devices.

MODULE III CROSS DRAINAGE WORKS 8

Design of Aqueducts – Syphon aqueducts – Super passage – Canal siphon

MODULE IV CANAL TRANSMISSION STRUCTURES 7

Design of Canal drops – Notch type – Syphon well drops

MODULE V CANAL REGULATION STRUCTURES 7

Design aspects of Canal head works – Canal regulator – Canal escape – Silt Exclusion structures.

MODULE VI IRRIGATION WATER MANAGEMENT STRUCTURES 7

On farm development works – Structures for proportional field distribution – Rain water harvesting structures – Design aspects.

Total Hours : 45

TEXTBOOKS:

1. Garg, S.K., “Irrigation Engineering and Design of Structures”, Khanna Publishers, New Delhi, 2009.
2. Satyanarayana Murthy, “Irrigation Design and Drawing”, L. Banumathi Publishers, Tuni, East Godavari District, A.P., 1998.

REFERENCES:

1. Sharma, R.K., “Irrigation Engineering and Hydraulic Structures”, Oxford and IBH Publishing Co., New Delhi, 2002.

OUTCOMES:

At the end of the course, students will be able to

- conceive and plan an tank irrigation structures
- design the various dams based on the hydraulic particulars.
- design the aqueducts for the locality based on the population.
- design the various canal drops or canal falls.
- plan and design the regulating structures based on the discharge released.
- analyse and plan the various irrigation water management project scheme and design its components.

CEC4103 PRESTRESSED CONCRETE

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge on the basic concepts, materials used for prestressed concreteTo provide knowledge on the analysis of stresses, losses of prestress and deflection of prestressed concrete members.
- To understand the behaviour and design the prestressed concrete flexural members.
- To give exposure to prestressed concrete in composite construction and special structures.

MODULE I BASIC CONCEPTS & ANALYSIS OF STRESSES 8

Concept of Prestressing – Advantages of prestressed concrete – Materials required – Systems and methods of prestressing – Analysis of sections – Stress concept – Strength concept – Load balancing concept –Stresses in tendons.

MODULE II LOSSES OF PRESTRESS AND DEFLECTION IN MEMBERS 7

Losses of prestress –Deflections of prestressed concrete members - Factors influencing deflections –Effect on tendon profile on deflections - Short term and long term deflections as per codal provisions.

MODULE III DESIGN OF PSC MEMBERS 8

Flexural strength – Strain compatibility method - Simplified procedures as per codes – Shear and Principal Stresses – Ultimate shear resistance of PSC members - Design of shear reinforcement – Design of PSC sections for flexure.

MODULE IV TRANSMISSION OF PRESTRESS 6

Transmission of prestress in pre-tensioned members –bond and transmission length – end zone reinforcement – Anchorage zone stresses - stress distribution - Design of anchorage zone reinforcement.

MODULE V COMPOSITE CONSTRUCTION 8

Analysis for stresses – Differential Shrinkage - Estimation of deflections – Flexural and shear strength of composite members.

MODULE VI PSC SPECIAL STRUCTURES 8

Concept of circular prestressing – Design of prestressed concrete pipes and cylindrical water tanks - Prestressed concrete poles, piles, sleepers.

Total Hours : 45

TEXTBOOKS:

1. Krishna Raju, N., “Prestressed Concrete”, Tata McGraw Hill Company, New Delhi, 1998.
2. Rajagopal, N., “Prestressed Concrete”, 2nd Edition, Narosa Publications, New Delhi, 2007.
3. Muthu K. U., Ibrahim Azmi, Janardhana Maganti, Vijayanand M., “Prestressed Concrete”, PHI Learning Pvt. Ltd., New Delhi, 2016.

REFERENCES:

1. Mallick, S.K. and Gupta, A.P., “Prestressed concrete”, Oxford and IBH publishing Co.Pvt. Ltd., New Delhi, 1997.
2. Lin, T.Y., “Design of Prestressed Concrete Structures”, Asia Publishing House, Bombay, 1995.
3. Ramaswamy, G.S., “Modern Prestressed Concrete Design”, Arnold Heinimen, New Delhi, 1990.

OUTCOMES:

At the end of the course, students will be able to

- describe the properties of constituents in prestressed concrete and apply the principles & procedures for analyzing the prestressed concrete structures.
- evaluate the short and long term losses and deflection for PSC members.
- establish appropriate approaches to calculate the design strength for flexure & shear and apply the principles for the design of PSC members.
- recognise the effects of transfer of prestress and design the anchorage reinforcement.
- analyse and design the composite structural members.
- apply the principles and techniques for the design of circular prestressing and demonstrate the various structures such as poles, piles.

CEC4104 CONSTRUCTION MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart knowledge on planning of construction projects, scheduling of activities using network diagrams, estimating cost of project, controlling the cost of project by creating cash flows and budgeting.
- To give exposure to project information systems.

MODULE I CONSTRUCTION PLANNING 7

Basic concepts in the development of construction plans-Choice of technology and construction method-Defining work tasks - Defining precedence relationships among activities-Estimating activity durations-Estimating resource requirements for work activities-Coding systems. Introduction to software's used in construction management.

MODULE II SCHEDULING PROCEDURES AND TECHNIQUES 7

Introduction - plan development process- scheduling-definition -types of construction schedules-scheduling techniques-CPM - Terms and definitions - Earliest and Latest times - different types of floats - significance- calculation of critical path method-PERT - terms and definitions - network and solving problems using PERT - standard deviation and probability calculation in PERT.

MODULE III RESOURCE PLANNING 8

Materials: Quantity of materials - time of purchase- inventory control - terms and definitions - types of inventory -EOQ -reasons for maintain inventory - different tools for inventory. Equipment: Classification of major construction equipment- planning and selecting of equipment- task consideration - cost consideration.

MODULE IV COST CONTROL MONITORING AND ACCOUNTING 7

Cost – Types of Cost -Cost control problem-Project budget-Forecasting for activity cost control - Financial accounting systems and cost accounts-Control of project cash flows-Schedule and budget updates-Relating cost and schedule information.

MODULE V QUALITY CONTROL & SAFETY DURING CONSTRUCTION 8

Quality and safety concerns in construction-Organizing for quality and safety-Work and material specifications-Total quality control-Quality control by statistical methods -Statistical quality control with sampling by attributes-Statistical quality

control by sampling and variables-Safety.

MODULE VI ORGANIZATION & USE OF PROJEC INFORMATION 7

Project information- Types and use-Organizing information in databases-Centralized database management systems-Databases and application programs-Information transfer and flow.

Total Hours : 45

TEXTBOOKS:

1. Chitkara, K.K., “Construction Project Management, Planning, Scheduling and Control”, Tata McGraw-Hill Publishing Co., New Delhi, 1998.
2. Chris Hendrickson and Tung Au, “Project Management for Construction – Fundamental Concepts for Owners, Engineers, Architects and Builders”, Prentice Hall, Pitsburgh, 2000.
3. Joy, P.K., “Total Project Management - The Indian context”, Macmillan India Ltd., New Delhi, 1992.

REFERENCES:

1. Moder, J., Phillips, C. and Davis, “Project Management with CPM, PERT and Precedence Diagramming”, 3rd Edition, Van Nostrand Reinhold Co., 1983.
2. Willis, E.M., “Scheduling Construction Projects”, John Wiley and Sons, New York, 1986.
3. Halpin, D.W., “Financial and Cost Concepts for Construction Management”, John Wiley and Sons, New York, 1985.

OUTCOMES:

After completion of the course, students will be able to

- identify the WBS and precedence relationships among activities and coding systems in the project.
- describe the CPM and PERT analysis method of scheduling.
- select the resources for optimization and construct the crashing and time/cost trade off.
- solve the cost control problem and financial accounting systems on site.
- apply statistical quality control techniques and list the safety and quality control checklist on site.

CEC4105	INDUSTRIAL INTERNSHIP	L	T	P	C
		0	0	0	1

OBJECTIVES:

- To train the students in the field work so as to have knowledge of practical problems related to Civil Engineering field in carrying out engineering tasks.
- To impart hands on practice in facing and solving the problems experiencing in the field.

GENERAL GUIDELINES:

- The students individually undertake training in reputed engineering companies doing Civil works in fields like construction, environmental engineering, GIS etc., during the summer vacation for a specified duration of four weeks.
- The students should also get a evaluation form filled by concerned authority giving training during that period.
- At the end of training, a detailed report on the work done should be submitted within one month from the commencement of the semester.
- The students will be evaluated through a viva-voce examination by a team of internal staff.

Total Hours : 15

OUTCOME:

- At the end of the course, the students will be exposed to apply their knowledge in practical real-world problems and would be able to face the field works with more courage.

SEMESTER VIII

		L	T	P	C
CEC4211	**PROJECT WORK**	**0**	**0**	**24**	**12**

OBJECTIVE:

• The Project aims to provide opportunity for the students to exhibit their capacity in executing a project work as a team which deals with analysis / design /experimental works related to civil engineering

GENERAL GUIDELINES:

- The students will be given opportunity to select a project topic of his/her interest and advised to approach the faculty member with expertise in that field to appraise the project and get his/her willingness to guide the project.
- The information related to proposed topic and the faculty member willing to act as guide shall be informed to the course co-ordinator within the stipulated time. The project co-ordinator in consultation with Professor in-charge and Head of the Department shall give initial approval.
- In the project students are expected to identify a suitable topic, draw the need for present study and scope of the investigation, review at least 10 journal papers in the related field, formulate the experimental / analytical methodology and conduct preliminary studies.
- Detailed experimental investigation / in-depth analytical study / fabrication of equipment have to be performed in line with the scope of investigation.
- The students are expected to analyse the obtained results and discuss the same in an elaborate manner by preparing necessary charts / tables / curves to get an inference.
- The important conclusions need to be drawn and scope for further research also to be highlighted.
- The project co-ordinator shall arrange to conduct three reviews to ascertain the progress of the work and award the marks based on the performance.
- At the end, students should submit a report covering the various aspects of Project work. The typical components of the project report are Introduction, Need for present study, Scope of the Investigation, Literature review, Methodology / Experimental investigation / development of software packages, Results & discussion of experimental and analytical work, Conclusions, References etc.
- The project co-ordinator shall arrange for final viva-voce examination to

ascertain the overall performance in Project work.

OUTCOME:

At the end of the course, the students will be able to

- apply their knowledge base in civil engineering
- Utilize the creative ability and inference capability to solve real world problems.
- Apply the practical knowledge while solving real time problems
- Prepare an appropriate documentation.

PROFESSIONAL ELECTIVES
SEMESTER IV

CECX01	MODERN CONSTRUCTION MATERIALS	L	T	P	C
		2	0	0	2

OBJECTIVE:

• To impart knowledge regarding the properties of modern construction materials used in construction and their suitability of applications in construction industry

MODULE I STRUCTURAL MATERIALS 6

Different types of steel, aluminium and their products - other alloys – applications in civil engineering

MODULE II NON - STRUCTURAL MATERIALS 9

Non structural materials - water proofing compounds-types - non weathering materials - flooring - types - materials used for flooring – properties - facade materials - types - properties - selection - insulation materials - coatings - eco friendly materials - polymers.

MODULE III SMART AND INTELLIGENT MATERIALS 9

Smart materials – shape memory alloys - application in construction – smart windows -types - intelligent materials - nano materials - coatings & paints – nano sensors- aerogels - phase changing materials - translucent concrete – sensiTile - electrified wood – flexicomb - self-repairing cement/concrete - liquid granite - bendable concrete

MODULE IV INNOVATIVE MATERIALS 6

Self healing concrete – 3D printing sand stone – Aluminium foam – Bamboo reinforced concrete – Bio receptive concrete – Facade made from pollutants – interactive printed grapheme – stabilized soil

Total Hours : 30

TEXT BOOKS:

1. Ganapathy. C, Modern construction materials, Easwar Press, 2015
2. Viswanath.H.S, Materials of construction II, Sapna book house Pvt Ltd., 2014

REFERENCES:

1. Mamlouk, M.S. and Zaniewski J.P, Materials for Civil and Construction Engineers, Prentice Hall Inc., 2011
2. Sankar, S.K. and Saraswati, S., Construction Technology, Oxford UniversityPress, New Delhi, 2008
3. Arora S.P. and Bindra S.P., Building Construction, Planning Techniques and Method of Construction, Dhanpat Rai and Sons, 1997

OUTCOMES:

At the end of the course, the student will be able to

- Select the materials such as metal structural materials for various applications in construction.
- Select the non structural materials for various applications in construction.
- Explain the advantages of using smart and innovative material in construction
- Explain the advantages and various applications of using intelligent material in construction.

CECX02	CONSTRUCTION EQUIPMENT AND TECHNIQUES	L	T	P	C
		2	0	0	2

OBJECTIVE:

To impart knowledge about various equipments and methods used in construction Industry

MODULE I EARTH WORK EQUIPMENTS AND MATERIAL HANDLING EQUIPMENT **7**

Fundamentals of earthwork operations-earth moving operations-types of earthwork equipment – tractors, motor graders, scrapers, front end waders, earth movers, forklifts and related equipment- -cranes - hauling equipments and methods.

MODULE II OTHER CONSTRUCTION EQUIPMENTS **8**

Equipments and methods for dredging, trenching, tunneling, drilling, blasting - equipment for compaction - erection methods and equipments-types of pumps used in construction - equipment and methods for dewatering and grouting - foundation and pile driving equipment.

MODULE III AGGREGATE AND CONCRETING EQUIPMENT **7**

Crushers- feeders - screening equipment - handling equipment – batching and mixing equipment - pouring and pumping equipment - transporters and related methods- portable material bins - conveyors.

MODULE IV COMPACTION AND STABILIZATION OF EARTH MATERIALS **8**

Compaction and stabilization of geotechnical materials-Selection of equipments – machine power- planning of construction plant and equipment with emphasis on site application - site layout – safety in handling equipments.

Total Hours : 30

TEXT BOOKS:

1. Peurifoy R.L., Ledbetter W.B. and Schexnayder. C., Construction Planning, Equipment and Methods, McGraw Hill, Singapore, 2010.
2. Harris. F., Modern Construction and Ground Engineering Equipment and Methods, Prentice Hall, 1994.

3. Richard. C, Ringwalk, Heavy Construction Handbook, Caterpillar Inc., 2015.

REFERENCES:

1. Peurifoy, R.L., Ledbetter, W.B.and Schexnayder, C., Construction Planning, Equipment and Methods, 5th Edition, McGraw Hill, Singapore, 2010.
2. Sharma S.C., Construction Equipment and its Management, Khanna Publishers New Delhi, 2002.
3. Deodhar, S.V., Construction Equipment and Job Planning, Khanna Publishers, New Delhi, 2001.
4. Saxena SC, Construction Equipment and Planning, Standard Publishes-Distributors-Delhi, 2009.

OUTCOMES:

At the end of the course, students will be able to

- describe the features of construction equipments
- explain the methods for stabilization of soil
- identify suitable equipments according to the construction work
- describe the construction equipment safety measures

CECX03 PRINCIPLES OF ARCHITECTURE L T P C
2 0 0 2

OBJECTIVES:

- To make the students learn the principle aspects of design and understand how it
- To understand the ideologies from works of architects and planners.
- To learn the design communication skills to enable to put forth the design ideas in graphics and literature.

MODULE I ELEMENTS OF DESIGN IN NATURE 8

Points, lines and shapes found in nature. Role of elements to emphasize the location, as landmark, for direction and dominance, etc. Patterns in nature and building design. Chaos and Order. Study: examples of nature inspired man made design.

MODULE II PRINCIPLES OF ORGANIZATION FROM NATURE 8

Fractals – patterns, proportion, repetition, harmony- Proportion- Axis, Symmetry/Asymmetry, Massing, Form generating exercises to approach site planning in small scale and large scale projects.

MODULE III DESIGN COMMUNICATION AND GRAPHICS 7

Importance of graphics in architectural design. Study of site plans, city plans, conceptual Drawings. Interpretation of architects' conceptual sketches and the respective buildings.

MODULE IV LANDSCAPING OF FUNCTIONAL AREAS 7

Urban open spaces and principle of urban landscape; Street landscaping, landscape design for waterfront areas and functional areas in urban centers. Green infrastructure including green roofs and walls.

Total Hours : 30

TEXT BOOKS:

1. Francis D.K.Ching, Architecture-Form, Space and Order, Van Nostrand Reinhold Company, New York, 2007.
2. Simon Unwin, Analysing Architecture, Routledge, London, 2003.
3. V.S.Pramar, Design Fundamentals in Architecture, Somaiya Publications Pvt.

Ltd., New Delhi, 1973.

REFERENCES:

1. Leland M. Roth - Understanding Architecture, its experience history and meaning, Craftsman house, 1994.
2. Steen Eiler Rasmussen - Experiencing architecture, MIT Press, 1964.
3. Peter von Meiss -Elements of architecture - from form to place, Spon Press 1992.

OUTCOMES:

- A thorough understanding on the definition of architecture; elements of architectures of form.
- An exposure to the principles of architecture and applications of the same in buildings and spaces.
- An understanding the meaning of character and style of buildings with examples.
    - Understanding of the role of landscape design in the shaping of outdoor environments

CECX04 SAFETY IN CONSTRUCTIONS

L	T	P	C
1	0	0	1

OBJECTIVES:

To impart knowledge in

- Safety aspects involved in construction industry.
- Policies followed and awareness in construction industry.

MODULE I SITE SAFETY 7

Construction Safety Management – Occupational Safety and Health Ordinance (OSHO) - Role of various parties, duties and responsibilities of top management - Site managers - Supervisors, etc - Role of Safety Officers - Responsibilities of general employees - Safety Committee - Safety Monitoring - Writing Safety Manuals - Preparing Safety Checklists - Inspection Reports

MODULE II ACCIDENT, AWARENESS & POLICY IN SAFETY 8

Safety of accidents on various construction sites - Prevention of accidents - Safety measures - Recording injuries and accident indices. Method statement – SOPs - PPE - Inspections – Investigations - Site safety programs – Job Safety Analysis (JSA) - Job Hazard Analysis (JHA) - Root cause analysis – Meetings - Safety Policy – manuals - Training & Orientation

Total Hours : 15

TEXT BOOKS:

1. Tim Howarth, Paul Watson, Construction Safety Management, Wiley- Blackwell Publishing, 2008.

REFERENCES:

1. Construction safety manual – SP 70 published by National Safety Commission of India- 2007.
2. Safety Management in Construction Industry – A manual for project managers. NICMAR Mumbai, 1998.
3. Construction Safety Handbook – Davies V.S.Thomasin K, Thomas Telford, London, 1990.

OUTCOMES:

At the end of the course student will be able to

- define the roles and responsibilities of stakeholders in establishing safety in the project, the safety practices to be followed during various construction operations.
- state the awareness about safety in site and analyse the safety policies followed by organization in construction site.

CECX05 REAL ESTATE LAWS L T P C
1 0 0 1

OBJECTIVE:

- To impart knowledge on the important concepts in real estate law, including real property, the general laws of land ownership and real estate transactions, title examinations and methods of title transfer, sales contracts and the sales process, real estate financing options, and the closing/settlement process.

MODULE I INTRODUCTION 7

Scope of real estate sector and regulatory framework in India - Real Estate (Regulation and Development) Act, 2016 - Real Estate construction and development transactions - Real estate financing transactions - Sale, Lease and Licenses - Importance of real estate laws for real estate and management professionals - Legal structure of smart cities Case study - How a large real estate company is structured

MODULE II REAL ESTATE ZONING AND BYE LAWS 8

General understanding of Planning, Zoning laws - Subdivision of land, Master Plan/Town Plan Provisions - Building Bye-laws - Approvals & Sanctions - Delhi Master Plan Study.

Joint-development models - Profit sharing and price determination - Property ownership and license to construct - Rights of landowners - Rights of developer.

Total Hours : 15

TEXT BOOKS:

1. Judith, Anne Mackenzie “Text book on land law”, Oxford University Press, U.K, 2004.
2. Kevin J.Gray, “ Elements of Land Law”, Lexis Nexis Publishers, U.K., 2004
3. V.G.Ramachandran, “Law of Land Acquisition and Compensation”, 8th edition, Eastern Book Company, Lucknow, 2000

REFERENCES:

1. Gerald R Cortesi, “Mastering Real estate principles”, Dearborn Trade Publishing, New York, U.S.A, 2001.
2. Fillmore W Galaty, “Modern Real estate practice”, Dearborn Trade Publishing, New York, U.S.A, 2002.

3. Tanya Davis, “Real estate developer’s handbook”, Atlantic pub company, Ocala, USA, 2007.
4. Mike .E. Miles, “Real estate development – Principles & Process 3rd edition, Urban Land Institute, ULI – Washington DC, 2000.

OUTCOMES:

At the end of the course, the students will be able to

- identify career opportunities for students with the appropriate training in this specialty area.
- identify and explain important concepts in real estate law.

CECX06	VAASTU SATRA AND ARCHITECTURAL DESIGN	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To introduce the principles of vastu and vaasthu and relationship between building and site
- To familiarize the students with the units of measurement in traditional architecture.
- To introduce the concepts of orientation and cosmogram according to the vasthu purusha mandala.

MODULE I INTRODUCTION TO VAASTU 5

Overview of mythological and scientific background of Vaastu - Understanding Life force Energy - Importance of Five Elements - Use of Magnetic Compass - Importance of Cardinal Directions & extensions – Types - shapes and selection of Land

MODULE II ORIENTATION OF HOME 10

Open Space planning and Building Design - Floor level Height factors – Verandas- Balconies -Porch Basements- Water flow - Mezzanine floors - Plants and Greenery Master Bed Room - Kids room - Living Room- Kitchen- Dining Room – Bathroom - Drawing room - Study Room - Puja Room – Doors - Windows and ventilators - Main Entrance - Staircase – Guest room

Total Hours : 15

TEXT BOOKS:

1. Dr.V.Ganapati Sthapati, “Sthapatya Veda”, Dakshina Publishing house, Chennai, India, 2001.
2. Stella Kramrish, “The Hindu Temple” Volume – I, Motital Banarsidass Publishers, 2002.
3. K.S.Subramanya Sastri, Mayamatam, Thanjavur Maharaja Sarojoji Saraswathi Mahal Library – Thanjavur, 1966.

REFERENCES:

1. . Anand Bhardwaj “Scientific approach to Vastu Shastra” Abhinav Publications; First edition, 2013.

2. . Suman Pandit " Golden rules of vastu shastra – Remedies and Solutions" UBS Publishers' Distributors (P) Ltd.,2004.

OUTCOMES:

Upon completion of the course, the student will be able to

- Summarize the Vaastu Principles.
- Explain the open space planning and building design using vaastu.
- Demonstrate the orientation of rooms based on vaastu

SEMESTER V

		L	T	P	C
CECX10	**HYDROLOGY**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To impart knowledge about the components of the hydrological cycle and their estimation.
- To provide details about the derivation of hydrographs, application of GIS in rainfall runoff process and flood routing & control.

MODULE I PRECIPITATION 7

Hydrologic cycle – Types of precipitation – Forms of precipitation – Measurement of Rainfall – Spatial measurement methods – Temporal measurement methods – Frequency analysis of point rainfall – Intensity, duration, frequency relationship – Probable maximum precipitation

MODULE II ABSTRACTION FROM PRECIPITATION 8

Losses from precipitation – Evaporation process – Reservoir evaporation – Infiltration process – Infiltration capacity – Measurement of infiltration – Infiltration indices – Effective rainfall

MODULE III HYDROGRAPHS 9

Factors affecting Hydrograph – Baseflow separation – Unit hydrograph – Derivation of unit hydrograph – S curve hydrograph – Unit hydrograph of different durations - Synthetic Unit Hydrograph

MODULE IV RUNOFF ESTIMATION 7

Runoff calculation using empirical formulae- SCS curve number method-Rational formulae – Hydrograph methods – Introduction to rainfall runoff modelling- Application of GIS in rainfall runoff analysis- case studies

MODULE V FLOODS AND FLOOD ROUTING 7

Flood frequency studies – Recurrence interval – Gumbel’s method – Flood routing – Reservoir flood routing – Muskingum’s Channel Routing – Flood control

MODULE VI GROUND WATER HYDROLOGY 7

Types of aquifers – Darcy’s law – Dupuit’s assumptions – Confined Aquifer – Unconfined Aquifer – aquifer yield- Recuperation test – Transmissibility – Specific

capacity – Pumping test – Steady flow analysis only.

Total Hours : 45

TEXT BOOKS:

1. Subramanya, K., “Engineering Hydrology”, Tata McGraw-Hill Publishing Co. Ltd., New Delhi, 2000.
2. Raghunath, H.M., “Hydrology – Principles, Analysis and Design", New Age International (P) Ltd., New Delhi, 2006.
3. Jayarami Reddy, P., "Hydrology”, Laxmi Publications (P) Ltd., New Delhi, 2005.

REFERENCES:

1. Chow, V.T. and Maidment, “Hydrology for Engineers”, McGraw-Hill Inc. Ltd., New York, 2000.
2. Singh, V.P., “Hydrology”, McGraw-Hill Inc. Ltd., New York, 2000.

OUTCOMES:

At the end of the course, the student will be able to

- explain the hydrologic cycle, classify the types of precipitation, measure rainfall by spatial and temporal methods, relate intensity, duration and frequency of rainfall and estimate probable maximum precipitation
- estimate the losses from precipitation and compute the effective rainfall.
- discuss the factors affecting hydrograph, describe the base flow separation, derive unit hydrograph, S- curve hydrograph and unit hydrograph of different durations.
- estimate runoff using empirical formulae SCS curve number method, explain rainfall runoff modeling and apply GIS in rainfall runoff analysis
- discuss flood frequency studies, describe Gumbel’s method, identify the flood routing and reservoir flood routing methods and suggest flood control measures
- classify aquifers, derive Darcy’s law, explain Dupuit’s assumptions, compare confined and unconfined aquifer, demonstrate recurption test and pumping test procedure for steady state flow

CECX11 AIR POLLUTION AND CONTROL

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge about: The sources of air pollution and their effects on living and non-living environment.
- Analysis of various sampling methods and analysis of air pollutants
- Simulation techniques of transport and transformation of the air pollutants with the help of dispersion models.
- Use the various devices or equipments and the other techniques available for control of air pollutants.
- Categorization of air pollution control methods through legislation and regulation acts.
- To describe the sources, characteristics, effects and control of noise pollution.

MODULE I SOURCES AND EFFECTS OF AIR POLLUTANTS 8

Classification of air pollutants – Particulates and gaseous pollutants – Sources of air pollution – Source inventory – Effects of air pollution on human beings, materials, vegetation, animals – global warming-ozone layer depletion.

MODULE II SAMPLING & ANALYSIS 7

Sampling and Analysis – Basic Principles of Sampling – Source and ambient sampling – Analysis of pollutants – Principles

MODULE III DISPERSION OF POLLUTANTS 8

Elements of atmosphere – Meteorological factors – Wind roses – Lapse rate - Atmospheric stability and turbulence – Plume rise – Dispersion of pollutants – Dispersion models – Applications.

MODULE IV AIR POLLUTION CONTROL 8

Concepts of air pollution control – Principles and design of control measures – Particulates control by gravitational, centrifugal, filtration, scrubbing, electrostatic precipitation – Selection criteria for equipment - gaseous pollutant control by adsorption, absorption, condensation, combustion – Pollution control for specific major industries

MODULE V AIR QUALITY MANAGEMENT 7

Air quality standards – Air quality monitoring – Preventive measures - Air pollution

control efforts – Zoning – Town planning regulation of new industries – Legislation and enforcement – Environmental Impact Assessment and Air quality.

MODULE VI NOISE POLLUTION 7

Sources of noise pollution – Effects – Assessment - Standards – Control methods – Prevention.

Total Hours : 45

TEXT BOOKS:

1. Anjaneyulu, D., “Air Pollution and Control Technologies”, Allied Publishers, Mumbai, 2002
2. Rao, C.S., “Environmental Pollution Control Engineering”, Wiley Eastern Ltd., New Delhi, 2003
3. Rao, M.N., and Rao, H.V.N., “Air Pollution Control”, Tata-McGraw-Hill, New Delhi, 1996

REFERENCES:

1. Mahajan, S.P., “Pollution Control in Process Industries”, Tata McGraw-Hill Publishing Company, New Delhi, 1991
2. Peavy, S.W., Rowe, D.R. and Tchobanoglous, G., “Environmental Engineering”, McGraw Hill, New Delhi, 1985

OUTCOMES:

At the end of the course, students will be able to

- Classify the sources of air pollution and list its effects on living and non-living environment.
- Sample and analyse the various air pollutants
- Demonstrate the procedure for simulation of transport of air polluatnts with the help of dispersion models.
- Identify and describe features of devices or equipments available for control of air pollutants
- Suggest air pollution control methods through legislation and regulations
- Describe sources, characteristics, effects and control of noise pollution

CECX12 TRAFFIC ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart knowledge on the basic concepts, design principles and management techniques of highway traffic

MODULE I INTRODUCTION **7**

Significance and scope, Characteristics of Vehicles and Road Users, Skid Resistance and Braking Efficiency (Problems), Components of Traffic Engineering-Road, Traffic and Land Use Characteristics

MODULE II TRAFFIC SURVEYS AND ANALYSIS **7**

Surveys and Analysis – Volume survey and its characteristics – Capacity-Speed and Delays- Origin and Destination studies

MODULE III TRAFFIC CONTROL **8**

Traffic Signs, Road Markings, Design of Traffic Signals and Signal Co-ordination (Problems), Traffic control Aids and Street Furniture, Computer Applications in Signal Design

MODULE IV DESIGN OF GEOMETRIC INTERSECTIONS **8**

Conflicts at Intersections, Classification of Intersections at Grade, Grade Separators (Concepts only), Principles of Intersection Design, Elements of Intersection Design, Channelization and Rotary Design (Problem)

MODULE V TRAFFIC MANAGEMENT **8**

Traffic Management- Traffic System Management (TSM) and Travel Demand Management (TDM), Restrictions on Turning Movements, One-way Streets, Traffic Segregation, Traffic Calming, Tidal Flow Operations, Exclusive Bus Lanes - Introduction to Intelligence Transport System (ITS)

MODULE VI TRAFFIC STUDIES **7**

General outline of traffic studies - Parking studies – Accidental studies – Congestion studies –Fuel conception and emission studies.

Total Hours : 45

TEXT BOOKS:

1. Khanna, K. and Justo, C.E.G., “Highway Engineering”, Khanna Publishers, Roorkee, 2001
2. Kadiyali, L.R., “Traffic Engineering and Transport Planning”, Khanna Technical Publications, New Delhi, 2000.

REFERENCES:

1. Subhasg C. Saxena, “A Course in Traffic Planning and Design”, Dhanpat Rai Publications, New Delhi, 2001.

OUTCOMES:

At the end of the course, the students will be able to

- calculate the braking efficiency and skid resistance
- prepare traffic study report
- design the traffic signals and traffic simulation models.
- identify the intersection elements and design a rotary intersection
- regulate traffic of particular area by means of modern methods.
- execute traffic studies like traffic congestion, fuel emission.

CECX13 SOLID WASTE MANAGEMENT L T P C
3 0 0 3

OBJECTIVE:

- To impart knowledge on the sources, characterization, processing and disposal of municipal solid waste.

MODULE I SOURCES AND TYPES OF MUNICIPAL SOLID WASTES 7

Sources and types of solid wastes – Quantity – factors affecting generation of solid wastes; characteristics – methods of sampling and characterization

MODULE II EFFECTS OF SOLID WASTE DISPOSAL 7

Effects of improper disposal of solid wastes – public health effects.Principle of solid waste management – social & economic aspects; Public awareness; Role of NGOs; Legislation

MODULE III ON-SITE STORAGE & HANDLING 7

On-site storage methods – materials used for containers – on-site segregation of solid wastes – public health & economic aspects of storage – options under Indian conditions – Critical Evaluation of Options.

MODULE IV COLLECTION AND TRANSFER 8

Methods of Collection – types of vehicles – Manpower requirement – collection routes; transfer stations – selection of location, operation & maintenance; options under Indian conditions.

MODULE V OFF-SITE PROCESSING 8

Processing techniques and Equipment; Resource recovery from solid wastes– composting, incineration, Pyrolysis - options under Indian conditions.

MODULE VI LANDFILLS 8

Dumping of solid waste; sanitary landfills – site selection, design and operation of sanitary landfills – Leachate collection & treatment.

Total Hours : 45

TEXT BOOKS:

1. George Tchobanoglous, “Integrated Solid Waste Management”, McGraw-Hill

Publishers, New Delhi, 1993
2. Bilitewski, B., HardHe, G., Marek, K., Weissbach, A., and Boeddicker, H., “Waste Management”, Springer, 1994

REFERENCES:

1. CPHEED, "Manual on Municipal Solid Waste Management", Central Public Health and Environmental Engineering Organisation, New Delhi, 2000
2. Landreth, R.E. and Rebers, P.A., “Municipal Solid Wastes – Problems and Solutions”, Lewis Publishers, New York, 1997

OUTCOMES:

At the end of the course, the student will be able to

- explain the sources and types of solid wastes and summarise the methods of sampling and characterization.
- describe the effects of improper disposal of solid wastes and illustrate the role of NGOs and legislation in creating public awareness.
- examine the on-site storage methods and materials used for containers, prepare critical evaluation of options fort handling of solid waste.
- analyse the methods of collection, types of vehicles, manpower requirement, collection routes and select the location, operation and maintenance of solid waste facility.
- compile processing techniques and equipment, resource recovery from wastes and describe the composting, incineration and pyrolysis methods.
- discuss the dumping of solid waste and design sanitary landfills with leachate collection and treatment facility.

CECX14 ROCK MECHANICS L T P C
2 0 0 2

OBJECTIVES:

- To familiarize the students with general terminology of rock mechanics and its applications in Civil engineering aspects.
- To impart knowledge on the properties of rocks and its classification.
- To enable the students to analyze the strength of the rocks.
- To provide an understanding on slope stability and slope failure in rocks.

MODULE I INTRODUCTION 6

Introduction on the rock mechanics - Relation with Engineering Geology and Soil Mechanics -Importance and application of the rock mechanics to Civil Engineering

MODULE II CLASSIFICATION AND PROPERTIES OF ROCKS 8

Rocks of peninsular India and the Himalayas - Index properties and classification of rock masses, competent and incompetent rock - value of RMR and ratings in field estimations

MODULE III STRENGTH CRITERIA OF ROCKS 9

Behaviour of rock under hydrostatic compression and deviatric loading - Models of rock failure - planes of weakness and joint characteristics - joint testing, Mohr - Coulomb failure criterion and tension cut-off. Hoek and Brown Strength criteria for rocks with discontinuity sets

MODULE IV SLOPE STABILITY OF ROCKS 7

Rock slopes - role of discontinuities in slope failure, slope analysis and factor of safety - remedial measures for critical slopes - case studies

Total Hours : 30

TEXT BOOKS:

1. Goodman, R.E., Introduction to rock mechanics, John Willey and Sons, 1989
2. Hudson, A. and Harrison, P., Engineering Rock mechanics – An introduction to the principles, Pergamon publications, 1997

REFERENCES:

1. Hoek, E and Bray, J., Rock slope Engineering, Institute of Mining and

Metallurgy, U.K. 1981.
2. Hoek, E and Brown, E.T., Underground Excavations in Rock, Institute of Mining and Metallurgy, U.K. 1995.
3. Obert, L. and Duvall, W., Rock Mechanics and the Design of structures in Rock, John Wiley, 1967.
4. Bazant, Z.P., Mechanics of Geomaterials Rocks, Concrete and Soil, John Wiley and Sons, Chichester, 1985.
5. Wittke, W., Rock Mechanics. Theory and Applications with case Histories, Springerverlag, Berlin, 1990.
6. Waltham, T, Foundations of Engineering Geology, Second Edition, Spon Press, Taylor & Francis Group, London and New York, 2002.

OUTCOMES:

At the end of the course, the student will be able to

- To classify the rocks for engineering purpose based on the properties and behaviour of rock masses.
- To apply the knowledge of rock mechanics in civil engineering field.
- To understand stress-strain characteristics, failure criteria, and influence of insitu stress in the stability of various structures.
- To analyze the stability of rock slope by different methods.

CECX15	FORM WORK	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To impart knowledge on
- Planning of formwork, plant and site equipments required for formwork.
- Design and erection of forms for various elements such as slabs, beams, columns and walls.

MODULE I **PLANNING, SITE EQUIPMENT & PLANT FOR FORM WORK** **8**

Introduction - forms for foundations, columns, beams and walls - general objectives of formwork building - planning for safety - development of a basic system – key areas of cost reduction - Overall planning - detailed planning - labour requirement - costing - planning crane arrangements - site layout plan -transporting plant - formwork accessories.

MODULE II **MATERIALS & ACCESSORIES** **7**

Lumber - types - finish - sheathing boards working stresses - repetitive member stress - plywood - types and grades - jointing boarding - textured surfaces and strength - reconstituted wood - steel - aluminum - hardware and fasteners – nails in plywood

MODULE III **DESIGN OF FORMS AND SHORES** **8**

Basic simplification - beam formulae - allowable stresses - deflection, bending - lateral stability - shear, bearing - design of wall, slab, beam and column forms - simple wood stresses - slenderness ratio - allowable load vs length behaviour of wood shores - form lining design tables for wall, slab and column formwork

MODULE IV **BUILDING AND ERECTING THE FORM WORK** **7**

Carpentry shop and job mill - forms for footings – wall, column, sloped, strap and stepped footing - slab form systems - sky deck and multiflex - standard table module forms - assembly sequence cycling with lifting fork - moving with table trolley and table prop - Various causes of failures.

Total Hours –30

TEXT BOOKS:

1. Robert L. Peurifoy and Garold D. Oberlender, Formwork For Concrete Structures,

McGraw - Hill, 1996.

REFERENCES:

1. Austin, C.K., Formwork for Concrete, Cleaver -Hume Press Ltd., London,1996.
2. Hurd, M.K., Formwork for Concrete, Special Publication No.4, American Concrete Institute, Detroit, 1996.
3. Michael P. Hurst, Construction Press, London and New York, 2003.

OUTCOMES:

At the end of the course, students will be able to

- plan for the formwork accessories.
- identify the required materials and their properties of the formwork.
- design and construct formwork for various structural elements.
- built and erect formwork in different conditions.

CECX16 INDUSTRIAL WASTE WATER TREATMENT

L	T	P	C
2	0	0	2

OBJECTIVE:

To impart appropriate knowledge on waste audit, waste water treatment techniques, waste water reuse and methods of industrial waste water treatment.

MODULE I INTRODUCTION **6**

Sources and types of industrial wastewater - Environmental impacts - Regulatory requirements - generation rates - characterization - Toxicity and Bioassay tests

MODULE II WASTE AUDIT **6**

Prevention Vs Control of Industrial Pollution- Source reduction techniques - Waste Audit- Evaluation of pollution prevention options.

MODULE III WASTEWATER TREATMENT TECHNIQUES **9**

Waste minimization - Equalization - Neutralization - Oil separation – Flotation - Precipitation - Heavy metal Removal - adsorption -Sequencing batch reactors - High Rate reactors - Chemical oxidation - Ozonation - Photocatalysis - Wet Air Oxidation - Evaporation - Nutrient removal – Zero effluent discharge systems.

MODULE IV TREATMENT FOR WASTEWATER FOR SPECIFIC INDUSTRIES **9**

Industrial manufacturing process description, wastewater characteristics, source reduction options and waste treatment flow sheet for textiles - Tanneries - Pulp and paper - metal finishing - Petroleum Refining - Pharmaceuticals - Sugar and Distilleries - Food Processing - fertilizers - Thermal Power Plants and Industrial Estates

Total Hours : 30

TEXT BOOKS:

1. Eckenfelder, W.W., “Industrial Water Pollution Control”, McGraw-Hill, New Delhi, 1999.
2. Arceivala, S.J., “Wastewater Treatment for Pollution Control”, McGraw-Hill, New Delhi, 1998.

REFERENCES:

1. Frank Woodard, "Industrial Waste Treatment Handbook", Butterworth

Heinemann, New Delhi, 2001.
2. Metcalf and Eddy, “Wastewater Engineering: Treatment and Reuse,” McGraw – Hill, New Delhi, 2002.

OUTCOMES:

At the end of the course, the students will able to

- Identify the various industrial wastewater sources and will be able to list the statutory requirements.
- Perform the waste audit based on the pollution generated and reduced.
- List the various wastewater treatment techniques and its applications.
- Identify the wastewater treatment method based on different industrial effluent.

CECX17 HAZARDOUS WASTE MANAGEMENT L T P C
2 0 0 2

OBJECTIVES:

- To offer sufficient knowledge on various sources and characterization of municipal solid wastes.
- To give an exposure to the on-site and off-site processing of municipal solid waste including disposal methods.

MODULE I INTRODUCTION 6

Hazardous substances and Hazardous wastes, sources of generation, Composition, physical form; quantity and quality of hazardous wastes – Legal and Administrative requirements and aspects for management, regulations for pollution control administrative liability

MODULE II WASTE COLLECTION 6

Waste Collection, segregation at source, on and off site collection, pre transport Requirements, safety in handling, transportation, storage, treatment, disposal technologies - Waste minimization physical and chemical and biological disposal treatment technologies

MODULE III LAND DISPOSAL AND THERMAL TREATMENT OF WASTE 9

Creation of treatment, storage and disposal facilities (TSDF) - Site selection for creating TSDF landfill, standards and guidelines for accepting a waste for land disposal, leachate management - Thermal treatment incinerability tests, different types of incinerators and their applicability for hazardous waste management - Biological treatment of facilities.

MODULE IV RECLAMATION AND REMEDIATION 8

Reclamation of hazardous wastes - Management of gaseous emissions/air pollutants generated during treatment and disposal operations of hazardous wastes- Remediation of hazardous wastes – Types – Stabilisation, Solidification, Myco remediation- Case studies.

Total Hours : 30

TEXT BOOKS:

1. Charles Wentz, A., “Hazardous Waste Management", 2nd Edition, McGraw Hill

International, London, 1995.
2. StanleyE. Manahan, “Hazardous Waste Chemistry, Toxicology and Treatment”, Lewis Publishers, Chelsea, 1990

REFERENCES:

1. Michael D. Lagrega, Phillip L. Buckingham and Jeffrey C. Evans., “Hazardous Waste Management” 2nd Edition, McGraw Hill International, London, 1994.
2. Rules and Regulation of Hazardous substance management”., Ministry of Environment, Forest and Climate change.

OUTCOMES:

At the end of the course, the students will able to

- Identify the various sources of hazardous waste and will be able to explain about its legal provision.
- Describe about the different steps involved in waste collection and treatment process.
- Specify the basic requirements needed for land disposal and its management techniques.
- Assess the various treatment methods of hazardous waste and air pollutants and summarize the various remediation techniques based on case studies

CECX18 ENVIRONMENTAL GEOTECHNOLOGY

L	T	P	C
2	0	0	2

OBJECTIVES:

- To impart knowledge on geotechnical engineering problems associated with soil contamination, safe disposal of wastes and remediation of contaminated soils.

MODULE I INTRODUCTION 7

Introduction to Environmental Geo techniques-Environmental cycles and their interaction-Soil water environment interaction relating to geotechnical problems-Sources, production and classification of wastes. Environmental regulations in India

MODULE II SITE SELECTION AND METHOD OF DISPOSAL 8

Criteria for selection of sites for waste disposal facilities-parameters controlling the selection of wastes disposal sites-current practices for waste disposal, subsurface disposal techniques-Passive contaminant systems- Leachate contamination-applications of geo membrane and other techniques in solid and liquid waste disposal-rigid or flexible membrane liners

MODULE III HYDROLOGY OF CONTAMINANTS 8

Transport phenomena in saturated and partially saturated porous media contaminant migration and contaminant hydrology-Hydrological design for ground water pollution control-Ground water pollution downstream for landfills - pollution of aquifers by mining and liquid wastes-protection of aquifers.

MODULE IV HAZARDOUS WASTE MANAGEMENT& REMEDIAL MEASURES 7

Hazardous waste control and storage system-Stabilization - Processes and Environmentally safe disposal of solid and liquid wastes - Ground modification techniques in waste fill, Remedial measures for contaminated grounds -Remediation technology - Bio-remediation

Total Hours : 30

TEXT BOOKS:

1. Wentz, C.A., " Hazardous Waste Management ", McGraw Hill, Singapore, 1989.

2. Daniel, B.E., " Geotechnical Practice for Waste disposal ", Chapman and Hall, London, 1997.
3. Ott, W.R., "Environmental Indices -Theory and Practice", Ann Arbor Science, 1978.
4. Row R.K, " Geotechnical and Geoenvironmental engineering Hand Book" Kluwer academic publications, London, 2000.
5. Young, R.N., "Geoenvironmental Engineering confaminated soils, pollutants fate and mitigation CRC press, New York, 2001.
6. Hillel. D., "Introduction to Environemental soil physics" Academic press, New York, 2003.

REFERENCES:

1. ASTM 874 – 1985, "Hydraulic Barrier in Soil and Rock", American Society for Testing and Materials, U.S.A
2. Westlake, K., "Landfill Waste Pollution and Control ", Albion Publishing Ltd., England, 1995.
3. Lagrega, M.D., Buckingham, P.L. and Evans, J.C., " Hazardous Waste Management ", McGraw Hill Inc., Singapore, 1994.

OUTCOMES:

At the end of the course, the student will be able to

- Identify the soil water interactions and the problems associated with the release of the wastes into soil water environment and Implement the various environmental regulations
- Select appropriate and safe sites and methods of disposal of wastes by analyzing the various parameters in the soil water environment
- Model the transport of contaminants in the soil water environment by the applying the principles of hydrology
- Apply the safe techniques of control and storage systems for hazardous waste and also Suggest remediation techniques in soil water environment

CECX19 DURABILITY PROPERTIES OF CONCRETE

L	T	P	C
2	0	0	2

OBJECTIVES:

- To impart knowledge of various deteriorating properties of reinforced concrete and assess the amount of deterioration.
- To impart knowledge on enhancing the durability of concrete

MODULE I DURABILITY PROPERTIES OF CONCRETE 9

General - Chemical attack of concrete - Corrosion of steel rebars - Carbonation - Freeze-thaw resistance - Fatigue - Abrasion resistance – Creep and Shrinkage - Transport of fluids: diffusion, absorption and permeability – Corrosion of reinforced concrete

MODULE II DURABILITY TESTS FOR CONCRETE 7

Tests related to durability properties - water absorption, permeability, sorptivity, resistance to chemical attack, freeze and thaw resistance, accelerated corrosion test, RCPT test, half-cell potential test and macro-cell corrosion test

MODULE III DETERIORATION OF CONCRETE 8

Erosion and Cracking Of Concrete - Deteriorating mechanisms: sulphate attack, alkali aggregate reaction, corrosion of steel reinforcement - mechanism, causes and consequences.

MODULE IV CONCRETES WITH PARTICULAR PROPERTIES 6

Durability of high performance concrete, fly ash concrete, concrete containing silica fume, GGBS and metakaolin, light weight concrete, high strength concrete

Total Hours : 30

TEXT BOOKS:

1. Neville.A.M., Properties of Concrete, 5th Edition, Pearson Education Limited, 2013.
2. Gambhir. M.L., Concrete Technology, McGraw Hill Education, 2006.
3. Shetty M.S., Concrete Technology, S.Chand and Company Ltd. Delhi, 2003.

REFERENCES:

1. Rendon Diaz Miron, Luis Emilio, Concrete Durability : Cementitious Materials and Reinforced Concrete Properties, Behavior and Corrosion Resistance, Springer International Publication
2. Santhakumar.A.R. ;"Concrete Technology",Oxford University Press, 2007
3. Gupta.B.L., Amit Gupta, "Concrete Technology, Jain Book Agency, 2010
4. P. Kumar Mehta and Paulo J. M. Monteiro, "Concrete, Microstructure, Properties and Materials" Indian Concrete Institute, Chennai

OUTCOMES:

At the end of the course, the student will be able to

- Identify the main factors affecting concrete durability
- Assess the durability of concrete by conducting different tests
- Identify the concrete deterioration mechanisms and causes
- Assess the durability properties of peculiar concretes

CECX 20 INDUSTRIAL HEALTH AND SAFETY

L	T	P	C
2	0	0	2

OBJECTIVE:

To make students conversant with the

- Health hazards and the safety measures to be followed in the industrial environment.
- Methods of prevention and control of Health diseases, accidents/emergencies and other hazards from the workplace.

MODULE I INTRODUCTION **7**

Need for developing Environment, Health and Safety systems in workplaces - Accident Case Studies - Status and relationship of Acts - Regulations and Codes of Practice - Role of trade union safety representatives. International initiatives - Ergonomics and workplace.

MODULE II OCCUPATIONAL HEALTH AND HYGIENE **8**

Definition of the term occupational health and hygiene - Categories of health hazards – Exposure pathways and human responses to hazardous and toxic substances - Advantages and limitations of environmental monitoring and occupational exposure limits - Hierarchy of control measures for occupational health risks - Role of personal protective equipment

MODULE III WORKPLACE SAFETY AND SAFETY SYSTEMS **7**

Features of Satisfactory and Safe design of work premises – good housekeeping - lighting and colour, Ventilation and Heat Control – Electrical Safety – Fire Safety – Safe Systems of work for manual handling operations – Machine guarding – Working at different levels – Process and System Safety.

MODULE IV ENVIRONMENTAL HEALTH AND SAFETY MANAGEMENT **8**

Concept of Environmental Health and Safety Management – Elements of Environmental Health and Safety Management Policy and methods of its effective implementation and review – Elements of Management Principles – Education and Training – Employee Participation.

Total Hours : 30

TEXT BOOKS:

1. Environmental and Health and Safety Management by Nicholas P.Cheremisinoff and Madelyn L. Graffia, William Andrew Inc. NY, 1995
2. Fundamentals of Industrial Safety and Health by Dr.K.U.Mistry, Siddharth Prakashan, 2012.
3. The Facility Manager's Guide to Environmental Health and Safety by Brian Gallant, Government Inst Publ., 2007.

REFERENCES:

1. Effective Environmental, Health, and Safety Management Using the Team Approach by Bill.
2. Taylor, Culinary and Hospitality Industry Publications Services, 2005.

OUTCOMES:

At the end of this course, the students will be able to

- Outline the common work-related diseases and accidents in occupational areas.
- Comprehend the roles that a community health practitioners play in an occupational setting to ensure the protection, promotion and maintenance of the health of the employee,
- Identify the potential risks of waste generated and analyze the threats to human and environment.
- Manage the health and safety of the employees in the working environment and incorporate various methods of health and safety.

CECX21 URBAN DESIGN

L	T	P	C
2	0	0	2

OBJECTIVES:

- To understand the scope and nature of urban design as a discipline.
- To introduce the components of a city and their interdependent roles.
- To learn to interpret the city in different ways and layers.
- To have a broad knowledge of various techniques to read a city

MODULE I INTRODUCTION TO URBAN DESIGN 7

Introduction to cities, Components of urban space such as blocks, density, neighborhood, Streets etc and their interdependencies - outline of issues/ aspects of urban space and Articulation of need for urban design - scope and objectives of urban design as a discipline.

MODULE II TRENDS IN URBAN DESIGN 7

Trend of Urbanization at International, National, State and District levels. National and regional Development Policies and Strategies – Urbanization, Housing and Transportation sustainable Urban Development- Definition and Principles.

MODULE III PLANNING PROCESS 8

Types of Urban and Regional Plans, Stages in the Planning Process – Delineation of Planning Areas, Goals and Objectives of Plans, Surveys and Analysis, Formulation of Plans, Evaluation of Alternative Plans, Plan Implementation

MODULE IV URBAN ANALYSIS 8

Understanding various tools through which an urban setting could be perceived - maps, sketches, photo documentations, reading, data collections, transects etc.. The various aspects of urban growth -. in Asian cities, city limits/boundaries, urban structure, urban architecture, typologies as well as infrastructural planning, The critical role that transportation plays in structuring the city will also be examined.

Total Hours : 30

TEXT BOOKS:

1. Rithchie. A, “Sustainable Urban Design: An Environmental Approach”, Taylor &

Francis, 2000.
2. “Time Saver Standards for Urban Design”, Donald Natson, McGraw Hill, 2003
3. A.E.J. Morris, “History of Urban Form before the Industrial Revolution”, Prentice Michelle Provoost et al., Dutchtown, NAI Publishers, Rotterdam, 1999.
4. Gallian B Arthur, Simon Eisner, The Urban Pattern, City Planning and Design, Affiliated Press Pvt. Ltd., New Delhi, 1995.
5. Margaret Roberts, An Introduction to Town Planning and Planning Techniques, Hutchinson, London, 1990.

REFERENCES:

1. Jonathan Barnett, “An Introduction to Urban Design”, Harper Row, 1982.
2. Gosling and Maitland, “Urban Design”, St. Martin’s Press, 1984.
3. Malcolm Moor, “Urban Design Futures”, Routledge, 2006.
4. Geoffrey Broadbent, “Emerging Concepts in Urban Space Design”, Taylor & Francis, 2003.

OUTCOMES:

- The students understood the role of Urban design as a discipline,
- Its role in understanding and interpreting a city.
- They also looked at addressing urban design issues in terms of awareness creation as well as with possible ways to address them.
- The student will be able to perform urban planning and design as per zoning rules and regulation

CECX22 WATER PROOFING OF R.C.C STRUCTURES

L	T	P	C
1	0	0	1

OBJECTIVE:

- To expose students to various materials and techniques for waterproofing building elements.

MODULE I INTRODUCTION **7**

Structural waterproofing industry - Background and source of a waterproofing design(BS8102:2009), water in the ground - natural and perched water tables, soil types and ground conditions, sources of water entering a structure, dampness in basements - sources and types.

MODULE II TYPES OF WATERPROOFING **8**

Effect on water movement on building components, Types of waterproofing- Barrier forms, integral forms and cavity forms – Materials used, preparation, application and aftercare of barrier, integral and drained cavity forms of waterproofing.

Total Hours : 15

TEXT BOOKS:

1. Santha Kumar, A.R., “Concrete Technology”, Oxford University Press, New Delhi, 2007.
2. Philip Perkins, H., "Repair, Protection and Waterproofing of Concrete Structures", Elsevier Applied Science Publishers, 2001.
3. Ransom, W.H., "Building Failures - Diagnosis and Avoidnce", E.& F.N. Spon Publishers, 2002.

REFERENCES:

1. Michael T. Kubal, "Waterproofing the Building Envelope", Mc-Graw Hill Inc., New Delhi, second edition, 2008.

OUTCOMES:

At the end of the course, the students will be able to

- predict the causes of dampness in structures.
- identify the suitable techniques and materials for waterproofing.

CECX23	CONSTRUCTION CHEMICALS FOR REPAIR WORKS	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To impart knowledge to students on various chemicals used in construction industry.
- To give exposure to the application of chemicals for different repair works.

MODULE I CHEMICAL ADMIXTURES 8

Types of chemical admixtures - air entrainers - water reducers - set retarders - set accelerators – super plasticizers – Applications of admixtures for repair works - Grouts and grouting compounds – its applications.

MODULE II PROTECTIVE COATINGS AND MEMBRANES 7

Floor hardener and Coatings – epoxy and cement base mortars, anticorrosive protective coatings for rebar, micro concrete etc. – Applications.

Total Hours : 15

TEXT BOOKS:

1. Santha Kumar, A.R., “Concrete Technology”, Oxford University Press, New Delhi, 2007.
2. Shetty, M.S., “Concrete Technology – Theory and Practice”, S. Chand & Company Limited, New Delhi, 2008.

REFERENCES:

1. Philip Perkins, H., "Repair, Protection and Waterproofing of Concrete Structures", Elsevier Applied Science Publishers, 2001
2. Yoshihiko Ohama, “Hand Book of Polymer – Modified Concrete and Mortars”, Noyes Publications, U.K.,1995

OUTCOMES:

At the end of course , the students will be able to

- Classify the construction chemicals with their end use and its application procedures.
- Identify appropriate chemical for the intended repair works.

CECX24 GEOSYNTHETICS

L	T	P	C
1	0	0	1

OBJECTIVE:

- To provide an understanding on various types of Geosynthethic materials.
- To impart knowledge on the properties of Geosythetics and various applications of Geosynthetics materials.

MODULE I AN OVERVIEW **5**

Historical Development – Types of Geosynthetics – Geotextiles – Geogrids- Geonets – Geomembranes – Geocomposites – Functions – Reinforcement – Separation – Filtration – Drainage – Barrier Functions.

MODULE II PROPERTIES AND APPLICATIONS OF GEOSYNTHETICS 10

Physical properties : Mass per unit area – Thickness – Specific gravity; Hydraulic properties :Apparent open size – Permittivity – Transmissivity. Mechanical Properties : Uniaxial Tensile Strength – Burst and Puncture Strength – Soil Geosynthetic friction tests - Use of geosynthetics for filtration and drainage – Use of geosynthetics in roads – Improvement of bearing capacity – Geosynthetics in landfills.

Total Hours : 15

TEXT BOOKS:

1. G. Venkatappa Rao and G.V.S. Suryanarayana Raju, “Engineering with Geosynthetics”, Tata McGraw Hill, New Delhi, 1990.
2. Robert M. Koerner, “Designing with Geosynthetics “, Prentice Hall, New Jersey, USA, 2005.

REFERENCES:

1. Sivakumar Babu, G.L., An Introduction to Soil Reinforcement and Geosynthetics, University Press (India), Pvt. Ltd., Hyderabad, 2006.
2. Jewell, R.A., Soil Reinforcement with Geotextile, CIRIA, London, 1996.
3. Bazant, Z.P., Mechanics of Geomaterials Rocks, Concrete and Soil, John Wiley and Sons, Chichester, 1985.

OUTCOMES:

At the end of this course, the student will be able

- To identify different types of Geosynthetics required based on their functions.
- To analyze the properties of Geosynthetics by lab testing method and its applications for various functions in Civil engineering.

SEMESTER VI

CECX30	**DYNAMICS OF STRUCTURES**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVE:

- To impart knowledge about theory of vibrations and vibration parameters to analyse the dynamic forces caused by an earthquake.
- To introduce the design of buildings for blast and impact forces as per BIS codes of practice.
-

MODULE I SINGLE DEGREE OF FREEDOM SYSTEMS 8

Formulation of equations of motion by different methods, Free and forced vibrations, Effect of damping.

MODULE II MULTI DEGREE OF FREEDOM SYSTEMS 8

Formulation of structure property matrices, Eigen value problems, Mode shapes and orthonormality of modes, Approximate methods of extraction of Eigen values.

MODULE III CONTINUOUS SYSTEMS 8

Modeling - free and forced vibration of bars and beams. Rayleigh –Ritz method –Formulation using Conservation of Energy –Formulation using Virtual Work

MODULE IV DIRECT INTEGRATION METHODS FOR DYNAMIC RESPONSE 8

Damping in MDOF systems, Nonlinear MDOF systems, Wilson Theta method, Newmark beta method, step-by-step numerical integration techniques.

MODULE V DESIGN AGAINST BLAST 7

Characteristics of internal and external blast - Pressure distribution on buildings above ground due to external blast - underground explosion - Design of buildings for blast as per BIS codes of practice.

MODULE V I DESIGN AGAINST IMPACT 6

Impact and impulse loads - underground explosion - Design of buildings for impact as per BIS codes of practice.

Total Hours : 45

REFERENCES:

1. Clough R.W, and Penzien J, Dynamics of Structures, Second Edition, McGraw-Hill International Edition, 1996.
2. Mario Paz, Structural Dynamics – Theory and Computations, Third Edition, CBS Publishers, 1990.
3. Roy R Craig, Structural Dynamics – An Introduction to Computer Methods, John Wiley and Sons, 2005.
4. Humar J. L., Dynamics of Structures, Prentice Hall, 1990.
5. Smith J.W., Vibration of Structures – Application in Civil Engineering Design, Chapmat Hill 1988.
6. Dowling, C.H., Blast vibration - Monitoring and Control, Prentice Hall Inc., Englewood Cliffs, 1985.

OUTCOME:

At the end of the course, the students will be able to

- develop the equation of motion for single degree of freedom
- analyze the dynamic response of multi degree of freedom systems
- analyze the free and forced vibration of bars and beams
- find the dynamic response of structures using numerical integration procedure
- design the buildings for blast forces using BIS codes of practice.
- design the buildings for impact forces using BIS codes of practice.

CECX31 ADVANCED CONCRETE DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To acquaint with the limit state of serviceability and design of various types of retaining walls.
- To enable students to design water tanks and flat slabs.
- To give an exposure on analysis of multistory frames and yield line theory.

MODULE I SERVICEABILITY LIMIT STATES : DEFLECTION AND CRACKING **8**

Limit state of Deflection - factors affecting deflection - Short and long term deflections- control of deflection - computation of deflection as per IS code – Limit state of Cracking – reasons and effects of cracking - limiting criteria on cracking - Estimation of crack width.

MODULE II RETAINING WALLS **8**

Types of Retaining walls - Design of cantilever and counterfort retaining walls.

MODULE III WATER TANKS **8**

Underground rectangular tanks - Overhead circular and rectangular tanks – Domes for water tanks - Design of staging and foundations.

MODULE IV BUILDING FRAMES **7**

Analysis of multistores frames-method of substitute frames –Analysis for vertical loads- Analysis of frames subjected to horizontal forces-portal method & cantilever method.

MODULE V FLAT SLABS **7**

Types of flat slabs – Direct design method - Equivalent frame method – Shear in flat slab – Design of flat slab

MODULE VI YIELD LINE THEORY **7**

Introduction to yield line theory – Yield line patterns – Characteristic features of yield lines – Load on slabs – Yield line analysis by virtual work method to square, rectangular, circular and triangular slabs.

Total Hours : 45

TEXT BOOKS:

1. Krishna Raju, N., "Design of RC Structures", CBS Publishers and Distributors, New Delhi, 2008.
2. Unikrishnana Pillai, S. and Devdas menon, “Reinforced Concrete Design” Tata McGraw-Hill Book Company, New Delhi, 2003.
3. Varghese, P.C., “Advanced Reinforced Concrete Design”, PHI Learning Ltd., New Delhi, 2005.
4. Krishna Raju, N., “Advanced Reinforced Concrete Design”, CBS Publishers and Distributors, New Delhi, 2008.

[

REFERENCES:

1. Dunham, C.W., “Advanced Reinforced Concrete Design”, McGraw-Hill Book Company, New Delhi, 1964.
2. Punmia, B.C., “Limit State Design of Reinforced Concrete Structures”, Laxmi Publications (P) Limited, New Delhi, 2007.
3. Ram Chandra, "Limit State Design of Concrete Structure", Standard Book House, New Delhi, 2007.

OUTCOMES:

At the end of the course, the students will be able to

- evaluate the deflection and crack width of RC members as per IS codal provisions.
- classify and design the various types of retaining walls.
- categorise the various types of water tanks and design the water tank as per standards.
- analyse the multistory frames for vertical and horizontal loading using various methods.
- employ the Indian code of practice for the design of flat slab.
- establish appropriate approaches to design the slab by yield line theory.

CECX32 REPAIR AND REHABILITATION OF STRUCTURES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge on quality assurance in construction, durability of concrete and deteriorating mechanisms and damage assessment of distressed structures.
- To expose students to various materials and techniques for repairing and rehabilitation of distressed structures with real time case studies and engineered demolition techniques

MODULE I QUALITY ASSURANCE AND DURABILITY 8

Introduction to Repair, Rehabilitation and maintenance.Importance of quality assurance - influencing parameters.Durability of concrete - strength and permeability. Deteriorating mechanisms : Corrosion of steel rebar -effects due to climate, chemical action, wear and erosion

MODULE II DAMAGE ASSESSMENT OF DISTRESSED STRUCTURES 8

Distress in structures, Damage assessment of distressed structures - Importance - Assessment procedure : preliminary inspection, planning, visual inspection, field and laboratory tests, report preparation. Non destructive testing techniques for damage assessment : Rebound hammer, Ultrasonic pulse velocity, half cell potential measurements.

MODULE III MATERIALS FOR DURABILITY AND REPAIR 8

Construction chemicals, Plasticizers, corrosion inhibitors, protective coatings for steel and concrete, rust convertors, fibre reinforced concrete, polymer concrete composites

MODULE IV REPAIR TECHNIQUES 9

Significance of repair material and repair techniques. Repair techniques : Mortar and dry pack, vacuum concrete, Ferrocement, guniting and shotcrete, epoxy injection, grouting, plate bonding, prestressing, FRP jacketing and laminates.

MODULE V REHABILITATION OF DISTRESSED STRUCTURAL ELEMENTS 9e

Procedure for repairing structural and non-structural cracks. Rehabilitation

procedure for : leaky sunken slabs, water tank and terrace slab, dampness in buildings. Case study on : Rehabilitation of distressed over head water tank due to corrosion and rehabilitation of fire damaged structure.

MODULE VI BUILDING DEMOLITION TECHNIQUES 3

Engineered demolition techniques - Water jetting, flame cutting, soundless chemical demolition etc

Total Hours : 45

TEXT BOOKS:

1. Santha Kumar, A.R., “Concrete Technology”, Oxford University Press, New Delhi, 2007
2. Shetty, M.S., “Concrete Technology – Theory and Practice”, S. Chand & Company Limited, New Delhi, 2008.
3. Yoshihiko Ohama, “Hand Book of Polymer – Modified Concrete and Mortars”, Noyes Publications, U.K.,1995.

REFERENCES:

1. Philip Perkins, H., "Repair, Protection and Waterproofing of Concrete Structures", Elsevier Applied Science Publishers, 2002.
2. Ransom, W.H., "Building Failures - Diagnosis and Avoidnce", E.& F.N. Spon Publishers, 2001.
3. Michael T. Kubal, "Waterproofing the Building Envelope", Mc-Graw Hill Inc., New Delhi, 1993.

OUTCOMES:

At the end of the course, the students will be able to

- predict the causes of distress affecting durability in structures.
- assess the damage in distressed structures
- choose the relevant materials for repair and rehabilitation
- identify the suitable techniques for repair and rehabilitation
- describe the processes used for repairing various cases such as leaky sunken slabs, water tank,fire damaged structure etc.
- suggest the suitable techniques that can be used for demolition of building.

CECX33 GROUND IMPROVEMENT TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To familiraze the students with geotechnical problems in soil.
- To understand the varios drainage methods available for dewatering of soil
- To impart knowledge about selection, design, and construction aspects of ground improvement techniques in problematic soils.
- To understand the application of Geo-synthetics in soil reinforcement
- To study the different grouting materials and techniques

To provide understanding on stabilization of soil by chemicals.

MODULE I INTRODUCTION **7**

Role of ground improvement in foundation engineering - methods of ground improvement - Geotechnical problems in alluvial, laterite and black cotton soils - Selection of suitable ground improvement techniques based on soil condition.

MODULE II DRAINAGE AND DEWATERING **8**

Drainage techniques - Well points - Vaccum and electro osmotic methods - Seepage analysis for two dimensional flow-fully and partially penetrating slots in homogenous deposits (Simple cases only).

MODULE III INSITU TREATMENT OF COHESIONLESS AND COHESIVE SOILS **7**

Insitu densification of cohesion less and consolidation of cohesive soils - Dynamic compaction and consolidation - Vibrofloation - Sand pile compaction - Preloading with sand drains and fabric drains- Stone columns - Lime piles - Installation techniques only - relative merits of various methods and their limitations.

MODULE IV EARTH REINFORCEMENT **8**

Concept of reinforcement - Types of reinforcement material - Applications of reinforced earth - use of Geotextiles for filtration, drainage and separation in road and other works.

MODULE V GROUTING TECHNIQUES **8**

Types of grouts - Grouting equipment and machinery - Injection methods - Grout monitoring.

MODULE VI STABILISATION METHODS **7**

Stabilization with cement, lime and chemicals - Stabilization of expansive soil.

Total Hours : 45

TEXT BOOKS:

1. Koerner, R.M., “Construction and Geotechnical Methods in Foundation Engineering”, McGraw-Hill, New York, 1994.
2. Purushothama Raj, P., “Ground Improvement Techniques”, Tata McGraw-Hill Publishing Company, New Delhi, 1995.

REFERENCES:

1. Moseley, M.P., "Ground Improvement", Blackie Academic and Professional, Chapman and Hall, Glassgow, USA and Canada, 1993.
2. Koerner, R.M., “Design with Geosynthetics”, 3rd Edition, Prentice Hall, New Jersey, 2002.
3. Jewell, R.A., “Soil Reinforcement with Geotextiles”, CIRIA Special Publication, London, 1996.
4. Das, B.M., “Principles of Foundation Engineering”, Thomson Brooks / Cole, USA, 2003.
5. Jones, E.P., "Earth Reinforcement and Soil Structure", Butterworth's, London, 1995.

OUTCOMES:

At the end of the course, students will be able to

- explain the properties of problematic soil and necessity of different ground modification techniques.
- describe the improvement of soil by compaction, consolidation and preloading techniques suitable for specific site conditions.
- effectively utilise different earth reinforcement materials including Geo-textile for different field conditions.
- implement the grouting techniques in the field condition for soil stabilization.
- assess the suitable chemicals and admixtures for stabilisation based on soil types.

CECX34	PAVEMENT DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart sufficient knowledge on various components of highway engineering such as highway planning, design of geometric elements of highways & urban roads, and rigid & flexible pavements design.
- To give an exposure to desirable properties of highway materials and construction practices.

MODULE I PRINCIPLE OF PAVEMENT DESIGN 7

Components of a road and their function – Factors affecting pavement stability – Equivalent Single wheel load – Vehicle and traffic factors, moisture, Climate and soil factors – Stress distribution in different conditions –Modulus of elasticity of various layers.

MODULE II FLEXIBLE PAVEMENT DESIGN 8

Empirical method using soil classification tests- Estimation of CBR values-method of designing pavement-plate bearing test method-asphalt institute method –AASHTO Method-bur mister design method –principles of bituminous mix design-IRC Methods.

MODULE III RIGID PAVEMENT DESIGN 8

General design consideration – Stresses in concrete pavement- Design procedure as per IRC method – Design of different joints in concrete pavement and their maintenance.

MODULE IV PAVEMENT EVALUATION 8

Method of pavement evaluation – Distress in flexible pavements – Distress in rigid pavements – Structural evaluation of flexible and rigid pavements – Evaluation by deflection measurements.

MODULE V PAVEMENTSTRENGTHENING 7

Strengthening of pavement-Methods –Flexible overlaysand types- Rigid overlays-

Case studies

MODULE VI HIGHWAY MAINTENANCE 7

Maintenance of Bituminous surface, concrete roads and low cost roads – aintenance of shoulders and drainage system.

Total Hours : 45

TEXT BOOKS:

1. Khanna, S.K. and Justo, C.E.G., “Highway Engineering”, 8th Edition, New Chand and Brothers, Roorkee, 2001.
2. Wright, P.H., “Highway Engineers”, John Wiley and Sons Inc., New York, 1996.

REFERENCES:

1. Kadiyali, L.R., “Principles and Practice of Highway Engineering”, Khanna Tech. Publications, New Delhi, 2000.
2. Yoder, R.J. and Witchak M.W., “Principles of Pavement Design”, John Wiley, 2000.
3. IRC 37–2001, Guidelines for the Design of Flexible Pavements, The Indian roads Congress, New Delhi.
4. IRC 58-1998, Guideline for the Design of Rigid Pavements for Highways, The Indian Roads Congress, New Delhi.

OUTCOMES:

At the end of the course, the student will be able to

- explain the basic principles and factors to be considered for pavement design.
- analyze and design flexible pavement by various methods.
- analyze and design rigid pavement as per IRC method.
- describe the structural and functional evaluation for pavement performance.
- assess the overlay construction methods.
- describe the method of maintaining different roads for longer durability and serviceability.

CECX35 HOUSING, PLANNING AND MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart comprehensive knowledge on planning, design, evaluation, construction and financing of housing projects.

MODULE I INTRODUCTION TO HOUSING **7**

Definition of Basic Terms – House, Home, Household, Apartments, Multi storied Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of sustainable housing

MODULE II HOUSING LAWS **8**

Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels.

MODULE III HOUSING PROGRAMMES **8**

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organizations

MODULE IV PLANNING AND DESIGN OF HOUSING **7**

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design-Problems)

MODULE V COST-EFFECTIVE MATERIALS AND TECHNIQUES **8**

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation.

MODULE VI HOUSING FINANCE AND PROJECT APPRISAL **7**

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

Total Hours : 45

TEXT BOOKS:

1. Meera Mehta and Dinesh Mehta, “Metropolitan Housing Markets”, Sage Publications Pvt. Ltd., New Delhi, 1999.
2. Francis Cherunilam and Odeyar D. Heggade, “Housing in India”, Himalaya Publishing House, Bombay, 1997.

REFERENCES:

1. Development Control Rules for Chennai Metropolitan Area, CMA, Chennai, 2002.
2. UNCHS, National Experiences with Shelter Delivery for the Poorest Groups, UNCHS (Habitat), Nairobi, 1994.
3. National Housing Policy, Government of India, 1994.

OUTCOMES:

At the end of the course, the students will be able to

- explain the basic concepts about different types of housing and its Policies.
- describe the housing bye laws at different administrative levels, development and control regulations..
- analyze the various housing programmes.
- design different types of housing units.
- list and describe the new construction materials and techniques with their function and performance.
- analyze and appraise the housing projects.

CECX36 BUILDING SERVICES

L	T	P	C
3	0	0	3

OBJECTIVE:

- To impart knowledge on various elements of building services like water supply, sanitation, electrical installations, lighting, air conditioning, and fire safety including smart buildings

MODULE I WATER TREATMENT AND SUPPLY SYSTEMS 7

Water quality, Purification and treatment- water supply systems-distribution systems in small towns -types of pipes used- laying jointing, testing-testing for water tightness plumbing system for building-internal supply in buildings-municipal bye laws and regulations.

MODULE II SANITATION AND DRAINAGE 8

Rain Water Harvesting - Sanitation in buildings-arrangement of sewerage systems in housing -pipe systems- storm water drainage from buildings - septic and sewage treatment plant - collection, conveyance and disposal of town refuse systems.

MODULE III ELECTRICITY AND LIGHTING 8

Types of wires , wiring systems and their choice -planning electrical wiring for building -main and distribution boards -transformers and switch gears -modern theory of light and colour -synthesis of light -luminous flux -candela- lans of illumination-lighting design-design for modern lighting.

MODULE IV VENTILATION AND COOLING 7

Ventilation and its importance-natural and artificial systems-Window type and packaged air-conditioners-chilled water plant -fan coil systems-water piping - cooling load -air conditioning systems for different types of buildings -protection against fire to be caused by A.C. Systems.

MODULE V FIRE SAFETY AND NBC PROVISONS IN BUILDINGS 8

Causes of fire in buildings-safety regulations-NBC-planning considerations in buildings like Non-combustible materials, construction, staircases and A.C. systems, special features required for physically handicapped and elderly in building types.

MODULE VI SMART AND INTELLIGENT BUILDINGS 7

Heat and smoke detectors-dry and wet risers - Automatic sprinklers - Capacity determination of OHT and UGT for firefighting needs.. Intelligent buildings-Building automation-Smart buildings- Building services in high rise buildings.

Total Hours : 45

TEXT BOOKS:

1. Fred Hall, Roger Greeno., "Building Services Handbook" 6th edition Elsevier limited, 2016.
2. Barrie Rigby., "Design of Electrical services for Buildings" 4th edition Spon Press, London, 2005.
3. David V. Chadderton., "Building services Engineering", 5th edition Taylor & Francis, 2007.

REFERENCES:

1. Ernst and Neufert, "Architect's Data", 3rd Edition, Oxford Brookes University, England, 2001.
2. Fair, G.M., Geyer, J.C. and Okun, D., "Water and Waste Engineering", Vol.II, John Wiley & sons Inc., New York,1968.
3. Hopkinson, R.G. and Kay, J.D., "The Lighting of buildings", Faber and Faber, London, 1969.
4. NBC, "Hand Book for Building Engineers in Metric systems", National Building Code of India, New Delhi, 1968.
5. Philips, "Lighting in Architecture Designs", McGraw Hill, New York, 1964.
6. Callendar, J.H., "Time saver Standards for Architecture Design Data", McGraw Hill, New York, 1974.
7. William H. Severns and Julian R. Fellows, "Air Conditioning and Refrigeration", John Wiley and sons, London, 1988.

OUTCOMES:

At the end of the course, the students will be able to

- provide solutions regarding suitable water treatment and water supply systems based on municipal bye-laws & regulations.
- plan and design a sanitation system for buildings and collection, conveyance and disposal of drainage.
- conceptualize the basic concepts of electricity and lighting, to plan electrical wiring for a building and to design modern lighting systems.

- analyse fundamental concepts of ventilation and cooling and assess the protective measures against fire caused by A.C. systems.
- identify the causes of fire in buildings and apply the fire safety measures and NBC provisions in buildings.
- appreciate smart buildings, intelligent buildings and various building services provided for high rise buildings.

CECX37 ENGINEERING ETHICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To enable the students to identify the core values that shapes the ethical behavior of an engineer.
- To enable the students to utilize opportunities to explore one's own values in ethical issues.
- To make the students aware of ethical concerns and conflicts.

To enhance familiarity with codes of conduct and increase the ability to recognize and resolve ethical dilemmas.

MODULE I ENGINEERING ETHICS 8

Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Professions and Professionalism – Professional Ideals and Virtues – Uses of Ethical Theories.

MODULE II ENGINEERING AS SOCIAL EXPERIMENTATION 8

Engineering as Experimentation – Engineers as responsible Experimenters – Research Ethics - Codes of Ethics – Industrial Standards - A Balanced Outlook on Law – The Challenger Case Study.

MODULE III ENGINEER'S RESPONSIBILITY FOR SAFETY 8

Safety and Risk – Assessment of Safety and Risk – Risk Analysis – Reducing Risk – The Government Regulator's Approach to Risk - Case Studies Chernobyl and Bhopal disasters.

MODULE IV ETHICAL RESPONSIBILITIES 7

Collegiality and Loyalty – Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime

MODULE V ETHICAL RIGHTS 6

rofessional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination

MODULE VI GLOBAL ISSUES 8

Multinational Corporations – Business Ethics - Environmental Ethics–ethics of

technology– Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Honesty – Moral Leadership – Sample Code of Conduct.

Total Hours : 45

TEXT BOOKS:

1. Mike Martin and Roland Schinzinger, “Ethics in Engineering”, McGraw Hill, New York, 2005.
2. Charles E. Harris, Michael S. Pritchard and Michael J. Rabins, “Engineering Ethics Concepts and Cases”, Thompson Learning, Belmont, CA, 2000.
3. Charles D. Fleddermann, “Engineering Ethics”, Prentice Hall, New Mexico, 1999.

REFERENCES:

1 John R. Boatright, “Ethics and the Conduct of Business”, Pearson Education, 2003.
2 Edmund G. Seebauer and Robert L. Barry, “Fundamentals of Ethics for Scientists and Engineers”, Oxford University Press, New York, 2001.
3 Bajaj, P.S., and Raj Agrawal, “Business Ethics – An Indian Perspective”, Biztantra, New Delhi, 2004.
4 David Ermann and Michele S. Shauf, “Computers, Ethics and Society”, Oxford University Press, New York, 2003.

OUTCOMES:

At the end of the course, the students will be:

- able to identify the core values that shape the ethical behavior of an engineer.
- aware of the ethical concerns and Standards.
- able to handle ethical dilemmas in a better way.
- able to maintain loyalty confidentiality, responsibilty and avoiding the areas where conflicts of interests arise.
- able to demonstrate the knowledge of ethical laws and intellectual rights.
- able to describe the ethical implications of emerging technologies

CECX38 ENVIRONMENTAL RISK ASSESSMENT

L	T	P	C
2	0	0	2

OBJECTIVE:

To provide knowledge related to the broad field of environmental risk assessment, important processes that control contaminant transport and tools that can be used in predicting human health risks

MODULE I INTRODUCTION TO RISK ASSESSMENT 8

Sources of Environmental hazards – Environmental and Ecological Risks – Environmental risk assessment framework – Regulatory perspectives and requirements – Risk analysis and management – Risk perception - Risk assessment in different disciplines

MODULE II ELEMENTS OF ENVIRONMENTAL RISK ASSESSMENT 7

Hazard identification – Receptor exposure to environmental contaminants - Dose Response Evaluation – Exposure Assessment – Exposure Factors, Slope factors, dose response calculations and dose conversion factors – Risk characterization – Vulnerability assessment – Uncertainty analysis

MODULE III TOOLS AND METHODS FOR RISK ASSESSMENT 8

HAZOP and FEMA methods – Cause failure analysis – Event tree and Fault tree modeling and analysis – Estimation of carcinogenic and non carcinogenic risks to human health – Methods in ecological risk assessment – Radiation risk assessment – Data sources and evaluation

MODULE IV RISK MANAGEMENT 7

Risk communication and Risk perception – Comparative Risks – Risks based decision making – Risk based environmental standard setting – Risk cost benefit optimization and tradeoffs – Emergency preparedness plans- Design of Risk management programs – Risk based remediation

Total Hours : 30

TEXT BOOKS:

1. Kasperson.J.K and Kasperson.R.E., “Global Environmental Risks”, V.N.University Press, New York,2003.
2. Joseph F Louvar and B Diane Louvar., “Health and Environmental Risk Analysis Fundamentals and applications” Prentice Hall,New Jersey, 1997.

REFERENCES:

1. Cutter, S.L., “Environmental Risk and Hazards”, Prentice – Hall of India Pvt.Ltd, New Delhi, 1993.
2. Kolluru Rao, Bartell Steven, Pitblado.R and Stricoff, “Risk Assessment and Management Handbook”, Mcgraw Hill Inc., New York, 1996.
3. Kofi Asante Duah, “Risk Assessment in Environmental Management” John Wiley and sons, Singapore, 1998.

OUTCOMES:

At the end of the course student will able

- To attain knowledge on Environmental Risk and its framework.
- To calculate the hazard exposure level and characterize the risk based on its vulnerability.
- To identify the risk by using various risk assessing tools and methods.
- To manage the risk situations and provide preparedness plans to that situation.

CECX39 REMOTE SENSING **L T P C**
3 0 0 3

OBJECTIVES:

The objective of the course is to

- To utilize the principles of remote sensing data acquisition and analysis of satellite data.
- To explore the spectral signatures of various earth features and electromagnetic interactions.
- To evaluate the satellite images for quality and apply enhancement techniques to improve the interpretability of satellite images.
- To process and interpret SAR data.
- To use the aerial photos for measurement of height determination.
- To create data models and data structures and analyse various raster and vector capabilities of GIS

MODULE I FUNDAMENTALS OF REMOTE SENSING 7

Remote sensing: definition – components of remote sensing- energy sensor, interacting body – Active and Passive remote sensing – platforms – aerial and space platforms – balloons ,helicopters, aircrafts and satellites – synoptivity and repeativity – electromagnetic radiation (EMR) – EMR spectrum – visible, infrared (IR) near IR, middle IR, thermal IR and microwave – black body radiation – Plancks Law – Stefan –Boltzman law.

MODULE II EMR INTERACTION WITH EARTH SURFACE FEATURES 8

Atmospheric characteristics – scattering of EMR – Rayliegh, Mie, Non-selective and Raman scattering – EMR interaction with water vapour and ozone – atmospheric windows – significance of atmospheric windows – EMR interaction with earth surface material, radiance, irradiance, incident, reflected, absorbed and transmitted energy – reflectance – specular and diffused reflection surfaces – spectral signature – spectral signature curves – EMR interaction with water, soil and earth surface.

MODULE III DIGITAL IMAGE PROCESSING 7

Digital processing of satellite images: Geometric rectification, spatial and radiometric enhancement, edge detection, band ratio, false color composites, Principal component analysis, Spectral domain enhancement, Supervised and unsupervised classification for thematic map generation.

MODULE IV MICROWAVE REMOTE SENSING 8

Microwave Remote Sensing: Basic principles, spatial resolution of SAR system,

geometric characteristics, and signature of earth features.

MODULE V MISCELLANEOUS REMOTE SENSING TECHNIQUES 8

Aerial photography, Stereo photo interpretation, Thermal radiation principles and thermal imaging, Radar transmission characteristics / Image interpretation, Passive microwave sensing / LIDAR.

MODULE VI REMOTE SENSING APPLICATIONS 7

Applications of remote sensing for Agriculture, forestry, land use/land cover, Soil, Geology, Water Resources, Urban and Coastal Zone Regulation.

Total Hours : 45

TEXT BOOKS:

1. Anji Reddy, “Remote sensing and Geographical Information systems”, BS Publications, 2008.
2. Srinivas, M.G., “Remote sensing applications”, Narosa Publishing House, New Delhi, 2001.
3. Lillesand, T.M. and Kuefer, R.W., “Remote sensing and image interpretation”, John Wiley and sons, 2001.

REFERENCES:

1. De Merse and Michael, N., “Fundamentals of Geographic Information System”, 2nd Edition, John Wiley and sons, New York, 2003.

OUTCOMES:

At the end of the course, the students will be able,

- To describe the basic principles of remote sensing data, types of remote sensing and laws related to remote sensing.
- To demonstrate the interactions of EMR with earth features and the features based on spectral signatures.
- To explain the evaluation techniques for interpretation of the satellite images.
- To describe the characteristic features of microwave remote sensing.
- To describe the use of aerial photos for measurement of height determination.
- To demonstrate the use of Remote Sensing for different applications

CECX40 MODERN SURVEYING L T P C

3 0 0 3

OBJECTIVSE:

- Locate the soundings and to measure the depth of water in hydrographic surveying.
- Use EDM, digital theodolite, digital level, LIDAR and total station for field measurements.
- Determine the precision of the GPS measurements and the working of GPS.
- Categorize the different measurement techniques using a GPS.
- Determine the height measurement with the help of aerial photos.
- Apply the measuring principle of GPS, Total station and EDM in civil engineering projects

MODULE I HYDROGRAPHIC SURVEYING 6

Tides – MSL – Sounding and methods – Location of Soundings and methods – Three-point problem – Strength of fix – Sextants and station pointer – River Surveys – Measurement of current and discharge.

MODULE II MODERN SYSTEMS IN SURVEYING AND MAPPING 9

General – Electronic Distance Measurement (EDM) – Digital Theodolite and its accuracy – Total Station and it's inbuilt programs like Co-go, Missing Line Measurement, Remote Elevation Measurement, 3D Coordinate Measurement, Automatic Azimuth Angle Setting, Resection, Setting out measurements and Area Calculation. Automatic total station – Laser Theodolite.Laser alignment instrument and electronic level – Digital level – Instrument for measuring tunnel profiles – Inertial positioning systems – Global Positioning System (GPS) – Digital Terrain Model (DTM) – LIDAR Measurements - Introduction to mapping software – Modern Trends.

MODULE III GLOBAL POSITIONING SYSTEM 8

History of GPS, GPS design objectives and details of segments space, control and user, blocks of GPS- Block I, II/IIA, IIR Satellites, and IIF. GPS Signal Structure - Carriers, GPS codes: C/A, P, navigational message, GPS receiver: Types and Structure of receivers, Principles of GPS position fixing: Pseudo ranging. Determination of GPS satellite coordinates, Types of ephemerides, GPS errors.

MODULE IV GPS SURVEY METHODS AND APPLICATIONS 8

Single Point or Point Vs Relative, Static Vs Kinematic, Real time Vs Post mission. Practical GPS survey field procedures: Code and Carrier-based positioning, Accuracy and recording time. GPS Applications - Geodetic control surveys, Cadastral surveys, Remote sensing, Engineering and monitoring. Military applications, Geographical Information System, Vehicle tracking and car navigation, LBS and special applications.

MODULE V PHOTOGRAMMETRY 7

Photogrammetric terms; Applications; Type of photographs; Perspective geometry of near vertical and tilted photographs, heights and tilt distortions; Flight planning; Stereoscopy, base lining, floating marks, parallax equation and stereo measurements for height determination; Developments in photogrammetry: analogue, analytical and digital methods; photogrammetric instruments.

MODULE VI TOTAL STATION 7

Electro-optical system: Measuring principle, Working principle, Sources of Error, Infrared and Laser Total Station instruments. Microwave system: Measuring principle, Working principle, Sources of Error, Microwave Total Station instruments. Comparison between Electro-optical and Microwave system applications.Care and maintenance of Total Station instruments.

Total Hours : 45

TEXT BOOKS:

1. Punmia, B.C., “Surveying”, Vol. II, III, Laxmi Publications, New Delhi, 2007.
2. Wolf, P. R., and Ghilani, C. D., “Adjustment Computations: Statistics and Least Squares in Surveying and GIS”, John Wiley & Sons, New York, 1997.
3. Kanetkar, T.P., “Surveying and Levelling”, Vol. I and II, United Book Corporation, Pune, 1994.
4. Roy, S.K., “Fundamentals of Surveying”, 2nd Edition, Prentice - Hall of India Private Ltd., New Delhi, 2004.

REFERENCES:

1. Hofmann-Wellenhof, B., Lichtenegger, H. and Collins, J., “Global Positioning System: Theory and Practice”, Springer, Berlin, 1994.
2. Xu Guochang, “GPS: Theory, Algorithms and Applications”, Springer, Berlin, 2007.

3. Schofield, W., “Engineering Surveying”, 5th Edition, Butterworth - Heinemann, London, 2001.

OUTCOMES:

At the end of the course, the students will

- Locate the soundings and to measure the depth of water in hydrographic surveying
- Map the terrain using EDM, Total Station and LIDAR.
- To determine the position of the points with GPS measurements.
- Use different GPS survey methods to improve the positional accuracy.
- Measure the heights with the help of aerial photos.
- Use the measuring principle of GPS, Total station and EDM in civil engineering projects

SEMESTER VII

		L	T	P	C
CECX45	**BRIDGE ENGINEERING**	**3**	**0**	**0**	**3**

OBJECTIVE:

- To impart knowledge on different types of bridges and culverts, investigation and planning procedures, design principles of various bridges using IRC Specifications, bearings, substructures and foundations.

MODULE I COMPONENTS, INVESTIGATIONS & SPECIFICATIONS 6

Components of a bridge structure - Inspection and site investigations for a bridge - Determination of linear waterway, design discharge and scour depth - Economical span - Types and choice of bridges - IRC loading for road bridges - General design considerations.

MODULE II SLAB BRIDGES & CULVERTS 7

Slab Bridge - Distribution of concentrated loads by IRC - Load distribution by Courbon's Method – Skew slab Bridge, RC box culvert (single vent only).

MODULE III REINFORCED CONCRETE BRIDGES 10

Design of tee beam bridge – design of main girder and cross girders, Single span rigid frame bridge (barrel or slab type only), Continuous girder bridges and Balanced cantilever RC bridges – Design of articulations.

MODULE IV STEEL BRIDGES 7

Design principles of Plate Girder bridges, IRC specifications.

MODULE V PRESTRESSED CONCRETE BRIDGES 7

Types of Prestressed Concrete Bridges - Types of prestressing – Pretensioning and Post-tensioning - Design principles of Post-tensioned concrete bridges.

MODULE VI BEARING, SUBSTRUCTURE & FOUNDATIONS 8

Bearings – types, functions – simple problems – Substructures – Pier and Abutment – Materials, Design - Stability requirements – Foundations – types, pile foundation, well foundation, Caissons – pneumatic and box types.

Total Hours : 45

TEXT BOOKS:

1. Krishnaraju, N., "Design of bridges", New Age International Publishing Ltd., New Delhi, 2005.
2. Ponnuswamy, S., "Bridge Engineering", Tata McGraw Hill Publishing Co., New Delhi, 2001.
3. Jhonson Victor, D., "Bridge Engineering", Oxford & IBH Publishing Co., New Delhi, 2003.
4. Raina, V.K., "Concrete Bridge Practice - Analysis, Design and Economics", 3rd Edition, Shroff Publishers, New Delhi, 2010.

REFERENCES:

1. Vazirani, V.N., Ratwani, M.M., and Vaswani, "Bridge Engineering", Khanna Publishers, New Delhi, 2000.
2. Chen, W.F. and Lian Duan, "Bridge Engineering Handbook", CRC Press, 2010.
3. Bindra, S.P., "Principles and Practice of Bridge Engineering", 9th Edition, Dhanpat Rai Publications (P) Ltd., New Delhi, 2012.
4. IRC 22-1986, Standard Specification and Code of Practice for Road Bridges, Section VI, Composite Construction, The Indian Road Congress, New Delhi.
5. IRC 83-1982, Standard Specification and Code of Practice for Road Bridges, Section IX, Bearings, part-I, Metallic Bearings, The Indian Road Congress, New Delhi.
6. IRC 83-1987, Standard Specification and Code of Practice for Road Bridges, Section IX, Bearings, Part-II, Elastomeric Bearings, The Indian Road Congress, New Delhi.
7. IRC 78-1983, Standard Specification and Code of Practice for Road Bridges, Section VII, Foundation and Substructures, The Indian Road Congress, New Delhi.
8. IRC 40-1970, Standard Specification and Code of Practice for Road Bridges, Section IV, Brick, Stone, Block Masonry, The Indian Road Congress, New Delhi.
9. IRC 18-2000, Design Criteria for Prestressed Concrete Road Bridges (Post-Tensioned Concrete), The Indian Road Congress, New Delhi.
10. IRC 5-1998, Standard Specifications and Code of Practice for Road Bridges, Section I – General Features of Design (Seventh Revision), The Indian Road Congress, New Delhi.
11. IRC 6-2010, Standard Specifications and Code of Practice for Road Bridges, Section II – Loads and Stresses (Fifth Revision), The Indian Road Congress, New Delhi.

12. IRC 21-2000, Standard Specifications and Code of Practice for Road Bridges, Section III – Cement Concrete (Plain and Reinforced) (Third Revision), The Indian Road Congress, New Delhi.
13. IRC: 24-2010, Standard Specifications and Code of Practice for Road Bridges, Steel Road Bridges (Limit State Method) Third Revision,The Indian Road Congress, New Delhi.
14. IRC: 22-2008, Standard Specifications and Code of Practice for Road Bridges, Section VI – Composite Construction (Limit States Design) (Second Revision), The Indian Road Congress, New Delhi.

OUTCOMES:

At the end of the course, the students will be able to

- identify a suitable site, classify different types of bridges and calculate loadings as per the standards
- describe the load distribution as per IRC standards and design the slab bridge culvert
- recognize and design the various components in different types of reinforced concrete bridges.
- explain the principles involved in the design of plate girder bridges as per IRC specifications.
- identify and apply the principles, techniques for the design of prestressed concrete bridges
- classify and describe the types of bearings, piers and abutments in bridges

CECX46 EARTHQUAKE ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide basic understanding on the theory of vibrations, earthquake phenomena and its measurements.
- To impart knowledge pertaining to design of structures in seismic areas using IS codal provisions.
- To provide insight knowledge on the seismic retrofitting techniques of structures.

MODULE I THEORY OF VIBRATIONS 9

Concepts of vibrations – Response of the system – Simple Harmonic Motion– Damped and Undamped -Free and Forced vibration- Natural frequencies and modes shapes

MODULE II ENGINEERING SEISMOLOGY 9

Earthquake characterizations – causes of Earthquake - types of Earthquake – Seismic waves – Magnitude and Intensity – Measurement of Earthquake – Seismic zones – Architectural Features – Indian Seismic Codes– Liquefaction of soil - Indian and world seismicity.

MODULE III SEISMIC BEHAVIOUR OF RC STRUCTURES 9

Seismic design philosophy – Earthquake resistant design of RC members – Beams – Columns – Beam column joints – Slabs – Staircases – Shear wall – Seismic coefficient – Load combinations - Lateral load analysis - Response spectrum method.

MODULE IV SEISMIC BEHAVIOUR OF STEEL STRUCTURES 7

Behaviour of flexural members for earthquake resistance – Steel frames – Steel panel zones – Bracing members–Connection design and joint behavior.

MODULE V DUCTILE DETAILING 6

IS 13920 codal provisions for detailing – Beams – Columns – Beam column joints – Footing – Staircases – Shear wall – Special confining reinforcements.

MODULE VI SEISMIC RETROFITTING OF STRUCTURES 5

Base isolation – Seismic dampers – Retrofitting and strengthening of structural members – Response of Buildings – Case study

Total Hours : 45

TEXT BOOKS:

1. Duggal, S.K., “Earthquake Resistant Design of Structures”. Oxford University Press, New Delhi, 2007.
2. Paulay,T. and Priestly, M.N.J., “Aseismic Design of Reinforced Concrete and Masonry Building”, John Wiley and Sons, 1991.
3. Arya, A.S., “Earthquake Engineering”, Jai Krishna 60th Birthday Anniversary Commemoration Volume, ISET, Sarita Prakashan, Meerut, 1974.

REFERENCES:

1. Anil K.Chopra, “Dynamics of Structures - Theory and Applications to Earthquake Engineering” Prentice Hall of India (P) Ltd., New Delhi, 1996.
2. Allen, R.T., Edwards, S.C., “Repair of Concrete Structures”, Blackie and Sons, U.K. 1987.
3. BMTC, “Improving Earthquake Resistance of Housing” Building Materials and Technology Promotion Council, New Delhi, 2000.
4. Damodarasamy, S.R. and Kavitha, S., "Basics of Structural Dynamics and Aseismic Design”, PHI learning Pvt. Ltd., New Delhi, 2009.

OUTCOMES:

At the end of this course students will be able to

- describe the basic concepts on theory of vibrations and apply the principles for response of structures
- recognize the characteristics of earthquake, dynamic behavior of soil and soil-structure interaction
- Critically describe the behaviour of various elements in a RCC structure under earthquake loading and evaluate the seismic forces using various analysis techniques.
- Predict the effect of building configuration and its seismic response on steel structures.
- Perform the design and detailing of various components in a structure for ductility as per codal provisions.
- Identify the seismic damage evaluation for structures and suggest suitable retrofitting techniques

CECX47 INDUSTRIAL STRUCTURES

L	T	P	C
3	0	0	3

OBJECTIVE:

- To enable the students to plan and understand the general requirements for various industrial structures.
- To impart knowledge to design the various special structures in steel and RCC.
- To give exposure on the principles involved in the design of prefabricated structures.

MODULE I PLANNING OF INDUSTRIAL STRUCTURES 5

Classification of industries and industrial structures – General requirements of various industries – Planning and layout of buildings and components.

MODULE II FUNCTIONAL REQUIREMENTS 6

Lighting – Ventilation Lighting – Illumination levels – Characteristics of Good lighting – Principles of day lighting design – Artificial lighting – Ventilation – Natural and Mechanical Ventilation – Evaporate cooling design – Measurement– Contaminant control – Installation and Operation - Acoustics – Fire safety – Guidelines from factories act.

MODULE III DESIGN OF STEEL STRUCTURES 10

Analysis and Design of Industrial buildings and bents – Industrial Roofs - Crane girders - Design of bunkers and silos.

MODULE IV POWER TRANSMISSION STRUCTURES 10

Tower configuration and bracings – Loads acting on towers – Analysis and Design of Lattice Towers – Transmission Line Towers – Tower foundations

MODULE V DESIGN OF R.C. STRUCTURES 9

Analysis and Design of bunkers and silos – Design of Chimneys – Design of Grid floor.

MODULE VI PREFABRICATED STRUCTURES 5

Principles of Prefabrication - Prestressed precast roof trusses – Functional requirements of precast concrete units.

Total Hours : 45

TEXT BOOKS:

1. Krishna Raju, N., "Advanced Concrete Structures", McGraw Hill, New Delhi, 2000.
2. Ramchandra, "Design of Steel Structures", Vol. I & II, Standard Book House, New Delhi, 1996.
3. Santhakumar, A.R. and Murthy, S.S., “Transmission Line Structures”, McGraw-Hill, New Delhi, 1990.

REFERENCES:

1. SP 32: 1986, Handbook on Functional Requirements of Industrial buildings, Bureau of Indian Standards, New Delhi.
2. Manohar, S.N., “Tall Chimneys; Design and Construction”, Tata McGraw Hill, New Delhi, 1985
3. Santhakumar, A.R. and Murthy, S.S., “Transmission Line Structures”, McGraw-Hill, New Delhi, 1990.
4. Dayaratnam, P., "Design of Steel Structures", Wheeler and Co., New Delhi, 1999.

OUTCOMES:

At the end of the course, the students will be able to

- plan the general requirements for various industries and prepare a layout for various industrial structures.
- make an appropriate lighting & ventilation and identify suitable measures to control fire as per factories act for an industrial structure.
- design an industrial building with bents and essential steel structures such as crane girder, bunkers, and silos for an industry.
- identify suitable tower configurations for power transmission and design a lattice tower with suitable foundations.
- analyse and design a RC structure such as bunkers, silos, chimneys and grid floor required for an industry.
- apply the principles and techniques to construct precast concrete units that are necessary for an industry.

CECX48 PREFABRICATED STRUCTURES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To appreciate aspects of modular construction and industrialised construction
- To design some of the prefabricated elements and also have the knowledge of the construction methods using these elements.

MODULE I DESIGN PRINCIPLES 8

General Civil Engineering requirements, specific requirements for planning and layout of prefabrication plant. IS Code specifications. Modular co-ordination, standardization, Disuniting of Prefabricates, production, transportation, erection, stages of loading and code provisions, safety factors, material properties, Deflection control, Lateral load resistance, Location and types of shear walls.

MODULE II REINFORCED CONCRETE 8

Prefabricated structures - Long wall and cross-wall large panel buildings, one way and two way prefabricated slabs, Framed buildings with partial and curtain walls - Connections – Beam to column and column to column.

MODULE III FLOORS, STAIRS AND ROOFS 8

Types of floor slabs, analysis and design example of cored and panel types and two-way systems, staircase slab design, types of roof slabs and insulation requirements, Description of joints, their behaviour and reinforcement requirements, Deflection control for short term and long term loads, Ultimate strength calculations in shear and flexure.

MODULE IV WALLS 8

Types of wall panels, Blocks and large panels, Curtain, Partition and load bearing walls, load transfer from floor to wall panels, vertical loads, Eccentricity and stability of wall panels, Design Curves, types of wall joints, their behaviour and design, Leak prevention, joint sealants, sandwich wall panels, approximate design of shear walls.

MODULE V INDUSTRIAL BUILDINGS AND SHELL ROOFS 7

Components of single-storey industrial sheds with crane gantry systems, R.C. Roof Trusses, Roof Panels, corbels and columns, wind bracing design. Cylindrical, Folded plate and hyper-prefabricated shells, Erection and jointing, joint design, hand book based design.

MODULE VI JOINT IN STRUCTURAL MEMBERS 6

Joints for different structural connections – Dimensions and detailing – Design of expansion joints

Total Hours : 45

REFERENCES:

1. Koncz.T., Manual of Precast Concrete Construction, Vol.I II and III & IV Bauverlag, GMBH, 1971.
2. Laszlo Mokk, Prefabricated Concrete for Industrial and Public Structures, Akademiai Kiado, Budapest, 2007.
3. Lewicki.B, Building with Large Prefabricates, Elsevier Publishing Company, Amsterdam/ London/New York, 1998.
4. Structural Design Manual, Precast Concrete Connection Details, Society for the Studies in the use of Precase Concrete, Netherland Betor Verlag, 2009.
5. Warszawski, A., Industrialization and Robotics in Building - A managerial approach, Harper and Row, 1990.

OUTCOME:

Upon successful completion of this course, students will be able to

- describe the design principles used to construct prefabricated structures.
- Illustrate to create a panel and framed buildings with their connections of prefabricated RC structures.
- Classify the types of floors, stairs and roofs and describe their behaviour of structures.
- Critically describe the various of types wall panels of prefabricated structures.
- Construct a prefabricated structural components for industrial buildings.
- Detailing of various joints in structural memnbers

CECX49 TALL STRUCTURES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the various problems associated with tall structures with respect to different kind of loads.
- To impart knowledge on the behaviour, analysis, design of various structural systems and stability of tall buildings including dynamic analysis

MODULE I DESIGN CRITERIA & LOADING 7

General - Factors affecting growth, height and structural form - Design philosophy - Loading - Gravity loading - Wind loading - Earthquake loading - Combinations of loading - Strength and Stability - Stiffness and Drift limitations - Human comfort criteria- Creep effects - Shrinkage effects - Temperature effects - Fire - Foundation settlement - Soil-structure interaction.

MODULE II STRUCTURAL FORMS 6

Structural forms – braced frame, rigid frame, infilled frame, shear wall structures, wall- frame structures, framed tube structures, outrigger braced structures, space structures, hybrid structures, R.C.floor systems - One-way slab on beams and girders - Two-way flat slab - Two-way flat plate - Waffle flat slabs - Two-way slab and beam - Steel framing floor systems - One-way beam system - Two-way beam system - Three-way beam system - Composite steel - Concrete floor systems.

MODULE III MODELING FOR ANALYSIS 8

Modeling for analysis - Assumptions - Modeling for approximate analyses - Modeling for accurate analysis - Reduction techniques.

MODULE IV BEHAVIOUR & ANALYSIS OF STRUCTURAL SYSTEMS 8

Types, Behaviour and analysis methods of braced frames - Behaviour and analysis of Rigid frame structures - Behaviour, analysis & design of Infilled frame structures - Behaviour and analysis of Shear wall, Coupled shear wall and Wall-frame structures - Behaviour of Tubular structures, Core structures and Outrigger-braced structures.

MODULE V STABILITY OF TALL BUILDINGS 8

Overall buckling analysis of frames (approximate methods) - Overall buckling analysis of wall frames - Second order effects of gravity loading - Translational -

Torsional instability - Out-of-plumb effects - Effects of foundation rotation - Creep and Shrinkage effects - Temperature effects.

MODULE VI DYNAMIC ANALYSIS 8

Response to wind loading - Along-wind response - Across-wind response - Estimation of natural frequencies & damping - Types of excitation - Design to minimise dynamic response - Response to earthquake motions - Response to ground accelerations - Response spectrum analysis - Estimation of natural frequencies and damping - Human response to building motions.

Total Hours : 45

TEXT BOOKS:

1. Bryan Stafford Smith and Alex Coull, "Tall building Structures Analysis Design", John Wiley and Sons, Inc., New York, 1991.
2. Taranath, B.S., "Structural Analysis and Design of Tall Buildings", McGraw Hill Book Co., New York, 1998.

REFERENCES:

1. Lin, Y. and Burry, D., Stotes, "Structural Concepts and Systems for Architects and Engineers", John Wiley, New York, 1994.
2. Lynn S. Beedle., “Advances in Tall Buildings”, CBS Publishers and Distributors, New Delhi, 1996.
3. Angus J. MacDonald., “Wind Loading on Buildings”, Wiley, New York, 1975.
4. Lawson, T. V., “Wind Effects on Buildings”, Applied Science Publishers, London, 2001.

OUTCOMES:

At the end of the course, the students will be able to

- compute the different types of loading acting on tall structures and identify the different factors affecting the tall structures.
- classify and use appropriate types of structural systems in tall structures.
- construct modeling using various analysis techniques and describe its behaviour for various structural systems.
- interpret the behaviour of different structural systems and predict a suitable system for tall structures.
- manipulate the second order effects of gravity loading, translational and torsional

instability in the analysis of tall structures

- analyze the response of wind and seismic motions on tall structures

CECX50 DESIGN OF MACHINE FOUNDATION

L	T	P	C
3	0	0	3

OBJECTIVE:

- To provide sound understanding of the concepts, principles, and techniques of designing foundations for different types of machines.

MODULE I INTRODUCTION TO VIBRATION OF SYSTEMS 7

Vibration of elementary systems-vibratory motion-single degree freedom system-free and forced vibration with and without damping.

MODULE II WAVES AND WAVE PROPAGATION 8

Wave propagation in an elastic homogeneous isotropic medium- Raleigh, shear and compression waves-waves in elastic half space.

MODULE III DYNAMIC PROPERTIES OF SOILS 7

Elastic properties of soils-coefficient of elastic, uniform and non-uniform compression - shear-effect of vibration dissipative properties of soils-determination of dynamic properties of soil- codal provisions.

MODULE IV DESIGN OF RECIPROCATING MACHINES 8

Dynamic loads - simple design procedures for foundations under reciprocating machines.

MODULE V DESIGN OF IMPACT AND ROTARY MACHINES 8

Design procedures for machines producing impact loads - rotary type machines.

MODULE VI VIBRATION ISOLATION 7

Vibration isolation techniques-mechanical isolation- foundation isolation-isolation by location-isolation by barriers- active and passive isolation tests.

Total Hours :45

TEXT BOOKS:

1. Swamisaran, “Soil Dynamics and Machine Foundations”, Galgotia Publications Pvt. Ltd., New Delhi, 1999.
2. Prakesh, S. and Puri, V.K., “Foundation for Machines”, McGraw-Hill, New York, 1993.
3. Srinivasulu, P. and Vaidyanathan, “Hand book of Machine Foundations”,

McGraw-Hill, New York, 1996.
4. Kramar, S.L., “Geotechnical Earthquake Engineering”, Prentice Hall International Series, Pearson Education (Singapore) Pvt. Ltd., U.S.A., 1986.
5. Kameswara Rao, “Dynamics Soil Tests and Applications”, Wheeler Publishing, New Delhi, 2003.

REFERENCES:

1. Kameswara Rao, “Vibration Analysis and Foundation Dynamics”, Wheeler Publishing, New Delhi, 1998.
2. IS 2974 (Part V) - 1987, Code of Practice for Design and Construction of Machine Foundations, Bureau of Indian Standards, New Delhi.
3. Moore, P.J., “Analysis and Design of Foundation for Vibration”, Oxford and IBH, New Delhi, 1995.

OUTCOMES:

At the end of the course, students will be able to

- describe the fundamentals of free and forced vibration with regard to single degree of freedom
- examine the propagation of waves in a soil medium subjected to dynamic loading
- explain the dynamic properties of soil and its method of determination based on codal provisions.
- design the foundation for reciprocating machines
- design the foundation for impact and rotary machines
- analyze the different vibration isolation systems.

CECX51 GROUND WATER ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the principles of Groundwater governing Equations and characteristics of different aquifers,
- To understand the techniques of development and management of groundwater

MODULE I HYDROGEOLOGICAL PARAMETERS 8

Introduction – Water bearing Properties of Rock – Type of aquifers – Aquifer properties – permeability, specific yield, transmissivity and storage coefficient – Methods of Estimation– Ground water table fluctuation and its interpretations – Groundwater development and Potential in India – GEC norms.

MODULE II WELL HYDRAULICS 8

Objectives of Groundwater hydraulics – Darcy's Law – Groundwater equation – steady state flow – Dupuit Forchheimer assumption – Unsteady state flow – Theis method – Jacob method -Slug tests – Image well theory – Partial penetrations of wells.

MODULE III GROUNDWATER MANAGEMENT 7

Need for Management Model – Database for groundwater management – groundwater balance study – Introduction to Mathematical model – Conjunctive use – Collector well and Infiltration gallery

MODULE IV GROUNDWATER QUALITY 8

Ground water chemistry – Origin, movement and quality – Water quality standards – Health and aesthetic aspects of water quality – Saline intrusion – Environmental concern and Regulatory requirements.

MODULE V GROUNDWATER CONSERVATION 7

Artificial recharge techniques – Remediation of Saline intrusion– Ground water management studies – Protection zone delineation, Contamination source inventory, remediation schemes – Ground water Pollution and legislation.

MODULE VI GROUNDWATER IMPROVEMENT METHODS 8

Tube wells- Types and Parts, optimum capacity, silting of tube well,design of tube wells in different aquifers.Bore hole, strains - types, well pipe, casing pipe, blind

pipe. Construction and working of tube wells, siteselection, drilling operation, alignment of tubewells, gravel packing. Methods -cable tool method, hydraulic method, rivers Rotary Method and drilling fluids.Pumping equipment and hydraulic testing of pumps.

Total Hours : 45

TEXT BOOKS:

1. Raghunath H.M., “Ground Water Hydrology”, New Age International (P) Limited, New Delhi, 2010.
2. Todd D.K., “Ground Water Hydrology”, John Wiley and Sons, New York, 2000.

REFERENCES:

1. Fitts R Charles, “Groundwater Science”. Elsevier, Academic Press, 2002.
2. Ramakrishnan, S, Ground Water, K.J. Graph arts, Chennai, 1998.

OUTCOMES:

At the end of the course, the students will be able to

- Understand aquifer properties and its dynamics after the completion of the course.
- Give an exposure towards well design and practical problems of groundwater aquifers.
- Impacts the Knowledge about the groundwater management
- Manage the quality of groundwater, exploration and saline instrusion
- Understand the importance of artificial recharge and groundwater quality concepts
- Understand the application of various groundwater improvement methods

CECX52 ENVIRONMENTAL IMPACT ASSESSMENT

L	T	P	C
3	0	0	3

OBJECTIVE:

- To familiarize the students about impact of infrastructure projects on the components of environment, impact assessment methods and mitigation measures

MODULE I INTRODUCTION **7**

Evolution of EIA - Concepts - Methodologies - Screening - Scoping – Mitigation-Matrices – Checklist- Impact of development projects – Sustainable development-Need for Environmental Impact Assessment (EIA) – Environmental Impact Statement (EIS)

MODULE II EIA PROCESS **8**

EIA capability and limitations-Stages of EIA, Types of EIA Rapid and Comprehensive EIA - Legislative and Environmental Clearance procedure in India - Prediction tools for EIA.

MODULE III EIA FOR SPECIFIC PROJECTS **7**

Assessment of Impact - Air - Water - Soil - Noise – Biological - EIA for infrastructure projects – Bridges – Stadium – Highways – Dams – Multi-storey Buildings-– Water Supply and Drainage Projects

MODULE IV PUBLIC PARTICIPATION IN EIA **8**

Socio-cultural environment - Public participation - Addressing the issues related to the Project Affected People - Resettlement and rehabilitation.

MODULE V MONITORING IN EIA **8**

Documentation of EIA - Environmental management plan - Plan for mitigation of adverse impact on environment options for mitigation of impact on water, air and land, flora and fauna; Post project monitoring

MODULE VI ENVIRONMENTAL AUDIT **7**

Environmental Audit- Life cycle assessment case studies - EMS - case studies in EIA- Industrial ecology – carbon trading

Total Hours :45

TEXT BOOKS:

1. Canter, R. L., “Environmental Impact Assessment”, McGraw Hill, New Delhi, 1996.
2. Shukla, S. K., and Srivastava.P.R., “ Concept in Environmental Impact Analysis”, common wealth publishers, New Delhi, 1992.

REFERENCES:

1. John G. Rau and David C. Wooten (Ed.), “Environmental Impact Analysis Hand Book”, McGraw Hill Book Company, 1990.
2. Judith Petts, “ Handbook of Environmental Impact, assessment Volume I & II “ Blackwell Science, 1999.

OUTCOMES:

At the end of the course, the student will be able to

- describe the concepts and methodologies of Environmental impact assessment
- explain the legislative and environmental clearance procedure and apply the prediction tools for EIA.
- assess the impacts of Infrastructure projects on air, water, soil and environment.
- Describe the public participation, procedure, resettlement and rehabilitation processes in EIA.
- prepare documentation of EIA and to develop environmental management plan for the same.
- Conduct environmental audit and life cycle assessment of products

CECX53 COASTAL ENGINEERING L T P C
3 0 0 3

OBJECTIVE:

- To impart sufficient knowledge on the coastal processes, coastal dynamics and management perspectives.

MODULE I COASTAL ZONE 7

Introduction to basic concepts -Coastal zone – Coastal zone regulations – Beach profile – Surf zone – Off shore – Coastal waters – Estuaries – Wet lands and Lagoons – Living resources and their conservation – Non living resources and their exploration and exploitation.

MODULE II WAVE DYNAMICS 7

Wave classification – Airy's Linear Wave theory – Deep water waves – Shallow water waves – Wave pressure – Wave energy – Wave Decay – Reflection, Refraction and Diffraction of waves – Breaking of waves – Wave force on structures – Vertical – Sloping and stepped barriers – Force on piles.

MODULE III WAVE FORECASTING AND TIDES 8

Need for forecasting - SMB and PNJ methods of wave forecasting – Classification of tides – Darwin's equilibrium theory of tides –Renewable tidal energy- Effects on structures – seiches, Surges and Tsunamis.

MODULE IV COASTAL PROCESSES 8

Erosion and depositional shore features – Change levels of shoreline-sediment movement -Methods of protection – Littoral currents – Shifting river mouths and delta formation - Coastal aquifers – Sea water intrusion –Desalination - Impact of sewage disposal in seas.

MODULE V COASTAL STRUCTURES 8

Types and selection of break waters – Design and Application of break water-Need and mode of dredging – Selection of dredgers- Types and design of Coastal Protection Works- Design of shore defense structures- Wave-tidal engineering structures and other infrastructure in coastal zone – Dykes and Levees

MODULE VI COASTAL MANAGEMENT 7

Land use in coastal zone – Coastal zone management – Concepts and

development – Data base for coastal zone management – Design and operation of closure works – Sand closure --Generation, propagation and effect of tsunami – Environment impact of ports-Introduction and basic concepts of GIS – Aquaculture remote sensing – Basic concepts – Application of remote sensing in coastal zone management.

Total Hours : 45

TEXT BOOKS:

1. Richard Sylvester, “Coastal Engineering, Vol. I and II”, Elsevier Scientific Publishing Co., New York, 1999.
2. Quinn, A.D., “Design & Construction of Ports and Marine Structures”, McGraw-Hill Book Co., 1999.

REFERENCES:

1. Ed. A.T. Ippen, “Coastline Hydrodynamics”, McGraw-Hill Inc., New York, 1993.
2. Dwivedi, S.N., Natarajan, R. and Ramachandran, S., “Coastal Zone Management in Tamilnadu State, India", Ocean Data Centre, 1991.
3. ACER, "Coastal Engineering Manual, Vol. I-VI", U.S. Army Coastal Engineering Research, USA.

OUTCOMES:

At the end of the course, students will be able to

- explain the coastal zone regulations and describe the estuaries, lagoons, exploration and exploitation of living and non living resources
- classify waves and describe Airy’s linear theory, breaking of waves and wave force on structures
- forecast waves using SMB and PNJ methods of wave forecasting and to describe Darwin’s equilibrium theory of tides
- explain the coastal processes, erosion and depositional shore features and to describe desalination process
- identify the type of break waters and to design shore defense structures, wave –tidal engineering structures and other infrastructure in coastal zone
- explain the concepts and development of coastal zone management, to design closure works and to describe the concepts and applications of remote sensing in coastal zone management

CECX54	GIS AND ITS APPLICATIONS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide fundamental concepts of GIS, its definitions, components and map making process.
- To provide information to segregate real world data, different storage procedures and database structures to store the GIS data in a database management system.
- To impart knowledge on classification of real world data into raster and vector representation, to understand data quality and handling of errors.
- To expose the students to raster and vector data analysis methods, to create raster and vector data models, create queries and solve surface to network problems.
- To provide different application scenarios available in different domains such as natural resources management, land information, water resources management, environmental engineering and monitoring and ways to solve the problems in these domains.
- To provide different application scenarios in problems related to urban, utilities, business development, web and mobile GIS and ways to solve the problems in these domains.

MODULE I FUNDAMENTALS OF GIS 7

Introduction – definitions of GIS – components of GIS – Geographic data Presentation: maps – mapping process – coordinate systems – transformations – map projection – geo referencing - data acquisition

MODULE II GIS DATA MODELS & STRUCTURES 8

Geographic data representation, storage, quality and standards: storage: digital representation of data –data-base structures and database management systems.

MODULE III SPATIAL DATA STRUCTURES 7

Raster data representation – vector data representation – concepts and definitions of data quality – components of data quality – assessment of data quality – managing

data errors – geographic data standards.

MODULE IV GIS DATA PROCESSING AND ANALYSIS 8

GIS data processing, analysis and modeling : Raster based GIS data processing – vector based GIS data processing – queries – spatial analysis – descriptive statistics – spatial autocorrelation – quadrant counts and nearest neighbour analysis – network analysis – surface modeling – DTM.

MODULE V APPLICATIONS OF GIS FOR NATURAL RESOURCES 8

Applications of GIS: Natural Resources Management, Natural hazard management, Land information, Water Resources Management, Environmental Engineering & Monitoring.

MODULE VI APPLICATIONS OF GIS IN CIVIL ENGINEERING 7

Applications of GIS: Urban planning, Transportation Engineering, Utility management, Business development, Cartography, Web GIS and Mobile GIS.

Total Hours : 45

TEXT BOOKS:

1. Anji Reddy, “Remote sensing and Geographical systems”, B.S Publications, Hyderabad, 2008.
2. Clarke, K., “Getting Started with Geographic Information Systems”, Prentice Hall, New Jersy, 2001.

REFERENCES:

1. Burrough, P.A., “Principles of Geographical Information Systems”, Oxford Publication, 2001.
2. De Mers and Michael, N., “Fundamentals of geographic information system”, 2nd Edition, John Wiley and sons, 2003.

OUTCOMES:

At the end of the course, the students will be able to

- describe GIS, list its different components, to identify different elements of a map.
- design a GIS database scheme, data structure for storage of data and segregate the different layers that needs to be stored for an application.
- create raster, vector layers and to generate and create error free spatial data with its attributes.
- categorize raster and vector data processing methods and to solve network and surface related problems and to generate spatial queries and to identify the outputs achieved.
- solve real world problems on environmental, water resources, natural resources and natural hazards through spatial analysis.
- solve real world problems on urban, utilities, business development, web and mobile GIS through spatial analysis.

CECX55 GEODESY

L	T	P	C
2	0	0	2

OBJECTIVE:

- To provide students comprehensive understanding of the various concepts of geodetic surveying and to solve geodetic problems

MODULE I FUNDAMENTALS **7**

Definitions, Classifications, and Problem of Geodesy. Historical development and Organization of Geodesy. Reference Surfaces and their relationship. Applications.Engineering, Lunar and Planetary Geodesy.

MODULE II GEOMETRIC GEODESY **9**

Geodetic, Geocentric and Reduced latitudes and their relationship.Coordinates in terms of Reduced, Geodetic and geocentric latitude.Radius of curvature in the meridian & prime vertical and their relationship.Radius of curvature in any azimuth, Length of the meridian arcs and arcs of parallel and Area of trapezium on the ellipsoid.Curves on the ellipsoid, properties of Geodesic and Everest ellipsoid.

MODULE III PHYSICAL GEODESY **8**

Gravity field of earth, Concept of equipotential, Geopotential and Spheropotential Surface - Normal gravity, The Significance of gravity measurements, Measurements of Absolute and Relative gravity, Reduction of gravity measurements, Isostasy. Gravity networks.Gravity anomaly and Gravity disturbance - Fundamental equation of Physical Geodesy. Determination of Geoid and Deflection of Vertical, Orthometric height, Normal height, Dynamic height and their corrections, Ellipsoidal height and geoidal height.

MODULE IV GEODETIC COMPUTATION **6**

Rectangular and Polar Co – ordinates - First and Second geodetic problem - Similarity and Helmert's transformation, Point determination by Intersection - Resection and Arc Section.

Total Hours : 30

TEXT BOOKS:

1. James R. Smith, "Introduction to Geodesy", John wiley & Sons Inc., New York, 2001.

REFERENCES:

1. Wolfgang Torge, “Geodesy”, Walter De Gruyter Inc., Berlin, 2001.
2. Bomford, G., “Geodesy”, Clarendon press, Oxford, 2004
3. Petr Vanicek and Edward J. Krakiwsky, “Geodesy : The Concepts”, North-Holland Publications Co., Amsterdam, 1991
4. Heribert kahmen and Wolfgang Faig, “Surveying”, Walter De Gruyter, Berlin, 2003.
5. Schwarze, V.S., “Geodesy: The challenge of the 3rd Millennium”, Springer verlag, 2002
6. Howard gore, J., “Elements of Geodesy”, Kessinger Publishing, 2007.
7. George l. Hosmer, “Geodesy”, Kessinger Publishing, 2007.

OUTCOMES:

At the end of the course, the students will be able,

- To categorize the classification of geodesy, to describe the problem of geodesy and to list the reference surfaces with their relationship.
- To sort the various types of the latitude with their relationship and to explore the radius of curvature in the the meridian, prime vertical, azimuth and ellipsoid.
- To justify the significance of gravity and to sort the various types of gravity, to solve the fundamental equation of physical geodesy and to categorize the different height involved in physical geodesy.
- To solve the rectangular and polar coordinates, to conclude first and second geodetic problem, to determine the coordinates of point by Intersection, Resection and Arc Section.

CECX56 BUILDING INFORMATION MODELLING

L	T	P	C
2	0	0	2

OBJECTIVES:

To provide knowledge on

- the basics of Building Information modelling
- how BIM principles are applied to the Construction industry to improve the ease of project delivery.

MODULE I AN OVERVIEW OF BIM 6

Introduction to BIM Software – Back ground and History of BIM – Purpose and objectives of BIM – BIM benefits

MODULE II INCORPORATING AND MANAGING BIM 8

To build a building virtually prior to building it physically - work out problems, simulate and analyze potential impacts - anticipation and ease of project delivery, the overall safety of the project – Introduction to Navis work

MODULE III BIM THROUGHOUT PROJECT LIFE CYCLE 9

Programming – Conceptual design – Detailed design – Analysis – Documentation – Fabrication – Construction 4D/5D – Construction Logistics – Operation and Maintenance – Demolition – Renovation

MODULE IV APPLICATIONS OF BIM 7

Application to enhance efficiency during and post construction phases, and facility management - Applications like determination of quantities of items and material inventory – Application like Building energy performance analysis

Total Hours –30

TEXT BOOKS:

1. Peter Thomas Barnes and Nigel Davies “BIM and Construction Management: Proven Tools, Methods and Workflows” ICE Publishing; First edition 2013.

2. Brad Hardin and Dave Mccool “BIM and Construction Management: Proven tools, methods and work force” Wiley; Second edition, 2015.

REFERENCES:

1. BIM Handbook: A Guide to Building Information Modeling for Owners, Managers, Designers, Engineers and Contractors, John Wiley & Sons; 2nd Revised edition, 2011.
2. BIM and Construction Management: Proven Tools, Methods, and Workflows / Hardin / Sybex — A BIM reference with a focus on construction management

OUTCOMES:

At the end of the course, students will be able to

- Summarize the BIM Principles.
- Understand the analyzing potential impacts using navis works.
- Explain the BIM Application.
- Demonstrate the construction project delivery using BIM.

CECX57	DESIGN OF COLD FORMED STEEL STRUCTURES	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To impart sufficient knowledge to students on techniques , properties and types of cold formed steel sections
- To give exposure to students on buckling of members; codal provisions; and connection methods.
- To offer knowledge to analyse and design different structural elements i.e., columns, beams, purlins using cold formed sections.

MODULE I INTRODUCTION 5

Manufacturing Techniques and properties of cold formed sections - Types of cross sections - Merits and demerits of cold formed sections.

MODULE II COLD FORMED STEEL SECTIONS 7

Concepts of local buckling - effective width - Stiffened and unstiffened elements – Codal Provisions - IS 801 & IS 811 – concept of lateral buckling - Methods of connections.

MODULE III DESIGN OF COMPRESSION MEMBERS 9

Design of axially compressed column – Analysis and design of effective section under bending and compression - Combined stresses.

MODULE IV DESIGN OF FLEXURAL MEMBERS 9

Concept of shear lag and flange curling - Design of beams and beam webs – deflection of beams - Empirical design of Z-purlins with lips and wall studs.

Total Hours : 30

TEXT BOOKS:

1. Dayaratnam, P., Design of Steel Structures, Wheeler Publishing, 1990.
2. Rhodes, J, Design of Cold-Formed Steel Members, Elsevier Science Publishers, 1991.
3. Ramchandra, S., Design of Steel Structures, Vol.-II, Standard Publications, New Delhi, 2010.
4. Subramanian N, Steel Structures - Design and practice, Oxford University

Press, 2011.

REFERENCES:

1. Teaching Resource for Structural Steel Design, INSDAG, Kolkatta, 2010.
2. BIS: 800-2007, Indian standard code of practice for general construction in steel, Bureau of Indian Standards.
3. BIS 801: 1975 - Indian standard code of practice for use of cold-formed light gauge steel structural members in general building construction, Bureau of Indian Standards.
4. SP 6 (5) -1980 – Hand book for structural Engineers, 5. Cold formed, Lightgauge steel structures, Bureau of Indian Standards.

OUTCOMES:

At the end of course work, students will be able to

- describe the manufacturing techniques, merits and demerits of cold formed steel structures
- illustrate the concepts of buckling , warping mechanisms and shear lag.
- analyse and design the cold formed compression members
- analyse and design the cold formed flexural members

CECX58	CORROSION CONTROL OF STEEL IN CONCRETE	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To impart sound knowledge on mechanism of corrosion of steel in concrete, its causes, consequences and control measures.
- To offer in depth knowledge on codal provisions for enhancing durability and corrosion rate measurement in distressed structures including rehabilitation techniques

MODULE I CORROSION MECHANISM 7

Corrosion mechanism – black rust - pits - stray current - bacterial corrosion causes of corrosion – carbonation - chloride attack - influence of concrete cover corrosion damage – damage in conventionally reinforced concrete - corrosion cracking - hydrogen embrittlement - Types of corrosion.

MODULE II CORROSION CONTROL IN CONCRETE 8

Control of carbonation - control of chlorides - high performance concrete- corrosion inhibitors – anodic, cathodic and mixed Inhibitors

MODULE III CORROSION CONTROL IN STEEL REBARS 7

Protective coatings to steel rebars – fusion bonded epoxy coating, galvanization, cement polymer composite coating, inhibited cement slurry coating and anticorrosive polymer cementious coatings - stainless steel reinforcement - sealers and membranes – cathodic protection.

MODULE IV CORROSION RATE MEASUREMENT 8

half cell potential measurements - carbonation depth measurement – chloride determination and resistivity measurement - corrosion rate measurement – linear polarization resistance techniques.

Total Hours : 30

TEXT BOOKS:

1. Arnon Bentur, Sidney Diamond and Neal S. Berke, Steel Corrosion in Concrete – Fundamentals and Civil Engineering Practice, E & FN SPON Publications, Madras,1997

2. John P.Broomfield, Corrosion of steel in concrete - Understanding, investigation and repair, E & FN SPON Publications, Madras,1997.

REFERENCES:

1. Mars G. Fontana, Corrosion Engineering Mc-Graw Hill Publishers, New Delhi, 2001.
2. Philip H. Perkins, Repair, Protection and Waterproofing of Concrete Structures, Elsevier Applied Science Publishers, London, 1986.

OUTCOMES:

At the end of course work, students will be able to

- Identify the causes and mechanism of corrosion in reinforced concrete
- Suggest passive measures to control the corrosion in reinforced concrete
- Suggest active measures to control the corrosion in steel reinforcement
- Assess the rate at which the reinforced concrete is being corroded

CECX59 FLOOD MANAGEMENT

L	T	P	C
2	0	0	2

OBJECTIVE:

To impart knowledge about:

- Water shed management, rainfall- runoff process, causes & effects of floods, flood risk assessment , modeling & mapping
- Flood prevention, preparedness and mitigation measures.
- Flood damage assessment, recovery and rehabilitation measures,
- National disaster management guide lines on flood management

MODULE I RAINFALL RUNOFF PROCESS 7

Water shed- and water shed management-rain fall runoff process - Criteria for sustainable water management -causes of floods-Impacts-Flood routing.

MODULE II FLOOD MODELLING AND RISK ASSESSMENT 9

Basic principles and aspects of flood risk assessment - Flood Hazard Modelling – Flood Plain delineation & mapping –Software tools- Application of GIS-Community-based flood risk assessment- Case studies.

MODULE III FLOOD RISK MANAGEMENT 7

flood plain management – Tools for flood plain management –Flood prevention, preparedness and mitigation – frame work - Structural and non structural flood mitigation measures– Integrated watershed management- Urban and Rural development planning – Public awareness and capacity building

MODULE IV FLOOD DISASTER PLANNING 7

Flood forecasting and warning–Indian context - Emergency response planning and management – Evacuation process, rescue process– Environmental health - Concepts of recovery and rehabilitation – Flood damage assessment – Management of recovery and rehabilitation activities- National disaster management guide lines on flood management.

Total Hours : 30

TEXT BOOKS:

1. Rangapathy.V. karmegam. M and Sakthivadivel.R., “ Monograph in flood routin

g methods as applied to Indian Rivers" Anna University Publication.
2. Andreas H. Schumann., "Flood Risk Assessment and Management", Springer Science & Business Media B.V.2011

REFERENCES:

1. Ashley R., Garvin S., Pasche E. and Vassilopoulos A., Advances in Urban Flood Management, Balkema, 2007
2. Saul A, Floods and Flood Management, Springer, 1992.
3. Engineering hydrology by K. Subramanya, Tata McGraw-Hill Education.

OUTCOMES:

Upon completion of the course students will be able to:

- Apply the various wasteshed concepts and flood and flood routing.
- Discuss the methods of flood risk assessment and mapping using geospatial techniques
- Demonstrate their knowledge on flood mitigation measures and public awareness.
- Analyse the flood forecasting and flood disaster.

CECX60	URBAN AND INDOOR AIR QUALITY MANAGEMENT	L	T	P	C
		2	0	0	2

OBJECTIVES:

- scientific principles that make up the broad field of air quality
- its pollution and management

MODULE I **MONITORING AND MANAGEMENT** **7**

Monitoring and measuring - air quality indicators - Air quality assessment methods - Monitoring objectives - Functions - Air quality assurance and air quality control

MODULE II **MONITORING SYSTEMS** **8**

Types of monitoring systems - Monitoring levels - Critical analysis of the existing monitoring systems - Software for air quality monitoring - Quality modeling and decision-making: Air quality and pollution sources - from assessment to management

MODULE III **INDOOR AIR QUALITY** **7**

Indoor activities of inhabitants - Levels of pollutants in indoor and outdoor air- Design and operation of buildings for improvements of public health- IAQ policy issues- sustainability. Air pollutants in indoor environments- private residences- offices- schools-public buildings- ventilation.

MODULE IV **POLLUTION & CONTROL** **9**

Indoor air pollution from outdoor sources- particulate matter and ozone- Combustion byproducts-Radon and its decay products- Volatile organic compounds- odours and sick-building syndrome- Humidity- Bio aerosols- infectious disease transmission- Special indoor environments- A/C units in indoor- Measurement methods- Control technologies- Control strategies.

Total Hours –30

TEXT BOOKS:

1. Griffin, R. D.: Principles of Air Quality Management, CRC Press, ISBN 0-8493-7099-X, 2006.

2. T.K. Gosh, S.K. Loyalka and R.C.Warder, Jr., "Indoor Air Quality & Control" PTR Prentice Hall,1993.

REFERENCES:

1. Richard A. Wadden, and Peter A. Scheff, "Indoor Air Pollution - Characterization, Prediction, and Control", John Wiley & Sons,1983.
2. Zanneti, P. "Air Pollution Modeling Theories", Computational Methods and Available Software. Van Nostrand Reinhold, New York. 1990
3. Boubel R.W., Fox D.L., Turner D.B & Stern A.C., "Fundamentals of Air Pollution" Academic Press, New York, 1994
4. Thaddes Godish, Indoor air and Environmental Quality, CRC press, 2000.
5. Nazaroff W.W. and L. Alvarez-Cohen, Environmental Engineering Science, Wiley sons, Newyork, 2001.

OUTCOMES:

At the end of the course, students will be able to

- Recognize hazardous atmospheric conditions
- Evaluate atmospheres relative to health and environmental standards
- Model air emissions to predict atmospheric concentrations and recommend appropriate controls and management strategies to reduce or eliminate pollutants and their effects
- Understand the measurement methods and control strategies

CECX61 CONTRACT LAWS AND REGULATIONS

L	T	P	C
2	0	0	2

OBJECTIVES:

To improve the knowledge of the students in various elements of contract, tendering procedures, arbitration, labor regulations and other laws related to it.

MODULE I CONSTRUCTION CONTRACTS **8**

Indian contracts act – elements of contracts – types of contracts – public private partnership in contract - design of contract documents – international contract document - standard contract document.

MODULE II TENDERS **7**

Prequalification – bidding – accepting – evaluation of tender from technical, contractual and commercial points of view – contract formation and interpretation-potential contractual problems.

MODULE III LEGAL REQUIREMENTS **8**

Insurance and bonding – laws governing sale, purchase and use of urban and rural land – tax laws – income tax, sales tax, excise and custom duties and their influence on construction costs – legal requirements for planning – property law local government laws for approval – statutory regulations.

MODULE IV LABOUR REGULATIONS **7**

laws relating to wages, bonus and industrial disputes, labour administration – insurance and safety regulations Workmen's Compensation Act – Indian Factory Act – Tamilnadu Factory Act – Child Labour Act - Other Labour Laws

Total Hours –30

TEXT BOOKS:

1. Gajaria G.T., Laws Relating to Building and Engineering Contracts in India, M.M.Tripathi Private Ltd., Bombay, 2000.

2. Patil. B.S, Civil Engineering Contracts and Estimates, Universities Press Private Limited, India, 2006.

REFERENCES:

1. Jimmie Hinze,Construction Contracts, McGraw Hill, 2001.
2. Joseph T. Bockrath, Contracts and the Legal Environment for Engineers and Architects, McGraw Hill, 2000.
3. The Indian Contracts Act, 1872,
4. Arbitration and Conciliation Act, 1996.
5. The Tamilnadu Transparency in Tenders act, 1998.

OUTCOMES:

At the end of the course, students will be able to

- define the various elements, types and laws related to contract.
- list the various processes involved in tendering.
- describe the various legal requirements related to construction activities.
- list the available labor regulations and its benefits to the labour.

CECX62 SMART CITIES

L	T	P	C
2	0	0	2

OBJECTIVES:

- To examine the core challenges relating to the foundation of sustainable smart cities
- To develop knowledge, understanding, and critical thinking related to smart, sustainable urban development.
- To explore issues relating to the development and deployment of new and emerging technologies, that will create a thorough understanding of smart processes and systems of the present and future.

MODULE I UNDERSTANDING SMART CITIES 7

Introduction to Smart City - How did the idea evolve - History and Evolution of Smart Cities, worldwide - barriers and benefits of smart cities - Development Perspectives - Definitions and Core Concepts - characteristics and factors of Smart cities

MODULE II SMART CITY RESPONSIBILITIES 7

Built environment – Energy – Telecommunications – Transportation - Health and human services - Water and wastewater - Public safety and Payments.

MODULE III SMART CITY ENABLERS 7

Instrumentation and control – connectivity- interoperability- security and privacy - data management - computing resources and analytics - Process of building a smart cities roadmap

MODULE IV TOWARDS SMART CITIES IN INDIA 9

ICT initiatives in Indian Cities - Are we ready for smart cities - economic development - smart city technologies: inventory and standardization- potential of commercialization and emerging trends - e-democracy and e-governance - Case studies in India : Palava - Dombivalli, Mumbai, Lavasa- Pune.

Total Hours : 30

TEXT BOOKS:

1. Chan.D (2016) Defining smart cities seminar : A Guiding Frame work.
2. Goldsmith.S & Crawford.S “ the responsive city: engaging communities through data – smart governance”John Wiley & sons, 2014.

3. Mele.N The end of big: How the internet makes david the new Goliath, Macmillan 2013
4 Townsend, A.M., " Smart Cities: Big data, Civic Hackers, and the quest for new ww norton & company, 2013.

REFERENCES:

1. Jesse Berst, Liz Enbysk and Christopher Williams Smart Cities Readiness Guide - The planning manual for building tomorrow's cities today, Smart Cities Council, 2014.
2. Aniket Bhagwat, Suparna Bhalla, Sanjay Prakash Ashish Bhalla Destination 100 The Making of Smart Cities in India**,** Future Institute publishers, 2014,
3. Vinod kumar T. M., Geographic Information Systems for Smart Cities, Copal Publishing, New Delhi, 2014,

OUTCOMES:

Upon completion of the course, the student will be able to

- To understand the technological, environmental and socio-economic aspects of sustainable smart cities.
- To understand how and to what extent cities are changing, following or contrasting the path of the so-called "smart cities revolution"
- To develop strategies and techniques in design which enable innovative solution for the improvement of quality of life.
- To learn how to develop successfully in a team a complete and feasible project which will contribute to the improvement of Indian city.

CECX63	ENVIRONMENTAL MONITORING	L	T	P	C
		2	0	0	2

OBJECTIVES:

- The fundamental objective of environmental monitoring is to collect data that can be used to make informed decisions to best manage and improve the environment.

MODULE I ANALYTICAL METHODS 7

Classification of instrumental methods- Performance characteristics of instruments (static and dynamic)-errors and uncertainties in performance parameters- noise reduction- Sensitivity and detection limit Errors-types-expression of errors- Precision and accuracy- Calibration of instrumental methods.

MODULE II AIR QUALITY MONITORING METHOD 7

Spectophotometry - Electromagnetic radiation -Atomic absorption and emission spectrometry -Ultraviolet-visible spectrophotometry principle and instrumentation- Atomic adsorption spectroscopy principle and instrumentation.

MODULE III WATER QUALITY MONITORING METHODS 8

Electro chemical methods- electrochemical cell- Fluorimetry- nephelometry and turbidimety- principles- Electrodes- Conductomety- electrolytic conductivity specific equivalent and molar conductance- working principles of pH, EC, TDS meters.

MODULE IV MATERIAL CHARACTERIZATION METHODS 8

Material characterization techniques- SEM, TEM, XRD, FTIR, thermal analysis- working principles and applications.

Total Hours : 30

TEXT BOOKS:

1. H.H, Willard, L.L. Merit, J.A. Dean and F.A. Settle, Instrumental Methods of Analysis, 7th Ed. CBP Publishers and Distributors, New Delhi, 1986.

2. D.A. Skoog, D.M. West and T.A. Nieman, Principles of Instrumental Analysis, 5th Ed. Thomson Asion(P) Ltd. Singapore, 2004.

REFERENCES:

1. Paul. R. Locontio, Trace Environmental Quantitaive Analysis: Princeiples, Techniques and Applications, 2nd Edition, 2005.

2. Ewing, Instrumental methods of chemical analysis,5th Edition, McGraw Hill, Newyork,1985.

3. Reeve R.N., Introduction to Environmental Analysis, Analytical techniques in sciences, John and Sons, Chichester, UK, 2002.

OUTCOMES:

At the end of the course, the students will be able to

- It elaborate about the problems and errors in instruments.
- Understand the principle, working & components of air quality, monitoring techniques.
- Understand the principle, working & components of water quality monitoring technique.
- Select a method for solid waste characterization.

Physics Elective Courses
(To be offered in II Semester)

PHCX 01	FUNDAMENTALS OF ENGINEERING MATERIALS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To help students to acquire the properties and applications of conducting and semiconducting materials.
- To familiarize students with basic ideas about the properties of dielectric and magnetic materials and their applications.
- To familiarize students with basic knowledge of nanomaterials and its electrical, electronic, mechanical and magnetic properties.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I CONDUCTING AND SEMICONDUCTING MATERIALS 7

Conductors: properties, Fermi distribution function, Fermi energy in metals- density of states- conducting polymers-properties-applications, semiconductors: intrinsic and extrinsic semiconductors-carrier concentration, conductivity and energy band gap, semiconducting polymers- properties- applications.

MODULE II DIELECTRIC MATERIALS 8

Polarization- dielectric constant – electronic, ionic, orientational and space charge polarization – frequency and temperature dependence of polarisation – Internal field - Clausius Mosotti relation - dielectric loss – dielectric breakdown – applications of dielectric materials (capacitors and transformers) – Pyroelectricity, Piezoelectricity, ferroelectricity and applications in Ferroelectric Random Access Memory (FeRAM) - multiferroic materials and its applications.

MODULE III MAGNETIC MATERIALS 7

Origin of magnetism-magnetic moment, susceptibility, permeability – Bohr magneton – Dia, Para and Ferro magnetism –Spontaneous magnetization- Domain theory – Hysteresis – soft and hard magnetic materials – antiferromagnetic materials – Ferrites and its application - Giant Magneto-resistance effect (GMR) - Magnetic resonance imaging(MRI).

MODULE IV NANOMATERIALS 8

Properties of nanomaterials – size effect on thermal, electrical, electronic, mechanical,

optical and magnetic properties – quantum confinement – classification of nanomaterials – quantum well, quantum wire, quantum dot - nanoporous materials - carbon nanotubes, graphene - nanocomposites – applications of nano materials.

PRACTICALS

1. Determination of energy band gap of a semiconductor.
2. Determination of resistivity of metals by four point probe method.
3. Determination of dielectric constant of dielectric material.
4. Determination of time constant of a capacitor using RC circuit.
5. Determination of paramagnetic susceptibility of given liquid.
6. Determination of hysteresis loss in a transformer using BH curve.
7. Analysis of size effect on the absorption spectrum of nanomaterials.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. William D. Callister, “Material Science and Engineering”, Wiley Publications, 2006.
2. Raghavan, V., “Materials Science and Engineering”, 5th edition, Printice Hall of India Pvt Ltd. New Delhi, 2004.
3. Wahab. M.A, “Solid State Physics: Structure and Properties of Materials”, Narosa Publishing House Pvt. Ltd., New Delhi , 2nd Edition, 2010.

5. Charles P. Poole and Frank J. Owens, ”Introduction to nanotechnology”, Wiley (India), 2009.
6. Pradeep. T., “Textbook of Nanoscience and Nanotechnology”, McGraw Hill Education (India) Private Limited, New York, 2012.

OUTCOMES:

On completion of this course, the student will be able to

- apply the concepts of conducting and semiconducting materials for solid state devices.
- comprehend the significance of properties of dielectric magnetic materials and derive these properties from synthesized materials.
- differentiate between the properties of the nanomaterials compared to bulk materials.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 02	HEAT AND THERMODYNAMICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To familiarize students with basic concepts of heat.
- To help students acquire the fundamentals of heat conduction and radiation.
- To enable students acquaint with the basics of thermodynamic concepts.
- To make students understand the fundamentals of heat based experiments.

MODULE I CONCEPTS OF HEAT **10**

Definition of temperature, thermal and thermodynamic equilibrium - relationship between temperature and kinetic energy - definition of solid, liquid, gas - Introduction to phase transitions, critical and triple points- definition of heat capacity, mechanical equivalent of heat -Joule's calorimeter- latent heat- microscopic model of ideal gas - equation of state, internal energy, equipartition theorem- equation of state for non-ideal gases.

MODULE II CONDUCTION AND RADIATION **10**

Thermal conductivity – rectilinear flow of heat – thermal conductivity of a good conductor – Forbe’s method – thermal conductivity of a bad conductor – Lee’s disc method – conduction of heat through compound media - radiation – Planck’s law of blackbody radiation – Wien’s law – Stefan’s law – Newton’s law of cooling from Stefan’s law – Solar constant – Pyrometry.

MODULE III FUNDAMENTALS OF THERMODYNAMICS **10**

Thermodynamic equilibrium – zeroth law of thermodynamics – first law of thermodynamics – Reversible and irreversible processes – second law of thermodynamics - Heat engine – Carnot’s engine – Carnot’s theorem – Internal combustion engines – petrol and diesel engines (qualitative) – Entropy and available energy – temperature – entropy diagram for Carnot’s cycle - Third Law of thermodynamics (qualitative).

PRACTICALS

1. Determination of mechanical equivalent of heat by Joule’s calorimeter.
2. Relation between temperature of a body and time by plotting a cooling curve-Newton’s law of cooling.

3. Determination of specific heat capacity of liquid by cooling.
4. Determination of thermal conductivity of a good conductor-Forbe's method
5. Determination of thermal conductivity of a bad conductor-Lee's disc method

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur. D.S, “Heat & Thermodynamics”, S.Chand & Co., 2009.
2. Brijlal & Subramaniam, “Heat and Thermodynamics”, S.Chand & Co, Delhi, 2010.
3. Gupta. A.B and Roy. H, “Thermal Physics”, Books and Allied Ltd., 2002.
4. Sharma. J.K and Sarkar. K.K, “Thermodynamics and statistical Physics”, Himalaya Publishing House, 1988.

OUTCOMES:

On completion of this course, the student will be able to

- understand the concepts of heat and its properties.
- comprehend the ideas governing the conduction and radiation processes.
- apply the knowledge of laws of thermodynamics in thermodynamic systems.
- perform heat based experiments and determine its various properties.

PHCX 03	INTRODUCTION TO NANOSCIENCE AND TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To acquire basic knowledge about the nanomaterials and applications.
- To learn about the synthesis and imaging techniques of nanomaterials.
- To gain the basic concepts of fabrication techniques.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I NANOMATERIALS AND APPLICATIONS **10**

Properties of nanomaterials – size effect on thermal, electrical, electronic, mechanical, optical and magnetic properties – quantum confinement – classification of nanomaterials – quantum well, quantum wire, quantum dot - nanoporous materials - zeolite, mesoporous materials, carbon nanotubes, grapheme - nanocomposites - applications (qualitative): Molecular electronics-nanoelectronics – nanophotonics - single electron transistor-drug delivery.

MODULE II SYNTHESIS AND IMAGING TECHNIQUES **12**

Top-down and bottom up approaches – mechanical alloying and mechanical ball milling - sol-gel approach - hydrothermal method - precipitation method - spray pyrolysis - spin coating-self assembled monolayer (SAM) - Chemical vapour deposition method – Physical vapour deposition method: laser ablation method, sputtering method.

Optical microscopy – Phase contrast and interference microscopy – confocal microscopy - high resolution Scanning electron microscope (HRSEM) - high resolution Transmission electron microscope (HRTEM) - Atomic force microscope - Scanning Tunnelling microscope (STM).

MODULE III NANOFABRICATION **8**

Photolithgraphy - electron beam lithography - X-ray and Ion beam lithography - nanoimprint lithography - soft lithograpy - nanoelectromechnical systems (NEMS) - nanoindentation principles.

PRACTICALS

1. Synthesis of nanomaterials by sol-gel method.

2. Synthesis of nanomaterials by hydrothermal method.
3. Synthesis of nanomaterials by solid state reaction method.
4. Synthesis of nanomaterials by chemical bath deposition method.
5. Synthesis of nanomaterials by co-precipitation method.
6. Synthesis of nano thin films by spray pyrolysis method.
7. Synthesis of nano thin films by pulsed laser deposition (PLD) method.
8. Analysis of size effect on the absorption spectrum of nanomaterials.
9. SEM characterization of nanomaterials.
10. AFM characterization of nano thin films.
11. Phase confirmation by XRD.

L – 30; P – 30; TOTAL HOURS – 60

5. Chris Mack, “Fundamental Principles of Optical Lithography: The Science of Microfabrication”, John Wiley & Sons, 2008.
6. Bandyopadhyay A.K., “Nano Materials”, New Age International Publishers, New Delhi, 2008.

OUTCOMES:

At the end of the course, the students will be able to

- understand the importance and basic concepts of the nanomaterials.
- comprehend the imaging techniques for nanomaterials.
- illustrate the various nanofabrication techniques.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 04 LASERS AND THEIR APPLICATIONS

L	T	P	C
2	0	2	3

OBJECTIVES:

- To recognize the fundamentals of laser and its characteristics.
- To comprehend and compare the different laser systems.
- To apply lasers in metrology and material processing.
- To understand the working of laser instrumentation.
- To correlate the experimental results for applications.

MODULE I LASER THEORY **8**

Spontaneous and stimulated emission - Population inversion – Einstein's A & B coefficients - Threshold condition – super-radiance Laser – Three level and four level laser systems -conditions for CW and pulsed laser action. Q-Switching - experimental methods - cavity dumping - Mode locking - experimental methods - Spatial and Temporal coherence.

MODULE II DIFFERENT LASER SYSTEMS **8**

Laser systems – General description - Laser structure - excitation mechanism - Different laser systems- He-Ne laser, Carbon-dioxide laser - Excimer laser – Free electron laser- Alexandrite laser - Ti-Sapphire laser – Semiconductor diode laser - Diode pumped solid state laser - Pulsed-CW dye laser- Fibre laser.

MODULE III METROLOGICAL AND MATERIAL PROCESSING APPLICATIONS **8**

CW and Pulsed laser beam characteristics and its measurements - Beam focusing effects - spot size - Power and Energy density Measurements - Distance measurement - Interferometric techniques - LIDARS - different experimental arrangements - Pollution monitoring by remote sensing - Laser gyroscope - Laser welding, drilling, machining and cutting - Laser surface treatment - Laser vapour deposition – Biophotonic applications.

MODULE IV LASER INSTRUMENTATION **7**

Laser for measurement of length, current and voltage – Laser Doppler Velocimetry - Holography and speckle in displacement and deformation measurements - Laser for communication with fiber optics as channel.

PRACTICALS

1. Tuning of Dye Laser using DFDL Arrangement
2. Determination of Brewster Angle using He-Ne laser
3. Study of transversely Pumped Dye Lasers
4. Study of longitudinally Pumped Dye Lasers
5. Determination of power and wavelength using Distributed Feedback Dye Laser (DFDL)
6. Determination of fibre optic losses using semiconductor laser.
7. Bandgap determination of a semiconductor diode.

L – 30; P – 30; TOTAL HOURS – 60

6. William M.Steen, ”Laser Material Processing”, Springer-Verlag, Berlin, Third Edn., 2005.

OUTCOMES:

At the end of the course, the students will be able

- To complement the knowledge acquired in the theory class.
- To work with dye lasers for tunability of laser wavelength.
- To measure the loss of information involved in fibre optic communication.
- To correlate the results for application.

PHCX 05	MATERIALS SCIENCE	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To gain basic knowledge in conducting and semiconducting materials and their properties.
- To provide basic understanding of properties and applications of dielectric materials.
- To impart knowledge on magnetic and optical materials and their properties & applications.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I CONDUCTING AND SEMICONDUCTING MATERIALS 10

Quantum free electron theory of metals and its importance - Energy distribution of electrons in metals - Fermi distribution function - Density of energy states and carrier concentration in metals - Fermi energy – Classification of solids into conductors, semiconductors and insulators on the basis of Band theory – Introduction to Elemental and Compound semiconductors - Carrier concentration derivation for Intrinsic semiconductors - Density of electrons in conduction band & Density of holes in valence band- intrinsic carrier concentration - Fermi energy & Variation of Fermi energy level with temperature - Mobility and electrical conductivity - Band gap determination.

MODULE II DIELECTRIC MATERIALS 7

Introduction to dielectric materials & basic definitions – Electronic, Ionic, Orientation & Space charge polarizations - Total polarization – Frequency and temperature dependence of polarization - Internal field in a dielectric material - Deduction of Clausius - Mosotti's relation - dielectric loss & loss tangent – Different types of dielectric breakdown – Applications of dielectric materials : Capacitors and Transformers.

MODULE III MAGNETIC MATERIALS 6

Introduction to magnetic materials & origin of magnetic moment - Different types of

magnetic materials and their properties - Ferromagnetism & Domain theory of ferromagnetism - Hysteresis, Soft and Hard magnetic materials - Antiferromagnetic materials - Ferrites and its applications – Applications of magnetic materials : Data storage.

MODULE IV OPTICAL MATERIALS 7

Optical properties of semiconductors - Direct and Indirect bandgap semiconductors – Traps, recombination centre, color center and exciton – Luminescence : Fluorescence and Phosphorescence - Liquid crystal display : twisted nematic crystal display – Applications of Optical materials - Optical Sources : light emitting diode and laser diode - Photo detectors : PIN photodiode and Avalanche Photodiode - Pyroelectric devices - Electro optic effect : Kerr effect and Faraday effect.

PRACTICALS

1. Resistivity measurement of a semiconductor using four point probe method.
2. Determination of band gap of a semiconductor diode.
3. Determination of Hall coefficient of a given semiconductor material.
4. Determination of dielectric constant of a given non-polar liquid.
5. Determination of magnetic susceptibility of a given paramagnetic liquid using Quincke's method.
6. Determination of energy loss of a given transformer core using hysteresis method.
7. To study the I-V characteristics of a photodiode.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

5. Raghavan. V, ''Materials Science and Engineering'', Prentice Hall of India, 5th Edition, 2004.

OUTCOMES:

On the completion of this course, the students will be able to

- Gain knowledge about fundamentals of conducting and semiconducting materials.
- Understand concepts and applications of Dielectric and Magnetic materials.
- Familiarize Optical materials and their applications in Engineering and Medical fields.
- Complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 06	NON-DESTRUCTIVE TESTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To study the process and applications of ultrasonic inspection method.
- To understand the basic concepts of radiographic inspection method.
- To acquire the knowledge about the various surface Non-Destructive Testing (NDT) techniques.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I ULTRASONIC INSPECTION METHOD **10**

Ultrasonic Testing - Principle of operations - types of sound waves - types of Transducers - transmission and pulse-echo method - straight beam and angle beam, instrumentation - calibration methods - ultrasonic testing technique- data representation, A Scan, B-scan, C-scan. Phased Array Ultrasound, Time of Flight. Diffraction - thickness determination - advantages, disadvantages and applications.

MODULE II RADIOGRAPHIC INSPECTION METHOD **10**

Radiographic testing – Principle - Interaction of X-ray with matter - X-ray radiography - method of generation-industrial radiography inspection techniques – Equipment - Exposure charts - Types of films – Fluoroscopy - Xero-Radiography – Limitations - Gamma radiography - Equipment, radiation sources - method of generation - film processing - interpretations of radiography - safety in industrial radiography.

MODULE III SURFACE NDT TECHNIQUES **10**

Liquid Penetrant Testing – Principles, Characteristics and types of liquid penetrants – developers - advantages and disadvantages of various methods - Inspection Procedure and Interpretation of results. Applications of Liquid Penetrant testing.

Magnetic Particle Testing - Principle-magnetizing technique - procedure –equipment - Interpretation and evaluation of test indications - applications and limitations - demagnetization.

PRACTICALS

1. Inspection of welds using solvent removable visible dye penetrant.
2. Inspection of welds using solvent removable fluorescent dye penetrant.

3. Inspection on non magnetic materials by eddy current method.
4. Inspection on magnetic materials by eddy current method.
5. Inspection of welds by Eddy current Testing.
6. Inspection of welds by Magnetic Particle Testing - Dry method.
7. Inspection of welds by Magnetic Particle Testing - Wet method.
8. Ultrasonic flaw detector - Inspection of defects.
9. Demonstration of Radiographic inspection.

L – 30; P – 30; TOTAL HOURS – 60

5. Charles J., Hellier, “Handbook of Nondestructive evaluation”, McGraw Hill, New York, 2001.

OUTCOMES:

Upon completion of this course, the students will be able to

- illustrate the ultrasonic inspection methods of NDT.
- understand the basic concept of radiographic inspection method.
- test the surfaces by the various surface NDT techniques.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 07	PROPERTIES OF MATTER AND ACOUSTICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand principles and properties of elasticity.
- To understand the basic concepts and application of viscosity.
- To analysis acoustic of building.
- To know about photoelasticity and its applications.

MODULE I ELASTICITY **8**

Stress and strain - Hooke's Law of elasticity - Elastic moduli - Stress-Strain Diagram - Poisson's Ratio - Relation between elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Expression for bending moment - Cantilever–Expression for depression - Uniform bending and Non-uniform bending of beams (theory & experiment) - I form Girders (qualitative treatment) and applications.

MODULE II VISCOSITY **8**

Viscosity- Newton’s formula for viscous flow - Streamline and turbulent motion - Reynolds number - Poiseuille's formula - Determination of coefficient of viscosity- factors affecting viscosity - capillary flow method - Stoke's formula- viscosity of highly viscous liquids – Stoke’s method - Lubricants and its applications –viscosity measurements - Viscometer - Variation of Viscosity with Temperature.

MODULE III ACOUSTICS OF BUILDING **7**

Basic requirement for the acoustically good halls - Reverberation and time of reverberation – Sabine’s formula for reverberation time - Absorption coefficient and its measurement -Transmission of sound and transmission loss - Factors affecting the architectural acoustics and their remedy-sound absorbing materials - vibration and noise control systems for buildings.

MODULE IV PHOTOELASTICITY **7**

Polarization - double refraction - Theory of Plane, Circularly and Elliptically polarized light - Quarter wave plate and half wave plate - photo elasticity - Theory of photo-elasticity - Stress optic relations - model materials - analysis techniques - Photo elastic bench - Three dimensional photo elasticity - Digital photo elasticity - Photo elastic

coatings.

PRACTICALS

1. Determination of viscosity of liquid by Poiseuille's method.
2. Determination of viscosity of liquid by Stoke's method.
3. Analysis of stress by photo elastic method.
4. Verification of Hooke's law by spring method.
5. Determination of Young's modulus of the cantilever beam.
6. Determination of rigidity modulus by static torsion method.
7. Visit to acoustically good auditorium and identifying the sound absorbing materials in the auditorium.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur D.S., "Elements of Properties of Matter", S.Chand & Co, Delhi, 2009.
2. Gaur R.K., Gupta S.L.,"Engineering Physics", Dhanpat Rai Publishers, 2010.
3. Brijlal and Subramaniam.," Properties of Matter", Eurasia Publishing Co, New Delhi, 2002.
4. Smith C.J.," General Properties of Matter", Orient & Longman,1960.
5. Kenneth G. Budinski and Michel K., Budinski, "Engineering Materials Properties and Selection", Pearson, Singapore, 2002.

OUTCOMES:

Upon completion of this course, the students will be able to

- understand the basic concepts of the elasticity of materials.
- comprehend the concepts of viscosity of liquid and measurement.
- demonstrate the acoustical aspects of building and its importance in construction.
- apply the fundamental concept of photo elasticity for the stress analysis of the object.

PHCX 08	PROPERTIES OF MATTER AND NONDESTRUCTIVE TESTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To impart knowledge about the principles and properties of elasticity.
- To learn the laws governing the dynamic of rigid bodies.
- To acquire the knowledge of the various techniques of Non-Destructive Testing (NDT) of materials.
- To understand the principle and basic concept of low temperature applications.

MODULE I ELASTICITY **8**

Stress and strain - Hooke's Law of elasticity - Elastic moduli - Stress-Strain Diagram - Poisson's Ratio - Relation between elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Expression for bending moment- Cantilever–Expression for depression - Uniform Bending and Non-uniform bending of beams (theory & experiment) - I form Girders (qualitative treatment) and applications.

MODULE II DYNAMICS OF RIGID BODIES **8**

Rigid bodies - angular acceleration - Torque on a particle - angular momentum - law of conservation of angular momentum - moment of inertia and its significance - Theorem of parallel and perpendicular axis - moment of inertia of a thin uniform bar - moment of inertia of a rectangular lamina - moment of inertia of uniform circular disc - Moment of inertia of hollow and solid cylinders – flywheel
(qualitative) - kinetic energy of rotating body – Routh rule.

MODULE III NDT TECHNIQUES **6**

Ultrasonic Testing- types of Transducers-transmission and pulse-echo method-Radiographic testing- Principle-Interaction of X-ray with matter-X-ray radiography-method of generation-industrial radiography inspection techniques- Liquid Penetrant Testing**-** Inspection Procedure and Interpretation of results.

MODULE IV LOW TEMPERATURE PHYSICS **8**

Definition of Refrigeration and Air-Conditioning - Types of Refrigeration Systems-

Applications- Comfort Air Conditioning, Industrial Refrigeration, Food processing and food chain - Cryogenic treatment - Low temperature properties of engineering materials: Mechanical properties, Thermal properties, Electrical properties.

PRACTICALS

1. Verification of Hooke's law by spring method.
2. Determination of Young's modulus of the beam by bending method.
3. Inspection of welds using solvent removable visible dye penetrant.
   Inspection of welds using solvent removable fluorescence dye penetrant.
5. Inspection of welds by Magnetic Particle Testing.
6. Determination of moment of inertia of the disc by torsion pendulum method.
7. Determination of moment of inertia of the disc by static torsion method.
8. Demonstration of working of flywheel.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur D.S.,"Elements of Properties of Matter", S.Chand & Co, Delhi, 2009.
2. Brijlal & Subramaniam," Properties of Matter", Eurasia Publishing Co, Delhi, 2002.

7. Charles J., Hellier.," Handbook of Nondestructive evaluation", McGraw Hill, New York, 2001.

OUTCOMES:

Upon completion of this course, the students will be able to

- understand the basic of concept of elasticity of materials.
- comprehend the basic concepts of motion of rigid bodies and its applications.
- demonstrate the various NDT techniques and its importance.
- know the low temperature systems and its applications.

PHCX 09	SEMICONDUCTOR PHYSICS AND OPTOELECTRONICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand the Physics of Semiconductor devices.
- To make the students learn the fundamentals of Photoluminous - semiconductors, Optoelectronic devices, Optical modulators/detectors.
- To make them understand the technology behind latest Display devices like LCD, Plasma and LED Panels.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I PHYSICS OF SEMICONDUCTORS **8**

Elemental and compound semiconductors – Drift and diffusion current - Intrinsic semiconductors – Carrier concentration (derivation) – Fermi energy – Variation of Fermi energy level with temperature – Mobility and electrical conductivity – Band gap determination – Extrinsic semiconductors – Carrier concentration in n-type and p-type semiconductor (derivation) – Variation of Fermi level with temperature and impurity concentration – Variation of Electrical conductivity with temperature – Hall effect – Experiment and applications of Hall effect.

MODULE II OPTOELECTRONIC DEVICES **7**

Light Emitting Diodes (LED) – power and efficiency - double hetero LED - LED structure - LED characteristics - White LED – Applications. Liquid crystal displays – Dynamic scattering and Twisted nematic display, Semiconductor Lasers, Homojunction and Heterojunction laser diodes - Optical processes in semiconductor lasers.

MODULE III OPTICAL MODULATORS **7**

Modulation of light – birefringence –Modulation Techniques - Electro optic effect – Electro optic materials –Types of Electro optic Modulators : Kerr and Pockel modulators –- Magneto optic effect - Magneto optic Modulators – Acousto Optic modulators.

MODULE IV OPTICAL DETECTORS **8**

Photo detectors - photodiodes - phototransistors - noise characteristics - PIN diode – Avalanche Photodiode (APD) characteristics - APD design of detector arrays – Charged Couple Device - Solar cells - Materials and design considerations, Thin film

solar cells, amorphous silicon solar cells.

PRACTICALS

1. Resistivity measurement of a semiconductor using four point probe method.
2. Determination of band gap of a semiconductor diode.
3. Determination of Hall coefficient of a given semiconductor material.
4. Determination of the wavelength of a given laser source using diffraction grating.
5. Determination of Planck's constant using LED.
6. To study the I-V characteristics of photodiode and phototransistor.
7. To study the characteristics of a solar cell.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

6. Palanisamy P.K., "Semiconductor physics and optoelectronics" Scitech Publications, 2003.

OUTCOMES:

On completion of this course, the student will be able to

- understand the principles of Physics behind semiconductor devices.
- choose the correct semiconductors for electronic devices and display.
- differentiate the working principle of LED and Diode Laser.
- apply the knowledge of modulation of light for different types of optical modulators.
- select suitable photodetectors for different types of applications.
- complement the knowledge acquired in the theory class and correlate the results for applications.

Chemistry Elective Courses
(To be offered II Semester)

CHCX01	ANALYTICAL INSTRUMENTATION	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the student conversant with

- principles, instrumentation and applications of different electroanalytical techniques
- different chromatographic techniques
- principles, instrumentation and applications of various types of absorption and emission spectroscopy
- different thermal analytical methods and their applications

MODULE I ELECTROANALYTICAL TECHNIQUES **7**

Principle and applications: conductometric titrations – potentiometrIc titrations, ion-selective electrodes and pH-metry – coulometry – voltammetry - polarography, amperometric titrations.

MODULE II CHROMATOGRAPHY **8**

Basic concepts of chromatography – paper chromatography – column chromatography – thin layer chromatography – gas chromatography – high performance liquid chromatography – gel permeation chromatography.

MODULE III SPECTROSCOPY **8**

Absorption spectroscopy (principle, instrumentation and applications): Colorimetric analysis – UV-Visible spectroscopy – FTIR spectroscopy - Emission Spectroscopy (principle, instrumentation and applications): fluorescence, phosphorescence and chemiluminescence – Atomic absorption spectroscopy – flame emission spectroscopy.

MODULE IV THERMAL ANALYSIS **7**

Principle, instrumentation and applications: Thermo gravimetric analysis – Differential thermal analysis – Differential scanning calorimetry

PRACTICALS

1. Conductometric titrations: acid-base and precipitation titrations

2. Potentiometric titrations
3. Determination of pH of the unknown solution
4. Estimation of alkali metals using flame emission spectroscopy
5. Estimation of metal ions of coloured solutions using colorimetric analysis
6. Separation of compounds using gas chromatography
7. Separation of compounds using high performance liquid chromatography
8. Analysis of the given sample and interpretation of the data using IR, UV-Visible spectroscopy
9. Demonstration of TGA/DTA and DSC and interpretation of data.

L – 30; P – 30; TOTAL HOURS – 60

6. Settle F. (Editor), Handbook of Instrumental Techniques for Analytical Chemistry, Pearson Education, Singapore, 2004.

OUTCOMES:

The student will be able to

- state the principle and applications of various electro-analytical techniques
- identify the right separation method for a given sample using different chromatographic techniques
- explain the principle, instrumentation & applications of various spectroscopic methods and also to interpret the data
- elaborate the principle, instrumentation and applications of various thermal analytical techniques and interpret the data.

CHCX02	CORROSION AND ITS CONTROL	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with the

- Basic concepts, principles and factors affecting corrosion
- Types and mechanism of corrosion
- Control measures of corrosion by material selection, proper design and by applying organic coatings
- Control of corrosion by applying inorganic coating

MODULE I BASIC CONCEPTS OF CORROSION 8

Corrosion – causes and impacts of corrosion – mechanism of corrosion: Dry corrosion- oxidation corrosion - corrosion by other gases – Pilling-Bedworth rule- Corrosion by hydrogen: hydrogen blistering, hydrogen embritttlement, decarburization and hydrogen attack – corrosion of silver and copper by sulphur compounds – liquid metal corrosion (embritttlement or cracking) – Wet corrosion : hydrogen evolution – presence and absence of oxygen and absorption of oxygen – difference between dry and wet corrosion-factors influencing corrosion-polarization-passivity-emf series and galvanic series- corrosion current -rate of corrosion.

MODULE II FORMS OF CORROSION 7

Forms of corrosion-conditions for electrochemical corrosion –galvanic corrosion – differential aeration corrosion: pitting, water line, wire fencing, crevice and filiform corrosion – stress corrosion – Intergranular corrosion- erosion corrosion – soil corrosion – microbiological corrosion- fretting corrosion- corrosion in composites.

MODULE III CORROSION CONTROL AND ORGANIC COATINGS 8

Corrosion control – selection of materials and designing- cathodic protection – sacrificial anode and impressed current cathodic protection – corrosion inhibitors: anodic, cathodic and vapour phase inhibitors.

Organic protective coatings – paints: constituents – functions – varnishes : types-constituents – functions – lacquers : constituents – functions –enamels-constituents – functions – special paints : fire retardant, water repellant, heat resistant, temperature indicating and luminous paints.

MODULE IV INORGANIC COATINGS 7

Treatment of metal surface-inorganic coatings- classification- metallic coatings : anodic and cathodic coatings-hot dipping : galvanizing and tinning- electroplating—electroless plating – cementation (diffusion) : sherardizing, calorizing and chromizing – metal cladding-metal spraying – non metallic coatings (chemical conversion coatings) : phosphate, chromate, oxide coatings and anodizing – comparison of anodic and cathodic protection.

PRACTICALS

1. Determination and comparison of rate of corrosion of metals in the presence of acid, base and neutral medium by weight loss method.
2. Determination of rate of corrosion of iron in the presence of various acids by weight loss method.
3. Determination of rate of corrosion of iron in the presence and absence of anodic Inhibitor by weight loss method.
4. Determination of rate of corrosion of iron in the presence and absence of cathodic Inhibitor by weight loss method.
5. Electroplating of base metal with copper.
6. Electrolessplating of base metal with copper
7. Chemical conversion coatings such as chromate and phosphate coatings.
8. Demonstration on the study of rate of corrosion by using cyclic voltametry.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. P.C Jain & Monica Jain, Engineering Chemistry Dhanpatrai Publishing Company (P) Ltd., New Delhi (2013).
2. S S Umare & S S Dara, A text Book of Engineering Chemistry, S. Chand& Company Ltd, New Delhi, 2014.

4. S. Banerjee, A.K. Tyagi, Functional Materials- Preparation, Processing and Applications, ELSEVIER Publications, London ; Waltham, MA : 2011

OUTCOMES:

Students will be able to

- explain the mechanism, compare and enumerate the factors affecting

corrosion

- describe and identify the place and types for a given situation.
- choose and elaborate the suitable organic coating method for a given real time situation.
- apply a suitable metallic coating for a given situation

CHCX03	ELECTRICAL MATERIALS AND BATTERIES	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with

- preparation, properties and applications of plastics used in electrical and electronic applications
- properties and uses of electrical engineering materials
- classification and description of different types of batteries.
- classification and types of fuel cells

MODULE I POLYMERS FOR ELECTRICAL AND ELECTRONIC APPLICATIONS **8**

Preparation, properties and applications **:** polyethylene, polypropylene, EPDM, Nylon-6,6, PVC, PTFE, polycarbonates, ABS, phenol formaldehyde, urea formaldehyde, epoxy resins – polymer blends and alloys.

MODULE II ELECTRICAL ENGINEERING MATERIALS **7**

Conductors: Silver, Copper, Gold, Aluminum – Semiconductors: Germanium, Silicon, Gallium Arsenic – Insulating Materials: Rubbers, Mica, Plastics, Ceramics, Insulating papers – Magnetic Materials: ferromagnetic materials, paramagnetic materials, diamagnetic materials, antiferromagnetic materials, ferrites

MODULE III BATTERIES **7**

Electrochemical and electrolytic cell – batteries: types (primary, secondary and flow cell) – primary batteries: dry cells, alkaline batteries – secondary batteries: nickel-cadmium cell – lead acid storage cell, lithium battery: primary and secondary type – solar cell – dye sensitized solar cell.

MODULE IV FUEL CELLS **8**

Difference between batteries and fuel cells - chemistry of fuel cells - types of fuel cell (based on temperature and electrolyte) – principle, characteristic features, advantages, disadvantages and applications of polymer electrolyte membrane or proton exchange membrane fuel cell (PEMFC), direct methanol fuel cell (DMFC), alkaline fuel cell (AFC), phosphoric acid fuel cell (PAFC), molten carbonate fuel cell (MCFC) and solid oxide

fuel cells (SOFC).

PRACTICALS

1. Free radical polymerization of styrene.
2. Free radical polymerization of PMMA.
3. Preparation of phenol-formaldehyde.
4. Preparation of urea-formaldehyde.
5. Synthesis of epoxy resin.
6. Demonstration of mechanical properties of insulating materials using UTM
7. Demonstration of electrical properties of insulating materials
8. Construction of batteries using natural resources
9. Measurement of EMF for different batteries.

L – 30; P – 30; TOTAL HOURS – 60

7. B. Viswanathan and M. Aulice Scibioh, Fuel Cells: Principles and Applications, Taylor and Francis Group, 2007.

OUTCOMES:

The student will be able to

- summarise the preparation, properties and applications of plastics used in electrical and electronic applications
- enumerate the properties and uses of electrical engineering materials
- illustrate various types of batteries with the aid of a diagram
- classify the fuel cells and elaborate the different types of fuel cells.

CHCX04	ENGINEERING MATERIALS	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with

- properties and uses of different types of refractories and abrasives
- adhesives, cements and lime, setting of cements and their chemical behaviors.
- types, properties and uses of lubricants.
- various types of composite materials.

MODULE I REFRACTORIES AND ABRASIVES **8**

Introduction refractory: -classification - based on chemical nature- characteristic and selection of good refractory - general manufacture of refractory- preparation properties and uses of: silica refractory - magnesite refractory - zirconia refractory, properties of refractories: refractoriness - refractoriness under load - thermal spalling - porosity and dimensional stability, Cermets - super refractory.

Abrasives : introduction - Moh's scale - natural abrasives: diamond – corundum – emery - garnet and quartz, synthetic abrasives: preparation properties and uses: carborundum (silicon carbide)– alundum - boron (norbide) carbide

MODULE II ADHESIVES AND BINDING MATERIALS **7**

Introduction - classification of adhesives –advantage –limitation of adhesive bonding – development of adhesive- factors influencing adhesive action: chemical and physical, application techniques of adhesive – Lime: classification – manufacture - setting and hardening, Gypsum: -Manufacture and properties and uses - Cement : chemical composition- Manufacture – setting and hardening – concrete – weathering of cement and concrete and its prevention- special cements: high alumina cement - sorel cement - white portland cement – water proof cement.

MODULE III LUBRICANTS **7**

Introduction –functions of lubricant- mechanism of lubrication - classification of lubricant – liquid lubricant: vegetable and animal oils – mineral oils, semisolid: grease(calcium, lithium, aluminium) – petroleum jelly, solid lubricant: graphite - molybdenum disulphide, Properties of lubricant: viscosity - viscosity index - flash point and fire point - cloud point and pour point – oiliness - aniline point - carbon residue.

MODULE IV COMPOSITE MATERIALS 7

Introduction – advantageous characteristics of composites, applications of composites, main constituent of composites, types and applications of composites: RCC fibre-reinforced plastics (glass , carbon and aramid) - particulate composite - metal matrix composite - layered composites - failures in fibre-reinforced composites, ceramic matrix composites (CMC) – properties and applications.

PRACTICALS

1. Preparation of refractory bricks
2. Preparation of abrasive papers/cloth
3. Preparation of simple adhesives
4. Estimation of alkalinity in cements
5. Determination of cloud point and pour point
6. Determination of flash point and fire point
7. Preparation of fibre-reinforced composite

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. P.C Jain & Monica Jain, Engineering Chemistry Dhanpatrai Publishing Company (P) Ltd., New Delhi (2013).
2. B.Sivasnakar, “Engineering Chemistry”, Tata McGrow-Hill Publication Limited, New Delhi, second reprint 2008.
3. Engineering Chemistry, Wiley India Editorial Team, Willey India Publisher, New Delhi, 2011.
4. S S Umare & S S Dara, A text Book of Engineering Chemistry, S. Chand& Company Ltd, New Delhi, 2014.

OUTCOMES:

The student will be able to

- classify and describe the manufacture the refractories and enumerate the properties and uses of abrasive materials.
- elaborate the manufacture, properties and uses of various adhesives and binding materials.
- classify lubricants and describe the properties and uses of them
- enumerate the properties and uses of various composite materials.

CHCX05	FUELS AND COMBUSTION	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the students conversant with the

- three types of fuels available and the different processes involved in it.
- analysis of fuel characteristics and manufacture of fuels
- calculations involved in calorific values and minimum air requirement for complete combustion.
- classification, functions, mechanism and properties of lubricants.

MODULE I SOLID FUELS **7**

Characteristics of good fuel. Solid fuel – Wood, Coal – Ranking of coal – selection of coal. Analysis of coal – Proximate analysis. Pulverized coal – Metallurgical coke – Carbonization of coal – types. Manufacture of metallurgical coke – Beehive oven and Otto Hoffman's by-product oven methods.

MODULE II LIQUID AND GASEOUS FUELS **8**

Liquid fuel: Petroleum: Refining of petroleum, Liquid fuels derived from petroleum – Cracking: Thermal (Liquid and Vapour phase) – Catalytic (fixed bed and moving bed cracking – Synthetic petrol: Fischer-Tropsch method– Knocking in petrol and diesel engine: octane number and antiknocking – cetane number and improvement of cetane number – biodiesel (trans-esterification) – Gaseous fuels: Compressed natural gas (CNG) – LPG – oil gas – producer gas – water (blue) gas – biogas.

MODULE III COMBUSTION **8**

Calorific value: Gross and net caloric value – Bomb Calorimeter, Gas calorimeter - Definition of combustion – calculation of minimum requirement of air (problems) – theoretical calculation of calorific values (Dulong's formula), Gross and net calorific values ((problems) – Analysis of flue gas: Orsat's gas analysis method, explosive range, Ignition temperature. Introduction to air pollution from IC (Internal combustion) engines, photochemical smog, primary and secondary pollutants.

MODULE IV LUBRICANTS **7**

Friction and wear – lubricants: definition, functions and mechanism of lubrication

(thick film and thin film) –classification: liquid lubricants: animal and vegetable origin, mineral oil, blended oils, lubricating emulsions and silicones – properties of lubricating oils: viscosity and viscosity index; Flash and fire-point, Cloud and pour point, oiliness, emulsification number, volatility, carbon residue, aniline point – semisolid lubricant: greases and waxes – solid lubricant: graphite and molybdenum disulphide –nanolubricants.

PRACTICALS

1. Testing of fuels - proximate analysis (moisture, volatile matter, ash content and fixed carbon present in coal, coke, charcoal etc)
2. Ash content and carbon residue test
3. Biodiesel synthesis by trans-esterification method (from coconut, groundnut, mustard oil, palm oil)
4. Determination of calorific value of a solid fuel using Bomb calorimeter (coal, charcoal, coke etc)
5. Determination of calorific value of a liquid fuel using Bomb calorimeter (petrol, diesel, biodiesel etc)
6. Determination of cloud point and pour point of a lubricant
7. Determination of flash and fire point of diesel.
8. Aniline Point of diesel
9. Viscosity Index of lubricants and Fuels by Viscometer
10. Flue gas analysis by Orsat's gas analysis method – Demonstration
11. Working of internal combustion engine – Demonstration

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Jain P.C and Renuka Jain, Physical Chemistry for Engineers, Dhanpat Rai and Sons, New Delhi, 2001.
2. Engineering Chemistry, Wiley India Editorial Team, Willey India Publisher, New Delhi, 2011.

4. J.B. Heywood, Internal Combustion Engine Fundamentals, McGraw Hill International Editions, 1989.
5. Bahl B.S., Tuli and Arun Bahl, Essentials of Physical Chemistry, S. Chand and Company Ltd., New Delhi, 2004.

OUTCOMES:

The students will be able to

- compare and contrast the solid, liquid and gaseous fuels and also describe the processes involved in liquid and gaseous fuels.
- analyse the fuel properties such as moisture, votalite matter, ash content, calorific value etc
- calculate minimum air required for complete combustion and calorific values of fuels.
- categorize different lubricants into three types, explain the preparation and determine their properties.

CHCX06	FUNDAMENTALS OF PHYSICAL CHEMISTRY	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students will be conversant with the

- various thermodynamic terms and relate the laws of thermodynamics in chemical processes
- molecularity and order of reaction and derive the rate constant for different order of reactions
- basics of adsorption of different materials and propose mechanisms and surface area measurement
- conditions for equilibrium and learn different components at equilibrium

MODULE I BASIC THERMODYNAMICS **8**

Introduction - Thermodynamic terms - Thermodynamic equilibrium and processes - 1st law of thermodynamics: internal energy, enthalpy, heat capacity, isothermal and adiabatic expansion, Joule-Thomson effect - Zeroth law of thermodynamics: absolute temperature - 2nd law of thermodynamics: - spontaneous and cyclic process, Entropy in isothermal, isobaric and isochoric processes, work and free energy function, Maxwell's relation - 3rd law of thermodynamics

MODULE II CHEMICAL KINETICS **8**

Rate of chemical reaction - order and molecularity of a reaction - Rate constant - kinetics of opposing, parallel and consecutive and chain reactions - isotope effects - effect of temperature on reaction rate - collision theory - absolute reaction rate theory - kinetics in enzyme catalysis

MODULE III SURFACE SCIENCE AND CATALYSIS **8**

Adsorption - adsorption isotherms - uni and bimolecular adsorption reactions - parahydrogen conversion - factors affecting adsorption – Langmuir adsorption isotherm - Hinshelwood mechanism and *Eley-Rideal* mechanism with example - adsorption of gases on solids and surface area measurement by BET method - Terms in catalysis - homogeneous and heterogeneous and enzyme catalysis with example

MODULE IV PHASE RULE **6**

Terms involved - Conditions for equilibrium - application of phase rule to water, lead-silver system, freezing mixtures, thermal analysis: cooling curves.

PRACTICALS

1. Determination of the heat capacity of benzoic acid, internal energy of combustion of camphor using Bomb calorimeter. Calculation of enthalpy of combustion and formation for camphor.
2. Determination of adsorption isotherm of (i) acetic acid on charcoal (ii) oxalic acid on charcoal.
3. *Kineticsoffirst and second order reactions.*
4. Phase rule experiments with organic compounds: (i) naphthalene and p-dichloro benzene (ii) naphthalene and diphenyl (iii) m-dinitrobenzenzene and p-nitro toluene.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

6. Puri B.R., Sharma L.R. and Pathania M.S., Principles of Physical Chemistry, 47th Edition, Vishal Publishing Co. India, 2016.

OUTCOMES:

The student will be able to

- calculate entropy, enthalpy and free energy change for different chemical processes
- calculate the rate constant for any chemical and biochemical processes
- differentiate the adsorption processes and calculate the surface area and predict the suitability of catalysts for different chemical processes
- predict the equilibrium conditions for water, alloys, freezing mixtures and draw the thermal curves for phase transition

CHCX07	GREEN TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make students conversant with the

- basic principles of green chemistry and green technology.
- wastes that causes hazards to human health
- chemicals that harms our environment
- need for green processes in various industries

MODULE I GREEN CHEMISTRY PROTOCOL **7**

Need – Significance – 12 Principles with examples – R4 model – Life cycle analysis – sustainable and cleaner production - Green Technology: definition, examples: CFC free refrigerants, green building, energy, 3D printers, nanotechnology – Awards for Green chemistry – organization promoting green chemistry.

MODULE II WASTE & WASTE MINIMISATION **8**

Source of wastes: domestic, industrial, medical, nuclear, e-waste; problems; prevention – economy of waste disposal – Waste minimization techniques: general waste treatment and recycling – alternate waste water treatment technologies: hybrid process – Green computing: goals, green cloud, green ICT - Pollution statistics from various industries (Industrial case studies).

MODULE III GREEN SYNTHESIS **7**

Introduction - Solvent free reactions - green reagents, green solvents in synthesis - microwave and ultrasound assisted reactions – supercritical fluid extraction – green oxidation and photochemical reactions – catalyst and biocatalysts.

MODULE IV GREEN INDUSTRIAL PROCESSES **8**

Polymer industry: biodegradable polymer - textile industry: greener approaches of dyeing, waste disposal – ecofriendly agrochemicals: biofertilizers, biopesticides – Pharmaceutical industry: atom economy, reduction of toxicity, use of biocatalyst, zero waste disposal – Leather industry: greener process in tanning, crusting, surface coating – ecofriendly batteries & fuel cells.

PRACTICALS

1. Synthesis of an ionic liquids (Ex: imidazolium) and testing the solubility of organic

chemicals.

2. Green bromination of stilbene (using pyridine hydrobromide).
3. Green synthesis: Photocatalytic reactions, solvent-free organic reaction – Aldol; green oxidation, green reduction.
4. Microwave assisted chemical reaction. (synthesis of aspirin, pinacol-pinacolone reaction, etc).
5. Comparison of conventional reaction with microwave assisted reactions (atom economy, solvent, etc) [Ex: aldehyde and ketones with hydrazines to give hydrazones].
6. Diels-Alder reaction in eucalyptus oil (green process).

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Jain P.C and Renuka Jain, Physical Chemistry for Engineers, Dhanpat Rai and Sons, New Delhi. 2001.
2. V. K. Ahluwalia, Green Chemistry: Environmentally Benign Reactions, Ane Books India, New Delhi, 2006.

4. Rashmi Sanghi, M. M. Srivastava, Green chemistry, Narosa publishers, New Delhi, 2003.

OUTCOMES:

The students will be able to

- outline the principles and implications of green chemistry.
- comprehend the potential risks of waste generated and analyse the threats to human and environment.
- integrate information into design of molecules to avoid/eliminate toxic solvents & reagents or reduce toxic products.
- identify various alternate greener technologies for various industries.

CHCX08	ORGANIC CHEMISTRY OF BIOMOLECULES	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make students conversant with the

- basic concepts in organic chemistry
- types and structure of carbohydrates and lipids
- formation of different structures of proteins from amino acid
- structure of nucleic acids

MODULE I BASIC CONCEPTS IN ORGANIC CHEMISTRY **8**

Classification and IUPAC nomenclature of organic compounds – stereochemistry – optical, stereo and geometrical isomerism – types of reagents: electrophiles and nucleophiles – types of reactions: addition, substitution, elimination and rearrangement reactions.

MODULE II CARBOHYDRATES, LIPIDS AND VITAMINS **7**

Structure and functions of carbohydrates: mono, di, oligo and polysaccharides – lipids: phospholipids, glycolipids, sphingolipids – cholesterol – steroids – Structure, functions and deficiency disorders of fat soluble vitamins: A, D, E & K - Water soluble vitamins B & C: Thiamine, riboflavin, pantothenic acid, niacin, pyridoxine, biotin, cobalamine, folic acid and ascorbic acid.

MODULE III AMINO ACIDS, PEPTIDES AND PROTEINS **7**

Aminoacids: classification, properties - peptides – polypeptides – proteins: primary, secondary, tertiary and quaternary structure – glycoproteins – lipoproteins – Enzymes: classification and functions

MODULE IV NUCLEIC ACIDS **8**

Nucleic acids – importance - structure of purines and pyrimidines – nucleotides – polynucleotides - RNA – types & structure - DNA – phosphodiester bonds – chemical, helical structure and functions – DNA replication – gene modification.

PRACTICALS

1. Qualitative tests to identify carbohydrates.

2. Quantitative estimation of carbohydrates.
3. Separation of sugars – TLC and/or paper chromatography.
4. Quantitative estimation of lipids.
5. Separation of amino acids – TLC and/or paper chromatography.
6. Quantitative estimation of proteins by Lowry's method.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. V. K. Ahluwalia, Organic Reaction Mechanism, Narosa Publishers, New Delhi, 2002.
2. Johnson Arthur T., Biology for Engineers, CRC Press, Finland, 2011.
3. Jain P.C and Renuka Jain, Physical Chemistry for Engineers, Dhanpat Rai and Sons, New Delhi. 2001.
4. David L. Nelson, Michael M. Cox, Lehninger Principles of biochemistry, Macmillan press, London, 2010

OUTCOMES:

The students will be able to

- classify organic compounds and explain the mechanism of various organic reactions.
- draw the structures and enumerate the functions of carbohydrate, lipids and vitamins.
- correlate the relationship among amino acids, peptides and proteins.
- recognize the role of nucleic acid in the formation of RNA & DNA and differentiate DNA & RNA using their structure and function.

CHCX09	POLYMER SCIENCE AND TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the student conversant with the

- basic concepts of polymers, classification, types of polymerization and molecular weight & its distribution
- preparation, properties and applications of thermoplastics and introduction to biodegradable polymers
- properties and applications of thermosets, elastomers and FRP
- different types of moulding techniques

MODULE I BASIC CONCEPTS OF POLYMERS **8**

Definitions: monomer, polymer, functionality, degree of polymerization – classification of polymers: source, structure, application, thermal processing behavior (thermoplastics and thermosets), composition and structure (addition and condensation), mechanism (chain growth and step-wise growth) – copolymer: types – Definition –nomenclature of polymers – tacticity – types of polymerization : free radical, cationic and anionic polymerization (concepts only) – average molecular weight of polymer: number, weight – molecular weight distribution (problems)

MODULE II THERMOPLASTICS AND BIODEGRADABLE POLYMERS **8**

Preparation, properties and applications : LDPE, HDPE, polypropylene, PVC, PTFE, PET, polyamides (Nylon-6 and Nylon 6,6) and polycarbonates – polymer blends and alloys – basics of biodegradable polymers.

MODULE III THERMOSET RESINS, ELASTOMERS AND FRP **7**

Thermoset resins : phenolic resins, amino resins (urea and melamine formaldehyde), epoxy resins, unsaturated polyesters – polyurethanes – elastomers : vulcanization of natural rubber, diene based elastomers –fibre reinforced plastics: glass, aramid and carbon.

MODULE IV MOULDING TECHNIQUES 7

Moulding constituents**:** functions – moulding techniques**:** compression, injection, extrusion (single screw), blow moulding, thermoforming, (mechanical and vacuum forming), lamination.

PRACTICALS

1. Determination of molecular weight and degree of polymerization using Oswald's viscometer.
2. Free radical polymerization of styrene.
3. Free radical polymerization of PMMA.
4. Preparation of phenol-formaldehyde.
5. Preparation of urea-formaldehyde.
6. Synthesis of epoxy resin.
7. Synthesis of unsaturated polyester.
8. Preparation of FRP laminates.
9. Demonstration of injection moulding, compression moulding and blow moulding.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Billmeyer F.N., Text Book of Polymer Science, 3rd Edition, John Wiley and Sons, New York, 1994.
2. George Odian, Principles of Polymerisation, 3rd Edition, McGraw Hill Book Company, New York, 1991.

6. Gowarikar V.R., Viswanathan N.V and Jayadev Sreedhar, Polymer Science, Wiley Eastern Limited, Madras, 1981.

OUTCOMES:

The student will be able to

- classify various polymers, name the polymers and types of polymerization

reactions, calculate molecular weight of polymers,

- summarise preparation, properties and applications of thermoplastics and give examples of biodegradable polymers
- elaborate the properties and applications of thermosets, elastomers and FRP
- select the appropriate moulding technique for a given polymer, based on the application

Maths Elective Courses

(to be offered in IV

Semester)

MACX 01	**DISCRETE MATHEMATICS AND GRAPH THEORY**	**L**	**T**	**P**	**C**
		3	**1**	**0**	**4**

OBJECTIVES:

The aims of this course are to

- introduce Logical and Mathematical ability to deal with abstraction.
- familiarize the basic mathematical ideas and terminologies used in computer science.
- translate real life situations into diagrammatic representations.

MODULE I PROPOSITIONAL CALCULUS 8

Propositions – Logical connectives – Compound propositions – Conditional and biconditional propositions – Truth tables – Tautologies and contradictions – Contrapositive – Logical equivalences and implications – DeMorgan's Laws – Normal forms – Principal conjunctive and disjunctive normal forms – Rules of inference – Arguments – Validity of arguments.

MODULE II PREDICATE CALCULUS 7+3

Predicates – Statement function – Variables – Free and bound variables – Quantifiers – Universe of discourse – Logical equivalences and implications for quantified statements – Theory of inference – The rules of universal specification and generalization – Validity of arguments.

MODULE III FUNCTIONS 7+3

Functions – Classification of functions –– Composition of functions – Inverse functions – Binary and n–ary operations – Characteristic function of a set – Hashing functions – Recursive functions – Permutation functions.

MODULE IV ALGEBRAIC SYSTEMS 8+2

Groups, Cyclic Groups, Subgroups, Cosets, Lagrange's theorem, Normal subgroups – Codes and group codes – Basic notions of error correlation – Error recovery in group codes.

MODULE V GRAPH THEORY 7+3

Graphs – incidence and degree – subgraphs – isomorphism – complement of a graph – operations on graphs

MODULE VI PATH AND CIRCUIT 8+2

Walks, trails and paths – Eulerian graphs – Konigsburg bridge problem - Hamiltonian graphs

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1 Trembly J.P and Manohar R, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 30th Reprint 2011.

2 Kenneth H.Rosen, “Discrete Mathematics and its Applications:, 7th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, Special Indian Edition, 2011.

REFERENCES:

1 Ralph.P.Grimaldi, “Discrete and Combinatorial Mathematics: An Introduction”, 4th Edition, Pearson Education Asia, Delhi, 2007.

3 C.L.Liu, D.P.Mohapatra, “Elements of Discrete Mathematics”, 4th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 2012.

OUTCOMES:

At the end of the course, student will be able to

- use the concepts of propositional calculus.
- use the concepts of predicate calculus.
- identify types of functions and their importance.
- decode and encode the messages using group theory concepts.
- apply the basic concepts of graph theory.
- represent some real life situations into diagrammatic representation.

MACX 02 PROBABLITY AND STATISTICS L T P C
3 1 0 4

OBJECTIVES:

The aims of this course are to impart the

- knowledge of the theory of probability and random variables
- techniques to carry out probability calculations and identifying probability distributions
- application of statistical inference in practical data analysis

MODULE I BASICS OF PROBABILITY AND STATISTICS 8+2

Sample space, events- axioms of probability and interpretation – Addition, multiplication rules – conditional probability, Independent events - Total probability – Baye's theorem - Descriptive Statistics.

MODULE II ONE DIMENSIONAL RANDOM VARIABLE AND PROBABILITY DISTRIBUTION FUNCTIONS 7+3

Discrete random variable –continuous random variable – Expectation - probability distribution - Moment generating function – Binomial, Poisson, Geometric, Uniform (continuous), Exponential and Normal distributions.

MODULE III TWO DIMENSIONAL RANDOM VARIABLES 8+2

Joint, marginal, conditional probability distributions –covariance, correlation - transformation of random variables.

MODULE IV SAMPLING AND ESTIMATION 7+3

Sampling distributions – basic knowledge on Random , simple random , stratified and cluster samplings – Test of Hypotheses - concepts- Point estimation and Interval estimation.

MODULE V THEORY OF INFERENCE 8+2

Large sample tests – test for single and difference on proportions, single mean, difference of means, difference of variances – confidence intervals. Small sample tests – Student's t test, F test and Chi square test on theory of goodness of fit and analyses of independence of attributes.

MODULE VI DESIGN OF EXPERIMENTS 7+3

Analysis of variance – one way classification – two way classification – Completely

Randomised Block Designs – Randomised Block Design – Latin square designs - Interpretations - case studies.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. T.Veerarajan, “Probability and Statistics”, Tata McGraw-Hill Education, 2008.
2. Miller, I., Miller, M.,Freund, J. E., “Mathematical statistics”, 7th Edition, Prentice Hall International, 1999.
3. S.P.Gupta, “Applied Statistics”, Sultan Chand & Sons

REFERENCES:

1. S.M.Ross, “Introduction to Probability and Statistics for Engineers and Scientists” Fifth Edition, Elesvier.
2. S.C.Gupta and V.K.Kapoor, “Fundamentals of Mathematical Statistics” First edition, Sultan Chand and Sons.
3. Arora and Arora, “Comphrensive Statistical Methods”, S. Chand, 2007

OUTCOMES:

On completion of the course, students will be able to

- do basic problems on probability and descriptive statistics.
- derive the probability mass / density function of a random variable.
- calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.
- calculate point and interval estimates.
- apply some large sample tests and small sample tests.
- carry out the data collection representation analysis and implications and the importance of inferences.

MACX 03	RANDOM PROCESSES	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of the course are to

- acquire the knowledge of the theory of probability and random variables
- study discrete and continuous probability distributions.
- demonstrate the techniques of two dimensional random variables and its distributions.
- introduce the random process, stationarity, Markov process and the study of correlation function and spectral analysis.

MODULE I Basics of Probability 7+3

Sample space, events- axioms of probability and interpretation – Addition, multiplication rules – conditional probability, Independent events - Total probability – Baye's theorem - Tchebychev's inequality.

MODULE II One dimensional Random variable and Probability Distribution functions 7+3

Discrete random variable –continuous random variable – Expectation - probability distribution - Moment generating function – Binomial, Poisson, Geometric, Uniform (continuous), Exponential and Normal distributions.

MODULE III Two dimensional random variables 7+3

Joint, marginal, conditional probability distributions - covariance, correlation and regression lines - transformation of random variables.

MODULE IV RANDOM PROCESSES 8+2

Classification of Random process - Stationary process - WSS and SSS processes - Poisson process – Markov Chain and transition probabilities.

MODULE V CORRELATION FUNCTIONS 8+2

Autocorrelation function and its properties - Cross Correlation function and its properties - Linear system with random inputs – Ergodicity.

MODULE VI SPECTRAL DENSITY 8+2

Power spectral Density Function - Properties - System in the form of convolution - Unit Impulse Response of the System – Weiner-Khinchine Theorem - Cross Power

Density Spectrum.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Veerarajan T., “Probability, Statistics and Random Processes”, Tata McGraw Hill,3rd edition, 2008.
2. Papoulis, “Probability, Random Variables and Stochastic Processes”, 4th Edition, Tata McGraw Hill Company, 2002.
3. S.M.Ross, “Introduction to Probability and Statistics for Engineers and Scientists” Fifth Edition, Elesvier

REFERENCES:

2. Trivedi K S, “ Probability and Statistics with reliability, Queueing and Computer Science Applications”,Prentice Hall of India,New Delhi,2nd revised edition, 2002

OUTCOMES:

On completion of the course, students will be able to

- do basic problems on probability.
- derive the probability mass / density function of a random variable.
- calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.
- identify and study the different random processes.
- compute correlation functions and related identities.
- compute power spectral density functions and apply Weiner-Khinchine formula.

MACX 04 APPLIED NUMERICAL METHODS L T P C
3 1 0 4

OBJECTIVES:

The aims of the course are to

- introduce basic computational methods for analyzing problems that arise in engineering and physical sciences.
- acquire knowledge about approximation theory and convergence analysis associated with numerical computation.

MODULE I NUMERICAL SOLUTIONS OF EQUATIONS 7+3

Bisection method - Regula Falsi method – Secant method - Fixed point iteration method - Newton's Raphson method –Gauss Elimination method - Gauss-Jordon method – Gauss Jacobi method - Gauss-Seidel method.

MODULE II INTERPOLATION 8+2

Finite difference operators – Gregory Newton's forward and backward interpolations – Cubic spline interpolation - Lagrange interpolation - Newton's divided difference formula.

MODULE III NUMERICAL DIFFERENTIATION AND INTEGRATION 8+2

Numerical differentiation using Newton's forward and backward formulae – Numerical integration : Trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Gaussian Two Point and Three Point Quadrature formulae – Double integrals using Trapezoidal and Simpson's 1/3 rule.

MODULE IV INITIAL VALUE PROBLEMS FOR FIRST ORDER ORDINARY DIFFERENTIAL EQUATIONS 7+3

Numerical solutions by Taylor's Series method, Euler's method, Modified Euler's Method - Runge – Kutta Method of fourth order – Milne's and Adam's Bashforth Predictor and Corrector methods

MODULE V INITIAL AND BOUNDARY VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 8+2

Numerical solutions by Taylor's Series method - Runge – Kutta Method of fourth order of second order ODE. Finite difference methods.

MODULE VI BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS **7+3**

Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace equation.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Grewal, B.S., “Numerical methods in Engineering and Science”, 7th edition, Khanna Publishers, 2007.
2. C.F.Gerald, P.O.Wheatley, “Applied Numerical Analysis” ,Pearson Education, New Delhi, 2002.

REFERENCES:

1. Chapra S.C, Canale R.P. “Numerical Methods for Engineers”, 5th Ed., McGraw Hill, 2006.
2. M.K.Jain, S.R.K.Iyengar, R.K.Jain, “Numerical methods for Scientific and Engineering Computation”, New Age International Publishers, New Delhi, 2003

OUTCOMES:

At the end of this course, students will be able to

- solve algebraic, transcendental and system of equations.
- apply interpolation techniques.
- carry out numerical differentiation and integration using different methods.
- solve first order ODE using single and multi step methods.
- solve second order ODE, initial and boundary value problems.
- solve the boundary value problems in PDE.

Maths Elective Courses
(To be offered in VI Semester)

MACX 05	MATHEMATICAL PROGRAMMING	L	T	P	C
		2	0	0	2

OBJECTIVES:

The aims of the course are to

- acquire knowledge and training in optimization techniques.
- obtain knowledge about optimization in utilization of resources.
- understand and apply operations research techniques to industrial operations.

MODULE I LINEAR PROGRAMMING PROBLEM 10

Linear programming – formulation of the problem - graphical interpretation of optimality - Simplex method – to obtain basic feasible solution – types of linear programming solution – complications and their resolution.

MODULE II ADVANCED LINEAR PROGRAMMING PROBLEMS 8

Artificial variable - Big M method – Two phase method – alternative optimal solution – unbounded solution - Duality – primal dual relationships.

MODULE III TRANSPORTATION PROBLEM 7

Transportation problems – Initial basic feasible solutions, MODI method, Unbalanced transportation problem, Degeneracy in transportation models,.

MODULE IV ASSIGNMENT PROBLEM 5

Assignment problem – Minimization and Maximization type of problems by Hungarian method.

Total Hours –30

TEXT BOOKS:

1. Hamdy A Taha, “Operations Research - An introduction”, 8th edition, Phil Pearson, 2007.
2. Winston.W.L., “Operations Research”, 4th edition, Thompson-Brooks/Cole, 2003.

REFERENCES:

1. Wayne.L. Winston, “Operations Research Applications and Algorithms”,

4th edition, Thomson learning, 2007.

2. Frederick. S. Hiller and Gerald J Lieberman, “Operations Research Concepts and Cases”, 8th edition (SIE), Tata McGraw – Hill Pub. Co. Ltd., New Delhi, 2006.
3. A. Ravindran, D. T. Phillips and J. J. Solberg, "Operations Research: Principles and Practice", 2nd edition, John Wiley & Sons, New York, 1992.
4. Robertazzi. T.G., “Computer networks and systems-Queuing theory and performance evaluation”, 3rd edition, Springer, 2002.

OUTCOMES:

At the end of the course, students will be able to

- formulate industrial problems as mathematical programming problems.
- solve linear programming problems by different methods.
- solve transportation problems by different methods.
- solve assignment problems by Hungarian method.

MACX 06	STATISTICAL METHODS FOR DATA ANALYSIS	L	T	P	C
		2	0	0	2

OBJECTIVES:

The aim of the course is to

- introduce statistical quality control tools.

MODULE I TESTS OF HYPOTHESES AND STATISTICAL INFERENCES 8

Small sample tests – Student's ' t ' test for single mean , difference of means, paired t test – F test for difference of variances – Chi square test on theory of goodness of fit and analyses of independence of attributes.

MODULE II DESIGN OF EXPERIMENTS 7

Analysis of variance – one way classification – two way classification – Completely Randomised Block Designs – Randomised Block Design – Latin square designs - Statistical analysis -Interpretations - case studies.

MODULE III STATISTICAL QUALITY CONTROL-I 8

Quality improvement and statistics –Statistical quality control- statistical process control – control charts – design of control charts –analysis of patterns on control charts - X bar chart, R chart and S chart.

MODULE IV STATISTICAL QUALITY CONTROL-II 7

Process and product control – attribute charts – P, np and C charts – control charts performance.

Total Hours –30

TEXT BOOKS:

1. Douglas C.Montgomery, George C. Runger "Applied Statistics and probability for Engineers" V Edition – John Wiley & Sons Inc.
2. Miller, I., Miller, M., Freund, J. E. "Mathematical statistics" 7th Edition. Prentice Hall International, 1999.

REFERENCES:

1. Dekking, F.M., Kraaikamp, C., Lopuhaä, H.P., Meester, L.E. "A Modern Introduction to Probability and Statistics" Springer, 2nd Edition.
2. Chin Long chiang "Statistical Methods of Analysis "World Scientific Books,

2003.
3. S.C.Gupta and V.K. Kapoor, “Mathematical Statistics” , Sultan Chand publications.
4. Veerarajan “Fundamentals of Mathematical Statistics” I Edition, Yes Dee Publishing Pvt. Ltd., 2017.

OUTCOMES:

On completion of the course, students will be able to

- develop and test hypothesis for different statistical tests
- design an experiment and case study the experiment with different data.
- analyze the industrial data using quality control design tools statistically.
- analyze the industrial data using process and product control tools statistically.

MACX 07 NUMERICAL METHODS FOR INTEGRATION AND DIFFERENTIAL EQUATIONS

L	T	P	C
2	0	0	2

OBJECTIVES:

- This course aims to solve numerically integral and differential equations.

MODULE I NUMERICAL INTEGRATION **8**

Numerical integration by trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Two Point and Three point Gaussian quadrature formulae.

MODULE II NUMERICAL DOUBLE INTEGRATION **6**

Double integrals using trapezoidal and Simpson's 1/3 rules

MODULE III NUMERICAL SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS **8**

Milne's Predictor and Corrector Method – Adam's Predictor-Corrector Method - Finite difference methods for two – point Boundary Value problems for Ordinary Differential Equations.

MODULE IV BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS **8**

Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace and Poisson equations

Total Hours –30

TEXT BOOKS:

1. M.K.Jain, S.R.K.Iyengar, R.K.Jain, "Numerical methods for Scientific and Engineering Computation", New Age International Publishers, New Delhi, 2003.
2. Grewal, B.S., "Numerical methods in Engineering and Science" 7th edition, Khanna Publishers, 2007

REFERENCES:

1. C.F.Gerald, P.O.Wheatley, "Applied Numerical Analysis" Pearson Education, New Delhi 2002.
2. P.Dechaumphai, N. Wansophark, "Numerical Methods in Engineering", Narosa Publications, 2012.

OUTCOMES:

At the end of the course students will be able to

- solve the integration by numerical methods.
- solve the double integration by numerical methods
- find numerical solution of ordinary differential equations in engineering problems.
- find numerical solution of partial differential equations in engineering problems.

MACX 08 MATHEMATICAL MODELLING

L	T	P	C
3	0	0	3

OBJECTIVES:

The aims of the course are to

- provide basic idea of formation and use of Mathematical models for different purposes.
- determine the extent to which models are able to replicate real-world phenomena under different conditions

MODULE I PRINCIPLES OF MATHEMATICAL MODELING 7

Mathematics as a modelling language - Classification of models - Building, studying, testing and using models - Black and white box models – Difference equations

MODULE II PHENOMENOLOGICAL MODELS 7

Linear, Multiple linear and nonlinear regression - Neural networks - Fuzzy model - Stability and higher dimensional systems

MODULE III MECHANISTIC MODELS –I 8

Setting up ODE models – Initial and Boundary value problems - Numerical solutions - Fitting ODE to data - Applications

L	T	P	C
2	0	0	2

MODULE IV MECHANISTIC MODELS –II 8

Linear and nonlinear equations - Elliptic, parabolic and hyperbolic equations - Closed form solutions - Finite difference and finite element methods

Total Hours –30

TEXT BOOKS:

1. G . Ledder , “Calculus, modelling , probability and dynamic systems”, Springer 2013
2. Kei Velten, “Mathematical modelling and simulation”, J. Wiley and sons,2009

REFERENCES:

1. Michael D Alder, “An introduction to Mathematical modelling”, Heaven for Books.com
2. Alfio Quarteroni, “Mathematical models in science and engineering”, Notices of AMS
3. J.N. Kapur, “Mathematical models in Biology and Medicine”, Affiliated East-

West Press Private Limited, New Delhi, 1992.

OUTCOMES:

On completion of the course, the students will be able to

- identify the relationship between real world and mathematical models
- Classify the data and choose the appropriate model
- Distinguish between linear and nonlinear models
- identify the relationship between empirical and mechanistic models

MACX 09 **GRAPH THEORY** **L T P C**

3 0 0 3

OBJECTIVES:

The aims of this course are to

- represent the real life situations diagrammatically.
- appraise different methods to find solutions to graph theory problems.

MODULE I INTRODUCTION TO GRAPH THEORY **8**

Graphs - finite and infinite graphs - Incident and degree-isolated vertex, pendent vertex and null vertex.

MODULE II PATH AND CIRCUIT **8**

Isomorphism – sub graphs-walks, paths and circuits – connected and disconnected graphs- Euler graphs – operation on a graph.

MODULE III TREES AND FUNDAMENTAL CIRCUITS **7**

Trees- some properties of trees- pendent vertices in a tree – rooted binary tree-spanning trees-fundamental circuits.

MODULE IV CUT SETS AND CUT VERTICES

Cut sets – some properties of cut sets- fundamental circuits and cut sets-network flows.

Total Hours –30

TEXT BOOKS:

1. NARSINGH DEO, Graph theory with applications to Engineering and Computer Science, Prentice Hall INC, New Delhi,
2. J.A. Pondy and U.S.R. Murthy, North Holland, Oxford, New York Graph theory with applications

REFERENCES:

1. Trembly J.P and Manohar R, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 30th Reprint 2011
2. Kenneth H.Rosen, “Discrete Mathematics and its Applications”, 7th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, Special Indian Edition, 2011

3. Md. Saidur Rahman, “Basic graph theory”, Springer, 2017

OUTCOMES:

At the end of the course, students will be able to

- demonstrate the basic concepts of Graph theory.
- explore connected and disconnected graphs.
- identify the real life problems with trees and circuits.
- bring out the cut set properties and network flows properties.

Humanities Elective I

(To be offered in III Semester)

		L	T	P	C
SSCXO1	**FUNDAMENTALS OF ECONOMICS**	**2**	**0**	**0**	**2**

OBJECTIVES:

- To identify and present the basic concepts of demand, supply and equilibrium.
- To explain and discuss the types and concepts of national income and inflation.
- To illustrate the fundamental concepts of money, banking and public finance.
- To apprise the students about Indian economy and the role of engineers in economic development.

MODULE I DEMAND AND SUPPLY ANALYSIS 8

Classification of economy – open and closed economy, Demand - Types of demand - Determinants of demand – Law of Demand - Demand elasticity - Supply - Determinants of Supply – Law of Supply - Supply elasticity - Pricing strategies.

MODULE II NATIONAL INCOME AND INFLATION 7

Concepts of National income and measurement – Importance and difficulties of estimating National Income in India - Aggregate demand and aggregate supply, Macroeconomic equilibrium – meaning of inflation- types - causes and preventive measures

MODULE III MONEY, BANKING AND PUBLIC FINANCE 9

Money – Meaning, types, functions, importance - Commercial Banks - Central Bank - Monetary policy – meaning, objectives, Methods of Credit Control By RBI, Government Budget – Government revenue and Expenditures – Fiscal policy - Its objectives, instruments and limitations - Deficit Financing - The Fiscal Responsibility and Budget Management Act, 2003 (FRBMA) .

MODULE IV INDIAN ECONOMY AND THE ROLE OF ENGINEERS 6

Economic reforms – Liberalization, Privatization and Globalization - challenges and opportunities, Engineers – Engineers' contributions to the economic growth.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Dutt and Sundharam (2013), *Indian Economy*, S. Chand & Company Pvt. Ltd, New Delhi.
2. Hussain, Moon Moon (2015), *Economics for Engineers*, Himalaya Publishing House, New Delhi.

REFERENCES:

1. Cleaver Tony (2004), "*Economics: The Basics*", Routledge, London.
2. Mell Andrew and Walker Oliver (2014), "*The Rough Guide to Economics*", Rough Guide Ltd.

OUTCOMES:

On successful completion of this course,

- Students will have had exposure to the basic concepts of demand, supply and various pricing strategies.
- Students will have understood the macroeconomic concepts of national income and inflation.
- Students will be able to apply the knowledge of money, banking and public finance in their real life situations.
- Students will have an overview of the economic reforms introduced in Indian economy.

SSCXO2 PRINCIPLES OF SOCIOLOGY.

L	T	P	C
2	0	0	2

OBJECTIVES:

- To acquaint the students with Concepts and perspectives of Sociology
- To explain the reflection of society in Individuals and vice versa
- To describe the hierarchical arrangement of individuals and groups in society
- To explicate the dimensions, forms and factors of Social change.
- To examine the context, impact and agencies of Globalization

MODULE I THE FOUNDATIONAL CANON 8

Sociology-Definition, scope and importance; Major theoretical perspectives- Functionalism, Conflict Theorising and Interactionism; Elements of social formation- Society, Community, Groups and Association; Associative Social Process- Co-operation, Accommodation and Assimilation; Dissociative Social Process- Competition and Conflict.

MODULE II INDIVIDUAL AND SOCIETY 7

Culture-definition, characteristics, functions, types, cultural lag and civilization, Socialization – definition, process, stages, agencies and anticipatory socialization; Social Control- definition, characteristics, importance, types & agencies.

MODULE III SOCIAL INEQUALITY AND STRATIFICATION 7

Concepts- inequality, hierarchy, differentiation, Social Exclusion, and Social Stratification. Forms of Social Stratification- Caste, Class and Estate. Gender and Social Stratification- sex and gender, patriarchy, factors perpetuating gender stratification; Globalization and gender inequality

MODULE IV SOCIAL CHANGE AND GLOBALIZATION 8

Social Change-definition, nature, direction; Forms- evolution, development, progress and transformation; Factors of social change- demography, economy, technology, polity and culture. Globalization- definition, characteristics, historical and social context and Impact, agencies of globalization- IGOs, INGOs, Nation-State, MNEs and Media

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Giddens A. 1989. “Sociology” Cambridge: Polity Press.

2. Heald Haralambos, R.M(2014) . ‘‘Sociology Themes and Perspectives”, Oxford, New Delhi-92
3. Bhushan Vidya and D.R. Sachdeva (2012). ‘‘Fundamental of Sociology”, Pearson, Delhi.

REFERENCES:

1. Das Gupta, Samir and Paulomi Saha (2012), ‘‘An Introduction to Sociology”, Pearson, Delhi
2. Bottomore, T.B. 1972. *Sociology- A Guide to Literature and Problems*, New Delhi,

OUTCOMES:

On successful completion of this course,

- Students will have exposure to the fundamentals tenets of Sociology.
- Students will be trained to understand social reality with sociological perspective.
- Students will be oriented to constructively analyze human interactions, social relationship and social issues
- Students will gain exposure to the dynamics of human society with special reference to the contemporary trends of globalization.

SSCXO3 SOCIOLOGY OF INDIAN SOCIETY.

L	T	P	C
2	0	0	2

OBJECTIVES:

- To present a portrayal of the components of the Indian Social structure
- To describe the nature and contemporary structure of Indian social Institutions.
- To examine the causality and magnitude of social problem facing the contemporary India.
- To elucidate the processes forms and impact of change and development in Indian society

MODULE I INDIAN SOCIAL STRUCTURE 7

Unity and Diversity; Concepts of unity and diversity- racial, religious, ethnic and linguistic composition of India. Types of communities-rural, urban and tribal; Social backwardness- OBC, SC and ST; Indian minorities- religious, ethnic, linguistic and LGBT

MODULE II INDIAN SOCIAL INSTITUTIONS 7

Family- definition, types, characteristics, functions of family; Joint Family- definition features, utility, changes; Marriage- definition, characteristics, marriage as sacrament or contract. Caste- definition, principles, contemporary changes, dominant caste, caste -class interface.

MODULE III SOCIAL PROBLEMS IN INDIA 8

Social Problem-definition, nature, social disorganization; Population explosion-causes, effects, relationship with development; Child Labour- causes, magnitude and consequences; Unemployment-nature , types, causes and effects; Gender issues-social status of women, violence against women and women in work place; Contemporary issues- communalism, terrorism and corruption.

MODULE IV SOCIAL CHANGE AND DEVELOPMENT IN INDIA 8

Socio-cultural Change- Sanskritization, Westernization, Secularization, Modernization; Processes of Social change- Industrialization, Urbanization, Globalization; Development- definition, elements, role of government, industry and corporate sector. Technology and change- invention and innovation, impact of technology on social institutions, technology and development.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Sharma,K.L.2008. *Indian Social Structure and Change*. Jaipur: Rawat Publications,.
2. Shah, A.M. 1998. *The Family in India: Critical Essays*. New Delhi: Orient Longman,
3. Ahuja Ram. 1999. *Social problems in India*, Rawat Publication: New Delhi.
4. Ahuja Ram. 2014. *Society in India,*, Rawat Publication: New Delhi.

REFERENCES:

1. Jayapalan, N.(2001), **"**Indian Society and Social Institutions" Atlantic Publishers & Distri,
2. Atal, yogesh (2006), "Changing Indian Society" Rawat Publications, Jaipur

OUTCOMES:

On successful completion of this course,

- Students will gain an in-depth understanding of the social structure and social institutions that constitute society in India.
- Students will be sensitized to the various categories ,Inequalities and their challenges
- Students will be exposed to the social problems encountered in contemporary India.
- Students will gain knowledge about the various forms and trends of the social change.
- Students will become aware about the challenges in the path of progress of Indian society and realize relevance of their role in bringing about development

Humanities Elective II

(To be offered in IV Semester)

SSCXO4	**ECONOMICS OF SUSTAINABLE DEVELOPMENT**	**L**	**T**	**P**	**C**
		2	**0**	**0**	**2**

OBJECTIVES:

- To have an increased awareness on the concept and components of sustainable development.
- To develop the ability to demonstrate the need of sustainable development and international responses to environmental challenges.
- To have an insight into global environmental issues and sustainable globalization.
- To establish a clear understanding of the policy instruments of sustainable development.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 7

Evolution of the Concept – Rio Summit and sustainable development - various definitions of sustainable development - Components of sustainable development: Social, environmental and economic components.

MODULE II NEED FOR SUSTAINABLE DEVELOPMENT 8

Need for sustainability – Global environmental challenges: population growth, resource depletion, pollution, energy use, climate change, pollution, growing water scarcity, other urban problems, loss of biodiversity, hazardous wastes disposal.International responses to environmental challenges - Global policy such as Kyoto Protocol, Montreal Protocol, Basel Convention.

MODULE III GLOBALIZATION AND ENVIRONMENT SUSTAINABILITY 8

Impact of Globalization on sustainable development, Co - existence of globalization and Environment sustainability, Globalization and Global Governance.Green economy - Renewable energy, sustainable transport, sustainable construction, land and water management, waste management.

MODULE IV POLICIES FOR ACHIEVING SUSTAINABLE DEVELOPMENT 7

Principles of environmental policy for achieving sustainable development: precautionary principle and polluter pays principle – Business Charter for Sustainable Development.Policy instruments for sustainable development: direct regulation – market based pollution control instruments such as pollution tax, subsidy, pollution permits.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Anderson, David A (2010), "*Environmental Economics and Natural Resource Management*", Routledge, 3rd edition.
2. Karpagam M (1999), "*Environmental Economics: A Textbook*", Sterling Publishers Pvt. Ltd, New Delhi.

REFERENCES:

1. Karpagam M and Jaikumar Geetha (2010), "*Green Management Theory and Applications*", Ane Books Pvt. Ltd, New Delhi.
2. Sengupta Ramprasad (2004), "*Ecology and Economics: An Approach to Sustainable Development*", Oxford University Press, New Delhi.

OUTCOMES:

On successful completion of this course,

- The students will have understood the concepts and components of sustainable development.
- The students will have a holistic overview on the challenges of sustainable development and International responses to environmental challenges.
- The students will have gained knowledge on the global environment issues and demonstrate responsible globalization through global governance.
- The students will have developed awareness of the ethical, economic, social and political dimensions that influence sustainable development.

SSCXO5 INDUSTRIAL SOCIOLOGY

L	T	P	C
2	0	0	2

OBJECTIVES:

- To introduce sociological approaches and perspectives to understand the social relationship in manufacturing industries and corporate sector.
- To explain the structure and functions of industrial organizations.
- To elucidate the dynamics of organizational behavior, leadership and communication.
- To inculcate professional ethics and values to equip students to work in organizational settings.

MODULE I INTRODUCTION 8

Industrial Sociology- definition, scope and importance; Theoretical approaches- scientific management, human relations approach, theory of bureaucracy, Fordism and post-fordism; Production system- concept and characteristics of factory system, automation and rationalization; Industrial conflict- strike , lockout and trade unions.

MODULE II INDUSTRIAL ORGANIZATION 7

Formal organization- definition, features, utility; Informal organization- definition, characteristics, types and relevance; Structure of industrial organization- features and functions of line organization, characteristics and roles of staff organization, distinction;

Industrial hierarchy-white collar, blue collar, supervisors and managers.

MODULE III DYNAMICS OF INDUSTRIAL RELATIONS 8

Group dynamics- Definition, Group behaviour model, Group decision making process, group cohesiveness; Leadership- definitions, style and effective supervision; Communication- concepts, types, model barriers; Job satisfaction- nature, employee compensation and job satisfaction.

MODULE IV PROFESSIONAL ETHICS AND VALUES 7

Concepts- values- morals, and ethics, Integrity, work ethics , service learning - Civic Virtue - caring - Sharing - Honesty - Courage - Valuing Time - Co-operation - commitment - empathy - Self-Confidence - Environmental Ethics, Cyber issues - computer ethics, cyber crimes, plagiarism Ethical living-concept of harmony in life.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Narender Singh, Industrial Sociology, Tata McGraw Hill Education Pvt. Ltd., New Delhi, 2012.
2. Gisbert Pascal, Fundamentals of Industrial Sociology, Tata Mc. Graw Hill Publishing Co., New Delhi, 1972
3. Schneider Engeno. V, Industrial Sociology 2nd Edition, Mc. Graw Hill Publishing Co., New Delhi, 1979.

REFERENCES:

1. Robbins, Stephen, Organizational Behaviour , Prentice Hall of India PVT ltd new Delhi, 1985
2. Devis Keith , Human Behaviour at work place, Mc. Graw Hill Publishing Co., New Delhi,1984

OUTCOMES:

On successful completion of this course,

- Students will have acclimatized with sociological perspectives for dealing with social relationships in production and service organizations.
- Students will be familiar with structure of authority, roles and responsibility in organizational settings.
- Students will imbibe leadership, communication and behavioral acumen to govern organization
- Students will be sensitized to standards of desirable behavior to engage in industrial and corporate sector.

SSCXO6 **LAW FOR ENGINEERS** **L T P C**
2 0 0 2

OBJECTIVES:

- To understand the Constitution and Governance of our country.
- To apprise the students of human rights - local and international and redressal mechanism.
- To have an insight into the industrial, corporate and labour laws of our country.
- To establish a clear understanding about the importance of intellectual property related laws.

MODULE I INDIAN CONSTITUTION AND GOVERNANCE 8

Constitution – salient features, Preamble, Citizenship, Fundamental rights, Fundamental duties, Directive principles, Union executive, Legislature – Union – State and union territories – Election Commission – Election for parliament and state legislature, Judiciary- basic functioning of the Supreme Court and High Courts, Right to information Act 2005 – evolution – concept – practice.

MODULE II HUMAN RIGHTS 7

Human rights – meaning and significance, Covenant on civil and political rights, Covenant on Economic, Social and Cultural rights, UN mechanism and agencies, The Protection of Human Rights Act, 1993 – watch on human rights and enforcement.

MODULE III INDUSTRIAL, CORPORATE AND LABOUR LAWS 8

Corporate laws – meaning and scope, Companies Act 1956 – Indian Contract Act 1872 - Principles of Arbitration - Industrial Employment (Standing Orders) Act 1946 - Industrial Disputes Act 1947 - Workmen's Compensation Act 1923 - The Factories Act, 1948.

MODULE IV LAWS RELATED TO IPR 7

IPR – meaning and scope, International organization – WIPO – TRIPS, Major Indian IPR Acts – Copyright laws, Patent and Design Act, Trademarks Act, Trade Secret Act, Geographical Indicator.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. M.P. Jain (2005) *Indian Constitutional Law*, Wadhwa & Co.

2. H. D, Agarwal (2008), *International Law and Human Rights,* Central Law Publications,
3. Rao, Meena (2006), *Fundamental Concepts in Law of Contract*, 3rd edn., Professional offset.
4. Ramappa (2010), *Intellectual Property Rights Law in India*, Asia Law House.
5. Singh, Avtar (2007), *Company Law*, Eastern Book Co.
6. R.F, Rustamji (1967)*, Introduction to the Law of Industrial Disputes*, Asia Publishing House.

REFERENCES:

1. Acts: Right to Information Act, Industrial Employees (standing order) Act, Factories Act, Workmen Compensate Act.

OUTCOMES:

On successful completion of this course,

- Students will `be able to apply the basic concepts of Indian Constitution, Governance and power in their real life situation.
- Students will have gained knowledge in human rights, cultural, social and political rights.
- Students will have synthesized knowledge about industrial, corporate and labour laws of our country.
- Students will have an overview of IPRs and laws related to Intellectual Property Rights.

General Elective Courses

Group I courses

(To be offered in V Semester)

		L	T	P	C
GECX101	**DISASTER MANAGEMENT**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To give an exposure to various environmental hazards and disasters: and various concepts and principles to manage disaster.
- To give exposure to various environmental policies & programs in India for disaster management

MODULE I ENVIRONMENTAL HAZARDS 7

Environmental hazards, Environmental Disasters and Environmental stress-Meaning and concepts. Vulnerability and disaster preparedness.

MODULE II NATURAL DISASTERS 7

Natural hazards and Disasters - Volcanic Eruption, Earthquakes, Tsunamis, Landslides, Cyclones, Lightning, Hailstorms, Floods, Droughts, Cold waves, Heat waves and Fire.

MODULE III MAN-MADE DISASTERS 7

Man induced hazards & Disasters - Soil Erosion, Chemical hazards, Population Explosion

MODULE IV DISASTER MANAGEMENT 8

Emerging approaches in Disaster Management- Preparing hazard zonation maps, Predictability / forecasting & warning, Preparing disaster preparedness plan, Land use zoning, Communication. Disaster resistant house construction, Population reduction in vulnerable areas, Awareness - Rescue training for search & operation at national & regional level - Immediate relief, Assessment surveys, Political, Administrative, Social, Economic, Environmental Aspects.

MODULE V NATURAL DISASTER REDUCTION & MANAGEMENT 8

Provision of Immediate relief measures to disaster affected people, Prediction of Hazards & Disasters, Measures of adjustment to natural hazards

MODULE VI ENVIRONMENTAL POLICIES & PROGRAMMES IN INDIA **8**

Regional survey of Land Subsidence, Coastal Disaster, Cyclonic Disaster & Disaster in Hills with particular reference to India. Ecological planning for sustainability & sustainable development in India, Sustainable rural development: A Remedy to Disasters, Role of Panchayats in Disaster mitigations, Environmental policies & programmes in India- Institutions & National Centers for Natural Disaster reduction, Environmental Legislations in India, Awareness, Conservation Movement, Education & training.

L – 45; Total Hours –45

REFERENCES:

1. Satender, “Disaster Management in Hills”, Concept Publishing Co., New Delhi, 2003.
2. Singh, R.B. (Ed.), “Environmental Geography”, Heritage Publishers, New Delhi,1990.
3. Savinder Singh, “Environmental Geography”, Prayag Pustak Bhawan,1997.
4. Kates, B.I. and White, G.F., “The Environment as Hazards”, Oxford University Press, New York, 1978.
5. Gupta, H.K., (Ed), “Disaster Management”, University Press, India, 2003.
6. Singh, R.B.,“Space Technology for Disaster Mitigation in India (INCED)”, University of Tokyo, 1994.
7. Bhandani, R.K., “An overview on Natural & Manmade Disaster & their Reduction”, IIPA Publication, CSIR, New Delhi, 1994.
8. Gupta, M.C., “Manuals on Natural Disaster management in India”, National Centre for Disaster Management, IIPA Publication, New Delhi, 2001.

OUTCOMES:

At the end of the course, the students will

- achieve sufficient knowledge on the disaster prevention strategy, early warning system, disaster preparedness, response and human resource development.
- be familiar with the National Policy on Disaster Management.

GECX102	TOTAL QUALITY MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the various principles, practices of TQM to achieve quality.
- To get acquainted with the various statistical tools and approaches for quality control and continuous improvement.
- To get aware of the importance of ISO and Quality Systems.

MODULE I INTRODUCTION 8

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

MODULE II TQM PRINCIPLES 7

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits.

MODULE III TQM IMPROVEMENT PROCESS 8

Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership – Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures – Basic Concepts, Strategy, Performance Measure.

MODULE IV STATISTICAL PROCESS CONTROL (SPC) 8

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma, New seven Management tools.

MODULE V TQM TOOLS 7

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA.

MODULE VI QUALITY SYSTEMS 7

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System– Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 – Concept, Requirements and Benefits

L – 45; Total Hours –45

TEXT BOOKS:

1. Dale H.Besterfiled, et al., “Total Quality Management”, Pearson Education, Inc. 2003.

REFERENCES:

1. James R.Evans & William M.Lidsay, “The Management and Control of Quality”, 5th Edition, South-Western (Thomson Learning), 2002.
2. Feigenbaum.A.V., “Total Quality Management”, McGraw-Hill, 1991.
3. Oakland.J.S., “Total Quality Management”, Butterworth Hcinemann Ltd., Oxford, 1989.
4. Narayana V. and Sreenivasan. N.S., “Quality Management – Concepts and Tasks”, New Age International, 1996.
5. Zeiri, “Total Quality Management for Engineers”, Wood Head Publishers, 1991.

OUTCOMES:

The student should be able to

- apply the various statistical tools and approaches for Quality control.
- achieve continuous process improvement through TQM.

GECX103 ENERGY STUDIES L T P C
3 0 0 3

OBJECTIVES:

- To learn the growing demand, supply of energy on global and national levels and the need for renewable energy promotion.
- To understand the basic need for energy conservation and waste heat recovery.
- To learn the important aspects of energy audit and management.
- To get acquainted with the global environmental issues and carbon credits.

MODULE I GLOBAL AND NATIONAL ENERGY SCENARIO 7

Role of energy in economic development, various energy resources - overall energy demand and availability- Energy consumption in various sectors and its changing pattern - Exponential increase in energy consumption and projected future demands. Need for renewable energy.

MODULE II SOLAR ENERGY 8

Solar Radiation – Measurements of Solar Radiation - Flat Plate and Concentrating Collectors – Solar direct Thermal Applications – Solar thermal Power Generation - Fundamentals of Solar Photo Voltaic Conversion – Solar Cells – Solar PV Power Generation – Solar PV Applications.

MODULE III OTHER RENEWABLE ENERGY SOURCES 8

Power from wind – wind turbine working and types, solar thermal power plants – low medium and high power generation, power from wave , tidal, geothermal sources, OTEC system. MHD power plants – working, types, merits and demerits. Energy from biomass.

MODULE IV COGENERATION, WASTE HEAT RECOVERY AND COMBINED CYCLE PLANTS 8

Cogeneration principles- topping and bottoming cycles, role in process industries. Energy from wastes- waste heat recovery- heat recovery from industrial processes. Heat exchange systems – recuperative and regenerative heat exchangers – commercially available waste heat recovery devices. Combined cycle plants – concept, need and

advantages, different combinations and practical scope.

MODULE V ENERGY CONSERVATION AND MANAGEMENT 7

Need for energy conservation – use of energy efficient equipment. Energy conservation opportunities - in educational institutions, residential, transport, municipal, industrial and commercial sectors – concept of green building. Energy audit in industries – need, principle and advantages. Case studies.

MODULE VI GLOBAL ENERGY ISSUES AND CARBON CREDITS 7

Energy crisis, fossil consumption and its impact on environmental climate change. Energy treaties – Montreal and Kyoto protocols - Transition from carbon rich and nuclear to carbon free technologies, carbon foot print – credits – clean development mechanism.

L – 45; Total Hours –45

TEXT BOOKS:

1. S.S. Rao and B.B. Parulekar, “Energy Technology”, 3rd Edition, Khanna Publishers, New Delhi, 2011.
2. O. Callaghn. P.W., “Design and Management for Energy Conservation”, Pergamon Press, Oxford, 1981.

REFERENCES:

1. G.D. Rai, “Non Conventional Energy Sources”, Khanna Publishers, New Delhi, 2011.
2. Archie, W Culp. “Principles of Energy Conservation”, McGraw Hill, 1991.
3. D Patrick and S W Fardo, “Energy Management and Conservation”, PHI,1990
4. P. O’Callaghan: “Energy Management”, McGraw - Hill Book Company, 1993.
5. Kenney, W. F., “Energy Conservation in Process Industries”, Academic Press, 1983.

OUTCOMES:

The student should be able to

- Realize the global and national energy status and need to switch over to renewable energy technology.
- Energy audit and suggest methodologies for energy savings.
- Utilize the available resources in an optimal way.
- Concern about the global environmental issues & promote carbon credits.

GECX104 **ROBOTICS** **L T P C**
3 0 0 3

OBJECTIVES:

To learn about the robots, various components, of Robots, programming and their applications.

MODULE I **8**

Definition- Need - Application, Types of robots – Classifications – Configuration, work volume, control loops, controls and intelligence- basic parts - functions – specifications. of robot, degrees of freedoms, end effectors – types, selection

MODULE II ROBOT DRIVES AND CONTROL **8**

Controlling the Robot motion – Position and velocity sensing devices – Design of drive systems – Hydraulic and Pneumatic drives – Linear and rotary actuators and control valves – Electro hydraulic servo valves, electric drives – Motors – Designing of end effectors – Vacuum, magnetic and air operated grippers.

MODULE III ROBOT SENSORS **8**

Transducers and Sensors – Tactile sensor – Proximity and range sensors – Sensing joint forces – Robotic vision system – Image Representation - Image Grabbing –Image processing and analysis – Edge Enhancement – Contrast Stretching – Band Rationing - Image segmentation – Pattern recognition – Training of vision system.

MODULE IV ROBOT PROGRAMMING & AI TECHNIQUES **7**

Types of Programming – Teach pendant programming – Basic concepts in AI techniques – Concept of knowledge representations – Expert system and its components.

MODULE V ROBOTIC WORK CELLS AND APPLICATIONS OF ROBOTS **7**

Robotic cell layouts – Inter locks – Humanoid robots – Micro robots – Application of robots in surgery, Manufacturing industries, space and underwater.

MODULE VI ROBOT KINEMATICS AND DYNAMICS 7

Forward and inverse Kinematic equations, Denvit – Hartenbers representations Fundamental problems with D-H representation, differential motion and velocity
of frames - Dynamic equations for sing, double and multiple DOF robots – static force analysis of robots.

L – 45; Total Hours –45

REFERENCES:

1. Yoram Koren," Robotics for Engineers", Mc Graw-Hill, 1987.
2. Kozyrey, Yu, "Industrial Robots", MIR Publishers Moscow, 1985.
3. Richard. D, Klafter, Thomas, A, Chmielewski, Michael Negin, "Robotics Engineering – An Integrated Approach", Prentice-Hall of India Pvt. Ltd., 1984.
4. Deb, S.R. "Robotics Technology and Flexible Automation", Tata Mc Graw-Hill, 1994.
5. Mikell, P. Groover, Mitchell Weis, Roger, N. Nagel, Nicholas G. Odrey, "Industrial Robotics Technology, Programming and Applications", Mc Graw- Hill, Int. 1986.
6. Timothy Jordanides et al,"Expert Systems and Robotics", Springer – Verlag, New York, May 1991.

OUTCOMES:

Students would be able to

- Understand about the robots, its various components.
- Design Robots for industrial applications.
- Do programming for robots and apply them in real time applications.

GECX105 TRANSPORT MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the transport fleet and their related activities for minimizing operational cost.
- To understand the need of maintenance and its importance.
- To understand the functions and applications of various types of transport system.

MODULE I INTRODUCTION 7

Personnel management; objectives and functions of personnel management, psychology, sociology and their relevance to organization, personality problems. Selection process: job description, employment tests, interviewing, introduction to training objectives, advantages, methods of training, training procedure, psychological tests.

MODULE II ORGANISATION AND MANAGEMENT 7

Forms of Ownership – principle of Transport Management – Staff administration – Recruitment and Training – welfare – health and safety. Basic principles of supervising. Organizing time and people. Driver and mechanic hiring - Driver checklist - Lists for driver and mechanic - Trip leasing - Vehicle operation and types of operations.

MODULE III TRANSPORT SYSTEMS 9

Introduction to various transport systems. Advantages of motor transport. Principal function of administrative, traffic, secretarial and engineering divisions. chain of responsibility, forms of ownership by state, municipality, public body and private undertakings.

MODULE IV SCHEDULING AND FARE STRUCTURE 8

Principal features of operating costs for transport vehicles with examples of estimating the costs. Fare structure and method of drawing up of a fare table. Various types of fare collecting methods. Basic factors of bus scheduling. Problems on bus scheduling.

MODULE V MOTOR VEHICLE ACT 7

Traffic signs, fitness certificate, registration requirements, permit insurance, constructional regulations, description of vehicle-tankers, tippers, delivery vans, recovery vans, Power wagons and fire fighting vehicles. Spread over, running time, test for competence to drive.

MODULE VI MAINTENANCE 7

Preventive maintenance system in transport industry, tyre maintenance procedures. Causes for uneven tyre wear; remedies, maintenance procedure for better fuel economy, Design of bus depot layout.

L – 45; Total Hours –45

TEXT BOOKS:

1. John Duke, "Fleet Management", McGraw-Hill Co, USA, 1984.
2. Kitchin.L.D., "Bus Operation", III edition, Illiffee and Sons Co., London, 1992

REFERENCES:

1. Government Motor Vehicle Act, Publication on latest act to be used as on date.

OUTCOMES:

Upon completion of the course, students will

- Know about different aspects related to transport system and management.
- Features of scheduling, fixing the fares
- Know about the motor vehicle act and maintenance aspects of transport.

GECX106 CONTROL SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the system modeling and to derive their transfer function.
- To provide adequate knowledge of time response of systems and steady state error analysis.
- To accord basic knowledge in obtaining the open loop and closed–loop frequency responses of Control systems.

MODULE I BASIC CONCEPTS AND SYSTEM REPRESENTATION **8**

Control System - Basic elements in control systems – Open and closed loop systems – Electrical analogy of mechanical and thermal systems – Transfer function – Block diagram reduction techniques – Signal flow graphs.

MODULE II TIME RESPONSE ANALYSIS AND DESIGN **8**

Time response – Time domain specifications – Types of test input – First and Second order system - Type I and Type II System – Response - Error coefficients – Generalized error series – Steady state error – P, PI, PID modes of feedback control.

MODULE III FREQUENCY RESPONSE ANALYSIS AND DESIGN **7**

Performance specifications - correlation to time domain specifications - bode plots and polar plots – gain and phase margin – constant M and N circles and Nichols chart – all pass and non-minimum phase systems.

MODULE IV STABILITY **8**

Characteristics equation – Location of roots in s plane for stability – Routh Hurwitz criterion – Root locus construction – Effect of pole, zero addition – Gain margin and phase margin – Nyquist stability criterion.

MODULE V COMPENSATOR DESIGN **8**

Performance criteria – Lag, lead and lag-lead networks – Compensator design using bode plots and root locus technique.

MODULE VI CONTROL SYSTEM COMPONENTS AND APPLICATION OF CONTROL SYSTEMS **6**

Synchros – AC servomotors - DC Servo motors - Stepper motors - AC

Tacho generator - DC Tacho generator - Typical applications of control system in industry.

L – 45; Total Hours –45

REFERENCES:

1. K. Ogata, “Modern Control Engineering”, 4th Edition, Pearson Education, New Delhi, 2003.
2. I.J. Nagrath & M. Gopal, “Control Systems Engineering”, New Age International Publishers, 2003.
3. C.J.Chesmond, “Basic Control System Technology”, Viva student edition, 1998.
4. I.J.Nagarath and M.Gopal, “Control System Engineering”, Wiley Eastern Ltd., Reprint, 1995.
5. R.C.Dorf and R.H.Bishop, “Modern Control Systems”, Addison-Wesley (MATLAB Reference), 1995.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Proper understanding of basics of Control Systems.
- Ability and skill to carry-out time domain and frequency domain analysis.
- Capable of determining stability of the system using Routh Hurwitz criterion, Root locus and Nyquist criterion.
- Ability to design lag, lead and lag lead compensator networks.

GECX107 INTRODUCTION TO VLSI DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- Basic concepts of HDL.
- Verilog language and its syntax constructs.
- Programmable Logic Devices and FPGAs
- MOS devices theory
- CMOS based combinational and sequential circuits

PREREQUISITES:

Fundamentals of Electronics

Basics knowledge in Digital Electronics.

MODULE I REVIEW OF BASIC DIGITAL SYSTEMS 7

Boolean algebra, Building blocks of combinational logic design-Adders, multiplexer, encoder, decoder, comparator, Latches & flip-flops, counters, shift registers.

MODULE II LOGIC DESIGN USING VERILOG HDL 8

Overview of Digital Design with Verilog HDL, Levels of Design Description, Concurrency, Hierarchical Modeling Concepts, Modules and Ports, Component instantiation Data flow and RTL, structural, gate level, switch level modeling and Behavioral Modeling.

MODULE III LANGUAGE CONSTRUCTS OF VERILOG HDL 7

Identifiers- gate primitives, gate delays, operators, timing controls, procedural assignments, conditional statements Variable types, arrays and tables, Tasks and functions, Test bench.

MODULE IV BUILDING BLOCKS OF DIGITAL VLSI SYSTEMS 8

HDL Design -Data Path Operations-Addition/Subtraction, Parity Generators, Comparators, Zero/One Detectors, Binary Counters, ALUs, Multiplication, Shifters, Memory Elements. Programmable logic elements and AND-OR arrays, FPGAs programming methods.

MODULE V TRANSISTOR THEORY 7

Introduction to MOS Transistors-NMOS & PMOS Characteristics, Current Equations, Complementary CMOS Inverter-DC Characteristics, Static Load MOS Inverters.

MODULE VI BASICS OF DIGITAL CMOS DESIGN 8

NMOS & PMOS Logic Gate, CMOS Logic Gate, Basic layout design of simple gate-stick diagram, CMOS Logic Structures-full adder, multiplexers.

Total Hours –45

TEXT BOOKS:

1. M.Morris Mano "Digital Design", 3rd Edition, Prentice Hall of India Pvt. Ltd New Delhi, 2003

REFERENCES:

1. Michael D. Ciletti“Advanced Digital Design with the Verilog HDL" (2nd Edition) Hardcover – January 31, 2010
2. J.Bhasker: Verilog HDL primer, BS publication, 2001.
3. J. P. Uyemura, "Introduction to VLSI Circuits and System", Wiley, 2002
4. Neil Weste and K. Eshragian, “Principles of CMOS VLSI Design: A System Perspective,” 2nd edition, Pearson Education (Asia) Pvt.Ltd., 2000
5. Douglas A Pucknell& Kamran Eshragian , “Basic VLSI Design” PHI 3rd Edition (original edition – 1994)

OUTCOMES:

At the end of the course the students will be able to

- Create basic Register Transfer Level (RTL) models for combinational circuits & Sequential circuits using Verilog HDL.
- Create basic behavioral models for combinational circuits & Sequential circuits using Verilog HDL.
- Describe the usage of Programmable Logic Devices and FPGAs.
- Describe MOS devices theory and inverter circuit DC characteristics
- Design the basic digital building blocks using MOS circuit.
- Apply VLSI design concepts based on the requirements to conduct experiments or projects

GECX108 PLANT ENGINEERING

L	T	P	C
3	0	0	4

OBJECTIVES:

- To provide in depth knowledge on Plant Engineering
- To introduce detail engineering and P&ID
- To learn about the support to Instrumentation from other disciplines
- To study about the Installation and commissioning

MODULE I INTRODUCTION OF PLANTS 7

General Project Cycle – Feed – Sales - Plant Description, Component / Areas of Plant, Plant Layout, Plant Interfaces, Plant Location

MODULE II ELEMENTS OF PLANT 8

Main Elements of a Plant, Process Flow Scheme (PFD – Process Flow Diagram) P&ID's, Plant Legend Finalization.

MODULE III DETAIL ENGINEERING 10

P& ID Development with PFD's, Major Discipline Involvement & Inter discipline Interaction, Major Instrumentation & Control Systems - Development Phase – Instrument List , I/O Count, Specification Sheets, Instrument Installation (Hook ups) , Control Philosophy – Detail Engineering.

MODULE IV SUPPORT FROM OTHER DISCIPLINE 8

Other Discipline Supports to Instrumentation – Plot Plan, Piping / Equipment Plan, Electrical Area Classification, Fire Hazardous Classification Telecommunication Systems - Control Network architecture.

MODULE V INSTALLATION AND COMMISSIONING 7

Plant Construction - Key Drawings for Construction Support Construction Activities, System Testing, Startup / Commissioning, Production.

MODULE VI CASE STUDIES 5

Case studies of Water Treatment Plant - Paper Industry – Power Plant etc

L – 45; Total Hours –45

REFERENCES:

1. Duncan C Richardson, Plant Equipment and Maintenance Engineering Handbook, McGraw-Hill Education: New York, Chicago, San Francisco, Athens, London, Madrid, Mexico City, Milan, New Delhi, Singapore, Sydney, Toronto, 2014 McGraw-Hill Education
2. Gabriel Salvendy, Handbook of Industrial Engineering – Technology and operations Management, John Wiley & Sons, 2001.
3. Robert C Rosaler , Standard Handbook of Plant Engineering, Mc Graw Hill third Edition, 2004
4. R. Keith Mobley, Plant Engineer's Handbook, Technology and Engineering, 2001.

OUTCOMES:

At the end of the course, the student will be able to

- Review and correct P&IDs
- Do installation and commissioning of new plants
- Apply plant engineering in design and maintenance of water treatment plant / power plant etc

GECX109	NETWORK SECURITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

The students should be able to

- Discuss the basic concepts of computer security, model and attacks
- Examine the major types of threats and the associated attacks
- Identify the encryption techniques in real time applications
- Understand the special requirements for wireless security and how authentication is implemented in wireless systems
- Understand the functions of Network Security Device Firewall and its types
- Interpret the various network intrusion such as computer viruses, network worms etc

MODULE I INTRODUCTION 6

Computer Security Concepts - The OSI Security Architecture - Security Attacks - Security Services - Security Mechanisms - A Model for Network Security - Standards – classical encryption techniques.

MODULE II SYMMETRIC ENCRYPTION AND MESSAGE CONFIDENTIALITY 7

Symmetric Encryption Principles - Symmetric Block Encryption Algorithms - Random and Pseudorandom Numbers - Stream Ciphers and RC4 - Cipher Block Modes of Operation

MODULE III PUBLIC KEY CRYPTOGRAPHY AND MESSAGE AUTHENTICATION 8

Approaches to Message Authentication - Secure Hash Functions - Message Authentication Codes - Public-Key Cryptography Principles - Public-Key Cryptography Algorithms - Digital Signatures

MODULE IV KEY DISTRIBUTION ,USER AUTHENTICATION AND TRANSPORT-LEVEL SECURITY 8

Symmetric Key Distribution Using Symmetric Encryption - Kerberos - Key Distribution Using Asymmetric Encryption - X.509 Certificates - Public-Key Infrastructure -Federated Identity Management - Web Security Considerations -

Secure Socket Layer and Transport Layer Security - Transport Layer Security

MODULE V WIRELESS NETWORK SECURITY, ELECTRONIC MAIL SECURITY AND IP SECURITY **8**

IEEE 802.11 Wireless LAN Overview -IEEE 802.11i Wireless LAN Security - Wireless Application Protocol Overview - Wireless Transport Layer Security - WAP End-to-End Security - Pretty Good Privacy - S/MIME – Domain Keys Identified Mail- IP Security Overview -IP Security Policy - Encapsulating Security Payload - Combining Security Associations - Internet Key Exchange - Cryptographic Suites

MODULE VI SYSTEM SECURITY **8**

Intruders -Intrusion Detection -Password Management - Types of Malicious Software - Viruses Virus Countermeasures – Worms - Distributed Denial of Service Attacks- The Need for Firewalls - Firewall Characteristics - Types of Firewalls - Firewall Basing - Firewall Location and Configurations

L – 45; Total Hours –45

REFERENCES:

1. William Stallings,"Network security Essentials:Applications and standards", Prentice Hall, Fifth Edition , ISBN-13: 978-0134527338, 2013
2. William Stallings, "Cryptography and Network Security: Principles and Practice", Pearson, ISBN-13:978-0-273-79335-9,2013
3. Behrouz Forouzan, Debdeep Mukhopadhyay,Cryptography and network security (sie) 2nd edition, ISBN-13: 978-0070702080, 2016
4. Wikipedia, "Network Security and Management" , https://en.wikipedia.org/wiki/Book:Network Security and Management, 2014.
5. Nitesh Dhanjani, Justin Clarke, "Network Security Tools", O'Reilly Media, ISBN-13: 9780596007942, 2005.

OUTCOMES:

Students who complete this course will be able to

- Recognize the computer security concepts, architecture attacks and model
- Distinguish the symmetric and asymmetric encryption techniques
- Apply the cryptographic algorithms in different applications
- Express the network security designs using available secure solutions

such as PGP,SSL, IPSec, etc.

- Describe the firewalls principles and different types of firewalls applied in organization
- Identify abnormalities within the network caused by worms, viruses and Network related security treats**.**

GECX110	KNOWLEDGE MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course

- Focuses on positioning knowledge as a valuable commodity, embedded in products and in the tacit knowledge of highly mobile individual employees.
- Presents KM as a deliberate and systematic approach to cultivating and sharing an organization's knowledge base.
- Brings out the paradigm in terms of information technology and intellectual capital.

MODULE I KNOWLEDGE MANAGEMENT 6

KM Myths – KM Life Cycle – Understanding Knowledge – Knowledge, intelligence – Experience – Common Sense – Cognition and KM – Types of Knowledge – History of Knowledge Management - From Physical assets to Knowledge Assets – Expert knowledge – Human Thinking and Learning.

MODULE II KNOWLEDGE MANAGEMENT SYSTEMS AND MODELS 9

Challenges in Building KM Systems – Conventional Vs KM System Life Cycle (KMSLS) – Knowledge Creation and Knowledge Architecture – KM cycle - Different variants of KM cycle - KM models - Implications and practical implementations.

MODULE III CAPTURING KNOWLEDGE AND SHARING 9

Tacit knowledge capture - Explicit knowledge codification – Knowledge taxonomies - Knowledge sharing - Communities - Obstacles to knowledge capture and sharing.

MODULE IV KNOWLEDGE MANAGEMENT TOOLS 9

KM System tools – Neural Network – Association Rules – Classification Trees – Data Mining and Business Intelligence – Knowledge capture and creation tools - Content creation tools - Data mining and knowledge discovery – Content management tools - Knowledge sharing and dissemination tools – Group ware

and Collaboration tools - Intelligent filtering tools.

MODULE V KNOWLEDGE APPLICATION 6

KM at individual level - Knowledge workers - Task analysis and modeling - Knowledge application at group and organizational levels – Knowledge repositories - Knowledge reuse -Case study: e-learning.

MODULE VI VALUE OF KNOWLEDGE MANAGEMENT 6

KM return on investment and metrics - Benchmarking method – Balanced scorecard method - House of quality method - Results based assessment method - Measuring success - Future challenges for KM.

L – 45; Total Hours –45

TEXT BOOKS:

1. Elias M. Awad, Hassan M. Ghaziri, “Knowledge Management”, Prentice Hall, 2nd Edition, 2010.
2. Jay Liebowitz, “Handbooks on Knowledge Management”, 2nd Edition, 2012.
3. Irma Becerra-Fernandez, Rajiv Sabherwal, ”Knowledge Management: Systems and Processes”, 2010.

OUTCOMES:

Students who complete this course will be able to

- Describe the fundamental concepts in the study of knowledge and its creation, acquisition, representation, dissemination, use and re-use, and management.
- Explains the core concepts, methods, techniques, and tools for computer support of knowledge management.
- Critically evaluate current trends in knowledge management and apply it for e-learning

GECX111 CYBER SECURITY L T P C

3 0 0 3

OBJECTIVES:

- To understand the basics of Cyber Security Standards and Policies.
- To know the legal, ethical and professional issues in Cyber security.
- To understand Cyber Frauds and Abuse and its Security Measures.
- To know the technological aspects of Cyber Security.

MODULE I FUNDAMENTALS OF CYBER SECURITY 7

Security problem in computing – Cryptography Basics – History of Encryption – Modern Methods – Legitimate versus Fraudulent Encryption methods – Encryption used in Internet.

MODULE II CYBERCRIME AND CYBEROFFENSES 8

Cybercrime and Information Security – Cybercriminals – Classifications of Cybercrimes – Email Spoofing – Spamming – Cyber defamation – Internet Time Theft – Forgery – Web jacking – Hacking – Online Frauds – Software Piracy – Mail Bombs – Password Sniffing – Cyberoffenses – Categories – Planning the attacks – Cyberstalking – Cybercafe and Cybercrimes – Botnets.

MODULE III CYBERCRIME: MOBILE AND WIRELESS DEVICES 8

Proliferation of Mobile and Wireless Devices – Trends in Mobility – Credit card frauds in Mobile and Wireless Computing – Security Challenges – Authentication Service Security – Attacks on Mobile Phones.

MODULE IV TOOLS AND METHODS USED IN CYBERCRIME 8

Proxy Servers and Anonymizers – Phishing – Password Cracking – Keyloggers and Spywares – Virus and Worms – Trojan Horses and Backdoors – Steganography – DoS and DDoS Attacks.

MODULE V SECURITY POLICIES 7

Introduction - Defining User Policies – Passwords – Internet Use – Email Usage – Installing/ Uninstalling Software – Instant Messaging – Defining System Administrative Policies – Defining Access Control Developmental Policies Standards, Guidelines and Procedures – Basics of assessing a system

MODULE VI COMPUTER FORENSICS 7

General Guidelines – Finding Evidence on the PC - Finding Evidence in System Logs – Windows Logs – Linux Logs – Getting Back Deleted Files – Operating System Utilities – The Windows Registry.

L – 45; Total Hours –45

TEXT BOOKS:

1. Nina Godbole, Sunit Belapure, “Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives”, Wiley, 2011.

2. Chuck Easttom, “Computer Security Fundamentals”, 2nd Edition, Pearson Education, 2012.

REFERENCES:

1. Charles B. Pfleeger, Shari Lawrence Pfleeger, “Security in Computing”, 3rd Edition, Pearson Education, 2003.
2. William Stallings, “Cryptography and Network Security – Principles and Practices”, 3rd Edition, Pearson Education, 2003.
3. Atul Kahate, “Cryptography and Network Security”, Tata McGraw Hill, 2000.

OUTCOMES:

Upon completion of this course, students will be able to

- Explain the general security issues.
- Discuss various cybercrimes and offenses.
- Outline the occurrence of Cybercrime in mobile and wireless environment.
- Use relevant tools and methods in cybercrime
- Apply security policies in cyber forensics.
- Outline the strategies adopted in computer forensics.

GECX112 GENETIC ENGINEERING L T P C
4 0 0 4

OBJECTIVES:

The course aims to provide an advanced understanding of the core principles and topics of Cell and Organism reproduction and the Principles of heredity and their experimental basis, and to enable students to be able to apply these principles in assessment of pedigrees to identify genotypes and predict the mating outcomes.

MODULE I GENETICS AND ORGANISM 10

Genetics and human affairs, Genetics and Biology, Genes and Environment, Techniques of genetic analysis, The chromosome theory of heredity, Sex chromosomes, Sex linkage, The parallel behaviour of autosomal genes and chromosomes.

MODULE II MENDELISM AND LINKAGE 12

Mendel's laws of inheritance, Interaction of genes, Variations on dominance, Multiple alleles, Lethal alleles, Several genes affecting the same character, Penetrance and expressivity, Linkage- Basic eukaryotic chromosome mapping, The discovery of linkage, Recombination linkage symbolism, Linkage of genes on X chromosomes, Linkage maps, Examples of linkage maps.

MODULE III FINE STRUCTURE OF GENES 10

The concept of promoter, Coding sequence, Terminator, Induction of gene for expression. The concept of extranuclear genome in higher plants and animals, Overview of mitochondrial genome, Chloroplast genome.

MODULE IV RECOMBINATION IN BACTERIA AND VIRUSES 10

Conjugation recombination and mapping the E.coli chromosomes, Transformation, Transduction, Chromosome mapping. Population genetics: Darwin's revolution, Variation and its modulation, The effect of sexual reproduction on variation, The sources of variation, Selection quantitative genetics

MODULE V PRINCIPLES OF PLANT BREEDING 9

Objectives, Selfing and crossing techniques, Male sterility,Incompatability, Hybrid vigour.

MODULE VI HUMAN GENOME PROJECT 9

Genetic diseases in humans, Genetics and society

L – 45; T – 15; Total Hours –60

REFERENCES:

1. In Introduction to genetic analysis, Griffiths, Miller, Suzuki, Lewontin and Gelbart, Freeman and Company.
2. Genetics, A.V.S.S. Sambamurty, Narosa Publishing House.
3. Concepts of Genetics, Klug & Cummings, Prientice Hall.
4. Molecular Cloning, Moniatisetal, Cold Spring Harbor Laboratory.

OUTCOMES:

At the end of the course students will be able to

- Describe the structure, function and replication of DNA as the genetic material
- Describe gene structure, expression and regulation
- Describe the chromosomal basis of inheritance and how alterations in chromosome number or structure may arise during mitosis and meiosis

GECX113	FUNDAMENTALS OF PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The students would gain knowledge on

- Technicalities attached to Project Management and Significance of Quality Consideration
- Project management methodologies – tools and techniques, supplemented with examples from case studies
- The importance of Efficient HR team and role of Communication in executing Projects.
- Managing Risks in Project Management

MODULE I INTRODUCTION TO PROJECT MANAGEMENT 9

Introduction to Project and Project Management-Project Management as a Career-Project Management Skill Sets-Project Scope Management: Project Charter, Scope Creep, Scope Validation, Scope Change Control-Type of Organization: Organization Structure-Influence of Organization Structure on Project, Project Stakeholders and Organizational Productivity.

MODULE II PROJECT MANAGEMENT PROCESS, TOOLS AND TECHNIQUES 8

Project life cycle-Initiation, Planning, Execution, Monitoring and Closing Phase; - Link between project management process, process groups and knowledge areas; Project management tools and techniques- Project Stakeholders description and mapping - Stakeholder Management Process

MODULE III PROJECT QUALITY, COST AND SCHEDULE MANAGEMENT 10

Triple constraints of project-quality, cost and schedule-Quality Planning, Quality Assurance and Quality Control, Process Control, Cost of Quality, Seven Tools of Quality Control- Cost Management: Cost Estimating Methods, Estimating Completion Cost, Earned Value Management, Budgeting, Life-Cycle Cost analysis- Project Time Management: Duration Estimation Method, FS/FF/SS/ SF Relations, Lead/Lag, Arrow Diagram Method and Precedence Diagram Method for Scheduling-Resource Allocation

MODULE IV PROJECT HR MANAGEMENT 5

Organizational Goals- (MBO/MBE/MBP)-Responsibility Assignment Matrix (RAM)-Types of Powers- Manage or Lead-Conflict management Techniques-Performance Evaluation Process-Motivation Theories and its Application for execution of Projects-Leadership Styles-Project Team Building-Project Staffing Constraints/Policies

MODULE V COMMUNICATION MANAGEMENT 5

Communication Management: Understanding Body languages of Project Personnel-Effective Communications- Interpersonal Skills for project Managers-PMIS-Communicating with the Customer-Communicating with Management- Formal vs. Informal Communications-Written, Verbal and Non-Verbal Communications.

MODULE VI PROJECT PROCUREMENT & RISK MANAGEMENT 8

Introduction to Project Procure Management: Soliciting RFQ/RFP-Contract Proposals-Contract Negotiation-Contract Closure-Risk Management: Defining risks-Risk management process-Risk identification-Qualitative and Quantitative Risk-Probability and Decision trees-Risk Response strategies / methods-Expected monetary value-Risk vs. life cycle phases

L – 45; Total Hours –45

REFERENCES:

1. Jack. R. Meredith, Samuel. J. Mantel & Scott. M. Shafer, Project Management in Practice, Fifth Edition, Bangalore: Wiley, 2015
2. Bob Hughes, Mike Cotterrel “Software Project Management”, Tata McGraw-Hill, 2009

OUTCOMES:

- Learners will be able to identify the Key Knowledge Areas and apply PM process in hypothetical project assignments given as continuous assessment.
- They would be able to suitably recognize tools and techniques required for various phases included in a project.
- They would also be able to manage scope, time, cost and other major components that would help them to execute the project efficiently.

GECX114 OPERATIONS RESEARCH

L	T	P	C
3	0	0	3

OBJECTIVES:

- To acquire knowledge and training in optimization techniques.
- To get knowledge about optimization in utilization of resources.
- To understand and apply operations research techniques to industrial operations

MODULE I LINEAR PROGRAMMING PROBLEM 8

Linear programming – formulation of the problem - graphical interpretation of optimality - Simplex method – to obtain basic feasible solution – types of linear programming solution – complications and their resolution.

MODULE II ARTIFICIAL VARIABLE AND TWO PHASE METHOD, DUALITY 6

Artificial variable - Big M method – Two phase method – alternative optimal solution – unbounded solution - Duality – primal dual relationships - rules of constructing the dual from primal.

MODULE III TRANSPORTATION PROBLEM & ASSIGNMENT PROBLE 8

Transportation problems – Initial basic feasible solutions, MODI method, Unbalance in transportation, Degeneracy in transportation models, Assignment problem – Minimization and Maximization type of problems by Hungarian method.

MODULE IV NETWORK AND SEQUENCING PROBLEMS 8

PERT and CPM – Network diagram – Fulkerson's rule - CPM Probability of achieving completion date – Crash time – Cost analysis. Sequencing N jobs through 2 machines and 3 machines.

MODULE V QUEUING THEORY & SIMULATION 7

Poisson arrivals and exponential service times – characteristics of Queuing models – single channel – Introduction to multi channel models – Random number generation – Monte Carlo Simulation.

MODULE VI INVENTORY CONTROL, REPLACEMENT MODELS AND GAME THEORY 8

Types of inventory- Inventory cost - EOQ - Deterministic inventory problems – Introduction to probabilistic models & system level inventory control - Replacement models – Replacement of items that deteriorate with time – value of money changing with time – not changing with time – Individual and group replacement policy - Game theory – simple games.

L – 45; Total Hours –45

TEXT BOOKS:

3. Hamdy ATaha, “Operations Research an introduction”, 8th edition, Phil Pearson, 2007.
4. Winston.W.L., “Operations Research”, 4th edition, Thompson-Brooks/Cole, 2003.

REFERENCES:

1. Wayne.L. Winston, “Operations Research applications and algorithms”, 4th edition, Thomson learning, 2007.

3. A. Ravindran, D. T. Phillips and J. J. Solberg, "Operations Research:Principles and Practice", 2nd edition, John Wiley & Sons, New York, 1992.
4. Robertazzi. T.G., “Computer networks and systems-Queuing theory and performance evaluation”, 3rd edition, Springer, 2002.

OUTCOMES:

At the end of the course students will be able to

- solve linear programming problems
- solve transportation and assignment problems.
- solve network and sequencing problems.
- apply the operations research techniques to solve industrial problems.

GECX115 NANO TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the basic concepts of Nanoscience relevant to the field of engineering.
- To provide an exposure about the importance of various synthesis method.
- To enrich the knowledge of students in various characterisation techniques.

MODULE I INTRODUCTION & CLASSIFICATION OF NANOMATERIALS 9

Definition - Origin of nanotechnology - Difference between bulk and nanomaterials- Top-down and bottom-up processes - Size dependent properties (magnetic, electronic,transport and optical), Classification based on dimensional property - 0D, 1D, 2D and 3D nanostructures – Kubo gap.

MODULE II TYPES OF NANOMATERIALS 9

Metal oxides and metal nano particles - Ceramic nano particles - Semi conducting quantum dots - Core-shell quantum dots - Nanocomposites - Micellar nanoparticles.

MODULE III PRODUCTION OF NANOPARTICLES 7

Sol-gel, hydrothermal, solvothermal, Plasma Arcing, Electro deposition, RF sputtering, Pulsed laser deposition, Chemical vapour, deposition.

MODULE IV CARBON BASED NANOMATERIALS 6

Carbon nanotubes: Single wall nanotubes (SWNT), Multiwall nanotubes (MWNT) - structures-carbon nanofibre, Fullerenes-Application of carbon nanotubes and Fullerenes.

MODULE V NANOPHOTONICS 7

Light and nanotechnology, Interaction of light and nanotechnology, Nanoholes and photons, nanoparticles and nanostructures; Nanostructured polymers, Photonic Crystals, Solar cells.

MODULE VI CHARACTERISATION TECHNIQUES 7

Basic principles of scanning Electron Microscopy (SEM), Atomic force microscopy (AFM), Scanning tunneling microscopy (STM), Scanning probe

microscopy (SPM) and Transmission electron microscopy (TEM), Particle size analyzer, Luminescence techniques.

L – 45; Total Hours –45

TEXT BOOKS:

1. Hari Singh Nalwa, “Handbook of Nanostructured Materials and Nanotechnology”, Academic Press, 2000.
2. Guozhong Cao, “Nanostructures and Nano materials-Synthesis, Properties and Applications”, Imperial College Press (2011).
3. Zhong Lin Wang, “Handbook of Nanophase and Nanomaterials (Vol 1 and II)”, Springer, 2002.
4. Mick Wilson, Kamali Kannangara, Geoff smith, “Nanotechnology: Basic Science and Emerging Technologies”, Overseas press, 2005.

REFERENCES:

1. A. Nabok, “Organic and Inorganic Nanostructures”, Artech House, 2005.
2. C.Dupas, P.Houdy, M.Lahmani, Nanoscience: “Nanotechnologies and Nanophysics”, Springer-Verlag Berlin Heidelberg, 2007.
3. Mick Wilson, Kamali Kannangara, Michells Simmons and Burkhard Raguse, “Nano Technology – Basic Science and Emerging Technologies”, 1st Edition, Overseas Press, New Delhi,2005.
4. M.S. Ramachandra Rao, Shubra SinghH, “Nanoscience and Nanotechnology: Fundamentals to Frontiers”, Wiley, 2013.

OUTCOMES:

At the end of this course, the students will be able to:

- Apply the knowledge of different types of nanomaterials for various engineering applications.
- Acquire the knowledge of various methods of production of nanomaterials.
- Familiarize with various characterization techniques.

GECX116	VEHICLE MAINTENANCE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To know about the various methods of maintaining procedure, vehicle insurance and basic problems in a vehicle.
- The student able to impart knowledge in maintaining of engine components and subsystems.
- The student able to impart knowledge in maintaining of transmission, driveline, steering, suspension, braking and wheels.
- The student able to impart **carefully maintaining their vehicle and can increase driving safety.**

MODULE I MAINTENANCE, WORKSHOP PRACTICES, SAFETY AND TOOLS **7**

Maintenance – Need, importance, primary and secondary functions, policies - classification of maintenance work - vehicle insurance - basic problem diagnosis. Automotive service procedures – workshop operations – workshop manual - vehicle identification. Safety – Personnel, machines and equipment, vehicles, fire safety - First aid. Basic tools – special service tools – measuring instruments – condition checking of seals, gaskets and sealants. Scheduled maintenance services – service intervals - Towing and recovering.

MODULE II ENGINE AND ENGINE SUBSYSTEM MAINTENANCE **8**

General Engine service- Dismantling of Engine components- Engine repair- working on the underside, front, top, ancillaries- Service of basic engine parts, cooling and lubricating system, fuel system, Intake and Exhaust system, electrical system - Electronic fuel injection and engine management service - fault diagnosis- servicing emission controls.

MODULE III TRANSMISSION AND DRIVELINE MAINTENANCE **8**

Clutch- general checks, adjustment and service- Dismantling, identifying, checking and reassembling transmission, transaxle- road testing- Removing and replacing propeller shaft, servicing of cross and yoke joint and constant velocity joints- Rear axle service points- removing axle shaft and bearings- servicing differential assemblies- fault diagnosis.

MODULE IV STEERING AND SUSPENSION MAINTENANCE 7

Maintenance and Service of Mc person strut, coil spring, leaf spring, shock absorbers. Dismantling and assembly procedures. Inspection, Maintenance and Service of steering linkage, steering column, Rack and pinion steering, Recirculating ball steering service- Worm type steering, and power steering system.

MODULE V BRAKE AND WHEEL MAINTENANCE 7

Inspection, Maintenance and Service of Hydraulic brake, Drum brake, Disc brake, parking brake. Bleeding of brakes. Wheel alignment and balance, removing and fitting of tyres, tyre wear and tyre rotation.

MODULE VI AUTO ELECTRICAL AND AIR CONDITIOING MAINTENANCE 8

Maintenance of batteries, starting system, charging system and body electrical -Fault diagnosis using Scan tools. Maintenance of air conditioning parts like compressor, condenser, expansion valve, evaporator - Replacement of hoses- Leak detection- AC Charging- Fault diagnosis Vehicle body repair like panel beating, tinkering, soldering, polishing, painting.

L – 45; Total Hours –45

TEXT BOOKS:

1. Ed May, "Automotive Mechanics Volume One" , Mc Graw Hill Publications, 2003
2. Ed May, "Automotive Mechanics Volume Two" , Mc Graw Hill Publications, 2003
3. Vehicle Service Manuals of reputed manufacturers
4. Vehicle maintenance and garage practice by Jigar A.Doshi Dhru U.Panchal,Jayesh P.Maniar. 2014
5. A Practical Approach to Motor Vehicle Engineering and Maintenance 3rd Edition by Allan Bonnick.

REFERENCES:

1. Bosch Automotive Handbook, Sixth Edition, 2004.
2. Advanced Automotive Fault Diagnosis by Tom Denton 2011.
3. Nissan Patrol Automotive Repair Manual: 1998-2014 by Haynes Manuals Inc.
4. Automobile electrical manual a comprehensive guide by Haynes manual car repair.

OUTCOMES:

On completion of the course student should be able to

- Prepare maintenance schedules and procedures with appropriate tools.
- Demonstrate the procedure and methods to repair and calibrate the engine.
- **Analyze the causes and remedies for fault in transmission and drive line systems.**
- **Analyze the causes and remedies of steering and suspension systems.**
- **Analyze the causes and remedies of brake system.**
- **Demonstrate the procedure for wheel alignment and wheel balanced.**

GECX117	FUNDAMENTALS OF DIGITAL IMAGE PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Describe and explain basic principles of digital image processing
- Design and implement algorithms that perform basic image processing
- Design and implement algorithms for advanced image analysis
- Assess the performance of image processing algorithms and systems

PRE-REQUISITES:

- Basic knowledge of transforms in Mathematics

MODULE I DIGITAL IMAGE FUNDAMENTALS 8

Elements of Image Processing System, Fundamentals steps in Digital Image Processing, Image Sampling & Quantization, Spatial and Gray Level Resolution.

MODULE II COLOR IMAGE PROCESSING 8

Fundamental of color image processing, color models- RGB, CMY, HIS, Pseudo color image processing

MODULE III IMAGE ENHANCEMENT 7

Basic gray level Transformations, Histogram Processing, Spatial Filtering

MODULE IV IMAGE TRANSFORMS 7

2D-DFT, DCT, Haar Transform, Fundamentals of 2D-wavelet transform, sub-band coding

MODULE V IMAGE SEGMENTATION AND RESTORATION 8

Point, line and edge detection methods ,Image Segmentation and its types, Restoration: Noise model, Inverse filter and Wiener filter.

MODULE VI IMAGE COMPRESSION 7

Fundamentals of redundancies, Basic Compression Methods: Huffman coding, Arithmetic coding, JPEG and MPEG Compression standards.

TOTAL HOURS 45

TEXT BOOKS

1. Gonzalez and Woods, "Digital Image Processing", 3rd Edition, Pearson Education, 2016.
2. Anil. K. Jain, "Fundamentals of Digital Image Processing"; 4th Edition, PHI, 2007

REFERENCES

1. Pratt William, "Digital Image Processing", John Wiley & Sons, 2007.
2. Arthur Weeks Jr., "Fundamentals of Digital Image Processing", PHI, 2006.

OUTCOMES:

On completion of the course, students will be able to

- Explain the fundamental concepts of digital image processing.
- Discuss about color image processing
- Recognize & apply various image enhancement techniques.
- Apply various transforms for image processing.
- Apply various techniques for image segmentation and restoration.
- Identify and use appropriate image compression techniques

Group II courses

(To be offered in VII Semester)

		L	T	P	C
GECX201	**GREEN DESIGN AND SUSTAINABILITY**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To impart knowledge to face challenges, the technology poses for water, energy, and climate change by implementing sustainable design.

MODULE I CONCEPTS OF SUSTAINABLE DEVELOPMENT 7

Objectives of Sustainable Development - Need for sustainable development-Environment and development linkages - Globalisation and environment-Population, poverty and pollution- global, regional and local environment issues-Green house gases and climate change.

MODULE II SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 8

Demographic dynamics of sustainability- Policies for socio economic development- Sustainable Development through trade- Economic growth- Action Plan for implementing sustainable development- Sustainable Energy and Agriculture.

MODULE III FRAME WORK FOR ACHIEVING SUSTAINBAILITY 7

Sustainability indicators- Hurdles to sustainability- Business and Industry – Science and Technology for Sustainable Development- Performance indicators of sustainability and assessment mechanism- Constraints and barriers of Sustainable Development.

MODULE IV GREEN BUILDINGS 8

Introduction to Green Building- Energy- Water- Materials and Resources - Sustainable Sites and Land Use - Indoor Environmental Quality- Life Cycle Assessment- Energy, water and materials efficiency.

MODULE V ENERGY CONSERVATION AND EFFICIENCY 7

Energy savings- Energy Audit- Requirements- Benefits of Energy conservation-Energy conservation measures for buildings- Energy wastage- impact to the environment.

MODULE VI GREEN BUILDINGS DESIGN 8

Elements of Green Buildings Design- Foundation, Electrical, Plumbing, flooring, Decking, roofing, insulation, wall coverings, windows, siding, doors and finishing, LEED certification for Green Buildings, Green Buildings for sustainability.

L – 45; Total Hours –45

TEXT BOOKS:

1. Kirby, J., Okeefe, P., and Timber lake, “Sustainable Development”, Earthscan Publication, London, 1995.

REFERENCES:

1. Charles Kibert, J., “Sustainable Construction: Green Building Design and Delivery”, 2nd Edition, John Wiley and sons, 2007.

OUTCOMES:

At the end of the course, the students will be able to

- Explain the relationship between sustainability and emergence of green building practices.
- Address the economic, environmental, and social concerns.

GECX202 APPROPRIATE TECHNOLOGY L T P C
3 0 0 3

OBJECTIVES:

- To impart students knowledge about the basics and applications of various appropriate technologies in the field of civil engineering.

MODULE I BASICS CONCEPTS 7

Back ground, Tools, Choices and Implications, Appropriate Technology Movement (an overview) - Basic design process, basic financial analysis-discounted cash flow, and energy fundamentals.

MODULE II APPROPRIATE TECHNOLOGY WITH REFERENCE TO BUILDING DESIGN 7

Appropriate Building Materials, Appropriate Energy Saving Techniques, Water Conservation (Indoor), Rain Water Harvesting.

MODULE III WATER, HEALTH AND SANITATION MANAGEMENT 7

Water Storage: Designing Dams and Pipelines, Appropriate Selection for Sanitation Technique, Sewerage, Communal Health and Waste Water Recycling.

MODULE IV WASTE MANAGEMENT 8

Types of Waste - Sources - Collections and On-Site Processing -Transferring Stations - Disposal Systems - Recycling.

MODULE V ENERGY EFFICIENT TECHNIQUES 8

Green building concepts-renewable energy sources- Solar – Steam and wind-Biofuels - Biogas – Electricity.

MODULE VI TECHNOLOGY POLICY 8

Government Policies- Energy Policy-Appropriate technology Development Centre-its function and responsibilities-Building policies-Case Studies.

L – 45; Total Hours –45

TEXT BOOKS:

1. Barrett Hazeltine and Christopher Bull, “Appropriate Technology: Tools Choices and Implications”, Academic Press, Orlando, USA, 1998.
2. Ken Darrow and Mike Saxenian, “Appropriate Technology Source Book : A Guide to Practical Books for Village and Small Community Technology”, Stanford, 1986.

REFERENCES:

1. Richard Heeks, “Technology and Developing Countries: Practical Applications Theoretical Issues”, 1995.
2. John Pickford, “The Worth of Water : Technical Briefs on Health, Water and Sanitation”, Intermediate Technology Publications, 1998.

OUTCOMES:

- At the end of the course, the students will be able to use suitable technologies for various conditions for sustainable development.

GECX203 ENGINEERING SYSTEM MODELLING AND SIMULATION

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn the concepts, techniques, tools for modeling and simulation systems and environments through the use of computers.
- To study the various aspects of discrete dynamic, stochastic systems modeling and conducting experiments with those models on a computer.

MODULE I INTRODUCTION 6

Systems – Modelling – types – systems components – Steps in model building- Simulation Algorithms and Heuristics; Simulation Languages.

MODULE II RANDOM NUMBERS / VARIATES 7

Random numbers – methods of generation – random variates for standard distributions like uniform, exponential, Poisson, binomial, normal etc. – Testing of Random variates – Monte Carlo Simulation.

MODULE III MODELLING PROCESS 7

Primitive Models : Establishing relationships via physical laws; Establishing relationships via curve fitting; Parameters estimation problems; Elementary state transition models.

MODULE IV DESIGN OF SIMULATION EXPERIMENTS 9

Steps on Design of Simulation Experiments – Development of models using of Highlevel language for systems like Queuing, Inventory, Replacement, Production etc., – Model validation and verification, Output analysis.

MODULE V SIMULATION LANGUAGES 10

Need for simulation Languages – Comparisons & Selection of Languages – GPSSARENA- EXTEND – Study of any one of the languages.

MODULE VI CASE STUDIES USING SIMULATION LANGUAGES 6

Case Study using simulation languages

L – 45; Total Hours –45

REFERENCES:

1. Law, A.M., & W.D. Kelton, “Simulation Modelling and Analysis”, McGraw

Hill, Singapore, 2000.
2. Harrel, C.R., et. al., “System Improvement Using Simulation”, 3rd Edition, JMI Consulting Group and ProModel Corporation, 1995.
3. Harrel, C.R. & T. Kerim, “Simulation Made Easy, A Manager’s Guide”, IIE Press, 1995.
4. Geoffrey Gordon, “Systems Simulation”, Prentice Hall, 2002.
5. David Kelton, Rondall P Sadowski, David T Sturrock, “Simulation with Arena”, Mc Graw Hill, 2004.

OUTCOMES:

The student should be able to

- Model and simulate systems and environments through the use of computers.
- Conduct experiments with discrete dynamic, stochastic system models on a computer.

GECX204 VALUE ANALYSIS AND ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To get acquainted with value analysis and engineering tool for productivity improvement.
- To understand and analyze the theory and methodology of Value Engineering.

MODULE I VALUE ENGINEERING BASICS 8

Origin of Value Engineering, Meaning of value, Definition of Value Engineering and Value analysis, Difference between Value analysis and Value Engineering, Types of Value, function - Basic and Secondary functions, concept of cost and worth, creativity In Value Engineering.

MODULE II VALUE ENGINEERING JOB PLAN AND PROCESS 6

Seven phases of job plan, FAST Diagram as Value Engineering Tool, Behavioural and organizational aspects of Value Engineering, Ten principles of Value analysis, Benefits of Value Engineering.

MODULE III ORIENTATION AND INFORMATION PHASES 8

Launching Value Engineering project work - Objectives and Targets - VE Project work: a time-bound programme - Projects and Teams - Time Schedule - Co-ordination - Consultant. Technical data - Marketing related information - Competition profile - Cost data - Materials Management related information - Quality related information - Manufacturing data.

MODULE IV FUNCTION ANALYSIS AND CREATIVE PHASES 9

Objectives - Function definition - Classification of functions - Higher level functions – Function – Cost – Function – Worth - Value Gap - Value index - How to carry out Function Analysis? – Fast Diagraming - Cost Modelling.

Creativity - How to improve creativity of an individual? – How to promote creativity in the organisation? - Obstacles to Creativity - Mental road blocks - Creativity killer phrases. Positive thinking - Ideas stimulators - Creativity techniques - Brainstorming.

MODULE V EVALUATION, INVESTIGATION AND RECOMMENDATION 6

Paired comparison and Evaluation Matrix techniques - Criteria for selection of

VE solutions. Design – Materials – Quality – Marketing – Manufacturing - Preview session. The report - presentation.

MODULE VI IMPLEMENTATION PHASE AND CASE STUDIES 8

Design department - Materials department - Production Planning & Control - Quality Control – Manufacturing – Marketing - Need for co-ordinated teams - The Action Plan. Value Engineering case studies.

L – 45; Total Hours –45

TEXT BOOKS:

1. Mudge, Arthur E. “Value Engineering- A systematic approach”, McGraw Hill, New York, 2000.
2. Kumar S, Singh R K and Jha J K (Ed), “Value Engineering”, Narosa Publishing House, 2005.

REFERENCES:

1. Park RJ, “Value Engineering: A Plan for Invention”, St.Lucie Press, New York, 1999.
2. Lawrence, D.M., “Techniques of Value Analysis and Engineering”, McGraw Hill 1988.
3. George, E.D., “Engineering Design: a Material and Processing Approach”, McGraw Hill, 1991.
4. Heller, D.E., “Value Management, Value Engineering and Cost Reduction”, Addison Wesley, 1988.

OUTCOMES:

- The student will be able to realize the value of products, processes and implement value analysis to achieve productivity improvement.

GECX205 INDUSTRIAL SAFETY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the various safety measures to be taken in different industrial environments.

MODULE I SAFETY MANAGEMENT **7**

Evolution of modern safety concept- Safety policy - Safety Organization - line and staff functions for safety- Safety Committee- budgeting for safety. safety education and training.

MODULE II SAFETY IN MANUFACTURING **7**

Safety in metal working-Machine guarding -Safety in welding and gas cutting - Safety in cold forming and hot working of metals -Safety in finishing, inspection and testing -Regulation.

MODULE III SAFETY IN CONSTRUCTION **8**

General safety consideration in Excavation, foundation and utilities – Cordoning – Demolition – Dismantling –Clearing debris – Types of foundations – Open footings.

Safety in Erection and closing operation - Safety in typical civil structures – Dams-bridges-water Tanks-Retaining walls-Critical factors for failure-Regular Inspection and monitoring.

MODULE IV ELECTRICAL SAFETY **8**

Electrical Hazards – Energy leakage – Clearance and insulation – Excess energy – Current surges – Electrical causes of fire and explosion – National electrical Safety code.

Selection of Environment, Protection and Interlock – Discharge rods and earthing device – Safety in the use of portable tools - Preventive maintenance.

MODULE V SAFETY IN MATERIAL HANDLING **8**

General safety consideration in material handling devices - Ropes, Chains, Sling, Hoops, Clamps, Arresting gears – Prime movers.

Ergonomic consideration in material handling, design, installation, operation and

maintenance of Conveying equipments, hoisting, traveling and slewing mechanisms.

Storage and Retrieval of common goods of shapes and sizes in a general store of a big industry.

MODULE VI SAFETY EDUCATION AND TRAINING 7

Importance of training-identification of training needs-training methods – programme, seminars, conferences, competitions – method of promoting safe practice - motivation – communication - role of government agencies and private consulting agencies in safety training – creating awareness, awards, celebrations, safety posters, safety displays, safety pledge, safety incentive scheme, safety campaign – Domestic Safety and Training.

L – 45; Total Hours –45

REFERENCES:

1. Krishnan N.V, “Safety Management in Industry”, Jaico Publishing House, Bombay, 1997.
2. Blake R.B., “Industrial Safety”, Prentice Hall, Inc., New Jersey, 1973.
3. Fulman J.B., “Construction Safety, Security, and Loss Prevention”, John Wiley and Sons, 1979.
4. Fordham Cooper W., “Electrical Safety Engineering”, Butterworths, London, 1986.
5. Alexandrov M.P., “Material Handling Equipment”, Mir Publishers, Moscow, 1981.

OUTCOMES:

Students would be able to

- Acquire knowledge on various safety Hazards.
- Carry out safety measures for different industrial environments.

GECX206 ADVANCED OPTIMIZATION TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the various advanced optimization tools.
- To provide an understanding to deal with ill identified and fuzzy problems.

MODULE I INTRODUCTION **7**

Review of conventional optimization techniques - limitations - limitation of exhaustive search - need for artificial intelligence - bio mimicking methods

MODULE II HEURISTICS METHODS **8**

Introduction – Advanced methods of algorithm design: Greedy method, Backtracking method, Divide and Conquer method – Dynamic programming – Heuristics exploration algorithms – Greedy search - Local search – Hill climbing – Tabu search – Gradient search – Beam search – Simulated Annealing.

MODULE III GENETIC ALGORITHM **7**

Introduction - Basics of GA – Population – Reproduction – Cross over – Mutation -genetic algorithms in search, optimization and machine learning-practical genetic algorithms.

MODULE IV ANT COLONY OPTIMIZATION **8**

Introduction: Ant Colony Optimization – Meta-heuristic Optimization – History – The ACO Meta-heuristic – ACO Algorithms: Main ACO – Ant system – Ant colony system – Max-Min Ant system – Applications: Routing in telecommunication networks – Travelling salesmen – Graph Coloring – Advantages & Disadvantages

MODULE V FUZZY LOGIC AND ANN **8**

Fuzzy logic, knowledge representation and inference mechanism – Fuzzy and expert control – standard Takagi-Sugeno mathematical characterizations – Design example – Biological foundations to intelligent systems: Artificial neural networks, Back-propagation networks, Radial basis function networks, and recurrent networks.

MODULE VI IMPLEMENTATIONS & APPLICATIONS 7

Reduction of size of an optimization problem – multilevel optimization – parallel processing – multi objective optimization – Job shop scheduling – Vehicle scheduling – Line balancing – Sensor integration.

L – 45; Total Hours –45

REFERENCES:

1. Singiresu S. Rao, “Engineering optimization – Theory and practices”, John Wiley and Sons, 1996.
2. Ravindran – Phillips –Solberg, “Operations Research – Principles and Practice, John Wiley and Sons, 1987.
3. Fredrick S.Hillier and G.J.Liberman, “Introduction to Operations Research”, McGraw Hill Inc. 1995.
4. Kalymanoy Deb, “Optimization for Engineering Design”, PHI, 2003
5. Christos H. Papadimitriou, Kenneth Steiglitz, Combinatorial Optimization, PHI 2006

OUTCOMES:

At the end of the course student will be able to

1. Formulate a real life situation as an optimization the problem.
2. Identify the appropriate solution methodology and provide a solution

GECX207 MATLAB SIMULINK

L	T	P	C
3	0	0	3

OBJECTIVES:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION MATLAB DATA PRESENTATION 7

Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts- Making clear and compelling plots-Solving systems of linear equations numerically and symbolically- Least squares regression -Curve fitting.

MODULE II MATLAB PLOT FUNCTION 7

Introduction- Plot Function – Animation- 3D Plots-Customizing Plots – Plot Applications- Saving &Painting Plots.

MODULE III ROOT FINDING AND COMPUTER REPRESENTATION OF NUMBERS 7

Linearization and solving non-linear systems of equations- The Newton-Rapson method- Integers and rational numbers in different bases- Floating point numbers- Round off and errors in basic arithmetic-Significant digits when reporting results

MODULE IV ORDINARY DIFFERENTIAL EQUATIONS 8

Numerical integration and solving 1^{st} order, ordinary differential equations (Euler's method and Runge-Kutta)- Use of ODE function in MATLAB

MODULE V NON-LINEAR DIFFERENTIAL EQUATIONS 8

Converting 2^{nd} order and higher ODEs to systems of 1^{st} order ODEs- Solving systems of ODEs via Euler's method and Runge-Kutta)- Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations

MODULE VI INTRODUCTION OF SIMULINK 8

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- Modeling the solution of three equations with three unknowns- Representing a model as a subsystem-Simulink demos.

L – 45; Total Hours –45

1. Griffiths D V and Smith I M, Numerical Methods for Engineers, Blackwell, 1991.
2. Laurene Fausett, Applied Numerical Analysis Using MATLAB, Pearson 2008.
3. Moin P, Fundamentals of Engineering Numerical Analysis, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB. CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving , Mathematical Exploration with MATLAB, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

1. Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
2. Write programs using first principles without automatic use of built-in ones.
3. Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
4. Be fluent in exploring Matlab's capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
5. Make use of Maltab visual capabilities for all engineering applications.
6. An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECX208	EMBEDDED SYSTEMS AND ITS APPLICATIONS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide a detailed overview of embedded system.
- To equip students with the software development skills necessary for practitioners in the embedded systems field.
- To understand entire software development lifecycle and examine the various issues involved in developing software for embedded systems.

MODULE I EMBEDDED SYSTEMS OVERVIEW 8

Introduction –Embedded Systems vs. General computing systems- Fundamental Components of embedded systems- Characteristics- Challenges-Examples- Embedded System design process.

MODULE II EMBEDDED COMPUTING PLATFORM 8

Overview of Processors and hardware units in an embedded system-CPU buses – Memory devices –Memory types- I/O devices – Designing with computing platforms- Consumer electronics architecture-Design example: Alarm clock.

MODULE III REAL TIME EMBEDDED SYSTEMS 8

Programming embedded systems in assembly and C – Real time systems – Hard and Soft real time systems- Need for RTOS in Embedded Systems- Multiple tasks and processes –Context switching-Scheduling policies- Interprocess communication and synchronization.

MODULE IV EMBEDDED SOFTWARE DEVELOPMENT PROCESS and TOOLS 8

Development process of an embedded system-software modules and tools for implementation of an embedded system- Integrated development environment- Host and target machines-cross compiler-cross assembler-Choosing right platform.

MODULE V PROGRAM MODELING IN EMBEDDED SYSTEMS 8

Program Models – Data Flow Graph model-control DFG model-Synchronous DFG model- Finite state machines- UML modeling – UML Diagrams.

MODULE VI EMBEDDED SYSTEMS APPLICATION 5

Application specific embedded system – case study: digital camera hardware and software architecture, embedded systems in automobile, embedded system for a smart card.

Total Hours –45

TEXT BOOKS:

1. Marilyn Wolf , "Computers as components", Elsevier 2012.
2. Shibu. K.V, “Introduction to Embedded Systems”, Tata Mcgraw Hill,2009.
3. Rajkamal, "Embedded Systems Architecture, Programming and Design",1st Reprint,Tata McGraw-Hill, 2003
4. Frank Vahid and Tony Gwargie, "Embedded System Design", John Wiley & sons, 2002.

REFERENCES:

2. Qing Li and Carolyn Yao," Real-Time Concepts for Embedded Systems", CMPBooks, 2003
3. David E.Simon, "An Embedded Software Primer", Pearson Education, 2003

OUTCOMES:

On completion of this course, the students will be able to

- Identify the suitable processor and peripherals in embedded applications
- Develop embedded programs in assembly and c
- Choose the right platform for designing an embedded system
- Explore different scheduling mechanism in rtos
- Design the program model for embedded applications.
- Analyze different domain specific applications in embedded systems.

GECX209 USABILITY ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of this course is

- To understand the emerging concept of usability, requirements gathering and analysis.
- To learn about human computer interaction with the help of interfaces that has high usability.

MODULE I INTRODUCTION 6

Cost Savings – Usability Now – Usability Slogans – Discount Usability Engineering – Usability – Definition – Example – Trade-offs – Categories – Interaction Design – Understanding & Conceptualizing Interaction – Cognitive Aspects.

MODULE II USER INTERFACES 8

Generation of User Interfaces – Batch Systems, Line Oriented Interfaces, Full Screen Interfaces, Graphical User Interfaces, Next Generation Interfaces, Long Term Trends – Usability Engineering Life Cycle – Interfaces – Data Gathering – Data Analysis Interpretation and Presentation.

MODULE III INTERACTION DESIGN 8

Process of Interaction Design - Establishing Requirements – Design,Prototyping and Construction - Evaluation and Framework.

MODULE IV USABILITY TESTING 8

Usability Heuristics – Simple and Natural Dialogue, Users' Language, Memory Load, Consistency, Feedback, Clearly Marked Exits, Shortcuts, Error Messages, Prevent Errors, Documentation, Heuristic Evaluation – Usability Testing - Test Goals and Test Plans, Getting Test Users, Choosing Experimenters, Ethical Aspects, Test Tasks, Stages of a Test, Performance Measurement, Thinking Aloud, Usability Laboratories.

MODULE V USABILITY ASSESSMENT METHODS 8

Observation, Questionnaires and Interviews, Focus Groups, Logging Actual Use, User Feedback, Usability Methods – Interface Standards - National, International and Vendor Standards, Producing Usable In-House Standards.

MODULE VI USER INTERFACES 7

International Graphical Interfaces, International Usability Engineering, Guidelines for Internationalization, Resource Separation, Multilocale Interfaces – Future Developments – Case Study.

L – 45; Total Hours –45

TEXT BOOKS:

1. Yvonne Rogers, Helen Sharp, Jenny Preece, “Interaction Design: Beyond Human - Computer Interaction”, John Wiley & Sons, 3rd Edition, 2011 (Module I, II, III).
2. Jakob Nielsen, “Usability Engineering”, Morgan Kaufmann Academic Press, 1994. (Module I – VI).

REFERENCES:

1. Ben Shneiderman, Plaisant, Cohen, Jacobs, “Designing the User Interface: Strategies for Effective Human Interaction”, Pearson Education, 5th Edition, 2010.
2. Laura M. Leventhal, Julie A. Barnes, “Usability Engineering: Process, Products, and Examples”, Pearson/Prentice Hall, 2008

OUTCOMES:

Students who complete this course will be able to

- build effective, flexible and robust user interfaces.
- translate system requirements into appropriate human/computer interaction sequences.
- choose mode, media and device for the application requirements.

GECX210 SUPPLY CHAIN MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the various decision phases in a supply chain
- To be aware of the Supply Chain and its drivers
- To design Supply Chain Network
- To build a aggregate plan in supply chain
- To understand Sourcing Decisions in Supply Chain
- To comprehend the influence of Information technology in Supply Chain

MODULE I INTRODUCTION TO SUPPLY CHAIN 7

Understanding Supply Chain - Decision phases - Supply chain performance - Competitive and supply chain strategies - Achieving strategic fit - Expanding strategic scope

MODULE II SUPPLY CHAIN DRIVERS AND DESIGN 7

Drivers of supply chain performance – Designing distribution network - Network Design in the Supply Chain - Network design in Uncertain Environment

MODULE III AGGREGATE PLANNING AND MANAGING SUPPLY, DEMAND AND INVENTORY 8

Aggregate Planning in a Supply chain: role - Managing Supply - Managing Demand in Supply Chain – Cycle and Safety inventory in supply chain – Level of product availability.

MODULE IV MANAGING INVENTORY IN SUPPLY CHAIN 8

Managing Economies of Scale in a Supply Chain : Cycle Inventory- Managing uncertainty in a Supply Chain Safety Inventory- Determining optimal level of Product Availability

MODULE V SOURCING AND TRANSPORTATION 8

Sourcing decision in supply chain - Third and Fourth – Party Logistics providers - Supplier scoring and assessment - Transportation in a Supply Chain – Risk and Trade-offs in transportation design.

MODULE VI INFORMATION TECHNOLOGY IN A SUPPLY CHAIN 7

Information technology in a supply chain – CRM, ISCM, SRM in supply chain -

Over view of recent trends in Supply Chain: e-SRM, e-LRM, e-SCM.

L – 45; Total Hours –45

REFERENCES:

1. Sunil Chopra and Peter Meindl, “Supply Chain Management-Strategy Planning and Operation”, Pearson Education, 5th Indian Reprint, 2013.
2. Jananth Shah “Supply Chain Management – Text and Cases“ Pearson Education, 2008.
3. Altekar Rahul V, “Supply Chain Management-Concept and Cases”, Prentice Hall India, 2005.
4. Monczka et al., “Purchasing and Supply Chain Management”, Thomson Learning, 2nd Edition, 2nd Reprint, 2002.

OUTCOMES:

- After taking up the course the student will be able to brighten his prospects of taking up a career on supply chain management.
- The student decision making capability specific to supply chain issues in an industry is improved.
- The student can plan a well defined execution of supply chain strategy in companies.
- The student will be able to design a optimal distribution network as per the demands of the industry.
- The student can also determine the most favorable transportation plan for a company.
- The student will also be able to bring in company from paper environment to paperless environment.

GECX211 SYSTEMS ANALYSIS AND DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To describe the phases of the systems development life cycle
- To teach the automated tools for system development
- To develop and evaluate system requirements.
- To explain the organizational issues in system implementation
- To teach the usability testing and electronic data interchange
- To elucidate the importance of System analysis and design in electronic commerce.

MODULE I FUNDAMENTALS OF SYSTEM DEVELOPMENT 8

System Concept – Characteristics – Elements of System – Types of System – Modern Approach to System Analysis and Design – System Development Life Cycle – Approaches to Improving Development – Tools for System Development – Succeeding as a System Analyst – Skills – Managing the Project.

MODULE II AUTOMATED TOOLS FOR SYSTEMS DEVELOPMENT 7

What is requirements determination? Fact finding techniques, Tools for documenting procedure and decision-CASE Tools-Need for CASE tools-Reverse engineering and reengineering- phases of the software life cycle-Ranking projects-Value Chain Analysis- Corporate Strategic Planning vs. Information Systems Planning.

MODULE III SYSTEM ANALYSIS 8

Determining System Requirements – Traditional Methods - Modern Methods – Radical Methods – Structuring System Requirements – Process Modeling – Data Flow Diagramming – Logic Modeling – Conceptual Data Modeling – E-R Modeling.

MODULE IV SYSTEM DESIGN 8

System Implementation – Software Application Testing – Installation – Documentation – Training and Support – Organizational Issues in Systems Implementation – Maintaining Information System – Conducting System Maintenance.

MODULE V USABILITY AND MEASURING USER SATISFACTION 7

Usability Testing-User satisfaction test- A tool for analyzing user satisfaction – Unified Modeling Language(UML)- Case study: System Design: Application in Human Resource-Financial Applications

MODULE VI SAD IN E-COMMERCE 7

Systems analysis and design in the era of electronic commerce: B2B, B2C and C2C e-commerce -advantages and disadvantages of e-commerce. E-commerce system architecture – physical networks, logical network, World Wide Web, web-services - HTML, XML - case studies-El electronic data interchange: EDI standards - virtual private networks - XML and EDI

L – 45; Total Hours –45

REFERENCES:

5.Larman, C.,” Applying UML and Patterns. An introduction to Object-Oriented Analysis and Design”. Prentice-Hall PTR, 2002.

OUTCOMES:

- List the characteristics of the system and specify the approaches in the development of the system.
- Summarize the phases of the software life cycle
- Differentiate Corporate Strategic Planning and Information Systems Planning.
- Illustrate the system requirements through various modeling diagrams.
- Use tools and techniques for process and data modeling.
- Solve realistic systems analysis problems and perform user satisfaction test.

GECX212 **ADVANCED MATERIALS** **L T P C**

3 0 0 3

OBJECTIVES:

To make the student conversant with

- Dielectric materials
- Magnetic materials
- Energy materials
- Nano materials
- Semi conductors
- Smart materials

MODULE I **8**

Dielectric Materials- Polarization and Mechanism-Internal or local field-Clausius-Mossotti relation- Dielectric loss- Temperature and Frequency effect-Measurement of Dielectric constant and loss using Scherring bridge- electric break down- ferro, piezo, pyroelectric materials and its application.

MODULE II **8**

Magnetic Materials- Terminology and classification of magnetic materials (Dia, Para, Ferro & Ferri) – Magnetic moments due to electrospin – Domain theory of Hysteresis – Heisenberg theory of Exchange Interaction (without derivation)- Structure and properties of Ferrites- Properties of Soft and Hard Magnetic Materials- Application: floppy disk, CD ROM, Magneto optical recording.

MODULE III **8**

Energy Materials (Nuclear) - Introduction to nuclear materials- Materials for nuclear fuel in fission and fusion reactors, Fissile and fertile materials- Control & Construction Materials for Nuclear reactors, Moderators, Heat Exchangers- Radiation proof materials- Brief discussion of safety and radioactive waste disposal.

MODULE IV **7**

Nano Materials- The nanosize range- classification of nanomaterials- processing of nanomaterials-properties of nanomaterials- mechanical, electrical, magnetic properties- other properties- carbon based nanomaterials- other nanomaterials and its application.

MODULE V **7**

Semiconductors- The energy gap in solids-Extrinsic Semiconductors- Intrinsic Semiconductors- Hall Effect in semiconductors- Application of Hall Effect- Basic ideas of compound semiconductors -Semiconductor materials- Fabrication of Integrated Circuits- Some semiconductor Devices

MODULE VI **7**

Smart materials- aerospace materials Ni and Co based super alloys, Special steels, Titanium alloys, Intermetallics, ceramics and their composites, New High strength material, Properties of Materials, Materials in Medical Applications, Stainless steel alloys,Cobalt based alloys, titanium based alloys, polymers

L – 45; Total Hours –45

REFERENCES:

1. Materials science and Engineering: A first course by V. RAGHAVAN, 6th ed., Eastern Economy edition,Prentice Hall of India,2015
2. Materials science and Engineering: An Introduction by William D. Callister Jr., 7th ed. John Wiley & Sons Inc. 2007
3. Material science by Dr.M.Arumugam, Anurasha agencies ,third revised edition ,2002

OUTCOMES:

Students will be able to know

- significance of dielectric materials
- types and applications of magnetic materials
- applications of nuclear materials for energy harvesting
- applications of nano materials
- significance of semi conductor devices
- applications of smart materials

GECX213	NATIONAL SERVICE SCHEME	L	T	P	C
		2	0	0	2

OBJECTIVES:

Primary Objective: Personality development through community service.
To achieve the above objective, the following should be adhered:

1. To provide an understanding about the aims, structure and programmes and activities of National Service scheme in terms of Nation Building
2. To develop certain basic skills for personality development through community development.
3. Understand the community in which they work and their relation
4. Identify the needs and problems of the community and involve them in problem-solving and
5. Practice national integration and social harmony.

MODULE I INTRODUCTION TO NSS 8

Orientation and structure of NSS,-Aims and Objectives of National Service Scheme- The history of NSS- Symbol and meaning- NSS hierarchy from national to college level – Role and responsibilities of various NSS functionaries

MODULE II PERSONALITY AND COMMUNITY DEVELOPMENT SKILLS 8

Importance of youth Leadership, Traits of Good Leadership and Personality Development. Role of youth in creating awareness through NSS Programmes on Health & Hygiene; Environmental Conservation and Enrichment for Sustainable Development; Sanitation and Swachh Bharat.

MODULE III UNDERSTANDING YOUTH 7

Definition and Profiles of youth categories, Youth Issues, Challenges and Opportunities for Youth, Youth as agent of social change & Community Mobilization .Role of Youth in Nation Building. National Youth Policy.

MODULE IV SOCIAL HARMONY AND NATIONAL INTEGRATION 7

National Integration, Various obstacles in the way of National Integration; such as caste, religion, language and provisional problems etc. Role of youth in Peace building and conflict resolution- Globalization and its Economic Social Political and

Cultural impacts.

L – 30; Total Hours –30

TEXT BOOKS:

1. National Service Scheme – A Youth Volunteers Programme for Under Graduate students as per UGC guidelines J.D.S.Panwar et al. Astral International. New Delhi.
2. National Service Scheme Revised Manual, 2006.Govt. of India. Ministry of Youth Affairs & Sports. New Delhi.
3. Social Problems in India, *Ram Ahuja.*

REFERENCES:

1. National Youth Policy-2014. Ministry of Youth Affairs & Sports. .Govt. of India

OUTCOMES:

On successful completion of this course-

- Students will have exposure to the the aims, structure and programmes and activities of National Service scheme in terms of Nation Building
- Students will be trained to skills for personality development through community development.
- Students will gain knowledge about national integration and social harmony.
- Students will be exposed to the role of youths in Nation building Students will gain

GECX214	AUTOMOTIVE POLLUTION AND CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To have a fair knowledge in automotive pollution control.
- To understand the concept of formation and control techniques of pollutants like UBHC, CO, NOx, particulate matter and smoke for both SI and CI engine will be taught to the students.
- To know about the instruments for measurement of pollutants
- To get introduced about emission standards

MODULE I EMISSION FROM AUTOMOBILES 8

Sources of Air Pollution. Various emissions from Automobiles — Formation — Effects of ollutants on environment and human beings. Emission control techniques – Modification of fuel, after treatment devices. Emission standards. Automotive waste management, old vehicle disposal, recycling, tyre recycling

MODULE II SI ENGINE EMISSIONS AND CONTROL 9

Emission formation in SI Engines- Carbon monoxide & Carbon di oxide - Unburned hydrocarbon, NOx, Smoke —Effects of design and operating variables on emission formation – controlling of pollutants - Catalytic converters, Charcoal Canister, Positive Crank case ventilation system, Secondary air injection, thermal reactor

MODULE III CI ENGINE EMISSION AND CONTROL 8

Formation of White, Blue, and Black Smokes, NOx, soot, Effect of Operating variables on Emission formation — Fumigation, Split injection, Catalytic Coating, EGR, Particulate Traps, SCR, Fuel additives — Cetane number Effect.

MODULE IV NOISE POLLUTION FROM AUTOMOBILES 8

Sources of Noise — Engine Noise, Transmission Noise, vehicle structural Noise, aerodynamics noise, Exhaust Noise. Noise reduction in Automobiles — Encapsulation technique for noise reduction —Silencer Design.

MODULE V TEST PROCEDURES 6

Constant Volume Sampling I and 3 (CVSI &CVS3) Systems- Sampling Procedures — Chassis dynamometers - Seven mode and thirteen mode cycles for Emission Sampling.

MODULE VI EMISSION MEASUREMENTS 6

Emission analysers —NDIR, FID, Chemiluminesecent, Smoke meters, Dilution Tunnel, SHED Test, Sound level meters.

L – 45; Total Hours –45

TEXT BOOKS:

1. V.Ganesan, 'Internal combustion Engines', Tata McGraw Hill Book Co, Eighth Reprint, 2005.
2. Crouse and Anglin, 'Automotive Emission Control', McGraw Hill company., Newyork 1993.

REFERENCES:

1. G.P.Springer ad D.J.Patterson, Engine Emissions, Pollutant formation, Plenum Press, New York. 1986.
2. D.J.Patterson and N.A.Henin, 'Emission from Combustion Engine and their control', Anna Arbor Science Publication,1985.
3. L.Lberanek, 'Noise Reduction', Mcgrawhill Company., Newyork1993.

5. A.Alexander, J.P.Barde, C.lomure and F.J. Langdan, 'Road traffic noise', Applied science publisher ltd., London,1987.

OUTCOMES:

On completion of the course student should be able to

- Identify the sources of emission from vehicles.
- Analyse the causes and effects of emissions.
- Analyse causes and effects of noise pollution
- Bring out solutions for control of emissions.
- Demonstrate the test procedures and emission norms.
- Select suitable instruments for measurement of emissions.

GECX215	MOTOR VEHICLE ACT, INSURANCE & POLICY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn about basic act and regulation followed for road vehicle
- To learn about systematic steps involved to get licence and registration of motor vehicle
- To learn arbour various types of motor vehicle polices and insurances

MODULE I BASIC RULES FOR ROAD VEHICLE 8

Display and Use of Number Plates- Attachment of number plates- Number plates in horizontal position- Removal of number plates on transfer- Hours prescribed for lighted lamps- Mounting of lamps and reflectors- Multiple beam headlamps- Daytime running lamps- Auxiliary driving lamps- Parking lamps- Brakes- Stopping distances- Emergency or parking brakes- Horn- Muffler- Mirrors- Inspection of motor vehicles- Standards of safety and repair

MODULE II LICENSING OF DRIVERS OF MOTOR VEHICLES 8

Necessity of driving licence- Age limit in connection with driving of motor vehicle-Responsibility of owners of motor vehicles-Restriction on the holding of driving licence-Grant of learner's licence-Grant of driving licence-Addition to driving licence- Renewal of driving licence-Revocation of driving licence on grounds of disease or disability-Driving licence to drive motor vehicle belonging to the central government- power of court to disqualify- suspension of driving licence in certain cases- suspension or cancellation of driving licence on convection- Endorsement.

MODULE III REGISTRATION OF MOTOR VEHICLE 7

Necessity for registration – Registration Where and how to be made- Special provision for registration of motor vehicle of diplomatic officers-Temporary registration- Production of vehicle at the time of registration- Refusal of registration- renewal of certificate of registration- effectiveness in India of registration- Change of residence or place of business-transfer of ownership-Suspension of registration – cancellation of registration suspended under section 53- certificate of fitness of transport vehicle-cancellation of registration.

MODULE IV INSURANCE OF MOTOR VEHICLE 8

Necessity for insurance against third party – Requirements of policies and limits of liability- - Duty of insurers to satisfy judgements and awards against person insured in respect of third party risks-Duty to give information as to insurance-Settlement between insurers and insured persons- transfer of certificate of insurance-production of certain certificates, licences and permit in certain cases-Special provisions as to compensation in case of hit and run motor accident – Types of motor polices

MODULE V CONTROL OF TRANSPORT VEHICLES 7

Power to State Government to control road transport- Transport authorities-General provision as to applications for permits- Application for stage carriage permit- Procedure of Regional Transport Authority in considering application for stage carriage permit- Scheme for renting of motor cabs- Application for private service vehicle permit- Procedure in applying for and granting permits- Duration and renewal of permits- Transfer of permit- Replacement of vehicles-Temporary permits

MODULE VI OFFENCES AND PUNISHMENT 7

Driving without holding an effective driving licence- Driving by an under-aged person (Minor driving vehicle)- Holding of a driving licence permitting it to be used by other person.- Driving a vehicle at an excessive speed- Driving or permitting to drive a vehicle carrying excess load- Driving dangerously / its Abetment Driving an uninsured vehicle

Rider and pillion rider failing to wear protective head gear (Helmet) -Violation of Mandatory Signs -.e-challan and spot challan

L – 45; Total Hours –45

TEXT BOOKS:

1. The motor vehicle act 1988, Universal law publishing co.cpvt ltd. Newdelhi 2011
2. A Commentary On The Motor Vehicles Act, 1988 by SUKHDEV AGGARWAL The Bright Law House, New Delhi

REFERENCES:

1. The Motor Vehicles Act, 1988 Along with Latest Case Law, Notifications

& Table of Offences and Punishments Asia Law House; 15th edition (2014)

2. Assessment of Compensation in Accidents under Motor Vehicles Act by Karkara Delhi Law House (2013)

OUTCOMES:

On completion of the course students should be able to

- Explain the analysis of rules and regulations for road vehicles
- Analyze the procedure for getting driving license for vehicles at national and international level
- Analyze the procedure for registration of vehicles.
- Analyze the procedure for Insurance of vehicles and claims.
- Analyze the procedure for obtaining Government Permits and renewal
- Analyze the consequences of not following the rules and regulations

GECX216	PRINCIPLES OF COMMUNICATION SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To introduce the analog and digital modulation techniques.
To elaborate the working of communication receivers in the presence of noise.
To give an overview of various communication systems.

MODULE I LINEAR MODULATION 8

Baseband signals, Amplitude Modulation – Modulation Index, Power Transmitted, Double Side Band and Single Side Band AM, AM Modulators and AM Receivers, AM Radio systems, Frequency Division Multiplexing.

MODULE II ANGLE MODULATION 8

Frequency Modulation and Phase Modulation, Frequency deviation and modulation index, Bandwidth of FM, FM Modulators and FM receivers, FM Radio and FM Stereo Systems

MODULE III SAMPLING AND PULSE MODULATION 7

Sampling, Nyquist's Sampling Theorem, Pulse Modulations - PAM, PPM and PWM, Time Division Multiplexing, Bandwidth of TDM systems.

MODULE IV DIGITAL COMMUNICATION 7

Digital baseband data, Digital Modulations – ASK, FSK, PSK and QPSK. Digital Communication Transmitters and Receivers.

MODULE V NOISE 8

Sources of Noise, Thermal Noise, shot noise, White noise, Narrow band Noise, Effect of noise in communication, SNR, Receiver Noise Temperature and Noise Equivalent Bandwidth.

MODULE VI COMMUNICATION SYSTEMS & NETWORK 7

FM Radio Systems, Cellular Mobile network, Satellite Communications, Optical Fiber Communication.

L – 45; T – 0; Total Hours – 45

TEXT BOOKS:

1. A. Bruce Carlson, Paul B. Crilly, "Communication Systems", 5th Edition,

McGraw Hill Int., 2011.
2. B.P. Lathi, Zhi Ding, Hari M. Gupta, “Modern Digital and Analog Communication Systems”, 4th Edition, Oxford University Press, 2017.

REFERENCES:

1. Herbert Taub, Donald L. Schilling, Goutam Saha, “Principles of Communication Systems” 4th Edition, McGraw Hill Int. 2013.
2. Simon Haykin, “An Introduction To Analog And Digital Communications”, 1st Edition, Wiley India, 2010.
3. Simon Haykin , “Communications Systems” 4th Edition, Wiley India, 2006.
4. Hwei P. Hsu, “Analog and Digital Communications” 3rd Edition,

OUTCOMES:

On completion of the course students will be able to

1. Identify various communication systems and the corresponding modulation schemes.
2. Predict the characteristics of various analog and digital modulation schemes.
3. Interpret the effect of noise and bandwidth in a communication systems
4. Apply the Nyquist criteria for a given baseband signals.
5. Evaluate the performance of communication receivers.
6. Demonstrate the applications of common communication systems.

GECX217 **LEAN MANAGEMENT** **L T P C**

3 1 0 4

OBJECTIVES:

The objective of the Course to make the student know about

- the basics of lean production management,
- how Lean principles are applied to the Construction industry to improve the operation management and product development.

MODULE I **8**

lean production? – Introduction, background, and lean thinking. Importance of philosophy, strategy, culture, alignment, focus and systems view. Discussion of Toyota Production System.

MODULE II **8**

Manufacturing systems – an overview of manufacturing strategies. Job shops, batch flow, and flexible manufacturing systems Flow production and lean production systems

MODULE III **7**

Value stream mapping in process design and product development Waste reduction - lead time reduction

Process cycle time and value-added vs. non-value added activities Optimum lot sizing

MODULE IV **8**

Lean production processes, approaches and techniques.—Importance of focusing upon flow. Tools -. Workplace organization – 5S. - Stability. - Just-In-Time – One piece flow – Pull. - . Cellular systems. - . Quick change and set-up reduction methods. f. Total productive maintenance. -. Poka-Yoke – mistake proofing, quality improvement. Standards. - . Leveling. - . Visual management. Just-in-time techniques – SMED and Takt Times - Standard work processes and line balancing Poka-yoke and pull systems material handling reduction and facilities planning

MODULE V **8**

Managing change in the lean organization Human resource management and the lean enterprise Employee involvement – Teams – Training – Supporting and encouraging involvement – Involving people in the change process -- communication -- Importance of culture. Startup of lean processes and examples of applications.

Sustaining improvement and change, auditing, follow-up actions.

7

MODULE VI

The lean enterprise and supply chain management Costs and risks of lean initiatives - Measuring lean initiatives

L – 45; Total Hours –45

TEXT BOOKS:

1. The Toyota Way Fieldbook, Jeffrey Liker and David Meier, McGraw-Hill, 2006. Lean Production Simplified, Pascal Dennis, Productivity Press, 2007.
2. Womack, James P., and Daniel T. Jones. Lean Thinking. New York, NY: Simon and Schuster, 2003. ISBN: 0743249275.
3. Murman, Earll. Lean Enterprise Value. New York, NY: Palgrave Macmillan, 2002. ISBN: 0333976975.

REFERENCES:

1. Readings at http://www.leanconstruction.org/readings.htm
2. Hopp, W. J., and Spearman, M. L. (2011). Factory Physics, Third Edition, Waveland Press, Long Grove, Il. 720 pp.

OUTCOMES:

The student will be able to

- Describe the manufacturing approaches employed and the background and philosophy of lean production.
- Illustrate the concept of waste reduction
- Apply evaluation techniques that can be used in preparation for and use in learn production activities.
- Select the tools that can be used implementing lean production in production operations.
- Discuss the importance of workplace organization, pull production, cellular arrangement and employee involvement, need for employee creativity
- Describe about the Methods for promoting success in implementing lean transformations

GECX218 GEOSPATIAL MODELING & ANALYSIS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To equip the students with fundamental representation and analysis of geospatial phenomena and provides foundations in methods and algorithms used in GIS analysis.
- To focus is on terrain modeling, geomorphometry, watershed analysis and introductory GIS-based modeling of landscape processes (water, sediment). The course includes analysis from lidar data, coastal change assessment and 3D visualization.

MODULE I INTRODUCTION TO GEOSPATIAL DATA 7

Mapping natural phenomena –Concept of continuous fields and discrete sampling – Units, projections, coordinate transformation – Georeferencing, geospatial formats, conversions, geospatial data abstraction library – Raster and vector representation, raster and vector conversions and resampling.

MODULE II DATA DISPLAY AND VISUALIZATION 7

Display of continuous and discrete data, use of color, shading, symbols, to extract the spatial pattern and relationships – 3D visualization: multiple surfaces and volumes, 3D vector objects – visualization for data analysis (lighting, scaling, transparency, cutting planes, animations) – view/create maps/post your data on-line (Google Earth/Maps, GPS visualizer)

MODULE III GEOSPATIAL ANALYSIS 7

Foundations for analysis of continuous and discrete phenomena – neighborhood operations and buffers – analysis and modeling with map algebra – cost surfaces and least cost path – spatial interpolation and approximation (gridding)

MODULE IV TERRAIN MODELING AND ANALYSIS 9

terrain and bathymetry mapping – mathematical and digital representations (point clouds, contour, raster, TIN) – DEM and DSM, working with multiple return lidar data – spatial interpolation of elevation data and topographic analysis, line of sight, view shed analysis – solar irradiation, photovoltaic energy potential, time series of elevation data, analysis of coastal change.

MODULE V FLOW TRACING, WATERSHED ANALYSIS AND LANDFORMS **8**

Methods for flow routing and flow accumulation – Extraction of stream networks – Extraction of watershed boundaries and building watershed hierarchies – feature extraction, types of landforms.

MODULE VI MODELING OF GEOSPATIAL PROCESSES **7**

Model formulation, input data processing – introduction to GIS-based hydrologic, erosion and environmental modeling – Geocomputational methods, including agent-based modeling, artificial neural networks and evolutionary computing.

L – 45; T – 0; Total Hours –45

TEXT BOOKS:

1. Hassan A, Karimi (2017), *Geospatial Data Science Techniques and Applications*, CRS Press & Co.
2. Sudipto Banerjee, Bradley P, Carlin, Alan E. Gelfand (2014), *Hierarchical Modeling and Analysis for Spatial Data*, CRS Press & Co.

OUTCOMES:

On successful completion of this course,

- Students will be able to apply the basic concepts of Conceptualize models as representations of real life systems with inputs, outputs, and processes.
- Students will have gained knowledge in spatial tools to make simulations and predictions of real life phenomena.
- Students will have synthesized knowledge about Apply, integrate, and develop models with geospatial data through a GIS.
- Students will have an overview of Evaluate models in terms of accuracy, sensitivity, and uncertainty.
- Students will have Use of a system-based approach for problem solving, with an emphasis on sustainability.

CURRICULUM AND SYLLABI

B.TECH.

MECHANICAL ENGINEERING

DEPARTMENT OF MECHANICAL ENGINEERING

VISION AND MISSION

VISION

To excel in providing quality education and training through Undergraduate and Postgraduate programs and carryout quality research in the field of Mechanical Engineering.

MISSION

- To provide a good learning experience through appropriate design of curriculum and syllabi that facilitate students to gain thorough understanding of the fundamental concepts and applications in Mechanical Engineering
- To equip students to solve challenging problems in Mechanical Engineering and related areas taking in to account their impact on the society
- To facilitate students to develop good communication, leadership and managerial skills through team approach in conducting experiments and projects
- To pursue academic and collaborative research activities with industry and other research institutions ensuring high quality in publications and other research outputs

PROGRAMME EDUCATIONAL OBJECTIVES

- To induce a sense of excitement in learning by adapting a holistic approach through well designed curriculum, pedagogy and evaluation for a successful professional career
- To provide a strong foundation in physical sciences and analytics to enable comprehensive understanding of the basic principles of Mechanical Engineering
- To develop knowledge and skill in applying engineering principles to conceive, design, analyze, manufacture, maintain and recycle engineering systems and components
- To equip the students with essential fundamental knowledge not only in the facets of Mechanical Engineering but also from other relevant disciplines to infuse a multi-disciplinary approach
- To enhance the spirit of inquiry through projects, internships leading to development of creativity, self confidence and team spirit
- To provide necessary ambience with scope for developing communication and life skills so as to meet the needs of the society in the globalized environment.

PROGRAMME OUTCOMES

On successful completion of the programme, the graduates will

- Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Identify, formulate, research literature, and analyses complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Use research –based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.
- Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

- Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- Demonstrate knowledge and understanding of the engineering and management principles and apply these to one’s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change
- Apply the principles of engineering to model, analyse, design and realize the physical components, processes and systems
- Work professionally in Mechanical systems

B.S. ABDUR RAHMAN CRESCENT INSTITUTE OF SCIENCE AND TECHNOLOGY

B.TECH. MECHANICAL ENGINEERING

CURRICULUM& SYLLABUS, REGULATIONS 2017

SEMESTER I

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C	-
1.	BS	MAC 1181	Differential Calculus and Geometry	3	1	0	4	
2.	HS	ENC 1181/ ISC 1181/ LNC 1181/ LNC 1182 / LNC 1183	English / Arabic / Mandarin / German / Japanese	3	0	0	3	
3.	BS	PHC 1181	Physics	3	0	2	4	
4.	BS	CHC 1181	Chemistry	3	0	2	4	
5.	ESF	GEC 1101	Engineering Graphics	2	0	2	3	
6.	ESF	GEC 1102	Engineering Design	2	0	0	2	
7.	ESF	GEC 1103	Basic Engineering Practices Laboratory	0	0	2	1	
8.	ESF	GEC 1104	Computer Programming I	1	0	2	2	**23**

SEMESTER II

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C
1.	BS	MAC 1281	Advanced Calculus	3	1	0	4
2.	BS	-	Physics Elective	2	0	2	3
3.	BS	-	Chemistry Elective	2	0	2	3
4.	ESF	GEC1211	Basic Engineering Mechanics	3	1	0	4
5.	BS	GEC 1212	Environmental Studies	2	0	0	2
6.	ESF	GEC 1213	Computer Programming II	1	0	2	2

Sl. No.	Course Group	Course Code	Course Title	L	T	P	C	
7.	EC	MEC1211	Material Science	3	0	0	3	
8.	EC	MEC1212	Design Appreciation Lab	0	0	3	1

Physics Elective Courses

(To be offered in II Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	PHCX 01	Fundamentals of Engineering Materials	2	0	2	3
2.	PHCX 02	Heat and Thermodynamics	2	0	2	3
3.	PHCX 03	Introduction to Nanoscience and Technology	2	0	2	3
4.	PHCX 04	Lasers and their applications	2	0	2	3
5.	PHCX 05	Materials Science	2	0	2	3
6.	PHCX 06	Non-Destructive Testing	2	0	2	3
7.	PHCX 07	Properties of Matter and Acoustics	2	0	2	3
8.	PHCX 08	Properties of Matter and Nondestructive Testing	2	0	2	3
9.	PHCX 09	Semiconductor Physics and Optoelectronics	2	0	2	3

Chemistry Elective Courses

(To be offered in II Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	CHCX01	Analytical Instrumentation	2	0	2	3
2.	CHCX02	Corrosion and its Control	2	0	2	3
3.	CHCX03	Electrical Materials and Batteries	2	0	2	3
4.	CHCX04	Engineering Materials	2	0	2	3
5.	CHCX05	Fuels and Combustion	2	0	2	3
6.	CHCX06	Fundamentals of Physical Chemistry	2	0	2	3
7.	CHCX07	Green Technology	2	0	2	3
8.	CHCX08	Organic Chemistry of Biomolecules	2	0	2	3
9.	CHCX09	Polymer Science and Technology	2	0	2	3

Maths Elective Courses

(To be offered in IV Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	MACX 01	Discrete Mathematics And Graph Theory	3	1	0	4
2.	MACX 02	Probability And Statistics	3	1	0	4
3.	MACX 03	Random Processes	3	1	0	4
4.	MACX 04	Applied Numerical Methods	3	1	0	4

Maths Elective Courses

(To be offered in VI Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	MACX 05	Mathematical Programming	2	0	0	2
2.	MACX 06	Statistical Methods for Data Analysis	2	0	0	2
3.	MACX 07	Numerical Methods for Integral and Differential Equations	2	0	0	2
4.	MACX 08	Mathematical Modelling	2	0	0	2
5.	MACX 09	Graph Theory	2	0	0	2

Humanities Elective I

(To be offered in III Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	SSCX01	Fundamentals of Economics	2	0	0	2
2.	SSCX02	Principles of Sociology	2	0	0	2
3.	SSCX03	Sociology of Indian Society	2	0	0	2

Humanities Elective II

(To be offered in IV Semester)

Sl. No.	Course Code	Course Title	L	T	P	C
1.	SSCX04	Economics of Sustainable Development	2	0	0	2
2.	SSCX05	Industrial Sociology	2	0	0	2
3.	SSCX06	Law for Engineers	2	0	0	2

General Elective

Group I Courses

(To be offered in V semester)

Sl. No.	Course Code	Course Title	Offering Department
1.	GECX101	Disaster Management	Civil
2.	GECX102	Total Quality Management	Mechanical
3.	GECX103	Energy Studies	Mechanical
4.	GECX104	Robotics	Mechanical
5.	GECX105	Transport Management	Automobile
6.	GECX106	Control Systems	EEE
7.	GECX107	Introduction to VLSI Design	ECE
8.	GECX108	Plant Engineering	EIE
9.	GECX109	Network Security	CSE
10.	GECX110	Knowledge management	CSE
11.	GECX111	Cyber security	IT
12.	GECX112	Genetic Engineering	LS
13.	GECX113	Fundamentals of Project Management	CBS
14.	GECX114	Operations Research	Mathematics
15.	GECX115	Nano Technology	Physics / Chemistry
16.	GECX116	Vehicle Maintenance	Automobile
17.	GECX117	Fundamentals of Digital Image Processing	ECE

Group II Courses

(To be offered in VII semester)

Sl. No.	Course Code	Course Title	Offering Department
1.	GECX201	Green Design and Sustainability	Civil
2.	GECX202	Appropriate Technology	Civil / Mechanical
3.	GECX203	Engineering System Modelling and Simulation	Mechanical
4.	GECX204	Value Analysis and Engineering	Mechanical
5.	GECX205	Industrial Safety	Mechanical
6.	GECX206	Advanced Optimization Techniques	Mechanical
7.	GECX207	Mat Lab Simulation	EEE
8.	GECX208	Embedded Systemsand its Applications	ECE
9.	GECX209	Usability Engineering	CSE
10.	GECX210	Supply Chain Management	CBS
11.	GECX211	System Analysis and Design	CA
12.	GECX212	Advanced Materials	Physics & Chemistry
13.	GECX213	National Service Scheme	School of Humanities
14.	GECX214	Automotive Pollution and Control	Automobile
15.	GECX215	Motor Vehicle Act, Insurance and Policy	Automobile
16.	GECX216	Principles of Communication Systems	ECE
17.	GECX217	Lean Management	Civil
18.	GECX218	Spatial Data Modeling & Analysis	Civil

SEMESTER I

MAC 1181	DIFFERENTIAL CALCULUS AND GEOMETRY	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- introduce eigen values and eigenvectors of matrix algebra.
- make the student knowledgeable in the area of Three Dimensional Analytical Geometry.
- demonstrate the application of Differential Calculus.
- familiarize the student with the functions of several variables.
- develop the use of ODE solvable techniques necessary for engineering applications.
- motivate the students with some basic engineering application problems in ODE.

MODULE I MATRICES 8+2

Characteristic Equation- Eigenvalues and Eigenvectors of a real matrix – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton Theorem (without proof) – Orthogonal matrices – orthogonal transformations of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation.

MODULE II THREE DIMENSIONAL ANALYTICAL GEOMETRY 7+3

Direction cosines and ratios – angle between two lines – equations of a plane – equations of a straight line, coplanar lines - shortest distance between skew lines - sphere – tangent plane – plane section of a sphere – orthogonal spheres.

MODULE III DIFFERENTIAL GEOMETRY 7+3

Curvature – Cartesian and polar coordinates – centre and radius of curvature – circle of curvature – involutes and evolutes – envelopes.

MODULE IV DIFFERENTIAL CALCULUS OF SEVERAL VARIABLES 8+2

Functions of two variables – partial derivatives – total differential – Implicit Functions – Jacobian - Taylor's series expansion – Optima of two variables – Lagrange's multiplier method.

MODULE V ORDINARY DIFFERENTIAL EQUATIONS 8+2

Linear equations of second order with constant and variable coefficients – Simultaneous first order linear equations with constant coefficients – homogeneous equations of Euler's type – method of undetermined coefficients, method of variation of parameters

MODULE VI APPLICATIONS OF ORDINARY DIFFERENTIAL EQUATIONS 7+3

Solution of Ordinary Differential Equation Related to Electric Circuits – Bending of Beams- Motion of a Particle in a resisting medium – Simple harmonic motion.

L – 45; T – 15; Total Hours –60

6. Venkataraman, M.K., "Engineering Mathematics", Volume I, 2nd edition, National Publishing Co., Chennai, 2003.

7. James Stewart ".Calculus" (7th edition),Brooks/Cole cengage learning,UK

OUTCOMES:

After completing the course, student will be able to

- Understand the matrix techniques and compute eigen values and eigenvectors of a given matrix.
- Do the problems based on three dimensional analytic geometry.
- Apply differential calculus in engineering problems.
- Differentiate more than one variable and their applications.
- Solve the differential equations with constant coefficient and variable coefficient.
- Form and solve differential equations.

ENC 1181	ENGLISH	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To train students to use appropriate vocabulary in academic and technical contexts.
- To facilitate students to speak effectively while exchanging ideas and making presentations.
- To develop students' listening skill for comprehending and analyzing information.
- To develop their reading skill through sub skills like skimming , scanning and critical reading of a text.
- To sharpen their academic writing skills.
- To expose them to the correct usage of language and help them to apply that knowledge appropriately.

MODULE I **8**

L: Listening for general information

S : Self Introduction, Introducing one another.

R: Predicting the content

W: Paragraph Writing

Language Focus: Affixes, Simple Present tense , Connective & Prepositions.

MODULE II **8**

L: Listening for specific information (from dialogues)

S:Exchanging opinion.

R: Skimming technical Passages

W: Argumentative Writing (using the concept of Flipped Learning), Letter to the Editor.

Language Focus: Idioms, use of Modals, Simple Past tense & use of "Wh" and question tags.

MODULE III **7**

L: Learning the ways of describing images and presenting specific information (focusing on note making)

S: Making Presentations using visuals.

R : Scanning short texts for gist of information

W: Letter of Invitation, Expository Writing

Language Focus: Homophones, Homographs, Simple Future & Collocations.

MODULE IV **7**

L: Understanding prepared presentation techniques through videos

S: Short Presentations.

R: Reading for coherence and cohesion

W: Letter seeking permission for Industrial Visit

Language Focus: S-V agreement, Euphemism

MODULE V **8**

L : Understanding Non- Verbal Communications while listening to narration of incidents.

S: Narrating an expereince

R: Inferential Reading

W: Process Description – Transcoding a Flow chart.

Language Focus: Interchange of Active & passive voice, Impersonal Passive voice.

MODULE VI **7**

L: Learning Story telling techniques (stories & visuals) through audio files

S: Discussion in groups

R: Reading for critical appreciation

W: Developing an idea, Slogan writing, Interpreting a Bar Chart.

Language Focus: If clause and phrasal verbs.

TOTAL HOURS :45

5. Matt Firth, Chris Sowton et.al. (2012). Academic English: An Integrated Skills Course for EAP. Cambridge University Press, Cambridge.

OUTCOMES:

After completion of the course, students will have the ability to

- Demonstrate their range of vocabulary in academic and technical contexts
- Exchange ideas and make presentations
- Comprehend and respond appropriately to listening tasks.
- Read a text efficiently and process information.
- Create and draft different kinds of academic documents
- Communicate effectively using grammatically correct expressions.

ISC1181	ARABIC	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To read and write in Arabic language.
- To learn vocabulary of different fields
- To develop situational communication skills.

MODULE I PREPARATORY ARABIC **7**

Introducing Arabic Alphabets.

Listening and Reading.

Audio & Video aided listening, Tajweed listening,

Writing Arabic Alphabets (connected & unconnected).

Introducing words.

Reading simple sentences.

Learning names of the things in and around the class room.

Exercises.

MODULE II FUNCTIONAL ARABIC **7**

Listening Arabic texts, stories and action verbs

Communicating Simple sentences.

Jumla' Ismiyya and Jumla' Fi'liyya

Situational Conversation:

Greetings, Introduction.

Classroom, College, Picnic.

Dining and Kitchen.

Reading skills.

Exercises

MODULE III FUNCTIONAL ARABIC **8**

Implication of effective listening.

Audio aids.

Writing Simple sentences.

Communicating ordinal and cardinal numbers.

Situational communication:

Playground, library.

Forms of plural – Sample sentences.

Introduction to tenses.

Exercises.

MODULE IV FUNCTIONAL ARABIC **8**

Communication:
Family, travel
Market, Prayer hall
Writing skills:
Note making.
Sequencing of sentences.
Developing answers from the questions.
Exercises.

MODULE V TECHNICAL ARABIC 8

Importance of technical communication.
Reading and writing skills.
Audio & Video aided listening.
Introduction to Arabic terms related to administration.
Situation communication:
Air travel, Office administration, passport, visa.
Exercises

MODULE VI TECHNICAL ARABIC 7

Situation communication:
Contractual work, machineries and equipments..
Computer, internet browsing.
Banking,
Exercises.

TOTAL HOURS :45

TEXT BOOKS:

1. Arabic for professionals and employees, Kilakarai Bukhari Aalim Arabic College, Chennai, India, 2013.

REFERENCES:

1. Arabic Reader for Non Arabs (Ummul Qura University, Makkah), Kilakarai Bukhari Aalim Arabic College, 2005.

OUTCOMES:

On successful completion of the course, the student will be able to:

- Write correct sentences in Arabic.
- Communicate in Arabic at primary level in working situations in the fields of engineering and administration.

LNC1181	MANDARIN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To improve the proficiency of students in Mandarin language.
- To develop their knowledge of vocabulary.
- To train them in using appropriate grammatical forms during communications.
- To empower them for successful communication in social and academic contexts.
- To make them appreciate the language usage in real life situations.

MODULE I **8**

General Introduction to Chinese • Pinyin and Tones • Introduction to the Writing System: basic strokes and stroke order · Numbers 1-100, song · Days of the Week · Months of the Year

MODULE II **8**

Chinese names and related culture · Chinese family structures and values · Greetings · Introducing Yourself · Family members · Occupations

MODULE III **7**

Languages and Nationalities · Daily Routine · Chinese breakfast · Negative Sentences and Interrogative Sentences · Asking for Personal Information · The Verb *shi* and Basic Sentence Structures

MODULE IV **7**

Answering an Affirmative-negative Question · Food and drinks Transportation · Likes and dislikes · Adverbs *bu*, *jiu* and *dou* · Verb-absent Sentences

MODULE V **8**

Jisui and *duoda* Questions · S+V+O Construction · Routines and Daily Activities ·*Haishi* Questions · Modal Verbs · Hobbies and Habits

MODULE VI **7**

Making Suggestions with *haoma* ·Colors · Clothing · Body parts · Talking about Likes and Dislikes · Measurement Words in Chinese

TOTAL HOURS :45

TEXT BOOKS:

1. Ma, Yanmin, and Li, Xinying. *Easy Steps to Chinese, Vol*. *1 Textbook*. Beijing: Beijing Language and Culture University Press, 2006. Print.
2. Ma, Yanmin, and Li, Xinying. *Easy Steps to Chinese, Vol. 1 Workbook*. Beijing: Beijing Language and Culture University Press, 2006. Print.

OUTCOMES:

On completion of the course, students will be able to

- Exhibit proficiency in Chinese Language.
- Use vocabulary in appropriate contexts.
- Use appropriate grammatical forms effectively.
- Use the language in social and academic contexts.
- Appreciate the use of language forms.

LNC1182	GERMAN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To improve the proficiency of students in German language.
- To create awareness of using vocabulary among students.
- To expose them to correct grammatical forms of the language.
- To empower them for successful communication in social and academic contexts.

MODULE I **8**

Introduction to German alphabets, phonetics and pronunciation- Introducing themselves and others using simple sentences and answer to some basic personal questions-: Introduction to different types of articles and verbs, Nouns

MODULE II **8**

Understanding and responding to everyday queries like instruction, questions, - number & gender, pronouns, present and past tense.

MODULE III **7**

Short telephone messages, requests etc., if spoken slowly and clearly-- Detailed overview of articles, adjectives with/without articles, Prepositions

MODULE IV **7**

Ask and giving directions using simple prepositions- Ability to fill basic information on forms while registering for courses / classes.

MODULE V **8**

Ability to extract and understand relevant information in a public announcement, broadcast, newspaper, radio etc-- dative & accusative

MODULE VI **7**

Ability to describe about people, work, immediate environment, education and other topics related to personal needs in a concise manner-- Understanding of matters that are familiar and are encountered regularly like instances at school, work, at public places, places of leisure etc.

4. Willkommen! Beginner's course. Paul Coggle, Heiner Schenke. ISBN: 978-1-444-16518-0
5. An Introduction to the German Language and Culture for Communication, Updated Edition Lovik, Thomas A., J. Douglas Guy & Monika Chavez. Vorsprung -. New York, Houghton Mifflin Company, 1997/2002. ISBN 0-618-14249-5.

OUTCOMES:

On completion of the course, students will be able to

- Show their proficiency in German Language.
- Use appropriate vocabulary in real life contexts.
- Use appropriate grammatical forms while communicating with people.
- Effectively use the language in social and academic contexts.

LNC1183	JAPANESE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To train students to use appropriate vocabulary in academic and technical contexts.
- To facilitate students to speak effectively while exchanging ideas and making presentations.
- To develop their reading skill through sub skills like skimming, scanning and critical reading of a text.
- To sharpen their academic writing skills.
- To expose them to the correct usage of language and help them to apply that knowledge appropriately.

MODULE I **7**

Introduction of the Japanese writing system, i.e. *Hiragana*, *Katakana* and *Kanji*, word-building, writing foreign names and loan words in Katakana.

MODULE II **8**

Oral practice of pronunciation and intonation of Japanese sounds, Japanese greetings, self introduction, identifying things, time of the day, calendar; counting using Japanese numerical classifiers; describing things;

MODULE III **7**

Making comparisons; talking of daily activities, kinship terms used for address and reference, seasons, giving and receiving, shopping; making requests, talking of one's likes and dislikes.

MODULE IV **8**

Extensive practice of basic patterns at the lower intermediate level through drills and exercises.

MODULE V **7**

Comprehension of passages in simple Japanese and writing of composition in Japanese applying lower intermediate grammatical patterns.

MODULE VI **8**

Diverse texts based on Japanese culture, customs, history, food habits, and science etc, for the development of communicative competence of students; skimming, scanning of texts with emphasis on advanced

sentence patterns, grammatical structures and idiomatic phrases, reading and writing of approximately

TOTAL HOURS :45

REFERENCES:

2. Exersice book 1of Nihongo 1, and other supplementary material
3. Nippon, the Land and its People & Encyclopedia of Contemporary Japanese
4. Japani: Japanese Conversation for Improving Spoken Proficiency, By P.A. George, Inoue Yoriko and Itsuko Nandi, Books Plus.
5. Chukyu Nihongo, Tokyo Gaikokugo Daigaku; Nihongo II, Kokusaigakuyukai, and other supplementary material.

OUTCOMES:

After completion of the course, students will have the ability to

- Demonstrate their range of vocabulary in academic and technical contexts
- Exchange ideas and make presentations
- Comprehend and respond appropriately to listening tasks.
- Read a text efficiently and process information.
- Create and draft different kinds of academic documents
- Communicate effectively using grammatically correct expressions.

PHC 1181	PHYSICS	L	T	P	C
		3	0	2	4

OBJECTIVES:

To make students conversant with the

- basic concepts of crystal physics and its structures
- production and applications of ultrasonic waves
- study of thermal conductivities of good and bad conductors
- phenomenon of wave optics and its applications
- principle of fibre optic communication and its applications to sensors
- wave mechanics principle and its applications in electron microscopy
- green energy physics and its environmental impacts to society

MODULE I CRYSTAL PHYSICS 8

Crystalline and amorphous solids – Unit Cell – Seven Crystal Systems – Bravais Lattice – Miller Indices – Interplanar Spacing – Characteristics of Unit Cell - Calculation of Number of atoms per unit cell, Atomic Radius, Coordination Number and Packing Factor for SC, BCC, FCC and HCP and Diamond structures –Defects in crystals-Point defects –Edge and screw dislocations and their significance - Surface Defects.

MODULE II ULTRASONICS AND THERMAL PHYSICS 8

Introduction to Ultrasonics - Properties - Production methods - Magnetostriction Oscillator method- Piezoelectric Oscillator method – Detection of Ultrasonics – Thermal method – Piezoelectric method – Kundt's tube method – Applications of Ultrasonics – Acoustic Grating – SONAR – Depth of sea – Velocity of blood flow, Ultrasonic Flaw detector (qualitative).

Transmission of heat – Conduction, Convection and Radiation – Thermal Conductivity of good Conductor – Forbe's method- Thermal Conductivity of bad Conductor – Lee's Disc method.

MODULE III APPLIED OPTICS 8

Interference – Air Wedge – Michelson's Interferometer – Determination of wavelength of light and thickness of thin transparent sheet.

Introduction to Laser – Characteristics of Laser – Spontaneous and Stimulated Emissions – Einstein's Coefficients - Population inversion –

Pumping Mechanism – Laser Action – Types of Laser: He-Ne laser, CO2 laser and Nd:YAG laser - Applications : Laser Materials Processing .

MODULE IV FIBRE OPTICS 7

Optical fibre – Principle and propagation of light in optical fibre – Numerical aperture and acceptance angle – Types of optical fibres – Attenuation – Absorption, Scattering losses, Bending losses and Dispersion in Optical fibres – Fiber Connectors and Couplers - Applications – Fibre optic communication system (block diagram only)- Fibre optic sensors - displacement and pressure sensors (qualitative) - Medical endoscope.

MODULE V QUANTUM MECHANICS 7

Black body radiation – Planck's theory of radiation – Deduction of Wien's displacement law and Rayleigh – Jean's law from Planck's theory –Dual nature of matter – de Broglie's wavelength- Physical significance of wave function – Schrodinger wave equation – Time independent and time dependent wave equation – Particle in one dimensional box – Harmonic oscillator(qualitative).

MODULE VI RENEWABLE ENERGY SOURCES 7

Present Energy sources and sustainability - Solar energy - Solar photovoltaics - Solar cells – Bioenergy - Biomass – production of liquid fuels from biomass – Wind energy – Wind turbines – energy and power from wind turbines - Geothermal energy - Ocean energy: Wave energy – Wave energy conversion devices – Tidal energy – Tidal power basics – power generation –Tidal energy potential – Environmental benefits and impacts of renewable energy sources

PRACTICALS

1. Determination of Velocity of Ultrasonic waves in a given liquid using Ultrasonic Interferometer.
2. Determination of wavelength of ultrasonic waves using Kundt's tube method.
3. Determination of thickness of a thin wire using Air Wedge method.
4. Determination of wavelength of light using spectrometer diffraction grating.

5. Determination of angle of divergence of a laser beam using He-Ne laser.
6. Determination of particle size of lycopodium powder using semiconductor laser.
7. Determination of wavelength of laser light using semiconductor laser diffraction.
8. Determination of Acceptance angle and Numerical Aperture using fiber optic cable.
9. Determination of thermal conductivity of a good conductor by Forbe's method.
10. Determination of thermal conductivity of a bad conductor by Lee's disc method.
11. Determination of solar cell characteristics.

L – 45; P – 30; TOTAL HOURS – 75

REFERENCES :

6. Godfrey Boyle, "Renewable Energy: Power for sustainable future", 2nd edition, Oxford University Press, UK, 2009.

OUTCOMES:

At the end of the course, students will be able to

- understand the different types of crystal structures
- apply the concept of ultrasonic principle in engineering and medical field
- calculate thermal conductivities of good and bad conductors

- differentiate the various laser systems and its applications in engineering and medical field
- apply the principle of fibre optics for communication and sensor applications
- formulate wave mechanics principle for applications in electron microscopy
- Correlate the different renewable energy sources for societal needs.
- To complement the knowledge acquired in the theory class.
- To correlate the experimental results for application.

CHC1181	CHEMISTRY	L	T	P	C
		3	0	2	4

OBJECTIVES:

The students should be conversant with

- the basic problems like hardness, alkalinity, dissolved oxygen associated with the water used for domestic and industrial purpose and treatment process involved.
- the synthesis, properties and applications of nanomaterials.
- the importance of renewable energy sources like solar, wind, biogas, biomass, geothermal, ocean and their limitations.
- the basic analytical techniques like UV-Visible, FT-IR, NMR, AAS, AES, Circular Dichroism and XRD etc.
- photochemistry concepts related to physical processes and chemical reactions induced by photon absorption and their applications.
- basic principles of electrochemistry, cell construction and evaluation and to understand general methodologies for construction & design of electrochemical cell

MODULE I WATER TECHNOLOGY 9

Impurities present in water, hardness : types of hardness, demerits of hard water in boilers, estimation of hardness by EDTA method (problems) – alkalinity : estimation of alkalinity (problems) – dissolved oxygen: estimation of dissolved oxygen – conditioning methods : external treatment method: – lime soda and zeolite process (principle only), Ion exchange process – Internal treatment : colloidal, carbonate, phosphate and calgon methods – drinking water: standards (BIS), treatment of domestic water {screening, sedimentation, coagulation, filtration, disinfection }– desalination: electrodialysis, reverse osmosis.

MODULE II NANOCHEMISTRY 6

Introduction – distinction between molecules, bulk materials and nanoparticles – classification based on dimension with examples – synthesis (top-down and bottom-up approach} : sol-gel, thermolysis (hydrothermal and solvothermal), electrodeposition, chemical vapour deposition, laser ablation – properties and applications (electronic, magnetic and catalytic) – risk factors and future perspectives.

MODULE III ENERGY SOURCES 8

Energy: past, today, and future – a brief history of energy consumption – present energy scenario of conventional and renewable energy sources – renewable energy : needs of renewable energy, advantages and limitations of renewable energy – solar energy: basics, solar energy in the past , photovoltaic, advantages and disadvantages – bioenergy: conversion, bio degradation, biogas generation, biomass gasifier, factors affecting biogas generation, advantages and disadvantages – geothermal energy: geothermal resources (hot dry rock and magma resources, natural and artificial), advantages and disadvantages – wind energy: wind resources, wind turbines, advantages and disadvantages – ocean energy: wave energy, wave energy conversion devices, ocean thermal energy, advantages and disadvantages.

MODULE IV PHOTOCHEMISTRY 7

Introduction: absorption and emission, chromophores, auxochromes – laws of photochemistry : Grotthus-Draper law, Stark Einstein law – quantum yield (problems) –photo physical processes : fluorescence and phosphorescence - Jablonski diagram (electronic states and transitions) – quenching, annihilation – photosensitization: principle and applications – chemiluminescence, bioluminescence.

MODULE V ANALYTICAL TECHNIQUES 7

Spectroscopy: electromagnetic radiation and spectrum – types of transitions – types of spectra (atomic and molecular with their chemical usefulness) – Beer-Lamberts law (problems) – principles, instrumentation and applications of: Colourimetry – UV-Vis spectrophotometer – atomic absorption spectroscopy – atomic emission spectroscopy – principles and applications of: IR, NMR, mass and X-ray diffraction analysis.

MODULE VI ELECTROCHEMISTRY 8

Electrochemistry - types of electrodes (principle and working) : gas (SHE), metal/metal ion electrode, metal-metal insoluble salt (calomel electrode), ion-selective (glass electrode and fluoride ion selective electrode) – Electrolytic and galvanic cells, construction of cell, EMF measurement and applications (problems), standard cell (Weston-cadmium), reversible and irreversible cell, concentration cell. Determination of fluoride ion using fluoride ion selective electrode – Chemically modified electrodes (CMEs) :

concept, approaches and applications.

PRACTICALS

1. Estimation of hardness in given water sample.
2. Estimation of the alkalinity of the given water sample.
3. Estimation of strong acid by conductometry.
4. Estimation of Fe^{2+} present in the given sample by potentiometry.
5. Verification of Beer-Lamberts law and estimation of Cu^{2+} present in unknown sample.
6. Estimation of sodium and potassium present in the given sample by flame photometry.
7. Determination of molecular weight and degree of polymerisation of a polymer by viscosity method.
8. Synthesis of thermosetting polymer.

7. Principles of molecular photochemistry: An introduction, Nicholas J. Turro, V.Ramamurthy and Juan C. Scaiano, University Science Books, Sausalito, CA, 2009.

OUTCOMES:

The students will be able to

- solve problems related to hardness, alkalinity, dissolved oxygen associated with the water and describe the treatment processes.
- classify nanomaterials and apply the nanochemistry approach to synthesize the nanomaterials.
- explain the principle and enumerate the advantages and disadvantages of various renewable energy sources.
- state the principle and illustrate the instrumentation of various analytical techniques.
- apply the concepts of photochemistry to elaborate various photo-physical and photochemical reactions.
- construct a electrochemical cell and describe the various types of electrodes and determine the fluoride content.

GEC 1101	ENGINEERING GRAPHICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To introduce the students of all engineering programs, the basic concepts of engineering drawing, which is the basic communication medium for all engineers
- To provide practical exposure on important aspects like drawing analytic curves, orthographic projections, section of solids, development of surfaces, isometric projection, perspective projection and free hand drawing.
- To introduce computerized drafting.

MODULE I BASICS AND ENGINEERING CURVES 10

Drawing instruments, dimensioning, BIS conventions, types of lines, simple geometric constructions.

Conic sections: ellipse, parabola, hyperbola.

Special curves: cycloid, epicycloid, hypocycloid and involutes.

MODULE II ORTHOGRAPHIC PROJECTION 8

Orthographic projection – first angle, second angle, third angle and fourth angle projections –setup - assumptions, principle. Free hand sketching of orthographic views of simple machine parts as per first angle projection. Orthographic projection of points in all quadrants. Some commands and demonstration of drafting packages.

MODULE III PROJECTION OF STRAIGHT LINES AND PLANES 10

Projection of straight lines in first quadrant – true length and true inclinations – Rotating line and trapezoidal methods –traces of straight line.

Projection of plane lamina in first quadrant and its traces

MODULE IV PROJECTION OF SOLIDS 10

Projection of solids in first quadrant: Axis inclined to one reference plane only- prism, pyramid, cone, cylinder – change of position and auxiliary projection methods.

MODULE V SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES 12

Section of solids: prism, pyramid, cone, cylinder, and sphere – sectional view – true shape of section Solids in simple position and cutting plane

inclined to one reference plane only.

Development of surface of truncated solids: prism, pyramid, cone cylinder – frustum of cone, pyramid and simple sheet metal parts.

MODULE VI PICTORIAL PROJECTIONS 10

Isometric projection: Isometric scale – isometric axes- iso sheet - Isometric projection and view of prism, pyramid, cylinder, cone, frustums, truncated solids and simple products

Perspective projection: station point – vanishing point – Perspective projection and views of prism, pyramid, cylinder and frustums by Visual ray method.

L – 30; P – 30; TOTAL HOURS – 60

TEXT BOOKS:

1. N.D. Bhatt, 'Engineering Drawing' Charotar Publishing house, 53rd Edtion, (2014)

REFERENCES:

1. K.V. Natarajan, 'A text book of Engineering Graphics', Dhanalakshmi publishers, Chennai. (2009)
2. Venugopal. K, and V. Prabhu Raja, Engineering Graphics, New Age International (P) Ltd., Publication, Chennai. (2011)

OUTCOMES:

- Students should be able to read the specifications and standards of technical drawing and able to draw conic sections and special curves.
- Students should be able to understand the insight of orthographic projection and to draw the various views of orthographic projection of a point and various components.
- Students should be able to draw the orthographic views of straight lines and plane figures.
- Students should be able to draw the orthographic views of simple solids.
- Students should be able to draw the sections of solids and development of solid surfaces.
- Students should be able to draw the isometric and perspective projection of simple solids and components.

GEC 1102	ENGINEERING DESIGN	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To understand the role of design in Engineering
- To understand the basic design concepts
- To understand the role of innovation in design

MODULE I DESIGN AS A CENTRAL ACTIVITY IN ENGINEERING 08

Product design – products and processes – product design methodology Design of systems; Software design

MODULE II NEED ANALYSIS AND CONCEPT DEVELOPMENT 07

Voice of customers – product specification - need analysis Bench marking Product architecture – concept generation and evaluation;

MODULE III CASE STUDIES IN ENGINEERING DESIGN 08

Product design – process design; system design; software design - Ergonomics – usability

MODULE IV INNOVATION AND DESIGN 07

Role of innovation in Engineering – incremental changes and systemic changes; scientific approach to driving innovation – case studies.

TOTAL HOURS – 30

REFERENCES:

1. Clive L. Dym and David C. Brown,"Engineering Design: Representation and Reasoning", 2nd Edition, Cambridge University Press, New Delhi, 2011.
2. Daniel G. Dorner, G. E. Gorman and Philip J. Calvert, "Information Needs Analysis: Principles and practice in information organizations", Published by Faced Publishing, London. 2015.

4. Bengt-Arne Vedin, "The Design-Inspired Innovation Workbook", World Scientific, 2011.

5. Navi Radjou, Jaideep Prabhu and Simone Ahuja, “Jugaad Innovation”, Published by Random House India, 2012.

OUTCOMES:

The students will be able to

- Apply the basic knowledge of design in engineering products / process / service.
- Analyse the problems and give innovative solutions.
- Correlate the basic knowledge of design in the real world problems.
- Apply innovative approaches to engineering design.

GEC1103	BASIC ENGINEERING PRACTICES LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To provide a practical exposure to basic engineering practices like carpentry, fitting, plumbing, welding and making of simple electrical and electronic circuits
- To have an understanding on the use of various tools, instruments and methods
- To enable the students to appreciate the practical difficulties and safety issues

CIVIL ENGINEERING PRACTICE

1. Study of plumbing in general household and industrial systems
2. Making a small window frame with Lap and Mortise & Tenon Joints
3. Introduction to power tools

MECHANICAL ENGINEERING PRACTICE

1. Fabrication of a small Table frame with Butt, Lap and Fillet Joints
2. Machining of a simple component like a table weight using lathe
3. Mold preparation for simple component

ELECTRICAL ENGINEERING PRACTICE

1. Comparison of incandescent, Fluorescent, CFL and LED lamps.
2. Study of Protection Circuits (small relay, fuse, MCB, HRC, MCCB, ECCB).
3. Familiarization of households Electrical Gadgets (Iron Box, Wet Grinder).
4. Understanding of Domestic and Industrial wiring.
5. Earthing and its significance.
6. Troubleshooting in Electrical Circuits.
7. Study of inverter fed UPS/Emergency lamp

[[

ELECTRONICS ENGINEERING PRACTICE

1. Identifications symbolic representation of active and passive

electronic components

2. Soldering and tracing of electronic circuits and checking its continuity
3. Assembling of A.C. to D.C, D.C to A.C. Circuits in bread Board and Mini project.

TOTAL HOURS – 30

OUTCOMES:

Upon the completion of the course, students should be able to

- Appreciate the practical skills needed even in making of simple objects, assemblies and circuits
- Attend minor defects especially in items used in day to day life
- Aware of the safety aspects involved in using tools and instruments

GEC 1104 COMPUTER PROGRAMMING I L T P C
1 0 2 2

OBJECTIVES:

- To identify the hardware and software components of the computer.
- To know the basic concept of operating system and get knowledge about different operating systems.
- To learn various database concepts and operations
- To develop efficient algorithms for solving a problem.
- To implement the algorithms in C language.
- To use arrays in solving problems.

MODULE I COMPUTER FUNDAMENTALS 7

Introduction -. Number System - Planning the computer program - Computer Software - Basic operating system concepts - Database Operations

MODULE II PROGRAMMING IN C 8

Introduction to C Programming Language – Operators - Control statements -Iterative statements - Arrays.

LIST OF EXPERIMENTS:

1. Computer organization –Hardware in a typical computer Identification – Booting- error messages and what it means
2. Types of Operating systems – Windows and Linux
3. Structure of a basic program - Hello world program – Debugging it
4. Data types: Type conversions
5. Input / Output: Formatted functions – Unformatted functions – Library functions
6. Properties of operators – Priority of operators – Arithmetic relational logical and bitwise operators
7. If – if else- nested if else- goto- switch case – nested switch case – for loops – nested for loops – while loop – do-while loop – break and continue statement
8. Arrays – Operation with arrays
9. Sorting and searching.

L – 15; P – 30; TOTAL HOURS – 45

REFERENCES:

1. Ashok N Kamthane, “Computer Programming”, Pearson Education, 2nd Edition, ISBN 13: 9788131704370, 2012
2. Paul J. Deitel, Deitel & Associates, “C How to Program”, Pearson Education, 7th Edition, ISBN-13: 978-0132990448, 2012

OUTCOMES:

Students who complete this course will be able to

- Recognize Modular design, logic flow, data abstraction
- Analyze the working of the programming constructs, functions, and I/O.
- Write down programs for sorting and searching algorithms
- Write down programs developing cycle for different applications
- Debug the programs and solve some practical problems in programming
- Develop programs using arrays.

SEMESTER II

MAC 1281	ADVANCED CALCULUS	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- train the students in solving problems using multiple integration.
- provide knowledge in using special functions to find out the area and volume of a region.
- acquire knowledge in tangent and normal vectors.
- gain knowledge in finding the areas of a curve and surface using vector integration.
- learn about the analytic functions and their properties along with bilinear transformation.
- know complex integration using Cauchy's theorems.

MODULE I MULTIPLE INTEGRATION AND ITS APPLICATIONS 8+2

Multiple integrals– Cartesian and Polar coordinates – change of order of integration – Multiple integral to compute area and volume.

MODULE II TRANSFORMATION OF COORDINATES AND SPECIAL FUNCTIONS 7+3

Change of variables between Cartesian, polar, cylindrical and spherical coordinates - Beta and Gamma functions – Properties and applications.

MODULE III VECTOR DIFFERENTIATION 7+3

Operations on vectors – Scalar Product, Vector Product, Projection of Vectors - Angle between two vectors - Gradient, divergence and curl

MODULE IV VECTOR INTEGRATION 8+2

Line, surface and volume integrals – Green's Theorem, Gauss Divergence Theorem and Stokes Theorem (statement only) – verification and evaluation of integrals.

MODULE V ANALYTIC FUNCTION 8+2

Analytic function - Necessary and Sufficient condition (statement only) – Cauchy-Riemann equations in polar coordinates - properties of analytic function – determination of analytic function – conformal mapping (w = z+a,

az and 1/z) and bilinear transformation.

MODULE VI COMPLEX INTEGRATION 7+3

Statement and application of Cauchy's integral theorem – Cauchy's integral formula – Taylor's series and Laurent's series expansion – singularities - classification – residues - Cauchy's residue theorem – contour integration – Unit circle and semi circular contours (excluding poles on the real axis).

6. Venkataraman, M.K., "Engineering Mathematics", Volume 2, 2nd edition, National Publishing Co., Chennai, 2003.
7. James Stewart ".Calculus" (7th edition),Brooks/Cole cengage learning,UK.

OUTCOMES:

After completing the course, student will be able to

- compute the area and volume using multiple integrals.
- apply special functions to solve integration problems.
- apply differentiation in scalar and vector fields.
- find area and volume of a region using vector integration.
- verify analyticity, conformity and bilinearity of complex functions.
- evaluate complex integrals.

GEC 1211 BASIC ENGINEERING MECHANICS L T P C
3 1 0 4

OBJECTIVES:

- To impart knowledge about the basic laws of statics and dynamics and their applications in problem solving
- To acquaint both with scalar and vector approaches for representing forces and moments acting on particles and rigid bodies and their equilibrium
- To give on exposure on inertial properties of surfaces and solids
- To provide an understanding on the concept of work energy principle, friction, kinematics of motion and their relationship

MODULE I VECTOR APPROACH TO MECHANICS 07

Introduction - Units and Dimensions- Vectors – Vectorial representation of forces and moments –Vector Algebra and its Physical relevance in Mechanics - Laws of Mechanics – Parallelogram and triangular Law of forces -Lame's theorem, Coplanar Forces – Resolution and Composition of forces- Equilibrium of a particle.

MODULE II EQUILIBRIUM OF PARTICLE 06

Forces in space - Equilibrium of a particle in space - Equivalent systems of forces – Principle of transmissibility – Single equivalent force

MODULE III EQUILIBRIUM OF RIGID BODY 06

Free body diagram – Types of supports and their reactions – requirements of stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis –Vectorial representation of moments and couples – Scalar components of a moment –Varignon's theorem - Equilibrium of Rigid bodies in two dimensions -Examples

MODULE IV PROPERTIES OF SURFACES 08

Determination of Areas – First moment of area and the Centroid of sections – Rectangle, circle, triangle from integration – T section, I section, Angle section, Hollow section by using standard formula – second and product moments of plane area – Physical relevance - Rectangle, triangle, circle from integration - T section, I section, Angle section, Hollow section by using standard formula – Parallel axis theorem and perpendicular axis

theorem – Polar moment of inertia- Mass moment of Area

MODULE V FRICTION 08

Introduction to friction- types of friction- Laws of Coloumb friction- Frictional force – simple contact friction – Rolling resistance –ladder friction

MODULE VI LAWS OF MOTION 10

Review of laws of motion – Newton's law – Work Energy Equation of particles– Impulse and Momentum – Impact of elastic bodies.

L – 45; T – 15; TOTAL HOURS – 60

3. Irving H. Shames, Engineering Mechanics – Statics and Dynamics, IV Edition Pearson Education Asia Pvt. Ltd., 2003.

OUTCOMES:

On completion of this course students should be able

- Analyse and resolve forces, moments and solve problems using various principles and laws of Mechanics
- Apply the concept of equilibrium to particles and solve problems
- Apply the concept of equilibrium to rigid bodies and solve problems
- Analyse and determine the properties of surfaces
- Analyse and evaluate the fractional forces between the bodies
- Apply the laws of motion in solving dynamics problems

GEC 1212	ENVIRONMENTAL STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

The student will be conversant with the

- various natural resources, availability, utilisation and its current scenario
- different ecosystems, energy transfer, values, threats and conservation of biodiversity
- levels of different pollutants and its impact and the causes and effects of natural disasters
- impacts of human population, impact assessment, human rights and environmental acts and sustainable development

MODULE I NATURAL RESOURCES 8

Land resources: land degradation, soil erosion and desertification - Forest resources: use and over-exploitation, deforestation - Water resources: use and over-utilisation of surface and ground water, conflicts over water (inter-state and international), dams (benefits and problems), water conservation (rainwater harvesting and watershed management) - Mineral resources: use and exploitation, environmental effects of extracting and using mineral resources, mining - Food resources: world food problems, changes in land use by agriculture and overgrazing, modern agriculture and its effects, fertilizer and pesticide problems, water logging and salinity - Energy resources: increasing energy needs, renewable and non-renewable, use of alternate energy sources.

MODULE II ECOSYSTEM AND BIODIVERSITY 8

Ecosystem- energy flow in the ecosystem - food chains, food webs and ecological pyramids - characteristics, structure and function of (a) Terrestrial ecosystems (forest, grassland, desert) and (b) Aquatic fresh water ecosystems (pond, lake, river) (c) Aquatic salt water ecosystems (ocean, estuary) - ecological succession.

Biodiversity - genetic, species and ecosystem diversity – hot-spots of biodiversity –biogeographic classification of India - endangered, endemic, extinct and invasive species of India - red data book - values of biodiversity: consumptive, productive, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - conservation of biodiversity: in-situ and ex-situ conservation of

biodiversity

MODULE III ENVIRONMENTAL POLLUTION AND NATURAL DISASTER **8**

Definition, cause, effects and control measures of (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards - ill-effects of fireworks and upkeep of clean environment - solid waste management: types (urban, industrial, biomedical and electronic wastes), collection, processing and disposal (incineration, composting and land-fill) - natural disaster and management: flood, cyclone, drought, landslide, avalanche, volcanic eruptions, earthquake and tsunami.

MODULE IV HUMAN POPULATION, HEALTH AND SOCIAL ISSUES **6**

Population and population growth, population variation among nations, population explosion, family welfare programme.

Human health: air-borne, water borne diseases, infectious diseases, risks due to chemicals in food and environment.

Sustainable development - environmental legislation and laws: water act, air act, wildlife protection act, forest conservation act, environment protection act - environmental impact assessment, steps in EIA - human rights - women and child welfare.

Case studies related to current situation

TOTAL HOURS – 30

TEXT BOOKS:

1. Erach Bharucha, Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education for University Grants Commission, Orient Blackswan Pvt Ltd, Hyderabad, India, 2013.

3. Miller T.G. Jr., Environmental Science, Wadsworth Publishing Co. Boston, USA, 2016.

OUTCOMES:

The student will be able to

- predict the scenario of various natural resources and suggest remedies to curb the exploitation of these resources.
- identify food chain and web and its role in various ecosystems, assess the impacts on biodiversity and provide solutions to conserve it.
- analyse the impacts of pollutants in the environment and propose suitable method to alleviate the pollutants and the natural disasters.
- assess on the impact of human population and the health related issues and the ethics to be followed for sustainable life.

GEC 1213	COMPUTER PROGRAMMING II	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To provide knowledge about the benefits of Object Oriented Programming over Procedure oriented programming.
- To learn various File operations
- To expose fundamental concepts of object-oriented programming in classes, invoking methods and functions.
- To prepare students to get full use of code reusability using object oriented programming.
- To implement the basic concepts of object oriented programming using C++concepts.
- To focus on solving problems based on analyzing, designing and implementing programs in C and C++.

MODULE I PROGRAMMING IN C 7

Functions - Storage Classes - Structures and Unions – Pointers -Self Referential Structures and Linked Lists - File Processing.

MODULE II PROGRAMMING IN C++ 8

Programming in C++ - Overview of OOP in C – Inheritance - Polymorphism - Type Casting – Exceptions.

LIST OF EXPERIMENTS:

1. Functions
2. One dimensional arrays, Pointers
3. Recursion
4. Multi dimensional arrays, Linked lists.
5. Operating on Files.
6. Simple C++ program with Control statements.
7. Getting input from user console.
8. Classes, Object and Constructors.
9. Method overloading.
10. Inheritance

L – 15; P – 30; TOTAL HOURS – 45

REFERENCES:

OUTCOMES:

Students who complete this course will be able to

- Develop efficient algorithms for solving problems
- Handle files in C
- Use simple data structures like arrays and linked lists in solving problems.
- Write simple programs using concepts of object oriented programming.
- Implement algorithms in C++ Language.
- Demonstrate the Object Oriented Programming concepts applied in networking, web development and Database applications.

MEC1211	MATERIAL SCIENCE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To integrate the materials science, manufacturing, and mechanics knowledge that students have from previous courses and apply it to engineering design.
- To impart knowledge on properties, testing and applications of materials so as to identify and select suitable materials for various engineering applications.
- To Impart knowledge on the various modes of failures and newer materials for engineering uses.

MODULE I CLASSIFICATION OF MATERIALS 10

Historical perspective, Material properties and qualities, Classification of materials: Ferrous (steel) and Non-ferrous (Aluminium, copper)metals, Polymers (PC, PP, PE, PVC, PTFE, Acrylic), Engineering Ceramics (Aliumina, SiC), Composites–Types, Properties and Applications.

MODULE II NEWER/ADVANCED MATERIALS 5

Smart materials, Nano crystalline Materials, Superalloys ,Intermetallics, Biomaterials – Properties and applications

MODULE III TESTING OFMATERIALS 9

Testing of materials under tension, compression and shear loads. Hardness tests(Brinnell, Vickers and Rockwell).Impact test-Izod and Charpy.Tests for Creep and Fatigue.

MODULE IV FAILUREANALYSIS 6

Wear and Corrosion Failures– Factors influencing failures, Failure analysis techniques, Analysis of failures, Simple case studies.

MODULE V FRACTURE AND ITS PREVENTION 9

Fundamentals, Mechanism of plastic deformation, Slip and Twinning, Types of fracture, Ductile fracture: mechanism and prevention. Brittle fracture: principles of fracture mechanics, Griffith's theory on fracture, stress intensity factor and fracture toughness. Creep and Fatigue fracture: Mechanism, Factors affecting fracture, Prevention.

MODULE VI MATERIALSELECTION 6

Steps in materials selection process, Factors influencing materials selection, Case studies

TOTAL HOURS – 45

TEXT BOOKS:

1. Williams D Callister, "Material Science and Engineering"WileyIndiaPvt Ltd, Revised, Indianedition2007.
2. KennethG.Budinski,MichaelK.Budinski,"EngineeringMaterials,PropertiesandSelection", Pearson Education, 8th Edition,2005

REFERENCES:

2. Materials Selection in Mechanical Design Fourth Edition MichaelF. Ashby Butterworth – Heinemann 2011.
3. EngineeringMaterials1 An Introduction to their Properties and Applications Second Edition by MichaelF. Ashby and DavidR.H.Jones Butterworth- Heinemann Reprint 2002.
4. Introduction to Physical Metallurgy by Sydney Avner, McGraw Hill Ltd

OUTCOMES:

Students will be able to

- Classify commonly used engineering materials and to describe the key properties and applications.
- Identify newer materials for engineering applications.
- Evaluate the mechanical properties of materials under different loading conditions using standard testing practices.
- Evaluate failures arising from wear and corrosion.
- Analyze and provide solution for fracture in engineering components.
- Know how to use information sources to select materials for engineering uses.

MEC 1212	DESIGN APPRECIATION LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To disassemble products and understand the interactions between its subsystems and their functionality.
- To appreciate the use of various mechanisms involved in engineering products.
- To gain knowledge through experience in handling of engineering products.
- To kindle own creativity, ideation and realize the importance of team working.

STUDY EXERCISE:

1. Study of Standard Components (Threaded fasteners, Gears, Bearings, Belt / chain drives, etc)
2. Mechanical components in electronic devices (CDD, HDD and Printer)
3. Front axle with Steering and Rear axle with Differential

TEAR DOWN EXERCISE:

Dismantle and assemble the following engineering products to identify the components and its functions

1. Reciprocating pump, axial piston pump and radial piston pump
2. Gear pump and vane pump
3. Centrifugal pump and submersible pump
4. Reciprocating compressor / Blower / Rotary compressor
5. Different type of valves
6. Work holding devices
7. Fixed reduction gear box
8. Internal combustion engine (2 Stroke and 4 Stroke)
9. Fuel feed pump and carburetor
10. Transmission system for diesel engine
11. Braking systems
12. Motors and generators

PROJECT:

Student groups will identify a product and perform a complete tear down and present it to the class.

TOTAL HOURS - 45

REFERENCES:

1. Things Come Apart: A Teardown Manual for Modern Living by Todd McLellan, Thames & Hudson Ltd, London, United Kingdom, 2013.
2. Reverse Engineering: Mechanisms, Structures, Systems & Materials by Robert W. Messler, McGraw Hill Professional, 2013.
3. Kevin Otto, Kristin wood, Product Design, Pearson Publishers,2013.

OUTCOMES:

On completion of the course, the students would be able to

- Understand of engineering systems and their mechanisms
- Understand the importance of design features in various engineering components.
- Develop awareness about single product meets multiple functions.
- Gain interest and ability to dismantle products by preparing tear down plan.
- Enhance team working and technical report writing skills.

EEC1283	BASIC ELECTRICAL ENGINEERING	L	T	P	C
		2	0	0	2

OBJECTIVES:

To impart knowledge on

- Basic concepts of electrical circuits and their solutions
- Principle of operation and applications of various D.C. and A.C. Machines
- Usage of the machines as drives
- Concepts of Basic Electronics and Devices.

MODULE I DC AND AC CIRCUITS 9

Ohm's law and its limitations. Kirchhoff's laws and its applications. Analysis of series, parallel and series-parallel resistive circuits. Power and Energy in such circuits. Generation of sinusoidal AC voltage-Phase and phase difference of sinusoidal varying voltage and current. Definition of real power, reactive power, apparent power and power factor -. The relationship between line and phase voltage & currents in balanced 3phase Star and Delta connections - Illustrative Examples

MODULE II DC MOTORS AND SPECIAL ELECTRICAL MOTORS 6

Working principle of motor.-Types and constructional feature - DC motor - Characteristics and applications. Principle of operation and constructional features of BLDC motor, Stepper and servo motors.

MODULE III TRANSFORMER AND INDUCTION MOTORS 8

Principle of operation and construction and types of single phase transformers. E.M.F equation, - voltage regulation. Three Phase Induction Motor: Principle of operation, constructional features, types, slip and its significance. Applications of squirrel- cage and slip-ring motors, Star Delta starter. Single phase Induction Motor: Principle of operation and applications.

MODULE IV ELECTRONICS 7

Semiconductor Diode: Operation, characteristics and its applications – Rectifiers and Filters, Zener diode Operation, characteristics and its applications - Regulated power supply using 78XX regulator ICs - Transistor, characteristics, operation and Applications- Transistor based

Relay Driver Circuits – opto - isolators and its applications - Basics of Thyristors and applications.

TOTAL HOURS – 30

REFERENCES:

1. Edward Hughes, “Electrical and Electronics Technology”, Pearson India, 9th Edition, 2007.
2. D P Kothari and I J Nagrath, “Basic Electrical Engineering”, McGraw Hill Publishing Co. Ltd., 2nd Edition, 2002.

4. B L Theraja and A K Theraja, “A textbook of Electrical Technology”, S.Chand, 2005.
5. Tom Denton “Automobile Electrical and Electronic Systems” Elsevier Butterworth- Heinemann,Third edition, 2004

OUTCOMES:

On completion of this course, the student will be familiar with

- Demonstrate the basics of Electrical circuits and their solution methods.
- Understand the working of Thyristors.
- Explain the structure of DC Motors systems.
- Understand the working of Special machines system.
- Demonstrate working of AC DC conversion.
- Explain the operation of Transformers and Induction motors

EEC1284	ELECTRICAL ENGINEERING LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To understand, simulate and verify Ohm's Law and Kirchhoff's Laws theorem.
- To understand and verify the characteristics of various Electrical Machines
- To fabricate the interfacing and power supply circuits.
- To understand the battery chargers.

LIST OF EXPERIMENTS:

1. Verification of Ohm's Law and Kirchhoff's Laws using MATLAB.
2. Power and power factor measurement using two wattmeter method.
3. Load Test on DC Shunt Motor.
4. Load Test on DC Series Motor
5. Load Test on Single Phase Transformer
6. Load Test on Three Phase Induction Motor.
7. Three phase transformer connections.
8. Fabrication of IC78XX based Regulated power supply.
9. Fabrication of opto - Isolator based transistor - relay driver circuit.
10. Fabrication of Transistor based Amplifier.
11. Study of battery chargers.

TOTAL HOURS – 30

REFERENCES:

1. Mr. M. Ramkumar, Mr. S. Suresh Electrical Workshop Manual, , Department of EEE, BSACU

OUTCOMES:

At the end of the course, the student should be able to

- Construct and simulate any given simple electric circuits and verify theorems using MATLAB.
- Study and understand the performance of Electrical Machines.
- Fabricate the power supplies.

- Design the relay driver stage.
- Implement the amplifier circuits.
- Analyse the battery charging system.

SEMESTER III

MAC 2181	PARTIAL DIFFERENTIAL EQUATIONS AND TRANSFORMS	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- Familiarize in solving partial differential equation of first, second and higher orders.
- Introduce basics and engineering applications of Fourier series, Laplace Transform, Fourier Transform and Z- Transform.

MODULE I PARTIAL DIFFERENTIAL EQUATIONS 8 + 2

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

MODULE II FOURIER SERIES 8+2

Fourier Series and Dirichlet's conditions - General Fourier series - Half range Fourier series - Parseval's identity - Harmonic Analysis.

MODULE III FOURIER TRANSFORMS 7+3

Fourier integral theorem (without proof) - Fourier transform pair - Fourier Inverse Transform – Properties - Convolution theorem - Parseval's identity.

MODULE IV APPLICATIONS OF FOURIER SERIES AND FOURIER TRANSFORMS 7+3

Applications of Fourier series and Fourier Transform to solution of PDEs having constant coefficients with special reference to Heat & Wave equations, Discrete & point Spectrum and Single pulse.

MODULE V LAPLACE TRANSFORM 8+2

Introduction to Laplace transform - Existence of Laplace Transform - Properties of Laplace Transforms - Initial & Final Value Theorems - Inverse Laplace Transform - Convolution Theorem – Circuits to signal square wave: Integral equations with unrepeated complex factors – Damped forced vibrations: repeated complex

factors – Resonance - Solution of differential equations

MODULE VI Z – TRANSFORM 7+3

Introduction and Definition of Z-transform - Properties of Z- Transform - Convolution Theorem of Z-Transform - Inverse Z–transform - Convolution Theorem of Inverse Z-Transform - Formation of difference equations - Solving Difference Equations using Z-Transform.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Kreyszig .E., "Advanced Engineering Mathematics", 10th edition, John Wiley and Sons (Asia) Pvt Ltd., Singapore, 2001.
2. Grewal B.S., "Higher Engineering Mathematics", 42nd edition, Khanna Publishers, New Delhi, 2012.
3. Ramana, B.V, "Higher Engineering Mathematics" Tata Mc Graw Hill Publishing Co. New Delhi, 2006.

REFERENCES:

2. Peter V. O'Neil, "Advanced Engineering Mathematics", 7th edition, Cengage Learning, 2011.
3. Dennis G. Zill, Warren S. Wright, "Advanced Engineering Mathematics", 4th edition, Jones and Bartlett publishers, Sudbury, 2011.
4. Alan Jeffrey, "Advanced Engineering Mathematics", Academic Press, USA, 2002.

OUTCOMES:

After completing the course, student will be able to

- solve the partial differential equations.
- derive a Fourier series of a given periodic function by evaluating Fourier coefficients.
- apply integral expressions for the forward and inverse Fourier transform to a range of non-periodic waveforms.
- solve wave equation and heat flow equation.
- solve ordinary differential equations using Laplace transform.
- solve difference equation using Z-transform.

ENC 2181 **ORAL COMMUNICATION** **L T P C**
0 0 2 1

OBJECTIVES:

- To expose students to a range of professional contexts through podcasts for learning appropriate expressions.
- To train them in making poster presentations.
- To enable them to make effective business presentations.
- To help them learn persuasive and negotiation skills.
- To train them to debate on issues of current relevance
- To train them to participate in group discussions on current affairs

MODULE I **4**

Orientation to the Importance of Oral Communication -– Verbal and non-verbal communication -Paralinguistic features.

One-minute presentations (using Audacity/Voicethread) – Just a minute (JAM) on random topics

MODULE II **4**

Negotiating and persuading through effective arguments – to arrive at a conclusion (pair-work)

Understanding Negotiation, persuasion and marketing skills through Podcasts

Listening to short conversations and monologues for understanding real life conversations

MODULE III **4**

Making Poster presentations on current issues

Understanding nuances of making effective presentations (TED Videos)

MODULE IV **6**

Deliberation on social and scientific issues – Debates (focus on rebuttal skills and deconstructing arguments)

Viewing videos on debates (NDTV Discussions)

MODULE V **6**

Discussing social issues or current affairs in groups

Viewing group discussions and listening for specific information

MODULE VI **6**

Making full length presentation (through Voicethread) with the focus on one's career plans and prospects (discipline specific)

Listening to interviews for understanding speakers' perception (on industry related issues)

P – 30; Total Hours –30

REFERENCES:

4. Dhanavel,S.P (2015). *English and Soft Skills*. Orient Blackswan, Chennai.
5. Whitby, Norman (2014). *Business Benchmark: Pre-Intermediate to Intermediate.* Cambridge University Press, UK.

OUTCOMES:

On completion of the course, students will be able to

- Listen to business conversations and do related tasks.
- Deliver effective poster presentations.
- Make effective business presentations.
- Use persuasive and negotiating skills for justifying arguments.
- Participate effectively in debates.
- Speak English intelligibly, fluently and accurately in group discussions.

MEC2101 MANUFACTURING PROCESSES L T P C
3 0 0 3

OBJECTIVES:

- To study the principles of various casting processes and their applications
- To learn the features of various types of welding processes
- To study the applications of various metal forming processes
- To describe various types of sheet metal forming process and its application
- To know the various steps required in powder metallurgy for making different components
- To understand the methods used for making plastic components

MODULE I CASTING PROCESSES 8

Sand casting process: Principle, Types of patterns- Pattern materials- Pattern allowance - Moulding sand – moulding sand properties and testing – Core making- Moulding machine types: Jolt and Squeeze- Cupola and Crucible furnace -Steps involved in sand casting-- Sand casting defects –Sand casting inspection methods- Moulding sand –Principle of special casting processes: Shell, Lost wax process, Centrifugal casting, Pressure die casting and Stir casting

MODULE II METAL JOINING PROCESSES 8

Gas welding: Principle, Equipment and types of flames- Arc Welding process: Principle, Equipment- Resistance welding: Principle, Spot, Seam, Percussion- MIG and TIG welding process- Submerged arc welding- Electro slag – Electron beam welding – Brazing and Soldering- Welding defects

MODULE III METAL FORMING PROCESSES 7

Hot and cold working of metals- Forging processes: Principle, Open and closed die forging, Forging operations, Forging machine types- Rolling : Principle, Types of rolling mills, Shape rolling operations, Flat strip rolling- Extrusion: Principle and types- Drawing process: Principle and rod , wire and tube drawing

MODULE IV SHEET METAL FORMING PROCESSES 7

Sheet metal forming operations: Shearing, bending, drawing and Stretching operations- Evaluation of formability of sheet metal: Forming limit diagram and Erichsen cupping tester-Hydro forming – Rubber pad forming- Metal spinning- Explosive forming- Magnetic pulse forming- Peen forming- Super Plastic forming

MODULE V POWDER METALLURGY 7

Principle- Methods of production of metal powders- Mixing of powders – Compaction

of metal powders- Sintering- Secondary operations- Selective laser sintering- Applications, Advantages and limitations

MODULE VI MANUFACTURE OF PLASTIC COMPONENTS 8

Types of Plastics: Thermosetting plastics and Thermo plastic – Injection Moulding: Plunger and Screw machines- Blow moulding- Rotational moulding- Film blowing- Extrusion moulding- Compression moulding- Thermoforming- Transfer moulding- Bonding of thermoplsatics

Total Hours –45

REFERENCES:

9. Manufacturing Process- Begman, John Wilely & Sons, VIII Edition, 1999.
10. Manufacturing Science, G.S. Sawhney, Vol I & II, I.K. International Publishing House Pvt. Ltd, New Delhi

OUTCOMES:

Students will be able to

- Identify a suitable casting process for making a component
- Select an appropriate welding process for joining of metals
- Choose proper equipment for making components by metal forming processes
- Pick appropriate sheet metal forming process to make a desired shape of component
- Apply the various steps involved in powder metallurgy for making various components
- Elite the process required to fabricate plastic products

MEC2102	ENGINEERING METALLURGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To study the fundamentals of crystallographic structures
- To learn the different phases of an alloy through phase diagrams
- To educate on different types of ferrous materials, properties and their applications
- To discuss different heat treatment processes and phase transformations
- To instruct the various processing of materials
- To describe the various strengthening mechanisms of materials

MODULE I CRYSTALLOGRAPHY 5

Crystal structures fundamentals, Crystallographic points, directions and planes, Structure of crystalline solids, Imperfection in metal crystals: Crystal imperfections and their classifications, point defects, line defects, edge & screw dislocations, surface defects, volume defects. Effects of imperfections on metal properties.

MODULE II PHASE DIAGRAM 10

Alloys constitution, Solid solutions: Substitutional and Interstitial, Solubility limit, phase, Importance and interpretation of phase diagram, Cooling curves, Unary & binary phase diagrams, Gibbs's phase rule, eutectic, eutectoid, peritectic and peritectoid systems, iron-Iron carbide phase diagram. Grain size determination. Diffusion Mechanisms, Steady-State and Non-steady-State Diffusion, Factors That Influence Diffusion.

MODULE III FERROUS MATERIALS 8

Ferrous materials, Classification, Specification of steel, Effect of alloying elements in steel (Mn, Si, Cr, Mo, V Ti & W), Stainless steel, Tool steel, Dual phase steels, High strength low alloy (HSLA) Steel, Transformation included plasticity (TRIP) steel, Maraging steel – properties and applications. Cast Irons - Gray, White malleable, Spheroidal graphite – properties and applications.

MODULE IV HEATTREATMENT PROCESSES AND PHASE TRANSFORMATIONS 9

Principles, purpose, Classification of heat treatment processes: Annealing, Normalizing, Hardening, Tempering. Case hardening: Carburizing, Nitriding, Cyaniding, Flame and induction hardening. Phase transformations: basic concepts, Isothermal and Continuous cooling transformation diagrams. Austempering, Martempering, Hardenability: Jominy end quench test.

MODULE V PROCESSING OF MATERIALS 5

Processing of engineering materials – Primary and Secondary processes – Castability, Weldability, Forgeability and Malleability Criteria – Process induced defects – Monitoring and control.

MODULE VI STRENGTHENING MECHANISM 8

Basic concepts: Dislocations and plastic deformations - Solid solution strengthening, strengthening by grain size reduction, Precipitation hardening, Particle and fiber dispersion strengthening, Strain hardening, Recovery, Recrystallisation and grain growth.

Total Hours –45

TEXT BOOKS:

1. Williams D Callister, “Material Science and Engineering” Wiley India Pvt Ltd, Revised, Indian edition 2007.
2. Kenneth G. Budinski, Michael K. Budinski, “Engineering Materials, Properties and Selection”, Pearson Education, 8thEdition,2005

REFERENCES:

1. Raghavan. V. “Materials Science and Engineering”, Prentice Hall of India Pvt. Ltd, 5th edition, 2007.
2. George. E. Dieter, “Mechanical Metallurgy”, McGraw Hill, 2007.
3. SyndneyHAvner,“IntroductiontoPhysicalMetallurgy”,2 / ETata McGraw Hill Book Company, 2007.

OUTCOMES:

Students will be able to

- Express the different crystallographic structures
- Interpret the different phases in the phase diagram
- Identify suitable ferrous material for a specific application
- Use a relevant heat treatment process and recognize its transformation
- Categorize the different processing of materials
- Select a suitable strengthening mechanism for various applications

MEC2103	ENGINEERING THERMODYNAMICS	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To study the fundamental concept of thermodynamic systems and energy transfer
- To study and understand zeroth and first laws of thermodynamics
- To analyze second law of thermodynamics
- To learn the principle of steam power cycle and its improvement
- To understand thermodynamic relations and their significance
- To gain knowledge on the properties of moist air and psychrometric processes

MODULE I BASIC CONCEPTS AND PROPERTIES 12

Thermodynamic systems and control volume, Property- pressure, temperature (Zeroth law of thermodynamics),volume, internal energy, specific heat capacities, enthalpy. Concept of Energy- modes of work and heat- P- dV work, Path function - work and its illustrations for simple processes- Quasi-static process -thermal equilibrium, thermodynamic cycle.

Properties of pure substances -vapour, liquid and dryness fraction – Use of Steam Tables Phase rule, P-V, P-T, T-V, PVT surfaces

MODULE II FIRST LAW OF THERMODYNAMICS 10

Cyclic & Non-cyclic processes - Calculations of work done and heat transfer for an ideal gases and pure substances for various processes.

Derivation of Steady Flow Energy Equation (SFEE) for control volume - Steady flow processes including throttling- Examples of steady flow devices- Problems in SFEE for ideal gases and pure substances.

MODULE III SECOND LAW, ENTROPY AND AVAILABILITY 12

Second law of thermodynamics – Kelvin’s and Clausius’s statements of second law- Reversibility and irreversibility- Carnot cycle, reversed Carnot cycle, efficiency, COP- Thermodynamic temperature scale.

Clausius inequality, concept of entropy, entropy of ideal gases and pure substances- principle of increase in entropy – Carnot theorem, absolute entropy, availability, Concept of Exergy analysis.

MODULE IV STEAM POWER CYCLES 8

Illustration of processes in T-S and H-S diagrams for pure substances - Standard

Rankine's cycle, Modified Rankine's cycle, cycle improvements - reheat cycle and regenerative cycle - Simple problems.

MODULE V GAS MIXTURES AND THERMODYNAMIC RELATIONS 8

Gas mixtures – properties of ideal and real gases, equation of state, Vander Waal's equation of state, compressibility factor, compressibility chart – Dalton's law of partial pressure, Amagut's law, T-ds equations, Maxwell's relations, Clausius Clapeyron equation, Joule – Thomson experiment.

MODULE VI PSYCHROMETRY 10

Psychrometry and psychrometric charts, property calculation of air vapour mixtures- Psychrometric process – Sensible heat exchange processes - Latent heat exchange processes - Adiabatic mixing, evaporative cooling - simple problems.

L-45;T-15; Total Hours –60

REFERENCES:

6. Holman. J.P., "Thermodynamics", 3rd Ed. McGraw-Hill, 1995.
7. D.B. Spalding and E.H. Cole, "Engineering Thermodynamics", 3rd edition, ELBS 1973.

OUTCOMES:

Students will be able to

- Apply the concept of thermodynamic properties to quantify energy transfer
- Apply and analyse zeroth and first laws of thermodynamics
- Evaluate the second law of thermodynamics applied to heat engines and refrigerators
- Analyse and evaluate vapour power cycles
- Evaluate properties of gas mixtures
- Demonstrate various Psychrometric processes and their relations

MEC2104	SOLID MECHANICS	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To study about stress, strain and deformation of solids
- To learn various loads and stresses in different types of beams
- To educate about torsional effects in different types of shafts
- To study about application of torsion in springs and columns
- To describe the different mathematical models for beam deflection
- To discuss analysis of stresses in two dimensions

MODULE I STRESS, STRAIN AND DEFORMATION OF SOLIDS 10

Rigid and Deformable bodies – Strength, Stiffness and Stability – Stresses - Tensile, Compressive and Shear – Deformation of simple and compound bars under axial load – Thermal stress – Elastic constants – Strain energy and unit strain energy – Strain energy in uniaxial loads.

MODULE II BEAMS - LOADS AND STRESSES 12

Types of beams: Supports and Loads – Shear force and Bending Moment in beams : Cantilever, Simply supported and Overhanging beams – Stresses in beams – Theory of simple bending – Stress variation along the length and in the beam section – Effect of beam section on stress induced – Shear stresses in beams – Shear flow.

MODULE III TORSION 10

Analysis of torsion in circular bars – Shear stress distribution – Bars of Solid and hollow circular section – Stepped shaft – Twist and torsion stiffness – Compound shafts – Fixed and simply supported shafts.

MODULE IV SPRINGS AND COLUMNS 10

Application to close-coiled helical springs – Maximum shear stress in spring section including Wahl Factor – Deflection of helical coil springs under axial loads – Design of helical coil springs – stresses in helical coil springs under torsion loads. Columns – End conditions – Equivalent length of a column – Euler equation – Slenderness ratio – Rankine formula for columns.

MODULE V BEAM DEFLECTION 8

Elastic curve of Neutral axis of the beam under normal loads – Evaluation of beam deflection and slope: Double integration method and Macaulay Method.

MODULE VI ANALYSIS OF STRESSES IN TWO DIMENSIONS 10

Biaxial state of stresses – Thin cylindrical and spherical shells – Deformation in thin cylindrical and spherical shells – Biaxial stresses at a point – Stresses on inclined plane – Principal planes and stresses – Mohr's circle for biaxial stresses – Maximum shear stress - Strain energy in bending and torsion.

L-45; T-15; Total Hours –60

3. Nash W.A, "Theory and problems in Strength of Materials", Schaum Outline Series, McGraw-Hill Book Co, New York, 1995.
4. Timoshenko S.P, "Elements of Strength of Materials", Tata McGraw-Hill, New Delhi 1997.
5. Singh D.K "Mechanics of Solids" Pearson Education, 2002.
6. Kazimi S.M.A, "Solid Mechanics", Tata McGraw-Hill Publishing Co, New Delhi, 1981.

OUTCOMES:

The students will be able to

- Demonstrate stress, strain and deformation of solids
- Recognise the various loads and analyse stresses in different types of beams
- Evaluate the torsional effects in different types shafts
- Calculate the various design parameters for springs and columns
- Estimate the beam deflection using various mathematical models
- Express the stresses in two dimensions

MEC2105	MANUFACTURING PROCESSES LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To provide the basic knowledge on different manufacturing techniques
- To experience the various operational activities of basic manufacturing processes including metal casting, metal joining, metal forming and machining
- To enable the students to fabricate simple components through the acquired skills

LIST OF EXPERIMENTS:

- CASTING PROCESS
  - Preparation of green sand mould for dumble and flange
- JOINING PROCESS
  - Preparation of weldments by arc welding and TIG welding
- FORMING PROCESS
  - Forming of hexagonal rod from the round rod
- SHEET METAL OPERATIONS
  - Making of tray and funnel from sheet metal
- OPERATIONS ON PLASTICS
  - Injection moulding by plastics
  - Extrusion / Blow moulding
- BASIC MACHINING
  - Facing, Plain turning, step turning and taper turning on lathe
  - Grooving, external chamfering, single start ‘V’ thread cutting and knurling on lathe
  - Drilling, boring, internal thread cutting, internal chamfering on lathe
  - Square cut shaping and key way cut by shaper
  - Internal slot / key way cut by slotter
  - Five holes at a given pitch circle on a plate (Boring center hole, drilling and tapping in five holes)
- PROJECT WORK
  - Combined Skill (Each team has to make an engineering component)

Total Hours –30

REFERENCES:

1. A course manual for the laboratory (prepared by SMS, BSACU) http://home.iitk.ac.in/~vkjain/manual.pdf

2. Hajra Choudhury, Elements of Workshop Technology, Vol. I and II, Media Promotors Pvt. Ltd., Mumbai, 2007.

OUTCOMES:

Students should be able to

- Describe various basic manufacturing processes
- Make the components using moulding, welding, forging and basic machine tools
- Produce a simple component using different manufacturing process

MEC2106	MATERIAL TESTING AND METALLURGY LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To observe the microstructure of various materials
- To study and record the various destructive test methods
- To understand the importance of various metallurgical and mechanical tests

EXPERIMENT

- MATERIAL TESTING LAB EXPERIMENTS
  - Tension test. 1
  - Compression test. 1
  - Torsion test. 1
  - Deflection test. 1
  - Impact test. 1
  - Double Shear test 1
  - Fatigue test 1
- METALLURGYLABEXPERIMENTS
  - Metallographic Examination-Demonstration and Practice 2
  - Study of metallurgical microscope.
  - Specimen preparation for microstructural examination-cutting, grinding, polishing, etching.
  - Selections of etchants for various metals and alloys.
  - Identification of microstructures of Ferrous and Non-ferrous materials. 2
  - Heat treatment: Annealing, normalizing, hardening and tempering of
  - steel- Hardness and its microstructure. 2
  - Study of microstructure of welded (HAZ)and cast component. 1
  - Hardenability test -Jominy End quench test. 1

Total Hours –30

REFERENCES:

1. ASTME3-01(2007) e1 Standard Guide for Preparation of Metallographic Specimens.
2. ASTM E407- 07Standard Practice for Microetching Metals and Alloys.
3. ASTM E7 – 03(2009) Standard Terminology Relating to Metallography.

OUTCOMES:

Students should be able to

- Interpret and analyse the microstructure of various materials
- Test the various mechanical properties of materials
- Correlate the results for applications

MEC2107	PART MODELING LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To familiarize with the codes and specifications of BIS, limits, fits and tolerances
- To learn and draw assembly drawing of various machine components using drafting packages
- To generate part and assembly drawings of actual mechanical products

DRAWING STANDARDS & FITS AND TOLERANCES

Introduction – Need of Graphical Language – Importance of Machine Drawing – Tools – Projections – Designation – Relative position of views – Classification of Machine Drawings – Scales as per ISO standards – Importance of Title Block and Part list – Lines types – Sectioning – Principle of Dimensioning – Limits, Fits and Tolerance – Definitions – Classifications of Fits – Method of Indicating Fits on Drawings – Tolerance Grade – Shaft and Hole Terminology – Conventional Representations – Surface finishing & Machining Symbols – Abbreviations and Symbols – Screwed Fastenings – Designation of Bolted Joints – Special Types of Bolts and Nuts – Key Joints – Types of Key joints – Introduction to Rivets and Riveting – Welded Joints – Pipes and Pipe Joints – Pulleys – Couplings.

INTRODUCTION TO 2D DRAFTING

Assembly Drawings – Introduction – Types of Assembly – Importance of BOM – Assembly procedures – Assembly Drawings (Examples) – Assembly of Engine Parts: Assembly of Machine Tools Parts – Production Drawings – Difference with Normal Drawings – Method of amendment of Corrections.

INTRODUCTION TO 3D MODELLING AND ASSEMBLY

Introduction of Solid 3D Modelling – Sketcher – Datum planes – Protrusion – Holes – Part modelling – Extrusion – Revolve – Sweep – Loft – Blend – Fillet – Pattern – Chamfer – Round – Mirror – Section – Assembly

Couplings – Flange, Universal, Oldham’s, Muff, Gear couplings

Joints – Knuckle, Gib & cotter, strap, sleeve & cotter joints

Engine parts – Piston, connecting rod, cross-head (vertical and horizontal), stuffing box, multi-plate clutch

Miscellaneous machine components – Screw jack, machine vice, tail stock, chuck,

vane and gear pumps

Total Hours –30

TEXT BOOKS:

2. William P. Spence, Engineering Graphics, Printice - Hall Inc, Engle Wood Cliff
3. S. Bogolyubov. A. Voinov., Engineering Drawing, Van Nostr and Reinhold Company
4. Brain Griffiths., Engineering Drawing for Manufacture, Kogan Page Science, USA
5. Hart. K R, Engineering Drawing with Problems and Solutions, Hodder and Stoughton, London Sydney Auckland
6. David L., Goetsch Williams Chaulk John A., Nelson, Technical Drawing (Drafting and Design) Savee Informatics.
7. D.E. Hewitt., Engineering Drawing and Design for Mechanical Technicians, The Macmillan Press Ltd, London

OUTCOMES:

Students should be able to

- State the codes, standards of BIS, limits, fits and tolerances
- Interpret complex drawings of machine parts and assembly
- Generate components and assembly drawings of actual products

SEMESTER IV

ENC 2282	WRITTEN COMMUNICATION	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To help students identify content specific vocabulary and learn its usage.
- To expose them to reading for specific purposes, especially in professional contexts.
- To expose them to the process of different kinds of formal writing.
- To help them learn corporate correspondence for different purposes.
- To train them in preparing effective applications with résumé
- To make them write different types of reports.

MODULE I **4**

Introduction - process of writing – Fundamentals of academic and professional writing – Understanding short, real world notices, messages, etc.

MODULE II **4**

Reading industry related texts (ex. Manufacturing, textile, hospitality sector etc.) for specific information.

Writing Instructions and recommendations

MODULE III **6**

Understanding format and conventions of writing email, memo, fax, agenda and minutes of the meeting.

Writing email, memo, fax, agenda and minutes of the meeting for various purposes (industry specific)

MODULE IV **6**

Viewing letter of application and Résumé, letter calling for an interview, letter of inquiry and Promotional letter

Writing Functional résumé and letter of application using Edmodo,

MODULE V **6**

Viewing a Video and reading a case study (industry specific) – collaborative writing using Edmodo –reading and information transfer

Writing reports- Survey, feasibility and progress – exposure to discipline specific reports

MODULE VI **4**

Writing Statement of purpose (Higher Education)-- Justifying and writing about one's preparedness for job (Statement of Purpose highlighting strengths and weaknesses) – Peer evaluation skills through Edmodo.

P – 30; Total Hours –30

5. Macknish, C. (2010). *Academic and Professional Writing for Teachers*. McGraw-Hill Education. USA.
6. Whitby, Norman (2014). *Business Benchmark: Pre-Intermediate to Intermediate.* Cambridge University Press, UK.

OUTCOMES:

On completion of the course, the students will have the ability to

- Identify content specific vocabulary and also use them in appropriate contexts.
- Demonstrate reading skills with reference to business related texts.
- Draft professional documents by using the three stages of writing.
- Create different types of documents for various corporate correspondences.
- Write effective letter of applications, résumé and statement of purpose.
- Write business related reports efficiently.

MEC2211	KINEMATICS OF MACHINERY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To study the various simple mechanisms
- To analyse the velocity of different mechanisms
- To acquire knowledge on acceleration analysis of different mechanisms
- To educate the kinematics of cams
- To study the different types of gears and gear trains
- To understand the various friction drives

MODULE I BASICS OF MECHANISMS 7

Terminology and Definitions- Description of common Mechanisms-Four Bar Mechanism-Single and double slider crank mechanisms - Kinematic Inversions of 4-bar and slider crank chains-– Indexing Mechanisms - Rocking Mechanisms - Straight line generators- Ratchets and escapements - Design of Mechanisms – Mobility - Grubler's criterion - Grashoff's law- Mechanical Advantage-Transmission angle.

MODULE II VELOCITY ANALYSIS OF MECHANISMS 7

Displacement and velocity analysis in mechanisms - Graphical Method – Velocity polygons – Kinematic analysis by Complex Algebra methods - Vector Approach - Instantaneous Centre method - Kennedys Theorem.

MODULE III ACCELERATION ANALYSIS OF MECHANISMS 7

Acceleration analysis in simple mechanisms - Graphical Method- acceleration polygons - Kinematic analysis by Complex Algebra methods - Vector Approach, Computer applications in the kinematic analysis of simple mechanisms- Coriolis component of acceleration.

MODULE IV KINEMATICS OF CAM 7

Classifications - Displacement diagrams - Simple harmonic, parabolic, and cycloidal motions - Layout of plate cam profiles - Derivatives of Follower motion - High speed cams - Circular arc and tangent cams - Standard cam motion - Pressure angle and undercutting.

MODULE V KINEMATICS OF GEARS 10

Spur gear Terminology and definitions - Fundamental Law of toothed gearing and involute gearing - Inter changeable gears - gear tooth action – Terminology - Interference and undercutting – Non standard gear teeth- Helical, Bevel, Worm, Rack

and Pinion gears (Basics only) - Gear trains - Parallel axis gear trains - Epicyclic gear trains – Differential mechanism.

MODULE VI FRICTION IN MACHINERY 7

Friction drives - Belt and rope drives, Friction in clutches - Friction aspects in Brakes – Friction in vehicle propulsion and braking.

Total Hours –45

REFERENCES:

1. Rattan S.S, “Theory of Machines”, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 1998.
2. Shigley J.E and Uicker J.J, “Theory of Machines and Mechanisms”, McGraw- Hill, Inc. 1995.
3. Thomas Bevan, “Theory of Machines”, CBS Publishers and Distributors, 1984.

6. John Hannah and Stephens R.C, “Mechanics of Machines”, Viva Low-Prices Student Edition, 1999.

OUTCOMES:

The students will be able to

- Describe various simple mechanisms
- Construct the velocity diagram and predict the velocities of mechanisms
- Draw the acceleration diagram and predict the acceleration of mechanisms
- Create various types of cam profiles with different follower motions
- Analyse the kinematics of gears and gear trains
- Solve simple application problems on frictional drives

MEC2212	FLUID MECHANICS AND MACHINERY	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To learn the fundamental concepts and properties of fluids
- To study the governing equations for fluid flow
- To educate different types of flow and its losses
- To understand boundary layer concepts and dimensional analysis
- To impart knowledge on hydraulic turbines
- To acquire knowledge on hydraulic pumps

MODULE I FUNDAMENTALS OF FLUID MECHANICS 10

Fluid Properties- Definition, distinction between solid and fluid – Units and Dimensions- Properties of fluid - Density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapour pressure, capillary and surface tension. Fluid statics: concept of fluid static pressure, absolute and gauge pressure-pressure measurements by manometers pressure gauges

MODULE II FLUID KINEMATICS AND FLUID DYNAMICS 12

Fluid Kinematics – Flow visualization – Lines of flow – types of flow – velocity field and acceleration–continuity equation (one and three dimensional forms) Equation of stream line-stream function-velocity potential function–circulation–flow net – fluid dynamics – equation of motion – Euler's equation along streamline – Bernoulli's equation – applications - Venturimeter, Orificemeter, Pitot tube

MODULE III INCOMPRESSIBLE FLUID FLOW 10

Viscous flow - Navier's Stoke equation (statement only)–Shear stress ,pressure gradient relationship- Laminar flow between parallel plates- Laminar flow through circular tubes (Hagen poiseulle's law)–Hydraulic and energy gradient – Flow through pipes–Darcy's Weisback's equation–Pipe roughness–friction factor – Moody's diagram minor losses- Flow through pipes in series and in parallel power transmission.

MODULE IV BOUNDARY LAYER & DIMENSIONAL ANALYSIS 10

Boundary Layer theory, Boundary layer separation – drags and lifts coefficients. Buckingham's pi-Theorem – applications - similarity laws and models

MODULE V HYDRAULIC TURBINES 8

Hydraulic machines: Definition and classification- exchange of energy- Euler's equation for turbo machines–Construction of velocity vector diagrams head and specific work–components of energy transfer–degree of reaction. Hydro turbines: Pelton turbine – Francis turbines – working principles – velocity triangle – work done– specific speed–efficiencies–performance curve for turbines

MODULE VI HYDRAULIC PUMPS 10

Pumps, definition and classifications: - Centrifugal pump: classifications and velocity triangles, specific speed, efficiency and performance curves. Reciprocating pumps: Classification, working principle, indicator diagram, work saved by air vessels and performance curves.

L-45; T-15; Total Hours –60

8. Robert W Fox, "Introduction to Fluid Mechanics", Fourth Edition, John Wiley and sons, Singapore, 1994.

OUTCOMES:

Students will be able to

- Apply the fundamental concepts in the design of flow measuring devices
- Apply the governing equation in flow through conduits
- Analyze incompressible fluid flow through pipes
- Measure Boundary layer friction and establish expression for any measurable parameter from the dependent variables

- Demonstrate and analyze the performance of hydraulic turbines
- Describe and analyze the performance of hydraulic pumps

MEC2213	METAL CUTTING AND MACHINE TOOLS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To study the various material removal process
- To learn the functions of centre lathe and special purpose lathes
- To acquire knowledge about reciprocating machines and milling machines
- To understand the principle of drilling, broaching and gear cutting
- To gain knowledge about finishing and super finishing processes
- To educate the working principle of CNC machine tools and non-traditional machining processes

MODULE I THEORY OF METAL CUTTING 7

Introduction: material removal processes, types of machine tools – theory of metal cutting, geometry of single point cutting tool, mechanism of chip formation, types of chips, orthogonal metal cutting, machining forces and Merchant's Circle Diagram - cutting tool materials, tool wear, tool life, cutting fluids.

MODULE II CENTRE LATHE AND SPECIAL PURPOSE LATHES 7

Centre lathe, constructional features, cutting tools, various operations, special attachments, machining time and power estimation - Capstan and turret lathes – automatic lathes: semiautomatic, automats – kinematics – single spindle : cutting off, swiss type, automatic screw type – multi spindle; cutting off, bar type

MODULE III RECIPROCATING MACHINES AND MILLING MACHINES 7

Reciprocating machine tools: shaper, planer, slotter - milling: types, milling cutters, plain milling cutter- nomenclature - operations.

MODULE IV DRILLING, BROACHING AND GEAR CUTTING 7

Hole making: drilling, reaming, boring, tapping – Deep hole Drilling – Broaching machines: broach construction – push, pull, surface and continuous broaching machines - Gear cutting: forming, generation, shaping, hobbing – Mechanics of processes.

MODULE V FINISHING AND SUPER FINISHING PROCESSES 10

Abrasive processes – Mechanics: grinding wheel – specifications and selection, types of grinding process – centreless grinding, cylindrical grinding, surface grinding– honing, lapping, super finishing, polishing and buffing

MODULE VI CNC MACHINE TOOLS AND MODERN MACHINING 7

METHODS

Numerical control (NC) machine tools – CNC: types, construction details, special features - Advantages and limitations : Abrasive Jet Machining- Ultrasonic Machining - Electron Beam and Laser Beam Machining

Total Hours –45

REFERENCES:

1. Rao, P.N. “Manufacturing Technology”, Metal Cutting and Machine Tools, Tata McGraw–Hill, New Delhi, 2008

5. Hajra Choudry, “Elements of Work Shop Technology – Vol. II”, Media Promoters. 2007
6. Geofrey Boothroyd, “Fundamentals of Metal Machining and Machine Tools”, McGraw Hill, 2006

OUTCOMES:

Students will be able to

- Describe the various material removal process
- Discuss the various types of lathe and its operations
- Illustrate the operations in reciprocating machines and milling machines
- Explain drilling, broaching and gear cutting operations
- Exhibit the various finishing and super finishing processes
- Deliberate the functions of CNC machine tools and non-traditional machining processes

MEC2214	MACHINING LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To gain knowledge in various mechanisms of special machine tools
- To learn the functions of various machines such as milling, shaping and grinding
- To acquire knowledge on producing various assembly components such as bushes, shafts, bolts and nuts

LIST OF EXPERIMENTS:

- SPECIAL MACHINES
  - Milling machines
  - Spur gear milling
  - Milling polygon surfaces
  - Reciprocating machines
  - Making of 'V' Block for work holding device
  - Super finishing machine
  - Surface grinding
  - Cylindrical grinding
- MACHINING IN LATHE
  - Bush and shaft
  - Bolt and nut
  - Double start 'V' thread
  - Eccentric turning and coupling
- MACHINING IN SEMI-AUTOMATIC LATHE
  - Machining in capstan and turret lathes
- PROJECT WORK
  - Combined Skill (Each team has to make a working model)

Total Hours –30

REFERENCES:

1. A course manual for the laboratory (prepared by SMS,BSACU)
2. http://home.iitk.ac.in/~vkjain/manual.pdf
3. HMT – "Production Technology", Tata McGraw-Hill, 2001.

OUTCOMES:

Students will be able to

- Demonstrate the different mechanisms involved in special machine tools
- Perform operations in various machines such as in milling, shaping and grinding
- Produce various assembly components such as bushes, shafts, bolts and nuts

MEC2215	PRODUCT MODELLING LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To understand the fundamentals of CAD systems
- To create a 3D model of the component given
- To familiarize students with the assembly of various machine components

OVERVIEW OF CAD SOFTWARE

Create 3D models of standard machine components by reading orthographic views of Brackets, V Blocks, Stop Block.

ASSEMBLY DRAWING

Create part model, assembly, exploded view, sectional views and detail drawings of

Joints: Cotter joints, knuckle joints, Hook's joint.

Shaft Couplings: rigid, flexible.

Bearings: Journal, footstep, thrust or collar bearing, Plummer block.

Engine parts: Stuffing box, connecting rod.

Machine tool components: Drill jig, tool post, machine vice, screw jack.

Valves: Safety valve, relief valve, non-return valve.

PARAMETRIC MODELLING

Modelling of screw threads, threaded fasteners, gears & pulleys.

PROJECT

Create CAD models of real time components.

Total Hours –30

6. David L., Goetsch Williams Chaulk John A., Nelson, Technical Drawing (Drafting and Design) Savee Informatics.
7. D.E. Hewitt., Engineering Drawing and Design for Mechanical Technicians, The Macmillan Press Ltd, London

OUTCOMES:

Students should be able to

- Describe the fundamentals of CAD systems
- Create a 3D model of the given component
- Perform virtual assembly of various machine components

MEC2216	FLUID MECHANICS AND MACHINERY LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To learn about the flow measuring instruments.
- To verify the laws of fluid mechanics.
- To study the performance of various pumps and turbines.

LIST OF EXPERIMENTS:

1. Comparison of coefficient of discharge of given orifice meter and Venturi meter.
2. Calibration of Rotameter.
3. Determination of various losses for the given set of pipes.
4. Performance study of centrifugal pumps / Submersible pumps.
5. Determination of maximum efficiency for the given reciprocating pump.
6. Characteristic curves for Gear pump / Vane pump.
7. Determination of maximum power at constant speed / constant load for an impulse turbine.
8. Performance characteristic of reaction turbine.
9. Impact of jet on flat and curved vanes.
10. Verification of Bernoulli's theorem.
11. Performance test on a jet pump.
12. Flow visualization: Laminar and Turbulent flows.

Total Hours –30

8. Robert W Fox, "Introduction to Fluid Mechanics", Fourth Edition, John Wiley and sons, Singapore, 1994.

OUTCOMES:

Students should be able to

- Apply the laws of fluid mechanics and measure parameters of fluid flow
- Analyse the performance of Hydraulic turbines and pumps
- Evaluate performance of Impinging jet on vanes

SEMESTER V

MSC 3181	LEADERSHIP AND CEO TRAINING	L	T	P	C
		3	0	0	3

OBJECTIVES:
The course aims at

- Bringing about positive transformation in students' attitude.
- Building unique leadership competencies that would ensure successful transition of students across all career stages.
- Sensitizing students to identify their strengths & weakness and training them to deal with it
- Assisting students in enhancing their expressive ability and inducing a high level of self confidence to manage both business and emotions
- Training students to become more adaptable and flexible to changing business environment

MODULE I INTRODUCTION TO LEADERSHIP 12

Leadership concept - meaning, definitions, importance of leadership, leadership traits. Leadership functions- general functions, listening, observing, managing and decision making. Components of leadership - leaders, followers and situation. Leadership theories – Trait theory, Skills theory, Style theory, Situational theory, Transformational theory, Transactional theory, Path Goal Theory and LMX. Assessing emotional intelligence and exploring the capabilities and inherent traits.through psychometric tests - Multi factor leadership questionnaire and personal reflections

MODULE II LEADERSHIP STYLE AND COMMUNICATION 8

Leadership styles-visionary, Coaching, Affiliative, Democratic, Pacesetting Commanding, Transformational, Transactional. Autocratic, Participative, Laissez-Faire Leader versus Managers. Leadership communication - Rationale, tactic, assertive, formal, informal, communication in crisis- leadership and negotiations, Leadership Presentations-convincing and impressive style

MODULE III LEADERSHIP ROLES 8

Facets of leadership- Leader as an individual – personality and leadership, values, attitudes and ethics of a leader. **Leader as a relationship builder**- empowering people to meet higher order needs, initiating organization wide motivational programs, involvement with all stakeholders- focusing on organization growth. **Leader as an inspirer**- motivation and leadership, recognizing and appreciating contributions, empowering others to lead **Leader as an innovator** –leader's role in shaping culture

and values in an organization. **Leader as a Liaison- Leader as team player**

MODULE IV LEADERSHIP CHALLENGES AND STRATEGIES 9

Challenges in leadership: Perception of organization culture and values, interpreting the power dynamics in the organization, establishing work life balance. Bad leadership – Reasons and impact.-Case Study of Marissa Mayer-Yahoo.Inc Organizational transformation through efficient leaders-Case study of Apple Inc. Blue Ocean Leadership-Steps to Blue ocean Leadership-Four Pillars of Blue Ocean leadership-Blue Ocean leadership grid

MODULE V LEADERSHIP AND CEO TRAINING 8

Leader as a CEO: Traits of a successful CEO, Key responsibilities of a CEO, the path to be a CEO ,Training on Board Room Discussions, Meeting the CEO –Live sessions with industry CEO's. Requirements of Leadership: - Cognitive skills, Interpersonal skills, Business skills, Strategic skills. Role of Emotional Intelligence in taking up key-positions in the organization.

Teaching Pedagogy:

Nurturing – Based on the identified strengths and weaknesses, training will be given to enhance the strengths and overcome the weakness.

Assessment - Continuous evaluation will be effected through group discussions, oratory assignments and situational enactments. Pre-and post-training assessment through peer reviews and faculty feedback.

Sustained development – Training will be imparted for self-development and monitoring of leadership skills to ensure sustained applicability of the skills learnt.

L – 45; T – 0; Total Hours –45

4. Leadership Wisdom by Robin Sharma Jaico Publishing House;

OUTCOMES:
The students will be able to

- Explore through self-introspection one’s own leadership style, their strength and weakness
- Gain self confidence to lead a team in the organization
- Realize the role of leadership in making or breaking of an organization
- Acquire the practice of self introspection and development of leadership competencies thorough continuous efforts
- Manage their own emotions as well as other resulting in successful relationship building with all stakeholders

MSC 3182	SOCIAL ENTREPRENEURSHIP	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To be able to understand the field of social entrepreneurship and Social problems
- To be able to describe and understand the traits of social entrepreneurs
- To recognize the social business opportunities
- To synthesize the resource mobilization ways for social entrepreneurship
- To understand the social entrepreneurship models
- To recognize the impact of social entrepreneurship on societies

MODULE I INTRODUCTION TO SOCIAL ENTREPRENEURSHIP 7

Introduction - Emergence and Development of Social Entrepreneurship. Social Problems in India: An Overview. Social Development: The Indian Scenario. Emergence of Social Entrepreneurs and Sustainable Solutions to Social Problem. Characteristics and Context of Social Entrepreneurship .The Role of Social Entrepreneurship in Societies & Economies.

MODULE II SOCIAL ENTREPRENEURSHIP: DRIVERS AND CHALLENGES 7

The Drivers of Social Entrepreneurship. Elements of the Social Entrepreneurial Personality. Challenges of financial constraints. Challenge to attract and cultivate talented workers. Challenge of evaluation of social entrepreneur impact. Challenge of scaling and its impact. Cases

MODULE III SOCIAL ENTREPRENEURSHIP: OPPORTUNITY RECOGNITION 7

Opportunity Recognition and Planning Process. Opportunities for Social Entrepreneurs. The Nature of Social Entrepreneurial Opportunities. Social Problems into Opportunities. Idea development and conceptualization of social problem. Cases

MODULE IV RESOURCE MOBILIZATION FOR SOCIAL VENTURE 8

Resources at Initial Stage. Social Network as a role of Social Capital. Team and Collective Efforts. Need and Determination of Important Resources. Resource of Knowledge, Skills and Abilities. overview of venture capital and angel investment. Cases

MODULE V BUSINESS MODELS AND BUSINESS PLAN FOR SOCIAL ENTERPRISES 8

Design Principles of Social Entrepreneurship Business Models, Evaluation of the Root Cause of a Societal Problem. Developing business plan for social ventures. Developing an investor presentation. Feasibility study and report. How to start a business - Procedures for registration of small scale industry

MODULE VI THE IMPACT OF SOCIAL ENTREPRENEURSHIP ON SOCIETIES AND CASES 8

Static Impact of Social Entrepreneurship. Impact of Charitable NGOs vs. Social Entrepreneurship, Impact of For-Profit Companies vs. Social Entrepreneurship. Social entrepreneurship report preparation by students. Case Study of Social Entrepreneurs

L – 45; T – 0; Total Hours –60

REFERENCES:

1. "Social Entrepreneurship : New models of sustainable social change" . Alex Nicholls, Oxford University Press 2006
2. The Process of social value creation : A multiple case study on Social Entrepreneurship in India , Archana Singh Springer 2016
3. "Social Entrepreneurship and social business" Christine K Volkmann, Springer Gabler 2012
4. "Social Entrepreneurship" Manuel London ,Routlege, 2010

OUTCOMES:

The students can able to

- Conceptualize social entrepreneurship in terms of a theoretical framework between changing social values and institutions
- Think and communicate about social values
- Learn about practical models of social change to launch, lead, manage, and evaluate a social venture
- Analyze funding needs and sources for the social venture
- Experience the ideas can be critically and collaboratively examined prior to commitment.

ENC 3181	COMMUNICATION AND SOFT SKILLS - I CAREER CHOICE	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To create awareness of industrial trends and market demands.
- To encourage students to explore career opportunities in an industry and evaluate themselves in relation to industry preparedness

MODULE I **6**

Knowledge about specific industry-Discussion with industry experts --Self evaluating career prospects through survey questionnaire (based on his/her eligibility for taking up a job (industry preparedness)

MODULE II **6**

. Knowing case studies of industries(pertaining to students' choice of career)- Reading and discussing about job markets-goal setting, working on creativity.

MODULE III **4**

SWOC analysis and discussing outcomes--exploring mini projects or case studies of latest industries.

MODULE IV **6**

Writing statement of purpose pertaining to career choice---- Outcomes

MODULE V **8**

Project or case study presentations (Presentation in pairs) -mini project report or case study report.

Total Hours – 30

REFERENCES:

1. Brown,D.(2002). Career Choice and Development. Wiley,J. & Sons.USA
2. Lore,N.(1998). The Pathfinder: How to Choose or Change Your Career for a Lifetime of Satisfaction and Success. Simon & Schuster.USA.
3. Shell, G.R.(2013). *Springboard Launching your Personal Search for Success.Portfolio.USA.*

OUTCOMES:

After the completion of the course, students would be able to

- Speak about their career choice.
- Self evaluate their strengths and weaknesses and speak about it.
- Make effective presentations on case studies or relating to projects.
- Write the statement of purpose relating to their career choice.

MEC3101	DYNAMICS OF MACHINERY	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To understand the basics of Dynamics of mechanisms and machinery.
- To understand the basics of balancing of moving parts.
- To understand the basics of free and forced vibrations.
- To understand the basics of control mechanisms.

MODULE I FUNDAMENTALS OF DYNAMICS 9

Introduction on static force analysis, Static Equilibrium, Equilibrium of Two force and three-force members, Member with Two force and a torque, Force convention, free body diagrams, Principle of Superposition. D-Alembert's Principle- Inertia Force Analysis of Mechanisms.

MODULE II ENGINE DYNAMICS 9

Velocity and acceleration of piston-Torque exerted on the crank shaft when friction and inertia of moving parts are neglected- Forces on the reciprocating parts of an engine considering friction and inertia of moving parts, Dynamically equivalent system, Turning moment diagrams-Fly wheels Engine shaking Forces.

MODULE III BALANCING OF MASSES 10

Introduction to balancing, Static balancing, dynamic balancing, balancing of several masses in same planes, balancing of several masses in different planes, Balancing of Reciprocating masses, balancing of locomotives, balancing of inline engines, balancing of V-engines.

MODULE IV UN-DAMPED FREE VIBRATIONS 10

Natural frequencies of free longitudinal vibrations of systems having single degree of freedom- Equilibrium method-Energy method and Rayleigh's method- Natural of free transverse vibrations due to point load and UDL acting over a simply supported shaft, dunkerley's method, critical speed of a shaft- Natural frequency of free torsional vibrations of a single rotor system, two rotor and three rotor system.

MODULE V DAMPED FREE AND FORCED VIBRATIONS 10

Damping factor and Logarithmic Decrement in free vibration- Forced Vibration- Steady state amplitude –Vibration due to Imbalance- Vibration isolation and transmissibility ratio for the systems subjected to forced vibrations.

MODULE VI CONTROL MECHANISMS 12

Introduction to Governors, types of Governor, Watt Governor, Porter governor, Proell Governor, Hartnell Governor, Sensitivity, Stability, Isochronism, Hunting, Governor Effort and Power, controlling force. Introduction, Precessional angular motion, gyroscopic couple, effect of gyroscopic couple on an aero plane, effect of gyroscopic couple on a naval ship -stability of a four wheel drive moving in a curved path- stability of a two wheel vehicle taking a turn.

L – 45; T – 15; Total Hours –60

1. S.S.Rattan, 'Theory of Machines', Tata McGraw Hill Publishing Company Ltd., New Delhi, 1994.
2. Design of Machinery by R.L.Norton, Mc Graw Hill Publications.
3. J.E.Shigley and J.J.Uicker, Theory of machines and Mechanisms, McGraw Hill, Inc., 1995.
4. Theory of Machines by Thomas Bevan, Pearson education publications.
5. A.Ghosh and A.K.Mallick, 'Theory of Mechanisms and Machines', Affiliated East-West Press Pvt. Ltd., New Delhi, 1988.
6. Theory of Machines by P.L.Ballaney, Khanna Publications.
7. Theory of Machines by R.S. Khurmi & J.K.Gupta, S. Chand Publications.

OUTCOMES:

Student will be able to

- Analyze conceptual fundamentals of mechanisms for static and dynamic conditions.
- Analyze and solve balancing and vibration problems.
- Understand and apply control mechanisms.

ECC3181 ELECTRONICS FOR MECHANICAL SYSTEMS

L	T	P	C
2	0	0	2

OBJECTIVES:

- To study the characteristics of semiconductor devices such as diodes, transistors and their applications.
- To study fundamentals of digital logic circuits.
- To study 8085 microprocessors and its interfacing with other peripheral devices.

MODULE I SEMICONDUCTORS AND RECTIFIERS 8

Classification of solids based on energy band theory-Intrinsic semiconductors-Extrinsic semiconductors-P type and N type-PN junction and its application – Zener diode. Bipolar junction transistor- CB, CE, CC configuration and characteristics- Field effect transistor: Configuration and characteristic-SCR, DIAC, TRIAC, UJT Characteristics and simple applications.

MODULE II DIGITAL ELECTRONICS 7

Number systems- Binary Arithmetic Operations-Boolean Algebra-Logic gates-Karnaugh map: SOP, POS.

MODULE III COMBINATIONAL AND SEQUENTIAL CIRCUITS 8

Combinational Circuits: Half and full adders- Magnitude Comparator- Multiplexer/ Demultiplexer- encoder / decoder Sequential circuits: Flip Flops: SR, JK, D and T FF-Truth tables and circuits-Shift Registers-Ripple Counters.

MODULE IV 8085 MICROPROCESSOR AND APPLICATIONS OF MICROPROCESSOR 7

Architecture of 8085-Pin configuration - Instruction set-Addressing modes- Simple programs using arithmetic and logical operations. Applications.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Milman and Halkias, "Integrated Electronics", Tata McGraw-Hill publishers,1995.
2. Ramesh Goankar, "Microprocessor Architecture", Programming and Applications with 8085, Wiley Eastern, 1998.

REFERENCES:

1. Malvino and Leach, "Digital Principles and Applications", Tata McGraw-

Hill,1996

2. Mehta V.K, "Principles of Electronics", S. Chand and Company Ltd, 1994
3. Dougles V.Hall, "Microprocessor and Interfacing", Programming and Hardware, Tata McGraw-Hill, 1999.
4. Salivahanan S, Suresh Kumar N, Vallavaraj A, "Electronic Devices and Circuits" First Edition, Tata McGraw-Hill, 1999.

OUTCOMES:

The student should be able to understand

- Working principles and characteristics of various semiconductor devices.
- Different digital logic circuits: Combinational and sequential circuits.
- Architecture of 8085, its features and programming for specific application.

MEC3102	THERMAL ENGINEERING (INTEGRATED LAB)	L	T	P	C
		3	0	3	4

(Use of Steam Tables, Mollier Diagram, Psychrometric chart and Refrigeration property Tables are permitted in the University examination)

OBJECTIVES:

- To impart knowledge on working and performance of IC engines, steam nozzles, steam turbines and air compressors.
- To understand the cycles and systems of refrigeration and air conditioning.
- To know the working Principles of IC engines.
- To understand the performance of various engines under different loadings.
- To learn and measure the various heat transactions within and outside the engines.
- To study the properties of fuels and exhaust gases.

MODULE I I.C. ENGINES 10

Classification of IC engine - components and functions. Two stroke and Four stroke engines - working principle, actual and theoretical valve timing diagrams, port timing diagrams and PV diagrams. Comparison - two stroke and four stroke engines- petrol and diesel engines. Fuel supply systems and ignition systems, Lubrication system and cooling system

MODULE II AIR STANDARD CYCLES AND IC ENGINE PERFROMANCE 10

Otto, Diesel, Dual, Brayton cycles - Calculation of mean effective pressure and air standard efficiency, Actual and theoretical PV diagram of two stroke and four stroke engines. Performance test on IC engine and Heat balance calculation. Knocking and Detonation. Exhaust gas analysis, pollution control norms.

MODULE III STEAM NOZZLES AND TURBINES 10

Flow of steam through nozzles, shapes of nozzles, effect of friction, critical pressure ratio, super saturated flow. Impulse and reaction principles, compounding, velocity diagrams for simple and multistage turbines, speed regulations - governors and nozzle governors.

MODULE IV AIR COMPRESSORS 10

Classification and working principle, work of compression with and without clearance. Volumetric efficiency, Isothermal efficiency and isentropic efficiency of reciprocating air compressors. Multistage air compressor and inter cooling – working of multistage

air compressor, Problems in single and two stage air compressors. Various types of compressors (Descriptive treatment only)

MODULE V REFRIGERATION 10

vapour compression refrigeration cycle - super heating, sub coolingperformance calculations. working principle of vapour absorption system. Ammonia - water, Lithium bromide - water systems, comparison between vapour compression and absorption systems.

MODULE VI AIR-CONDITIONING 10

Psychrometry, Psychometric chart, cooling load calculation, Concept of RSHF, GSHF, ESHF. Air conditioning Systems - summer and winter air conditioning systems Requirements for comfort and industrial air-conditioning.

List of Experiments:

1. (a) Experimental study on valve timing diagram in 4-stroke engine cut model.
   (b) Experimental study on port timing diagram in 2-stroke engine cut model.
2. Experiment on Fuel properties
   a. Redwood Viscometer
   b. Fire and Flash point
   c. Calorific Value.
3. Performance test on constant speed 4-stroke diesel engine.
4. Heat balance test on 4-stroke twin cylinder diesel engine.
5. IC engine performance and heat balance evaluation using PC interface.
6. Motoring test on 4-stroke diesel engine with electrical loading.
7. Retardation test on 4-stroke diesel engine with mechanical loading.
8. Study on the composition of Exhaust gas of an IC engine using Orsat Apparatus under various loads.
9. Performance test on high pressure two stage reciprocating air compressor.
10. Experiment on air conditioning unit.
11. Experiment on Refrigeration tutor.
12. Experiment on Vapour absorption refrigeration unit.

L – 30; P – 30; Total Hours –60

TEXT BOOKS:

1. Rajput, R.K, " Thermal Engineering", 8th Edition, Laxmi Publications Pvt Ltd., 2010

REFERENCES:

1. Rudramoorthy R, "Thermal Engineering", Tata McGraw Hill Publishers

Co. Ltd., New Delhi, 2006.

2. Sarkar .B.K, "Thermal Engineering", Tata McGraw Hill Publishers Co. Ltd., New Delhi, 2005.
3. Ganesan V, "Internal Combustion Engine", 3rd edition,Tata McGraw Hill Publishers Co. Ltd., New Delhi, 2008.
4. Rajput, R.K, “Thermal Engineering”, 8th edition, Laxmi publications pvt ltd., 2010
5. Arora. C.P. “Refrigeration and Air conditioning” 3rd edition, Tata McGraw Hill Publishers Co. Ltd., 2008.
6. Frank Kreith, “Hand Book of thermal Engineering”, CRC press, 2000.
7. Manohar Prasad, “Refrigeration and Air-conditioning” 2nd edition, new age international, 2003.

OUTCOMES:

The students should be able to

- analyses air standard cycles and performance of I.C engines
- possess the knowledge of compressor, steam nozzle and turbines
- Analyze refrigeration and air conditioning cycles and systems.
- Run and analyze the performance and emission of IC engines.
- Understand and analyze the working of air compressors and refrigeration and air conditioning systems.

MEC3103	MECHANICS LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To study the various principles of mechanics using simple mechanisms.
- To study the various controlling mechanisms such as governors and gyroscope.
- To determine the vibration parameters under various modes of vibration.

LIST OF EXPERIMENTS:

1. Governors - Determination of sensitivity, effort, etc. for watt, porter, proell, Hartnell governors.
2. Cam - Study of jump phenomenon and drawing profile of the cam.
3. Motorised Gyroscope-Verification of law's -Determination of gyroscopic couple.
4. Whirling of shaft-Determination of critical speed of shaft with concentrated loads.
5. Balancing of reciprocating masses.
6. Balancing of rotating masses.
7. Determination of Moment of inertia by oscillation method for connecting rod and flywheel.
8. Vibrating system Spring mass-system-Determination of damping co-efficient of single degree of freedom system.
9. Determination of influence co-efficients for multi degree freedom suspension system.
10. Determination of transmissibility ratio - vibrating table.
11. Determination of torsional frequencies for compound pendulum and flywheel –system with lumped Moment of inertia
12. Transverse vibration –free- Beam. Determination of natural frequency and deflection of beam.

L – 0; P – 30; Total Hours –30

OUTCOMES:

The students should be able to

- Apply the principles of mechanics in real time mechanisms.
- Be familiar with various controlling mechanisms.
- Analyze the vibration parameters under various modes of vibration.

ECC31812	ELECTRONICS LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To study the characteristics of various electronic devices.
- To learn the usage of microprocessor and controllers for various operations.

LIST OF EXPERIMENTS:

1. VI characteristics of PN Junction Diode
2. VI characteristics of Zener Diode
3. Characteristic of CE Transistor
4. Characteristics of JFET
5. Characteristics of Uni Junction Transistor
6. Study of Logic Gates (Basic Gates)
7. Half Adder and Full Adder
8. Shift Register
9. Ripple counter
10. bit addition, subtraction
11. Multiplication and division
12. Maximum and Minimum of block of data
13. Sorting and block transfer
14. Stepper Motor Interfacing
15. Traffic light controller

L – 0; P – 30; Total Hours –30

OUTCOMES:

Students will be able to

- Analyze the characteristics of various electronic devices.
- Apply microprocessors and controllers for various operations.

SEMESTER VI

ENC 3281	COMMUNICATION AND SOFT SKILLS - II CONFIDENCE BUILDING	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To develop professional skills like work ethics, analytical skills, presentation skills etc.
- To train them in problem solving skills and leadership skills pertaining to industries.
- To train them in team building skills.
- To train in setting up career goals

MODULE I **6**

Brief about Multinational companies- Analysing work ethics of multinational companies and small industries- discussing as pairs-Knowledge about etiquette (different types)

MODULE II **6**

Visit to an Industry and prepare reports --Critically reading of industry specific journal articles and write ups-- preparing reports.

MODULE III **4**

Analysing problem solving situations in industries (relating to application of core subject to specific jobs) and discussing about them- working on a sample case

MODULE IV **6**

Developing Leadership in team projects-- debating about various aspects of leadership: for example, responsibility and reliability-time management

MODULE V **8**

Team building skills-- group discussions pertaining to industries-- presenting career goals. -- preparing for interviews- interpersonal skills

Total Hours – 30

REFERENCES:

2. Fine, P.M.& Alice Olins. (2016).Step up: Confidence, Success and Your Stellar Career in 10 Minutes a Day. Vermilion.UK
3. Pai, A. (1993).How to Develop Self-Confidence. Amazon.com
4. Wentz,F.H.(2012). Soft skills training: A Workbook to Develop Skills for Employment. Amazon.com

OUTCOMES:

After completing the course students would be able to

- Exhibit critical reading skills through review of industry specific articles.
- Provide solutions to problem based situations.
- Exhibit leadership qualities by debating over industry specific issues.
- Participate in group discussions confidently.
- Present their career goals.

MEC3211	MACHINE DESIGN	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To familiarize the various steps involved in the Design Process.
- To understand the principles involved in evaluating the design procedure
- Optimal utilization of Data book
- Able to satisfy a design under maximum loading conditions

MODULE I STEADY STRESSES AND VARIABLE STRESSES 12

Introduction to the design process - factors influencing machine design, selection of materials based on mechanical properties - Direct, Bending and torsional stress equations –calculation of principle stresses for various load combinations, eccentric loading – design of curved beams – crane hook and 'C' frame - factor of safety - theories of failure – stress concentration – design for variable loading– Soderberg, Goodman and Gerber relations.

MODULE II DESIGN OF SHAFTS AND COUPLINGS 10

Design of solid and hollow shafts based on strength, rigidity and critical speed - Design of Keys, key ways and splines - Design of rigid, flange and muff couplings.

MODULE III DESIGN OF TEMPORARY AND PERMANENT JOINTS 10

Threaded fasteners - Design of bolted joints including eccentric loading, Knuckle joints – Design of welded joints, riveted joints for structures - theory of bonded joints.

MODULE IV IV DESIGN OF ENERGY STORING ELEMENTS 8

Design of helical and leaf springs - Design of flywheels considering stresses in rims and arms for engines and punching machines.

MODULE V DESIGN OF BEARINGS 12

Sliding contact and rolling contact bearings -Design of hydrodynamic journal bearings, McKee's Eqn., Sommerfield Number, Raimondi & Boyd graphs – Derivation of McKee's Eqn - Selection of Rolling Contact bearings.

MODULE VI DESIGN OF MISCELLANEOUS ELEMENTS 8

Design of Seals and Gaskets -Design of crankshafts- Design of Connecting Rod.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Shigley J.E, Mischke C. R., “Mechanical Engineering Design”, 6th Edition, Tata McGraw-Hill, 2003.
2. Bhandari V.B, “Design of Machine Elements”, 6th Edition, Tata McGraw-Hill Book Co, 2007.

REFERENCES:

1. Sundararajamoorthy T.V, Shanmugam .N, "Machine Design", Anuradha Publications, Chennai, 2003.
2. Orthwein W, “Machine Component Design”, Jaico Publishing Co, 2003.
3. Ugural A.C, “Mechanical Design – An Integral Approach”, McGraw-Hill Book Co, 5. 2004.
4. Spotts M.F., Shoup T.E, “Design and Machine Elements” Pearson Education, 2004.

OUTCOMES:

Students should be able to

- Familiar with design procedures for various components
- Will be able to understand and follow standards in designing a component
- They will be explored to practical difficulties that are faced in a design calculations

MEC3212	METROLOGY AND MECHANICAL MEASUREMENT	L	T	P	C
		3	0	3	4

OBJECTIVES:

- To teach the concepts, calibration and analysis of errors in measurements.
- To measure experimentally various specifications of engineering components.
- To train on modern measuring equipment such as CMM, Machine vision system and surface roughness tester.
- To use modern techniques for acquiring data in the measurement parameters such as temperature, vibration, displacement, force, torque etc.

MODULE I CONCEPT OF MEASUREMENT 10

Definition of metrology, General Concepts of measurement system-Units and standards-measuring instruments- sensitivity, readability, range of accuracy, precision-static and dynamic response-repeatability-Measurement system behavior: General model for dynamic measurement system and special cases: zero order, first order and second order system, determination of time constant and settling time, phase linearity- systematic and random errors-correction, calibration, interchangeability, traceability. Statistical concepts: Mean, Range, Variance and Standard deviation in error analysis.

MODULE II LINEAR AND ANGULAR MEASUREMEN 11

Linear measuring instruments: Slip gauges, Tool Maker's microscope, limit gauges. Comparators: Mechanical, pneumatic and electrical types, applications. Angular measurements: -Sine bar, bevel protractor-Taper angle measurements.

MODULE III FORM AND FINISH MEASUREMENT 10

Form measurement- Measurement of screw threads- floating carriage micrometer-measurement of gears-tooth thickness-constant chord and base tangent method-straightness, flatness and roundness measurements- surface finish-surface roughness tester.

MODULE IV LASER AND ADVANCES IN METROLOGY 9

Precision instruments based on laser-Principles- laser interferometer-application in measurements and machine tool metrology- Coordinate measuring machine (CMM): need, construction, types, applications.- computer aided inspection. Machine Vision systems - principle and functions.

MODULE V MEASUREMENT OF POWER FLOW AND TEMPERATURE RELATED PROPERTIES **10**

Response of Measuring System: Amplitude, Frequency and Phase - Force, torque measurement- mechanical, pneumatic, hydraulic and electrical type-Flow measurement-Temperature measurement- bimetallic strip, pressure thermometers, thermocouples, electrical resistance thermistor.

MODULE VI SENSORS AND SENSING SYSTEMS FOR PROCESS, SYSTEM AND CONDITION MONITORING **10**

Vibration measurement – Vibrometers and accelerometers, test methods and calibration- Acoustic Measurement- AE Parameters, principles of acoustic emission techniques ,– Advantages, limitations and applications –Acoustic sensors- piezo electric sensors -Microphones and its types.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. 1. Jain R.K., “Engineering Metrology”, Khanna Publishers, 2009
2. 2. Alan S. Morris, “The Essence of Measurement”, Prentice Hall of India, 1997

REFERENCES:

1. Gupta S.C, “Engineering Metrology”, Dhanpat rai Publications, 2005.
2. Beckwith T.G, and R.D. Marangoni, “Mechanical Measurements”, Addison Wesley, 2007
3. Donald D Eckman, “Industrial Instrumentation”, Wiley Eastern, 1985.
4. ASTME, “hand book of industrial metrology” Prentice Hall of India, 1988
5. ASNT, “Nondestructive testing handbook Emission” Volme.5- Acoustic emission testing,1994

OUTCOMES:

- Students should able to know the basic concepts of measurement and measuring systems
- Students should able to measure various engineering specifications with linear and angular instruments.
- Students should able to perform the form measurement on different components like screw thread and gears.
- Students should able to execute dimensional measurement and angularity using Coordinate Measuring Machine and Machine Vision

System and to evaluate roughness of measuring surfaces.

- Students should able to measure the force , torque ,flow and temperature
- Students should able to carry out vibration and acoustic measurement using vibrometers and accelerometers.

MEC3213	HEAT AND MASS TRANSFER	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To study the different modes of heat transfer and their application in engineering.
- To study and design various types of heat exchangers.
- To learn the basic concepts of mass transfer.

MODULE I BASIC OF HEAT TRANSFER & GOVERNING EQUATIONS 10

Basic Concepts- Modes of heat transfer- conduction, convection, and radiation, Fourier law of heat conduction, three-dimensional heat conduction equations in various co-ordinate systems, steady state heat conduction equation for plane, cylindrical and spherical shapes- overall heat transfer co-efficient, Composite systems, Critical radius of insulation.

MODULE II CONDUCTIVE HEAT TRANSFER 7

Variable thermal conductivity, heat transfer with heat generation in different shapes. Extended surfaces (fins)-numerical methods for varying sections of fins with different end conditions. Transient heat conduction Lumped parameter systems, infinite solids, semi-infinite solids, numerical and graphical methods.

MODULE III CONVECTIVE HEAT TRANSFER 7

Concepts of Boundary Layer: Differential and integral equations for hydrodynamics and thermal boundary layer. Convection Heat Transfer: Forced Heat transfer from flat plate, laminar and turbulent flow, cylinders and spheres, flow through tubes. Free convection, heat transfer from vertical and horizontal surfaces.

MODULE IV RADIATION HEAT TRANSFER 6

Radiation Heat Transfer: Emissive power, grey body. Radiation heat transfer between surfaces, shape factor.-Electrical analogy, Gas radiation.

MODULE V HEAT EXCHANGERS 9

Types-tube arrangements, single and multi-tube types, parallel, counter and cross flow, Overall heat transfer coefficient, Analysis – LMTD method, - NTU method. Fouling factor. Boiling and Condensation: Boiling heat transfer - bubble growth, freezing and melting. Condensation, film condensation and drop wise condensation.

MODULE VI MASS TRANSFER 6

Mass Transfer: Basic Concepts- Diffusion mass transfer- Fick's law of diffusion steady state molecular diffusion- convective mass transfer- momentum, Heat and mass transfer analogies- convective mass transfer correlations.

L – 45; T – 0; Total Hours –45

REFERENCES:

1. Holman J P, "Heat Transfer", 9th edition, Tata McGraw Hill Inc., New York, 2008.
2. S. P. Sukhatme, "Text book of Heat transfer" 4th edition, University Press (India) Pvt. Ltd. 2006.
3. Yunus A Cengel, "Heat Transfer: A Practical Approach", 2nd Edition, Tata McGraw Hill Inc., New York, 2005.
4. Sachdeva R C, "Fundamentals of Engineering Heat and Mass Transfer", 4th edition, New Age International Publishers, New Delhi, 2010.
5. Nag P K., "Heat and Mass Transfer", Tata McGraw Hill Publishing Company, New Delhi, 2004.
6. Suhas V Patankar, "Numerical Heat transfer and fluid flow", ane books, 1st edition series in computational methods in mechanics and thermal sciences.
7. Frank P Incropera and David P Dewitt, "Heat and Mass Transfer", 5th edition 2001, Wiley.
8. Donald Q Kern, "Process Heat Transfer", TMH.

OUTCOMES:

The student should be able to

- Conceptualize and apply the different modes of heat transfer to real applications.
- Solve the real time problems with the help of HMT data book.
- Design heat exchangers to suit specific requirements.

MEC3214	HEAT AND MASS TRANSFER LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To experimentally study the different modes of heat transfer.
- To determine the parameters such as thermal conductivity, heat transfer coefficient and Stefan Boltzmann constant.

LIST OF EXPERIMENTS:

1. Thermal conductivity measurement of pipe insulation using lagged pipe apparatus.
2. Thermal conductivity of metal rod.
3. Thermal Conductivity of liquids.
4. Heat transfer through composite wall.
5. Thermal conductivity measurement using guarded plate apparatus.
6. Determination of heat transfer coefficient under natural convection from a vertical cylinder.
7. Determination of heat transfer coefficient under forced convection from a tube.
8. Heat transfer from pin-fin (natural & forced convection modes)
9. Determination of Stefan – Boltzmann constant.
10. Determination of emissivity of a grey surface.
11. Heat transfer studies on pool boiling.
12. Effectiveness of Parallel / counter flow heat exchanger.
13. Drop and Film-wise condensation study
14. Transient heat conduction study

L – 0; P – 30; Total Hours –30

OUTCOMES:

Students should be able to

- apply heat laws and equations to measure heat transfer.

MEC3215	CNC LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To learn part programming for CNC machines.
- To practice tool path simulation in CAD/CAM software.
- To generate NC code for CNC controllers from 3D models.
- To familiarize interfacing between software and machines.

LIST OF EXPERIMENTS:

CNC Lathe:

1. Part programming for Linear and Circular interpolation.
2. Part programming using standard canned cycles for Turning.

CNC Mill:

1. Part programming for Linear, Circular interpolation and Contour motions.
2. Part programming involving canned cycles for Drilling, Peck drilling and Boring.

Modelling and Simulation in CAD/CAM software:

1. Tool path generation and Mould design from 3D models using CAD/ CAM software.
2. Post processing for standard CNC Controllers like FANUC, Sinumerik etc.

Designing and realizing a product:

1. Design a simple product and its required tooling and simulate its 3D model.
2. Generate NC codes and interface with CNC machine to realize the product.

L – 0; P – 30; Total Hours –30

TEXT BOOKS:

1. Lab Manual.

REFERENCES:

1. P.N. Rao, “CAD / CAM Principles and Applications”, 2nd Edition, Tata Mc Graw Hill, 2004.
2. Ibrahim Zeid, “CAD/CAM - Theory and Practice”, McGraw Hill, International Edition, 1998.

OUTCOMES:

Students should be able to

- Write part programs and operate CNC lathe.
- Write part programs and operate CNC milling machine.
- Choose proper manufacturing processes and tooling for machining.
- Create 3D models and simulate tool path using CAM software.
- Perform post processing for various CNC controllers and interface with machines.
- Develop their ideas into CAD models and realize it in a CNC machine.

SEMESTER VII

MEC4101	FINITE ELEMENT ANALYSIS (INTEGRATED LAB)	L	T	P	C
		3	0	3	4

OBJECTIVES:

- To introduce the concept of mathematical modeling of engineering problems.
- To understand the principles of discretization and finite element formulation.
- To reveal the types of elements and its selection.
- To form and assemble stiffness matrices and force vectors for simple elements.
- To appreciate the use of FEM to a structural and thermal applications.
- To discover Isoparametric formulation and its importance.

MODULE I INTRODUCTION 12

Basic Concept, comparison with FDM and FVM, advantages and disadvantages, history of development, application. – Application to the continuum – Discretization – Governing equations for continuum – Variational methods - Weighted residual method.

MODULE II BASICS OF FINIETE ELEMENT FORMULATION 8

Finite Element Analysis of 1D Problems - Element type - Spring element, two noded line element - lower order and higher order element types - discretization, displacement function, shape function, formulation, element equations, assembly, boundary conditions, solution of equations- post processing, convergence criteria, examples from solid mechanics.

MODULE III BEAM ELEMENT AND ITS APPLICATIONS

Element Shape Functions - C0, C1 continuity- completeness and compatibility condition, formulation, element equations, assembly, boundary conditions, solution of equations and examples - types of beam and different loading conditions.

MODULE IV TWO DIMENSIONAL STRUCTURAL ANALYSIS

Theory of Elasticity – Plane Stress – Plain Strain and Axisymmeteric Concept – CST - LST - shape function - strain - displacement matrix - constitutive matrix - stiffness matrix - assembly - solutions - examples - finite element formulation of plate, dam, pipe, pressure vessels problems.

MODULE V ISOPARAMETRIC FORMULATION AND NUMERICAL INTEGRATION

Natural co-ordinate systems –Lagrangian Interpolation Polynomials-Serendipity Formulation- Isoparamatric Elements Formulation - Rectangular elements - Numerical integration – simple Problems using Gauss quadrature Technique.

MODULE VI FEA IN THERMAL ANALYSIS

Governing equation - 1D heat flow and finite element formulation – 2D thermal element and its formulation - Conduction and Convection - Simple problems - heat transfer in composite wall, fins

L – 45; T – 15; Total Hours –60

REFERENCES:

8. Krishnamoorthy C.S – “Finite Element Analysis: Theory and Programming”, Tata McGraw Hill Publishing Company .Ltd 1998.

OUTCOMES:

Students should be able to

- develop corresponding mathematical model for the engineering problems.
- write governing equations and solves them for boundary and initial value problems.
- assemble stiffness matrices and force vectors for simple elements.

- apply concepts of FEM to structural and thermal applications
- model any complex problem into a simple two dimensional problems.
- form and solve the stiffness matrices in natural coordinates.

MEC4102	MECHATRONICS (INTEGRATED LAB)	L	T	P	C
		3	0	3	4

OBJECTIVES:

- To study the interdisciplinary applications of electronics, electrical, mechanical and computer systems for the control of mechanical and electronic systems.
- To impart knowledge on the role of sensors, actuators, control, and machine intelligence in mechanical engineering.
- To gain knowledge on the concepts and techniques involved in mechatronic systems which are widely used in various industries.

MODULE I INTRODUCTION 12

Introduction to Mechatronics- Systems- Concepts of Mechatronics app roach – Need for Mechatronics- Emerging area of Mechatronics- Sequential controllers. Introduction to Sensors & Transducers – Performance Terminology- Sensors for motion and position measurement, force, torque, tactile, temperature sensors, ultrasonic sensors, hall-effect sensors. Selection of sensors for different applications, Signal Conditioning.

Hands on Practices in Following Sensors - Potentiometer, Strain gauge, Torque, LVDT, Hall effect, speed, Vibration, Pressure - Practices on Transducer – Temperature, optical - operational amplifier circuits.

MODULE II ACTUATORS 12

Review of Pneumatic and Hydraulic Systems - Control Valves, Actuators. Review of Mechanical Actuation Systems – Electrical Actuation Systems – Mechanical Switches, Solid State Switches, Solenoids, Construction and working principle of DC and AC Motors –speed control of AC and DC drives, Stepper Motors-switching circuitries for stepper motor.

Hands on Practices in Electro Pneumatic trainer kit and simulation software.

MODULE III PROGRAMMABLE LOGIC CONTROLLER 8

Programmable Logic Controllers –Basic Structure, Input / Output Processing, Programming, Mnemonics, Timers, Internal relays and counters, Shift Registers, Master and Jump Controls, Data Handling, Analogs Input / Output, Selection of a PLC.

Hands on Practices in Simulation of real life automation viz., bottling plant and punching operation using PLC Ladder Diagram

MODULE IV SYSTEM MODELS 9

System Models - Building blocks of Mechanical, Electrical, Fluid and Thermal Systems, Modeling spring, mass & damper systems, Rotational –Translational Systems, Electromechanical Systems, and Hydraulic –Mechanical Systems.

Hands on Practices in the development of an obstacle avoidance robot using servo motors, ultrasonic and touch sensors, Measurement of damping ratio of a machine tool base from free vibration studies using an impact hammer and an accelerometer pick up with data acquisition system.

MODULE V SYSTEM CONTROLLERS 9

Closed-Loop Controllers - Continuous and discrete process Controllers, Control Modes –Two –Step mode, Proportional Mode, Derivative Mode, Integral Mode, PID Controllers –Digital Controllers –Velocity Control –Adaptive Control –Digital Logic Control.

Hands on Practices in control of speed, direction and number of revolutions of a stepper motor using PC interface, control valve characteristics, Level Process Stations.

MODULE VI DESIGN OF A MECHATRONICS SYSTEM 10

Mechatronics Design process-stages -Traditional and Mechatronics design concepts- Case studies of Mechatronics systems- Pick and place Robot, Autonomous mobile robot - Engine Management system- Automatic car park barrier- Robot walking machine. Introduction to data acquisition and control systems, virtual instrumentation, interfacing of various sensors and actuators with PC.

Hands on Practices in interfacing of a thermal sensor to monitor and control the temperature in a thermal chamber within a specified tolerance limits - Virtual process controls systems and Heating and Ventilation control using Data Acquisition techniques

L – 45; T – 15; Total Hours –60

REFERENCES:

5. Bradley D. A., Dawson D., Buru N.C. and. Loader A.J, “Mechatronics”, Chapman and Hall, 1993.
6. Dan Necsulesu, “Mechatronics”, Pearson Education Asia, 2002 (Indian Reprint).
7. Lawrence J. Kamm, “Understanding Electro –Mechanical Engineering”, An Introduction to Mechatronics, Prentice –Hall of India Pvt., Ltd., 2000.

OUTCOMES:

Students will be able to

- Identify the elements of a mechatronic system.
- Select suitable sensors and actuators to meet specific requirement.
- Design basic system model.
- Utilize suitable controller for a given system
- Able to build a mechatronics system using PLC
- Design mechatronic system for engineering application

MEC4103	DESIGN OF TRANSMISSION SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To gain knowledge on the principles and procedure for the design of power transmission components.
- To understand the standard procedure available for Design of Transmission systems.
- To learn to use standard data and catalogues.

MODULE I DESIGN OF BELT AND CHAIN DRIVES 8

Introduction : Selection of Flat belts and pulleys – Selection of V belts and pulleys – Wire ropes and pulleys-Selection of Transmission chains and Sprockets. Design of pulleys and sprockets.

MODULE II SPUR GEARS AND PARALLEL AXIS HELICAL GEARS 9

Gear Terminology-Speed ratios and number of teeth-Force analysis – Tooth stresses – Dynamic effects – Fatigue strength – Factor of safety – Gear materials – Module and Face width-power rating calculations based on strength and wear considerations – Parallel axis. Helical Gears – Pressure angle in the normal and transverse plane – Equivalent number of Teeth-forces and stresses. Estimating the size of the helical gear.

MODULE III BEVEL, WORM GEARS AND CROSSED HELICAL GEARS 9

Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth estimating the dimensions of pair of straight bevel gears. Worm Gear: Merits and demerits –Terminology. Thermal Capacity, Materialsforces and stresses, efficiency, estimating the size of the worm gear pair. Crossed -helical Terminology-helix angles – Estimating the size of the pair of Crossed-helical gears.

MODULE IV DESIGN OF GEAR BOXES 9

progression – Standard step ratio – Ray diagram, kinematic layout – Design of Sliding mesh gear box- Constant mesh gearbox – Design of multi speed gear box.

MODULE V DESIGN OF CAMS 5

Cam Design: Types-pressure angle and under cutting base circle determination-forces and Surface stresses.

MODULE VI DESIGN OF CLUTCHES AND BRAKES 5

Design of plate clutches – axial clutches-cone clutches-internal expanding rim clutches-internal and external shoe brakes. Case Studies and Mini Projects

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Shigley J.E and Mischke C. R., “Mechanical Engineering Design”, Sixth Edition,Tata McGraw-Hill , 2003.
2. Sundararajamoorthy T. V and Shanmugam .N, "Machine Design", Anuradha Publications, Chennai, 2003.

REFERENCES:

1. Maitra G.M. and Prasad L.V., “Hand book of Mechanical Design”, II Edition, Tata McGraw-Hill, 1985.
2. Bhandari, V.B., “Design of Machine Elements”, Tata McGraw-Hill Publishing Company Ltd., 1994.
3. Prabhu. T.J., “Design of Transmission Elements”, Mani Offset, Chennai, 2000,
4. Hamrock B.J., Jacobson B. and Schmid S.R., “Fundamentals of Machine Elements”, Tata McGraw-Hill Book Co., 1999.
5. Ugural A,C, "Mechanical Design, An Integrated Approach", Tata McGraw-Hill,2003.

STANDARDS:

1. 1.IS 4460 : Parts 1 to 3 : 1995, Gears – Spur and Helical Gears – Calculation of Load Capacity.
2. IS 7443 : 2002, Methods of Load Rating of Worm Gears
3. IS 15151: 2002, Belt Drives – Pulleys and V-Ribbed belts for Industrial applications – PH, PJ, PK, Pl and PM Profiles : Dimensions
4. IS 2122 : Part 1: 1973, Code of practice for selection, storage, installation and maintenance of belting for power transmission : Part 1 Flat Belt Drives.
5. 5. IS 2122: Part 2: 1991, Code of practice for selection, storage, installation and maintenance of belting for power transmission : Part 2: V-Belt Drives.

OUTCOMES:

The students should be able to

- use standard design data and catalogues.
- design different types of power transfer devices.
- design gear box assembly, Cams, brakes etc..

MEC4104	SIMULATION LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To realize the importance of Computational efficiency in simulation of Real time Mechanical systems.
- To Implement Dynamics and control problems in Vibratory systems.
- To learn vibration pattern in vibratory systems with damping and without damping.
- To implement automation systems by virtual simulation and analysis of Real Time systems.

LIST OF EXPERIMENTS

1. Simulation of simple pendulum.
2. Simulation of Double pendulum.
3. Single degree of freedom spring-mass system with free and forced vibration.
4. Single degree of freedom spring-mass-damper system with free and forced vibration.
5. Two degree of freedom spring-mass system with free and forced vibration.
6. Two degree of freedom spring-mass-damper system with free and forced vibration.
7. Implementation of PID controller in Tuning and control of above dynamic systems.
8. Simulation of Four bar mechanism.
9. Simulation of Simple pendulum.
10. Simulations of Slider crank mechanism.
11. Simulation of Single link Robot Arm.
12. Simulation of Hydraulic system with Single-Acting Cylinder.
13. Simulation of Elevator system.
14. Simulation of Hydraulic system with Double-Acting Cylinder.

OUTCOMES:

The students should be able to

- simulate and study different systems and mechanisms.
- acquire knowledge on automation through virtual simulation of real time systems

MEC4105	AUTOMOBILE LAB	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To study the various components of vehicle by dismantling and assembling
- To study the functions and performance of various automobile systems

LIST OF EXPERIMENTS

1. Dismantling & Assembling of petrol engine.
2. Dismantling & Assembling of diesel engine.
3. Study of oil filter, fuel filter, fuel injection system, carburetor, MPFI
4. Study of ignition system components – coil, magneto and electronic ignition systems.
5. Study of engine cooling system components
6. Study of engine lubrication system components
7. Dismantling & Assembling of Differential
8. Dismantling & Assembling of gear box
9. Dismantling & Assembling of Clutch assembly

L – 45; T – 15; Total Hours –60

OUTCOMES:

Student should be able to

- understand the function of various automobile components.
- dismantle and assemble various components of a vehicle.

MEC4106	INTERNSHIP	L	T	P	C
		0	0	0	1

Students must undergo two weeks industrial training to gain practical experience.

SEMESTER VIII

MEC4211	PROJECT WORK	L	T	P	C
		0	0	24	12

OBJECTIVES:

- To practice the knowledge gained from all the courses
- To develop individual responsibility and team work

Students should do a project which involves themselves with innovative ideas of design, fabrication, analysis, Industrial problem solving, new development.

Frequently, progress in the project work is evaluated by conducting reviews.

At end semester students should appear for their project viva-voce and submit the reports.

OUTCOMES:

Student can able to

- Examine a part or product feasibility
- Develop a real time working model
- Planning of activities and time management skills.
- Fault diagnosis of industrial parts.

PROGRAMME ELECTIVES
DESIGN ELECTIVES

		L	T	P	C
MECX01	**ADVANCED STRENGTH OF MATERIALS**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To understand the stress strain relations and location of shear centers.
- To study and analyze stress and deflections in curved beams.
- To understand the stresses in flat plates.
- To study and analyze torsional stresses in thin walled tubes and non-circular sections.
- To understand the stresses in rotary sections and contacts.

MODULE I STRESS AND STRAIN RELATIONS 8

Elastic and Inelastic response of a solid, Transformation of stress, strain, principal stresses and strains, general equations of elasticity in Cartesian, Polar and spherical coordinates, differential equations of equilibrium-compatibility- boundary conditions. Representation of three dimensional stress of a tension, generalized hook's law – St. Venant's principle-plane stress-Airy's stress function.

MODULE II SHEAR CENTRE 7

Shear Centre – Location of shear centre for various sections: thin wall beam cross section, channel section, box beams, beams formed from stringers and thin webs-shear flows.

MODULE III UNSYMMETRICAL BENDING 8

Flexible Members – Circumference and radial stresses-deflections-curved beam with restrained ends-closed ring subjected to concentrated load and uniform load-chain links and crane hooks.

MODULE IV FLAT PLATES 7

Stresses in circular and rectangular plates due to various types of loading and end conditions, buckling of plates.

MODULE V TORSION OF NON-CIRCULAR SECTIONS 8

Torsion of rectangular cross section – S.Venants theory – elastic membrane analogy, Prandtl's stress function. Torsional stress in hollow thin walled tubes.

MODULE VI STRESSES DUE TO ROTARY SECTIONS & CONTACTS 7

Radial and tangential stresses in solid disc and ring of uniform thickness and varying

thickness allowable speeds. Contact Stresses – Methods of computing contact stress - deflection of bodies in point and line contact applications.

Total Hours –45

REFERENCES:

1. Boresi A.P., Schmidt R.J., “Advanced Mechanics of Materials”, John Wiley and Sons, Sixth edition, 2003.
2. Seely and Smith, "Advanced Mechanics of Materials", John Wiley International Edn, 1952.
3. Timoshenko and Goodier, "Theory of Elasticity", McGraw Hill.
4. Wang, "Applied Elasticity", McGraw Hill.
5. Robert D. Cook, Warren C. Young, "Advanced Mechanics of Materials", Mcmillan pub. Co., 1985.

OUTCOMES:

Students will be able to

- Analyze two and three dimensional complex stress problems.
- Identify the shear centers for different sections.
- Compute stresses and deflections in curved beams subjected to unsymmetrical loading.
- Critique stresses in flat plates.
- Analyze and solve torsion of non-circular sections.
- Evaluate problems arising from stresses in rotary sections and contact applications.

MECX02	COMPOSITE MATERIALS FOR MANUFACTURE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the fundamentals of mechanics and manufacturing methods of composites.
- To study and analyze the behavior of composite materials.

MODULE I INTRODUCTION 9

Fundamentals of composites - Need for composites - Matrix materials - Properties- Reinforcement - Fibres - Glass fibre, Aramid fibre, Carbon fibre, boron fibre - Fabrication - Properties - Applications - Comparison of fibres - Particulate and whisker reinforcements. Matrix Reinforcement Interface - Wettability - Effect of surface roughness - Interfacial bonding - Methods for measuring bond strength.

MODULE II POLYMER MATRIX COMPOSITES 8

Polymer matrix resins - Thermosetting resins -Thermoplastic resins – PMC Processes - Hand layup and spray processes - Compression moulding - Reinforced reaction injection moulding - Resin transfer moulding - Pultrusion- Filament winding - Injection moulding - Fibre Reinforced Plastics (FRP) – Glass fibre Reinforced Plastics(GRP).

MODULE III METAL MATRIX COMPOSITES 8

Characteristics - Types - Alloy vs. MMCs - Advantages - Limitations – Metallic materials - Reinforcement - Particles - Fibres - Effect of reinforcement – Volume fraction - Rule of mixtures - Processing of MMCs - Solid state, liquid state, deposition and insitu - Applications.

MODULE IV CERAMIC MATRIX COMPOSITES 8

Engineering ceramic materials - Properties - Advantages - Limitations – Need for CMCs - Processing - Hot pressing, liquid infiltration technique, Lanxide process, insitu chemical reaction techniques - CVD, CVI, Solgel process - Interface in CMCs - Applications.

MODULE V MICROMECHANICS 6

Micromechanics models for stiffness - Micromechanics models for strength - Thermal and moisture effects.

MODULE VI FATIGUE AND CREEP IN COMPOSITE MATERIALS 6

Fatigue - S-N curves - Fatigue behavior of CMCs - Fatigue of particle and whisker

reinforced composites -Hybrid composites - Thermal fatigue - Creep.

Total Hours –45

7. Derek Hull, “Introduction to Composite Materials”, Cambridge University Press, 1988.
8. Handbook of Composites - American Society of Metals, 1990.

OUTCOMES:

Students will be able to

- Familiar with the mechanics and manufacturing methods of different types of composites.
- Analyze the behavior of composite materials.

MECX03 DESIGN OF HYDRAULICS AND PNEUMATICS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn the advantages and applications of fluid power engineering and power transmission system.
- To learn the applications of fluid power system in automation of machine tools and others equipment.

MODULE I FLUID POWER PRINCIPLES & REVIEW OF FUNDEMENTALS **7**

Introduction to Fluid power- Advantages and Applications- Fluid power systems – Types of fluids- Properties of fluids Basics of Hydraulics – Pascal's Law- Principles of flow – Work, Power and Torque. Properties of air– Perfect Gas Laws. General types of fluids – fluid power symbols.

MODULE II HYDRAULIC SYSTEM AND COMPONENTS **8**

Sources of Hydraulic power: Pumping Theory – Pump Classification-Gear , vane and piston pumps - Construction, Working, Advantages, Disadvantages, Performance-Variable displacement pumps.Fluid power actuators: Linear hydraulic actuators – Types of hydraulic cylinders – single & double acting – special cylinders like tandem, rodless, Telescopic, cushioning Mechanism, construction of double acting cylinder, Rotary Actuator – Fluid motors, Gear, Vane and piston motors. Construction of control components – DCV – 3/2 , 4/ 2 valves – shuttle valve – check valve – pressure control valve – pressure reducing valve, sequence valve, flow control valve- Fixed and adjustable, electrical control solenoid valves, relays, ladder diagrams.

MODULE III DESIGN OF HYDRAULIC CIRCUITS **7**

Reciprocating, quick return, sequencing, synchronizing circuits, simple industrial circuits – Press circuits, earth movers, grinding machines. Safety and emergency emergency modules. Accumulators and intensifiers: Types, sizing and applications.

MODULE IV PNEUMATIC SYSTEM **8**

Compressors- Filter, Regulator, Lubricator, Muffler, Air control Valves, Quick Exhaust valves, Pneumatic actuators, Servo systems. Fluid power design, speed control circuits, synchronizing circuit, Pneumo hydraulic circuit, and sequential circuit design for simple industrial applications using cascade methods.

MODULE V DESIGN OF HYDRALIC AND PNEUMATIC CIRCUITS 8

Servo systems – hydro mechanical servo systems, electro hydraulic servo systems and proportional valves. Introduction to electro hydraulic pneumatic logic circuits, ladder diagrams, PLC applications in fluid power control. Fluid power circuits.

MODULE VI TROUBLESHOOTING AND MAINTENANCE 7

Common faults in hydraulic system, Procedure for repair, contamination, Component fittings and failure due to contaminants, Filter and filter maintenance, Pump maintenance, hydraulic system maintenance, performance monotoring General safety measures for fluid power system.

Total Hours –45

REFERENCES:

1. Anthony Esposito," Fluid Power with Applications", PHI / Pearson Education, 2005.
2. Shanmugasundaram.K, "Hydraulic and Pneumatic controls", Chand & Co, 2006.
3. Majumdar, S.R., "Oil Hydraulics Systems- Principles and Maintenance", Tata McGraw Hill, Fourth Reprint 2003.
4. Majumdar, S.R., "Pneumatic Systems – Principles and Maintenance", Tata McGraw Hill, 2007.
5. Dudelyt, A Pease and John J Pippenger, "Basic Fluid Power", Prentice Hall, 1987.

OUTCOMES:

Students will be able to

- Design pneumatic and hydraulic circuits for industrial automation.

MECX04	NOISE, VIBRATION AND HARSHNESS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart fundamental knowledge in the area of mechanical vibration and noise.
- To understand the fundamental knowledge on vibrating systems.
- To understand how to model the physical vibrating systems mathematically and the basic behavior of vibration measuring instruments and their industrial applications.
- To understand the fundamental of noise and its control.

MODULE I INTRODUCTION 7

Introduction to Noise, Vibration and Harshness (NVH) and its role in automotive and industrial applications. Sources of vibration and noise. Physiological effects of noise and vibration. Vibration and noise standards and limit.

MODULE II BASICS OF NOISE 8

Basic concept about sound. Sound intensity measurements. Sound propagation characteristics. Acoustic parameters. Sound pressure level and sound intensity; frequency and time weightings. Assessment of combustion noise, assessment of mechanical noise, engine radiated noise, intake and exhaust noise, engine accessory contributed noise, transmission noise, aerodynamic noise, tyre noise, brake noise.

MODULE III MODELING OF VIBRATING SYSTEMS 7

Relevance and need for vibration analysis – Mathematical modeling of Vibrating Systems – Discrete and Continuous systems - Single degree of freedom Systems – Free and Forced Vibrations- Various Damping Models.

MODULE IV VIBRATION MEASUREMENTS 8

Vibration Monitoring. Data Acquisition. Vibration Parameter Selection. Vibration Sensors. Accelerometers. Performance Characteristics. Sensor Location Signal. Preamplifications. Types of Preamplifiers. Real Time Analysis. Digital Fourier Transforms. FFT Analysis. Vibration Meters. Vibration Signatures. Standards. Vibration Testing Equipment. Modal analysis.

MODULE V NOISE CONTROLLING METHODS 7

Methods for control of engine noise, combustion noise, mechanical noise, predictive analysis, palliative treatments and enclosures, automotive noise control principles, sound in enclosures, sound energy absorption, sound transmission through barriers.

MODULE VI VIBRATION CONTROLLING TECHNIQUES 8

Methods of vibration control. Excitation reduction at source, Balancing of rigid, flexible and variable mass rotors. Dynamic properties and selection of structural materials. Vibration absorbers. Tuned absorber. Tuned and damped absorber. Untuned viscous damper. Vibration isolation. Harshness. Sources and its Effects, Measurement and control.

Total Hours –45

7. Clarence W. de Silva. (2007) Vibration Monitoring, Testing, and Instrumentation, CRC Press.
8. M. Harrison. (2004) Vehicle Refinement: Controlling Noise and Vibration in Road Vehicles, Elsevier Butterworth-Heinemann.

OUTCOMES:

Student should be able to

- Understand the basic physics of sound and acoustic parameters.
- Model and analyze the vibration systems.
- Measure and control Noise and vibrations.

MECX05	DESIGN OF JIGS, FIXTURES AND PRESS TOOLS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the functions and design principles of Jigs, fixtures and press tools.
- To gain proficiency in the development of the final design.

MODULE I PURPOSE TYPES, FUNCTIONS OF JIGS AND FIXTURES 5

Tool design objectives - Production devices - Inspection devices – Materials used in Jigs and Fixtures – Types of Jigs - Types of Fixtures.

MODULE II CLAMPS AND TOLERANCE 3

Types of clamps - Mechanical actuation-pneumatic and hydraulic actuation Analysis of clamping force-Tolerance and error analysis.

MODULE III JIGS 9

Drill bushes –different types of jigs-plate latch, channel, box, post, angle plate, angular post, turnover, pot jigs-Automatic drill jigs-Rack and pinion operated. Air operated Jigs components. Design and development of Jigs for given components.

MODULE IV FIXTURES 9

General principles of boring, lathe, milling and broaching fixtures- Grinding, planning and shaping fixtures, assembly, Inspection and welding fixtures, Modular fixtures. Design and development of fixtures for given component.

MODULE V PRESS WORKING TERMINOLOGIES AND ELEMENTS OF DIES AND STRIP LAYOUT 6

Press working terminology-Presses and press accessories-Computation of capacities and tonnage requirements. Elements of progressive combination and compound dies:Die block-die shoe. Bolster plate-punch plate-punch holder-guide pins and bushes – strippers – knockouts-stops –pilots-Selection of standard die sets strip lay out-strip lay out calculations.

MODULE VI DESIGN AND DEVELOPMENT OF DIES 6

Design and development of progressive and compound dies for Blanking and piercing operations. Bending dies – development of bending dies-forming and drawing dies-Development of drawing dies. Design considerations in forging, extrusion, casting and plastic dies.

Total Hours –45

TEXT BOOKS:

4. “Fundamentals of Tool Design”, CEEE Edition, ASTME, 1983.
5. Design Data Handbook PSG College of Technology, Coimbatore.

OUTCOMES:
Students will be able to

- Apply the functions and design principles of Jigs, fixtures and press tools.

MECX07	GEOMETRIC MODELLING	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To understand the basics of mathematical representation of geometry
- To understand the modeling techniques and tools
- To understand the basics of modeling algorithms
- To understand the graphics standards and applications

MODULE I INTRODUCTION AND PRINCIPLES OF COMPUTER GRAPHICS 10

The design process and the role of CAD/CAM - Defining the modeling schemes: wire frame geometry, surface representation, Solid modeling – Elements of interactive computer graphics: Introduction, input and output devices, raster graphics, 2D (Translations, Rotation, Scaling and Shear) and 3D transformation (Translations, Rotation, Scaling, Shear, Orthographic and Perspective Projections), Windows to View port transformation, Clipping, Hidden line removal, Hidden Surface removal.

MODULE II LINES AND CURVES 10

Introduction to Equations - Implicit, explicit, parametric - Line Drawing Algorithm – Circles - Introduction to curves, parametric continuity condition, geometric continuity condition, Conics, Spline representation, Hermite Curves (Algebraic and Geometric Forms, Basis Functions, Matrix Form, Tangent Vectors, Truncating and Sub-dividing, 3-point and 4-point interpolation), Bézier Curves (Bézier basis functions, control points, truncating and subdividing, composite Bézier curve, characteristics of Bézier curve), B-Spline Curves (Uniform and Nonuniform B-Spline basis function, Quadratic and Cubic B-Spline basis function, Closed B-Spline Curve, Continuity, NURBS, Representation of conics with NURBS).

MODULE III SURFACES AND SOLDS 10

Surfaces: Introduction, Implicit and explicit function of surfaces, types of surfaces, Surface Representation, Surface Analysis (Tangent, Normal, Twist, Distance Calculation, Curvature, Tangent Plane), Plane Surface, Ruled Surface, Surfaces of Revolution, Tabulated Surfaces, Hermite Bi-cubic surface, Bézier Surface, Coons Surface, Introduction, Solid Representation, Properties of Solid model, Regularized Boolean set operations, Primitive instancing, Sweep representations, Boundary representations (B-rep), Constructive Solid Geometry (CSG), Comparison of representations.

Total Hours –30

REFERENCES:

2. Geometric Modelling M Mortenson Industrial Press.
3. CAD / CAM: Theory and Practice Ibrahim Zeid McGraw-Hill
4. Mathematical Elements of Computer Graphics David F Roger McGraw Hill
5. Computer Graphics: C Version Hearn and Baker Pretice Hall of India
6. Curves and Surfaces for CAGD: A Practical Guide 5/e, Gerald Farin Morgan Kaufmann
7. Computer Graphics and Geometric Modelling David Salomon Springer.
8. Computer Aided Engineering Design Anupam Saxena and Birendra Sahay Springer
9. Mechanical Assemblies: Their Design, Manufacture, and Role in Product Development D E Whitney Oxford Press

OUTCOMES:

The students should be able to

- Apply the mathematical representation of various geometries used in CAD/CAM.
- Perform the background activities/algorithms used in of modeling techniques.
- Compile the basic geometry commands used in different software to create the basic geometry.
- Predict the mathematical representations used to for different curves

MECX08	REVERSE ENGINEERING	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To explain reverse engineering and its scope
- To learn the tools for reverse engineering
- To study the concepts of reverse engineering
- To enlighten the students on data management
- To study different integration methods of reverse engineering

MODULE I INTRODUCTION & TOOLS FOR REVERSE ENGINEERING 10

Scope and tasks of reverse engineering - Domain analysis- Process of duplicating - Functionality- Dimensional- Developing technical data - Digitizing techniques - Construction of surface model - Solid-part material- Characteristics evaluation - Software and application- Prototyping – Verification - History of reverse engineering – Preserving and preparation for the four stage process – Evaluation and verification- Technical data generation, Data verification, Project implementation.

MODULE II DATA MANAGEMENT 10

Data reverse engineering – Three data reverse engineering strategies – Definition – Organization data issues - Software application – Finding reusable software components – Recycling real-time embedded software – Design of experiments to evaluate a reverse engineering tool – Rule based detection for reverse engineering user interfaces – Reverse engineering of assembly programs: A model based approach and its logical basics.

MODULE III INTEGRATION 10

Cognitive approach to program understated – Integrating formal and structured methods in reverse engineering – Integrating reverse engineering, reuse and specification tool environments to reverse engineering - Coordinate measurement – Feature capturing – Surface and solid members.

Total Hours –30

REFERENCES:

1. Bigger staff T J, Design Recovery for Maintenance and Reuse, IEEE Corpn. July 1991.
2. Rugaban S, White paper on RE, Technical Report, Georgia Instt. Of Technology, 1994.

5. Linda Wills, Reverse Engineering, Kluiver Academic Publishers, 1996
6. Donald R. Honsa, Co-ordinate Measurement and reverse engineering, American Gear Manufacturers Association.

OUTCOMES:
Students should be able to

- Describe about reverse engineering and its scope
- Use relevant tools for reverse engineering
- Apply the concepts of reverse engineering
- Practice data management
- Synthesize various integration methods of reverse engineering

MECX09	RELIABILITY ENGINEERING	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To familiarize probability theory and determine system reliability for series, parallel and mixed configurations.
- To understand the features of redundancy and fault tree analysis
- To understand the various aspects of Maintainability, Availability and Repairable systems.

MODULE I RELIABILITY CONCEPTS 10

Probability concept-Definition of reliability-Failure data analysis: Mean time to failure and Mean time between failure- Bathtub curve and Hazard Model: Constant Hazard and linearly Increasing Hazard- System reliability: Series configuration, parallel configuration and mixed configurations. System Relaiblity Problems.

MODULE II RELIABILITY IMPROVEMENT AND FAULT TREE ANALYSIS 10

Improvements of components – Redundancy: Element redundancy, unit redundancy- Standby redundancy- Reliability cost Trade off- Redundancy problems- Fault Tree Construction- Calculation of Reliability from Fault tree.

MODULE III MAINTAINABILITY/ AVAILABILITY AND REPAIRABLE SYSTEMS 10

Maintainability approach, Availability aspect, System down time, Availability types: Inherent Availability, Achieved availability and operational availability- Reliability and Maintainability trade off- Instantaneous repair rate- Mean time to repair.

Total Hours –30

REFERENCES:

1. L.S.Srinath," Reliability Engineering" , Affiliated East West (PVT) Ltd, New Delhi
2. Patrick D To' corner " Practical Reliability Engineering" , John Wiley and sons Inc, 2002.

5. Dhillon , Engineering Maintainability – How to design for reliability and easy maintenance, PHI, 2008

6. David J Smith, Reliability, maintainability and Risk: Practical Methods for Engineers, Butterworth 2002.

OUTCOMES:
Students will be able to

- Able to apply the concept of Probability to engineering problems and able to estimate system reliability of simple and complex systems.
- Able to determine redundancy for various combinations of reliability system
- Aware about Maintainability, Availability and repair systems for reliability of components.

MECX10	MICRO ELECTRO MECHANICAL SYSTEMS (MEMS)	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To understand the design, fabrication and application of Micro Electro Mechanical Systems (MEMS).

MODULE I INTRODUCTION 8

MEMS and Microsystems, Miniaturization, Typical products, Micro sensors, Micro accelerometers, Micro actuators, Micro fluidics, Bio chemical micro system - Static bending of thin plates, Configurations of accelerometers, Thermo mechanics, Fracture mechanics, Thin film mechanics.

MODULE II MICRO SENSORS AND MICRO ACTUATORS 7

Pressure sensors, Thermal sensors, Electrostatics: basic theory, Gap and finger pull up, Electro static actuators, Comb generators, Inchworms, Electromagnetic actuators, Bistable actuators, Micro motors.

MODULE III CIRCUIT AND SYSTEM DESIGN ISSUES 7

System types, Basic modeling elements in system, Feedback systems, Noise, Modeling of MEMS systems, CAD for MEMS, Capacitive accelerometers.

MODULE IV MEMS MATERIALS AND FABRICATION TECHNOLOGIES 8

MEMS materials, Substrates and wafers, Micro system fabrication: Photolithography, Etching techniques, CVD process, Oxidation, Diffusion, Micro machining process: Bulk micro machining, Surface micro machining, and LIGA process.

Total Hours –30

TEXT BOOKS:

1. Stephen Santeria," Microsystems Design", Kluwer publishers, 2000.

REFERENCES:

1. Nadim Maluf," An introduction to Micro electro mechanical system design", Artech House, 2000.
2. Mohamed Gad-el-Hak, editor," The MEMS Handbook", CRC press Baco Raton,2000.
3. Tai Ran Hsu," MEMS & Micro systems Design and Manufacture" Tata McGraw Hill, New Delhi, 2002.

4. Nitaigour Premchand Mahalik “MEMS” McGraw hill education (India) private limited, 2007.

OUTCOMES:
Students will be able to

- Identify various products in MEMS and their application in Industries.
- Analyze and evaluate their performance of the MEMS components.
- Explain the working functions of various MEMS components.
- Design the new model and application of CAD in MEMS.
- Explain the development of advanced MEMS components and their applications.
- Identify suitable materials and fabrication methods for manufacturing MEMS components.

MECX11	GEOMETRIC DIMENSIONING AND TOLERANCING	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To teach the principles of geometric product definition
- To educate the students on types of tolerances.

MODULE I INTRODUCTION 5

Introduction to limits fits and tolerances – GDNT definitions and importance –Datum reference frame – Feature control frame - MMC & LMC – General Rules – Datum System.

MODULE II PRINCIPLES OF MEASUREMENT FOR GEOMETRIC CHARACTERISTICS 10

Geometric characteristic symbols and meanings – Form tolerances – Profile tolerances – Location tolerances – Runout tolerances – Orientation tolerances – True position theory – Dimensional and tolerance schemes.

Total Hours –15

REFERENCES:

1. ASME Y – 14.5
2. Rao Ming, Harry Peck, “Designing for Manufacture”, Pitman Publications, London, 1983.
3. Krulikowski. A, “Fundamentals of Geomtric Dimensioning and Tolerancing”, Delmar Publishers – New York, 1997
4. Spotts.M.F, “Dimensioning and Tolerance for Quality Production”, Prentice Hall Inc., New Jersey, 1983.
5. Oliver R Wade, “Tolerance Control in Design and Manufacturing”, Industrial Press Inc., New York, 2008.

OUTCOMES:

Students should be able to

- Analyze situations and proceed to the logical end to solve product’s geometric definitions in order to function and be cost effective
- Totally consider function, manufacturing process and inspection methods in order to guarantee function with reduction in manufacturing and inspection cost

MECX12	TOOL AND DIE DESIGN	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To teach the principles of geometric product definition
- To educate the students on types of tolerances.

MODULE I DESIGN OF CUTTING TOOLS 8

Single Point Cutting Tools: Classification, Nomenclature, geometry, design of single point tools for lathes, shapers, planers etc. Chip breakers and their design. Multipoint Cutting Tools: Classification and specification, nomenclature, Design of drills, milling cutters, broaches, taps etc. Design of Form Tools: Flat and circular form tools, their design and applications.

MODULE II DESIGN OF DIES 7

Classification of dies, Design of Dies for Bulk metal Deformation-Wire Drawing, Extrusion, Forging and Rolling; Design of Dies for Sheet metal: Blanking and Piercing, Bending and Deep-drawing; Design of Dies used for Casting and Moulding, Powder Metallurgy die design.

Total Hours –15

REFERENCES:

2. Pollack, H.W., “Tool Design” Reston Publishing Company, Inc. 1976.
3. Joshi, P.H., “Jigs and Fixtures, Tata Mc-Graw Hill, 2003
4. Grant, H,E., “Jigs and Fixtures, Tata Mc-Graw Hill, 2006
5. Kempster, M.H.A., “Principles of Jig and Tool Design”, English University Press Ltd.,1968.

OUTCOMES:

Students should be able to

- Increase their employability skills
- Develop innovative ideas work holding methods

THERMAL ELECTIVES

MECX21	REFRIGERATION AND AIR CONDITIONING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the principles of refrigeration and air conditioning.
- To learn the principles of psychrometry, cooling and heating load calculations.
- To acquire knowledge of system components of refrigeration and air conditioning.

MODULE I REFRIGERATION SYSTEMS 7

Review of thermodynamic principles of refrigeration – Concept of air craft refrigeration system- Vapour compression refrigeration system – use of PH charts- Multi stage and multi evaporator systems- Cascade system- COP comparison- Vapour Absorption system- Ammonia water and lithium Bromide water systems-Steam jet refrigeration system.

MODULE II REFRIGERANTS AND COMPONENT SELECTION 8

Compressors- reciprocating and rotary (elementary treatment)-condensersevaporators- ooling towers-Refrigerants-Properties- selection of refrigerants, alternate refrigerants, refrigeration plant controls- testing and charging of refrigeration units. Balancing of system components. Application to refrigeration systems-ice plant-food storage plants-milk chilling plants-refrigerated cargo ships.

MODULE III PSYCHROMETRY 7

Psychrometric Processes-use of psychrometric charts- Grand and Room Sensible Heat Factors-by bass factor-requirements of comfort air conditioningcomfort charts-factors governing optimum effective temperature, recommended design condition and ventilation standards.

MODULE IV COOLING LOAD CALCULATION 8

Types of load – design of space cooling load- heat transmission through building. Solar radiation–infiltration – internal heat sources (sensible and latent heat)-outside air and fresh air load-estimation of total load-domestic, industrial systems- central air conditioning systems.

MODULE V AIR CONDITIONING SYSTEMS 7

Air conditioning equipment – air cleaning and filters-humidifiers-dehumidifiers air

washers-condensers-cooling tower and spray ponds.

MODULE VI AIR CONDITIONING SYSTEM DESIGN & CONTROLS 8

Design of summer and winter air conditioning systems-Elementary treatment of duct design- Air distribution system- Temperature, Pressure and Humidity sensors, Actuators- Thermal insulation of air conditioning system – Applications: Car, industry, Stores and public buildings.

L – 45; T – 0; Total Hours –45

7. R.C. Jordan and G.B. Priester, “Refrigeration & Air conditioning” – Prentice Hall of India. Manohar Prasad, “Refrigeration and Air conditioning”, Wiley Eastern Ltd, 1983.

OUTCOMES:

- Student will be able to design refrigeration and air conditioning systems and solve the related issues.

MECX22	ADVANCED I.C. ENGINES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To acquire an overview about various systems in I C engines.
- To study the combustion process in I C engines.
- To learn about automobile emissions, use of alternate fuels and the recent developments.

MODULE I FUEL SUPPLY SYSTEM FOR IC ENGINE 7

Carburetion- Theory of carburetion, Mixture requirements for components in S.I Engines, Simple carburetor, Requirements of ignition system; types of ignition system- Direct and indirect- Monopoint, Multipoint injection – MPFI Types of Nozzles.

MODULE II COMBUSTION IN I.C. ENGINES 8

combustion phenomena S.I Engine– Normal and abnormal combustion – Factor affecting combustion in S.I. Engines, Combustion chamber for S.I engines, octane rating of fuels; knocking in S.I and C.I Engine- combustion phenomena C.I Engine– Normal and abnormal combustion - Factor affecting combustion in C.I. Engines, Combustion chamber for C.I engines, Cetane rating.

MODULE III ENGINE SYSTEM AND COMPONENTS 7

Ignition system, Lubrication system, Engine starting system, Engine cooling system, Governing system.

MODULE IV AIR POLLUTION FROM IC ENGINE AND ITS REMEDIES 8

Pollutants - sources - formation of carbon monoxide , unburnt hydrocarbon, NOx , Smoke and particulate matter – Method of controlling Emissions - Catalytic converters and particulate Traps - EGR – SER, Method of measurement – Emissions norms.

MODULE V ALTERNATIVE FUELS 8

Alcohol, Hydrogen, Compressed Natural Gas, LPG, Bio Diesel – properties, Suitability, Merits and Demerits – Engine Modifications.

MODULE VI RECENT TRENDS 7

HCCI - Variables Geometry turbochargers - CRDI- Free piston Engines, Plasma Jet Ignition, Stratified charge engine- six stroke engine, fuel cells.

L – 45; T – 0; Total Hours –45

REFERENCES:

1. Heywood, J.B., Internal Combustion Engine Fundamentals, Tata Mc-Graw- Hill, 1988.
2. V.Ganesan, Internal Combustion Engines, 4th Edition, Tata Mc-graw Hill Publishing Co.ltd. 2012.
3. K.K. Ramalingam, Internal Combustion Engines Fundamentals, Scitech Publications (India) Pvt Ltd,2009.
4. Dr. V.M. Domkundar, A Course In Internal Combustion Engines, Dhanapat Rai &Co, Delhi.
5. R.Yadav, I.C.Engines, Central book Depot, Allahabad.
6. Willard w.Pulkrabek, Internal Combustion Engines, Pearson Education.

OUTCOMES:

Student will be able to

- Understand the various systems of IC engines.
- Realize the ill effects of automobile emissions and the use of alternate fuels.

MECX23	NUCLEAR ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the basics of nuclear physics.
- To learn about nuclear reactions and reaction materials and their reprocessing and disposal.
- To study about various reactors.

MODULE I NUCLEAR PHYSICS 7

Nuclear model of an atom-Equivalence of mass and energy-binding- radio activity-half life-neutron interactions-cross sections.

MODULE II NUCLEAR REACTIONS AND REACTION MATERIALS 8

Mechanism of nuclear fission and fusion- radio activity- chain reactions-critical mass and composition-nuclear fuel cycles and its characteristics-uranium production and purification-Zirconium, thorium, beryllium.

MODULE III REPROCESSING 7

Reprocessing: nuclear fuel cycles-spent fuel characteristics-role of solvent extraction in reprocessing-solvent extraction equipment.

MODULE IV NUCLEAR REACTOR 8

Nuclear reactors: types of fast breeding reactors-design and construction of fast breeding reactors-heat transfer techniques in nuclear reactors- reactor shielding. Fusion reactors.

MODULE V SEPARATION OF REACTOR PRODUCTS 8

Processes to be considered - 'Fuel Element' dissolution - precipitation process – ion exchange - redox - purex - TTA - chelation -U235 - Hexone - TBP and thorax Processes - oxidative slaging and electro - refinng - Isotopes – principles of Isotope separation.

MODULE VI SAFETY AND DISPOSAL 7

Safety and disposal: Nuclear plant safety-safety systems-changes and consequences of accident-criteria for safety-nuclear waste-types of waste and its disposal-radiation hazards and their prevention-weapons proliferation.

L – 45; T – 0; Total Hours –45

TEXT BOOKS:

1. Thomas J.Cannoly, “Fundamentals of nuclear Engineering” John Wiley 1978.

REFERENCES:

1. Collier J.G., and Hewitt G.F, “Introduction to Nuclear power”, Hemisphere publishing, New York. 1987.
2. Wakil M.M.El., “Power Plant Technology” – McGraw-Hill International, 1984.
3. S. Glasstone and A. Sesonske, “Nuclear Reactor Engineering: Reactor Design Basics”, Vol. 1, Ed. 4, Chapman and Hall, London, 1994.
4. S. Glasstone and A. Sesonske, “Nuclear Reactor Engineering: Reactor Systems Engineering”, Vol. 2, Ed. 4, Chapman and Hall, New York, 1994.

OUTCOMES:

Students will be able to

- Understand the basic concepts of nuclear physics.
- Be familiar with different types of nuclear reactions and reactors.
- Be aware of fuel reprocessing and disposal of nuclear wastes.

MECX24 GAS DYNAMICS AND JET PROPULSION L T P C
3 0 0 3

OBJECTIVES:

- To provide an insight into the applications of compressible flows and the fundamentals of jet and space propulsion system.
- To enable the student formulate and solve problems in steady compressible flow in constant and variable area ducts.
- To understand the phenomenon of shock waves and its effect.

MODULE I COMPRESSIBLE FLOW – FUNDAMENTALS 7

Energy and momentum equations for compressible fluid flows, reference velocities, stagnation state, velocity of sound, critical states, Mach number, critical Mach number, types of waves, Mach cone, Mach angle-Effect of Mach number on compressibility.

MODULE II FLOW THROUGH VARIABLE AREA DUCT 8

Isentropic flow through variable area ducts, comparison of isentropic and adiabatic process, T-s and H-s diagrams for nozzle and diffuser flows- Mach number Variation-Impulse function Area ratio as a function of Mach number mass flow rate through nozzles and diffusers.

MODULE III FLOW THROUGH CONSTANT AREA DUCT 8

Flow in constant area ducts with friction (Fanno flow)- Fanno curves, variation of flow properties, variation of Mach number with duct length, Isothermal flow with friction-Flow in constant area ducts with heat transfer(Rayleigh flow),Rayleigh line, variation of flow properties, maximum heat transfer.

MODULE IV NORMAL SHOCK 8

Governing equations, variation of flow parameters like static pressure, static temperature, density, stagnation pressure and entropy across the normal shock, Prandtl-Meyer equation, Impossibility of shock in subsonic flows, flow in convergent and divergent nozzle with shock, normal shock in Fanno and Rayleigh flows, flow with oblique shock (elementary treatment only).

MODULE V JET PROPULSION 7

Aircraft propulsion- types of jet engines- energy flow through jet engines, study of turbo jet engine components- diffuser, compressor, combustion chamber, turbine and exhaust sytems, performance of turbo jet engines- thrust, thrust power, propulsive and overall efficiencies, thrust augmentation in turbo jet engines, Ram jet and pulse

jet engines.

MODULE VI SPACE VEHICLES 7

Rocket propulsion- Types of rocket engines- Constructional details and working principle – Thrust equation- effective jet velocity, specific impulse- Rocket engine performance, solid and liquid propellants, and comparison of different propulsion systems. Space vehicle applications.

L – 45; T – 0; Total Hours –45

REFERENCES:

1. Yahya. S.M., “Fundamentals of compressible flow with Aircraft and Rocket Propulsion”, New Age Internal Pvt ltd., New Delhi, 2003.
2. Patrich.H. Oosthvizen, William E.Carscallen, “Compressible Fluid Flow”, Tata McGraw –Hill, 1997.
3. Cohen.H., Rogers R.E.C and Saravanmutoo, “ Gas Turbine theory”, Addision Wesley Ltd., 1987.
4. Ganesan. V., “Gas Turbines”, Tata McGraw –Hill, New Delhi, 1999.
5. RadhaKrishnan. E, “Gas Dynamics”, Prentice Hall of India, New Delhi, 2001.

OUTCOMES:

Student should be able to

- Apply the concepts of gas dynamics for applications related to compressible flows and jet propulsion.
- Possess the knowledge of jet engines and space propulsion theories.

MECX25	ENERGY CONVERSION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart knowledge on power generation from fossil, renewable and nuclear energy sources.
- To impart knowledge on energy conservation opportunities in various sectors of energy usage, concepts of cogeneration and combined cycle plants.

MODULE I COAL BASED THERMAL POWER PLANT 9

High Pressure and Super Critical Boilers – Fluidized Bed Boilers, coal and ash handling, burning-stoker firing, burners, FBC, dust collection-scrubbers, ESP, boiler calculations. Layout of thermal plant – components.

MODULE II DIESEL ENGINE AND HYDROELECTRIC PLANTS 7

Diesel engine power plant layout – components, various operating systems, merits, demerits, applications. Hydel plant – layout and system components, hydraulic turbines, types of hydel plants, safety.

MODULE III NUCLEAR AND GAS TURBINE PLANTS 7

Development of nuclear plant in India, nuclear energy – fission chain reaction, reactor components, types of reactors and plants, waste disposal and safety. Gas turbines – working, types, methods to improve power output and efficiency, layout with inter-cooling, reheating and regeneration.

MODULE IV RENEWABLE ENERGY BASED PLANTS AND MHD PLANTS 9

Power from wind – wind turbine working and types, solar thermal power plants – low medium and high power generation, power from wave, tidal, geothermal sources, OTEC system, Energy from biomass. MHD power plants – working, types, merits and demerits.

MODULE V ENERGY CONSERVATION AND WASTE HEAT RECOVERY 6

Energy conservation – need and importance, energy efficient equipment, energy conservation opportunities (ECOs) in residential, transport, commercial and industrial sectors. Energy from wastes , Waste heat recovery – need and importance, cogeneration, combined cycle plants.

MODULE VI ENERGY ECONOMICS AND ENVIRONMENTAL POLLUTION **7**

Cost of Energy generation – load curves– Economics of load sharing, comparison of economics of various power plants. Environmental degradation - emissions from fossil based power plants and their implications –remedial measures.

L – 45; T – 0; Total Hours –45

TEXT BOOKS:

1. EI- Wakil M.M, “Power Plant Technology”, McGraw-Hill 1984.
2. G.R. Nagpal, “Power Plant Engineering”, Hanna Publishers, 1998.
3. G.D.Rai, “Introduction to Power Plant Technology”, Khanna Publishers, 1995

REFERENCES:

1. Arora S.C and Domkundwar S, “A course in Power Plant Engineering”, Dhanpatrai, 2001.
2. Nag P.K, “Power plant Engineering”, Tata McGraw-Hill, 1998.
3. R.K.Rajput, “Power Plant Engineering”, Laxmi Publications, 1995.

OUTCOMES:

Students should be able to

- Recognize the construction and working of various power plants.
- Implement the concepts of cogeneration and combined cycle plants wherever applicable.
- Recognize the need and implement the concepts of energy conservation and waste heat recovery wherever applicable.

MECX28	COMPUTATIONAL FLOW AND HEAT TRANSFER	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn the Governing Equations of viscous fluid flows.
- To study numerical modeling and its role in the field of fluid flow and heat transfer.
- To understand the various discretization methods, solution procedures and turbulence modeling.

MODULE I GOVERNING EQUATIONS AND BOUNDARY CONDITIONS 8

Basics of computational fluid dynamics – Governing equations of fluid dynamics – Continuity, Momemtum and Energy equations – Chemical species transport – Physical boundary conditions – Mathematical behaviour of PDEs on CFD - Elliptic, Parabolic and Hyperbolic equations.

MODULE II FINITE DIFFERENCE METHOD 8

Derivation of finite difference equations – Simple Methods – General Methods for first and second order accuracy – solution methods for finite difference equations – Elliptic equations – Iterative solution Methods – Parabolic equations – Explicit and Implicit schemes – Example problems on elliptic and parabolic equations.

MODULE III FINITE VOLUME METHOD (FVM) FOR DIFFUSION 8

Finite volume formulation for steady state One, Two and Three –dimensional diffusion problems. One dimensional unsteady heat conduction through Explicit, Crank – Nicolson and fully implicit schemes.

MODULE IV FINITE VOLUME METHOD FOR CONVECTION DIFFUSION 7

Steady one-dimensional convection and diffusion – Central, upwind differencing schemes properties of discretization schemes – Conservativeness, Boundedness, Trasnportiveness, Hybrid, Power-law, QUICK Schemes.

MODULE V CALCULATION FLOW FIELD 7

Representation of the pressure gradient term and continuity equation – Staggered grid – Momentum equations – Pressure and Velocity corrections – Pressure Correction equation, SIMPLE algorithm and its variants.

MODULE VI TURBULENCE 7

Introduction-Time-averaged equations for Turbulent Flow – Turbulent–Kinetic Energy Equations Turbulence models, mixing length model, two equation (k- ?) models – High and low Reynolds number models.

L – 45; T – 0; Total Hours –45

REFERENCES:

8. Anil W. Date “Introduction to Computational Fluid Dynamics” Cambridge University Press, 2005.

OUTCOMES:

Students should be able to

- Derive the governing equations to solve real time problems.
- Solve complex problems in the field of fluid flow and heat transfer.

MECX29	RENEWABLE SOURCES OF ENERGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To know the Global and National energy scenario of renewable energy resources.
- To study harnessing of energy from various renewable sources.

MODULE I INTRODUCTION 7

Primary energy sources - World energy resources-Indian energy scenario, energy cycle of the earth-environmental aspects of energy utilisation-CO2 emmisions and Global warming, Global dimming - renewable energy resources and their importance. Potential impacts of harnessing the different renewable energy sources.

MODULE II SOLAR ENERGY 8

Principles of solar energy collection – solar radiation- measurements – instruments – data and estimation – types of collectors- characteristics and design principles of different types of collectors – performance of collectors – testing of collectors. Solar thermal applications – water heaters and air heaters,- performance and applications – simple calculations – solar cooling – solar drying, solar ponds- solar tower concept. Solar furnace.

MODULE III WIND AND GEOTHERMAL ENERGY 8

Wind potential in India, Energy from the wind – general theory of wind mills, types of windmills design aspects of horizontal axis wind mills – applications, Potential Sites, Estimations of Geothermal Power, Nature of Geothermal Sites, Hot-Dry Rocks, Resources, Magma Resources, Systems for Energy Generation, Applications of Geothermal, Energy, Environmental Issues.

MODULE IV OCEAN ENERGY, TIDAL ENERGY AND SMALL SCALE HYDRO ELECTRIC POWER PLANTS 7

Basic theory of OTEC, potential and application of technologies Energy from tides and waves – working principles of tidal plants, Classification of Small Hydro Power Stations, Mini and Micro Hydel Projects, Turbines and Generators for Small Scale Hydro Electric, Protection, Advantages and Limitations

MODULE V BIO ENERGY 8

Energy from bio mass and bio gas plants – various types – design principles of biogas plants – applications. Energy from wastes – waste collection, Reduction and transfer. Waste burning power plants – utilization of industrial and municipal wastes – energy

from the agricultural wastes.

MODULE VI OTHER RENEWABLE ENERGY SOURCES 7

Direct energy conversion (Description, principle of working and basic design aspects only) – Magneto hydrodynamic systems (MHD) – thermoelectric generators – thermionic generators, fuel cells – solar cells – types – Emf generated, power output losses and efficiency and applications. Hydrogen conversion and storage systems.

L – 45; T – 0; Total Hours –45

REFERENCES:

1. Sukhatme. S.P., Solar Energy, 2nd Edition, TMH, 2003.
2. Sulton, “Direct Energy Conversion”, Mc-Graw-Hill, 1966.
3. Duffie and Beckmann, “ Solar Energy Thermal Processes ”, John Wiley, 1974.
4. Garg. H.P and Prakash. J.,” Solar Energy – Fundamentals and Applications”, TMH, New Dwlhi, 1997.

OUTCOMES:

- Students should be able recognize the significance of renewable energy and its harnessing.

MECX30	SOLAR ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn the working and performance of various solar collectors.
- To learn about solar photovoltaic principle and usage.
- To learn about the applications and economic use of solar energy.

MODULE I SOLAR RADIATION AND MEASUREMENT 9

The Solar energy option- an overview of thermal applications. Solar Radiation analysis – Solar constant, electromagnetic energy spectrum, determination of earth-sun angles, Solar time, solar angles, sunset, sunrise, and day length. Solar Radiation -Measurements and data estimation.

MODULE II FLAT PLATE COLLECTOR 9

Physical principle and general characteristics of a Liquid flat plate collectors- Performance and thermal analysis of liquid flat plate collector, Coatings and selection of materials ,effect of dust and shade. High temperature non concentrating collectors.

Solar Air heaters collectors – materials, types, Performance analysis and applications.

MODULE III CONCENTRATING COLLECTORS 7

Line focusing and point focusing collectors- cylindrical parabolic collector, compound parabolic concentrators(CPC), Paraboloid dish collector, Thermal performance of focusing collectors. Solar energy storage – types, Solar Ponds

MODULE IV SOLAR CELLS 7

Photovoltaic principle- materials for solar cells. Design and fabrication of Photovoltaic cells. Performance analysis of P-V cells- thermoelectric generator solar cells.

MODULE V APPLICATIONS OF SOLAR ENERGY 6

Solar heating, solar cooling, heat pump, solar pumping, Solar distillation, solar cooking. Solar Thermal Power generation.

MODULE VI ECONOMIC ANALYSIS 7

Cost analysis and pay back calculations for different types of solar panels and collectors, installation and operating costs; Environmental and safety issues, protection systems, performance monitor.

L – 45; T – 0; Total Hours –45

REFERENCES:

1. G.D.Rai, “Solar energy utilisation, Khanna Publishers”, New Delhi.

7. A.B. Meinel and M.B. Meinel, “Applied Solar Energy”, Addison – Wiley Pub. Co., Reading.
8. G.N. Tiwari and S. Suneja, “Solar Thermal Engineering Systems”, Narosa Publishing House.

OUTCOMES:

Students will be able to

- Select suitable solar device for a particular application.
- Use solar energy effectively and economically.

MECX31	DESIGN OF THERMAL SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the working and performance of heat transfer equipment.
- To learn design of thermal systems for effective and efficient heat transfer.

MODULE I DOUBLE PIPE HEAT EXCHANGER AND HEAT PIPES 8

Thermal and hydraulic design-Inner pipe- Annulus, Hairpin heat exchangers- Base inner tube-finned inner multi tubes-parallel and series arrangements, pressure drop and constructional features. Heat pipes-structures-Applications- Basic relations-Performance characteristics-Effects of working fluid and operating temperature, Wick-selection of material-pore size

MODULE II SHELL AND TUBE HEAT EXCHANGERS 7

Basic components-shell-tube bundles-Baffles –Types and geometry, Design procedure-Preliminary estimation of size, pressure drop and heat transfer calculations- shell and tube sides-Kenn method –bell-Delaware method.

MODULE III COMPACT AND GASKETTED PLATE HEAT EXCHANEGRS 8

Compact heat exchangers- types-constructional features, heat transfer and pressure drop calculation- Finned plate and tube. Gasketted plate heat exchangers-Constructional features-Plate pack and frame-operational characteristics- flow arrangement, heat transfer and pressure drop calculation, performance analysis, comparison with other type of heat exchangers.

MODULE IV CONDENSERS 7

Shell and tube condenser- horizontal and vertical types- temperature distribution and heat flow in a condenser-pressure drop in a condenser - extended surfaces- design and operational consideration, plate heat condenser, air cooled and direct contact types, condensers for refrigeration, evaporative condenser.

MODULE V EVAPORATORS 7

Temperature distribution and heat flow in an evaporator-Evaporator for refrigeration and air conditioning- chillers- air coolers- thermal analysis- Shah, Kandhar and Ghngor and Wintertom correlations, standard types.

MODULE VI COOLING TOWERS 8

Cooling tower-types-Basic relation- heat balance and heat transfer- Characteristics, effects of: Packings- Geometry, spray Design- Selection of: Pumps, Fans, Testing, Maintenance, Environmental effects, Wind loads, Typical Installations.

L – 45; T – 0; Total Hours –45

5. Holger Martin, Heat Exchangers- Hemisphere Publishing Corporation, London, 1992.
6. Arora, Domkundwar, A course in Heat and mass Transfer – Dhanpat Rai & co. (P) ltd -2003.

OUTCOMES:

Student will be able to

- Be familiar with functions, characteristics and performance of various thermal systems.
- Design a heat exchanger for any specific application.

MECX32	AUTOMOBILE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide a comprehensive view of automobile engineering.
- To provide an overview about different systems in an automobile.
- To impart knowledge on recent developments.

MODULE I VEHICLE STRUCTURE AND ENGINES 7

Types of Automobiles- Vehicle construction- Chassis – Frame and Body – aerodynamics. Components of Engine – Their forms, Functions and Materials- Basic layout of Automotive vehicles.

MODULE II ENGINE SYSTEMS 8

Cooling and Lubrication systems in Engine - fuel injection systems- Electrical systems- Battery generator- Starting Motor and drives – Lighting and Ignition (Battery ,Magneto Coil and Electronic Types)- Regulators – Cut outs.

MODULE III TRANSMISSION SYSTEM 7

Types of Clutch- gear box (manual and automatic)-differential and types of rear axle- Transfer Box Fluid flywheel – Torque convertors- Propeller shaft.

MODULE IV STEERING AND BRAKING SYSTEM 8

Wheels and Tyres- Wheel Alignments Parameters – Steering Geometry and Types of Steering gear box- Power Steering- Breaking Systems – Types and Constructions – Diagonal Braking Systems

MODULE V SUSPENSION SYSTEMS 7

Shock absorbers – Independent Suspension -Torsions bars – Air suspension systems.

MODULE VI AUTOMOTIVE SAFETY AND RECENT TRENDS 8

Safety systems- Active safety- Passive safety – Electric Vehicle- Hybrid vehicles , Fuel cells – Antilock Braking Systems- Adaptive lighting- Active cruise Control- Traction control-Drive by wire.

L – 45; T – 0; Total Hours –45

4. The Motor Vehicle K. Newton, W. Steeds, T. K. Garrett,SAE International,13th edition
5. Advanced Vehicle Technology, Heinz Heisler, Elsevier Ltd, (Second Edition)

OUTCOMES:

Student should be able to

- Be familiar with different systems of an automobile.
- Be aware of the recent developments in automobile engineering.

MECX34	FUELS AND COMBUSTION	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To learn the characteristics, types and utility of solid, liquid and gaseous fuels.
- To understand the combustion phenomenon of different fuels and equipment for their combustion.

MODULE I FUEL CHARACTERIZATION 6

Fuels - Types and Characteristics of Fuels - Determination of Properties of Fuels – Fuels Analysis - Proximate and Ultimate Analysis – Moisture Determination - Calorific Value – Gross & Net Calorific Values - Calorimetry - DuLong's Formula for CV Estimation – Flue gas Analysis - Orsat Apparatus - Fuel & Ash Storage & Handling - Spontaneous Ignition Temperatures.

MODULE II SOLID, LIQUID and GASEOUS FUELS 11

Solid fuel types - Coal Family - Properties - Calorific Value - ROM, DMMF, DAF and Bone Dry Basis - Ranking - Bulk & Apparent Density - Storage - Washability - Coking & Caking Coals - Renewable Solid Fuels - Biomass - Wood Waste - Agro Fuels – Manufactured Solid Fuels.

Liquid fuel types - Sources - Petroleum Fractions - Classification - Refining – Properties of Liquid Fuels - Calorific Value, Specific Gravity, Flash & Fire Point, Octane Number, Cetane Number etc, - Alcohols - Tar Sand Oil - Liquefaction of Solid Fuels.

Classification - Composition & Properties - Estimation of Calorific Value – Gas Calorimeter. Rich & Lean Gas - Wobbe Index - Natural Gas - Dry & Wet Natural Gas - Stripped NG - Foul & Sweet NG - LPG - LNG - CNG – Methane - Producer Gas - Gasifiers - Water Gas - Town Gas - Coal Gasification - Gasification Efficiency - Non - Thermal Route - Biogas - Digesters – Reactions - Viability - Economics.

MODULE III COMBUSTION STOICHIOMETRY & KINETICS 7

Stoichiometry - Mass Basis & Volume Basis - Excess Air Calculation - Fuel & Flue Gas. Compositions - Calculations - Rapid Methods – Combustion Processes – Stationary. Flame - Surface or Flameless Combustion - Submerged Combustion - Pulsating & Slow. Combustion Explosive Combustion. Mechanism of Combustion - Ignition & Ignition Energy - Spontaneous Combustion - Flame Propagation - Solid, Liquid & Gaseous Fuels Combustion - Flame Temperature - Theoretical, Adiabatic &

Actual - Ignition Limits - Limits of Inflammability

MODULE IV COMBUSTION EQUIPMENT 6

Coal Burning Equipment - Types - Pulverized Coal Firing - Fluidized Bed Firing – Fixed Bed & Recycled Bed - Cyclone Firing - Spreader Stokers - Vibrating Grate Stokers - Sprinkler Stokers, Traveling Grate Stokers. Oil Burners - Vaporizing Burners, Atomizing Burners - Design of Burners. Gas Burners - Atmospheric Gas Burners - Air Aspiration Gas Burners – Burners Classification according to Flame Structures - Factors Affecting Burners & Combustion.

L – 30; T – 0; Total Hours –30

REFERENCES:

1. Bhatt, Vora Stoichiometry, 2nd Edition, Tata Mcgraw Hill, 1984.
2. Fuels And Combustion (3rd Edition), Samir Sarkar,Orient BlackSwan.
3. Sharma SP, Mohan Chander, Fuels & Combustion, Tata Mcgraw Hill, 1984
4. Civil Davies, Calculations in Furnace Technology, Pergamon Press, Oxford, 1966

OUTCOMES:

Student will be able to

- Recognize the nature, characteristics and suitability of fuels.
- Calculate the air – fuel ratio for different fuels under different types of combustion.
- Select suitable combustion equipment for different fuels based on nature of combustion.

MECX33 AUTOMOTIVE POLLUTION AND CONTROL L T P C
2 0 0 2

OBJECTIVES:

- To have a fair knowledge in automotive pollution control.
- To understand the concept of formation and control techniques of pollutants like UBHC, CO, NOx, particulate matter and smoke for both SI and CI engine will be taught to the students.
- To know about the instruments for measurement of pollutants
- To get introduced about emission standards

MODULE I EMISSION FROM AUTOMOBILES 6

Sources of Air Pollution. Various emissions from Automobiles — Formation — Effects of pollutants on environment and human beings. Emission control techniques – Modification of fuel, after treatment devices. Emission standards. Automotive waste management, old vehicle disposal, recycling, tyre recycling

MODULE II SI ENGINE AND CI ENGINE EMISSIONS AND CONTROL 10

Emission formation in SI Engines- Carbon monoxide & Carbon di oxide – Unburned hydrocarbon, NOx, Smoke —Effects of design and operating variables on emission formation – controlling of pollutants - Catalytic converters, Charcoal Canister, Positive Crank case ventilation system, Secondary air injection, thermal reactor.

Formation of White, Blue, and Black Smokes, NOx, soot, Effect of Operating variables on Emission formation — Fumigation, Split injection, Catalytic Coating, EGR, Particulate Traps, SCR, Fuel additives — Cetane number Effect.

MODULE III NOISE POLLUTION FROM AUTOMOBILES 6

Sources of Noise — Engine Noise, Transmission Noise, vehicle structural Noise, aerodynamics noise, Exhaust Noise. Noise reduction in Automobiles — Encapsulation technique for noise reduction —Silencer Design.

MODULE IV TEST PROCEDURES AND EMISSION MEASUREMENTS 8

Constant Volume Sampling I and 3 (CVSI &CVS3) Systems- Sampling Procedures —

Chassis dynamometers - Seven mode and thirteen mode cycles for Emission Sampling.

Emission analysers —NDIR, FID, Chemiluminesecent, Smoke meters, Dilution Tunnel, SHED Test, Sound level meters.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. V.Ganesan, 'Internal combustion Engines', Tata McGraw Hill Book Co, Eighth Reprint, 2005.
2. Crouse and Anglin, 'Automotive Emission Control', McGraw Hill company., Newyork 1993.

5. A.Alexander, J.P.Barde, C.lomure and F.J. Langdan, 'Road traffic noise', Applied science publisher ltd., London,1987.

OUTCOMES:

The student should be able to

- Identify the sources of emission form vehicles.
- Analyze the causes of emissions. Bring out solutions for control of emissions.
- Be familiar with test procedures and emission norms
- Select suitable instrument and procedure for measurement of emissions

MANUFACTURING AND MATERIALS ELECTIVES

MECX41	MODERN MANUFACTURING SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the concepts and applications of flexible manufacturing systems.

MODULE I INTRODUCTION TO FLEXIBLE MANUFACTURING SYSTEMS 7

Introduction to FMS– benefits - the challenge – major elements – types of flexibility – FMS application – single product, single batch, n – batch scheduling problem Production Flow Analysis - Rank Order Clustering – knowledge based scheduling system.

MODULE II COMPUTER CONTROL FOR FLEXIBLE MANUFACTURING SYSTEMS 8

Introduction – composition of FMS– hierarchy of computer control –computer control of work center and assembly lines – FMS supervisory computer control – types of software specification and selection – trends.

MODULE III SIMULATION AND DATABASE 7

Application of simulation–model of FMS–simulation software – advantages and limitation – manufacturing data systems–data flow–FMS database systems–planning for FMS database.

MODULE IV MODULE IV GROUP TECHNOLOGY 8

Introduction – matrix formulation – graph formulation – knowledge based system for group technology – Part Family sequencing - Dispatching rules - economic justification of FMS- application of possibility distributions in FMS systems justification.

MODULE V APPLICATIONS OF FMS AND TOOLS 8

FMS application in machining, sheet metal fabrication, prismatic component production – aerospace application. Tools – Cellular Manufacturing, Automation, Material Handling - Just In Time Manufacturing – Kanban - CONWIP and Kanbanetc,.

MODULE VI SYNCHRONOUS MANUFACTURING AND FMS FUTURE FACTORIES 7

The Goal - Principles of SM - TOC and LP - Scheduling FMS development towards

factories of the future – artificial intelligence and expert systems in FMS.

L – 45; T – 0 ; Total Hours –45

REFERENCES:

5. TaiichiOhno, “Toyota production system: beyond large-scale production”,Productivity Press (India) Pvt. Ltd. 1992.
6. Askin R G and Strandridge C R (1993), Modelling and Analysis of Manufacturing

OUTCOMES:

Students will be able to

- Implement FMS in the modernization of manufacturing systems

MECX42	PROCESS PLANNING AND COST ESTIMATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To appreciate the need for process planning
- To understand the concept of work study and ergonomics
- To apprehend the importance of estimation and costing
- To know about the elements of cost
- To apply basic calculation in manufacturing processes
- To study and analyze the cost estimation in different manufacturing units

MODULE I INTRODUCTION 9

Types of production- Standardization, Simplification- Production design and selection- Process planning, selection and analysis- steps involved in manual experience based planning and computer aided process planning- Retrieval, generative-Selection of processes analysis-Breakeven analysis

MODULE II WORK STUDY AND ERGONOMICS 8

Method study, Definition- Objectives-Motion economy- Principles-Tools and Techniques – Applications- Work measurements- Purpose, Use, Procedure, tools and techniques, standard time- Ergonomics- Principles and applications.

MODULE III ESTIMATION AND COSTING 8

Importance and aims of cost estimation –Functions of estimation –costing – Importance and aims of costing- Difference between costing and estimation - importance of realistic estimates- Estimation procedure.

MODULE IV ELEMENTS OF COST 7

Introduction-Material cost- Determination of material cost, Labor cost - Determination of Direct Labor cost-Expenses- Cost of Product(Ladder of cost)-Illustrative examples, Analysis of overhead expenses-Factory expenses - Depreciation-Causes of depreciation- Methods of depreciation- Administrative expenses- selling and distributing expenses- allocation of overhead expenses.

MODULE V ESTIMATION OF MACHINE TIME AND COST 6

Estimation of machining time for machining operations involved in lathe, drilling, and milling and grinding – Estimation of machining cost

MODULE VI COST ESTIMATION IN FORMING, CASTING AND 7

WELDING SHOP

Product cost Estimation: Estimation in forging shop-Losses in forging-Forging cost-Illustrative examples.Estimation in foundry shop-Estimation of pattern cost and casting cost- Illustrative examples.Estimation in welding shop-Gas cutting- Electric welding- illustrative examples

L – 45; T – 0 ; Total Hours –45

REFERENCES:

1. Sinha.B.P., "Mechanical Estimation and costing", Tata McGraw hill publishing co., 1995
2. Nanusa Singh, "System approach to Computer Integrated Design and Manufacturing" John Wiley & Sons, Inc., 1996
3. Joseph G. Monks, "Operations Management, Theory & Problems", McGraw Hill Book Company, 1982
4. G.B.S. Narang and V. Kumar, "Production and costing ", Khanna Publishers, 1995

OUTCOMES:

Upon the completion of the course, students will be able to

- know about the need and various types of process planning
- effectively implement the process planning concepts
- implement the concepts of work study and ergonomics in manufacturing units
- distinguish various cost components
- estimate the machining time for metal cutting operations
- estimate the cost for other different manufacturing units

MECX43	PRODUCTION PLANNING AND CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the various functions of production planning and control.
- To study the steps involved in the work study and principles of ergonomics.
- To provide knowledge on product and process planning.
- To know the production scheduling procedures, inventory control and recent trends in manufacturing requirement Planning (MRP) and EnterpriseResource Planning (ERP).

MODULE I INTRODUCTION 7

Objectives and benefits of planning and control-Functions of production control-Types of production-job- batch and continuous-Product development and design-Marketing aspect - Functional aspects-Operational aspect-Durability and dependability aspect aesthetic aspect. Profit consideration- Standardization, Simplification & specialization- Break even analysis- Economics of a new design.

MODULE II WORK STUDY 8

Method study, basic procedure-Selection-Recording of process - Critical analysis, Development - Implementation - Micro motion and memo motion study – work measurement - Techniques of work measurement - Time study- Production study - Work sampling - Synthesis from standard data - Predetermined motion time standards.

MODULE III PRODUCT AND PROCESS PLANNING 7

Product planning-Extending the original product information-Value analysis- Problems in lack of product planning-Process planning and routing-Pre requisite information needed for process planning-Steps in process planning- Quantity determination in batch production-Machine capacity, balancing- Analysis of process capabilities in a multi-product system.

MODULE IV PRODUCTION SCHEDULING 8

Introduction to Scheduling and Shop Floor Planning and Control; Production Control Systems-Loading and scheduling; Master Scheduling-Scheduling rules-Gantt charts-Perpetual loading, Basic scheduling problems – Flow production scheduling-Batch production scheduling;Order Sequencing Rules and Their Performance Based on Different Evaluation Criteria; Changeover Costs and Job Sequence; Sequencing Jobs Through Two Work centers - Johnson's Rule.

MODULE V LINE BALANCING 8

Introduction to Line Balancing – Steps involved in line balancing - Techniques for Analyzing Line Balancing Problems; Application of Incremental Utilization and Longest-Task-Times Heuristics.

MODULE VI INVENTORY CONTROL AND RECENT TRENDS IN PPC 7

Inventory control-Purpose of holding stock-Effect of demand on inventories- Ordering procedures. Two bin system -Ordering cycle system-Determination of Economic order quantity and economic lot size-ABC analysis-Recorder procedure-Introduction to computer integrated production planning systems- elements of JUST IN TIME SYSTEMS-Fundamentals of MRP II and ERP.

L – 45; T – 0 ; Total Hours –45

TEXT BOOKS:

1. MartandTelsang, “Industrial Engineering and Production Management”, First edition, S.Chand and Company, 2000.

REFERENCES:

OUTCOMES:

- Understand the overall aspects of production planning and control activities.
- Conduct method study and time study to improve process and resource utilization.
- Plan the product and processes effectively.
- Implement the concepts of scheduling in manufacturing.
- Analyze and provide solution for line balancing problems.
- Analyze and control inventory effectually.

MECX44	STATISTICS AND QUALITY CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn the various statistical approaches for Quality control.
- To understand the various principles, practices of quality management.
- To understand the various tools for continuous process control and improvement.

MODULE I STATISTICS 7

Introduction to Statistics - Meaning and significance of statistical process control (SPC) Process capability – meaning, significance and measurement – Six sigma concepts of process capability.

MODULE II STATISTICAL PROCESS CONTROL 8

Reliability concepts – definitions, reliability in series and parallel, product life characteristics curve.Total productive maintenance (TMP) – relevance to TQM, Terotechnology. Business process re-engineering (BPR) – principles, applications, reengineering process, benefits and limitations.

MODULE III INTRODUCTION TO QUALITY MANAGEMENT 7

Definitions – TQM framework, benefits, awareness and obstacles. Quality – vision, mission and policy statements. Customer Focus – customer perception of quality, Translating needs into requirements, customer retention. Dimensions of product and service quality. Cost of quality.

MODULE IV TOOLS AND TECHNIQUES FOR QUALITY MANAGEMENT 8

Overview of the contributions of Deming, Taguchi techniques – introduction, loss function, parameter and tolerance design, signal to noise ratio. Concepts of Quality circle, Japanese 5S principles and 8D methodology. Quality functions development (QFD) – Benefits, Voice of customer, information organization, House of quality (HOQ), building a HOQ, QFD process.

MODULE V CONTROL CHARTS 8

Control Charts for X and R (statistical basis, development and use, estimating process capability; interpretation, the effect of non normality on the chart, the OC function, average run length); Control Charts for X and S; Control Chart for Individual Measurements. Control Chart for Fraction Nonconforming (OC curve of the control

chart, variable sample size, nonmanufacturing application, the OC function and ARL calculation); Control Charts for Nonconformities or Defects; Choices Between Attribute and Variable Control Charts.

MODULE VI SAMPLING 7

Introduction to sampling distributions, sampling distribution of mean and proportion, application of central limit theorem, sampling techniques. Estimation: Point and Interval estimates for population parameters of large sample and small samples, determining the sample size.

L – 45; T – 0 ; Total Hours –45

REFERENCES:

1. Montgomery, Douglas C. (2009). Introduction to Statistical Quality Control, Sixth Edition. John Wiley and Sons, Inc. (ISBN: 978 -0-470-16992-6).

OUTCOMES:
Students should be able to

- apply statistical tools and techniques for quality improvement.
- achieve process control and improvement.

MECX45	MODERN PRODUCTION MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Enable students to understand manufacturing and production system
- Able to design a layout for optimal usage of plant
- To understand the critics at management level
- They will be able to control the processes in an optimized way
- Have knowledge in maintaining the inventory level
- Students will have a broad scope in maintenance part of firm

MODULE I INTRODUCTION 5

Manufacturing systems – types and concepts, manufacturing automation - Performance measures – types and uses of manufacturing models.

MODULE II FACILITY, CAPACITY & LAYOUT PLANNING 8

Facility planning – Factors affecting selection of plant location, Factor rating analysis: Break – event, Load distance model, closeness ratings.

Types of plant layout, criteria for good layout, Process layout, Assembly line balancing. Computer based solutions to layout problems such as CRAFT, ALDEP, CORELAP and PREP.

Capacity planning – Analysis of designed capacity, installed capacity, commissioned capacity, utilized capacity, factors affecting productivity and capacity expansion strategies.

MODULE III DEMAND FORECASTING & PROJECT MANAGEMENT 8

Demand forecasting – Quantitative and qualitative techniques, measurement of forecasting errors, numerical problems, Long term forecast methodologies.

Project management – its role in functional areas of management, network representation of a project, CPM and PERT techniques, Analyzing cost-time trade-offs – Case study.

MODULE IV PRODUCTION PLANNING & CONTROL 8

Steps in PPC process mapping, preparation of process mapping and feedback control for effective monitoring. Aggregate production planning, production planning strategies, Disaggregating the aggregate plan, Materials Requirement Planning (MRP), MRP-II, Supply chain management, Operation scheduling, prioritization.

MODULE V INVENTORY PLANNING & CONTROL 8

EOQ models- with and without shortages, price breaks, effect of quantity discount – selective inventory control techniques – ABC, FSN, VED etc. Types of inventory control – Perpetual, two-bin and periodic inventory system – JIT, SMED, kanban, Zero inventory – Case study.

MODULE VI MAINTENANCE SYSTEM 8

Maintenance strategies and planning, Maintenance economics: quantitative analysis, optimal number of machines, Replacement strategies and policies – economic service life, opportunity cost, replacement analysis using specific time period, spares management, Maintenance records.

L – 45; T – 0 ; Total Hours –45

REFERENCES:

7. KanishkaBedi, "**Production and Operations Management**", 2nd Edition, Oxford Higher Education, 2007.

OUTCOMES:

Students must able to:

- Identify the type of automation process in a manufacturing industry.
- To make an optimized plant layout.
- Apply forecasting techniques
- Prepare process plan for various production activities
- Control the inventory level
- Gain knowledge in maintenance strategies

MECX46 ADVANCED OPTIMISATION TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the various advanced optimization tools.
- To provide an understanding to deal with ill identified and fuzzy problems.

MODULE I INTRODUCTION 7

Review of conventional optimization techniques - limitations - limitation of exhaustive search - need for artificial intelligence - bio mimicking methods

MODULE II HEURISTICS METHODS 8

Introduction – Advanced methods of algorithm design: Greedy method, Backtracking method, Divide and Conquer method – Dynamic programming– Heuristics exploration algorithms – Greedy search - Local search – Hill climbing – Tabu search – Gradient search – Beam search – Simulated Annealing

MODULE III GENETIC ALGORITHM 7

Introduction - Basics of GA – Population – Reproduction – Cross over – Mutation – genetic algorithms in search, optimization and machine learning practical genetic algorithms

MODULE IV ANT COLONY OPTIMIZATION 8

Introduction: Ant Colony Optimization – Meta-heuristic Optimization – History – The ACO Meta-heuristic – ACO Algorithms: Main ACO – Ant system – Ant colony system – Max-Min Ant system – Applications: Routing in telecommunication networks – Travelling salesmen – Graph Coloring –Advantages & Disadvantages

MODULE V FUZZY LOGIC AND ANN 8

Fuzzy logic, knowledge representation and inference mechanism – Fuzzy and expert control – standard Takagi-Sugeno mathematical characterizations – Design example – Biological foundations to intelligent systems: Artificial neural networks, Back-propagation networks, Radial basis function networks, and recurrent networks.

MODULE VI IMPLEMENTATIONS & APPLICATIONS 7

Reduction of size of an optimization problem – multilevel optimization – parallel processing – multi objective optimization – Job shop scheduling – Vehicle scheduling – Line balancing – Sensor integration.

L – 45; T – 0 ; Total Hours –45

REFERENCES:

1. Singiresu S. Rao, “Engineering optimization – Theory and practices”, John Wiley and Sons, 1996.
2. Ravindran – Phillips –Solberg, “Operations Research – Principles and Practice”, John Wiley and Sons, 1987.

4. Kalymanoy Deb, “Optimization for Engineering Design”,PHI,2003
5. Christos H. Papadimitriou, Kenneth Steiglitz, Combinatorial Optimization, PHI 2006

OUTCOMES:

At the end of the course student will be able to

- Formulate a real life situation as an optimization the problem.
- Identify the appropriate solution methodology and provide a solution

MECX47	MECHANICAL MAINTENANCE	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To stress the importance of reliability in engineering and products.
- To understand the concept of maintability, failure modes and testing methods.
- To study the maintenance strategies in different types of industries.

MODULE I CONCEPTS OF RELIABILITY, SYSTEM AND MODELS 8

Definition of reliability – reliability Vs quality – reliability function – derivation of the reliability function -MTTF – hazard rate function – constant failure rate model – time dependent failure models – Weibull distribution – Types of system – series, parallel, series parallel, stand by and complex – methods of reliability evaluation¬ – matrix methods, event trees and fault trees methods – reliability evaluation using probability distributions – Markov method – frequency and duration method.

MODULE II DESIGN FOR RELIABILITY AND MAINTAINABILITY 8

Reliability improvement – techniques – Pareto analysis – Design for reliability – Redundancy – standby redundancy – failsafe systems classifications – failure characteristics – failure data analysis – mean time to failure maintainability and availability – system reliability in terms of probability of failure – MTBF – Acceptance sampling based on reliability test – OC curves.

MODULE III MAINTENANCE CONCEPT 7

Need for maintenance – Maintenance definition – Maintenance objectives – Challenges of Maintenance management – Tero technology – Scope of maintenance department – Maintenance costs.

MODULE IV MAINTENANCE MODELS 7

Proactive/Reactive maintenance – Imperfect maintenance – Maintenance policies – PM versus b/d maintenance – Optimal PM schedule and product characteristics – Optimal Inspection frequency: Maximizing profit – Minimizing downtime – Replacement models.

MODULE V MAINTENANCE QUALITY 7

Maintenance excellence –Five Zero concept –FMECA –Root cause analysis – System effectiveness – Design for maintainability – Maintainability allocation – CMMS – Reliability Centered Maintenance

MODULE VI TOTAL PRODUCTIVE MAINTENANCE 8

TPM features – Chronic and sporadic losses – Equipment defects – Six major losses – Overall Equipment Effectiveness – TPM pillars –TPM implementation – Autonomous maintenance.

L – 45; T – 0 ; Total Hours –45

8. Autonomous maintenance in seven steps – Masaji Tajiri and Fumio Gotoh, Productivity Inc., Oregon, 1999.

OUTCOMES:

- Students should be able to effectively implement reliability concepts and maintenance strategies in different types of industries.

MECX48	ROBOTICS AND AUTOMATION	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To introduce the basic concepts, parts and types of robots
- To gain knowledge on working principles of different sensors machine vision
- To study various drives and controls of robot
- To impart knowledge about kinematics, dynamics and control of robots

MODULE 1 INTRODUCTION 7

Robot – Definition – Robot Anatomy – Co ordinate Systems, Work EnvelopeTypes and classification – Specifications – pitch, Yaw, Roll, Joint Notations,Speed of Motion, Pay Load – Robot Parts and their Functions – Need for Robots

MODULE II SENSING AND MACHINE VISION 8

Range sensing – Proximity sensing –Touch sensing – Force and Torque sensing. Introduction to Machine vision – Sensing and Digitizing – Image processing and analysis

MODULE III ROBOT DRIVES AND CONTROL 7

Controlling the Robot motion – Design of drive systems – Hydraulic and Pneumatic drives – Linear and rotary actuators and control valves – Electro hydraulic servo valves, electric drives – Motors.

End Effectors – Grippers – Mechanical Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Selection and Design Considerations.

MODULE IV ROBOT MOTION ANALYSIS AND CONTROL 7

Manipulator kinematics, homogenous transformations and robot kinematics, manipulator path control, robot dynamics, configuration of robot controller.

L – 45; T – 0 ; Total Hours –45

TEXT BOOKS:

1. K.S.Fu, R.C. Gonzalez and C.S.G. Lee, “Robotics Control, Sensing,

Vision and Intelligence", Mc Graw Hill, 1987

REFERENCES:

1. YoramKoren," Robotics for Engineers' Mc Graw-Hill, 1987.
2. Kozyrey, Yu. "Industrial Robots", MIR Publishers Moscow, 1985.
3. Richard. D, Klafter, Thomas, A, Chmielewski, Michael Negin, "Robotics Engineering – An Integrated Approach", Prentice-Hall of India Pvt. Ltd., 1984.
4. Deb, S.R." Robotics Technology and Flexible Automation", Tata Mc Graw- Hill, 1994.
5. Mikell, P. Groover, Mitchell Weis, Roger, N. Nagel, Nicholas G. Odrey," Industrial Robotics Technology, Programming and Applications", Mc Graw- Hill, Int. 1986.

OUTCOMES:

Students should be able to

- Understand the basic components of robots and Differentiate types of robots
- Choose appropriate sensors and machine vision system
- Apply suitable drives and controls for robot design
- Model forward and inverse kinematics of robot manipulators

MECX49	ADVANCED PRODUCTION PROCESS FOR AUTOMOTIVE COMPONENTS	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To understand the various manufacturing processes of automobile components.

MODULE I POWDER METALLURGY 7

Powder Metallurgy -Process flow chart - Production of metal powders and their raw materials - Manufacture of friction lining materials for clutches and brakes - Testing and inspection of PM parts.

MODULE II METAL FORMING 8

Forging - process flow chart, forging of valves, connecting rod, crank shaft, cam shaft, propeller shaft, transmission gear blanks, foot brake linkage, steering knuckles, Extrusions: Basic process steps, extrusion of transmission shaft, steering worm blanks, brake anchor pins, rear axle drive shaft, axle housing spindles, piston pin and valve tappets. Thermoforming, hydro forming & press forming, welding of body panels.

MODULE III METAL CASTING AND MACHINING 8

Sand casting of cylinder block and liners - Centrifugal casting of flywheel, piston rings, bearing bushes, and liners, permanent mould casting of piston, pressure die casting of carburettor other small auto parts. Machining of connecting rods - crank shafts - cam shafts - pistons - piston pins – piston rings - valves - front and rear axle housings - fly wheel - Honing of cylinder bores - Copy turning and profile grinding machines.

MODULE IV METAL COATING 7

Chemical Vapour Deposition and Physical Vapour Deposition in ball bearings. Spraying, plating and painting in paint booth for automobile body.

MODULE V GEAR MANUFACTURING 7

Gear milling, Hobbing and shaping - Gear finishing of automobile gears and inspection.

MODULE VI SPECIAL MANUFACTURING PROCESSES 8

Powder injection moulding - Shotpeen hardening of gears - Production of aluminium MMC liners for engine blocks - Plasma spray coated engine blocks and valves – Recent developments in auto body panel forming – Squeeze casting of pistons -

aluminimum composite brake rotors.

L – 45; T – 0 ; Total Hours –45

REFERENCES:

1. Heldt.P.M., " High Speed Combustion Engines ", Oxford Publishing Co., New York, 1990
2. Haslehurst.S.E., " Manufacturing Technology ", ELBS, London, 1990.
3. Rusinoff, “Forging and Forming of metals ", D.B. Taraporevala Son & Co. Pvt Ltd., Mumbai, 1995.
4. Sabroff.A.M. & Others, “Forging Materials & Processes ", Reinhold Book Corporation, New York, 1988.
5. Upton, "Pressure Die Casting ", pergamon Press, 1985.
6. High Velocity " Forming of Metals ", ASTME, prentice Hall of India (P) Ltd., New Delhi, 1990
7. HMT handbook.

OUTCOMES:

- Student should be able to identify and apply the appropriate process to manufacture the automobile components.

MECX50 PLANT LAYOUT AND MATERIAL HANDLING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To learn the different types of plant layout, essential requirements and safety aspects.
- To study the need and use of appropriate equipment for effective material handling.

MODULE I PRODUCT LAYOUT 7

Selection of plant locations, territorial parameters, considerations of land, water, electricity, location for waste treatment and disposal, further expansions Safe location of chemical storages, LPG, LNG, CNG, acetylene, ammonia, chlorine, explosives and propellants

MODULE II PROCESS LAYOUT 8

Safe layout for process industries, engineering industry, construction sites, pharmaceuticals, pesticides, fertilizers, refineries, food processing, nuclear power stations, thermal power stations, metal powders manufacturing, fireworks and match works. Safe layout, equipment layout, safety system, fire hydrant locations, fire service rooms, facilities for safe effluent disposal and treatment tanks, site considerations, approach roads, plant railway lines,security towers.

MODULE III LAYOUT REQUIREMENTS 7

Principles of good ventilation, purpose, physiological and comfort level types, local and exhaust ventilation, hood and duct design, air conditioning, ventilation standards, application. Purpose of lighting, types, advantages of good illumination, glare and its effect, lighting requirements for various work, standards- Housekeeping, principles of 5S.

MODULE IV LAYOUT SAFETY 8

Preventing common injuries, lifting by hand, team lifting and carrying, handling specific shape machines and other heavy objects – accessories for manual handling, hand tools, jacks, hand trucks, dollies and wheel barrows – storage of specific materials - problems with hazardous materials, liquids, solids – storage and handling of cryogenic liquids - shipping and receiving, stock picking, dock boards, machine and tools, steel strapping and sacking, glass and nails, pitch and glue, boxes and cartons and car loading – personalprotection – ergonomic considerations.

MODULE V MATERIAL HANDLING 8

Fiber rope, types, strength and working load inspection, rope in use, rope in storage - wire rope, construction, design factors, deterioration causes, sheaves and drums, lubrication, overloading, rope fitting, inspection and replacement – slings, types, method of attachment, rated capacities, alloy chain slings, hooks and attachment, inspection. Hoisting apparatus, types - cranes, types, design and construction, guards and limit devices, signals, operating rules, maintenance safety rules, inspection and inspection checklist – conveyors, precautions, types, applications.

MODULE VI MATERIAL HANDLING EQUIPMENT 7

Powered industrial trucks, requirements, operating principles, operators selection and training and performance test, inspection and maintenance, electric trucks, gasoline operated trucks, LPG trucks – power elevators, types of drives, hoist way and machine room emergency procedure, requirements for the handicapped, types- Escalator, safety devices and brakes, moving walks – man lifts, construction, brakes, inspection.

L – 45; T – 0 ; Total Hours –45

6. Rudenko, N., “Material handling Equipment”, Mir Publishers, 1981.
7. “Industrial ventilation (A manual for recommended practice), American conference of Governmental Industrial Hygiene, USA, 1984.

OUTCOMES:

Students will be able to

- Design appropriate layout for manufacturing considering safety.
- Select and use appropriate material handling equipment.

MECX51	INDUSTRIAL SAFETY ENGINEERING	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To understand the basics of industrial hazards, safety measures, safety analysis and safety management activities
- To bring the awareness on safety in various manufacturing processes, inspection and testing, health and safety regulation of people at work.
- To impart basic knowledge on different material handling devices and its mechanisms with proper safety and ergonomic considerations.

MODULE I INDUSTRIAL SAFETY SYSTEM 12

Evolution of modern safety concept - industrial hazard - significant of safety - causes of industrial accidents - accident preventions - personal protective equipment - safety signs and colour at work - safety analysis - JSA – FMEA

Organizational safety culture - safety organization - safety committee - safety policy - Budgeting for safety - Safety education and training

MODULE II SAFETY IN MANUFACTURING 8

Machine guarding - safety in metal working - safety in welding and gas cutting - safety in cold forming and hot working of metals - safety in finishing - safety in inspection and testing - health and safety regulations - OSHA

MODULE III SAFETY IN MATERIAL HANDLING 10

Material handling basics - principles - classifications of material handling equipment - general safety considerations in material handling devices - ropes, chains, slinks, hoops, clamps, arresting gears and prime movers

Ergonomic and anatomy - ergonomic consideration in material handling, design, installation, operation and maintenance of conveying equipment, hoisting, traveling and slewing mechanisms - storage and retrieval of common goods of shapes and sizes in a general store of big industry

L – 30; T – 0 ; Total Hours –30

REFERENCES:

1. Mahajan.M, “Industrial engineering and production management”, Dhanpat ray & co (p) ltd., 2001.
2. Krishnan N.V, “Safety management in industry”, Jaico publication house, Bombay, 1997.

3. Blake R.B, “Industrial safety”, Prentice Hall, Inc., New jersey, 1973.

6. Alexandrov M.P, “Material Handling Equipment”, Mir Publishers, Moscow, 1981.
7. Siddhartha ray, “Introduction to Materials Handling”, New age international publications, 2008

OUTCOMES:

Upon satisfactory completion of the course, the student will be able to:

- Identify safety hazards and implement appropriate safety measures in industries. Also can perform various safety management activities.
- Identify the hazards in various manufacturing processes and provide suitable safety prevention through appropriate safety regulations
- Apply the knowledge of safety and ergonomic concepts to handle the different material handling devices in industry

MECX52	OPERATIONS RESEARCH & SYSTEM ANALYSIS	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To acquire knowledge in optimization techniques and know about utilization of resources. To determine optimum transportation cost
- To determine project duration and slack time in network problem and to determine elapsed time and idle time of machines
- To determine the replacement period, features of inventory approach and simulation analysis

MODULE I LINEAR PROGRAMMING PROBLEMS AND TRANSPORTATION PROBLEM 10

Linear programming problem: Formulation of problem- Determination of unknown values by Simplex method – Graphical method- Big M method.

Transportation Problem: Initial Basic feasible cost- MODI method- Non degeneracy type

MODULE II ASSIGNMENT, NETWORK ANALYSIS AND SEQUENCING PROBLEMS 10

Assignment Problems: Hungarian method for Minimization and Maximization type

Network Analysis: Determination of Project duration and slack time for PERT and CPM type of problem

Sequencing problem: Determination of Elapsed time and idle time for N Jobs 2 & 3 Machines

MODULE III REPLACEMENT MODELS, INVENTORY MODELS AND SIMULATION ANALYSIS 10

Replacement of items that deteriorate with time- Value of money changing with time- not changing with time

Inventory Model; Deterministic inventory model

Simulation Analysis: Random number generation- Monte carlo simulation

L – 30; T – 0 ; Total Hours –30

TEXT BOOKS:

1. Taha H.A. Operations Research, pearson Education, 6th Edition, 2003

REFERENCES:

1. Hira and Gupta, Problems in Operations research, S.Chand and Co. 2002
2. Panneerselvam, Operations Research, Prentice Hall of india, 2003.

OUTCOMES:

- Able to apply techniques for Optimum utilization of resources
- Able to determine project duration for large projects and determine idle time of machines
- Students will determine optimum replacement period, unnecessary stock and features of simulation analysis.

MECX53	NANO MATERIALS & FABRICATIONS	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To study the basics of Nano technology and Nano science.
- To Understand Nano fabrication and inspection.
- To study the applications of Nano materials.

MODULE I NANOMATERIAL CLASSES AND FUNDAMENTALS 7

Classification of Nanomaterials– size effects-surface to volume ratio- surface curvature-strain confinement –quantum effects.

MODULE II PROPERTIES OF NANOMATERIALS 8

Mechanical properties-Thermal-electrical-mechanical-optical-acoustic properties-study of carbon Nanotubes and Nano Composites.

MODULE III SYNTHESIS AND CHARACTERIZATION 7

Methods for making 0D,1D,2D and 3D Nanomaterial -Top down process-Intermediate process-Bottom up process-Nano profiling-Characterization of Nanomaterial.

MODULE IV PRODUCTION OF NANOMATERIAL 8

Methods of production-Mechanical alloying-Sol-gel, Electro deposition,Inert gas condensation.

MODULE V INSPECTION OF NANOMATERIAL 8

Electron Microscopy, X- ray Diffraction-Scanning Probe Microscopy-contact mode-tapping mode- Atomic Force Microscopy-Scanning Tunnel Microscopy- Nano Indentation.

MODULE VI APPLICATION OF NANOMATERIAL 7

Nano coatings-Nano films-self cleaning and easy cleaning materials-self healing materials-smart materials-Nano drugs and its delivery-Nano Tribology -Molecular Nanomachines

L – 45; T – 0 ; Total Hours –45

REFERENCES:

1. Michel F.Ashby, Paulo J Ferreira and Daniel L Schodek “Nanomaterials, Nanotechnologies and design”Elsiever, 2009.
2. T.Pradeep “Nano: The essentials”, Tata Mcgraw Hill Education pvt. Ltd, New Delhi, 2007.
3. Mark Ratner and Daniel Ratner, “Nanotechnology”, Pearson Education, New Delhi, 2003.
4. Guozong Cao “Nano structures and Nanomaterials” Imperial college press, London, 2006.

OUTCOMES:

Students will be able to

- fabricate and inspect nonmaterial.
- use nonmaterial for industrial and other applications.

MECX54	ADVANCED MATERIALS	L	T	P	C
		2	0	0	1

OBJECTIVES:

- To learn the Physical Properties of various Smart Materials
- To acquire knowledge on synthesis of newer materials.
- To learn the techniques of characterization of newer materials.
- To acquire knowledge on applications of smart sensor, actuator and transducer technologies.

MODULE I SMART BEHAVIOURS AND MATERIALS 12

Piezoelectric, electrostrictive, magnetostrictive, pyroelectric, electrooptic, Piezomagnetism, Pyromagnetism, Piezoresitivity, Thermoelectricity, photon striction, Thermally and Magnetically activated Shape memory alloy, Superelastic, Viscoelastic, Thermochromic materials. Magneto rheological fluid: constitutive behaviour and its applications as damper, Behaviour of Electro active polymer and its use as artificial muscles.

MODULE II MATERIAL SYNTHESIS 6

Solid state reaction, sol-gel process

MODULE III APPLICCATIONS 12

Impact Design and fabrication of devices and structures and their integration with system, Biomorphs / Moonies, Chip capacitor, Memory devices (FRAM), Sensor, actuator and transducers, Accelerometer, Gyroscopes, Ultrasonic Motor, Liquid Crystal display, Photonics, Structural Health Monitoring

L – 30; T – 0 ; Total Hours –30

REFERENCES:

1. Volti Rudi, “Society and Technology Change”, 6th Edition, Worth publishers Inc, USA, 2009.
2. Ferroelectric devices- Kenji Uchino, Marcell Decker Inc., 2000.

4. Electromechanical Sensors and Actuators, Ilene J. Busch-Vishniac, Springer-Verlag NY,1999.
5. Fundamentals of Piezoelectricity- Takuro Ikeda, Oxford University Press, 1990.
6. Actuators: Basics and Applications H.armut Janocha (Ed), Springer-Verlag Berlin Heidelberg, 2004.

7. Smart Material Systems: Model Developments, Ralph C. Smith, Cambridge University Press, Series: Frontiers in Applied Mathematics (No. 32), 2005.
8. T. Yoneyama & S. Mayazaki, Shape memory alloys for biomedical applications, CRC Press, 2009
9. Kwang J. Kim & S. Tadokoro, Electroactive polymers for robotics applications, artificial muscles and sensors, Springer, 2007.

OUTCOMES:

At the end of this course, the students will be able to

- Summarize the properties of newer materials, their synthesis and characterization.
- Explain the development of actuators and sensors and their integration into a smart structure
- Demonstrate about application areas of smart materials

MECX55	PROTOTYPING TECHNIQUES	L	T	P	C
		2	0	0	1

OBJECTIVES:

- To learn the fundamentals of rapid prototyping and automated fabrication.
- To acquire knowledge on the generation of suitable CAD models.
- To study the current rapid prototyping fabrication technologies, the use of secondary processing and the impact of these technologies.
- To understand the various rapid prototyping fabrication technologies, their underlying material science and the application of this technology on society.

MODULE I INTRODUCTION 5

Introduction to RP –Technology- Description -Definition to RP -Overview of RP - Benefits and Application

MODULE II RPT FILE GENERATION 8

RP Processes: Process overviews, STL file Generation, File Verification & Repair, Build File Creation, Part Construction, Part Cleaning and finishing, Process Strength & limitations.

MODULE III LIQUID BASED AND SOLID BASED RAPID PROTOTYPING SYSTEMS 10

Classes of RP systems: 3D Printers, Enterprise Prototyping centers, Direct digital tooling, Direct digital manufacturing, system classification, Stereo lithography, SL with photo polymerization, Selective Laser Sintering, Fused deposition modeling, Laminated object manufacturing, Laser powder forming. Prototype properties: Material, color, dimensional accuracy, stability, surface finish, machine-ability, environmental resistance, operational properties

MODULE IV RAPID PROTOTYPING APPLICATIONS 9

RP Applications: Design, Concept Models, Form & fit checking, Ergonomic Studies, Functional testing, Requesting Price quotes, CAD data verification, Rapid Tooling, rapid manufacturing, Science & Medicine, Archeology, Paleontology & forensic Science, miniaturization

L – 30; T – 0 ; Total Hours –30

REFERENCES:

1. Chua C.K., Leong K.F., and Lim C.S., Rapid prototyping: Principles and applications, second edition, World Scientific Publishers, 2003.
2. Andreas Gebhardt, Hanser Gardener, Rapid prototyping, Publications, 2003.
3. Liou W. Liou, Frank W. Liou, Rapid Prototyping and Engineering applications: A tool box for prototype development, CRC Press, 2007.
4. Ali K. Kamrani, Emad Abouel Nasr, Rapid Prototyping: Theory and practice, Springer, 2006.
5. Peter D. Hilton, Hilton / Jacobs, Paul F. Jacobs, Rapid Tooling: Technologies and Industrial Applications, CRC press, 2000.

OUTCOMES:

The students will

- Identify the currently available rapid prototyping systems, their fundamental operating principles and their characteristics
- Demonstrate complementary, secondary fabrication processes commonly used with the above rapid prototyping systems
- Select the appropriate fabrication technology or technologies for a given prototyping task

MECX57	INDUSTRIAL MARKETING	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To share the concepts and frameworks which may be more relevant in industrial marketing situations
- To develop skills in identifying an interesting industrial marketing problem to study, as well as finding relevant facts.

MODULE I OVERVIEW AND PREPARATION 7

The Industrial Marketing system and the Industrial Marketing concept, Industrial goods demand and product characteristics market levels and product types, the industrial customer, buyer motives business and institutional buyers.

MODULE II INDUSTRIAL BUYER BEHAVIOUR AND INPUTS TO MARKETING 8

Analysis of micro and macro environment of industrial markets, BUYGRID MODEL, phases in purchasing decision process & their marketing implications, buying center - Webster and Wind model - Sheth model. Purchasing Agents in Industrial Buying; Negotiation in Industrial Marketing

L – 15; T – 0 ; Total Hours –15

REFERENCES:

1. Krishna K. Havaldar, “Industrial Marketing,” Tata McGraw Hill Pub Co. Ltd, New Delhi, 2002.
2. Richard M. Hill, Ralph S. Alexander, James S.Cross, “Industrial Marketing”, AITBS, 2000
3. Robert R. Reeder, Edward G. Brittle and Pretty H. Reedier, “Industrial Marketing – Analysis Planning and Control,” Prentice Hall of India Limited, New Delhi,2000.

OUTCOMES:

Students should be able to

- Take strategic decisions to promote marketing.
- Analyse the industrial market potential

MECX58	ENTREPRENEURIAL DEVELOPMENT	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To make the students aware of the importance of entrepreneurship opportunities available in the society for the entrepreneur.
- Acquaint them with the challenges faced by the entrepreneur

MODULE I INTRODUCTION 8

Objectives, scope & philosophy, Characteristics and skills of a Successful Entrepreneur, Design Thinking for Customer Delight,creativity & entrepreneurship, harnessing locally available resources, Role of small Enterprise in Economic development, Problems of Small scale industrial units,

MODULE II BUSINESS REQUIREMENTS 7

Market Survey and Research - Feasibility Study –Preparation and Evaluation of report – Central and State Government Industrial Policies and Regulations –Taxes - Global Business, Sources of finance mobilization – External factors

L – 15; T – 0 ; Total Hours –15

REFERENCES:

1. Hisrich, “Entrepreneurship”, Tata McGraw Hill, New Delhi, 2006.
2. P.C. Jain (ed.), “Handbook for New Entrepreneurs”, EDII, Oxford UniversityPress, New Delhi, 1999.
3. Rabindra N. Kanungo, “Entrepreneurship and Innovation”, Sage Publications,New Delhi, 1998.

OUTCOMES:

Students should be able to

- Develop leadership qualities, business ethics and positive value system.
- Acquire the requirements of entrepreneurship to lead a business.

MECX60	ADDITIVE MANUFACTURING	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To gain the knowledge of importance of Additive manufacturing techniques in manufacturing
- To learn the various additive processes and their principles and applications
- To learn how to create physical objects using additive manufacturing devices and processes

MODULE I INTRODUCTION 8

Introduction and basic fundamentals of AM technology- Traditional manufacturing Vs Additive manufacturing- Reverse Engineering: Introduction, From Scanner to Model validation - Development of Additive Manufacturing Technology-Classifications- Materials for Additive Manufacturing Technology – Additive manufacturing in medical applications- Bio-manufacturing.

MODULE II ADDITIVE MANUFACTURING PROCESS 12

Extrusion Based Additive Manufacturing Process- Fused Deposition Modeling (FDM), Shape Deposition Manufacturing (SDM), Laminated Object Manufacturing (LOM)- Photo-polymer vat Additive Manufacturing Process-Streolithography (SLA), Solid Ground Curing (SGC), Selective Laser Sintering (SLS)-Powder bed fusion and material jetting Additive Manufacturing Process- Electron Beam Melting (EBM), Laser Engineered Net Shaping (LENS), Three Dimensional Printing (3DP) - Hybrid Additive Manufacturing Process- Issues with additive manufacturing

MODULE III BASIC ADDITIVE MANUFACTURING MACHINE 10

Preprocessing – Post processing – Tooling - Construction of basic AM machines: Axes, Linear motion guide ways, Ball screws, Motors, Bearings, Encoders/ Glass scales, Process Chamber, Sensors - Laser scanning system, Powder feeding and Wire feeding systems

L – 30; T – 0 ; Total Hours –30

REFERENCES:

8. Jacobs, Paul F, Rapid Tooling: Technologies And Industrial Applications
9. D.T. Pham, S.S. Dimov, Rapid Manufacturing: The Technologies and Applications of Rapid Prototyping and Rapid Tooling

OUTCOMES:

Upon satisfactory completion of the course, the student will be able to:

- Learn the importance of additive process parameters and their applications
- Demonstrate comprehensive knowledge of the broad range of additive manufacturing processes, devices, capabilities and materials that are available.
- Understand to create the physical objects through additive manufacturing process

MECX61	FAILURE ANALYSIS AND TECHNIQUES	L	T	P	C
		1	0	0	1

OBJECTIVES:

- Introduce students to the concept of material failure analysis and Techniques, and
- Equip them with knowledge on how to design against catastrophic failures required in carrying out failure analysis.
- To identify different types of fracture and to various methods of identifying them.

MODULE I FAILURE ANALYSIS INTRODUCTION 8

Historical background, origin, detection and prevention of failure, types of mechanical failure: Ductile and brittle fracture, fatigue fracture, buckling, creep rupture, stress concentration, statistical aspect of failure analysis, loading spectrum, metallurgical aspect of component failure.

MODULE II FAILURE ANALYSIS TECHNIQUES 7

Processing-structure-property relationship, metallurgical imperfection, processing defects, NDT methods, surface defects and corrosion, propagation of defects, tools for metallurgical failure analysis, Case study reports

L – 15; T – 0 ; Total Hours –15

REFERENCES:

11. George E. Dieter, Mechanical metallurgy, McGraw-Hill Book Company, SI Metric Edition Printed in Singapore.

OUTCOMES:

Physics Elective Courses
(To be offered in II Semester)

PHCX 01	FUNDAMENTALS OF ENGINEERING MATERIALS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To help students to acquire the properties and applications of conducting and semiconducting materials.
- To familiarize students with basic ideas about the properties of dielectric and magnetic materials and their applications.
- To familiarize students with basic knowledge of nanomaterials and its electrical, electronic, mechanical and magnetic properties.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I CONDUCTING AND SEMICONDUCTING MATERIALS 7

Conductors: properties, Fermi distribution function, Fermi energy in metals- density of states- conducting polymers-properties-applications, semiconductors: intrinsic and extrinsic semiconductors-carrier concentration, conductivity and energy band gap, semiconducting polymers- properties- applications.

MODULE II DIELECTRIC MATERIALS 8

Polarization- dielectric constant – electronic, ionic, orientational and space charge polarization – frequency and temperature dependence of polarisation – Internal field - Clausius Mosotti relation - dielectric loss – dielectric breakdown – applications of dielectric materials (capacitors and transformers) – Pyroelectricity, Piezoelectricity, ferroelectricity and applications in Ferroelectric Random Access Memory (FeRAM) - multiferroic materials and its applications.

MODULE III MAGNETIC MATERIALS 7

Origin of magnetism-magnetic moment, susceptibility, permeability – Bohr magneton – Dia, Para and Ferro magnetism –Spontaneous magnetization- Domain theory – Hysteresis – soft and hard magnetic materials – antiferromagnetic materials – Ferrites and its application - Giant Magneto-resistance effect (GMR) - Magnetic resonance imaging(MRI).

MODULE IV NANOMATERIALS 8

Properties of nanomaterials – size effect on thermal, electrical, electronic, mechanical,

optical and magnetic properties – quantum confinement – classification of nanomaterials – quantum well, quantum wire, quantum dot - nanoporous materials - carbon nanotubes, graphene - nanocomposites – applications of nano materials.

PRACTICALS

1. Determination of energy band gap of a semiconductor.
2. Determination of resistivity of metals by four point probe method.
3. Determination of dielectric constant of dielectric material.
4. Determination of time constant of a capacitor using RC circuit.
5. Determination of paramagnetic susceptibility of given liquid.
6. Determination of hysteresis loss in a transformer using BH curve.
7. Analysis of size effect on the absorption spectrum of nanomaterials.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. William D. Callister, “Material Science and Engineering”, Wiley Publications, 2006.
2. Raghavan, V., “Materials Science and Engineering”, 5th edition, Printice Hall of India Pvt Ltd. New Delhi, 2004.
3. Wahab. M.A, “Solid State Physics: Structure and Properties of Materials”, Narosa Publishing House Pvt. Ltd., New Delhi , 2nd Edition, 2010.

6. Pradeep. T., “Textbook of Nanoscience and Nanotechnology”, McGraw Hill Education (India) Private Limited, New York, 2012.

OUTCOMES:

On completion of this course, the student will be able to

- apply the concepts of conducting and semiconducting materials for solid state devices.
- comprehend the significance of properties of dielectric magnetic materials and derive these properties from synthesized materials.
- differentiate between the properties of the nanomaterials compared to bulk materials.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 02	HEAT AND THERMODYNAMICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To familiarize students with basic concepts of heat.
- To help students acquire the fundamentals of heat conduction and radiation.
- To enable students acquaint with the basics of thermodynamic concepts.
- To make students understand the fundamentals of heat based experiments.

MODULE I CONCEPTS OF HEAT **10**

Definition of temperature, thermal and thermodynamic equilibrium - relationship between temperature and kinetic energy - definition of solid, liquid, gas - Introduction to phase transitions, critical and triple points- definition of heat capacity, mechanical equivalent of heat -Joule's calorimeter- latent heat- microscopic model of ideal gas - equation of state, internal energy, equipartition theorem- equation of state for non-ideal gases.

MODULE II CONDUCTION AND RADIATION **10**

Thermal conductivity – rectilinear flow of heat – thermal conductivity of a good conductor – Forbe’s method – thermal conductivity of a bad conductor – Lee’s disc method – conduction of heat through compound media - radiation – Planck’s law of blackbody radiation – Wien’s law – Stefan’s law – Newton’s law of cooling from Stefan’s law – Solar constant – Pyrometry.

MODULE III FUNDAMENTALS OF THERMODYNAMICS **10**

Thermodynamic equilibrium – zeroth law of thermodynamics – first law of thermodynamics – Reversible and irreversible processes – second law of thermodynamics - Heat engine – Carnot’s engine – Carnot’s theorem – Internal combustion engines – petrol and diesel engines (qualitative) – Entropy and available energy – temperature – entropy diagram for Carnot’s cycle - Third Law of thermodynamics (qualitative).

PRACTICALS

1. Determination of mechanical equivalent of heat by Joule’s calorimeter.
2. Relation between temperature of a body and time by plotting a cooling curve-Newton’s law of cooling.

3. Determination of specific heat capacity of liquid by cooling.
4. Determination of thermal conductivity of a good conductor-Forbe's method
5. Determination of thermal conductivity of a bad conductor-Lee's disc method

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur. D.S, “Heat & Thermodynamics”, S.Chand & Co., 2009.
2. Brijlal & Subramaniam, “Heat and Thermodynamics”, S.Chand & Co, Delhi, 2010.
3. Gupta. A.B and Roy. H, “Thermal Physics”, Books and Allied Ltd., 2002.
4. Sharma. J.K and Sarkar. K.K, “Thermodynamics and statistical Physics”, Himalaya Publishing House, 1988.

OUTCOMES:

On completion of this course, the student will be able to

- understand the concepts of heat and its properties.
- comprehend the ideas governing the conduction and radiation processes.
- apply the knowledge of laws of thermodynamics in thermodynamic systems.
- perform heat based experiments and determine its various properties.

PHCX 03 INTRODUCTION TO NANOSCIENCE AND TECHNOLOGY

L	T	P	C
2	0	2	3

OBJECTIVES:

- To acquire basic knowledge about the nanomaterials and applications.
- To learn about the synthesis and imaging techniques of nanomaterials.
- To gain the basic concepts of fabrication techniques.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I NANOMATERIALS AND APPLICATIONS **10**

Properties of nanomaterials – size effect on thermal, electrical, electronic, mechanical, optical and magnetic properties – quantum confinement – classification of nanomaterials – quantum well, quantum wire, quantum dot - nanoporous materials - zeolite, mesoporous materials, carbon nanotubes, grapheme - nanocomposites - applications (qualitative): Molecular electronics-nanoelectronics – nanophotonics - single electron transistor-drug delivery.

MODULE II SYNTHESIS AND IMAGING TECHNIQUES **12**

Top-down and bottom up approaches – mechanical alloying and mechanical ball milling - sol-gel approach - hydrothermal method - precipitation method - spray pyrolysis - spin coating-self assembled monolayer (SAM) - Chemical vapour deposition method – Physical vapour deposition method: laser ablation method, sputtering method.

Optical microscopy – Phase contrast and interference microscopy – confocal microscopy - high resolution Scanning electron microscope (HRSEM) - high resolution Transmission electron microscope (HRTEM) - Atomic force microscope - Scanning Tunnelling microscope (STM).

MODULE III NANOFABRICATION **8**

Photolithgraphy - electron beam lithography - X-ray and Ion beam lithography - nanoimprint lithography - soft lithograpy - nanoelectromechnical systems (NEMS) - nanoindentation principles.

PRACTICALS

1. Synthesis of nanomaterials by sol-gel method.

2. Synthesis of nanomaterials by hydrothermal method.
3. Synthesis of nanomaterials by solid state reaction method.
4. Synthesis of nanomaterials by chemical bath deposition method.
5. Synthesis of nanomaterials by co-precipitation method.
6. Synthesis of nano thin films by spray pyrolysis method.
7. Synthesis of nano thin films by pulsed laser deposition (PLD) method.
8. Analysis of size effect on the absorption spectrum of nanomaterials.
9. SEM characterization of nanomaterials.
10. AFM characterization of nano thin films.
11. Phase confirmation by XRD.

L – 30; P – 30; TOTAL HOURS – 60

6. Bandyopadhyay A.K., “Nano Materials”, New Age International Publishers, New Delhi, 2008.

OUTCOMES:

At the end of the course, the students will be able to

- understand the importance and basic concepts of the nanomaterials.
- comprehend the imaging techniques for nanomaterials.
- illustrate the various nanofabrication techniques.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 04	LASERS AND THEIR APPLICATIONS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To recognize the fundamentals of laser and its characteristics.
- To comprehend and compare the different laser systems.
- To apply lasers in metrology and material processing.
- To understand the working of laser instrumentation.
- To correlate the experimental results for applications.

MODULE I LASER THEORY **8**

Spontaneous and stimulated emission - Population inversion – Einstein's A & B coefficients - Threshold condition – super-radiance Laser – Three level and four level laser systems -conditions for CW and pulsed laser action. Q-Switching - experimental methods - cavity dumping - Mode locking - experimental methods - Spatial and Temporal coherence.

MODULE II DIFFERENT LASER SYSTEMS **8**

Laser systems – General description - Laser structure - excitation mechanism - Different laser systems- He-Ne laser, Carbon-dioxide laser - Excimer laser – Free electron laser- Alexandrite laser - Ti-Sapphire laser – Semiconductor diode laser - Diode pumped solid state laser - Pulsed-CW dye laser- Fibre laser.

MODULE III METROLOGICAL AND MATERIAL PROCESSING APPLICATIONS **8**

CW and Pulsed laser beam characteristics and its measurements - Beam focusing effects - spot size - Power and Energy density Measurements - Distance measurement - Interferometric techniques - LIDARS - different experimental arrangements - Pollution monitoring by remote sensing - Laser gyroscope - Laser welding, drilling, machining and cutting - Laser surface treatment - Laser vapour deposition – Biophotonic applications.

MODULE IV LASER INSTRUMENTATION **7**

Laser for measurement of length, current and voltage – Laser Doppler Velocimetry - Holography and speckle in displacement and deformation measurements - Laser for communication with fiber optics as channel.

PRACTICALS

1. Tuning of Dye Laser using DFDL Arrangement
2. Determination of Brewster Angle using He-Ne laser
3. Study of transversely Pumped Dye Lasers
4. Study of longitudinally Pumped Dye Lasers
5. Determination of power and wavelength using Distributed Feedback Dye Laser (DFDL)
6. Determination of fibre optic losses using semiconductor laser.
7. Bandgap determination of a semiconductor diode.

L – 30; P – 30; TOTAL HOURS – 60

6. William M.Steen, ”Laser Material Processing”, Springer-Verlag, Berlin, Third Edn., 2005.

OUTCOMES:

At the end of the course, the students will be able

- To complement the knowledge acquired in the theory class.
- To work with dye lasers for tunability of laser wavelength.
- To measure the loss of information involved in fibre optic communication.
- To correlate the results for application.

PHCX 05	MATERIALS SCIENCE	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To gain basic knowledge in conducting and semiconducting materials and their properties.
- To provide basic understanding of properties and applications of dielectric materials.
- To impart knowledge on magnetic and optical materials and their properties & applications.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I CONDUCTING AND SEMICONDUCTING MATERIALS **10**

Quantum free electron theory of metals and its importance - Energy distribution of electrons in metals - Fermi distribution function - Density of energy states and carrier concentration in metals - Fermi energy – Classification of solids into conductors, semiconductors and insulators on the basis of Band theory – Introduction to Elemental and Compound semiconductors - Carrier concentration derivation for Intrinsic semiconductors - Density of electrons in conduction band & Density of holes in valence band- intrinsic carrier concentration - Fermi energy & Variation of Fermi energy level with temperature - Mobility and electrical conductivity - Band gap determination.

MODULE II DIELECTRIC MATERIALS **7**

Introduction to dielectric materials & basic definitions – Electronic, Ionic, Orientation & Space charge polarizations - Total polarization – Frequency and temperature dependence of polarization - Internal field in a dielectric material - Deduction of Clausius - Mosotti's relation - dielectric loss & loss tangent – Different types of dielectric breakdown – Applications of dielectric materials : Capacitors and Transformers.

MODULE III MAGNETIC MATERIALS **6**

Introduction to magnetic materials & origin of magnetic moment - Different types of magnetic materials and their properties - Ferromagnetism & Domain theory of ferromagnetism - Hysteresis, Soft and Hard magnetic materials - Antiferromagnetic materials - Ferrites and its applications – Applications of magnetic materials : Data storage.

MODULE IV OPTICAL MATERIALS 7

Optical properties of semiconductors - Direct and Indirect bandgap semiconductors – Traps, recombination centre, color center and exciton – Luminescence : Fluorescence and Phosphorescence - Liquid crystal display : twisted nematic crystal display – Applications of Optical materials - Optical Sources : light emitting diode and laser diode - Photo detectors : PIN photodiode and Avalanche Photodiode - Pyroelectric devices - Electro optic effect : Kerr effect and Faraday effect.

PRACTICALS

1. Resistivity measurement of a semiconductor using four point probe method.
2. Determination of band gap of a semiconductor diode.
3. Determination of Hall coefficient of a given semiconductor material.
4. Determination of dielectric constant of a given non-polar liquid.
5. Determination of magnetic susceptibility of a given paramagnetic liquid using Quincke's method.
6. Determination of energy loss of a given transformer core using hysteresis method.
7. To study the I-V characteristics of a photodiode.

L – 30; P – 30; TOTAL HOURS – 60

5. Raghavan. V, ''Materials Science and Engineering'', Prentice Hall of India, 5th

Edition, 2004.

OUTCOMES:

On the completion of this course, the students will be able to

- Gain knowledge about fundamentals of conducting and semiconducting materials.
- Understand concepts and applications of Dielectric and Magnetic materials.
- Familiarize Optical materials and their applications in Engineering and Medical fields.
- Complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 06	NON-DESTRUCTIVE TESTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To study the process and applications of ultrasonic inspection method.
- To understand the basic concepts of radiographic inspection method.
- To acquire the knowledge about the various surface Non-Destructive Testing (NDT) techniques.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I ULTRASONIC INSPECTION METHOD **10**

Ultrasonic Testing - Principle of operations - types of sound waves - types of Transducers - transmission and pulse-echo method - straight beam and angle beam, instrumentation - calibration methods - ultrasonic testing technique- data representation, A Scan, B-scan, C-scan. Phased Array Ultrasound, Time of Flight. Diffraction - thickness determination - advantages, disadvantages and applications.

MODULE II RADIOGRAPHIC INSPECTION METHOD **10**

Radiographic testing – Principle - Interaction of X-ray with matter - X-ray radiography - method of generation-industrial radiography inspection techniques – Equipment - Exposure charts - Types of films – Fluoroscopy - Xero-Radiography – Limitations - Gamma radiography - Equipment, radiation sources - method of generation - film processing - interpretations of radiography - safety in industrial radiography.

MODULE III SURFACE NDT TECHNIQUES **10**

Liquid Penetrant Testing – Principles, Characteristics and types of liquid penetrants – developers - advantages and disadvantages of various methods - Inspection Procedure and Interpretation of results. Applications of Liquid Penetrant testing.

Magnetic Particle Testing - Principle-magnetizing technique - procedure –equipment - Interpretation and evaluation of test indications - applications and limitations - demagnetization.

PRACTICALS

1. Inspection of welds using solvent removable visible dye penetrant.
2. Inspection of welds using solvent removable fluorescent dye penetrant.

3. Inspection on non magnetic materials by eddy current method.
4. Inspection on magnetic materials by eddy current method.
5. Inspection of welds by Eddy current Testing.
6. Inspection of welds by Magnetic Particle Testing - Dry method.
7. Inspection of welds by Magnetic Particle Testing - Wet method.
8. Ultrasonic flaw detector - Inspection of defects.
9. Demonstration of Radiographic inspection.

L – 30; P – 30; TOTAL HOURS – 60

5. Charles J., Hellier, “Handbook of Nondestructive evaluation”, McGraw Hill, New York, 2001.

OUTCOMES:

Upon completion of this course, the students will be able to

- illustrate the ultrasonic inspection methods of NDT.
- understand the basic concept of radiographic inspection method.
- test the surfaces by the various surface NDT techniques.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 07	PROPERTIES OF MATTER AND ACOUSTICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand principles and properties of elasticity.
- To understand the basic concepts and application of viscosity.
- To analysis acoustic of building.
- To know about photoelasticity and its applications.

MODULE I ELASTICITY **8**

Stress and strain - Hooke's Law of elasticity - Elastic moduli - Stress-Strain Diagram - Poisson's Ratio - Relation between elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Expression for bending moment - Cantilever–Expression for depression - Uniform bending and Non-uniform bending of beams (theory & experiment) - I form Girders (qualitative treatment) and applications.

MODULE II VISCOSITY **8**

Viscosity- Newton’s formula for viscous flow - Streamline and turbulent motion - Reynolds number - Poiseuille's formula - Determination of coefficient of viscosity- factors affecting viscosity - capillary flow method - Stoke's formula- viscosity of highly viscous liquids – Stoke’s method - Lubricants and its applications –viscosity measurements - Viscometer - Variation of Viscosity with Temperature.

MODULE III ACOUSTICS OF BUILDING **7**

Basic requirement for the acoustically good halls - Reverberation and time of reverberation – Sabine’s formula for reverberation time - Absorption coefficient and its measurement -Transmission of sound and transmission loss - Factors affecting the architectural acoustics and their remedy-sound absorbing materials - vibration and noise control systems for buildings.

MODULE IV PHOTOELASTICITY **7**

Polarization - double refraction - Theory of Plane, Circularly and Elliptically polarized light - Quarter wave plate and half wave plate - photo elasticity - Theory of photo-elasticity - Stress optic relations - model materials - analysis techniques - Photo elastic bench - Three dimensional photo elasticity - Digital photo elasticity - Photo elastic

coatings.

PRACTICALS

1. Determination of viscosity of liquid by Poiseuille's method.
2. Determination of viscosity of liquid by Stoke's method.
3. Analysis of stress by photo elastic method.
4. Verification of Hooke's law by spring method.
5. Determination of Young's modulus of the cantilever beam.
6. Determination of rigidity modulus by static torsion method.
7. Visit to acoustically good auditorium and identifying the sound absorbing materials in the auditorium.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur D.S., "Elements of Properties of Matter", S.Chand & Co, Delhi, 2009.
2. Gaur R.K., Gupta S.L.,"Engineering Physics", Dhanpat Rai Publishers, 2010.

4. Smith C.J.," General Properties of Matter", Orient & Longman,1960.
5. Kenneth G. Budinski and Michel K., Budinski, "Engineering Materials Properties and Selection", Pearson, Singapore, 2002.

OUTCOMES:

Upon completion of this course, the students will be able to

- understand the basic concepts of the elasticity of materials.
- comprehend the concepts of viscosity of liquid and measurement.
- demonstrate the acoustical aspects of building and its importance in construction.
- apply the fundamental concept of photo elasticity for the stress analysis of the object.

PHCX 08	PROPERTIES OF MATTER AND NONDESTRUCTIVE TESTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To impart knowledge about the principles and properties of elasticity.
- To learn the laws governing the dynamic of rigid bodies.
- To acquire the knowledge of the various techniques of Non-Destructive Testing (NDT) of materials.
- To understand the principle and basic concept of low temperature applications.

MODULE I ELASTICITY **8**

Stress and strain - Hooke's Law of elasticity - Elastic moduli - Stress-Strain Diagram - Poisson's Ratio - Relation between elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Expression for bending moment-Cantilever–Expression for depression - Uniform Bending and Non-uniform bending of beams (theory & experiment) - I form Girders (qualitative treatment) and applications.

MODULE II DYNAMICS OF RIGID BODIES **8**

Rigid bodies - angular acceleration - Torque on a particle - angular momentum - law of conservation of angular momentum - moment of inertia and its significance -Theorem of parallel and perpendicular axis - moment of inertia of a thin uniform bar - moment of inertia of a rectangular lamina - moment of inertia of uniform circular disc - Moment of inertia of hollow and solid cylinders – flywheel (qualitative) - kinetic energy of rotating body – Routh rule.

MODULE III NDT TECHNIQUES **6**

Ultrasonic Testing- types of Transducers-transmission and pulse-echo method-Radiographic testing- Principle-Interaction of X-ray with matter-X-ray radiography-method of generation-industrial radiography inspection techniques- Liquid Penetrant Testing**-** Inspection Procedure and Interpretation of results.

MODULE IV LOW TEMPERATURE PHYSICS **8**

Definition of Refrigeration and Air-Conditioning - Types of **Refrigeration Systems-**Applications- Comfort Air Conditioning, Industrial Refrigeration, Food

processing and food chain - **Cryogenic treatment - Low temperature properties of engineering materials: Mechanical properties, Thermal properties, Electrical properties.**

PRACTICALS

1. Verification of Hooke's law by spring method.
2. Determination of Young's modulus of the beam by bending method.
3. Inspection of welds using solvent removable visible dye penetrant.
   Inspection of welds using solvent removable fluorescence dye penetrant.
5. Inspection of welds by Magnetic Particle Testing.
6. Determination of moment of inertia of the disc by torsion pendulum method.
7. Determination of moment of inertia of the disc by static torsion method.
8. Demonstration of working of flywheel.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur D.S.,"Elements of Properties of Matter", S.Chand & Co, Delhi, 2009.
2. Brijlal & Subramaniam," Properties of Matter", Eurasia Publishing Co, Delhi, 2002.

7. Charles J., Hellier.," Handbook of Nondestructive evaluation", McGraw Hill, New York, 2001.

OUTCOMES:

Upon completion of this course, the students will be able to

- understand the basic of concept of elasticity of materials.
- comprehend the basic concepts of motion of rigid bodies and its applications.
- demonstrate the various NDT techniques and its importance.
- know the low temperature systems and its applications.

PHCX 09	SEMICONDUCTOR PHYSICS AND OPTOELECTRONICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand the Physics of Semiconductor devices.
- To make the students learn the fundamentals of Photoluminous - semiconductors, Optoelectronic devices, Optical modulators/detectors.
- To make them understand the technology behind latest Display devices like LCD, Plasma and LED Panels.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I PHYSICS OF SEMICONDUCTORS **8**

Elemental and compound semiconductors – Drift and diffusion current - Intrinsic semiconductors – Carrier concentration (derivation) – Fermi energy – Variation of Fermi energy level with temperature – Mobility and electrical conductivity – Band gap determination – Extrinsic semiconductors – Carrier concentration in n-type and p-type semiconductor (derivation) – Variation of Fermi level with temperature and impurity concentration – Variation of Electrical conductivity with temperature – Hall effect – Experiment and applications of Hall effect.

MODULE II OPTOELECTRONIC DEVICES **7**

Light Emitting Diodes (LED) – power and efficiency - double hetero LED - LED structure - LED characteristics - White LED – Applications. Liquid crystal displays – Dynamic scattering and Twisted nematic display, Semiconductor Lasers, Homojunction and Heterojunction laser diodes - Optical processes in semiconductor lasers.

MODULE III OPTICAL MODULATORS **7**

Modulation of light – birefringence –Modulation Techniques - Electro optic effect – Electro optic materials –Types of Electro optic Modulators : Kerr and Pockel modulators –- Magneto optic effect - Magneto optic Modulators – Acousto Optic modulators.

MODULE IV OPTICAL DETECTORS **8**

Photo detectors - photodiodes - phototransistors - noise characteristics - PIN diode – Avalanche Photodiode (APD) characteristics - APD design of detector arrays – Charged Couple Device - Solar cells - Materials and design considerations, Thin film

solar cells, amorphous silicon solar cells.

PRACTICALS

1. Resistivity measurement of a semiconductor using four point probe method.
2. Determination of band gap of a semiconductor diode.
3. Determination of Hall coefficient of a given semiconductor material.
4. Determination of the wavelength of a given laser source using diffraction grating.
5. Determination of Planck's constant using LED.
6. To study the I-V characteristics of photodiode and phototransistor.
7. To study the characteristics of a solar cell.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Arumugam. M, "Physics II", Anuradha Publishers, 5th Edition, 2005.
2. Sze. S.M., "Semiconductor Devices – Physics and Technology", 2nd edn. John Wiley, 2002.
3. Wilson & J.F.B. Hawkes, "Optoelectronics – An Introduction", Prentice Hall, India, 1996.

6. Palanisamy P.K., "Semiconductor physics and optoelectronics" Scitech Publications, 2003.

OUTCOMES:

On completion of this course, the student will be able to

- understand the principles of Physics behind semiconductor devices.
- choose the correct semiconductors for electronic devices and display.
- differentiate the working principle of LED and Diode Laser.
- apply the knowledge of modulation of light for different types of optical modulators.
- select suitable photodetectors for different types of applications.
- complement the knowledge acquired in the theory class and correlate the results for applications.

Chemistry Elective Courses
(To be offered II Semester)

CHCX01	ANALYTICAL INSTRUMENTATION	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the student conversant with

- principles, instrumentation and applications of different electroanalytical techniques
- different chromatographic techniques
- principles, instrumentation and applications of various types of absorption and emission spectroscopy
- different thermal analytical methods and their applications

MODULE I ELECTROANALYTICAL TECHNIQUES **7**

Principle and applications: conductometric titrations – potentiometrIc titrations, ion-selective electrodes and pH-metry – coulometry – voltammetry - polarography, amperometric titrations.

MODULE II CHROMATOGRAPHY **8**

Basic concepts of chromatography – paper chromatography – column chromatography – thin layer chromatography – gas chromatography – high performance liquid chromatography – gel permeation chromatography.

MODULE III SPECTROSCOPY **8**

Absorption spectroscopy (principle, instrumentation and applications): Colorimetric analysis – UV-Visible spectroscopy – FTIR spectroscopy - Emission Spectroscopy (principle, instrumentation and applications): fluorescence, phosphorescence and chemiluminescence – Atomic absorption spectroscopy – flame emission spectroscopy.

MODULE IV THERMAL ANALYSIS **7**

Principle, instrumentation and applications: Thermo gravimetric analysis – Differential thermal analysis – Differential scanning calorimetry

PRACTICALS

1. Conductometric titrations: acid-base and precipitation titrations

2. Potentiometric titrations
3. Determination of pH of the unknown solution
4. Estimation of alkali metals using flame emission spectroscopy
5. Estimation of metal ions of coloured solutions using colorimetric analysis
6. Separation of compounds using gas chromatography
7. Separation of compounds using high performance liquid chromatography
8. Analysis of the given sample and interpretation of the data using IR, UV-Visible spectroscopy
9. Demonstration of TGA/DTA and DSC and interpretation of data.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

6. Settle F. (Editor), Handbook of Instrumental Techniques for Analytical Chemistry, Pearson Education, Singapore, 2004.

OUTCOMES:

The student will be able to

- state the principle and applications of various electro-analytical techniques
- identify the right separation method for a given sample using different chromatographic techniques
- explain the principle, instrumentation & applications of various spectroscopic methods and also to interpret the data
- elaborate the principle, instrumentation and applications of various thermal analytical techniques and interpret the data.

CHCX02	CORROSION AND ITS CONTROL	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with the

- Basic concepts, principles and factors affecting corrosion
- Types and mechanism of corrosion
- Control measures of corrosion by material selection, proper design and by applying organic coatings
- Control of corrosion by applying inorganic coating

MODULE I BASIC CONCEPTS OF CORROSION **8**

Corrosion – causes and impacts of corrosion – mechanism of corrosion: Dry corrosion- oxidation corrosion - corrosion by other gases – Pilling-Bedworth rule-Corrosion by hydrogen: hydrogen blistering, hydrogen embritttlement, decarburization and hydrogen attack – corrosion of silver and copper by sulphur compounds – liquid metal corrosion (embritttlement or cracking) – Wet corrosion : hydrogen evolution – presence and absence of oxygen and absorption of oxygen –difference between dry and wet corrosion-factors influencing corrosion-polarization-passivity-emf series and galvanic series- corrosion current -rate of corrosion.

MODULE II FORMS OF CORROSION **7**

Forms of corrosion-conditions for electrochemical corrosion –galvanic corrosion – differential aeration corrosion: pitting, water line, wire fencing, crevice and filiform corrosion – stress corrosion – Intergranular corrosion- erosion corrosion – soil corrosion – microbiological corrosion- fretting corrosion- corrosion in composites.

MODULE III CORROSION CONTROL AND ORGANIC COATINGS **8**

Corrosion control – selection of materials and designing- cathodic protection – sacrificial anode and impressed current cathodic protection – corrosion inhibitors: anodic, cathodic and vapour phase inhibitors.

Organic protective coatings – paints: constituents – functions – varnishes : types-constituents – functions – lacquers : constituents – functions –enamels-

constituents – functions – special paints : fire retardant, water repellant, heat resistant, temperature indicating and luminous paints.

MODULE IV INORGANIC COATINGS 7

Treatment of metal surface-inorganic coatings- classification- metallic coatings : anodic and cathodic coatings-hot dipping : galvanizing and tinning-electroplating—electroless plating – cementation (diffusion) : sherardizing, calorizing and chromizing – metal cladding-metal spraying – non metallic coatings (chemical conversion coatings) : phosphate, chromate, oxide coatings and anodizing – comparison of anodic and cathodic protection.

PRACTICALS

1. Determination and comparison of rate of corrosion of metals in the presence of acid, base and neutral medium by weight loss method.
2. Determination of rate of corrosion of iron in the presence of various acids by weight loss method.
3. Determination of rate of corrosion of iron in the presence and absence of anodic Inhibitor by weight loss method.
4. Determination of rate of corrosion of iron in the presence and absence of cathodic Inhibitor by weight loss method.
5. Electroplating of base metal with copper.
6. Electrolessplating of base metal with copper
7. Chemical conversion coatings such as chromate and phosphate coatings.
8. Demonstration on the study of rate of corrosion by using cyclic voltametry.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. P.C Jain & Monica Jain, Engineering Chemistry Dhanpatrai Publishing Company (P) Ltd., New Delhi (2013).

4. S. Banerjee, A.K. Tyagi, Functional Materials- Preparation, Processing and Applications, ELSEVIER Publications, London ; Waltham, MA : 2011

OUTCOMES:

Students will be able to

- explain the mechanism, compare and enumerate the factors affecting corrosion
- describe and identify the place and types for a given situation.
- choose and elaborate the suitable organic coating method for a given real time situation.
- apply a suitable metallic coating for a given situation

CHCX03	ELECTRICAL MATERIALS AND BATTERIES	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with

- preparation, properties and applications of plastics used in electrical and electronic applications
- properties and uses of electrical engineering materials
- classification and description of different types of batteries.
- classification and types of fuel cells

MODULE I POLYMERS FOR ELECTRICAL AND ELECTRONIC APPLICATIONS **8**

Preparation, properties and applications **:** polyethylene, polypropylene, EPDM, Nylon-6,6, PVC, PTFE, polycarbonates, ABS, phenol formaldehyde, urea formaldehyde, epoxy resins – polymer blends and alloys.

MODULE II ELECTRICAL ENGINEERING MATERIALS **7**

Conductors: Silver, Copper, Gold, Aluminum – Semiconductors: Germanium, Silicon, Gallium Arsenic – Insulating Materials: Rubbers, Mica, Plastics, Ceramics, Insulating papers – Magnetic Materials: ferromagnetic materials, paramagnetic materials, diamagnetic materials, antiferromagnetic materials, ferrites

MODULE III BATTERIES **7**

Electrochemical and electrolytic cell – batteries: types (primary, secondary and flow cell) – primary batteries: dry cells, alkaline batteries – secondary batteries: nickel-cadmium cell – lead acid storage cell, lithium battery: primary and secondary type – solar cell – dye sensitized solar cell.

MODULE IV FUEL CELLS **8**

Difference between batteries and fuel cells - chemistry of fuel cells - types of fuel cell (based on temperature and electrolyte) – principle, characteristic features, advantages, disadvantages and applications of polymer electrolyte membrane or proton exchange membrane fuel cell (PEMFC), direct methanol fuel cell (DMFC), alkaline fuel cell (AFC), phosphoric acid fuel cell (PAFC), molten carbonate fuel cell (MCFC) and solid oxide

fuel cells (SOFC).

PRACTICALS

1. Free radical polymerization of styrene.
2. Free radical polymerization of PMMA.
3. Preparation of phenol-formaldehyde.
4. Preparation of urea-formaldehyde.
5. Synthesis of epoxy resin.
6. Demonstration of mechanical properties of insulating materials using UTM
7. Demonstration of electrical properties of insulating materials
8. Construction of batteries using natural resources
9. Measurement of EMF for different batteries.

L – 30; P – 30; TOTAL HOURS – 60

7. B. Viswanathan and M. Aulice Scibioh, Fuel Cells: Principles and Applications, Taylor and Francis Group, 2007.

OUTCOMES:

The student will be able to

- summarise the preparation, properties and applications of plastics used in electrical and electronic applications
- enumerate the properties and uses of electrical engineering materials
- illustrate various types of batteries with the aid of a diagram
- classify the fuel cells and elaborate the different types of fuel cells.

CHCX04	ENGINEERING MATERIALS	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with

- properties and uses of different types of refractories and abrasives
- adhesives, cements and lime, setting of cements and their chemical behaviors.
- types, properties and uses of lubricants.
- various types of composite materials.

MODULE I REFRACTORIES AND ABRASIVES **8**

Introduction refractory: -classification - based on chemical nature- characteristic and selection of good refractory - general manufacture of refractory- preparation properties and uses of: silica refractory - magnesite refractory - zirconia refractory, properties of refractories: refractoriness - refractoriness under load - thermal spalling - porosity and dimensional stability, Cermets - super refractory.

Abrasives : introduction - Moh's scale - natural abrasives: diamond – corundum – emery - garnet and quartz, synthetic abrasives: preparation properties and uses: carborundum (silicon carbide)– alundum - boron (norbide) carbide

MODULE II ADHESIVES AND BINDING MATERIALS **7**

Introduction - classification of adhesives –advantage –limitation of adhesive bonding – development of adhesive- factors influencing adhesive action: chemical and physical, application techniques of adhesive – Lime: classification – manufacture - setting and hardening, Gypsum: -Manufacture and properties and uses - Cement : chemical composition- Manufacture – setting and hardening – concrete – weathering of cement and concrete and its prevention- special cements: high alumina cement - sorel cement - white portland cement – water proof cement.

MODULE III LUBRICANTS **7**

Introduction –functions of lubricant- mechanism of lubrication - classification of lubricant – liquid lubricant: vegetable and animal oils – mineral oils, semisolid: grease(calcium, lithium, aluminium) – petroleum jelly, solid lubricant: graphite - molybdenum disulphide, Properties of lubricant: viscosity - viscosity index - flash point and fire point - cloud point and pour point – oiliness - aniline point - carbon residue.

MODULE IV COMPOSITE MATERIALS 7

Introduction – advantageous characteristics of composites, applications of composites, main constituent of composites, types and applications of composites: RCC fibre-reinforced plastics (glass , carbon and aramid) - particulate composite - metal matrix composite - layered composites - failures in fibre-reinforced composites, ceramic matrix composites (CMC) – properties and applications.

PRACTICALS

1. Preparation of refractory bricks
2. Preparation of abrasive papers/cloth
3. Preparation of simple adhesives
4. Estimation of alkalinity in cements
5. Determination of cloud point and pour point
6. Determination of flash point and fire point
7. Preparation of fibre-reinforced composite

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

2. B.Sivasnakar, “Engineering Chemistry”, Tata McGrow-Hill Publication Limited, New Delhi, second reprint 2008.
3. Engineering Chemistry, Wiley India Editorial Team, Willey India Publisher, New Delhi, 2011.
4. S S Umare & S S Dara, A text Book of Engineering Chemistry, S. Chand& Company Ltd, New Delhi, 2014.

OUTCOMES:

The student will be able to

- classify and describe the manufacture the refractories and enumerate the properties and uses of abrasive materials.
- elaborate the manufacture, properties and uses of various adhesives and binding materials.
- classify lubricants and describe the properties and uses of them
- enumerate the properties and uses of various composite materials.

CHCX05	FUELS AND COMBUSTION	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the students conversant with the

- three types of fuels available and the different processes involved in it.
- analysis of fuel characteristics and manufacture of fuels
- calculations involved in calorific values and minimum air requirement for complete combustion.
- classification, functions, mechanism and properties of lubricants.

MODULE I SOLID FUELS **7**

Characteristics of good fuel. Solid fuel – Wood, Coal – Ranking of coal – selection of coal. Analysis of coal – Proximate analysis. Pulverized coal – Metallurgical coke – Carbonization of coal – types. Manufacture of metallurgical coke – Beehive oven and Otto Hoffman's by-product oven methods.

MODULE II LIQUID AND GASEOUS FUELS **8**

Liquid fuel: Petroleum: Refining of petroleum, Liquid fuels derived from petroleum – Cracking: Thermal (Liquid and Vapour phase) – Catalytic (fixed bed and moving bed cracking – Synthetic petrol: Fischer-Tropsch method– Knocking in petrol and diesel engine: octane number and antiknocking – cetane number and improvement of cetane number – biodiesel (trans-esterification) – Gaseous fuels: Compressed natural gas (CNG) – LPG – oil gas – producer gas – water (blue) gas – biogas.

MODULE III COMBUSTION **8**

Calorific value: Gross and net caloric value – Bomb Calorimeter, Gas calorimeter - Definition of combustion – calculation of minimum requirement of air (problems) – theoretical calculation of calorific values (Dulong's formula), Gross and net calorific values ((problems) – Analysis of flue gas: Orsat's gas analysis method, explosive range, Ignition temperature. Introduction to air pollution from IC (Internal combustion) engines, photochemical smog, primary and secondary pollutants.

MODULE IV LUBRICANTS **7**

Friction and wear – lubricants: definition, functions and mechanism of lubrication

(thick film and thin film) –classification: liquid lubricants: animal and vegetable origin, mineral oil, blended oils, lubricating emulsions and silicones – properties of lubricating oils: viscosity and viscosity index; Flash and fire-point, Cloud and pour point, oiliness, emulsification number, volatility, carbon residue, aniline point – semisolid lubricant: greases and waxes – solid lubricant: graphite and molybdenum disulphide –nanolubricants.

PRACTICALS

1. Testing of fuels - proximate analysis (moisture, volatile matter, ash content and fixed carbon present in coal, coke, charcoal etc)
2. Ash content and carbon residue test
3. Biodiesel synthesis by trans-esterification method (from coconut, groundnut, mustard oil, palm oil)
4. Determination of calorific value of a solid fuel using Bomb calorimeter (coal, charcoal, coke etc)
5. Determination of calorific value of a liquid fuel using Bomb calorimeter (petrol, diesel, biodiesel etc)
6. Determination of cloud point and pour point of a lubricant
7. Determination of flash and fire point of diesel.
8. Aniline Point of diesel
9. Viscosity Index of lubricants and Fuels by Viscometer
10. Flue gas analysis by Orsat's gas analysis method – Demonstration
11. Working of internal combustion engine – Demonstration

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Jain P.C and Renuka Jain, Physical Chemistry for Engineers, Dhanpat Rai and Sons, New Delhi, 2001.
2. Engineering Chemistry, Wiley India Editorial Team, Willey India Publisher, New Delhi, 2011.

4. J.B. Heywood, Internal Combustion Engine Fundamentals, McGraw Hill International Editions, 1989.
5. Bahl B.S., Tuli and Arun Bahl, Essentials of Physical Chemistry, S. Chand and Company Ltd., New Delhi, 2004.

OUTCOMES:

The students will be able to

- compare and contrast the solid, liquid and gaseous fuels and also describe the processes involved in liquid and gaseous fuels.
- analyse the fuel properties such as moisture, votalite matter, ash content, calorific value etc
- calculate minimum air required for complete combustion and calorific values of fuels.
- categorize different lubricants into three types, explain the preparation and determine their properties.

CHCX06	FUNDAMENTALS OF PHYSICAL CHEMISTRY	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students will be conversant with the

- various thermodynamic terms and relate the laws of thermodynamics in chemical processes
- molecularity and order of reaction and derive the rate constant for different order of reactions
- basics of adsorption of different materials and propose mechanisms and surface area measurement
- conditions for equilibrium and learn different components at equilibrium

MODULE I BASIC THERMODYNAMICS **8**

Introduction - Thermodynamic terms - Thermodynamic equilibrium and processes - 1st law of thermodynamics: internal energy, enthalpy, heat capacity, isothermal and adiabatic expansion, Joule-Thomson effect - Zeroth law of thermodynamics: absolute temperature - 2nd law of thermodynamics: - spontaneous and cyclic process, Entropy in isothermal, isobaric and isochoric processes, work and free energy function, Maxwell's relation - 3rd law of thermodynamics

MODULE II CHEMICAL KINETICS **8**

Rate of chemical reaction - order and molecularity of a reaction - Rate constant - kinetics of opposing, parallel and consecutive and chain reactions - isotope effects - effect of temperature on reaction rate - collision theory - absolute reaction rate theory - kinetics in enzyme catalysis

MODULE III SURFACE SCIENCE AND CATALYSIS **8**

Adsorption - adsorption isotherms - uni and bimolecular adsorption reactions - parahydrogen conversion - factors affecting adsorption – Langmuir adsorption isotherm - Hinshelwood mechanism and *Eley-Rideal* mechanism with example - adsorption of gases on solids and surface area measurement by BET method - Terms in catalysis - homogeneous and heterogeneous and enzyme catalysis with example

MODULE IV PHASE RULE 6

Terms involved - Conditions for equilibrium - application of phase rule to water, lead-silver system, freezing mixtures, thermal analysis: cooling curves.

PRACTICALS

1. Determination of the heat capacity of benzoic acid, internal energy of combustion of camphor using Bomb calorimeter. Calculation of enthalpy of combustion and formation for camphor.
2. Determination of adsorption isotherm of (i) acetic acid on charcoal (ii) oxalic acid on charcoal.
3. *Kineticsoffirst and second order reactions.*
4. Phase rule experiments with organic compounds: (i) naphthalene and p-dichloro benzene (ii) naphthalene and diphenyl (iii) m-dinitrobenzenzene and p-nitro toluene.

L – 30; P – 30; TOTAL HOURS – 60

6. Puri B.R., Sharma L.R. and Pathania M.S., Principles of Physical Chemistry, 47th Edition, Vishal Publishing Co. India, 2016.

OUTCOMES:

The student will be able to

- calculate entropy, enthalpy and free energy change for different chemical processes
- calculate the rate constant for any chemical and biochemical processes
- differentiate the adsorption processes and calculate the surface area and predict the suitability of catalysts for different chemical processes

- predict the equilibrium conditions for water, alloys, freezing mixtures and draw the thermal curves for phase transition

CHCX07	GREEN TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make students conversant with the

- basic principles of green chemistry and green technology.
- wastes that causes hazards to human health
- chemicals that harms our environment
- need for green processes in various industries

MODULE I GREEN CHEMISTRY PROTOCOL **7**

Need – Significance – 12 Principles with examples – R4 model – Life cycle analysis – sustainable and cleaner production - Green Technology: definition, examples: CFC free refrigerants, green building, energy, 3D printers, nanotechnology – Awards for Green chemistry – organization promoting green chemistry.

MODULE II WASTE & WASTE MINIMISATION **8**

Source of wastes: domestic, industrial, medical, nuclear, e-waste; problems; prevention – economy of waste disposal – Waste minimization techniques: general waste treatment and recycling – alternate waste water treatment technologies: hybrid process – Green computing: goals, green cloud, green ICT - Pollution statistics from various industries (Industrial case studies).

MODULE III GREEN SYNTHESIS **7**

Introduction - Solvent free reactions - green reagents, green solvents in synthesis - microwave and ultrasound assisted reactions – supercritical fluid extraction – green oxidation and photochemical reactions – catalyst and biocatalysts.

MODULE IV GREEN INDUSTRIAL PROCESSES **8**

Polymer industry: biodegradable polymer - textile industry: greener approaches of dyeing, waste disposal – ecofriendly agrochemicals: biofertilizers, biopesticides – Pharmaceutical industry: atom economy, reduction of toxicity, use of biocatalyst, zero waste disposal – Leather industry: greener process in tanning, crusting, surface coating – ecofriendly batteries & fuel cells.

PRACTICALS

1. Synthesis of an ionic liquids (Ex: imidazolium) and testing the solubility of organic

chemicals.

2. Green bromination of stilbene (using pyridine hydrobromide).
3. Green synthesis: Photocatalytic reactions, solvent-free organic reaction – Aldol; green oxidation, green reduction.
4. Microwave assisted chemical reaction. (synthesis of aspirin, pinacol-pinacolone reaction, etc).
5. Comparison of conventional reaction with microwave assisted reactions (atom economy, solvent, etc) [Ex: aldehyde and ketones with hydrazines to give hydrazones].
6. Diels-Alder reaction in eucalyptus oil (green process).

L – 30; P – 30; TOTAL HOURS – 60

4. Rashmi Sanghi, M. M. Srivastava, Green chemistry, Narosa publishers, New Delhi, 2003.

OUTCOMES:

The students will be able to

- outline the principles and implications of green chemistry.
- comprehend the potential risks of waste generated and analyse the threats to human and environment.
- integrate information into design of molecules to avoid/eliminate toxic solvents & reagents or reduce toxic products.
- identify various alternate greener technologies for various industries.

CHCX08	ORGANIC CHEMISTRY OF BIOMOLECULES	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make students conversant with the

- basic concepts in organic chemistry
- types and structure of carbohydrates and lipids
- formation of different structures of proteins from amino acid
- structure of nucleic acids

MODULE I BASIC CONCEPTS IN ORGANIC CHEMISTRY **8**

Classification and IUPAC nomenclature of organic compounds – stereochemistry – optical, stereo and geometrical isomerism – types of reagents: electrophiles and nucleophiles – types of reactions: addition, substitution, elimination and rearrangement reactions.

MODULE II CARBOHYDRATES, LIPIDS AND VITAMINS **7**

Structure and functions of carbohydrates: mono, di, oligo and polysaccharides – lipids: phospholipids, glycolipids, sphingolipids – cholesterol – steroids – Structure, functions and deficiency disorders of fat soluble vitamins: A, D, E & K - Water soluble vitamins B & C: Thiamine, riboflavin, pantothenic acid, niacin, pyridoxine, biotin, cobalamine, folic acid and ascorbic acid.

MODULE III AMINO ACIDS, PEPTIDES AND PROTEINS **7**

Aminoacids: classification, properties - peptides – polypeptides – proteins: primary, secondary, tertiary and quaternary structure – glycoproteins – lipoproteins – Enzymes: classification and functions

MODULE IV NUCLEIC ACIDS **8**

Nucleic acids – importance - structure of purines and pyrimidines – nucleotides – polynucleotides - RNA – types & structure - DNA – phosphodiester bonds – chemical, helical structure and functions – DNA replication – gene modification.

PRACTICALS

1. Qualitative tests to identify carbohydrates.

2. Quantitative estimation of carbohydrates.
3. Separation of sugars – TLC and/or paper chromatography.
4. Quantitative estimation of lipids.
5. Separation of amino acids – TLC and/or paper chromatography.
6. Quantitative estimation of proteins by Lowry's method.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. V. K. Ahluwalia, Organic Reaction Mechanism, Narosa Publishers, New Delhi, 2002.
2. Johnson Arthur T., Biology for Engineers, CRC Press, Finland, 2011.
3. Jain P.C and Renuka Jain, Physical Chemistry for Engineers, Dhanpat Rai and Sons, New Delhi. 2001.
4. David L. Nelson, Michael M. Cox, Lehninger Principles of biochemistry, Macmillan press, London, 2010

OUTCOMES:

The students will be able to

- classify organic compounds and explain the mechanism of various organic reactions.
- draw the structures and enumerate the functions of carbohydrate, lipids and vitamins.
- correlate the relationship among amino acids, peptides and proteins.
- recognize the role of nucleic acid in the formation of RNA & DNA and differentiate DNA & RNA using their structure and function.

CHCX09	POLYMER SCIENCE AND TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the student conversant with the

- basic concepts of polymers, classification, types of polymerization and molecular weight & its distribution
- preparation, properties and applications of thermoplastics and introduction to biodegradable polymers
- properties and applications of thermosets, elastomers and FRP
- different types of moulding techniques

MODULE I BASIC CONCEPTS OF POLYMERS **8**

Definitions: monomer, polymer, functionality, degree of polymerization – classification of polymers: source, structure, application, thermal processing behavior (thermoplastics and thermosets), composition and structure (addition and condensation), mechanism (chain growth and step-wise growth) – copolymer: types – Definition –nomenclature of polymers – tacticity – types of polymerization : free radical, cationic and anionic polymerization (concepts only) – average molecular weight of polymer: number, weight – molecular weight distribution (problems)

MODULE II THERMOPLASTICS AND BIODEGRADABLE POLYMERS **8**

Preparation, properties and applications : LDPE, HDPE, polypropylene, PVC, PTFE, PET, polyamides (Nylon-6 and Nylon 6,6) and polycarbonates – polymer blends and alloys – basics of biodegradable polymers.

MODULE III THERMOSET RESINS, ELASTOMERS AND FRP **7**

Thermoset resins : phenolic resins, amino resins (urea and melamine formaldehyde), epoxy resins, unsaturated polyesters – polyurethanes – elastomers : vulcanization of natural rubber, diene based elastomers –fibre reinforced plastics: glass, aramid and carbon.

MODULE IV MOULDING TECHNIQUES 7

Moulding constituents**:** functions – moulding techniques**:** compression, injection, extrusion (single screw), blow moulding, thermoforming, (mechanical and vacuum forming), lamination.

PRACTICALS

1. Determination of molecular weight and degree of polymerization using Oswald's viscometer.
2. Free radical polymerization of styrene.
3. Free radical polymerization of PMMA.
4. Preparation of phenol-formaldehyde.
5. Preparation of urea-formaldehyde.
6. Synthesis of epoxy resin.
7. Synthesis of unsaturated polyester.
8. Preparation of FRP laminates.
9. Demonstration of injection moulding, compression moulding and blow moulding.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Billmeyer F.N., Text Book of Polymer Science, 3rd Edition, John Wiley and Sons, New York, 1994.
2. George Odian, Principles of Polymerisation, 3rd Edition, McGraw Hill Book Company, New York, 1991.

6. Gowarikar V.R., Viswanathan N.V and Jayadev Sreedhar, Polymer Science, Wiley Eastern Limited, Madras, 1981.

OUTCOMES:

The student will be able to

- classify various polymers, name the polymers and types of polymerization

reactions, calculate molecular weight of polymers,

- summarise preparation, properties and applications of thermoplastics and give examples of biodegradable polymers
- elaborate the properties and applications of thermosets, elastomers and FRP
- select the appropriate moulding technique for a given polymer, based on the application

Maths Elective Courses

(to be offered in IV Semester)

		L	T	P	C
MACX 01	**DISCRETE MATHEMATICS AND GRAPH THEORY**	**3**	**1**	**0**	**4**

OBJECTIVES:

The aims of this course are to

- introduce Logical and Mathematical ability to deal with abstraction.
- familiarize the basic mathematical ideas and terminologies used in computer science.
- translate real life situations into diagrammatic representations.

MODULE I PROPOSITIONAL CALCULUS 8

Propositions – Logical connectives – Compound propositions – Conditional and biconditional propositions – Truth tables – Tautologies and contradictions – Contrapositive – Logical equivalences and implications – DeMorgan's Laws – Normal forms – Principal conjunctive and disjunctive normal forms – Rules of inference – Arguments – Validity of arguments.

MODULE II PREDICATE CALCULUS 7+3

Predicates – Statement function – Variables – Free and bound variables – Quantifiers – Universe of discourse – Logical equivalences and implications for quantified statements – Theory of inference – The rules of universal specification and generalization – Validity of arguments.

MODULE III FUNCTIONS 7+3

Functions – Classification of functions –– Composition of functions – Inverse functions – Binary and n–ary operations – Characteristic function of a set – Hashing functions – Recursive functions – Permutation functions.

MODULE IV ALGEBRAIC SYSTEMS 8+2

Groups, Cyclic Groups, Subgroups, Cosets, Lagrange's theorem, Normal subgroups – Codes and group codes – Basic notions of error correlation – Error recovery in group codes.

MODULE V GRAPH THEORY 7+3

Graphs – incidence and degree – subgraphs – isomorphism – complement of a graph – operations on graphs

MODULE VI PATH AND CIRCUIT 8+2

Walks, trails and paths – Eulerian graphs – Konigsburg bridge problem - Hamiltonian graphs

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1 Trembly J.P and Manohar R, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 30th Reprint 2011.

2 Kenneth H.Rosen, “Discrete Mathematics and its Applications:, 7th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, Special Indian Edition, 2011.

3 C.L.Liu, D.P.Mohapatra, “Elements of Discrete Mathematics”, 4th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 2012.

OUTCOMES:

At the end of the course, student will be able to

- use the concepts of propositional calculus.
- use the concepts of predicate calculus.
- identify types of functions and their importance.
- decode and encode the messages using group theory concepts.
- apply the basic concepts of graph theory.
- represent some real life situations into diagrammatic representation.

MACX 02 PROBABLITY AND STATISTICS L T P C
3 1 0 4

OBJECTIVES:

The aims of this course are to impart the

- knowledge of the theory of probability and random variables
- techniques to carry out probability calculations and identifying probability distributions
- application of statistical inference in practical data analysis

MODULE I BASICS OF PROBABILITY AND STATISTICS 8+2

Sample space, events- axioms of probability and interpretation – Addition, multiplication rules – conditional probability, Independent events - Total probability – Baye's theorem - Descriptive Statistics.

MODULE II ONE DIMENSIONAL RANDOM VARIABLE AND PROBABILITY DISTRIBUTION FUNCTIONS 7+3

Discrete random variable –continuous random variable – Expectation - probability distribution - Moment generating function – Binomial, Poisson, Geometric, Uniform (continuous), Exponential and Normal distributions.

MODULE III TWO DIMENSIONAL RANDOM VARIABLES 8+2

Joint, marginal, conditional probability distributions –covariance, correlation - transformation of random variables.

MODULE IV SAMPLING AND ESTIMATION 7+3

Sampling distributions – basic knowledge on Random , simple random , stratified and cluster samplings – Test of Hypotheses - concepts- Point estimation and Interval estimation.

MODULE V THEORY OF INFERENCE 8+2

Large sample tests – test for single and difference on proportions, single mean, difference of means, difference of variances – confidence intervals. Small sample tests – Student's t test, F test and Chi square test on theory of goodness of fit and analyses of independence of attributes.

MODULE VI DESIGN OF EXPERIMENTS 7+3

Analysis of variance – one way classification – two way classification – Completely

Randomised Block Designs – Randomised Block Design – Latin square designs - Interpretations - case studies.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. T.Veerarajan, “Probability and Statistics”, Tata McGraw-Hill Education, 2008.
2. Miller, I., Miller, M.,Freund, J. E., “Mathematical statistics”, 7th Edition, Prentice Hall International, 1999.
3. S.P.Gupta, “Applied Statistics”, Sultan Chand & Sons

2. S.C.Gupta and V.K.Kapoor, “Fundamentals of Mathematical Statistics” First edition, Sultan Chand and Sons.
3. Arora and Arora, “Comphrensive Statistical Methods”, S. Chand, 2007

OUTCOMES:

On completion of the course, students will be able to

- do basic problems on probability and descriptive statistics.
- derive the probability mass / density function of a random variable.
- calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.
- calculate point and interval estimates.
- apply some large sample tests and small sample tests.
- carry out the data collection representation analysis and implications and the importance of inferences.

MACX 03	RANDOM PROCESSES	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of the course are to

- acquire the knowledge of the theory of probability and random variables
- study discrete and continuous probability distributions.
- demonstrate the techniques of two dimensional random variables and its distributions.
- introduce the random process, stationarity, Markov process and the study of correlation function and spectral analysis.

MODULE I Basics of Probability 7+3

Sample space, events- axioms of probability and interpretation – Addition, multiplication rules – conditional probability, Independent events - Total probability – Baye's theorem - Tchebychev's inequality.

MODULE II One dimensional Random variable and Probability Distribution functions 7+3

Discrete random variable –continuous random variable – Expectation - probability distribution - Moment generating function – Binomial, Poisson, Geometric, Uniform (continuous), Exponential and Normal distributions.

MODULE III Two dimensional random variables 7+3

Joint, marginal, conditional probability distributions - covariance, correlation and regression lines - transformation of random variables.

MODULE IV RANDOM PROCESSES 8+2

Classification of Random process - Stationary process - WSS and SSS processes - Poisson process – Markov Chain and transition probabilities.

MODULE V CORRELATION FUNCTIONS 8+2

Autocorrelation function and its properties - Cross Correlation function and its properties - Linear system with random inputs – Ergodicity.

MODULE VI SPECTRAL DENSITY 8+2

Power spectral Density Function - Properties - System in the form of convolution - Unit Impulse Response of the System – Weiner-Khinchine Theorem - Cross Power

Density Spectrum.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Veerarajan T., “Probability, Statistics and Random Processes”, Tata McGraw Hill,3rd edition, 2008.
2. Papoulis, “Probability, Random Variables and Stochastic Processes”, 4th Edition, Tata McGraw Hill Company, 2002.
3. S.M.Ross, “Introduction to Probability and Statistics for Engineers and Scientists” Fifth Edition, Elesvier

2. Trivedi K S, “ Probability and Statistics with reliability, Queueing and Computer Science Applications”,Prentice Hall of India,New Delhi,2nd revised edition, 2002

OUTCOMES:

On completion of the course, students will be able to

- do basic problems on probability.
- derive the probability mass / density function of a random variable.
- calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.
- identify and study the different random processes.
- compute correlation functions and related identities.
- compute power spectral density functions and apply Weiner-Khinchine formula.

MACX 04 APPLIED NUMERICAL METHODS L T P C
3 1 0 4

OBJECTIVES:

The aims of the course are to

- introduce basic computational methods for analyzing problems that arise in engineering and physical sciences.
- acquire knowledge about approximation theory and convergence analysis associated with numerical computation.

MODULE I NUMERICAL SOLUTIONS OF EQUATIONS 7+3

Bisection method - Regula Falsi method – Secant method - Fixed point iteration method - Newton's Raphson method –Gauss Elimination method - Gauss-Jordon method – Gauss Jacobi method - Gauss-Seidel method.

MODULE II INTERPOLATION 8+2

Finite difference operators – Gregory Newton's forward and backward interpolations – Cubic spline interpolation - Lagrange interpolation - Newton's divided difference formula.

MODULE III NUMERICAL DIFFERENTIATION AND INTEGRATION 8+2

Numerical differentiation using Newton's forward and backward formulae – Numerical integration : Trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Gaussian Two Point and Three Point Quadrature formulae – Double integrals using Trapezoidal and Simpson's 1/3 rule.

MODULE IV INITIAL VALUE PROBLEMS FOR FIRST ORDER ORDINARY DIFFERENTIAL EQUATIONS 7+3

Numerical solutions by Taylor's Series method, Euler's method, Modified Euler's Method - Runge – Kutta Method of fourth order – Milne's and Adam's Bashforth Predictor and Corrector methods

MODULE V INITIAL AND BOUNDARY VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 8+2

Numerical solutions by Taylor's Series method - Runge – Kutta Method of fourth order of second order ODE. Finite difference methods.

MODULE VI BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS **7+3**

Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace equation.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Grewal, B.S., “Numerical methods in Engineering and Science”, 7th edition, Khanna
   Publishers, 2007.

2. M.K.Jain, S.R.K.Iyengar, R.K.Jain, “Numerical methods for Scientific and Engineering Computation”, New Age International Publishers, New Delhi, 2003

OUTCOMES:

At the end of this course, students will be able to

- solve algebraic, transcendental and system of equations.
- apply interpolation techniques.
- carry out numerical differentiation and integration using different methods.
- solve first order ODE using single and multi step methods.
- solve second order ODE, initial and boundary value problems.
- solve the boundary value problems in PDE.

Maths Elective Courses
(To be offered in VI Semester)

MACX 05	MATHEMATICAL PROGRAMMING	L	T	P	C
		2	0	0	2

OBJECTIVES:

The aims of the course are to

- acquire knowledge and training in optimization techniques.
- obtain knowledge about optimization in utilization of resources.
- understand and apply operations research techniques to industrial operations.

MODULE I LINEAR PROGRAMMING PROBLEM 10

Linear programming – formulation of the problem - graphical interpretation of optimality - Simplex method – to obtain basic feasible solution – types of linear programming solution – complications and their resolution.

MODULE II ADVANCED LINEAR PROGRAMMING PROBLEMS 8

Artificial variable - Big M method – Two phase method – alternative optimal solution – unbounded solution - Duality – primal dual relationships.

MODULE III TRANSPORTATION PROBLEM 7

Transportation problems – Initial basic feasible solutions, MODI method, Unbalanced transportation problem, Degeneracy in transportation models,.

MODULE IV ASSIGNMENT PROBLEM 5

Assignment problem – Minimization and Maximization type of problems by Hungarian method.

Total Hours –30

4. Robertazzi. T.G., “Computer networks and systems-Queuing theory and performance evaluation”, 3rd edition, Springer, 2002.

OUTCOMES:

At the end of the course, students will be able to

- formulate industrial problems as mathematical programming problems.
- solve linear programming problems by different methods.
- solve transportation problems by different methods.
- solve assignment problems by Hungarian method.

MACX 06	STATISTICAL METHODS FOR DATA ANALYSIS	L	T	P	C
		2	0	0	2

OBJECTIVES:

The aim of the course is to

- introduce statistical quality control tools.

MODULE I TESTS OF HYPOTHESES AND STATISTICAL INFERENCES 8

Small sample tests – Student's ' t ' test for single mean , difference of means, paired t test – F test for difference of variances – Chi square test on theory of goodness of fit and analyses of independence of attributes.

MODULE II DESIGN OF EXPERIMENTS 7

Analysis of variance – one way classification – two way classification – Completely Randomised Block Designs – Randomised Block Design – Latin square designs - Statistical analysis -Interpretations - case studies.

MODULE III STATISTICAL QUALITY CONTROL-I 8

Quality improvement and statistics –Statistical quality control- statistical process control – control charts – design of control charts –analysis of patterns on control charts - X bar chart, R chart and S chart.

MODULE IV STATISTICAL QUALITY CONTROL-II 7

Process and product control – attribute charts – P, np and C charts – control charts performance.

Total Hours –30

TEXT BOOKS:

1. Douglas C.Montgomery, George C. Runger "Applied Statistics and probability for Engineers" V Edition – John Wiley & Sons Inc.
2. Miller, I., Miller, M., Freund, J. E. "Mathematical statistics" 7th Edition. Prentice Hall International, 1999.

REFERENCES:

1. Dekking, F.M., Kraaikamp, C., Lopuhaä, H.P., Meester, L.E. "A Modern Introduction to Probability and Statistics" Springer, 2nd Edition.
2. Chin Long chiang "Statistical Methods of Analysis "World Scientific Books,

2003.
3. S.C.Gupta and V.K. Kapoor, “Mathematical Statistics” , Sultan Chand publications.
4. Veerarajan “Fundamentals of Mathematical Statistics” I Edition, Yes Dee Publishing Pvt. Ltd., 2017.

OUTCOMES:

On completion of the course, students will be able to

- develop and test hypothesis for different statistical tests
- design an experiment and case study the experiment with different data.
- analyze the industrial data using quality control design tools statistically.
- analyze the industrial data using process and product control tools statistically.

MACX 07 NUMERICAL METHODS FOR INTEGRATION AND DIFFERENTIAL EQUATIONS

L	T	P	C
2	0	0	2

OBJECTIVES:

- This course aims to solve numerically integral and differential equations.

MODULE I NUMERICAL INTEGRATION 8

Numerical integration by trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Two Point and Three point Gaussian quadrature formulae.

MODULE II NUMERICAL DOUBLE INTEGRATION 6

Double integrals using trapezoidal and Simpson's 1/3 rules

MODULE III NUMERICAL SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS 8

Milne's Predictor and Corrector Method – Adam's Predictor-Corrector Method - Finite difference methods for two – point Boundary Value problems for Ordinary Differential Equations.

MODULE IV BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS 8

Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace and Poisson equations

Total Hours –30

TEXT BOOKS:

1. M.K.Jain, S.R.K.Iyengar, R.K.Jain, "Numerical methods for Scientific and Engineering Computation", New Age International Publishers, New Delhi, 2003.
2. Grewal, B.S., "Numerical methods in Engineering and Science" 7th edition, Khanna Publishers, 2007

REFERENCES:

1. C.F.Gerald, P.O.Wheatley, "Applied Numerical Analysis" Pearson Education, New Delhi 2002.
2. P.Dechaumphai, N. Wansophark, "Numerical Methods in Engineering", Narosa Publications, 2012.

OUTCOMES:

At the end of the course students will be able to

- solve the integration by numerical methods.
- solve the double integration by numerical methods
- find numerical solution of ordinary differential equations in engineering problems.
- find numerical solution of partial differential equations in engineering problems.

MACX 08 MATHEMATICAL MODELLING L T P C
3 0 0 3

OBJECTIVES:

The aims of the course are to

- provide basic idea of formation and use of Mathematical models for different purposes.
- determine the extent to which models are able to replicate real-world phenomena under different conditions

MODULE I PRINCIPLES OF MATHEMATICAL MODELING 7

Mathematics as a modelling language - Classification of models - Building, studying, testing and using models - Black and white box models – Difference equations

MODULE II PHENOMENOLOGICAL MODELS 7

Linear, Multiple linear and nonlinear regression - Neural networks - Fuzzy model - Stability and higher dimensional systems

MODULE III MECHANISTIC MODELS –I 8

Setting up ODE models – Initial and Boundary value problems - Numerical solutions - Fitting ODE to data - Applications

L T P C
2 0 0 2

MODULE IV MECHANISTIC MODELS –II 8

Linear and nonlinear equations - Elliptic, parabolic and hyperbolic equations - Closed form solutions - Finite difference and finite element methods

Total Hours –30

TEXT BOOKS:

1. G . Ledder , “Calculus, modelling , probability and dynamic systems”, Springer 2013
2. Kei Velten, “Mathematical modelling and simulation”, J. Wiley and sons,2009

REFERENCES:

1. Michael D Alder, “An introduction to Mathematical modelling”, Heaven for Books.com
2. Alfio Quarteroni, “Mathematical models in science and engineering”, Notices of AMS
3. J.N. Kapur, “Mathematical models in Biology and Medicine”, Affiliated East-

West Press Private Limited, New Delhi, 1992.

OUTCOMES:

On completion of the course, the students will be able to

- identify the relationship between real world and mathematical models
- Classify the data and choose the appropriate model
- Distinguish between linear and nonlinear models
- identify the relationship between empirical and mechanistic models

MACX 09 **GRAPH THEORY** **L T P C**

3 0 0 3

OBJECTIVES:

The aims of this course are to

- represent the real life situations diagrammatically.
- appraise different methods to find solutions to graph theory problems.

MODULE I INTRODUCTION TO GRAPH THEORY 8

Graphs - finite and infinite graphs - Incident and degree-isolated vertex, pendent vertex and null vertex.

MODULE II PATH AND CIRCUIT 8

Isomorphism – sub graphs-walks, paths and circuits – connected and disconnected graphs- Euler graphs – operation on a graph.

MODULE III TREES AND FUNDAMENTAL CIRCUITS 7

Trees- some properties of trees- pendent vertices in a tree – rooted binary tree-spanning trees-fundamental circuits.

MODULE IV CUT SETS AND CUT VERTICES

Cut sets – some properties of cut sets- fundamental circuits and cut sets-network flows.

Total Hours –30

TEXT BOOKS:

1. NARSINGH DEO, Graph theory with applications to Engineering and Computer Science, Prentice Hall INC, New Delhi,
2. J.A. Pondy and U.S.R. Murthy, North Holland, Oxford, New York Graph theory with applications

REFERENCES:

1. Trembly J.P and Manohar R, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 30th Reprint 2011
2. Kenneth H.Rosen, “Discrete Mathematics and its Applications”, 7th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, Special Indian Edition, 2011

3. Md. Saidur Rahman, “Basic graph theory”, Springer, 2017

OUTCOMES:

At the end of the course, students will be able to

- demonstrate the basic concepts of Graph theory.
- explore connected and disconnected graphs.
- identify the real life problems with trees and circuits.
- bring out the cut set properties and network flows properties.

Humanities Elective I

(To be offered in III Semester)

		L	T	P	C
SSCXO1	**FUNDAMENTALS OF ECONOMICS**	**2**	**0**	**0**	**2**

OBJECTIVES:

- To identify and present the basic concepts of demand, supply and equilibrium.
- To explain and discuss the types and concepts of national income and inflation.
- To illustrate the fundamental concepts of money, banking and public finance.
- To apprise the students about Indian economy and the role of engineers in economic development.

MODULE I DEMAND AND SUPPLY ANALYSIS 8

Classification of economy – open and closed economy, Demand - Types of demand - Determinants of demand – Law of Demand - Demand elasticity - Supply - Determinants of Supply – Law of Supply - Supply elasticity - Pricing strategies.

MODULE II NATIONAL INCOME AND INFLATION 7

Concepts of National income and measurement – Importance and difficulties of estimating National Income in India - Aggregate demand and aggregate supply, Macroeconomic equilibrium – meaning of inflation- types - causes and preventive measures

MODULE III MONEY, BANKING AND PUBLIC FINANCE 9

Money – Meaning, types, functions, importance - Commercial Banks - Central Bank - Monetary policy – meaning, objectives, Methods of Credit Control By RBI, Government Budget – Government revenue and Expenditures – Fiscal policy - Its objectives, instruments and limitations - Deficit Financing - The Fiscal Responsibility and Budget Management Act, 2003 (FRBMA) .

MODULE IV INDIAN ECONOMY AND THE ROLE OF ENGINEERS 6

Economic reforms – Liberalization, Privatization and Globalization - challenges and opportunities, Engineers – Engineers' contributions to the economic growth.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Dutt and Sundharam (2013), *Indian Economy*, S. Chand & Company Pvt. Ltd, New Delhi.
2. Hussain, Moon Moon (2015), *Economics for Engineers*, Himalaya Publishing House, New Delhi.

REFERENCES:

1. Cleaver Tony (2004), "*Economics: The Basics*", Routledge, London.
2. Mell Andrew and Walker Oliver (2014), "*The Rough Guide to Economics*", Rough Guide Ltd.

OUTCOMES:

On successful completion of this course,

- Students will have had exposure to the basic concepts of demand, supply and various pricing strategies.
- Students will have understood the macroeconomic concepts of national income and inflation.
- Students will be able to apply the knowledge of money, banking and public finance in their real life situations.
- Students will have an overview of the economic reforms introduced in Indian economy.

SSCXO2	PRINCIPLES OF SOCIOLOGY.	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To acquaint the students with Concepts and perspectives of Sociology
- To explain the reflection of society in Individuals and vice versa
- To describe the hierarchical arrangement of individuals and groups in society
- To explicate the dimensions, forms and factors of Social change.
- To examine the context, impact and agencies of Globalization

MODULE I THE FOUNDATIONAL CANON 8

Sociology-Definition, scope and importance; Major theoretical perspectives- Functionalism, Conflict Theorising and Interactionism; Elements of social formation- Society, Community, Groups and Association; Associative Social Process- Co-operation, Accommodation and Assimilation; Dissociative Social Process- Competition and Conflict.

MODULE II INDIVIDUAL AND SOCIETY 7

Culture-definition, characteristics, functions, types, cultural lag and civilization, Socialization – definition, process, stages, agencies and anticipatory socialization; Social Control- definition, characteristics, importance, types & agencies.

MODULE III SOCIAL INEQUALITY AND STRATIFICATION 7

Concepts- inequality, hierarchy, differentiation, Social Exclusion, and Social Stratification. Forms of Social Stratification- Caste, Class and Estate. Gender and Social Stratification- sex and gender, patriarchy, factors perpetuating gender stratification; Globalization and gender inequality

MODULE IV SOCIAL CHANGE AND GLOBALIZATION 8

Social Change-definition, nature, direction; Forms- evolution, development, progress and transformation; Factors of social change- demography, economy, technology, polity and culture. Globalization- definition, characteristics, historical and social context and Impact, agencies of globalization- IGOs, INGOs, Nation-State, MNEs and Media

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Giddens A. 1989. “Sociology” Cambridge: Polity Press.
2. Heald Haralambos, R.M(2014) . ‘‘Sociology Themes and Perspectives”, Oxford, New Delhi-92
3. Bhushan Vidya and D.R. Sachdeva (2012). ‘‘Fundamental of Sociology”, Pearson, Delhi.

REFERENCES:

1. Das Gupta, Samir and Paulomi Saha (2012), ‘‘An Introduction to Sociology”, Pearson, Delhi
2. Bottomore, T.B. 1972. *Sociology- A Guide to Literature and Problems*, New Delhi,

OUTCOMES:

On successful completion of this course,

- Students will have exposure to the fundamentals tenets of Sociology.
- Students will be trained to understand social reality with sociological perspective.
- Students will be oriented to constructively analyze human interactions, social relationship and social issues
- Students will gain exposure to the dynamics of human society with special reference to the contemporary trends of globalization.

SSCXO3 SOCIOLOGY OF INDIAN SOCIETY.

L	T	P	C
2	0	0	2

OBJECTIVES:

- To present a portrayal of the components of the Indian Social structure
- To describe the nature and contemporary structure of Indian social Institutions.
- To examine the causality and magnitude of social problem facing the contemporary India.
- To elucidate the processes forms and impact of change and development in Indian society

MODULE I INDIAN SOCIAL STRUCTURE 7

Unity and Diversity; Concepts of unity and diversity- racial, religious, ethnic and linguistic composition of India. Types of communities-rural, urban and tribal; Social backwardness- OBC, SC and ST; Indian minorities- religious, ethnic, linguistic and LGBT

MODULE II INDIAN SOCIAL INSTITUTIONS 7

Family- definition, types, characteristics, functions of family; Joint Family- definition features, utility, changes; Marriage- definition, characteristics, marriage as sacrament or contract. Caste- definition, principles, contemporary changes, dominant caste, caste -class interface.

MODULE III SOCIAL PROBLEMS IN INDIA 8

Social Problem-definition, nature, social disorganization; Population explosion-causes, effects, relationship with development; Child Labour- causes, magnitude and consequences; Unemployment-nature , types, causes and effects; Gender issues-social status of women, violence against women and women in work place; Contemporary issues- communalism, terrorism and corruption.

MODULE IV SOCIAL CHANGE AND DEVELOPMENT IN INDIA 8

Socio-cultural Change- Sanskritization, Westernization, Secularization, Modernization; Processes of Social change- Industrialization, Urbanization, Globalization; Development- definition, elements, role of government, industry and corporate sector. Technology and change- invention and innovation, impact of technology on social institutions, technology and development.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Sharma,K.L.2008. *Indian Social Structure and Change*. Jaipur: Rawat Publications,.
2. Shah, A.M. 1998. *The Family in India: Critical Essays*. New Delhi: Orient Longman,
3. Ahuja Ram. 1999. *Social problems in India*, Rawat Publication: New Delhi.
4. Ahuja Ram. 2014. *Society in India,*, Rawat Publication: New Delhi.

REFERENCES:

1. Jayapalan, N.(2001), **"**Indian Society and Social Institutions" Atlantic Publishers & Distri,
2. Atal, yogesh (2006), "Changing Indian Society" Rawat Publications, Jaipur

OUTCOMES:

On successful completion of this course,

- Students will gain an in-depth understanding of the social structure and social institutions that constitute society in India.
- Students will be sensitized to the various categories ,Inequalities and their challenges
- Students will be exposed to the social problems encountered in contemporary India.
- Students will gain knowledge about the various forms and trends of the social change.
- Students will become aware about the challenges in the path of progress of Indian society and realize relevance of their role in bringing about development

Humanities Elective II

(To be offered in IV Semester)

		L	T	P	C
SSCXO4	**ECONOMICS OF SUSTAINABLE DEVELOPMENT**	**2**	**0**	**0**	**2**

OBJECTIVES:

- To have an increased awareness on the concept and components of sustainable development.
- To develop the ability to demonstrate the need of sustainable development and international responses to environmental challenges.
- To have an insight into global environmental issues and sustainable globalization.
- To establish a clear understanding of the policy instruments of sustainable development.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 7

Evolution of the Concept – Rio Summit and sustainable development - various definitions of sustainable development - Components of sustainable development: Social, environmental and economic components.

MODULE II NEED FOR SUSTAINABLE DEVELOPMENT 8

Need for sustainability – Global environmental challenges: population growth, resource depletion, pollution, energy use, climate change, pollution, growing water scarcity, other urban problems, loss of biodiversity, hazardous wastes disposal.International responses to environmental challenges - Global policy such as Kyoto Protocol, Montreal Protocol, Basel Convention.

MODULE III GLOBALIZATION AND ENVIRONMENT SUSTAINABILITY 8

Impact of Globalization on sustainable development, Co - existence of globalization and Environment sustainability, Globalization and Global Governance.Green economy - Renewable energy, sustainable transport, sustainable construction, land and water management, waste management.

MODULE IV POLICIES FOR ACHIEVING SUSTAINABLE DEVELOPMENT 7

Principles of environmental policy for achieving sustainable development: precautionary principle and polluter pays principle – Business Charter for Sustainable Development.Policy instruments for sustainable development: direct regulation – market based pollution control instruments such as pollution tax, subsidy, pollution permits.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Anderson, David A (2010), "*Environmental Economics and Natural Resource Management*", Routledge, 3rd edition.
2. Karpagam M (1999), "*Environmental Economics: A Textbook*", Sterling Publishers Pvt. Ltd, New Delhi.

REFERENCES:

1. Karpagam M and Jaikumar Geetha (2010), "*Green Management Theory and Applications*", Ane Books Pvt. Ltd, New Delhi.
2. Sengupta Ramprasad (2004), "*Ecology and Economics: An Approach to Sustainable Development*", Oxford University Press, New Delhi.

OUTCOMES:

On successful completion of this course,

- The students will have understood the concepts and components of sustainable development.
- The students will have a holistic overview on the challenges of sustainable development and International responses to environmental challenges.
- The students will have gained knowledge on the global environment issues and demonstrate responsible globalization through global governance.
- The students will have developed awareness of the ethical, economic, social and political dimensions that influence sustainable development.

SSCXO5 INDUSTRIAL SOCIOLOGY

L	T	P	C
2	0	0	2

OBJECTIVES:

- To introduce sociological approaches and perspectives to understand the social relationship in manufacturing industries and corporate sector.
- To explain the structure and functions of industrial organizations.
- To elucidate the dynamics of organizational behavior, leadership and communication.
- To inculcate professional ethics and values to equip students to work in organizational settings.

MODULE I INTRODUCTION 8

Industrial Sociology- definition, scope and importance; Theoretical approaches- scientific management, human relations approach, theory of bureaucracy, Fordism and post-fordism; Production system- concept and characteristics of factory system, automation and rationalization; Industrial conflict- strike , lockout and trade unions.

MODULE II INDUSTRIAL ORGANIZATION 7

Formal organization- definition, features, utility; Informal organization- definition, characteristics, types and relevance; Structure of industrial organization- features and functions of line organization, characteristics and roles of staff organization, distinction;

Industrial hierarchy-white collar, blue collar, supervisors and managers.

MODULE III DYNAMICS OF INDUSTRIAL RELATIONS 8

Group dynamics- Definition, Group behaviour model, Group decision making process, group cohesiveness; Leadership- definitions, style and effective supervision; Communication- concepts, types, model barriers; Job satisfaction- nature, employee compensation and job satisfaction.

MODULE IV PROFESSIONAL ETHICS AND VALUES 7

Concepts- values- morals, and ethics, Integrity, work ethics , service learning - Civic Virtue - caring - Sharing - Honesty - Courage - Valuing Time - Co-operation - commitment - empathy - Self-Confidence - Environmental Ethics, Cyber issues - computer ethics, cyber crimes, plagiarism Ethical living-concept of harmony in life.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Narender Singh, Industrial Sociology, Tata McGraw Hill Education Pvt. Ltd., New Delhi, 2012.
2. Gisbert Pascal, Fundamentals of Industrial Sociology, Tata Mc. Graw Hill Publishing Co., New Delhi, 1972
3. Schneider Engeno. V, Industrial Sociology 2nd Edition, Mc. Graw Hill Publishing Co., New Delhi, 1979.

REFERENCES:

1. Robbins, Stephen, Organizational Behaviour , Prentice Hall of India PVT ltd new Delhi, 1985
2. Devis Keith , Human Behaviour at work place, Mc. Graw Hill Publishing Co., New Delhi,1984

OUTCOMES:

On successful completion of this course,

- Students will have acclimatized with sociological perspectives for dealing with social relationships in production and service organizations.
- Students will be familiar with structure of authority, roles and responsibility in organizational settings.
- Students will imbibe leadership, communication and behavioral acumen to govern organization
- Students will be sensitized to standards of desirable behavior to engage in industrial and corporate sector.

SSCXO6 LAW FOR ENGINEERS L T P C
2 0 0 2

OBJECTIVES:

- To understand the Constitution and Governance of our country.
- To apprise the students of human rights - local and international and redressal mechanism.
- To have an insight into the industrial, corporate and labour laws of our country.
- To establish a clear understanding about the importance of intellectual property related laws.

MODULE I INDIAN CONSTITUTION AND GOVERNANCE 8

Constitution – salient features, Preamble, Citizenship, Fundamental rights, Fundamental duties, Directive principles, Union executive, Legislature – Union – State and union territories – Election Commission – Election for parliament and state legislature, Judiciary- basic functioning of the Supreme Court and High Courts, Right to information Act 2005 – evolution – concept – practice.

MODULE II HUMAN RIGHTS 7

Human rights – meaning and significance, Covenant on civil and political rights, Covenant on Economic, Social and Cultural rights, UN mechanism and agencies, The Protection of Human Rights Act, 1993 – watch on human rights and enforcement.

MODULE III INDUSTRIAL, CORPORATE AND LABOUR LAWS 8

Corporate laws – meaning and scope, Companies Act 1956 – Indian Contract Act 1872 - Principles of Arbitration - Industrial Employment (Standing Orders) Act 1946 - Industrial Disputes Act 1947 - Workmen's Compensation Act 1923 - The Factories Act, 1948.

MODULE IV LAWS RELATED TO IPR 7

IPR – meaning and scope, International organization – WIPO – TRIPS, Major Indian IPR Acts – Copyright laws, Patent and Design Act, Trademarks Act, Trade Secret Act, Geographical Indicator.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. M.P. Jain (2005) *Indian Constitutional Law*, Wadhwa & Co.
2. H. D, Agarwal (2008), *International Law and Human Rights,* Central Law Publications,
3. Rao, Meena (2006), *Fundamental Concepts in Law of Contract*, 3rd edn., Professional offset.
4. Ramappa (2010), *Intellectual Property Rights Law in India*, Asia Law House.
5. Singh, Avtar (2007), *Company Law*, Eastern Book Co.
6. R.F, Rustamji (1967)*, Introduction to the Law of Industrial Disputes*, Asia Publishing House.

REFERENCES:

1. Acts: Right to Information Act, Industrial Employees (standing order) Act, Factories Act, Workmen Compensate Act.

OUTCOMES:

On successful completion of this course,

- Students will `be able to apply the basic concepts of Indian Constitution, Governance and power in their real life situation.
- Students will have gained knowledge in human rights, cultural, social and political rights.
- Students will have synthesized knowledge about industrial, corporate and labour laws of our country.
- Students will have an overview of IPRs and laws related to Intellectual Property Rights.

General Elective Courses
Group I courses
(To be offered in V Semester)

		L	T	P	C
GECX101	**DISASTER MANAGEMENT**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To give an exposure to various environmental hazards and disasters: and various concepts and principles to manage disaster.
- To give exposure to various environmental policies & programs in India for disaster management

MODULE I ENVIRONMENTAL HAZARDS 7

Environmental hazards, Environmental Disasters and Environmental stress-Meaning and concepts. Vulnerability and disaster preparedness.

MODULE II NATURAL DISASTERS 7

Natural hazards and Disasters - Volcanic Eruption, Earthquakes, Tsunamis, Landslides, Cyclones, Lightning, Hailstorms, Floods, Droughts, Cold waves, Heat waves and Fire.

MODULE III MAN-MADE DISASTERS 7

Man induced hazards & Disasters - Soil Erosion, Chemical hazards, Population Explosion

MODULE IV DISASTER MANAGEMENT 8

Emerging approaches in Disaster Management- Preparing hazard zonation maps, Predictability / forecasting & warning, Preparing disaster preparedness plan, Land use zoning, Communication. Disaster resistant house construction, Population reduction in vulnerable areas, Awareness - Rescue training for search & operation at national & regional level - Immediate relief, Assessment surveys, Political, Administrative, Social, Economic, Environmental Aspects.

MODULE V NATURAL DISASTER REDUCTION & MANAGEMENT 8

Provision of Immediate relief measures to disaster affected people, Prediction of Hazards & Disasters, Measures of adjustment to natural hazards

MODULE VI ENVIRONMENTAL POLICIES & PROGRAMMES IN INDIA **8**

Regional survey of Land Subsidence, Coastal Disaster, Cyclonic Disaster & Disaster in Hills with particular reference to India. Ecological planning for sustainability & sustainable development in India, Sustainable rural development: A Remedy to Disasters, Role of Panchayats in Disaster mitigations, Environmental policies & programmes in India- Institutions & National Centers for Natural Disaster reduction, Environmental Legislations in India, Awareness, Conservation Movement, Education & training.

L – 45; Total Hours –45

REFERENCES:

1. Satender, “Disaster Management in Hills”, Concept Publishing Co., New Delhi, 2003.
2. Singh, R.B. (Ed.), “Environmental Geography”, Heritage Publishers, New Delhi,1990.
3. Savinder Singh, “Environmental Geography”, Prayag Pustak Bhawan,1997.
4. Kates, B.I. and White, G.F., “The Environment as Hazards”, Oxford University Press, New York, 1978.
5. Gupta, H.K., (Ed), “Disaster Management”, University Press, India, 2003.
6. Singh, R.B.,“Space Technology for Disaster Mitigation in India (INCED)”, University of Tokyo, 1994.
7. Bhandani, R.K., “An overview on Natural & Manmade Disaster & their Reduction”, IIPA Publication, CSIR, New Delhi, 1994.
8. Gupta, M.C., “Manuals on Natural Disaster management in India”, National Centre for Disaster Management, IIPA Publication, New Delhi, 2001.

OUTCOMES:

At the end of the course, the students will

- achieve sufficient knowledge on the disaster prevention strategy, early warning system, disaster preparedness, response and human resource development.
- be familiar with the National Policy on Disaster Management.

GECX102 TOTAL QUALITY MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the various principles, practices of TQM to achieve quality.
- To get acquainted with the various statistical tools and approaches for quality control and continuous improvement.
- To get aware of the importance of ISO and Quality Systems.

MODULE I INTRODUCTION **8**

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

MODULE II TQM PRINCIPLES **7**

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits.

MODULE III TQM IMPROVEMENT PROCESS **8**

Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership – Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures – Basic Concepts, Strategy, Performance Measure.

MODULE IV STATISTICAL PROCESS CONTROL (SPC) **8**

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma, New seven Management tools.

MODULE V TQM TOOLS 7

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA.

MODULE VI QUALITY SYSTEMS 7

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System– Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 – Concept, Requirements and Benefits

L – 45; Total Hours –45

TEXT BOOKS:

1. Dale H.Besterfiled, et al., “Total Quality Management”, Pearson Education, Inc. 2003.

REFERENCES:

1. James R.Evans & William M.Lidsay, “The Management and Control of Quality”, 5th Edition, South-Western (Thomson Learning), 2002.
2. Feigenbaum.A.V., “Total Quality Management”, McGraw-Hill, 1991.
3. Oakland.J.S., “Total Quality Management”, Butterworth Hcinemann Ltd., Oxford, 1989.
4. Narayana V. and Sreenivasan. N.S., “Quality Management – Concepts and Tasks”, New Age International, 1996.
5. Zeiri, “Total Quality Management for Engineers”, Wood Head Publishers, 1991.

OUTCOMES:

The student should be able to

- apply the various statistical tools and approaches for Quality control.
- achieve continuous process improvement through TQM.

GECX103 ENERGY STUDIES L T P C
3 0 0 3

OBJECTIVES:

- To learn the growing demand, supply of energy on global and national levels and the need for renewable energy promotion.
- To understand the basic need for energy conservation and waste heat recovery.
- To learn the important aspects of energy audit and management.
- To get acquainted with the global environmental issues and carbon credits.

MODULE I GLOBAL AND NATIONAL ENERGY SCENARIO 7

Role of energy in economic development, various energy resources - overall energy demand and availability- Energy consumption in various sectors and its changing pattern - Exponential increase in energy consumption and projected future demands. Need for renewable energy.

MODULE II SOLAR ENERGY 8

Solar Radiation – Measurements of Solar Radiation - Flat Plate and Concentrating Collectors – Solar direct Thermal Applications – Solar thermal Power Generation - Fundamentals of Solar Photo Voltaic Conversion – Solar Cells – Solar PV Power Generation – Solar PV Applications.

MODULE III OTHER RENEWABLE ENERGY SOURCES 8

Power from wind – wind turbine working and types, solar thermal power plants – low medium and high power generation, power from wave , tidal, geothermal sources, OTEC system. MHD power plants – working, types, merits and demerits. Energy from biomass.

MODULE IV COGENERATION, WASTE HEAT RECOVERY AND COMBINED CYCLE PLANTS 8

Cogeneration principles- topping and bottoming cycles, role in process industries. Energy from wastes- waste heat recovery- heat recovery from industrial processes. Heat exchange systems – recuperative and regenerative heat exchangers – commercially available waste heat recovery devices. Combined cycle plants – concept, need and

advantages, different combinations and practical scope.

MODULE V ENERGY CONSERVATION AND MANAGEMENT 7

Need for energy conservation – use of energy efficient equipment. Energy conservation opportunities - in educational institutions, residential, transport, municipal, industrial and commercial sectors – concept of green building. Energy audit in industries – need, principle and advantages. Case studies.

MODULE VI GLOBAL ENERGY ISSUES AND CARBON CREDITS 7

Energy crisis, fossil consumption and its impact on environmental climate change. Energy treaties – Montreal and Kyoto protocols - Transition from carbon rich and nuclear to carbon free technologies, carbon foot print – credits – clean development mechanism.

L – 45; Total Hours –45

TEXT BOOKS:

1. S.S. Rao and B.B. Parulekar, “Energy Technology”, 3rd Edition, Khanna Publishers, New Delhi, 2011.
2. O. Callaghn. P.W., “Design and Management for Energy Conservation”, Pergamon Press, Oxford, 1981.

REFERENCES:

1. G.D. Rai, “Non Conventional Energy Sources”, Khanna Publishers, New Delhi, 2011.
2. Archie, W Culp. “Principles of Energy Conservation”, McGraw Hill, 1991.
3. D Patrick and S W Fardo, “Energy Management and Conservation”, PHI,1990
4. P. O’Callaghan: “Energy Management”, McGraw - Hill Book Company, 1993.
5. Kenney, W. F., “Energy Conservation in Process Industries”, Academic Press, 1983.

OUTCOMES:

The student should be able to

- Realize the global and national energy status and need to switch over to renewable energy technology.
- Energy audit and suggest methodologies for energy savings.
- Utilize the available resources in an optimal way.
- Concern about the global environmental issues & promote carbon credits.

GECX104 ROBOTICS

L	T	P	C
3	0	0	3

OBJECTIVES:

To learn about the robots, various components, of Robots, programming and their applications.

MODULE I **8**

Definition- Need - Application, Types of robots – Classifications – Configuration, work volume, control loops, controls and intelligence- basic parts - functions – specifications. of robot, degrees of freedoms, end effectors – types, selection

MODULE II ROBOT DRIVES AND CONTROL **8**

Controlling the Robot motion – Position and velocity sensing devices – Design of drive systems – Hydraulic and Pneumatic drives – Linear and rotary actuators and control valves – Electro hydraulic servo valves, electric drives – Motors – Designing of end effectors – Vacuum, magnetic and air operated grippers.

MODULE III ROBOT SENSORS **8**

Transducers and Sensors – Tactile sensor – Proximity and range sensors – Sensing joint forces – Robotic vision system – Image Representation - Image Grabbing –Image processing and analysis – Edge Enhancement – Contrast Stretching – Band Rationing - Image segmentation – Pattern recognition – Training of vision system.

MODULE IV ROBOT PROGRAMMING & AI TECHNIQUES **7**

Types of Programming – Teach pendant programming – Basic concepts in AI techniques – Concept of knowledge representations – Expert system and its components.

MODULE V ROBOTIC WORK CELLS AND APPLICATIONS OF ROBOTS **7**

Robotic cell layouts – Inter locks – Humanoid robots – Micro robots – Application of robots in surgery, Manufacturing industries, space and underwater.

MODULE VI ROBOT KINEMATICS AND DYNAMICS **7**

Forward and inverse Kinematic equations, Denvit – Hartenbers representations Fundamental problems with D-H representation, differential motion and velocity
of frames - Dynamic equations for sing, double and multiple DOF robots – static force analysis of robots.

L – 45; Total Hours –45

6. Timothy Jordanides et al,"Expert Systems and Robotics", Springer – Verlag, New York, May 1991.

OUTCOMES:

Students would be able to

- Understand about the robots, its various components.
- Design Robots for industrial applications.
- Do programming for robots and apply them in real time applications.

GECX105	TRANSPORT MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the transport fleet and their related activities for minimizing operational cost.
- To understand the need of maintenance and its importance.
- To understand the functions and applications of various types of transport system.

MODULE I INTRODUCTION 7

Personnel management; objectives and functions of personnel management, psychology, sociology and their relevance to organization, personality problems. Selection process: job description, employment tests, interviewing, introduction to training objectives, advantages, methods of training, training procedure, psychological tests.

MODULE II ORGANISATION AND MANAGEMENT 7

Forms of Ownership – principle of Transport Management – Staff administration – Recruitment and Training – welfare – health and safety. Basic principles of supervising. Organizing time and people. Driver and mechanic hiring - Driver checklist - Lists for driver and mechanic - Trip leasing - Vehicle operation and types of operations.

MODULE III TRANSPORT SYSTEMS 9

Introduction to various transport systems. Advantages of motor transport. Principal function of administrative, traffic, secretarial and engineering divisions. chain of responsibility, forms of ownership by state, municipality, public body and private undertakings.

MODULE IV SCHEDULING AND FARE STRUCTURE 8

Principal features of operating costs for transport vehicles with examples of estimating the costs. Fare structure and method of drawing up of a fare table. Various types of fare collecting methods. Basic factors of bus scheduling. Problems on bus scheduling.

MODULE V MOTOR VEHICLE ACT 7

Traffic signs, fitness certificate, registration requirements, permit insurance, constructional regulations, description of vehicle-tankers, tippers, delivery vans, recovery vans, Power wagons and fire fighting vehicles. Spread over, running time, test for competence to drive.

MODULE VI MAINTENANCE 7

Preventive maintenance system in transport industry, tyre maintenance procedures. Causes for uneven tyre wear; remedies, maintenance procedure for better fuel economy, Design of bus depot layout.

L – 45; Total Hours –45

TEXT BOOKS:

1. John Duke, "Fleet Management", McGraw-Hill Co, USA, 1984.
2. Kitchin.L.D., "Bus Operation", III edition, Illiffee and Sons Co., London, 1992

REFERENCES:

1. Government Motor Vehicle Act, Publication on latest act to be used as on date.

OUTCOMES:

Upon completion of the course, students will

- Know about different aspects related to transport system and management.
- Features of scheduling, fixing the fares
- Know about the motor vehicle act and maintenance aspects of transport.

GECX106	CONTROL SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the system modeling and to derive their transfer function.
- To provide adequate knowledge of time response of systems and steady state error analysis.
- To accord basic knowledge in obtaining the open loop and closed–loop frequency responses of Control systems.

MODULE I BASIC CONCEPTS AND SYSTEM REPRESENTATION 8

Control System - Basic elements in control systems – Open and closed loop systems – Electrical analogy of mechanical and thermal systems – Transfer function – Block diagram reduction techniques – Signal flow graphs.

MODULE II TIME RESPONSE ANALYSIS AND DESIGN 8

Time response – Time domain specifications – Types of test input – First and Second order system - Type I and Type II System – Response - Error coefficients – Generalized error series – Steady state error – P, PI, PID modes of feedback control.

MODULE III FREQUENCY RESPONSE ANALYSIS AND DESIGN 7

Performance specifications - correlation to time domain specifications - bode plots and polar plots – gain and phase margin – constant M and N circles and Nichols chart – all pass and non-minimum phase systems.

MODULE IV STABILITY 8

Characteristics equation – Location of roots in s plane for stability – Routh Hurwitz criterion – Root locus construction – Effect of pole, zero addition – Gain margin and phase margin – Nyquist stability criterion.

MODULE V COMPENSATOR DESIGN 8

Performance criteria – Lag, lead and lag-lead networks – Compensator design using bode plots and root locus technique.

MODULE VI CONTROL SYSTEM COMPONENTS AND APPLICATION OF CONTROL SYSTEMS 6

Synchros – AC servomotors - DC Servo motors - Stepper motors - AC

Tacho generator - DC Tacho generator - Typical applications of control system in industry.

L – 45; Total Hours –45

REFERENCES:

5. R.C.Dorf and R.H.Bishop, “Modern Control Systems”, Addison-Wesley (MATLAB Reference), 1995.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Proper understanding of basics of Control Systems.
- Ability and skill to carry-out time domain and frequency domain analysis.
- Capable of determining stability of the system using Routh Hurwitz criterion, Root locus and Nyquist criterion.
- Ability to design lag, lead and lag lead compensator networks.

GECX107 INTRODUCTION TO VLSI DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- Basic concepts of HDL.
- Verilog language and its syntax constructs.
- Programmable Logic Devices and FPGAs
- MOS devices theory
- CMOS based combinational and sequential circuits

PREREQUISITES:

Fundamentals of Electronics

Basics knowledge in Digital Electronics.

MODULE I REVIEW OF BASIC DIGITAL SYSTEMS 7

Boolean algebra, Building blocks of combinational logic design-Adders, multiplexer, encoder, decoder, comparator, Latches & flip-flops, counters, shift registers.

MODULE II LOGIC DESIGN USING VERILOG HDL 8

Overview of Digital Design with Verilog HDL, Levels of Design Description, Concurrency, Hierarchical Modeling Concepts, Modules and Ports, Component instantiation Data flow and RTL, structural, gate level, switch level modeling and Behavioral Modeling.

MODULE III LANGUAGE CONSTRUCTS OF VERILOG HDL 7

Identifiers- gate primitives, gate delays, operators, timing controls, procedural assignments, conditional statements Variable types, arrays and tables, Tasks and functions, Test bench.

MODULE IV BUILDING BLOCKS OF DIGITAL VLSI SYSTEMS 8

HDL Design -Data Path Operations-Addition/Subtraction, Parity Generators, Comparators, Zero/One Detectors, Binary Counters, ALUs, Multiplication, Shifters, Memory Elements. Programmable logic elements and AND-OR arrays, FPGAs programming methods.

MODULE V TRANSISTOR THEORY 7

Introduction to MOS Transistors-NMOS & PMOS Characteristics, Current Equations, Complementary CMOS Inverter-DC Characteristics, Static Load MOS

Inverters.

MODULE VI BASICS OF DIGITAL CMOS DESIGN 8

NMOS & PMOS Logic Gate, CMOS Logic Gate, Basic layout design of simple gate-stick diagram, CMOS Logic Structures-full adder, multiplexers.

Total Hours –45

TEXT BOOKS:

1. M.Morris Mano "Digital Design", 3rd Edition, Prentice Hall of India Pvt. Ltd New Delhi, 2003

REFERENCES:

1. Michael D. Ciletti“Advanced Digital Design with the Verilog HDL" (2nd Edition) Hardcover – January 31, 2010

4. Neil Weste and K. Eshragian, “Principles of CMOS VLSI Design: A System Perspective,” 2nd edition, Pearson Education (Asia) Pvt.Ltd., 2000
5. Douglas A Pucknell& Kamran Eshragian , “Basic VLSI Design” PHI 3rd Edition (original edition – 1994)

OUTCOMES:

At the end of the course the students will be able to

- Create basic Register Transfer Level (RTL) models for combinational circuits & Sequential circuits using Verilog HDL.
- Create basic behavioral models for combinational circuits & Sequential circuits using Verilog HDL.
- Describe the usage of Programmable Logic Devices and FPGAs.
- Describe MOS devices theory and inverter circuit DC characteristics
- Design the basic digital building blocks using MOS circuit.
- Apply VLSI design concepts based on the requirements to conduct experiments or projects

GECX108 PLANT ENGINEERING L T P C
3 0 0 4

OBJECTIVES:

- To provide in depth knowledge on Plant Engineering
- To introduce detail engineering and P&ID
- To learn about the support to Instrumentation from other disciplines
- To study about the Installation and commissioning

MODULE I INTRODUCTION OF PLANTS 7

General Project Cycle – Feed – Sales - Plant Description, Component / Areas of Plant, Plant Layout, Plant Interfaces, Plant Location

MODULE II ELEMENTS OF PLANT 8

Main Elements of a Plant, Process Flow Scheme (PFD – Process Flow Diagram) P&ID's, Plant Legend Finalization.

MODULE III DETAIL ENGINEERING 10

P& ID Development with PFD's, Major Discipline Involvement & Inter discipline Interaction, Major Instrumentation & Control Systems - Development Phase – Instrument List , I/O Count, Specification Sheets, Instrument Installation (Hook ups) , Control Philosophy – Detail Engineering.

MODULE IV SUPPORT FROM OTHER DISCIPLINE 8

Other Discipline Supports to Instrumentation – Plot Plan, Piping / Equipment Plan, Electrical Area Classification, Fire Hazardous Classification Telecommunication Systems - Control Network architecture.

MODULE V INSTALLATION AND COMMISSIONING 7

Plant Construction - Key Drawings for Construction Support Construction Activities, System Testing, Startup / Commissioning, Production.

MODULE VI CASE STUDIES 5

Case studies of Water Treatment Plant - Paper Industry – Power Plant etc

L – 45; Total Hours –45

REFERENCES:

1. Duncan C Richardson, Plant Equipment and Maintenance Engineering Handbook, McGraw-Hill Education: New York, Chicago, San Francisco, Athens, London, Madrid, Mexico City, Milan, New Delhi, Singapore, Sydney, Toronto, 2014 McGraw-Hill Education

3. Robert C Rosaler , Standard Handbook of Plant Engineering, Mc Graw Hill third Edition, 2004
4. R. Keith Mobley, Plant Engineer's Handbook, Technology and Engineering, 2001.

OUTCOMES:

At the end of the course, the student will be able to

- Review and correct P&IDs
- Do installation and commissioning of new plants
- Apply plant engineering in design and maintenance of water treatment plant / power plant etc

GECX109	NETWORK SECURITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

The students should be able to

- Discuss the basic concepts of computer security, model and attacks
- Examine the major types of threats and the associated attacks
- Identify the encryption techniques in real time applications
- Understand the special requirements for wireless security and how authentication is implemented in wireless systems
- Understand the functions of Network Security Device Firewall and its types
- Interpret the various network intrusion such as computer viruses, network worms etc

MODULE I INTRODUCTION 6

Computer Security Concepts - The OSI Security Architecture - Security Attacks - Security Services - Security Mechanisms - A Model for Network Security - Standards – classical encryption techniques.

MODULE II SYMMETRIC ENCRYPTION AND MESSAGE CONFIDENTIALITY 7

Symmetric Encryption Principles - Symmetric Block Encryption Algorithms - Random and Pseudorandom Numbers - Stream Ciphers and RC4 - Cipher Block Modes of Operation

MODULE III PUBLIC KEY CRYPTOGRAPHY AND MESSAGE AUTHENTICATION 8

Approaches to Message Authentication - Secure Hash Functions - Message Authentication Codes - Public-Key Cryptography Principles - Public-Key Cryptography Algorithms - Digital Signatures

MODULE IV KEY DISTRIBUTION ,USER AUTHENTICATION AND TRANSPORT-LEVEL SECURITY 8

Symmetric Key Distribution Using Symmetric Encryption - Kerberos - Key Distribution Using Asymmetric Encryption - X.509 Certificates - Public-Key Infrastructure -Federated Identity Management - Web Security Considerations -

Secure Socket Layer and Transport Layer Security - Transport Layer Security

MODULE V WIRELESS NETWORK SECURITY, ELECTRONIC MAIL SECURITY AND IP SECURITY **8**

IEEE 802.11 Wireless LAN Overview -IEEE 802.11i Wireless LAN Security - Wireless Application Protocol Overview - Wireless Transport Layer Security - WAP End-to-End Security - Pretty Good Privacy - S/MIME – Domain Keys Identified Mail- IP Security Overview -IP Security Policy - Encapsulating Security Payload - Combining Security Associations - Internet Key Exchange - Cryptographic Suites

MODULE VI SYSTEM SECURITY **8**

Intruders -Intrusion Detection -Password Management - Types of Malicious Software - Viruses Virus Countermeasures – Worms - Distributed Denial of Service Attacks- The Need for Firewalls - Firewall Characteristics - Types of Firewalls - Firewall Basing - Firewall Location and Configurations

L – 45; Total Hours –45

5. Nitesh Dhanjani, Justin Clarke, "Network Security Tools", O'Reilly Media, ISBN-13: 9780596007942, 2005.

OUTCOMES:

Students who complete this course will be able to

- Recognize the computer security concepts, architecture attacks and model
- Distinguish the symmetric and asymmetric encryption techniques
- Apply the cryptographic algorithms in different applications
- Express the network security designs using available secure solutions

such as PGP,SSL, IPSec, etc.

- Describe the firewalls principles and different types of firewalls applied in organization
- Identify abnormalities within the network caused by worms, viruses and Network related security treats**.**

GECX110	KNOWLEDGE MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course

- Focuses on positioning knowledge as a valuable commodity, embedded in products and in the tacit knowledge of highly mobile individual employees.
- Presents KM as a deliberate and systematic approach to cultivating and sharing an organization's knowledge base.
- Brings out the paradigm in terms of information technology and intellectual capital.

MODULE I KNOWLEDGE MANAGEMENT 6

KM Myths – KM Life Cycle – Understanding Knowledge – Knowledge, intelligence – Experience – Common Sense – Cognition and KM – Types of Knowledge – History of Knowledge Management - From Physical assets to Knowledge Assets – Expert knowledge – Human Thinking and Learning.

MODULE II KNOWLEDGE MANAGEMENT SYSTEMS AND MODELS 9

Challenges in Building KM Systems – Conventional Vs KM System Life Cycle (KMSLS) – Knowledge Creation and Knowledge Architecture – KM cycle - Different variants of KM cycle - KM models - Implications and practical implementations.

MODULE III CAPTURING KNOWLEDGE AND SHARING 9

Tacit knowledge capture - Explicit knowledge codification – Knowledge taxonomies - Knowledge sharing - Communities - Obstacles to knowledge capture and sharing.

MODULE IV KNOWLEDGE MANAGEMENT TOOLS 9

KM System tools – Neural Network – Association Rules – Classification Trees – Data Mining and Business Intelligence – Knowledge capture and creation tools - Content creation tools - Data mining and knowledge discovery – Content management tools - Knowledge sharing and dissemination tools – Group ware

and Collaboration tools - Intelligent filtering tools.

MODULE V KNOWLEDGE APPLICATION 6

KM at individual level - Knowledge workers - Task analysis and modeling - Knowledge application at group and organizational levels – Knowledge repositories - Knowledge reuse -Case study: e-learning.

MODULE VI VALUE OF KNOWLEDGE MANAGEMENT 6

KM return on investment and metrics - Benchmarking method – Balanced scorecard method - House of quality method - Results based assessment method - Measuring success - Future challenges for KM.

L – 45; Total Hours –45

TEXT BOOKS:

1. Elias M. Awad, Hassan M. Ghaziri, “Knowledge Management”, Prentice Hall, 2nd Edition, 2010.
2. Jay Liebowitz, “Handbooks on Knowledge Management”, 2nd Edition, 2012.
3. Irma Becerra-Fernandez, Rajiv Sabherwal, ”Knowledge Management: Systems and Processes”, 2010.

OUTCOMES:

Students who complete this course will be able to

- Describe the fundamental concepts in the study of knowledge and its creation, acquisition, representation, dissemination, use and re-use, and management.
- Explains the core concepts, methods, techniques, and tools for computer support of knowledge management.
- Critically evaluate current trends in knowledge management and apply it for e-learning

GECX111 CYBER SECURITY L T P C

3 0 0 3

OBJECTIVES:

- To understand the basics of Cyber Security Standards and Policies.
- To know the legal, ethical and professional issues in Cyber security.
- To understand Cyber Frauds and Abuse and its Security Measures.
- To know the technological aspects of Cyber Security.

MODULE I FUNDAMENTALS OF CYBER SECURITY 7

Security problem in computing – Cryptography Basics – History of Encryption – Modern Methods – Legitimate versus Fraudulent Encryption methods – Encryption used in Internet.

MODULE II CYBERCRIME AND CYBEROFFENSES 8

Cybercrime and Information Security – Cybercriminals – Classifications of Cybercrimes – Email Spoofing – Spamming – Cyber defamation – Internet Time Theft – Forgery – Web jacking – Hacking – Online Frauds – Software Piracy – Mail Bombs – Password Sniffing – Cyberoffenses – Categories – Planning the attacks – Cyberstalking – Cybercafe and Cybercrimes – Botnets.

MODULE III CYBERCRIME: MOBILE AND WIRELESS DEVICES 8

Proliferation of Mobile and Wireless Devices – Trends in Mobility – Credit card frauds in Mobile and Wireless Computing – Security Challenges – Authentication Service Security – Attacks on Mobile Phones.

MODULE IV TOOLS AND METHODS USED IN CYBERCRIME 8

Proxy Servers and Anonymizers – Phishing – Password Cracking – Keyloggers and Spywares – Virus and Worms – Trojan Horses and Backdoors – Steganography – DoS and DDoS Attacks.

MODULE V SECURITY POLICIES 7

Introduction - Defining User Policies – Passwords – Internet Use – Email Usage – Installing/ Uninstalling Software – Instant Messaging – Defining System Administrative Policies – Defining Access Control Developmental Policies Standards, Guidelines and Procedures – Basics of assessing a system

MODULE VI COMPUTER FORENSICS 7

General Guidelines – Finding Evidence on the PC - Finding Evidence in System Logs – Windows Logs – Linux Logs – Getting Back Deleted Files – Operating System Utilities – The Windows Registry.

L – 45; Total Hours –45

TEXT BOOKS:

1. Nina Godbole, Sunit Belapure, “Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives”, Wiley, 2011.

2. Chuck Easttom, “Computer Security Fundamentals”, 2nd Edition, Pearson Education, 2012.

REFERENCES:

1. Charles B. Pfleeger, Shari Lawrence Pfleeger, “Security in Computing”, 3rd Edition, Pearson Education, 2003.

2. William Stallings, “Cryptography and Network Security – Principles and Practices”, 3rd Edition, Pearson Education, 2003.

3. Atul Kahate, “Cryptography and Network Security”, Tata McGraw Hill, 2000.

OUTCOMES:

Upon completion of this course, students will be able to

- Explain the general security issues.
- Discuss various cybercrimes and offenses.
- Outline the occurrence of Cybercrime in mobile and wireless environment.
- Use relevant tools and methods in cybercrime
- Apply security policies in cyber forensics.
- Outline the strategies adopted in computer forensics.

GECX112 GENETIC ENGINEERING L T P C
4 0 0 4

OBJECTIVES:

The course aims to provide an advanced understanding of the core principles and topics of Cell and Organism reproduction and the Principles of heredity and their experimental basis, and to enable students to be able to apply these principles in assessment of pedigrees to identify genotypes and predict the mating outcomes.

MODULE I GENETICS AND ORGANISM 10

Genetics and human affairs, Genetics and Biology, Genes and Environment, Techniques of genetic analysis, The chromosome theory of heredity, Sex chromosomes, Sex linkage, The parallel behaviour of autosomal genes and chromosomes.

MODULE II MENDELISM AND LINKAGE 12

Mendel's laws of inheritance, Interaction of genes, Variations on dominance, Multiple alleles, Lethal alleles, Several genes affecting the same character, Penetrance and expressivity, Linkage- Basic eukaryotic chromosome mapping, The discovery of linkage, Recombination linkage symbolism, Linkage of genes on X chromosomes, Linkage maps, Examples of linkage maps.

MODULE III FINE STRUCTURE OF GENES 10

The concept of promoter, Coding sequence, Terminator, Induction of gene for expression. The concept of extranuclear genome in higher plants and animals, Overview of mitochondrial genome, Chloroplast genome.

MODULE IV RECOMBINATION IN BACTERIA AND VIRUSES 10

Conjugation recombination and mapping the E.coli chromosomes, Transformation, Transduction, Chromosome mapping. Population genetics: Darwin's revolution, Variation and its modulation, The effect of sexual reproduction on variation, The sources of variation, Selection quantitative genetics

MODULE V PRINCIPLES OF PLANT BREEDING 9

Objectives, Selfing and crossing techniques, Male sterility,Incompatability, Hybrid vigour.

MODULE VI HUMAN GENOME PROJECT 9

Genetic diseases in humans, Genetics and society

L – 45; T – 15; Total Hours –60

REFERENCES:

1. In Introduction to genetic analysis, Griffiths, Miller, Suzuki, Lewontin and Gelbart, Freeman and Company.
2. Genetics, A.V.S.S. Sambamurty, Narosa Publishing House.
3. Concepts of Genetics, Klug & Cummings, Prientice Hall.
4. Molecular Cloning, Moniatisetal, Cold Spring Harbor Laboratory.

OUTCOMES:

At the end of the course students will be able to

- Describe the structure, function and replication of DNA as the genetic material
- Describe gene structure, expression and regulation
- Describe the chromosomal basis of inheritance and how alterations in chromosome number or structure may arise during mitosis and meiosis

GECX113	FUNDAMENTALS OF PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The students would gain knowledge on

- Technicalities attached to Project Management and Significance of Quality Consideration
- Project management methodologies – tools and techniques, supplemented with examples from case studies
- The importance of Efficient HR team and role of Communication in executing Projects.
- Managing Risks in Project Management

MODULE I INTRODUCTION TO PROJECT MANAGEMENT 9

Introduction to Project and Project Management-Project Management as a Career-Project Management Skill Sets-Project Scope Management: Project Charter, Scope Creep, Scope Validation, Scope Change Control-Type of Organization: Organization Structure-Influence of Organization Structure on Project, Project Stakeholders and Organizational Productivity.

MODULE II PROJECT MANAGEMENT PROCESS, TOOLS AND TECHNIQUES 8

Project life cycle-Initiation, Planning, Execution, Monitoring and Closing Phase; - Link between project management process, process groups and knowledge areas; Project management tools and techniques- Project Stakeholders description and mapping - Stakeholder Management Process

MODULE III PROJECT QUALITY, COST AND SCHEDULE MANAGEMENT 10

Triple constraints of project-quality, cost and schedule-Quality Planning, Quality Assurance and Quality Control, Process Control, Cost of Quality, Seven Tools of Quality Control- Cost Management: Cost Estimating Methods, Estimating Completion Cost, Earned Value Management, Budgeting, Life-Cycle Cost analysis- Project Time Management: Duration Estimation Method, FS/FF/SS/ SF Relations, Lead/Lag, Arrow Diagram Method and Precedence Diagram Method for Scheduling-Resource Allocation

MODULE IV PROJECT HR MANAGEMENT 5

Organizational Goals- (MBO/MBE/MBP)-Responsibility Assignment Matrix (RAM)-Types of Powers- Manage or Lead-Conflict management Techniques-Performance Evaluation Process-Motivation Theories and its Application for execution of Projects-Leadership Styles-Project Team Building-Project Staffing Constraints/Policies

MODULE V COMMUNICATION MANAGEMENT 5

Communication Management: Understanding Body languages of Project Personnel-Effective Communications- Interpersonal Skills for project Managers-PMIS-Communicating with the Customer-Communicating with Management- Formal vs. Informal Communications-Written, Verbal and Non-Verbal Communications.

MODULE VI PROJECT PROCUREMENT & RISK MANAGEMENT 8

Introduction to Project Procure Management: Soliciting RFQ/RFP-Contract Proposals-Contract Negotiation-Contract Closure-Risk Management: Defining risks-Risk management process-Risk identification-Qualitative and Quantitative Risk-Probability and Decision trees-Risk Response strategies / methods-Expected monetary value-Risk vs. life cycle phases

L – 45; Total Hours –45

REFERENCES:

1. Jack. R. Meredith, Samuel. J. Mantel & Scott. M. Shafer, Project Management in Practice, Fifth Edition, Bangalore: Wiley, 2015
2. Bob Hughes, Mike Cotterrel “Software Project Management”, Tata McGraw-Hill, 2009

OUTCOMES:

- Learners will be able to identify the Key Knowledge Areas and apply PM process in hypothetical project assignments given as continuous assessment.
- They would be able to suitably recognize tools and techniques required for various phases included in a project.
- They would also be able to manage scope, time, cost and other major components that would help them to execute the project efficiently.

GECX114 OPERATIONS RESEARCH L T P C
3 0 0 3

OBJECTIVES:

- To acquire knowledge and training in optimization techniques.
- To get knowledge about optimization in utilization of resources.
- To understand and apply operations research techniques to industrial operations

MODULE I LINEAR PROGRAMMING PROBLEM 8

Linear programming – formulation of the problem - graphical interpretation of optimality - Simplex method – to obtain basic feasible solution – types of linear programming solution – complications and their resolution.

MODULE II ARTIFICIAL VARIABLE AND TWO PHASE METHOD, DUALITY 6

Artificial variable - Big M method – Two phase method – alternative optimal solution – unbounded solution - Duality – primal dual relationships - rules of constructing the dual from primal.

MODULE III TRANSPORTATION PROBLEM & ASSIGNMENT PROBLE 8

Transportation problems – Initial basic feasible solutions, MODI method, Unbalance in transportation, Degeneracy in transportation models, Assignment problem – Minimization and Maximization type of problems by Hungarian method.

MODULE IV NETWORK AND SEQUENCING PROBLEMS 8

PERT and CPM – Network diagram – Fulkerson's rule - CPM Probability of achieving completion date – Crash time – Cost analysis. Sequencing N jobs through 2 machines and 3 machines.

MODULE V QUEUING THEORY & SIMULATION 7

Poisson arrivals and exponential service times – characteristics of Queuing models – single channel – Introduction to multi channel models – Random number generation – Monte Carlo Simulation.

MODULE VI INVENTORY CONTROL, REPLACEMENT MODELS AND GAME THEORY 8

Types of inventory- Inventory cost - EOQ - Deterministic inventory problems – Introduction to probabilistic models & system level inventory control - Replacement models – Replacement of items that deteriorate with time – value of money changing with time – not changing with time – Individual and group replacement policy - Game theory – simple games.

L – 45; Total Hours –45

4. Robertazzi. T.G., “Computer networks and systems-Queuing theory and performance evaluation”, 3rd edition, Springer, 2002.

OUTCOMES:

At the end of the course students will be able to

- solve linear programming problems
- solve transportation and assignment problems.
- solve network and sequencing problems.
- apply the operations research techniques to solve industrial problems.

GECX115 NANO TECHNOLOGY L T P C
3 0 0 3

OBJECTIVES:

- To introduce the basic concepts of Nanoscience relevant to the field of engineering.
- To provide an exposure about the importance of various synthesis method.
- To enrich the knowledge of students in various characterisation techniques.

MODULE I INTRODUCTION & CLASSIFICATION OF NANOMATERIALS 9

Definition - Origin of nanotechnology - Difference between bulk and nanomaterials- Top-down and bottom-up processes - Size dependent properties (magnetic, electronic,transport and optical), Classification based on dimensional property - 0D, 1D, 2D and 3D nanostructures – Kubo gap.

MODULE II TYPES OF NANOMATERIALS 9

Metal oxides and metal nano particles - Ceramic nano particles - Semi conducting quantum dots - Core-shell quantum dots - Nanocomposites - Micellar nanoparticles.

MODULE III PRODUCTION OF NANOPARTICLES 7

Sol-gel, hydrothermal, solvothermal, Plasma Arcing, Electro deposition, RF sputtering, Pulsed laser deposition, Chemical vapour, deposition.

MODULE IV CARBON BASED NANOMATERIALS 6

Carbon nanotubes: Single wall nanotubes (SWNT), Multiwall nanotubes (MWNT) - structures-carbon nanofibre, Fullerenes-Application of carbon nanotubes and Fullerenes.

MODULE V NANOPHOTONICS 7

Light and nanotechnology, Interaction of light and nanotechnology, Nanoholes and photons, nanoparticles and nanostructures; Nanostructured polymers, Photonic Crystals, Solar cells.

MODULE VI CHARACTERISATION TECHNIQUES 7

Basic principles of scanning Electron Microscopy (SEM), Atomic force microscopy (AFM), Scanning tunneling microscopy (STM), Scanning probe

microscopy (SPM) and Transmission electron microscopy (TEM), Particle size analyzer, Luminescence techniques.

L – 45; Total Hours –45

TEXT BOOKS:

1. Hari Singh Nalwa, “Handbook of Nanostructured Materials and Nanotechnology”, Academic Press, 2000.
2. Guozhong Cao, “Nanostructures and Nano materials-Synthesis, Properties and Applications”, Imperial College Press (2011).
3. Zhong Lin Wang, “Handbook of Nanophase and Nanomaterials (Vol 1 and II)”, Springer, 2002.
4. Mick Wilson, Kamali Kannangara, Geoff smith, “Nanotechnology: Basic Science and Emerging Technologies”, Overseas press, 2005.

REFERENCES:

1. A. Nabok, “Organic and Inorganic Nanostructures”, Artech House, 2005.
2. C.Dupas, P.Houdy, M.Lahmani, Nanoscience: “Nanotechnologies and Nanophysics”, Springer-Verlag Berlin Heidelberg, 2007.
3. Mick Wilson, Kamali Kannangara, Michells Simmons and Burkhard Raguse, “Nano Technology – Basic Science and Emerging Technologies”, 1st Edition, Overseas Press, New Delhi,2005.
4. M.S. Ramachandra Rao, Shubra SinghH, “Nanoscience and Nanotechnology: Fundamentals to Frontiers”, Wiley, 2013.

OUTCOMES:

At the end of this course, the students will be able to:

- Apply the knowledge of different types of nanomaterials for various engineering applications.
- Acquire the knowledge of various methods of production of nanomaterials.
- Familiarize with various characterization techniques.

GECX116	VEHICLE MAINTENANCE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To know about the various methods of maintaining procedure, vehicle insurance and basic problems in a vehicle.
- The student able to impart knowledge in maintaining of engine components and subsystems.
- The student able to impart knowledge in maintaining of transmission, driveline, steering, suspension, braking and wheels.
- The student able to impart **carefully maintaining their vehicle and can increase driving safety.**

MODULE I MAINTENANCE, WORKSHOP PRACTICES, SAFETY AND TOOLS **7**

Maintenance – Need, importance, primary and secondary functions, policies - classification of maintenance work - vehicle insurance - basic problem diagnosis. Automotive service procedures – workshop operations – workshop manual - vehicle identification. Safety – Personnel, machines and equipment, vehicles, fire safety - First aid. Basic tools – special service tools – measuring instruments – condition checking of seals, gaskets and sealants. Scheduled maintenance services – service intervals - Towing and recovering.

MODULE II ENGINE AND ENGINE SUBSYSTEM MAINTENANCE **8**

General Engine service- Dismantling of Engine components- Engine repair-working on the underside, front, top, ancillaries- Service of basic engine parts, cooling and lubricating system, fuel system, Intake and Exhaust system, electrical system - Electronic fuel injection and engine management service - fault diagnosis- servicing emission controls.

MODULE III TRANSMISSION AND DRIVELINE MAINTENANCE **8**

Clutch- general checks, adjustment and service- Dismantling, identifying, checking and reassembling transmission, transaxle- road testing- Removing and replacing propeller shaft, servicing of cross and yoke joint and constant velocity joints- Rear axle service points- removing axle shaft and bearings- servicing differential assemblies- fault diagnosis.

MODULE IV STEERING AND SUSPENSION MAINTENANCE 7

Maintenance and Service of Mc person strut, coil spring, leaf spring, shock absorbers. Dismantling and assembly procedures. Inspection, Maintenance and Service of steering linkage, steering column, Rack and pinion steering, Recirculating ball steering service- Worm type steering, and power steering system.

MODULE V BRAKE AND WHEEL MAINTENANCE 7

Inspection, Maintenance and Service of Hydraulic brake, Drum brake, Disc brake, parking brake. Bleeding of brakes. Wheel alignment and balance, removing and fitting of tyres, tyre wear and tyre rotation.

MODULE VI AUTO ELECTRICAL AND AIR CONDITIOING MAINTENANCE 8

Maintenance of batteries, starting system, charging system and body electrical - Fault diagnosis using Scan tools. Maintenance of air conditioning parts like compressor, condenser, expansion valve, evaporator - Replacement of hoses- Leak detection- AC Charging- Fault diagnosis Vehicle body repair like panel beating, tinkering, soldering, polishing, painting.

L – 45; Total Hours –45

TEXT BOOKS:

1. Ed May, "Automotive Mechanics Volume One" , Mc Graw Hill Publications, 2003
2. Ed May, "Automotive Mechanics Volume Two" , Mc Graw Hill Publications, 2003
3. Vehicle Service Manuals of reputed manufacturers
4. Vehicle maintenance and garage practice by Jigar A.Doshi Dhru U.Panchal,Jayesh P.Maniar. 2014
5. A Practical Approach to Motor Vehicle Engineering and Maintenance 3rd Edition by Allan Bonnick.

REFERENCES:

1. Bosch Automotive Handbook, Sixth Edition, 2004.
2. Advanced Automotive Fault Diagnosis by Tom Denton 2011.
3. Nissan Patrol Automotive Repair Manual: 1998-2014 by Haynes Manuals Inc.
4. Automobile electrical manual a comprehensive guide by Haynes manual car

repair.

OUTCOMES:

On completion of the course student should be able to

- Prepare maintenance schedules and procedures with appropriate tools.
- Demonstrate the procedure and methods to repair and calibrate the engine**.**
- **Analyze the causes and remedies for fault in transmission and drive line systems.**
- **Analyze the causes and remedies of steering and suspension systems.**
- **Analyze the causes and remedies of brake system.**
- **Demonstrate the procedure for wheel alignment and wheel balanced.**

GECX117	FUNDAMENTALS OF DIGITAL IMAGE PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Describe and explain basic principles of digital image processing
- Design and implement algorithms that perform basic image processing
- Design and implement algorithms for advanced image analysis
- Assess the performance of image processing algorithms and systems

PRE-REQUISITES:

- Basic knowledge of transforms in Mathematics

MODULE I DIGITAL IMAGE FUNDAMENTALS 8

Elements of Image Processing System, Fundamentals steps in Digital Image Processing, Image Sampling & Quantization, Spatial and Gray Level Resolution.

MODULE II COLOR IMAGE PROCESSING 8

Fundamental of color image processing, color models- RGB, CMY, HIS, Pseudo color image processing

MODULE III IMAGE ENHANCEMENT 7

Basic gray level Transformations, Histogram Processing, Spatial Filtering

MODULE IV IMAGE TRANSFORMS 7

2D-DFT, DCT, Haar Transform, Fundamentals of 2D-wavelet transform, sub-band coding

MODULE V IMAGE SEGMENTATION AND RESTORATION 8

Point, line and edge detection methods ,Image Segmentation and its types, Restoration: Noise model, Inverse filter and Wiener filter.

MODULE VI IMAGE COMPRESSION 7

Fundamentals of redundancies, Basic Compression Methods: Huffman coding, Arithmetic coding, JPEG and MPEG Compression standards.

TOTAL HOURS 45

TEXT BOOKS

1. Gonzalez and Woods, "Digital Image Processing", 3rd Edition, Pearson Education, 2016.
2. Anil. K. Jain, "Fundamentals of Digital Image Processing"; 4th Edition, PHI, 2007

REFERENCES

1. Pratt William, "Digital Image Processing", John Wiley & Sons, 2007.
2. Arthur Weeks Jr., "Fundamentals of Digital Image Processing", PHI, 2006.

OUTCOMES:

On completion of the course, students will be able to

- Explain the fundamental concepts of digital image processing.
- Discuss about color image processing
- Recognize & apply various image enhancement techniques.
- Apply various transforms for image processing.
- Apply various techniques for image segmentation and restoration.
- Identify and use appropriate image compression techniques

Group II courses

(To be offered in VII Semester)

		L	T	P	C
GECX201	**GREEN DESIGN AND SUSTAINABILITY**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To impart knowledge to face challenges, the technology poses for water, energy, and climate change by implementing sustainable design.

MODULE I CONCEPTS OF SUSTAINABLE DEVELOPMENT 7

Objectives of Sustainable Development - Need for sustainable development-Environment and development linkages - Globalisation and environment-Population, poverty and pollution- global, regional and local environment issues-Green house gases and climate change.

MODULE II SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 8

Demographic dynamics of sustainability- Policies for socio economic development- Sustainable Development through trade- Economic growth- Action Plan for implementing sustainable development- Sustainable Energy and Agriculture.

MODULE III FRAME WORK FOR ACHIEVING SUSTAINBAILITY 7

Sustainability indicators- Hurdles to sustainability- Business and Industry – Science and Technology for Sustainable Development- Performance indicators of sustainability and assessment mechanism- Constraints and barriers of Sustainable Development.

MODULE IV GREEN BUILDINGS 8

Introduction to Green Building- Energy- Water- Materials and Resources - Sustainable Sites and Land Use - Indoor Environmental Quality- Life Cycle Assessment- Energy, water and materials efficiency.

MODULE V ENERGY CONSERVATION AND EFFICIENCY 7

Energy savings- Energy Audit- Requirements- Benefits of Energy conservation-Energy conservation measures for buildings- Energy wastage- impact to the environment.

MODULE VI GREEN BUILDINGS DESIGN 8

Elements of Green Buildings Design- Foundation, Electrical, Plumbing, flooring, Decking, roofing, insulation, wall coverings, windows, siding, doors and finishing, LEED certification for Green Buildings, Green Buildings for sustainability.

L – 45; Total Hours –45

TEXT BOOKS:

1. Kirby, J., Okeefe, P., and Timber lake, “Sustainable Development”, Earthscan Publication, London, 1995.

REFERENCES:

1. Charles Kibert, J., “Sustainable Construction: Green Building Design and Delivery”, 2nd Edition, John Wiley and sons, 2007.

OUTCOMES:

At the end of the course, the students will be able to

- Explain the relationship between sustainability and emergence of green building practices.
- Address the economic, environmental, and social concerns.

GECX202 APPROPRIATE TECHNOLOGY L T P C
3 0 0 3

OBJECTIVES:

- To impart students knowledge about the basics and applications of various appropriate technologies in the field of civil engineering.

MODULE I BASICS CONCEPTS 7

Back ground, Tools, Choices and Implications, Appropriate Technology Movement (an overview) - Basic design process, basic financial analysis-discounted cash flow, and energy fundamentals.

MODULE II APPROPRIATE TECHNOLOGY WITH REFERENCE TO BUILDING DESIGN 7

Appropriate Building Materials, Appropriate Energy Saving Techniques, Water Conservation (Indoor), Rain Water Harvesting.

MODULE III WATER, HEALTH AND SANITATION MANAGEMENT 7

Water Storage: Designing Dams and Pipelines, Appropriate Selection for Sanitation Technique, Sewerage, Communal Health and Waste Water Recycling.

MODULE IV WASTE MANAGEMENT 8

Types of Waste - Sources - Collections and On-Site Processing -Transferring Stations - Disposal Systems - Recycling.

MODULE V ENERGY EFFICIENT TECHNIQUES 8

Green building concepts-renewable energy sources- Solar – Steam and wind-Biofuels - Biogas – Electricity.

MODULE VI TECHNOLOGY POLICY 8

Government Policies- Energy Policy-Appropriate technology Development Centre-its function and responsibilities-Building policies-Case Studies.

L – 45; Total Hours –45

TEXT BOOKS:

1. Barrett Hazeltine and Christopher Bull, “Appropriate Technology: Tools Choices and Implications”, Academic Press, Orlando, USA, 1998.
2. Ken Darrow and Mike Saxenian, “Appropriate Technology Source Book : A Guide to Practical Books for Village and Small Community Technology”, Stanford, 1986.

REFERENCES:

1. Richard Heeks, “Technology and Developing Countries: Practical Applications Theoretical Issues”, 1995.
2. John Pickford, “The Worth of Water : Technical Briefs on Health, Water and Sanitation”, Intermediate Technology Publications, 1998.

OUTCOMES:

- At the end of the course, the students will be able to use suitable technologies for various conditions for sustainable development.

GECX203 ENGINEERING SYSTEM MODELLING AND SIMULATION

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn the concepts, techniques, tools for modeling and simulation systems and environments through the use of computers.
- To study the various aspects of discrete dynamic, stochastic systems modeling and conducting experiments with those models on a computer.

MODULE I INTRODUCTION 6

Systems – Modelling – types – systems components – Steps in model building- Simulation Algorithms and Heuristics; Simulation Languages.

MODULE II RANDOM NUMBERS / VARIATES 7

Random numbers – methods of generation – random variates for standard distributions like uniform, exponential, Poisson, binomial, normal etc. – Testing of Random variates – Monte Carlo Simulation.

MODULE III MODELLING PROCESS 7

Primitive Models : Establishing relationships via physical laws; Establishing relationships via curve fitting; Parameters estimation problems; Elementary state transition models.

MODULE IV DESIGN OF SIMULATION EXPERIMENTS 9

Steps on Design of Simulation Experiments – Development of models using of Highlevel language for systems like Queuing, Inventory, Replacement, Production etc., – Model validation and verification, Output analysis.

MODULE V SIMULATION LANGUAGES 10

Need for simulation Languages – Comparisons & Selection of Languages – GPSSARENA- EXTEND – Study of any one of the languages.

MODULE VI CASE STUDIES USING SIMULATION LANGUAGES 6

Case Study using simulation languages

L – 45; Total Hours –45

REFERENCES:

1. Law, A.M., & W.D. Kelton, “Simulation Modelling and Analysis”, McGraw

Hill, Singapore, 2000.
2. Harrel, C.R., et. al., “System Improvement Using Simulation”, 3rd Edition, JMI Consulting Group and ProModel Corporation, 1995.
3. Harrel, C.R. & T. Kerim, “Simulation Made Easy, A Manager’s Guide”, IIE Press, 1995.
4. Geoffrey Gordon, “Systems Simulation”, Prentice Hall, 2002.
5. David Kelton, Rondall P Sadowski, David T Sturrock, “Simulation with Arena”, Mc Graw Hill, 2004.

OUTCOMES:

The student should be able to

- Model and simulate systems and environments through the use of computers.
- Conduct experiments with discrete dynamic, stochastic system models on a computer.

GECX204 VALUE ANALYSIS AND ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To get acquainted with value analysis and engineering tool for productivity improvement.
- To understand and analyze the theory and methodology of Value Engineering.

MODULE I VALUE ENGINEERING BASICS 8

Origin of Value Engineering, Meaning of value, Definition of Value Engineering and Value analysis, Difference between Value analysis and Value Engineering, Types of Value, function - Basic and Secondary functions, concept of cost and worth, creativity In Value Engineering.

MODULE II VALUE ENGINEERING JOB PLAN AND PROCESS 6

Seven phases of job plan, FAST Diagram as Value Engineering Tool, Behavioural and organizational aspects of Value Engineering, Ten principles of Value analysis, Benefits of Value Engineering.

MODULE III ORIENTATION AND INFORMATION PHASES 8

Launching Value Engineering project work - Objectives and Targets - VE Project work: a time-bound programme - Projects and Teams - Time Schedule - Co-ordination - Consultant. Technical data - Marketing related information - Competition profile - Cost data - Materials Management related information - Quality related information - Manufacturing data.

MODULE IV FUNCTION ANALYSIS AND CREATIVE PHASES 9

Objectives - Function definition - Classification of functions - Higher level functions – Function – Cost – Function – Worth - Value Gap - Value index - How to carry out Function Analysis? – Fast Diagraming - Cost Modelling.

Creativity - How to improve creativity of an individual? – How to promote creativity in the organisation? - Obstacles to Creativity - Mental road blocks - Creativity killer phrases. Positive thinking - Ideas stimulators - Creativity techniques - Brainstorming.

MODULE V EVALUATION, INVESTIGATION AND RECOMMENDATION 6

Paired comparison and Evaluation Matrix techniques - Criteria for selection of

VE solutions. Design – Materials – Quality – Marketing – Manufacturing - Preview session. The report - presentation.

MODULE VI IMPLEMENTATION PHASE AND CASE STUDIES 8

Design department - Materials department - Production Planning & Control - Quality Control – Manufacturing – Marketing - Need for co-ordinated teams - The Action Plan. Value Engineering case studies.

L – 45; Total Hours –45

TEXT BOOKS:

1. Mudge, Arthur E. “Value Engineering- A systematic approach”, McGraw Hill, New York, 2000.
2. Kumar S, Singh R K and Jha J K (Ed), “Value Engineering”, Narosa Publishing House, 2005.

REFERENCES:

1. Park RJ, “Value Engineering: A Plan for Invention”, St.Lucie Press, New York, 1999.
2. Lawrence, D.M., “Techniques of Value Analysis and Engineering”, McGraw Hill 1988.
3. George, E.D., “Engineering Design: a Material and Processing Approach”, McGraw Hill, 1991.
4. Heller, D.E., “Value Management, Value Engineering and Cost Reduction”, Addison Wesley, 1988.

OUTCOMES:

- The student will be able to realize the value of products, processes and implement value analysis to achieve productivity improvement.

GECX205 INDUSTRIAL SAFETY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the various safety measures to be taken in different industrial environments.

MODULE I SAFETY MANAGEMENT **7**

Evolution of modern safety concept- Safety policy - Safety Organization - line and staff functions for safety- Safety Committee- budgeting for safety. safety education and training.

MODULE II SAFETY IN MANUFACTURING **7**

Safety in metal working-Machine guarding -Safety in welding and gas cutting - Safety in cold forming and hot working of metals -Safety in finishing, inspection and testing -Regulation.

MODULE III SAFETY IN CONSTRUCTION **8**

General safety consideration in Excavation, foundation and utilities – Cordoning – Demolition – Dismantling –Clearing debris – Types of foundations – Open footings.

Safety in Erection and closing operation - Safety in typical civil structures – Dams-bridges-water Tanks-Retaining walls-Critical factors for failure-Regular Inspection and monitoring.

MODULE IV ELECTRICAL SAFETY **8**

Electrical Hazards – Energy leakage – Clearance and insulation – Excess energy – Current surges – Electrical causes of fire and explosion – National electrical Safety code.

Selection of Environment, Protection and Interlock – Discharge rods and earthing device – Safety in the use of portable tools - Preventive maintenance.

MODULE V SAFETY IN MATERIAL HANDLING **8**

General safety consideration in material handling devices - Ropes, Chains, Sling, Hoops, Clamps, Arresting gears – Prime movers.

Ergonomic consideration in material handling, design, installation, operation and

maintenance of Conveying equipments, hoisting, traveling and slewing mechanisms.

Storage and Retrieval of common goods of shapes and sizes in a general store of a big industry.

MODULE VI SAFETY EDUCATION AND TRAINING 7

Importance of training-identification of training needs-training methods – programme, seminars, conferences, competitions – method of promoting safe practice - motivation – communication - role of government agencies and private consulting agencies in safety training – creating awareness, awards, celebrations, safety posters, safety displays, safety pledge, safety incentive scheme, safety campaign – Domestic Safety and Training.

L – 45; Total Hours –45

REFERENCES:

1. Krishnan N.V, “Safety Management in Industry”, Jaico Publishing House, Bombay, 1997.
2. Blake R.B., “Industrial Safety”, Prentice Hall, Inc., New Jersey, 1973.
3. Fulman J.B., “Construction Safety, Security, and Loss Prevention”, John Wiley and Sons, 1979.
4. Fordham Cooper W., “Electrical Safety Engineering”, Butterworths, London, 1986.
5. Alexandrov M.P., “Material Handling Equipment”, Mir Publishers, Moscow, 1981.

OUTCOMES:

Students would be able to

- Acquire knowledge on various safety Hazards.
- Carry out safety measures for different industrial environments.

GECX206 ADVANCED OPTIMIZATION TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the various advanced optimization tools.
- To provide an understanding to deal with ill identified and fuzzy problems.

MODULE I INTRODUCTION **7**

Review of conventional optimization techniques - limitations - limitation of exhaustive search - need for artificial intelligence - bio mimicking methods

MODULE II HEURISTICS METHODS **8**

Introduction – Advanced methods of algorithm design: Greedy method, Backtracking method, Divide and Conquer method – Dynamic programming – Heuristics exploration algorithms – Greedy search - Local search – Hill climbing – Tabu search – Gradient search – Beam search – Simulated Annealing.

MODULE III GENETIC ALGORITHM **7**

Introduction - Basics of GA – Population – Reproduction – Cross over – Mutation -genetic algorithms in search, optimization and machine learning-practical genetic algorithms.

MODULE IV ANT COLONY OPTIMIZATION **8**

Introduction: Ant Colony Optimization – Meta-heuristic Optimization – History – The ACO Meta-heuristic – ACO Algorithms: Main ACO – Ant system – Ant colony system – Max-Min Ant system – Applications: Routing in telecommunication networks – Travelling salesmen – Graph Coloring – Advantages & Disadvantages

MODULE V FUZZY LOGIC AND ANN **8**

Fuzzy logic, knowledge representation and inference mechanism – Fuzzy and expert control – standard Takagi-Sugeno mathematical characterizations – Design example – Biological foundations to intelligent systems: Artificial neural networks, Back-propagation networks, Radial basis function networks, and recurrent networks.

MODULE VI IMPLEMENTATIONS & APPLICATIONS 7

Reduction of size of an optimization problem – multilevel optimization – parallel processing – multi objective optimization – Job shop scheduling – Vehicle scheduling – Line balancing – Sensor integration.

L – 45; Total Hours –45

REFERENCES:

1. Singiresu S. Rao, “Engineering optimization – Theory and practices”, John Wiley and Sons, 1996.
2. Ravindran – Phillips –Solberg, “Operations Research – Principles and Practice, John Wiley and Sons, 1987.
3. Fredrick S.Hillier and G.J.Liberman, “Introduction to Operations Research”, McGraw Hill Inc. 1995.
4. Kalymanoy Deb, “Optimization for Engineering Design”, PHI, 2003
5. Christos H. Papadimitriou, Kenneth Steiglitz, Combinatorial Optimization, PHI 2006

OUTCOMES:

At the end of the course student will be able to

1. Formulate a real life situation as an optimization the problem.
2. Identify the appropriate solution methodology and provide a solution

GECX207 MATLAB SIMULINK

L	T	P	C
3	0	0	3

OBJECTIVES:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION MATLAB DATA PRESENTATION 7

Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts- Making clear and compelling plots-Solving systems of linear equations numerically and symbolically- Least squares regression -Curve fitting.

MODULE II MATLAB PLOT FUNCTION 7

Introduction- Plot Function – Animation- 3D Plots-Customizing Plots – Plot Applications- Saving &Painting Plots.

MODULE III ROOT FINDING AND COMPUTER REPRESENTATION OF NUMBERS 7

Linearization and solving non-linear systems of equations- The Newton-Rapson method- Integers and rational numbers in different bases- Floating point numbers- Round off and errors in basic arithmetic-Significant digits when reporting results

MODULE IV ORDINARY DIFFERENTIAL EQUATIONS 8

Numerical integration and solving 1^{st} order, ordinary differential equations (Euler's method and Runge-Kutta)- Use of ODE function in MATLAB

MODULE V NON-LINEAR DIFFERENTIAL EQUATIONS 8

Converting 2^{nd} order and higher ODEs to systems of 1^{st} order ODEs- Solving systems of ODEs via Euler's method and Runge-Kutta)- Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations

MODULE VI INTRODUCTION OF SIMULINK 8

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- Modeling the solution of three equations with three unknowns- Representing a model as a subsystem-Simulink demos.

L – 45; Total Hours –45

REFERENCES:

1. Griffiths D V and Smith I M, Numerical Methods for Engineers, Blackwell, 1991.
2. Laurene Fausett, Applied Numerical Analysis Using MATLAB, Pearson 2008.
3. Moin P, Fundamentals of Engineering Numerical Analysis, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB. CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving , Mathematical Exploration with MATLAB, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

1. Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
2. Write programs using first principles without automatic use of built-in ones.
3. Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
4. Be fluent in exploring Matlab's capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
5. Make use of Maltab visual capabilities for all engineering applications.
6. An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECX208	EMBEDDED SYSTEMS AND ITS APPLICATIONS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide a detailed overview of embedded system.
- To equip students with the software development skills necessary for practitioners in the embedded systems field.
- To understand entire software development lifecycle and examine the various issues involved in developing software for embedded systems.

MODULE I EMBEDDED SYSTEMS OVERVIEW 8

Introduction –Embedded Systems vs. General computing systems- Fundamental Components of embedded systems- Characteristics- Challenges-Examples- Embedded System design process.

MODULE II EMBEDDED COMPUTING PLATFORM 8

Overview of Processors and hardware units in an embedded system-CPU buses – Memory devices –Memory types- I/O devices – Designing with computing platforms- Consumer electronics architecture-Design example: Alarm clock.

MODULE III REAL TIME EMBEDDED SYSTEMS 8

Programming embedded systems in assembly and C – Real time systems – Hard and Soft real time systems- Need for RTOS in Embedded Systems- Multiple tasks and processes –Context switching-Scheduling policies- Interprocess communication and synchronization.

MODULE IV EMBEDDED SOFTWARE DEVELOPMENT PROCESS and TOOLS 8

Development process of an embedded system-software modules and tools for implementation of an embedded system- Integrated development environment- Host and target machines-cross compiler-cross assembler-Choosing right platform.

MODULE V PROGRAM MODELING IN EMBEDDED SYSTEMS 8

Program Models – Data Flow Graph model-control DFG model-Synchronous DFG model- Finite state machines- UML modeling – UML Diagrams.

MODULE VI EMBEDDED SYSTEMS APPLICATION 5

Application specific embedded system – case study: digital camera hardware and software architecture, embedded systems in automobile, embedded system for a smart card.

Total Hours –45

TEXT BOOKS:

1. Marilyn Wolf , "Computers as components", Elsevier 2012.
2. Shibu. K.V, “Introduction to Embedded Systems”, Tata Mcgraw Hill,2009.
3. Rajkamal, "Embedded Systems Architecture, Programming and Design",1st Reprint,Tata McGraw-Hill, 2003
4. Frank Vahid and Tony Gwargie, "Embedded System Design", John Wiley & sons, 2002.

REFERENCES:

1. Sriram V Iyer and PankajGupta ,”Embedded Realtime Systems Programming ”Tata McGraw-Hill,2008
2. Qing Li and Carolyn Yao," Real-Time Concepts for Embedded Systems", CMPBooks, 2003
3. David E.Simon, "An Embedded Software Primer", Pearson Education, 2003

OUTCOMES:

On completion of this course, the students will be able to

- Identify the suitable processor and peripherals in embedded applications
- Develop embedded programs in assembly and c
- Choose the right platform for designing an embedded system
- Explore different scheduling mechanism in rtos
- Design the program model for embedded applications.
- Analyze different domain specific applications in embedded systems.

GECX209 USABILITY ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of this course is

- To understand the emerging concept of usability, requirements gathering and analysis.
- To learn about human computer interaction with the help of interfaces that has high usability.

MODULE I INTRODUCTION 6

Cost Savings – Usability Now – Usability Slogans – Discount Usability Engineering – Usability – Definition – Example – Trade-offs – Categories – Interaction Design – Understanding & Conceptualizing Interaction – Cognitive Aspects.

MODULE II USER INTERFACES 8

Generation of User Interfaces – Batch Systems, Line Oriented Interfaces, Full Screen Interfaces, Graphical User Interfaces, Next Generation Interfaces, Long Term Trends – Usability Engineering Life Cycle – Interfaces – Data Gathering – Data Analysis Interpretation and Presentation.

MODULE III INTERACTION DESIGN 8

Process of Interaction Design - Establishing Requirements – Design,Prototyping and Construction - Evaluation and Framework.

MODULE IV USABILITY TESTING 8

Usability Heuristics – Simple and Natural Dialogue, Users' Language, Memory Load, Consistency, Feedback, Clearly Marked Exits, Shortcuts, Error Messages, Prevent Errors, Documentation, Heuristic Evaluation – Usability Testing - Test Goals and Test Plans, Getting Test Users, Choosing Experimenters, Ethical Aspects, Test Tasks, Stages of a Test, Performance Measurement, Thinking Aloud, Usability Laboratories.

MODULE V USABILITY ASSESSMENT METHODS 8

Observation, Questionnaires and Interviews, Focus Groups, Logging Actual Use, User Feedback, Usability Methods – Interface Standards - National, International and Vendor Standards, Producing Usable In-House Standards.

MODULE VI USER INTERFACES 7

International Graphical Interfaces, International Usability Engineering, Guidelines for Internationalization, Resource Separation, Multilocale Interfaces – Future Developments – Case Study.

L – 45; Total Hours –45

TEXT BOOKS:

1. Yvonne Rogers, Helen Sharp, Jenny Preece, “Interaction Design: Beyond Human - Computer Interaction”, John Wiley & Sons, 3rd Edition, 2011 (Module I, II, III).
2. Jakob Nielsen, “Usability Engineering”, Morgan Kaufmann Academic Press, 1994. (Module I – VI).

REFERENCES:

1. Ben Shneiderman, Plaisant, Cohen, Jacobs, “Designing the User Interface: Strategies for Effective Human Interaction”, Pearson Education, 5th Edition, 2010.
2. Laura M. Leventhal, Julie A. Barnes, “Usability Engineering: Process, Products, and Examples”, Pearson/Prentice Hall, 2008

OUTCOMES:

Students who complete this course will be able to

- build effective, flexible and robust user interfaces.
- translate system requirements into appropriate human/computer interaction sequences.
- choose mode, media and device for the application requirements.

GECX210 SUPPLY CHAIN MANAGEMENT L T P C
3 0 0 3

OBJECTIVES:

- To understand the various decision phases in a supply chain
- To be aware of the Supply Chain and its drivers
- To design Supply Chain Network
- To build a aggregate plan in supply chain
- To understand Sourcing Decisions in Supply Chain
- To comprehend the influence of Information technology in Supply Chain

MODULE I INTRODUCTION TO SUPPLY CHAIN 7

Understanding Supply Chain - Decision phases - Supply chain performance - Competitive and supply chain strategies - Achieving strategic fit - Expanding strategic scope

MODULE II SUPPLY CHAIN DRIVERS AND DESIGN 7

Drivers of supply chain performance – Designing distribution network - Network Design in the Supply Chain - Network design in Uncertain Environment

MODULE III AGGREGATE PLANNING AND MANAGING SUPPLY, DEMAND AND INVENTORY 8

Aggregate Planning in a Supply chain: role - Managing Supply - Managing Demand in Supply Chain – Cycle and Safety inventory in supply chain – Level of product availability.

MODULE IV MANAGING INVENTORY IN SUPPLY CHAIN 8

Managing Economies of Scale in a Supply Chain : Cycle Inventory- Managing uncertainty in a Supply Chain Safety Inventory- Determining optimal level of Product Availability

MODULE V SOURCING AND TRANSPORTATION 8

Sourcing decision in supply chain - Third and Fourth – Party Logistics providers - Supplier scoring and assessment - Transportation in a Supply Chain – Risk and Trade-offs in transportation design.

MODULE VI INFORMATION TECHNOLOGY IN A SUPPLY CHAIN 7

Information technology in a supply chain – CRM, ISCM, SRM in supply chain -

Over view of recent trends in Supply Chain: e-SRM, e-LRM, e-SCM.

L – 45; Total Hours –45

REFERENCES:

1. Sunil Chopra and Peter Meindl, “Supply Chain Management-Strategy Planning and Operation”, Pearson Education, 5th Indian Reprint, 2013.
2. Jananth Shah “Supply Chain Management – Text and Cases“ Pearson Education, 2008.
3. Altekar Rahul V, “Supply Chain Management-Concept and Cases”, Prentice Hall India, 2005.
4. Monczka et al., “Purchasing and Supply Chain Management”, Thomson Learning, 2nd Edition, 2nd Reprint, 2002.

OUTCOMES:

- After taking up the course the student will be able to brighten his prospects of taking up a career on supply chain management.
- The student decision making capability specific to supply chain issues in an industry is improved.
- The student can plan a well defined execution of supply chain strategy in companies.
- The student will be able to design a optimal distribution network as per the demands of the industry.
- The student can also determine the most favorable transportation plan for a company.
- The student will also be able to bring in company from paper environment to paperless environment.

GECX211 SYSTEMS ANALYSIS AND DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To describe the phases of the systems development life cycle
- To teach the automated tools for system development
- To develop and evaluate system requirements.
- To explain the organizational issues in system implementation
- To teach the usability testing and electronic data interchange
- To elucidate the importance of System analysis and design in electronic commerce.

MODULE I FUNDAMENTALS OF SYSTEM DEVELOPMENT 8

System Concept – Characteristics – Elements of System – Types of System – Modern Approach to System Analysis and Design – System Development Life Cycle – Approaches to Improving Development – Tools for System Development – Succeeding as a System Analyst – Skills – Managing the Project.

MODULE II AUTOMATED TOOLS FOR SYSTEMS DEVELOPMENT 7

What is requirements determination? Fact finding techniques, Tools for documenting procedure and decision-CASE Tools-Need for CASE tools-Reverse engineering and reengineering- phases of the software life cycle-Ranking projects-Value Chain Analysis- Corporate Strategic Planning vs. Information Systems Planning.

MODULE III SYSTEM ANALYSIS 8

Determining System Requirements – Traditional Methods - Modern Methods – Radical Methods – Structuring System Requirements – Process Modeling – Data Flow Diagramming – Logic Modeling – Conceptual Data Modeling – E-R Modeling.

MODULE IV SYSTEM DESIGN 8

System Implementation – Software Application Testing – Installation – Documentation – Training and Support – Organizational Issues in Systems Implementation – Maintaining Information System – Conducting System

Maintenance.

MODULE V USABILITY AND MEASURING USER SATISFACTION 7

Usability Testing-User satisfaction test- A tool for analyzing user satisfaction – Unified Modeling Language(UML)- Case study: System Design: Application in Human Resource-Financial Applications

MODULE VI SAD IN E-COMMERCE 7

Systems analysis and design in the era of electronic commerce: B2B, B2C and C2C e-commerce -advantages and disadvantages of e-commerce. E-commerce system architecture – physical networks, logical network, World Wide Web, web-services - HTML, XML - case studies-El electronic data interchange: EDI standards - virtual private networks - XML and EDI

5.Larman, C.,” Applying UML and Patterns. An introduction to Object-Oriented Analysis and Design”. Prentice-Hall PTR, 2002.

OUTCOMES:

- List the characteristics of the system and specify the approaches in the development of the system.
- Summarize the phases of the software life cycle
- Differentiate Corporate Strategic Planning and Information Systems Planning.
- Illustrate the system requirements through various modeling diagrams.
- Use tools and techniques for process and data modeling.
- Solve realistic systems analysis problems and perform user satisfaction test.

GECX212	ADVANCED MATERIALS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To make the student conversant with

- Dielectric materials
- Magnetic materials
- Energy materials
- Nano materials
- Semi conductors
- Smart materials

MODULE I **8**

Dielectric Materials- Polarization and Mechanism-Internal or local field-Clausius-Mossotti relation- Dielectric loss- Temperature and Frequency effect- Measurement of Dielectric constant and loss using Scherring bridge- electric break down- ferro, piezo, pyroelectric materials and its application.

MODULE II **8**

Magnetic Materials- Terminology and classification of magnetic materials (Dia, Para, Ferro & Ferri) – Magnetic moments due to electrospin – Domain theory of Hysteresis – Heisenberg theory of Exchange Interaction (without derivation)- Structure and properties of Ferrites- Properties of Soft and Hard Magnetic Materials- Application: floppy disk, CD ROM, Magneto optical recording.

MODULE III **8**

Energy Materials (Nuclear) - Introduction to nuclear materials- Materials for nuclear fuel in fission and fusion reactors, Fissile and fertile materials- Control & Construction Materials for Nuclear reactors, Moderators, Heat Exchangers- Radiation proof materials- Brief discussion of safety and radioactive waste disposal.

MODULE IV **7**

Nano Materials- The nanosize range- classification of nanomaterials- processing of nanomaterials-properties of nanomaterials- mechanical, electrical, magnetic properties- other properties- carbon based nanomaterials- other nanomaterials and its application.

MODULE V **7**

Semiconductors- The energy gap in solids-Extrinsic Semiconductors- Intrinsic Semiconductors- Hall Effect in semiconductors- Application of Hall Effect- Basic ideas of compound semiconductors -Semiconductor materials- Fabrication of Integrated Circuits- Some semiconductor Devices

MODULE VI **7**

Smart materials- aerospace materials Ni and Co based super alloys, Special steels, Titanium alloys, Intermetallics, ceramics and their composites, New High strength material, Properties of Materials, Materials in Medical Applications, Stainless steel alloys,Cobalt based alloys, titanium based alloys, polymers

L – 45; Total Hours –45

REFERENCES:

1. Materials science and Engineering: A first course by V. RAGHAVAN, 6th ed., Eastern Economy edition,Prentice Hall of India,2015
2. Materials science and Engineering: An Introduction by William D. Callister Jr., 7th ed. John Wiley & Sons Inc. 2007
3. Material science by Dr.M.Arumugam, Anurasha agencies ,third revised edition ,2002

OUTCOMES:

Students will be able to know

- significance of dielectric materials
- types and applications of magnetic materials
- applications of nuclear materials for energy harvesting
- applications of nano materials
- significance of semi conductor devices
- applications of smart materials

GECX213 NATIONAL SERVICE SCHEME

L	T	P	C
2	0	0	2

OBJECTIVES:

Primary Objective: Personality development through community service.
To achieve the above objective, the following should be adhered:

1. To provide an understanding about the aims, structure and programmes and activities of National Service scheme in terms of Nation Building
2. To develop certain basic skills for personality development through community development.
3. Understand the community in which they work and their relation
4. Identify the needs and problems of the community and involve them in problem-solving and
5. Practice national integration and social harmony.

MODULE I INTRODUCTION TO NSS 8

Orientation and structure of NSS,-Aims and Objectives of National Service Scheme- The history of NSS- Symbol and meaning- NSS hierarchy from national to college level – Role and responsibilities of various NSS functionaries

MODULE II PERSONALITY AND COMMUNITY DEVELOPMENT SKILLS 8

Importance of youth Leadership, Traits of Good Leadership and Personality Development. Role of youth in creating awareness through NSS Programmes on Health & Hygiene; Environmental Conservation and Enrichment for Sustainable Development; Sanitation and Swachh Bharat.

MODULE III UNDERSTANDING YOUTH 7

Definition and Profiles of youth categories, Youth Issues, Challenges and Opportunities for Youth, Youth as agent of social change & Community Mobilization .Role of Youth in Nation Building. National Youth Policy.

MODULE IV SOCIAL HARMONY AND NATIONAL INTEGRATION 7

National Integration, Various obstacles in the way of National Integration; such as caste, religion, language and provisional problems etc. Role of youth in Peace building and conflict resolution- Globalization and its Economic Social Political and

Cultural impacts.

L – 30; Total Hours –30

TEXT BOOKS:

1. National Service Scheme – A Youth Volunteers Programme for Under Graduate students as per UGC guidelines J.D.S.Panwar et al. Astral International. New Delhi.
2. National Service Scheme Revised Manual, 2006.Govt. of India. Ministry of Youth Affairs & Sports. New Delhi.
3. Social Problems in India, *Ram Ahuja.*

REFERENCES:

1. National Youth Policy-2014. Ministry of Youth Affairs & Sports. .Govt. of India

OUTCOMES:

On successful completion of this course-

- Students will have exposure to the the aims, structure and programmes and activities of National Service scheme in terms of Nation Building
- Students will be trained to skills for personality development through community development.
- Students will gain knowledge about national integration and social harmony.
- Students will be exposed to the role of youths in Nation building Students will gain

GECX214	AUTOMOTIVE POLLUTION AND CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To have a fair knowledge in automotive pollution control.
- To understand the concept of formation and control techniques of pollutants like UBHC, CO, NOx, particulate matter and smoke for both SI and CI engine will be taught to the students.
- To know about the instruments for measurement of pollutants
- To get introduced about emission standards

MODULE I EMISSION FROM AUTOMOBILES 8

Sources of Air Pollution. Various emissions from Automobiles — Formation — Effects of ollutants on environment and human beings. Emission control techniques – Modification of fuel, after treatment devices. Emission standards. Automotive waste management, old vehicle disposal, recycling, tyre recycling

MODULE II SI ENGINE EMISSIONS AND CONTROL 9

Emission formation in SI Engines- Carbon monoxide & Carbon di oxide - Unburned hydrocarbon, NOx, Smoke —Effects of design and operating variables on emission formation – controlling of pollutants - Catalytic converters, Charcoal Canister, Positive Crank case ventilation system, Secondary air injection, thermal reactor

MODULE III CI ENGINE EMISSION AND CONTROL 8

Formation of White, Blue, and Black Smokes, NOx, soot, Effect of Operating variables on Emission formation — Fumigation, Split injection, Catalytic Coating, EGR, Particulate Traps, SCR, Fuel additives — Cetane number Effect.

MODULE IV NOISE POLLUTION FROM AUTOMOBILES 8

Sources of Noise — Engine Noise, Transmission Noise, vehicle structural Noise, aerodynamics noise, Exhaust Noise. Noise reduction in Automobiles — Encapsulation technique for noise reduction —Silencer Design.

MODULE V TEST PROCEDURES 6

Constant Volume Sampling I and 3 (CVSI &CVS3) Systems- Sampling Procedures — Chassis dynamometers - Seven mode and thirteen mode cycles for Emission Sampling.

MODULE VI EMISSION MEASUREMENTS 6

Emission analysers —NDIR, FID, Chemiluminesecent, Smoke meters, Dilution Tunnel, SHED Test, Sound level meters.

L – 45; Total Hours –45

TEXT BOOKS:

1. V.Ganesan, 'Internal combustion Engines', Tata McGraw Hill Book Co, Eighth Reprint, 2005.
2. Crouse and Anglin, 'Automotive Emission Control', McGraw Hill company., Newyork 1993.

REFERENCES:

1. G.P.Springer ad D.J.Patterson, Engine Emissions, Pollutant formation, Plenum Press, New York. 1986.
2. D.J.Patterson and N.A.Henin, 'Emission from Combustion Engine and their control', Anna Arbor Science Publication,1985.
3. L.Lberanek, 'Noise Reduction', Mcgrawhill Company., Newyork1993.

5. A.Alexander, J.P.Barde, C.lomure and F.J. Langdan, 'Road traffic noise', Applied science publisher ltd., London,1987.

OUTCOMES:

On completion of the course student should be able to

- Identify the sources of emission from vehicles.
- Analyse the causes and effects of emissions.
- Analyse causes and effects of noise pollution
- Bring out solutions for control of emissions.
- Demonstrate the test procedures and emission norms.
- Select suitable instruments for measurement of emissions.

GECX215	MOTOR VEHICLE ACT, INSURANCE & POLICY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn about basic act and regulation followed for road vehicle
- To learn about systematic steps involved to get licence and registration of motor vehicle
- To learn arbour various types of motor vehicle polices and insurances

MODULE I BASIC RULES FOR ROAD VEHICLE 8

Display and Use of Number Plates- Attachment of number plates- Number plates in horizontal position- Removal of number plates on transfer- Hours prescribed for lighted lamps- Mounting of lamps and reflectors- Multiple beam headlamps- Daytime running lamps- Auxiliary driving lamps- Parking lamps- Brakes- Stopping distances- Emergency or parking brakes- Horn- Muffler- Mirrors- Inspection of motor vehicles- Standards of safety and repair

MODULE II LICENSING OF DRIVERS OF MOTOR VEHICLES 8

Necessity of driving licence- Age limit in connection with driving of motor vehicle-Responsibility of owners of motor vehicles-Restriction on the holding of driving licence-Grant of learner's licence-Grant of driving licence-Addition to driving licence- Renewal of driving licence-Revocation of driving licence on grounds of disease or disability-Driving licence to drive motor vehicle belonging to the central government- power of court to disqualify- suspension of driving licence in certain cases- suspension or cancellation of driving licence on convection- Endorsement.

MODULE III REGISTRATION OF MOTOR VEHICLE 7

Necessity for registration – Registration Where and how to be made- Special provision for registration of motor vehicle of diplomatic officers-Temporary registration- Production of vehicle at the time of registration- Refusal of registration- renewal of certificate of registration- effectiveness in India of registration- Change of residence or place of business-transfer of ownership-Suspension of registration – cancellation of registration suspended under section 53- certificate of fitness of transport vehicle-cancellation of registration.

MODULE IV INSURANCE OF MOTOR VEHICLE 8

Necessity for insurance against third party – Requirements of policies and limits of liability- - Duty of insurers to satisfy judgements and awards against person insured in respect of third party risks-Duty to give information as to insurance-Settlement between insurers and insured persons- transfer of certificate of insurance-production of certain certificates, licences and permit in certain cases-Special provisions as to compensation in case of hit and run motor accident – Types of motor polices

MODULE V CONTROL OF TRANSPORT VEHICLES 7

Power to State Government to control road transport- Transport authorities-General provision as to applications for permits- Application for stage carriage permit- Procedure of Regional Transport Authority in considering application for stage carriage permit- Scheme for renting of motor cabs- Application for private service vehicle permit- Procedure in applying for and granting permits- Duration and renewal of permits- Transfer of permit- Replacement of vehicles-Temporary permits

MODULE VI OFFENCES AND PUNISHMENT 7

Driving without holding an effective driving licence- Driving by an under-aged person (Minor driving vehicle)- Holding of a driving licence permitting it to be used by other person.- Driving a vehicle at an excessive speed- Driving or permitting to drive a vehicle carrying excess load- Driving dangerously / its Abetment Driving an uninsured vehicle

Rider and pillion rider failing to wear protective head gear (Helmet) -Violation of Mandatory Signs -.e-challan and spot challan

L – 45; Total Hours –45

TEXT BOOKS:

1. The motor vehicle act 1988, Universal law publishing co.cpvt ltd. Newdelhi 2011
2. A Commentary On The Motor Vehicles Act, 1988 by SUKHDEV AGGARWAL The Bright Law House, New Delhi

REFERENCES:

1. The Motor Vehicles Act, 1988 Along with Latest Case Law, Notifications

& Table of Offences and Punishments Asia Law House; 15th edition (2014)

2. Assessment of Compensation in Accidents under Motor Vehicles Act by Karkara Delhi Law House (2013)

OUTCOMES:

On completion of the course students should be able to

- Explain the analysis of rules and regulations for road vehicles
- Analyze the procedure for getting driving license for vehicles at national and international level
- Analyze the procedure for registration of vehicles.
- Analyze the procedure for Insurance of vehicles and claims.
- Analyze the procedure for obtaining Government Permits and renewal
- Analyze the consequences of not following the rules and regulations

GECX216	PRINCIPLES OF COMMUNICATION SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To introduce the analog and digital modulation techniques.
To elaborate the working of communication receivers in the presence of noise.
To give an overview of various communication systems.

MODULE I LINEAR MODULATION 8

Baseband signals, Amplitude Modulation – Modulation Index, Power Transmitted, Double Side Band and Single Side Band AM, AM Modulators and AM Receivers, AM Radio systems, Frequency Division Multiplexing.

MODULE II ANGLE MODULATION 8

Frequency Modulation and Phase Modulation, Frequency deviation and modulation index, Bandwidth of FM, FM Modulators and FM receivers, FM Radio and FM Stereo Systems

MODULE III SAMPLING AND PULSE MODULATION 7

Sampling, Nyquist's Sampling Theorem, Pulse Modulations - PAM, PPM and PWM, Time Division Multiplexing, Bandwidth of TDM systems.

MODULE IV DIGITAL COMMUNICATION 7

Digital baseband data, Digital Modulations – ASK, FSK, PSK and QPSK. Digital Communication Transmitters and Receivers.

MODULE V NOISE 8

Sources of Noise, Thermal Noise, shot noise, White noise, Narrow band Noise, Effect of noise in communication, SNR, Receiver Noise Temperature and Noise Equivalent Bandwidth.

MODULE VI COMMUNICATION SYSTEMS & NETWORK 7

FM Radio Systems, Cellular Mobile network, Satellite Communications, Optical Fiber Communication.

L – 45; T – 0; Total Hours – 45

TEXT BOOKS:

1. A. Bruce Carlson, Paul B. Crilly, "Communication Systems", 5th Edition,

McGraw Hill Int., 2011.
2. B.P. Lathi, Zhi Ding, Hari M. Gupta, “Modern Digital and Analog Communication Systems”, 4th Edition, Oxford University Press, 2017.

REFERENCES:

1. Herbert Taub, Donald L. Schilling, Goutam Saha, “Principles of Communication Systems” 4th Edition, McGraw Hill Int. 2013.
2. Simon Haykin, “An Introduction To Analog And Digital Communications”, 1st Edition, Wiley India, 2010.
3. Simon Haykin , “Communications Systems” 4th Edition, Wiley India, 2006.
4. Hwei P. Hsu, “Analog and Digital Communications” 3rd Edition,

OUTCOMES:

On completion of the course students will be able to

1. Identify various communication systems and the corresponding modulation schemes.
2. Predict the characteristics of various analog and digital modulation schemes.
3. Interpret the effect of noise and bandwidth in a communication systems
4. Apply the Nyquist criteria for a given baseband signals.
5. Evaluate the performance of communication receivers.
6. Demonstrate the applications of common communication systems.

GECX217 LEAN MANAGEMENT L T P C

3 1 0 4

OBJECTIVES:

The objective of the Course to make the student know about

- the basics of lean production management,
- how Lean principles are applied to the Construction industry to improve the operation management and product development.

MODULE I **8**

lean production? – Introduction, background, and lean thinking. Importance of philosophy, strategy, culture, alignment, focus and systems view. Discussion of Toyota Production System.

MODULE II **8**

Manufacturing systems – an overview of manufacturing strategies. Job shops, batch flow, and flexible manufacturing systems Flow production and lean production systems

MODULE III **7**

Value stream mapping in process design and product development Waste reduction - lead time reduction

Process cycle time and value-added vs. non-value added activities Optimum lot sizing

MODULE IV **8**

Lean production processes, approaches and techniques.—Importance of focusing upon flow. Tools -. Workplace organization – 5S. - Stability. - Just-In-Time – One piece flow – Pull. - . Cellular systems. - . Quick change and set-up reduction methods. f. Total productive maintenance. -. Poka-Yoke – mistake proofing, quality improvement. Standards. - . Leveling. - . Visual management. Just-in-time techniques – SMED and Takt Times - Standard work processes and line balancing Poka-yoke and pull systems material handling reduction and facilities planning

MODULE V **8**

Managing change in the lean organization Human resource management and the lean enterprise Employee involvement – Teams – Training – Supporting and encouraging involvement – Involving people in the change process -- communication -- Importance of culture. Startup of lean processes and examples of applications.

Sustaining improvement and change, auditing, follow-up actions.

7

MODULE VI

The lean enterprise and supply chain management Costs and risks of lean initiatives - Measuring lean initiatives

L – 45; Total Hours –45

TEXT BOOKS:

1. The Toyota Way Fieldbook, Jeffrey Liker and David Meier, McGraw-Hill, 2006. Lean Production Simplified, Pascal Dennis, Productivity Press, 2007.
2. Womack, James P., and Daniel T. Jones. Lean Thinking. New York, NY: Simon and Schuster, 2003. ISBN: 0743249275.
3. Murman, Earll. Lean Enterprise Value. New York, NY: Palgrave Macmillan, 2002. ISBN: 0333976975.

REFERENCES:

1. Readings at http://www.leanconstruction.org/readings.htm
2. Hopp, W. J., and Spearman, M. L. (2011). Factory Physics, Third Edition, Waveland Press, Long Grove, Il. 720 pp.

OUTCOMES:

The student will be able to

- Describe the manufacturing approaches employed and the background and philosophy of lean production.
- Illustrate the concept of waste reduction
- Apply evaluation techniques that can be used in preparation for and use in learn production activities.
- Select the tools that can be used implementing lean production in production operations.
- Discuss the importance of workplace organization, pull production, cellular arrangement and employee involvement, need for employee creativity
- Describe about the Methods for promoting success in implementing lean transformations

GECX218 GEOSPATIAL MODELING & ANALYSIS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To equip the students with fundamental representation and analysis of geospatial phenomena and provides foundations in methods and algorithms used in GIS analysis.
- To focus is on terrain modeling, geomorphometry, watershed analysis and introductory GIS-based modeling of landscape processes (water, sediment). The course includes analysis from lidar data, coastal change assessment and 3D visualization.

MODULE I INTRODUCTION TO GEOSPATIAL DATA 7

Mapping natural phenomena –Concept of continuous fields and discrete sampling – Units, projections, coordinate transformation – Georeferencing, geospatial formats, conversions, geospatial data abstraction library – Raster and vector representation, raster and vector conversions and resampling.

MODULE II DATA DISPLAY AND VISUALIZATION 7

Display of continuous and discrete data, use of color, shading, symbols, to extract the spatial pattern and relationships – 3D visualization: multiple surfaces and volumes, 3D vector objects – visualization for data analysis (lighting, scaling, transparency, cutting planes, animations) – view/create maps/post your data on-line (Google Earth/Maps, GPS visualizer)

MODULE III GEOSPATIAL ANALYSIS 7

Foundations for analysis of continuous and discrete phenomena – neighborhood operations and buffers – analysis and modeling with map algebra – cost surfaces and least cost path – spatial interpolation and approximation (gridding)

MODULE IV TERRAIN MODELING AND ANALYSIS 9

terrain and bathymetry mapping – mathematical and digital representations (point clouds, contour, raster, TIN) – DEM and DSM, working with multiple return lidar data – spatial interpolation of elevation data and topographic analysis, line of sight, view shed analysis – solar irradiation, photovoltaic energy potential, time series of elevation data, analysis of coastal change.

MODULE V FLOW TRACING, WATERSHED ANALYSIS AND LANDFORMS 8

Methods for flow routing and flow accumulation – Extraction of stream networks – Extraction of watershed boundaries and building watershed hierarchies – feature extraction, types of landforms.

MODULE VI MODELING OF GEOSPATIAL PROCESSES 7

Model formulation, input data processing – introduction to GIS-based hydrologic, erosion and environmental modeling – Geocomputational methods, including agent-based modeling, artificial neural networks and evolutionary computing.

L – 45; T – 0; Total Hours –45

TEXT BOOKS:

1. Hassan A, Karimi (2017), *Geospatial Data Science Techniques and Applications*, CRS Press & Co.
2. Sudipto Banerjee, Bradley P, Carlin, Alan E. Gelfand (2014), *Hierarchical Modeling and Analysis for Spatial Data*, CRS Press & Co.

REFERENCES:

1. Maguire, D., M. Batty, and M. Goodchild. 2015. GIS, Spatial analysis, and modeling. ESRI Press (G70.212 .G584 2005)
2. Zeiler, M. 2010. Modeling Our World: The ESRI Guide to Geodatabase Design. Second Ed. ESRI Press, Redlands, California

OUTCOMES:

On successful completion of this course,

- Students will be able to apply the basic concepts of Conceptualize models as representations of real life systems with inputs, outputs, and processes.
- Students will have gained knowledge in spatial tools to make simulations and predictions of real life phenomena.
- Students will have synthesized knowledge about Apply, integrate, and develop models with geospatial data through a GIS.
- Students will have an overview of Evaluate models in terms of accuracy, sensitivity, and uncertainty.
- Students will have Use of a system-based approach for problem solving, with an emphasis on sustainability.

B.S. Abdur Rahman Crescent Institute of Science & Technology

Deemed to be University u/s 3 of the UGC Act, 1956

REGULATIONS 2017

CURRICULUM AND SYLLABI

B.TECH.

ELECTRICAL AND ELECTRONICS ENGINEERING

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

VISION AND MISSION

VISION

To achieve excellence in the programs offered by the Department of Electrical and Electronics Engineering through quality teaching, holistic learning and innovative research.

MISSION

- To offer Under Graduate, Post Graduate & Research programs of industrial and societal relevance.
- To provide knowledge and skill in the Design and realization of Electrical and Electronic circuits and systems.
- To impart necessary managerial and soft skills to face the industrial challenges.
- To pursue academic and collaborative research with industry and research institutions in India and abroad.
- To disseminate the outcome of research and projects through publications, seminars and workshops.
- To provide conducive ambience for higher education, teaching and research.

PROGRAMME EDUCATIONAL OBJECTIVES

- To provide fundamental knowledge of mathematics and science to understand the basic concepts of Electrical and Electronics Engineering.
- To impart theoretical and practical knowledge in the broad areas of Power Generation, transmission, Distribution and Utilization.
- To provide knowledge and skill in using Electrical and Electronic components circuits and systems.
- To develop skills for devising and evaluating solutions including design of components system and their analysis using appropriate tools.

  To enhance the spirit of enquiry through projects and internships to develop creativity, self confidence and team spirit.
- To inculcate self learning capability to enable the students to constantly update themselves with the technological developments.
- To impart necessary managerial and soft skills to face the challenges in core industries and software companies.

PROGRAMME OUTCOMES

On successful completion of the programme, the graduates will

- Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions

- Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- Design, Simulate and Analyse the Electrical and Magnetic Systems in the areas of Electrical and Electronics Engineering and arrive at appropriate solutions.
- Competent to work professionally in an Industrial Environment.

4.	GECX204	Value Analysis and Engineering	Mechanical
5.	GECX205	Industrial Safety	Mechanical
6.	GECX206	Advanced Optimization Techniques	Mechanical
7.	GECX207	Mat Lab Simulation	EEE
8.	GECX208	Embedded Systemsand its Applications	ECE
9.	GECX209	Usability Engineering	CSE
10.	GECX210	Supply Chain Management	CBS
11.	GECX211	System Analysis and Design	CA
12.	GECX212	Advanced Materials	Physics & Chemistry
13.	GECX213	National Service Scheme	School of Humanities
14.	GECX214	Automotive Pollution and Control	Automobile
15.	GECX215	Motor Vehicle Act, Insurance and Policy	Automobile
16.	GECX216	Principles of Communication Systems	ECE
17.	GECX217	Lean Management	Civil
18.	GECX218	Spatial Data Modeling & Analysis	Civil

SEMESTER I

MAC 1181	DIFFERENTIAL CALCULUS AND GEOMETRY	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- introduce eigen values and eigenvectors of matrix algebra.
- make the student knowledgeable in the area of Three Dimensional Analytical Geometry.
- demonstrate the application of Differential Calculus.
- familiarize the student with the functions of several variables.
- develop the use of ODE solvable techniques necessary for engineering applications.
- motivate the students with some basic engineering application problems in ODE.

MODULE I **MATRICES** **8+2**

Characteristic Equation- Eigenvalues and Eigenvectors of a real matrix –Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton Theorem (without proof) – Orthogonal matrices – orthogonal transformations of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation.

MODULE II **THREE DIMENSIONAL ANALYTICAL GEOMETRY** **7+3**

Direction cosines and ratios – angle between two lines – equations of a plane – equations of a straight line, coplanar lines - shortest distance between skew lines - sphere – tangent plane – plane section of a sphere – orthogonal spheres.

MODULE III **DIFFERENTIAL GEOMETRY** **7+3**

Curvature – Cartesian and polar coordinates – centre and radius of curvature – circle of curvature – involutes and evolutes – envelopes.

MODULE IV **DIFFERENTIAL CALCULUS OF SEVERAL VARIABLES** **8+2**

Functions of two variables – partial derivatives – total differential – Implicit Functions – Jacobian - Taylor's series expansion – Optima of two variables – Lagrange's multiplier method.

MODULE V ORDINARY DIFFERENTIAL EQUATIONS 8+2

Linear equations of second order with constant and variable coefficients – Simultaneous first order linear equations with constant coefficients – homogeneous equations of Euler's type – method of undetermined coefficients, method of variation of parameters

MODULE VI APPLICATIONS OF ORDINARY DIFFERENTIAL EQUATIONS 7+3

Solution of Ordinary Differential Equation Related to Electric Circuits – Bending of Beams- Motion of a Particle in a resisting medium – Simple harmonic motion.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Ramana, B.V, "Higher Engineering Mathematics" Tata McGraw Hill Publishing Co. New Delhi, 2006.
2. Grewal B.S., "Higher Engineering Mathematics" (43rd edition), Khanna Publishers, New Delhi, 2012.
3. John W. Cell "Engineering Problems Illustrating Mathematics" Mc Graw Hill Publishing Co., New York 1943.

REFERENCES:

2. Kreyszig, E., "Advanced Engineering Mathematics", 10th edition, John Wiley and Sons (Asia) Pvt Ltd., Singapore, 2001.
3. Peter V. O'Neil, "Advanced Engineering Mathematics", 7th edition, Cengage Learning, 2011.
4. Dennis G. Zill, Warren S. Wright, "Advanced Engineering Mathematics", 4th edition, Jones and Bartlett publishers, Sudbury, 2011.
5. Alan Jeffrey, "Advanced Engineering Mathematics", Academic Press, USA, 2002.
6. Venkataraman, M.K., "Engineering Mathematics", Volume I, 2nd edition,

National Publishing Co., Chennai, 2003.

7. James Stewart ".Calculus" (7th edition),Brooks/Cole cengage learning,UK

OUTCOMES:

After completing the course, student will be able to

- Understand the matrix techniques and compute eigen values and eigenvectors of a given matrix.
- Do the problems based on three dimensional analytic geometry.
- Apply differential calculus in engineering problems.
- Differentiate more than one variable and their applications.
- Solve the differential equations with constant coefficient and variable coefficient.
- Form and solve differential equations.

ENC 1181	ENGLISH	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To train students to use appropriate vocabulary in academic and technical contexts.
- To facilitate students to speak effectively while exchanging ideas and making presentations.
- To develop students' listening skill for comprehending and analyzing information.
- To develop their reading skill through sub skills like skimming , scanning and critical reading of a text.
- To sharpen their academic writing skills.
- To expose them to the correct usage of language and help them to apply that knowledge appropriately.

MODULE I **8**

L: Listening for general information

S : Self Introduction, Introducing one another.

R: Predicting the content

W: Paragraph Writing

Language Focus: Affixes, Simple Present tense , Connective & Prepositions.

MODULE II **8**

L: Listening for specific information (from dialogues)

S:Exchanging opinion.

R: Skimming technical Passages

W: Argumentative Writing (using the concept of Flipped Learning), Letter to the Editor.

Language Focus: Idioms, use of Modals, Simple Past tense & use of "Wh" and question tags.

MODULE III **7**

L: Learning the ways of describing images and presenting specific information (focusing on note making)

S: Making Presentations using visuals.

R : Scanning short texts for gist of information

W: Letter of Invitation, Expository Writing

Language Focus: Homophones, Homographs, Simple Future & Collocations.

MODULE IV **7**

L: Understanding prepared presentation techniques through videos

S: Short Presentations.

R: Reading for coherence and cohesion

W: Letter seeking permission for Industrial Visit

Language Focus: S-V agreement, Euphemism

MODULE V **8**

L : Understanding Non- Verbal Communications while listening to narration of incidents.

S: Narrating an expereince

R: Inferential Reading

W: Process Description – Transcoding a Flow chart.

Language Focus: Interchange of Active & passive voice, Impersonal Passive voice.

MODULE VI **7**

L: Learning Story telling techniques (stories & visuals) through audio files

S: Discussion in groups

R: Reading for critical appreciation

W: Developing an idea, Slogan writing, Interpreting a Bar Chart.

Language Focus: If clause and phrasal verbs.

TOTAL HOURS :45

4. Sen, Leena. (2004) Communication Skills. Prentice Hall, New Delhi.

5. Matt Firth, Chris Sowton et.al. (2012). Academic English: An Integrated Skills Course for EAP. Cambridge University Press, Cambridge.

OUTCOMES:

After completion of the course, students will have the ability to

- Demonstrate their range of vocabulary in academic and technical contexts
- Exchange ideas and make presentations
- Comprehend and respond appropriately to listening tasks.
- Read a text efficiently and process information.
- Create and draft different kinds of academic documents
- Communicate effectively using grammatically correct expressions.

ISC1181	ARABIC	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To read and write in Arabic language.
- To learn vocabulary of different fields
- To develop situational communication skills.

MODULE I PREPARATORY ARABIC 7

Introducing Arabic Alphabets.
Listening and Reading.
Audio & Video aided listening, Tajweed listening,
Writing Arabic Alphabets (connected & unconnected).
Introducing words.
Reading simple sentences.
Learning names of the things in and around the class room.
Exercises.

MODULE II FUNCTIONAL ARABIC 7

Listening Arabic texts, stories and action verbs
Communicating Simple sentences.
Jumla' Ismiyya and Jumla' Fi'liyya
Situational Conversation:
Greetings, Introduction.
Classroom, College, Picnic.
Dining and Kitchen.
Reading skills.
Exercises

MODULE III FUNCTIONAL ARABIC 8

Implication of effective listening.
Audio aids.
Writing Simple sentences.
Communicating ordinal and cardinal numbers.
Situational communication:

Playground, library.
Forms of plural – Sample sentences.
Introduction to tenses.
Exercises.

MODULE IV FUNCTIONAL ARABIC 8

Communication:
Family, travel
Market, Prayer hall
Writing skills:
Note making.
Sequencing of sentences.
Developing answers from the questions.
Exercises.

MODULE V TECHNICAL ARABIC 8

Importance of technical communication.
Reading and writing skills.
Audio & Video aided listening.
Introduction to Arabic terms related to administration.
Situation communication:
Air travel, Office administration, passport, visa.
Exercises

MODULE VI TECHNICAL ARABIC 7

Situation communication:
Contractual work, machineries and equipments..
Computer, internet browsing.
Banking,
Exercises.

TOTAL HOURS :45

TEXT BOOKS:

1. Arabic for professionals and employees, Kilakarai Bukhari Aalim Arabic College, Chennai, India, 2013.

REFERENCES:

1. Arabic Reader for Non Arabs (Ummul Qura University, Makkah), Kilakarai Bukhari Aalim Arabic College, 2005.

OUTCOMES:

On successful completion of the course, the student will be able to:

- Write correct sentences in Arabic.
- Communicate in Arabic at primary level in working situations in the fields of engineering and administration.

LNC1181	MANDARIN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To improve the proficiency of students in Mandarin language.
- To develop their knowledge of vocabulary.
- To train them in using appropriate grammatical forms during communications.
- To empower them for successful communication in social and academic contexts.
- To make them appreciate the language usage in real life situations.

MODULE I **8**

· General Introduction to Chinese • Pinyin and Tones • Introduction to the Writing System: basic strokes and stroke order · Numbers 1-100, song · Days of the Week · Months of the Year

MODULE II **8**

· Chinese names and related culture · Chinese family structures and values · Greetings

· Introducing Yourself · Family members · Occupations

MODULE III **7**

· Languages and Nationalities · Daily Routine · Chinese breakfast · Negative Sentences and Interrogative Sentences · Asking for Personal Information · The Verb *shi* and Basic Sentence Structures

MODULE IV **7**

· Answering an Affirmative-negative Question · Food and drinks · Transportation · Likes and dislikes · Adverbs *bu*, *jiu* and *dou* · Verb-absent Sentences

MODULE V **8**

·*Jisui* and *duoda* Questions · S+V+O Construction · Routines and Daily Activities ·*Haishi* Questions · Modal Verbs · Hobbies and Habits

MODULE VI **7**

· Making Suggestions with *haoma* ·Colors · Clothing · Body parts · Talking about Likes and Dislikes · Measurement Words in Chinese

TOTAL HOURS :45

TEXT BOOKS:

1.Ma, Yanmin, and Li, Xinying. *Easy Steps to Chinese, Vol*. *1 Textbook*. Beijing: Beijing Language and Culture University Press, 2006. Print.

2. Ma, Yanmin, and Li, Xinying. *Easy Steps to Chinese, Vol. 1 Workbook*. Beijing: Beijing Language and Culture University Press, 2006. Print.

OUTCOMES:

On completion of the course, students will be able to

- Exhibit proficiency in Chinese Language.
- Use vocabulary in appropriate contexts.
- Use appropriate grammatical forms effectively.
- Use the language in social and academic contexts.
- Appreciate the use of language forms.

LNC1182	GERMAN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To improve the proficiency of students in German language.
- To create awareness of using vocabulary among students.
- To expose them to correct grammatical forms of the language.
- To empower them for successful communication in social and academic contexts.

MODULE I **8**

Introduction to German alphabets, phonetics and pronunciation- Introducing themselves and others using simple sentences and answer to some basic personal questions-: Introduction to different types of articles and verbs, Nouns

MODULE II **8**

Understanding and responding to everyday queries like instruction, questions, -number & gender, pronouns, present and past tense.

MODULE III **7**

Short telephone messages, requests etc., if spoken slowly and clearly-- Detailed overview of articles, adjectives with/without articles, Prepositions

MODULE IV **7**

Ask and giving directions using simple prepositions- Ability to fill basic information on forms while registering for courses / classes.

MODULE V **8**

Ability to extract and understand relevant information in a public announcement, broadcast, newspaper, radio etc-- dative & accusative

MODULE VI **7**

Ability to describe about people, work, immediate environment, education and other topics related to personal needs in a concise manner-- Understanding of matters that are familiar and are encountered regularly like instances at school, work, at public places, places of leisure etc.

TOTAL HOURS :45

4. Willkommen! Beginner's course. Paul Coggle, Heiner Schenke. ISBN: 978-1-444-16518-0
5. An Introduction to the German Language and Culture for Communication, Updated Edition Lovik, Thomas A., J. Douglas Guy & Monika Chavez. Vorsprung -. New York, Houghton Mifflin Company, 1997/2002. ISBN 0-618-14249-5.

OUTCOMES:

On completion of the course, students will be able to

- Show their proficiency in German Language.
- Use appropriate vocabulary in real life contexts.
- Use appropriate grammatical forms while communicating with people.
- Effectively use the language in social and academic contexts.

LNC1183	JAPANESE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To train students to use appropriate vocabulary in academic and technical contexts.
- To facilitate students to speak effectively while exchanging ideas and making presentations.
- To develop their reading skill through sub skills like skimming, scanning and critical reading of a text.
- To sharpen their academic writing skills.
- To expose them to the correct usage of language and help them to apply that knowledge appropriately.

MODULE I **7**

Introduction of the Japanese writing system, i.e. *Hiragana*, *Katakana* and *Kanji*, word-building, writing foreign names and loan words in Katakana.

MODULE II **8**

Oral practice of pronunciation and intonation of Japanese sounds, Japanese greetings, self introduction, identifying things, time of the day, calendar; counting using Japanese numerical classifiers; describing things;

MODULE III **7**

Making comparisons; talking of daily activities, kinship terms used for address and reference, seasons, giving and receiving, shopping; making requests, talking of one’s likes and dislikes.

MODULE IV **8**

Extensive practice of basic patterns at the lower intermediate level through drills and exercises.

MODULE V **7**

Comprehension of passages in simple Japanese and writing of composition in Japanese applying lower intermediate grammatical patterns.

MODULE VI **8**

Diverse texts based on Japanese culture, customs, history, food habits, and science etc, for the development of communicative competence of students; skimming, scanning of texts with emphasis on advanced sentence patterns, grammatical structures and idiomatic phrases, reading and writing of approximately

TOTAL HOURS :45

5. Chukyu Nihongo, Tokyo Gaikokugo Daigaku; Nihongo II, Kokusaigakuyukai, and other supplementary material.

OUTCOMES:

After completion of the course, students will have the ability to

- Demonstrate their range of vocabulary in academic and technical contexts
- Exchange ideas and make presentations
- Comprehend and respond appropriately to listening tasks.
- Read a text efficiently and process information.
- Create and draft different kinds of academic documents
- Communicate effectively using grammatically correct expressions.

PHC 1181	PHYSICS	L	T	P	C
		3	0	2	4

OBJECTIVES:

To make students conversant with the

- basic concepts of crystal physics and its structures
- production and applications of ultrasonic waves
- study of thermal conductivities of good and bad conductors
- phenomenon of wave optics and its applications
- principle of fibre optic communication and its applications to sensors
- wave mechanics principle and its applications in electron microscopy
- green energy physics and its environmental impacts to society

MODULE I CRYSTAL PHYSICS **8**

Crystalline and amorphous solids – Unit Cell – Seven Crystal Systems – Bravais Lattice – Miller Indices – Interplanar Spacing – Characteristics of Unit Cell - Calculation of Number of atoms per unit cell, Atomic Radius, Coordination Number and Packing Factor for SC, BCC, FCC and HCP and Diamond structures –Defects in crystals-Point defects –Edge and screw dislocations and their significance - Surface Defects.

MODULE II ULTRASONICS AND THERMAL PHYSICS **8**

Introduction to Ultrasonics - Properties - Production methods - Magnetostriction Oscillator method- Piezoelectric Oscillator method – Detection of Ultrasonics – Thermal method – Piezoelectric method – Kundt's tube method – Applications of Ultrasonics – Acoustic Grating – SONAR – Depth of sea – Velocity of blood flow, Ultrasonic Flaw detector (qualitative).

Transmission of heat – Conduction, Convection and Radiation – Thermal Conductivity of good Conductor – Forbe's method- Thermal Conductivity of bad Conductor – Lee's Disc method.

MODULE III APPLIED OPTICS **8**

Interference – Air Wedge – Michelson's Interferometer – Determination of wavelength of light and thickness of thin transparent sheet.

Introduction to Laser – Characteristics of Laser – Spontaneous and Stimulated Emissions – Einstein's Coefficients - Population inversion – Pumping Mechanism –

Laser Action – Types of Laser: He-Ne laser, CO2 laser and Nd:YAG laser - Applications : Laser Materials Processing .

MODULE IV FIBRE OPTICS 7

Optical fibre – Principle and propagation of light in optical fibre – Numerical aperture and acceptance angle – Types of optical fibres – Attenuation – Absorption, Scattering losses, Bending losses and Dispersion in Optical fibres – Fiber Connectors and Couplers - Applications – Fibre optic communication system (block diagram only)- Fibre optic sensors - displacement and pressure sensors (qualitative) - Medical endoscope.

MODULE V QUANTUM MECHANICS 7

Black body radiation – Planck's theory of radiation – Deduction of Wien's displacement law and Rayleigh – Jean's law from Planck's theory –Dual nature of matter – de Broglie's wavelength- Physical significance of wave function – Schrodinger wave equation – Time independent and time dependent wave equation – Particle in one dimensional box – Harmonic oscillator(qualitative).

MODULE VI RENEWABLE ENERGY SOURCES 7

Present Energy sources and sustainability - Solar energy - Solar photovoltaics - Solar cells – Bioenergy - Biomass – production of liquid fuels from biomass – Wind energy – Wind turbines – energy and power from wind turbines - Geothermal energy - Ocean energy: Wave energy – Wave energy conversion devices – Tidal energy – Tidal power basics – power generation –Tidal energy potential – Environmental benefits and impacts of renewable energy sources

PRACTICALS

1. Determination of Velocity of Ultrasonic waves in a given liquid using Ultrasonic Interferometer.
2. Determination of wavelength of ultrasonic waves using Kundt's tube method.
3. Determination of thickness of a thin wire using Air Wedge method.
4. Determination of wavelength of light using spectrometer diffraction grating.
5. Determination of angle of divergence of a laser beam using He-Ne laser.
6. Determination of particle size of lycopodium powder using semiconductor laser.
7. Determination of wavelength of laser light using semiconductor laser diffraction.

8. Determination of Acceptance angle and Numerical Aperture using fiber optic cable.
9. Determination of thermal conductivity of a good conductor by Forbe's method.
10. Determination of thermal conductivity of a bad conductor by Lee's disc method.
11. Determination of solar cell characteristics.

6. Godfrey Boyle, "Renewable Energy: Power for sustainable future", 2nd edition, Oxford University Press, UK, 2009.

OUTCOMES:

At the end of the course, students will be able to

- understand the different types of crystal structures
- apply the concept of ultrasonic principle in engineering and medical field
- calculate thermal conductivities of good and bad conductors
- differentiate the various laser systems and its applications in engineering and medical field
- apply the principle of fibre optics for communication and sensor applications
- formulate wave mechanics principle for applications in electron microscopy
- Correlate the different renewable energy sources for societal needs.
- To complement the knowledge acquired in the theory class.
- To correlate the experimental results for application.

CHC1181	CHEMISTRY	L	T	P	C
		3	0	2	4

OBJECTIVES:

The students should be conversant with

- the basic problems like hardness, alkalinity, dissolved oxygen associated with the water used for domestic and industrial purpose and treatment process involved.
- the synthesis, properties and applications of nanomaterials.
- the importance of renewable energy sources like solar, wind, biogas, biomass, geothermal, ocean and their limitations.
- the basic analytical techniques like UV-Visible, FT-IR, NMR, AAS, AES, Circular Dichroism and XRD etc.
- photochemistry concepts related to physical processes and chemical reactions induced by photon absorption and their applications.
- basic principles of electrochemistry, cell construction and evaluation and to understand general methodologies for construction & design of electrochemical cell

MODULE I WATER TECHNOLOGY 9

Impurities present in water, hardness : types of hardness, demerits of hard water in boilers, estimation of hardness by EDTA method (problems) – alkalinity : estimation of alkalinity (problems) – dissolved oxygen: estimation of dissolved oxygen – conditioning methods : external treatment method: – lime soda and zeolite process (principle only), Ion exchange process – Internal treatment : colloidal, carbonate, phosphate and calgon methods – drinking water: standards (BIS), treatment of domestic water {screening, sedimentation, coagulation, filtration, disinfection }– desalination: electrodialysis, reverse osmosis.

MODULE II NANOCHEMISTRY 6

Introduction – distinction between molecules, bulk materials and nanoparticles – classification based on dimension with examples – synthesis (top-down and bottom-up approach} : sol-gel, thermolysis (hydrothermal and solvothermal), electrodeposition, chemical vapour deposition, laser ablation – properties and applications (electronic, magnetic and catalytic) – risk factors and future perspectives.

MODULE III ENERGY SOURCES 8

Energy: past, today, and future – a brief history of energy consumption – present energy scenario of conventional and renewable energy sources – renewable energy : needs of renewable energy, advantages and limitations of renewable energy – solar energy: basics, solar energy in the past , photovoltaic, advantages and disadvantages – bioenergy: conversion, bio degradation, biogas generation, biomass gasifier, factors affecting biogas generation, advantages and disadvantages – geothermal energy: geothermal resources (hot dry rock and magma resources, natural and artificial), advantages and disadvantages – wind energy: wind resources, wind turbines, advantages and disadvantages – ocean energy: wave energy, wave energy conversion devices, ocean thermal energy, advantages and disadvantages.

MODULE IV PHOTOCHEMISTRY 7

Introduction: absorption and emission, chromophores, auxochromes – laws of photochemistry : Grotthus-Draper law, Stark Einstein law – quantum yield (problems) –photo physical processes : fluorescence and phosphorescence - Jablonski diagram (electronic states and transitions) – quenching, annihilation – photosensitization: principle and applications – chemiluminescence, bioluminescence.

MODULE V ANALYTICAL TECHNIQUES 7

Spectroscopy: electromagnetic radiation and spectrum – types of transitions – types of spectra (atomic and molecular with their chemical usefulness) – Beer-Lamberts law (problems) – principles, instrumentation and applications of: Colourimetry – UV-Vis spectrophotometer – atomic absorption spectroscopy – atomic emission spectroscopy – principles and applications of: IR, NMR, mass and X-ray diffraction analysis.

MODULE VI ELECTROCHEMISTRY 8

Electrochemistry - types of electrodes (principle and working) : gas (SHE), metal/metal ion electrode, metal-metal insoluble salt (calomel electrode), ion-selective (glass electrode and fluoride ion selective electrode) – Electrolytic and galvanic cells, construction of cell, EMF measurement and applications (problems), standard cell (Weston-cadmium), reversible and irreversible cell, concentration cell. Determination of fluoride ion using fluoride ion selective electrode – Chemically modified electrodes (CMEs) : concept, approaches and applications.

PRACTICALS

1. Estimation of hardness in given water sample.
2. Estimation of the alkalinity of the given water sample.
3. Estimation of strong acid by conductometry.
4. Estimation of Fe^{2+} present in the given sample by potentiometry.
5. Verification of Beer-Lamberts law and estimation of Cu^{2+} present in unknown sample.
6. Estimation of sodium and potassium present in the given sample by flame photometry.
7. Determination of molecular weight and degree of polymerisation of a polymer by viscosity method.
8. Synthesis of thermosetting polymer.

7. Principles of molecular photochemistry: An introduction, Nicholas J. Turro, V.Ramamurthy and Juan C. Scaiano, University Science Books, Sausalito, CA, 2009.

OUTCOMES:

The students will be able to

- solve problems related to hardness, alkalinity, dissolved oxygen associated with the water and describe the treatment processes.
- classify nanomaterials and apply the nanochemistry approach to synthesize

the nanomaterials.

- explain the principle and enumerate the advantages and disadvantages of various renewable energy sources.
- state the principle and illustrate the instrumentation of various analytical techniques.
- apply the concepts of photochemistry to elaborate various photo-physical and photochemical reactions.
- construct a electrochemical cell and describe the various types of electrodes and determine the fluoride content.

GEC 1101	ENGINEERING GRAPHICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To introduce the students of all engineering programs, the basic concepts of engineering drawing, which is the basic communication medium for all engineers
- To provide practical exposure on important aspects like drawing analytic curves, orthographic projections, section of solids, development of surfaces, isometric projection, perspective projection and free hand drawing.
- To introduce computerized drafting.

MODULE I BASICS AND ENGINEERING CURVES 10

Drawing instruments, dimensioning, BIS conventions, types of lines, simple geometric constructions.

Conic sections: ellipse, parabola, hyperbola.

Special curves: cycloid, epicycloid, hypocycloid and involutes.

MODULE II ORTHOGRAPHIC PROJECTION 8

Orthographic projection – first angle, second angle, third angle and fourth angle projections –setup - assumptions, principle. Free hand sketching of orthographic views of simple machine parts as per first angle projection. Orthographic projection of points in all quadrants. Some commands and demonstration of drafting packages.

MODULE III PROJECTION OF STRAIGHT LINES AND PLANES 10

Projection of straight lines in first quadrant – true length and true inclinations – Rotating line and trapezoidal methods –traces of straight line.

Projection of plane lamina in first quadrant and its traces

MODULE IV PROJECTION OF SOLIDS 10

Projection of solids in first quadrant: Axis inclined to one reference plane only- prism, pyramid, cone, cylinder – change of position and auxiliary projection methods.

MODULE V SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES 12

Section of solids: prism, pyramid, cone, cylinder, and sphere – sectional view – true shape of section Solids in simple position and cutting plane inclined to one reference

plane only.

Development of surface of truncated solids: prism, pyramid, cone cylinder – frustum of cone, pyramid and simple sheet metal parts.

MODULE VI PICTORIAL PROJECTIONS 10

Isometric projection: Isometric scale – isometric axes- iso sheet - Isometric projection and view of prism, pyramid, cylinder, cone, frustums, truncated solids and simple products

Perspective projection: station point – vanishing point – Perspective projection and views of prism, pyramid, cylinder and frustums by Visual ray method.

L – 30; P – 30; TOTAL HOURS – 60

TEXT BOOKS:

1. N.D. Bhatt, 'Engineering Drawing' Charotar Publishing house, 53rd Edtion, (2014)

REFERENCES:

1. K.V. Natarajan, 'A text book of Engineering Graphics', Dhanalakshmi publishers, Chennai. (2009)
2. Venugopal. K, and V. Prabhu Raja, Engineering Graphics, New Age International (P) Ltd., Publication, Chennai. (2011)

OUTCOMES:

- Students should be able to read the specifications and standards of technical drawing and able to draw conic sections and special curves.
- Students should be able to understand the insight of orthographic projection and to draw the various views of orthographic projection of a point and various components.
- Students should be able to draw the orthographic views of straight lines and plane figures.
- Students should be able to draw the orthographic views of simple solids.
- Students should be able to draw the sections of solids and development of solid surfaces.
- Students should be able to draw the isometric and perspective projection of simple solids and components.

GEC 1102	ENGINEERING DESIGN	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To understand the role of design in Engineering
- To understand the basic design concepts
- To understand the role of innovation in design

MODULE I DESIGN AS A CENTRAL ACTIVITY IN ENGINEERING 08

Product design – products and processes – product design methodology Design of systems; Software design

MODULE II NEED ANALYSIS AND CONCEPT DEVELOPMENT 07

Voice of customers – product specification - need analysis Bench marking Product architecture – concept generation and evaluation;

MODULE III CASE STUDIES IN ENGINEERING DESIGN 08

Product design – process design; system design; software design -Ergonomics – usability

MODULE IV INNOVATION AND DESIGN 07

Role of innovation in Engineering – incremental changes and systemic changes; scientific approach to driving innovation – case studies.

TOTAL HOURS – 30

REFERENCES:

5. Navi Radjou, Jaideep Prabhu and Simone Ahuja, “Jugaad Innovation”,

Published by Random House India, 2012.

OUTCOMES:

The students will be able to

- Apply the basic knowledge of design in engineering products / process / service.
- Analyse the problems and give innovative solutions.
- Correlate the basic knowledge of design in the real world problems.
- Apply innovative approaches to engineering design.

GEC1103	BASIC ENGINEERING PRACTICES LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To provide a practical exposure to basic engineering practices like carpentry, fitting, plumbing, welding and making of simple electrical and electronic circuits
- To have an understanding on the use of various tools, instruments and methods
- To enable the students to appreciate the practical difficulties and safety issues

CIVIL ENGINEERING PRACTICE

1. Study of plumbing in general household and industrial systems
2. Making a small window frame with Lap and Mortise & Tenon Joints
3. Introduction to power tools

MECHANICAL ENGINEERING PRACTICE

1. Fabrication of a small Table frame with Butt, Lap and Fillet Joints
2. Machining of a simple component like a table weight using lathe
3. Mold preparation for simple component

ELECTRICAL ENGINEERING PRACTICE

1. Comparison of incandescent, Fluorescent, CFL and LED lamps.
2. Study of Protection Circuits (small relay, fuse, MCB, HRC, MCCB, ECCB).
3. Familiarization of households Electrical Gadgets (Iron Box, Wet Grinder).
4. Understanding of Domestic and Industrial wiring.
5. Earthing and its significance.
6. Troubleshooting in Electrical Circuits.
7. Study of inverter fed UPS/Emergency lamp

ELECTRONICS ENGINEERING PRACTICE

1. Identifications symbolic representation of active and passive electronic components
2. Soldering and tracing of electronic circuits and checking its continuity
3. Assembling of A.C. to D.C, D.C to A.C. Circuits in bread Board and Mini

project.

TOTAL HOURS – 30

OUTCOMES:

Upon the completion of the course, students should be able to

- Appreciate the practical skills needed even in making of simple objects, assemblies and circuits
- Attend minor defects especially in items used in day to day life
- Aware of the safety aspects involved in using tools and instruments

GEC 1104	COMPUTER PROGRAMMING I	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To identify the hardware and software components of the computer.
- To know the basic concept of operating system and get knowledge about different operating systems.
- To learn various database concepts and operations
- To develop efficient algorithms for solving a problem.
- To implement the algorithms in C language.
- To use arrays in solving problems.

MODULE I COMPUTER FUNDAMENTALS **7**

Introduction -. Number System - Planning the computer program - Computer Software - Basic operating system concepts - Database Operations

MODULE II PROGRAMMING IN C **8**

Introduction to C Programming Language – Operators - Control statements - Iterative statements - Arrays.

LIST OF EXPERIMENTS:

1. Computer organization –Hardware in a typical computer Identification – Booting- error messages and what it means
2. Types of Operating systems – Windows and Linux
3. Structure of a basic program - Hello world program – Debugging it
4. Data types: Type conversions
5. Input / Output: Formatted functions – Unformatted functions – Library functions
6. Properties of operators – Priority of operators – Arithmetic relational logical and bitwise operators
7. If – if else- nested if else- goto- switch case – nested switch case – for loops – nested for loops – while loop – do-while loop – break and continue statement
8. Arrays – Operation with arrays
9. Sorting and searching.

L – 15; P – 30; TOTAL HOURS – 45

REFERENCES:

1. Ashok N Kamthane, “Computer Programming”, Pearson Education, 2nd

Edition, ISBN 13: 9788131704370, 2012

2. Paul J. Deitel, Deitel & Associates, “C How to Program”, Pearson Education, 7th Edition, ISBN-13: 978-0132990448, 2012

OUTCOMES:

Students who complete this course will be able to

- Recognize Modular design, logic flow, data abstraction
- Analyze the working of the programming constructs, functions, and I/O.
- Write down programs for sorting and searching algorithms
- Write down programs developing cycle for different applications
- Debug the programs and solve some practical problems in programming
- Develop programs using arrays.

SEMESTER II

MAC 1281	ADVANCED CALCULUS	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- train the students in solving problems using multiple integration.
- provide knowledge in using special functions to find out the area and volume of a region.
- acquire knowledge in tangent and normal vectors.
- gain knowledge in finding the areas of a curve and surface using vector integration.
- learn about the analytic functions and their properties along with bilinear transformation.
- know complex integration using Cauchy's theorems.

MODULE I **MULTIPLE INTEGRATION AND ITS APPLICATIONS** **8+2**

Multiple integrals– Cartesian and Polar coordinates – change of order of integration – Multiple integral to compute area and volume.

MODULE II **TRANSFORMATION OF COORDINATES AND SPECIAL FUNCTIONS** **7+3**

Change of variables between Cartesian, polar, cylindrical and spherical coordinates - Beta and Gamma functions – Properties and applications.

MODULE III **VECTOR DIFFERENTIATION** **7+3**

Operations on vectors – Scalar Product, Vector Product, Projection of Vectors - Angle between two vectors - Gradient, divergence and curl

MODULE IV **VECTOR INTEGRATION** **8+2**

Line, surface and volume integrals – Green's Theorem, Gauss Divergence Theorem and Stokes Theorem (statement only) – verification and evaluation of integrals.

MODULE V ANALYTIC FUNCTION 8+2

Analytic function - Necessary and Sufficient condition (statement only) – Cauchy-Riemann equations in polar coordinates - properties of analytic function – determination of analytic function – conformal mapping (w = z+a, az and 1/z) and bilinear transformation.

MODULE VI COMPLEX INTEGRATION 7+3

Statement and application of Cauchy's integral theorem – Cauchy's integral formula – Taylor's series and Laurent's series expansion – singularities - classification – residues - Cauchy's residue theorem – contour integration – Unit circle and semi circular contours (excluding poles on the real axis).

6. Venkataraman, M.K., "Engineering Mathematics", Volume 2, 2nd edition, National Publishing Co., Chennai, 2003.
7. James Stewart ".Calculus" (7th edition),Brooks/Cole cengage learning,UK.

OUTCOMES:

After completing the course, student will be able to

- compute the area and volume using multiple integrals.
- apply special functions to solve integration problems.
- apply differentiation in scalar and vector fields.
- find area and volume of a region using vector integration.
- verify analyticity, conformity and bilinearity of complex functions.
- evaluate complex integrals.

GEC 1211	BASIC ENGINEERING MECHANICS	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To impart knowledge about the basic laws of statics and dynamics and their applications in problem solving
- To acquaint both with scalar and vector approaches for representing forces and moments acting on particles and rigid bodies and their equilibrium
- To give on exposure on inertial properties of surfaces and solids
- To provide an understanding on the concept of work energy principle, friction, kinematics of motion and their relationship

MODULE I VECTOR APPROACH TO MECHANICS **07**

Introduction - Units and Dimensions- Vectors – Vectorial representation of forces and moments –Vector Algebra and its Physical relevance in Mechanics - Laws of Mechanics – Parallelogram and triangular Law of forces -Lame's theorem, Coplanar Forces – Resolution and Composition of forces- Equilibrium of a particle.

MODULE II EQUILIBRIUM OF PARTICLE **06**

Forces in space - Equilibrium of a particle in space - Equivalent systems of forces – Principle of transmissibility – Single equivalent force

MODULE III EQUILIBRIUM OF RIGID BODY **06**

Free body diagram – Types of supports and their reactions – requirements of stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis –Vectorial representation of moments and couples – Scalar components of a moment –Varignon's theorem - Equilibrium of Rigid bodies in two dimensions - Examples

MODULE IV PROPERTIES OF SURFACES **08**

Determination of Areas – First moment of area and the Centroid of sections – Rectangle, circle, triangle from integration – T section, I section, Angle section, Hollow section by using standard formula – second and product moments of plane area – Physical relevance - Rectangle, triangle, circle from integration - T section, I section, Angle section, Hollow section by using standard formula – Parallel axis theorem and perpendicular axis theorem – Polar moment of inertia- Mass moment of

Area

MODULE V FRICTION 08

Introduction to friction- types of friction- Laws of Coloumb friction- Frictional force – simple contact friction – Rolling resistance –ladder friction

MODULE VI LAWS OF MOTION 10

Review of laws of motion – Newton's law – Work Energy Equation of particles– Impulse and Momentum – Impact of elastic bodies.

L – 45; T – 15; TOTAL HOURS – 60

REFERENCES:

1. Beer, F.P and Johnston Jr. E.R, "Vector Mechanics for Engineers, Dynamics & Statics", Third SI Metric Edition, Tata McGraw-Hill International Edition, 2001.

3. Irving H. Shames, Engineering Mechanics – Statics and Dynamics, IV Edition Pearson Education Asia Pvt. Ltd., 2003.

OUTCOMES:

On completion of this course students should be able

- Analyse and resolve forces, moments and solve problems using various principles and laws of Mechanics
- Apply the concept of equilibrium to particles and solve problems
- Apply the concept of equilibrium to rigid bodies and solve problems
- Analyse and determine the properties of surfaces
- Analyse and evaluate the fractional forces between the bodies
- Apply the laws of motion in solving dynamics problems

GEC 1212	ENVIRONMENTAL STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

The student will be conversant with the

- various natural resources, availability, utilisation and its current scenario
- different ecosystems, energy transfer, values, threats and conservation of biodiversity
- levels of different pollutants and its impact and the causes and effects of natural disasters
- impacts of human population, impact assessment, human rights and environmental acts and sustainable development

MODULE I NATURAL RESOURCES **8**

Land resources: land degradation, soil erosion and desertification - Forest resources: use and over-exploitation, deforestation - Water resources: use and over-utilisation of surface and ground water, conflicts over water (inter-state and international), dams (benefits and problems), water conservation (rainwater harvesting and watershed management) - Mineral resources: use and exploitation, environmental effects of extracting and using mineral resources, mining - Food resources: world food problems, changes in land use by agriculture and overgrazing, modern agriculture and its effects, fertilizer and pesticide problems, water logging and salinity - Energy resources: increasing energy needs, renewable and non-renewable, use of alternate energy sources.

MODULE II ECOSYSTEM AND BIODIVERSITY **8**

Ecosystem- energy flow in the ecosystem - food chains, food webs and ecological pyramids - characteristics, structure and function of (a) Terrestrial ecosystems (forest, grassland, desert) and (b) Aquatic fresh water ecosystems (pond, lake, river) (c) Aquatic salt water ecosystems (ocean, estuary) - ecological succession.

Biodiversity - genetic, species and ecosystem diversity – hot-spots of biodiversity –biogeographic classification of India - endangered, endemic, extinct and invasive species of India - red data book - values of biodiversity: consumptive, productive, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - conservation of biodiversity: in-situ and ex-situ conservation of biodiversity

MODULE III ENVIRONMENTAL POLLUTION AND NATURAL DISASTER **8**

Definition, cause, effects and control measures of (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards - ill-effects of fireworks and upkeep of clean environment - solid waste management: types (urban, industrial, biomedical and electronic wastes), collection, processing and disposal (incineration, composting and land-fill) - natural disaster and management: flood, cyclone, drought, landslide, avalanche, volcanic eruptions, earthquake and tsunami.

MODULE IV HUMAN POPULATION, HEALTH AND SOCIAL ISSUES **6**

Population and population growth, population variation among nations, population explosion, family welfare programme.

Human health: air-borne, water borne diseases, infectious diseases, risks due to chemicals in food and environment.

Sustainable development - environmental legislation and laws: water act, air act, wildlife protection act, forest conservation act, environment protection act - environmental impact assessment, steps in EIA - human rights - women and child welfare.

Case studies related to current situation

TOTAL HOURS – 30

TEXT BOOKS:

1. Erach Bharucha, Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education for University Grants Commission, Orient Blackswan Pvt Ltd, Hyderabad, India, 2013.

3. Miller T.G. Jr., Environmental Science, Wadsworth Publishing Co. Boston, USA, 2016.

OUTCOMES:

The student will be able to

- predict the scenario of various natural resources and suggest remedies to curb the exploitation of these resources.
- identify food chain and web and its role in various ecosystems, assess the impacts on biodiversity and provide solutions to conserve it.
- analyse the impacts of pollutants in the environment and propose suitable method to alleviate the pollutants and the natural disasters.
- assess on the impact of human population and the health related issues and the ethics to be followed for sustainable life.

GEC 1213	COMPUTER PROGRAMMING II	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To provide knowledge about the benefits of Object Oriented Programming over Procedure oriented programming.
- To learn various File operations
- To expose fundamental concepts of object-oriented programming in classes, invoking methods and functions.
- To prepare students to get full use of code reusability using object oriented programming.
- To implement the basic concepts of object oriented programming using C++concepts.
- To focus on solving problems based on analyzing, designing and implementing programs in C and C++.

MODULE I PROGRAMMING IN C 7

Functions - Storage Classes - Structures and Unions – Pointers -Self Referential Structures and Linked Lists - File Processing.

MODULE II PROGRAMMING IN C++ 8

Programming in C++ - Overview of OOP in C – Inheritance - Polymorphism - Type Casting – Exceptions.

LIST OF EXPERIMENTS:

1. Functions
2. One dimensional arrays, Pointers
3. Recursion
4. Multi dimensional arrays, Linked lists.
5. Operating on Files.
6. Simple C++ program with Control statements.
7. Getting input from user console.
8. Classes, Object and Constructors.
9. Method overloading.
10. Inheritance

L – 15; P – 30; TOTAL HOURS – 45

OUTCOMES:

Students who complete this course will be able to

- Develop efficient algorithms for solving problems
- Handle files in C
- Use simple data structures like arrays and linked lists in solving problems.
- Write simple programs using concepts of object oriented programming.
- Implement algorithms in C++ Language.
- Demonstrate the Object Oriented Programming concepts applied in networking, web development and Database applications.

EEC1211	ELECTRIC CIRCUIT ANALYSIS	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To learn circuit laws, theorems and circuit solution methods
- To be able to analyze DC and AC circuits
- To be able to analyze magnetic circuits and magnetically coupled electric circuits

MODULE I DC CIRCUITS **8**

Circuit elements : R, L and C - sources : Independent (ideal and practical), and dependent voltage and current sources - ohm's and Kirchhoff's laws - power and energy - solution of DC circuits - use of source transformations - network reduction by Y-Δ transformations.

MODULE II AC FUNDAMENTALS **7**

Sinusoidal voltages and currents : Average and RMS Values, peak and form factors - concept of phasor and its use in representing sinusoidal voltages and currents - impedance and admittance - Real, reactive and apparent power – Power factor and its practical importance -Analysis of simple series and parallel circuits.

MODULE III AC NETWORK ANALYSIS **7**

Solution of series-parallel AC circuits - Resonance: RLC series and parallel resonance, resonant frequency, half-power frequencies, Q-factor – Design of Resonant circuits - Node voltage and mesh current method of analysis - concept of super nodes and super meshes.

MODULE IV NETWORK THEOREMS **8**

Network Theorems: Superposition theorem, Millman's Theorem, Thevenin's Theorem, Norton's Theorem and Maximum power transfer theorem - Application to DC and AC networks

MODULE V MAGNETIC CIRCUITS **8**

Magnetic circuits : Definition of magnetic quantities i.e., permeability, flux, flux

density, field intensity and their units and relationships - magnetic curves of ferromagnetic materials - magnetic circuit concept and analogies - magnetic circuit computations - Hysteresis and eddy current losses.

MODULE VI COUPLED AND THREE PHASE CIRCUITS 7

Magnetically coupled circuits : self and mutual inductances, Dot rule for coupled circuits, coupled circuits analysis and applications - Three phase circuits: generation of 3 - phase voltages - star and delta connection - relation between phase and line quantities - balanced and unbalanced 3 - phase loads - power measurement by 2 - wattmeter method- Application of two wattmeter method of power measurement.

6. R.C. Dorf, ‘Introduction to Electric Circuits’, John Wiley & Sons Inc, New York, 2nd Edition, 2003.

OUTCOMES:

At the end of the course, the student will be able to

- Calculate currents, voltages and powers in typical DC electric circuits.
- Analyze circuits with ideal, independent, and controlled voltage and current sources.
- Apply node-voltage analysis and mesh-current analysis techniques to analyze circuit behavior.

- Reduce circuits into equivalent circuits by applying network theorems.
- Perform steady state analysis on AC circuits and to design resonant circuits
- Implement the concept of magnetic circuits and coupled circuits in magnetic circuits .
- Perform the calculations on three phase circuits and implement in practical circuits.

EEC1212	ELECTRIC CIRCUITS AND SIMULATION LABORATORY	L	T	P	C
		0	0	3	1

OBJECTIVES:

- To impart hands on experience in verification of Electric Circuit laws and Theorems
- To verify Electric Circuit laws and theorems using Mat Lab / PSpice
- To implement power measurement methods for three phase circuits.

LIST OF EXPERIMENTS:

1. Verification of Kirchhoff's Voltage and Current Laws
2. Verification of Thevinin's and Norton's Theorem
3. Verification of Superposition and Maximum Power Transfer Theorem
4. Study of Oscilloscope and measurement of sinusoidal voltage, frequency and power factor
5. Study of the effect of Q on frequency response of series and parallel resonant circuits
6. Measurement of real power, reactive power, power factor and impedance of RL, RC and RLC circuits using 3 voltmeters and 3 ammeters
7. Power measurement in a three phase circuit using two wattmeter method
8. Verification of Kirchhoff's Voltage and Current Laws using MatLab / PSpice
9. To obtain Thevenin's and Norton's equivalent circuits using PSpice / MatLab
10. To verify Maximum power Transfer theorem and Superposition theorem using PSpice / MatLab
11. Simulation of three phase power measurement by two wattmeter method using MatLab

TOTAL HOURS – 30

2. Muhammad H.Rashid , Introduction to PSpice Using OrCAD for circuits and Electronics, Prentice Hall of India Pvt Ltd, 2008,Third Edition.

OUTCOMES:

At the end of the course, the student will be able to

- Conduct basic laboratory experiments involving electrical circuits using laboratory

test equipments such as power supplies, signal generators, oscilloscopes, multimeters etc.

- Implement and verify network theorems
- Implement three phase power measurement method using two wattmeter method
- Relate physical observations and measurements involving electrical circuits to theoretical principles.
- To simulate various electric circuits using PSpice and MaTLab simulation.
- For electric circuits the performance evaluations can be done using simulation tools.

SEMESTER III

		L	T	P	C
MAC 2181	**PARTIAL DIFFERENTIAL EQUATIONS AND TRANSFORMS**	**3**	**1**	**0**	**4**

OBJECTIVES:

The aims of this course are to

- Familiarize in solving partial differential equation of first, second and higher orders.
- Introduce basics and engineering applications of Fourier series, Laplace Transform, Fourier Transform and Z- Transform.

MODULE I PARTIAL DIFFERENTIAL EQUATIONS 8 + 2

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

MODULE II FOURIER SERIES 8+2

Fourier Series and Dirichlet's conditions - General Fourier series - Half range Fourier series - Parseval's identity - Harmonic Analysis.

MODULE III FOURIER TRANSFORMS 7+3

Fourier integral theorem (without proof) - Fourier transform pair - Fourier Inverse Transform – Properties - Convolution theorem - Parseval's identity.

MODULE IV APPLICATIONS OF FOURIER SERIES AND FOURIER TRANSFORMS 7+3

Applications of Fourier series and Fourier Transform to solution of PDEs having constant coefficients with special reference to Heat & Wave equations, Discrete & point Spectrum and Single pulse.

MODULE V LAPLACE TRANSFORM 8+2

Introduction to Laplace transform - Existence of Laplace Transform - Properties of Laplace Transforms - Initial & Final Value Theorems - Inverse Laplace Transform - Convolution Theorem – Circuits to signal square wave: Integral equations with unrepeated complex factors – Damped forced vibrations: repeated complex factors – Resonance - Solution of differential equations

MODULE VI Z – TRANSFORM 7+3

Introduction and Definition of Z-transform - Properties of Z- Transform - Convolution Theorem of Z-Transform - Inverse Z–transform - Convolution Theorem of Inverse Z-Transform - Formation of difference equations - Solving Difference Equations using Z-Transform.

L – 45; T – 15; Total Hours –60

3. Dennis G. Zill, Warren S. Wright, “Advanced Engineering Mathematics”, 4th edition, Jones and Bartlett publishers, Sudbury, 2011.
4. Alan Jeffrey, “Advanced Engineering Mathematics”, Academic Press, USA, 2002.

OUTCOMES:

After completing the course, student will be able to

- solve the partial differential equations.
- derive a Fourier series of a given periodic function by evaluating Fourier coefficients.
- apply integral expressions for the forward and inverse Fourier transform to a range of non-periodic waveforms.
- solve wave equation and heat flow equation.
- solve ordinary differential equations using Laplace transform.
- solve difference equation using Z-transform.

ENC2181	ORAL COMMUNICATION	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To expose students to a range of professional contexts through podcasts for learning appropriate expressions.
- To train them in making poster presentations.
- To enable them to make effective business presentations.
- To help them learn persuasive and negotiation skills.
- To train them to debate on issues of current relevance
- To train them to participate in group discussions on current affairs

MODULE I **4**

Orientation to the Importance of Oral Communication -– Verbal and non-verbal communication -Paralinguistic features.

One-minute presentations (using Audacity/Voicethread) – Just a minute (JAM) on random topics

MODULE II **4**

Negotiating and persuading through effective arguments – to arrive at a conclusion (pair-work)

Understanding Negotiation, persuasion and marketing skills through Podcasts

Listening to short conversations and monologues for understanding real life conversations

MODULE III **4**

Making Poster presentations on current issues

Understanding nuances of making effective presentations (TED Videos)

MODULE IV **6**

Deliberation on social and scientific issues – Debates (focus on rebuttal skills and deconstructing arguments)

Viewing videos on debates (NDTV Discussions)

MODULE V **6**

Discussing social issues or current affairs in groups

Viewing group discussions and listening for specific information

MODULE VI **6**

Making full length presentation (through Voicethread) with the focus on one's career plans and prospects (discipline specific)

Listening to interviews for understanding speakers' perception (on industry related issues)

P – 30; Total Hours –30

4. Dhanavel,S.P (2015). *English and Soft Skills*. Orient Blackswan, Chennai.
5. Whitby, Norman (2014). *Business Benchmark: Pre-Intermediate to Intermediate.* Cambridge University Press, UK.

OUTCOMES:

On completion of the course, students will be able to

- Listen to business conversations and do related tasks.
- Deliver effective poster presentations.
- Make effective business presentations.
- Use persuasive and negotiating skills for justifying arguments.
- Participate effectively in debates.
- Speak English intelligibly, fluently and accurately in group discussions.

EEC2101 ELECTROMAGNETIC THEORY L T P C
3 0 0 3

OBJECTIVES:

- To introduce the basic mathematical concepts related to electromagnetic vector fields.
- To provide knowledge on the concepts of electrostatics, magneto statics,electrical potential, energy density and their application.
- To impart knowledge on the concepts of Faraday's law, induced EMF and Maxwell's equations.
- To deliver knowledge on the concepts of electromagnetic wave and Poynting vector.

MODULE I CO-ORDINATE SYSTEM AND VECTOR CALCULUS 7

Cartesian Coordinates, Circular Cylindrical Coordinates, Spherical Coordinates, Constant-Coordinate Surfaces, Differential Length, Area, and Volume, Line, Surface, and Volume Integrals, Del Operator, Gradient of a Scalar, Divergence of a Vector and Divergence Theorem, Curl of a Vector and Stokes's Theorem, Laplacian of a Scalar, Classification of Vector Fields

MODULE II ELECTROSTATIC FIELDS 7

Coulomb's Law and Field Intensity, Electric Fields due to Continuous Charge Distributions, Electric Flux Density, Gauss's Law—Maxwell's Equation, Applications of Gauss's Law, ElectricPotential, Relationship between E and V—Maxwell's Equation, An Electric Dipole and Flux Lines, Energy Density in Electrostatic Fields

MODULE III ELECTRIC FIELDS IN MATERIAL SPACE 9

Properties of Materials, Convection and Conduction Currents, Conductors, Polarization in Dielectric, Dielectric Constant and Strength Linear, Isotropic, and Homogeneous Dielectrics Continuity Equation and Relaxation Time, Boundary Conditions. Poisson's and Laplace's Equations - Uniqueness Theorem - General Procedure for Solving Poisson's or Laplace's Equation - Resistance and Capacitance - Method of Images.

MODULE IV MAGNETOSTATIC FIELDS 8

Biot-Savart's Law, Ampere's Circuit Law—Maxwell's Equation, Applications of Ampere's Law , Magnetic Flux Density—Maxwell's Equation, Maxwell's Equations for

Static EM Fields, Magnetic Scalar and Vector Potentials , Derivation of Biot-Savart's Law and Ampere's Law, Forces due to Magnetic Fields, Magnetic Torque and Moment, A Magnetic Dipole, Magnetization in Materials, Classification of Magnetic Materials, Magnetic Boundary Conditions, Inductors and Inductances, Magnetic Energy, Magnetic Circuits, Force on Magnetic Materials.

MODULE V ELECTRO MAGNETIC INDUCTION 8

Faraday's Law, Transformer and Motional EMFs, Displacement Current, Maxwell's Equations in Final Forms, Time-Varying Potentials, Time-Harmonic Fields.

MODULE VI ELECTROMAGNETIC WAVE PROPAGATION 7

Waves in General, Wave Propagation in Lossy Dielectrics, Plane Waves in Lossless Dielectrics, Plane Waves in Free Space, Plane Waves in Good Conductors, Power and the Poynting Vector, Reflection of a Plane Wave at Normal Incidence, Reflection of a Plane Wave at Oblique Incidence.

Total Hours –45

6.http://ocw.mit.edu/terms

7. nptel.ac.in/courses/108104087

OUTCOMES:

At the end of the course, the student is expected to

- Relate the concepts of vector calculus and coordinate systems in the study of electromagnetics.
- Appreciate the fundamental laws and concepts of electrostatic fields .
- Apply the fundamental laws of electrostatics to material space and to solve electrostatic boundary value problems.
- Explain the fundamental laws and concepts of magnetostatic fields.

- Apply the concepts of Maxwell's equations in electromagnetic field theory.
- Correlate the concepts of wave propagation in various media.

EEC 2102 SIGNALS AND SYSTEMS

L	T	P	C
3	1	0	4

OBJECTIVES:

- To introduce the students to the concept of Signals and Linear Time-Invariant Systems
- To illustrate various mathematical tools such as Fourier, Laplace, z-Transform etc. for signal processing applications
- To impart the fundamentals of digital filter and its design.

MODULE I INTRODUCTION TO SIGNALS AND SYSTEMS 10

Signals: classification (analog and digital, energy and power, even and odd, periodic and aperiodic, deterministic and random, stationary and non-stationary) - standard signals (unit step, unit impulse, ramp, exponential, sinusoids) - transformations of the independent variable.

Systems: system classification (continuous and discrete, causal and non-causal, stable and unstable, stable/unstable oscillatory, linear and non-linear, time-invariant and variant, invertible etc.) - continuous and discrete time LTI systems - Impulse response of an LTI system - convolution integral, graphical convolution - LTI system properties - interconnection of LTI systems - Differential and Difference Equation representation of LTI systems

MODULE II II LAPLACE TRANSFORM 7

Unilateral and Bilateral Laplace transform - region of convergence (ROC) - properties of Laplace transforms - poles and zeros - inverse Laplace transformation – brief introduction to solving differential equations with initial conditions - the concept of transfer function.

MODULE III FOURIER SERIES AND FOURIER TRANSFORM 9

Fourier Series representation of signals - properties of Fourier Series - Continuous / discrete - Time Fourier transform and its properties - Frequency Response of CT-LTI Systems - phase delay and group delay – Discrete Time Fourier Transform (DTFT) and its properties - Discrete Fourier Transform (DFT) and its properties – Fast Fourier Transform (FFT).

MODULE IV Z- TRANSFORM 6

Z-Transform, z-Plane and ROC - properties of z-Transform - poles and zeros - inverse

z-Transform - Transfer Function of DT-LTI Systems. Causality and Stability.

MODULE V SAMPLING 6

Representation of a Continuous-Time Signal by Its Samples - Shannon's Sampling Theorem - reconstruction of a signal from its samples using interpolation - effect of under sampling - Aliasing - discrete-time processing of continuous time signals.

MODULE VI INTRODUCTION TO DIGITAL FILTERS 7

Representation of linear digital networks – different types of filters - network structures for infinite impulse response (IIR) and finite impulse response (FIR) filters – introduction to design of IIR and FIR filters.

9. Ashok Amhardar, "Analog and Digital Signal Processing", 2nd Edition, Thomson, 2002.

OUTCOMES:

On completion of the course the students will be able to

- Classify, identify and mathematically represent different types of signals and

systems.

- Use Laplace transform to analyze continuous time systems.
- Apply z- transform to analyze discrete time systems.
- Use Fourier series and Fourier transform to analyze the different signals and systems.
- Discretize analog signals and reconstruct them back from the samples
- Follow the design procedure to design digital filters.

EEC2103 ELECTRONIC DEVICES AND CIRCUITS L T P C

3 0 0 3

OBJECTIVES:

- To familiarize the student with the principle of operation, capabilities and limitation of various electronic devices and their applications.
- To familiarize the student with the principle of operation of operational amplifier and its various application circuits
- To familiarize the student with the principle of operation of feedback amplifiers and oscillators

MODULE I PN JUNCTION DIODE 8

Diodes- PN junction- current equation, junction capacitance, breakdown characteristics, V-I characteristics, PN junction diode ratings. Diode Applications- Clippers, clampers and rectifiers (Half wave and Full wave). Zener diode - V-I characteristics, applications- LED and Photo diode

MODULE II BIPOLAR JUNCTION TRANSISTOR (BJT) 7

Physical behavior of a BJT – Ebers–Moll model - Modes of transistor operation – Common Base, Common Emitter and Common Collector configurations, Input and output characteristics, Early effect, Thermal runaway. AC and DC load lines - Need for stability of Q -Point, Bias stability –fixed bias, collector to base bias, self-bias. Transistor switching times, Transistor as a switch and an amplifier rating, photo transistors.

MODULE III FIELD EFFECT TRANSISTOR (FET) 7

JFET operation - V-I characteristics, transfer characteristics, regions of operation. DC analysis - JFET biasing, JFET as a switch, Voltage variable resistor and an amplifier. MOSFET- Constructional details- Operation of Enhancement and Depletion type MOSFET, V-I characteristics, Transfer characteristics, MOSFET biasing, MOSFET as a switch, resistor and amplifier, generalized small signal model.

MODULE IV OPAMP FUNDAMENTALS AND CHARACTERISTICS 7

Operational amplifier: block diagram representation, Transfer characteristics of a typical Op Amp circuit, ideal Op Amp characteristics -Non-ideal characteristics- DC characteristics – Input bias current-Input offset voltage- Input offset current- Thermal drift- AC characteristics- Frequency response- Frequency compensation- Slew rate, Internal circuit operation of operational amplifier - differential amplifier.

MODULE V OP AMP APPLICATIONS 9

Mathematical operations using operational amplifier - inverting amplifier, non inverting amplifier, summer, subtractor, multiplier, divider, integrator, differentiator, zero crossing detector - Instrumentation amplifier - Precision rectifier - comparator -Schmitt Trigger, Astable and Monostable Multivibrator, Active Filters: I and II order low pass filter.

MODULE VI FEEDBACK AMPLIFIERS AND OSCILLATOR USING OPAMP 7

Amplifier classification - Feedback concept - Characteristics - effect of feedback on input and output characteristics. Oscillator-Principle, Stability of feedback circuits using Barkhausen criteria, RC oscillator- Wien bridge oscillator and Phase shift oscillator, LC oscillator - Hartley oscillator, Colpitts oscillator, Crystal oscillator.

Total Hours –45

6. D. R. Choudhury and S. Jain, Linear Integrated Circuits, New Age International, New Delhi, 2002

OUTCOMES:

At the end of the course, the student is expected to

- apply the fundamentals of PN junction and Zener diode to design practical circuits.
- apply the concepts of BJT to design practical circuits .
- analyse the working of FET and its applications.
- characterize opamp behaviour in practical circuits.
- synthesize opampcircuits to perform various mathematical operations
- design feedback amplifiers and oscillators using opamps.

EEC2104	ELECTROMECHANICAL ENERGY CONVERSION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To relate the concepts of electromechanical energy conversion principles to working of electrical machines.
- To impart knowledge on working and classification of DC machines; determination of their characteristics and methods of speed control of motors.
- To estimate the various losses taking place in DC machines and to study the different testing methods to arrive at their performance.
- To familiarize the constructional details, the principle of operation, prediction of performance, the methods of testing the transformers and three phase transformer connections.

MODULE I ELECTROMECHANICAL ENERGY CONVERSION SYSTEMS 8

Principles of Electromechanical Energy Conversion-Conservative force field-Energy Balance Relationships in Electromechanical Systems-Conservation of Energy-Concept of co-energy.

MODULE II DC GENERATOR 8

Construction – Principle of Operation – classification– types of armature windings – EMF equation -OCC & Load characteristics – Power Flow diagram – Losses and efficiency- Armature reaction – Commutation

MODULE III DC MOTOR 8

Construction – Principle of operation – Torque – Types and characteristics – Power Flow diagram – Starters – Speed Control - Solid state DC drives (Qualitative treatment only).

MODULE IV BRUSHLESS DC MOTORS 6

Brushless Concept – Construction and operation of Brushless DC motors (BLDCM) – Characteristics – Concept of control of BLDCM – Control Circuitry – Applications

MODULE V TRANSFORMER 8

Construction and principle of operation – EMF equation – Transformer on no load and load –Phasor diagram - Equivalent circuit - Voltage regulation – Losses & Efficiency - Auto Transformer - All day efficiency- 3-phase transformer- connections-

applications.

MODULE VI TRANSFORMER TESTING &PARALLEL OPERATION 7

OC and SC tests — computation of Voltage regulation, losses & efficiency using OC and SC tests - polarity test – Sumpner's test - Parallel Operation of transformers.

Total Hours –45

REFERENCES:

4. M.N.Bandyopadhyay, Electrical Machines Theory and Practice, PHI Learning PVT LTD., New Delhi, 2009.

OUTCOMES:

At the end of this course, the student will possess knowledge and skills on the following:

- apply the concepts of electromagnetism in electromechanical energy conversion systems.
- analyze the performance and characteristicsof DC Generators.
- compare performance characteristics of DC Motors for various applications.
- test and troubleshoot DC Motors and DC Generators.
- analyze the performance and characteristicsofBLDCM and Transformers.
- compute voltage regulation, losses and efficiency of transformers by conducting appropriate test.

EEC 2105 ELECTRONIC DEVICES & CIRCUITS LAB

L	T	P	C
0	0	2	1

OBJECTIVES:

- To get practical exposure of the various electronic devices and its applicationcircuitry.
- To design and implement rectifiers and oscillators.
- To provide hands-on experience on opamp application circuits.

LIST OF EXPERIMENTS:

1. VI characteristics of PN junction diode and Zener diode.
2. Characteristics of BJT.
3. Characteristics of LED and photo transistor.
4. Characteristics of JFET.
5. Frequency response of FET amplifier.
6. Analysis of Bridge Rectifier.
7. Measurement of important Opamp parameters such as CMRR, slew rate, open loop gain, input and output impedances, GBW product.
8. Gain of inverting and non-inverting amplifier
9. Op Amp application circuits - Integrator and differentiator
10. Astable and Schmitt Trigger using Opamp.
11. Design of RC Phase shift oscillator using Opamp .
12. Design of Hartley and Colpitts oscillator using Opamp.

Total Hours –30

OUTCOMES:

The student should have the ability to

- practically construct and verify the various characteristics of semiconductor devices
- demonstrate the working of amplifiers.
- demonstrate the working of various oscillator circuits.
- analyze applications of photo diode and photo transistor.
- demonstrate the working of a bridge rectifier.
- demonstrate the working of opamp application circuits.

EEC2106	ELECTROMECHANICAL ENERGY CONVERSION LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To experimentally verify the performance and characteristics of DC machines and 1-phase transformers.
- Know the necessity to predetermine the performance of DC machines and transformers.
- To apply DC machines and transformers to various applications.

LIST OF EXPERIMENTS

1. OCC and Load characteristics of a separately excited DC generator.
2. OCC and Load characteristics of a self-excited DC shunt generator.
3. Load characteristics of a DC shunt motor.
4. Load characteristics of a DC series motor.
5. Load characteristics of a DC compound motor.
6. Speed control of DC shunt motor.
7. Swinburne’s test.
8. Hopkinson's test
9. Load test on a 1-phase transformer.
10. OC and SC tests on a 1-phase transformer.
11. Sumpner’s test.
12. Polarity test and 3-phase transformer connections.
13. Speed control of BLDC motors.

Total Hours –30

OUTCOMES:

At the end of the course, the student will have ability to:

- Plot the OCC and load characteristics of DC generators.
- Conduct load test on various types of DC motors.
- Choose appropriate speed control methodology for DC and BLDC motors.
- Predetermine the efficiency of DC machines by conducting indirect tests.
- Predetermine the efficiency of transformers by conducting indirect tests.
- Identify the polarity of different three phase transformer connections.

SEMESTER IV

ENC2282	**WRITTEN COMMUNICATION**	**L**	**T**	**P**	**C**
		0	**0**	**2**	**1**

OBJECTIVES:

- To help students identify content specific vocabulary and learn its usage.
- To expose them to reading for specific purposes, especially in professional contexts.
- To expose them to the process of different kinds of formal writing.
- To help them learn corporate correspondence for different purposes.
- To train them in preparing effective applications with résumé
- To make them write different types of reports.

MODULE I **4**

Introduction - process of writing – Fundamentals of academicand professional writing –Understanding short, real world notices, messages, etc.

MODULE II **4**

Reading industry related texts (ex. Manufacturing, textile, hospitality sector etc.) for specific information.

Writing Instructions and recommendations

MODULE III **6**

Understanding format and conventions of writing email, memo, fax, agenda and minutes of the meeting.

Writing email, memo, fax, agenda and minutes of the meeting for various purposes (industry specific)

MODULE IV **6**

Viewing letter of application and Résumé, letter calling for an interview, letter of inquiry and Promotional letter

Writing Functional résumé and letter of application using Edmodo,

MODULE V **6**

Viewing a Video and reading a case study (industry specific) – collaborative writing using Edmodo –reading and information transfer

Writing reports- Survey, feasibility and progress – exposure to discipline specific reports

MODULE VI **4**

Writing Statement of purpose (Higher Education)-- Justifying and writing about one's preparedness for job (Statement of Purpose highlighting strengths and weaknesses) – Peer evaluation skills through Edmodo.

P – 30; Total Hours –30

6. Whitby, Norman (2014). *Business Benchmark: Pre-Intermediate to Intermediate.* Cambridge University Press, UK.

OUTCOMES:

On completion of the course, the students will have the ability to

- Identify content specific vocabulary and also use them in appropriate contexts.
- Demonstrate reading skills with reference to business related texts.
- Draft professional documents by using the three stages of writing.
- Create different types of documents for various corporate correspondences.
- Write effective letter of applications, résumé and statement of purpose.
- Write business related reports efficiently.

EEC2211	POWER SYSTEM - I	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To provide the students the knowledge and skills to model and analyze the transmission lines in electric power systems.
- To provide fundamental design considerations for insulator strings, cables and overhead lines.
- To make the students understand the different bus-bar arrangements in substations and distribution schemes
- To provide the knowledge and skills to model large-scale power systems.

MODULE I INTRODUCTION AND TRANSMISSION LINE PARAMETERS 12

Structure of electric power system - Generation, transmission and distribution - EHV AC and HVDC transmission – break-even distance.

Transmission line parameters of single and three phase transmission lines with single and double circuits: resistance, inductance and capacitance of solid, stranded and bundled conductors - symmetrical and unsymmetrical spacing – transposition of conductors - self and mutual GMD - skin and proximity effects – communication interference.

MODULE II MODELING AND PERFORMANCE OF TRANSMISSION LINES 12

Classification of lines: short, medium and long lines - equivalent circuits and mathematical models - attenuation constant, phase constant, surge impedance - transmission efficiency and voltage regulation - real and reactive power flow in lines – power angle diagram - surge-impedance loading - shunt and series compensation - Ferranti effect and corona loss.

MODULE III III INSULATORS, CABLES AND MECHANICAL DESIGN OF OVERHEAD LINES 11

Insulators: Types - voltage distribution in insulator string - string efficiency - improvement of string efficiency.

Underground cables: Constructional features of LT and HT cables – capacitance-dielectric stress and grading - thermal characteristics.

Mechanical design of overhead lines: Sag in overhead lines - calculation of sag and

tension – supports at equal and unequal heights – effects of wind and ice.

MODULE IV SUBSTATION AND DISTRIBUTION SYSTEM 10

Types of substations - bus-bar arrangements - substation bus schemes: single bus scheme, double bus with double breaker, double bus with single breaker, main and transfer bus, ring bus, breaker-and-a-half with two main buses, double bus-bar with bypass isolators - radial and ring-main distributors – interconnectors - AC distribution: AC distributor with concentrated load; three-phase, four-wire distribution system

MODULE V POWER SYSTEM REPRESENTATION 8

Balanced three phase systems and per phase analysis, per phase models of generator, load, transmission line and transformers - equivalent circuit of transformers with off-nominal tap ratio - single line diagram – per unit system - impedance and reactance diagrams.

MODULE VI NETWORK MODELING 7

Network modeling by network matrices - Bus admittance matrix: formation of bus admittance matrix by inspection method (two rule method) - basic graph theory – node incidence matrix – formation of bus admittance matrix by singular transformation.

L – 45; T – 15; Total Hours –60

7. M.A. Pai, ‘Computer Methods in Power System Analysis’ McGraw Hill Education (India) Pvt. Ltd., 2006.

OUTCOMES:

At the end of the course, the students will be able to

- Calculate the electrical parameters of the single and phase transmission lines with different configurations.
- Model short, medium and long transmission lines and analyze their performance.
- Follow the fundamental design considerations for insulator strings, cables and laying of transmission lines.
- Choose appropriate bus schemes for substations and distribution schemes, based on the requirement.
- Draw and interpret single line diagrams and per unit impedance diagrams of a given power system with all the related equipment.
- Model an electrical power network using bus admittance matrix.

EEC2212	AC MACHINES	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To give exposure to the students about synchronous machines including their constructional details, principle of operation and performance analysis.
- To learn the characteristics of induction machines and relate their use for various applications.
- To enable the students to compute various parameters of AC rotating machines by performing suitable experiments.
- To enable the students to solve analytical problems on AC machines.

MODULE I SYNCHRONOUS GENERATOR 8

Construction – Principle of Operation – EMF equation – Synchronous impedance – Voltage Regulation-Application.

MODULE II PERFORMANCE STUDY OF SYNCHRONOUS GENERATOR 8

Armature Reaction – Parallel operation – Synchronizing current and torque – Effect of change in excitation and mechanical input – Two reaction theory – Slip test.

MODULE III SYNCHRONOUS MOTOR 9

Principle of Operation – Starters – Power developed and torque – Power stages and efficiency – Motor on load with varying excitations and varying loads – V and inverted V curves- Application.

MODULE IV THREE PHASE INDUCTION MOTOR 8

Construction – Types – Principle of operation –Slip-torque characteristics - Various torques - T_{st}, T_{max} etc., – Losses and efficiency –Starters and Speed Control-Application.

MODULE V PREDICTION OF PARAMETERS FOR THREE PHASE INDUCTION MOTOR 8

No load and blocked rotor tests – Equivalent circuit – Circle diagram –

Cogging torque and crawling- induction machines with deep bar and double cage rotors.

MODULE VI SINGLE PHASE INDUCTION MOTOR 5

Constructional details of single phase induction motor - Double revolving field theory and operation - Equivalent circuit - No load and blocked rotor test - Performance analysis - Starting methods of single-phase induction motors.

L – 45; T – 15; Total Hours –60

4. Alexander S. Langsdorf, “Theory of Alternating current Machinery” SecondEdition, TATA McGRAW-HILL, 1983.
5. P.S.Bhimbra, Electrical Machinery, Khanna Publishers, 2014.

OUTCOMES:

At the end of this course, the student will have ability to:

- Identify different types of synchronous and induction machines.
- Explain how synchronous and induction machines works.
- Do basic calculation on synchronous and induction machines.
- Identify areas of application of synchronous and induction machines
- Assess the performance of Induction motor using equivalent circuits.
- Analyze the performance of single phase induction motor.

EEC2213	POWER ELECTRONICS	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To experimentally reinforce and support the fundamental concepts in Power Electronics.
- To provide an important bridge between theory and application and promoting active design-based learning.
- To expose the students to the digital controller based controlling techniques.
- To introduce the students to state-of-the-art industrial-grade experimentation tools.
- To equip the next generation of power electronics design engineers with the skills to tackle problems make them more adaptable for industry with less effort on job training.

MODULE I PHASE CONTROLLED RECTIFIERS 9

Construction and characteristics of DIAC, SCR - Understanding the specification parameters of SCR and DIAC - Case study: MOC 30XX series optically isolated Thyristor drivers – single phase controlled rectifiers: single pulse, two pulse and semi converters with R and R-L Loads – three phase controlled rectifiers: three pulse and six pulse converters with R and R-L loads -Design of RC Snubber.

MODULE II AC TO AC CONVERTERS 9

Construction and characteristics of TRIAC - Understanding the specification parameters of TRIAC - AC Voltage controllers: SCR based single phase AC phase angle controller with R and RL loads – Integral controller –AC voltage controller for Incandescent Light Dimming and Motor Speed Control - Digital AC Lamp intensity controller with zero crossing detection - Matrix converter.

MODULE III DC-DC CONVERTERS 9

Construction and characteristics of Fast recovery diode, MOSFET and IGBT- Understanding the specification parameters of Fast recovery diode, MOSFET and IGBT- High side and Low side switching- High side, Low side and half bridge gate drivers – optically isolated gate drivers – Basics and generation of PWM - operation of Non-Isolated DC/DC Converters: Buck, Boost and Buck-Boost converters \

MODULE IV INVERTERS 6

Single phase and Three phase (both 120°and 180°Modes) Inverters - Sine-PWM - Space Vector PWM – Multilevel inverters: Capacitor-Clamped Inverter – Cascaded H-Bridge Inverter- Uninterruptible power supplies.

MODULE V SWITCH MODE POWER SUPPLIES 6

operation of Isolated DC/DC Converters: Flyback Converter - Forward Converter - Bridge Converters. Design Specifications - SMPS Transformer Design –Selection of the Semiconductors: Selection of the Output Rectifiers and Power Switch - Design of the SMPS Controller - UC3843current mode PWM controller Implementation.

MODULE VI MODELING AND SIMULATION OF POWER ELECTRONIC CONVERTER USING PSIM 6

Phase controlled Rectifiers – DC-DC converters - closed loop control of Choppers and fly back converters– SPWM inverters.

L – 45; T – 15; Total Hours –60

7. *Marty Brown* Mokorola Semiconductor "Practical Switching Power Supply Design" Academic PressA Harcourl Science and Technology Company525 B Street. Suite IWO. San Diego. California 92101-4495. USA 1990.

OUTCOMES:

At the end of the course, the student is expected to

- Select appropriate power electronics device and control IC for different applications.
- analyze and design controlled rectifiers and AC voltage regulators.

- analyze and design DC- DC converters and inverters.
- use micro controller in power electronic applications.
- design Switch Mode Power Supplies.
- modify and scale the converter design to fit real time applications and simulate power electronic circuits using PSIM software.

EEC2214	AC MACHINES LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To experimentally verify the performance and characteristics of Alternator, Synchronous motor, 3-phase induction motor.
- To perform tests on the various types of electric motors and generators
- To introduce students to the operating principles, methods of starting and area of applications of synchronous and induction machines.
- To perform speed control in various AC machines.
- To synchronize AC machines and to regulate the voltage.

LIST OF EXPERIMENTS:

1. Regulation of alternators by EMF method.
2. Regulation of alternators by MMF method.
3. Regulation of alternators by Potier Triangle method.
4. Load test on a 3-phase alternator.
5. Regulation of a salient pole alternator by Slip test.
6. Synchronization of alternators
7. V and inverted V curves of a synchronous motor.
8. Load test on a 3-phase squirrel cage induction motor.
9. No load and blocked rotor tests on a 3-phase induction motor to draw the equivalent circuit and circle diagram.
10. Load test on single phase induction motor.
11. Performance study of induction generator.

Total Hours –30

OUTCOMES:

At the end of the course, the student will have the ability to:

- estimate voltage regulation of alternators by EMF, MMF and Potier triangle methods.
- evaluate the performanceof synchronous and induction machines by plotting their characteristic curves.
- analyze the working of any electrical machine under loaded and unloaded conditions.

EEC2215	POWER ELECTRONICS LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To acquire knowledge on design and operation of several common circuits relevant to the field of power electronics.
- To provide the students with hands-on experience in design and prototyping the power electronic converters.
- To expose the students to the Micro Controller based controlling techniques.
- To describe the real time implementation of DC-DC converters and Inverters.
- To provide an introduction to the dSPACE Control Desk and MATLAB/Simulink software.

LIST OF EXPERIMENTS:

1. Design and fabrication of Half wave controlled rectifier using RC Firing Circuit.
2. Design and fabrication of SCR and TRIAC gate driving circuits using MOC 30XX series optically isolated Thyristor drivers.
3. Design and fabrication of zero crossing detector circuit for SCR and TRIAC triggering.
4. Design and Implementation of digital control of Half wave controlled rectifier using PIC Microcontroller.
5. Design and Implementation of TRIAC based AC Lamp intensity control and Heat Control Using PIC Microcontroller.
6. Design and fabrication of gate driving stage using half bridge gate driver IC with High speed opto-coupler.
7. Designing and fabrication of gate driving stage using optically isolated gate driver IC.
8. Design and fabrication of Buck Converter.
9. Design and fabrication of Boost Converter.
10. Design and fabrication of Flyback Converter.
11. Design and fabrication of Half bridge Inverter using Half bridge gate driver IC.
12. Design and fabrication of H- Bridge Inverter.
13. ControlDesk and Matlab/Simulink software

Total Hours –30

OUTCOMES:

At the end of the course the student is expected to:

- Design the driving and interfacing stages of switching power converters and inverters.
- Implement and interface digital controller in power electronics circuits.
- Fabricate the different types of converters and inverters.
- Implement fabricated converters and inverters to control the AC and DC Motors.
- Be Proficient in using the dSPACE Control Desk and Matlab /Simulink software.

SEMESTER V

		L	T	P	C
MSC 3181	**LEADERSHIP & CEO TRAINING**	**3**	**0**	**0**	**3**

OBJECTIVES:

The course aims at

- Bringing about positive transformation in students' attitude.
- Building unique leadership competencies that would ensure successful transition of students across all career stages.
- Sensitizing students to identify their strengths & weakness and training them to deal with it.
- Assisting students in enhancing their expressive ability and inducing a high level of self-confidence to manage both business and emotions
- Training students to become more adaptable and flexible to changing business environment

MODULE I INTRODUCTION TO LEADERSHIP 12

Leadership concept - meaning, definitions, importance of leadership, leadership traits. Leadership functions- general functions, listening, observing, managing and decision making. Components of leadership - leaders, followers and situation. Leadership theories – Trait theory, Skills theory, Style theory, Situational theory, Transformational theory, Transactional theory, Path Goal Theory and LMX. Assessing emotional intelligence and exploring the capabilities and inherent traitsthrough psychometric tests - Multi factor leadership questionnaire and personal reflections

MODULE II LEADERSHIP STYLE AND COMMUNICATION 8

Leadership styles-visionary, Coaching, Affiliative, Democratic, Pacesetting Commanding, Transformational, Transactional. Autocratic, Participative, Laissez-Faire Leader versus Managers. Leadership communication - Rationale, tactic, assertive, formal, informal, communication in crisis- leadership and negotiations, Leadership Presentations-convincing and impressive style

MODULE III LEADERSHIP ROLES 8

Facets of leadership- Leader as an individual – personality and leadership, values, attitudes and ethics of a leader. Leader as a relationship builder- empowering people to meet higher order needs, initiating organization wide motivational programs, involvement with all stakeholders- focusing on organization growth. Leader as an inspirer- motivation and leadership, recognizing and appreciating contributions,

empowering others to lead Leader as an innovator –leader's role in shaping culture and values in an organization. Leader as a Liaison- Leader as team player.

MODULE IV LEADERSHIP CHALLENGES AND STRATEGIES 9

Challenges in leadership: Perception of organization culture and values, interpreting the power dynamics in the organization, establishing work life balance. Bad leadership – Reasons and impact. -Case Study of Marissa Mayer-Yahoo.Inc Organizational transformation through efficient leaders-Case study of Apple Inc. Blue Ocean Leadership-Steps to Blue ocean Leadership-Four Pillars of Blue Ocean leadership-Blue Ocean leadership grid.

MODULE V LEADERSHIP AND CEO TRAINING 8

Leader as a CEO: Traits of a successful CEO, Key responsibilities of a CEO, the path to be a CEO ,Training on Board Room Discussions, Meeting the CEO –Live sessions with industry CEO's. Requirements of Leadership: - Cognitive skills, Interpersonal skills, Business skills, Strategic skills. Role of Emotional Intelligence in taking up key-positions in the organization.

MODULE VI TEACHING PEDAGOGY

Nurturing – Based on the identified strengths and weaknesses, training will be given to enhance the strengths and overcome the weakness.

Assessment - Continuous evaluation will be effected through group discussions, oratory assignments and situational enactments. Pre-and post-training assessment through peer reviews and faculty feedback.

Sustained development – Training will be imparted for self-development and monitoring of leadership skills to ensure sustained applicability of the skills learnt.

Total Hours –45

4. Leadership Wisdom by Robin Sharma Jaico Publishing House;

OUTCOMES:

The students will be able to

- Explore through self-introspection one’s own leadership style, their strength and weakness
- Gain self confidence to lead a team in the organization
- Realize the role of leadership in making or breaking of an organization
- Acquire the practice of self introspection and development of leadership competencies thorough continuous efforts
- Manage their own emotions as well as other resulting in successful relationship building with all stakeholders

MSC 4181	SOCIAL ENTREPRENEURSHIP	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To be able to understand the field of social entrepreneurship and Social problems
- To be able to describe and understand the traits of social entrepreneurs
- To recognize the social business opportunities
- To synthesize the resource mobilization ways for social entrepreneurship
- To understand the social entrepreneurship models
- To recognize the impact of social entrepreneurship on societies.

MODULE I INTRODUCTION TO SOCIAL ENTREPRENEURSHIP 7

Introduction - Emergence and Development of Social Entrepreneurship. Social Problems in India: An Overview. Social Development: The Indian Scenario. Emergence of Social Entrepreneurs and Sustainable Solutions to Social Problem. Characteristics and Context of Social Entrepreneurship. The Role of Social Entrepreneurship in Societies & Economies.

MODULE II SOCIAL ENTREPRENEURSHIP: DRIVERS AND CHALLENGES 7

The Drivers of Social Entrepreneurship. Elements of the Social Entrepreneurial Personality. Challenges of financial constraints. Challenge to attract and cultivate talented workers. Challenge of evaluation of social entrepreneur impact. Challenge of scaling and its impact. Cases.

MODULE III SOCIAL ENTREPRENEURSHIP: OPPORTUNITY RECOGNITION 7

Opportunity Recognition and Planning Process. Opportunities for Social Entrepreneurs. The Nature of Social Entrepreneurial Opportunities. Social Problems into Opportunities. Idea development and conceptualization of social problem. Cases

MODULE IV RESOURCE MOBILIZATION FOR SOCIAL VENTURE 8

Resources at Initial Stage. Social Network as a role of Social Capital. Team and Collective Efforts. Need and Determination of Important Resources. Resource of Knowledge, Skills and Abilities. overview of venture capital and angel investment. Cases

MODULE V **BUSINESS MODELS AND BUSINESS PLAN FOR SOCIAL ENTERPRISES** **8**

Design Principles of Social Entrepreneurship Business Models, Evaluation of the Root Cause of a Societal Problem. Developing business plan for social ventures. Developing an investor presentation. Feasibility study and report. How to start a business - Procedures for registration of small scale industry

MODULE VI **THE IMPACT OF SOCIAL ENTREPRENEURSHIP ON SOCIETIES AND CASES** **8**

Static Impact of Social Entrepreneurship. Impact of Charitable NGOs vs. Social Entrepreneurship, Impact of For-Profit Companies vs. Social Entrepreneurship. Social entrepreneurship report preparation by students.

Case Study of Social Entrepreneurs

Total Hours –45

REFERENCES:

1. “Social Entrepreneurship : New models of sustainable social change” . Alex Nicholls, Oxford University Press 2006
2. The Process of social value creation : A multiple case study on Social Entrepreneurship in India , Archana Singh Springer 2016
3. “Social Entrepreneurship and social business” Christine K Volkmann, Springer Gabler 2012
4. “Social Entrepreneurship” Manuel London ,Routlege, 2010.

OUTCOMES:

The students can be able to

- Conceptualize social entrepreneurship in terms of a theoretical frameworkbetween changing social values and institutions
- Think and communicate about social values
- Learn about practical models of social change to launch, lead, manage, and evaluate a social venture
- Analyze funding needs and sources for the social venture
- Experience the ideas can be critically and collaboratively examined prior to commitment.

ENC 3181	COMMUNICATION AND SOFT SKILLS - I CAREER CHOICE	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To create awareness of industrial trends and market demands.
- To encourage students to explore career opportunities in an industry and evaluate themselves in relation to industry preparedness

MODULE I **6**

Knowledge about specific industry-Discussion with industry experts --Self evaluating career prospects through survey questionnaire (based on his/her eligibility for taking up a job (industry preparedness)

MODULE II **6**

. Knowing case studies of industries(pertaining to students' choice of career)- Reading and discussing about job markets-goal setting, working on creativity.

MODULE III **4**

SWOC analysis and discussing outcomes--exploring mini projects or case studies of latest industries.

MODULE IV **6**

Writing statement of purpose pertaining to career choice---- Outcomes

MODULE V **8**

Project or case study presentations (Presentation in pairs) -mini project report or case study report.

Total Hours – 30

REFERENCES:

1. Brown,D.(2002). Career Choice and Development. Wiley,J. & Sons.USA
2. Lore,N.(1998). The Pathfinder: How to Choose or Change Your Career for a Lifetime of Satisfaction and Success. Simon & Schuster.USA.
3. Shell, G.R.(2013). Springboard Launching your Personal Search for Success.Portfolio.USA.

OUTCOMES:

After the completion of the course, students would be able to

- Speak about their career choice.
- Self evaluate their strengths and weaknesses and speak about it.
- Make effective presentations on case studies or relating to projects.
- Write the statement of purpose relating to their career choice.

EEC3101 POWER SYSTEM - II

L	T	P	C
3	1	0	4

OBJECTIVES:

- To provide the student the computational skills required to model and analyze large-scale power systems under normal and abnormal operating conditions.
- To make the students understand the usage of efficient numerical techniques suitable for computer application which are required for planning and operation of power systems.
- To provide the fundamentals of power system control and economic operation.

MODULE I POWER FLOW ANALYSIS 11

Introduction to power system analysis: power flow, fault and stability analyses.

Power flow analysis: Problem definition - bus classification - derivation of power flow equation in rectangular and polar forms - review of Gauss-Siedel and Newton-Raphson methods for solution of non-linear algebraic equations.

Power flow solution by Gauss-Siedel, Newton-Raphson, Decoupled and FDPF methods - computation of slack bus power, transmission loss and line flows – development of power flow diagrams.

MODULE II SYMMETRICAL FAULT ANALYSIS 10

Need for short circuit study - symmetrical short circuit analysis by internal emf and Thevenin's equivalent circuit methods - short circuit current and MVA calculation - Thevenin's impedance and bus impedance matrix - bus impedance matrix building algorithm (without mutual impedance) - symmetrical short circuit analysis by bus impedance matrix - selection of circuit breakers.

MODULE III SYMMETRICAL COMPONENTS AND UNSYMMETRICAL FAULT ANALYSIS 10

Symmetrical components - sequence impedances of synchronous machines, transformers, transmission lines and loads - formation of sequence networks for unsymmetrical fault analysis.Unsymmetrical fault analysis: LG, LL and LLG faults with and without fault impedance - effect of ground impedance.

MODULE IV STABILITY ANALYSIS 10

Basic concepts of steady state, transient and dynamic stabilities - swing equation for SMIB system - power angle equation and curve- steady state stability limit - transient

stability: equal area criterion, critical clearing time and angle - numerical solution of swing equation by modified Euler method - methods to improve steady state and transient stabilities.

MODULE V POWER SYSTEM OPERATION AND CONTROL 12

Types of load – load characteristics – load curves and load duration curves – generation reserves - Energy control center: functions – monitoring, data acquisition and control system hardware configuration – SCADA and EMS functions – power system security – various operation states.

Real power control: Fundamentals of speed governing mechanism and its modeling – speed load characteristics – load sharing between two synchronous generators in parallel – need for frequency control - automatic generation control - concept of control area – load frequency control in single and two area systems - modeling and static analysis.

Introduction to reactive power control: Generation and absorption of reactive power – role of excitation systems and AVR.

MODULE VI ECONOMIC OPERATION OF POWER SYSTEMS 7

Economic dispatch: concept of incremental cost - incremental cost curves - classical economic dispatch without and with losses - loss coefficients.

Unit commitment: need, constraints, solution methods – unit commitment by priority listingscheme.

L – 45; T – 15; Total Hours –60

9. Kundur, 'Power System Stability and Control', McGraw-Hill Pub. Co., 1994.

OUTCOMES:

The students will be able to

- Write a program to perform load flow analysis using Gauss Seidel / Newton Raphson method for simple systems.
- Perform symmetrical fault analysis in power systems.
- Transform unbalanced power systems into a set of balanced systems using symmetrical component transformation for unsymmetrical fault analysis.
- Analyze the given power system for small signal / transient stability and compute critical clearing angle and critical clearing time for simple systems using equal area criterion.
- Perform load frequency control in single and two area systems with the understanding of basic concepts in power system operation.
- Prepare generation schedules considering economic operation of power systems.

EEC3102 MEASUREMENTS AND INSTRUMENTATION

L	T	P	C
3	0	0	3

OBJECTIVES:

To impart Knowledge on -

1. Various instrument systems and their errors in them.
2. Various signal conditioning circuits.
3. Principle of various active and passive transducers.
4. Various storage and display devices.
5. Instruments for measuring the various electrical quantities.
6. Working principles of biomedical instruments that are actually in use at the present day.

MODULE I INTRODUCTION 7

Functional elements of an Instrument - Static and Dynamic characteristics - Errors in measurement - statistical evaluation of measurement of data - Standards and Calibration.

MODULE II TRANSDUCERS 9

Classification of transducers - selection of transducer - resistive, capacitive and inductive transducer - Piezo- electric transducer - optical and digital transducers. Transducers for measurement of displacement,temperature,level, pressure, velocity and acceleration.

MODULE III SIGNAL CONDITIONING CIRCUITS AND DISPLAYS 9

Bridge Circuits - differential and Instrumentation amplifier -filter circuits- V/f and f/V converters - multiplexing and demultiplexing - data acquisition systems - digital CRO.

MODULE IV ELECTRICAL INSTRUMENTS 6

Principle and types of analog and digital ammeters and voltmeters – Single and three phase watt meters and energy meter –magnetic measurements –

MODULE V BIOMEDICAL INSTRUMENTS 6

Introduction to biomedical instruments - Blood pressure measurement methods - Blood flow measurement methods - CT scanner - MRI scanner.

MODULE VI ASSISTING AND THERAPEUTIC EQUIPMENTS 8

Pacemakers - Defibrillators - Ventilators - Nerve and muscle stimulators - Diathermy -

Audio meters - Dialyzers (Haemodialysis Machine)

Total Hours –45

6 R.S.Khandpur, 'Handbook of Bio-Medical instrumentation', Tata McGraw Hill Publishing Co Ltd., 2003.

7 M.Arumugam, 'Bio-Medical Instrumentation', Anuradha Agencies, 2003.

OUTCOMES:

At the end of the course, the student is expected to

1. understand the functional blocks of various Instruments and their standards.
2. Study and select transducers based on their working principle.
3. Understand the working of signal conditioning circuits.
4. Understand the working principles of electrical instruments.
5. Understand the working of Biomedical instruments
6. Understand the working of therapeuticequipment.

EEC3103	DIGITAL SYSTEMS & INTEGRATED CIRCUITS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce basic postulates of Boolean algebra, the methods for simplifying Boolean expressions and shows the correlation between Boolean expressions
- To outline the formal procedures for the analysis and design of combinational circuits and sequential circuits.

MODULE I Number Systems and Boolean Algebra 8

Review of binary, octal and hexadecimal number systems - conversion methods- number representations - signed, unsigned, fixed point, floating point numbers – Binary code BCD, Gray code - error detection and correction codes - parity codes- Boolean algebra – basic postulates, theorems – canonical forms-Simplification of Boolean function using Karnaugh map and Quine-McClusky method – Implementations of logic functions using gates, NAND –NOR implementations –Multi level gate implementations- Multi output gate implementations.

MODULE II Combinational Logic Design

Design Procedure**-** Implementation of combinational logic functions –Half adder, full adder– Half subtraction – full subtract or – parallel adder, Carry look ahead adder – binary adder – Magnitude comparator – encoder and decoders – multiplexers – code converters – parity generator/checker- implementation of combinational circuits using de-multiplexers.

MODULE III Analysis of Sequential Circuits

General model of sequential circuits- flip-flops- latches – level triggering, edge triggering- master slave configuration - concept of state – state diagram - state table, state reduction procedures -Design of synchronous sequential circuits -up/down, modulus counters - shift registers - Ring counter - Johnson counter - timing diagram – serial adder - parity checker - sequence detector.

MODULE IV Monolithic IC Processes and fabrication

Basic planar processes-fabrication of a typical circuit,Refining and growth of Si ystals, Si wafer preparation, Diffusion of dopant impurities, Ion implantation, thermal oxidation, photo lithography, fine line lithography, relative plasma etching, chemical

vapor deposition, metallization.

MODULE V VHDL MODELING AND DESIGN FLOW

Introduction to VLSI - Basics of Verilog, operators, hierarchy procedures and assignments, timing controls and delays, tasks and functions, control statements. VHDL: Syntax and semantics, identifiers, and literals, entities and architectures, packages and libraries interface, type and other declarations, sequential statements, operators, arithmetic operators, VHDL and logic synthesis, Verilog and logic synthesis – Sequential, Data flow, and Structural Modeling – Functions, Procedures and attributes - Test benches, Synthesizable, and non synthesizable statements - packages and configurations - Modeling in VHDL with examples of circuits such as counters, shift registers, bidirectional bus.

MODULE VI PROGRAMMABLE LOGIC DEVICES & SEQUENTIAL LOGIC PRINCIPLES

Introduction to the CPLDs - Study of architecture of CPLD and Study of the Architecture of FPGA .Sequential Circuits – Meta-stability Synchronization – Design of Finite State. Machines and State minimization - FSM CASE STUDIES - Traffic Light control - Lift Control and UART STA and DTA.

Total Hours –45

OUTCOMES:

Students will be able to :

- Apply the concepts and techniques associated with the number systems and codes and to minimize the logical expressions using Boolean postulates.
- To design various combinational and sequential circuits.
- An in-depth understanding of fundamentals of Op-amps and its application circuits.
- Develop design skills to design various circuits using different data conversion systems using op-amps
- Knowledge regarding the various signal generator circuits and the power amplifiers using op-amp

EEC3104	POWER SYSTEM SIMULATION LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

To develop simple C programs for the following basic requirements and to acquire experience in the usage of standard packages for the following analysis / simulation / control functions.

a) Formation of bus admittance and impedance matrices and network solution.

b) Power flow solution of small systems using simple method, Gauss-Seidel P.F.method.

c) Unit Commitment and Economic Dispatch.

d) Steady-state analysis of large system using NRPF and FDPF methods.

e) Quasi steady-state (Fault) analysis for balanced and unbalanced faults.

f) Transient stability simulation of multimachine power system.

g) Simulation of Load-Frequency Dynamics and control of power system.

LIST OF EXPERIMENTS:

1. Computation of Parameters and Modeling of Transmission Lines
2. Formation of Network Matrices and Solution of Networks.
3. Power Flow Analysis I: Solution of Power Flow using Gauss-Seidel Method.
4. Power Flow Analysis II: Solution of Power Flow using Newton-Raphson and Fast-Decoupled Methods.
5. Short Circuit Analysis.
6. Transient and Small Signal Stability Analysis: Single-Machine Infinite Bus System.
7. Transient Stability Analysis of Multi machine Power Systems.
8. Electromagnetic Transients in Power Systems.
9. Load - Frequency Dynamics of Single and Two-Area Power Systems.
10. Unit Commitment and Economic Dispatch in Power Systems.

TOTAL HOURS: 30

OUTCOMES:

At the end of the course, the student will be able to

- Determine the performance characteristics of a long transmission line and its reactive power requirement.
- Perform load flow studies using Gauss Seidal , Newton Raphson and fast decoupled method.

- Perform contingency analysis and selection methods to improve system security.
- Solve various faults on power system elements using fault analysis techniques.
- Perform transient and small signal stability study.
- Perform load frequency dynamics of single area and two area power systems.
- Implement optimal scheduling using economic dispatch programme.

EEC3105	MEASUREMENTS AND INSTRUMENTATION LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

• To select appropriate instruments for the measurement of various process parameters.

• To calibrate various instruments.

LIST OF EXPERIMENTS

1. Study of Displacement and pressure transducers.
2. Design of AC Bridges (Schering and Maxwell).
3. Design of DC Bridges (Wheatstone and Kelvin).
4. Design of Instrumentation Amplifiers.
5. Study of A/ D and D/A converters.
6. Study of Transients.
7. Calibration of Single Phase Energy meter.
8. Calibration of Current Transformer.
9. Measurement of three phase Reactive Power and Power factor.
10. Measurement of Iron Loss.

OUTCOMES:

To enable the student to

1. Study the various types of transducers and their characteristics
2. Design Instrumentation amplifiers.
3. Calibrate the various instruments
4. Measure the electrical quantities like power and power factor
5. Design Inductive and capacitive bridge circuits.
6. Measure the iron loss in a specimen.

EEC3106	DIGITAL SYSTEMS & INTEGRATED CIRCUITS LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To provide hands-on experience on design, testing, and analysis of various digital circuits.
- To provide hands-on experience on design, testing, and analysis of Op Amp Circuits

LIST OF EXPERIMENTS:

1. Design and implementation of combinational circuits using basic gates and universal gates for arbitrary functions.
2. Design and implementation of multiplexers and Demultiplexers.
3. Design and implementation of Code converters
4. Design and implementation of encoder and decoder
5. Design and implementation of synchronous counters and Asynchronous Counters.
6. Study of ADCs and DACs: Verification of A/D conversion using dedicated ICs.
7. Astable and Monostable Multivibrators and Schmitt Trigger using 555 timers.
8. Memory chips

a. Simple exercises like READ and WRITE involving memory chips

b. Expansion of Memory Size

9. Simulation and verification of Combinational Circuits using verilog HDL

- Simple Gates
- Simple Boolean Expressions
- Adder and subtractor
- Parallel Adder design

10. Simulation and verification of sequential Circuits using verilog HDL

- Flip-flops
- Registers
- Counters

11. Design of traffic light controller using VHDL

TOTAL HOURS: 30

OUTCOMES:

At the end of the course, the student is expected to

• Be trained to design and implement combinational and sequential digital circuits.

• Have skills to design and implement various signal generation circuits

SEMESTER VI

ENC 3281	COMMUNICATION AND SOFT SKILLS - II	L	T	P	C
	CONFIDENCE BUILDING	0	0	2	1

OBJECTIVES:

- To develop professional skills like work ethics, analytical skills, presentation skills etc.
- To train them in problem solving skills and leadership skills pertaining to industries.
- To train them in team building skills.
- To train in setting up career goals

MODULE I **6**

Brief about Multinational companies- Analysing work ethics of multinational companies and small industries- discussing as pairs-Knowledge about etiquette (different types)

MODULE II **6**

Visit to an Industry and prepare reports --Critically reading of industry specific journal articles and write ups-- preparing reports.

MODULE III **4**

Analysing problem solving situations in industries (relating to application of core subject to specific jobs) and discussing about them- working on a sample case

MODULE IV **6**

Developing Leadership in team projects-- debating about various aspects of leadership: for example, responsibility and reliability-time management

MODULE V **8**

Team building skills-- group discussions pertaining to industries-- presenting career goals. -- preparing for interviews- interpersonal skills

Total Hours – 30

3. Pai, A. (1993).How to Develop Self-Confidence. Amazon.com
4. Wentz,F.H.(2012). Soft skills training: A Workbook to Develop Skills for Employment. Amazon.com

OUTCOMES:

After completing the course students would be able to

- Exhibit critical reading skills through review of industry specific articles.
- Provide solutions to problem based situations.
- Exhibit leadership qualities by debating over industry specific issues.
- Participate in group discussions confidently.
- Present their career goals.

EEC3211 EMBEDDED SYSTEMS

L	T	P	C
3	1	0	4

OBJECTIVES:

To impart Knowledge on -

- Hardware architecture of 8085 processors.
- Concept of addressing modes, need and use of interrupts.
- Simple machine language programming using 8085.
- Different peripherals and their interfacing concepts with microcontroller
- positively and appropriately apply knowledge in doing open ended project

MODULE I INTRODUCTION TO 8085 PROCESSOR 9

Overview of 8085 microprocessor – The salient features of 8085- 8085 Architecture - Functional Block Diagram - Memory - Interrupts - Serial communication – DMA – Registers -Instruction Set -Addressing mode - Assembly language : Simple examples

.

MODULE II INTRODUCTION TO EMBEDDED SYSTEMS 8

Components of Embedded systems - Evolution in Microcontroller technology - Introduction to PIC family - Features of PIC16F877A - PIC Families - Harvard Architecture vs Von Neoman - PIC16F877A Architecture - Pin description and Oscillator Types - System Reset.

I/O PORTS AND REGISTERS OF PIC16F877A

Memory Organization - Input/output - Ports - Registers - Status Register - Option Register - Memory Organization - Port I/O configuration - Introduction to Software Tools - MikroC and Pickit2 programmer. Simple programmes in MikroC: Digital input/output and Delay loop Applications – Push Button interfacing, Flasher and Counter.

MODULE III INTERRUPTS AND ON-CHIP ANALOG TO DIGITAL CONVERTOR 8

Interrupts in PIC 16F877A - INTCON Register - Option Register - Interrupt Sources - PIE and PIR registers - Enabling Interrupts - Peripheral Interrupts - Interrupt Service Routine (ISR). - On-Chip Analog-to-Digital Converter (ADC) block diagram - PIC16F877A ADC pins - ADC Configuration- ADC PORT configuration - ADC Channel Selection – ADC voltage reference selection - Resolution - ADC conversion clock source - Interrupt control - ADC result format - ADC Registers: ADCON0 and ADCON1 - Sample Interrupt Codes in MikroC.

MODULE IV TIMER MODULES IN PIC 16F877A 9

TIMER0 module Block Diagram - Timer Calculation and TMR0 Register – Configuring the TIMER0 module using the INTCON and OPTION registers – TIMER1 module Block Diagram - Timer Calculation and TMR1H:TMR1L Register - Register Configuring the TIMER1using T1CON, PIR1 and PIE1control registers – TIMER2 module Block Diagram - Timer Calculation and TMR2 Register - Register Configuring the TIMER2 using T2CON, PIR1 and PIE1control registers - sample codes to generate time delay.

MODULE V CAPTURE/COMPARE/PWM MODULES 8

CAPTURE and COMARE modes operation block diagram - CCP1CON/CCP2CON Registers - TIMER1 mode selection - software interrupt - CCP prescaler - PWM mode-simplified PWM block diagram- PWM period - PWM duty cycle - setup for PWM operation – Generation of PWM in mikroC using the CCP module.

MODULE VI PIC 16F877A SERIAL COMMUNICATION MODULES 10

Master SSP (MSSP) Module – Control registers - SPI Mode – Master/Slave mode - Inter-Integrated Circuit (I^2C) Mode - Universal Synchronous Asynchronous Receiver Transmitter (USART) module- Master/Slave mode – Sample MikroC source codes: PIC to PIC Communication.

L – 45; T – 15; Total Hours –60

10. Ramesh Gaonkar, "Fundamentals of Microcontrollers and Applications.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Internal organization of some popular microprocessors/microcontrollers.
- Hardware and software interaction and integration.
- Design of microprocessors/microcontrollers-based systems.
- Interface PIC microcontroller with hardware for given application.
- Develop small microcontroller based applications.
- analyze a problem and formulate appropriate computing solution for microcontroller based applications.

EEC 3212 **CONTROL SYSTEMS** **L T P C**

3 1 0 4

OBJECTIVES:

- To analyze the system modeling and various methods of representation.
- To provide adequate knowledge on time response analysis of systems and steady state error calculations.
- To educate the necessity for frequency domain analysis using numerous plots.
- To provide knowledge on the design procedure of compensators and its applications.
- To provide knowledge on state space approach, state of systems, controllers and observers for different processes.
- To enhance knowledge on stability analysis of multivariable processes.

MODULE I SYSTEM REPRESENTATION AND ANALYSIS 8

Open loop and closed loop control systems – Transfer Function – Mechanical, Electrical and Electromechanical Systems – Block diagram representation – Block diagram reduction – Signal flow graphs – Mason's Gain formula – Characteristics Equation.

MODULE II TIME DOMAIN ANALYSIS 8

Transient and Steady State response – Test Signals – Time domain specifications – First and Second order system, Steady state error and error constants – P, PI, PID modes of feedback control – Tuning of PID Controller using MATLAB.

MODULE III FREQUENCY DOMAIN ANALYSIS 8

Frequency domain specifications – Relation between time and frequency domain parameters – Analysis based on bode plot and polar plot – Gain and phase margin – Nichols chart.

MODULE IV COMPENSATOR DESIGN 7

Compensator design using bode plots: Lag, Lead, Lead-Lag Compensator. Realization of Lag, lead and Lead-Lag networks.

MODULE V MODELING IN STATE SPACE 7

Introduction to State Space Approach – System representation in state variable form –Controllability and Observability–System analysis using state space approach in MATLAB.

MODULE VI SYSTEM STABILITY 7

Stability analysis by locating roots in s plane – Routh Hurwitz criterion– Root locus construction and performance analysis – Stability analysis in frequency domain – Nyquist stability criterion- Case Study- Modelling and parameter analysis of a closed loop control system.

L – 45; T – 15; Total Hours –60

REFERENCES:

1. K. Ogata, 'Modern Control Engineering', 4th edition, Pearson Education, New Delhi, 2003.

6. R.C.Dorf and R.H.Bishop, 'Modern Control Systems', Addison-Wesley, 1995 (MATLAB Reference).

OUTCOMES:

At the end of the course, the student will have knowledge and achieve skills on the following:

- Ability to analyze complex systems using mathematical models.
- Get the time response of first and second order systems analytically and interpret the response.
- Perform frequency response analysis of physical systems and interpret the response.
- Design appropriate compensator for the given system to meet the desired specifications
- Perform stability analyses of the system using conventional mathematical approach.
- Implement state space approach for the process and obtain the solution.

EEC3213	EMBEDDED SYSTEMS LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

• Simple Assembly Language programming using 8086 and 8051 Instruction set.

• Framing and implementing of algorithms.

• Subroutines, nesting and interrupts need and usage.

LIST OF EXPERIMENTS

1. Programs on arithmetic operations: addition / division using 8085
2. Programs on logical operations: Largest / Descending using 8085
3. Introduction to Software Tools MikroC, PicKit2 programmer
4. Blinking LED and Square wave generation using PIC Microcontroller – MikroC
5. Using Push Button Switch with PIC Microcontroller
6. Interfacing Relay with PIC Microcontroller
7. Using Interrupt with PIC Microcontroller
8. Analog to Digital Conversion using in-built ADC Module
9. Interfacing DC Motor with PIC Microcontroller using L293D
10. Interfacing Matrix Keypad with PIC Microcontroller
11. Using Internal EEPROM of PIC Microcontroller
12. Interfacing Stepper Motor with PIC Microcontroller
13. Interfacing Real Time Clock (RTC) DS1307 with PIC Microcontroller
14. Using Analog Comparator in PIC Microcontroller
15. Generating PWM with PIC Microcontroller using CCP Module
16. PIC to PIC Communication using UART

TOTAL HOURS: 30

OUTCOMES:

At the end of the course the student is expected to possess knowledge and achieve skills on the following.

• Usage of arithmetic, logical branching and control instructions.

• Interfacing of peripheral devices and waveform generation.

• Design and implementation of simple projects using peripheral devices and processors and controllers.

EEC3214	CONTROL SYSTEMS LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To provide a platform for understanding the basic concepts of linear control theory and its application to practical systems.

LIST OF EXPERIMENTS

1. Transfer function of separately excited DC Generator and determine the stability pole-zero map.
2. Transfer function of Armature controlled and field controlled DC Motor and dete the stability using pole-zero map.
3. State space model of a DC Servomotor.
4. State space model of an AC Servomotor.
5. Digital simulation of an Automatic cruise control to maintain a constant vehicle s despite external disturbances.
6. Time response analysis of a Type-1 system with the standard test inputs.
7. Stability analysis of a DC Motor speed control using Bode plot.
8. Stability analysis of a DC Motor position control using Root locus/Nyquist plot.
9. Lag, Lead and Lag-Lead compensator design.
10. Design of P, PI and PID controller for a second order system.
11. Study of synchro for angle detection in Radar.
12. Study of application of stepper motor in Robotics.

TOTAL HOURS: 30

OUTCOMES:

At the end of the course, the student will have knowledge and achieve skills on the following:

- Ability to determine the transfer function of D.C generator, D.C motor, D.C and A.C servomotors.
- Ability to simulate the response of I and II order systems using MATLAB.
- Capable to analyze the output of systems with different TYPES and Order.
- Capable to analyze the stability of different systems using Bode, Root locus, Nyquist plot etc
- Able to design lag, lead and lag-lead compensators.
- Capable to predict the performance of synchro, stepper motor etc.

SEMESTER VII

		L	T	P	C
EEC4101	**POWER SYSTEM PROTECTION AND SWITCHGEAR**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To introduce students to power system protection and switchgear
- To discuss the causes of abnormal operating conditions (faults, lightning and switching surges) of the apparatus and system.
- To understand the characteristics and functions of relays and protection schemes.
- To understand the problems associated with circuit interruption by a circuit breaker.
- Ability to discuss understand and Re-striking.
- To develop an ability and skill to design the feasible protection systems needed for each main part of a power system in students.

MODULE I INTRODUCTION 6

Importance of Protective schemes for electrical apparatus and power system- Qualitative review of faults and fault currents – relay terminology – definitions– essential qualities of protection - CT's and PT's and their applications in protective schemes.

MODULE II PROTECTION AGAINST OVER VOLTAGES AND NEUTRALGROUNDING 7

Generation of Over Voltages in Power Systems - Protection against Lightning Over Voltages –Shielding – Nonmetallic shielding methods - Valve type and Zinc-Oxide Lighting Arresters – Impulse Ratio -Standard Impulse Test Wave - Volt-Time Characteristics - BIL - Insulation Coordination.

MODULE III OPERATING PRINCIPLES AND RELAY CHARACTERISTICS 8

Electromagnetic relays – overcurrent, directional and non-directional, distance, negative sequence, differential and under frequency relays – Introduction to static relays.

MODULE IV APPARATUS PROTECTION 8

Main considerations in apparatus protection – transformer, generator and motor protection – protection of bus bars. Transmission line protection – zones of

protection.

MODULE V THEORY OF CIRCUIT INTERRUPTION 8

Physics of arc phenomena and arc interruption – DC and AC circuit breaking– restriking voltage and recovery voltage – rate of rise of recovery voltage – resistance switching – current chopping – interruption of capacitive current.

MODULE VI CIRCUIT BREAKERS 8

Types of circuit breakers – air blast, air break, oil, SF6 and vacuum circuit breakers – comparative merits of different circuit breakers – testing of circuit breakers.

Total Hours –45

REFERENCES:

5. Sunil S.Rao, “Switch Gear and Protection”, Khanna Publishers, New Delhi, 1986.

OUTCOMES:

At the end of the course, the student is expected to

- gain knowledge on different Protective Equipment or Power Systems
- Know about various protective systems- how it works and where it works
- apply Oil Circuit Breaker, Air Blast circuit Breakers, SF6 Circuit Breaker in the appropriate places.
- identify Rotor, Stator Faults, inter turn faults and their protection.
- Analyze the fault level and accordingly design the protective devices in a power system for power frequency voltages and currents.
- Ability to design insulation co – ordination between protected equipment and protective devices so that major equipment are protected against surges.

EEC4102	DESIGN OF MACHINES AND ELECTRICALAPPARATUS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To know about the various types of materials used for designing an electrical apparatus
- To get knowledge about the magnetic equivalent circuit of electrical apparatus
- To understand and design the basic principles of DC and AC machine
- To know about the design stator and rotor of induction machines.
- To understand the heating cooling system design of electrical apparatus
- To study about modeling of turbo generator and micro turbine generator.

MODULE I INTRODUCTION AND MAGNETIC CIRCUITS 8

Major design considerations – Classification of Electrical Engineering materials – Calculation of total MMF – carter's co – efficient and gap contraction factor – Real and apparent flux density – problems – magnetic leakage calculation for parallel sided slot, tapered slot and circular slot.

MODULE II MAIN DIMENSIONS OF DC MACHINE 8

Introduction – Output equation – main dimensions – Design of armature – magnetic circuit calculations.

MODULE III FIELD AND COMMUTATOR DESIGN 6

Design of field, interpoles, commutator & brushes and efficiency

MODULE IV TRANSFORMERS 7

Introduction: Discussions on Power and distributed type transformer, Core, winding, tank, tapping, oil, relay– construction and design of single phase and three phase transformers – resistance and reactance from design data – cooling tank design

MODULE V INDUCTION MOTORS 8

Introduction – Output equation – main dimensions – Design of slots – bar current – end ring current - resistance and reactance from design data – wound rotor design.

MODULE VI TURBO GENERATOR 8

Turbo generator: Types, dynamic design of large turbo generator. Micro turbine generator: Power generation – finite element model. Designing the cooling systems

for the world's most powerful turbo generator.

Total Hours – 45

REFERENCES:

3. A.E.Clayton and N.N.Hancock, 'Performance and design of Direct current machines' CBS 1st edition July 2004.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieveskills on the following:

- To design an electrical machine considering dynamic and thermal quantities.
- Can be able to troubleshoot and rectify the design bugs in any types of electrical apparatus
- Able to transform application demands to simple design specification
- Can be able to justify the given magnetic equivalent circuit design
- Ability to design an efficient transformer
- To design and model a turbo generator

EEC4103 **PLC & DCS** **L T P C**

3 1 0 4

OBJECTIVES:

- To provide fundamental knowledge about the PLC networks.
- To give an introductory knowledge about PLC and the programming languages.
- To give adequate knowledge about the applications of PLC and DCS
- To give basic knowledge in the architecture of DCS
- To know how to design a automated system in a process industry
- To give adequate knowledge about programming and controlling with PLC and DCS

MODULE I PLC **8**

Evolution of PLCs – controller and hardware — PLC Architecture – PLC sizes and its application –PLC Vs. Computer– International Electrotechnical Commission (IEC) programming languages – Programming of PLC — relay logic – Ladder logic – Fundamentals of logic circuits – Programming: Timers and Counters.

MODULE II COMMUNICATION IN PLCS

Program control instructions - Data manipulation Instructions - Arithmetic instructions - Sequencer instructions. Requirement of communication networks for PLC – computer networks – PLC applications in Industrial Automation.

MODULE III DISTRIBUTED CONTROL SYSTEMS

Evolution - Different architectures - Local control unit - Operator interface - Display's - Engineering interface. Case study - DCS - Study of two popular DCS available in market - Factors to be considered in selecting DCS – Operator and Engineering Interface.

MODULE IV HART AND FIELD BUS

Introduction - Evolution of signal standard - HART Communication protocol - Communication modes - HART networks - HART commands - HART field controller implementation - HART and OSI model - Field bus – Introduction profibus, Mod bus - Foundation field bus - General field bus architecture - basic requirements of field bus standard - Field bus topology -Interoperability CAN & LIN bus.

MODULE V PLC PROGRAMMING

Logic gates – Boolean Conversions – Combination logic circuits – Decoder – Encoder – Flip flop – Annunciator – Math Instructions – Jump Instructions.

MODULE VI PROCESS CONTROL SYSTEM

Design of Level control system, Temperature control system, Controlling of pumps in sequence, Conveyor control, density based traffic control system. Batch process: Heating, mixing, and filling. Programming using Functional Block Diagram in Delta – V.

L – 45; T – 15; Total Hours –60

3. Hughes T, "Programmable Logic Controllers", ISA Press, 1989.
4. Michael P.Lucas, "Distributed Control System", Van Nastrand Reinhold Company, New York, 1986.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- To design all types of logic gates and sequences using PLC
- Able to design and execute ladder logic program for any industrial system
- Will be able to interface any type of PLC to achieve the required operation
- Be able to write the sequence of operation for any industrial/process control plant
- Be able to communicated with DCS
- Design a DCS based system for any plant

PROGRAMME ELECTIVES

POWER SYSTEM

		L	T	P	C
EECX01	**POWER DISTRIBUTION SYSTEM**	**3**	**0**	**0**	**3**

OBJECTIVES:

To impart knowledge on

- The importance of the design of distribution systems.
- Various components of the distribution systems.
- The methods of analysis of distribution systems.
- Protection of the distribution systems.
- Concepts of demand side management.

MODULE I INTRODUCTION TO DISTRIBUTION SYSTEMS 7

General - Introduction to distribution system, an overview of the role of computers in distribution system planning. Load modeling and characteristics: Definition of basic terms like demand factor, utilization factor, load factor, plant factor, diversity factor, coincidence factor, contribution factor and loss factor - Relationship between the load factor and loss factor - Classification of loads (Residential, Commercial, Agricultural and Industrial) and their characteristics

MODULE II DISTRIBUTION FEEDERS 7

Design consideration of Distribution feeders - voltage levels – different types of feeder loading.

MODULE III SUBSTATIONS AND GROUNDING SYSTEM 9

Types of substations - Design considerations of the secondary distribution system - Bus-bar arrangements - Substation bus schemes - Location of substations - Rating of a distribution substation - Service area with primary feeder - Resistance of grounding systems - Grounding grids - Design principles of substation grounding system.

MODULE IV DISTRIBUTION SYSTEM ANALYSIS 8

Voltage drop and power loss calculations - Derivation for volt-drop and power loss in lines – dc distribution – ac distribution –three phase balanced primary lines- Non-three-phase primary lines.

MODULE V PROTECTIVE DEVICES AND COORDINATION 8

Objectives of distribution system protection - Types of common faults and procedure for fault calculation. Protective devices - Principle of operation of

fuses, circuit reclosers, line sectionalizer and circuit breakers. Coordination of protective devices - General coordination procedure

MODULE VI CONCEPTS AND METHODS OF DSM, LOAD CONTROL 6

Load control - Energy efficiency - Load management - DSM planning, design, marketing, impact assessment - Direct, distributed and local control – Assessment of impact on load shape.

TOTAL HOURS ; 45

9. B.R.Gupta, ‘Power System Analysis and Design’, S.Chand, New Delhi, 2003.

OUTCOMES:

At the end of the course, the student will

- be attaining skills on various components of the distribution systems.
- be able to design distribution feeders
- have ability to implement grounding system in substations.
- have ability to perform analysis of voltage drop and power loss on feeders
- be able to carry out fault analysis and Co-ordination of protective devices in distribution systems.
- be able to do demand side management.

EECX02	POWER SYSTEM PLANNING AND RELIABILITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

To impart knowledge on:

- Load forecasting in power systems.
- Basic probability theory and concepts of reliability analysis.
- Factors influencing the reliability of generation systems, transmission systems and distribution systems.
- Expansion planning.

MODULE I LOAD FORECASTING 8

Objectives of forecasting - Load growth patterns and their importance in planning - Load forecasting based on discounted multiple regression technique – Procedure for Weather sensitive load forecasting - Determination of annual forecasting.

MODULE II INTRODUCTION TO RELIABILITY ANALYSIS 7

Review of probability distribution, binomial distribution and exponential distribution – Network modeling and evaluation of simple systems - Series and parallel systems - reliability evaluation using probability distributions – Frequency and duration techniques — MARKOV process - Recursive technique– Bathtub curve - Meantime to failure

MODULE III GENERATION SYSTEM RELIABILITY ANALYSIS 8

Probabilistic generation and load models - Determination of reliability of isolated systems - Procedure for determination of reliability of interconnected systems.

MODULE IV TRANSMISSION SYSTEM RELIABILITY ANALYSIS 7

Deterministic contingency analysis - Probabilistic load flow - Probabilistic transmission system reliability analysis - Determination of reliability indices like LOLP and expected value of demand not served isolated system.

MODULE V EXPANSION PLANNING 7

Basic concepts on expansion planning - A perspective: brief introduction to structure of power systems, growth of power system in India, present Indian power industry, GRID formation, concept of National GRID - Procedure followed to integrate transmission system planning, current practice in India - Capacitor placement

problems in transmission systems and radial distribution systems.

MODULE VI DISTRIBUTION SYSTEM PLANNING AND RELIABILITY 8

Introduction, sub transmission lines and distribution substations - Design primary and secondary systems - Distribution system protection and coordination of protective devices. Distribution system reliability evaluation.

Total Hours –45

6. Eodrenyi, J., “Reliability Modelling in Electric Power System”, John Wiley, 1980.
7. B.R. Gupta, “Power Sytem Analysis and Design”, S.Chand, New Delhi, 2003.

OUTCOMES:

At the end of the course, the Students are expected to possess knowledge andachieve skills on following:

- Understand the importance of maintaining reliability of power system components
- Apply the probabilistic methods for evaluating the reliability of generation and transmission systems.
- Assess the different models of system components in reliability studies.
- Understanding some advanced concepts of power system planning.
- Familiarity with load forecasting techniques
- Expansion planning of power systems.

EECX03 POWER SYSTEM DYNAMICS L T P C

3 0 0 3

OBJECTIVES:

- To impart knowledge on dynamic modelling of a synchronous machine in detail.
- To describe the modelling of excitation and speed governing system in detail.
- To understand the fundamental concepts of stability of dynamic systems and its classification.
- To understand and enhance small signal stability problem of power systems.

MODULE I INTRODUCTION 8

Concepts and importance of stability in power system operation and design-Basic concepts and definition-Classification of power system stability-complexity of stability problem in large system-Need for reduced models-stability of interconnected systems.

MODULE II SYNCHRONOUS MACHINE MODELLING 8

Physical description-Park's transformation :flux linkage equations ,voltage equation and torque equation-per unit conversion-normalizing the equation-equivalent circuit-flux linkage state space model with transient and sub transient inductances and time constants- Simplified models(one axis and constant flux linkage), steady state equations and pharsor equation.

MODULE III MODELLING OF EXCITATION AND SPEED GOVERNINGSYSTEMS 8

Excitation system requirements-Elements of Excitation system-Types of Excitation system-Typical excitation system configuration-block diagram and state space representation of IEEE type 1 excitation system-saturation function-stabilizing circuit. Function of speed governing systems-block diagram and state space representation of IEEE steam turbine and hydraulic governor.

MODULE IV TRANSIENT STABILITY 8

State equation for multimachine –transient stability simulation of multimachine power system with one axis machine model including excitation system and speed governing system using R-K method of fourth order (Gill's Technique), Power system stabilizer.

MODULE V SMALL SIGNAL STABILITY 8

System response to small disturbance –Linear model of the synchronous machine

and load -modes of oscillation-effect of excitation on dynamic stability-approximation system representation-supplementary stabilizing signals-small signal performance measures.

MODULE VI ENHANCEMENT OF SMALL SIGNAL STABILITY ANDTRANSIENT STABILITY **5**

Methods of enhancing transient stability –methods based on reduction of disturbance severity-methods by increasing synchronizing forces-methods of enhancing small signal stability-Power system stabilizers-delta-omega stabilizer.

Total Hours –45

REFERENCES:

3. R.Ramanujam, “Power system dynamics, Analysis and simulation”, Prentice Hall India Learning Pvt.Ltd., New Delhi, 2009.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Understanding of detailed modeling of the electrical and mechanical parts of a three phase synchronous machine, excitation system and turbine.
- Mathematically model the basic controllers, excitation and turbine governing systems for dynamics studies.
- Perform simple power system stability study on a small multi-machine power system model using commercial software AU POWER LAB, ETAP, CYME. Report and critically assess the results of the study.
- Analyze the methodology for small-signal stability and transient stability without controller.
- Assess power system stability for small disturbances and transient disturbances.
- Understand the enhancement of power system stability for both small signal and large signal.

EECX04 **POWER SYSTEM TRANSIENTS** **L T P C**

3 0 0 3

OBJECTIVES:

- To identify and analyze the cause of surges and their propagation and their effect on power system components.
- To understand & distinguish between power frequency and surge voltages and currents and accordingly model the power system components.

MODULE I **8**

Types of power system transients – modeling of lines for surges and power frequency over voltages – effect of transients & power system components – importance of study of transients in planning.

MODULE II **8**

Lightning phenomenon: charge formation in clouds, rate of charging of thunder clouds, mechanism of lightning strokes, characteristic of lightning strokes - protection against lightning over voltage by shielding and non shielding methods.

MODULE III **8**

Circuit closing transients in RL and RLC circuits with sinusoidal excitation to simulate faults – circuit breaker restriking and recovery voltage – double frequency transients.

MODULE IV **8**

Generation of system over voltages - current chopping – reclosing circuit breaker and compound transients – control of switching over voltages.

MODULE V **8**

Wave equations and its solution- travelling voltage and current waves: velocity, attenuation and distortion-reflection,refraction of travelling waves – behaviour at line termination multiple reflections – Lattice diagram.

MODULE VI **5**

Over voltage in integrated power system and its simulation and analysis using EMTP.

Total Hours –45

REFERENCES:

2. R.D. Begamudre, “Extra High Voltage AC Transmission Engineering”, Wiley Eastern Limited,1986.
3. Pritidra Choudary, “Electromagnetic Transients in Power System”, John Wiley and sons Inc,1996.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and skills on the following:

1. Identify the occurrence of transient disturbance in the power system
2. Analyse the lightning stroke current
3. Calculate the stress on the insulator strings
4. Design the protective schemes against transient disturbance
5. Calculate the multiple reflections in power system due to travelling waves
6. Analyse the power system using EMTP software

EECX05 SMART POWER GRID

L	T	P	C
3	0	0	3

OBJECTIVES:

- Introduce the fundamentals of smart grids.
- Introduce modeling of devices associated with smart grids.
- Introduce the different automation and networking standards.
- Introduce the concept of Wide area measuring systems and Phasor measurement units.(PMU)

MODULE I SMART GRID FUNDAMENTALS 9

Smart grid structure – Interactive grid – Micro grid – Distributed Resources modeling – communication infrastructure – sensing and Control devices – smart grid characteristics.

MODULE II COMPONENTS AND STANDARDS 9

Smart grid components – Metering – Virtual power plants-Benefits and cost elements – Pricing regulations – Networking Standards and integration – Analytics.

MODULE III AUTOMATION TECHNOLOGIES 9

Control centre systems – Data management principles – Smart Grid implementation standards and procedure – Advanced Metering Infrastructure – Outage management – Distribution and Substation automation .

MODULE IV WIDE AREA MEASUREMENT SYSTEMS AND PMU 6

Wide area measurement systems –Phasor Measurement Units-Optimal placement algorithm for PMUs. Smart grid experimentation plan for load forecasting.

MODULE V CASE STUDY I 6

Smart meters – Cloud computing and security issues -Forecasting – Coordination between cloud computing andSmart power grids – Development of power system modelsand control and communication software.

MODULE VI RECENT TRENDS IN SMART POWER GRIDS 6

Demand Response – concepts and models.Real time pricingmodels for practical applications-SCADA in smart grids.

Total Hours –45

REFERENCES:

1. Ali Keyhani :" Design of Smart Power Grid Renewable Energy Systems ", First Edition , John Wiley Inc., 2011
2. Tony Flick and Justin Morehouse : "Securing the Smart Grid –Next generation Power Grid security ", Elsevier Publications,2011.

6. Mini . S. Thomas :Power System SCADA and Smart Grids.
7. Kenneth . C.Budka , Jayant G.Deshpande :Communication Networks for Smart Grids:Making Smart Grid Real , 2014

OUTCOMES:

At the end of the course the student is expected to

- design and implement smart Power Grid Power Systems
- apply the concept of demand response in Smart grids.
- apply smart grid concepts to real time applications.
- implement optimal location strategies of PMU in smart grids.
- coordinate the use of cloud computing application for smart grids.
- apply the concept of SCADA in smart grids.

EECX06 WIND ENERGY CONVERSION SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the demand for electrical power generation from the renewable wind energy and fundamentals of wind power.
- To study and understand about the wind turbine components, power generation machinery, control systems.

MODULE I INTRODUCTION **8**

Historical development and current status of Wind power-Generators and power electronics for wind turbines - Impacts of wind power-Wind speed estimation-Wind speed measurements-Rayleigh distribution-Maximum Power obtainable-Bertz limit-Power coefficient –Aerodynamics of wind rotor-Blade element theory-Aerodynamic efficiency-Wind energy conversion system components.

MODULE II WIND TURBINE **8**

Types of Wind Turbine-Rotor design considerations-Tip speed ratio-Blade profile-Power regulation-Yaw control –Pitch angle control-Stall control-Schemes for maximum power extraction.

MODULE III FIXED SPEED AND VARIABLE SPEED SYSTEMS **8**

Fixed speed and variable speed wind turbine- Need of variable speed systems-Power-wind speed characteristics-Generation schemes with fixed and variable speed turbines-Comparison of different schemes.

MODULE IV MODELING AND SIMULATION OF FIXED SPEED ANDVARIABLE SPEED WIND GENERATORS **8**

Modeling of fixed speed Induction generator - axes transformation - flux linkage equations - voltage equations-state equations-modeling of variable speed DFIG for wind energy conversion systems-converter control system- transient stability simulation of fixed speed induction generator using EUROSTAG - Doubly Fed Induction Generator(DFIG) modeling - controller modelling - Modelling of DFIG in EUROSTAG - Transient stability simulation of power systems with induction generators using EUROSTAG.

MODULE V POWER ELECTRONICS IN WIND ENERGY CONVERSIONSYSTEM **8**

Induction generator-Controlled firing angle scheme with AC and DC side Capacitor-

Scalar method-flux vector scheme-Control scheme for synchronous generator with variable speed drive-Variable speed synchronous generator control with boost converter.

MODULE VI GRID CONNECTED SYSTEMS 5

Stand alone and grid connected WECS system-Grid connection Issues-Impacts of wind power on power system stability-wind plant reactive power capability and its requirements-voltage control and active power control - Storage technologies.

Total Hours –45

OUTCOMES:

At the end of the course, the student will be able to:

- recognize the need of renewable energy technologies and their role in the world energy demand.
- identify and mathematically model the wind turbine components, calculate the available wind power, predict mechanical loads based on design, and discuss the generation of electrical power.
- to numerically simulate the wind turbine dynamic system behavior with integration of components, sensors, and control for given real time application.
- mathematically model and simulate the transient and steady state performance of the stand-alone and grid connected wind generators using EUROSTAG, MATLAB, CYME packages.

- analyze the wind power integration issues and their mitigation techniques.
- identify the present and the future energy storage technologies used for standalone operation and grid connected operation .

EECX07 FLEXIBLE AC TRANSMISSION SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the need for reactive power compensation in AC transmission system.
- To become familiar with modeling and operation of thyristor and voltage source inverter based FACTS controllers.
- To study the effect of FACTS controllers on AC transmission system.

MODULE I REACTIVE POWER CONTROL IN TRANSMISSIONSYSTEM **8**

Reactive power - uncompensated transmission lines - load compensation - system compensation - lossless distributed parameter lines -symmetrical lines - midpoint conditions of a symmetrical line case study - passive compensation - shunt compensation -series compensation effect on power-transfer capacity.

MODULE II CONVENTIONAL FACTS DEVICES **8**

Types, definitions and representation of various FACTS controllers - synchronous Condensers - saturated Reactor (SR) - thyristor-controlled reactor (TCR) - operating characteristics of a TCR- fixed Capacitor–thyristor-controlled reactor (FC–TCR)- thyristor-switched capacitor (TSC)- thyristor-switched capacitor–thyristor-controlled reactor (TSC–TCR).

MODULE III STATIC VAR COMPENSATOR **8**

Voltage Control - V-I characteristics of the SVC - dynamic Characteristics-steady-State characteristic advantages of the slope in the SVC dynamic characteristic influence of the SVC on system voltage.

MODULE IV THYRISTOR-CONTROLLED SERIES CAPACITOR (TCSC) **8**

Fixed-series compensation - need for variable series compensation-advantages of the TCSC - TCSC controller- operation of the TCSC - modes of TCSC operation - capability characteristics - single-module TCSC- multi - module TCSC - variable-reactance model of TCSC.

MODULE V EMERGING FACTS CONTROLLERS **8**

STATCOM : principle of operation - V-I characteristic - SSSC : principle ofoperation -

UPFC : principle of operation.

MODULE VI APPLICATIONS OF FACTS DEVICES 5

Increase in steady-state power-transfer capacity - enhancement of transient stability. - TCSC applications - applications of STATCOM , SSSC and UPFC.

Total Hours –45

3. A.T.John, “Flexible A.C. Transmission Systems”, Institution of Electrical and Electronic Engineers (IEEE), 1999.

OUTCOMES:

At the end of the course, the student is expected to

- Compute power transmission capability of a transmission system and apply reactive compensation methods for its improvement
- Comprehend the operating principles, control systems and modeling of different conventional FACTS devices
- Understand the influence of measurement systems and the performance of shunt compensators
- Understand the performance of series compensating devices.
- Analyse and utilize the emerging FACTS devices in the utility networks.
- Apply the techniques of FACTS controller design for enhancing power transfer, increasing stability, augmenting system damping, mitigating sub-synchronous resonances, preventing voltage instability, performing load compensation, etc.

EEBX08	INDUSTRIAL POWER SYSTEM ANALYSIS AND DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide practical knowledge in the field of power system analysis and design for industrial applications.
- To introduce the fundamentals of smart grid and associated Information Technology services.
- To derive expressions for the computation of transmission line parameters.
- To understand the problems associated with circuit interruption by a circuit breaker.

MODULE I ELECTRICAL POWER SYSTEM BACKGROUND 7

Overview of power systems generation, transmission and distribution- utilityscale systems versus industrial power systems; utility restructuring and deregulation- smart grid.

MODULE II POWER SYSTEM STUDIES 9

Load flow – short circuits – protective coordination – arc flash hazard calculation – harmonic analysis – power system stability – simple calculation.

MODULE III TRANSMISSION LINE MODELING AND TRANSFORMER 8

Line configurations and physical parameters- lumped circuit equivalent models- applications- Transformer – types – transformer for non linear loads – instrument transformers.

MODULE IV FAULTS AND SYSTEM PROTECTION 7

Symmetrical components- symmetrical and unsymmetrical faults- protection devices.

MODULE V SWITCHGEAR CIRCUIT BREAKER- MOTOR CONTROL CENTRE 7

Switchgear: low voltage medium voltage – load interrupt switchgear – power fuse – medium and high voltage circuit breaker – SF6 gas insulated switchgear – low and medium voltage motor control centre.

MODULE VI APPLICATION & PROTECTION OF MEDIUM VOLTAGE MOTORS 7

Introduction overview – load characteristics – squirrel cage induction motor –wound

rotor induction motor – synchronous motor – electric motor for variable frequency drives – motor controllers and starting methods.

TOTAL HOURS: 45

9. PrabhaKundur, “Power system stability and control”, McGraw-Hill, Inc, 1999.

OUTCOMES:

At the end of the course, the student is expected to

- understand the operation of deregulated power system and smart grids
- perform power flow studies
- determine voltage regulation and efficiency for short, mediumand long lines.
- perform fault calculations.
- design circuit breaker ratings
- select an induction motor and synchronous motor for a particular industrial application

EECX09	ELECTRIC ENERGY GENERATION, UTILIZATION AND CONSERVATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

To impart knowledge on

- Generation of electrical power by conventional and non-conventional methods.
- Electrical energy conservation, energy auditing and power quality.
- Principle and design of illumination systems and methods of heating and welding.
- Electric traction systems and their performance.
- Industrial applications of electric drives.

MODULE I CONVENTIONAL METHODS OF POWER GENERATION 6

Thermal, hydro and nuclear based power generation- Selection of site for power plants- schematic arrangement- merits and demerits of power plants.

MODULE II NON-CONVENTIONAL METHODS OF POWERGENERATION 6

Fuel cells-tidal waves-wind- geothermal -solar- bio mass - municipal waste. Co generation. Effect of distributed generation on power system operation.

MODULE III ECONOMIC ASPECTS OF GENERATION 8

Economic aspects of power generation - load and load duration curves - number and size of units - cost of electrical energy - tariff. Economics of power factor improvement - power capacitors - power quality. Importance of electrical energy conservation - methods - energy efficient equipments. Introduction to energy auditing.

MODULE IV ILLUMINATION 8

Importance of lighting - properties of good lighting scheme - laws of illumination - photometry - types of lamps - lighting calculations - basic design of illumination schemes for residential, commercial, street lighting, and sports ground - energy efficiency lamps.

MODULE V HEATING AND WELDING 8

Introduction - advantages of electric heating - modes of heat transfer - methods of electric heating -resistance heating - arc furnaces - induction heating - dielectric heating - electric welding - types -resistance welding - arc welding - power supply for arc welding - radiation welding.

MODULE VI ELECTRIC DRIVES AND TRACTION 9

Fundamentals of electric drive - choice of an electric motor - application of motors for particular services - traction motors - characteristic features of traction motor - systems of railway electrification -electric braking - train movement and energy consumption - traction motor control .

Total Hours –45

3. Gupta.J.B, "Utilization of Electric Power and Electric Traction", S.K.Kataria and Sons, 2002
4. R.K.Rajput, Utilisation of Electric Power, Laxmi publications Private Limited.,2007

OUTCOMES:

At the end of the course the student will be able to

- understand the concepts conventional power generation systems
- implement small renewable based power generation systems
- find the number and size of units from load curve, compute tariff and power factor correction for practical system and carry out energy management and auditing.
- compute illumination and suggest lighting scheme for various application.
- understand practical implications of electric heating and welding
- select suitable motor for different applications including traction system.

EECX10 RESTRUCTURED POWER SYSTEMS L T P C
3 0 0 3

OBJECTIVES:

To provide the student a background on restructuring of power system which has taken place in many countries in the world including our country

- To provide insight on new trends in operation and control in deregulated power systems
- To highlight electric energy trading in the electricity market.
- To compare and calculate various pricing strategies in restructured environment.

MODULE I INTRODUCTION TO RESTRUCTURING 7

Restructuring Models: PoolCo Model, Bilateral Contracts Model, Hybrid Model-Independent System Operator (ISO): The Role of ISO - Power Exchange(PX):Market Clearing Price (MCP) - Market operations: Day-ahead and Hour-Ahead Markets, Elastic and Inelastic Markets - Market Power.

MODULE II KEY ISSUES IN RESTRUCTURING 8

Transmission Pricing: Contract Path Method, The MW-Mile Method -Congestion Pricing: Congestion Pricing Methods, Management of Inter-Zonal/Intra Zonal Congestion: Solution procedure.

MODULE III ELECTRIC UTILITY MARKETS IN THE UNITED STATES 7

California Markets- New York Market: Market operations - PJM interconnection - Ercot ISO - New England ISO .

MODULE IV OASIS: OPEN ACCESS SAME-TIME INFORMATION SYSTEM 8

Structure of OASIS: Functionality and Architecture of OASIS-Transfer Capability on OASIS: Definitions, Transfer Capability Issues, ATC Calculation, TTC Calculation, TRM Calculation, CBM Calculation - Transmission Services - Methodologies to Calculate ATC.

MODULE V ELECTRIC ENERGY TRADING 7

Essence of Electric Energy Trading - Energy Trading Framework: The Qualifying factors - Derivative Instruments of Energy Trading: Forward Contracts, Futures Contracts, Options, Swaps, Applications of Derivatives in Electric Energy Trading .

MODULE VI SPECIAL COMPUTATIONAL TECHNIQUES 8

Formulation of D.C. Optimal Power Flow (DCOPF) model for assessment of Available Transfer Capability (ATC), assessment of Simultaneous ATC (SATC) and Congestion Management.

Total Hours –45

7 F.C.Schweppe, M.C.Caramanis, R.D.Tabors and R.E.Bohn, "Spot Pricing of Electricity", Kluwer Academic Publishers, 2002.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- understand the various process of restructuring.
- perform the various steps of electricity trading operation such as market clearing and settlement for an exchange.
- Explain the operation of different electricity markets in United States.
- Compute transmission pricing and perform congestion Use and interpret the real time information available in an OASIS.
- Perform the various steps of trading such as forecasting of energy requirement and billing of supply offers / demand bids for GENCOS / DISCOS
- Compute the ATC and perform congestion management in restructured power systems.

EECX11	SOLAR ENERGY TECHNOLOGY	L	T	P	C
		1	0	0	1

OBJECTIVES:

The primary objectives of the course is to deliver knowledge at fundamental and advanced levels in the following topics:

- Solar energy technologies and their design principles
- Sources of energy consumption in buildings.
- Solar thermal and photovoltaic (PV) technologies for application in buildings.

MODULE **15**

- Solar Energy – Need, types- Physics of Solar Energy Energy Policies
- Solar PV Technologies- olar Cells & types - Balance of System
- Design of PV System - Types of PV System - Design of Off-Grid PV System - Design of On-Grid PV System
- Solar Power Plant - Grid Tie Plants - Off grid Plants - Hybrid Plants - Maintenance of plant

Total Hours : 15

OUTCOMES:

After studying this course, the student should be able to:

- explain the principles that underlie the ability of various natural phenomena to deliver solar energy.
- outline the technologies that are used to harness the power of solar energy

EECX12 MICRO-GRID PROTECTION L T P C

3 0 0 3

OBJECTIVES:

To familiarize the students with

- The concepts of microgrid, its types, modes of operation and importance.
- Control aspects of microgrid
- Various microgrid pilots and microgrid components

MODULE I INTRODUCTION 8

Microgrid basic concepts – architecture - operational conditions, Microgrid : merits and demerits - functionalities and variables in microgrid - issues in microgrid. Types of microgrid (LV microgrid, MV microgrid - DC microgrid, AC microgrid, hybrid) - Microgrid as part of smarter grid.

MODULE II DISTRIBUTED ENERGY RESOURCES AND STORAGE DEVICES 8

Distributed Energy Resources: solar – wind – CHP – MCHP – Microturbine - Diesel generators –geo thermal. Storage devices-Batteries - fuel cells - super capacitors.

MODULE III MICRO-GRID PROTECTION AND CONTROL 8

Requirements of protection - issues in protection (LOM, Blinding of protection, unwanted islanding, lack of selectivity) - challenges in protection scheme -design of digital relays : under/over voltage relay- over current relay- differential relay – directional over current relay.

Modes of operation : grid connected mode - islanded mode - transition between grid connected mode and islanded mode.primary control strategy - secondary control strategy- Control of distribution generation - demand side management - Opportunities and risk of different market players.

MODULE IV CONTROLLERS FOR MICROGRID 7

Three phase converter - Three phase Voltage source Inverter (VSI) – Boost Converter – PWM Techniques - P-Q Control -Structure of the VSI PQ Controller - Power Voltage (PV) Control Scheme - Frequency (V/f) Control Scheme -generation Control Based on Droop Concept - adaptive droop control, Phase locked loop for synchronisation.

MODULE V COMMUNICATION FOR MICROGRIDS 7

Communication lines in power system : PLC - Microwave – fiber optic links - PMU basic concepts- International Electrotechnical Commission (IEC) 61850, 61850-7-

420, 61850-8. Renewable Microgrid controller RMC 600. Review / Comparison on simulation packages used for Microgrid Protection

MODULE VI MICROGRID COMPONENTS 7

Microgrid pilots : KERI – CERTS - Intelligent Electronic Devices (IED) - Microgrid Management system (MMS) - Static Transfer switch (STS) - RTU/ gateway - Smart metering –Sensing Devices.

Total Hours –45

9. Eric Sorotomme, S.S. Venkata, Joydeep Mitra, “ Microgrid protection using communication assisted digital relays” IEEE transaction on power delivery, vol.25, No.4, pp.2789-2796, 2010

OUTCOMES:

The students will be able to

- Know the significance of microgrid and its types.
- Know various control strategies of microgrid.
- Realize various issues involved in microgrid protection.
- Incorporate communication techniques and standards for microgrid protection.
- Have an idea of various microgrid components

EECX13 ELECTRIC VEHICLE TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the concept of Electric Vehicles.
- To familiarize the basic energy transfer processes that govern existing and proposed methods of power generation for Electric Vehicles.
- To familiarize with the traditional and non-traditional sources for Electric Vehicles in terms of energy content, accessibility, required processing steps and projected remaining reserves

MODULE I INTRODUCTION 8

A Brief History - Types of Electric Vehicle in Use Today : Battery electric vehicles - The IC engine/electric hybrid vehicle - Fuelled electric vehicles - Electric vehicles using supply lines - Solar powered vehicles - Electric vehicles which use flywheels or super capacitors.

MODULE II BATTERIES 7

Battery Parameters - Lead Acid Batteries - Nickel-based Batteries - Sodium-based Batteries - Lithium Batteries - Metal Air Batteries - Battery Charging - Choice of Battery - Use of Batteries in Hybrid - Vehicles - Battery Modelling.

MODULE III FUEL CELLS 8

Hydrogen Fuel Cells - Fuel Cell Thermodynamics - Connecting Cells in Series - Water Management in the PEM Fuel Cell - Thermal Management of the PEM Fuel Cell - A Complete Fuel Cell System - Hydrogen Supply - Fuel Reforming - Hydrogen Storage.

-

MODULE IV ELECTRIC VEHICLE MODELLING AND DESIGNCONSIDERATIONS 7

Tractive Effort - Modelling Vehicle Acceleration - Modelling Electric Vehicle Range - Aerodynamic Considerations - Transmission Efficiency - Electric Vehicle Chassis and Body Design - General Issues in Design.

MODULE V DESIGN OF ANCILLARY SYSTEMS 7

Heating and Cooling Systems - Design of the Controls - Power Steering - Choice of Tyres - Wing Mirrors, Aerials and Luggage Racks - Electric Vehicle Recharging and Refuelling Systems.

MODULE VI ELECTRIC VEHICLES AND THE ENVIRONMENT 8

Vehicle Pollution - The Effects - Vehicles Pollution - A Quantitative Analysis - Vehicle Pollution in Context - Alternative and Sustainable Energy Used via the Grid - Using Sustainable Energy with Fuelled Vehicles.

Total Hours –45

REFERENCES:

1. James Larminie and John Lowry, “Electric Vehicle Technology Explained”, John Wiley & Sons Ltd, 2003.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- analyze and quantify the important energy transfer for Batteries and fuel cell schemes.
- use the techniques, opportunities and challenges of advances in Electric Vehicles.
- develop a strong functional literacy in automotive power electronics.
- apply power electronic converters to control the Electric Vehicles including actuator drivers and motor drives.
- analyze the Solar powered vehicles including selection of power devices and thermal management.
- design Electric Vehicles to meet desired needs within realistic constraints such as economic, environmental, manufacturability, and sustainability.

EECX14 POWER SYSTEM SIMULATION SOFTWARE

L	T	P	C
0	0	2	1

OBJECTIVES:

To expose the students to various proprietary and open source software for simulation of power systems.

COURSE DESCRIPTION: **8**

Study of both proprietary and open source software for simulation of power systems:

PROPRIETARY SOFTWARE

- ETAP
- CYME
- PSCAD
- EUROSTAG

OPEN SOURCE SOFTWARE

- UWPFLOW
- PSAT
- InterPSS
- DCOPFJ
- OpenDSS
- MatDyn
- minpower
- Dome
- GridLAB-D
- OpenPMU

Assessment I: A presentation on the proprietary software available in the department and the latest open source software.

Assessment II: Comparative study by simulating the same problem over multiple software.

Semester End: Solving a given power system problem using any one of the software.

EECX15 WIDE AREA MEASUREMENT SYSTEMS

L	T	P	C
2	0	0	2

OBJECTIVES:

To understand the operating principle of wide area measurement systems and performance of phasor measurement units.

MODULE I MATHEMATICAL BACKGROUND 8

Phasor representation of sinusoids - Fourier series and Fourier transform and DFT Phasor representation - Phasor Estimation of Nominal Frequency Signals - Formulas for updating phasors - Nonrecursive updates - Recursive updates - Frequency Estimation

MODULE II SYNCHRO PHASOR MEASUREMENTS 10

Need of Synchro phasor Measurements, Phasor Measurement Unit : Architecture,Functions, Optimal Placement of PMUs, phasor data concentrators and associated communication system. Visualization tools to enhance visibility and control within transmission system, PMU measurements and sampling rates State Estimation & observability by using PMU, phasor data use for real time operation, frequency stability monitoring and trending, power oscillation, voltage monitoring and trending. Alarming and setting system operating limits. Dynamic line rating and congestion management, outage restoration. Application of PMU for wide area monitoring and control.

MODULE III WIDE AREA MEASUREMENT SYSTEM 6

Architecture, Components of WAMS, GUI (Graphical User Interface), Applications: Voltage Stability Assessment, Frequency stability Assessment, Power Oscillation Assessment, Communication needs of WAMS, WAMPAC (Wide Area Monitoring Protection & Control), RAS (Remedial Action Scheme). Standards: IEEE 1344, IEEE C37.118 (2005), IEEE Standard C37.111-1999 (COMTRADE), IEC61850 GOOSE

MODULE IV PERFORMANCE OF A GENERIC PMU 6

The global positioning system - Hierarchy for phasor measurement systems, - Functional requirements of PMUs - Transient Response of Phasor Measurement Units - of instrument transformers, filters, during electromagnetic transients – Transient response during power swings

Total Hours: 30

REFERENCES:

1. A.G. Phadke, J.S. Thorp, 'Synchronized Phasor Measurements and Their Applications', Springer Publications, 2008
2. Joseph Euzebe Tate "Event detection and visualization based on phasor measurement units for improved situational awareness", UMI Dissertation Publishing.

4. Dr. Arun G. Phadke, Dr. James S. Thorp,."Computer Relaying for Power Systems", Wiley Publication, Second Edition.
5. Krzysztof Iniewski "SMART GRID Infrastructure & Networking", Tata McGraw Hill.

OUTCOMES:

Upon finishing the course, students are expected to,

- Model the phasor measurement system mathematically.
- Define and demonstrate the concept of Wide area measurement systems
- Use the wide area measurement systems for assessing power system oscillations and stability.
- Analyze the performance of a generic phasor measurement unit.

EECX16 ENERGY AUDITING

L	T	P	C
2	0	0	2

OBJECTIVES:

- To introduce the general concepts and methodologies of energy auditing.
- To understand the procedures and techniques involved in energy auditing
- To systematically explore the possibilities of energy saving.
- To expose the students to different instruments involved in energy auditing.

MODULE I GENERAL ASPECTS, METHODOLOGY AND APPROACH **9**

General Philosophy and need of Energy Audit and Management. Definition and Objective of Energy Management, General Principles of Energy Management - Energy Audit: Need, Types - Understanding Energy Costs, Bench marking, Energy performance, Matching energy usage to requirements, Maximizing system efficiency, Optimizing the input energy requirements, Fuel and Energy substitution.

MODULE II PROCEDURES AND TECHNIQUES **8**

Data gathering : Level of responsibilities, energy sources, control of energy and uses of energy get Facts, figures and impression about energy /fuel and system operations, Past and Present operating data, Special tests, Questionnaire for data gathering. Analytical Techniques: Incremental cost concept, mass and energy balancing techniques, inventory of Energy inputs and rejections, Heat transfer calculations, Evaluation of Electric load characteristics, process and energy system simulation.

MODULE III EVALUATION OF SAVING OPPORTUNITIES **7**

Determining the savings in Rs, Noneconomic factors, Conservation opportunities, estimating cost of implementation. Energy Audit Reporting: The plant energy study report- Importance, contents, effective organization, report writing and presentation - Identification of losses, Improvements. Energy Balance sheet

MODULE IV ENERGY AUDIT INSTRUMENTS **6**

Basic measurements – Electrical measurements, Light, Pressure, Temperature and heat flux, Velocity and Flow rate, Vibrations, etc. Instruments Used in Energy systems: Load and power factor measuring equipments, Wattmeter, flue gas analysis, Temperature and thermal loss measurements, air quality analysis

Total Hours: 30

11. ASHRAEE Energy Use (4 Volumes)

12. CIBSI Guide –Users Manual (U.K.)

13. CRC Handbook of Energy Efficiency – CRC Press.

OUTCOMES:

At the end of the course, the students will be able to

- Demonstrate the importance of energy auditing.
- Use the right technique and procedure for energy auditing
- Explore the possibilities of reducing the losses and saving the energy systematically.
- Use appropriate instruments in the process of energy auditing.

POWER ELECTRONICS & DRIVES

EECX21 SPECIAL ELECTRICAL MACHINES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart knowledge on the constructional features and operating principles of various types of special electrical machines.
- To review the fundamental concept of stepper motor and high speed application .
- To impart knowledge on principle of operation, control and performance of Synchronous Reluctance, SRM and linear induction motor.
- To expose the students to the principle of operation, emf and Torque speed characteristics of PM brushless and PM synchronous motors.

MODULE I STEPPER MOTORS 6

Constructional features, Principle of operation, Permanent magnet stepper motor, Variable reluctance motor, Hybrid motor, Single and multistack configurations, Torque equations, Modes of excitations, Characteristics, Drive circuits, Control of stepping motors..

MODULE II HIGH-SPEED OPERATION OF STEPPER MOTORS 8

Pull-out torque/speed, characteristics of Hybrid stepper motors, calculation of pull-out torque, pull-out torque/speed characteristics for the VR stepper-motors, calculation of the pull out torque.

MODULE III SWITCHED RELUCTANCE MOTORS 8

Constructional features – Principle of operation – Torque prediction –Power controllers – Non-linear analysis – Microprocessor basedcontrol – Characteristics.

MODULE IV LINEAR INDUCTION AND SYNCHRONOUS MOTORS: 8

Development of a Double sided LIM from Rotary type IM- Schematic of LIM drive for electric traction, Development of one-sided LIM, Equivalent circuit of LIM,Linear Synchronous motor.

MODULE V PERMANENT MAGNET BRUSHLESS D.C. MOTORS AND SYNCHRONOUS MOTORS 8

Permanent magnet brushless D.C. Motors, Permanent magnet synchronous motors and axial flux machine:Principle of operation – EMF and torque equations – Phasor

diagram – Power controllers - Torque speed characteristics.

MODULE VI MODELLING OF MACHINES 8

Mathematical model of switched reluctance motor, PMBLDC motor, PM synchronous Motor ,axial flux motor.

Total Hours –45

8. M. Gopal, 'Digital Control and State Variable Methods', Tata McGraw-Hill,1997

OUTCOMES:

At the end of the course, the student is expected to

- understand the operating principle performance and Applications of Stepping Motors.
- understand the construction, principle of operation, control and performance of switched reluctance motors.
- understand the construction, principle of operation, control and performance of Synchronous Reluctance.
- Select the suitable Machines for Real Time Applications to maximize the torque output.

EECX22 CAD FOR ELECTRICAL APPARATUS L T P C

3 0 0 3

OBJECTIVES:

- To impart knowledge on using electromagnetic field theory in understanding the modeling concepts of Electrical Apparatus.
- Applying Maxwell's equation to model Electrical Apparatus.
- Providing numerical solutions for the analysis of Electrical Apparatus, using finite element approach.

MODULE I INTRODUCTION 5

Conventional design methodology – limitation -need for field analysis based design - computer aided design aspects – Advantages.

MODULE II ELECTROMAGNETICS AND ELECTROSTATICS 5

Basic field equations – calculation of field distribution – flux linkages – voltage induced – storage energy in electric field and magnetic field inductance – capacitance - Laplace and Poisson equation.

MODULE III CAD PACKAGES 8

Recent developments – preprocessing – modeling – boundary conditions – material characteristics – problem formulation – solution – post processing.

MODULE IV FINITE ELEMENT ANALYSIS 9

Mathematical formulation – differential and integral equation-FDM-discretisation – shape functions – stiffness matrix – solution techniques – post processing.

MODULE V V FUNDAMENTAL DESIGN PROBLEMS 8

Design of actuator – solenoid –Inductance – transformer with EMF equation.

MODULE VI DESIGN PROBLEMS IN MOTORS 10

Induction motor - switched reluctance motor – stepper motor – P.M. machines-Torque calculation.

Total Hours: 45

REFERENCES:

1. Sheppard J.Salon, “Finite Element Analysis of Electrical Machines”, Springer Edition, 2009.
2. Nicola Bianchi, “Electrical Machines Analysis Using Finite Elements”, Taylor & Francis group, 2009.
3. P.P. Silvester and Ferrari, “Finite Element for Electrical Engineers”, Cambridge University Press, 1984.

5. M.V.K. Chari and P.P. Silvester, “Finite Elements in Electric and Magnetic Field Problems”, John Wiley, 1980.

OUTCOMES:

At the end of the course, the students are expected to possess knowledge and achieve skills on following:

- To understand/learn the importance of CAD method.
- understand the basic electromagnetic field equation and problem formulation for CAD application.
- Apply theoretical concepts in designing of Electrical Apparatus.
- Ability to design actuators, solenoid, transformer and AC Machines using MAGNET software.
- Ability to Model any Electrical Apparatus.
- Apply FEM for the designing of differential eqaution.

EECX23 SOFTWARE FOR CIRCUIT SIMULATION L T P C
3 0 0 3

OBJECTIVES:

- To gain the hands-on experience to simulate, verify, examine, and design electrical, mechanical and electronic circuits using electrical software such as PSPICE, MATLAB, MagNet and Lab View
- To possess the intuitive analysis skill to forecast / illustrate the circuit simulation results.

MODULE I INTRODUCTION 7

Importance of simulation – General purpose circuit analysis – programs –Method of analysis of power electronic systems – Review of modeling of powerelectronic components and systems - Future trends in computer simulation.

MODULE II PSPICE 8

Introduction – PSpice overview – DC circuit Analysis –AC circuit analysis –Transient and the time domain analysis – Fourier Series and Harmoniccomponents – Modelling of devices like BJT, FET and MOSFET as amplifiersand oscillators and their analysis.

MODULE III MATLAB 7

Introduction - function description – Data types – Tool boxes – Graphical Display- Import and Export of data - programs for the solution of state equations.

MODULE IV MAGNET 8

Introduction - 2D mesh adaption tools - 2D boundary conditions – Modellingand predicting the performance of any electromagnetic or electromechanicaldevice such as Electric Motors / Generators and Transformers.

MODULE V LABVIEW 8

Introduction – Lab view concepts - Environment basics – Graphicalprogramming basics - Common tools - Debugging tools.

MODULE VI DESIGN 7

Solve electrical and electronics circuits and systems by modeling in PSpice,Matlab, MagNet and Labview.

Total Hours –45

REFERENCES:

1. Rajagopalan V., Marcell Dekker, “Computer aided analysis of power electronicsystems”, 1987.

4. “Matlab / Simulink manual”, MathWork, 2010.
5. Robert H., “Learning with Labview 2009”, Bishop prentice Hall, 2009.

OUTCOMES:

- At the end of the course, the student is expected to possess knowledge and achieve skills on the following:
- Basic concepts of simulation software tools and its applications.
- Describe the techniques to model and solve the application problems.
- Apply modern simulation tools such as PSPICE – MATLAB – MagNet – Labview for the design, analyses, and performance evaluations of electrical and electronics circuits and systems.

EECX24	ELECTROMAGNETIC FIELD COMPUTATION AND MODELING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart knowledge on the mathematical modelling of physical systems for analysis.
- To make the students analyse the system based on controllability and observability methods.
- To Introduce design techniques for effective control.
  To provide concept for analysing the stability of a system.

MODULE I INTRODUCTION 9

Review of basic field theory – electric and magnetic fields – Maxwell's equations– Laplace, Poisson and Helmoltz equations – principle of energy conversion – force/torque calculation – Electro thermal formulation.

MODULE II SOLUTION OF FIELD EQUATIONS I 8

Limitations of the conventional design procedure, need for the field analysis based design, problem definition, solution by analytical methods-direct integration method – variable separable method – method of images, solution by numerical methods- Finite Difference Method.

MODULE III SOLUTION OF FIELD EQUATIONS II 9

Finite element method (FEM) – Differential / integral functions – Variational method – Energy minimization – Discretisation – Shape functions –Stiffness matrix –1D and 2D planar and axial symmetry problem.

MODULE IV FIELD COMPUTATION FOR BASIC CONFIGURATIONS 7

Computation of electric and magnetic field intensities– Capacitance and Inductance – Force, Torque, Energy for basic configurations

MODULE V BASIC EXERCISES IN FEA PACKAGES 6

Modeling – Pre-processing – A vector and flux plot calculations – deriving point quantities in Post-processing.

MODULE VI DESIGN APPLICATIONS 6

Insulators- Bushings – Cylindrical magnetic actuators – Transformers – Rotating machines.

Total Hours –45

5. User manuals of MAGNET, MAXWELL & ANSYS software.
6. Silvester and Ferrari, “Finite Elements for Electrical Engineers” Cambridge University press, 1983.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Model the physical systems in terms of mathematical model for easier analysis. Analyse the system controllability and observability.
- Ability to model electric systems in finite element analysis scenario.
- Ability to calculate any electrical or magnetic parameter from the analysis and co-relate it.
- Design and develop modal control technique for systems.
- Analyse the systems stability using Lyapunov’s theory.

EECX25 SOLID STATE AC & DC DRIVES L T P C
3 0 0 3

OBJECTIVES:

- To study and understand the operation of electrical drives - D.C. motor drives, Induction motor drives, Synchronous motor drives.
- To analyze the closed-loop control of both DC and AC drives.
- To understand the differences between induction motor drives and synchronous motor drives.

MODULE I ELECTRIC MOTOR CHARACTERISTICS 7

Characteristics of DC motors - Induction motors - Synchronous motors - Constant torque and constant HP operations – Four quadrant operations – Rating of motors - Selection of drives.

MODULE II CONVERTER FED DC DRIVES 8

Single phase semi and full converter fed drives – three phase semi and full converter fed drives – continuous and discontinuous modes – closed loop converter fed drives.

MODULE III CHOPPER FED DC DRIVES 7

Operation of Class A, B, C, D, E chopper fed DC drives - four quadrant operations – closed loop chopper fed drives.

MODULE IV IV STATOR CONTROLLED INDUCTION MOTOR DRIVES 7

AC voltage controller fed induction motor drive – VSI and CSI fed drives – closed loop stator controlled induction motor drives - Braking methods for induction motors.

MODULE V ROTOR CONTROLLED INDUCTION MOTOR DRIVES 8

Rotor resistance control – slip power recovery scheme - Scherbius drive - sub synchronous operation, Kramers drive – super synchronous operation – closed loop rotor controlled drives.

MODULE VI SYNCHRONOUS MOTOR DRIVES 8

Operation of wound field cylindrical and salient pole synchronous motor for constant voltage and constant frequency source – brushless excitation – closed

loop self controlled synchronous motor drives.

Total Hours –45

5. S.B. Dewan, Gordon R. Slemon and A. Straughen, “Power Semiconductor Drives”, John Wiley Pub., 1996.

OUTCOMES:

At the end of the course the student will be able to

- Apply suitable motor for different applications
- Apply suitable power electronic controller for electric drives.
- Design and analyze converter fed DC drive
- Design and analyze chopper fed AC drive
- Apply power electronic controllers for the speed control of induction motor drives
- Apply power electronic controllers for the speed control of synchronous motor drives

EECX26	CONVERTERS, APPLICATIONS & DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To get an overview of different types of power semi-conductor devices andtheir switching characteristics.
- To understand the operation, characteristics and performance parameters ofcontrolled rectifiers.
- To design & implement real time industrial application of Power Electronicequipments.
- To know the practical application for power electronics converters in conditioning the power supply.

MODULE I PROTECTION OF POWER ELECTRONIC DEVICES 7

SCR – Triac – MOSFET - IGBT - Protection Circuits - Snubber Circuits –Ratings - safe operating Area - Heat sink Design.

MODULE II DESIGN OF CONTROLLED CONVERTERS 8

Gate pulse generating circuits - conventional methods, gate pulse generationusing microcontroller, gate drive circuits - Pulse Transformers - Opto Triacs - Synchronisation Circuits - fully controlled fed DC motor - Open loop, closedloop.

MODULE III DC-DC CONVERTERS 7

Half Bridge and Full Bridge Driver ICs for MOSFET and IGBT - Phase shiftedseries Resonant Converters - ZCS – ZVS – DC to DC Converter for ElectricVehicle.

MODULE IV PHASE CONTROLLERS 8

Photosensors - Temperature sensors - Micro controller Programming for phaseangle control - Implementation of phase controller for illuminating lights &Electric furnace control using micro controller -Maximum power point trackers Grid connected inverter - Implementation of converters for solar panel.

MODULE V SWITCHING POWER SUPPLIES 8

Design of PWM inverters - SPPWM inverters - Design and implementation ofUPS and SMPS - Harmonic analysis of inverters using Harmonic Analyser.

MODULE VI CASE STUDY 7

Mini Project Model – Hardware Fabrication – converter – DC to DC ConverterDC Drives.

Total Hours –45

REFERENCES:

1. M.H. Rashid, “Power Electronics Handbook”, Elsevier Press, Micro C Manual,2003.
2. Nihal Kularatna, “Power Electronics Design Handbook”, “Low-PowerComponents and Applications”, 1999.
3. Keith H. Sueker, “Power Electronics Design - A Practitioner’s Guide”, 1998.
4. “International Rectifiers”, Application note Catalogue.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Practical exposure in DC-DC converter and control.
- Knowledge in power control devises.
- Experience to selection of converter for various application.
- Design controllers for drives.

EECX27	POWER ELECTRONICS APPLICATION TO RENEWABLE ENERGY SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide basic understanding of the emerging power electronics technologies to Renewable systems.
- To enable students to design power electronics circuit that can control active and reactive power flow in grids.
- To integrate theory and practical knowledge of power system protection.

MODULE I OVERVIEW OF ENERGY CONVERSION AND RENEWABLE ENERGY SYSTEMS 7

Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost-GHG Emission) - Qualitative study of different renewable energy resources: Solar, wind, ocean, Biomass, Fuel cell, Hydrogen energy systems and hybrid renewable energy systems -Block diagram.

MODULE II ELECTRICAL ENERGY CONVERSION SYSTEMS 8

Review of reference theory fundamentals - principle of operation and analysis: IG, PMSG, SCIG and DFIG - different conversion schemes - fixed and variable speed operation - drive selection - power control - braking systems - grid integration issues.

MODULE III POWER CONVERSION IN RENEWABLE SYSTEMS 8

Principle of operation: line commutated converters (inversion-mode) - Boost and buck-boost converters - Inverters for high power applications: Multi-level Inverters, Analysis of their performance, Selection of inverter, Battery sizing, Array sizing, harmonics, Interaction with power grid.

MODULE IV ANALYSIS OF WIND ENERGY SYSTEMS 8

Stand alone operation of fixed and variable speed wind energy conversion systems - electrical design - power collection systems – earthing - electrical protection - reactive VAR issues - compensators -remote monitoring and control - economic aspects.

MODULE V ANALYSIS OF PV SYSTEMS 8

Technical and non-technical considerations - system size and module choice -

mounting systems and building integration- power conditioning system - lightning protection - earthing - metering Stand-alone systems: Modules-Batteries - charge controllers -sizing of PV arrays – applications.

MODULE VI HYBRID RENEWABLE ENERGY SYSTEMS 6

Need for Hybrid Systems- Range and type of Hybrid systems- micro wind systems and solar system- Grid integrated PMSG and SCIG Based WECS - Case studies.

Total Hours –45

4. Gray, L. Johnson, "Wind energy system", Prentice Hall Inc, 1995.
5. B.H.Khan, “Non-conventional Energy sources”, Tata McGraw-hill Publishing Company, New Delhi.

OUTCOMES:

- The ability to understand different renewable energy resources : Solar, Wind Biomass, Fuel cell, Hydrogen energy systems and hybrid renewable energy syst
- Nurturing the ability to develop RE systems considering sustainable developmen
- Knowledge on the advancements in designing of power electronics equipments renewable energy sources.
  Identifying power electronics topologies for used in controlling active and
- reactive power in a RES.
- The capability to understand Grid Connection Issues in the RES plant.
  Identifying integrating and justifying techniques to be used in the planning and operation of grid control with renewable energy sources

EECX28	EMBEDDED CONTROL OF ELECTRIC DRIVES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To make the student into a competent and independent practitioner in the field of embedded systems.
- To provide an In-depth study both of microcontroller design, and of the Power Electronic Converters and Electric Drives to which the microcontroller must interface.
- Study and application of a Real Time Operating System using programming in C.

MODULE I PIC16F8XX- MICROCONTROLLERS 8

Function - I/O Ports – Timers - CCP Modules - Serial Communication Modules - Analog Modules - EEPROM.

MODULE II MICROCONTROLLER C 8

Mikro C Compiler reference - mikro C Libraries: ADC, PWM, Keypad, LCD, Trigonometric Libraries –Preprocessor - Statements.

MODULE III ALGORITHM AND PROGRAMMING IN MIKROC 8

Source codes in Mikro C: ADC and PWM – Unipolar SPWM – Phase Angle Control with Zero Crossing Detection- LCD with Key Pad - Speed Measurement.

MODULE IV ISOLATORS AND SENSORS 10

High Speed Opto-Couplers – Zero Crossing Detectors - Optically Isolated High Voltage and High Current sensing circuits –Optical Encoders – Tachogenerators.

MODULE V CLOSED LOOP CONTROL OF ELECTRIC DRIVES 6

Closed Loop Control - Hardware and Software Implementation: DC Motor control using PWM based DC-DC converters and Controlled Rectifiers – AC Motor Control Using TRIAC Phase Controller, SPWM inverter fed single and three phase induction motors.

MODULE VI MICRO C BUILDING APPLICATIONS 5

Micro C IDE - Code Editor- Code Explorer – Debugger – Error Window – Statistics – Integrated Tools - Building applications - Projects – Source Files -

Search Paths – Managing Source Files – Compilation - Output Files – Assembly View – Error Messages - Burning Software - Overview of Microbar - ICSP port .

Total Hours –45

REFERENCES:

4. Tim Wilmshurst, “Designing Embedded Systems with PIC Microcontrollers- Principles and applications”, Newnes, 2007.
5. Martin P. Bates, “PIC Microcontrollers–An Introduction”, Newnes, 2011.

OUTCOMES:

At the end of the course, the student will have:

- A thorough understanding on PIC Microcontroller and its modules.
- Able to provide details of hardware and software development of modern embedded systems.
- The ability to form algorithm and execute programming in mikroc.
- The capability to design power electronics equipments related to renewable energy sources.
- The ability to simulate closed loop Control of Electric Drives.
- The capability to apply micro c compiler for real time operating systems.

EECX29	POWER QUALITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To acquire knowledge on factors affecting Power Quality.
- To analyze and control power quality problems.

MODULE I POWER QUALITY TERMS AND DEFINITIONS 8

Introduction – transients - short duration/long duration voltage variations -voltage imbalance - waveform distortion - voltage fluctuations – power frequency variation. Power Quality Problems - Poor load power factor – loads containing harmonics - notching in load voltage -DC offset in loads – unbalanced loads - disturbance in supply voltage.

MODULE II VOLTAGE SAGS AND INTERRUPTIONS 8

Sources of sags and interruptions - end user issues - Ferro resonant transformer - on-line UPS - hybrid UPS - motor generator set, SMES etc. -motor starting sags - utility system fault clearing issues.

Transient over Voltage - Sources of transient over voltages - principles of over voltage protection - devices for over voltage protection - utility capacitor switching transients - utility lightning protection - load-switching transient problems.

MODULE III LONG DURATION VOLTAGE VARIATIONS 8

Devices for voltage regulation - Utility voltage regulator applications – capacitors for voltage regulation- end-user capacitor application - regulating Utility voltage with dispersed sources.

Quality and Reliability of Power Supply - Reliability of power supply – reliability measurements consumer interruption cost - distribution automation – substation grounding - energy auditing.

MODULE IV HARMONICS 7

Voltage and current harmonics distortions - harmonics of single-phase power supplies - three phase power converters - arcing devices - storable devices -effects of harmonics distortion - system response characteristics – locating sources of harmonics, peripherals for controlling harmonics - devices for filtering harmonics.

MODULE V WIRING AND GROUNDING 7

Harmonics study procedure - symmetrical components - modeling harmonics sources - harmonic filter design - telecommunication interferences – Reason for grounding -

typical wiring and grounding problems and their solutions.

MODULE VI POWER QUALITY MONITORING AND CUSTOM POWER DEVICES **7**

Power quality related standards - standard test waveform and detailed power quality monitoring - power quality measurement equipments. Custom Power Devices: Utility customer interface - network reconfiguring device load compensation using shunt compensators - voltage regulation using shunt compensators - dynamic voltage restorer - unified power quality conditioner - Computer tools for harmonic analysis.

5. Barry W. Kennedy, "Power Quality Primer "McGraw Hill, 2000.
6. Wilson E. Kazibwe, Van Nostrand Reinhold, "Electrical power quality controls techniques".

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Understand the power quality issues and its importance.
- Evaluate the characteristics of power quality disturbances.

EECX33 IoT FOR ELECTRICAL ENGINEERS L T P C
3 0 2 3

OBJECTIVES:

- The objective of this course is to introduce IoT in Electrical and Electronics Engineering
- Introduces CLOUD PLATFORMS and PROTOCOLS.
- To provide practical experience with IoT and microcontroller systems
- Demonstrates the use of the IoT.

MODULE I INTRODUCTION TO INTERNET OF THINGS(IoT) 4

Introduction - Overview of the Architecture of Internet of Thing- Overview of the top-level components: the device, gateway and cloud - IOT enabling technologies.

MODULE II IOT COMPONENTS 5

Device platforms : Raspberry Pi - Arduino controller – Overview of Device platforms and interfacing - USB – GPIO - Inter-Integrated Circuit serial bus Serial Peripheral Interface Bus, Universal Asynchronous Receiver/Transmitter (UART) -Sensors: Temperature and Humidity, Moisture, light, Voltage , Current, IR, PIR and Hall sensors.

MODULE III COMMUNICATION PROTOCOLS FOR IoT 6

Basics of the MQTT, HTTP, CoAP Protocols –installing the Arduino MQTT Libraries - testing MQTT.

MODULE IV OVERVIEW OF CLOUD PLATFORMS 10

Overview of Cloud platforms - AWS IoT Platform -Microsoft Azure IoT Hub - IBM Watson/Bluemix cloud IoT Platform - Google Cloud Platform - SAP Cloud Platform - General Electric's Predix cloud - Node-RED programming tool - Arduino Ethernet Shield, GSM module, Wi-Fi module and NodeMCU.

MODULE V INTERFACING CLOUD PLATFORM WITH HARDWARE 12

LM 35 Temperature sensor and calibration – interfacing LM 35 with Arduino – Interfacing Ethernet shield with Arduino – sending data from arduino to cloud platform – monitoring temperature in the cloud.

MODULE VI APPLICATION OF IOT IN SMART GRID 8

Case Study: Advanced metering infrastructure (AMI) – remote control operation of

energy consuming devices – virtual power plants and smart metering.

Total Hours –45

6 Michael Margolis "Arduino Cookbook" O'Reilly Media, Inc., 1005 Gravenstein Highway North, Sebastopol, CA 95472.@ March 2011.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Work on different projects making use of the IoT .
- Implement sensor interfaces in various Cloud systems by using various interfacing techniques.
- Enable the student to design IoT based monitoring to interact with real-world systems
- Design and develop Arduino microcontroller and NodeMCU based automation systems.
- Develop and demonstrate how to accomplish a given task using IoT with Arduino microcontroller.
- Demonstrate a working knowledge of the necessary steps and methods used to interface a IoT system to devices such as relays, meters,motor controls and sensors, etc.

HIGH VOLTAGE ENGINEERING

EECX36	HIGH VOLTAGE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide fundamental knowledge on effects of overvoltges in power sytems
- To understand breakdown mechanisms in gaseous, liquids
- To perceive breakdown mechanisms in solid and composite dielectrics.
- To understand the generation of High voltages and currents.
- To summarise different measurement techniques for High voltages and currents.
- To analyze various High voltage testing methods.

MODULE I OVER VOLTAGE PHENOMENON AND INSULATIONCO-ORDINATION 8

Natural causes for over voltages – Lightning phenomenon, Overvoltage due to switching surges, system faults and other abnormal conditions, Principles of Insulation Coordination on High voltage and Extra High Voltage power systems.

MODULE II BREAK DOWN IN GASEOUS AND LIQUID DIELECTRICS 7

Gases as insulating media, collision process, Ionization process, Townsend's criteria of breakdown in gases, Paschen's law - Streamer theory-Breakdown in non uniform fields and corona discharges. Liquid as Insulator, pure and commercial liquids, breakdown in pure and commercial liquids.

MODULE III BREAK DOWN IN SOLID DIELECTRICS 8

Intrinsic breakdown, electromechanical breakdown, thermal breakdown, breakdown of solid dielectrics in practice, Breakdown in composite dielectrics, Solid dielectrics used in practice.

MODULE IV GENERATION OF HIGH VOLTAGES AND CURRENTS 8

Generation of High Direct Current Voltages, Generation of High alternating voltages, Generation of Impulse Voltages, Generation of Impulse currents, Triggering and control of impulse generators.

MODULE V MEASUREMENT OF HIGH VOLTAGES AND CURRENTS 7

Measurement of High DC, AC and impulse voltages, Measurement of High DC, AC and impulse currents, Digital techniques in high voltage measurements.

MODULE VI HIGH VOLTAGE TESTING 7

High voltage testing of Transformers, Insulators and bushings, cables, Isolators and circuit breakers, surge Arresters- Radio Interference measurements.

Total Hours –45

REFERENCES:

1. C.L.Wadhwa, “High Voltage Engineering”, by New Age Internationals (P) Limited, 1997.
2. Ravindra Arora, Wolfgang Mosch, “High Voltage Insulation Engineering”, by New Age International (P) Limited, 1995.

4. E.Kuffel, W.S.Zaengl, J.Kuffel, “High Voltage Engineering”, Fundamentals by Elsevier, 2nd Edition, 1999.

OUTCOMES:

At the end of the course, the student will be able to

- understand the causes of abnormal operating conditions (faults, lightning and switching surges) in power systems and the principles of insulation coordination in high voltage and extra high voltage systems.
- gain the Knowledge of the various breakdown mechanisms in, liquid and gaseous dielectrics
- analyze the fundamental behaviour and breakdown mechanisms in solid and composite dielectrics.
- generate high AC,DC and impulse voltages and currents.
- gain knowledge on measurement of high AC, DC and impulse voltages and impulse currents.
- select appropriate type of test for each high voltage power apparatus.

EECX37 BIOELECTRICS L T P C

3 0 0 3

OBJECTIVES:

- To teach the students, some of the basic concepts of bioelectrics through pulsed power principles.
- To impart a detailed knowledge on pulsed power systems.
- To study about various applications of electroporation
- To gain a detailed knowledge on electroporation
- To study about equipments used for electroporation
- Applications of electroporation

MODULE I BIOELECTRICITY 8

Introduction – Diffusion – Comparison of gravity and diffusion – Membrane potential – membrane capacitance – Ion selectivity – Channel density – Channel conductance – Channel number, channel conductance and membrane potential – Channel conductance and random switch – Probability – Membrane potential revisited – Diffusion potential – More realistic view of cell potential – Channel opening probability – Channels in membranes – Classes of selective holes – Total membrane conductance and potential.

MODULE II PULSED SYSTEMS: DESIGN PRINCIPLES 7

Lumped parameter pulsed systems - Principle schemes for pulse generation – Voltage multiplication and transformation. Pulse generation using long lines - Generation of nanosecond pulses – voltage multiplication in line based generators – pulse systems with segmented and non uniform lines.

MODULE III APPLICATIONS OF PULSED POWER AND PLASMAS TOBIOSYSTEMS AND LIVING ORGANSISMS 8

Pulsed power source using magnetic compression system – discharge plasma by pulsed power – action of pulsed power and discharge plasma to bio-systems.

MODULE IV ELECTROPORATION 7

Introduction to Electroporation – Electroporation and cellular physiology – the cell in the electric field.

MODULE V EQUIPMENT FOR ELECTROPORATION

Pulse generator – Applicator – Electrode – Electrochemotherapy – Gene

Electrotransfer – DNA Vaccination – Irreversible Electroporation.

MODULE VI APPLICATIONS OF ELECTROPORATION 7

Case Study.

Total Hours –45

5. Stephen T.Lee, Julie Gehl, Edward W.Lee, “Clinical aspects of Electroporation”, Springer, 2011.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Pulsed power principles and bioelectricity.
- Illustrate the design principles of pulse forming networks
- appraise the pulse and plasma transmission to biosystems and living organisms
- Understand the concept of electroporation and its application in cellular physiology
- identify and apply an appropriate equipment for electroporation technique
- Electroporation and applications of electroporation through conducting of case studies

EECX38	EHV AC AND DC TRANSMISSION ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide an in depth understanding of the different aspects of Extra High Voltage AC and DC transmission system analysis and design.
- To acquire knowledge about the various parameters of EHV lines
- To study about the various EHV AC transmission schemes
- To acquire knowledge about the various EHV testing methods and techniques.
- Compare EHVAC and HVDC systems and suggest appropriate transmission systems based on requirement and constraints
- Understand about the overvoltage and its effects on power system. Complete analysis of harmonics and basis of protection for HVDC systems

MODULE I INTRODUCTION 8

Need of EHV transmission-standard transmission voltages-comparison of EHV AC and HVDC transmission systems and their applications & limitations-surface voltage gradients in conductor- distribution of voltage gradients on sub-conductors- mechanical considerations of transmission lines-modern trends in EHV AC and HVDC transmission.

MODULE II PARAMETERS OF EHV LINES 8

Resistance of conductors- bundle conductors-inductance of EHV Line configurations line capacitance-sequence inductance and capacitance- line parameters for modes of propagation- resistance and Inductance of ground returns.

MODULE III EHV AC TRANSMISSION 7

Corona loss formulas- corona current- audible noise – generation and characteristics corona pulses their generation and properties- radio interference (RI) effects- over voltage due to switching- ferroresonance-reduction of switching surges on EHV system.

MODULE IV EXTRA HIGH VOLTAGE TESTING AND DESIGN OF EHVLINES 7

Characteristics and generation of impulse voltage -generation of high AC and DC voltages- measurement of high voltages by sphere gaps and potential dividers- Consideration for Design of EHV Lines: Design factors under steady

state limits- EHV line insulation design based upon transient over voltages- Effects of pollution on performance of EHV lines.

MODULE V HVDC TRANSMISSION 7

Types of dc links- converter station-choice of converter configuration and pulse number- effect of source inductance on operation of converters- Principle of dc link control- converter controls characteristics- firing angle control- current and excitation angle control- power control-starting and stopping of dc link.

MODULE VI CONTROL AND PROTECTION OF HVDC LINE 8

Converter faults- protection against over currents and over voltages-smoothing reactors-generation of harmonics-ac and dc filters- Multi Terminal DC systems (MTDC): Types, control- protection and applications-control of HVDC system desired features of control-control characteristics

Total Hours –45

6. Padiyar K R “FACTS controllers in Power Transmission and distribution” New Delhi, New Age Int. publishers.
7. Clayton R.Paul, “Analysis of multi-conductor transmission lines”, Wiley publication, 2000.

OUTCOMES:

At the end of the course, the student will be able to

- Compute the surface voltage gradient for bundled conductors.
- Compute the line parameters for EHVAC transmission lines.
- Explain the issues, such as corona, radio interference and switching surges, in EHVAC systems.

- Design an EHVAC transmission system for the given requirement and explain the methods of testing EHVAC systems.
- Explain the operation of converters in HVDC transmission systems.

- Analyze a HVDC systems for faults and identify suitable methods to control and protect it.

EECX39	HIGH VOLTAGE DIRECT CURRENT TRANSMISSION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Understand the evolution of HVDC conversion and transmission
- To develop the skills in the area of HVDC power transmission with the analysis of HVDC converters, harmonics and design of filters.
- To understand about the various control schemes associated with HVDC systems
- To analyze AC/DC system interactions and know the operation and control of various MTDC systems.
- To acquire knowledge about the power flow analysis in HVDC systems
- To study about different applications of HVDC systems.

MODULE I INTRODUCTION TO TRANSMISSION SYSTEMS 8

Introduction – Evolution of HVDC Transmission systems – Comparison of HVAC and HVDC transmission systems – Types of HVDC transmission systems – Components of HVDC transmission systems.

MODULE II ANALYSIS OF HVDC CONVERTERS AND HVDC SYSTEM 8

Analysis of simple rectifier circuits – Bridge Rectifier analysis – Analysis of HVDC Converter: Different modes of converter operation - Output voltage waveforms and DC voltage in rectification - Output voltage waveforms and dc in inverter operation - thyristor voltages - Equivalent electrical circuit.

MODULE III HVDC SYSTEM CONTROL 8

HVDC System control features – Control modes - Control schemes – Control comparisons.

MODULE IV MULTITERMINAL DC SYSTEMS 10

Converter mal-operations – Commutation failure – starting and shutting down the converter Bridge – Converter Protection - Smoothing reactor and dc lines – Reactive power requirements – Harmonic Analysis – Filter Design

MODULE V POWER FLOW ANALYSIS IN AC/DC SYSTEMS 6

Component Models for the Analysis of AC and DC Systems - Power flow analysis of AC-DC systems - Transient stability analysis - Dynamic stability

analysis.

MODULE VI APPLICATIONS OF HVDC SYSTEMS 5

Multi-terminal HVDC system - Advances in HVDC transmission - HVDC system application in wind power generation.

Total Hours –45

8. V.K.Sood, HVDC and FACTS controllers – “Applications of Static Converters in Power System”, Kluwer Academic Publishers, 2004.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and skills on the following:

(i) Ability to identify and design the various components of HVDC system.
(ii) Ability to analyse the HVDC converters for different modes of operation.
(iii) Ability to design the different control schemes for HVDC system.
(iv) Ability to design the protection schemes for converters and filters to overcome harmonics in multi terminal HVDC system operations
(v) Ability to perform power flow analysis ,transient stability and dynamic stability analysis in HVDC systems

Ability to implement the HVDC system for different applications

EECX40	ELECTROMAGNETIC INTERFERENCE ANDELECTROMAGNETIC COMPATIBILITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

This course conveys essential facts on:

- Different electromagnetic Interference problems occurring in Intersystem and their possible mitigation techniques in Electronic design.
- EMI Sources, EMI problems and their solution methods in PCB level / Subsystem and system level design.
- Characteristics and design of electromagnetic compatibility
- Methods of coupling and grounding summarize filtering, shielding and coating methods
- Explain the digital logic noise and ground noise
- Standard and laboratory techniques forpossible EMC standards

MODULE I BASIC CONCEPTS 6

Definition of EMI and EMC with examples - Classification of EMI/EMC - CE, RE, CS, RS Modules of parameters - Sources of EMI - EMI coupling modes - CM and DM, ESD phenomena and effects - Transient phenomena and suppression.

MODULE II EMI MEASUREMENTS 8

Basic principles of RE, CE, RS and CS measurements - EMI measuring instruments- Antennas, LISN, Feed through capacitor, current probe, EMC analyzer and detection technique - Open area site - shielded anechoic chamber - TEM cell.

MODULE III EMC STANDARD AND REGULATIONS 8

National and Intentional standardizing organizations- FCC, CISPR, ANSI, DOD, IEC, CENEEC, FCC CE and RE standards - CISPR, CE and RE Standards - IEC/EN, CS standards - Frequency assignment - spectrum conversation.

MODULE IV EMI CONTROL METHODS AND FIXES 8

Shielding – Grounding – Bonding – Filtering - EMI gasket - Isolation transformer - Opto isolator.

MODULE V GROUNDING FOR THE EMI CONTROL 8

Characteristics of grounding systems: Impedance characteristics - Antenna characteristics – Ground, related interference - Circuit, Equipment, and System

grounding: Single-point grounding scheme - Multipoint grounding Scheme - Selection of a grounding Scheme - Ground system confgurations - EMI control devices and techniques.

MODULE VI EMC DESIGN AND INTERCONNECTION TECHNIQUES 7

Cable routing and connection - Component selection and mounting - PCB design - Trace routing - Impedance control – decoupling - Zoning and grounding.

Total Hours – 45

REFERENCES:

1. Prasad Kodali.V, “Engineering Electromagnetic Compatibility”, S.Chand& Co, New Delhi, 2000.
2. Clayton R.Paul, “Introduction to Electromagnetic compatibility”, John Wiley & Sons, 1992.
3. Keiser, “Principles of Electromagnetic Compatibility”, Artech House, 3rd Edition, 1994.
4. Donwhite Consultant Incorporate, “Handbook of EMI / EMC - Vol I”, 1985.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieveskills on the following:

- Ability to understand Electromagnetic Interference problems and their mitigation techniques and grounding systems for EMI control.
- Real-world EMC design constraints and make appropriate tradeoffs to achieve the most cost-effective design that meets all requirements.
- Designing electronic systems that function without errors or problems related to electromagnetic compatibility
- To design systems with Electromagnetic compatibility and to diagnose and solve basic electromagnetic compatibility problems
- To able to design systems to mitigate the effects of Electromagnetic Interference.
- Knowledge and awareness on EMC design and interconnection techniques.

EECX41 OUTDOOR INSULATORS

L	T	P	C
3	0	0	3

OBJECTIVES:

The course aims at giving a comprehensive knowledge on

- Outdoor Insulators, which are mainly, used for Transmission and Distribution systems.
- Exposure to a range of insulation materials and composites used in HV insulation systems and their electrical properties
- Learn a comprehensive range of testing and measurement techniques to characterise insulation materials
- Acquire knowledge on design and manufacture of insulators
- Acquire knowledge of partial discharges, condition monitoring and insulation quality assessment
- Selection,design and maintainence of insulation system according to IEC standards.

MODULE I INTRODUCTION 7

Overview – Important Definitions – Types of Outdoor Insulators – Uses of Outdoor Insulators – Stresses Encountered in Service – Electrical Performance– Mechanical Performance – Role of Insulators on Overall Power System Reliability – Shapes of Outdoor Insulators – Mechanical and Electrical Ratings of Insulators – Comparison of Porcelain, Glass and Composite Insulators – Life Expectancy.

MODULE II NONCERAMIC INSULATOR TECHNOLOGY 7

Introduction - Materials for Weathersheds / Housings – Shed Design – Insulator Core – Hardware – Establishing Equivalency to Porcelain/Glass – Manufacturing Changes and Quality Control (QC) – Un-standardization/ Propagation - Live-line Maintenance Handling, Cleaning and Packaging - Brittle Fracture – Water Drop Corona – Aging and Longevity – Grading Control Rings.

MODULE III DESIGN AND MANUFACTURE OF INSULATORS 8

Porcelain Insulators – Manufacture of Porcelain Insulators – The Porcelain Suspension Insulator – Porcelain Pin-type Insulators – Porcelain Multicone Insulators – Porcelain Long-rod and Post Insulators – Porcelain Insulators Glazes - Porcelain Insulator Hardware – Porcelain Insulator Cement – The Porcelain Dielectric.

Nonceramic Insulators - Nonceramic Suspension Insulator – Line Post Insulator – Hollow Core Insulator – Manufacture of Nonceramic Insulators – The Composite

Dielectric – Voltage Stress Control.

MODULE IV TESTING STANDARDS FOR INSULATORS 8

Need for Standards – Standards Producing Organizations – Insulator Standards– Classification of Porcelain / Glass Insulator Tests – Brief Description and Philosophy of Various Tests for Cap and Pin Porcelain/Glass Insulators – Summary of Standards for Porcelain/Glass Insulators – Standards of Nonceramic (Composite) Insulators – Classification of Tests, Philosophy and Brief Description – Standards for Nonceramic Insulators.

MODULE V DETECTION OF DEFECTIVE INSULATORS 7

Detecting defective porcelain insulators – principles involved – electrical methods – thermography - Detecting defective non ceramic insulators – detection prior to installation – detecting degraded insulator during service.

MODULE VI SELECTION AND MAINTENANCE OF INSULATORS 8

Introduction – Cost and Weight – National Electricity Safety Code (NESC) – Basic Lightning Impulse Insulation Level (BIL) – Contamination Performance– Experience with Silicone Rubber Insulators in Salt Areas – Compaction – Grading Rings for Nonceramic Insulators - Maintenance of Insulators - Maintenance Inspection – Hotline washing – equivalent salt deposit.

Total Hours –45

5. EPRI, “Transmission Lines Reference Book – 345kV and above”, 1982.
6. ANSI C 29.1, “Electrical Power Insulator – Test Methods”, 1992.

OUTCOMES:

Upon completing the Course, the student will be able to do the following:

- Become familiar with different stresses encountered in the service of the insulator as well as the types and performance of Insulators.

- Able to connect the current area of Research in insulators including non-ceramic insulators.
- Design and Manufacturing process of insulators can be understood.
- Ability to understand the various testing standards of insulating materials
- Ability to perform quality check of insulating materials.
- The testing standards, selection and maintenance of insulators will also be made aware.

EECX44 HIGH VOLTAGE TESTING TECHNIQUES L T P C
3 0 0 3

OBJECTIVES:

To acquire knowledge on,

- basics of condition monitoring of high voltage equipments
- pre-testing procedures by statistical evaluation methods.
- different types of testing and measurement techniques.

MODULE I INTRODUCTION 6

Objectives of high voltage testing, classification of testing methods- self restoration and non-self restoration systems-standards and specifications measurement techniques ,Diagnostic testing online measurement, standard test cells.

MODULE II STATISTICAL EVALUTION OF MEASURED RESULTS 8

Determination of probability values, Distribution function of a measured quantity, confidence limits of the mean values of disruptive discharges - 'Up and Down' method for determining the 50% disruptive discharge voltage, multi stress ageing, life data analysis.

MODULE III TESTING TECHNIQUES FOR ELECTRICAL EQUIPMENT 8

Testing of insulators, bushings, air break switches, isolators, circuit breakers, power transformers, voltage transformers, current transformers, surge diverters ,cable - testing methodology-recording of oscillograms - interpretation of test results.

MODULE IV NON-DESTRUCTIVE INSULATION TEST TECHNIQUES 8

Dynamic properties of dielectrics-dielectric loss and capacitance measurement-partial discharge measurements-basic partial discharge (PD) circuit - PD currents- PD quantities -Digital PD instruments and measurements, acoustic emission technique and UHF Techniques for PD identification, Corona and RIV measurements on line hardware.

MODULE V POLLUTION TESTS AND DESIGN OF HIGH VOLTAGE LAB 8

Artificial Pollution tests- salt-fog method, solid layer method, Dimensions of High voltage laboratory, equipment- fencing, earthing and shielding, circuits for high voltage experiments.

MODULE VI APPLICATION OF HIGH VOLTAGE ENGINEERING IN INDUSTRY **9**

Introduction – Electrostatic applications – Electrostatic precipitation, separation, painting coating,spraying, imaging, printing – Transport of materials – Sandpaper Manufacture – Smoke particle detector – Electrostatic spinning, pumping, propulsion – Ozone generation – Biomedical applications.

Total Hours – 45

9. M.D Judd, Liyang, Ian BB Hunter "P.D Monitoring of Power Transformers using UHF Sensors Part II, Vol.21, No.3, pp 5-13, 2004.

OUTCOMES:

At the end of the course the student will be able to

- coordinate the various standards for testing of HV equipments
- Ability to evaluate the results by using statistical tools.
- familiarize with different testing techniques.
- To identify an appropriate non destructive testing technique for high voltage applications
- To demonstrate the pollution performance tests on high voltage equipments

- Ability to select, apply and perform testing on various high voltage electrical equipment using appropriate testing technique

EECX45	PULSED ELECTRIC FIELD AND FOOD PRESERVATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To acquire skills in the area of food preservation using pulsed electric field treatment.
- To study about different inactivation techniques used in pulsed electric field.

MODULE I FUNDAMENTALS OF PULSED ELECTRIC FIELD 7

Introduction- Methods of Applying Electricity – High Intensity PEF Processing System – Basics of High Intensity PEF – Energy Requirements – Applications of PEF in Food Preservation – Disadvantages of PEF.

MODULE II DESIGN OF PEF PROCESSING EQUIPMENT 8

Introduction – High Voltage Pulsers – Switches – Treatment Chambers – Cooling system – Typical Measurements in PEF system – Packaging and Storaging.

MODULE III MICROBIAL INACTIVATION IN ELECTRIC FIELDS 7

Introduction – Transmembrane Potential – Electromechanical Compression and instability – Osmotic Balance – Viscoelastic Model – Hydrophobic and Hydrophilic pores - Theories based on conformational changes – Electric Field induced structural changes.

MODULE IV PEF INDUCED BIOLOGICAL CHANGES 8

Introduction – Electropermeabilization – Electrofusion – Disruption and Biological Alteration – Electrical and Thermal Gradients induced by PEF on microbial cell membranes – Main factors in Microbial inactivation.

MODULE V PEF INACTIVATION OF VEGETATIVE CELLS SPORES AND ENZYMES IN FOODS AND FOOD PROCESSING BY PEF 7

Introduction – Microbial Inactivation – Inactivation of yeasts - E.Coli - S.Aureus– Lactobacillus – Bacillus – Salmonella – Pseuomonas - Inactivation of other microorganisms - Spore Inactivation – Standardization of inactivation assessment - Enzyme inactivation.

MODULE VI FOOD PROCESSING BY PEF 8

Microbial Analysis – Chemical and Physical Analysis – Sensory evaluation and Shelf life studies - Quality and Shelf Life Evaluation of PEF products – Processing of Apple

Juice, Orange Juice, Milk, Eggs and Green Pea Soup - Processing of Brine solutions and water in cooling systems.

Total Hours – 45

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Understand and analyze the PEF concept in different applications.
- Ability to study about the design of PEF processing equipments
- Ability to understand the various microbial inactivation techniques in electric feilds
- Ability to analyse electrical and thermal Gradients induced by PEF
- Study different inactivation techniques used in pulsed electric field.
- Ability to perform microbial ,chemical and physical analysis for food processing by PEF

COMPUTER SCIENCE & INFORMATION TECHNOLOGY

ITCX82	COMPUTER NETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To enable the students to

- know the computer networking basics and the functions of different layers in OSI Model and TCP-IP Model.
- acquire the knowledge about the different error detection and correction methods and how the data flow is controlled in data communication.
- learn the internetworking protocols and how to apply the sub netting scheme to efficiently use the IP addresses by reducing the wastage of addresses.
- be conversant with the various transmission control protocols and congestion control mechanisms.
- be familiar with various application layer protocols .
- learn about cryptographic techniques and algorithms for network security.

Prerequisite: Computer Fundamentals

MODULE I DATACOMMUNICATIONS 8

Components - Direction of Data flow - networks - Components and Categories- types of Connections - Topologies -Protocols and Standards - OSI and TCP-IP Model- Transmission Media – Twisted Pair Cable - Coaxial Cable – Optical Fiber Cable - Line Coding .

MODULE II DATA LINKLAYER 8

Error detection and correction - Parity - CRC - Hamming code - Flow and Error control - stop and wait - go back-N ARQ - selective repeat ARQ- sliding window - HDLC - LAN - Ethernet IEEE 802.3 - IEEE 802.11 - Bridges.

MODULE III NETWORK LAYER 8

Internetworks - Packet Switching and Datagram approach – IPv4 and IPv6 - IP addressing methods - Sub netting – Routers - Routing - Distance Vector Routing - Link State Routing. Link State Routing

MODULE IV TRANSPORT LAYER 7

Process to Process delivery – Port Addressing - Multiplexing - Demultiplexing - Sockets - User Datagram Protocol (UDP) - Transmission Control Protocol (TCP) - Congestion Control - Quality of services (QOS).

MODULE V APPLICATION LAYER **7**

Domain Name System – Simple Message Transfer Protocol – Post Office Protocol – Internet Message Access Protocol - File Transfer Protocol – Hyper Text Transfer Protocol – World Wide Web.

MODULE VI CRYPTOGRAPHY **7**

Introduction – Symmetric Key Cryptography – Traditional ciphers – Simple Modern Ciphers – Modern Round Ciphers – Mode of operation – Asymmetric Key Cryptography – RSA Algorithm.

Total Hours – 45

TEXT BOOKS:

1. BehrouzA .Forouzan ,"Data Communication and Networking", 4th Edition, TataMcGraw-Hill,2017.

REFERENCES:

4. Paul Goransson ,Chuck Black, and Timothy Culver **"**Software Defined Networks: A Comprehensive Approach" Second Edition, Pearson Education, 2016.

OUTCOMES:

On successful completion of the course, the students will be able to

- Discuss the terminology and concepts of the OSI referencemodel & TCP-IP model and the various technologies & standards related networks.
- apply the error detection & correction methods and compare various flow control mechanisms in data communication
- design and apply appropriate sub netting scheme upon analyzing the requirements of the organization networking structure.
- illustrate the role of various transmission control protocols , how congestion in the networks can be controlled .
- explain the various services provided by network and the protocols related with each service.

- apply cryptographic techniques and algorithms for network security.
- design and apply appropriate sub netting scheme upon analyzing the requirements of the organization networking structure.
- illustrate the role of various transmission control protocols , how congestion in the networks can be controlled .
- explain the various services provided by network and the protocols related with each service.
- apply cryptographic techniques and algorithms for network security.

ITCX84 COMPUTER HARDWARE & INTERFACING

L	T	P	C
3	0	0	3

OBJECTIVES:

To enable the students to

- get a detailed knowledge of all the hardware components that make up a computer and understand the different interfaces required for connecting these hardware devices.
- know the insight about the CPU and memory
- understand the components of motherboard
- learn about the various storage devices
- study about the different I/O Peripherals and Bus Architecture
- learn the configuration of PC system

Prerequisite: Computer Architecture

MODULE I CPU AND MEMORY **8**

CPU essentials – Processor modes – Modern CPU concepts – Architectural performance features – The Intel's CPU – CPU over clocking – Over clocking requirements – over clocking the system – Over clocking the Intel processors – Essential memory concepts – Memory organizations – Memory packages –modules – Logical memory organizations – Memory considerations – Memory types – Memory techniques – Selecting and installing memory.

MODULE II MOTHERBOARDS **7**

Active motherboards – Sockets and slots – Intel D850GB – Pentium 4 mother board – expansion slots – Form factor – Upgrading a mother board – Chipsets – North bridge – South bridge – CMOS – CMOS optimization tactics – Configuring the standard CMOS setup – Motherboard BIOS – POST – BIOS features – BIOS and Boot sequences – BIOS shortcomings and compatibility issues – Power supplies and power management – Concepts of switching regulation – Potential power problems – Power management.

MODULE III STORAGE DEVICES **8**

The floppy drive – Magnetic storage – Magnetic recording principles – Data and disk organization – Floppy drive – Hard drive – Data organization and hard drive – Sector layout – IDE drive standard and features – Hard drive electronics – CD-ROM drive – Construction – CDROM electronics – DVDROM – DVD media – DVD drive and decoder.

MODULE IV I/O PERIPHERALS 7

Parallel port – Signals and timing diagram – IEEE1284 modes – Asynchronous communication - Serial port signals – Video adapters – Graphic accelerators – 3D graphics accelerator issues – DirectX – Mice – Modems – Keyboards –sound boards – Audio bench marks.

[

MODULE V BUS ARCHITECTURE 8

Buses – Industry standard architecture (ISA), peripheral component Interconnect (PCI) – Accelerated Graphics port (AGP) – Plug-and-play devices – SCSI concepts – USB architecture.

MODULE VI PC SYSTEM 7

Scanners- types. Web and Digital camera. Printers – Dot Matrix – Laser, Inkjet. MODEMS and standards – Lap Top specifications – Configuration and Assembling of a latest PC System.

Total Hours –45

REFERENCES:

4. B. Govindarajulu, “IBM PC and Clones: Hardware, Troubleshooting and Maintenance”, TATA McGraw Hill, Second edition,2002.

OUTCOMES:

On successful completion of the course, the students will be able to

- describe and explain the difference between various analyses in computer field.
- differentiate issues related to CPU and memory.
- discuss about the various components of motherboard.
- explain the various storage devices
- feature the different I/O peripheral devices and their interfaces.
  design the PC System

ITCX86 **OPERATING SYTEMS** **L T P C**

3 0 0 3

OBJECTIVES:

To enable the students to

- Understand the overview of computer system and the operating system, the concepts of process, memory, and I/O management.
- summarize the various approaches for solving the problem of mutual exclusion in an operating system.
- compare and contrast the various CPU scheduling algorithms.
- elaborate conditions that lead to deadlock.
- enrich knowledge in memory hierarchy and cost-performance trade-offs.

Prerequisite: Programming concepts

MODULE I OPERATING SYSTEM TYPES 7

Introduction - Mainframe systems - Desktop Systems - Multiprocessor Systems- Distributed Systems - Clustered Systems - Real Time Systems – Handheld Systems - Hardware Protection - System Components - Operating System Services - System Calls .

MODULE II PROCESS SCHEDULING 8

Process Concept - Process Scheduling - Operations on Processes - Cooperating Processes - Inter-process Communication - CPU Scheduling - Basic Concepts - Scheduling Criteria - Scheduling Algorithms

MODULE III PROCESS SYNCHRONIZATION 7

The Critical-Section Problem - Synchronization Hardware - Semaphores - Classic problems of Synchronization – Monitors- Threads.

MODULE IV DEADLOCKS 7

System Model - Deadlock Characterization - Methods for handling Deadlocks - Deadlock Prevention - Deadlock avoidance - Deadlock detection – Recovery from Deadlocks.

MODULE V MEMORY MANAGEMENT 8

Swapping - Contiguous Memory allocation - Paging - Segmentation - Virtual Memory - Demand Paging - Page Replacement.

MODULE VI FILE SYSTEM & DISK MANAGEMENT 8

File Concept - Access Methods - Directory Structure - Protection - File System Structure - File System Implementation - Directory Implementation - Allocation Methods - Disk Structure - Disk Scheduling.

Total Hours –45

5. Pramod Chandra P. Bhatt, "An Introduction to Operating Systems, Concepts and Practice", PHI, 2014.

OUTCOMES:

On successful completion of the course, the students will be able to

- discuss the different types of systems and operating system services.
- implement the various scheduling techniques and evaluate their performance.
- analyze the issues in process synchronization and implement multithreaded programs using synchronization tools.
- analyze and manage deadlocks in multi process environment.
- discuss the concepts of primary and virtual memory management.
- elaborate the concepts of file and disk management.

ITCX81 DATABASE MANAGEMENT SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

To enable the students to

- Describe essential features of database management systems and its use.
- Be familiar to identify about the procedural and non-procedural language.
- Mastering the design principles of databases, as well as in the normalization approach.
- Provide the description of physical file structures and access methods.
- Be familiar with the basic concepts of transaction processing and concurrency control.
- Master in the advanced topics and current trends.

Prerequisite: Knowledge on Programming,Data structures and Algorithm.

MODULE I INTRODUCTORY CONCEPTS 7

General Introduction to database-Traditional file system and database-Database system three tier architecture- various components of database- Data models-Modeling using ER model.

MODULE II RELATIONAL ALGEBRA AND SQL LANGUAGE 8

Unary Operations: Select and Project-Relational Set operations -Binary Relational operators.SQL: Data definition Language in SQL-Basic constraints in SQL- Basic Queries in SQL- Joins and Aggregate functions.

MODULE III DATABASE DESIGN AND DATA STORAGE 8

Functional dependencies- Normal forms up to BCNF- Dependency preserving and Lossless decomposition. Storage File organization: Memory Hierarchies-Secondary Storage devices-Magnetic tape storage device. Files - Operations on files.

MODULE IV INDEXING AND TRANSACTION PROCESSING 8

Indexing -Different type of index - B tree and B+ trees: Insertion and Deletion.

Introduction to transaction processing: Need for Concurrency and recovery-Transaction states- ACID properties- Schedules based on Serializability. Characterizing schedules based on Recoverability: Recoverable-Non-recoverable schedules.

MODULE V CONCURRENCY AND RECOVERY TECHNIQUES 8

Concurrency control techniques: Locking, Basic Two-phase locking (2PL) protocol, Timestamp-ordering based protocol, Deadlock. Database recovery techniques: Immediate update, deferred update, Shadow paging, and Checkpoint.

MODULE VI ENHANCED DATA MODEL FOR SPECIFIC APPLICATIONS 6

Overview of object oriented concepts- Temporal databases-Introduction to multimedia and spatial databases- Distributed databases and issues-Types of distributed database systems-XML documents and XML Querying-Data mining concepts.

Total Hours –45

TEXT BOOKS:

1. Elmasri, R., & Navathe, S. B. “Fundamentals of database systems” (7th Edition) Pearson Education, 2017.
2. Silberschatz, A., Korth, H. F., & Sudarshan, “Database system concepts” McGraw-Hill. ,(International Edition) (6th ed.). New York, 2011.

REFERENCES:

1. Raghu Ramakrishnan, “Database Management System”, 3rd Edition, Tata McGraw-Hill Publishing Company, 2003.
2. Peter Rob and Corlos Coronel- “Database System, Design, Implementation and Management”, 5th edition, 2003.
3. C J Date, “An Introduction to Database System”, 8th Edition, 2004.

OUTCOMES:

On successful completion of the course, the students will be able to

- Summarize the vital concepts and architecture associated with DBMS
- Describe relational database using SQL.
- Apply normalization techniques in database design.
- Understand database file organization and indexing.
- Use the transaction processing and concurrency control for application software.

  Apply the knowledge in current trends of database system.

ITCX88 PYTHON PROGRAMMING

L	T	P	C
2	0	1	3

OBJECTIVES:

- To understand the fundamentals of python programming.
- To develop python programs with conditional loops.
- To define and declare functions and call them.
- To explore file input and output operations.
- To develop simple data structures using python.

To study OOPS concepts using python programming

Pre requisites: Computer Fundamentals, Programming in 'C' or C++.

MODULE I PYTHON BASICS 8

Overview and fundamentals of python, executing simple programs, exploring python variables, operators and comprehend python blocks.

MODULE II DATA TYPES AND PROGRAM FLOW CONTROLS 7

Basic data types, numeric data types, string and string operations, list data types and slicing, tuples and its types, conditional blocks, control statements, looping statements, break statements, for loop, while loop using strings and dictionaries.

MODULE III FUNCTIONS , PACKAGES AND MODULES 8

Organize functions using python code, import libraries and methods internally and externally, usage of external packages, powerful functions in python, understanding packages.

MODULE IV BULIDING BLOCKS OF PYTHON – METHODS 7

String and dictionary manipulations, list manipulation using in build methods, programming using string, list and inbuilt functions. Exception handling and programs

.

LABORATORY PRACTICE:

1. Implementation of simple python program by installing and exploring python IDE.
2. Programs to implement basic data types, tuples, strings, numeric data types and list data types.
3. Implement control statements and conditional blocks.
4. Implement looping statements – for, while and do-while.

5. Implement strings and dictionaries.
6. Programming using functions in python
7. Programming powerful functions in python.
8. Import basic packages and libraries and execute programs
9. Build methods using list and basic data structures.
10. Implement exception handling using python programs

L – 30; P – 30; Total Hours –60

TEXT BOOKS:

1. Kenneth A. Lambert, “Fundamentals of Python: First Programs”, CENGAGE Learning, 2012.
2. Charles Dierbach, “Introduction to Computer Science using Python: A Computational Problem-Solving Focus, Wiley India Edition, 2013.

REFERENCES:

1. John V Guttag, “Introduction to Computation and Programming Using Python’’, Revised and expanded Edition, MIT Press , 2013.
2. Kenneth A. Lambert, “Fundamentals of Python: First Programs”, CENGAGE Learning, 2012.
3. Robert Sedgewick, Kevin Wayne, Robert Dondero, “Introduction to Programming in Python: An Inter-disciplinary Approach, Pearson India Education Services Pvt. Ltd., 2016.
4. Timothy A. Budd, “Exploring Python”, Mc-Graw Hill Education (India) Private Ltd., 2015.

OUTCOMES:

Upon Completion of course the students will be able to :

- write and execute python programs
- develop simple python programs to solve problems.
- explore libraries in python and molder programs to functions
- develop data structures based on python programs

ITCX83 JAVA PROGRAMMING L T P C

2 0 2 3

OBJECTIVES:

To enable the students to

- understand the basic concepts of object oriented programming using java.
- acquire knowledge and skills for developing Graphical User Interface (GUI) using java.

  understand java database connectivity for web and enterprise application development.

MODULE I JAVA FUNDAMENTALS 7

Introduction to java- Features - Java virtual machine - Byte code interpretation - Programming structures- Data types - variable-expressions- operators-arrays-,strings-input -output and control structures.

MODULE II OBJECTS AND CLASSES 8

Introduction to object oriented programming-Classes -objects-constructors-static fields-static methods-packages- inheritance-polymorphism-abstract class-reflection-interface and inner class.

MODULE III EXCEPTION HANDLING AND IO STREAMS 7

Exception handling fundamentals-types- Try -catch- finally – throws - java's built-in exceptions-IO basics-byte streams-character streams-reading and writing files- Java Thread model - Thread Life cycle - thread class-runnable interface-thread creation.

MODULE IV GUI AND DATABASE PROGRAMMING 8

Swing components – JApplet, JButton, JFrame -Event handling -Actions-Mouse events- Layout managers- Design of JDBC-JDBC configuration -sql query execution-results set -row sets -transactions.

LIST OF EXPERIMENTS

1. Java program using control statements,loop statements and decision making.
2. Java program for string handling
3. Java program to demonstrate inheritance and polymorphism.
4. Implementing Exception handling using java program,
5. Java programs to implement thread using thred class and runnable interface.

6. Java programs for database connectivity using JDBC-ODBC connectivity.
7. Java programs for layout manager.
8. Java program using swing GUI components and applets.

L – 30; P – 30; Total Hours –60

TEXT BOOKS:

1. Cay S. Horstmann and Gary Cornell, “Core Java: Volume I – Fundamentals”, 9th Edition, Prentice Hall, 2013.
2. Cay S. Horstmann and Gary Cornell, “Core Java: Volume II–Advanced features”, 9th Edition, Prentice Hall, 2013.

REFERENCES:

1. Herbert Schildt, "Java: The Complete Reference", 9th Edition, Oracle Press,2017.

   K. Arnold and J. Gosling, “The JAVA programming language”, 4th Edition, Addison Wesley Professional,2005.

OUTCOMES:

OUTCOMES:

At the end of the course completion, the student is able to :

- Express the basic concepts of java programming.
- Apply the knowledge of objects, classes, streams, multi-threading and GUI for developing java application.
- Develop small scale customised applications using java.

ITCX87 INTERNET OF THINGS L T P C

3 0 0 3

OBJECTIVES:

- To introduce the basics of Internet of things.
- Utilize IoT features and create applications based on IoT middleware and protocols.
- To discuss the features of cloud of things.
- Outline the embedded prototyping and apply the use of IoT devices in IoT Technology.
- To explain real world IoT design with API techniques.

MODULE I INTRODUCTION 8

IoT Functional Requirements –Motivation – IoT Architecture (IoT-A) – Ubiquitous IoT Applications – Vertical IoT Applications - Four Pillars of IoT – M2M (Internet of Devices) – RFID (Internet of Objects) – WSN (Internet of Transducers) – SCADA (Internet of Controllers) DNA of IoT – DCM – Device – Things that Talk – Connect – Via Pervasive Networks – Manage – To Create New Business Value Middleware for IoT: Overview – Communication middleware for IoT.

MODULE II MIDDLEWARE & PROTOCOLS FOR IOT 8

Overview of Middleware – Communication Middleware for IoT – MTC/M2M – SCADA – RFID – WSN – Protocol Standardization for IoT – M2M and WSN Protocols - SCADA and RFID Protocols - – Issues with IoT Standardization - – Unified Data Standards - Protocols – IEEE 802.15.4 – BACNet Protocol – Modbus – KNX – ZigBee.

MODULE III CLOUD OF THINGS 8

Cloud Computing – Cloud Middleware – Cloud Standards – Cloud Providers and Systems - Mobile Cloud Computing - Cloud of Things Architecture – Deployment Models – Vertical Applications – Essential Features – Technological Pillars – Layers of IoT Systems

MODULE IV DESIGN PRINCIPLES OF CONNECTED DEVICES 7

Technology for design – Privacy in storing data – Internet principles for connected devices- Prototypes and production – Changing embedded platform – Open source versus closed source.

MODULE V PROTOTYPING EMBEDDED DEVICES 7

Prototyping embedded devices – Electronics- Sensors – Actuators – Arduino – Raspberry PI – Beagle Bone Black – Electric Imp.

MODULE VI **PROTOTYPING ONLINE COMPONENTS AND EMBEDDED CODING** **7**

Sketch – Iterate and Explore – Preparation of physical prototype – Getting started with API – Writing New API – Other Protocols – Techniques for Writing Embedded code – Libraries and Debugging.

Total Hours –45

TEXT BOOKS:

1. Honbo Zhou, “The Internet of Things in the Cloud: A Middleware Perspective”, CRC Press, 2012.
   Olivier Hersent, David Boswarthick, Omar Elloumi, “The Internet of Things – Key applications and Protocols”, Wiley, 2012.

REFERENCES:

1. Adrian McEwen & Hakim Cassimally, “Designing internet of things”, Jhon Wiley and Sons, 2014.
2. Dieter Uckelmann; Mark Harrison; Florian Michahelles-(Eds.), “Architecting the Internet of Things” Springer, 2011.

OUTCOMES:

Upon Completion of course the students will be able to :

- Identify and analyze the new models for market strategic interaction
- Analyze various middleware and protocols for IoT
- Analyze Cloud of things with features and applications
- Design the principles of connected devices
- Identify the prototyping with various embedded devices
- Analyze and design different prototypes for embedded devices and API techniques

ITCX85	CLOUD COMPUTING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn about cloud computing basics.
- To know the various technologies available for cloud platforms.
- To understand the cloud storage service and standards to access cloud service providers.
- To learn virtualization technology over various open source cloud tools to monitor the cloud performance.
- To understand security and challenges in cloud.
-

MODULE I CLOUD COMPUTINGBASICS 8

Cloud Computing Overview- Cloud Components – Infrastructure – Services- Applications- Storage – Database services- Intranets and Cloud- Components- Hypervisor applications- Cloud providers- Amazon, Google, Microsoft- Benefits and Limitations of Cloud.

MODULE II CLOUD COMPUTINGTECHNOLOGY 7

Hardware and Infrastructure – Thick and thin clients –Security–Network- Services- Accessing the cloud – Cloud Platforms– Web Applications – Web API"s – Web Browsers – Google App Engine.

MODULE III CLOUD STORAGE 8

Storage as a Service – Cloud Storage Providers – Amazon S3- Nirvanix- Google Big Table Data store- Standards- Application- Client- Infrastructure-Service-Google File System.

MODULE IV VIRTUALIZATION TECHNOLOGY 7

Virtualization Technology - Overview - Virtual Machines Provisioning and Manageability - Virtual Machine Migration Services - VM Provisioning and Migrationin Action – VMLife Cycle N and VM Monitoring – Amazon Elastic Compute Cloud.

MODULE V DEVELOPING APPLICATIONS 7

Google- Payment- Force.com and Google- Google Gears- Microsoft- Live Services- Microsoft SQL services- Microsoft Share point services- Dynamic CRM Services- Development- Google App Engine-Salesforce.com- Microsoft Windows Azure.

MODULE VI SECURITY MANAGEMENT 8

Cloud Security Fundamentals- Security requirements- Security Management in cloud- Availability management – Access control- Vulnerability management- Patch management-Configuration Management- Security Management functions for Cloud Delivery models-security responsibilities for customers of public cloud services-Case Study example for IaaS, PaaS, SaaS.

Total Hours –45

TEXT BOOKS:

1. AnthonyT.Velte,TobyJ.Velte,RobertElsenpeter,"CloudComputing:A PracticalApproach",McGraw-Hill,2010.
2. Tim Malhar, S.Kumaraswammy, S.Latif, "Cloud Security & Privacy",SPD, O"REILLY2009.
3. RajkumarBuyya,JamesBroberg,AndrzejGoscinski,"CloudComputingPrinciples and Paradigms", John Wiley & Sons, Inc Publications,2011

REFERENCES:

1. Kai Hwang, Fox and Dongarra, Morgan Kaufmann, "Distributed andCloudComputing", 1st Edition, Elseiver,2012.
2. ScottGranneman,"GoogleAppsDeciphered:Computeinthecloudto streamline your desktop", Pearson Education,2009.
3. Thomas Erl , Ricardo Puttini , Zaigham Mahmood, "Cloud Computing: Concepts, Technology & Architecture", Prentice –Hall, 2013

OUTCOMES:

- Discuss the core concepts of cloud computing paradigm.
- Analyze services, systems, platforms, frameworks to support cloud computing.
- Illustrate the concepts of cloud storage system services.
- Assess virtualization technology services in open source cloud computing environment.
- Can deploy the applications developed in cloud.
- Identify cloud security issues to demonstrate real time applications.

ELECTRONICS, COMMUNICATION, INSTRUMENTATION AND CONTROL

ECCX81	IMAGE PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Describe and explain basic principles of digital image processing;
- Design and implement algorithms that perform basic image processing
- Design and implement algorithms for advanced image analysis
- Assess the performance of image processing algorithms and systems

MODULE I DIGITAL IMAGE FUNDAMENTALS 8

Components of Image Processing System, Elements of Visual Perception, MTF of VisualSystem, Image Sensing and Acquisition, Image formation model, Image Sampling &Quantization Spatial and Gray Level Resolution, Basic Relationships between Pixels.Statistical parameters, Measures and their significance, Mean, standard deviation,variance, SNR, PSNR.

MODULE II IMAGE ENHANCEMENT 7

Enhancement in Spatial Domain: basic gray level transformations, histogram processing,equalization, Arithmetic and logical operations between images, Basics of spatial filtering,smoothening and sharpening spatial filters. Image Enhancement in frequency Domain:smoothening and sharpening frequency domain filters. Fundamental of color imageprocessing: color models, RGB, CMY, YIQ, HIS. Pseudo Color Image processing: Intensityfiltering, gray level to color transformation, Basics of full color image processing.

MODULE III IMAGE TRANSFORMS 7

2D-DFT, FFT, DCT, the KL Transform, Walsh/Hadamard Transform, Haar Transform.

MODULE IV IMAGE CODING AND COMPRESSION 7

Image Coding Fundamentals, Image Compression Model, fundamentals-redundancy: coding, interpixel, psychovisual, fidelity criteria, elements of information theory. Error FreeCompression - variable length, bit plane, Lossless Predictive, Lossy Compression- LossyPredictive. Fundamentals of JPEG, MPEG, fractals.

MODULE V IMAGE ANALYSIS 7

Edge detection, spatial feature and boundary extraction, boundary representation by

chain codes and B splines, Hough Transform. Morphological Image Processing: Dilation, Erosion, Opening, Closing on Binary Images, Segmentation: Point, line. Edge detection, Boundary detection and Thersholding.

MODULE VI IMAGE RESTORATION AND IMAGE PROCESSING APPLICATIONS 9

Image Degradation Model, Noise Models, and Restoration in Presence of Noise in spatial Domain, Linear Filtering, Applications: Character Recognition, Fingerprint Recognition, Remote Sensing. Applications using different Imaging modalities such as acoustic Imaging, Medical imaging, electron microscopy etc.

Total Hours –45

TEXT BOOKS:

1. Gonzalez and Woods, "Digital Image Processing", Pearson Education, 2009.
2. Arthur Weeks Jr., "Fundamentals of Digital Image Processing", PHI, 2006.

REFERENCES:

1. A. K. Jain, "Fundamentals of Digital Image Processing"; PHI, 2006
2. Pratt William, "Digital Image Processing", John Wiley & Sons, 2007.

OUTCOMES:

At the completion of the course, students will be able to

- Explain the fundamental concepts of digital image processing.
- Recognize & apply various image enhancement techniques.
- Apply various transforms for image processing.
- Identify and use appropriate image compression techniques
- Apply various techniques for image analysis and restoration.
- Apply suitable image processing techniques in different applications

ECCX82	VLSI DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

This course teaches:

- Basic concepts of HDL.
- Verilog language and its syntax constructs.
- Programmable Logic Devices and FPGAs
- MOS devices theory
- CMOS based combinational and sequential circuits

MODULE I REVIEW OF BASIC DIGITAL SYSTEMS 7

Boolean algebra, Building blocks of combinational logic design-Adders, multiplexer,
encoder, decoder, comparator, Latches & flip-flops, counters, shift registers, State diagram,
State Reduction and State Assignments.

MODULE II LOGIC DESIGN USING VERILOG HDL 8

Overview of Digital Design with Verilog HDL, Levels of Design Description, Concurrency,
Hierarchical Modeling Concepts, Modules and Ports, Component instantiation Data flow
and RTL, structural, gate level, switch level modeling and Behavioral Modeling.

MODULE III LANGUAGE CONSTRUCTS OF VERILOG HDL 7

Identifiers- gate primitives, gate delays, operators, timing controls, procedural assignments,
conditional statements Variable types, arrays and tables, Tasks and functions, Test bench.

MODULE IV BUILDING BLOCKS OF DIGITAL VLSI SYSTEMS 8

HDL Design -Data Path Operations-Addition/Subtraction, Parity Generators, Comparators,
Zero/One Detectors, Binary Counters, ALUs, Multiplication, Shifters, Memory Elements,
Control-FSM, Control Logic Implementation. Programmable logic elements and AND-OR
arrays, FPGAs and CPLD, programming methods.

MODULE V TRANSISTOR THEORY 7

Introduction to MOS Transistors-NMOS & PMOS Characteristics, Current Equations, Complementary CMOS Inverter-DC Characteristics, Static Load MOS Inverters, Differential
Inverter, Tri State Inverter, BiCMOS logic.

MODULE VI BASICS OF DIGITAL CMOS DESIGN 8

NMOS & PMOS Logic Gate, CMOS Logic Gate, Basic layout design of simple gate-stick
diagram, CMOS Logic Structures-full adder, multiplexers,pass transistor circuits, Transmission Gate, Dynamic CMOS circuit techniques

Total Hours –45

REFERENCES:

1. M.Morris Mano "Digital Design", 3rd Edition, Prentice Hall of India Pvt. Ltd New Delhi 2003
2. Michael D. Ciletti“Advanced Digital Design with the Verilog HDL" (2nd Edition) Hardcover – January 31, 2010
3. J.Bhasker: Verilog HDL primer, BS publication, 2001.

6. Douglas A Pucknell& Kamran Eshragian , “Basic VLSI Design” PHI 3rd Edition (original edition – 1994)

OUTCOMES:

At the end of the course the students will be able to

- Create basic Register Transfer Level (RTL) models for combinational circuits &
- Sequential circuits using Verilog HDL.
- Create basic behavioral models for combinational circuits & Sequential circuits using
- Verilog HDL.
- Describe the usage of Programmable Logic Devices and FPGAs.
- Describe MOS devices theory and inverter circuit DC characteristics
- Design the basic digital building blocks using MOS circuit.
- Apply VLSI design concepts based on the requirements to conduct

experiments or projects.

ECCX83	INTEGRATED CIRCUITS AND SYSTEM DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

.To introduce the students to active and passive components available in CMOS and their parasitic elements of first order transistor modelling for initial manual design and the limits of applicability.

• To teach the student behaviour and design of basic analogue and digital circuit primitives, including quantitative treatment of matching.

• The students are introduced to switched capacitor techniques and continuous time filters.

MODULE I BASIC SEMICONDUCTOR PHYSICS 7

Quantum mechanical concepts and atomic states – Solid state structure – Intrinsic, Extrinsic and compensated semiconductors – Lattice vibrations – Electron and hole mobilities and drift velocities.

MODULE II DEVICES 7

Diode - CMOS – Wire models – CMOS inverter - Static behavior, Dynamic Behavior, Power, Energy.

MODULE III DIGITAL SYSTEMS 7

DTL IC – HTL IC – TTL IC – ECL IC – Basic digital circuits – Special Purpose gates – Flip flops – Clock and waveform generators.

MODULE IV SEQUENTIAL AND COMBINATIONAL LOGIC DESIGN 8

Ripple Adder, Look Ahead Carry Generator, Binary Parallel Adder, n-Bit Parallel Subtractor, Priority Encoder, Design considerations of the above combinational logic circuits with relevant Digital ICs. MSI Registers - Shift Registers - Modes of Operation of Shift Registers, Ring Counter, Johnson Counter -Basic sequential logic Design steps - Design considerations of the above sequential logic circuits with relevant Digital ICs.

MODULE V ANALOGUE INTEGRATED CIRCUIT DESIGN 8

CMOS amplifier basics – Current and Voltage sources – CMOS operational amplifiers – Data conversion circuits.

MODULE VI SYSTEM DESIGN EXAMPLES 8

Frequency counter – DACs and ADCs – Filter design - Filter response, Low pass RC active filter, Bandpass RC active filter, Switched C filter – Combinational logic design.

Total Hours –45

REFERENCES:

1. Michael Shur, “Physics of Semiconductor Devices”, Prentice Hall, 2004.
2. B.S. Sonde, “Introduction to system design”, New Age International, 2003.
3. Razavi B., “Design of Analog CMOS Integrated Circuits”, McGraw Hill, 1998.
4. John F. Wakerly, “Digital Design Principles & Practices”, PHI Publications, 3rd Edition, 2005.
5. Jan M.Rabaey, Anantha Chandrakasan, Borivoje Nikolic, “Digital Integrated Circuits-A Design Perspective Pearson Education”, 2005.
6. Alan B. Marcovitz, “Introduction to Logic Design”, TMH, 2nd Edition, 2005.
7. Mano, “Digital Logic and Computer Design”, Pearson Education, 2000.

OUTCOMES:

. At the end of the course, the student is expected to posses knowledge and achieve skills on the following:

• The student has a thorough understanding of the characteristic and design aspects of IC circuits.
• The student will be able to build simple digital and analogue ICs.

ECCX84 COMMUNICATION SYSTEM SECURITY

L	T	P	C
3	0	0	3

OBJECTIVES:

• To familiarize the students with the issues and technologies involved in designing a communication network system that is robust against attack.

• Students will gain an understanding of the various ways in which a network can be attacked and the tradeoffs in protecting it.

MODULE I NETWORK FUNDAMENTALS AND PHYSICAL LAYER 7

Introduction to Networks - definition of layers – services - interface and protocols - OSI reference model - layers and duties - TCP/IP reference model – layers and duties - Physical layer - general description – characteristics - signaling media types – topologies - examples physical layer (RS232C, ISDN, ATM, SONET).

MODULE II INTRODUCTION ON SECURITY 7

Security Goals, Types of Attacks - Passive attack, active attack, attacks on confidentiality, attacks on Integrity and availability - Security services and mechanisms, Techniques – Cryptography - Steganography - Revision on Mathematics for Cryptography.

MODULE III SYMMETRIC & ASYMMETRIC KEY ALGORITHMS 7

Substitution Ciphers - Transposition Ciphers - Stream and Block Ciphers - Data Encryption Standards (DES) - Advanced Encryption Standard (AES) - RC4 - principle of asymmetric key algorithms - RSA Cryptosystem.

MODULE IV INTEGRITY, AUTHENTICATION AND KEY MANAGEMENT 8

Message Integrity - Hash functions – SHA - Digital signatures - Digital signature standards - Authentication Entity Authentication – Biometrics - Key management Techniques.

MODULE V NETWORK SECURITY, FIREWALLS AND WEB SECURITY 8

Introduction on Firewalls - Types of Firewalls - Firewall Configuration and Limitation of Firewall - IP Security Overview - IP security Architecture - authentication Header - Security payload - security associations - Key Management - Web security requirement - secure sockets layer - transport layer security - secure electronic

transaction - dual signature.

MODULE VI WIRELESS NETWORK SECURITY 8

Security Attack issues specific to Wireless systems - Worm hole – Tunneling - DoS.WEP for Wi-Fi network - Security for 4G networks - Secure Ad hoc Network - Secure Sensor Network.

Total Hours –45

6. Atul Kahate, ”Cryptography and Network security”, 2nd Edition, Tata McGraw Hill, 2008.
7. R.K.Nichols and P.C. Lekkas , “Wireless Security”, 2000.

OUTCOMES:

.At the end of the course, the student is expected to posses knowledge and achieve skills on the following:

• Students will gain an appreciation of the need to develop an understanding of underlying system applications and potential security issues early in the design process.

ECCX85 EMBEDDED HARDWARE & SOFTWARE SYSTEM DESIGN **L T P C 3 0 0 3**

OBJECTIVES:

• The objective of this course is to present to the student the computation devices, peripherals and networks associated with an embedded system.

• The students are introduced to embedded - C used in the design of a modern day embedded system.

MODULE I ARCHITECTURE OF EMBEDDED SYSTEMS 7

Categories of Embedded Systems - Specifications of Embedded systems -Resent trends in Embedded Systems - Hardware Architecture - Software Architecture - Communication software - Process of generation of executable image- development/testing tools.

MODULE II HARDWARE FUNDAMENTALS 7

Buses – DMA – interrupts – Built-ins on the microprocessor – Conventions used on schematics – Microprocessor Architectures – Software Architectures – RTOS Architectures – Selecting and Architecture. PIC microcontroller - Architecture of PIC 16c6x/7x – FSR - Reset action – Oscillatory connection - Memory organization - Instructions - Addressing modes - I/O ports – Interrupts – Timers – ADC - Assembly language programming.

MODULE III RTOS 7

Tasks and Task states – Semaphores – Shared data – Message queues, Mail boxes and pipes – Memory management – Interrupt routines – Encapsulating semaphore and queues – Hard Real-time scheduling – Power saving.

MODULE IV PROGRAMMING EMBEDDED SYSTEMS 8

Embedded Program – Role of Infinite loop – Compiling, Linking and locating – downloading and debugging – Emulators and simulators processor – External peripherals – Memory testing – Flash Memory.

MODULE V OPERATING SYSTEM 8

Embedded operating system – Real time characteristics – Selection process – Flashing the LED – serial ports – Zilog 85230 serial controlled code efficiency – Code size – Reducing memory usage.

MODULE VI EMBEDDED SOFTWARE DEVELOPMENT TOOLS 8

Host and target machines – Linkers / Locators for Embedded Software – Debugging techniques – Instruction set simulators Laboratory tools – Practical example – Source code.

Total Hours –45

7. Daniel 5.W Lewis, “Fundamentals of Embedded Software”, Pearson Education, 2001.
8. Peatman, “Designing with PIC Micro Controller”, Pearson, 2003.

OUTCOMES:

.At the end of the course, the student is expected to posses knowledge and achieve skills on the following:

• Will provide a knowledge foundation which will enable students to pursue subsequent courses in real-time embedded systems software and computer design.

ECCX86 DIGITAL SIGNAL PROCESSORS L T P C
3 0 0 3

OBJECTIVES:

- To impart knowledge on the architectural details and instruction set of TMS320F2812 processor.
- To provide practical experience with Digital Signal Processors.
- To Introduce Code Composer Studio IDE for C 2000 Processors.
- To implement DSP Processor in real time Digital Motor Control application.

MODULE I ARCHITECTURE OF F2812 6

TMS320F2812 Architecture - The F2812 CPU-F2812 Math Units-Data Memory Access -Internal Bus Structure- Atomic Arithmetic Logic Unit (ALU) -Instruction Pipeline - Memory Map - Code Security Module - Interrupt Response- Operating Modes - Reset Behaviour.

MODULE II PROGRAM DEVELOPMENT TOOLS 8

Code Composer Studio IDE - The Software Flow - Code Composer Studio – Basics - Lab Hardware Setup - Code Composer Studio – Step by Step procedure - Createa project - Setup Build Options Linker Command File - Download code into DSP - beginner's project - Objective Procedure - Open Files, Create Project File- C28xFlash Programming - C28x Start-up Sequences -C28x Flash Memory SectorsFlash Flash Configuration Registers - Flash Programming Procedure .

MODULE III DIGITAL I/O 7

Data Memory Mapped Peripherals - The Peripheral Frames - Unit Digital I/O Registers Module - Watchdog Timer - System Control and Status Register - Low Power Mode – Digital Input / Output programmes.

MODULE IV INTERRUPT SYSTEM 8

C28x Core Interrupt Lines - The C28x RESET - Reset Bootloader - Interrupt Sources - Maskable Interrupt Processing - Peripheral Interrupt Expansion - C28x CPU Timers - Serial Peripheral Interface (SPI) Data Transfer - SPI Registers - SPI communication.

MODULE V C28X EVENT MANAGER AND C28X ANALOGUE DIGITAL CONVERTER 8

Event Manager Block Diagram - General Purpose Timer Timer Operating Modes - Interrupt Sources - GP Timer Registers - GP Timer Interrupts - Event

ManagerCompare Units Capture Units - Quadrature Encoder Pulse Unit (QEP).- Generate a PWM sine wave -.ADC Module Overview - ADC in Cascaded Mode -ADC in Dual Sequencer Mode - ADC Register Block .

MODULE VI DIGITAL MOTOR CONTROL APPLICATIONS 8

C28x IQ – Math Library - IQ – Math Library Functions - IQ- Math Application- FOC - C28x FIR – Filter - Texas Instruments C28x Filter Library - C28x Digital Motor Control - Field Orientated Control (FOC) Core Math Operations - PARK Transform - CLARKE Transform - Texas Instruments Digital Motor Control Library Modules. FOC for PMSM - Hardware Laboratory Setup - PMSM control project – Build levels.

Total Hours –45

5. TMS320F/C24/X DSP controllers, Refernce guide literature No : SPRU160c, June 1994.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Programming Knowledge in DSP and its real time application.
- To configure DSPBIOS to handle hardware interrupts (HWI)
- Implementing Digital Motor Control Library Modules.
- Computing steps necessary to build a control scheme for Field Oriented
- Control (FOC).
- Board level operations of the Digital Signal Processors (DSP)based on the
- Texas Instruments TMS320F2812 Processor.

EICX81	BIO INSTRUMENTATION AND SIGNAL ANALYSIS	L	T	P	C
		3	0	0	3

OBJECTIVES:

• To provide an acquaintance of the physiology of the brain , heart and lungs.

• To introduce the student to the biosensors, electrodes and amplifiers.

• To introduce the typical measurement and devices of bio-electric origin.

• To provide the latest ideas on devices of imaging techniques and monitoringand awareness of electrical safety of medical equipments.

• To bring out the importance of bio-signal analysis and diagnosis.

MODULE I ANATOMY AND PHYSIOLOGY 7

Basic components of a biomedical system, Cell and its structure – Action and resting – Potential propagation of action potential – Sodium pump – Nervous system – Nerve cell – Synapse – Cardio pulmonary system – Physiology of heart and lungs – Circulation and respiration.

MODULE II TRANSDUCERS AND AMPLIFIERS 7

Transducers – Different types – Piezo-electric, ultrasonic, resistive, capacitive, inductive transducers – Selection criteria. Electrodes – Micro, needle and surface electrodes – Amplifiers – Preamplifiers, differential amplifiers, chopper amplifiers – Isolation amplifier- ECG isolation amplifiers.

MODULE III ELECTRO – PHYSIOLOGICAL MEASUREMENTS 7

ECG – EEG – EMG – ERG – Lead systems and recording methods – Typical waveforms.

MODULE IV MEDICAL IMAGING AND PMS 7

X-ray machine - Radio graphic and fluoroscopic techniques – Computer tomography – MRI – Ultrasonography – types of biotelemetry systems and patient monitoring systems (PMS) – Electrical safety.

MODULE V BIO SIGNAL ANALYSIS 8

Objectives of biomedical signal analysis – Fundamental of Biosignals – classification of biosignals - Difficulties encountered in biomedical signal acquisition and analysis – Filtering for removal of artifacts – biosignal processing algorithms – time domain alaysis and frequency domain analysis – Computer aided diagnosis.

MODULE VI CASE STUDY **9**

Problem statement: Connect up to 8/16 ECG input leads with ECG system or get available ECG data. Use automated analysis features for HRV, to classify heartbeats, identify arrhythmias, perform ECG averaging and report.

Total Hours –45

6. Rangaraj M. Rangayan, “Biomedical signal analysis”, John Wiley and sons (ASIA) Pvt Ltd., 2009.

OUTCOMES:

At the end of the course, the student is expected to posses knowledge and achieve skills on the following:

• Students will have an exposure of the physiology of the brain ,heart and lungs.
• Students will be well equipped to choose the proper electrodes and required amplifiers for specific bioapplication.
• They will be able to analyze typical waveforms of bio potentials.

EICX82 SENSORS FOR BIO-MEDICAL APPLICATION

L	T	P	C
3	0	0	3

OBJECTIVES:

• To introduce the student to the various principles, technologies, methods andapplications of biosensors and bioinstrumentation.

• To link engineering principles to understanding of bio systems in sensors andbioelectronics.

• To bring out the important and modern methods of sensor techniques.

• To provide the student with detail methods and procedures used in the design,fabrication and application of biosensors and bio electronic devices.

MODULE I INTRODUCTION TO BIOSENSORS 8

Introduction to biosensors - Types of bio sensors – Bio transducers – Different types - active and passive transducer – factors influencing and selection criteria of transducers for physiological parameters - Transducer for biomedical application.

MODULE II BIO RESISTIVE SENSORS 7

Resistive Transducers – Strain Gauge - types, construction, selection materials, Gauge factor, Bridge circuit and calibration - Strain Gauge type Blood pressure transducers - Thermistor used for cardiac output measurement - nasal airflow measurement - Photoelectric type resistive transducer.

MODULE III NON CONTACT TYPE BIOSENSORS 7

Non contact type infrared thermometry; Optical pyrometer – Electrochemical Biosensors – Electrochemical principles - Glucose biosensors – piezo electricsensors – ultrasonic sensors.

MODULE IV BIO ELECTRODES AND AMPLIFIERS 8

Electrodes – Micro needle and surface electrodes – Amplifiers – Preamplifiers, differential amplifiers, and chopper amplifiers – Isolation amplifier – ECG isolation amplifiers.

MODULE V BIO-CHEMICAL SENSORS AND NON ELECTRICAL MEASUREMENT 8

pH - pO2 - pCO2 – Electrophoresis – photometer - Auto analyzer - Blood flow sensors – phonocardiogram - respiratory measurement – pulse - Blood cell counters.

MODULE VI CASE STUDY **7**

To analyse a diabetic patient using glucose biosensors – to analyse an asthmapatient using respiratory sensors – selection of temperature, pressure andflow sensors for biomedical application.

Total Hours –45

REFERENCES:

1. R.S. Khandpar, “Hand Book of Biomedical Instrumentation and measurement”, McGraw Hill publishing Co., 2009.

5. E.A.H.Hall, “Biosensors”, Advanced Reference Series, Engineering, Prentice Hall, New Jersey, 1991.

OUTCOMES:

At the end of the course, the student is expected to posses knowledge and achieve skills on the following:

• On bio sensing and transducing techniques, design and construct biosensors instrumentation.
• Possess knowledge of detailed methods and procedures used in the design, fabrication and application of biosensors and bio electronic devices.
• To apply the above techniques for biomedical applications.

EICX83 INTELLIGENT CONTROL L T P C

3 0 0 3

OBJECTIVES:

• This course will obtain a basic understanding of artificial neural networks, fuzzy logic control and intelligent technique.

• Students will know how these techniques are applied to engineering problems, including control systems.

MODULE I INTRODUCTION TO INTELLIGENT CONTROL 7

Introduction and motivation - Approaches to intelligent control - Architecturefor intelligent control - Symbolic reasoning system - rule-based systems - theAI approach - Knowledge representation - Expert systems.

MODULE II MATHEMATICAL MODELING 7

Concept of Artificial Neural Networks and its basic mathematical model -McCulloch-Pitts neuron model - simple perceptron - Adaline and Madaline -Feed-forward Multilayer Perceptron - Learning and Training the neural network- Data Processing - Scaling, Fourier transformation - principal-componentanalysis and wavelet transformations.

MODULE III NEURAL NETWORKS 7

Networks: Hopfield network - Self-organizing network and recurrent network- Neural Net based controller. Case studies: Identification and control of linearand nonlinear dynamic systems using Matlab - Neural Network toolbox.

MODULE IV INTRODUCTION TO FUZZY LOGIC 8

Introduction to crisp sets and fuzzy sets - basic fuzzy set operation and approximate reasoning - Introduction to fuzzy logic modeling and control –Fuzzification - inference and defuzzification - Fuzzy knowledge and rule bases- Fuzzy modeling and control schemes for nonlinear systems - Fuzzy logic control for nonlinear time-delay system - Implementation of fuzzy logic controller using Matlab fuzzy - logic toolbox.

MODULE V FUZZY LOGIC SYSTEM 8

Fuzzy logic system: Basic concepts of Fuzzy logic approaches – classic alsets & Fuzzy sets - linguistic variables - membership functions - basic operation- Fuzzy relations - numbers and arithmetic & logical operations - different de-Fuzzification techniques - Fuzzy rule based model & model based controllers- PID controllers, and

application of Fuzzy controllers.

MODULE VI GENETIC ALGORITHM 8

Genetic Algorithm: Basic concept of Genetic algorithm and detail algorithmicsteps - adjustment of free parameters - Solution of typical control problemsusing genetic algorithm.

Total Hours –45

8. Jacek M.Zurada, “Introduction to Artificial Neural Systems”, Jaico PublishingHouse, 1997.
9. Timothy J.Ross, “Fuzzy Logic with Engineering Applications”, McGraw Hill Inc., 1997.

OUTCOMES:

At the end of the course, the student is expected to posses knowledge and achieve skills on the following:

• Students will be able to design control systems using fuzzy logic and artificial neural networks.
• Students will understand the advantages and disadvantages of these methods relative to other control methods.
• Students will be aware of current research trends and issues

EICX84 ADVANCED CONTROL SYSTEM L T P C

3 0 0 3

OBJECTIVES:

- To provide a basic understanding of state space analysis of the system.
- To impart knowledge state space model for discrete systems.
- To provide knowledge about the nonlinear control systems.
-

MODULE I STATE SPACE ANALYSIS OF SYSTEMS 7

Classical Vs modern control theory ,concept of state, state space and state variables, state model for typical linear sytems, construction of state model using differential equations, state variable diagram and block diagram representation of state models, state space model for electrical circuits,mechanical systems, electro-mechanical system-DC motors, solution of time in variant state equation, state transition matrix from cayleigh -hamilton theorem,solution of linear time varying state equation. Simulation of state space model of electrical circuits, mechanical systems, electro-mechanical system-DCmotors using control system toolbox.

MODULE II TRANSFORMATION IN STATE SPACE MODEL 7

State space model from transfer functions - decomposition methods, state model for a multi input muti output system from block diagrams, similarity transformation, non uniqueness of state space model, transfer from statespace model, different canonical models like phase variable form ,observable canonical model, diagonal canonical model, Jordan canonical model, state variable description of discrete time systems.

MODULE III STATE FEEDBACK AND OBSERVER DESIGN 8

State and output controllability of systems - criterion for controllability ofcontinuous and discrete time systems, observability of systems, criterion forobservabilty of a system, significance of controllability and observability ,statefeedback controller design using pole placement for plant represented in phase variable form, determination of feedback gain using ackerman’s formula,design of full state and reduced order observers. State feedback and observer design using control system toolbox.

MODULE IV STATE SPACE ANALYSIS OF DISCRETE TIME CONTROL SYSTEM 7

Discrete time systems - analogies with continuous time systems - Z-transforms(review), mathematical models for LTI discrete time systems. State model

oflinear discrete-time systems, state models from linear difference equations/system functions, derivation of system function from state model, solution of state equations-state transition matrix, controllability and observability conditions.

MODULE V NONLINEAR CONTROL SYSTEMS 8

Introduction to nonlinearities and non linear phenomenon, nonlinear system behavior. Methods of linearization, Phase Plane Analysis: Concepts of Phase Plane Analysis: Phase Portraits; Singular Points; Symmetry in Phase PlanePortraits, Methods of Constructing Phase Portraits: Analytical method, the method of Isoclines, Determining time form Phase Portraits, Phase Plane Analysis of linear systems, Phase Plane Analysis of nonlinear systems, limit cycles and existence of limit cycle

MODULE VI DESCRIBING FUNCTION METHOD 8

Describing function fundamentals: An example of describing functions; Computing describing functions, Derivations of describing functions of common online arities, Describing function analysis of nonlinear systems.

Total Hours –45

TEXT BOOKS:

1. Benjamin C. Kuo, “Digital Control Systems”, Oxford University Press, 2002.
2. George J. Thaler, “Automatic Control Systems”, Jaico Publishers, 2004.

REFERENCES:

1. I.J. Nagrath and M. Gopal, “Control Systems Engineering”, New Age International Publishers, 2003.

3. William L. Luyben and Michael L. Luyben, “Essentials of Process Control”, McGraw Hill International Editions, Chemical Engineering Series, 1997.

OUTCOMES:

At the end of the course, the students will be able to,

- Derive mathematical models in terms of state space of the system.
- Design and analyse discrete systems using state space techniques
- Apply describing functions for nonlinear systems

EICX85 POWER PLANT INSTRUMENTATION L T P C

3 0 0 3

OBJECTIVES:

To provide an overview of different methods of Power Generation, with a particular emphasis on thermal power Generation.

• To get knowledge about the various measurements involved in power generation plants.

• To provide knowledge about the different types of analysers used for analysis.

• To impart knowledge about the different types of controls and control loops.

• To familiarize the student with the methods of monitoring different parameters like speed, vibration of turbines and their control.

MODULE I OVERVIEW OF POWER GENERATION 7

Brief survey of methods of power generation – Hydro, thermal, nuclear, solar and wind power – importance of instrumentation in power generation – Thermal power plants – Block diagram – Details of boiler processes – P & I diagram of boiler – Cogeneration.

MODULE II MEASUREMENTS IN POWER PLANTS 8

Measurements – Flow of feed water, fuel, air and steam with correction factor for temperature – Steam pressure and steam temperature – Drum level measurement – Smoke density measurement – Dust monitor.

MODULE III ANALYSERS IN POWER PLANTS 8

Flue gas oxygen analyser – Analysis of impurities in feed water and steam – Dissolved oxygen analyser – Chromatography – pH meter – Fuel analyser – Pollution monitoring instruments, conductivity meter; Silica Analyser.

MODULE IV CONTROL LOOPS IN BOILER & PROTECTION 8

Combustion control - Air fuel ratio control – Furnace draft control – Drum level control – Main steam and reheat steam temperature control – Super heater control – Air temperature – Deaerator Control – Distributed control system in power plants – Interlocks in boiler operation.

MODULE V TURBINE MONITORING 7

Speed, vibration, shell temperature monitoring and control – Lubricant oil temperature control – Cooling system.

MODULE VI TURBINE CONTROL & PROTECTION 7

Steam pressure control, L.P.Heater, H.P. Heater, Condenser Hotwell Control, Interlocks In turbine operation.

Total Hours –45

TEXT BOOKS:

1. Sam G.Dukelow, “The Control of Boilers”, Instrument Society of America, 1991.

2. P.K.Nag, “Power Plant Engineering”, Tata McGraw Hill, 2001.

3. “Modern Power Station Practice” Vol. 6, Instrumentation controls and Testing, Pergaman Press.

REFERENCES:

1. S.M.Elonka and A.L.Kohal, “Standard Boiler Operations”, Tata McGraw Hill, New Delhi, 1994.

2. R.K.Jain, “Mechanical and Industrial Measurements”, Khanna Publishers, New Delhi, 1995. 3. E.Al. Wakil, “Power Plant Engineering”, Tata McGraw Hill, 1984.

OUTCOMES:

At the end of the course, the student will be able to

- Apply effectively the different methods of Power Generation in operation and maintenance of power generation in a core industry.
- Monitor and analyze different parameters like speed, vibration of turbines and their control.
- Control the power plant using control loops effectively.

EICX86	INSTRUMENTATION AND CONTROL IN PETROCHEMICAL INDUSTRIES	L	T	P	C
		3	0	0	3

OBJECTIVES:

To familiarize the students with raw material pertaining to making of petroleum process

- To get knowledge about various operations.
- To expose to measurement, automation and control system in respect of petrochemical industry.
- To provide an overview of computer application in petrochemical industry.

MODULE I PETROLEUM PROCESSING 8

Petroleum exploration – recovery techniques – oil – gas separation processing wet gases – refining of crude oil.

MODULE II UNIT OPERATIONS IN PETROLEUM INDUSTRY 8

Thermal cracking – catalytic cracking – catalytic reforming – polymerisation – alkylation – isomerization – production of ethylene, acetylene and propylene from petroleum.

MODULE III CHEMICALS FROM PETROLEUM PRODUCTS 8

Chemical from petroleum – methane derivatives – acetylene derivatives – acetylene derivatives – ethylene derivatives – propylene derivatives – other products.

MODULE IV MEASUREMENTS IN PETROCHEMICAL INDUSTRY 6

Parameters to be measured in refinery and petrochemical industry – selection and maintenance of measuring instruments – intrinsic safety of instruments.

MODULE V CONTROL LOOPS IN PETROCHEMICAL INDUSTRY 10

Process control in refinery and petrochemical industry – control of distillation column – control of catalytic crackers and pyrolysis unit – automatic control of polyethylene production – control of vinyl chloride and PVC production.

MODULE VI CASE STUDY 5

Unique problem solving in petrochemical industries

Total Hours –45

TEXT BOOKS:

1. Waddams A.L, “Chemical from petroleum”, Butter and Janner Ltd., 1968

2. Balchan.J.G. and Mumme K.I., “Process Control Structures and Applications”, Van Nostrand Reinhold Company, New York, 1988.

REFERENCES:

1. Austin G.T.Shreeves, “Chemical Process Industries”, McGraw Hill International student edition, Singapore, 1985.

2. Liptak B.G., “Instrumentation in Process Industries”, Chilton Book Company, 1994.

OUTCOMES:

At the end of the course, the student will be able

• To implement the concept of different measurement techniques and control systems in Petrochemical Industry.

• To implement the methods of computer control in petrochemical industry.

Physics Elective Courses
(To be offered in II Semester)

PHCX 01	FUNDAMENTALS OF ENGINEERING MATERIALS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To help students to acquire the properties and applications of conducting and semiconducting materials.
- To familiarize students with basic ideas about the properties of dielectric and magnetic materials and their applications.
- To familiarize students with basic knowledge of nanomaterials and its electrical, electronic, mechanical and magnetic properties.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I CONDUCTING AND SEMICONDUCTING MATERIALS 7

Conductors: properties, Fermi distribution function, Fermi energy in metals- density of states- conducting polymers-properties-applications, semiconductors: intrinsic and extrinsic semiconductors-carrier concentration, conductivity and energy band gap, semiconducting polymers- properties- applications.

MODULE II DIELECTRIC MATERIALS 8

Polarization- dielectric constant – electronic, ionic, orientational and space charge polarization – frequency and temperature dependence of polarisation – Internal field - Clausius Mosotti relation - dielectric loss – dielectric breakdown – applications of dielectric materials (capacitors and transformers) – Pyroelectricity, Piezoelectricity, ferroelectricity and applications in Ferroelectric Random Access Memory (FeRAM) - multiferroic materials and its applications.

MODULE III MAGNETIC MATERIALS 7

Origin of magnetism-magnetic moment, susceptibility, permeability – Bohr magneton – Dia, Para and Ferro magnetism –Spontaneous magnetization- Domain theory – Hysteresis – soft and hard magnetic materials – antiferromagnetic materials – Ferrites and its application - Giant Magneto-resistance effect (GMR) - Magnetic resonance imaging(MRI).

MODULE IV NANOMATERIALS 8

Properties of nanomaterials – size effect on thermal, electrical, electronic, mechanical,

optical and magnetic properties – quantum confinement – classification of nanomaterials – quantum well, quantum wire, quantum dot - nanoporous materials - carbon nanotubes, graphene - nanocomposites – applications of nano materials.

PRACTICALS

1. Determination of energy band gap of a semiconductor.
2. Determination of resistivity of metals by four point probe method.
3. Determination of dielectric constant of dielectric material.
4. Determination of time constant of a capacitor using RC circuit.
5. Determination of paramagnetic susceptibility of given liquid.
6. Determination of hysteresis loss in a transformer using BH curve.
7. Analysis of size effect on the absorption spectrum of nanomaterials.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. William D. Callister, “Material Science and Engineering”, Wiley Publications, 2006.
2. Raghavan, V., “Materials Science and Engineering”, 5th edition, Printice Hall of India Pvt Ltd. New Delhi, 2004.
3. Wahab. M.A, “Solid State Physics: Structure and Properties of Materials”, Narosa Publishing House Pvt. Ltd., New Delhi , 2nd Edition, 2010.

6. Pradeep. T., “Textbook of Nanoscience and Nanotechnology”, McGraw Hill Education (India) Private Limited, New York, 2012.

OUTCOMES:

On completion of this course, the student will be able to

- apply the concepts of conducting and semiconducting materials for solid state devices.
- comprehend the significance of properties of dielectric magnetic materials and derive these properties from synthesized materials.
- differentiate between the properties of the nanomaterials compared to bulk materials.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 02	HEAT AND THERMODYNAMICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To familiarize students with basic concepts of heat.
- To help students acquire the fundamentals of heat conduction and radiation.
- To enable students acquaint with the basics of thermodynamic concepts.
- To make students understand the fundamentals of heat based experiments.

MODULE I CONCEPTS OF HEAT **10**

Definition of temperature, thermal and thermodynamic equilibrium - relationship between temperature and kinetic energy - definition of solid, liquid, gas - Introduction to phase transitions, critical and triple points- definition of heat capacity, mechanical equivalent of heat -Joule's calorimeter- latent heat- microscopic model of ideal gas - equation of state, internal energy, equipartition theorem- equation of state for non-ideal gases.

MODULE II CONDUCTION AND RADIATION **10**

Thermal conductivity – rectilinear flow of heat – thermal conductivity of a good conductor – Forbe’s method – thermal conductivity of a bad conductor – Lee’s disc method – conduction of heat through compound media - radiation – Planck’s law of blackbody radiation – Wien’s law – Stefan’s law – Newton’s law of cooling from Stefan’s law – Solar constant – Pyrometry.

MODULE III FUNDAMENTALS OF THERMODYNAMICS **10**

Thermodynamic equilibrium – zeroth law of thermodynamics – first law of thermodynamics – Reversible and irreversible processes – second law of thermodynamics - Heat engine – Carnot’s engine – Carnot’s theorem – Internal combustion engines – petrol and diesel engines (qualitative) – Entropy and available energy – temperature – entropy diagram for Carnot’s cycle - Third Law of thermodynamics (qualitative).

PRACTICALS

1. Determination of mechanical equivalent of heat by Joule’s calorimeter.
2. Relation between temperature of a body and time by plotting a cooling curve-Newton’s law of cooling.

3. Determination of specific heat capacity of liquid by cooling.
4. Determination of thermal conductivity of a good conductor-Forbe's method
5. Determination of thermal conductivity of a bad conductor-Lee's disc method

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur. D.S, “Heat & Thermodynamics”, S.Chand & Co., 2009.
2. Brijlal & Subramaniam, “Heat and Thermodynamics”, S.Chand & Co, Delhi, 2010.
3. Gupta. A.B and Roy. H, “Thermal Physics”, Books and Allied Ltd., 2002.
4. Sharma. J.K and Sarkar. K.K, “Thermodynamics and statistical Physics”, Himalaya Publishing House, 1988.

OUTCOMES:

On completion of this course, the student will be able to

- understand the concepts of heat and its properties.
- comprehend the ideas governing the conduction and radiation processes.
- apply the knowledge of laws of thermodynamics in thermodynamic systems.
- perform heat based experiments and determine its various properties.

PHCX 03	INTRODUCTION TO NANOSCIENCE AND TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To acquire basic knowledge about the nanomaterials and applications.
- To learn about the synthesis and imaging techniques of nanomaterials.
- To gain the basic concepts of fabrication techniques.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I NANOMATERIALS AND APPLICATIONS **10**

Properties of nanomaterials – size effect on thermal, electrical, electronic, mechanical, optical and magnetic properties – quantum confinement – classification of nanomaterials – quantum well, quantum wire, quantum dot - nanoporous materials - zeolite, mesoporous materials, carbon nanotubes, grapheme - nanocomposites - applications (qualitative): Molecular electronics-nanoelectronics – nanophotonics - single electron transistor-drug delivery.

MODULE II SYNTHESIS AND IMAGING TECHNIQUES **12**

Top-down and bottom up approaches – mechanical alloying and mechanical ball milling - sol-gel approach - hydrothermal method - precipitation method - spray pyrolysis - spin coating-self assembled monolayer (SAM) - Chemical vapour deposition method – Physical vapour deposition method: laser ablation method, sputtering method.

Optical microscopy – Phase contrast and interference microscopy – confocal microscopy - high resolution Scanning electron microscope (HRSEM) - high resolution Transmission electron microscope (HRTEM) - Atomic force microscope - Scanning Tunnelling microscope (STM).

MODULE III NANOFABRICATION **8**

Photolithgraphy - electron beam lithography - X-ray and Ion beam lithography - nanoimprint lithography - soft lithograpy - nanoelectromechnical systems (NEMS) - nanoindentation principles.

PRACTICALS

1. Synthesis of nanomaterials by sol-gel method.

2. Synthesis of nanomaterials by hydrothermal method.
3. Synthesis of nanomaterials by solid state reaction method.
4. Synthesis of nanomaterials by chemical bath deposition method.
5. Synthesis of nanomaterials by co-precipitation method.
6. Synthesis of nano thin films by spray pyrolysis method.
7. Synthesis of nano thin films by pulsed laser deposition (PLD) method.
8. Analysis of size effect on the absorption spectrum of nanomaterials.
9. SEM characterization of nanomaterials.
10. AFM characterization of nano thin films.
11. Phase confirmation by XRD.

5. Chris Mack, “Fundamental Principles of Optical Lithography: The Science of Microfabrication”, John Wiley & Sons, 2008.
6. Bandyopadhyay A.K., “Nano Materials”, New Age International Publishers, New Delhi, 2008.

OUTCOMES:

At the end of the course, the students will be able to

- understand the importance and basic concepts of the nanomaterials.
- comprehend the imaging techniques for nanomaterials.
- illustrate the various nanofabrication techniques.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 04	LASERS AND THEIR APPLICATIONS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To recognize the fundamentals of laser and its characteristics.
- To comprehend and compare the different laser systems.
- To apply lasers in metrology and material processing.
- To understand the working of laser instrumentation.
- To correlate the experimental results for applications.

MODULE I LASER THEORY **8**

Spontaneous and stimulated emission - Population inversion – Einstein's A & B coefficients - Threshold condition – super-radiance Laser – Three level and four level laser systems -conditions for CW and pulsed laser action. Q-Switching - experimental methods - cavity dumping - Mode locking - experimental methods - Spatial and Temporal coherence.

MODULE II DIFFERENT LASER SYSTEMS **8**

Laser systems – General description - Laser structure - excitation mechanism - Different laser systems- He-Ne laser, Carbon-dioxide laser - Excimer laser – Free electron laser- Alexandrite laser - Ti-Sapphire laser – Semiconductor diode laser - Diode pumped solid state laser - Pulsed-CW dye laser- Fibre laser.

MODULE III METROLOGICAL AND MATERIAL PROCESSING APPLICATIONS **8**

CW and Pulsed laser beam characteristics and its measurements - Beam focusing effects - spot size - Power and Energy density Measurements - Distance measurement - Interferometric techniques - LIDARS - different experimental arrangements - Pollution monitoring by remote sensing - Laser gyroscope - Laser welding, drilling, machining and cutting - Laser surface treatment - Laser vapour deposition – Biophotonic applications.

MODULE IV LASER INSTRUMENTATION **7**

Laser for measurement of length, current and voltage – Laser Doppler Velocimetry - Holography and speckle in displacement and deformation measurements - Laser for communication with fiber optics as channel.

PRACTICALS

1. Tuning of Dye Laser using DFDL Arrangement
2. Determination of Brewster Angle using He-Ne laser
3. Study of transversely Pumped Dye Lasers
4. Study of longitudinally Pumped Dye Lasers
5. Determination of power and wavelength using Distributed Feedback Dye Laser (DFDL)
6. Determination of fibre optic losses using semiconductor laser.
7. Bandgap determination of a semiconductor diode.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

6. William M.Steen, ”Laser Material Processing”, Springer-Verlag, Berlin, Third Edn., 2005.

OUTCOMES:

At the end of the course, the students will be able

- To complement the knowledge acquired in the theory class.
- To work with dye lasers for tunability of laser wavelength.
- To measure the loss of information involved in fibre optic communication.
- To correlate the results for application.

PHCX 05	MATERIALS SCIENCE	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To gain basic knowledge in conducting and semiconducting materials and their properties.
- To provide basic understanding of properties and applications of dielectric materials.
- To impart knowledge on magnetic and optical materials and their properties & applications.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I CONDUCTING AND SEMICONDUCTING MATERIALS 10

Quantum free electron theory of metals and its importance - Energy distribution of electrons in metals - Fermi distribution function - Density of energy states and carrier concentration in metals - Fermi energy – Classification of solids into conductors, semiconductors and insulators on the basis of Band theory – Introduction to Elemental and Compound semiconductors - Carrier concentration derivation for Intrinsic semiconductors - Density of electrons in conduction band & Density of holes in valence band- intrinsic carrier concentration - Fermi energy & Variation of Fermi energy level with temperature - Mobility and electrical conductivity - Band gap determination.

MODULE II DIELECTRIC MATERIALS 7

Introduction to dielectric materials & basic definitions – Electronic, Ionic, Orientation & Space charge polarizations - Total polarization – Frequency and temperature dependence of polarization - Internal field in a dielectric material - Deduction of Clausius - Mosotti's relation - dielectric loss & loss tangent – Different types of dielectric breakdown – Applications of dielectric materials : Capacitors and Transformers.

MODULE III MAGNETIC MATERIALS 6

Introduction to magnetic materials & origin of magnetic moment - Different types of

magnetic materials and their properties - Ferromagnetism & Domain theory of ferromagnetism - Hysteresis, Soft and Hard magnetic materials - Antiferromagnetic materials - Ferrites and its applications – Applications of magnetic materials : Data storage.

MODULE IV OPTICAL MATERIALS 7

Optical properties of semiconductors - Direct and Indirect bandgap semiconductors – Traps, recombination centre, color center and exciton – Luminescence : Fluorescence and Phosphorescence - Liquid crystal display : twisted nematic crystal display – Applications of Optical materials - Optical Sources : light emitting diode and laser diode - Photo detectors : PIN photodiode and Avalanche Photodiode - Pyroelectric devices - Electro optic effect : Kerr effect and Faraday effect.

PRACTICALS

1. Resistivity measurement of a semiconductor using four point probe method.
2. Determination of band gap of a semiconductor diode.
3. Determination of Hall coefficient of a given semiconductor material.
4. Determination of dielectric constant of a given non-polar liquid.
5. Determination of magnetic susceptibility of a given paramagnetic liquid using Quincke's method.
6. Determination of energy loss of a given transformer core using hysteresis method.
7. To study the I-V characteristics of a photodiode.

3. Arumugam. M, "Physics II'', Material Science for ECE, Anuradha Publishers, 5th Edition, 2005.
4. Sze. S.M., ''Semiconductor Devices – Physics and Technology'', John Wiley, 2nd Edition. 2002.
5. Raghavan. V, ''Materials Science and Engineering'', Prentice Hall of India, 5th Edition, 2004.

OUTCOMES:

On the completion of this course, the students will be able to

- Gain knowledge about fundamentals of conducting and semiconducting materials.
- Understand concepts and applications of Dielectric and Magnetic materials.
- Familiarize Optical materials and their applications in Engineering and Medical fields.
- Complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 06	NON-DESTRUCTIVE TESTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To study the process and applications of ultrasonic inspection method.
- To understand the basic concepts of radiographic inspection method.
- To acquire the knowledge about the various surface Non-Destructive Testing (NDT) techniques.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I ULTRASONIC INSPECTION METHOD **10**

Ultrasonic Testing - Principle of operations - types of sound waves - types of Transducers - transmission and pulse-echo method - straight beam and angle beam, instrumentation - calibration methods - ultrasonic testing technique- data representation, A Scan, B-scan, C-scan. Phased Array Ultrasound, Time of Flight. Diffraction - thickness determination - advantages, disadvantages and applications.

MODULE II RADIOGRAPHIC INSPECTION METHOD **10**

Radiographic testing – Principle - Interaction of X-ray with matter - X-ray radiography - method of generation-industrial radiography inspection techniques – Equipment - Exposure charts - Types of films – Fluoroscopy - Xero-Radiography – Limitations - Gamma radiography - Equipment, radiation sources - method of generation - film processing - interpretations of radiography - safety in industrial radiography.

MODULE III SURFACE NDT TECHNIQUES **10**

Liquid Penetrant Testing – Principles, Characteristics and types of liquid penetrants – developers - advantages and disadvantages of various methods - Inspection Procedure and Interpretation of results. Applications of Liquid Penetrant testing.

Magnetic Particle Testing - Principle-magnetizing technique - procedure –equipment - Interpretation and evaluation of test indications - applications and limitations - demagnetization.

PRACTICALS

1. Inspection of welds using solvent removable visible dye penetrant.
2. Inspection of welds using solvent removable fluorescent dye penetrant.

3. Inspection on non magnetic materials by eddy current method.
4. Inspection on magnetic materials by eddy current method.
5. Inspection of welds by Eddy current Testing.
6. Inspection of welds by Magnetic Particle Testing - Dry method.
7. Inspection of welds by Magnetic Particle Testing - Wet method.
8. Ultrasonic flaw detector - Inspection of defects.
9. Demonstration of Radiographic inspection.

L – 30; P – 30; TOTAL HOURS – 60

5. Charles J., Hellier, “Handbook of Nondestructive evaluation”, McGraw Hill, New York, 2001.

OUTCOMES:

Upon completion of this course, the students will be able to

- illustrate the ultrasonic inspection methods of NDT.
- understand the basic concept of radiographic inspection method.
- test the surfaces by the various surface NDT techniques.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 07	PROPERTIES OF MATTER AND ACOUSTICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand principles and properties of elasticity.
- To understand the basic concepts and application of viscosity.
- To analysis acoustic of building.
- To know about photoelasticity and its applications.

MODULE I ELASTICITY **8**

Stress and strain - Hooke's Law of elasticity - Elastic moduli - Stress-Strain Diagram - Poisson's Ratio - Relation between elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Expression for bending moment - Cantilever–Expression for depression - Uniform bending and Non-uniform bending of beams (theory & experiment) - I form Girders (qualitative treatment) and applications.

MODULE II VISCOSITY **8**

Viscosity- Newton’s formula for viscous flow - Streamline and turbulent motion - Reynolds number - Poiseuille's formula - Determination of coefficient of viscosity- factors affecting viscosity - capillary flow method - Stoke's formula- viscosity of highly viscous liquids – Stoke’s method - Lubricants and its applications –viscosity measurements - Viscometer - Variation of Viscosity with Temperature.

MODULE III ACOUSTICS OF BUILDING **7**

Basic requirement for the acoustically good halls - Reverberation and time of reverberation – Sabine’s formula for reverberation time - Absorption coefficient and its measurement -Transmission of sound and transmission loss - Factors affecting the architectural acoustics and their remedy-sound absorbing materials - vibration and noise control systems for buildings.

MODULE IV PHOTOELASTICITY **7**

Polarization - double refraction - Theory of Plane, Circularly and Elliptically polarized light - Quarter wave plate and half wave plate - photo elasticity - Theory of photo-elasticity - Stress optic relations - model materials - analysis techniques - Photo elastic bench - Three dimensional photo elasticity - Digital photo elasticity - Photo elastic

coatings.

PRACTICALS

1. Determination of viscosity of liquid by Poiseuille's method.
2. Determination of viscosity of liquid by Stoke's method.
3. Analysis of stress by photo elastic method.
4. Verification of Hooke's law by spring method.
5. Determination of Young's modulus of the cantilever beam.
6. Determination of rigidity modulus by static torsion method.
7. Visit to acoustically good auditorium and identifying the sound absorbing materials in the auditorium.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

4. Smith C.J.," General Properties of Matter", Orient & Longman,1960.
5. Kenneth G. Budinski and Michel K., Budinski, "Engineering Materials Properties and Selection", Pearson, Singapore, 2002.

OUTCOMES:

Upon completion of this course, the students will be able to

- understand the basic concepts of the elasticity of materials.
- comprehend the concepts of viscosity of liquid and measurement.
- demonstrate the acoustical aspects of building and its importance in construction.
- apply the fundamental concept of photo elasticity for the stress analysis of the object.

PHCX 08	PROPERTIES OF MATTER AND NONDESTRUCTIVE TESTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To impart knowledge about the principles and properties of elasticity.
- To learn the laws governing the dynamic of rigid bodies.
- To acquire the knowledge of the various techniques of Non-Destructive Testing (NDT) of materials.
- To understand the principle and basic concept of low temperature applications.

MODULE I ELASTICITY **8**

Stress and strain - Hooke's Law of elasticity - Elastic moduli - Stress-Strain Diagram - Poisson's Ratio - Relation between elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Expression for bending moment- Cantilever–Expression for depression - Uniform Bending and Non-uniform bending of beams (theory & experiment) - I form Girders (qualitative treatment) and applications.

MODULE II DYNAMICS OF RIGID BODIES **8**

Rigid bodies - angular acceleration - Torque on a particle - angular momentum - law of conservation of angular momentum - moment of inertia and its significance - Theorem of parallel and perpendicular axis - moment of inertia of a thin uniform bar - moment of inertia of a rectangular lamina - moment of inertia of uniform circular disc - Moment of inertia of hollow and solid cylinders – flywheel
(qualitative) - kinetic energy of rotating body – Routh rule.

MODULE III NDT TECHNIQUES **6**

Ultrasonic Testing- types of Transducers-transmission and pulse-echo method- Radiographic testing- Principle-Interaction of X-ray with matter-X-ray radiography-method of generation-industrial radiography inspection techniques- Liquid Penetrant Testing**-** Inspection Procedure and Interpretation of results.

MODULE IV LOW TEMPERATURE PHYSICS **8**

Definition of Refrigeration and Air-Conditioning - Types of **Refrigeration Systems-**

Applications- Comfort Air Conditioning, Industrial Refrigeration, Food processing and food chain - **Cryogenic treatment - Low temperature properties of engineering materials: Mechanical properties, Thermal properties, Electrical properties.**

PRACTICALS

1. Verification of Hooke's law by spring method.
2. Determination of Young's modulus of the beam by bending method.
3. Inspection of welds using solvent removable visible dye penetrant.
   Inspection of welds using solvent removable fluorescence dye penetrant.
5. Inspection of welds by Magnetic Particle Testing.
6. Determination of moment of inertia of the disc by torsion pendulum method.
7. Determination of moment of inertia of the disc by static torsion method.
8. Demonstration of working of flywheel.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

7. Charles J., Hellier.," Handbook of Nondestructive evaluation", McGraw Hill, New York, 2001.

OUTCOMES:

Upon completion of this course, the students will be able to

- understand the basic of concept of elasticity of materials.
- comprehend the basic concepts of motion of rigid bodies and its applications.
- demonstrate the various NDT techniques and its importance.
- know the low temperature systems and its applications.

PHCX 09	SEMICONDUCTOR PHYSICS AND OPTOELECTRONICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand the Physics of Semiconductor devices.
- To make the students learn the fundamentals of Photoluminous - semiconductors, Optoelectronic devices, Optical modulators/detectors.
- To make them understand the technology behind latest Display devices like LCD, Plasma and LED Panels.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I PHYSICS OF SEMICONDUCTORS **8**

Elemental and compound semiconductors – Drift and diffusion current - Intrinsic semiconductors – Carrier concentration (derivation) – Fermi energy – Variation of Fermi energy level with temperature – Mobility and electrical conductivity – Band gap determination – Extrinsic semiconductors – Carrier concentration in n-type and p-type semiconductor (derivation) – Variation of Fermi level with temperature and impurity concentration – Variation of Electrical conductivity with temperature – Hall effect – Experiment and applications of Hall effect.

MODULE II OPTOELECTRONIC DEVICES **7**

Light Emitting Diodes (LED) – power and efficiency - double hetero LED - LED structure - LED characteristics - White LED – Applications. Liquid crystal displays – Dynamic scattering and Twisted nematic display, Semiconductor Lasers, Homojunction and Heterojunction laser diodes - Optical processes in semiconductor lasers.

MODULE III OPTICAL MODULATORS **7**

Modulation of light – birefringence –Modulation Techniques - Electro optic effect – Electro optic materials –Types of Electro optic Modulators : Kerr and Pockel modulators –- Magneto optic effect - Magneto optic Modulators – Acousto Optic modulators.

MODULE IV OPTICAL DETECTORS **8**

Photo detectors - photodiodes - phototransistors - noise characteristics - PIN diode – Avalanche Photodiode (APD) characteristics - APD design of detector arrays – Charged Couple Device - Solar cells - Materials and design considerations, Thin film

solar cells, amorphous silicon solar cells.

PRACTICALS

1. Resistivity measurement of a semiconductor using four point probe method.
2. Determination of band gap of a semiconductor diode.
3. Determination of Hall coefficient of a given semiconductor material.
4. Determination of the wavelength of a given laser source using diffraction grating.
5. Determination of Planck's constant using LED.
6. To study the I-V characteristics of photodiode and phototransistor.
7. To study the characteristics of a solar cell.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Arumugam. M, "Physics II", Anuradha Publishers, 5th Edition, 2005.
2. Sze. S.M., "Semiconductor Devices – Physics and Technology", 2nd edn. John Wiley, 2002.

6. Palanisamy P.K., "Semiconductor physics and optoelectronics" Scitech Publications, 2003.

OUTCOMES:

On completion of this course, the student will be able to

- understand the principles of Physics behind semiconductor devices.
- choose the correct semiconductors for electronic devices and display.
- differentiate the working principle of LED and Diode Laser.
- apply the knowledge of modulation of light for different types of optical modulators.
- select suitable photodetectors for different types of applications.
- complement the knowledge acquired in the theory class and correlate the results for applications.

Chemistry Elective Courses
(To be offered II Semester)

CHCX01	ANALYTICAL INSTRUMENTATION	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the student conversant with

- principles, instrumentation and applications of different electroanalytical techniques
- different chromatographic techniques
- principles, instrumentation and applications of various types of absorption and emission spectroscopy
- different thermal analytical methods and their applications

MODULE I ELECTROANALYTICAL TECHNIQUES **7**

Principle and applications: conductometric titrations – potentiometrIc titrations, ion-selective electrodes and pH-metry – coulometry – voltammetry - polarography, amperometric titrations.

MODULE II CHROMATOGRAPHY **8**

Basic concepts of chromatography – paper chromatography – column chromatography – thin layer chromatography – gas chromatography – high performance liquid chromatography – gel permeation chromatography.

MODULE III SPECTROSCOPY **8**

Absorption spectroscopy (principle, instrumentation and applications): Colorimetric analysis – UV-Visible spectroscopy – FTIR spectroscopy - Emission Spectroscopy (principle, instrumentation and applications): fluorescence, phosphorescence and chemiluminescence – Atomic absorption spectroscopy – flame emission spectroscopy.

MODULE IV THERMAL ANALYSIS **7**

Principle, instrumentation and applications: Thermo gravimetric analysis – Differential thermal analysis – Differential scanning calorimetry

PRACTICALS

1. Conductometric titrations: acid-base and precipitation titrations

2. Potentiometric titrations
3. Determination of pH of the unknown solution
4. Estimation of alkali metals using flame emission spectroscopy
5. Estimation of metal ions of coloured solutions using colorimetric analysis
6. Separation of compounds using gas chromatography
7. Separation of compounds using high performance liquid chromatography
8. Analysis of the given sample and interpretation of the data using IR, UV-Visible spectroscopy
9. Demonstration of TGA/DTA and DSC and interpretation of data.

L – 30; P – 30; TOTAL HOURS – 60

6. Settle F. (Editor), Handbook of Instrumental Techniques for Analytical Chemistry, Pearson Education, Singapore, 2004.

OUTCOMES:

The student will be able to

- state the principle and applications of various electro-analytical techniques
- identify the right separation method for a given sample using different chromatographic techniques
- explain the principle, instrumentation & applications of various spectroscopic methods and also to interpret the data
- elaborate the principle, instrumentation and applications of various thermal analytical techniques and interpret the data.

CHCX02	CORROSION AND ITS CONTROL	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with the

- Basic concepts, principles and factors affecting corrosion
- Types and mechanism of corrosion
- Control measures of corrosion by material selection, proper design and by applying organic coatings
- Control of corrosion by applying inorganic coating

MODULE I BASIC CONCEPTS OF CORROSION 8

Corrosion – causes and impacts of corrosion – mechanism of corrosion: Dry corrosion- oxidation corrosion - corrosion by other gases – Pilling-Bedworth rule- Corrosion by hydrogen: hydrogen blistering, hydrogen embritttlement, decarburization and hydrogen attack – corrosion of silver and copper by sulphur compounds – liquid metal corrosion (embritttlement or cracking) – Wet corrosion : hydrogen evolution – presence and absence of oxygen and absorption of oxygen – difference between dry and wet corrosion-factors influencing corrosion-polarization-passivity-emf series and galvanic series- corrosion current -rate of corrosion.

MODULE II FORMS OF CORROSION 7

Forms of corrosion-conditions for electrochemical corrosion –galvanic corrosion – differential aeration corrosion: pitting, water line, wire fencing, crevice and filiform corrosion – stress corrosion – Intergranular corrosion- erosion corrosion – soil corrosion – microbiological corrosion- fretting corrosion- corrosion in composites.

MODULE III CORROSION CONTROL AND ORGANIC COATINGS 8

Corrosion control – selection of materials and designing- cathodic protection – sacrificial anode and impressed current cathodic protection – corrosion inhibitors: anodic, cathodic and vapour phase inhibitors.

Organic protective coatings – paints: constituents – functions – varnishes : types-constituents – functions – lacquers : constituents – functions –enamels-constituents – functions – special paints : fire retardant, water repellant, heat resistant, temperature indicating and luminous paints.

MODULE IV INORGANIC COATINGS 7

Treatment of metal surface-inorganic coatings- classification- metallic coatings : anodic and cathodic coatings-hot dipping : galvanizing and tinning- electroplating—electroless plating – cementation (diffusion) : sherardizing, calorizing and chromizing – metal cladding-metal spraying – non metallic coatings (chemical conversion coatings) : phosphate, chromate, oxide coatings and anodizing – comparison of anodic and cathodic protection.

PRACTICALS

1. Determination and comparison of rate of corrosion of metals in the presence of acid, base and neutral medium by weight loss method.
2. Determination of rate of corrosion of iron in the presence of various acids by weight loss method.
3. Determination of rate of corrosion of iron in the presence and absence of anodic Inhibitor by weight loss method.
4. Determination of rate of corrosion of iron in the presence and absence of cathodic Inhibitor by weight loss method.
5. Electroplating of base metal with copper.
6. Electrolessplating of base metal with copper
7. Chemical conversion coatings such as chromate and phosphate coatings.
8. Demonstration on the study of rate of corrosion by using cyclic voltametry.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. P.C Jain & Monica Jain, Engineering Chemistry Dhanpatrai Publishing Company (P) Ltd., New Delhi (2013).
2. S S Umare & S S Dara, A text Book of Engineering Chemistry, S. Chand& Company Ltd, New Delhi, 2014.

4. S. Banerjee, A.K. Tyagi, Functional Materials- Preparation, Processing and Applications, ELSEVIER Publications, London ; Waltham, MA : 2011

OUTCOMES:

Students will be able to

- explain the mechanism, compare and enumerate the factors affecting

corrosion

- describe and identify the place and types for a given situation.
- choose and elaborate the suitable organic coating method for a given real time situation.
- apply a suitable metallic coating for a given situation

CHCX03	ELECTRICAL MATERIALS AND BATTERIES	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with

- preparation, properties and applications of plastics used in electrical and electronic applications
- properties and uses of electrical engineering materials
- classification and description of different types of batteries.
- classification and types of fuel cells

MODULE I POLYMERS FOR ELECTRICAL AND ELECTRONIC APPLICATIONS **8**

Preparation, properties and applications **:** polyethylene, polypropylene, EPDM, Nylon-6,6, PVC, PTFE, polycarbonates, ABS, phenol formaldehyde, urea formaldehyde, epoxy resins – polymer blends and alloys.

MODULE II ELECTRICAL ENGINEERING MATERIALS **7**

Conductors: Silver, Copper, Gold, Aluminum – Semiconductors: Germanium, Silicon, Gallium Arsenic – Insulating Materials: Rubbers, Mica, Plastics, Ceramics, Insulating papers – Magnetic Materials: ferromagnetic materials, paramagnetic materials, diamagnetic materials, antiferromagnetic materials, ferrites

MODULE III BATTERIES **7**

Electrochemical and electrolytic cell – batteries: types (primary, secondary and flow cell) – primary batteries: dry cells, alkaline batteries – secondary batteries: nickel-cadmium cell – lead acid storage cell, lithium battery: primary and secondary type – solar cell – dye sensitized solar cell.

MODULE IV FUEL CELLS **8**

Difference between batteries and fuel cells - chemistry of fuel cells - types of fuel cell (based on temperature and electrolyte) – principle, characteristic features, advantages, disadvantages and applications of polymer electrolyte membrane or proton exchange membrane fuel cell (PEMFC), direct methanol fuel cell (DMFC), alkaline fuel cell (AFC), phosphoric acid fuel cell (PAFC), molten carbonate fuel cell (MCFC) and solid oxide

fuel cells (SOFC).

PRACTICALS

1. Free radical polymerization of styrene.
2. Free radical polymerization of PMMA.
3. Preparation of phenol-formaldehyde.
4. Preparation of urea-formaldehyde.
5. Synthesis of epoxy resin.
6. Demonstration of mechanical properties of insulating materials using UTM
7. Demonstration of electrical properties of insulating materials
8. Construction of batteries using natural resources
9. Measurement of EMF for different batteries.

L – 30; P – 30; TOTAL HOURS – 60

7. B. Viswanathan and M. Aulice Scibioh, Fuel Cells: Principles and Applications, Taylor and Francis Group, 2007.

OUTCOMES:

The student will be able to

- summarise the preparation, properties and applications of plastics used in electrical and electronic applications
- enumerate the properties and uses of electrical engineering materials
- illustrate various types of batteries with the aid of a diagram
- classify the fuel cells and elaborate the different types of fuel cells.

CHCX04	ENGINEERING MATERIALS	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with

- properties and uses of different types of refractories and abrasives
- adhesives, cements and lime, setting of cements and their chemical behaviors.
- types, properties and uses of lubricants.
- various types of composite materials.

MODULE I REFRACTORIES AND ABRASIVES **8**

Introduction refractory: -classification - based on chemical nature- characteristic and selection of good refractory - general manufacture of refractory- preparation properties and uses of: silica refractory - magnesite refractory - zirconia refractory, properties of refractories: refractoriness - refractoriness under load - thermal spalling - porosity and dimensional stability, Cermets - super refractory.

Abrasives : introduction - Moh's scale - natural abrasives: diamond – corundum – emery - garnet and quartz, synthetic abrasives: preparation properties and uses: carborundum (silicon carbide)– alundum - boron (norbide) carbide

MODULE II ADHESIVES AND BINDING MATERIALS **7**

Introduction - classification of adhesives –advantage –limitation of adhesive bonding – development of adhesive- factors influencing adhesive action: chemical and physical, application techniques of adhesive – Lime: classification – manufacture - setting and hardening, Gypsum: -Manufacture and properties and uses - Cement : chemical composition- Manufacture – setting and hardening – concrete – weathering of cement and concrete and its prevention- special cements: high alumina cement - sorel cement - white portland cement – water proof cement.

MODULE III LUBRICANTS **7**

Introduction –functions of lubricant- mechanism of lubrication - classification of lubricant – liquid lubricant: vegetable and animal oils – mineral oils, semisolid: grease(calcium, lithium, aluminium) – petroleum jelly, solid lubricant: graphite - molybdenum disulphide, Properties of lubricant: viscosity - viscosity index - flash point and fire point - cloud point and pour point – oiliness - aniline point - carbon residue.

MODULE IV COMPOSITE MATERIALS 7

Introduction – advantageous characteristics of composites, applications of composites, main constituent of composites, types and applications of composites: RCC fibre-reinforced plastics (glass , carbon and aramid) - particulate composite - metal matrix composite - layered composites - failures in fibre-reinforced composites, ceramic matrix composites (CMC) – properties and applications.

PRACTICALS

1. Preparation of refractory bricks
2. Preparation of abrasive papers/cloth
3. Preparation of simple adhesives
4. Estimation of alkalinity in cements
5. Determination of cloud point and pour point
6. Determination of flash point and fire point
7. Preparation of fibre-reinforced composite

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. P.C Jain & Monica Jain, Engineering Chemistry Dhanpatrai Publishing Company (P) Ltd., New Delhi (2013).
2. B.Sivasnakar, “Engineering Chemistry”, Tata McGrow-Hill Publication Limited, New Delhi, second reprint 2008.
3. Engineering Chemistry, Wiley India Editorial Team, Willey India Publisher, New Delhi, 2011.
4. S S Umare & S S Dara, A text Book of Engineering Chemistry, S. Chand& Company Ltd, New Delhi, 2014.

OUTCOMES:

The student will be able to

- classify and describe the manufacture the refractories and enumerate the properties and uses of abrasive materials.
- elaborate the manufacture, properties and uses of various adhesives and binding materials.
- classify lubricants and describe the properties and uses of them
- enumerate the properties and uses of various composite materials.

CHCX05	FUELS AND COMBUSTION	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the students conversant with the

- three types of fuels available and the different processes involved in it.
- analysis of fuel characteristics and manufacture of fuels
- calculations involved in calorific values and minimum air requirement for complete combustion.
- classification, functions, mechanism and properties of lubricants.

MODULE I SOLID FUELS **7**

Characteristics of good fuel. Solid fuel – Wood, Coal – Ranking of coal – selection of coal. Analysis of coal – Proximate analysis. Pulverized coal – Metallurgical coke – Carbonization of coal – types. Manufacture of metallurgical coke – Beehive oven and Otto Hoffman's by-product oven methods.

MODULE II LIQUID AND GASEOUS FUELS **8**

Liquid fuel: Petroleum: Refining of petroleum, Liquid fuels derived from petroleum – Cracking: Thermal (Liquid and Vapour phase) – Catalytic (fixed bed and moving bed cracking – Synthetic petrol: Fischer-Tropsch method– Knocking in petrol and diesel engine: octane number and antiknocking – cetane number and improvement of cetane number – biodiesel (trans-esterification) – Gaseous fuels: Compressed natural gas (CNG) – LPG – oil gas – producer gas – water (blue) gas – biogas.

MODULE III COMBUSTION **8**

Calorific value: Gross and net caloric value – Bomb Calorimeter, Gas calorimeter - Definition of combustion – calculation of minimum requirement of air (problems) – theoretical calculation of calorific values (Dulong's formula), Gross and net calorific values ((problems) – Analysis of flue gas: Orsat's gas analysis method, explosive range, Ignition temperature. Introduction to air pollution from IC (Internal combustion) engines, photochemical smog, primary and secondary pollutants.

MODULE IV LUBRICANTS **7**

Friction and wear – lubricants: definition, functions and mechanism of lubrication

(thick film and thin film) –classification: liquid lubricants: animal and vegetable origin, mineral oil, blended oils, lubricating emulsions and silicones – properties of lubricating oils: viscosity and viscosity index; Flash and fire-point, Cloud and pour point, oiliness, emulsification number, volatility, carbon residue, aniline point – semisolid lubricant: greases and waxes – solid lubricant: graphite and molybdenum disulphide –nanolubricants.

PRACTICALS

1. Testing of fuels - proximate analysis (moisture, volatile matter, ash content and fixed carbon present in coal, coke, charcoal etc)
2. Ash content and carbon residue test
3. Biodiesel synthesis by trans-esterification method (from coconut, groundnut, mustard oil, palm oil)
4. Determination of calorific value of a solid fuel using Bomb calorimeter (coal, charcoal, coke etc)
5. Determination of calorific value of a liquid fuel using Bomb calorimeter (petrol, diesel, biodiesel etc)
6. Determination of cloud point and pour point of a lubricant
7. Determination of flash and fire point of diesel.
8. Aniline Point of diesel
9. Viscosity Index of lubricants and Fuels by Viscometer
10. Flue gas analysis by Orsat's gas analysis method – Demonstration
11. Working of internal combustion engine – Demonstration

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Jain P.C and Renuka Jain, Physical Chemistry for Engineers, Dhanpat Rai and Sons, New Delhi, 2001.
2. Engineering Chemistry, Wiley India Editorial Team, Willey India Publisher, New Delhi, 2011.

4. J.B. Heywood, Internal Combustion Engine Fundamentals, McGraw Hill International Editions, 1989.
5. Bahl B.S., Tuli and Arun Bahl, Essentials of Physical Chemistry, S. Chand and Company Ltd., New Delhi, 2004.

OUTCOMES:

The students will be able to

- compare and contrast the solid, liquid and gaseous fuels and also describe the processes involved in liquid and gaseous fuels.
- analyse the fuel properties such as moisture, votalite matter, ash content, calorific value etc
- calculate minimum air required for complete combustion and calorific values of fuels.
- categorize different lubricants into three types, explain the preparation and determine their properties.

CHCX06	FUNDAMENTALS OF PHYSICAL CHEMISTRY	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students will be conversant with the

- various thermodynamic terms and relate the laws of thermodynamics in chemical processes
- molecularity and order of reaction and derive the rate constant for different order of reactions
- basics of adsorption of different materials and propose mechanisms and surface area measurement
- conditions for equilibrium and learn different components at equilibrium

MODULE I BASIC THERMODYNAMICS **8**

Introduction - Thermodynamic terms - Thermodynamic equilibrium and processes - 1st law of thermodynamics: internal energy, enthalpy, heat capacity, isothermal and adiabatic expansion, Joule-Thomson effect - Zeroth law of thermodynamics: absolute temperature - 2nd law of thermodynamics: - spontaneous and cyclic process, Entropy in isothermal, isobaric and isochoric processes, work and free energy function, Maxwell's relation - 3rd law of thermodynamics

MODULE II CHEMICAL KINETICS **8**

Rate of chemical reaction - order and molecularity of a reaction - Rate constant - kinetics of opposing, parallel and consecutive and chain reactions - isotope effects - effect of temperature on reaction rate - collision theory - absolute reaction rate theory - kinetics in enzyme catalysis

MODULE III SURFACE SCIENCE AND CATALYSIS **8**

Adsorption - adsorption isotherms - uni and bimolecular adsorption reactions - parahydrogen conversion - factors affecting adsorption – Langmuir adsorption isotherm - Hinshelwood mechanism and *Eley-Rideal* mechanism with example - adsorption of gases on solids and surface area measurement by BET method - Terms in catalysis - homogeneous and heterogeneous and enzyme catalysis with example

MODULE IV PHASE RULE **6**

Terms involved - Conditions for equilibrium - application of phase rule to water, lead-silver system, freezing mixtures, thermal analysis: cooling curves.

PRACTICALS

1. Determination of the heat capacity of benzoic acid, internal energy of combustion of camphor using Bomb calorimeter. Calculation of enthalpy of combustion and formation for camphor.
2. Determination of adsorption isotherm of (i) acetic acid on charcoal (ii) oxalic acid on charcoal.
3. *Kineticsoffirst and second order reactions.*
4. Phase rule experiments with organic compounds: (i) naphthalene and p-dichloro benzene (ii) naphthalene and diphenyl (iii) m-dinitrobenzenzene and p-nitro toluene.

L – 30; P – 30; TOTAL HOURS – 60

6. Puri B.R., Sharma L.R. and Pathania M.S., Principles of Physical Chemistry, 47th Edition, Vishal Publishing Co. India, 2016.

OUTCOMES:

The student will be able to

- calculate entropy, enthalpy and free energy change for different chemical processes
- calculate the rate constant for any chemical and biochemical processes
- differentiate the adsorption processes and calculate the surface area and predict the suitability of catalysts for different chemical processes
- predict the equilibrium conditions for water, alloys, freezing mixtures and draw the thermal curves for phase transition

CHCX07	GREEN TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make students conversant with the

- basic principles of green chemistry and green technology.
- wastes that causes hazards to human health
- chemicals that harms our environment
- need for green processes in various industries

MODULE I GREEN CHEMISTRY PROTOCOL **7**

Need – Significance – 12 Principles with examples – R4 model – Life cycle analysis – sustainable and cleaner production - Green Technology: definition, examples: CFC free refrigerants, green building, energy, 3D printers, nanotechnology – Awards for Green chemistry – organization promoting green chemistry.

MODULE II WASTE & WASTE MINIMISATION **8**

Source of wastes: domestic, industrial, medical, nuclear, e-waste; problems; prevention – economy of waste disposal – Waste minimization techniques: general waste treatment and recycling – alternate waste water treatment technologies: hybrid process – Green computing: goals, green cloud, green ICT - Pollution statistics from various industries (Industrial case studies).

MODULE III GREEN SYNTHESIS **7**

Introduction - Solvent free reactions - green reagents, green solvents in synthesis - microwave and ultrasound assisted reactions – supercritical fluid extraction – green oxidation and photochemical reactions – catalyst and biocatalysts.

MODULE IV GREEN INDUSTRIAL PROCESSES **8**

Polymer industry: biodegradable polymer - textile industry: greener approaches of dyeing, waste disposal – ecofriendly agrochemicals: biofertilizers, biopesticides – Pharmaceutical industry: atom economy, reduction of toxicity, use of biocatalyst, zero waste disposal – Leather industry: greener process in tanning, crusting, surface coating – ecofriendly batteries & fuel cells.

PRACTICALS

1. Synthesis of an ionic liquids (Ex: imidazolium) and testing the solubility of organic

chemicals.

2. Green bromination of stilbene (using pyridine hydrobromide).
3. Green synthesis: Photocatalytic reactions, solvent-free organic reaction – Aldol; green oxidation, green reduction.
4. Microwave assisted chemical reaction. (synthesis of aspirin, pinacol-pinacolone reaction, etc).
5. Comparison of conventional reaction with microwave assisted reactions (atom economy, solvent, etc) [Ex: aldehyde and ketones with hydrazines to give hydrazones].
6. Diels-Alder reaction in eucalyptus oil (green process).

L – 30; P – 30; TOTAL HOURS – 60

4. Rashmi Sanghi, M. M. Srivastava, Green chemistry, Narosa publishers, New Delhi, 2003.

OUTCOMES:

The students will be able to

- outline the principles and implications of green chemistry.
- comprehend the potential risks of waste generated and analyse the threats to human and environment.
- integrate information into design of molecules to avoid/eliminate toxic solvents & reagents or reduce toxic products.
- identify various alternate greener technologies for various industries.

CHCX08	ORGANIC CHEMISTRY OF BIOMOLECULES	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make students conversant with the

- basic concepts in organic chemistry
- types and structure of carbohydrates and lipids
- formation of different structures of proteins from amino acid
- structure of nucleic acids

MODULE I BASIC CONCEPTS IN ORGANIC CHEMISTRY **8**

Classification and IUPAC nomenclature of organic compounds – stereochemistry – optical, stereo and geometrical isomerism – types of reagents: electrophiles and nucleophiles – types of reactions: addition, substitution, elimination and rearrangement reactions.

MODULE II CARBOHYDRATES, LIPIDS AND VITAMINS **7**

Structure and functions of carbohydrates: mono, di, oligo and polysaccharides – lipids: phospholipids, glycolipids, sphingolipids – cholesterol – steroids – Structure, functions and deficiency disorders of fat soluble vitamins: A, D, E & K - Water soluble vitamins B & C: Thiamine, riboflavin, pantothenic acid, niacin, pyridoxine, biotin, cobalamine, folic acid and ascorbic acid.

MODULE III AMINO ACIDS, PEPTIDES AND PROTEINS **7**

Aminoacids: classification, properties - peptides – polypeptides – proteins: primary, secondary, tertiary and quaternary structure – glycoproteins – lipoproteins – Enzymes: classification and functions

MODULE IV NUCLEIC ACIDS **8**

Nucleic acids – importance - structure of purines and pyrimidines – nucleotides – polynucleotides - RNA – types & structure - DNA – phosphodiester bonds – chemical, helical structure and functions – DNA replication – gene modification.

PRACTICALS

1. Qualitative tests to identify carbohydrates.

2. Quantitative estimation of carbohydrates.
3. Separation of sugars – TLC and/or paper chromatography.
4. Quantitative estimation of lipids.
5. Separation of amino acids – TLC and/or paper chromatography.
6. Quantitative estimation of proteins by Lowry's method.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. V. K. Ahluwalia, Organic Reaction Mechanism, Narosa Publishers, New Delhi, 2002.
2. Johnson Arthur T., Biology for Engineers, CRC Press, Finland, 2011.

4. David L. Nelson, Michael M. Cox, Lehninger Principles of biochemistry, Macmillan press, London, 2010

OUTCOMES:

The students will be able to

- classify organic compounds and explain the mechanism of various organic reactions.
- draw the structures and enumerate the functions of carbohydrate, lipids and vitamins.
- correlate the relationship among amino acids, peptides and proteins.
- recognize the role of nucleic acid in the formation of RNA & DNA and differentiate DNA & RNA using their structure and function.

CHCX09	POLYMER SCIENCE AND TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the student conversant with the

- basic concepts of polymers, classification, types of polymerization and molecular weight & its distribution
- preparation, properties and applications of thermoplastics and introduction to biodegradable polymers
- properties and applications of thermosets, elastomers and FRP
- different types of moulding techniques

MODULE I BASIC CONCEPTS OF POLYMERS **8**

Definitions: monomer, polymer, functionality, degree of polymerization – classification of polymers: source, structure, application, thermal processing behavior (thermoplastics and thermosets), composition and structure (addition and condensation), mechanism (chain growth and step-wise growth) – copolymer: types – Definition –nomenclature of polymers – tacticity – types of polymerization : free radical, cationic and anionic polymerization (concepts only) – average molecular weight of polymer: number, weight – molecular weight distribution (problems)

MODULE II THERMOPLASTICS AND BIODEGRADABLE POLYMERS **8**

Preparation, properties and applications : LDPE, HDPE, polypropylene, PVC, PTFE, PET, polyamides (Nylon-6 and Nylon 6,6) and polycarbonates – polymer blends and alloys – basics of biodegradable polymers.

MODULE III THERMOSET RESINS, ELASTOMERS AND FRP **7**

Thermoset resins : phenolic resins, amino resins (urea and melamine formaldehyde), epoxy resins, unsaturated polyesters – polyurethanes – elastomers : vulcanization of natural rubber, diene based elastomers –fibre reinforced plastics: glass, aramid and carbon.

MODULE IV MOULDING TECHNIQUES **7**

Moulding constituents**:** functions – moulding techniques**:** compression, injection, extrusion (single screw), blow moulding, thermoforming, (mechanical and vacuum

forming), lamination.

PRACTICALS

1. Determination of molecular weight and degree of polymerization using Oswald's viscometer.
2. Free radical polymerization of styrene.
3. Free radical polymerization of PMMA.
4. Preparation of phenol-formaldehyde.
5. Preparation of urea-formaldehyde.
6. Synthesis of epoxy resin.
7. Synthesis of unsaturated polyester.
8. Preparation of FRP laminates.
9. Demonstration of injection moulding, compression moulding and blow moulding.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

6. Gowarikar V.R., Viswanathan N.V and Jayadev Sreedhar, Polymer Science, Wiley Eastern Limited, Madras, 1981.

OUTCOMES:

The student will be able to

- classify various polymers, name the polymers and types of polymerization reactions, calculate molecular weight of polymers,
- summarise preparation, properties and applications of thermoplastics and give examples of biodegradable polymers

- elaborate the properties and applications of thermosets, elastomers and FRP
- select the appropriate moulding technique for a given polymer, based on the application

Maths Elective Courses

(to be offered in IV

Semester)

MACX 01	**DISCRETE MATHEMATICS AND GRAPH THEORY**	**L**	**T**	**P**	**C**
		3	**1**	**0**	**4**

OBJECTIVES:

The aims of this course are to

- introduce Logical and Mathematical ability to deal with abstraction.
- familiarize the basic mathematical ideas and terminologies used in computer science.
- translate real life situations into diagrammatic representations.

MODULE I PROPOSITIONAL CALCULUS 8

Propositions – Logical connectives – Compound propositions – Conditional and biconditional propositions – Truth tables – Tautologies and contradictions – Contrapositive – Logical equivalences and implications – DeMorgan's Laws – Normal forms – Principal conjunctive and disjunctive normal forms – Rules of inference – Arguments – Validity of arguments.

MODULE II PREDICATE CALCULUS 7+3

Predicates – Statement function – Variables – Free and bound variables – Quantifiers – Universe of discourse – Logical equivalences and implications for quantified statements – Theory of inference – The rules of universal specification and generalization – Validity of arguments.

MODULE III FUNCTIONS 7+3

Functions – Classification of functions –– Composition of functions – Inverse functions – Binary and n–ary operations – Characteristic function of a set – Hashing functions – Recursive functions – Permutation functions.

MODULE IV ALGEBRAIC SYSTEMS 8+2

Groups, Cyclic Groups, Subgroups, Cosets, Lagrange's theorem, Normal subgroups – Codes and group codes – Basic notions of error correlation – Error recovery in group codes.

MODULE V GRAPH THEORY 7+3

Graphs – incidence and degree – subgraphs – isomorphism – complement of a graph – operations on graphs

MODULE VI PATH AND CIRCUIT 8+2

Walks, trails and paths – Eulerian graphs – Konigsburg bridge problem - Hamiltonian graphs

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1 Trembly J.P and Manohar R, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 30th Reprint 2011.

2 Kenneth H.Rosen, “Discrete Mathematics and its Applications:, 7th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, Special Indian Edition, 2011.

REFERENCES:

3 C.L.Liu, D.P.Mohapatra, “Elements of Discrete Mathematics”, 4th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 2012.

OUTCOMES:

At the end of the course, student will be able to

- use the concepts of propositional calculus.
- use the concepts of predicate calculus.
- identify types of functions and their importance.
- decode and encode the messages using group theory concepts.
- apply the basic concepts of graph theory.
- represent some real life situations into diagrammatic representation.

MACX 02 PROBABLITY AND STATISTICS L T P C
3 1 0 4

OBJECTIVES:

The aims of this course are to impart the

- knowledge of the theory of probability and random variables
- techniques to carry out probability calculations and identifying probability distributions
- application of statistical inference in practical data analysis

MODULE I BASICS OF PROBABILITY AND STATISTICS 8+2

Sample space, events- axioms of probability and interpretation – Addition, multiplication rules – conditional probability, Independent events - Total probability – Baye's theorem - Descriptive Statistics.

MODULE II ONE DIMENSIONAL RANDOM VARIABLE AND PROBABILITY DISTRIBUTION FUNCTIONS 7+3

Discrete random variable –continuous random variable – Expectation - probability distribution - Moment generating function – Binomial, Poisson, Geometric, Uniform (continuous), Exponential and Normal distributions.

MODULE III TWO DIMENSIONAL RANDOM VARIABLES 8+2

Joint, marginal, conditional probability distributions –covariance, correlation - transformation of random variables.

MODULE IV SAMPLING AND ESTIMATION 7+3

Sampling distributions – basic knowledge on Random , simple random , stratified and cluster samplings – Test of Hypotheses - concepts- Point estimation and Interval estimation.

MODULE V THEORY OF INFERENCE 8+2

Large sample tests – test for single and difference on proportions, single mean, difference of means, difference of variances – confidence intervals. Small sample tests – Student's t test, F test and Chi square test on theory of goodness of fit and analyses of independence of attributes.

MODULE VI DESIGN OF EXPERIMENTS 7+3

Analysis of variance – one way classification – two way classification – Completely

Randomised Block Designs – Randomised Block Design – Latin square designs - Interpretations - case studies.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. T.Veerarajan, “Probability and Statistics”, Tata McGraw-Hill Education, 2008.
2. Miller, I., Miller, M.,Freund, J. E., “Mathematical statistics”, 7th Edition, Prentice Hall International, 1999.
3. S.P.Gupta, “Applied Statistics”, Sultan Chand & Sons

REFERENCES:

1. S.M.Ross, “Introduction to Probability and Statistics for Engineers and Scientists” Fifth Edition, Elesvier.
2. S.C.Gupta and V.K.Kapoor, “Fundamentals of Mathematical Statistics” First edition, Sultan Chand and Sons.
3. Arora and Arora, “Comphrensive Statistical Methods”, S. Chand, 2007

OUTCOMES:

On completion of the course, students will be able to

- do basic problems on probability and descriptive statistics.
- derive the probability mass / density function of a random variable.
- calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.
- calculate point and interval estimates.
- apply some large sample tests and small sample tests.
- carry out the data collection representation analysis and implications and the importance of inferences.

MACX 03	RANDOM PROCESSES	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of the course are to

- acquire the knowledge of the theory of probability and random variables
- study discrete and continuous probability distributions.
- demonstrate the techniques of two dimensional random variables and its distributions.
- introduce the random process, stationarity, Markov process and the study of correlation function and spectral analysis.

MODULE I Basics of Probability 7+3

Sample space, events- axioms of probability and interpretation – Addition, multiplication rules – conditional probability, Independent events - Total probability – Baye's theorem - Tchebychev's inequality.

MODULE II One dimensional Random variable and Probability Distribution functions 7+3

Discrete random variable –continuous random variable – Expectation - probability distribution - Moment generating function – Binomial, Poisson, Geometric, Uniform (continuous), Exponential and Normal distributions.

MODULE III Two dimensional random variables 7+3

Joint, marginal, conditional probability distributions - covariance, correlation and regression lines - transformation of random variables.

MODULE IV RANDOM PROCESSES 8+2

Classification of Random process - Stationary process - WSS and SSS processes - Poisson process – Markov Chain and transition probabilities.

MODULE V CORRELATION FUNCTIONS 8+2

Autocorrelation function and its properties - Cross Correlation function and its properties - Linear system with random inputs – Ergodicity.

MODULE VI SPECTRAL DENSITY 8+2

Power spectral Density Function - Properties - System in the form of convolution - Unit Impulse Response of the System – Weiner-Khinchine Theorem - Cross Power

Density Spectrum.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Veerarajan T., “Probability, Statistics and Random Processes”, Tata McGraw Hill,3rd edition, 2008.
2. Papoulis, “Probability, Random Variables and Stochastic Processes”, 4th Edition, Tata McGraw Hill Company, 2002.
3. S.M.Ross, “Introduction to Probability and Statistics for Engineers and Scientists” Fifth Edition, Elesvier

REFERENCES:

2. Trivedi K S, “ Probability and Statistics with reliability, Queueing and Computer Science Applications”,Prentice Hall of India,New Delhi,2nd revised edition, 2002

OUTCOMES:

On completion of the course, students will be able to

- do basic problems on probability.
- derive the probability mass / density function of a random variable.
- calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.
- identify and study the different random processes.
- compute correlation functions and related identities.
- compute power spectral density functions and apply Weiner-Khinchine formula.

MACX 04 APPLIED NUMERICAL METHODS L T P C
3 1 0 4

OBJECTIVES:

The aims of the course are to

- introduce basic computational methods for analyzing problems that arise in engineering and physical sciences.
- acquire knowledge about approximation theory and convergence analysis associated with numerical computation.

MODULE I NUMERICAL SOLUTIONS OF EQUATIONS 7+3

Bisection method - Regula Falsi method – Secant method - Fixed point iteration method - Newton's Raphson method –Gauss Elimination method - Gauss-Jordon method – Gauss Jacobi method - Gauss-Seidel method.

MODULE II INTERPOLATION 8+2

Finite difference operators – Gregory Newton's forward and backward interpolations – Cubic spline interpolation - Lagrange interpolation - Newton's divided difference formula.

MODULE III NUMERICAL DIFFERENTIATION AND INTEGRATION 8+2

Numerical differentiation using Newton's forward and backward formulae – Numerical integration : Trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Gaussian Two Point and Three Point Quadrature formulae – Double integrals using Trapezoidal and Simpson's 1/3 rule.

MODULE IV INITIAL VALUE PROBLEMS FOR FIRST ORDER ORDINARY DIFFERENTIAL EQUATIONS 7+3

Numerical solutions by Taylor's Series method, Euler's method, Modified Euler's Method - Runge – Kutta Method of fourth order – Milne's and Adam's Bashforth Predictor and Corrector methods

MODULE V INITIAL AND BOUNDARY VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 8+2

Numerical solutions by Taylor's Series method - Runge – Kutta Method of fourth order of second order ODE. Finite difference methods.

MODULE VI BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS 7+3

Finite difference solution of one dimensional heat equation by explicit and implicit

methods – One dimensional wave equation and two dimensional Laplace equation.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Grewal, B.S., “Numerical methods in Engineering and Science”, 7th edition, Khanna
   Publishers, 2007.
2. C.F.Gerald, P.O.Wheatley, “Applied Numerical Analysis” ,Pearson Education, New Delhi, 2002.

1. Chapra S.C, Canale R.P. “Numerical Methods for Engineers”, 5th Ed., McGraw Hill, 2006.
2. M.K.Jain, S.R.K.Iyengar, R.K.Jain, “Numerical methods for Scientific and Engineering Computation”, New Age International Publishers, New Delhi, 2003

OUTCOMES:

At the end of this course, students will be able to

- solve algebraic, transcendental and system of equations.
- apply interpolation techniques.
- carry out numerical differentiation and integration using different methods.
- solve first order ODE using single and multi step methods.
- solve second order ODE, initial and boundary value problems.
- solve the boundary value problems in PDE.

Maths Elective Courses
(To be offered in VI Semester)

MACX 05	MATHEMATICAL PROGRAMMING	L	T	P	C
		2	0	0	2

OBJECTIVES:

The aims of the course are to

- acquire knowledge and training in optimization techniques.
- obtain knowledge about optimization in utilization of resources.
- understand and apply operations research techniques to industrial operations.

MODULE I LINEAR PROGRAMMING PROBLEM 10

Linear programming – formulation of the problem - graphical interpretation of optimality - Simplex method – to obtain basic feasible solution – types of linear programming solution – complications and their resolution.

MODULE II ADVANCED LINEAR PROGRAMMING PROBLEMS 8

Artificial variable - Big M method – Two phase method – alternative optimal solution – unbounded solution - Duality – primal dual relationships.

MODULE III TRANSPORTATION PROBLEM 7

Transportation problems – Initial basic feasible solutions, MODI method, Unbalanced transportation problem, Degeneracy in transportation models,.

MODULE IV ASSIGNMENT PROBLEM 5

Assignment problem – Minimization and Maximization type of problems by Hungarian method.

Total Hours –30

TEXT BOOKS:

1. Hamdy A Taha, “Operations Research - An introduction”, 8th edition, Phil Pearson, 2007.
2. Winston.W.L., “Operations Research”, 4th edition, Thompson-Brooks/Cole, 2003.

4. Robertazzi. T.G., “Computer networks and systems-Queuing theory and performance evaluation”, 3rd edition, Springer, 2002.

OUTCOMES:

At the end of the course, students will be able to

- formulate industrial problems as mathematical programming problems.
- solve linear programming problems by different methods.
- solve transportation problems by different methods.
- solve assignment problems by Hungarian method.

MACX 06	STATISTICAL METHODS FOR DATA ANALYSIS	L	T	P	C
		2	0	0	2

OBJECTIVES:

The aim of the course is to

- introduce statistical quality control tools.

MODULE I TESTS OF HYPOTHESES AND STATISTICAL INFERENCES 8

Small sample tests – Student's ' t ' test for single mean , difference of means, paired t test – F test for difference of variances – Chi square test on theory of goodness of fit and analyses of independence of attributes.

MODULE II DESIGN OF EXPERIMENTS 7

Analysis of variance – one way classification – two way classification – Completely Randomised Block Designs – Randomised Block Design – Latin square designs - Statistical analysis -Interpretations - case studies.

MODULE III STATISTICAL QUALITY CONTROL-I 8

Quality improvement and statistics –Statistical quality control- statistical process control – control charts – design of control charts –analysis of patterns on control charts - X bar chart, R chart and S chart.

MODULE IV STATISTICAL QUALITY CONTROL-II 7

Process and product control – attribute charts – P, np and C charts – control charts performance.

Total Hours –30

TEXT BOOKS:

1. Douglas C.Montgomery, George C. Runger "Applied Statistics and probability for Engineers" V Edition – John Wiley & Sons Inc.
2. Miller, I., Miller, M., Freund, J. E. "Mathematical statistics" 7th Edition. Prentice Hall International, 1999.

REFERENCES:

2003.
3. S.C.Gupta and V.K. Kapoor, “Mathematical Statistics” , Sultan Chand publications.
4. Veerarajan “Fundamentals of Mathematical Statistics” I Edition, Yes Dee Publishing Pvt. Ltd., 2017.

OUTCOMES:

On completion of the course, students will be able to

- develop and test hypothesis for different statistical tests
- design an experiment and case study the experiment with different data.
- analyze the industrial data using quality control design tools statistically.
- analyze the industrial data using process and product control tools statistically.

MACX 07 NUMERICAL METHODS FOR INTEGRATION AND DIFFERENTIAL EQUATIONS

L	T	P	C
2	0	0	2

OBJECTIVES:

- This course aims to solve numerically integral and differential equations.

MODULE I NUMERICAL INTEGRATION **8**

Numerical integration by trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Two Point and Three point Gaussian quadrature formulae.

MODULE II NUMERICAL DOUBLE INTEGRATION **6**

Double integrals using trapezoidal and Simpson's 1/3 rules

MODULE III NUMERICAL SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS **8**

Milne's Predictor and Corrector Method – Adam's Predictor-Corrector Method - Finite difference methods for two – point Boundary Value problems for Ordinary Differential Equations.

MODULE IV BOUNDARY VALUE PROBLEMS FOR PARTIAL DIFFERENTIAL EQUATIONS **8**

Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace and Poisson equations

Total Hours –30

TEXT BOOKS:

1. M.K.Jain, S.R.K.Iyengar, R.K.Jain, "Numerical methods for Scientific and Engineering Computation", New Age International Publishers, New Delhi, 2003.
2. Grewal, B.S., "Numerical methods in Engineering and Science" 7th edition, Khanna Publishers, 2007

2. P.Dechaumphai, N. Wansophark, "Numerical Methods in Engineering", Narosa Publications, 2012.

OUTCOMES:

At the end of the course students will be able to

- solve the integration by numerical methods.
- solve the double integration by numerical methods
- find numerical solution of ordinary differential equations in engineering problems.
- find numerical solution of partial differential equations in engineering problems.

MACX 08 MATHEMATICAL MODELLING

L	T	P	C
3	0	0	3

OBJECTIVES:

The aims of the course are to

- provide basic idea of formation and use of Mathematical models for different purposes.
- determine the extent to which models are able to replicate real-world phenomena under different conditions

MODULE I PRINCIPLES OF MATHEMATICAL MODELING 7

Mathematics as a modelling language - Classification of models - Building, studying, testing and using models - Black and white box models – Difference equations

MODULE II PHENOMENOLOGICAL MODELS 7

Linear, Multiple linear and nonlinear regression - Neural networks - Fuzzy model - Stability and higher dimensional systems

MODULE III MECHANISTIC MODELS –I 8

Setting up ODE models – Initial and Boundary value problems - Numerical solutions - Fitting ODE to data - Applications

L	T	P	C
2	0	0	2

MODULE IV MECHANISTIC MODELS –II 8

Linear and nonlinear equations - Elliptic, parabolic and hyperbolic equations - Closed form solutions - Finite difference and finite element methods

Total Hours –30

TEXT BOOKS:

1. G . Ledder , “Calculus, modelling , probability and dynamic systems”, Springer 2013
2. Kei Velten, “Mathematical modelling and simulation”, J. Wiley and sons,2009

REFERENCES:

2. Alfio Quarteroni, “Mathematical models in science and engineering”, Notices of AMS
3. J.N. Kapur, “Mathematical models in Biology and Medicine”, Affiliated East-

West Press Private Limited, New Delhi, 1992.

OUTCOMES:

On completion of the course, the students will be able to

- identify the relationship between real world and mathematical models
- Classify the data and choose the appropriate model
- Distinguish between linear and nonlinear models
- identify the relationship between empirical and mechanistic models

MACX 09 **GRAPH THEORY** **L T P C**

3 0 0 3

OBJECTIVES:

The aims of this course are to

- represent the real life situations diagrammatically.
- appraise different methods to find solutions to graph theory problems.

MODULE I INTRODUCTION TO GRAPH THEORY 8

Graphs - finite and infinite graphs - Incident and degree-isolated vertex, pendent vertex and null vertex.

MODULE II PATH AND CIRCUIT 8

Isomorphism – sub graphs-walks, paths and circuits – connected and disconnected graphs- Euler graphs – operation on a graph.

MODULE III TREES AND FUNDAMENTAL CIRCUITS 7

Trees- some properties of trees- pendent vertices in a tree – rooted binary tree-spanning trees-fundamental circuits.

MODULE IV CUT SETS AND CUT VERTICES

Cut sets – some properties of cut sets- fundamental circuits and cut sets-network flows.

Total Hours –30

TEXT BOOKS:

1. NARSINGH DEO, Graph theory with applications to Engineering and Computer Science, Prentice Hall INC, New Delhi,

1. Trembly J.P and Manohar R, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 30th Reprint 2011
2. Kenneth H.Rosen, “Discrete Mathematics and its Applications”, 7th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, Special Indian Edition, 2011

3. Md. Saidur Rahman, “Basic graph theory”, Springer, 2017

OUTCOMES:

At the end of the course, students will be able to

- demonstrate the basic concepts of Graph theory.
- explore connected and disconnected graphs.
- identify the real life problems with trees and circuits.
- bring out the cut set properties and network flows properties.

Humanities Elective I

(To be offered in III Semester)

		L	T	P	C
SSCXO1	**FUNDAMENTALS OF ECONOMICS**	**2**	**0**	**0**	**2**

OBJECTIVES:

- To identify and present the basic concepts of demand, supply and equilibrium.
- To explain and discuss the types and concepts of national income and inflation.
- To illustrate the fundamental concepts of money, banking and public finance.
- To apprise the students about Indian economy and the role of engineers in economic development.

MODULE I DEMAND AND SUPPLY ANALYSIS 8

Classification of economy – open and closed economy, Demand - Types of demand - Determinants of demand – Law of Demand - Demand elasticity - Supply - Determinants of Supply – Law of Supply - Supply elasticity - Pricing strategies.

MODULE II NATIONAL INCOME AND INFLATION 7

Concepts of National income and measurement – Importance and difficulties of estimating National Income in India - Aggregate demand and aggregate supply, Macroeconomic equilibrium – meaning of inflation- types - causes and preventive measures

MODULE III MONEY, BANKING AND PUBLIC FINANCE 9

Money – Meaning, types, functions, importance - Commercial Banks - Central Bank - Monetary policy – meaning, objectives, Methods of Credit Control By RBI, Government Budget – Government revenue and Expenditures – Fiscal policy - Its objectives, instruments and limitations - Deficit Financing - The Fiscal Responsibility and Budget Management Act, 2003 (FRBMA) .

MODULE IV INDIAN ECONOMY AND THE ROLE OF ENGINEERS 6

Economic reforms – Liberalization, Privatization and Globalization - challenges and opportunities, Engineers – Engineers' contributions to the economic growth.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Dutt and Sundharam (2013), *Indian Economy*, S. Chand & Company Pvt. Ltd, New Delhi.
2. Hussain, Moon Moon (2015), *Economics for Engineers*, Himalaya Publishing House, New Delhi.

REFERENCES:

1. Cleaver Tony (2004), "*Economics: The Basics*", Routledge, London.
2. Mell Andrew and Walker Oliver (2014), "*The Rough Guide to Economics*", Rough Guide Ltd.

OUTCOMES:

On successful completion of this course,

- Students will have had exposure to the basic concepts of demand, supply and various pricing strategies.
- Students will have understood the macroeconomic concepts of national income and inflation.
- Students will be able to apply the knowledge of money, banking and public finance in their real life situations.
- Students will have an overview of the economic reforms introduced in Indian economy.

SSCXO2 PRINCIPLES OF SOCIOLOGY.

L	T	P	C
2	0	0	2

OBJECTIVES:

- To acquaint the students with Concepts and perspectives of Sociology
- To explain the reflection of society in Individuals and vice versa
- To describe the hierarchical arrangement of individuals and groups in society
- To explicate the dimensions, forms and factors of Social change.
- To examine the context, impact and agencies of Globalization

MODULE I THE FOUNDATIONAL CANON 8

Sociology-Definition, scope and importance; Major theoretical perspectives- Functionalism, Conflict Theorising and Interactionism; Elements of social formation- Society, Community, Groups and Association; Associative Social Process- Co-operation, Accommodation and Assimilation; Dissociative Social Process- Competition and Conflict.

MODULE II INDIVIDUAL AND SOCIETY 7

Culture-definition, characteristics, functions, types, cultural lag and civilization, Socialization – definition, process, stages, agencies and anticipatory socialization; Social Control- definition, characteristics, importance, types & agencies.

MODULE III SOCIAL INEQUALITY AND STRATIFICATION 7

Concepts- inequality, hierarchy, differentiation, Social Exclusion, and Social Stratification. Forms of Social Stratification- Caste, Class and Estate. Gender and Social Stratification- sex and gender, patriarchy, factors perpetuating gender stratification; Globalization and gender inequality

MODULE IV SOCIAL CHANGE AND GLOBALIZATION 8

Social Change-definition, nature, direction; Forms- evolution, development, progress and transformation; Factors of social change- demography, economy, technology, polity and culture. Globalization- definition, characteristics, historical and social context and Impact, agencies of globalization- IGOs, INGOs, Nation-State, MNEs and Media

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Giddens A. 1989. “Sociology” Cambridge: Polity Press.

2. Heald Haralambos, R.M(2014) . ‘‘Sociology Themes and Perspectives”, Oxford, New Delhi-92
3. Bhushan Vidya and D.R. Sachdeva (2012). ‘‘Fundamental of Sociology”, Pearson, Delhi.

REFERENCES:

1. Das Gupta, Samir and Paulomi Saha (2012), ‘‘An Introduction to Sociology”, Pearson, Delhi
2. Bottomore, T.B. 1972. *Sociology- A Guide to Literature and Problems*, New Delhi,

OUTCOMES:

On successful completion of this course,

- Students will have exposure to the fundamentals tenets of Sociology.
- Students will be trained to understand social reality with sociological perspective.
- Students will be oriented to constructively analyze human interactions, social relationship and social issues
- Students will gain exposure to the dynamics of human society with special reference to the contemporary trends of globalization.

SSCXO3	SOCIOLOGY OF INDIAN SOCIETY.	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To present a portrayal of the components of the Indian Social structure
- To describe the nature and contemporary structure of Indian social Institutions.
- To examine the causality and magnitude of social problem facing the contemporary India.
- To elucidate the processes forms and impact of change and development in Indian society

MODULE I INDIAN SOCIAL STRUCTURE 7

Unity and Diversity; Concepts of unity and diversity- racial, religious, ethnic and linguistic composition of India. Types of communities-rural, urban and tribal; Social backwardness- OBC, SC and ST; Indian minorities- religious, ethnic, linguistic and LGBT

MODULE II INDIAN SOCIAL INSTITUTIONS 7

Family- definition, types, characteristics, functions of family; Joint Family- definition features, utility, changes; Marriage- definition, characteristics, marriage as sacrament or contract. Caste- definition, principles, contemporary changes, dominant caste, caste -class interface.

MODULE III SOCIAL PROBLEMS IN INDIA 8

Social Problem-definition, nature, social disorganization; Population explosion-causes, effects, relationship with development; Child Labour- causes, magnitude and consequences; Unemployment-nature , types, causes and effects; Gender issues-social status of women, violence against women and women in work place; Contemporary issues- communalism, terrorism and corruption.

MODULE IV SOCIAL CHANGE AND DEVELOPMENT IN INDIA 8

Socio-cultural Change- Sanskritization, Westernization, Secularization, Modernization; Processes of Social change- Industrialization, Urbanization, Globalization; Development- definition, elements, role of government, industry and corporate sector. Technology and change- invention and innovation, impact of technology on social institutions, technology and development.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Sharma,K.L.2008. *Indian Social Structure and Change*. Jaipur: Rawat Publications,.
2. Shah, A.M. 1998. *The Family in India: Critical Essays*. New Delhi: Orient Longman,
3. Ahuja Ram. 1999. *Social problems in India*, Rawat Publication: New Delhi.
4. Ahuja Ram. 2014. *Society in India,*, Rawat Publication: New Delhi.

REFERENCES:

1. Jayapalan, N.(2001), **"**Indian Society and Social Institutions" Atlantic Publishers & Distri,
2. Atal, yogesh (2006), "Changing Indian Society" Rawat Publications, Jaipur

OUTCOMES:

On successful completion of this course,

- Students will gain an in-depth understanding of the social structure and social institutions that constitute society in India.
- Students will be sensitized to the various categories ,Inequalities and their challenges
- Students will be exposed to the social problems encountered in contemporary India.
- Students will gain knowledge about the various forms and trends of the social change.
- Students will become aware about the challenges in the path of progress of Indian society and realize relevance of their role in bringing about development

Humanities Elective II

(To be offered in IV Semester)

		L	T	P	C
SSCXO4	**ECONOMICS OF SUSTAINABLE DEVELOPMENT**	**2**	**0**	**0**	**2**

OBJECTIVES:

- To have an increased awareness on the concept and components of sustainable development.
- To develop the ability to demonstrate the need of sustainable development and international responses to environmental challenges.
- To have an insight into global environmental issues and sustainable globalization.
- To establish a clear understanding of the policy instruments of sustainable development.

MODULE I CONCEPT OF SUSTAINABLE DEVELOPMENT 7

Evolution of the Concept – Rio Summit and sustainable development - various definitions of sustainable development - Components of sustainable development: Social, environmental and economic components.

MODULE II NEED FOR SUSTAINABLE DEVELOPMENT 8

Need for sustainability – Global environmental challenges: population growth, resource depletion, pollution, energy use, climate change, pollution, growing water scarcity, other urban problems, loss of biodiversity, hazardous wastes disposal.International responses to environmental challenges - Global policy such as Kyoto Protocol, Montreal Protocol, Basel Convention.

MODULE III GLOBALIZATION AND ENVIRONMENT SUSTAINABILITY 8

Impact of Globalization on sustainable development, Co - existence of globalization and Environment sustainability, Globalization and Global Governance.Green economy - Renewable energy, sustainable transport, sustainable construction, land and water management, waste management.

MODULE IV POLICIES FOR ACHIEVING SUSTAINABLE DEVELOPMENT 7

Principles of environmental policy for achieving sustainable development:

precautionary principle and polluter pays principle – Business Charter for Sustainable Development.Policy instruments for sustainable development: direct regulation – market based pollution control instruments such as pollution tax, subsidy, pollution permits.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Anderson, David A (2010), "*Environmental Economics and Natural Resource Management*", Routledge, 3rd edition.
2. Karpagam M (1999), "*Environmental Economics: A Textbook*", Sterling Publishers Pvt. Ltd, New Delhi.

REFERENCES:

1. Karpagam M and Jaikumar Geetha (2010), "*Green Management Theory and Applications*", Ane Books Pvt. Ltd, New Delhi.
2. Sengupta Ramprasad (2004), "*Ecology and Economics: An Approach to Sustainable Development*", Oxford University Press, New Delhi.

OUTCOMES:

On successful completion of this course,

- The students will have understood the concepts and components of sustainable development.
- The students will have a holistic overview on the challenges of sustainable development and International responses to environmental challenges.
- The students will have gained knowledge on the global environment issues and demonstrate responsible globalization through global governance.
- The students will have developed awareness of the ethical, economic, social and political dimensions that influence sustainable development.

SSCXO5 INDUSTRIAL SOCIOLOGY

L	T	P	C
2	0	0	2

OBJECTIVES:

- To introduce sociological approaches and perspectives to understand the social relationship in manufacturing industries and corporate sector.
- To explain the structure and functions of industrial organizations.
- To elucidate the dynamics of organizational behavior, leadership and communication.
- To inculcate professional ethics and values to equip students to work in organizational settings.

MODULE I INTRODUCTION 8

Industrial Sociology- definition, scope and importance; Theoretical approaches- scientific management, human relations approach, theory of bureaucracy, Fordism and post-fordism; Production system- concept and characteristics of factory system, automation and rationalization; Industrial conflict- strike , lockout and trade unions.

MODULE II INDUSTRIAL ORGANIZATION 7

Formal organization- definition, features, utility; Informal organization- definition, characteristics, types and relevance; Structure of industrial organization- features and functions of line organization, characteristics and roles of staff organization, distinction;

Industrial hierarchy-white collar, blue collar, supervisors and managers.

MODULE III DYNAMICS OF INDUSTRIAL RELATIONS 8

Group dynamics- Definition, Group behaviour model, Group decision making process, group cohesiveness; Leadership- definitions, style and effective supervision; Communication- concepts, types, model barriers; Job satisfaction- nature, employee compensation and job satisfaction.

MODULE IV PROFESSIONAL ETHICS AND VALUES 7

Concepts- values- morals, and ethics, Integrity, work ethics , service learning - Civic Virtue - caring - Sharing - Honesty - Courage - Valuing Time - Co-operation - commitment - empathy - Self-Confidence - Environmental Ethics, Cyber issues - computer ethics, cyber crimes, plagiarism Ethical living-concept of harmony in life.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. Narender Singh, Industrial Sociology, Tata McGraw Hill Education Pvt. Ltd., New Delhi, 2012.
2. Gisbert Pascal, Fundamentals of Industrial Sociology, Tata Mc. Graw Hill Publishing Co., New Delhi, 1972
3. Schneider Engeno. V, Industrial Sociology 2nd Edition, Mc. Graw Hill Publishing Co., New Delhi, 1979.

REFERENCES:

1. Robbins, Stephen, Organizational Behaviour , Prentice Hall of India PVT ltd new Delhi, 1985
2. Devis Keith , Human Behaviour at work place, Mc. Graw Hill Publishing Co., New Delhi,1984

OUTCOMES:

On successful completion of this course,

- Students will have acclimatized with sociological perspectives for dealing with social relationships in production and service organizations.
- Students will be familiar with structure of authority, roles and responsibility in organizational settings.
- Students will imbibe leadership, communication and behavioral acumen to govern organization
- Students will be sensitized to standards of desirable behavior to engage in industrial and corporate sector.

SSCXO6 **LAW FOR ENGINEERS** **L T P C**
2 0 0 2

OBJECTIVES:

- To understand the Constitution and Governance of our country.
- To apprise the students of human rights - local and international and redressal mechanism.
- To have an insight into the industrial, corporate and labour laws of our country.
- To establish a clear understanding about the importance of intellectual property related laws.

MODULE I INDIAN CONSTITUTION AND GOVERNANCE 8

Constitution – salient features, Preamble, Citizenship, Fundamental rights, Fundamental duties, Directive principles, Union executive, Legislature – Union – State and union territories – Election Commission – Election for parliament and state legislature, Judiciary- basic functioning of the Supreme Court and High Courts, Right to information Act 2005 – evolution – concept – practice.

MODULE II HUMAN RIGHTS 7

Human rights – meaning and significance, Covenant on civil and political rights, Covenant on Economic, Social and Cultural rights, UN mechanism and agencies, The Protection of Human Rights Act, 1993 – watch on human rights and enforcement.

MODULE III INDUSTRIAL, CORPORATE AND LABOUR LAWS 8

Corporate laws – meaning and scope, Companies Act 1956 – Indian Contract Act 1872 - Principles of Arbitration - Industrial Employment (Standing Orders) Act 1946 - Industrial Disputes Act 1947 - Workmen's Compensation Act 1923 - The Factories Act, 1948.

MODULE IV LAWS RELATED TO IPR 7

IPR – meaning and scope, International organization – WIPO – TRIPS, Major Indian IPR Acts – Copyright laws, Patent and Design Act, Trademarks Act, Trade Secret Act, Geographical Indicator.

L – 30; T – 0; Total Hours –30

TEXT BOOKS:

1. M.P. Jain (2005) *Indian Constitutional Law*, Wadhwa & Co.

2. H. D, Agarwal (2008), *International Law and Human Rights,* Central Law Publications,
3. Rao, Meena (2006), *Fundamental Concepts in Law of Contract*, 3rd edn., Professional offset.
4. Ramappa (2010), *Intellectual Property Rights Law in India*, Asia Law House.
5. Singh, Avtar (2007), *Company Law*, Eastern Book Co.
6. R.F, Rustamji (1967)*, Introduction to the Law of Industrial Disputes*, Asia Publishing House.

REFERENCES:

1. Acts: Right to Information Act, Industrial Employees (standing order) Act, Factories Act, Workmen Compensate Act.

OUTCOMES:

On successful completion of this course,

- Students will `be able to apply the basic concepts of Indian Constitution, Governance and power in their real life situation.
- Students will have gained knowledge in human rights, cultural, social and political rights.
- Students will have synthesized knowledge about industrial, corporate and labour laws of our country.
- Students will have an overview of IPRs and laws related to Intellectual Property Rights.

General Elective Courses

Group I courses

(To be offered in V Semester)

		L	T	P	C
GECX101	**DISASTER MANAGEMENT**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To give an exposure to various environmental hazards and disasters: and various concepts and principles to manage disaster.
- To give exposure to various environmental policies & programs in India for disaster management

MODULE I ENVIRONMENTAL HAZARDS 7

Environmental hazards, Environmental Disasters and Environmental stress-Meaning and concepts. Vulnerability and disaster preparedness.

MODULE II NATURAL DISASTERS 7

Natural hazards and Disasters - Volcanic Eruption, Earthquakes, Tsunamis, Landslides, Cyclones, Lightning, Hailstorms, Floods, Droughts, Cold waves, Heat waves and Fire.

MODULE III MAN-MADE DISASTERS 7

Man induced hazards & Disasters - Soil Erosion, Chemical hazards, Population Explosion

MODULE IV DISASTER MANAGEMENT 8

Emerging approaches in Disaster Management- Preparing hazard zonation maps, Predictability / forecasting & warning, Preparing disaster preparedness plan, Land use zoning, Communication. Disaster resistant house construction, Population reduction in vulnerable areas, Awareness - Rescue training for search & operation at national & regional level - Immediate relief, Assessment surveys, Political, Administrative, Social, Economic, Environmental Aspects.

MODULE V NATURAL DISASTER REDUCTION & MANAGEMENT 8

Provision of Immediate relief measures to disaster affected people, Prediction of Hazards & Disasters, Measures of adjustment to natural hazards

MODULE VI ENVIRONMENTAL POLICIES & PROGRAMMES IN INDIA **8**

Regional survey of Land Subsidence, Coastal Disaster, Cyclonic Disaster & Disaster in Hills with particular reference to India. Ecological planning for sustainability & sustainable development in India, Sustainable rural development: A Remedy to Disasters, Role of Panchayats in Disaster mitigations, Environmental policies & programmes in India- Institutions & National Centers for Natural Disaster reduction, Environmental Legislations in India, Awareness, Conservation Movement, Education & training.

L – 45; Total Hours –45

REFERENCES:

1. Satender, “Disaster Management in Hills”, Concept Publishing Co., New Delhi, 2003.
2. Singh, R.B. (Ed.), “Environmental Geography”, Heritage Publishers, New Delhi,1990.
3. Savinder Singh, “Environmental Geography”, Prayag Pustak Bhawan,1997.
4. Kates, B.I. and White, G.F., “The Environment as Hazards”, Oxford University Press, New York, 1978.
5. Gupta, H.K., (Ed), “Disaster Management”, University Press, India, 2003.
6. Singh, R.B.,“Space Technology for Disaster Mitigation in India (INCED)”, University of Tokyo, 1994.
7. Bhandani, R.K., “An overview on Natural & Manmade Disaster & their Reduction”, IIPA Publication, CSIR, New Delhi, 1994.
8. Gupta, M.C., “Manuals on Natural Disaster management in India”, National Centre for Disaster Management, IIPA Publication, New Delhi, 2001.

OUTCOMES:

At the end of the course, the students will

- achieve sufficient knowledge on the disaster prevention strategy, early warning system, disaster preparedness, response and human resource development.
- be familiar with the National Policy on Disaster Management.

GECX102 TOTAL QUALITY MANAGEMENT L T P C
3 0 0 3

OBJECTIVES:

- To understand the various principles, practices of TQM to achieve quality.
- To get acquainted with the various statistical tools and approaches for quality control and continuous improvement.
- To get aware of the importance of ISO and Quality Systems.

MODULE I INTRODUCTION 8

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

MODULE II TQM PRINCIPLES 7

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits.

MODULE III TQM IMPROVEMENT PROCESS 8

Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership – Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures – Basic Concepts, Strategy, Performance Measure.

MODULE IV STATISTICAL PROCESS CONTROL (SPC) 8

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma, New seven Management tools.

MODULE V TQM TOOLS 7

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA.

MODULE VI QUALITY SYSTEMS 7

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System– Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 – Concept, Requirements and Benefits

L – 45; Total Hours –45

TEXT BOOKS:

1. Dale H.Besterfiled, et al., “Total Quality Management”, Pearson Education, Inc. 2003.

REFERENCES:

1. James R.Evans & William M.Lidsay, “The Management and Control of Quality”, 5th Edition, South-Western (Thomson Learning), 2002.
2. Feigenbaum.A.V., “Total Quality Management”, McGraw-Hill, 1991.
3. Oakland.J.S., “Total Quality Management”, Butterworth Hcinemann Ltd., Oxford, 1989.
4. Narayana V. and Sreenivasan. N.S., “Quality Management – Concepts and Tasks”, New Age International, 1996.
5. Zeiri, “Total Quality Management for Engineers”, Wood Head Publishers, 1991.

OUTCOMES:

The student should be able to

- apply the various statistical tools and approaches for Quality control.
- achieve continuous process improvement through TQM.

GECX103 ENERGY STUDIES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn the growing demand, supply of energy on global and national levels and the need for renewable energy promotion.
- To understand the basic need for energy conservation and waste heat recovery.
- To learn the important aspects of energy audit and management.
- To get acquainted with the global environmental issues and carbon credits.

MODULE I GLOBAL AND NATIONAL ENERGY SCENARIO 7

Role of energy in economic development, various energy resources - overall energy demand and availability- Energy consumption in various sectors and its changing pattern - Exponential increase in energy consumption and projected future demands. Need for renewable energy.

MODULE II SOLAR ENERGY 8

Solar Radiation – Measurements of Solar Radiation - Flat Plate and Concentrating Collectors – Solar direct Thermal Applications – Solar thermal Power Generation - Fundamentals of Solar Photo Voltaic Conversion – Solar Cells – Solar PV Power Generation – Solar PV Applications.

MODULE III OTHER RENEWABLE ENERGY SOURCES 8

Power from wind – wind turbine working and types, solar thermal power plants – low medium and high power generation, power from wave , tidal, geothermal sources, OTEC system. MHD power plants – working, types, merits and demerits. Energy from biomass.

MODULE IV COGENERATION, WASTE HEAT RECOVERY AND COMBINED CYCLE PLANTS 8

Cogeneration principles- topping and bottoming cycles, role in process industries. Energy from wastes- waste heat recovery- heat recovery from industrial processes. Heat exchange systems – recuperative and regenerative heat exchangers – commercially available waste heat recovery devices. Combined cycle plants – concept, need and

advantages, different combinations and practical scope.

MODULE V ENERGY CONSERVATION AND MANAGEMENT 7

Need for energy conservation – use of energy efficient equipment. Energy conservation opportunities - in educational institutions, residential, transport, municipal, industrial and commercial sectors – concept of green building. Energy audit in industries – need, principle and advantages. Case studies.

MODULE VI GLOBAL ENERGY ISSUES AND CARBON CREDITS 7

Energy crisis, fossil consumption and its impact on environmental climate change. Energy treaties – Montreal and Kyoto protocols - Transition from carbon rich and nuclear to carbon free technologies, carbon foot print – credits – clean development mechanism.

L – 45; Total Hours –45

TEXT BOOKS:

1. S.S. Rao and B.B. Parulekar, “Energy Technology”, 3rd Edition, Khanna Publishers, New Delhi, 2011.
2. O. Callaghn. P.W., “Design and Management for Energy Conservation”, Pergamon Press, Oxford, 1981.

REFERENCES:

1. G.D. Rai, “Non Conventional Energy Sources”, Khanna Publishers, New Delhi, 2011.
2. Archie, W Culp. “Principles of Energy Conservation”, McGraw Hill, 1991.
3. D Patrick and S W Fardo, “Energy Management and Conservation”, PHI,1990
4. P. O’Callaghan: “Energy Management”, McGraw - Hill Book Company, 1993.
5. Kenney, W. F., “Energy Conservation in Process Industries”, Academic Press, 1983.

OUTCOMES:

The student should be able to

- Realize the global and national energy status and need to switch over to renewable energy technology.
- Energy audit and suggest methodologies for energy savings.
- Utilize the available resources in an optimal way.
- Concern about the global environmental issues & promote carbon credits.

GECX104 ROBOTICS L T P C

3 0 0 3

OBJECTIVES:

To learn about the robots, various components, of Robots, programming and their applications.

MODULE I **8**

Definition- Need - Application, Types of robots – Classifications – Configuration, work volume, control loops, controls and intelligence- basic parts - functions – specifications. of robot, degrees of freedoms, end effectors – types, selection

MODULE II ROBOT DRIVES AND CONTROL **8**

Controlling the Robot motion – Position and velocity sensing devices – Design of drive systems – Hydraulic and Pneumatic drives – Linear and rotary actuators and control valves – Electro hydraulic servo valves, electric drives – Motors – Designing of end effectors – Vacuum, magnetic and air operated grippers.

MODULE III ROBOT SENSORS **8**

Transducers and Sensors – Tactile sensor – Proximity and range sensors – Sensing joint forces – Robotic vision system – Image Representation - Image Grabbing –Image processing and analysis – Edge Enhancement – Contrast Stretching – Band Rationing - Image segmentation – Pattern recognition – Training of vision system.

MODULE IV ROBOT PROGRAMMING & AI TECHNIQUES **7**

Types of Programming – Teach pendant programming – Basic concepts in AI techniques – Concept of knowledge representations – Expert system and its components.

MODULE V ROBOTIC WORK CELLS AND APPLICATIONS OF ROBOTS **7**

Robotic cell layouts – Inter locks – Humanoid robots – Micro robots – Application of robots in surgery, Manufacturing industries, space and underwater.

MODULE VI ROBOT KINEMATICS AND DYNAMICS 7

Forward and inverse Kinematic equations, Denvit – Hartenbers representations Fundamental problems with D-H representation, differential motion and velocity
of frames - Dynamic equations for sing, double and multiple DOF robots – static force analysis of robots.

L – 45; Total Hours –45

REFERENCES:

1. Yoram Koren," Robotics for Engineers", Mc Graw-Hill, 1987.
2. Kozyrey, Yu, "Industrial Robots", MIR Publishers Moscow, 1985.
3. Richard. D, Klafter, Thomas, A, Chmielewski, Michael Negin, "Robotics Engineering – An Integrated Approach", Prentice-Hall of India Pvt. Ltd., 1984.
4. Deb, S.R. "Robotics Technology and Flexible Automation", Tata Mc Graw-Hill, 1994.
5. Mikell, P. Groover, Mitchell Weis, Roger, N. Nagel, Nicholas G. Odrey, "Industrial Robotics Technology, Programming and Applications", Mc Graw- Hill, Int. 1986.
6. Timothy Jordanides et al,"Expert Systems and Robotics", Springer – Verlag, New York, May 1991.

OUTCOMES:

Students would be able to

- Understand about the robots, its various components.
- Design Robots for industrial applications.
- Do programming for robots and apply them in real time applications.

GECX105 TRANSPORT MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the transport fleet and their related activities for minimizing operational cost.
- To understand the need of maintenance and its importance.
- To understand the functions and applications of various types of transport system.

MODULE I INTRODUCTION 7

Personnel management; objectives and functions of personnel management, psychology, sociology and their relevance to organization, personality problems. Selection process: job description, employment tests, interviewing, introduction to training objectives, advantages, methods of training, training procedure, psychological tests.

MODULE II ORGANISATION AND MANAGEMENT 7

Forms of Ownership – principle of Transport Management – Staff administration – Recruitment and Training – welfare – health and safety. Basic principles of supervising. Organizing time and people. Driver and mechanic hiring - Driver checklist - Lists for driver and mechanic - Trip leasing - Vehicle operation and types of operations.

MODULE III TRANSPORT SYSTEMS 9

Introduction to various transport systems. Advantages of motor transport. Principal function of administrative, traffic, secretarial and engineering divisions. chain of responsibility, forms of ownership by state, municipality, public body and private undertakings.

MODULE IV SCHEDULING AND FARE STRUCTURE 8

Principal features of operating costs for transport vehicles with examples of estimating the costs. Fare structure and method of drawing up of a fare table. Various types of fare collecting methods. Basic factors of bus scheduling. Problems on bus scheduling.

MODULE V MOTOR VEHICLE ACT 7

Traffic signs, fitness certificate, registration requirements, permit insurance, constructional regulations, description of vehicle-tankers, tippers, delivery vans, recovery vans, Power wagons and fire fighting vehicles. Spread over, running time, test for competence to drive.

MODULE VI MAINTENANCE 7

Preventive maintenance system in transport industry, tyre maintenance procedures. Causes for uneven tyre wear; remedies, maintenance procedure for better fuel economy, Design of bus depot layout.

L – 45; Total Hours –45

TEXT BOOKS:

1. John Duke, "Fleet Management", McGraw-Hill Co, USA, 1984.
2. Kitchin.L.D., "Bus Operation", III edition, Illiffee and Sons Co., London, 1992

REFERENCES:

1. Government Motor Vehicle Act, Publication on latest act to be used as on date.

OUTCOMES:

Upon completion of the course, students will

- Know about different aspects related to transport system and management.
- Features of scheduling, fixing the fares
- Know about the motor vehicle act and maintenance aspects of transport.

GECX106 CONTROL SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the system modeling and to derive their transfer function.
- To provide adequate knowledge of time response of systems and steady state error analysis.
- To accord basic knowledge in obtaining the open loop and closed–loop frequency responses of Control systems.

MODULE I BASIC CONCEPTS AND SYSTEM REPRESENTATION **8**

Control System - Basic elements in control systems – Open and closed loop systems – Electrical analogy of mechanical and thermal systems – Transfer function – Block diagram reduction techniques – Signal flow graphs.

MODULE II TIME RESPONSE ANALYSIS AND DESIGN **8**

Time response – Time domain specifications – Types of test input – First and Second order system - Type I and Type II System – Response - Error coefficients – Generalized error series – Steady state error – P, PI, PID modes of feedback control.

MODULE III FREQUENCY RESPONSE ANALYSIS AND DESIGN **7**

Performance specifications - correlation to time domain specifications - bode plots and polar plots – gain and phase margin – constant M and N circles and Nichols chart – all pass and non-minimum phase systems.

MODULE IV STABILITY **8**

Characteristics equation – Location of roots in s plane for stability – Routh Hurwitz criterion – Root locus construction – Effect of pole, zero addition – Gain margin and phase margin – Nyquist stability criterion.

MODULE V COMPENSATOR DESIGN **8**

Performance criteria – Lag, lead and lag-lead networks – Compensator design using bode plots and root locus technique.

MODULE VI CONTROL SYSTEM COMPONENTS AND APPLICATION OF CONTROL SYSTEMS **6**

Synchros – AC servomotors - DC Servo motors - Stepper motors - AC

Tacho generator - DC Tacho generator - Typical applications of control system in industry.

L – 45; Total Hours –45

REFERENCES:

1. K. Ogata, “Modern Control Engineering”, 4th Edition, Pearson Education, New Delhi, 2003.
2. I.J. Nagrath & M. Gopal, “Control Systems Engineering”, New Age International Publishers, 2003.
3. C.J.Chesmond, “Basic Control System Technology”, Viva student edition, 1998.
4. I.J.Nagarath and M.Gopal, “Control System Engineering”, Wiley Eastern Ltd., Reprint, 1995.
5. R.C.Dorf and R.H.Bishop, “Modern Control Systems”, Addison-Wesley (MATLAB Reference), 1995.

OUTCOMES:

At the end of the course, the student is expected to possess knowledge and achieve skills on the following:

- Proper understanding of basics of Control Systems.
- Ability and skill to carry-out time domain and frequency domain analysis.
- Capable of determining stability of the system using Routh Hurwitz criterion, Root locus and Nyquist criterion.
- Ability to design lag, lead and lag lead compensator networks.

GECX107 INTRODUCTION TO VLSI DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- Basic concepts of HDL.
- Verilog language and its syntax constructs.
- Programmable Logic Devices and FPGAs
- MOS devices theory
- CMOS based combinational and sequential circuits

PREREQUISITES:

Fundamentals of Electronics

Basics knowledge in Digital Electronics.

MODULE I REVIEW OF BASIC DIGITAL SYSTEMS 7

Boolean algebra, Building blocks of combinational logic design-Adders, multiplexer, encoder, decoder, comparator, Latches & flip-flops, counters, shift registers.

MODULE II LOGIC DESIGN USING VERILOG HDL 8

Overview of Digital Design with Verilog HDL, Levels of Design Description, Concurrency, Hierarchical Modeling Concepts, Modules and Ports, Component instantiation Data flow and RTL, structural, gate level, switch level modeling and Behavioral Modeling.

MODULE III LANGUAGE CONSTRUCTS OF VERILOG HDL 7

Identifiers- gate primitives, gate delays, operators, timing controls, procedural assignments, conditional statements Variable types, arrays and tables, Tasks and functions, Test bench.

MODULE IV BUILDING BLOCKS OF DIGITAL VLSI SYSTEMS 8

HDL Design -Data Path Operations-Addition/Subtraction, Parity Generators, Comparators, Zero/One Detectors, Binary Counters, ALUs, Multiplication, Shifters, Memory Elements. Programmable logic elements and AND-OR arrays, FPGAs programming methods.

MODULE V TRANSISTOR THEORY 7

Introduction to MOS Transistors-NMOS & PMOS Characteristics, Current Equations, Complementary CMOS Inverter-DC Characteristics, Static Load MOS Inverters.

MODULE VI BASICS OF DIGITAL CMOS DESIGN 8

NMOS & PMOS Logic Gate, CMOS Logic Gate, Basic layout design of simple gate-stick diagram, CMOS Logic Structures-full adder, multiplexers.

Total Hours –45

TEXT BOOKS:

1. M.Morris Mano "Digital Design", 3rd Edition, Prentice Hall of India Pvt. Ltd New Delhi, 2003

REFERENCES:

1. Michael D. Ciletti“Advanced Digital Design with the Verilog HDL" (2nd Edition) Hardcover – January 31, 2010
2. J.Bhasker: Verilog HDL primer, BS publication, 2001.
3. J. P. Uyemura, "Introduction to VLSI Circuits and System", Wiley, 2002
4. Neil Weste and K. Eshragian, “Principles of CMOS VLSI Design: A System Perspective,” 2nd edition, Pearson Education (Asia) Pvt.Ltd., 2000
5. Douglas A Pucknell& Kamran Eshragian , “Basic VLSI Design” PHI 3rd Edition (original edition – 1994)

OUTCOMES:

At the end of the course the students will be able to

- Create basic Register Transfer Level (RTL) models for combinational circuits & Sequential circuits using Verilog HDL.
- Create basic behavioral models for combinational circuits & Sequential circuits using Verilog HDL.
- Describe the usage of Programmable Logic Devices and FPGAs.
- Describe MOS devices theory and inverter circuit DC characteristics
- Design the basic digital building blocks using MOS circuit.
- Apply VLSI design concepts based on the requirements to conduct experiments or projects

GECX108 PLANT ENGINEERING

L	T	P	C
3	0	0	4

OBJECTIVES:

- To provide in depth knowledge on Plant Engineering
- To introduce detail engineering and P&ID
- To learn about the support to Instrumentation from other disciplines
- To study about the Installation and commissioning

MODULE I INTRODUCTION OF PLANTS 7

General Project Cycle – Feed – Sales - Plant Description, Component / Areas of Plant, Plant Layout, Plant Interfaces, Plant Location

MODULE II ELEMENTS OF PLANT 8

Main Elements of a Plant, Process Flow Scheme (PFD – Process Flow Diagram) P&ID's, Plant Legend Finalization.

MODULE III DETAIL ENGINEERING 10

P& ID Development with PFD's, Major Discipline Involvement & Inter discipline Interaction, Major Instrumentation & Control Systems - Development Phase – Instrument List , I/O Count, Specification Sheets, Instrument Installation (Hook ups) , Control Philosophy – Detail Engineering.

MODULE IV SUPPORT FROM OTHER DISCIPLINE 8

Other Discipline Supports to Instrumentation – Plot Plan, Piping / Equipment Plan, Electrical Area Classification, Fire Hazardous Classification Telecommunication Systems - Control Network architecture.

MODULE V INSTALLATION AND COMMISSIONING 7

Plant Construction - Key Drawings for Construction Support Construction Activities, System Testing, Startup / Commissioning, Production.

MODULE VI CASE STUDIES 5

Case studies of Water Treatment Plant - Paper Industry – Power Plant etc

L – 45; Total Hours –45

REFERENCES:

1. Duncan C Richardson, Plant Equipment and Maintenance Engineering Handbook, McGraw-Hill Education: New York, Chicago, San Francisco, Athens, London, Madrid, Mexico City, Milan, New Delhi, Singapore, Sydney, Toronto, 2014 McGraw-Hill Education
2. Gabriel Salvendy, Handbook of Industrial Engineering – Technology and operations Management, John Wiley & Sons, 2001.
3. Robert C Rosaler , Standard Handbook of Plant Engineering, Mc Graw Hill third Edition, 2004
4. R. Keith Mobley, Plant Engineer's Handbook, Technology and Engineering, 2001.

OUTCOMES:

At the end of the course, the student will be able to

- Review and correct P&IDs
- Do installation and commissioning of new plants
- Apply plant engineering in design and maintenance of water treatment plant / power plant etc

GECX109	NETWORK SECURITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

The students should be able to

- Discuss the basic concepts of computer security, model and attacks
- Examine the major types of threats and the associated attacks
- Identify the encryption techniques in real time applications
- Understand the special requirements for wireless security and how authentication is implemented in wireless systems
- Understand the functions of Network Security Device Firewall and its types
- Interpret the various network intrusion such as computer viruses, network worms etc

MODULE I INTRODUCTION 6

Computer Security Concepts - The OSI Security Architecture - Security Attacks - Security Services - Security Mechanisms - A Model for Network Security - Standards – classical encryption techniques.

MODULE II SYMMETRIC ENCRYPTION AND MESSAGE CONFIDENTIALITY 7

Symmetric Encryption Principles - Symmetric Block Encryption Algorithms - Random and Pseudorandom Numbers - Stream Ciphers and RC4 - Cipher Block Modes of Operation

MODULE III PUBLIC KEY CRYPTOGRAPHY AND MESSAGE AUTHENTICATION 8

Approaches to Message Authentication - Secure Hash Functions - Message Authentication Codes - Public-Key Cryptography Principles - Public-Key Cryptography Algorithms - Digital Signatures

MODULE IV KEY DISTRIBUTION ,USER AUTHENTICATION AND TRANSPORT-LEVEL SECURITY 8

Symmetric Key Distribution Using Symmetric Encryption - Kerberos - Key Distribution Using Asymmetric Encryption - X.509 Certificates - Public-Key Infrastructure -Federated Identity Management - Web Security Considerations -

Secure Socket Layer and Transport Layer Security - Transport Layer Security

MODULE V WIRELESS NETWORK SECURITY, ELECTRONIC MAIL SECURITY AND IP SECURITY **8**

IEEE 802.11 Wireless LAN Overview -IEEE 802.11i Wireless LAN Security - Wireless Application Protocol Overview - Wireless Transport Layer Security - WAP End-to-End Security - Pretty Good Privacy - S/MIME – Domain Keys Identified Mail- IP Security Overview -IP Security Policy - Encapsulating Security Payload - Combining Security Associations - Internet Key Exchange - Cryptographic Suites

MODULE VI SYSTEM SECURITY **8**

Intruders -Intrusion Detection -Password Management - Types of Malicious Software - Viruses Virus Countermeasures – Worms - Distributed Denial of Service Attacks- The Need for Firewalls - Firewall Characteristics - Types of Firewalls - Firewall Basing - Firewall Location and Configurations

L – 45; Total Hours –45

5. Nitesh Dhanjani, Justin Clarke, "Network Security Tools", O'Reilly Media, ISBN-13: 9780596007942, 2005.

OUTCOMES:

Students who complete this course will be able to

- Recognize the computer security concepts, architecture attacks and model
- Distinguish the symmetric and asymmetric encryption techniques
- Apply the cryptographic algorithms in different applications
- Express the network security designs using available secure solutions

such as PGP,SSL, IPSec, etc.

- Describe the firewalls principles and different types of firewalls applied in organization
- Identify abnormalities within the network caused by worms, viruses and Network related security treats**.**

GECX110	KNOWLEDGE MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course

- Focuses on positioning knowledge as a valuable commodity, embedded in products and in the tacit knowledge of highly mobile individual employees.
- Presents KM as a deliberate and systematic approach to cultivating and sharing an organization's knowledge base.
- Brings out the paradigm in terms of information technology and intellectual capital.

MODULE I KNOWLEDGE MANAGEMENT 6

KM Myths – KM Life Cycle – Understanding Knowledge – Knowledge, intelligence – Experience – Common Sense – Cognition and KM – Types of Knowledge – History of Knowledge Management - From Physical assets to Knowledge Assets – Expert knowledge – Human Thinking and Learning.

MODULE II KNOWLEDGE MANAGEMENT SYSTEMS AND MODELS 9

Challenges in Building KM Systems – Conventional Vs KM System Life Cycle (KMSLS) – Knowledge Creation and Knowledge Architecture – KM cycle - Different variants of KM cycle - KM models - Implications and practical implementations.

MODULE III CAPTURING KNOWLEDGE AND SHARING 9

Tacit knowledge capture - Explicit knowledge codification – Knowledge taxonomies - Knowledge sharing - Communities - Obstacles to knowledge capture and sharing.

MODULE IV KNOWLEDGE MANAGEMENT TOOLS 9

KM System tools – Neural Network – Association Rules – Classification Trees – Data Mining and Business Intelligence – Knowledge capture and creation tools - Content creation tools - Data mining and knowledge discovery – Content management tools - Knowledge sharing and dissemination tools – Group ware

and Collaboration tools - Intelligent filtering tools.

MODULE V KNOWLEDGE APPLICATION 6

KM at individual level - Knowledge workers - Task analysis and modeling - Knowledge application at group and organizational levels – Knowledge repositories - Knowledge reuse -Case study: e-learning.

MODULE VI VALUE OF KNOWLEDGE MANAGEMENT 6

KM return on investment and metrics - Benchmarking method – Balanced scorecard method - House of quality method - Results based assessment method - Measuring success - Future challenges for KM.

L – 45; Total Hours –45

TEXT BOOKS:

1. Elias M. Awad, Hassan M. Ghaziri, “Knowledge Management”, Prentice Hall, 2nd Edition, 2010.
2. Jay Liebowitz, “Handbooks on Knowledge Management”, 2nd Edition, 2012.
3. Irma Becerra-Fernandez, Rajiv Sabherwal, ”Knowledge Management: Systems and Processes”, 2010.

OUTCOMES:

Students who complete this course will be able to

- Describe the fundamental concepts in the study of knowledge and its creation, acquisition, representation, dissemination, use and re-use, and management.
- Explains the core concepts, methods, techniques, and tools for computer support of knowledge management.
- Critically evaluate current trends in knowledge management and apply it for e-learning

GECX111 CYBER SECURITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the basics of Cyber Security Standards and Policies.
- To know the legal, ethical and professional issues in Cyber security.
- To understand Cyber Frauds and Abuse and its Security Measures.
- To know the technological aspects of Cyber Security.

MODULE I FUNDAMENTALS OF CYBER SECURITY 7

Security problem in computing – Cryptography Basics – History of Encryption – Modern Methods – Legitimate versus Fraudulent Encryption methods – Encryption used in Internet.

MODULE II CYBERCRIME AND CYBEROFFENSES 8

Cybercrime and Information Security – Cybercriminals – Classifications of Cybercrimes – Email Spoofing – Spamming – Cyber defamation – Internet Time Theft – Forgery – Web jacking – Hacking – Online Frauds – Software Piracy – Mail Bombs – Password Sniffing – Cyberoffenses – Categories – Planning the attacks – Cyberstalking – Cybercafe and Cybercrimes – Botnets.

MODULE III CYBERCRIME: MOBILE AND WIRELESS DEVICES 8

Proliferation of Mobile and Wireless Devices – Trends in Mobility – Credit card frauds in Mobile and Wireless Computing – Security Challenges – Authentication Service Security – Attacks on Mobile Phones.

MODULE IV TOOLS AND METHODS USED IN CYBERCRIME 8

Proxy Servers and Anonymizers – Phishing – Password Cracking – Keyloggers and Spywares – Virus and Worms – Trojan Horses and Backdoors – Steganography – DoS and DDoS Attacks.

MODULE V SECURITY POLICIES 7

Introduction - Defining User Policies – Passwords – Internet Use – Email Usage – Installing/ Uninstalling Software – Instant Messaging – Defining System Administrative Policies – Defining Access Control Developmental Policies Standards, Guidelines and Procedures – Basics of assessing a system

MODULE VI COMPUTER FORENSICS 7

General Guidelines – Finding Evidence on the PC - Finding Evidence in System Logs – Windows Logs – Linux Logs – Getting Back Deleted Files – Operating System Utilities – The Windows Registry.

L – 45; Total Hours –45

TEXT BOOKS:

1. Nina Godbole, Sunit Belapure, “Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives”, Wiley, 2011.

2. Chuck Easttom, “Computer Security Fundamentals”, 2nd Edition, Pearson Education, 2012.

REFERENCES:

1. Charles B. Pfleeger, Shari Lawrence Pfleeger, “Security in Computing”, 3rd Edition, Pearson Education, 2003.
2. William Stallings, “Cryptography and Network Security – Principles and Practices”, 3rd Edition, Pearson Education, 2003.
3. Atul Kahate, “Cryptography and Network Security”, Tata McGraw Hill, 2000.

OUTCOMES:

Upon completion of this course, students will be able to

- Explain the general security issues.
- Discuss various cybercrimes and offenses.
- Outline the occurrence of Cybercrime in mobile and wireless environment.
- Use relevant tools and methods in cybercrime
- Apply security policies in cyber forensics.
- Outline the strategies adopted in computer forensics.

GECX112 GENETIC ENGINEERING L T P C
4 0 0 4

OBJECTIVES:

The course aims to provide an advanced understanding of the core principles and topics of Cell and Organism reproduction and the Principles of heredity and their experimental basis, and to enable students to be able to apply these principles in assessment of pedigrees to identify genotypes and predict the mating outcomes.

MODULE I GENETICS AND ORGANISM 10

Genetics and human affairs, Genetics and Biology, Genes and Environment, Techniques of genetic analysis, The chromosome theory of heredity, Sex chromosomes, Sex linkage, The parallel behaviour of autosomal genes and chromosomes.

MODULE II MENDELISM AND LINKAGE 12

Mendel's laws of inheritance, Interaction of genes, Variations on dominance, Multiple alleles, Lethal alleles, Several genes affecting the same character, Penetrance and expressivity, Linkage- Basic eukaryotic chromosome mapping, The discovery of linkage, Recombination linkage symbolism, Linkage of genes on X chromosomes, Linkage maps, Examples of linkage maps.

MODULE III FINE STRUCTURE OF GENES 10

The concept of promoter, Coding sequence, Terminator, Induction of gene for expression. The concept of extranuclear genome in higher plants and animals, Overview of mitochondrial genome, Chloroplast genome.

MODULE IV RECOMBINATION IN BACTERIA AND VIRUSES 10

Conjugation recombination and mapping the E.coli chromosomes, Transformation, Transduction, Chromosome mapping. Population genetics: Darwin's revolution, Variation and its modulation, The effect of sexual reproduction on variation, The sources of variation, Selection quantitative genetics

MODULE V PRINCIPLES OF PLANT BREEDING 9

Objectives, Selfing and crossing techniques, Male sterility,Incompatability, Hybrid vigour.

MODULE VI HUMAN GENOME PROJECT **9**

Genetic diseases in humans, Genetics and society

L – 45; T – 15; Total Hours –60

REFERENCES:

1. In Introduction to genetic analysis, Griffiths, Miller, Suzuki, Lewontin and Gelbart, Freeman and Company.
2. Genetics, A.V.S.S. Sambamurty, Narosa Publishing House.
3. Concepts of Genetics, Klug & Cummings, Prientice Hall.
4. Molecular Cloning, Moniatisetal, Cold Spring Harbor Laboratory.

OUTCOMES:

At the end of the course students will be able to

- Describe the structure, function and replication of DNA as the genetic material
- Describe gene structure, expression and regulation
- Describe the chromosomal basis of inheritance and how alterations in chromosome number or structure may arise during mitosis and meiosis

GECX113	FUNDAMENTALS OF PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3

OBJECTIVES:

The students would gain knowledge on

- Technicalities attached to Project Management and Significance of Quality Consideration
- Project management methodologies – tools and techniques, supplemented with examples from case studies
- The importance of Efficient HR team and role of Communication in executing Projects.
- Managing Risks in Project Management

MODULE I INTRODUCTION TO PROJECT MANAGEMENT 9

Introduction to Project and Project Management-Project Management as a Career-Project Management Skill Sets-Project Scope Management: Project Charter, Scope Creep, Scope Validation, Scope Change Control-Type of Organization: Organization Structure-Influence of Organization Structure on Project, Project Stakeholders and Organizational Productivity.

MODULE II PROJECT MANAGEMENT PROCESS, TOOLS AND TECHNIQUES 8

Project life cycle-Initiation, Planning, Execution, Monitoring and Closing Phase; - Link between project management process, process groups and knowledge areas; Project management tools and techniques- Project Stakeholders description and mapping - Stakeholder Management Process

MODULE III PROJECT QUALITY, COST AND SCHEDULE MANAGEMENT 10

Triple constraints of project-quality, cost and schedule-Quality Planning, Quality Assurance and Quality Control, Process Control, Cost of Quality, Seven Tools of Quality Control- Cost Management: Cost Estimating Methods, Estimating Completion Cost, Earned Value Management, Budgeting, Life-Cycle Cost analysis- Project Time Management: Duration Estimation Method, FS/FF/SS/ SF Relations, Lead/Lag, Arrow Diagram Method and Precedence Diagram Method for Scheduling-Resource Allocation

MODULE IV PROJECT HR MANAGEMENT 5

Organizational Goals- (MBO/MBE/MBP)-Responsibility Assignment Matrix (RAM)-Types of Powers- Manage or Lead-Conflict management Techniques-Performance Evaluation Process-Motivation Theories and its Application for execution of Projects-Leadership Styles-Project Team Building-Project Staffing Constraints/Policies

MODULE V COMMUNICATION MANAGEMENT 5

Communication Management: Understanding Body languages of Project Personnel-Effective Communications- Interpersonal Skills for project Managers-PMIS-Communicating with the Customer-Communicating with Management- Formal vs. Informal Communications-Written, Verbal and Non-Verbal Communications.

MODULE VI PROJECT PROCUREMENT & RISK MANAGEMENT 8

Introduction to Project Procure Management: Soliciting RFQ/RFP-Contract Proposals-Contract Negotiation-Contract Closure-Risk Management: Defining risks-Risk management process-Risk identification-Qualitative and Quantitative Risk-Probability and Decision trees-Risk Response strategies / methods-Expected monetary value-Risk vs. life cycle phases

L – 45; Total Hours –45

REFERENCES:

1. Jack. R. Meredith, Samuel. J. Mantel & Scott. M. Shafer, Project Management in Practice, Fifth Edition, Bangalore: Wiley, 2015
2. Bob Hughes, Mike Cotterrel “Software Project Management”, Tata McGraw-Hill, 2009

OUTCOMES:

- Learners will be able to identify the Key Knowledge Areas and apply PM process in hypothetical project assignments given as continuous assessment.
- They would be able to suitably recognize tools and techniques required for various phases included in a project.
- They would also be able to manage scope, time, cost and other major components that would help them to execute the project efficiently.

GECX114 OPERATIONS RESEARCH **L T P C**
3 0 0 3

OBJECTIVES:

- To acquire knowledge and training in optimization techniques.
- To get knowledge about optimization in utilization of resources.
- To understand and apply operations research techniques to industrial operations

MODULE I LINEAR PROGRAMMING PROBLEM 8

Linear programming – formulation of the problem - graphical interpretation of optimality - Simplex method – to obtain basic feasible solution – types of linear programming solution – complications and their resolution.

MODULE II ARTIFICIAL VARIABLE AND TWO PHASE METHOD, DUALITY 6

Artificial variable - Big M method – Two phase method – alternative optimal solution – unbounded solution - Duality – primal dual relationships - rules of constructing the dual from primal.

MODULE III TRANSPORTATION PROBLEM & ASSIGNMENT PROBLE 8

Transportation problems – Initial basic feasible solutions, MODI method, Unbalance in transportation, Degeneracy in transportation models, Assignment problem – Minimization and Maximization type of problems by Hungarian method.

MODULE IV NETWORK AND SEQUENCING PROBLEMS 8

PERT and CPM – Network diagram – Fulkerson's rule - CPM Probability of achieving completion date – Crash time – Cost analysis. Sequencing N jobs through 2 machines and 3 machines.

MODULE V QUEUING THEORY & SIMULATION 7

Poisson arrivals and exponential service times – characteristics of Queuing models – single channel – Introduction to multi channel models – Random number generation – Monte Carlo Simulation.

MODULE VI INVENTORY CONTROL, REPLACEMENT MODELS AND GAME THEORY 8

Types of inventory- Inventory cost - EOQ - Deterministic inventory problems –

Introduction to probabilistic models & system level inventory control - Replacement models – Replacement of items that deteriorate with time – value of money changing with time – not changing with time – Individual and group replacement policy - Game theory – simple games.

L – 45; Total Hours –45

TEXT BOOKS:

1. Hamdy ATaha, “Operations Research an introduction”, 8th edition, Phil Pearson, 2007.
2. Winston.W.L., “Operations Research”, 4th edition, Thompson-Brooks/Cole, 2003.

REFERENCES:

1. Wayne.L. Winston, “Operations Research applications and algorithms”, 4th edition, Thomson learning, 2007.
2. Frederick. S. Hiller and Gerald.J.Lieberman, “Operations Research concepts and cases”, 8th edition (SIE), Tata McGraw – Hill Pub. Co. Ltd., New Delhi, 2006.
3. A. Ravindran, D. T. Phillips and J. J. Solberg, "Operations Research:Principles and Practice", 2nd edition, John Wiley & Sons, New York, 1992.
4. Robertazzi. T.G., “Computer networks and systems-Queuing theory and performance evaluation”, 3rd edition, Springer, 2002.

OUTCOMES:

At the end of the course students will be able to

- solve linear programming problems
- solve transportation and assignment problems.
- solve network and sequencing problems.
- apply the operations research techniques to solve industrial problems.

GECX115	NANO TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the basic concepts of Nanoscience relevant to the field of engineering.
- To provide an exposure about the importance of various synthesis method.
- To enrich the knowledge of students in various characterisation techniques.

MODULE I INTRODUCTION & CLASSIFICATION OF NANOMATERIALS 9

Definition - Origin of nanotechnology - Difference between bulk and nanomaterials- Top-down and bottom-up processes - Size dependent properties (magnetic, electronic,transport and optical), Classification based on dimensional property - 0D, 1D, 2D and 3D nanostructures – Kubo gap.

MODULE II TYPES OF NANOMATERIALS 9

Metal oxides and metal nano particles - Ceramic nano particles - Semi conducting quantum dots - Core-shell quantum dots - Nanocomposites - Micellar nanoparticles.

MODULE III PRODUCTION OF NANOPARTICLES 7

Sol-gel, hydrothermal, solvothermal, Plasma Arcing, Electro deposition, RF sputtering, Pulsed laser deposition, Chemical vapour, deposition.

MODULE IV CARBON BASED NANOMATERIALS 6

Carbon nanotubes: Single wall nanotubes (SWNT), Multiwall nanotubes (MWNT) - structures-carbon nanofibre, Fullerenes-Application of carbon nanotubes and Fullerenes.

MODULE V NANOPHOTONICS 7

Light and nanotechnology, Interaction of light and nanotechnology, Nanoholes and photons, nanoparticles and nanostructures; Nanostructured polymers, Photonic Crystals, Solar cells.

MODULE VI CHARACTERISATION TECHNIQUES 7

Basic principles of scanning Electron Microscopy (SEM), Atomic force microscopy (AFM), Scanning tunneling microscopy (STM), Scanning probe

microscopy (SPM) and Transmission electron microscopy (TEM), Particle size analyzer, Luminescence techniques.

L – 45; Total Hours –45

TEXT BOOKS:

1. Hari Singh Nalwa, “Handbook of Nanostructured Materials and Nanotechnology”, Academic Press, 2000.
2. Guozhong Cao, “Nanostructures and Nano materials-Synthesis, Properties and Applications”, Imperial College Press (2011).
3. Zhong Lin Wang, “Handbook of Nanophase and Nanomaterials (Vol 1 and II)”, Springer, 2002.
4. Mick Wilson, Kamali Kannangara, Geoff smith, “Nanotechnology: Basic Science and Emerging Technologies”, Overseas press, 2005.

REFERENCES:

1. A. Nabok, “Organic and Inorganic Nanostructures”, Artech House, 2005.
2. C.Dupas, P.Houdy, M.Lahmani, Nanoscience: “Nanotechnologies and Nanophysics”, Springer-Verlag Berlin Heidelberg, 2007.
3. Mick Wilson, Kamali Kannangara, Michells Simmons and Burkhard Raguse, “Nano Technology – Basic Science and Emerging Technologies”, 1st Edition, Overseas Press, New Delhi,2005.
4. M.S. Ramachandra Rao, Shubra SinghH, “Nanoscience and Nanotechnology: Fundamentals to Frontiers”, Wiley, 2013.

OUTCOMES:

At the end of this course, the students will be able to:

- Apply the knowledge of different types of nanomaterials for various engineering applications.
- Acquire the knowledge of various methods of production of nanomaterials.
- Familiarize with various characterization techniques.

GECX116	VEHICLE MAINTENANCE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To know about the various methods of maintaining procedure, vehicle insurance and basic problems in a vehicle.
- The student able to impart knowledge in maintaining of engine components and subsystems.
- The student able to impart knowledge in maintaining of transmission, driveline, steering, suspension, braking and wheels.
- The student able to impart **carefully maintaining their vehicle and can increase driving safety.**

MODULE I MAINTENANCE, WORKSHOP PRACTICES, SAFETY AND TOOLS **7**

Maintenance – Need, importance, primary and secondary functions, policies - classification of maintenance work - vehicle insurance - basic problem diagnosis. Automotive service procedures – workshop operations – workshop manual - vehicle identification. Safety – Personnel, machines and equipment, vehicles, fire safety - First aid. Basic tools – special service tools – measuring instruments – condition checking of seals, gaskets and sealants. Scheduled maintenance services – service intervals - Towing and recovering.

MODULE II ENGINE AND ENGINE SUBSYSTEM MAINTENANCE **8**

General Engine service- Dismantling of Engine components- Engine repair- working on the underside, front, top, ancillaries- Service of basic engine parts, cooling and lubricating system, fuel system, Intake and Exhaust system, electrical system - Electronic fuel injection and engine management service - fault diagnosis- servicing emission controls.

MODULE III TRANSMISSION AND DRIVELINE MAINTENANCE **8**

Clutch- general checks, adjustment and service- Dismantling, identifying, checking and reassembling transmission, transaxle- road testing- Removing and replacing propeller shaft, servicing of cross and yoke joint and constant velocity joints- Rear axle service points- removing axle shaft and bearings- servicing differential assemblies- fault diagnosis.

MODULE IV STEERING AND SUSPENSION MAINTENANCE 7

Maintenance and Service of Mc person strut, coil spring, leaf spring, shock absorbers. Dismantling and assembly procedures. Inspection, Maintenance and Service of steering linkage, steering column, Rack and pinion steering, Recirculating ball steering service- Worm type steering, and power steering system.

MODULE V BRAKE AND WHEEL MAINTENANCE 7

Inspection, Maintenance and Service of Hydraulic brake, Drum brake, Disc brake, parking brake. Bleeding of brakes. Wheel alignment and balance, removing and fitting of tyres, tyre wear and tyre rotation.

MODULE VI AUTO ELECTRICAL AND AIR CONDITIOING MAINTENANCE 8

Maintenance of batteries, starting system, charging system and body electrical -Fault diagnosis using Scan tools. Maintenance of air conditioning parts like compressor, condenser, expansion valve, evaporator - Replacement of hoses- Leak detection- AC Charging- Fault diagnosis Vehicle body repair like panel beating, tinkering, soldering, polishing, painting.

L – 45; Total Hours –45

TEXT BOOKS:

1. Ed May, "Automotive Mechanics Volume One" , Mc Graw Hill Publications, 2003
2. Ed May, "Automotive Mechanics Volume Two" , Mc Graw Hill Publications, 2003
3. Vehicle Service Manuals of reputed manufacturers
4. Vehicle maintenance and garage practice by Jigar A.Doshi Dhru U.Panchal,Jayesh P.Maniar. 2014
5. A Practical Approach to Motor Vehicle Engineering and Maintenance 3rd Edition by Allan Bonnick.

REFERENCES:

1. Bosch Automotive Handbook, Sixth Edition, 2004.
2. Advanced Automotive Fault Diagnosis by Tom Denton 2011.
3. Nissan Patrol Automotive Repair Manual: 1998-2014 by Haynes Manuals Inc.
4. Automobile electrical manual a comprehensive guide by Haynes manual car repair.

OUTCOMES:

On completion of the course student should be able to

- Prepare maintenance schedules and procedures with appropriate tools.
- Demonstrate the procedure and methods to repair and calibrate the engine.
- **Analyze the causes and remedies for fault in transmission and drive line systems.**
- **Analyze the causes and remedies of steering and suspension systems.**
- **Analyze the causes and remedies of brake system.**
- **Demonstrate the procedure for wheel alignment and wheel balanced.**

GECX117	FUNDAMENTALS OF DIGITAL IMAGE PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Describe and explain basic principles of digital image processing
- Design and implement algorithms that perform basic image processing
- Design and implement algorithms for advanced image analysis
- Assess the performance of image processing algorithms and systems

PRE-REQUISITES:

- Basic knowledge of transforms in Mathematics

MODULE I DIGITAL IMAGE FUNDAMENTALS 8

Elements of Image Processing System, Fundamentals steps in Digital Image Processing, Image Sampling & Quantization, Spatial and Gray Level Resolution.

MODULE II COLOR IMAGE PROCESSING 8

Fundamental of color image processing, color models- RGB, CMY, HIS, Pseudo color image processing

MODULE III IMAGE ENHANCEMENT 7

Basic gray level Transformations, Histogram Processing, Spatial Filtering

MODULE IV IMAGE TRANSFORMS 7

2D-DFT, DCT, Haar Transform, Fundamentals of 2D-wavelet transform, sub-band coding

MODULE V IMAGE SEGMENTATION AND RESTORATION 8

Point, line and edge detection methods ,Image Segmentation and its types, Restoration: Noise model, Inverse filter and Wiener filter.

MODULE VI IMAGE COMPRESSION 7

Fundamentals of redundancies, Basic Compression Methods: Huffman coding, Arithmetic coding, JPEG and MPEG Compression standards.

TOTAL HOURS 45

TEXT BOOKS

1. Gonzalez and Woods, "Digital Image Processing", 3rd Edition, Pearson Education, 2016.
2. Anil. K. Jain, "Fundamentals of Digital Image Processing"; 4th Edition, PHI, 2007

REFERENCES

1. Pratt William, "Digital Image Processing", John Wiley & Sons, 2007.
2. Arthur Weeks Jr., "Fundamentals of Digital Image Processing", PHI, 2006.

OUTCOMES:

On completion of the course, students will be able to

- Explain the fundamental concepts of digital image processing.
- Discuss about color image processing
- Recognize & apply various image enhancement techniques.
- Apply various transforms for image processing.
- Apply various techniques for image segmentation and restoration.
- Identify and use appropriate image compression techniques

Group II courses

(To be offered in VII Semester)

GECX201	GREEN DESIGN AND SUSTAINABILITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To impart knowledge to face challenges, the technology poses for water, energy, and climate change by implementing sustainable design.

MODULE I CONCEPTS OF SUSTAINABLE DEVELOPMENT 7

Objectives of Sustainable Development - Need for sustainable development-Environment and development linkages - Globalisation and environment-Population, poverty and pollution- global, regional and local environment issues-Green house gases and climate change.

MODULE II SUSTAINABLE DEVELOPMENT OF SOCIO ECONOMIC SYSTEMS 8

Demographic dynamics of sustainability- Policies for socio economic development- Sustainable Development through trade- Economic growth- Action Plan for implementing sustainable development- Sustainable Energy and Agriculture.

MODULE III FRAME WORK FOR ACHIEVING SUSTAINBAILITY 7

Sustainability indicators- Hurdles to sustainability- Business and Industry – Science and Technology for Sustainable Development- Performance indicators of sustainability and assessment mechanism- Constraints and barriers of Sustainable Development.

MODULE IV GREEN BUILDINGS 8

Introduction to Green Building- Energy- Water- Materials and Resources - Sustainable Sites and Land Use - Indoor Environmental Quality- Life Cycle Assessment- Energy, water and materials efficiency.

MODULE V ENERGY CONSERVATION AND EFFICIENCY 7

Energy savings- Energy Audit- Requirements- Benefits of Energy conservation-Energy conservation measures for buildings- Energy wastage- impact to the environment.

MODULE VI GREEN BUILDINGS DESIGN 8

Elements of Green Buildings Design- Foundation, Electrical, Plumbing, flooring, Decking, roofing, insulation, wall coverings, windows, siding, doors and finishing, LEED certification for Green Buildings, Green Buildings for sustainability.

L – 45; Total Hours –45

TEXT BOOKS:

REFERENCES:

1. Charles Kibert, J., “Sustainable Construction: Green Building Design and Delivery”, 2nd Edition, John Wiley and sons, 2007.

OUTCOMES:

At the end of the course, the students will be able to

- Explain the relationship between sustainability and emergence of green building practices.
- Address the economic, environmental, and social concerns.

GECX202 APPROPRIATE TECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To impart students knowledge about the basics and applications of various appropriate technologies in the field of civil engineering.

MODULE I BASICS CONCEPTS **7**

Back ground, Tools, Choices and Implications, Appropriate Technology Movement (an overview) - Basic design process, basic financial analysis-discounted cash flow, and energy fundamentals.

MODULE II APPROPRIATE TECHNOLOGY WITH REFERENCE TO BUILDING DESIGN **7**

Appropriate Building Materials, Appropriate Energy Saving Techniques, Water Conservation (Indoor), Rain Water Harvesting.

MODULE III WATER, HEALTH AND SANITATION MANAGEMENT **7**

Water Storage: Designing Dams and Pipelines, Appropriate Selection for Sanitation Technique, Sewerage, Communal Health and Waste Water Recycling.

MODULE IV WASTE MANAGEMENT **8**

Types of Waste - Sources - Collections and On-Site Processing -Transferring Stations - Disposal Systems - Recycling.

MODULE V ENERGY EFFICIENT TECHNIQUES **8**

Green building concepts-renewable energy sources- Solar – Steam and wind-Biofuels - Biogas – Electricity.

MODULE VI TECHNOLOGY POLICY **8**

Government Policies- Energy Policy-Appropriate technology Development Centre-its function and responsibilities-Building policies-Case Studies.

L – 45; Total Hours –45

TEXT BOOKS:

1. Barrett Hazeltine and Christopher Bull, “Appropriate Technology: Tools Choices and Implications”, Academic Press, Orlando, USA, 1998.
2. Ken Darrow and Mike Saxenian, “Appropriate Technology Source Book : A Guide to Practical Books for Village and Small Community Technology”, Stanford, 1986.

REFERENCES:

1. Richard Heeks, “Technology and Developing Countries: Practical Applications Theoretical Issues”, 1995.
2. John Pickford, “The Worth of Water : Technical Briefs on Health, Water and Sanitation”, Intermediate Technology Publications, 1998.

OUTCOMES:

- At the end of the course, the students will be able to use suitable technologies for various conditions for sustainable development.

GECX203 ENGINEERING SYSTEM MODELLING AND SIMULATION

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn the concepts, techniques, tools for modeling and simulation systems and environments through the use of computers.
- To study the various aspects of discrete dynamic, stochastic systems modeling and conducting experiments with those models on a computer.

MODULE I INTRODUCTION 6

Systems – Modelling – types – systems components – Steps in model building- Simulation Algorithms and Heuristics; Simulation Languages.

MODULE II RANDOM NUMBERS / VARIATES 7

Random numbers – methods of generation – random variates for standard distributions like uniform, exponential, Poisson, binomial, normal etc. – Testing of Random variates – Monte Carlo Simulation.

MODULE III MODELLING PROCESS 7

Primitive Models : Establishing relationships via physical laws; Establishing relationships via curve fitting; Parameters estimation problems; Elementary state transition models.

MODULE IV DESIGN OF SIMULATION EXPERIMENTS 9

Steps on Design of Simulation Experiments – Development of models using of Highlevel language for systems like Queuing, Inventory, Replacement, Production etc., – Model validation and verification, Output analysis.

MODULE V SIMULATION LANGUAGES 10

Need for simulation Languages – Comparisons & Selection of Languages – GPSSARENA- EXTEND – Study of any one of the languages.

MODULE VI CASE STUDIES USING SIMULATION LANGUAGES 6

Case Study using simulation languages

L – 45; Total Hours –45

REFERENCES:

1. Law, A.M., & W.D. Kelton, “Simulation Modelling and Analysis”, McGraw

Hill, Singapore, 2000.
2. Harrel, C.R., et. al., “System Improvement Using Simulation”, 3rd Edition, JMI Consulting Group and ProModel Corporation, 1995.
3. Harrel, C.R. & T. Kerim, “Simulation Made Easy, A Manager’s Guide”, IIE Press, 1995.
4. Geoffrey Gordon, “Systems Simulation”, Prentice Hall, 2002.
5. David Kelton, Rondall P Sadowski, David T Sturrock, “Simulation with Arena”, Mc Graw Hill, 2004.

OUTCOMES:

The student should be able to

- Model and simulate systems and environments through the use of computers.
- Conduct experiments with discrete dynamic, stochastic system models on a computer.

GECX204 VALUE ANALYSIS AND ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To get acquainted with value analysis and engineering tool for productivity improvement.
- To understand and analyze the theory and methodology of Value Engineering.

MODULE I VALUE ENGINEERING BASICS 8

Origin of Value Engineering, Meaning of value, Definition of Value Engineering and Value analysis, Difference between Value analysis and Value Engineering, Types of Value, function - Basic and Secondary functions, concept of cost and worth, creativity In Value Engineering.

MODULE II VALUE ENGINEERING JOB PLAN AND PROCESS 6

Seven phases of job plan, FAST Diagram as Value Engineering Tool, Behavioural and organizational aspects of Value Engineering, Ten principles of Value analysis, Benefits of Value Engineering.

MODULE III ORIENTATION AND INFORMATION PHASES 8

Launching Value Engineering project work - Objectives and Targets - VE Project work: a time-bound programme - Projects and Teams - Time Schedule - Co-ordination - Consultant. Technical data - Marketing related information - Competition profile - Cost data - Materials Management related information - Quality related information - Manufacturing data.

MODULE IV FUNCTION ANALYSIS AND CREATIVE PHASES 9

Objectives - Function definition - Classification of functions - Higher level functions – Function – Cost – Function – Worth - Value Gap - Value index - How to carry out Function Analysis? – Fast Diagraming - Cost Modelling.

Creativity - How to improve creativity of an individual? – How to promote creativity in the organisation? - Obstacles to Creativity - Mental road blocks - Creativity killer phrases. Positive thinking - Ideas stimulators - Creativity techniques - Brainstorming.

MODULE V EVALUATION, INVESTIGATION AND RECOMMENDATION 6

Paired comparison and Evaluation Matrix techniques - Criteria for selection of

VE solutions. Design – Materials – Quality – Marketing – Manufacturing - Preview session. The report - presentation.

MODULE VI IMPLEMENTATION PHASE AND CASE STUDIES 8

Design department - Materials department - Production Planning & Control - Quality Control – Manufacturing – Marketing - Need for co-ordinated teams - The Action Plan. Value Engineering case studies.

L – 45; Total Hours –45

TEXT BOOKS:

1. Mudge, Arthur E. “Value Engineering- A systematic approach”, McGraw Hill, New York, 2000.
2. Kumar S, Singh R K and Jha J K (Ed), “Value Engineering”, Narosa Publishing House, 2005.

REFERENCES:

1. Park RJ, “Value Engineering: A Plan for Invention”, St.Lucie Press, New York, 1999.
2. Lawrence, D.M., “Techniques of Value Analysis and Engineering”, McGraw Hill 1988.
3. George, E.D., “Engineering Design: a Material and Processing Approach”, McGraw Hill, 1991.
4. Heller, D.E., “Value Management, Value Engineering and Cost Reduction”, Addison Wesley, 1988.

OUTCOMES:

- The student will be able to realize the value of products, processes and implement value analysis to achieve productivity improvement.

GECX205 INDUSTRIAL SAFETY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the various safety measures to be taken in different industrial environments.

MODULE I SAFETY MANAGEMENT **7**

Evolution of modern safety concept- Safety policy - Safety Organization - line and staff functions for safety- Safety Committee- budgeting for safety. safety education and training.

MODULE II SAFETY IN MANUFACTURING **7**

Safety in metal working-Machine guarding -Safety in welding and gas cutting - Safety in cold forming and hot working of metals -Safety in finishing, inspection and testing -Regulation.

MODULE III SAFETY IN CONSTRUCTION **8**

General safety consideration in Excavation, foundation and utilities – Cordoning – Demolition – Dismantling –Clearing debris – Types of foundations – Open footings.

Safety in Erection and closing operation - Safety in typical civil structures – Dams-bridges-water Tanks-Retaining walls-Critical factors for failure-Regular Inspection and monitoring.

MODULE IV ELECTRICAL SAFETY **8**

Electrical Hazards – Energy leakage – Clearance and insulation – Excess energy – Current surges – Electrical causes of fire and explosion – National electrical Safety code.

Selection of Environment, Protection and Interlock – Discharge rods and earthing device – Safety in the use of portable tools - Preventive maintenance.

MODULE V SAFETY IN MATERIAL HANDLING **8**

General safety consideration in material handling devices - Ropes, Chains, Sling, Hoops, Clamps, Arresting gears – Prime movers.

Ergonomic consideration in material handling, design, installation, operation and

maintenance of Conveying equipments, hoisting, traveling and slewing mechanisms.

Storage and Retrieval of common goods of shapes and sizes in a general store of a big industry.

MODULE VI SAFETY EDUCATION AND TRAINING 7

Importance of training-identification of training needs-training methods – programme, seminars, conferences, competitions – method of promoting safe practice - motivation – communication - role of government agencies and private consulting agencies in safety training – creating awareness, awards, celebrations, safety posters, safety displays, safety pledge, safety incentive scheme, safety campaign – Domestic Safety and Training.

L – 45; Total Hours –45

REFERENCES:

1. Krishnan N.V, “Safety Management in Industry”, Jaico Publishing House, Bombay, 1997.
2. Blake R.B., “Industrial Safety”, Prentice Hall, Inc., New Jersey, 1973.
3. Fulman J.B., “Construction Safety, Security, and Loss Prevention”, John Wiley and Sons, 1979.
4. Fordham Cooper W., “Electrical Safety Engineering”, Butterworths, London, 1986.
5. Alexandrov M.P., “Material Handling Equipment”, Mir Publishers, Moscow, 1981.

OUTCOMES:

Students would be able to

- Acquire knowledge on various safety Hazards.
- Carry out safety measures for different industrial environments.

GECX206 ADVANCED OPTIMIZATION TECHNIQUES

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the various advanced optimization tools.
- To provide an understanding to deal with ill identified and fuzzy problems.

MODULE I INTRODUCTION **7**

Review of conventional optimization techniques - limitations - limitation of exhaustive search - need for artificial intelligence - bio mimicking methods

MODULE II HEURISTICS METHODS **8**

Introduction – Advanced methods of algorithm design: Greedy method, Backtracking method, Divide and Conquer method – Dynamic programming – Heuristics exploration algorithms – Greedy search - Local search – Hill climbing – Tabu search – Gradient search – Beam search – Simulated Annealing.

MODULE III GENETIC ALGORITHM **7**

Introduction - Basics of GA – Population – Reproduction – Cross over – Mutation -genetic algorithms in search, optimization and machine learning-practical genetic algorithms.

MODULE IV ANT COLONY OPTIMIZATION **8**

Introduction: Ant Colony Optimization – Meta-heuristic Optimization – History – The ACO Meta-heuristic – ACO Algorithms: Main ACO – Ant system – Ant colony system – Max-Min Ant system – Applications: Routing in telecommunication networks – Travelling salesmen – Graph Coloring – Advantages & Disadvantages

MODULE V FUZZY LOGIC AND ANN **8**

Fuzzy logic, knowledge representation and inference mechanism – Fuzzy and expert control – standard Takagi-Sugeno mathematical characterizations – Design example – Biological foundations to intelligent systems: Artificial neural networks, Back-propagation networks, Radial basis function networks, and recurrent networks.

MODULE VI IMPLEMENTATIONS & APPLICATIONS 7

Reduction of size of an optimization problem – multilevel optimization – parallel processing – multi objective optimization – Job shop scheduling – Vehicle scheduling – Line balancing – Sensor integration.

L – 45; Total Hours –45

REFERENCES:

1. Singiresu S. Rao, “Engineering optimization – Theory and practices”, John Wiley and Sons, 1996.
2. Ravindran – Phillips –Solberg, “Operations Research – Principles and Practice, John Wiley and Sons, 1987.
3. Fredrick S.Hillier and G.J.Liberman, “Introduction to Operations Research”, McGraw Hill Inc. 1995.
4. Kalymanoy Deb, “Optimization for Engineering Design”, PHI, 2003
5. Christos H. Papadimitriou, Kenneth Steiglitz, Combinatorial Optimization, PHI 2006

OUTCOMES:

At the end of the course student will be able to

1. Formulate a real life situation as an optimization the problem.
2. Identify the appropriate solution methodology and provide a solution

GECX207 **MATLAB SIMULINK** **L T P C**
3 0 0 3

OBJECTIVES:

- Teach students how to mathematically model engineering systems
- Teach students how to use computer tools to solve the resulting mathematical models. The computer tool used is MATLAB and the focus will be on developing and solving models of problems encountered in engineering fields

MODULE I INTRODUCTION MATLAB DATA PRESENTATION 7

Vectors, Matrices -Vector/Matrix Operations & Manipulation- Functions vs scripts- Making clear and compelling plots-Solving systems of linear equations numerically and symbolically- Least squares regression -Curve fitting.

MODULE II MATLAB PLOT FUNCTION 7

Introduction- Plot Function – Animation- 3D Plots-Customizing Plots – Plot Applications- Saving &Painting Plots.

MODULE III ROOT FINDING AND COMPUTER REPRESENTATION OF NUMBERS 7

Linearization and solving non-linear systems of equations- The Newton-Rapson method- Integers and rational numbers in different bases- Floating point numbers- Round off and errors in basic arithmetic-Significant digits when reporting results

MODULE IV ORDINARY DIFFERENTIAL EQUATIONS 8

Numerical integration and solving 1^{st} order, ordinary differential equations (Euler's method and Runge-Kutta)- Use of ODE function in MATLAB

MODULE V NON-LINEAR DIFFERENTIAL EQUATIONS 8

Converting 2^{nd} order and higher ODEs to systems of 1^{st} order ODEs- Solving systems of ODEs via Euler's method and Runge-Kutta)- Solving single and systems of non-linear differential equations by linearization-Use of the function ODE in MATLAB to solve differential equations

MODULE VI INTRODUCTION OF SIMULINK 8

Simulink & its relations to MATLAB – Modeling a Electrical Circuit- Modeling a fourth order differential equations- Modeling the solution of three equations with three unknowns- Representing a model as a subsystem-Simulink demos.

L – 45; Total Hours –45

REFERENCES:

1. Griffiths D V and Smith I M, Numerical Methods for Engineers, Blackwell, 1991.
2. Laurene Fausett, Applied Numerical Analysis Using MATLAB, Pearson 2008.
3. Moin P, Fundamentals of Engineering Numerical Analysis, Cambridge University Press, 2001.
4. Wilson HB, Turcotte LH, Advanced mathematics and mechanics applications using MATLAB. CRC Press, 1997
5. Ke Chen, Peter Giblin and Alan Irving , Mathematical Exploration with MATLAB, Cambridge University Press, 1999.

OUTCOMES:

At the end of this unit students will be able to:

1. Use Matlab as a convenient tool for solving a broad range of practical problems in engineering from simple models to real examples.
2. Write programs using first principles without automatic use of built-in ones.
3. Write programs for solving linear and nonlinear systems, including those arising from boundary value problems and integral equations, and for root-finding and interpolation, including piecewise approximations.
4. Be fluent in exploring Matlab's capabilities, such as using matrices as the fundamental data-storage unit, array manipulation, control flow, script and function m-files, function handles, graphical output.
5. Make use of Maltab visual capabilities for all engineering applications.
6. An ability to identify, formulate, and solve engineering problems. This will be accomplished by using MATLAB to simulate the solution to various problems in engineering fields

GECX208	EMBEDDED SYSTEMS AND ITS APPLICATIONS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide a detailed overview of embedded system.
- To equip students with the software development skills necessary for practitioners in the embedded systems field.
- To understand entire software development lifecycle and examine the various issues involved in developing software for embedded systems.

MODULE I EMBEDDED SYSTEMS OVERVIEW 8

Introduction –Embedded Systems vs. General computing systems- Fundamental Components of embedded systems- Characteristics- Challenges-Examples- Embedded System design process.

MODULE II EMBEDDED COMPUTING PLATFORM 8

Overview of Processors and hardware units in an embedded system-CPU buses – Memory devices –Memory types- I/O devices – Designing with computing platforms- Consumer electronics architecture-Design example: Alarm clock.

MODULE III REAL TIME EMBEDDED SYSTEMS 8

Programming embedded systems in assembly and C – Real time systems – Hard and Soft real time systems- Need for RTOS in Embedded Systems- Multiple tasks and processes –Context switching-Scheduling policies- Interprocess communication and synchronization.

MODULE IV EMBEDDED SOFTWARE DEVELOPMENT PROCESS and TOOLS 8

Development process of an embedded system-software modules and tools for implementation of an embedded system- Integrated development environment- Host and target machines-cross compiler-cross assembler-Choosing right platform.

MODULE V PROGRAM MODELING IN EMBEDDED SYSTEMS 8

Program Models – Data Flow Graph model-control DFG model-Synchronous DFG model- Finite state machines- UML modeling – UML Diagrams.

MODULE VI EMBEDDED SYSTEMS APPLICATION 5

Application specific embedded system – case study: digital camera hardware and software architecture, embedded systems in automobile, embedded system for a smart card.

Total Hours –45

TEXT BOOKS:

1. Marilyn Wolf , "Computers as components", Elsevier 2012.
2. Shibu. K.V, “Introduction to Embedded Systems”, Tata Mcgraw Hill,2009.
3. Rajkamal, "Embedded Systems Architecture, Programming and Design",1st Reprint,Tata McGraw-Hill, 2003
4. Frank Vahid and Tony Gwargie, "Embedded System Design", John Wiley & sons, 2002.

REFERENCES:

1. Sriram V Iyer and PankajGupta ,”Embedded Realtime Systems Programming ”Tata McGraw-Hill,2008
2. Qing Li and Carolyn Yao," Real-Time Concepts for Embedded Systems", CMPBooks, 2003
3. David E.Simon, "An Embedded Software Primer", Pearson Education, 2003

OUTCOMES:

On completion of this course, the students will be able to

- Identify the suitable processor and peripherals in embedded applications
- Develop embedded programs in assembly and c
- Choose the right platform for designing an embedded system
- Explore different scheduling mechanism in rtos
- Design the program model for embedded applications.
- Analyze different domain specific applications in embedded systems.

GECX209 USABILITY ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

The objective of this course is

- To understand the emerging concept of usability, requirements gathering and analysis.
- To learn about human computer interaction with the help of interfaces that has high usability.

MODULE I INTRODUCTION 6

Cost Savings – Usability Now – Usability Slogans – Discount Usability Engineering – Usability – Definition – Example – Trade-offs – Categories – Interaction Design – Understanding & Conceptualizing Interaction – Cognitive Aspects.

MODULE II USER INTERFACES 8

Generation of User Interfaces – Batch Systems, Line Oriented Interfaces, Full Screen Interfaces, Graphical User Interfaces, Next Generation Interfaces, Long Term Trends – Usability Engineering Life Cycle – Interfaces – Data Gathering – Data Analysis Interpretation and Presentation.

MODULE III INTERACTION DESIGN 8

Process of Interaction Design - Establishing Requirements – Design,Prototyping and Construction - Evaluation and Framework.

MODULE IV USABILITY TESTING 8

Usability Heuristics – Simple and Natural Dialogue, Users' Language, Memory Load, Consistency, Feedback, Clearly Marked Exits, Shortcuts, Error Messages, Prevent Errors, Documentation, Heuristic Evaluation – Usability Testing - Test Goals and Test Plans, Getting Test Users, Choosing Experimenters, Ethical Aspects, Test Tasks, Stages of a Test, Performance Measurement, Thinking Aloud, Usability Laboratories.

MODULE V USABILITY ASSESSMENT METHODS 8

Observation, Questionnaires and Interviews, Focus Groups, Logging Actual Use, User Feedback, Usability Methods – Interface Standards - National, International and Vendor Standards, Producing Usable In-House Standards.

MODULE VI USER INTERFACES 7

International Graphical Interfaces, International Usability Engineering, Guidelines for Internationalization, Resource Separation, Multilocale Interfaces – Future Developments – Case Study.

L – 45; Total Hours –45

TEXT BOOKS:

1. Yvonne Rogers, Helen Sharp, Jenny Preece, “Interaction Design: Beyond Human - Computer Interaction”, John Wiley & Sons, 3rd Edition, 2011 (Module I, II, III).
2. Jakob Nielsen, “Usability Engineering”, Morgan Kaufmann Academic Press, 1994. (Module I – VI).

REFERENCES:

1. Ben Shneiderman, Plaisant, Cohen, Jacobs, “Designing the User Interface: Strategies for Effective Human Interaction”, Pearson Education, 5th Edition, 2010.
2. Laura M. Leventhal, Julie A. Barnes, “Usability Engineering: Process, Products, and Examples”, Pearson/Prentice Hall, 2008

OUTCOMES:

Students who complete this course will be able to

- build effective, flexible and robust user interfaces.
- translate system requirements into appropriate human/computer interaction sequences.
- choose mode, media and device for the application requirements.

GECX210 SUPPLY CHAIN MANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the various decision phases in a supply chain
- To be aware of the Supply Chain and its drivers
- To design Supply Chain Network
- To build a aggregate plan in supply chain
- To understand Sourcing Decisions in Supply Chain
- To comprehend the influence of Information technology in Supply Chain

MODULE I INTRODUCTION TO SUPPLY CHAIN 7

Understanding Supply Chain - Decision phases - Supply chain performance - Competitive and supply chain strategies - Achieving strategic fit - Expanding strategic scope

MODULE II SUPPLY CHAIN DRIVERS AND DESIGN 7

Drivers of supply chain performance – Designing distribution network - Network Design in the Supply Chain - Network design in Uncertain Environment

MODULE III AGGREGATE PLANNING AND MANAGING SUPPLY, DEMAND AND INVENTORY 8

Aggregate Planning in a Supply chain: role - Managing Supply - Managing Demand in Supply Chain – Cycle and Safety inventory in supply chain – Level of product availability.

MODULE IV MANAGING INVENTORY IN SUPPLY CHAIN 8

Managing Economies of Scale in a Supply Chain : Cycle Inventory- Managing uncertainty in a Supply Chain Safety Inventory- Determining optimal level of Product Availability

MODULE V SOURCING AND TRANSPORTATION 8

Sourcing decision in supply chain - Third and Fourth – Party Logistics providers - Supplier scoring and assessment - Transportation in a Supply Chain – Risk and Trade-offs in transportation design.

MODULE VI INFORMATION TECHNOLOGY IN A SUPPLY CHAIN 7

Information technology in a supply chain – CRM, ISCM, SRM in supply chain -

Over view of recent trends in Supply Chain: e-SRM, e-LRM, e-SCM.

L – 45; Total Hours –45

REFERENCES:

1. Sunil Chopra and Peter Meindl, “Supply Chain Management-Strategy Planning and Operation”, Pearson Education, 5th Indian Reprint, 2013.
2. Jananth Shah “Supply Chain Management – Text and Cases“ Pearson Education, 2008.
3. Altekar Rahul V, “Supply Chain Management-Concept and Cases”, Prentice Hall India, 2005.
4. Monczka et al., “Purchasing and Supply Chain Management”, Thomson Learning, 2nd Edition, 2nd Reprint, 2002.

OUTCOMES:

- After taking up the course the student will be able to brighten his prospects of taking up a career on supply chain management.
- The student decision making capability specific to supply chain issues in an industry is improved.
- The student can plan a well defined execution of supply chain strategy in companies.
- The student will be able to design a optimal distribution network as per the demands of the industry.
- The student can also determine the most favorable transportation plan for a company.
- The student will also be able to bring in company from paper environment to paperless environment.

GECX211 SYSTEMS ANALYSIS AND DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- To describe the phases of the systems development life cycle
- To teach the automated tools for system development
- To develop and evaluate system requirements.
- To explain the organizational issues in system implementation
- To teach the usability testing and electronic data interchange
- To elucidate the importance of System analysis and design in electronic commerce.

MODULE I FUNDAMENTALS OF SYSTEM DEVELOPMENT 8

System Concept – Characteristics – Elements of System – Types of System – Modern Approach to System Analysis and Design – System Development Life Cycle – Approaches to Improving Development – Tools for System Development – Succeeding as a System Analyst – Skills – Managing the Project.

MODULE II AUTOMATED TOOLS FOR SYSTEMS DEVELOPMENT 7

What is requirements determination? Fact finding techniques, Tools for documenting procedure and decision-CASE Tools-Need for CASE tools-Reverse engineering and reengineering- phases of the software life cycle-Ranking projects-Value Chain Analysis- Corporate Strategic Planning vs. Information Systems Planning.

MODULE III SYSTEM ANALYSIS 8

Determining System Requirements – Traditional Methods - Modern Methods – Radical Methods – Structuring System Requirements – Process Modeling – Data Flow Diagramming – Logic Modeling – Conceptual Data Modeling – E-R Modeling.

MODULE IV SYSTEM DESIGN 8

System Implementation – Software Application Testing – Installation – Documentation – Training and Support – Organizational Issues in Systems Implementation – Maintaining Information System – Conducting System Maintenance.

MODULE V USABILITY AND MEASURING USER SATISFACTION 7

Usability Testing-User satisfaction test- A tool for analyzing user satisfaction – Unified Modeling Language(UML)- Case study: System Design: Application in Human Resource-Financial Applications

MODULE VI SAD IN E-COMMERCE 7

Systems analysis and design in the era of electronic commerce: B2B, B2C and C2C e-commerce -advantages and disadvantages of e-commerce. E-commerce system architecture – physical networks, logical network, World Wide Web, web-services - HTML, XML - case studies-El electronic data interchange: EDI standards - virtual private networks - XML and EDI

L – 45; Total Hours –45

REFERENCES:

1. Jeffrey A. Hoffer, Joey F. George, Joseph S. Valacich, “Modern Systems Analysis and Design”,Fifth Edition, Prentice Hall,March 2007.

5.Larman, C.,” Applying UML and Patterns. An introduction to Object-Oriented Analysis and Design”. Prentice-Hall PTR, 2002.

OUTCOMES:

- List the characteristics of the system and specify the approaches in the development of the system.
- Summarize the phases of the software life cycle
- Differentiate Corporate Strategic Planning and Information Systems Planning.
- Illustrate the system requirements through various modeling diagrams.
- Use tools and techniques for process and data modeling.
- Solve realistic systems analysis problems and perform user satisfaction test.

GECX212 **ADVANCED MATERIALS** **L T P C**

3 0 0 3

OBJECTIVES:

To make the student conversant with

- Dielectric materials
- Magnetic materials
- Energy materials
- Nano materials
- Semi conductors
- Smart materials

MODULE I **8**

Dielectric Materials- Polarization and Mechanism-Internal or local field-Clausius-Mossotti relation- Dielectric loss- Temperature and Frequency effect- Measurement of Dielectric constant and loss using Scherring bridge- electric break down- ferro, piezo, pyroelectric materials and its application.

MODULE II **8**

Magnetic Materials- Terminology and classification of magnetic materials (Dia, Para, Ferro & Ferri) – Magnetic moments due to electrospin – Domain theory of Hysteresis – Heisenberg theory of Exchange Interaction (without derivation)- Structure and properties of Ferrites- Properties of Soft and Hard Magnetic Materials- Application: floppy disk, CD ROM, Magneto optical recording.

MODULE III **8**

Energy Materials (Nuclear) - Introduction to nuclear materials- Materials for nuclear fuel in fission and fusion reactors, Fissile and fertile materials- Control & Construction Materials for Nuclear reactors, Moderators, Heat Exchangers- Radiation proof materials- Brief discussion of safety and radioactive waste disposal.

MODULE IV **7**

Nano Materials- The nanosize range- classification of nanomaterials- processing of nanomaterials-properties of nanomaterials- mechanical, electrical, magnetic properties- other properties- carbon based nanomaterials- other nanomaterials and its application.

MODULE V **7**

Semiconductors- The energy gap in solids-Extrinsic Semiconductors- Intrinsic Semiconductors- Hall Effect in semiconductors- Application of Hall Effect- Basic ideas of compound semiconductors -Semiconductor materials- Fabrication of Integrated Circuits- Some semiconductor Devices

MODULE VI **7**

Smart materials- aerospace materials Ni and Co based super alloys, Special steels, Titanium alloys, Intermetallics, ceramics and their composites, New High strength material, Properties of Materials, Materials in Medical Applications, Stainless steel alloys,Cobalt based alloys, titanium based alloys, polymers

L – 45; Total Hours –45

REFERENCES:

1. Materials science and Engineering: A first course by V. RAGHAVAN, 6th ed., Eastern Economy edition,Prentice Hall of India,2015
2. Materials science and Engineering: An Introduction by William D. Callister Jr., 7th ed. John Wiley & Sons Inc. 2007
3. Material science by Dr.M.Arumugam, Anurasha agencies ,third revised edition ,2002

OUTCOMES:

Students will be able to know

- significance of dielectric materials
- types and applications of magnetic materials
- applications of nuclear materials for energy harvesting
- applications of nano materials
- significance of semi conductor devices
- applications of smart materials

GECX213	NATIONAL SERVICE SCHEME	L	T	P	C
		2	0	0	2

OBJECTIVES:

Primary Objective: Personality development through community service.
To achieve the above objective, the following should be adhered:

1. To provide an understanding about the aims, structure and programmes and activities of National Service scheme in terms of Nation Building
2. To develop certain basic skills for personality development through community development.
3. Understand the community in which they work and their relation
4. Identify the needs and problems of the community and involve them in problem-solving and
5. Practice national integration and social harmony.

MODULE I INTRODUCTION TO NSS 8

Orientation and structure of NSS,-Aims and Objectives of National Service Scheme- The history of NSS- Symbol and meaning- NSS hierarchy from national to college level – Role and responsibilities of various NSS functionaries

MODULE II PERSONALITY AND COMMUNITY DEVELOPMENT SKILLS 8

Importance of youth Leadership, Traits of Good Leadership and Personality Development. Role of youth in creating awareness through NSS Programmes on Health & Hygiene; Environmental Conservation and Enrichment for Sustainable Development; Sanitation and Swachh Bharat.

MODULE III UNDERSTANDING YOUTH 7

Definition and Profiles of youth categories, Youth Issues, Challenges and Opportunities for Youth, Youth as agent of social change & Community Mobilization .Role of Youth in Nation Building. National Youth Policy.

MODULE IV SOCIAL HARMONY AND NATIONAL INTEGRATION 7

National Integration, Various obstacles in the way of National Integration; such as caste, religion, language and provisional problems etc. Role of youth in Peace building and conflict resolution- Globalization and its Economic Social Political and

Cultural impacts.

L – 30; Total Hours –30

TEXT BOOKS:

1. National Service Scheme – A Youth Volunteers Programme for Under Graduate students as per UGC guidelines J.D.S.Panwar et al. Astral International. New Delhi.
2. National Service Scheme Revised Manual, 2006.Govt. of India. Ministry of Youth Affairs & Sports. New Delhi.
3. Social Problems in India, *Ram Ahuja.*

REFERENCES:

1. National Youth Policy-2014. Ministry of Youth Affairs & Sports. .Govt. of India

OUTCOMES:

On successful completion of this course-

- Students will have exposure to the the aims, structure and programmes and activities of National Service scheme in terms of Nation Building
- Students will be trained to skills for personality development through community development.
- Students will gain knowledge about national integration and social harmony.
- Students will be exposed to the role of youths in Nation building Students will gain

GECX214	AUTOMOTIVE POLLUTION AND CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To have a fair knowledge in automotive pollution control.
- To understand the concept of formation and control techniques of pollutants like UBHC, CO, NOx, particulate matter and smoke for both SI and CI engine will be taught to the students.
- To know about the instruments for measurement of pollutants
- To get introduced about emission standards

MODULE I EMISSION FROM AUTOMOBILES 8

Sources of Air Pollution. Various emissions from Automobiles — Formation — Effects of ollutants on environment and human beings. Emission control techniques – Modification of fuel, after treatment devices. Emission standards. Automotive waste management, old vehicle disposal, recycling, tyre recycling

MODULE II SI ENGINE EMISSIONS AND CONTROL 9

Emission formation in SI Engines- Carbon monoxide & Carbon di oxide - Unburned hydrocarbon, NOx, Smoke —Effects of design and operating variables on emission formation – controlling of pollutants - Catalytic converters, Charcoal Canister, Positive Crank case ventilation system, Secondary air injection, thermal reactor

MODULE III CI ENGINE EMISSION AND CONTROL 8

Formation of White, Blue, and Black Smokes, NOx, soot, Effect of Operating variables on Emission formation — Fumigation, Split injection, Catalytic Coating, EGR, Particulate Traps, SCR, Fuel additives — Cetane number Effect.

MODULE IV NOISE POLLUTION FROM AUTOMOBILES 8

Sources of Noise — Engine Noise, Transmission Noise, vehicle structural Noise, aerodynamics noise, Exhaust Noise. Noise reduction in Automobiles — Encapsulation technique for noise reduction —Silencer Design.

MODULE V TEST PROCEDURES 6

Constant Volume Sampling I and 3 (CVSI &CVS3) Systems- Sampling Procedures — Chassis dynamometers - Seven mode and thirteen mode cycles for Emission Sampling.

MODULE VI EMISSION MEASUREMENTS 6

Emission analysers —NDIR, FID, Chemiluminesecent, Smoke meters, Dilution Tunnel, SHED Test, Sound level meters.

L – 45; Total Hours –45

TEXT BOOKS:

1. V.Ganesan, 'Internal combustion Engines', Tata McGraw Hill Book Co, Eighth Reprint, 2005.
2. Crouse and Anglin, 'Automotive Emission Control', McGraw Hill company., Newyork 1993.

REFERENCES:

1. G.P.Springer ad D.J.Patterson, Engine Emissions, Pollutant formation, Plenum Press, New York. 1986.
2. D.J.Patterson and N.A.Henin, 'Emission from Combustion Engine and their control', Anna Arbor Science Publication,1985.
3. L.Lberanek, 'Noise Reduction', Mcgrawhill Company., Newyork1993.
4. C.Duerson, 'Noise Abatment', Butterworths ltd., London1990.
5. A.Alexander, J.P.Barde, C.lomure and F.J. Langdan, 'Road traffic noise', Applied science publisher ltd., London,1987.

OUTCOMES:

On completion of the course student should be able to

- Identify the sources of emission from vehicles.
- Analyse the causes and effects of emissions.
- Analyse causes and effects of noise pollution
- Bring out solutions for control of emissions.
- Demonstrate the test procedures and emission norms.
- Select suitable instruments for measurement of emissions.

GECX215	MOTOR VEHICLE ACT, INSURANCE & POLICY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn about basic act and regulation followed for road vehicle
- To learn about systematic steps involved to get licence and registration of motor vehicle
- To learn arbour various types of motor vehicle polices and insurances

MODULE I BASIC RULES FOR ROAD VEHICLE 8

Display and Use of Number Plates- Attachment of number plates- Number plates in horizontal position- Removal of number plates on transfer- Hours prescribed for lighted lamps- Mounting of lamps and reflectors- Multiple beam headlamps- Daytime running lamps- Auxiliary driving lamps- Parking lamps- Brakes- Stopping distances- Emergency or parking brakes- Horn- Muffler- Mirrors- Inspection of motor vehicles- Standards of safety and repair

MODULE II LICENSING OF DRIVERS OF MOTOR VEHICLES 8

Necessity of driving licence- Age limit in connection with driving of motor vehicle-Responsibility of owners of motor vehicles-Restriction on the holding of driving licence-Grant of learner's licence-Grant of driving licence-Addition to driving licence- Renewal of driving licence-Revocation of driving licence on grounds of disease or disability-Driving licence to drive motor vehicle belonging to the central government- power of court to disqualify- suspension of driving licence in certain cases- suspension or cancellation of driving licence on convection- Endorsement.

MODULE III REGISTRATION OF MOTOR VEHICLE 7

Necessity for registration – Registration Where and how to be made- Special provision for registration of motor vehicle of diplomatic officers-Temporary registration- Production of vehicle at the time of registration- Refusal of registration- renewal of certificate of registration- effectiveness in India of registration- Change of residence or place of business-transfer of ownership- Suspension of registration – cancellation of registration suspended under section 53- certificate of fitness of transport vehicle-cancellation of registration.

MODULE IV INSURANCE OF MOTOR VEHICLE 8

Necessity for insurance against third party – Requirements of policies and limits of liability- - Duty of insurers to satisfy judgements and awards against person insured in respect of third party risks-Duty to give information as to insurance-Settlement between insurers and insured persons- transfer of certificate of insurance-production of certain certificates, licences and permit in certain cases-Special provisions as to compensation in case of hit and run motor accident – Types of motor polices

MODULE V CONTROL OF TRANSPORT VEHICLES 7

Power to State Government to control road transport- Transport authorities-General provision as to applications for permits- Application for stage carriage permit- Procedure of Regional Transport Authority in considering application for stage carriage permit- Scheme for renting of motor cabs- Application for private service vehicle permit- Procedure in applying for and granting permits- Duration and renewal of permits- Transfer of permit- Replacement of vehicles-Temporary permits

MODULE VI OFFENCES AND PUNISHMENT 7

Driving without holding an effective driving licence- Driving by an under-aged person (Minor driving vehicle)- Holding of a driving licence permitting it to be used by other person.- Driving a vehicle at an excessive speed- Driving or permitting to drive a vehicle carrying excess load- Driving dangerously / its Abetment Driving an uninsured vehicle

Rider and pillion rider failing to wear protective head gear (Helmet) -Violation of Mandatory Signs -.e-challan and spot challan

L – 45; Total Hours –45

TEXT BOOKS:

1. The motor vehicle act 1988, Universal law publishing co.cpvt ltd. Newdelhi 2011
2. A Commentary On The Motor Vehicles Act, 1988 by SUKHDEV AGGARWAL The Bright Law House, New Delhi

REFERENCES:

1. The Motor Vehicles Act, 1988 Along with Latest Case Law, Notifications & Table of Offences and Punishments Asia Law House; 15th edition

(2014)

2. Assessment of Compensation in Accidents under Motor Vehicles Act by Karkara Delhi Law House (2013)

OUTCOMES:

On completion of the course students should be able to

- Explain the analysis of rules and regulations for road vehicles
- Analyze the procedure for getting driving license for vehicles at national and international level
- Analyze the procedure for registration of vehicles.
- Analyze the procedure for Insurance of vehicles and claims.
- Analyze the procedure for obtaining Government Permits and renewal
- Analyze the consequences of not following the rules and regulations

GECX216	PRINCIPLES OF COMMUNICATION SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

To introduce the analog and digital modulation techniques.
To elaborate the working of communication receivers in the presence of noise.
To give an overview of various communication systems.

MODULE I LINEAR MODULATION 8

Baseband signals, Amplitude Modulation – Modulation Index, Power Transmitted, Double Side Band and Single Side Band AM, AM Modulators and AM Receivers, AM Radio systems, Frequency Division Multiplexing.

MODULE II ANGLE MODULATION 8

Frequency Modulation and Phase Modulation, Frequency deviation and modulation index, Bandwidth of FM, FM Modulators and FM receivers, FM Radio and FM Stereo Systems

MODULE III SAMPLING AND PULSE MODULATION 7

Sampling, Nyquist's Sampling Theorem, Pulse Modulations - PAM, PPM and PWM, Time Division Multiplexing, Bandwidth of TDM systems.

MODULE IV DIGITAL COMMUNICATION 7

Digital baseband data, Digital Modulations – ASK, FSK, PSK and QPSK. Digital Communication Transmitters and Receivers.

MODULE V NOISE 8

Sources of Noise, Thermal Noise, shot noise, White noise, Narrow band Noise, Effect of noise in communication, SNR, Receiver Noise Temperature and Noise Equivalent Bandwidth.

MODULE VI COMMUNICATION SYSTEMS & NETWORK 7

FM Radio Systems, Cellular Mobile network, Satellite Communications, Optical Fiber Communication.

L – 45; T – 0; Total Hours – 45

TEXT BOOKS:

1. A. Bruce Carlson, Paul B. Crilly, "Communication Systems", 5th Edition,

McGraw Hill Int., 2011.
2. B.P. Lathi, Zhi Ding, Hari M. Gupta, “Modern Digital and Analog Communication Systems”, 4th Edition, Oxford University Press, 2017.

REFERENCES:

1. Herbert Taub, Donald L. Schilling, Goutam Saha, “Principles of Communication Systems” 4th Edition, McGraw Hill Int. 2013.
2. Simon Haykin, “An Introduction To Analog And Digital Communications”, 1st Edition, Wiley India, 2010.
3. Simon Haykin , “Communications Systems” 4th Edition, Wiley India, 2006.
4. Hwei P. Hsu, “Analog and Digital Communications” 3rd Edition,

OUTCOMES:

On completion of the course students will be able to

1. Identify various communication systems and the corresponding modulation schemes.
2. Predict the characteristics of various analog and digital modulation schemes.
3. Interpret the effect of noise and bandwidth in a communication systems
4. Apply the Nyquist criteria for a given baseband signals.
5. Evaluate the performance of communication receivers.
6. Demonstrate the applications of common communication systems.

GECX217 **LEAN MANAGEMENT** **L T P C**

3 1 0 4

OBJECTIVES:

The objective of the Course to make the student know about

- the basics of lean production management,
- how Lean principles are applied to the Construction industry to improve the operation management and product development.

MODULE I **8**

lean production? – Introduction, background, and lean thinking. Importance of philosophy, strategy, culture, alignment, focus and systems view. Discussion of Toyota Production System.

MODULE II **8**

Manufacturing systems – an overview of manufacturing strategies. Job shops, batch flow, and flexible manufacturing systems Flow production and lean production systems

MODULE III **7**

Value stream mapping in process design and product development Waste reduction - lead time reduction

Process cycle time and value-added vs. non-value added activities Optimum lot sizing

MODULE IV **8**

Lean production processes, approaches and techniques.—Importance of focusing upon flow. Tools -. Workplace organization – 5S. - Stability. - Just-In-Time – One piece flow – Pull. - . Cellular systems. - . Quick change and set-up reduction methods. f. Total productive maintenance. -. Poka-Yoke – mistake proofing, quality improvement. Standards. - . Leveling. - . Visual management. Just-in-time techniques – SMED and Takt Times - Standard work processes and line balancing Poka-yoke and pull systems material handling reduction and facilities planning

MODULE V **8**

Managing change in the lean organization Human resource management and the lean enterprise Employee involvement – Teams – Training – Supporting and encouraging involvement – Involving people in the change process -- communication -- Importance of culture. Startup of lean processes and examples of applications.

Sustaining improvement and change, auditing, follow-up actions.

7

MODULE VI

The lean enterprise and supply chain management Costs and risks of lean initiatives - Measuring lean initiatives

L – 45; Total Hours –45

TEXT BOOKS:

1. The Toyota Way Fieldbook, Jeffrey Liker and David Meier, McGraw-Hill, 2006. Lean Production Simplified, Pascal Dennis, Productivity Press, 2007.
2. Womack, James P., and Daniel T. Jones. Lean Thinking. New York, NY: Simon and Schuster, 2003. ISBN: 0743249275.
3. Murman, Earll. Lean Enterprise Value. New York, NY: Palgrave Macmillan, 2002. ISBN: 0333976975.

REFERENCES:

1. Readings at http://www.leanconstruction.org/readings.htm
2. Hopp, W. J., and Spearman, M. L. (2011). Factory Physics, Third Edition, Waveland Press, Long Grove, Il. 720 pp.

OUTCOMES:

The student will be able to

- Describe the manufacturing approaches employed and the background and philosophy of lean production.
- Illustrate the concept of waste reduction
- Apply evaluation techniques that can be used in preparation for and use in learn production activities.
- Select the tools that can be used implementing lean production in production operations.
- Discuss the importance of workplace organization, pull production, cellular arrangement and employee involvement, need for employee creativity
- Describe about the Methods for promoting success in implementing lean transformations

GECX218 GEOSPATIAL MODELING & ANALYSIS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To equip the students with fundamental representation and analysis of geospatial phenomena and provides foundations in methods and algorithms used in GIS analysis.
- To focus is on terrain modeling, geomorphometry, watershed analysis and introductory GIS-based modeling of landscape processes (water, sediment). The course includes analysis from lidar data, coastal change assessment and 3D visualization.

MODULE I INTRODUCTION TO GEOSPATIAL DATA 7

Mapping natural phenomena –Concept of continuous fields and discrete sampling – Units, projections, coordinate transformation – Georeferencing, geospatial formats, conversions, geospatial data abstraction library – Raster and vector representation, raster and vector conversions and resampling.

MODULE II DATA DISPLAY AND VISUALIZATION 7

Display of continuous and discrete data, use of color, shading, symbols, to extract the spatial pattern and relationships – 3D visualization: multiple surfaces and volumes, 3D vector objects – visualization for data analysis (lighting, scaling, transparency, cutting planes, animations) – view/create maps/post your data on-line (Google Earth/Maps, GPS visualizer)

MODULE III GEOSPATIAL ANALYSIS 7

Foundations for analysis of continuous and discrete phenomena – neighborhood operations and buffers – analysis and modeling with map algebra – cost surfaces and least cost path – spatial interpolation and approximation (gridding)

MODULE IV TERRAIN MODELING AND ANALYSIS 9

terrain and bathymetry mapping – mathematical and digital representations (point clouds, contour, raster, TIN) – DEM and DSM, working with multiple return lidar data – spatial interpolation of elevation data and topographic analysis, line of sight, view shed analysis – solar irradiation, photovoltaic energy potential, time series of elevation data, analysis of coastal change.

MODULE V FLOW TRACING, WATERSHED ANALYSIS AND LANDFORMS **8**

Methods for flow routing and flow accumulation – Extraction of stream networks – Extraction of watershed boundaries and building watershed hierarchies – feature extraction, types of landforms.

MODULE VI MODELING OF GEOSPATIAL PROCESSES **7**

Model formulation, input data processing – introduction to GIS-based hydrologic, erosion and environmental modeling – Geocomputational methods, including agent-based modeling, artificial neural networks and evolutionary computing.

L – 45; T – 0; Total Hours –45

TEXT BOOKS:

1. Hassan A, Karimi (2017), *Geospatial Data Science Techniques and Applications*, CRS Press & Co.
2. Sudipto Banerjee, Bradley P, Carlin, Alan E. Gelfand (2014), *Hierarchical Modeling and Analysis for Spatial Data*, CRS Press & Co.

REFERENCES:

1. Maguire, D., M. Batty, and M. Goodchild. 2015. GIS, Spatial analysis, and modeling. ESRI Press (G70.212 .G584 2005)
2. Zeiler, M. 2010. Modeling Our World: The ESRI Guide to Geodatabase Design. Second Ed. ESRI Press, Redlands, California

OUTCOMES:

On successful completion of this course,

- Students will be able to apply the basic concepts of Conceptualize models as representations of real life systems with inputs, outputs, and processes.
- Students will have gained knowledge in spatial tools to make simulations and predictions of real life phenomena.
- Students will have synthesized knowledge about Apply, integrate, and develop models with geospatial data through a GIS.
- Students will have an overview of Evaluate models in terms of accuracy, sensitivity, and uncertainty.
- Students will have Use of a system-based approach for problem solving, with an emphasis on sustainability.

Deemed to be University u/s 3 of the UGC Act, 1956

REGULATIONS 2017

CURRICULUM AND SYLLABI

B.TECH.

ELECTRONICS AND COMMUNICATION ENGINEERING

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

VISION AND MISSION

VISION

Department of Electronics and Communication Engineering envisions to be a leader in providing state of the art education through excellence in teaching, training, and research in contemporary areas of Electronics and Communication Engineering and aspires to meet the global and socio economic challenges of the country.

MISSION

- The Department of Electronics and Communication Engineering endeavours to produce globally competent Engineers prepared to face challenges of the society.
- To enable the students to formulate, design and solve problems in applied science and engineering.
- To provide excellent teaching and research environment using state of the art facilities.
- To provide adequate practical training to meet the requirement of the Electronics & communication industry.
- To train the students to take up leadership roles in their career or to pursue higher education and research.

PROGRAMME EDUCATIONAL OBJECTIVES AND OUTCOMES

B.Tech. (Electronics and Communication Engineering)

PROGRAMME EDUCATIONAL OBJECTIVES

- To provide fundamental knowledge in Mathematics and Basic Sciences to solve problems in Electronics and Communication Engineering.
- To impart necessary knowledge and skills in the area of Microelectronics, Signal Processing, Telecommunication and Networking.
- To impart practical knowledge and skill sets with the state of the art industrial hardware and software tools to meet the industrial requirement.
- To provide knowledge in related disciplines of electronics engineering through elective courses to enable them to work in multidisciplinary areas.
- To train in soft skills to attain leadership roles in industries.

PROGRAMME OUTCOMES

On successful completion of the programme, the graduates will be able to:

- **Engineering knowledge:** Apply the knowledge of Mathematics, Science and Electronics & communication Engineering fundamentals to solve the complex engineering problems.
- **Problem analysis:** Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions using first principle of Mathematics, Electronics and Communication Engineering sciences.
- **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal and environmental considerations.
- **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.

- **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of and need for sustainable development.
- **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
- **Communication Systems:** Analyze and assess various aspects of communication systems and communication mediums for efficient utilization of resources.
- **Signal Processing:** Apply the concepts of signal processing to real world data for effective analysis and optimization of Information systems.
- **Electronic Systems:** Design and develop appropriate electronic subsystem to address the application needs of complex engineering problems.

General Elective

Group I Courses

(To be offered in V semester)

Sl. No.	Course Code	Course Title	Offering Department
1.	GECX101	Disaster Management	Civil
2.	GECX102	Total Quality Management	Mechanical
3.	GECX103	Energy Studies	Mechanical
4.	GECX104	Robotics	Mechanical
5.	GECX105	Transport Management	Automobile
6.	GECX106	Control Systems	EEE
7.	GECX107	Introduction to VLSI Design	ECE
8.	GECX108	Plant Engineering	EIE
9.	GECX109	Network Security	CSE
10.	GECX110	Knowledge management	CSE
11.	GECX111	Cyber security	IT
12.	GECX112	Genetic Engineering	LS
13.	GECX113	Fundamentals of Project Management	CBS
14.	GECX114	Operations Research	Mathematics
15.	GECX115	Nano Technology	Physics / Chemistry
16.	GECX116	Vehicle Maintenance	Automobile
17.	GECX117	Fundamentals of Digital Image Processing	ECE

Group II Courses

(To be offered in VII semester)

Sl. No.	Course Code	Course Title	Offering Department
1.	GECX201	Green Design and Sustainability	Civil
2.	GECX202	Appropriate Technology	Civil / Mechanical
3.	GECX203	Engineering System Modelling and Simulation	Mechanical
4.	GECX204	Value Analysis and Engineering	Mechanical
5.	GECX205	Industrial Safety	Mechanical
6.	GECX206	Advanced Optimization Techniques	Mechanical
7.	GECX207	Mat Lab Simulation	EEE
8.	GECX208	Embedded Systemsand its Applications	ECE
9.	GECX209	Usability Engineering	CSE
10.	GECX210	Supply Chain Management	CBS
11.	GECX211	System Analysis and Design	CA
12.	GECX212	Advanced Materials	Physics & Chemistry
13.	GECX213	National Service Scheme	School of Humanities
14.	GECX214	Automotive Pollution and Control	Automobile
15.	GECX215	Motor Vehicle Act, Insurance and Policy	Automobile
16.	GECX216	Principles of Communication Systems	ECE
17.	GECX217	Lean Management	Civil
18.	GECX218	Spatial Data Modeling & Analysis	Civil

SEMESTER I

MAC 1181	DIFFERENTIAL CALCULUS AND GEOMETRY	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- introduce eigen values and eigenvectors of matrix algebra.
- make the student knowledgeable in the area of Three Dimensional Analytical Geometry.
- demonstrate the application of Differential Calculus.
- familiarize the student with the functions of several variables.
- develop the use of ODE solvable techniques necessary for engineering applications.
- motivate the students with some basic engineering application problems in ODE.

MODULE I **MATRICES** **8+2**

Characteristic Equation- Eigenvalues and Eigenvectors of a real matrix – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton Theorem (without proof) – Orthogonal matrices – orthogonal transformations of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation.

MODULE II **THREE DIMENSIONAL ANALYTICAL GEOMETRY** **7+3**

Direction cosines and ratios – angle between two lines – equations of a plane – equations of a straight line, coplanar lines - shortest distance between skew lines - sphere – tangent plane – plane section of a sphere – orthogonal spheres.

MODULE III **DIFFERENTIAL GEOMETRY** **7+3**

Curvature – Cartesian and polar coordinates – centre and radius of curvature – circle of curvature – involutes and evolutes – envelopes.

MODULE IV **DIFFERENTIAL CALCULUS OF SEVERAL VARIABLES** **8+2**

Functions of two variables – partial derivatives – total differential – Implicit Functions – Jacobian - Taylor's series expansion – Optima of two variables – Lagrange's multiplier method.

MODULE V **ORDINARY DIFFERENTIAL EQUATIONS** **8+2**

Linear equations of second order with constant and variable coefficients – Simultaneous first order linear equations with constant coefficients – homogeneous equations of Euler's type – method of undetermined coefficients, method of variation of parameters

MODULE VI **APPLICATIONS OF ORDINARY DIFFERENTIAL EQUATIONS** **7+3**

Solution of Ordinary Differential Equation Related to Electric Circuits – Bending of Beams- Motion of a Particle in a resisting medium – Simple harmonic motion.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Ramana, B.V, "Higher Engineering Mathematics" Tata McGraw Hill Publishing Co. New Delhi, 2006.
2. Grewal B.S., "Higher Engineering Mathematics" (43rd edition), Khanna Publishers, New Delhi, 2012.
3. John W. Cell "Engineering Problems Illustrating Mathematics" Mc Graw Hill Publishing Co., New York 1943.

REFERENCES:

2. Kreyszig, E., "Advanced Engineering Mathematics", 10th edition, John Wiley and Sons (Asia) Pvt Ltd., Singapore, 2001.
3. Peter V. O'Neil, "Advanced Engineering Mathematics", 7th edition, Cengage Learning, 2011.
4. Dennis G. Zill, Warren S. Wright, "Advanced Engineering Mathematics", 4th edition, Jones and Bartlett publishers, Sudbury, 2011.
5. Alan Jeffrey, "Advanced Engineering Mathematics", Academic Press, USA, 2002.
6. Venkataraman, M.K., "Engineering Mathematics", Volume I, 2nd edition, National Publishing Co., Chennai, 2003.
7. James Stewart ".Calculus" (7th edition),Brooks/Cole cengage learning,UK

OUTCOMES:

After completing the course, student will be able to

- Understand the matrix techniques and compute eigen values and eigenvectors of a given matrix.
- Do the problems based on three dimensional analytic geometry.
- Apply differential calculus in engineering problems.
- Differentiate more than one variable and their applications.
- Solve the differential equations with constant coefficient and variable coefficient.
- Form and solve differential equations.

ENC 1181	ENGLISH	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To train students to use appropriate vocabulary in academic and technical contexts.
- To facilitate students to speak effectively while exchanging ideas and making presentations.
- To develop students' listening skill for comprehending and analyzing information.
- To develop their reading skill through sub skills like skimming , scanning and critical reading of a text.
- To sharpen their academic writing skills.
- To expose them to the correct usage of language and help them to apply that knowledge appropriately.

MODULE I **8**

L: Listening for general information

S : Self Introduction, Introducing one another.

R: Predicting the content

W: Paragraph Writing

Language Focus: Affixes, Simple Present tense , Connective & Prepositions.

MODULE II **8**

L: Listening for specific information (from dialogues)

S:Exchanging opinion.

R: Skimming technical Passages

W: Argumentative Writing (using the concept of Flipped Learning), Letter to the Editor.

Language Focus: Idioms, use of Modals, Simple Past tense & use of "Wh" and question tags.

MODULE III **7**

L: Learning the ways of describing images and presenting specific information (focusing on note making)

S: Making Presentations using visuals.

R : Scanning short texts for gist of information

W: Letter of Invitation, Expository Writing

Language Focus: Homophones, Homographs, Simple Future & Collocations.

MODULE IV **7**

L: Understanding prepared presentation techniques through videos

S: Short Presentations.

R: Reading for coherence and cohesion

W: Letter seeking permission for Industrial Visit

Language Focus: S-V agreement, Euphemism

MODULE V **8**

L : Understanding Non- Verbal Communications while listening to narration of incidents.

S: Narrating an expereince

R: Inferential Reading

W: Process Description – Transcoding a Flow chart.

Language Focus: Interchange of Active & passive voice, Impersonal Passive voice.

MODULE VI **7**

L: Learning Story telling techniques (stories & visuals) through audio files

S: Discussion in groups

R: Reading for critical appreciation

W: Developing an idea, Slogan writing, Interpreting a Bar Chart.

Language Focus: If clause and phrasal verbs.

TOTAL HOURS :45

4. Sen, Leena. (2004) Communication Skills. Prentice Hall, New Delhi.
5. Matt Firth, Chris Sowton et.al. (2012). Academic English: An Integrated Skills Course for EAP. Cambridge University Press, Cambridge.

OUTCOMES:

After completion of the course, students will have the ability to

- Demonstrate their range of vocabulary in academic and technical contexts
- Exchange ideas and make presentations
- Comprehend and respond appropriately to listening tasks.
- Read a text efficiently and process information.
- Create and draft different kinds of academic documents
- Communicate effectively using grammatically correct expressions.

ISC1181	ARABIC	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To read and write in Arabic language.
- To learn vocabulary of different fields
- To develop situational communication skills.

MODULE I PREPARATORY ARABIC **7**

Introducing Arabic Alphabets.
Listening and Reading.
Audio & Video aided listening, Tajweed listening,
Writing Arabic Alphabets (connected & unconnected).
Introducing words.
Reading simple sentences.
Learning names of the things in and around the class room.
Exercises.

MODULE II FUNCTIONAL ARABIC **7**

Listening Arabic texts, stories and action verbs
Communicating Simple sentences.
Jumla' Ismiyya and Jumla' Fi'liyya
Situational Conversation:
Greetings, Introduction.
Classroom, College, Picnic.
Dining and Kitchen.
Reading skills.
Exercises

MODULE III FUNCTIONAL ARABIC **8**

Implication of effective listening.
Audio aids.
Writing Simple sentences.
Communicating ordinal and cardinal numbers.
Situational communication:

Playground, library.
Forms of plural – Sample sentences.
Introduction to tenses.
Exercises.

MODULE IV FUNCTIONAL ARABIC 8

Communication:
Family, travel
Market, Prayer hall
Writing skills:
Note making.
Sequencing of sentences.
Developing answers from the questions.
Exercises.

MODULE V TECHNICAL ARABIC 8

Importance of technical communication.
Reading and writing skills.
Audio & Video aided listening.
Introduction to Arabic terms related to administration.
Situation communication:
Air travel, Office administration, passport, visa.
Exercises

MODULE VI TECHNICAL ARABIC 7

Situation communication:
Contractual work, machineries and equipments..
Computer, internet browsing.
Banking,
Exercises.

TOTAL HOURS :45

TEXT BOOKS:

1. Arabic for professionals and employees, Kilakarai Bukhari Aalim Arabic College, Chennai, India, 2013.

REFERENCES:

1. Arabic Reader for Non Arabs (Ummul Qura University, Makkah), Kilakarai Bukhari Aalim Arabic College, 2005.

OUTCOMES:

On successful completion of the course, the student will be able to:

- Write correct sentences in Arabic.
- Communicate in Arabic at primary level in working situations in the fields of engineering and administration.

LNC1181	MANDARIN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To improve the proficiency of students in Mandarin language.
- To develop their knowledge of vocabulary.
- To train them in using appropriate grammatical forms during communications.
- To empower them for successful communication in social and academic contexts.
- To make them appreciate the language usage in real life situations.

MODULE I **8**

· General Introduction to Chinese • Pinyin and Tones • Introduction to the Writing System: basic strokes and stroke order · Numbers 1-100, song · Days of the Week · Months of the Year

MODULE II **8**

· Chinese names and related culture · Chinese family structures and values · Greetings

· Introducing Yourself · Family members · Occupations

MODULE III **7**

· Languages and Nationalities · Daily Routine · Chinese breakfast · Negative Sentences and Interrogative Sentences · Asking for Personal Information · The Verb *shi* and Basic Sentence Structures

MODULE IV **7**

· Answering an Affirmative-negative Question · Food and drinks · Transportation · Likes and dislikes · Adverbs *bu*, *jiu* and *dou* · Verb-absent Sentences

MODULE V **8**

·*Jisui* and *duoda* Questions · S+V+O Construction · Routines and Daily Activities ·*Haishi* Questions · Modal Verbs · Hobbies and Habits

MODULE VI **7**

· Making Suggestions with *haoma* ·Colors · Clothing · Body parts · Talking about Likes and Dislikes · Measurement Words in Chinese

TOTAL HOURS :45

TEXT BOOKS:

1.Ma, Yanmin, and Li, Xinying. *Easy Steps to Chinese, Vol*. *1 Textbook*. Beijing: Beijing Language and Culture University Press, 2006. Print.

2. Ma, Yanmin, and Li, Xinying. *Easy Steps to Chinese, Vol. 1 Workbook*. Beijing: Beijing Language and Culture University Press, 2006. Print.

OUTCOMES:

On completion of the course, students will be able to

- Exhibit proficiency in Chinese Language.
- Use vocabulary in appropriate contexts.
- Use appropriate grammatical forms effectively.
- Use the language in social and academic contexts.
- Appreciate the use of language forms.

LNC1182	GERMAN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To improve the proficiency of students in German language.
- To create awareness of using vocabulary among students.
- To expose them to correct grammatical forms of the language.
- To empower them for successful communication in social and academic contexts.

MODULE I **8**

Introduction to German alphabets, phonetics and pronunciation- Introducing themselves and others using simple sentences and answer to some basic personal questions-: Introduction to different types of articles and verbs, Nouns

MODULE II **8**

Understanding and responding to everyday queries like instruction, questions, -number & gender, pronouns, present and past tense.

MODULE III **7**

Short telephone messages, requests etc., if spoken slowly and clearly-- Detailed overview of articles, adjectives with/without articles, Prepositions

MODULE IV **7**

Ask and giving directions using simple prepositions- Ability to fill basic information on forms while registering for courses / classes.

MODULE V **8**

Ability to extract and understand relevant information in a public announcement, broadcast, newspaper, radio etc-- dative & accusative

MODULE VI **7**

Ability to describe about people, work, immediate environment, education and other topics related to personal needs in a concise manner-- Understanding of matters that are familiar and are encountered regularly like instances at school,

work, at public places, places of leisure etc.

5. An Introduction to the German Language and Culture for Communication, Updated Edition Lovik, Thomas A., J. Douglas Guy & Monika Chavez. Vorsprung -. New York, Houghton Mifflin Company, 1997/2002. ISBN 0-618-14249-5.

OUTCOMES:

On completion of the course, students will be able to

- Show their proficiency in German Language.
- Use appropriate vocabulary in real life contexts.
- Use appropriate grammatical forms while communicating with people.
- Effectively use the language in social and academic contexts.

LNC1183	JAPANESE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To train students to use appropriate vocabulary in academic and technical contexts.
- To facilitate students to speak effectively while exchanging ideas and making presentations.
- To develop their reading skill through sub skills like skimming, scanning and critical reading of a text.
- To sharpen their academic writing skills.
- To expose them to the correct usage of language and help them to apply that knowledge appropriately.

MODULE I **7**

Introduction of the Japanese writing system, i.e. *Hiragana*, *Katakana* and *Kanji*, word-building, writing foreign names and loan words in Katakana.

MODULE II **8**

Oral practice of pronunciation and intonation of Japanese sounds, Japanese greetings, self introduction, identifying things, time of the day, calendar; counting using Japanese numerical classifiers; describing things;

MODULE III **7**

Making comparisons; talking of daily activities, kinship terms used for address and reference, seasons, giving and receiving, shopping; making requests, talking of one’s likes and dislikes.

MODULE IV **8**

Extensive practice of basic patterns at the lower intermediate level through drills and exercises.

MODULE V **7**

Comprehension of passages in simple Japanese and writing of composition in Japanese applying lower intermediate grammatical patterns.

MODULE VI **8**

Diverse texts based on Japanese culture, customs, history, food habits, and science etc, for the development of communicative competence of students; skimming, scanning of texts with emphasis on advanced sentence patterns, grammatical structures and idiomatic phrases, reading and writing of approximately

5. Chukyu Nihongo, Tokyo Gaikokugo Daigaku; Nihongo II, Kokusaigakuyukai, and other supplementary material.

OUTCOMES:

After completion of the course, students will have the ability to

- Demonstrate their range of vocabulary in academic and technical contexts
- Exchange ideas and make presentations
- Comprehend and respond appropriately to listening tasks.
- Read a text efficiently and process information.
- Create and draft different kinds of academic documents
- Communicate effectively using grammatically correct expressions.

PHC 1181	PHYSICS	L	T	P	C
		3	0	2	4

OBJECTIVES:

To make students conversant with the

- basic concepts of crystal physics and its structures
- production and applications of ultrasonic waves
- study of thermal conductivities of good and bad conductors
- phenomenon of wave optics and its applications
- principle of fibre optic communication and its applications to sensors
- wave mechanics principle and its applications in electron microscopy
- green energy physics and its environmental impacts to society

MODULE I CRYSTAL PHYSICS **8**

Crystalline and amorphous solids – Unit Cell – Seven Crystal Systems – Bravais Lattice – Miller Indices – Interplanar Spacing – Characteristics of Unit Cell - Calculation of Number of atoms per unit cell, Atomic Radius, Coordination Number and Packing Factor for SC, BCC, FCC and HCP and Diamond structures –Defects in crystals-Point defects –Edge and screw dislocations and their significance - Surface Defects.

MODULE II ULTRASONICS AND THERMAL PHYSICS **8**

Introduction to Ultrasonics - Properties - Production methods - Magnetostriction Oscillator method- Piezoelectric Oscillator method – Detection of Ultrasonics – Thermal method – Piezoelectric method – Kundt's tube method – Applications of Ultrasonics – Acoustic Grating – SONAR – Depth of sea – Velocity of blood flow, Ultrasonic Flaw detector (qualitative).

Transmission of heat – Conduction, Convection and Radiation – Thermal Conductivity of good Conductor – Forbe's method- Thermal Conductivity of bad Conductor – Lee's Disc method.

MODULE III APPLIED OPTICS **8**

Interference – Air Wedge – Michelson's Interferometer – Determination of wavelength of light and thickness of thin transparent sheet.

Introduction to Laser – Characteristics of Laser – Spontaneous and Stimulated Emissions – Einstein's Coefficients - Population inversion – Pumping Mechanism – Laser Action – Types of Laser: He-Ne laser, CO2 laser and Nd:YAG laser - Applications : Laser Materials Processing .

MODULE IV FIBRE OPTICS **7**

Optical fibre – Principle and propagation of light in optical fibre – Numerical aperture and

acceptance angle – Types of optical fibres – Attenuation – Absorption, Scattering losses, Bending losses and Dispersion in Optical fibres – Fiber Connectors and Couplers - Applications – Fibre optic communication system (block diagram only)- Fibre optic sensors - displacement and pressure sensors (qualitative) - Medical endoscope.

MODULE V QUANTUM MECHANICS 7

Black body radiation – Planck's theory of radiation – Deduction of Wien's displacement law and Rayleigh – Jean's law from Planck's theory –Dual nature of matter – de Broglie's wavelength- Physical significance of wave function – Schrodinger wave equation – Time independent and time dependent wave equation – Particle in one dimensional box – Harmonic oscillator(qualitative).

MODULE VI RENEWABLE ENERGY SOURCES 7

Present Energy sources and sustainability - Solar energy - Solar photovoltaics - Solar cells – Bioenergy - Biomass – production of liquid fuels from biomass – Wind energy – Wind turbines – energy and power from wind turbines - Geothermal energy - Ocean energy: Wave energy – Wave energy conversion devices – Tidal energy – Tidal power basics – power generation – Tidal energy potential – Environmental benefits and impacts of renewable energy sources

PRACTICALS

1. Determination of Velocity of Ultrasonic waves in a given liquid using Ultrasonic Interferometer.
2. Determination of wavelength of ultrasonic waves using Kundt's tube method.
3. Determination of thickness of a thin wire using Air Wedge method.
4. Determination of wavelength of light using spectrometer diffraction grating.
5. Determination of angle of divergence of a laser beam using He-Ne laser.
6. Determination of particle size of lycopodium powder using semiconductor laser.
7. Determination of wavelength of laser light using semiconductor laser diffraction.
8. Determination of Acceptance angle and Numerical Aperture using fiber optic cable.
9. Determination of thermal conductivity of a good conductor by Forbe's method.
10. Determination of thermal conductivity of a bad conductor by Lee's disc method.
11. Determination of solar cell characteristics.

L – 45; P – 30; TOTAL HOURS – 75

6. Godfrey Boyle, “Renewable Energy: Power for sustainable future”, 2nd edition, Oxford University Press, UK, 2009.

OUTCOMES:

At the end of the course, students will be able to

- understand the different types of crystal structures
- apply the concept of ultrasonic principle in engineering and medical field
- calculate thermal conductivities of good and bad conductors
- differentiate the various laser systems and its applications in engineering and medical field
- apply the principle of fibre optics for communication and sensor applications
- formulate wave mechanics principle for applications in electron microscopy
- Correlate the different renewable energy sources for societal needs.
- To complement the knowledge acquired in the theory class.
- To correlate the experimental results for application.

CHC1181	CHEMISTRY	L	T	P	C
		3	0	2	4

OBJECTIVES:

The students should be conversant with

- the basic problems like hardness, alkalinity, dissolved oxygen associated with the water used for domestic and industrial purpose and treatment process involved.
- the synthesis, properties and applications of nanomaterials.
- the importance of renewable energy sources like solar, wind, biogas, biomass, geothermal, ocean and their limitations.
- the basic analytical techniques like UV-Visible, FT-IR, NMR, AAS, AES, Circular Dichroism and XRD etc.
- photochemistry concepts related to physical processes and chemical reactions induced by photon absorption and their applications.
- basic principles of electrochemistry, cell construction and evaluation and to understand general methodologies for construction & design of electrochemical cell

MODULE I WATER TECHNOLOGY 9

Impurities present in water, hardness : types of hardness, demerits of hard water in boilers, estimation of hardness by EDTA method (problems) – alkalinity : estimation of alkalinity (problems) – dissolved oxygen: estimation of dissolved oxygen – conditioning methods : external treatment method: – lime soda and zeolite process (principle only), Ion exchange process – Internal treatment : colloidal, carbonate, phosphate and calgon methods – drinking water: standards (BIS), treatment of domestic water {screening, sedimentation, coagulation, filtration, disinfection }– desalination: electrodialysis, reverse osmosis.

MODULE II NANOCHEMISTRY 6

Introduction – distinction between molecules, bulk materials and nanoparticles – classification based on dimension with examples – synthesis (top-down and bottom-up approach} : sol-gel, thermolysis (hydrothermal and solvothermal), electrodeposition, chemical vapour deposition, laser ablation – properties and applications (electronic, magnetic and catalytic) – risk factors and future perspectives.

MODULE III ENERGY SOURCES 8

Energy: past, today, and future – a brief history of energy consumption – present energy scenario of conventional and renewable energy sources – renewable energy : needs of renewable energy, advantages and limitations of renewable energy – solar energy: basics, solar energy in the past , photovoltaic, advantages and disadvantages – bioenergy: conversion, bio degradation, biogas generation, biomass gasifier, factors affecting biogas generation, advantages and disadvantages – geothermal energy: geothermal resources (hot dry rock and magma resources, natural and artificial), advantages and disadvantages – wind energy: wind resources, wind turbines, advantages and disadvantages – ocean energy: wave energy, wave energy conversion devices, ocean thermal energy, advantages and disadvantages.

MODULE IV PHOTOCHEMISTRY 7

Introduction: absorption and emission, chromophores, auxochromes – laws of photochemistry : Grotthus-Draper law, Stark Einstein law – quantum yield (problems) – photo physical processes : fluorescence and phosphorescence - Jablonski diagram (electronic states and transitions) – quenching, annihilation – photosensitization: principle and applications – chemiluminescence, bioluminescence.

MODULE V ANALYTICAL TECHNIQUES 7

Spectroscopy: electromagnetic radiation and spectrum – types of transitions – types of spectra (atomic and molecular with their chemical usefulness) – Beer-Lamberts law (problems) – principles, instrumentation and applications of: Colourimetry – UV-Vis spectrophotometer – atomic absorption spectroscopy – atomic emission spectroscopy – principles and applications of: IR, NMR, mass and X-ray diffraction analysis.

MODULE VI ELECTROCHEMISTRY 8

Electrochemistry - types of electrodes (principle and working) : gas (SHE), metal/metal ion electrode, metal-metal insoluble salt (calomel electrode), ion-selective (glass electrode and fluoride ion selective electrode) – Electrolytic and galvanic cells, construction of cell, EMF measurement and applications (problems), standard cell (Weston-cadmium), reversible and irreversible cell, concentration cell. Determination of fluoride ion using fluoride ion selective electrode – Chemically modified electrodes (CMEs) : concept, approaches and applications.

PRACTICALS

1. Estimation of hardness in given water sample.
2. Estimation of the alkalinity of the given water sample.
3. Estimation of strong acid by conductometry.
4. Estimation of Fe^{2+} present in the given sample by potentiometry.
5. Verification of Beer-Lamberts law and estimation of Cu^{2+} present in unknown sample.
6. Estimation of sodium and potassium present in the given sample by flame photometry.
7. Determination of molecular weight and degree of polymerisation of a polymer by viscosity method.
8. Synthesis of thermosetting polymer.

7. Principles of molecular photochemistry: An introduction, Nicholas J. Turro, V.Ramamurthy and Juan C. Scaiano, University Science Books, Sausalito, CA, 2009.

OUTCOMES:

The students will be able to

- solve problems related to hardness, alkalinity, dissolved oxygen associated with the water and describe the treatment processes.
- classify nanomaterials and apply the nanochemistry approach to synthesize the

nanomaterials.

- explain the principle and enumerate the advantages and disadvantages of various renewable energy sources.
- state the principle and illustrate the instrumentation of various analytical techniques.
- apply the concepts of photochemistry to elaborate various photo-physical and photochemical reactions.
- construct a electrochemical cell and describe the various types of electrodes and determine the fluoride content.

GEC 1101	ENGINEERING GRAPHICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To introduce the students of all engineering programs, the basic concepts of engineering drawing, which is the basic communication medium for all engineers
- To provide practical exposure on important aspects like drawing analytic curves, orthographic projections, section of solids, development of surfaces, isometric projection, perspective projection and free hand drawing.
- To introduce computerized drafting.

MODULE I BASICS AND ENGINEERING CURVES **10**

Drawing instruments, dimensioning, BIS conventions, types of lines, simple geometric constructions.

Conic sections: ellipse, parabola, hyperbola.

Special curves: cycloid, epicycloid, hypocycloid and involutes.

MODULE II ORTHOGRAPHIC PROJECTION **8**

Orthographic projection – first angle, second angle, third angle and fourth angle projections –setup - assumptions, principle. Free hand sketching of orthographic views of simple machine parts as per first angle projection. Orthographic projection of points in all quadrants. Some commands and demonstration of drafting packages.

MODULE III PROJECTION OF STRAIGHT LINES AND PLANES **10**

Projection of straight lines in first quadrant – true length and true inclinations – Rotating line and trapezoidal methods –traces of straight line.

Projection of plane lamina in first quadrant and its traces

MODULE IV PROJECTION OF SOLIDS **10**

Projection of solids in first quadrant: Axis inclined to one reference plane only- prism, pyramid, cone, cylinder – change of position and auxiliary projection methods.

MODULE V SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES **12**

Section of solids: prism, pyramid, cone, cylinder, and sphere – sectional view – true shape of section Solids in simple position and cutting plane inclined to one reference plane only.

Development of surface of truncated solids: prism, pyramid, cone cylinder – frustum of

cone, pyramid and simple sheet metal parts.

MODULE VI PICTORIAL PROJECTIONS 10

Isometric projection: Isometric scale – isometric axes- iso sheet - Isometric projection and view of prism, pyramid, cylinder, cone, frustums, truncated solids and simple products
Perspective projection: station point – vanishing point – Perspective projection and views of prism, pyramid, cylinder and frustums by Visual ray method.

L – 30; P – 30; TOTAL HOURS – 60

TEXT BOOKS:

1. N.D. Bhatt, 'Engineering Drawing' Charotar Publishing house, 53rd Edtion, (2014)

REFERENCES:

1. K.V. Natarajan, 'A text book of Engineering Graphics', Dhanalakshmi publishers, Chennai. (2009)
2. Venugopal. K, and V. Prabhu Raja, Engineering Graphics, New Age International (P) Ltd., Publication, Chennai. (2011)

OUTCOMES:

- Students should be able to read the specifications and standards of technical drawing and able to draw conic sections and special curves.
- Students should be able to understand the insight of orthographic projection and to draw the various views of orthographic projection of a point and various components.
- Students should be able to draw the orthographic views of straight lines and plane figures.
- Students should be able to draw the orthographic views of simple solids.
- Students should be able to draw the sections of solids and development of solid surfaces.
- Students should be able to draw the isometric and perspective projection of simple solids and components.

GEC 1102	ENGINEERING DESIGN	L	T	P	C
		2	0	0	2

OBJECTIVES:

- To understand the role of design in Engineering
- To understand the basic design concepts
- To understand the role of innovation in design

MODULE I DESIGN AS A CENTRAL ACTIVITY IN ENGINEERING 08

Product design – products and processes – product design methodology Design of systems; Software design

MODULE II NEED ANALYSIS AND CONCEPT DEVELOPMENT 07

Voice of customers – product specification - need analysis Bench marking Product architecture – concept generation and evaluation;

MODULE III CASE STUDIES IN ENGINEERING DESIGN 08

Product design – process design; system design; software design -Ergonomics – usability

MODULE IV INNOVATION AND DESIGN 07

Role of innovation in Engineering – incremental changes and systemic changes; scientific approach to driving innovation – case studies.

TOTAL HOURS – 30

REFERENCES:

5. Navi Radjou, Jaideep Prabhu and Simone Ahuja, “Jugaad Innovation”,

Published by Random House India, 2012.

OUTCOMES:

The students will be able to

- Apply the basic knowledge of design in engineering products / process / service.
- Analyse the problems and give innovative solutions.
- Correlate the basic knowledge of design in the real world problems.
- Apply innovative approaches to engineering design.

GEC1103	BASIC ENGINEERING PRACTICES LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To provide a practical exposure to basic engineering practices like carpentry, fitting, plumbing, welding and making of simple electrical and electronic circuits
- To have an understanding on the use of various tools, instruments and methods
- To enable the students to appreciate the practical difficulties and safety issues

CIVIL ENGINEERING PRACTICE

1. Study of plumbing in general household and industrial systems
2. Making a small window frame with Lap and Mortise & Tenon Joints
3. Introduction to power tools

MECHANICAL ENGINEERING PRACTICE

1. Fabrication of a small Table frame with Butt, Lap and Fillet Joints
2. Machining of a simple component like a table weight using lathe
3. Mold preparation for simple component

ELECTRICAL ENGINEERING PRACTICE

1. Comparison of incandescent, Fluorescent, CFL and LED lamps.
2. Study of Protection Circuits (small relay, fuse, MCB, HRC, MCCB, ECCB).
3. Familiarization of households Electrical Gadgets (Iron Box, Wet Grinder).
4. Understanding of Domestic and Industrial wiring.
5. Earthing and its significance.
6. Troubleshooting in Electrical Circuits.
7. Study of inverter fed UPS/Emergency lamp

ELECTRONICS ENGINEERING PRACTICE

1. Identifications symbolic representation of active and passive electronic components
2. Soldering and tracing of electronic circuits and checking its continuity
3. Assembling of A.C. to D.C, D.C to A.C. Circuits in bread Board and Mini

project.

TOTAL HOURS – 30

OUTCOMES:

Upon the completion of the course, students should be able to

- Appreciate the practical skills needed even in making of simple objects, assemblies and circuits
- Attend minor defects especially in items used in day to day life
- Aware of the safety aspects involved in using tools and instruments

GEC 1104	COMPUTER PROGRAMMING I	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To identify the hardware and software components of the computer.
- To know the basic concept of operating system and get knowledge about different operating systems.
- To learn various database concepts and operations
- To develop efficient algorithms for solving a problem.
- To implement the algorithms in C language.
- To use arrays in solving problems.

MODULE I COMPUTER FUNDAMENTALS **7**

Introduction -. Number System - Planning the computer program - Computer Software - Basic operating system concepts - Database Operations

MODULE II PROGRAMMING IN C **8**

Introduction to C Programming Language – Operators - Control statements -Iterative statements - Arrays.

LIST OF EXPERIMENTS:

1. Computer organization –Hardware in a typical computer Identification – Booting-error messages and what it means
2. Types of Operating systems – Windows and Linux
3. Structure of a basic program - Hello world program – Debugging it
4. Data types: Type conversions
5. Input / Output: Formatted functions – Unformatted functions – Library functions
6. Properties of operators – Priority of operators – Arithmetic relational logical and bitwise operators
7. If – if else- nested if else- goto- switch case – nested switch case – for loops – nested for loops – while loop – do-while loop – break and continue statement
8. Arrays – Operation with arrays
9. Sorting and searching.

L – 15; P – 30; TOTAL HOURS – 45

REFERENCES:

1. Ashok N Kamthane, “Computer Programming”, Pearson Education, 2nd Edition, ISBN 13: 9788131704370, 2012

2. Paul J. Deitel, Deitel & Associates, “C How to Program”, Pearson Education, 7th Edition, ISBN-13: 978-0132990448, 2012

OUTCOMES:

Students who complete this course will be able to

- Recognize Modular design, logic flow, data abstraction
- Analyze the working of the programming constructs, functions, and I/O.
- Write down programs for sorting and searching algorithms
- Write down programs developing cycle for different applications
- Debug the programs and solve some practical problems in programming
- Develop programs using arrays.

SEMESTER II

MAC 1281	ADVANCED CALCULUS	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- train the students in solving problems using multiple integration.
- provide knowledge in using special functions to find out the area and volume of a region.
- acquire knowledge in tangent and normal vectors.
- gain knowledge in finding the areas of a curve and surface using vector integration.
- learn about the analytic functions and their properties along with bilinear transformation.
- know complex integration using Cauchy's theorems.

MODULE I MULTIPLE INTEGRATION AND ITS APPLICATIONS 8+2

Multiple integrals– Cartesian and Polar coordinates – change of order of integration – Multiple integral to compute area and volume.

MODULE II TRANSFORMATION OF COORDINATES AND SPECIAL FUNCTIONS 7+3

Change of variables between Cartesian, polar, cylindrical and spherical coordinates - Beta and Gamma functions – Properties and applications.

MODULE III VECTOR DIFFERENTIATION 7+3

Operations on vectors – Scalar Product, Vector Product, Projection of Vectors - Angle between two vectors - Gradient, divergence and curl

MODULE IV VECTOR INTEGRATION 8+2

Line, surface and volume integrals – Green's Theorem, Gauss Divergence Theorem and Stokes Theorem (statement only) – verification and evaluation of integrals.

MODULE V ANALYTIC FUNCTION 8+2

Analytic function - Necessary and Sufficient condition (statement only) – Cauchy-Riemann equations in polar coordinates - properties of analytic function – determination

of analytic function – conformal mapping (w = z+a, az and 1/z) and bilinear transformation.

MODULE VI COMPLEX INTEGRATION **7+3**

Statement and application of Cauchy's integral theorem – Cauchy's integral formula – Taylor's series and Laurent's series expansion – singularities - classification – residues - Cauchy's residue theorem – contour integration – Unit circle and semi circular contours (excluding poles on the real axis).

6. Venkataraman, M.K., "Engineering Mathematics", Volume 2, 2nd edition, National Publishing Co., Chennai, 2003.
7. James Stewart ".Calculus" (7th edition),Brooks/Cole cengage learning,UK.

OUTCOMES:

After completing the course, student will be able to

- compute the area and volume using multiple integrals.
- apply special functions to solve integration problems.

- apply differentiation in scalar and vector fields.
- find area and volume of a region using vector integration.
- verify analyticity, conformity and bilinearity of complex functions.
- evaluate complex integrals.

GEC 1211 BASIC ENGINEERING MECHANICS

L	T	P	C
3	1	0	4

OBJECTIVES:

- To impart knowledge about the basic laws of statics and dynamics and their applications in problem solving
- To acquaint both with scalar and vector approaches for representing forces and moments acting on particles and rigid bodies and their equilibrium
- To give on exposure on inertial properties of surfaces and solids
- To provide an understanding on the concept of work energy principle, friction, kinematics of motion and their relationship

MODULE I VECTOR APPROACH TO MECHANICS 07

Introduction - Units and Dimensions- Vectors – Vectorial representation of forces and moments –Vector Algebra and its Physical relevance in Mechanics - Laws of Mechanics – Parallelogram and triangular Law of forces -Lame's theorem, Coplanar Forces – Resolution and Composition of forces- Equilibrium of a particle.

MODULE II EQUILIBRIUM OF PARTICLE 06

Forces in space - Equilibrium of a particle in space - Equivalent systems of forces – Principle of transmissibility – Single equivalent force

MODULE III EQUILIBRIUM OF RIGID BODY 06

Free body diagram – Types of supports and their reactions – requirements of stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis – Vectorial representation of moments and couples – Scalar components of a moment – Varignon's theorem - Equilibrium of Rigid bodies in two dimensions –Examples

MODULE IV PROPERTIES OF SURFACES 08

Determination of Areas – First moment of area and the Centroid of sections – Rectangle, circle, triangle from integration – T section, I section, Angle section, Hollow section by using standard formula – second and product moments of plane area – Physical relevance - Rectangle, triangle, circle from integration - T section, I section, Angle section, Hollow section by using standard formula – Parallel axis theorem and perpendicular axis theorem – Polar moment of inertia- Mass moment of Area

MODULE V FRICTION 08

Introduction to friction- types of friction- Laws of Coloumb friction- Frictionalforce – simple contact friction – Rolling resistance –ladder friction

MODULE VI LAWS OF MOTION 10

Review of laws of motion – Newton's law – Work Energy Equation of particles– Impulse and Momentum – Impact of elastic bodies.

L – 45; T – 15; TOTAL HOURS – 60

REFERENCES:

3. Irving H. Shames, Engineering Mechanics – Statics and Dynamics, IV Edition Pearson Education Asia Pvt. Ltd., 2003.

OUTCOMES:

On completion of this course students should be able

- Analyse and resolve forces, moments and solve problems using various principles and laws of Mechanics
- Apply the concept of equilibrium to particles and solve problems
- Apply the concept of equilibrium to rigid bodies and solve problems
- Analyse and determine the properties of surfaces
- Analyse and evaluate the fractional forces between the bodies
- Apply the laws of motion in solving dynamics problems

GEC 1212	ENVIRONMENTAL STUDIES	L	T	P	C
		2	0	0	2

OBJECTIVES:

The student will be conversant with the

- various natural resources, availability, utilisation and its current scenario
- different ecosystems, energy transfer, values, threats and conservation of biodiversity
- levels of different pollutants and its impact and the causes and effects of natural disasters
- impacts of human population, impact assessment, human rights and environmental acts and sustainable development

MODULE I NATURAL RESOURCES 8

Land resources: land degradation, soil erosion and desertification - Forest resources: use and over-exploitation, deforestation - Water resources: use and over-utilisation of surface and ground water, conflicts over water (inter-state and international), dams (benefits and problems), water conservation (rainwater harvesting and watershed management) - Mineral resources: use and exploitation, environmental effects of extracting and using mineral resources, mining - Food resources: world food problems, changes in land use by agriculture and overgrazing, modern agriculture and its effects, fertilizer and pesticide problems, water logging and salinity - Energy resources: increasing energy needs, renewable and non-renewable, use of alternate energy sources.

MODULE II ECOSYSTEM AND BIODIVERSITY 8

Ecosystem- energy flow in the ecosystem - food chains, food webs and ecological pyramids - characteristics, structure and function of (a) Terrestrial ecosystems (forest, grassland, desert) and (b) Aquatic fresh water ecosystems (pond, lake, river) (c) Aquatic salt water ecosystems (ocean, estuary) - ecological succession.

Biodiversity - genetic, species and ecosystem diversity – hot-spots of biodiversity – biogeographic classification of India - endangered, endemic, extinct and invasive species of India - red data book - values of biodiversity: consumptive, productive, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - conservation of biodiversity: in-situ and ex-situ conservation of biodiversity

MODULE III ENVIRONMENTAL POLLUTION AND NATURAL DISASTER **8**

Definition, cause, effects and control measures of (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards - ill-effects of fireworks and upkeep of clean environment - solid waste management: types (urban, industrial, biomedical and electronic wastes), collection, processing and disposal (incineration, composting and land-fill) - natural disaster and management: flood, cyclone, drought, landslide, avalanche, volcanic eruptions, earthquake and tsunami.

MODULE IV HUMAN POPULATION, HEALTH AND SOCIAL ISSUES **6**

Population and population growth, population variation among nations, population explosion, family welfare programme.

Human health: air-borne, water borne diseases, infectious diseases, risks due to chemicals in food and environment.

Sustainable development - environmental legislation and laws: water act, air act, wildlife protection act, forest conservation act, environment protection act - environmental impact assessment, steps in EIA - human rights - women and child welfare.

Case studies related to current situation

TOTAL HOURS – 30

TEXT BOOKS:

1. Erach Bharucha, Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education for University Grants Commission, Orient Blackswan Pvt Ltd, Hyderabad, India, 2013.

3. Miller T.G. Jr., Environmental Science, Wadsworth Publishing Co. Boston, USA, 2016.

OUTCOMES:

The student will be able to

- predict the scenario of various natural resources and suggest remedies to curb the exploitation of these resources.
- identify food chain and web and its role in various ecosystems, assess the impacts on biodiversity and provide solutions to conserve it.
- analyse the impacts of pollutants in the environment and propose suitable method to alleviate the pollutants and the natural disasters.
- assess on the impact of human population and the health related issues and the ethics to be followed for sustainable life.

GEC 1213	COMPUTER PROGRAMMING II	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To provide knowledge about the benefits of Object Oriented Programming over Procedure oriented programming.
- To learn various File operations
- To expose fundamental concepts of object-oriented programming in classes, invoking methods and functions.
- To prepare students to get full use of code reusability using object oriented programming.
- To implement the basic concepts of object oriented programming using C++concepts.
- To focus on solving problems based on analyzing, designing and implementing programs in C and C++.

MODULE I PROGRAMMING IN C 7

Functions - Storage Classes - Structures and Unions – Pointers -Self Referential Structures and Linked Lists - File Processing.

MODULE II PROGRAMMING IN C++ 8

Programming in C++ - Overview of OOP in C – Inheritance - Polymorphism - Type Casting – Exceptions.

LIST OF EXPERIMENTS:

1. Functions
2. One dimensional arrays, Pointers
3. Recursion
4. Multi dimensional arrays, Linked lists.
5. Operating on Files.
6. Simple C++ program with Control statements.
7. Getting input from user console.
8. Classes, Object and Constructors.
9. Method overloading.
10. Inheritance

L – 15; P – 30; TOTAL HOURS – 45

REFERENCES:

OUTCOMES:

Students who complete this course will be able to

- Develop efficient algorithms for solving problems
- Handle files in C
- Use simple data structures like arrays and linked lists in solving problems.
- Write simple programs using concepts of object oriented programming.
- Implement algorithms in C++ Language.
- Demonstrate the Object Oriented Programming concepts applied in networking, web development and Database applications.

ECC1201 CIRCUIT AND NETWORK ANALYSIS L T P C

2 0 2 3

OBJECTIVES:

- To explicate the fundamental laws and theorems of electrical circuit and network.
- To familiarize with the concepts of steady state and transient analysis in RL, RC and RLC circuits.
- To learn the significance of two port networks

PREREQUISITES:

- Basic idea about active and passive elements
- Mathematical knowledge especially in linear algebra and Matrix theory
- Basic knowledge about voltage, current and power.

MODULE I BASICS OF CIRCUITS AND NETWORKS 5+4

Ideal sources – Dependent and Independent sources – Linear relation between voltage and current of Network elements – source Transformation – Types of Networks – Network reduction – voltage division – current division.

Laboratory Practice: Circuit Simulation for Network Reduction

MODULE II ANALYSIS OF CIRCUITS 5+4

Star - delta transformation - Formation of matrix equations and analysis of complex circuits using Mesh current method and nodal method.

Laboratory Practice: Circuit Simulation of Mesh current method and nodal method

MODULE III NETWORK THEOREMS 7+4

Thevenin’s Theorem - Norton’s Theorem - Superposition theorem - Maximum power transfer theorem, Substitution theorem, Reciprocity theorem.

Laboratory Practice: Circuit Simulation of verification of Thevenin’s Theorem- Norton’s Theorem - Maximum power transfer theorem.

MODULE IV TRANSIENTS 7+6

Steady state and transient response – DC response of an RL, RC and RLC circuits -Sinusoidal response of an RL, RC and RLC circuits.

Laboratory Practice: Circuit Simulation of DC response of an RL, RC, RLC circuits and Sinusoidal response of RL, RC and RLC circuits.

MODULE V TWO PORT NETWORKS 6+4

Open circuit Impedance (Z) Parameters - short Circuit Admittance(Y) Parameters, Transmission (ABCD) Parameters and Inverse Transmission Parameters-Hybrid (h) Parameters and Inverse Hybrid Parameter-Conversion between parameters-interconnection of two-port networks

Laboratory Practice: Study the network parameters for various types of network connections using simulation

MODULE VI NETWORK TOPOLOGY 4+4

Introduction -Tree and co-tree- Twigs and links-Incidence matrix – properties of Incidence matrix-Tie-set matrix-cut-set-tree branch voltage.

Laboratory Practice: use PSpice simulation to identify tree, co-tree, twigs and branches.

TOTAL HOURS – 60

TEXT BOOKS:

1. William H.Hayt, Jr, J.E.Kemmerly& Steven M.Durban, "Engineering Circuit Analysis" 6th Edition, Mc Graw Hill, 2013
2. A.Sudhakar &ShyammohanS.Palli "Circuits &Network; Analysis& Synthesis", 4th Edition, Tata Mc Graw Hill, 2010
3. Someshwar C. Gupta, Jon W. Bayless, Behrouz Peikari, “Circuit Analysis - with computer applications to problem-solving", Wiley-Eastern Ltd., 1991.
4. Van Valkenburg, "Network Analysis", Prentice Hall of India Pvt. Ltd., New Delhi, 2006

REFERENCES:

1. M.L Soni& J.C. Gupta, "Electric Circuit Analysis", Dhanpat Rai& Sons, New Delhi, 1999.
2. Joseph Edminister, "Electric Circuits", Schaum's Outline Series, Mc Graw Hill 5th Edition, 2011
3. Franklin F.Kuo, "Network Analysis and Synthesis", John Wiley, 2nd Edition, 2006.

OUTCOMES:

On completion of the course, students will be able to

- Describe and apply fundamental concepts of network analysis in solving and analyzing different electrical networks.
- Analyze the electrical networks in various network reduction techniques.
- Select appropriate and relevant technique for solving the Electrical network under different conditions.
- Analyze resonant circuits both in time and frequency domains.
- Reconstruct the electrical networks using graph theory
- Learn to use PSpice in the analysis of circuits.

ECC1202	ELECTRON DEVICES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To brief about the semi-conductor devices and their types.
- To describe the working of different diodes and transistors with their applications.
- To analyze the characteristics of diodes and transistors.
- To explain the working of different power control devices.

PREREQUISITES:

- Fundamentals of semiconductors.
- Electrical and physical characteristics of conductors, semiconductors and insulators.

MODULE I PN JUNCTION DIODE 8

Introduction to semiconductors – PN junction diode – Characteristics - Current Components –Temperature dependence – Breakdown - Transition and diffusion capacitance – switching characteristics – Application of PN junction diode : Clipper, clamper and slicer.

MODULE II SPECIAL SEMICONDUCTOR DEVICES 8

Zener Diode - Varactor Diode - Backward diode - Schottky Diode - Tunnel Diode - Current regulator Diode - PNPN diode – LDR – Characteristics and applications.

MODULE III BIPOLAR JUNCTION TRANSISTORS 8

Construction, Configurations and Characteristics of BJT - Current components - Hybrid Model - Transistor switching times.

MODULE IV FIELD EFFECT TRANSISTORS 9

Construction, Configuration and Characteristics of JFET -Relation between Pinch off Voltage and drain current - Applications of JFET. Construction, Configuration and Characteristics of MOSFET - Applications of MOSFET- Comparison of BJT and FET.

MODULE V RECTIFIERS AND REGULATORS 6

Analysis of half wave Rectifier, Full wave Rectifiers: Center tap and Bridge without filters and with C, L and LC filters - series and shunt regulators.

MODULE VI POWER CONTROL DEVICES 6

Construction, characteristics and applications: UJT, SCR, TRIAC and DIAC - IGBT - Power MOSFET

TOTAL HOURS – 45

TEXT BOOKS:

1. J.Millman, C.C.Halkias, and Satyabratha Jit, “Electronic Devices and Circuits” Tata McGraw Hill, 2nd Ed., 2007.
2. Thomas L.Floyd ,”Electron Devices (Electron Flow Version), 8th edition, Pearson -2008
3. Ben G.Streetman and Sanjay Banerjee, Solid State Electronic Devices, Pearson Education 2000.

REFERENCES:

2. Nandita Das Gupta and Amitava Das Gupta, “Semiconductor Devices – Modeling and Technology”, Prentice Hall of India, 2004.
3. David A Bell, ‘Electronic Devices and Circuits’, 5th edition, Oxford University Press, 2008.

OUTCOMES:

On completion of the course, students will be able to

- Infer the charge carrier transport mechanisms of semiconductors.
- Summarize the basic understanding of the static and dynamic behavior of
- P-N junction diodes.
- Identify the applications of different diodes and special diodes.
- Analyze the characteristics of bipolar junction transistor.
- Analyze the characteristics of FET and MOSFET.
- Describe the working of various power control devices

SEMESTER III

MAC 2181	PARTIAL DIFFERENTIAL EQUATIONS AND TRANSFORMS	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to

- Familiarize in solving partial differential equation of first, second and higher orders.
- Introduce basics and engineering applications of Fourier series, Laplace Transform, Fourier Transform and Z- Transform.

MODULE I PARTIAL DIFFERENTIAL EQUATIONS 8 + 2

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

MODULE II FOURIER SERIES 8+2

Fourier Series and Dirichlet's conditions - General Fourier series - Half range Fourier series - Parseval's identity - Harmonic Analysis.

MODULE III FOURIER TRANSFORMS 7+3

Fourier integral theorem (without proof) - Fourier transform pair - Fourier Inverse Transform – Properties - Convolution theorem - Parseval's identity.

MODULE IV APPLICATIONS OF FOURIER SERIES AND FOURIER TRANSFORMS 7+3

Applications of Fourier series and Fourier Transform to solution of PDEs having constant coefficients with special reference to Heat & Wave equations, Discrete & point Spectrum and Single pulse.

MODULE V LAPLACE TRANSFORM 8+2

Introduction to Laplace transform - Existence of Laplace Transform - Properties of Laplace Transforms - Initial & Final Value Theorems - Inverse Laplace Transform - Convolution Theorem – Circuits to signal square wave: Integral equations with unrepeated complex factors – Damped forced vibrations: repeated complex

factors – Resonance - Solution of differential equations

MODULE VI Z – TRANSFORM 7+3

Introduction and Definition of Z-transform - Properties of Z- Transform - Convolution Theorem of Z-Transform - Inverse Z–transform - Convolution Theorem of Inverse Z-Transform - Formation of difference equations - Solving Difference Equations using Z-Transform.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Kreyszig .E., “Advanced Engineering Mathematics“, 10th edition, John Wiley and Sons (Asia) Pvt Ltd., Singapore, 2001.
2. Grewal B.S., “Higher Engineering Mathematics”, 42nd edition, Khanna Publishers, New Delhi, 2012.
3. Ramana, B.V, “Higher Engineering Mathematics” Tata Mc Graw Hill Publishing Co. New Delhi, 2006.

REFERENCES:

1. Veerarajan.T., “Engineering Mathematics“, 5th edition, Tata Mc Graw Hill Publishing Co. New Delhi, 2012.
2. Peter V. O'Neil, “Advanced Engineering Mathematics**”**, 7th edition, Cengage Learning, 2011.
3. Dennis G. Zill, Warren S. Wright, “Advanced Engineering Mathematics”, 4th edition, Jones and Bartlett publishers, Sudbury, 2011.
4. Alan Jeffrey, “Advanced Engineering Mathematics”, Academic Press, USA, 2002.

OUTCOMES:

After completing the course, student will be able to

- solve the partial differential equations.
- derive a Fourier series of a given periodic function by evaluating Fourier coefficients.
- apply integral expressions for the forward and inverse Fourier transform to a range of non-periodic waveforms.
- solve wave equation and heat flow equation.
- solve ordinary differential equations using Laplace transform.
- solve difference equation using Z-transform.

ENC 2181	ORAL COMMUNICATION	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To expose students to a range of professional contexts through podcasts for learning appropriate expressions.
- To train them in making poster presentations.
- To enable them to make effective business presentations.
- To help them learn persuasive and negotiation skills.
- To train them to debate on issues of current relevance
- To train them to participate in group discussions on current affairs

MODULE I **4**

Orientation to the Importance of Oral Communication -– Verbal and non-verbal communication -Paralinguistic features.

One-minute presentations (using Audacity/Voicethread) – Just a minute (JAM) on random topics

MODULE II **4**

Negotiating and persuading through effective arguments – to arrive at a conclusion (pair-work)

Understanding Negotiation, persuasion and marketing skills through Podcasts

Listening to short conversations and monologues for understanding real life conversations

MODULE III **4**

Making Poster presentations on current issues

Understanding nuances of making effective presentations (TED Videos)

MODULE IV **6**

Deliberation on social and scientific issues – Debates (focus on rebuttal skills and deconstructing arguments)

Viewing videos on debates (NDTV Discussions)

MODULE V **6**

Discussing social issues or current affairs in groups

Viewing group discussions and listening for specific information

MODULE VI **6**

Making full length presentation (through Voicethread) with the focus on one's career plans and prospects (discipline specific)

Listening to interviews for understanding speakers' perception (on industry related issues)

P – 30; Total Hours –30

REFERENCES:

4. Dhanavel,S.P (2015). *English and Soft Skills*. Orient Blackswan, Chennai.
5. Whitby, Norman (2014). *Business Benchmark: Pre-Intermediate to Intermediate.* Cambridge University Press, UK.

OUTCOMES:

On completion of the course, students will be able to

- Listen to business conversations and do related tasks.
- Deliver effective poster presentations.
- Make effective business presentations.
- Use persuasive and negotiating skills for justifying arguments.
- Participate effectively in debates.
- Speak English intelligibly, fluently and accurately in group discussions.

ECC2101	ELECTRONIC CIRCUITS	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To introduce the biasing concepts of BJT, JFET and MOSFET
- To familiarize the design and analysis of BJT and FET amplifiers.
- To study the feedback amplifiers and oscillators.
- To impart knowledge on Tuned amplifiers, Power amplifiers, Multivibrators, blocking oscillators and time based generators.

PREREQUISITES:

- Basic concepts on Network analysis
- Basic knowledge on Electronic devices

MODULE I BIASING CIRCUITS 6

DC Load line, operating point, various biasing methods for BJT-Design-Stability-Bias compensation Biasing circuits of BJT, JFET and MOSFET.

MODULE II SMALL SIGNAL ANALYSIS AND FREQUENCY RESPONSE OF AMPLIFIERS 9

Small signal models of BJT and MOSFET, Small signal Analysis of Common Emitter, Common Collector and common Base amplifiers. Small signal analysis of FET amplifiers, AC Load line, Voltage swing limitations, Differential amplifiers. Low frequency response of BJT and FET amplifiers-high frequency response of BJT and FET amplifiers, Miller effect capacitance.

MODULE III FEEDBACK AMPLIFIERS AND OSCILLATORS 9

Basic feedback concepts - Properties of Negative feedback -Four feedback topologies with amplifier circuit. Examples - Analysis of series - shunt feedback amplifiers.

Oscillators :Barkhausen criteria for oscillator - Analysis of RC oscillators - LC oscillators –Crystal oscillator

MODULE IV POWER AMPLIFIERS AND TUNED AMPLIFIERS 7

Classification of large signal amplifiers – Class A amplifier– Class B amplifier –Class AB amplifier– Class C amplifier and Efficiency – Thermal stability and heat sink-Basic principles - Inductor losses - Use of transformers – Single tuned amplifier - Double tuned amplifier - Synchronously tuned amplifiers-impedance matching to improve gain.

MODULE V MULTIVIBRATOR CIRCUITS 7

Collector coupled and Emitter coupled Astable multivibrator – Monostable

multivibrator- Bistable multivibrators. Triggering methods: Storage delay and calculation of switching times - Speed up capacitors - Schmitt trigger circuit.

MODULE VI BLOCKING OSCILLATORS AND TIME BASE GENERATORS 7

Pulse transformers - Monostable Blocking Oscillators using Emitter and base timing - Astable blocking oscillator - Voltage sweep generators - Current sweep generators

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Boylested and Nashlesky, “Electronic Devices and Circuit theory”, 11th edition, Prentice Hall of India, 2015.
2. Donald .A.Neamen, “Electronic Circuit Analysis and Design” 2nd edition,Tata McGraw Hill, 2009.
3. David A. Bell, "Solid State Pulse Circuits", 4thedition, Eastern economic edition, Prentice Hall of India, 2006.
4. D. L. Schilling, C. Belove, Tuvia Apelewicz and Raymond J Saccardi, “Electronic Circuits: Discrete and Integrated”, Tata McGraw Hill, 2002.

REFERENCES:

3. Millman .J. and Halkias C.C, Integrated Electronics, McGraw Hill, 2001.
4. Millman J. and Taub H., "Pulse Digital and Switching waveform", 3rd Edition McGraw-Hill International, 2000.

OUTCOMES:

On completion of the course, students will be able to

- Calculate the DC voltages and currents of an amplifier.
- Design and analyze the BJT and FET amplifiers
- Classify and construct the feedback amplifiers and oscillators.
- Estimate lower and upper cut off frequencies of an amplifier.
- Explain the concepts of tuned amplifiers and power amplifiers.
- Design and develop circuits to generate non-sinusoidal waveforms.

ECC2102 SIGNALS AND SYSTEMS

L	T	P	C
3	0	2	4

OBJECTIVES:

- To introduce the concepts of Signals and Linear Time-Invariant Systems
- To illustrate various Transform such as Fourier, Laplace, Z-Transform etc. for signal processing applications
- To interpret the signals and it's processing through computer simulation.

PREREQUISITES:

- Fundamentals of Engineering Mathematics
- Basic knowledge in computer programming

MODULE I INTRODUCTION TO SIGNALS 7

Time-Domain Representation of Discrete and Continuous Signals. Standard elementary signals - and complex signal. Basic Time-Domain operations on signals. Energy, Power and Correlation of signals. Signal Classification and Symmetry. Periodicity of discrete-time signals. Synthesis of simple signals.

Practical Exercises:

1. Generation of standard signals using MATLAB
2. Energy & Power Estimation of signals
3. Even and Odd Components of the signal.

MODULE II INTRODUCTION TO LTI SYSTEMS 6

Continuous-Time and Discrete-Time Systems. Characteristics of Systems. Linear and Time-Invariant (LTI) Systems and its Properties. Impulse Response, convolution sum and convolution integral. Interconnection of LTI Systems. Differential and Difference Equation representation of LTI systems.

Practical Exercises:

4. Correlation of signals
5. Convolution of DT and CT signals
6. Functional Implementation of a given LTI System

MODULE III FOURIER SERIES AND FOURIER TRANSFORM ANALYSIS 6

Fourier Series representation of signals. Properties of Fourier Series. Continuous-Time Fourier Transform and its properties. Frequency Response of CT-LTI Systems. Discrete-Time Fourier Transform (DTFT) and its properties. Discrete Fourier

Transform (DFT) and its properties.

Practical Exercises:

7. DFT of CT and DT signals
8. FFT
9. Power Spectral Density
10. First Order Low-Pass and High Pass-Filters

MODULE IV LAPLACE TRANSFORM ANALYSIS 5

Unilateral and Bilateral Laplace Transform. Region of Convergence (ROC), Properties of Laplace Transforms. Poles and Zeros. Inverse Laplace Transformation. The Transfer Function and Frequency Response of CT-LTI Systems.

Practical Exercises:

11. Laplace & Inverse Laplace Transform
12. Plotting of poles and zeros.

MODULE V Z- TRANSFORM ANALYSIS 9

Z-Transform. Z-Plane and ROC. Properties of Z-Transform. Poles and Zeros. Methods for Inverse Z-Transform. Transfer Function of DT-LTI Systems. Causality and Stability.

Practical Exercises:

13. Z- Transform of Time limited signals
14. Impulse response of given DT Systems.
15. Plotting of poles and zeros.

MODULE VI APPLICATION OF TRANSFORMS 10

Application of Fourier Transform to communication systems - Spectrum of AM, DSB and SSB AM. Computational Structures for Implementing Discrete-Time LTI systems using z-Transform.

Practical Exercises:

16. Generation of AM signal and it's spectrum.
17. Generation of DSB – AM signal and it's spectrum
18. First order and Second order Butterworth Filters

L – 45; T – 30; Total Hours –75

TEXT BOOKS:

4. John G. Proakis & Dimitris G Manolakis , “Digital Signal Processing : Principles, Algorithms, and Applications”, 4 Edition, Pearson India, 2007.

OUTCOMES:

On completion of the course, students will be able to

- Mathematically represent and classify the signals
- Evaluate and manipulate signals mathematically.
- Identify, and characterize common LTI Systems.
- Apply the tools such as Fourier Transform, Laplace Transform, and Z-Transform in problem solving.
- Synthesize discrete-time systems from basic component block
- Justify the spectral behavior of communication systems.

ECC2103	DIGITAL ELECTRONICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the methods for simplifying Boolean expressions.
- To learn the procedures for the analysis and design of combinational circuits and sequential circuits.
- To introduce the concept of memories and programmable logic devices.
- To illustrate the concepts of HDL

PREREQUISITES:

- Knowledge on Boolean Algebra
- Knowledge on Number System
- Familiarity in Electronics

MODULE I BOOLEAN ALGEBRA AND LOGIC GATES 8

Binary number systems- Binary Arithmetic- Binary codes-Boolean algebra and theorems- Boolean functions- Karnaugh map and Quine- Mc Cluskey Method-Logic gates-Implementations of Logic Functions using gates. Digital IC families -DTL, TTL, ECL, MOS, CMOS.

MODULE II COMBINATIONAL CIRCUITS 8

Analysis and design procedures- Circuits for arithmetic operations - Multiplexer/ Demultiplexer- Encoder / decoder - Parity checker- Code converters.

MODULE III FUNDAMENTALS OF SEQUENTIAL CIRCUITS 10

Edge triggering – Level Triggering, Flip flops- SR, JK, T, D, Master slave–Conversion of flip flops, Counters, Shift registers – Types.

MODULE IV SEQUENTIAL CIRCUITS DESIGN 8

Classification of sequential circuits - Moore and Mealy circuits-Analysis and Design of sequential circuits, Asynchronous sequential circuits-Hazards, Hazards elimination.

MODULE V SEMICONDUCTOR MEMORIES 6

Memory organization, Classification, and characteristics of memories, Sequential memories, ROMs, R/W memories, Content Addressable memories, Charged-Coupled Device memory, PLA, PAL and Gate Array, CPLD and FPGA architectures.

MODULE VI VERILOG HARDWARE DESCRIPTION LANGUAGE 5

Introduction to Verillog HDL, Language Constructs and Conventions, Gate Level Modeling, Modeling at Dataflow Level, Behavioral Modeling, Switch Level Modeling.

Total Hours –45

TEXT BOOKS:

1. M. Morris Mano ,Michael D. Ciletti "Digital Design With an Introduction to the Verilog HDL",5th Edition, Pearson Education, 2013
2. William Stallings, "Computer Organization and Architecture", 8th Edition, Pearson Education Asia, 2010.

REFERENCES:

3. R.P. Jain, "Modern Digital Electronics", Tata McGraw Hill, 4th Edition. New Delhi, 2010.
4. Thomas L. Floyd, "Digital Fundamentals", 10th Edition Pearson Education, Inc, New Delhi, 2008
5. Donald D. Givone, "Digital Principles and Design", Tata McGraw Hill Publishing company limited, New Delhi, 2003.

OUTCOMES:

On completion of the course, students will be able to

- Describe concepts and terminology of digital electronics
- Formulate and employ a Karnaugh map to reduce Boolean expressions
- Analyze and design digital combinational circuits and sequential circuits
- Design digital circuits for various applications
- Implement combinational logic circuits using programmable logic devices
- Develop HDL codes for various digital circuits

ECC2104	ELECTROMAGNETIC FIELDS AND TRANSMISSION LINES	L	T	P	C
		3	1	0	4

OBJECTIVES:

- To interpret the relation between the fields under time varying situations
- To introduce principles of propagation of uniform plane waves.
- To familiarize with propagation of signals through transmission lines and waveguides.
- To analyze the characteristics of transmission lines and waveguides.
- To study in detail various modes of radio propagation.

PREREQUISITES:

- Basic properties of Electric and magnetic fields
- Knowledge on engineering mathematics
- Familiarity of electromagnetic spectrum

MODULE I REVIEW OF STATIC FIELDS 9

Coulomb's Law in Vector Form - Electric Field due to discrete charges - Electric field due to continuous charge distribution - Electric Scalar Potential-Relationship between potential and electric field -Gauss Law-The Biot-Savart Law in vector form - Magnetic Field intensity due to a finite and infinite wire carrying a current I - Magnetic field intensity on the axis of a circular and rectangular loop carrying a current I - Ampere's circuital law.

MODULE II TIME VARYING FIELDS 8

Displacement current - Ampere's circuital law in integral form - Modified form of Ampere's circuital law - Maxwell's first equation in integral form - Equation expressed in point form.– Faraday's law - Maxwell's Second Equation in integral form from Faraday's Law –Equation expressed in point form - Poynting Vector and the flow of power - Power flow in a co-axial cable - Instantaneous Average and Complex Poynting Vector.

MODULE III ELECTROMAGNETIC WAVES 9

Derivation of Wave Equation - Uniform Plane Waves - Maxwell's equation in Phasor form - Wave equation in Phasor form - Plane waves in free space and in a homogenous material.Wave equation for a conducting medium - Plane waves in lossy

dielectrics - Propagation in good conductors - Skin effect. Linear, Elliptical and circular polarization - Reflection of Plane Wave from a conductor-normal incidence - Reflection of Plane Waves by a perfect dielectric - normal and oblique incidence. Dependence on Polarization. Brewster angle.

MODULE IV WAVE PROPAGATION IN TRANSMISSION LINES 7

Lumped and distributed element models of transmission lines, characteristic impedance, terminated transmission line - reflection coefficient, wavelength and velocities of propagation, Transfer Impedance, Standing waves, Impedance matching, Smith Chart - impedance and admittance chart, scattering matrix.

MODULE V WAVE PROPAGATION IN GUIDED MEDIUM 8

Planar waveguides, TE and TM waves - characteristics, velocities of propagation, Rectangular waveguides - dominant mode, cut-off wavelength, phase velocity, group velocity, characteristic impedances,

MODULE VI RADIO WAVE PROPAGATION 4

The three basic types of propagation; ground wave, space wave and sky wave propagation. Wave tilt of surface wave, Tropospheric wave, Structure of atmosphere, ionospheric propagation, virtual height, critical frequency, MUF, space wave propagation, ground wave propagation, forward scatter propagation.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. M.N.O.Sadiku: "Elements of Engineering Electromagnetics", 4th Edition, Oxford University Press, 2007.
2. Edward C. Jordan and Kenneth G. Balmain, "Electromagnetic Waves and Radiating Systems", 2nd Edition, Prentice Hall Int., 2009.
3. John D Ryder, "Networks, Lines and Fields", 2nd Edition, Pearson India, 2015.
4. William H.Hayt "Engineering Electromagnetics", 8th Edition, Tata McGraw - Hill, 2014

REFERENCES:

1. John D Kraus, Ronald J Marhefka, Ahmad S Khan, "Antennas and Wave Propagation", 3rd Edition, Tata McGraw Hill, 2006.
2. David M.Pozar, "Microwave Engineering", 4th Edition, John Wiley, 2013.
3. Ramo, Whinnery and Van Duzer: "Fields and Waves in Communications Electronics", 3rd Edition, John Wiley & Sons, 2003

OUTCOMES:

On completion of the course, students will be able to

- Recall the basic laws of Electromagnetic theory
- Solve the static and time varying electric and magnetic fields for practical applications.
- Characterize the EM waves in free space and at different boundaries.
- Analyze the wave propagation in different mediums.
- Explain the basic concepts of Transmission lines and waveguides
- Illustrate the types of wave propagation

ECC2105	ELECTRONIC CIRCUITS LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To design the biasing circuits for FET and BJT.
- To obtain the characteristics of common emitter and common collector amplifiers.
- To design multistage amplifiers and oscillators.
- To use modern tools for PCB layouts of electronic circuits.
- To design, simulate and verify the performance of electronic circuits.

PRE-REQUISITES:

- Knowledge on basic concepts of electron Devices and its applications

LIST OF EXPERIMENTS:

1. Design of Biasing networks for BJT & FET and find the operating points & verification using SPICE / Cadence software.
2. Design & Determination of frequency response, input impedance and output impedance of CE amplifier.
3. Design & Determination of frequency response, input impedance and output impedance of CS amplifier.
4. Determination of frequency response, input impedance and output impedance of two stage RC Coupled Amplifier, Darlington amplifier.
5. Determination of CMRR of Differential amplifier.
6. Design and Analysis of Feedback Amplifiers
7. Design of Class C Single Tuned Amplifier
8. Determination of frequency response, input impedance and output impedance of Cascode amplifier
9. Design and Verification of Oscillators
10. Design and fabrication of PCB for basic circuits.

Total Hours –30

REFERENCES:

1. Paul Horowitz and Thomas C. Hayes, “Learning the Art of Electronics: A Hands-On Lab Course Book”, Cambridge university press, first edition, 2016.
2. S.V. Subrahmanyam , “Experiments in Electronics Paperback” New Central Book Agency Pvt Ltd, 2011.
3. Owen Bishop, “Electronics - Circuits and Systems”, Elsevier publication, 4th Edition, 2010.

4. John Keown “OrCAD PSpice and Circuit Analysis, Pearson Publication, 4th edition, 2000.

OUTCOMES:

On completion of the course, students will be able to

- Design the biasing circuit for BJT and FET circuits for given operating points and stability factors.
- Design RC coupled amplifier and Darlington amplifiers for better gain values.
- Design RC and LC type oscillators for different frequency.
- Design tuned amplifier for any given frequency.
- Design PCB layout for simple electronics circuits using modern software tools.

ECC2106	DIGITAL ELECTRONICS LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To design and implement the Combinational circuits.
- To verify the functionalities of Flip-flops.
- To design and implement sequential circuits.
- To simulate the Verilog programs using simulators.

PRE-REQUISITES:

- Basic knowledge on digital theory
- Familiarity with logic gates, digital electronic devices and its building blocks

LIST OF EXPERIMENTS:

1. Design and implementation of combinational circuits using logic gates.
2. Design and implementation of 4 bit binary Adder/ subtractor and BCD adder using IC7483.
3. Design and implementation of 2-Bit Magnitude Comparator using logic gates & 8 Bit magnitude Comparator using IC 7485.
4. Design and implementation of 16 bit odd/even parity checker generator using IC 74180.
5. Verification of state tables of R-S flip-flop, J-K flip-flop, T Flip-Flop, D Flip-Flop Using NAND and NOR gates.
6. Design and implementation of asynchronous and synchronous counters.
7. Design and Implementation of shift registers using Flip- flops.
8. Simulation of combinational and sequential circuits using Verilog HDL.
9. Mini project

Total Hours –30

REFERENCES:

1. M. Morris Mano ,Michael D. Ciletti “Digital Design With an Introduction to the Verilog HDL”,5th Edition, Pearson Education, 2013

4. R.P. Jain, "Modern Digital Electronics", Tata McGraw Hill, 4th Edition. New Delhi, 2010.

OUTCOMES:

On completion of the course, students will be able to

- Analyze and design digital logic circuits applying the knowledge of number systems, codes and Boolean algebra.
- Design simple combinational circuits containing logic gates, multiplexer, encoder and decoder
- Design simple sequential circuits containing latch circuit and flip-flop circuits.
- Identify, formulate and solve engineering problems in the area of digital logic circuit design to meet desired needs within realistic constraints.
- Use the techniques, skills and modern engineering tools such as logic works and Verilog HDL, necessary for engineering practice
- Function on multi-disciplinary teams through digital circuit experiments and projects

SEMESTER IV

ENC 2282	WRITTEN COMMUNICATION	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To help students identify content specific vocabulary and learn its usage.
- To expose them to reading for specific purposes, especially in professional contexts.
- To expose them to the process of different kinds of formal writing.
- To help them learn corporate correspondence for different purposes.
- To train them in preparing effective applications with résumé
- To make them write different types of reports.

MODULE I **4**

Introduction - process of writing – Fundamentals of academic and professional writing – Understanding short, real world notices, messages, etc.

MODULE II **4**

Reading industry related texts (ex. Manufacturing, textile, hospitality sector etc.) for specific information.

Writing Instructions and recommendations

MODULE III **6**

Understanding format and conventions of writing email, memo, fax, agenda and minutes of the meeting.

Writing email, memo, fax, agenda and minutes of the meeting for various purposes (industry specific)

MODULE IV **6**

Viewing letter of application and Résumé, letter calling for an interview, letter of inquiry and Promotional letter

Writing Functional résumé and letter of application using Edmodo,

MODULE V **6**

Viewing a Video and reading a case study (industry specific) – collaborative writing using Edmodo –reading and information transfer

Writing reports- Survey, feasibility and progress – exposure to discipline

specific reports

MODULE VI **4**

Writing Statement of purpose (Higher Education)-- Justifying and writing about one's preparedness for job (Statement of Purpose highlighting strengths and weaknesses) – Peer evaluation skills through Edmodo.

P – 30; Total Hours –30

6. Whitby, Norman (2014). *Business Benchmark: Pre-Intermediate to Intermediate.* Cambridge University Press, UK.

OUTCOMES:

On completion of the course, the students will have the ability to

- Identify content specific vocabulary and also use them in appropriate contexts.
- Demonstrate reading skills with reference to business related texts.
- Draft professional documents by using the three stages of writing.
- Create different types of documents for various corporate correspondences.
- Write effective letter of applications, résumé and statement of purpose.
- Write business related reports efficiently.

ECC2201 DIGITAL SIGNAL PROCESSING

L	T	P	C
3	1	0	4

OBJECTIVES:

- Implementation of discrete Fourier transform and its applications in digital Filter design.
- Familiarize on design of FIR and IIR Digital filters.
- To understand the concept of quantization noise and its effects in multi-rate signal processing.
- To introduce signal processing concepts in systems having more than one sampling frequency.
- To study the architecture and features of digital signal processor

PRE-REQUISITES:

- Knowledge on Signals and systems

MODULE I DISCRETE FOURIER TRANSFORM 8+3

Introduction to Discrete Fourier Transform, Direct computation of DFT and Inverse DFT, Properties of DFT, Radix-2FFT algorithms -Decimation in Time, Decimation in Frequency algorithms.

MODULE II DESIGN AND IMPLEMENTATION OF IIR FILTERS 8+3

Design of Low Pass Butterworth filters & Chebyshev filters- analog to analog transformation - Analog to digital transformation, Bilinear transformation - prewarping, Impulse invariant transformation.

MODULE III DESIGN AND IMPLEMENTATION OF FIR FILTERS 8+3

Amplitude and phase responses of FIR filters - symmetric and anti-symmetric impulse response, Frequency response of FIR filters, Linear phase filters - Windowing techniques for design of Linear phase FIR filters - Rectangular, Hamming, Hanning windows.

MODULE IV FINITE WORD LENGTH EFFECTS 8+3

Representation of numbers - Fixed point and binary floating point number representation - comparison, errors due to truncation and rounding- off, Quantization noise - derivation for quantization noise power at the input and output of a digital filter, Co-efficient quantization error -product quantization error, Round-off effects in digital filters, Limit cycle oscillation .

MODULE V MULTIRATE DIGITAL SIGNAL PROCESSING 8+3

Interpolation and Decimation, Decimation by an integer factor, Interpolation by an

integerfactor, Sampling rate conversion by a rational factor, Time and frequency domain descriptions - Quadrature Mirror Filter banks - Sub-band Coding.

MODULE VI DIGITAL SIGNAL PROCESSORS 5

Introduction to DSP processor - Harvard and Von Neumann architecture - Pipelining - Architecture of TMS320C5X and C54X, Overview of instruction set of TMS320C5X and C54X.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. John G Proakis, Dimtris G Manolakis, "Digital Signal Processing Principles, Algorithms and Application", 4th Edition, PHI, 2009.
2. B.Venkataramani, M. Bhaskar, "Digital Signal Processor Architecture, Programming and Application", 2nd Edition, TMH 2002.

REFERENCES:

1. Alan V Oppenheim, Ronald W Schafer, John R Back, "Discrete Time Signal Processing", 2nd Edition, PHI, 2000.
2. Avtar Singh, S.Srinivasan, "DSP Implementation using DSP microprocessor with Examples from TMS32C54XX", 3rdEdition, Thomson / Brooks Cole Publishers, 2003.
3. Johny.R.Johnson, "Introduction to Digital Signal Processing", 2nd Edition, Prentice Hall, 2002.
4. S.K.Mitra, "Digital Signal Processing- A Computer based approach", 4th Edition, Tata McGraw-Hill, New Delhi, 2011.

OUTCOMES:

On completion of the course, students will be able to

- Represent discrete-time signals in the frequency domain, using z-transform and discrete Fourier transform (DFT).
- Analyze the basic forms of FIR and IIR filters and, to design filters with desired frequency responses.
- Analyze the effect of finite word length in the DSP systems.
- Implement the multirate processing fundamentals using decimation and interpolation.
- Illustrate the basic architecture of digital signal processors.
- Apply digital signal processing concepts in audio, video signals etc.

ECC2202	LINEAR INTEGRATED CIRCUITS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To describe the characteristics and internal circuit of op-amps.
- To Characterize the differential amplifiers and current sources
- To design the various linear and non-linear applications of op-amps.
- To design and characterize the data converters and active filters.
- To explain and characterize the special purpose ICs like PLL, Timer IC, voltage regulators, switched capacitor filters.

PREREQUISITES:

- Comprehensive knowledge in Network Analysis and Synthesis
- Knowledge in Electronic circuits

MODULE I INTRODUCTION AND CIRCUIT CONFIGURATION OF LINEAR ICS **8**

OP-AMP fundamentals, differential amplifier, current mirror, active load, level shifter, output stage; ac and dc characteristics, basic building blocks of OP-AMP.

Feedback Amplifiers: General feedback structure, properties of negative feedback, basic feedback topologies, determination of loop-gain, stability problem.

MODULE II LINEAR APPLICATIONS OF OPERATIONAL AMPLIFIERS **8**

Linear circuits using operational amplifiers and their analysis: virtual ground, Inverting and non-inverting modes; adder, subtractor, difference amplifier; common mode rejection ratio (CMRR), Differentiator, Integrator, V to I converter and I to V converter, Instrumentation Amplifier, sine wave Oscillators, Log and Antilog amplifiers. Designing linear power supply using op amp.

MODULE III NON LINEAR APPLICATIONS OF OPERATIONAL AMPLIFIERS AND ANALOG MULTIPLIER **8**

Precision rectifier, Comparator, Application of comparator, Schmitt trigger, Multivibrators, Triangular wave generator. Analysis of four quadrant (Gilbert cell) and variable trans conductance multiplier, DC analysis of Gilbert multiplier cell, Application of Gilbert cell as complete analog multiplier, modulator and phase detector.

MODULE IV DAC and ADC 7

Analog switches, High speed Sample and Hold circuit. DAC techniques: Weighted Resistor, R-2R ladder, Inverted R-2R ladder, ADC techniques: Flash type, Counter type, Successive approximation, Single slope and Dual slope.DAC and ADC specifications - Linearity, accuracy, Monotonicity, Settling time and stability.

MODULE V TIMER IC AND PLL 8

555 timer IC, Applications: Astable and Monostable operation, Active filters, PLL and Closed loop analysis of PLL, Applications of PLL: Frequency translation, AM, FM and FSK modulators and demodulators.

MODULE VI SPECIAL PURPOSE ICS 6

IC Voltage regulators – General purpose ,variable regulator Switched capacitor filter- IC MF10, Frequency to Voltage and Voltage to Frequency converters, Audio Power amplifier, Video Amplifier, Isolation Amplifier, fiber optic IC- IC transducers.

Total Hours – 45

TEXT BOOKS:

4. William D.Stanely, 'Operational Amplifiers with Linear Integrated Circuits'.4th Edition, Pearson Education, 2004
5. Sedra & Smith, "Micro Electronic Circuits", 5th Edition, Oxford University Press, 2004.

OUTCOMES:

On completion of the course, students will be able to

1. Determine the difference between ideal and practical AC & DC characteristics of an Operational Amplifier.
2. Differentiate linear and non-linear applications of operational amplifiers
3. Generate waveforms using Op-Amp.
4. Identify the special purpose ICs
5. Apply IC 555 and PLL for different applications
6. Design and analyze a circuit using ICs, based on the requirement.

ECC2203 COMMUNICATION THEORY AND SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- Introduce various continuous wave modulation techniques.
- Differentiate all types of amplitude modulation systems based on transmission bandwidth, transmitted power and system complexity
- Apply the knowledge of vestigial side band modulation in television system.
- Compare amplitude modulation and angle modulation with respect to performance parameters.
- Analyze the noise performance of various analog receivers.
- Distinguish various pulse modulation and Multiplexing techniques.

PREREQUISITES:

- Fundamentals of Electronic circuit design and its function
- Knowledge on Signals and Systems and Random Process

MODULE I AMPLITUDE MODULATION 8

Overview of communication systems-electromagnetic spectrum-ranges and application areas. Need for modulation, Principles of amplitude modulation. Generation of AM wave: square law modulator, switching modulator. Detection of AM waves: square law detector, envelop detector. Generation of DSBSC waves: balanced modulator, ring modulator. Coherent detection of DSBSC modulated waves. Costas loop.

MODULE II SSB AND VSB MODULATION 8

Single side-band modulation - Phase discrimination method for generating an SSB modulated wave, Demodulation of SSB waves. Vestigial side band modulation - Generation of VSB modulated wave, Envelop detection of VSB wave plus carrier, Frequency translation, Frequency division multiplexing, Application: Radio broadcasting, AM radio.

MODULE III ANGLE MODULATION 8

Angle modulation - Frequency modulation, transmission bandwidth of FM signals, frequency spectrum, phase modulation, relationship between FM&PM, narrow band FM & wide band FM. Generation of FM waves: direct method, indirect method of FM generation. Detection of FM waves: Balanced frequency discriminator, Zero crossing

detectors, Phase locked loop, Fosterseely discriminator, ratio detector.

MODULE IV NOISE THEORY 7

Sources of noise - shot noise, thermal noise, white noise, Noise bandwidth, Noise temperature, Noise figure - Measurement of noise figure, Signal in presence of noise, Narrow band noise. Noise in continuous wave modulation-Noise in SSB and DSB - SC receiver, Noises in AM receiver threshold effect.

MODULE V PULSE MODULATION AND MULTIPLEXING TECHNIQUES 7

Sampling of Signals- Pulse modulation - Generation and detection of PAM, PWM and PPM. Multiplexing- TDM, FDM.

MODULE VI BROADCAST AND TELEPHONE SYSTEMS 7

AM and FM radio broadcast systems, Television systems and scanning principles, TV signal transmission and reception, Telephone systems.

Total Hours – 45

TEXT BOOKS:

1. Simon Haykin, "Communication System", 5th Edition, John Wiley & Sons, 2009.
2. A. Bruce Carlson, Paul B. Crilly,“Communication Systems” McGraw-Hill , 5th Edition, 2011
3. Taub & Schilling, Gautam Sahe, "Principles of Communication Systems", 3rd Edition, TMH, 2008.
4. Wayne Tomasi, "Electronic Communication Systems: Fundamentals Through Advanced", 6th Edition, Pearson Education, 2007.
5. R.R. Gulati “Modern Television Practice: Principles, Technology and Servicing” 2nd edition, New Age International Publications – 2007

REFERENCES:

1. Roddy and Coolen, "Communication Systems", 4th Edition, PHI learning, New Delhi, 2003.
2. George Kennedy and Bernard Davis, "Electronic Communication Systems", 4th Edition, Tata McGraw Hill, 2008.
3. K.N.Hari Bhat & Ganesh Rao, "Analog communications", 2nd Edition, Pearson Publication, 2008.
4. J.G. Proakis and M. Salehi, Communication Systems Engineering, 2nd Edition,

Prentice Hall, 2002.
5. A.M.Dhake “TV and Video Engineering” Tata Mcgraw Hill,2001

OUTCOMES:

On completion of the course the students will be able to

- Explain continuous wave modulation techniques.
- Differentiate and analyze the performance of AM, DSB-SC, SSB and VSB systems.
- Compute the performance parameter for noise analysis in various analog receivers
- Design different types of pulse modulation system and its multiplexing techniques.
- Apply suitable analog / pulse modulation techniques for signal transmission.
- Describe the television system and scanning principles.

ECC2204 MICROPROCESSORS & MICROCONTROLLERS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To illustrate the architecture of 8085 & 8086 microprocessors.
- To introduce the programming and interfacing techniques of 8086 microprocessor.
- To analyze the basic concepts and programming of 8051 microcontroller
- To develop the interfacing circuits for various applications of 8051 microcontroller
- To make use of ARM board for various applications

PREREQUISITES:

- Knowledge on Digital Electronics.

MODULE I ARCHITECTURE OF 8086 MICROPROCESSOR 8

Introduction to the architecture of 8085 Microprocessor, 8086 Microprocessor – Architecture - Register Organization - Memory Organization - Minimum Mode bus cycle - Maximum Mode bus cycle -Timing Diagram - Interrupts & Service Routine.

MODULE II PROGRAMMING OF 8086 6

Addressing modes - Instruction set – Data transfer instructions, Arithmetic Instructions, Logical instructions, String manipulation instructions and control transfer instructions - Assembly language Programming.

MODULE III INTERFACING WITH 8086 MICROPROCESSOR 9

Memory interfacing - Interfacing with peripheral ICs like 8251 - serial I/O, 8255-parallel I/O, 8254-programmable interval timer, 8279-Keyboard display controller, 8257-DMA, LEDs, LCDs, ADCs and DACs.

MODULE IV 8051 MICROCONTROLLER 8

Architecture of 8051 – Special Function Registers (SFRs) – I/O Ports and Memory organization – Instruction set – Addressing modes – Assembly language programming.

MODULE V INTERFACING WITH 8051 MICROCONTROLLER 8

Programming 8051 Timers - Serial Port Programming - Interrupts Programming – LCD & Keyboard Interfacing – ADC, DAC & Sensor Interfacing – External Memory

Interface - Stepper Motor interface.

MODULE VI INTRODUCTION TO ARM PROCESSOR 6

ARM architecture - ARM Organization and Implementation - ARM Instruction Set.

Total Hours – 45

TEXT BOOKS:

1. A.K. Ray and K.M.Burchandi, “Advanced Microprocessors and Peripherals (Third Edition)", McGraw Hill International Edition, 2012.
2. Mohammed Ali Mazidi and Janice Gillispie Mazidi, "The 8051 Microcontroller and Embedded Systems", 2nd Edition, Pearson Education Asia, New Delhi, 2003.
3. Steve Furber, “ARM System-on-Chip Architecture”, 2nd Edition, University of Manchester, Addison-Wesley Professional, 2001.

REFERENCES:

1. Yu-Cheng Liu, Glenn A.Gibson, “Microcomputer Systems: The 8086 / 8088 Family – Architecture, Programming and Design”, Second Edition, Prentice Hall of India, 2007.
2. Kenneth J Ayala, "The 8051 Microcontroller Architecture Programming and Application", 2nd Edition, Penram International Publishers (India), New Delhi, 1996.
3. Doughlas V.Hall, “Microprocessors and Interfacing, Programming and Hardware”, TMH, 2012.

OUTCOMES:

On completion of the course, students will be able to

- Illustrate the organization of registers and memory in microprocessors and microcontroller.
- Prioritize interrupts for executing the respective ISR.
- Identify the addressing mode and calculate the number of T-states required for the execution of an instruction
- Develop assembly language programs suitable for real time applications using microprocessors / microcontroller.
- Explain the different interfacing devices.
- Design and develop applications using ARM boards.

ECC2205	MICROPROCESSOR AND MICROCONTROLLER LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To introduce the concept of Assembly Language Programming (ALP).
- To develop skills in assembly language programming to interface 8086 with various modules.
- To familiarize students on programming and interfacing of 8051 Microcontroller.
- To introduce applications using ARM board.

PREREQUISITES:

- Knowledge on Digital Electronics.
- Comprehensive knowledge on the instruction set of 8086 Microprocessor & 8051 Microcontroller.

LIST OF EXPERIMENTS:

8086 Microprocessor basic programs

1. 16 bit Arithmetic operation
2. Sorting of an array

8086 Microprocessor interfacing programs

3. Stepper motor interface
4. Generate an interrupt using 8253 timer.
5. Program to display a string of characters using Keyboard display (8279).
6. Interfacing PPI (8255).

8051 Microcontroller basic and interfacing programs

7. 16 bit Arithmetic operation
8. Interfacing ADC
9. Interfacing DAC
10. Communication between 8051 kit and PC using USART (8251)
11. Interfacing Traffic Light Control
12. Study on ARM Processor

Total Hours – 30

REFERENCES:

1. Doughlas V.Hall, “Microprocessors and Interfacing, Programming and Hardware”, TMH, 2012.
2. Yu-Cheng Liu, Glenn A.Gibson, “Microcomputer Systems: The 8086 / 8088 Family – Architecture, Programming and Design”, Second Edition, Prentice Hall of India, 2007.

4. William Hohl and Christopher Hinds “ARM Assembly Language: Fundamentals and Techniques”, Second Edition, CRC Press is an imprint of Taylor & Francis Group, 2015.

OUTCOMES:

On completion of the course, students will be able to

- Develop the assembly language program for the basic arithmetic and logical operations of 8086 Microprocessor and 8051 Microcontroller.
- Interface different peripheral devices with Microprocessor/Microcontroller.
- Analyze the errors during the execution of program.
- Develop applications using Microprocessor/Microcontroller based systems.
- Interface Microcontroller and PC.
- Design and develop programs for various applications using Microprocessor/ Microcontroller.

ECC2206	DIGITAL SIGNAL PROCESSING LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To implement Linear and Circular Convolution
- To implement FIR and IIR filters
- To study the architecture of DSP processor
- To demonstrate Finite word length effect

PREREQUISITES:

- Basic concepts of Signals and systems
- Fundamentals of various transforms.

LIST OF EXPERIMENTS USING SIMULATION TOOL

1. Frequency response of LTI system.
2. Linear convolution/Circular convolution
3. Discrete Fourier Transform& Fast Fourier Transform
4. Design of IIR filter using Impulse invariant and Bilinear transformation
5. Design of FIR filter using windows
6. Sampling and reconstruction of a signal
7. Sampling rate conversion-interpolation & decimation.

LIST OF EXPERIMENTS USING DSP PROCESSOR

8. Linear convolution using TMS320C54X
9. Circular convolution using TMS320C54X
10. Discrete Fourier Transform using TMS320C54X
11. Inverse Discrete Fourier Transform using TMS320C54X
12. Mini project

Total Hours – 30

REFERENCES:

1. S.K.Mitra, "Digital Signal Processing- A Computer based approach", 4th Edition Tata McGraw-Hill, New Delhi, 2013.
2. Nasser kehtarnavaz and Namjin Kim, “Digital Signal processing system-level design using LabVIEW”, Newnes- Elsevier,2005.
3. B.Venkataramani, M. Bhaskar, "Digital Signal Processor Architecture, Programming and Application", 2nd Edition, TMH 2002.

OUTCOMES:

On completion of the course, students will be able to

- Use DSP tools to analyze discrete time signals and systems
- Analyze the properties of discrete time signals and systems and identify its implication for practical systems.
- Evaluate and plot the frequency, magnitude and phase response of linear time-invariant systems using simulation tools.
- Evaluate the discrete Fourier transform (DFT) of a sequence, use the FFT to compute DFT and implement using DSP processor.
- Implement convolution using DSP processor.
- Design digital IIR and FIR filter.

ECC2207	LINEAR INTEGRATED CIRCUITS LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To understand the characteristics of operational amplifier
- To categorize the linear integrated circuits and available ICs with its basic functionalities
- To apply operational amplifiers in linear and nonlinear applications
- To acquire the basic knowledge of special function ICs like PLL, regulators
- To use Elvis board and SPICE, Netlist software for circuit design
- To become skilled with the functions of linear integrated circuits

PREREQUISITES:

- Basic knowledge on circuits and circuit theory
- Knowledge on dual power supply connections.

LIST OF EXPERIMENTS:

DESIGN AND TESTING OF

1. Inverting and Non-Inverting Amplifiers and Voltage follower – Application as Buffer/Isolator.
2. Adder, Subtractor, Difference amplifier, Integrator, Differentiator – Application of Analog computation.
3. Instrumentation Amplifier – Signal extraction from sensor and measurement of CMRR
4. Active Butterworth Filters – As distortion eliminators in Audio amplifiers
5. Multivibrators and Schmitt Trigger using operational amplifier – Function generator
6. Phase shift and Wien bridge oscillators using operational amplifier – Variable low frequency generator.
7. Design of Multivibrators using 555 timer – Clock Pulse generator.
8. PLL characteristics and its application as Frequency Multiplier.
9. DC power supply using LM317 and LM723.
10. Study of SMPS
11. Simulation using PSpice, Netlist of above experiments
12. Mini project using above experiments

Total Hours – 30

REFERENCES:

1. D. Roy Choudhry, Shail Jain, "Linear Integrated Circuits", 2nd Edition, New Age International Pvt. Ltd., 2011.
2. Gray and Meyer, 'Analysis and Design of Analog Integrated Circuits', 4th Edition, Wiley International, 2009.
3. William D.Stanely, 'Operational Amplifiers with Linear Integrated Circuits'.4th Edition, Pearson Education, 2004.
4. Sergio Franco, "Design with Operational Amplifiers and Analog Integrated Circuits", 3rd Edition, Tata McGraw-Hill, 2002.

OUTCOMES:

On completion of this course the student will be able to:

- Estimate the DC and AC Analysis of operational amplifiers.
- Design and implement circuits using Op amp to perform various mathematical operations.
- Design and demonstrate the sinusoidal and non-sinusoidal oscillators using Op-AMP
- Design filters using Opamp and perform experiment on frequency response
- Develop and analyze various multivibrator circuits using OP amp and 555 Timer IC
- Analyze the working of PLL and use PLL as frequency multiplier

SEMESTER V

MSB 3181	LEADERSHIP & CEO TRAINING	L	T	P	C
		3	0	0	3

OBJECTIVES:

The course aims at

- Bringing about positive transformation in students' attitude.
- Building unique leadership competencies that would ensure successful transition of students across all career stages.
- Sensitizing students to identify their strengths & weakness and training them to deal with it
- Assisting students in enhancing their expressive ability and inducing a high level of self confidence to manage both business and emotions
- Training students to become more adaptable and flexible to changing business environment

MODULE I INTRODUCTION TO LEADERSHIP 12

Leadership concept - meaning, definitions, importance of leadership, leadership traits. Leadership functions- general functions, listening, observing, managing and decision making. Components of leadership - leaders, followers and situation. Leadership theories – Trait theory, Skills theory, Style theory, Situational theory, Transformational theory, Transactional theory, Path Goal Theory and LMX. Assessing emotional intelligence and exploring the capabilities and inherent traits through psychometric tests - Multi factor leadership questionnaire and personal reflections

MODULE II LEADERSHIP STYLE AND COMMUNICATION 08

Leadership styles-visionary, Coaching, Affiliative, Democratic, Pacesetting Commanding, Transformational, Transactional. Autocratic, Participative, Laissez-Faire Leader versus Managers. Leadership communication - Rationale, tactic, assertive, formal, informal, communication in crisis- leadership and negotiations, Leadership Presentations-convincing and impressive style

MODULE III LEADERSHIP ROLES 08

Facets of leadership- Leader as an individual – personality and leadership, values, attitudes and ethics of a leader. **Leader as a relationship builder**-

empowering people to meet higher order needs, initiating organization wide motivational programs, involvement with all stakeholders- focusing on organization growth. **Leader as an inspirer**- motivation and leadership, recognizing and appreciating contributions, empowering others to lead **Leader as an innovator** –leader's role in shaping culture and values in an organization. **Leader as a Liaison- Leader as team player**

MODULE IV LEADERSHIP CHALLENGES AND STRATEGIES 09

Challenges in leadership: Perception of organization culture and values, interpreting the power dynamics in the organization, establishing work life balance. Bad leadership – Reasons and impact.-Case Study of Marissa Mayer-Yahoo.Inc Organizational transformation through efficient leaders-Case study of Apple Inc. Blue Ocean Leadership-Steps to Blue ocean Leadership-Four Pillars of Blue Ocean leadership-Blue Ocean leadership grid

MODULE V LEADERSHIP AND CEO TRAINING 08

Leader as a CEO: Traits of a successful CEO, Key responsibilities of a CEO, the path to be a CEO ,Training on Board Room Discussions, Meeting the CEO –Live sessions with industry CEO's. Requirements of Leadership: - Cognitive skills, Interpersonal skills, Business skills, Strategic skills. Role of Emotional Intelligence in taking up key-positions in the organization.

Teaching Pedagogy:

Nurturing – Based on the identified strengths and weaknesses, training will be given to enhance the strengths and overcome the weakness.

Assessment - Continuous evaluation will be effected through group discussions, oratory assignments and situational enactments. Pre-and post-training assessment through peer reviews and faculty feedback.

Sustained development – Training will be imparted for self-development and monitoring of leadership skills to ensure sustained applicability of the skills learnt.

L – 45; Total Hours – 45

3. Kim, W. C., & Mauborgne, R. A. (2014). Blue ocean strategy, expanded edition: How to create uncontested market space and make the competition irrelevant. Harvard business review Press.
4. Leadership Wisdom by Robin Sharma Jaico Publishing House;

OUTCOMES:

The students will be able to

- Explore through self-introspection one’s own leadership style, their strength and weakness
- Gain self confidence to lead a team in the organization
- Realize the role of leadership in making or breaking of an organization
- Acquire the practice of self introspection and development of leadership competencies thorough continuous efforts
- Manage their own emotions as well as other resulting in successful relationship building with all stakeholders

ENC 3181	COMMUNICATION AND SOFT SKILLS - I CAREER CHOICE	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To create awareness of industrial trends and market demands.
- To encourage students to explore career opportunities in an industry and evaluate themselves in relation to industry preparedness

MODULE I **6**

Knowledge about specific industry-Discussion with industry experts --Self evaluating career prospects through survey questionnaire (based on his/her eligibility for taking up a job (industry preparedness)

MODULE II **6**

. Knowing case studies of industries(pertaining to students' choice of career)- Reading and discussing about job markets-goal setting, working on creativity.

MODULE III **4**

SWOC analysis and discussing outcomes--exploring mini projects or case studies of latest industries.

MODULE IV **6**

Writing statement of purpose pertaining to career choice---- Outcomes

MODULE V **8**

Project or case study presentations (Presentation in pairs) -mini project report or case study report.

Total Hours – 30

REFERENCES:

1. Brown,D.(2002). Career Choice and Development. Wiley,J. & Sons.USA
2. Lore,N.(1998). The Pathfinder: How to Choose or Change Your Career for a Lifetime of Satisfaction and Success. Simon & Schuster.USA.
3. Shell, G.R.(2013). Springboard Launching your Personal Search for Success.Portfolio.USA.

OUTCOMES:

After the completion of the course, students would be able to

- Speak about their career choice.
- Self evaluate their strengths and weaknesses and speak about it.

- Make effective presentations on case studies or relating to projects.
- Write the statement of purpose relating to their career choice.

ECC3101 DIGITAL COMMUNICATION

L	T	P	C
3	1	0	4

OBJECTIVES:

- To understand the building blocks of digital communication systems.
- To give an overview of the design of digital communication systems.
- To introduce the basic concepts of digital modulation of baseband and passband signals.
- To give an exposure to information theory, source coding and error control coding.
- To discuss about the spread spectrum modulation schemes.

PREREQUISITES:

- Basic knowledge on Probability and random process.
- Fundamentals of Analog Communication.

MODULE I SAMPLING AND QUANTIZATION PROCESS 12

Digital communication systems – Functional description, Channel classification, Mathematical Models of Communication Channel, Sampling theory, Sampling theorem- Impulse sampling , flat top sampling, Sampler implementation: Quantization – Uniform and Non uniform.

MODULE II WAVEFORM CODING TECHNIQUES AND BASEBAND SIGNALING 10

Pulse Code Modulation, Differential pulse code modulation, Delta modulation, Adaptive delta modulation, Line Codes & their properties - Matched filter – ISI, Signal Design for zero ISI and Ideal Nyquist's Pulse for distortionless baseband data transmission - Correlative coding - Eye pattern, Adaptive Equalization.

MODULE III BAND PASS SIGNALING 11

Geometric Representation of signals, Conversion of the continuous AWGN Channel into a Vector Channel, Optimum receivers using coherent detection - Generation, detection, PDF and BER of Coherent BPSK, BFSK, and QPSK - Principles of MSK and QAM - Non-Coherent Modulation Techniques –BFSK- Principle of DPSK.

MODULE IV INFORMATION THEORY 9

Entropy –Source coding theorem - Lossless data Compression Algorithms- Prefix coding, Huffman and Shannon-Fano codes. - Mutual information - Channel capacity -

Channel coding theorem.

MODULE V ERROR CONTROL CODING 9

Error control using forward error correction, Discrete memoryless channels, - Linear Block codes –Syndrome and properties- Hamming codes - Cyclic codes-Convolution codes - Viterbi Decoder - Trellis Coded Modulation.

MODULE VI SPREAD SPECTRUM TECHNIQUES 9

Spread Spectrum Codes - PN sequence - Auto correlation and Cross correlation properties - M Sequences - Direct Sequence Spread Spectrum - Code synchronization, Processing Gain - Jamming Resistance - CDMA - Frequency Hop Spread Spectrum.

- B. P. Lathi, "Modern Digital and Analog Communication Systems", 3rd Edition, Oxford University Press,1998.
- Roger L. Peterson, David E. Borth and Rodger E. Ziemer, "Introduction to Spread Spectrum Communications", 1st Edition, Prentice Hall Inc, 1995.

OUTCOMES:

On Completion of the course, students wil be able to

- Explain the fundamental concepts of sampling and quantization.
- To describe the baseband and pass band digital communication.
- Choose different modulation techniques based on the application.
- Apply the suitable source coding and channel coding techniques.

- Develop secure communication using spread spectrum techniques.
- Design and evaluate a digital communication system on need basis.

List of Mini Project Samples (Project Based Learning):

1. Digital modulation and demodulation using MATLAB Simulation.
2. Implementation of duo binary encoding and modified duo binary encoding Using MATLAB
3. Analysis of AWGN channel by using Adaptive Equalizer.
4. Binary step size based LMS Algorithm developed by using MATLAB.
5. Implementation of MSK in Radio Communication Using MATLAB.
6. Analysis of Eb/N0 Vs BER for BPSK modulation scheme.
7. QPSK modulation and demodulation using MATLAB simulation.
8. Channel coding developed using Hamming code techniques by using MATLAB simulation.
9. Slow Frequency Hopping Spread Spectrum Implementation.
10. Direct sequence spread spectrum using MATLAB Simulation.

ECC3102	COMPUTER NETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Familiarize the student with the basic taxonomy and terminology of the computer networking region.
- To know about the concepts of data communication and networks.
- To discuss on ISO-OSI model and different protocols.
- To distinguish different protocols of network layer, transport layer and application layer.
- To provide students with contemporary knowledge in Cryptography and Security.

PREREQUISITES:

- Basic Knowledge in Computer Architecture

MODULE I DATA COMMUNICATIONS 7

Components and Categories - types of Connections - Topologies-Protocols and Standards - ISO / OSI model -Modems - RS232 Interfacing sequences

MODULE II DATA LINK LAYER 10

Error - detection and correction - Parity - LRC - CRC - Hamming code - Flow Control and Error control: stop and wait - go back N ARQ - selective repeat ARQ- sliding window techniques LAN: Ethernet IEEE 802.3, IEEE 802.4, IEEE 802.5 and IEEE 802.11.

MODULE III NETWORK LAYER 9

Packet Switching and Datagram approach - IP addressing methods - Sub netting - Routing - Distance Vector Routing - Link State Routing - Routers.

MODULE IV TRANSPORT LAYER 7

Duties of transport layer - Multiplexing - Demultiplexing - Sockets – User Datagram Protocol (UDP) - Transmission Control Protocol (TCP) – Congestion Control - Quality of services (QOS).

MODULE V APPLICATION LAYER 6

Domain Name Space (DNS)-SMTP, FTP, HTTP, WWW

MODULE VI CRYPTOGRAPHY&SYSTEM SECURITY 6

Basics of cryptography, classical encryption techniques, Data Encryption Standard and RSA algorithm, Role of firewalls and types of firewalls.

L – 45;Total Hours –45

TEXT BOOKS:

1. Behrouz A. Forouzan, "Data communication and Networking", Fourth Edition, Tata McGraw-Hill, 2011.
2. Larry L. Peterson & Bruce Davie, "Computer Networks': A system Approach", 5th Edition, Morgan Kaufmann Publishers, 2011.
3. William Stallings, Cryptography and network Security", 6th Edition, Pearson Education, March 2013

2. Andrew S. Tanenbaum,David J. Wetherall"Computer Networks", 5th Edition, Pearson Education, 2011.

OUTCOMES:

On completion of the course, students will be able to

- Explain data communication systems and its components.
- Enumerate the layers of OSI model ad TCP/IP.
- Implement the error detection and correction techniques in computer networks
- Understand and build the sub-netting and routing mechanisms.
- Compare the operation and features of application layer protocol.
- Have a basic knowledge of the use of cryptography &security issues

ECC3103	VLSI DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide rigorous foundation in MOS and CMOS digital circuits
- To introduce the fundamental principles of MOS and CMOS process technology and to examine the basic building blocks of large-scale digital integrated circuits.
- To introduce the concepts of modeling a digital system using Hardware Description Language.
- To offer a profound understanding of the design of complex digital VLSI circuits.

PREREQUISITES:

- Fundamentals and applications of Digital Electronics, Electronic Devices and Circuits

MODULE I MOS TRANSISTOR PRINCIPLES AND CMOS INVERTER 8

MOS(FET) Transistor Characteristic under Static and Dynamic Conditions, MOS Transistor Secondary Effects, Process Variations, Technology Scaling, CMOS Inverter - Static Characteristic, Dynamic Characteristic, Power, Energy, and Energy Delay parameters.

MODULE II COMBINATIONAL LOGIC CIRCUITS 7

Propagation Delays, Stick diagram, Layout diagrams, Examples of combinational logic design, Elmore’s constant, Dynamic Logic Gates, Pass Transistor Logic, Power Dissipation, Low Power Design principles.

MODULE III SEQUENTIAL LOGIC CIRCUITS 7

Static Latches and Registers, Dynamic Latches and Registers, Timing Issues, Pipelines, Pulse and sense amplifier based Registers, Nonbistable Sequential Circuits.

MODULE IV ARITHMETIC BUILDING BLOCKS AND MEMORY ARCHITECTURES 7

Data path circuits, Architectures for Adders, Accumulators, Multipliers, Barrel Shifters, Speed and Area Tradeoffs, Memory Architectures, and Memory control circuits.

MODULE V IMPLEMENTATION STRATEGIES 8

Full custom and Semi-custom design, Standard cell design and cell libraries, FPGA building block architectures, FPGA interconnect routing procedures.

MODULE VI DESIGN OF VLSI SYSTEMS 8

Basic concepts- identifiers- gate primitives, gate delays, operators, timing controls, procedural assignments conditional statements, Data flow and RTL, structural, gate level, switch level modeling, Design hierarchies, Behavioral and RTL modeling, Test benches, Structural gate level description with examples.

7. Digital Design and Verilog HDL fundamentals, Joseph Cavanagh, 2007, CRC Press, ISBN

OUTCOMES:

On completion of the course, students will be able to

- Explain data communication systems and its components.

- Enumerate the layers of OSI model ad TCP/IP.
- Implement the error detection and correction techniques in computer networks
- Understand and build the sub-netting and routing mechanisms.
- Compare the operation and features of application layer protocol.
- Have a basic knowledge of the use of cryptography &security issues.

ECC3104	VLSI LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To learn coding of combinational and sequential circuits using Verilog HDL
- To familiarize the simulation and synthesis tools for FPGAs.
- To estimate power and delay of logic circuits in FPGAs.

PREREQUISITES:

- Principles of Digital Electronics and its systems
- VLSI Design.

LIST OF EXPERIMENTS

Study of Simulation & Synthesis tools.
Design and simulation of basic logic gates.
Design, simulate and synthesis of adders and subtractors using HDL.
Design, simulate and synthesis of Multiplexers & demultiplexers using HDL.
Design, simulate and synthesis of Encoders & Decoders using HDL.
Design, simulation and synthesis of multipliers using HDL.
Design, simulation and synthesis of flip flops using HDL.
Design, simulation and synthesis of Shift registers and Counters using HDL.
Verification of on board LEDs and switches of FPGA using HDL codes.
Design of traffic light controller using HDL .
Design of Real time Clock (2 digits, 7 segment LED displays each for Hour, Minute and Sec) and verification in the FPGA board.
Simulation for CMOS Inverter Using Xilinx

P – 30; Total Hours –30

REFERENCES:

1. Digital Design: With an Introduction to the Verilog HDL, 5th Edition by M Morris Mano and Michael Ciletti, Pearson publications, 2013.
2. Verilog HDL: A Guide to Digital Design and Synthesis, Second EditionBy Samir Palnitkar, Prentice Hall PTR, 2003
3. Fundamentals of Digital Logic with Verilog Design, Third Edition, Stephen Brown, Mc, Graw Hill, 2014

OUTCOMES:

On completion of the course, students will be able to

- Write Verilog code for combinational circuits and sequential circuits
- Simulate the combinational circuits and sequential circuits using Xilinx ISE

- Synthesize the designed digital circuits using Spartan FPGA kits.
- Implement the designed circuits in FPGA and verify the operation physically
- Estimate the power and delay of the digital circuit from device utilization summary
- Develop a real time application using Xilinx ISE and FPGA kit

ECC3105	NETWORKS LAB	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To explain about basic network components and devices in a network
- To find out performance of different wired LAN protocols
- To analyze wireless LAN protocol
- To use different algorithms for finding out shortest path between any nodes
- To study and analyze cryptographic algorithm

PREREQUISITES:

- Knowledge of basics of network and its protocols
- Basics of C language.

LIST OF EXPERIMENTS

1. Demonstration of network devices and crimping of Ethernet cable.
2. Performance Study of ALOHA protocol for packet communication between nodes in a network.
3. Performance Study of CSMA protocol for data communication between nodes in a network.
4. Performance Study of CSMA – CD protocol for data communication between nodes in a network.
5. Performance Study of Token Bus access method in a bus network.
6. Performance Study of Token Ring access method in a ring network
7. Performance Study of Stop-and-Wait and Go-back N protocol for data transfer between two nodes in a network.
8. WLAN realization and throughput measurement
9. Simulation of shortest path between any two nodes using Distance Vector Routing Protocol and Link State Routing Protocol
10. Simulation of Cryptographic algorithm using C program.

P – 30; Total Hours –30

REFERENCES:

1. Behrouz A. Forouzan, "Data communication and Networking", Fourth Edition, Tata McGraw-Hill, 2011.

3. William Stallings, Cryptography and network Security",6th Edition, Pearson

Education, March 2013.

OUTCOMES:

On completion of the course, students will be able to

- Understand fundamental underlying principles of computer networking devices
- Implement basic wired LAN protocol such as ALOHA in a network and find its performance
- Implement IEEE standard protocols for wired LAN such as IEEE 802.3,802.4 and 802.5 and find its performance
- Implement wireless LAN protocol in a network and find its performance
- Understand the algorithm for finding shortest path between any two nodes in a network.
- Acquire knowledge about cryptographic algorithm used for network security

ECC3106	COMMUNICATION SYSTEM LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To implement Amplitude modulation, frequency modulation and demodulation circuit
- To analyse the Spectral characteristics of AM and FM signal
- To implement the modulation techniques using NI-LABVIEW SOFTWARE
- To construct and analyse different converters and mixer circuits.
- To develop an application using various analog modulation techniques.

PREREQUISITES:

- Familiarity with Electronic components, devices and its associated systems
- Basics of Electronic circuit design
- Knowledge on basic circuit functions
- Fundamentals of analog modulation

LIST OF EXPERIMENTS

1. Design and test the performance of
2. Amplitude modulator and demodulator.
3. Frequency modulator and demodulator
4. Study of spectrum analyzer.
5. Spectral analysis of AM/FM.
6. Up converter
7. Down converter
8. Mixer circuit
9. IF Amplifier
10. Frequency Division Multiplexing and demultiplexing
11. Time Division Multiplexing and demultiplexing
12. Labview –AM,FM,Noise Analysis
13. Pulse Modulation Techniques(PAM,PWM,PPM)
14. Mini project

P – 30; Total Hours –30

REFERENCES:

1. Simon Haykin, "Communication System", 5th Edition, Wiley India Pvt Ltd, 2009.
2. Wayne Tomasi, "Electronic Communication Systems: Fundamentals Through Advanced", 6th Edition, Pearson Education, 2007.

3. J.G. Proakis and M. Salehi, Communication Systems Engineering, 5th Edition, Prentice Hall, 2014.

OUTCOMES:

On completion of the course the students will be able to

- Design and Implement the modulation techniques for the analysis of signal communication circuits.
- Analyze and design simple modulators & demodulators using diode, transistors and integrated circuits
- Identify, formulate and Perform spectral estimation in the area of communication engineering to meet desired needs within realistic constraints.
- Apply the techniques, skills and modern engineering tools such as NI-LABVIEW necessary for engineering practice.
- Analyze and design the multiplexer and demultiplexer circuits.
- Justify and incorporate the modulator and demodulator circuits for various applications.

SEMESTER VI

MSB 3182	**SOCIAL ENTREPRENEURSHIP**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To be able to understand the field of social entrepreneurship and Social problems
- To be able to describe and understand the traits of social entrepreneurs
- To recognize the social business opportunities
- To synthesize the resource mobilization ways for social entrepreneurship
- To understand the social entrepreneurship models
- To recognize the impact of social entrepreneurship on societies

MODULE I INTRODUCTION TO SOCIAL ENTREPRENEURSHIP 07

Introduction - Emergence and Development of Social Entrepreneurship. Social Problems in India: An Overview. Social Development: The Indian Scenario. Emergence of Social Entrepreneurs and Sustainable Solutions to Social Problem. Characteristics and Context of Social Entrepreneurship .The Role of Social Entrepreneurship in Societies & Economies.

MODULE II SOCIAL ENTREPRENEURSHIP: DRIVERS AND CHALLENGES 07

The Drivers of Social Entrepreneurship. Elements of the Social Entrepreneurial Personality. Challenges of financial constraints. Challenge to attract and cultivate talented workers. Challenge of evaluation of social entrepreneur impact. Challenge of scaling and its impact. Cases

MODULE III SOCIAL ENTREPRENEURSHIP: OPPORTUNITY RECOGNITION 07

Opportunity Recognition and Planning Process. Opportunities for Social Entrepreneurs. The Nature of Social Entrepreneurial Opportunities. Social Problems into Opportunities. Idea development and conceptualization of social problem. Cases

MODULE IV RESOURCE MOBILIZATION FOR SOCIAL VENTURE 08

Resources at Initial Stage. Social Network as a role of Social Capital. Team and Collective Efforts. Need and Determination of Important Resources. Resource of Knowledge, Skills and Abilities. overview of venture capital and angel investment.

Cases

MODULE V **BUSINESS MODELS AND BUSINESS PLAN FOR SOCIAL ENTERPRISES** **08**

Design Principles of Social Entrepreneurship Business Models , Evaluation of the Root Cause of a Societal Problem. Developing business plan for social ventures. Developing an investor presentation. Feasibility study and report. How to start a business - Procedures for registration of small scale industry

MODULE VI **THE IMPACT OF SOCIAL ENTREPRENEURSHIP ON SOCIETY** **08**

Static Impact of Social Entrepreneurship. Impact of Charitable NGOs vs. Social Entrepreneurship, Impact of For-Profit Companies vs. Social Entrepreneurship. Social entrepreneurship report preparation by students.

Case Study of Social Entrepreneurs.

L – 45; Total Hours – 45

REFERENCES:

1. “Social Entrepreneurship : New models of sustainable social change” . Alex Nicholls, Oxford University Press 2006
2. The Process of social value creation : A multiple case study on Social Entrepreneurship in India , Archana Singh Springer 2016
3. “Social Entrepreneurship and social business” Christine K Volkmann, Springer Gabler 2012
4. “Social Entrepreneurship” Manuel London ,Routlege, 2010

OUTCOMES:

The students can able to

- Conceptualize social entrepreneurship in terms of a theoretical framework between changing social values and institutions
- Think and communicate about social values
- Learn about practical models of social change to launch, lead, manage, and evaluate a social venture
- Analyze funding needs and sources for the social venture
- Experience the ideas can be critically and collaboratively examined prior to commitment.

ENC 3281	COMMUNICATION AND SOFT SKILLS - II	L	T	P	C
	CONFIDENCE BUILDING	0	0	2	1

OBJECTIVES:

- To develop professional skills like work ethics, analytical skills, presentation skills etc.
- To train them in problem solving skills and leadership skills pertaining to industries.
- To train them in team building skills.
- To train in setting up career goals

MODULE I **6**

Brief about Multinational companies- Analysing work ethics of multinational companies and small industries- discussing as pairs-Knowledge about etiquette (different types)

MODULE II **6**

Visit to an Industry and prepare reports --Critically reading of industry specific journal articles and write ups-- preparing reports.

MODULE III **4**

Analysing problem solving situations in industries (relating to application of core subject to specific jobs) and discussing about them- working on a sample case

MODULE IV **6**

Developing Leadership in team projects-- debating about various aspects of leadership: for example, responsibility and reliability-time management

MODULE V **8**

Team building skills-- group discussions pertaining to industries-- presenting career goals. -- preparing for interviews- interpersonal skills

Total Hours – 30

REFERENCES:

3. Pai, A. (1993).How to Develop Self-Confidence. Amazon.com
4. Wentz,F.H.(2012). Soft skills training: A Workbook to Develop Skills for Employment. Amazon.com

OUTCOMES:

After completing the course students would be able to

- Exhibit critical reading skills through review of industry specific articles.

- Provide solutions to problem based situations.
- Exhibit leadership qualities by debating over industry specific issues.
- Participate in group discussions confidently.
- Present their career goals.

ECC3201	RF & MICROWAVE ENGINEERING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce various microwave sources, devices and components.
- To study the characteristics of microwave devices and components.
- To demonstrate the theory of wire antennas and aperture antennas.
- To familiarize with array antennas.
- To study about planar transmission lines and microwave integrated circuits

.

PREREQUISITES:

- Electromagnetic Fields & Electromagnetic Wave Propagation.

MODULE I MICROWAVE SOURCES 7

Microwave tubes-High frequency limitations- Principle of operation of Two cavity klystron, Multicavity Klystron, Reflex Klystron, TWT and Magnetron.

MODULE II MICROWAVE SOLID STATE DEVICES 8

Microwave junctions- Tee junctions- Magic Tee – Rat race-Corners- bends and twists-Directional couplers- Two hole directional couplers-Isolator-Circulator–S Matrix for microwave components

MODULE III MICROWAVE PASSIVE COMPONENTS 7

Microwave junctions- Tee junctions- Magic Tee – Rat race-Corners- bends and twists-Directional couplers- Two hole directional couplers-Isolator-Circulator–S Matrix for microwave components

MODULE IV FUNDAMENTALS OF ANTENNA 8

Vector Potential, Radiation from a infinitesimal alternating current element, Half-wave dipole antenna - power radiated, Mono-pole antenna. Antenna Parameters, radiation resistance, radiation intensity, radiation pattern, directivity, gain, effective height and effective aperture. Reciprocity theorem, Self and Mutual impedance

MODULE V ANTENNA ARRAYS& APERTURE ANTENNAS 8

Linear Arrays - Broadside and End-fire arrays, pattern multiplication, parasitic array elements, log-periodic and Yagi-Uda antenna. Loop antenna, Travelling wave antenna concepts. Horn Antennas and its types – Reflector antennas and its types.

MODULE VI STRIPLINES & MMICs 7

Monolithic Microwave Integrated Circuits: Introduction - Materials: Substrate Introduction to Microstrip Lines - Characteristic Impedance, Attenuation Losses – Parallel Strip Lines - Distributed Lines - Coplanar Strip Lines - Shielded Strip Lines. Materials, ConductorMaterials, Dielectric Materials, Resistive Materials - Monolithic Microwave Integrated- Circuit Growth - MMIC Fabrication Techniques.

Total Hours –45

TEXT BOOKS:

1. Samuel Y Liao,“Microwave Devices & Circuits”, Prentice Hall of India, 2006.
2. Robert.E.Collin-Foundations of Microwave Engg–McGraw Hill, 2002.
3. Constantine A. Ballanis , "Antenna Theory ", 2nd Edition, John Wiley & Sons, 2003.

REFERENCES:

1. D.M.Pozar, “Microwave Engineering”, John Wiley &sons,Inc., 2006.
2. John D Kraus, Ronald J Marhefka, Ahmad S Khan, "Antennas and Wave Propagation", 3rd Edition, Tata McGraw Hill, 2006.
3. R. S. Elliot, "Antenna Theory and Design", Revised edition, Wiley-IEEE Press., 2003.

OUTCOMES:

On completion of the course, students will be able to

- Select a microwave source, device and strip lines for a particular application.
- Determine the S-Matrix of various passive devices.
- Analyze the various microwave devices and components.
- Analyze the characteristics of different strip lines, antennas and antenna arrays.
- Solve the problems related to microwave devices.
- Design various types of antennas and micro strip line for a specific application.

ECC3202 EMBEDDED SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To expose the concepts of embedded systems
- To equip students with the software development skills necessary for practitioners in the embedded systems field.
- To learn entire software development lifecycle and examine the various issues involved in developing software for embedded systems.

PREREQUISITES:

- Knowledge in Microprocessor and Microcontrollers
- Basic Programming Skills in C language..
-

MODULE I EMBEDDED COMPUTING PLATFORM 8

Embedded computing – classification, characteristics and challenges –embedded system design process- overview of processors and hardware units in an embedded system- Embedded application-case study.

MODULE II EMBEDDED SOFTWARE DEVELOPMENT TOOLS 8

Host and target machines - Linkers / Locators for Embedded Software – Debugging techniques - Instruction set simulators Laboratory tools - Practical example – Source code.

MODULE III EMBEDDED C 7

Programming embedded systems in C- Introducing the 8051 microcontroller family-simulation and debugging in IDE-I/O port programming- Reading Switch- Adding structure to your code- meeting real-time constraints- Creating an embedded operating system- Serial interface.

MODULE IV REAL TIME OPERATING SYSTEMS (RTOS) 8

Overview of Operating Systems (OS) concepts – Real time systems –Types -Need for RTOS in Embedded Systems -Compare OS and RTOS- Multiple Tasks and Multiple Processes-Priority-Based Scheduling- Real time scheduling algorithm –Inter process Communication Mechanisms- Case study.

MODULE V PROGRAM DESIGN AND ANALYSIS 7

Components for Embedded Programs - Program design - Model of programs –

Assembly, Linking and Loading - Basic compilation techniques –program optimization –program level performance analysis-software performance optimization-program level energy and power analysis- Analysis and optimization of program size - Program validation and testing.

MODULE VI EMBEDDED NETWORKING 7

Embedded Networking: Introduction – Serial/Parallel Communication – Serial communication protocols - RS232 standard – Inter Integrated Circuits (I2C)-CAN Bus-Ethernet- Introduction to IoT.

Total Hours –45

TEXT BOOKS:

1. Marilyn Wolf, "Computers as components", Elsevier 2012
2. Qing Li and Carolyn Yao," Real-Time Concepts for Embedded Systems", CMP Books, 2003.
3. Michael J Pont, "Embedded C", Pearson Education Ltd, 2011.

3. Steve Heath, "Embedded System Design", 2nd Edition, Elsevier, 2004.
4. Frank Vahid and Tony Gwargie, "Embedded System Design", John Wiley & sons, 2002.

OUTCOMES:

On completion of the course, students will be able to

- Describe the software and hardware components in embedded system.
- Apply code optimization and debugging techniques for host & target based embedded system
- To discuss the application development using RTOS
- Illustrate the communication in distributed embedded system
- Design real time embedded application.
- Study the basics of 8051 microcontroller Architecture and programming the peripherals with C Language

ECC3203	RF AND MICROWAVE LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To study the characteristics of various microwave sources.
- To determine S - matrices of various passive microwave components.
- To find the gain and radiation pattern of various microwave antennas.
- To measure various microwave parameters using network analyzer.

PREREQUISITES:

- Electromagnetic Fields & Electromagnetic Wave Propagation.

LIST OF EXPERIMENTS:

1. Characteristics of Gunn diode Oscillator.
2. Characteristics of Reflex Klystron.
3. Microwave Power Measurement.
4. Characteristics of Directional Coupler and Magic Tee.
5. Determination of guide wavelength, frequency measurement.
6. VSWR measurements.
7. Determination of impedance of microwave components.
8. Radiation Patten of Horns, parabolic antenna.
9. Measurement of Dielectric constants of a solid.
10. Simulation of Microwave components using HFSS.
11. Characteristics of microwave components using Vector Network Analyser.

TOTAL HOURS-30

REFERENCES:

1. Annapurna Das and Sisir K Das, “Microwave Engineering”, TMH, 2nd ed., 2008.
2. M.L. Sisodia, " Basic Microwave Techniques and Laboratory Manual”, New Age international Publishers, 2011.
3. Samuel Y Liao,“Microwave Devices & Circuits”, Prentice Hall of India, 2006.

OUTCOMES:

On completion of the course the students will be able to

- Identify the antenna based on the characteristics of radiation pattern.
- Determine the s parameters of microwave devices.
- Design a microwave system, components or process to meet desired needs within realistic constraints

- Apply the theoretical principles underlying microwave devices and network.
- Use the techniques, skills and modern engineering tools such as network analyzer and HFSS, for solving problems in microwave systems

ECC3204	EMBEDDED SYSTEM DESIGN LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To learn the concepts of programming on software tools for Microcontrollers
- To develop a program, simulate and debug 8051/PIC and ARM Microcontrollers
- To program serial ports and displays device with Microcontrollers
- To program on chip peripherals of ARM Controllers.
- To familiarize a real time operating system.
- To know the concepts of IOT

PRE-REQUISITES:

- Micro-processor and Micro-controller architecture and its interfacing mechanism.
- Basics of C language.

LIST OF EXPERIMENTS:

1. Design with 8051/PIC Microcontrollers - I/O Programming, Timer programming - Assembly and C Programming.
2. Serial port programming with 8051/ PIC Microcontrollers – Assembly and Embedded C language.
3. Program 16X2 LCD and 4X4 keypad interface with 8051/ PIC Microcontrollers – Embedded C Programming.
4. I/O port programming and Serial port programming using ARM LPC2148.
5. Program for Analog to Digital conversion (with on chip ADC) of ARM LPC2148 microcontroller.
6. Program CAN bus of ARM LPC2378 microcontroller
7. Graphical LCD interfacing with ARM Cortex-M3 LPC1768 microcontroller
8. Multitasking implementation using RTX-tiny Real Time Operating Systems.
9. Study and implementation of Internet of Things for real time application.

Total Hours –30

REFERENCES:

1. Michael J Pont, “Embedded C”, Pearson Education, 2007.
2. Mohamammad Ali Mazidi & Mazidi, “8051 Microcontroller and Embedded Systems” , Pearson Education, 2006.

OUTCOMES:

On completion of the course, students will be able to

- Develop and debug the programs using Keil µvision IDE.
- Design projects for I/O ports, timers, serial ports using 8051/ PIC Microcontrollers.
- Demonstrate Keypad and LCD interfacing with microcontroller.
- Develop the application based on on- chip peripherals and CAN bus of ARM family Microcontroller
- Develop a real time embedded application using 8051and ARM Microcontrollers.
- Design IOT based application using Raspberry PI boards.

SEMESTER VII

		L	T	P	C
ECC4101	**INTRODUCTION TO WIRELESS COMMUNICTION**	**3**	**0**	**0**	**3**

OBJECTIVES:

- To introduce the aspects, needs and standards of modern wireless communications.
- To elaborate techniques for wireless channel modeling, and their performance over digital modulation.
- To give overview on advanced wireless techniques like OFDM and Spread Spectrums.

PRE-REQUISITES:

- Basics of communication theory and system

MODULE I INTRODUCTION TO WIRELESS COMMUNICATION 8

Overview of Wireless Communication – History, Types of services, Requirement for the Services, Current wireless systems, Wireless Spectrum and Standards.

MODULE II RADIO WAVE PROPAGATION

Path Loss and Shadowing – Free space Path loss – Ray tracing models, Emphrical Path loss Models, shadow fading, combined loss, outage probability, coverage area

MODULE III STATISTICAL MULTIPATH CHANNEL MODELS

Impulse response of channel, Narrow-band fading model and wide-band fading model, Discrete-time model, Space-Time channel models, Capacity of wireless AWGN channels, Flat-fading channels, and Frequency-selective fading channels

MODULE IV DIGITAL MODULATION OVER WIRELESS CHANNELS

Signal Space analysis, Geometric representation of signals, AWGN Channels, SNR, Error Probability for BPSK, QPSK, MPSK, MPAM, MQAM, FSK and CPFSK, Doppler Spread, ISI, Equalization techniques.

MODULE V CODING FOR WIRELESS CHANNELS

Linear Block Codes, Cyclic codes, Probability of Error for Hard Decision Decoding, convolutional codes, Viterbi algorithm, Turbo Codes, Low Density Parity Check Codes

MODULE VI MULTICARRIER MODULATION AND SPREAD SPECTRUM

Multicarrier Modulation with Overlapping Subchannels, Discrete implementation of Multicarrier, OFDM, Direct Sequence Spread Spectrum, RAKE recievers, Frequency-Hopping Spread Spectrum techniques and CDMA.

Total Hours –45

TEXT BOOKS:

1. Andrea Goldsmith, "Wireless Communications", 1st Edition, Cambridge University Press, 2005
2. Andreas F. Molisch , "Wireless Communications", 2nd Edition, Wiley IEEE, 2011

REFERENCES:

1. Theodore S. Rappaport, "Wireless Communications : Principles and Practice" 2nd Edition, Pearson India, 2010.
2. Simon Haykin, Michael Moher, "Modern Wireless Communication", 1st Edition, Pearson India, 2011.
3. Kamilo Feher, "Wireless Digital Communications: Modulation and Spread Spectrum Applications", 1st Edition, PHI Learning, 2009.

OUTCOMES:

On completion of the course the students will be able to

- Recognize various wireless communication services and modulation techniques.
- Classify channel models and signal models.
- Interpret the effects AWGN channel in discrete communication.
- Apply suitable coding techniques for a given discrete channel.
- Analyze the performance of common modulation techniques and coding techniques.
- Evaluate the benefits of different Spread-spectrum techniques and OFDM

ECC4102 OPTICAL COMMUNICATION

L	T	P	C
3	0	0	3

OBJECTIVES:

- To apply the principle and techniques of fiber optical communication.
- To distinguish various optical fiber modes, configurations and various signal degradation factors associated with optical fiber.
- To integrate optical source, optical detectors, Network Topologies and their application in optical Communication system.

PREREQUISITES:

- Basic knowledge in analog communication and digital communication, fundamental knowledge in Maxwell's equation.

MODULE I INTRODUCTION TO OPTICAL FIBERS 7

Element of an Optical Fiber Transmission link - Ray Optics - Optical Fiber Modes and Configurations - Mode theory of Circular Wave guides - Overview of Modes - Linearly Polarized Modes – Single Mode and Multimode mode Fibers - Graded Index fiber structure.

MODULE II SIGNAL DEGRADATION IN OPTICAL FIBERS 8

Attenuation - Absorption losses, Scattering losses, Bending Losses, Core and Cladding losses, Signal Distortion in Optical Wave guides - Information Capacity determination - Group Delay - Material Dispersion, Wave guide Dispersion, Signal distortion in SM fibers - Polarization Mode dispersion, Intermodal dispersion, Pulse Broadening in GI fibers - Mode Coupling - Design Optimization of SM fibers.

MODULE III FIBER OPTICAL SOURCES 8

Direct and indirect Band gap materials - Light source materials - LED structures, Quantum efficiency and LED power, Modulation of a LED, Laser Diodes - Modes and Threshold condition - Rate equations - External Quantum efficiency, Resonant frequencies - Laser Diodes structures and radiation patterns.

MODULE IV FIBER OPTICAL RECEIVERS 7

PIN and APD diodes - Photo detector noise, SNR, Detector Response time, Avalanche Multiplication Noise - Comparison of Photo detectors – Fundamental Receiver Operation.

MODULE V DIGITAL TRANMISSION SYSTEM 7

Point-to-Point links - System considerations - Fiber Splicing and connectors - Link Power budget - Rise-time budget - Noise Effects on System Performance

MODULE VI OPTICAL NETWORKS 8

Introduction to optical networking components-Basic networks-Network Topologies, Performance of passive linear Buses, Performance of star Architectures- Operational Principles of WDM, Erbium-doped fiber, Solitons, Basic concepts of SONET/SDH- Optical CDMA- Measurements- optical power meter- optical time domain reflectometer (OTDR).

Total Hours –45

TEXT BOOKS:

1. Gerd Keiser, "Optical Fiber Communication", 3rd Edition, McGraw-Hill International, Singapore, 2000.
2. J. Gowar, "Optical Communication System", Prentice Hall of India, 2001.
3. J. Senior, "Optical Communication, Principles and Practice", Prentice Hall of India, 3rd Edition, 2008

REFERENCES :

2. Rajiv Ramaswami and Kumar Sivarajan, "Optical Networks: A practical perspective", 2nd Edition, Morgan Kaufmann, 2001.

OUTCOMES:

On completion of the course, students will be able to

- Describe the basic elements in optical communication system.
- Identify and analyze the characteristics of optical fibers.
- Quantify, and understand the significance of dispersion and attenuation in optical fiber communications.
- Classify the characteristics of Optical sources and detectors.
- Design a real time fiber optic system based on link power and rise time budget.
- Analyze the optical network based on network topologies and optical power measurements**.**

ECC4103	OPTICAL COMMUNICATION LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To apply the principle and techniques of fiber optical communication.
- To distinguish various optical fiber modes, configurations and various signal degradation factors associated with optical fiber.
- To integrate optical source, optical detectors, Network Topologies and their application in optical Communication system.

PRE-REQUISITES:

- Basic knowledge in analog communication and digital communication, fundamental knowledge in Maxwell's equation.

LIST OF EXPERIMENTS:

1. To measure the numerical aperture (NA) of the different optical fiber.
2. Measurement of Mode field diameter of optical fiber.
3. Analysis of various parameters for step index fiber and graded index fibers using MATLAB.
4. Measuring optical power attenuation in plastic optical fiber.
5. Measuring optical power bending loss and coupling loss in plastic optical fiber.
6. To check the VI characteristic of LED.
7. Characteristics of LASER Diode.
8. Characteristics of APD
9. Describe the operational characteristics and parameters of Photodiode used as photo detector in fiber optic system.
10. Analysis of fiber optic power budget using MATLAB.
11. Power budget analysis of LASER and LED.
12. Measurement of Link Characteristics using OTDR

Total Hours –30

4. Gerd Keiser, "Optical Fiber Communication", 3rd Edition, McGraw-Hill

International, Singapore, 2000.

OUTCOMES:

On completion of the course, students will be able to

- Describe the basic elements in optical communication system.
- Identify and analyze the characteristics of optical fibers.
- Quantify, and understand the significance of dispersion and attenuation in optical fiber communications.
- Classify the characteristics of Optical sources and detectors.
- Design a real time fiber optic system based on link power and rise time budget.
- Analyze the optical network based on network topologies and optical power measurements.

ECC4104	WIRELESS COMMUNICATION LABORATORY	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To familiarize mathematical modeling of wireless communication systems and channels.
- To evaluate the performance of wireless communication systems using software tools.
- To implement Filters and Equalizer for wireless digital communication

PRE-REQUISITES:

- Basics of communication theory and system

LIST OF EXPERIMENTS:

1. Modelling Digital Baseband Communication with noise.
2. Implementation of Matched Filter using Simulation tools
3. Study of EYE-Pattern variation with SNR & Bandwidth
4. Spectral Analysis of BPSK, QPSK, 16-PSK, FSK and QAM.
5. Implementation of Digital Communication Receiver with Hard Decision Decoding BER vs SNR for BPSK, QPSK, FSK
6. Direct Sequence Spread Spectrum communication
7. Modeling of Fading wireless channels.
8. Implementation of Equalization techniques
9. Implementation of OFDM

Total Hours –30

REFERENCES:

1. Andrea Goldsmith, “Wireless Communications”, 1st Edition, Cambridge University Press, 2005
2. Andreas F. Molisch , “Wireless Communications”, 2nd Edition, Wiley IEEE, 2011
3. Apurba Das, “Digital Communication - Principles & System Modelling”, Springer, 2010
4. Agam Kumar Tyagi, “Matlab and Simulink for Engineers”, Oxford University Press, 2012

OUTCOMES:

On completion of the course, students will be able to

- Classify the modulation schemes based on the applications

- Model wireless communication Systems and channels
- Implement suitable filters and Equalizers based on the system.
- Analyze the BER performance of various modulation schemes under AWGN and ISI
- Evaluate the performance of different Spread Spectrum techniques.
- Summarize the benefits of OFDM

ECC4105	INTERNSHIP/INDUSTRY TRAINING/ MINI PROJECT	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To improve the professional competency and research aptitude of students

GUIDELINES:

1. This mini project will help the students to develop the work practice to apply the design skills for solving real life problems.
2. The project can be an experimental project on any of the topics in electronics and communication.
3. The project work is allotted individually on different topics.
4. The students shall be encouraged to do their project in the parent institute itself.
5. Department will constitute an Evaluation Committee to review the project periodically.

Total Hours –30

OUTCOMES:

At the end of the project the student will be able to

- Design and analyze an electronic system
- Fabricate an electronic system/device in their area of interest
- Improve their presentation skills
- Improve the documentation skills.

SEMESTER VIII

		L	T	P	C
ECC4201	**PROJECT WORK**	**0**	**0**	**24**	**12**

OBJECTIVES:

- To develop the work practice of students
- To apply theoretical and practical tools/techniques
- To solve real life problems related to industry and current research
- To improve the skills on prototype development
- To improve the skills towards report/documentation preparation

GUIDELINES:

Project work can be a design project/experimental project and/or computer simulation project on any of the topics of Electronics and communication Engineering. The project work is allotted individually or a group of students not more than 3 on different topics. The students shall be encouraged to do their project work in the parent institute itself. If found essential (Industry oriented Projects), they may be permitted to continue their project outside the parent institute.

Department will constitute an Evaluation Committee to review the project work. The Evaluation committee consists of internal guide and experts in the specified area of the project. Project work consists of thesis work, two reviews of the work and the submission of project report. First review would highlight the topic, objectives, methodology and expected results. Second review evaluates the progress of the work, draft of the project report and demo of the prototype model.

OUTCOMES:

At the end of the project the student will be able to

- Learn the tool required for the design, analysis of their preliminary work.
- Select the specific devices for different application along with justification.
- Apply the practical knowledge while solving real time problems
- Incorporate cost effective and efficient project models.
- Conclude the subject knowledge through proto type models.
- Prepare an appropriate documentation.

PROFESSIONAL ELECTIVES

ECCX01	DIGITAL SYSTEM DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To identify the principles involved in the design of asynchronous sequential circuits to match industry standards.
- To gain knowledge in the design of asynchronous sequential circuits, fault modelling and simulation.
- Students will gain knowledge in designing memory devices.
- Students will be able to design circuits using PLDs.
- The students will gain knowledge in system verilog programming.

MODULE I ASYNCHRONOUS SEQUENTIAL CIRCUIT DESIGN 7

Analysis of Asynchronous Sequential Circuit (ASC) – Flow Table Reduction – Races in ASC – State Assignment Problem and the Transition Table – Design of ASC – Static and Dynamic Hazards – Essential Hazards – Designing vending Machine Controller – Mixed Operating Mode Asynchronous Circuits

MODULE II STATE MACHINE CHARTS 6

SM Chart - derivation of SM Chart- SM chart for Binary Multiplier, Realization of SM Chart.

MODULE III NEW GENERATION PROGRAMMABLE LOGIC DEVICES 8

ROM- Internal ROM structure – Implementation of Boolean functions using ROM- Design of Sequential circuits using ROM, PROM – Realization State machine using PLD, PAL, PLA, Programmable Gate Arrays, Programmable Logic sequencer, Field Programmable Gate Array Families.

MODULE IV FAULT MODELING 7

Logical fault model, Fault detection & Redundancy in combinational, sequential circuits, Fault Equivalence and Fault location in Combinational & sequential Circuits. Single stuck fault model, Multiple stuck fault model.

MODULE V FAULT TESTING 8

Basic issues, Automatic test generator for single stuck fault in combinational circuits,D Algorithm, Path oriented Decision Making Algorithm, ATG systems, Test set

compaction

MODULE VI SYSTEM DESIGN USING VERILOG 9

Hardware Modelling with Verilog, Realization of combinational and sequential circuits using Verilog – Registers – counters – sequential machine – serial adder – Multiplier-Divider – Design of simple microprocessor, Synthesis of Finite State Machines.

Total Hours –45

TEXT BOOKS:

1. Donald G. Givone, “Digital principles and Design”, Tata McGraw Hill, 2002.
2. Stephen Brown and ZvonkVranesic, “Fundamentals of Digital Logic with Verilog Design”, Tata McGraw Hill, 2002.
3. Parag K Lala, “Digital System design using PLD”, BS Publications, 2003.
4. John M Yarbrough, “Digital Logic applications and Design”, Thomson Learning, 2001.

REFERENCES:

1. Nripendra N Biswas, “Logic Design Theory”, Prentice Hall of India, 2001.
2. Charles H. Roth Jr., “Fundamentals of Logic design”, Thomson Learning, 2004.
3. Digital Logic Design, IV edition, Brian Holdsworth, Clive Woods, Elesevier, 2008.
4. Michael D Ciletti, “Advanced Digital Design with the Verilog HDL”, PHI, 2008.

OUTCOMES:

- Analyze asynchronous sequential circuits and design simple asynchronous digital system for the given specifications.
- Make use of state machines and ASM charts for the given design requirements.
- Select and use appropriate PLDs to realize digital systems based on the requirements.
- Test the faults in the digital circuits using stuck at fault models.
- Generate test vectors using ATPG algorithms and analyze its performance.
- Apply digital system design principles and make projects based on the requirements using verilog HDL.

ECCX02 COMPUTER ARCHITECTURE

L	T	P	C
3	0	0	3

OBJECTIVES:

- To acquaint students with the basic hardware components and performance measure of computers
- To study the algorithms & implementation of arithmetic for Computer
- To understand the concepts of pipelining and the hierarchy of memory system
- To impart knowledge on Parallel Processors and networking

MODULE I COMPUTER ABSTRACTIONS AND TECHNOLOGY 9

Introduction - Eight Great Ideas in Computer Architecture - Below Your Program - Technologies for Building Processors and Memory – Performance - The Power Wall - Switch from Uniprocessors to Multiprocessors - Fallacies and Pitfalls

MODULE II LANGUAGE OF THE COMPUTER 9

Operations and Operands of computer hardware – Signed and Unsigned Numbers - Representing Instructions in the Computer – Instruction and instruction sequencing - Addressing modes - Stacks and queues - A translation hierarchy for C.

MODULE III ARITHMETIC ALGORITHMS FOR COMPUTERS 8

Algorithms : Addition and Subtraction – Multiplication – Division - Floating Point operations

MODULE IV PROCESSING UNIT AND PIPELINING CONCEPTS 7

Fundamental concepts - Hardwired control - Microprogrammed control- Nano Programming - Pipelining - Basic concepts - Data hazards - Instruction hazards - Superscalar operation

MODULE V EXPLOITING MEMORY HIERARCHY 7

Basic concepts - Semiconductor RAMs, ROMs ,Speed, size and cost - Associative memory - Cache memories - Virtual memory - Memory Management requirements - Secondary storage.

MODULE VI PARALLEL PROCESSORS FROM CLIENT TO CLOUD 5

Introduction - Categorization of parallel hardware - Introduction to Multiprocessor Network Topologies - Communicating to the Outside World: Cluster Networking.

Total Hours –45

TEXT BOOKS:

1. D A Patterson & J L Hennessy, Computer Organization and Design: The hardware/software interface, Morgan-Kaufmann (Fifth edition) 2013.
2. Carl Hamacher, Zvonko Vranesic and Safwat Zaky, "Computer Organization" 5th Edition, McGraw Hill, 2002.
3. Morris Mano, "Computer System Architecture", 3rd Edition, PHI, 2001.

REFERENCES:

1. William Stallings, "Computer Organization & Architecture - Designing for Performance", 6th Edition, Pearson Education, 2003 reprint.
2. David A.Patterson and John L.Hennessy, "Computer Organization & Design, the hardware / software interface", 2nd Edition, Morgan Kaufmann, 2002 reprint.
3. John P.Hayes, "Computer Architecture & Organization", 3rd Edition, McGraw-Hill, 1998.

OUTCOMES:

On completion of the course the students will be able to

- Analyze and evaluate the performance of a system.
- Identify addressing modes and describe the language of a computer.
- Demonstrate how to add and multiply integers and floating-point numbers using two’s complement.
- Design and emulate a single cycle or pipelined CPU and handle different types of hazards.
- Explain the wide variety of memory technologies and learn partitioning of memory.
- Use different techniques to create and use parallelism.

ECCX03	CONTROL SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the modeling of control systems.
- To analyze the properties of control system in time domain & frequency domain.
- To design feedback controllers and compensators
- To analyze the stability of the control system.
- To introduce state variable representation of physical systems and study the effect of state feedback
- To introduce the modern tool such MATLAB for analyzing the system.

MODULE I CONTROL SYSTEM MODELING 8

Basic Elements of Control System – Open loop and Closed loop systems - Differential equation - Transfer function, Modeling of Electric systems, Translational and rotational mechanical systems - Block diagram reduction Techniques - Signal flow graph

MODULE II TIME RESPONSE ANALYSIS 8

Time response analysis - First Order Systems - Impulse and Step Response analysis of second order systems - Steady state errors – P, PI, PD and PID Compensation, Analysis using MATLAB

MODULE III FREQUENCY RESPONSE ANALYSIS 8

Frequency Response - Bode Plot, Polar Plot, Nyquist Plot - Frequency Domain specifications from the plots - Constant M and N Circles - Nichol‟s Chart - Use of Nichol‟s Chart in Control System Analysis

MODULE IV STABILITY ANALYSIS 7

Stability, Routh-Hurwitz Criterion, Root Locus Technique, Construction of Root Locus, Stability, Dominant Poles, Application of Root Locus Diagram - Nyquist Stability Criterion - Relative Stability, Analysis using MATLAB

MODULE V STATE VARIABLE ANALYSIS 7

State space representation of Continuous Time systems – State equations – Transfer function from State Variable Representation – Solutions of the state equations - Concepts of Controllability and Observability – State space representation for Discrete time systems. Sampled Data control systems – Sampling Theorem – Sampler & Hold

– Open loop & Closed loop sampled data systems

MODULE VI DESIGN OF COMPENSATORS 7

Series, Parallel, series-parallel Compensators - Lead, Lag, and Lead Lag Compensators, Analysis using MATLAB.

Total Hours –45

TEXT BOOKS:

1. Farid Golnaraghi, Benjamin C. Kuo," Automatic Control Systems", McGraw Hill Professional, Tenth Edition , 2017.
2. Katsuhiko Ogata," Modern Control Engineering" Prentice Hall, 5e, 2010.
3. J. Nagrath, M. Gopal Control Systems Engineering, Anshan, 5e, 2008.

REFERENCES:

1. William S. Levine, "The Control Handbook, Second Edition: Control System Fundamentals "CRC Press, 2010.
2. Jesus C. De Sosa, "Control Systems: Analysis and Realization ", iUniverse, 2010

OUTCOMES:

On completion of the course the students will be able to

- develop mathematical models of control components and systems
- design controllers for systems
- analyze the system in time and frequency domain
- use the Root Locus method, Routh Hurwitz array and Nyquist stability criterion to find stability of a system
- obtain and manipulate state space representation of systems
- use techniques and skills of system control using modern tool such as matlab

ECCX04	BIO MEDICAL ELECTRONICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the application of biomedical sensors.
- To analyze different instruments to measure bio signals like EEG, ECG, and EMG.
- To explain the working of different medical instruments, Therapeutic Instruments and their use in physiological measurements.

MODULE I SOURCES OF BIOELECTRIC POTENTIALS 8

Introduction to bio potentials-Resting & Action potentials, propagation of active potential, The Bioelectric potentials – ECG, EEG, EMG and Evoked responses

MODULE II TRANSDUCERS & ELECTRODES 8

Transducers & Transduction principles-Active transducers- Passive Transducers- Biochemical Transducers- Transducer for Biomedical Applications.

Electrode theory- Bio potential Electrodes – Microelectrodes- Body surface electrodes- Needle Electrodes- Reference electrodes- PH electrodes- Blood gas electrodes.

MODULE III MONITOR AND RECORDERS 5

Bio potential amplifiers, recorders, monitors, Galvanometric, potentiometric, ultra violet, electrostatic, ink jet recorder video monitors, color printers, Electro Physiological recorders

MODULE IV BIO SIGNAL MEASUREMENTS 8

Neuronal communication, EPSP & IPSP, Neuronal firing measurements, EEG-block diagram, various Rythms, EEG in diagnostics, EMG -principles and applications. ECG-principles and clinical applications.

MODULE V OPHTHALMOLOGY INSTRUMENTS 8

Electro retinogram, Electrooculogram, Opthalmoscope, Tonometer for eye pressure measurement.

MODULE VI THERAPEUTIC INSTRUMENTS 8

Diathermy, Defibrillator, cardiac pacemaker, stimulators, Laser applications in

machine, X-Rays production & use, Radiographic Diagnostic and Therapeutic, Film construction and processing, Interaction with body. Fundamentals of radiation therapy.

Total Hours –45

TEXT BOOKS:

1. Khandpur, R.S., "Handbook of Biomedical Instrumentation", Tata McGraw-Hill, New Delhi, 2014.
2. Willis J.Tompkins,"Biomedical digital signal processing", Prentice Hall of India, New Delhi, 2000
3. Leislie Cromwell, "Biomedical instrumentation and measurement", Prentice Hall of India, New Delhi, 2013.

REFERENCES:

1. W.F. Ganong / Review of Medical Physiology / 25th Asian Ed. / Medical Publishers, -2015
2. J. G. Webestered / Medical Insturmentation / Houghton Mifflin, Fourth edition,2010
3. A. M. Cook and J. G. Webester, eds / Therapeutic Medical Devices / PHI, 2009

OUTCOMES:

On completion of the course the students will be able to

- Characterize various sources of bio signals.
- Identify the transducers and electrodes used for brain, heart, muscles diagnosis.
- Discuss the various recorders in clinical applications.
- Analyze EEG,ECG & EMG signal.
- Describe the Ophthalmology Instruments for eye pressure measurements
- Apply modern therapeutic Instruments for diagnosis and treatments

ECCX05 IMAGE PROCESSING

L	T	P	C
2	0	2	3

OBJECTIVES:

- Describe basic principles of digital image processing and its performance parameters
- Design and implement algorithms that perform basic image processing
- Design and implement algorithms for advanced image analysis
- Use appropriate algorithm for different image processing applications

MODULE I DIGITAL IMAGE FUNDAMENTALS 5

Difference between Analog and Digital image, Components of Image Processing System, Elements of Visual Perception, Image Sampling & Quantization, Spatial and Gray Level Resolution, Basic Relationships between Pixels. Performance parameters-Measures and their significance- Mean, variance, PSNR, correlation. Fundamentals of color image processing: color models- RGB, CMY, HIS.

MODULE II IMAGE ENHANCEMENT 5

Image Enhancement techniques overview- Histogram of an image-Histogram equalization-Spatial and frequency domain-Low pass and High pass filters.

MODULE III IMAGE TRANSFORMS 5

Significance of image transforms – Classifications-2D DFT,DCT, Hadamard and Haar transform

MODULE IV IMAGE SEGMENTATION AND RESTORATION 6

Morphological Image Processing: Dilation, Erosion, Opening, Closing on Binary Images, Segmentation: Point, line edge detection, boundary and thresholding, Segmentation types, Restoration: Image Degradation Model, Unconstrained and constrained restoration

MODULE V IMAGE COMPRESSION 4

Need of image compression-Compression ratio-Compression types-Lossless and lossy compression techniques.

MODULE VI IMAGE PROCESSING APPLICATIONS 5

Applications using different Imaging modalities such as Satellite Imaging, Medical imaging etc. Applications in Biometrics and security.

Practicals :

1. Read, write and displaying images
2. Image sampling and quantization
3. Extraction of basic color components from an image
4. Histogram of a low contrast, high contrast and good contrast image
5. Histogram equalization
6. Image filtering using LPF and HPF
7. DFT of an image
8. Haar transform of an image
9. Dilation, Erosion, opening and closing of binary image
10. Point,line and edge detection of an image
11. Image compression using lossless technique and find its compression ratio
12. Image compression using lossy technique and find its compression ratio
13. Extracting Agricultural fields from satellite images
14. Enhancing X-ray images
15. Fingerprint recognition

L – 30; P– 30; Total Hours –60

TEXT BOOKS:

1. Gonzalez and Woods, "Digital Image Processing", 3rd Edition, Pearson Education, 2016.
2. Anil. K. Jain, "Fundamentals of Digital Image Processing"; 4th Edition, PHI, 2007
3. Gonzalez, Woods and Eddins, “Digital Image Processing using MATLAB”, Tata McGraw Hill Education,2nd edition,2017

2. Jayaraman, S.Essakirajan and T.Veerakumar “Digital Image Processing”, Tata McGraw Hill Education,5th edition,2015
3. Arthur Weeks Jr., "Fundamentals of Digital Image Processing", PHI, 2006.

OUTCOMES:

On completion of the course the students will be able to

- Explain the fundamental concepts and performance parameters of digital image processing.
- Recognize & apply various image enhancement techniques.
- Apply various transforms for image processing

- Apply various techniques for image segmentation and restoration.
- Identify and use appropriate image compression techniques
- Apply suitable image processing techniques in different applications

ECCX06	ADVANCED MICROPROCESSORS AND MICROCONTROLLERS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To study about Pentium Processor and its programming
- To learn about the functioning of PIC Microcontroller.
- To learn about the interfacing of PIC Microcontroller.
- To study the ARM RISC architecture and its programming.

MODULE I HIGH PERFORMANCE ARCHITECTURE – PENTIUM 8

CPU Architecture- Bus Operations – Pipelining – Branch predication – floating point unit- Pentium memory management.

MODULE II INTRODUCTION TO MULTICORE ARCHITECTURE 7

State of computing – Multiprocessor and Multicomputer – Multivector and SIMD Computer –Performance Metrics and Measures- Speedup Performance Laws

MODULE III PIC MICROCONTROLLER CPU 8

CPU Architecture - Instruction set - interrupts - Assembly language programming and introduction to C-Compilers.

MODULE IV PIC COMMUNICATION INTERFACE 7

Timers- I2C Interfacing - UART- A/D Converter -PWM and Introduction to C-Compilers.

MODULE V ARM ARCHITECTURE 7

Organization of CPU - Bus architecture -Memory management unit - ARM instruction sets - addressing modes - Programming the ARM processor

MODULE VI HIGH PERFORMANCE RISC ARCHITECTURE ARM 8

Exception handling – Interrupts – Interrupt handling schemes- Firmware and bootloader – Application of ARM Processor.

Total Hours –45

TEXT BOOKS:

1. James L.Antonakos ,” An Introduction to the Intel family of Microprocessors ‘’ Pearson Education 1999.

3. Valvano "Embedded Microcomputer Systems" Thomson Asia PVT LTD first reprint 2001.
4. Barry.B.Breg,” The Intel Microprocessors Architecture, Programming and Interfacing”, PHI, 2002.

OUTCOMES:

On completion of the course the students will be able to

- Categorize the CISC and identify the addressing modes for various instructions of advanced microprocessors
- Develop an algorithm and write programs for PENTIUM.
- Develop an algorithm and write programs for PIC.
- Interface peripheral devices with PIC microcontroller.
- Explain the architecture and programming of ARM processor.
- Design a ARM development board.

ECCX07	PCB DESIGN	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To familiarize with basics of PCB components.
- To study about Pspice for circuit analyze
- To learn about schematic design.
- To evaluate Design rule check and prepare footprint.
- To design layout and generate art files.
- To Fabricate the PCB, assemble the components and test the PCB.

MODULE I BASICS OF PCB AND SCHEMATIC DESIGN 7

PCB components – SMD and through hole components, Circuit analysis – Pspice, Schematic design - Design rule check. Footprint design, Net list generation

1. Schematic circuit design
2. New symbol creation.
3. Pspice Simulation
4. Foot print creation
5. Design rule check and Net list generation

MODULE II PCB LAYOUT DESIGN AND MANUFACTURING PROCESS 6

Classification of PCB, Layer design, General layout - rules and parameters - PCB design rules for digital and analog circuits, Art file Generation.

1. Layout design constrains
2. Components placement
3. Board routing
4. Design rule check
5. Art file generation.

MODULE III PCB FABRICATION USING MILLING MACHINE AND ASSEMBLY 2

Fabrication and testing of five Volt power supply board, Fabrication and testing of half adder and full adder circuit, Fabrication and testing of Half wave rectifier circuit.

L – 15; P-30 ;Total Hours –45

TEXT BOOKS:

1. Walter C Bosshart , ‘’ Printed Circuit Boards, Design and Technology ” McGraw Hill.Inc., 2009
2. Khandpur R.S, ‘’ Printed Circuit Boards, Design, Fabrication and Assembly” McGraw Hill.Inc.,

2. Kraig Mitzner “Complete PCB Design Using OrCAD Capture and PCB Editor” Newnes, 2009
3. IPC 2221 standards
4. Pspice.com for component models and libraries

OUTCOMES:

On completion of the course the students will be able to

- Categorize the SMD components and PTH components with different packages
- Understand circuit design process and different machines used for designing.
- Design pads and footprint for new symbols.
- Design, place components and trouble shoot the errors.
- Etch the traces for final PCB and Produce art files for fabrication.
- Fabricate the board and test the circuit by assembling the components

ECCX08	DATA STRUCTURE AND ITS ALGORITHMS	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To introduce the fundamental concepts of data structure.
- To understand the basic operations of stacks and queues for real time scenario.
- To comprehend the significance of sorting algorithms.
- To demonstrate the understanding of various searching algorithms.

MODULE I BASICS OF DATA STRUCTURES 5

Introduction to Data Structures-Data Structure Operations- Algorithm: complexity, Time- space tradeoff- Linked lists-Representation of linked lists in Memory- Traversing a linked list, Searching a linked list- insertion into linked list, Deletion from a linked list- Types of linked list: Singly Linked Lists – Doubly Linked Lists – Circular List

MODULE II STACK ,QUEUES & TREES 5

Introduction, Array Representation of Stack-Operations on Stack: Infix, prefix and postfix notations-Application of stack, Queue- Array Representation of Queue- Trees: Definitions and Concepts- Operations on Binary Trees, Representation of binary tree –Tree Traversal.

MODULE III GRAPHS: SEARCHING TECHNIQUES ELEMENTARY ALGORITHMS 5

Graphs: Matrix Representation of Graphs, Breadth First Search, Depth First Search, - Searching Techniques: Sequential Searching, Binary Searching, Search Trees, Sorting: Introduction, O notation, Exchange sort- Bubble sort, Quick sort- Elementary Algorithms: Characteristics of an Algorithm; Building Blocks of Algorithms- Outline of Algorithms

PRACTICALS :

1. Write a C program to implement the doubly linked list.
2. Write a C program to implement the Circular list.
3. Write a C program to implement the tower of Hanoi.
4. Write a C program to demonstrate the working of stack, of size N using Array. The program should check overflow and underflow also.

5. Write a C program to demonstrate the working of queue, of size N using Array. The program should check the queue status for empty and full.
6. Write a C program to convert the given expression from infix to postfix.
7. Write a C program to search for an element in an array using binary search.
8. Write a C program to sort a list of n elements using bubble sort.
9. Write a C program to sort a list of n elements using quick sort.

L – 15; P – 30; Total Hours –45

TEXT BOOKS:

1. Horowitz, Sahni, Anderson- Freed , “Fundamentals of Data Structures in C” , , 2nd edition, Universities Press,2008.
2. A.M.Tennenbaum, Y.Langsam and M.J.Augenstein , “Data Structures using C”, PHI, Pearson education 1991.
3.

REFERENCES:

1. Rajesh K. Shukla , “Data Structures Using C & C++”, Wiley- India,1st edition 2009.
2. Data Structures Using C, ISRD Group, Second Edition, Tata McGraw-Hill, First reprint 2007.
3. Balagurusamy, “Data Structure Using C” , McGraw Hill Education; First edition, July 2017
4. C & Data Structures, Prof. P.S. Deshpande, Prof. O.G. Kakde, Dreamtech press.

OUTCOMES:

On completion of the course the students will be able to

- Describe common applications for arrays.
- Compare between different data structures. Pick an appropriate data structure for a design situation.
- Apply linear and non-linear data structures like stacks, queues, linked list etc.
- Analyse, evaluate and choose appropriate abstract data types and algorithms to solve particular problems.
- Analyze and evaluate the efficiency of various sorting algorithms including exchange sort, bubble sort and quicksort.
- Formulate new solutions for programming problems or improve existing code using learned algorithms and data structures.

ECCX09	JAVA PROGRAMMING	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To introduce the concept of OOPS
- To familiarize core Java concepts.
- To apply standard Java API's in programming
-

MODULE I INTRODUCTION TO JAVA 2

Introduction to Object Oriented Programming, Java Virtual Machine, Java Bytecode, Overview of Java API's.

MODULE II BASIC JAVA LANGUAGE 4

Keywords, literals, lexical tokens, data types, variables and arrays, operators, control statements

MODULE III CLASSES AND OBJECTS 5

Class fundamentals, constructors & methods, Object reference, access control and modifiers, inheritance and method overloading, package and interfaces, standard java library.

MODULE IV EXCEPTION HANDLING, MULTI THREADING & IO 4

Use of try, catch, finally, throw and throws keywords. User defined exceptions. Java Thread, thread life-cycle, priorities and thread synchronization. Standard java.io library.

Total Hours –15

TEXT BOOKS:

1. Herbert Schildt, "Java: The Complete Reference", 8th Edition, McGraw Hill Education, 2011.

REFERENCES:

1. Robert Sedgewick and Kevin Wayne, "Introduction to Programming in Java: An Interdisciplinary Approach", 1st Edition, Pearson India, 2014.
2. C Thomas Wu, "An Introduction to Object-Oriented Programming with Java", 4th Edition, McGraw Hill Education, 2010.
3. Cay S. Horstmann, "Core Java: Volume I: Fundamentals", 10th Edition, Pearson Education, 2016.

OUTCOMES:

On completion of the course the students will be able to

- Write, compile and execute simple Java program.
- Recognize data types, classes and objects in a Java program
- Interpret the functionalities of inheritance, overloading and overriding
- Construct Java programs that could handle exceptions.
- Decide on the appropriate standard library class for applications.
- Develop multi-threaded Java programs

ECCX10 MATLAB PROGRAMMING L T P C
1 0 0 1

OBJECTIVES:

- To practice the MATLAB environment and learn programming fundamentals
- To develop skill to write Programs using commands and functions
- To use MATLAB in engineering applications

MODULE I AN OVERVIEW OF MATLAB 7

MATLAB environment - Command Window- History- Workspace-Current Directory-Figure window- Edit window-Shortcuts-Help files-Data types-Constants and Variables- Character constants- operators- Assignment statements-Control Structures: For loops, While, If control structures, Switch, Break, Continue statements.

MODULE II OPERATIONS IN MATLAB 8

Input Output functions-Reading and Storing Data-Vectors and Matrices- Matrix Manipulations- Arithmetic operations on Matrices, Relational operations on Matrices, and Logical operations on Matrices- Polynomial Evaluation- Roots of Polynomial- Arithmetic operations on Polynomials- Graphics: 2D plots, Printing labels, Grid & Axes box, Text in plot, Bar and Pie chart- Applications of MATLAB in engineering.

Total Hours –15

TEXT BOOKS:

1. Bansal R.K, Goel A.K, Sharma M.K, “MATLAB and its Applications in Engineering”, Pearson Education, 2012
2. MATLAB for Electrical and Computer Engineering Students and Professionals, with Simulink, R. Priemer, SciTech Pub, 2013, ISBN: 978-1-61353-188-4.

REFERENCES:

1. Amos Gilat, “MATLAB-An Introduction with Applications”, Wiley India, 2009.
2. Stephen J Chapman, “Programming in MATLAB for Engineers”, Cengage Learning, 2011.

OUTCOMES:

On completion of the course the students will be able to

- Write simple program modules to implement algorithms
- Calculate solutions to engineering problems
- Test program output for accuracy using hand calculations and debugging techniques
- Synthesize multiple program modules into larger program packages

ECCX11 INTRODUCTION TO ASIC DESIGN

L	T	P	C
3	0	0	3

OBJECTIVES:

- The concept of semicustom and programmable ASIC types.
- The fundamentals of digital logic design and the physical features of each ASIC.
- ASIC logic design, partitioning, floor planning, placement, and routing.

MODULE I INTRODUCTION TO CMOS 6

CMOS transistors- process, CMOS current equation- CMOS inverter characteristics and Design rules.

MODULE II INTRODUCTION TO ASICs 7

ASIC introduction - advantages- Types of ASICs - Full Custom, Semi custom and programmable ASICs- ASIC Design flow.

MODULE III CMOS LOGIC DESIGN AND ASIC LIBRARY DESIGN 8

CMOS Combinational Logic Cell - Sequential logic cell - Data path logic cell - Transistors as Resistors - Transistor Parasitic Capacitance.

MODULE IV PROGRAMMABLE ASICs AND LOGIC CELLS 8

Anti fuse - static RAM - EPROM and EEPROM technology - PREP benchmarks - Actel ACT - Xilinx LCA -Altera FLEX - Altera MAX.

MODULE V PROGRAMMABLE ASIC INTERCONNECT 8

Actel ACT -Xilinx LCA - Xilinx EPLD - Altera MAX 5000 and 7000 – Altera MAX9000 - Altera FLEX.

MODULE VI PARTITIONING, FLOOR PLANNING, PLACEMENT & ROUTING 8

Partitioning methods - floor planning - placement - global routing - detailed routing.

Total Hours –45

TEXT BOOKS:

1. M.J.S .Smith, "Application Specific Integrated Circuits", Addison -Wesley Longman Inc., 2001.
2. Andrew Brown, "VLSI Circuits and Systems in Silicon", McGraw Hill, 1991
3. S.D. Brown, R.J. Francis, J. Rox, Z.G. Vranesic, "Field Programmable Gate

Arrays", Kluwer Academic Publishers, 1992.

REFERENCES:

1. Mohammed Ismail and Terri Fiez, "Analog VLSI Signal and Information Processing", McGraw Hill, 1994.
2. S. Y. Kung, H. J. White House, T. Kailath, "VLSI and Modern Signal Processing", Prentice Hall, 1985.
3. Jose E. France, Yannis Tsividis, "Design of Analog & Digital VLSI Circuits for Telecommunication and Signal Processing", Prentice Hall, 1994.

OUTCOMES:

On completion of the course the students will be able to

- Apply the appropriate layout rules while carrying transistor level circuit design.
- Interpret appropriate ASIC types based on application and requirements.
- Design data path circuits required for ASIC chip.
- Illustrate required types of programming technologies as well as logic cells based on applications.
- Choose type of interconnects required for the ASIC chip.
- Select appropriate algorithm to perform back end design such as partitioning, floor planning, placement & routing.

ECCX12 BIOMEDICAL SIGNAL PROCESSING L T P C
3 0 0 3

OBJECTIVES:

- To explain the methods of recording various bio-potentials.
- To introduce the processing techniques of biomedical signals and parameter detection
- To discuss recent techniques in bio medical signal processing
- To introduce modern industrial biomedical applications

PREREQUISITES:

- Basic knowledge about signals and systems
- Fundamentals of signal processing

MODULE I INTRODUCTION TO BIOMEDICAL SIGNALS 6

The origin of Bio-potentials-l -ECG, EEG, ENG,EMG, PCG, EOG- - Typical waveforms and signal characteristics.

MODULE II PROCESSING OF BIOMEDICAL SIGNAL 9

Processing of Random & Stochastic signals - spectral estimation - Properties and effects of noise in biomedical signals - Filtering of biomedical signals- Detection of biomedical signals in noise.

MODULE III ANALYSIS OF ECG 10

High-frequency noise in the ECG. Motion artifact in the ECG -.Power-line interference in ECG signals - Maternal interference in fetal ECG- ECG parameters estimation -Direct data compression techniques- Direct ECG data compression techniques- Transformation compression techniques-MATLAB Simulation of analyzing ECG.

MODULE IV ANALYSIS OF EEG 10

EEG rhythms & waveform - EEG applications-Epilepsy-sleep disorders-brain computer interface-Modeling EEG- linear, stochastic models - Non linear modeling of EEG - artifacts in EEG & their characteristics and processing - Model based spectral analysis - EEG segmentation - Joint Time-Frequency analysis - correlation analysis of EEG channels - coherence analysis of EEG channels.

MODULE V BIO-TELEMETRY 5

Telemetry principles- Frequency selection- Bio-telemetry- Radio-pill and Tele-stimulation-

MODULE VI BIOMEDICAL APPLICATIONS 5

Case Study HL7 Protocol- Patient Monitoring System - Nano medicine and application.

TOTAL HOURS 45

TEXT BOOKS

1. Rangaraj M. Rangayyan, “Bio medical signal analysis. A case study approach”, Wiley-IEEE Press June 2015
2. D.C.Reddy, "Biomedical Signal Processing: Principles and techniques", Tata McGraw Hill, New Delhi, 2005

REFERENCES

1. Khandpur, R.S., "Handbook of Biomedical Instrumentation", Tata McGraw-Hill, New Delhi, 2014.
2. Joseph J.Carr and John M.Brown, "Introduction to Biomedical equipment Technology", John Wiley and Sons, New York, 2001.
3. Leislie Cromwell, "Biomedical instrumentation and measurement", Prentice Hall of India, New Delhi, 2013.
4. Willis J.Tompkins,”Biomedical digital signal processing”, Prentice Hall of India, New Delhi, 2000

OUTCOMES:

On completion of the course, students will be able to

1. Describe the characteristics of various Bio medical signals.
2. Discuss the properties and effects of noise in biomedical signals
3. Design filters for biomedical signals .
4. Analyze the ECG signals and its compression techniques.
5. Analyze the EEG signals
6. Summarize the biotelemetry and modern technologies in hospital applications.

ECCX13	TELECOMMUNICATION SWITCHING NETWORKS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Various Telecommunication systems and networks.
- Understand the concept in PSTN communication
- Understand the various switching and signalling techniques
- Analyze the concepts in network traffic and its engineering
- Identify the applications of telecom networks

MODULE I TELECOMMUNICATION CONCEPTS 7

Introductory concepts of Telecommunication, Quality of Service, Standardization in Telecommunications, Tele Transmission types,

MODULE II PUBLIC SWITCHING TELEPHONE NETWORK 8

Makeup of the PSTN, Design of Long-Distance Networks, Traffic Routing in a National Network, Transmission Factors in Long-Distance Telephony, Fiber Optic Communication Links, LAN- Types,

MODULE III SWITCHING TECHNIQUES 8

Introduction to Switching techniques-Message and Packet Switching-, Voice Telephony, operation of telephone subset, Subscriber Loop Design, Design of Local Area Wire-Pair Trunks (Junctions), VF Repeaters (Amplifiers), Long-Distance PCM Transmission, Digital Switching, Digital Loop Carrier

MODULE IV SIGNALLING 7

Signaling, Signaling Techniques, Concepts of Link by Link and End to End signaling, Effects of numbering on signaling

MODULE V TRAFFIC ENGINEERING 8

Network traffic and load parameters, Grade of service and blocking probability, Modeling of Switching system, Traffic and time characterization, Blocking Models and delay systems

MODULE VI TELECOM NETWORKS 7

Overview of communication Networks- Communication process and Layered Architecture and Standards, ISDN,ATM,SONET

Total Hours –45

TEXT BOOKS:

1. Fundamentals of Telecommunications, Roger L. Freeman, A Wiley-Interscience publication, fourth edition, JOHN WILEY & SONS, INC. New York
2. Communication Networks Fundamental Concepts And Key Architectures 2nd Edition, Alberto Leon-Garcia, Tata Mc Graw-Hill publishing company limited, New Delhi,2004 edition.
3. Telecommunication Switching Systems and Networks , Thiagarajan Viswanathan, Manav , Second edition,2015,PHI learning PVT Ltd.

REFERENCES:

1. Telecommunications Engineer's Reference Book,Edited By Fraidoon Mazda,Butterworth Heimann Limited,Part of Reed International Books.
2. Telecommunication Switching, Traffic And Networks, J.E.Flood, Pearson Education, Second Impression 2007.
3. Network Routing Algorithms, Protocols And Architechtures, Deepankar Medhi, Karthikeyan Ramasamy, Elseiver Publication 2007.

OUTCOMES:

On completion of the course the students will be able to

- Explain the telecommunication concept
- Differentiate PSTN from other networks.
- Describe the switching types
- Compute traffic in a telecom network
- Explain the signaling techniques
- Apply suitable network for suitable system.

ECCX14	ARTIFICIAL INTELLIGENCE	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide knowledge of Artificial Intelligence systems and its application
- To describe various knowledge representation techniques.
- To formulate machine learning problems corresponding to different applications

MODULE I ARTIFICIAL INTELLIGENCE AS REPRESENTATION AND SEARCH 8

History And Applications-The Predicate Calculus - Structures And Strategies For State Space Search - Heuristic Search -Stochastic Methods - Control And Implementation Of State Space Search

MODULE II CAPTURING INTELLIGENCE: THE AI CHALLENGE 8

Knowledge Representation - Strong Method Problem Solving -Reasoning In Uncertain Situations

MODULE III MACHINE LEARNING-SYMBOL-BASED,CONNECTIONIST 9

Introduction -A Framework for Symbol-based Learning -Version Space Search -The ID3 Decision Tree Induction Algorithm -Inductive Bias and Learn ability -Knowledge and Learning -Unsupervised Learning -Reinforcement Learning -Foundations for Connectionist Networks -Perceptron Learning –Back propagation Learning - Competitive Learning -Hebbian Coincidence Learning.

MODULE IV MACHINE LEARNING: GENETIC AND EMERGENT,PROBABILISTIC 9

Genetic and Emergent Models of Learning -The Genetic Algorithm -Classifier Systems and Genetic Programming -Artificial Life and Society-Based Learning - Stochastic and Dynamic Models of Learning -Hidden Markov Models -Dynamic Bayesian Networks and Learning -Stochastic Extensions to Reinforcement Learning

MODULE V ADVANCED TOPICS FOR AI PROBLEM SOLVING-AUTOMATED REASONING 5

Introduction to Weak Methods in Theorem Proving -The General Problem Solver and Difference Tables -Resolution Theorem Proving -PROLOG and Automated Reasoning - Further Issues in Automated Reasoning

MODULE VI ADVANCED TOPICS FOR AI PROBLEM SOLVING- UNDERSTANDING NATURAL LANGUAGE **6**

The Natural Language Understanding Problem -Deconstructing Language: An Analysis -Syntax -Transition Network Parsers and Semantics -Stochastic Tools for Language Understanding -Natural Language Applications

Total Hours –45

TEXT BOOKS:

1. George F Luger, Artificial Intelligence, Pearson Education, 6th edition, 2009.

REFERENCES:

1. Patrick Henry Winston, “Artificial Intelligence”, Addison Wesley, Third edition, 2000.
2. Engene Charniak and Drew Mc Dermott, “Introduction to Artificial intelligence”, Addison Wesley 2000.
3. Nils J. Nilsson, “Principles of Artificial Intelligence”, Narosa Publishing House, 2000

OUTCOMES:

On completion of the course the students will be able to

- Apply AI problem solving techniques, knowledge representation, and reasoning methods in Knowledge based systems
- Design, implement and evaluate a system / computer based system process, component or program to meet desired needs
- Use current techniques, skills and tools necessary for computing and engineering practice
- Analyze the computational trade-offs involved in applying different AI techniques and models.
- Formulate machine learning problems corresponding to different applications.
- Apply machine learning algorithms to solve problems of moderate complexity

ECCX15	WIRELESS NETWORKS & ITS APPLICATIONS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To apply various wireless applications like WLAN and WAN.
- To discuss wireless internet and adhoc networks.
- To study about advanced wireless network, LTE, 4G
- To study about wireless IP architecture, Packet Data Protocol and LTE network architecture

MODULE I WIRELESS LAN 8

Introduction-WLAN technologies: Infrared, UHF narrowband, spread spectrum - IEEE802.11: System architecture, protocol architecture, physical layer, MAC layer, 802.11a/b/g/c/n – Hiper LAN1, HiperLAN2, WATM, BRAN - IEEE802.16-WIMAX: Physical layer, MAC, Spectrum allocation for WIMAX

MODULE II MOBILE NETWORK LAYER 7

Mobile IP: IP packet delivery, Agent discovery, tunneling and encapsulation, IPV6-Network layer in the internet- Mobile IP session initiation protocol – mobile adhoc network - Issues in adhoc networks - Routing Protocols, Wireless Sensor Networks – Architecture

MODULE III MOBILE TRANSPORT LAYER 7

TCP enhancements for wireless protocols – Traditional TCP: Congestion control, fast retransmit/fast recovery, Implications of mobility – Classical TCP improvements: Indirect TCP, Snooping TCP, Mobile TCP, Time out freezing, Selective retransmission, Transaction oriented TCP – TCP over 3G wireless networks.

MODULE IV WIRELESS WIDE AREA NETWORK 7

Overview of 2G & 2.5G Networks - UTMS Terrestrial Radio access network-UMTS Core network Architecture: 3G-MSC, 3G-SGSN, 3G-GGSN, SMS-GMSC/SMS-IWMSC, Firewall, DNS/DHCP-High Speed Packet Access (HSPA)

MODULE V 4G NETWORK 8

Introduction – 4G vision – 4G features and challenges – Applications of 4G – 4G Technologies: Multicarrier Modulation, Smart antenna techniques, OFDM-MIMO systems, Adaptive Modulation and coding with time slot scheduler, Cognitive Radio.

MODULE VI WIRELESS IP NETWORK ARCHITECTURE 8

3GPP Packet Data Networks - Network Architecture - Packet Data Protocol (PDP) Context -Configuring PDP Addresses on Mobile Stations - Accessing IP Networks through PS Domain – LTE network Architecture - Roaming Architecture- Protocol Architecture- Bearer Establishment Procedure -Inter-Working with other RATs.

Total Hours –45

TEXT BOOKS:

1. Jochen Schiller, ”Mobile Communications”, Second Edition, Pearson Education,2012.
2. Vijay Garg , “Wireless Communications and networking”, First Edition, Elsevier, 2007
3. Kaveh Pahlavan, Prashant Krishnamoorthy, "Principles of Wireless Networks,-A unified approach", PHI, New Delhi, 2009
4. C.Siva Ram Murthy, B S Manoj, "Ad hoc Wireless Networks, Architectures and Protocols", Pearson, 2004

REFERENCES:

1. Erik Dahlman, Stefan Parkvall, Johan Skold and Per Beming, “3G Evolution HSPA and LTE for Mobile Broadband”, Second Edition, Academic Press, 2008
2. Anurag Kumar, D.Manjunath, Joy kuri, “Wireless Networking”, First Edition, Elsevier 2011
3. Ayman ElNashar, Mohamed El-saidny, Mahmoud Sherif, “Design, Deployment and Performance of 4G-LTE Networks: A Practical Approach”, John Wiley & Sons, 2014.
4. Crosspoint Boulevard, “Wireless and Mobile All-IP Networks”, Wiley Publication, 2005.
5. Stefania Sesia, IssamToufik and Matthew Baker, “LTE – The UMTS Long Term Evolution From Theory to Practice”, John Wiley & Sons, Inc. Publication, Second Edition, 2011
6. Savo Glisic,” advanced wireless networks-technology and business models”, Third Edition, John Wiley & Sons, Ltd, 2016

OUTCOMES:

On completion of the course the students will be able to

- Describe working principle of wireless LAN network and protocol involved in physical layer and MAC layer.
- Explain the importance of various TCP Protocols

- Classify various wireless networks
- Illustrate the mechanism of Ad Hoc Networks and Sensor Networks
- Familiar with the latest 4G networks and LTE
- Understand about the wireless IP architecture and LTE network architecture.

ECCX16 MULTIMEDIA COMMUNICATION SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the components of Multimedia Communication.
- To describe the different compression techniques for text, image, audio and video signal.
- To familiarize real time applications of multimedia.

MODULE I MULTIMEDIA COMPONENTS 4

Introduction - Multimedia skills - Multimedia components and their characteristics - Text, sound, images, graphics, animation, video, hardware.

MODULE II TEXT COMPRESSION 9

Need for Compression, types, Huffman coding-Adaptive Huffman coding - arithmetic coding - Shannon-Fano coding - LZW algorithms

MODULE III IMAGE COMPRESSION 8

Analogue black and white picture signal. Colour picture and RGB signal, Y;Cr,Cb. Resolution of the picture. Structure of the picture signal information, luminescence and chromatic components .Transform coding - DCT – JPEG

MODULE IV AUDIO AND VIDEO COMPRESSION 9

A law and μ law companding - Basic sub-band coding - Application to speech coding - G.722.H.261 - H.263 - MPEG 1, 2, 4.

MODULE V REQUIREMENT AND PERFORMACE ISSUES 7

Network performance parameters for multimedia, characteristics of multimedia traffic sources, factors that affect network performance, multimedia traffic requirement for networks, Quality of Service.

MODULE VI MULTIMEDIA APPLICATIONS 8

Video conferencing, DVI technology-Packet Video. DVB-T and DVB-C. Digital television.TV monitor as Multimedia terminal. VOIP Technology.

L – 45; Total Hours –45

TEXT BOOKS:

1. K.R. Rao, Z S Bojkovic, D A Milovanovic, "Multimedia Communication

System", Standards, and Networks", Pearson Education, 2007.
2. Khalid Sayood, "Introduction to Data Compression", Morgan Kauffman Harcourt India, 2nd Edition, 2000.
3. Yun Q. Shi, Huifang Sun, "Image and video compression for Multimedia Engineering", CRC Press,1999.

REFERENCES:

1. Fred Halshall "Multimedia communication - applications, networks, protocols and standards", Pearson education, 2007.
2. R. Steimnetz, K. Nahrstedt, "Multimedia Computing, Communications and Applications", Pearson Education,2002.
3. Ranjan Parekh, "Principles of Multimedia", TMH 2006.
4. Marcus goncalves "Voice over IP Networks", McGraw Hill, 1998.

OUTCOMES:

On completion of the course the students will be able to

- Distinguish and describe the various components of multimedia communication.
- Describe various compression techniques and apply them for text compression.
- Explain various compression techniques and apply them for image compression.
- Describe various compression techniques and apply them for sound and video compression
- Analyze the performance issues of multimedia on networks.
- Apply multimedia in real time.

ECCX17	PRINCIPLES OF WIRELESS SENSOR NETWORK	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Principles of Wireless Sensor Network• To obtain a broad understanding of the technologies and applications for the emerging and exciting domain of wireless sensor networks.
- To know physical layer issues, medium Access control Protocols , network layer characteristics and protocols.
- A broad coverage of challenges related to the design and management of wireless sensor networks.

MODULE I INTRODUCTION 6

Introduction to wireless sensor networks - Challenges and Constraints - Application of sensor networks - Node architecture

MODULE II BASIC ARCHITECTURAL FRAMEWORK: PHYSICAL LAYER 8

Basic Components, Source Encoding, The Efficiency of a Source Encoder, Pulse Code Modulation and Delta Modulation, Channel Encoding, Types of Channels, Information Transmission over a Channel, Error Recognition and Correction, Modulation, Modulation Types, Quadratic Amplitude Modulation, Signal Propagation

MODULE III MEDIUM ACCESS LAYER 8

Overview, Wireless MAC Protocols, Characteristics of MAC Protocols in Sensor Networks, Contention-Free MAC Protocols, Contention-Based MAC Protocols, Hybrid MAC Protocols

MODULE IV NETWORK LAYER 8

Overview, Routing Metrics, Flooding and Gossiping, Data-Centric Routing, Proactive Routing, On-Demand Routing, Hierarchical Routing, Location-Based Routing, QoS-Based Routing Protocols

MODULE V NODE AND NETWORK MANAGEMENT 8

Local Power Management Aspects, Dynamic Power Management, Basics of Time Synchronization, Time Synchronization Protocols.

MODULE VI LOCALIZATION AND SECURITY 7

Ranging Techniques, Range-Based Localization, Range-Free Localization, Challenges of Security in Wireless Sensor Networks, Security Attacks in Sensor Networks

Total Hours –45

TEXT BOOKS:

1. Christian Poellabauer and Waltenegus Dargie, ,“FUNDAMENTALS OF WIRELESS SENSOR NETWORKS THEORY AND PRACTICE”, John Wiley & Sons Ltd. First edition 2010
2. Carlos de Morais Cordeiro , Dharma Prakash Agarwal, Ad hoc and Sensor Network : Theory and Applications , 2nd Edition, World Scientific Publishing Co.

REFERENCES:

1. Holger Karl and Andreas Willig, “Protocols and Architectures for Wireless Sensor Networks”, John Wiley and Sons, 2012.
2. G.Anastasi, Marco Conti, Mario Di Francesco and Andrea Passarella, “Energy Conservation in Wireless Sensor Networks: A Survey”, Adhoc Networks, Vol.7, No.3 May 2009, Elsevier Publications, pp.537-568. 4

OUTCOMES:

On completion of the course the students will be able to

- Understand the state of art techniques in wireless sensor networks.
- Learn the basics and challenges of wireless networking, the constraints of wireless sensor networks, the design of protocols to meet the challenges and constraints of a specific application and the development of a research project
- Be able to apply the concepts of wireless sensor networks (WSN) to various application areas.
- Get an overview of basic architectural framework.
- Able to analyze performance characteristics of WSN and manage WSN.
- To know methods in Localization tracking and security issues.

ECCX18 FUNDAMENTALS OF NANOTECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the basic concepts of nano technology
- To illustrate the importance of various synthesis method.
- To enrich the knowledge of students in various fabrication and characterization techniques.
- To introduce various nano devices

MODULE I INTRODUCTION **7**

Overview of nanotechnology, Historical background, Importance of Nanoscale, Bottom-up approaches, Top-down approaches, Functional approaches - Difference between bulk and nano materials - Size dependent properties

MODULE II SYNTHESIS OF NANOMATERIALS **7**

Fundamentals of film-Physical vapor deposition(PVD)-Chemical Vapor deposition(CVD)-Atomic layer deposition-solgel films

MODULE III FABRICATION OF NANOSTRUCTURES **8**

Lithography -Nanomanipulation and nanolithography-Soft lithography-Assembly of nanoparticles and nanowires-other methods for microfabrication

MODULE IV CHARACTERIZATION **8**

Structural characterization –X-ray diffraction, Small angle X-ray scattering ,Scanning electron microscopy, Transmission electron microscopy, Scanning probe microscopy-Chemical characterization – Optical spectroscopy, Electron spectroscopy, Ion spectroscopy-Physical properties of nanomaterials

MODULE V NANO DEVICES **7**

Issues of miniaturization - Digital information processing – Quantum Computing – Electronic devices – Spintronics – Storage class memory – Photonic devices – Thermal devices

MODULE VI APPLICATION OF NANOMATERIALS **8**

Molecular Electronics and Nanoelectronics - Nanobots-Biological applications of Nanoparticles-Catalysis by Gold Nanoparticles-Quantum devices -Nanomechanics-

Carbon nanotube emitters-Energy applications of nanomaterials-environmental applications of nano materials

Total Hours –45

TEXT BOOKS:

1. Guozhong Cao, “Nanostructures and Nano materials-Synthesis, Properties and Applications”, Imperial College Press (2011).
2. M.S. Ramachandra Rao, Shubra SinghH, “Nanoscience and Nanotechnology: Fundamentals to Frontiers”, Wiley, 2013.
3. Guozhong Cao,Ying Wang “Nanostructures and Nano materials”world scientific series in nanoscience and nanotechnology2 nd edition 2016

REFERENCES:

1. C.Dupas, P.Houdy, M.Lahmani, Nanoscience: “Nanotechnologies and Nanophysics”, Springer-Verlag Berlin Heidelberg, 2007.
2. Mick Wilson, Kamali Kannangara, Michells Simmons and Burkhard Raguse,“Nano Technology – Basic Science and Emerging Technologies”, 1st Edition,Overseas Press, New Delhi,2005

OUTCOMES:

On completion of the course the students will be able to

- Acquire the knowledge of various nano tec hniques
- Discuss about the synthesis of nano materials
- Describe various fabrication techniques of nano structures
- Compare different characterization techniques
- Explain about nano devices
- Apply the knowledge of different types of nano materials for various engineering applications

ECCX19 EMBEDDED SIGNAL PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To study the architecture of embedded processor.
- To introduce the number formats and quantization in real time processing.
- To learn the memory systems and data transfer in Blackfin Processor.
- To introduce the concept of code optimization and power management.

MODULE I INTRODUCTION TO EMBEDDED PROCESSOR 4

Embedded Processor: Micro Signal Architecture -Real-Time Embedded Signal Processing

MODULE II BLACKFIN PROCESSOR 6

The Blackfi n Processor: An Architecture for Embedded Media Processing-Introduction to Micro Signal Architecture-Overview of the Blackfin Processor-Architecture: Hardware Processing Units and Register Files-Bus Architecture and Memory-Basic Peripherals

MODULE III REAL-TIME DSP FUNDAMENTALS AND IMPLEMENTATION CONSIDERATIONS 9

Number Formats Used in the Blackfin Processor-Fixed-Point Formats -Fixed-Point Extended Format -Fixed-Point Data Types -Emulation of Floating-Point Format -Block Floating-Point Format-Dynamic Range, Precision, and Quantization Errors - Incoming Analog Signal and Quantization -Dynamic Range, Signal-to-Quantization Noise Ratio, and Precision -Sources of Quantization Errors in Digital Systems-Overview of Real-Time Processing

MODULE IV MEMORY SYSTEM AND DATA TRANSFER 10

Overview of Signal Acquisition and Transfer to Memory-DMA Operations and Programming-Using Cache in the Blackfin Processor-Comparing and Choosing Between Cache and Memory DMA- Scratchpad Memory of Blackfin Processor

MODULE V CODE OPTIMIZATION AND POWER MANAGEMENT 10

Using Assembly Code for Efficient Programming - Using Hardware Loops - Using Dual MACs -Using Parallel Instructions -Special Addressing Modes: Separate Data Sections - Using Software Pipelining- Power Consumption and Management in the Blackfin Processor

MODULE VI DSP APPLICATIONS 6

Overview of Audio Compression -Audio Encoding -Audio Decoding- Digital Image Processing- Overview of Image Representation- Color Conversion- Image Enhancement

Total Hours –45

TEXT BOOKS:

1. Woon-Seng Gan,Sen M.Kuo," Embedded Signal Processing with the Micro Signal Architecture", Wiley-IEEE Press,January 2007.

REFERENCES:

2. Proakis and Manolokis, "Digital Signal Processing: Principles, Algorithms, and Applications, Pearson, July 13
3. S.K. Mitra ,"Digital Signal Processing", Mc-Graw Hill,. 3rd Edition, 2006.
4. Sinha, Priyabrata," Speech Processing in Embedded Systems", Springer 2010.
5. Phil Lapsley, Jeff Bier, Amit Shoham, Edward A. Lee, "DSP Processor Fundamentals: Architectures and Features", Wiley-IEEE Press, January 1997

OUTCOMES:

On completion of the course the students will be able to

- Describe the architecture of embedded processor.
- Differentiate the Number Formats Used in Blackfin processor.
- Analyze the Quantization Errors in Digital Systems
- Compare DMA Operations and Cache in Blackfin Processor
- Optimize the codes and Power Consumption in Blackfin Processor.
- Acquire knowledge about applications of DSP.

ECCX20	INTRODUCTION TO NETWORK SECURITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the fundamentals of Cryptography
- To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.

To understand the various key distribution and management schemes.

- To understand how to deploy encryption techniques to secure data in transit across data networks

PREREQUISITES:

Fundamentals of networking concepts.

MODULE I INTRODUCTION TO NETWORKSECURITY 7

Security attacks (Interruption, Interception, Modification & fabrication), Security services (confidentiality, authentication, integrity, Non-repudiation, access control and availability) and mechanisms. A model for internetwork security, internet standards and RCFs, Buffer overflow & format string vulnerabilities, TCP session hijacking, ARP attacks, route table modification, UDP hijacking and mon-in-the-middle attacks

.

MODULE II CLASSICAL ENCRYPTION TECHNIQUES 9

Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Monoalphabetic Cipher, Playfair Cipher, Hill Cipher, Polyalphabetic Cipher, One TimePad. Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, ADES example, results, the avalanche effect, the strength of DES.

MODULE III PUBLIC-KEY CRYPTOGRAPHY and RSA 8

Principles of public-key cryptosystems, Public key cryptosystems, Applications, for public-key cryptosystems, requirements for public-key cryptosystems. public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. Other Public-Key Crypto systems: Diffie-hellman key exchange.

MODULE IV KEY MANAGEMENT AND DISTRIBUTION 8

Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates.

MODULE V EMAIL PRIVACY SECURITY 8

Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats.

MODULE VI IP SECURITY 5

IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations and Key Management.

Total Hours –45

TEXT BOOKS:

1. William Stallings, 'Cryptography and Network Security', Pearson 6th edition. 2013
2. V k Pachghare, ' Cryptography and Information Security', PHE, 2013.
3. Ryan Russell, Dan Kaminsky, Rain Forest Puppy, Joe Grand, David Ahmad,Hal Flynn Ido Dubrawsky, Steve W.Manzuik and Ryan Permeh, Wiley Dremtech ,"Hack Proofing your Network" , syngress publishing,2002

REFERENCES:

2. Charlie Kaufman, Radia Perlman and Mike Spenciner , "Network Security– Private Communication in a Public World" by, Pearson/PHI, 2002.

OUTCOMES:

On successful completion of this course, students will be able to:

1. Understand basic cryptographic algorithms, web authentication and security issues.
2. Analyze the vulnerabilities in any computing system and hence be able to design a security solution.

3. Identify the security issues in the network and resolve it.
4. Evaluate security mechanisms using rigorous approaches, including theoretical.
5. Describe about electronic mail security.
6. Understand the current legal issues towards information security.

ECCX21	INFORMATION CODING TECHNIQUES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Fundamental concepts of information theory
- Data compaction, data compression, data transmission,
- Error detection and correction

MODULE I INFORMATION ENTROPY FUNDAMENTALS 7

Uncertainty, Information and Entropy – Source coding Theorem – Huffman coding – Shannon Fano coding – Discrete Memory less channels – channel capacity – channel coding Theorem – Channel capacity Theorem.

MODULE II DATA AND VOICE CODING 8

Linear Block codes – Syndrome Decoding – Minimum distance consideration – cyclic codes – Generator Polynomial – Parity check polynomial – Encoder for cyclic codes – calculation of syndrome – Convolution codes.

MODULE III ERROR CONTROL CODING 8

Principles – Text compression – Static Huffman Coding – Dynamic Huffman coding – Arithmetic coding – Image Compression – Graphics Interchange format – Tagged Image File Format – Digitized documents – Introduction to JPEG standards.

MODULE IV COMPRESSION TECHNIQUES 7

Principles – Text compression – Static Huffman Coding – Dynamic Huffman coding – Arithmetic coding – Image Compression – Graphics Interchange format – Tagged Image File Format – Digitized documents – Introduction to JPEG standards.

MODULE V AUDIO AND VIDEO CODING 7

Linear Predictive coding – code excited LPC – Perceptual coding, MPEG audio coders – Dolby audio coders – Video compression – Principles – Introduction to H.261 & MPEG Video standards.

MODULE VI CRYPTOGRAPHY: 8

Overview of encryption techniques - symmetric cryptography - Data Encryption Standard (DES) - International Data Encryption Algorithm (IDEA) - RC Ciphers -

Public-key algorithm - RSA algorithm - Pretty Good Privacy - One-way Hashing

Total Hours –45

TEXT BOOKS:

1. Simon Haykin, “Communication Systems”, John Wiley and Sons, 4th Edition, 2001.
2. Fred Halsall, “Multimedia Communications, Applications Networks Protocols and Standards”, Pearson Education, Asia 2002; Chapters: 3,4,5.

REFERENCES:

1. Mark Nelson, “Data Compression Book”, BPB Publication 1992.
2. Watkinson J, “Compression in Video and Audio”, Focal Press, London, 1995.

OUTCOMES:

- Understand encoding and decoding of digital data streams.
- know methods for the generation of these codes and their decoding techniques.
- Have a detailed knowledge of compression and decompression techniques.
- analyze concepts of multimedia communication
- Have a complete understanding of error–control coding.
- Understand the cryptographic techniques

ECCX22 PYTHON PROGRAMMING

L	T	P	C
1	0	0	1

OBJECTIVES:

- To fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- Understand fundamentals of object-oriented programming in python, including defining classes, invoking methods, using class libraries, etc
- Have the ability to write a program to solve specified problems

MODULE I PYTHON CONCEPTS 5

Introduction to python, Installation, Python Interpreter, Interpreter and its environment, running a program, first python programme , Basic Operators, Data types- String ,List, tuple, set, Dictionary, Control statements – Decision making, loop, numbers ,Date and time.

MODULE II FUNCTIONS AND MODULES 5

Defining a Function- Calling a Function-Passing by Reference Versus Passing by Value -Function Arguments-The return Statement-scope of variables – global and local variables-Modules-import statements.

MODULE III FILES I/O ,EXCEPTIONS AND CLASSES & OBJECTS 5

Reading Keyboard Input-Opening and Closing Files-Reading and Writing Files-Renaming and Deleting Files -Directories in Python-file and Directory Related methods-Exception handling, creating Classes and Objects, accessing the attributes, class inheritance, Over riding, Over loading methods.

Total Hours - 15

TEXT BOOKS:

1. Mark Lutz , “Learning Python” , Fifth Edition, O,Reilly, 2013
2. Allen Downey, “Think Python”, second edition, Green Tea Press,2015

REFERENCES:

1. Jason Cannon, “Python Programming for Beginners” O,Reilly, 2012
2. David Beazley , Brain K Jones “Python CookBook” Third edition,2013
3. CHUN, WESLEY J ”Core Python Programming”, Pearson Education 2012
4. GUTTAG, JOHN V ”Introduction to Computation and Programming Using Python”, PHI Learning Private,2014

OUTCOMES:

On completion of the course the students will be able to

- Implement user defined python functions.
- Create programs using various collection data types
- Develop basic programs using fundamental structures
- Apply appropriate Python control flow structure
- Design classes and use them
- know how Python can be used for application development

ECCX23	DESIGN USING EDA TOOLS	L	T	P	C
		0	0	2	1

OBJECTIVES:

- To introduce the basic functionality of CAE/CAD tools for integrated circuits CADENCE.
- To become familiar with the main structure and basic modules of the CAE/CAD tools.
- To investigate the main design flow for analog, analog-digital and digital integrated circuit
- To enable students to exercise appropriate design of digital and analog circuits.

LIST OF EXPERIMENTS

1. Study of Basic CMOS technology and design rules.
2. Analyze and compare advanced analog ICs based on CMOS techniques, such as different types of current sources, amplifiers, filters and comparators.
3. Analyze and compare simple digital circuits based on different CMOS techniques.
4. Designing complex analog/digital systems starting from simpler analog/digital circuits.

Total Hours –30

TEXT BOOKS:

1. A Computer-Aided Design and Synthesis Environment for Analog Integrated Circuits, Geert van der Plas, Georges Gielen Willy Sansen, Kluwert Academic Publishers, ISBN 0-7923-7697-8, 2002.
2. Electronic Design Automation for Integrated Circuits Handbook, Volume 1, EDA for IC System Design, Verification and Testing, Edited by Louis Scheffer, Luciano Lavagno and Grant Martin, Taylor & Francis, 2006, ISBN 0-8493-7923-7.
3. Electronic Design Automation for Integrated Circuits Handbook, Volume 2, EDA for IC Implementation, Circuits Design and Process Technology, Edited by Louis Scheffer, Luciano Lavagno and Grant Martin, Taylor & Francis, 2006, ISBN 0-8493-7924-5.

REFERENCES:

1. Erik Brunvand, “Digital VLSI Chip Design with Cadence and Synopsys CAD Tools“, Pearson Publications, 1st edition, 25th February 2009.
2. Dennis Fitzpatrick, “Analog Design and Simulation using OrCAD Capture and PSpice”, Newnes, 2nd edition, December 13, 2017.

OUTCOMES:

On completion of the course the students will be able to

- Demonstrate knowledge and understanding of fundamental concepts in CAD.
- Work on the simulation tool.
- Analyze any analog circuit using a simulation tool.
- Analyze any digital circuit using a simulation tool.
- Design a component or circuit for a specific application.
- Establish capability for CAD tool development and enhancement.

ECCX24	PREDICTIVE ANALYTICS	L	T	P	C
		1	0	0	1

OBJECTIVES:

- Design effective experiments and analyze the results
- Use resampling methods to make clear and bulletproof statistical arguments
- Analytics tools to analyze the problems through prediction, classification and discrete choices
- Explain and apply a set of unsupervised learning concepts and methods

PREREQUISITES:

- Knowledge on programming, calculus, statistics, mathematical models or linear algebra
- Statistical analysis, Descriptive statistics, Probability Distribution, Hypothesis testing, ANOVA

MODULE I PREDICTION EFFECT 8

Introduction to Analytics, Analytics in Decision Making, Digital Data Collection Predicts - Data Effect -data models and algorithms - data integration components- Trick to Predictive Analytics

MODULE II PREDICTIVE ANALYTICS AND MACHINE LEARNING **7**

Predictive Analytics tools, Prediction Takes Action; automation of driverless Cars- Change Motoring, Right Tool for Tough Times, Ethical issues, A Case for Early Adoption

Total Hours –15

TEXT BOOKS:

1. Conor Doherty, Steven Camiña, Kevin White & Gary Orenstein The Path to Predictive Analytics and Machine Learning, O'Reilly Media, Inc.,First edition, 2016
2. Eric Siegel, "Predictive Analytics", Wiley Publishers, First edition, 2016

REFERENCES:

1. Daniel T. Larose, Chantal D. Larose, "Data Mining and Predictive Analytics", MISL-WILEY publishers, 2nd edition, 2016
2. Dean Abbott, "Applied Predictive Analytics: Principles and Techniques for The Professional Data Analyst", MISL-WILEY publishers, First edition, 2014

OUTCOMES:

On completion of the course, students will be able to

- Apply the concepts, ideas and protocols to analyze derived datasets
- Use computational abilities, inferential thinking, and practical skills for tackling core data scientific challenges.
- Investigate the foundational concepts of data management and processing
- Perform statistical computing and dynamic visualization using modern programming tools.

ECCX25 IC TECHNOLOGY L T P C
3 0 0 3

OBJECTIVES:

- To provide strong foundation in fundamentals of VLSI.
- To introduce the fundamental principles Integrated Circuit Fabrication.
- To familiarize with fabrication of Integrated circuits.
- To demonstrate design rules for layout and circuit characterization.

PREREQUISITE :

Knowledge on Digital Electronics, Electron Devices and Circuits

MODULE I INTRODUCTION TO CMOS CIRCUITS: 8

MOS Transistors and Switches , CMOS Logic --- Inverter, Combinational logic, NAND and NOR gates, Compound gates and Multiplexers, Memories ‘ Circuit and System Representation --- behavioral, structural and physical representations

MODULE II OPERATING PRINCIPLES OF MOS TRANSISTORS: 7

Introduction, NMOS and pMOS enhancement transistors , Threshold voltage and body effect ,MOS device design equations ,Basic DC equation ,Second order effects Complementary CMOS Inverter , DC characteristics ,Static load MOS inverters ,Differential inverter ,Transmission gate ‘Tri-state inverter , Bipolar devices

MODULE III FABRICATION OF CMOS INTEGRATED CIRCUITS 7

An overview of silicon semiconductor technology, Wafer processing ,Oxidation ,Epitaxy, deposition, ion-implantation and diffusion , Silicon gate process Basic CMOS Technology, Basic n–well CMOS process, P-well process,Twin-Tub process, Silicon-on-Insulator process

MODULE IV INTERCONNECTIONS AND CONTACTS, PACKAGING AND YIELD 7

Metal Interconnections and Contact Technology, Diffused Interconnections, Polysilicon Interconnections and Buried Contacts, Silicides and Multilayer-Contact Technology, Copper Interconnects and Damascene Processes, Wafer Thinning and Die Separation, Die Attachment, Wire Bonding, Packages, Yield.

MODULE V CMOS PROCESS ENHANCEMENTS AND LAYOUT DESIGN RULES 8

Circuit elements, Layer representations ,CMOS n-well rules, Latch-up, Technology-related CAD issues

MODULE VI CIRCUIT CHARACTERIZATION 8

Resistance estimation ,Capacitance, estimation, Switching, characteristics Analytic delay models ,Gate delay ,CMOS-gate transistor sizing ,Power transmission , Scaling of MOS transistor dimensions

TOTAL HOURS 45

TEXT BOOKS

1. J. Plummer, Michael D. Deal and Peter B. Griffin, “Silicon VLSI Technology, fundamentals, practice and modeling” Pearson Education, 2009.
2. Richard C. Jaeger , “Introduction to Microelectronic Fabrication”, Second Edition.

REFERENCES

1. J. P. Uyemura, Physical Design of CMOS Integrated Circuits Using L-Edit, PWS Publishers, Boston, 1995.
2. Neil H. E. Weste, David Money Harris, “CMOS VLSI Design A Circuits and Systems Perspective” 4th edition , Pearson Publication.
3. Jan M. Rabaey ,Anantha Chandrakasan,Borivoje Nikolic “Digital Integrated (ionnd Edit2)Circuits .

OUTCOMES:

On completion of the course, students will be able to

1. Understand the principles of CMOS transistors.
2. Learning lithography techniques and concepts of wafer exposure system, types of resists etc.
3. Understand concepts of thermal oxidation and Si/SiO2 interface and its quality measurements.
4. Learn concepts of IC Fabrication
5. Understand back-end technology to define contacts, interconnect, gates, source and drain, and measurements techniques to insure quality of designs.

ECCX26	SIMULATION OF RF CIRCUITS AND COMPONENTS	L	T	P	C
		0	0	2	1

OBJECTIVES:

To study the basic tools of microwave engineering and practice them.

LIST OF EXPERIMENTS

1. Simulation of Rectangular waveguide.
2. Simulation of circular waveguide
3. Simulation of wave guide Tee junction.
4. Simulation of microstripline
5. Simulation of strip line
6. Simulation of RF Low Pass & High Pass Filters
7. Simulation of RF amplifier
8. Simulation of RF Band pass and Band stop Filters
9. Simulation of coupled filters.
10. Simulation of Impedance matching networks

Total Hours –30

REFERENCES:

1. David. M.Pozar, "Microwave Engineering" 3rd Edition, John Wiley and Sons, 2005.
2. S.Y.Liao, "Microwave Amplifiers and Oscillators Design", Prentice Hall, New Jersey, 1999.

OUTCOMES:

On completion of the course the students will be able to

- Work on the simulation tool.
- Analyze any RF component or circuit using a simulation tool
- Design a component or circuit for a specific application.

ECCX27	RF TEST AND MEASUREMENT	L	T	P	C
		1	0	0	1

OBJECTIVES:

To study the RF & Microwave measurement techniques.

To learn the EMI/EMC testing methods of RF Components & Circuits.

MODULE I INTRODUCTION TO S MATRIX AND EMI. 5

High frequency parameters-Formulation of S parameters, properties of S parameters. Concepts of EMI and EMC and definitions - Sources of EMI.

MODULE II MICROWAVE MEASUREMENTS 5

Slotted line VSWR measurement, VSWR through return loss measurements, power measurement, impedance measurement insertion loss and attenuation measurements-measurement of scattering parameters- Measurement of dielectric constant of a solid using waveguide.

MODULE III EMI MEASUREMENTS 5

Open area test site measurements-Measurement precautions - Open –area test site-Anechoic Chamber-TEM Reverberating TEM-GTEM cell - Comparisons.

Total Hours –15

TEXT BOOKS:

1. D.M.Pozar, “Microwave Engineering”, John Wiley & sons,Inc., 2006.
2. Reinhold. Ludwig and Pavel Bretshko “RF Circuit Design”, Pearson Education, Inc.,2006

REFERENCES:

1. V.P.Kodali, "Engineering EMC Principles, Measurements and Technologies", IEEE Press, 1996.
2. C.R.Paul, "Introduction to Electromagnetic Compatibility", John Wiley and Sons,
3. Inc, 1992

OUTCOMES:

On completion of the course the students will be able to

1. Find unknown load impedance for any high frequency networks using smith chart.

2. Determine s parameters for any microwave circuits or components.
3. Relate the transmission matrix with S matrix.
4. Analyze the microwave networks using SFG
5. Analyze the microwave networks using S matrix.
6. Design impedance matching networks.

ECCX28 DSP ARCHITECTURE AND PROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

1. To describe the architecture of programmable digital signal processor.
2. To implement basic DSP functions in processor TMS320C5XX
3. To apply TMS320C5XX for real time applications.
4.

MODULE I FUNDAMENTALS OF DSP PROCESSORS 7

Multiplier and Multiplier accumulator, Modified Bus Structures and Memory access in PDSPs, Multiple access memory, Multi-ported memory, VLIW architecture, Pipelining, Special Addressing modes in P-DSPs, on chip Peripherals.

MODULE II COMPUTATIONAL ACCURACY IN DSP IMPLEMENTATION 7

Number formats for signals and coefficients in DSP systems, Dynamic Range and Precision, Sources of error in DSP implementation, A/D Conversion errors, DSP Computational errors, D/A Conversion Errors.

MODULE III ARCHITECTURES OF DIGITAL SIGNAL PROCESSOR 9

Basic Architectural features, DSP computational Building Blocks, Bus Architecture and Memory, Data Addressing Capabilities, Address Generation Unit, Programmability and Program Execution, Speed issues Features for External interfacing.

MODULE IV PROGRAMMABLE DIGITAL SIGNAL PROCESSORS 10

Commercial Digital signal-processing Devices, TMS320C54XX DSP: Data Addressing mode, Memory space, Program Control, Instructions and Programming, On-Chip peripherals, Interrupts, Pipeline Operation, Introduction to code composer studio.

MODULE V TMS320C6XDSPs 6

Introduction, features of TMS320C6X processor, internal architecture, functional units and its operations, addressing modes in C6x, memory architecture, peripherals

.

MODULE VI IMPLEMENTATION OF BASIC DSP ALGORITHMS 6

The Q-notation,FIR Filters, IIR Filters, interpolation Filters, Decimation filters, Adaptive Filters, 2-D signal processing, An FFT Algorithm for DFT Computation, Computation of signal spectrum.

Total Hours –45

TEXT BOOKS:

1. B. Venkataramani, M. Bhaskar "Digital Signal Processors: Architecture, Programming and Applications", Tata McGraw-Hill Education, 2002
2. Avtar Singh, S.Srinivasan ,"DSP Implementation using DSP microprocessor with Examples from TMS32C54XX" -Thomson 2004
3. Sen-Maw Kuo, Woon-SengGan,"Digital signal processors architectures, implementations, and applications", Pearson Prentice Hall, 2005
4.

REFERENCES:

1. Phil Lapsley, Jeff Bier, AmitShohan, Edward A Lee, "DSP Processor Fundamentals, Architectures & Features". S. Chand & Co, 2000
2. Jonathan Stein, "Digital signal processing" John Wiley 2005.
3. S.K. Mitra, "Digital Signal Processing", Tata McGraw-Hill Publication, 2001.
4. Alan V. Oppenheim,"Discrete-Time Signal Processing", Pearson Education India, 2006.

OUTCOMES:

On completion of the course the students will be able to

- Recognize the fundamentals of fixed and floating point architectures of various DSPs.
- Estimate DSP computational errors.
- Describe the architectural features of DSP processors
- Select appropriate DSP processors for signal processing applications.
- Make use of TMS3206X processors in real time applications.
- Implement various DSP algorithms.

ECCX29	DSP APPLICATIONS	L	T	P	C
		0	0	2	1

OBJECTIVES:

- Apply the concepts of DSP for real time applications
- To provide an understanding of how to design signal processing systems and process data in a software simulation.
- To introduce programming for real time DSP applications.

LIST OF EXPERIMENTS

AUDIO PROCESSING

1. Generation of Octave music
2. Real time Audio processing- Audio equalizer, Delayed audio playback,Audio reverberator, Concert hall simulation& Audio effects

IMAGE PROCESSING

3. Histogram equalization
4. Implementation of transforms on images
5. Edge detection of Images
6. Pseudo color image processing

DIGITAL SIGNAL GENERATION AND DETECTION

7. Dual-tone Multifrequency (DTMF) signals
8. ECG signal analysis.

Total Hours –30

REFERENCES:

1. Sen M. Kuo, Bob H. Lee, Wenshun Tian, “Real-Time Digital Signal Processing: Fundamentals, Implementations and Applications”, Third edition, Wiley publication, 2013.

OUTCOMES:

On completion of the course the students will be able to

- Use DSP tools to analyze the real time signals.
- Apply various transforms like DCT , FFT for real time signals
- Validate the concept of digital signal generation and detection through real time systems.

ECCX30	INTRODUCTION TO RECONFIGURABLE COMPUTING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Basic concepts of Reconfigurable computing
- Various FPGA designs
- Modeling and programming various reconfigurable systems
- Mapping algorithms for reconfigurable architectures
- Design and development of Various Reconfigurable architectures.
- Applications development of reconfigurable systems

PRE-REQUISITES:

- Basics of VLSI Design
- Fundamental knowledge of FPGA architecture

MODULE I RECONFIGURABLE COMPUTING HARDWARE 8

Device Architecture- The Computational Fabric- Array and Interconnect-Extending Logic Configuration-Reconfigurable Processing Fabric Architectures- -RPF Integration into Traditional Computing Systems-Reconfigurable Computing Systems - Configuration Architectures

MODULE II FPGA DESIGN 8

FPGA Physical Design Tools -Technology mapping - Placement & routing - Register transfer (RT)/Logic Synthesis - Controller/Data path synthesis - Logic minimization .

MODULE III MAPPING DESIGNS TO RECONFIGURABLE PLATFORMS 8

Technology Mapping- Structural Mapping Algorithms- Integrated Mapping Algorithms Mapping Algorithms for Heterogeneous Resources- FPGA Placement- Placement Problem Clustering- Partition-based Placement-Analytic Placement- Datapath Composition Fundamentals.

MODULE IV RETIMING AND FAST COMPILATION 7

Retiming: Concepts, Algorithm, and Restrictions- Re-pipelining and C-slow Retiming Implementations of Retiming- Retiming on Fixed-frequency FPGAs-C-slowing as Multithreading.

MODULE V CASE STUDIES OF FPGA APPLICATIONS 7

SPIHT Image Compression- Automatic Target Recognition Systems- Multi- FPGA Systems: Logic Emulation.

MODULE VI APPLICATION DEVELOPMENT 7

Implementing Applications with FPGAs- Strengths and Weaknesses of FPGAs- Application Characteristics and Performance- General Implementation Strategies for FPGA-based Systems- Implementing Arithmetic in FPGAs-Instance-specific Design- Partial Evaluation Distributed Arithmetic- FPGA Implementation of CORDIC Processors- Hardware/Software Partitioning.

Total Hours –45

TEXT BOOKS:

1.Scott Hauck and Andr´e DeHon, "Reconfigurable Computing :The Theory And Practice of FPGA-Based mputation". Morgan Kaufmann Publishers, 2008.

REFERENCES:

1. M.Gokhale and P.Graham, "Reconfigurable Computing: Accelerating Computation with Field Programmable Gate Arrays", Springer Publications, 2005.
2. C.Bobda," Introduction to Reconfigurable Computing: Architectures, Algorithms and Applications", Springer Publications, 2007.

OUTCOMES:

On completion of the course, students will be able to

- Analyze various reconfigurable architectures.
- Apply various methodologies to reconfigure FPGA.
- Implement fast compilation techniques in architecture design.
- Develop modules and applications using high level languages and tools.
- Design and build an SOPC for a specific application
- Design FPGA and programming reconfigurable systems

ECCX31 PROGRAMMING IN EMBEDDED SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the design of embedded computing systems with its hardware and software architectures
- To describe entire software development lifecycle and examine the various issues involved in developing software for embedded systems.
- To analyze the I/O programming and Embedded C coding techniques
- To equip students with the software development skills necessary for Practitioners in the field of embedded systems.

PRE-REQUISITES:

Embedded System Concepts and C Language

MODULE I DATA REPRESENTATION IN EMBEDDED SYSTEMS 6

Introduction to embedded system-Fixed-Precision binary numbers-Binary representation of integers-Binary representation of Real numbers-integer data types-mixed data types-manipulating bits in memory, I/O ports- Accessing memory mapped I/O Devices-Structures

MODULE II C PROGRAMMING CONCEPTS 8

Programming Style - Declarations and Expressions - Arrays, Qualifiers and Reading Numbers - Decision and Control Statements - Programming Process - More Control Statements - Variable Scope and Functions - C Preprocessor - Advanced Types - Simple Pointers - Debugging and Optimization.

MODULE III EMBEDDED C 9

Programming Embedded System In C-Introducing 8051 Microcontroller-Keil Software-Reading Switches- Adding Structure To C Code- Meeting Real Time Constraints-Creating An Embedded Operating System-Multistate Systems And Function Sequences- Serial Interface.

MODULE IV INPUT/OUTPUT PROGRAMMING 6

Mixing c and assembly-I/O Instructions, Synchronization, Transfer Rate & Latency, Polled Waiting Loops, Interrupt – Driven I/O, Direct memory access.

MODULE V MEMORY MANAGEMENT 7

Scheduling-Objects In C-Automatic Allocation-Static Allocation-Object Creation, Initialization, Destruction-Dynamic Allocation-Automatic Allocation With Variable Size-Recursive Function –Shared Memory.

MODULE VI PYTHON PROGRAMMING 9

Basics of PYTHON Programming Syntax and Style – Python Objects– Dictionaries – comparison with C programming on Conditionals and Loops – Files – Input and Output – Errors and Exceptions – Functions – Modules – Classes and OOP – Execution Environment.

Total Hours –45

TEXT BOOKS:

1. Michael J Pont, “Embedded C”, Pearson Education, 2007.
2. Daniel W. Lewis, "Fundamentals of embedded software where C and assembly meet", Pearson Education
3. Allen Downey, “Think Python”, second edition, Green Tea Press,2015

REFERENCES:

1. Mohamammad Ali Mazidi & Mazidi, “8051 Microcontroller and Embedded Systems” , Pearson Education,2006
2. Jason Cannon, “Python Programming for Beginners” O,Reilly, 2012
3. Steve Oualline, ‘Practical C Programming 3rd Edition’, O’Reilly Media, Inc, 2006.

OUTCOMES:

On completion of the course, students will be able to

- Write, compile and debug programs in C language.
- Develop program using embedded C
- Analyze the Real-time constraints in embedded systems
- Describe memory management in embedded systems
- Program using python language
- Design projects using embedded C and python language

ECCX32	MULTI-CORE ARCHITECTURE AND PARALLEL PROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To study multicore architecture and their design issues.
- To Program distributed and shared memory architecture.
- To know various types of multicore architecture and application.

MODULE I INTRODUCTION TO MULTI-CORE ARCHITECTURE 8

Motivation for concurrency in software-Parallel computing Platforms-Parallel computing in Microprocessors-Differentiating Multi-core architectures fromm Hyper-threading technology-Multithreading on Single-Core versus Multi-core platforms-understanding performance-Amdahl's law-Gustafson's law-Homogeneous multi-core-Heterogeneous multi-core

MODULE II PARALLEL HARDWARE 7

The basics of caching- Cache mappings- Virtual memory- Instruction-level parallelism- Hardware multithreading- SIMD systems- MIMD systems - Interconnection networks- Cache coherence- Shared-memory versus distributed-memory

MODULE III PARALLEL SOFTWARE 7

Coordinating the processes/threads- Programming hybrid systems-Input and Output- Scalability- Parallel Program Design

MODULE IV DISTRIBUTED-MEMORY PROGRAMMING WITH MPI 8

Getting Started- Compilation and execution- MPI programs- Communicators- SPMD programs- Communication- Message matching- The Trapezoidal Rule in MPI- Dealing with I/O- Collective Communication- MPI Derived Datatypes- Performance Evaluation of MPI Programs

MODULE V SHARED-MEMORY PROGRAMMING WITH OPENMP 8

Compiling and running OpenMP programs- The Trapezoidal Rule- The Reduction Clause- The parallel for Directive- Loops in OpenMP- Scheduling Loops- Producer-Consumer Synchronization - Caches, Cache Coherence, and False Sharing- Thread-Safety

MODULE VI CASE STUDIES 7

Intel Core Duo, Intel i7, AMD Dual Core Opteron, SUN UltraSPARC Multicore, Freescale Embedded Multicore,IBM cell.

L – 45; Total Hours -45

TEXT BOOKS:

1. Peter S. Pacheco, "An Introduction to Parallel Programming", Elsevier,2011
2. Shameem Akhtar and Jason Roberts, “Multi-core Programming”, 2nd Edition, Intel Press, 2006.
3. David E. Culler, Jaswinder Pal Singh, “Parallel computing architecture: A hardware/software 71 approach”, Morgan Kaufmann /Elsevier Publishers, 1999.

REFERENCES:

1. Kai Hwang and Zhi Wei Xu, “Scalable Parallel Computing”, Tata McGraw Hill, New Delhi, 2003.
2. Kai Hwang, “Advanced Computer Architecture”, Tata McGraw-Hill Education, 2003
3. Richard Y. Kain, “Advanced Computer Architecture a Systems Design Approach”, Prentice Hall,2011

OUTCOMES:

On completion of the course the students will be able to

- Know need of multicore architecture
- Compare various multicore processor architectures
- Analyze the architecture of Vector, SIMD and GPU architecture
- Develop parallel programming using MPI for DSM
- Develop programme for shared memory architecture using OpenMP
- Discuss the existing multicore architecture

ECCX33	ROBOTICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To study the various parts of robots and fields of robotics.
- To study the various kinematics and inverse kinematics of robots.
- To study the Euler, Lagrangian formulation of Robot dynamics.
- To study the trajectory planning for robot.
- To study the control of robots for some specific applications.

MODULE I BASIC CONCEPTS 9

Definition and origin of robotics – different types of robotics – various generations of robots – degrees of freedom – Asimov"s laws of robotics – dynamic stabilization of robots.

MODULE II POWER SOURCES AND SENSORS 9

Hydraulic, pneumatic and electric drives – determination of HP of motor and gearing ratio – variable speed arrangements – path determination – micro machines in robotics – machine vision – ranging – laser – acoustic – magnetic, fiber optic and tactile sensors

MODULE III MANIPULATORS, ACTUATORS AND GRIPPERS 9

Construction of manipulators – manipulator dynamics and force control – electronic and pneumatic manipulator control circuits – end effectors – U various types of grippers – design considerations.

MODULE IV KINEMATICS AND PATH PLANNING 6

Solution of inverse kinematics problem – multiple solution jacobian work envelop – hill Climbing Techniques

MODULE V ROBOT PROGRAMMING 4

Robot Programming: Robot Langauges – Classification of Robot language – Computer Control and Robot Software

MODULE VI CASE STUDIES 8

Mutiple robots – machine interface – Application of robots - robots in manufacturing and non- manufacturing applications – robot cell design – selection of robot.

Total Hours – 45

TEXT BOOKS:

1. Mikell P. Weiss G.M., Nagel R.N., Odraj N.G., “Industrial Robotics”, Mc Graw-Hill Singapore, 1996.
2. Ghosh, Control in Robotics and Automation: Sensor Based Integration, Allied Publishers, Chennai, 1998.
3. M.P.Groover, M.Weiss, R.N. Nagal, N.G.Odrey, “Industrial Robotics – technology, Programming and Applications” Tata McGraw-Hill Education, 2008.

REFERENCES:

3. Mc Kerrow P.J. “Introduction to Robotics”, Addison Wesley, USA, 1991.
4. Issac Asimov “Robot”, Ballantine Books, New York, 1986.
5. Barry Leatham – Jones, “Elements of industrial Robotics” PITMAN Publishing, 1987.
6. Mikell P.Groover, Mitchell Weiss, Roger N.Nagel Nicholas G.Odrey, “Industrial Robotics Technology, Programming and Applications “, McGraw Hill Book Company 1986.
7. Fu K.S. Gonzaleaz R.C. and Lee C.S.G., “Robotics Control Sensing, Vision and Intelligence” McGraw Hill International Editions, 1987.

OUTCOMES:

On completion of the course the students will be able to

- Explain the basic concepts of working of robot
- Analyze the function of sensors in the robot
- Write program to use a robot for a typical application
- Use Robots in different applications

ECCX34	VLSI SIGNAL PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn different algorithms used for DSP processors and fundamentals of pipelining and parallel processing on FIR filters.
- To study the concepts of retiming, unfolding, transforms and rank order filters.
- To understand different fast convolution algorithms and pipelining/parallel processing techniques for IIR filters.
- To study different bit level architectures and their complexities.
- To study the general architectures of programmable Digital signal processors.

MODULE I INTRODUCTION TO DSP SYSTEMS 5

Typical DSP algorithms: Convolution, correlation, Digital filters, Adaptive filters, Discrete cosine transform Decimators and Expanders, wavelets and filter banks, DSP application demands and scaled CMOS technologies, Representation of DSP Algorithms

MODULE II PIPELINING AND PARALLEL PROCESSING 9

Data flow graph representations, loop bound and iteration bound, Algorithms for computing iteration bound: Longest path Matrix algorithm, Iteration bound for multirated data flow graphs Pipelining and parallel processing - Pipelining of FIR digital filters, parallel processing, pipelining and parallel processing for low power.

MODULE III RETIMING, ALGORITHMIC STRENGTH REDUCTION 9

Definitions and properties of retiming, an algorithm for unfolding, properties of unfolding, Applications of unfolding: sample period reduction , parallel processing

MODULE IV FAST CONVOLUTION AND ALGORITHMIC STRENGTH REDUCTION IN FILTERS AND TRANSFORMS 9

Cook Toom algorithm, modified Cook-Took algorithm, parallel FIR filter, 2-parallel fast FIR filter, DCT algorithm architecture transformation, parallel architectures for rank-order filters, odd- even merge- sort architecture, parallel rank-order filters.

MODULE V BIT LEVEL ARITHEMATIC ARCHITECTURES 9

Parallel multipliers with sign extension, parallel carry-ripple array multipliers, parallel carry save multiplier, bit Baugh-Wooley multipliers, parallel multipliers with modified

booth recoding, Bit serial multipliers, Bit serial filter design and implementation multipliers using Horner's rule, bit-serial FIR filter.

MODULE VI PROGRAMMABLE DIGITAL SIGNAL PROCESSORS 4

Introduction, evolution of programmable DSP, important features of DSP processors, DSP processors for mobile and wireless communication, processors for multimedia signal processing.

Total Hours –45

TEXT BOOKS:

1. Keshab K.Parhi, "VLSI Digital Signal Processing systems, Design and implementation", Wiley, Inter Science, 1999.
2. Mohammed Ismail and Terri Fiez, "Analog VLSI Signal and Information Processing ", McGraw-Hill, 1994.

REFERENCES:

1. S.Y. Kung, H.J.White House,T.Kailath,"VLSI and Modern Signal Processing ", Prentice Hall,1985.

OUTCOMES:

On completion of the course the students will be able to

- Understand various algorithms that can be designed and applied on application specific VLSI architecture.
- Have knowledge on fast convolution algorithms and high speed multipliers.
- Gain minimum knowledge to find solution for any research queries on DSP processors.
- Apply the advantages retiming, unfolding and folding on pipelined and parallel processed architectures.
- Have the ability to develop advanced DSP filters and processors.
- Be able to develop optimized DSP designs by employing the advantages of VLSI concepts.

ECCX35	ELECTROMAGNETIC INTERFERENCE & COMPATIBILITY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To apply, identify and understand the basic knowledge of science in EMI & EMC in different environments.
- To select and apply appropriate coupling principles for EMI.
- To formulate and analyze different EMI measurements
- To understand the concepts of EMI control mechanisms which meets the specific needs with appropriate techniques.
- To select, apply and differentiate appropriate standards for EMI/EMC.
- To design, analyze and understand the process of creating EMC PCBs

MODULE I EMI ENVIRONMENT 8

Concepts of EMI and EMC and definitions - Sources of EMI - Celestial Electromagnetic noise - Lightning discharge-Electrostatic Discharge-Electromagnetic Pulse - Electromagnetic emissions - Noise from relays and Switches - Nonlinearities in Circuits

MODULE II EMI COUPLING PRINCIPLES 8

Capacitive coupling - Inductive coupling- Common impedance ground coupling- Ground loop coupling-Transients in power supply lines- Radiation coupling, Conduction coupling- Common - mode and Differential mode interferences- Conducted EM noise on power supply lines.

MODULE III EMI MEASUREMENTS 7

Open area test site measurements-Measurement precautions - Open -area test site-Anechoic Chamber-TEM Reverberating TEM-GTEM cell – Comparisons

MODULE IV EMI CONTROL TECHNIQUES 7

EMC Technology- Grounding-Shielding-Electrical Bonding-Power line filter-CM filter - DM filter- EMI suppression Cables- EMC Connectors -Isolation transformer.

MODULE V EMI / EMC STANDARDS 8

Introduction- Standards for EMI/EMC- MIL-STD-461/462-IEEE/ANSI standard-CISPR/IEC standard- FCC regulations-British standards-VDE standards-Euro norms-Performance standards-some comparisons.

MODULE VI EMC DESIGN OF PCBs 7

PCB Traces Cross Talk, Impedance Control, Power Distribution Decoupling, Zoning, Motherboard Designs and Propagation Delay Performance Models.

Total Hours – 45

REFERENCES:

1. V.P.Kodali, "Engineering EMC Principles, Measurements and Technologies", IEEE Press, 1996.
2. Henry W.Ott, "Noise Reduction Techniques in Electronic Systems", John Wiley and Sons, New York,1988.
3. C.R.Paul, "Introduction to Electromagnetic Compatibility", John Wiley and Sons, Inc, 1992
4. Bernhard Keiser, "Principles of Electromagnetic Compatibility", 3rd Edition, Artech house, 1986.

OUTCOMES:

On completion of the course the students will be able to

- Outline the basic knowledge of science in EMI & EMC in different environments.
- Distinguish coupling principles for EMI.
- Measure different EMI parameters
- Apply EMI control mechanisms for specific needs with appropriate techniques.
- Compare and discuss different standards for EMI/EMC.
- Design and analyze the process of creating EMC PCBs

ECCX36 INTRODUCTION TO INTERNET OF THINGS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To Provide an overview of concepts, main trends and the paradigm of Internet of Things.
- Develop skills to relate the IoT technologies for practical IoT applications.
- Develop the ability to use Internet of Things related protocols and connectivity methods.
- Provide the knowledge of data management business processes and analytics of IoT.

PRE-REQUISITES:

- Prerequisite: Fundamentals of computer network, wireless sensor network, communication & internet technology, web technology, information security.

MODULE I INTRODUCTION – CONCEPTS BEHIND THE INTERNET OF THINGS 6

The IoT paradigm - Smart objects - Bits and atoms - Goal orientation - Convergence of technologies - Future Internet Technologies, Infrastructure, Networks and Communication, Processes, Data Management, Security, Privacy & Trust, Device Level Energy Issues, IoT Related Standardization - Overview of IoT architecture.

MODULE II IOT APPLICATIONS FOR VALUE CREATION 5

Introduction, IoT applications for industry: Future Factory Concepts, Brownfield IoT - Smart Objects, Smart Applications, Four Aspects in your Business to Master IoT - Value Creation from Big Data and Serialization, IoT for Retailing Industry, IoT For Oil and Gas Industry, Opinions on IoT Application and Value for Industry, Home Management, eHealth.

MODULE III OVERVIEW OF IOT CONNECTIVITY METHODS AND TECHNOLOGIES 9

Wireless 101 - RF 101 - ZigBee - RFID - Hardware, SoC, sensors, device drivers, IoT standards - Cloud computing for IoT - Bluetooth, Bluetooth Low Energy - IEEE 802.15.4, IEEE 802.15.4e, 802.11ah - Relay Access Point (AP) - Grouping of stations - Target Wake Time (TWT) - Real-time systems and embedded software -

Cloud computing and storage - Augmented Reality.

MODULE IV PROTOCOLS 8

NFC, RFID, Zigbee - MIPI, M-PHY, UniPro, SPMI, SPI, M-PCIe - Wired vs. Wireless communication -GSM, CDMA, LTE, GPRS, 3G, LTE,small cells, SATCOM - Sensors and sensor networks - Wired connectivity - IPv4/IPv6 - Ethernet/GigE.

MODULE V EVALUATION OF THE INTERNET OF THINGS 8

Platforms - Mobile integration - Deployment - Data Visualization - Convergence with Social Networks - Value chain and Business models - User centric cloud based services - Analytical Hierarchy Process for technology selection - End-to-end security - Integration with IT systems, Cost/benefit constraints End-to-end compatibility, Application Architecture - Lifecycle solution management, Real-time response and delay.

MODULE VI INTERNET OF THINGS PRIVACY, SECURITY AND GOVERNANCE 9

Introduction, Overview of Governance - Privacy and Security Issues, Contribution from FP7 Projects, Security, Privacy and Trust in IoT-Data-Platforms for Smart Cities, First Steps Towards a Secure Platform, Smartie Approach - Data Aggregation for the IoT in Smart Cities, Security.

TOTAL HOURS 45

TEXT BOOKS

1. Dr. Ovidiu Vermesan, Dr. Peter Friess, Internet of Things: Converging Technologies for Smart Environments and Integrated Ecosystems, River Publishers, 2013.

REFERENCES

1. Cuno P fister, Getting Started with the Internet of Things, O"Reilly Media, 2011, ISBN: 978-1-4493- 9357-1
2. Vijay Madisetti and Arshdeep Bahga, “Internet of Things (A Hands-on-Approach)”, 1 st Edition, VPT, 2014
3. Samuel Greengard, “The Internet of Things”, MIT Press, 2015.
4. Francis daCosta, “Rethinking the Internet of Things: A Scalable Approach to Connecting Everything”, 1 st Edition, Apress Publications, 2013

OUTCOMES:

On completion of the course, students will be able to

1. Explain and interpret the concepts of IoT.
2. Understand the steps involved in IoT design Methodology for different applications.
3. Identify the hardware and connecting methods of IoT Technologies.
4. Explore the features of various protocols used for IoT.
5. Experiment with the software & hardware IoT Technologies.
6. Evaluate the performance of an IoT based prototype.

ECCX37	RF SYSTEM DESIGN	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To study the characteristics of RF basic components and RF transistors.
- To design and analyze all types of RF filters,amplifiers,oscillators.
- To understand and design the various impedance matching using smith chart.

PREREQUISITES

- Basics of Resonant Circuits, Biasing of transistor, Amplifier design.

MODULE I INTRODUCTION TO RF COMPONENTS 7

Wire – Resistor – Inductor – Capacitor – Torids – Toroidal Inductor Design.

MODULE II RESONANT CIRCUITS 8

Resonance – Loaded Q – Insertion Loss -Impedance transformations – Coupling of Resonant circuits

MODULE III MODERN FILTER DESIGN 8

Filter types – Normalization and Low pass prototype- Frequency & Impedance Scaling – High Pass Filter design - Dual networks – Band Pass Filter design – Band Rejection filter Design – effects of finite Q.

MODULE IV IMPEDANCE MATCHING 8

Background – L Network design – Complex Loads – three element matching – Wideband matching Networks – Smith chart – Impedance Matching using smith chart.

MODULE V TRANSISTOR AT RADIO FREQUENCIES 8

Transistor equivalent circuit – Y parameters – S parameters – transistor biasing – Design Using Y parameters – Design using S parameters

MODULE VI RF AMPLIFIER & OSCILLATORS 6

RF Power amplifier characteristics – Transistor Biasing - Power amplifier Design – Matching to Coaxial feed lines – Broadband Amplifiers – Oscillators.

Total Hours –45

TEXT BOOKS:

1. Chris Bowick, “Rf Circuit Design”, Newnes Ltd.,1982.
2. Reinhold Ludwig and Powel Bretchko, "RF Circuit Design - Theory and Applications", 1st Edition, Pearson Education Asia, 2001.
3. David.M.Pozar, "Microwave Engineering" 3rd Edition, John Wiley and Sons, 2005.

REFERENCES:

1. Mathew M. Radmanesh, "Radio Frequency & Microwave Electronics", 2nd Edition, Pearson Education Asia, 2002.
2. S.Y.Liao, "Microwave Amplifiers and Oscillators Design", Prentice Hall, New Jersey, 1999.
3. G.Gonzalez, "Microwave Transistors and Amplifiers: Analysis and Design", Prentice Hall, New Jersey 1999.

OUTCOMES:

On completion of the course, students will be able to

- Understand the basic RF components Characteristics and resonant circuits.
- Design different types of filters for various applications.
- Identify impedance matching for various RF circuits using smith chart.
- Analyze the S parameter value for any RF transistors.
- Design RF power amplifiers and oscillators with proper transistor biasing
- Implement the design of RF components and circuits for various applications.

ECCX38	INTRODUCTION TO SATELLITE COMMUNICATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To define satellite orbits and to understand about satellite communication
- To illustrate geostationary orbit and to formulate uplink and down link equations
- To explain the basic concepts of earth and space segments
- To introduce the principles and mechanism involved in satellite systems
- To illustrate the facts and ideas of different satellite services and its applications

MODULE I ORBITAL MECHANICS AND LAUNCHER 8

Orbital Mechanics – Look angle determination –Orbital perturbations – Orbit determination- launches and launch vehicles – Orbital effects in communication systems

MODULE II THE SPACE AND EARTH SEGMENT 8

Space segment: Satellite subsystems – Attitude and orbit control systems – Telemetry, Tracking, Command and Monitoring – Power systems – Communication Subsystems. Earth segment: Receive only Home TV Systems- Master antenna TV systems – community antenna TV systems - Transmit-Receive Earth stations.

MODULE III SATELLITE ANTENNAS CHARACTERISTICS 7

Satellite antennas– Antenna foot prints- horn antenna- Parabolic Antenna – Multibeam Antenna – Phased array antenna –Frequency reuse in multibeam and Phased array antenna

MODULE IV THE SPACE LINK AND INTERFERENCE 7

EIRP- transmission loss- the link power budget equation –system noise –CNR-the uplink- the downlink – Effects of rain – Combined uplink and down link – Intermodulation noise- Intersateliite links- Interference between satellites – Energy dispersal – Coordination

MODULE V SATELLITE DIGITAL AUDIO RADIO SERVICE AND VSAT NETWORKS FOR INTERACTIVE APPLICATION 7

Satellite radio broad cast Concept- World space- Sirius satellite radio- XM satellite

Radio – Interactive data networks- VSAT star networks – VSAT in business TV

MODULE VI FIXED TELEPHONY SATELLITE NETWORKS AND MOBILE SATELLITE SERVICE **8**

Role of satellite in telephone services – Demand assignment SCPC Network Architecture – Preassigned point to point link – Application of FTS- Foundation of Mobile Satellite services – GEO MSS system – Handheld terminals – Non- GEO MSS systems – Intelligent MSS services- Multiple access in MSS – Digital speech compression – Ground Segment Architecture in MSS- Subscriber access and connectivity – Network security

Total Hours –45

TEXT BOOKS:

1. Timothy Pratt, Charles Bostian, Jeremy Allmuti, "Satellite Communications", John Wiley &Sons (Asia) Pvt. Ltd. 2004.
2. Dennis Roddy, "Satellite Communications", 4th Edition, McGraw-Hill Publication, 2006.

REFERENCES:

1. Satellite Communications Network Design and Analysis, Kenneth Y. Jo, Artech House, 2011- Artificial satellites in telecommunication
2. The Satellite Communication Applications Handbook, 2nd edition Bruce R. Elbert , Artech House, 2004 - Technology & Engineering
3. Introduction to Satellite Communication, Bruce R. Elbert , 3rd edition Artech House, 2008 - Technology & Engineering
4. Wilbur L. Pritchard, Henri G.Suyder, Hond Robert A.Nelson, "Satellite Communication Systems Engineering", 2nd Edition, Pearson Education Ltd., 2003.
5. M.Richharia,"Satellite Communication Systems (Design Principles)", 2nd Edition, Macmillan Press Ltd, 2003.

OUTCOMES:

On completion of the course the students will be able to

- Identify satellite orbits and launching mechanisms
- Describe the space segment and earth segment
- Identify different antennas used in satellite communication
- Design uplink and downlink of a satellite systems
- Describe satellite service like FSS, DBS, MSS, VSS etc.…

ECCX39	MICROWAVE & MILLIMETER WAVE SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To train different microwave and millimeter wave transceivers architectures and illustrate their operation principle.
- To provide the design consideration of microwave and millimeter waves systems.
- To introduce the design consideration for antennas in the millimeter wave range.

MODULE I PASSIVE MICROWAVE COMPONENTS 8

Lumped & Distributed elements, Two-port networks, S-parameters, impedance matching, Microwave Filters - Butterworth and Chebyshev Response, Transmission Line Filter.

MODULE II ACTIVE MICROWAVE DEVICES

Diodes, Microwave Transistors, Microwave FET, Power Amplifier Design – stability, Oscillator and Resonators Design.

MODULE III CHARACTERISTICS OF MILLIMETER WAVE

Millimeter Wave Characteristics, Channel Performance at 60 GHz, Gigabit Wireless Communications, Development of Millimeter Wave Standards, Coexistence with Wireless Backhaul. Review of modulations for millimeter wave, Orthogonal Frequency Division Multiplexing.

MODULE IV MILLIMETER WAVE TRANSCEIVERS

Millimeter Wave Link Budget, Transceiver Architecture, Transceiver Without Mixer, Receiver Without Local Oscillator, Millimeter Wave Calibration, Silicon-based transceivers.

MODULE V MILLIMETER WAVE ANTENNAS

Path Loss and Antenna Directivity, Antenna Beamwidth, Maximum Possible Gain-to-Q, Polarization, Beam Steering and Beam Forming, Millimeter Wave Design Consideration.

MODULE VI MIMO

Spatial Diversity of Antenna Arrays, Multiple Antennas, Multiple Transceivers, Noise

Coupling in a MIMO System. Potential Benefits for Millimeter Wave Systems, Spatial and Temporal Diversity, Spatial and Frequency Diversity.

Total Hours – 45

TEXT BOOKS:

1. Kao-Cheng Huang, Zhaocheng Wang, "Millimeter Wave Communication Systems", 1st Edition, Wiley - IEEE, 2011.
2. George D. Vendelin ,ANTHONY M. Pavio, Ulrich L. Rohde, “Microwave Circuit Design Using Linear and Nonlinear Techniques”, 2nd Edition, Wiley Interscience, 2005.

REFERENCES:

1. D. Liu, U. Pfeiffer, J. Grzyb, B. Gaucher, “Advanced Millimeter-wave Technologies: Antennas, Packaging and Circuits”, John Wiley & Sons, 2009.
2. D. Liu, U. Pfeiffer, J. Grzyb, B. Gaucher, “Advanced Millimeter-wave Technologies:Antennas, Packaging and Circuits”, John Wiley & Sons, 2009.
3. J. Wells, “Multi-Gigabit Microwave and Millimeter-Wave Wireless Communications”, Artech House, 2010.

OUTCOMES:

On completion of the course students will be able to

1. Identify the active and passive microwave components
2. Describe the characteristics of millimeter waves
3. Apply the spatial and frequency diversity principles in designing MIMO systems.
4. Evaluate the channel performance at frequencies above 40 GHz.
5. Analyze the design of millimeter wave transceivers and antennas.
6. Design antennas for specific microwave and millimeter wave applications.

ECCX40	RADAR AND NAVIGATIONAL AIDS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To introduce the Principle of Radar and derive range equation of RADAR.
- To learn the different types of Radars and its applications.
- To illustrate the Doppler principle in radars and to know about the facts in the detection and tracking.
- To analyze the usage of antennas and its propagation as related to radars and the transceivers.
- To know about the principles of navigation and landing aids.

MODULE I INTRODUCTION TO RADAR 9

Basic Radar –The simple form of the Radar Equation- Radar Block Diagram-Radar Frequencies –Applications of Radar – The Origins of Radar.

MODULE II THE RADAR EQUATION 9

Introduction- Detection of Signals in Noise- Receiver Noise and the Signal-to-Noise Ratio-Probability Density Functions- Probabilities of Detection and False Alarm-Integration of Radar Pulses- Radar Cross Section of Targets- Radar cross Section Fluctuations-Transmitter Power-Pulse Repetition Frequency-Antenna Parameters-System losses – Other Radar Equation Considerations.

MODULE III TARGET ECHO INFORMATION EXTRACTION 5

Detection – Detection in Noise – Signal Integration and Target Fluctuation – M of N Detection – Threshold Setting Concept (CFAR) – Ranging – Target Velocity – Range and Velocity with CW – Radar Height Finding

MODULE IV MTI AND PULSE DOPPLER RADAR 9

Introduction to Doppler and MTI Radar - Delay –Line Cancelers - Staggered Pulse Repetition Frequencies –Doppler Filter Banks - Digital MTI Processing - Moving Target Detector - Limitations to MTI Performance - MTI from a Moving Platform (AMIT) - Pulse Doppler Radar– Other Doppler Radar Topics- Tracking with Radar – Monopulse Tracking –Conical Scan and Sequential Lobing - Limitations to Tracking Accuracy - Low-Angle Tracking - Tracking in Range - Other Tracking Radar Topics - Comparison of Trackers - Automatic Tracking with Surveillance Radar (ADT).

MODULE V FUNDAMENTALS OF NAVIGATION 9

Introduction to Navigation - Aural Null Direction Finder - Commutated Aerial Direction Finder - Range and Accuracy of Direction Finders, Radio Ranges - The LF/ MF Four course Radio Range - VHF Omni Directional Range(VOR) - VOR Receiving Equipment - Range and Accuracy of VOR – Recent Developments. Hyperbolic Systems of Navigation (Loran and Decca) - Loran-A - Loran-A Equipment - Range and precision of Standard Loran - Loran-C - The Decca Navigation System - Decca Receivers - Range and Accuracy of Decca - The Omega System.

MODULE VI APPLICATIONS OF RADAR 4

DME - TACAN - Microwave Landing System(MLS) - Global Positioning System (GPS)

Total Hours –45

TEXT BOOKS:

1. Merrill I. Skolnik ," Introduction to Radar Systems", Tata McGraw-Hill, 3rd Edition, 2003.
2. Byron Edde, “Radar Principles, Technology, Applications”, Pearson Education India,2009.

REFERENCES:

1. Peyton Z. Peebles, "Radar Principles", Johnwiley, 2004
2. J.C Toomay, "Principles of Radar", 2nd Edition –PHI, 2004

OUTCOMES:

On completion of the course the students will be able to

- Define and describe the basic principle and operation of Radar.
- Describe the working of RADAR and the techniques of detection.
- Apply Doppler principle to radars
- Compare and Analyze different types of Radar and its applications.
- Distinguish the types of antennas and propagation related to radars.
- Illustrate the principle and mechanism involved in the navigational aids

ECCX41	ADVANCED ANTENNA DESIGN	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To provide an in-depth understanding of modern antenna concepts
- Understanding of practical antenna design for various applications
- To discuss various types of antennas including the planar printed antennas
- To introduce the concept of smart antennas

MODULE I FUNDAMENTAL CONCEPTS 5

Physical concept of radiation, Radiation pattern, near- and far-field regions, reciprocity, directivity and gain, effective aperture, polarization, input impedance, efficiency, Friis transmission equation, radiation integrals and auxiliary potential functions.

MODULE II MICROSTRIP ANTENNAS 6

Basic characteristics of microstrip antennas, feeding methods, methods of analysis, design of rectangular and circular patch antennas.

MODULE III ANTENNA ARRAYS 6

Analysis of uniformly spaced arrays with uniform and non-uniform excitation amplitudes, extension to planar arrays.

MODULE IV ADVANCED ANTENNA CONCEPTS & APPLICATIONS 7

Reconfigurable Antennas – Millimeter Wave Antennas – Concepts of Metamaterial Antennas - Antennas for medical applications - Antennas for MIMO / Full-Duplex Systems - Antennas for mobile communications

MODULE V BASIC CONCEPTS OF SMART ANTENNAS 6

Concept and benefits of smart antennas, Fixed weight beamforming basics, Adaptive beamforming

MODULE VI ANTENNA MEASUREMENTS 5

Antenna ranges - Radiation patterns - Gain measurements - Directivity - Polarization measurements - Scale model measurements

Practicals:

1. Simulation of Rectangular Microstrip Antennas.
2. Simulation of Circular Microstrip Antennas.
3. Simulation of 2 Element Antenna Array
4. Simulation of Planar Array
5. Simulation of Reconfigurable Antenna
6. Simulation of Millimeter wave Antenna
7. Simulation of Metamaterial Antenna
8. Simulation of MIMO Antenna
9. Simulation of Smart antenna
10. Antenna Measurements.

L – 30; T – 30; Total Hours –60

TEXT BOOKS:

1. C.A.Balanis,"Antenna Theory and Design", 3rd Ed., John Wiley & Sons., 2005
2. W. L.Stutzman, and G.A. Thiele,"Antenna Theory and Design", 2nd Ed., John Wiley & Sons., 1998
3. R.S.Elliot,"Antenna Theory and Design", Revised edition, Wiley-IEEE Press., 2003

REFERENCES:

1. Ved Vyas Dwivedi, “Microstrip Patch Antenna Using Metamaterial”, Lambert Academic Publishing, 2012
2. Lamont V. Blake, Maurice W. Long, "Antennas: Fundamentals, Design, Measurement", 3rd SciTech Pub., 2009.
3. Jaco du Preez, Saurabh Sinha, "Millimeter-Wave Antennas: Configurations and Applications", Springer, 2016
4. John D Kraus, Ronald J Marhefka, Ahmad S Khan, "Antennas and Wave Propagation", 3rd Edition, Tata McGraw Hill, 2006
5. Frank Gross, "Smart Antennas for Wireless Communications: With MATLAB", 2nd edition, Tata McGraw Hill, 2005

OUTCOMES:

On completion of the course the students will be able to

- Understand the fundamental concepts of antennas.
- Analysis and design parameters pertaining to microstrip patch antennas
- Design antenna arrays and analyze mutual coupling among antennas

- Have an understanding of advanced antenna concepts such as millimeter-wave antennas, reconfigurable antennas, and metamaterial based antennas
- Formulate and execute a research plan to design advanced antenna types including simulations and measured results.
- Understand the concepts of smart antennas.

ECCX42	INTRODUCTION TO ERROR CONTROL CODING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To provide an introduction to traditional and modern coding theory.
- To introduce the recent advancements in codes
- To develop a new code based on an application

MODULE I Linear Block codes **8**

Introduction to Error control coding, Linear Block codes-Generator matrix-Parity check Matrix-Properties of Linear Block codes-syndrome and Error Detection-Decoding of Linear block codes-Distance properties of Linear Block codes.-Examples –Repetition codes, SPC, Reed Muller codes.

MODULE II CYCLIC CODES **7**

Fields-Polynomial ring-Construction of finite fields-Deducing finite field structure-subfields –cyclic codes –BCH codes-Reed Solomon codes-Decoding of BCH and Reed Solomon codes

MODULE III CONVOLUTIONAL CODES **7**

Introduction to convolutional codes-Encoding-state diagram-trellis diagram-classification-realisation-Distance properties-Decoding of convolutional codes-Viterbi algorithm-BCJR algorithm

MODULE IV TURBO CODES **8**

Turbo codes-Intoduction-encoding-Decoding of Turbo codes-Distance Properties of Turbo codes-Convergence of Turbo codes-HARQ schemes in Turbo codes

MODULE V LDPC CODES **7**

Low Density Parity Check Codes-Intoduction-Encoding –Decoding of LDPC codes-Belief Propagation Algorithm on BSC and AWGN channel

MODULE VI APPLICATIONS OF ECC **8**

Error Detecting codes in ISBN numbers, European article number(EAN)-Compact Discs-Satellite Communications-Deep Space Communications-modems-Wireless Communications

Total Hours –45

TEXT BOOKS:

1. Shu Lin and Daniel Costello, “Error Control Coding”, Pearson, II edition, 2004

REFERENCES:

1. RudigerUrbanke and Thomas Richardson “Modern coding theory”, Cambridge 2008
2. F. J. MacWilliams and N. J. A. Sloane, “The theory of error-correcting codes”, North-Holland publishers, 1983.
3. Richard Blahut “Algebraic codes for data transmission” Cambridge, 2003
4. Thierry Lestable, Moshe Ran, “Error Control Coding for B3G/4G Wireless Systems”, John Wiley & Sons ltd, 2011.
5. DhouhaKbaier Ben Ismail, Catherine Douillard and Sylvie Kerouédan, “A survey of three-dimensional turbo codes and recent performance enhancements” Journal on Wireless Communications and Networking 2013, Vol. 2013:115

OUTCOMES:

On completion of the course the students will be able to

- Describe the modern coding techniques and basics of coding algebra.
- Combine the effect of HARQ schemes with Error Correcting Codes
- Employ the concept of convolutional codes in constructing a turbo coder
- Analyze the performance of Turbo codes and LDPC.
- Develop a new design of channel coding.
- Recommend a channel coder based on the application.

ECCX43 SATELLITE IMAGE PROCESSING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To study about the satellite systems and display systems
- To describe about the procedure of satellite data acquisition.
- To analyze about enhancing the satellite images
- To know about the methods to extract information from satellite images
- To analyze the satellite images using different techniques
- To interpret satellite images

MODULE I SATELLITE SYSTEMS AND DATA 7

acquisition - storage - orbits – Data formats –Data products – Image processing system – factors to be considered- Image display systems – Image sampling and quantization - Basic relationship between pixels.

MODULE II SENSOR AND DATA MODEL 8

Sensor model – pixel characters - Image formation – Histogram -Types- Uni-variate & multi-variate image statistics – spatial statistics – Image registration and ortho rectification - Geometric and radiometric correction - noise models.

MODULE III IMAGE ENHANCEMENTS 8

Spectral signatures – Image characteristics, feature space scatterogram- point, local and regional operation – contrast, spatial feature and multi image manipulation techniques - Fourier transform - principle component analysis - Optimal Rotation Transformation – Scale-space transform, wavelet transform. multi-image fusion

.

MODULE IV INFORMATION EXTRACTION 7

Training sits - Supervised, Unsupervised and Hybrid classifiers - Baye's Theorem – parametric Classification - -Decision tree – other Non - parametric classifiers - sub-pixel and super-pixel classification – Hyper-spectral image analysis – Accuracy assessment.

MODULE V IMAGE ANALYSIS 8

Pattern recognition - boundary detection and representation - textural and contextual analysis - decision concepts: Fuzzy sets - evidential reasoning - Expert system - Artificial Neural Network – Case studies

MODULE VI VISUAL IMAGE INTERPRETATION 7

Introduction –Fundamentals - Visual Image interpretation equipment Land use/Lan cover Mapping – Geological and soil mapping – wet land mapping- Application : Agriculture , forestry, rangeland, water resource , urban ,regional and archeological

Total Hours –45

TEXT BOOKS:

1. John R. Jensen, Introductory Digital Image Processing: A Remote Sensing Perspective, 4th Edition, 2015.
2. Robert Shcowebgerdt, Remote sensing models & methods for image processing,3 rd edition, 2004. 3. John A.Richards, Springer – Verlag, Remate Sensing Digital Image Analysis 1999.

REFERENCES:

1. Digital Image Processing (3rd Edition) Rafael C. Gonzalez, Richard E. Woods Prentice Hall, 2007.
2. W.G.Rees - Physical Principles of Remote Sensing, Cambridge University Press, 2nd edition, 2001.
3. Remote Sensing and Image Interpretation 6th Edition, by Thomas Lillesand , ,Kiefer .Ralph W Jonathan Chipman 2008
4. Image Processing and GIS for Remote Sensing: Techniques and Applications, Jian Guo Liu, Philippa J. Mason, John Wiley & Sons, 2016

OUTCOMES:

On completion of this course, the student shall be able to

- Get familiarized about various satellite systems and data systems
- Understand the image formation and information
- Apply the image enhancement and image processing techniques.
- Interpret satellite images and can analyses the image using models
- Derive the information from various images
- Interpret the satellite image visually

ECCX44	SOFTWARE DEFINED RADIO	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand Modern Radio Communication System
- To understand GNU Radio
- To understand how SDR platform provides easy access to wireless network system
- To understand how unlike simulation in Communication Projects, SDR allows easy access to both PHY and MAC layer
- To understand the concept of Cognitive Radio and Spectrum sharing

PREREQUISITES:

- Basics of Analog and digital communication
- Basics of wireless communication

MODULE I SOFTWARE DEFINED RADIO FUNDAMENTALS 8

Introduction to SDR, Principles of SDR , Basic Principle and difference in Analog radio and SDR , SDR characteristics, required hardware specifications, Software/Hardware platform, GNU radio - GNU Radio Architecture, Hardware Block of GNU, GNU software , MATLAB in SDR , Radio Frequency Implementation issues, Purpose of RF front End, Dynamic Range ,RF receiver Front End topologies, Flexibility of RF chain with software radio, Duplexer ,Diplexer ,RF filter ,LNA ,Image reject filters , IF filters , RF Mixers Local Oscillator , AGC, Transmitter Architecture and their issues, Sampling theorem in ADC, Noise and distortion in RF chain, Pre-distortion

MODULE II SDR ARCHITECTURE 7

Architecture of SDR-Open Architecture, Software Communication Architecture, Transmitter Receiver Homodyne/heterodyne architecture, RF front End, ADC, DAC, DAC/ADC Noise Budget, ADC and DAC Distortion, Role of FPGA/CPU/GPU in SDR, Applications of FPGA in SDR, Design Principles using FPGA, Trade –offs in using DSP, FPGA and ASIC, Power Management Issues in DSP,ASIC,FPGA

MODULE III MULTI RATE SIGNAL PROCESSING 8

Sample timing algorithms, Frequency offset estimation and correction, Channel Estimation, Basics of Multi Rate, Multi Rate DSP, Multi Rate Algorithm, DSP techniques in SDR, OFDM in SDR

MODULE IV SMART/MIMO ANTENNAS USING SOFTWARE RADIO 7

Smart Antenna Architecture, Vector Channel Modeling , Benefits of Smart Antenna Phased Antenna Array Theory, Adaptive Arrays, DOA Arrays, Applying Software Radio Principles to Antenna Systems, Beam forming for systems-Multiple Fixed Beam Antenna Array, Fully Adaptive Array , Relative Benefits and Trade-offs OF Switched Beam and Adaptive Array, Smart Antenna Algorithms , Hardware Implementation of Smart Antennas, MIMO -frequency, time, sample Synchronization, Space time block coding-Space Time Filtering, Space Time Trellis Coding .

MODULE V COGNITIVE RADIO 8

Cognitive Radio Architecture, Dynamic Access Spectrum, Spectrum Efficiency, Spectrum Efficiency gain in SDR and CR ,Spectrum Usage, SDR as a platform for CR, OFDM as PHY layer ,OFDM Modulator, OFDM Demodulator, OFDM Bandwidth, Benefits of OFDM in CR, Spectrum Sensing in CR, CR

MODULE VI APPLICATIONS OF SDR 7

Application of SDR in Advance Communication System-Case Study, Challenges and Issues, Implementation, Parameter Estimation –Environment, Location, other factors, Vertical Handoff, Network Interoperability.

Total Hours –45

TEXT BOOKS:

1. Jeffrey.H.Reed ,Software Radio : A Modern Approach to Radio Engineering , Pearson , LPE
2. Markus Dillinger , KambizMadani ,Nancy Alonistioti, Software Defined Radio : Architectures , Systems and Functions ,Wiley.
3. Tony .J. Rouphael , RF and DSP for SDR, Elsevier Newness Press ,2008

REFERENCES:

1. Dr.TajStruman ,Evaluation of SDR –Main Document
2. SDR –Handbook , 8th Edition , PENTEK 5. Bruce a. Fette , Cognitive Radio Technology, Newness, Elsevier.

OUTCOMES:

After successfully completing the course students will be able to

- Compare SDR with traditional Hardware Radio (HDR)
- Implement modern wireless system based on OFDM, MIMO & Smart Antenna
- Build experiment with real wireless waveform and applications.

- Analyze the Multi Rate Signal Processing
- Accessing both Physical and MAC layers.
- Parameter estimation of SDR

ECCX45	GNU RADIO REALIZATION THROUGH PYTHON AND C++	L	T	P	C
		1	0	2	2

OBJECTIVES:

- Student will learn with about open source software with respect to digital communication in
- The course is combined with USRP/RTL SDR to enable the use of off the self-component for analysis of the RF signal, which are readily available at much lower cost than the standard testing rig
- Various system requirement for a good RF receiver

MODULE I GNU RADIO & RTL SDR 5+10

USRP/RTL hardware schematics(A/D convertor, OCXO, TCXO, PPM, USB interface) -Sampling and bandwidth, SNR, Low Noise Amplifier, Down conversion -Gnu radio Companion(GRC) modules, source modules, sink modules, plotting of frequency response

PRACTICAL :

Sin wave generation using GRC

frequency plot using GRC

MODULE II GNU RADIO PYTHON & C++ 5+10

GRC Blocks, (gr-theano, gr-)- Modification of the python code generated by GRC - Out of order (OOT) modules creation - How to add Python blocks with gr_modtool - create a module for QPSK mapping, create GRC binding for block

PRACTICAL :

Creation of AM receiver using GRC flow graph

Modify the python code for water fall frequency plot

Add the module to gr_modtool

Creation of QPSK block and add it to gr_modtool

MODULE III GNU RADIO INTERFACING WITH HARDWARE 5+10

gr-uhd-Interfacing with USRP- gr-osmosdr-interfacing with RTL-SDR, decimation, interpolation, wifi 802.11 (Phy and mac) layer, study and analysis using gr-ieee802-11

PRACTICAL :

1) Implementation of the OFDM receiver based on Wifi physical layer specification
2) Implementation of the 802.11 MAC layer packetization of the received MAC data (802.11) using gr-foo for analysis using wireshark

L – 15; P – 30; Total Hours – 45

TEXT BOOKS:

1. David clark & Paul clark , “Field Expedient SDR: Introduction to Software Defined Radio”
2. Carl Laufer , “The Hobbyist's Guide to the RTL-SDR: Really Cheap Software Defined Radio”.
3. Mathew S. Gast , “802.11 wireless Networks : The definitive guide”

REFERENCES:

1. Simon Haykin and Michael Moher, ”An Introduction to Analog and Digital Communications”, JOHN WILEY & SONS, INC, .2006.

OUTCOMES:

- Student will learn how to build modules in gnu radio
- Use off the self-components to analyse different radio technology
- Will learn the system design aspect for SDR

ECCX46	IMPLEMENTATION OF GSM (2G), 3G STACK	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To have practical exposure on GSM stack implementation.
- GSM base station is a complex entity which had high cost and cannot be used for funding.
- Open BTS being open source and open hardware presents a simplified view of the base station

PREREQUISITES:

- Digital communication, Networking, wire shark

MODULE I INTRODUCTION TO GSM 5+10

GSM Architecture (HLR, VLR, Equipment identity register, Outgoing call, incoming call, BTS-L1(PHY), BTS-L2(MAC))- PSTN - VoIP (SIP) -Wireshark packet analysis

Practical :

Wireshark installation

Filtering of packet (udp & TCP)

MODULE II OPEN BTS & USRP 5+10

USRP (dynamic range of the a/d convertor, bandwidth, fpga, UDP packet to the host from usrp, ocxo) - GSM BTS (PHY, MAC) module discussion with respect to specification - Sip authentication & registration per session (Register, invite, message) USRP B2xx internals (a/d convertor, fpga)

Practical :

Open BTS installation (clone, compiling, tool chain installation)

Mobile registration on the network

MODULE III CALL ESTABLISHMENT AND PACKET ANALYSIS 5+10

Registration of the mobile (message sequence) packet capture and analysis, (Paging request, System information)- SMS message sequence study(A-I/F DTAP, A-I/F RP, SMS TPDU)- Voice call message sequence(CCH, CI, LAI, BCCH) - 2G - Edge mode - UMTS data mode registration, packet capture and analysis

Practical :

capture and analysis of the packet for SMS

capture and analysis of the packet for voice
mobile registration rejection analysis

L – 15; P – 30; Total Hours – 45

TEXT BOOKS:

1. Michael Iedema,"Getting Started with OpenBTS: Build Open Source Mobile Networks"
2. Martin Sauter ,"From GSM to LTE: An Introduction to Mobile Networks and Mobile",
3. Russell Bryant, Leif Madsen and Jim Van Meggelen" Asterisk: The Definitive Guide: The Future of Telephony Is Now",

REFERENCES:

1. GSM - Architecture, Protocols and Services, 3rd Edition, Jörg Eberspächer, Hans-Joerg Vögel, Christian Bettstetter, Christian Hartmann Radio Access Networks for UMTS: Principles and Practice, Chris Johnson

OUTCOMES:

On completion of the course the students will be able to

- Student will have the basic understanding of control path & data path of the GSM stack.
- System capacity to handling multiple users

ECCX47	IoT FOR INDUSTRIAL APPLICATIONS	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To Understand the Architectural Overview of IoT
- To Understand the IoT Reference Architecture and Real World Design Constraints
- To Understand the various IoT Protocols
- To learn the concepts of big data analytics

PREREQUISITES:

- Basics of wireless communication
- Basics of embedded system

MODULE I IOT OVERVIEW 8

IoT-An Architectural Overview– Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations. M2M and IoT Technology Fundamentals- Devices and gateways, Local and wide area networking, Data management, Business processes in IoT, Everything as a Service(XaaS), M2M and IoT Analytics, Knowledge Management.

Practical

- Sensor Interfacing
- Server configuration
- Node-Node Communication

MODULE II BIG DATA PLATFORMS FOR THE INTERNET OF THINGS 7

Big Data Platforms for the Internet of Things: network protocol- data dissemination – current state of art- Improving Data and Service Interoperability with Structure, Compliance, Conformance and Context Awareness: interoperability problem in the IoT context- Big Data Management Systems for the Exploitation of Pervasive Environments - Big Data challenges and requirements coming from different Smart City applications.

Practical

- Data Management in cloud

- Web Design
- Application design

L-15 , P-30 Total Hours –45

TEXT BOOKS:

1. Jan Holler, VlasiosTsiatsis, Catherine Mulligan, Stefan Avesand, StamatisKarnouskos, David Boyle, From Machine-to-Machine to the Internet of Things: Introduction to a New Age of Intelligence", 1st Edition, Academic Press, 2014.
2. Stackowiak, R., Licht, A., Mantha, V., Nagode, L.," Big Data and The Internet of Things Enterprise Information Architecture for A New Age", Apress, 2015.

5. Dr. John Bates , "Thingalytics - Smart Big Data Analytics for the Internet of Things", john Bates, 2015.Outcomes

OUTCOMES:

After successfully completing the course students will be able to

- Effective usage of IoT deployment for different sectors.
- Developing and modifying code for various sensor based applications using wireless sensor modules and working with variety of modules like environmental and security module.
- Exploring the features of predictive data analytics for IoT applications.
- Modular hands on training will enable participants to conduct IoT related activities in academic environment and initiate new projects in Industrial sectors.
- Participants will be encouraged to orient themselves to specific focused areas of their interest with hands on training.

ECCX48	TELEVISION ENGINEERING	L	T	P	C
		1	0	2	2

OBJECTIVES:

- To Identify different components and section in TV receiver
- To gain sufficient knowledge regarding different modules present in the TV transmitter and receiver and their design considerations
- To get adequate knowledge regarding signal injection and signal tracing in TV system.
- To measure Voltage and waveform signals
- Organization of RF and VIDIF sections.
- Familiarization of TV set with specification and operation.

MODULE I ELEMENTS OF TV SYSTEM, TV SIGNAL TRANSMISSION AND PROPAGATION: 5+10

TV transmitter and receiver, TV signal propagation, TV broadcast channels, TV transmission antennas, Receiver antennas. Monochromatic picture tube, electrostatic focusing, beam deflection, picture tube characteristics and specifications, , TV standards: American 525 line B&W TV system, NTSC color system, 625-line monochrome system.

1. Study and Identification of various elements in TV Transmitter and Receiver.
2. Signal generation and Tracking in TV system.
3. Familiarization with specification, operation and use of TV set equipment.
4. Test TV antenna and booster.
5. Study and use of various video cameras and its controls.

MODULE II COLOR TV: 5+10

Color picture tubes, Interleaving process, Three Color theory, Chrominance Signal, composite color signal, comparison of NTSC, PAL and SECAM Systems. Color television display tubes (Delta gun, PIL, Trinitron). Color signal transmission.

1. Study of composite video signal.
2. Color pattern generators.
3. Troubleshoot VCRs for simple faults.

MODULE III SYNCHRONOUS SEPARATION, AFC AND DEFLECTION OSCILLATORS: 5+10

Synchronous separation, separation of frame and line synchronous pulses, AFC,

single ended AFC circuit. Deflection oscillators, TV cameras.

1. Tuning of RF, VIDIF and SIF sections.
2. Various video cameras and its controls.

L-15 , P-30 Total Hours –45

TEXT BOOKS:

1. Modern television practice-Principles, Technology and service-R.R. Gulati, New Age International publication, 2005.
2. Monochrome and color TV-R.R Gulati, New Age International publication, 2005.

REFERENCES:

1. Color Television Theory and practice-S.P.Bali, TMH, 2007.
2. Television and Video engineering-A.M. Dhake, 2nd Edition, Tata McGraw Hill, 2006
3. Basic television and video systems-B.Grob and C.E.Herndon, McGraw Hill, 1999.

OUTCOMES:

After completion of this course the student will be able to

- Key out various elements and sections in TV receiver.
- Get complete knowledge regarding the working principles involved in both Monochrome and Color Television.
- Get adequate knowledge regarding different modules and their design considerations.
- Get familiarized with principles involved in the modern televisions system.
- Troubleshoot VCRs, TV antenna and booster.
- Use of various video cameras and its controls.

ECCX49	MOBILE NETWORKS	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To study the basics of Mobile networks and its generation.
- To understand the concepts of advanced network concepts.
- To study the basics of Mobile networks and its generation.

MODULE I INTRODUCTION TO MOBILE NETWORKS 7

Introduction to mobile networks - IEEE technologies - Cellular networks – Generation of networks - Relevant features of LTE - HetNet in LTE Advanced – Small cell concepts - Transition of LTE advanced towards 5G - cloud RAN - Femtocell technology –The backhaul network

MODULE II WPAN,WLAN, WMAN, WRAN AND IOT 8

WPAN and WiGig – WLAN and Wifi – WMAN and Wimax – WiMAX and Wifi integration - IEEE 802.22 – interconnection between IEEE standards – Sensor Networks –RFID – Near field communication – IOT in the home – FOG networking – connection of things – LoRa

Total Hours –15

TEXT BOOKS:

1. Khaldoun Al Agha, Guy Pujolle, Tara Ali-Yahiya, “Mobile and Wireless Networks”, Volume 2, Advanced Networks set, published by ISTE Ltd. and John Wiley & Sons Inc.

REFERENCES:

1. Joh R. Vacca, “Wireless Broadband Networks Handbook 3G, LMDS and Wireless Internet” Tata McGraw-Hill, 2001
2. D.P. Agrawal and Qing-An zeng, “Introduction to Wireless and Mobile Systems” Thomson Learning, 2003. [Unit I, Chapter 13.1 to 13.7.7, Unit 2 13.7.8 to 13.9

OUTCOMES:

On completion of the course the students will be able to

- To explain the types and functional principles of cellular networks.
- To describe the features, interconnections and applications of various IEEE standards.

ECCX50	OPTICAL NETWORKS	L	T	P	C
		1	0	0	1

OBJECTIVES:

- Acquire knowledge of optical components and networks.
- Gain knowledge on architecture and standards of optical networks.

MODULE I OPTICAL COMPONENTS & CHARACTERISTICS 7

Light propagation in optical fibers-Loss & Bandwidth, System limitations Optical Components- Couplers, Isolators & Circulators, Multiplexers & Filters Optical Amplifiers, Switches Wavelength Converters. Introduction to Optical Networks; Advantages of optical network, WDM optical networks ,Challenges of optical WDM network, Metropolitan-Area Networks, Layered Architecture; Broadcast and Select Networks- Topologies for Broadcast Networks, Media Access Control Protocols, Wavelength Routing Architecture.

MODULE II WAVELENGTH ROUTING NETWORKS AND OPTICAL ACCESS NETWORKS 8

The Optical layer, Node Designs, Optical layer cost tradeoff, Routing and Wavelength Assignment algorithms, Virtual Topology design, Architectural variations, Introduction to access network, PON, EPON and WDN EPON: overview, principal of operation, architecture; dynamic wavelength allocation, STARGATE: overview, need, architecture, operation and application, gigabit Ethernet, radio over fiber network.

Total Hours –15

TEXT BOOKS:

1. Rajiv Ramaswamy, Kumar N. Sivaranjan and Galen H. Sasaki, "Optical Networks – A practical perspective", 3rd edition, Elsevier, 2010.
2. C.Siva Ram Moorthy and Mohan Gurusamy, “WDM Optical Networks: Concept, Design and Algorithms”, PHI, 1st Edition, 2002.
3. P.E.Green. jr., "Fiber Optical Networks", Prentice Hall, New Jersy, 1993.

REFERENCES:

1. John M. Senior, “Optical Fiber Communications –Principles and Practice”, Pearson Education, 2009.
2. Biswanath Mukherjee, “Optical Communication Networks”, McGraw-Hill, 1997.

OUTCOMES:

On completion of the course the students will be able to

- Define the fundamental concepts of optical networks and characteristics.
- Select appropriate and relevant optical network protocols
- Identify various access networks that can be used for real scenario.
- Compare the operation and features of optical network.
- Understand and build the WDM routing mechanisms.
- Choose different networking techniques based on the application.

ECCX51	ADAPTIVE SIGNAL PROCESSING	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To understand the adaptive signal processing algorithms for extracting relevant information from noisy signals.
- explain the mean square algorithms
- identify the Weiner least-squares solution

MODULE I INTRODUCTION TO ADAPTIVE FILTERING 8

Introduction To Stochastic Processes, Linear Adaptive Filter Structure, Real And Complex Forms Of Adaptive Filter, Non-Linear Adaptive Filter, Adaptation Approaches: Wiener Filter Theory Method Of Least Squares. Mean-Square Error Criterion, Linear Optimum Filtering Statement, Principle Of Orthogonality, Wiener-Hopf Equation, Error Performance Surface.

MODULE II KALMAN & LINEAR ADAPTIVE FILTERING 7

Introduction to Kalman filters- Variance Of Kalman Filtering, Extended Kalman Filtering Method Of Steepest Descent, Stability Of Steepest Descent, Least Mean Square Algorithm, Adaptive Prediction, Adaptive Equalization, Robustness Of LMS Algorithm, Block Adaptive Filter, Fast LMS Algorithm, Unconstrained Frequency-Domain Adaptive Filtering, Methods Of Least Squares

Total Hours –15

TEXT BOOKS:

1. Simon Haykin,"Adaptive Filter Theory", Prentice Hall International", 3rd Ed., 2002.
2. Bernard Widrow and Samuel Stearns,"Adaptive Signal Processing", Pearson Education, 2nd Ed., 1995.

REFERENCES:

1. Ali H. Sayed,"Fundamentals of Adaptive Filtering", Wiley, 1st Ed., 2003.
2. Farhang-Boroujeny B.,"Adaptive Filters Theory and Applications", John Wiley & Sons, 1st Ed.,1998.
3. Mohamed Ibnkahla(Edited),"Adaptive Signal Processing in Wireless Communications", CRC Press, Taylor & Francis Group, 1st Ed., 2009.

OUTCOMES:

On completion of the course the students will be able to

- Design and apply optimal minimum mean square estimators and in particular linear estimators. To understand and compute their expected performance and verify it.
- Design, implement and apply Wiener filters (FIR, non-causal, causal) and evaluate their performance.
- Identify applications in which it would be possible to use the different adaptive filtering approaches.
- Design, implement and apply LMS, RLS, and Kalman filters to given applications.
- Analyze the accuracy and determine advantages and disadvantages of each method.
- Use the theoretical understanding to do troubleshooting.

ECCX52	STUDY ON NETWORK SIMULATORS	L	T	P	C
		1	0	0	1

OBJECTIVES:

- To analyze different network simulators used for WSN applications
- To analyze the network simulator ns-2
- To analyze the network simulator opnet

MODULE I NS-2 **7**

General ns-2 simulator characteristics and requirements, Network topology and simulation scenario, AODV protocol,Installation of NS-2, ns2 simulation output.

MODULE II OPNET **8**

General Opnet simulator characteristics and requirements, Network topology and simulation scenario, Installation of opnet , Visualization and Statistics

Total Hours –15

TEXT BOOKS:

1. Teerawat Issariyakul,Ekram Hossain ,"Introduction to Network Simulator NS2", Second Edition,Springer.

REFERENCES:

1. Adarshpal S. Sethi, Vasil Y. Hnatyshin,"The Practical OPNET User Guide for Computer Network Simulation", Chapman and Hall/CRC

OUTCOMES:

On completion of the course the students will be able to

- Work with network simulator ns-2
- Have knowledge on various simulator characteristics.
- Gain knowledge to find simulator for any networking research.
- Apply the network characteristics to the simulator
- Work with network simulator opnet

ECCX53	MIMO OFDM TECHNOLOGY	L	T	P	C
		1	0	0	1

OBJECTIVES:

- Acquire knowledge of OFDM technology.
- Gain knowledge on MIMO communication.

MODULE I Orthogonal Frequency Division Multiplexing 7

Basic principles of orthogonality, Single vs multi carrier systems, OFDM block diagram and ITS explanation, OFDM signal mathematical representation, Selection parameters for modulation, Pulse shaping in 05 20% OFDM signal and spectral efficiency, Windowing in OFDM signal and spectral efficiency, Synchronization in OFDM, Pilot insertion in OFDM transmission and channel estimation, Amplitude limitations in OFDM, FFT points selection constraints in OFDM, CDMA vs OFDM, Hybrid OFDM, Other variants of OFDM

MODULE II MIMO SYSTEMS 8

Introduction, Space diversity and systems based on space diversity, Smart antenna system and MIMO, MIMO-Based system architecture, MIMO exploits multipath, Space-time processing, Antenna considerations for MIMO, MIMO channel modeling, channel measurement and channel capacity, Cyclic delay diversity (CDD), Space-time coding, Advantages and applications of MIMO in present context, MIMO applications in 3G wireless systems, MIMO-OFDM.

Total Hours –15

TEXT BOOKS:

1. Wireless Communication By Upena Dalal, Oxford University Press

REFERENCES:

1. Wireless Communications and Networking By Vijay K. Garg, Morgan Kaufmann Publications

OUTCOMES:

On completion of the course the students will be able to

- Describe the concepts of MIMO OFDM Wireless communication systems.
- Determine the capacity and bit error rate of MIMO OFDM system for a given power delay profile of the MIMO channel.
- Explain the fundamental concept of Software defined Radio and current 3-G

and 4-G system

- Compare the operation SISO,SIMO,MISO and MIMO channels.
- Estimate and correct the timing and frequency offset in the signal received in the MIMO OFDM receivers.
- Analyze the performance of MIMO OFDM physical channel in WiMax/LTE wireless standards.

ECCX54	MEDICAL IMAGE PROCESSING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the fundamentals of medical image processing techniques.
- To explain the sources of medical image sources.
- To develop computational methods
- To apply algorithms for analyze and quantify biomedical data
- To realize the methods of image registration and visualization

MODULE I IMAGE FUNDAMENTALS AND PRE-PROCESSING 7

Image perception, MTF of the visual system, Image fidelity criteria, Image model, Image sampling and quantization – two dimensional sampling theory, Image quantization, Optimum mean square quantizer, Image transforms – 2D-DFT and other transforms. Image enhancement – point operation, Histogram modeling, spatial operations, Transform operations,

MODULE II BASICS OF MEDICAL IMAGE SOURCES 8

Radiology- The electromagnetic spectrum-Computed Tomography-Magnetic Resonance Tomography –ultrasound-nuclear medicine and molecular imaging-other imaging techniques-radiation protection and dosimetry

MODULE III MEDICAL IMAGE REPRESENTATION 8

Pixels and voxels – algebraic image operations - gray scale and color representation-depth-color and look up tables - image file formats- DICOM- other formats- Analyze 7.5, NifTI and Interfile, Image quality and the signal to noise ratio- MATLAB based simple operations.

MODULE IV MEDICAL IMAGE ANALYSIS AND CLASSIFICATION 8

Image segmentation- pixel based, edge based, region based segmentation. Image representation and analysis, Feature extraction and representation, Statistical, Shape, Texture, feature and image classification – Statistical, Rule based, Neural Network approaches

MODULE V IMAGE REGISTRATIONS AND VISUALIZATION 8

Rigid body visualization, Principal axis registration, Interactive principal axis registration, Feature based registration, Elastic deformation based registration, Image

visualization – 2D display methods, 3D display methods, virtual reality based interactive visualization.

MODULE VI NEURAL NETWORKS FOR IMAGE PROCEssing 6

Neural Network based Image Processing-Statistical approach for texture analysis-Segmentation in color and B/W images-Expert system based Image Processing-Multispectral classification techniques

Total Hours –45

TEXT BOOKS:

1. John L. Semmlow, Benjamin Griffel ,"Biosignal and Medical Image Processing", Third Edition2014 by CRC Press
2. G. R. Sinha," "Medical Image Processing: Concepts and Applications", 2014
3. Wolfgang Birkfellner, "Applied Medical Image Processing – A Basic course", CRC Press, 2011.
4. Atam P.Dhawan, „Medical Image Analysis", Wiley Interscience Publication, NJ, USA 2003.
5. R.C.Gonzalez and R.E.Woods, „Digital Image Processing", Second Edition, Pearson Education, 2002.
6. Anil. K. Jain, „Fundamentals of Digital Image Processing", Pearson education, Indian Reprint 2003.

REFERENCES:

1. Alfred Horowitz, „MRI Physics for Radiologists – A Visual Approach", Second edition Springer Verlag Network, 1991.
2. Kavyan Najarian and Robert Splerstor," Biomedical signals and Image processing",CRC – Taylor and Francis,New York,2006
3. John L.Semmlow,"Biosignal and Biomedical Image Processing Matlab Based applications" Marcel Dekker Inc.,New York,2004
4. Jerry L.Prince and Jnathan M.Links," Medical Imaging Signals and Systems"-Pearson Education Inc. 2006.

OUTCOMES:

At the end of the course ,Students will be able to

Analyze Morphology, Segmentation techniques and implement these in images.

- Explain medical image acquisition and reconstruction methods.
- Apply the classical methods for spectral analysis to medical images
- Apply digital processing techniques to analyze medical images for texture

analysis and segmentation and classifications.

- Enables quantitative analysis and visualization of medical images of numerous modalities such as PET, MRI, CT, or microscopy

ECCX55 COMPUTER VISION AND ITS APPLICATIONS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To review image processing techniques for computer vision
- To understand shape and region analysis
- To understand three-dimensional image analysis techniques
- To understand motion analysis
- To study some applications of computer vision algorithms

MODULE I IMAGE PROCESSING FOUNDATIONS 7

Review of image processing techniques – classical filtering operations – thresholding techniques – edge detection techniques – corner and interest point detection – mathematical morphology – texture analysis

MODULE II SHAPES AND REGIONS 8

Binary shape analysis – connectedness – object labeling and counting – size filtering – distance, functions – skeletons and thinning – deformable shape analysis – boundary tracking procedures – active contours – shape models and shape recognition – centroidal profiles – handling occlusion – boundary length measures – boundary descriptors – chain codes – Fourier descriptors – region descriptors – moments

MODULE III HOUGH TRANSFORM 9

Line detection – Hough Transform (HT) for line detection – foot-of-normal method – line localization –line fitting – RANSAC for straight line detection – HT based circular object detection – accurate center location – speed problem – ellipse detection – Case study: Human Iris location – hole detection – generalized Hough Transform – spatial matched filtering – GHT for ellipse detection – object location – GHT for feature collation

MODULE IV IMAGE COMPRESSION 7

Image Coding Fundamentals, Image Compression Model, types of image redundancies, fidelity criteria, Lossless Compression - variable length, bit plane, Lossless Predictive, Lossy Compression- Lossy Predictive, JPEG, MPEG, fractal image compression

MODULE V 3D VISION AND MOTION 7

Methods for 3D vision – projection schemes – shape from shading – photometric stereo – shape from texture – shape from focus – active range finding – surface representations – point-based representation – volumetric representations – 3D object recognition – 3D reconstruction – introduction to motion – triangulation – bundle adjustment – translational alignment – parametric motion – spline based motion – optical flow – layered motion

MODULE VI APPLICATIONS 7

Application: Photo album – Face detection – Face recognition – Eigen faces – Active appearance and 3D shape models of faces Application: Surveillance – foreground-background separation – particle filters – Chamfer matching, tracking, and occlusion – combining views from multiple cameras – human gait analysis Application: In-vehicle vision system: locating roadway – road markings – identifying road signs – locating pedestrians

Total Hours –45

TEXT BOOKS:

1. Gonzalez and Woods, "Digital Image Processing", 3rd Edition, Pearson Education, 2016.
2. Mark Nixon and Alberto S. Aquado, “Feature Extraction & Image Processing for Computer Vision”, Third Edition, Academic Press, 2012.
3. E. R. Davies, “Computer & Machine Vision”, Fourth Edition, Academic Press, 2012.

REFERENCES:

1. D. L. Baggio et al., “Mastering OpenCV with Practical Computer Vision Projects”, Packt Publishing, 2012.
2. Jan Erik Solem, “Programming Computer Vision with Python: Tools and algorithms for analyzingimages”, O'Reilly Media, 2012.

OUTCOMES:

On completion of the course the students will be able to

- To implement fundamental image processing techniques required for computer vision To perform shape analysis
- To implement boundary tracking techniques
- To apply chain codes, other region descriptors
- To understand and implement suitable compression technique for images

- To apply 3D vision techniques
- To develop applications using computer vision techniques

ECCX56 SIGNAL DETECTION AND ESTIMATION

L	T	P	C
3	0	0	3

OBJECTIVES:

- Mathematical background of detection and estimation theory
- Some common and practical detection and estimation techniques

PREREQUISITES:

- Signals and Systems
- Probability theory and random processes

MODULE I REVIEW OF RANDOM VARIABLES AND STATISTICAL DECISION THEORY **9**

Review of Gaussian variables and processes; problem formulation and objective of signal detection and signal parameter estimation in discrete time domain, Bayesian, minimax, and Neyman-Pearson decision rules, likelihood ratio, receiver operating characteristics, composite hypothesis testing, locally optimum tests, detector comparison techniques, asymptotic relative efficiency.

MODULE II DETECTION OF DETERMINISTIC SIGNALS **7**

Matched filter detector and its performance; generalized matched filter; detection of sinusoid with unknown amplitude, phase, frequency and arrival time, linear model.

MODULE III DETECTION OF RANDOM SIGNALS **8**

Estimator-correlator, linear model, general Gaussian detection, detection of Gaussian random signal with unknown parameters, weak signal detection.

MODULE IV NON PARAMETRIC DETECTION **6**

Detection in the absence of complete statistical description of observations, sign detector, Wilcoxon detector, detectors based on quantized observations, robustness of detectors.

MODULE V ESTIMATION OF SIGNAL PARAMETERS **9**

Minimum variance unbiased estimation, Fisher information matrix, Cramer-Rao bound, Sufficient statistics, minimum statistics, complete statistics; linear models; best linear unbiased estimation; maximum likelihood estimation, invariance principle; estimation efficiency; Bayesian Estimation: philosophy, nuisance parameters, risk functions, minimum mean square error estimation, maximum a

posteriori estimation..

MODULE VI SIGNAL ESTIMATION IN DISCRETE-TIME 6

Linear Bayesian estimation, Weiner filtering, dynamical signal model, discrete Kalman filtering.

TOTAL HOURS 45

TEXT BOOKS

1. H. L. Van Trees, "Detection, Estimation and Modulation Theory: Part I, II, and III", John Wiley, NY, 1968.
2. H. V. Poor, "An Introduction to Signal Detection and Estimation", Springer, 2/e, 1998.

REFERENCES

1. M. Hays, "Statistical Digital Signal Processing and Modelling", John Willey and Sons, 1996.
2. Steven.M.Kay, "Fundamentals of Statistical Signal Processing:" Volume I Estimation Theory, Prentice Hall, USA, 1998.
3. Steven.M.Kay, "Fundamentals of Statistical Signal Processing:" Volume I Detection Theory, Prentice Hall, USA, 1998

OUTCOMES:

On completion of the course, students will be able to

1. Acquire basics of statistical decision theory used for signal detection and estimation.
2. Examine the detection of deterministic signals using statistical models.
3. Examine the detection of random signals using statistical models
4. Comprehend the elements and structure of nonparametric detection
5. Examine the performance of signal parameters using optimal estimators.
6. Analyze signal estimation in discrete-time domain using filters.

ECCX57 VIDEO PROCESSING TECHNIQUES L T P C
2 0 0 2

OBJECTIVES:

- Understand representation of digital images and video in the spatial (pixel) and frequency domains.
- Analyze video enhancement and compression standards
- To implement image and video processing algorithms using MATLAB or another programming language

MODULE I VIDEO ACQUISITION AND REPRESENTATION 10

Principles of color video processing, Spatial Temporal Sampling — Interpolation — video formats, Motion Estimation

MODULE II VIDEO ENHANCEMENT 10

Video Filtering: Motion Compensation – Noise Filtering – Enhancement and Restoration – Video Stabilization and Super Resolution

MODULE III VIDEO COMPRESSION STANDARDS 10

MPEG1, MPEG2, MPEG3 and MPEG4

Total Hours –30

TEXT BOOKS:

1. Handbook of Image and Video processing – Al Bovik (Alan C Bovik), Academic Press, Second Edition, 2005.
2. Digital Image Sequence Processing, Compression, and Analysis – Todd R. Reed, CRC Press, 2004

REFERENCES:

1. Practical Image and Video Processing using MATLAB, Dr.Oge Marques, John Wiley&Sons,2013
2. IEEE Transactions of Circuits and Systems for Video Technology.

OUTCOMES:

On completion of the course the students will be able to

- Explain the fundamental concepts of digital video processing.
- Recognize & apply various image enhancement techniques
- Identify and use appropriate image compression techniques

ECCX58 DIGITAL VLSI TESTING

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce different techniques for detection of faults in digital circuits.
- To develop a Generation of test vectors for combinational and sequential circuits
- To establish Self-testing methods

MODULE I BASICS OF TESTING 7

Introduction to Testing - Role of testing - VLSI Realisation process- VLSI Technology Trends Affecting Testing-Types of Testing -ATE -AC and DC parameters testing and yield.

MODULE II FAULT MODELLING AND SIMULATION 8

Functional Versus Structural Testing-Faults in digital circuits - Modelling of faults-Fault detection - Fault location - Fault dominance - Logic Simulation - Types of simulation

MODULE III TESTING OF COMBINATIONAL CIRCUITS 8

Combinational logic circuits -test generation, Testable combinational logic circuit design

MODULE IV TESTING OF SEQUENTIAL CIRCUITS 8

Test generation for sequential circuits - design of testable sequential circuits.

MODULE V DESIGN FOR TESTABILITY 7

Design for Testability - Ad-hoc design - scan based design.

MODULE VI SELF TESTING 7

Built-In Self Test - Test pattern generation for BIST - Circular BIST - BIST Architectures

Total Hours –45

TEXT BOOKS:

1. M.L. Bushnell and V.D. Agrawal, "Essentials of Electronic Testing for Digital, Memory and Mixed-Signal VLSI Circuits", Kluwer Academic Publishers, 2002.
2. A.L. Crouch, "Design Test for Digital ICs and Embedded Core Systems", Prentice Hall International, 2002.

REFERENCES:

1. Phillip E. Allen, Douglas R. Holberg. CMOS Analog Circuit Design, Oxford University Press, Second Edition, 2002.
2. M. Abramovici, M.A. Breuer, and A.D. Friedman. Digital Systems Testing and Testable Design. Wiley-IEEE Press, 1994.

OUTCOMES:

On completion of the course the students will be able to

- To comprehend the standard procedures and principles to test digital VLSI circuits
- Apply the testing principles to test digital circuits logically using stuck at faults models.
- Analyze and compare the performance of the fault models used to perform testing of digital circuits.
- To apply the design for test (DFT) principles for designing digital systems.
- To generate test vectors using ATPG algorithms for combinational and sequential circuits
- To function in teams involving the testing of digital VLSI systems

ECCX59	FIN FET TECHNOLOGY	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the necessary of scaling of MOS transistor.
- To introduce the concepts of nanoscale MOS transistor concepts and their performance characteristics.
- To study the various nano scaled MOS transistors.

MODULE I INTRODUCTION TO NOVEL MOSFETS 9

from Single Gate to Multigate, MOSFET scaling and Moore's law, Short-Channel Effects, Gate Geometry and Electrostatic Integrity, History and Multigate MOSFET Physics

MODULE II MULTIGATE MOSFET TECHNOLOGY 9

Introduction, Active Area: Fins, Gate Stack, Source/Drain Resistance and Capacitance, Mobility and Strain Engineering, Contacts to the Fins

MODULE III PHYSICS OF THE MULTIGATE MOS SYSTEM 9

Device electrostatics, Double gate MOS system, Two-dimensional confinement

MODULE IV MOBILITY IN MULTIGATE MOSFETS 9

Introduction, Double-Gate MOSFETs and FinFETs, Silicon multiple-gate nanowires

MODULE V MULTI-GATE MOSFET CIRCUIT DESIGN 9

Introduction, Digital Circuit Design, Analog Circuit Design, SOC Design and Technology Aspects

MODULE VI RADIATION EFFECTS IN ADVANCED SINGLE AND MULTIGATE MOSFETS 7

Total ionizing Dose effects-Advanced multi-gate devices-Single-event effects-Scaling effects.

Total Hours –45

TEXT BOOKS:

1. FinFETs and Other Multigate Transistors. J. P. Colinge, Springer Publications
2. Nanoelectronic Circuit Design – Niraj K. Jha and Deming Chen, Springer Publications.

REFERENCES:

1. Mark Lundstrom Jing Guo, Nanoscale Transistors: Device Physics, Modeling and Simulation, Springer, 2006.
2. M S Lundstorm, Fundamentals of Carrier Transport, 2nd Ed., Cambridge University Press, Cambridge UK, 2000

OUTCOMES:

On completion of the course the students will be able to

- Realize limitations of MOSFET technology.
- Apply the merits of FinFET technology.
- Analyze FinFET physics and modeling.
- Determine FinFET circuit design approaches.
- Analyze various issues with FinFET device
- Explore research opportunities in FinFET technology

ECCX60 REAL TIME EMBEDDED SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To introduce the concepts of embedded systems
- To learn about the data management system for real time
- To introduce the fundamentals of real time communication
- To familiarize different algorithms and techniques used for real time systems

MODULE I INTRODUCTION TO EMBEDDED SYSTEMS 7

Introduction - Embedded Systems – Skills Required for an Embedded System Designer - Issues in Real Time Computing – Structure of a Real Time System – Task classes – Performance Measures for Real Time Systems – Estimating Program Run Times.

MODULE II TASK ASSIGNMENT AND SCHEDULING 8

Introduction - Classical uniprocessor scheduling algorithms – Uniprocessor scheduling of IRIS tasks tasks – Task assignment – Mode changes and Fault Tolerant Scheduling.

MODULE III PROGRAMMING TOOLS 8

Introduction – Desired language characteristics – Data typing – Control structures – Facilitating Hierarchical Decomposition, Packages, Run time (Exception) Error handling – Overloading and Generics – Multitasking – Low level programming – Programming Environments – Run – time support.

MODULE IV REAL TIME DATABASES 7

Basic Definition- Real time vs General Purpose Databases- Main Memory Databases - Transaction priorities - Transaction Aborts - Concurrency control issues - Disk Scheduling Algorithms -Databases for Hard Real Time Systems.

MODULE V COMMUNICATION PROTOCOLS 7

Network Topology - contention based Protocol, Token Based Protocol, Stop-and-Go multihop Protocol, Polled Bus Protocol , Hierarchical Round Robin Protocol, Deadline-Based Protocols

MODULE VI EVALUATION TECHNIQUES 8

Reliability Evaluation Techniques – Obtaining parameter values - Reliability models

for Hardware Redundancy – Software error models. Clock Synchronization – Clock, A Non fault – Tolerant Synchronization Algorithm – Impact of faults – Fault Tolerant Synchronization in Hardware – Fault Tolerant Synchronization in software.

Total Hours –45

TEXT BOOKS:

1. C.M. Krishna, Kang G. Shin, “Real – Time Systems”, McGraw – Hill International Editions, 1997.
2. Rajib Mall, ”Real-time systems: theory and practice”, Pearson Education, 2009
3. Peter D.Lawrence, “Real Time Micro Computer System Design – An Introduction”, McGraw Hill, 1987.
4. Stuart Bennett, “Real Time Computer Control – An Introduction”, Prentice Hall of India, 1998.
5.

REFERENCES:

1. S.T. Allworth and R.N.Zobel, “Introduction to real time software design”, Macmillan, 2nd Edition, 1987.
2. R.J.A Buhur, D.L Bailey, “An Introduction to Real – Time Systems”, Prentice – Hall International, 1999.
3. Philip.A.Laplante, “Real Time System Design and Analysis”, Prentice Hall of India, 3rd Edition, April 2004
4. Sriram V Iyer, PankajGupta, “Embedded Real Time Systems Programming”, Tata Mc Graw Hill 2004.

OUTCOMES:

On completion of the course the students will be able to

- Describe the concepts of Embedded Systems
- Illustrate task assignment and scheduling.
- Discuss about error handling and multitasking.
- Understand real time data bases and transaction.
- Describe deadline based protocols and fault tolerance techniques.
- Discuss about the reliability evaluation techniques and tolerant synchronization algorithms.

ECCX61 INTRODUCTION TO RTOS

L	T	P	C
3	0	0	3

OBJECTIVES:

- To explain the aspects of the Operating systems and Real-time Operating Systems
- To analyze the unique issues in the design and analysis of computer systems for real-time applications.
- To describe Resource management, time-constrained communication, scheduling and imprecise computations, real-time kernels and case studies on RTOS

MODULE I OVERVIEW OF OPERATING SYSTEM 7

Computer-System Organization-Operating-System Structure -Operating-System Operations - Process Management - Memory Management -Storage Management - Protection and Security - Kernel Data Structures - Computing Environments - Open-Source Operating Systems-Operating system structures-System Calls-Operating-System Design and Implementation-Operating-System Structure -Operating-System Debugging - Operating-System Generation - System Boot

MODULE II REAL TIME OPERATING SYSTEMS 8

Brief History of OS, Defining RTOS, The Scheduler, Objects, Services, Characteristics of RTOS, Task, Tasks States and Scheduling, Task Operations, Structure, Synchronization, Communication and Concurrency, Semaphores, Defining Message Queue, States, Content, Storage, Operations and Use.

MODULE III KERNEL OBJECTS AND RTOS SERVICES 7

Pipes, Event Registers, Signals, Other Building Blocks, Component Configuration, Basic I/O Concepts, I/O Subsystem

MODULE IV Exceptions , Interrupts and Memory Management 8

Exceptions, Interrupts, Applications, Processing of Exceptions and Spurious Interrupts, Real Time Clocks, Programmable Timers, Timer Interrupt Service Routines (ISR), Soft Timers, Dynamic memory allocation.

MODULE V MICROC/OS-II 8

MicroC/OS-II -Introduction – Features and Goals of µC/OS – II – Requirements of

µC/OS – II - Support Devices for µC/OS – II – File Structure in µC/OS – II - Task Management Functions – Creating a Task - Time Management Functions – OS Delay Functions - Implementation of Scheduling and rescheduling.

MODULE VI APPLICATION OF RTOS 7

Comparison RT Linux, Vx Works, QNX and Basic Concepts of Android OS-RTOS for Image Processing – RTOS for fault Tolerant Applications – RTOS for Control Systems.

Total Hours –45

TEXT BOOKS:

1. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne, " Operating system concepts", 9th edition, John Wiley and Sons Inc.,2012
2. Qing Li, Elsevier , "Real Time Concepts for Embedded Systems", 2011
3. 3Jean J. Labrosse, "MicroC/OS – II The Real Time Kernel", CMP Books, 2002.
4. Karim Yaghmour, " Embedded Android: Porting, Extending, and Customizing", O'Reilly March 2013.

REFERENCES:

1. Embedded Systems- Architecture, Programming and Design by Rajkamal, 2007, TMH
2. David. E. Simon, "An Embedded Software Primer", Pearson Education, 2001.

OUTCOMES:

On completion of the course the students will be able to

- Describe various task assignment and scheduling methods of operating system and real time operating system.
- Solve the task synchronization problem using synchronization techniques.
- Describe the application of real time OS – Micro- C OS-2.
- Analyze the use of synchronization techniques in real-time systems.
- Illustrate exceptions, timer and memory management in OS.
- Justify the type of real time operating system needed for particular application.

ECCX62	MECHATRONICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- Identify the different components for mechatronics system design.
- To gain sufficient knowledge regarding PIC Microcontroller and its interfacing concept.
- To study the applications of electronics, electrical and mechanical systems for the control of mechanical and electronic systems.
- To impart knowledge on the role of sensors, transducers, control, and machine intelligence in mechanical- electronics engineering.
- To gain knowledge on the concepts and techniques involved in PLC systems which are widely used in mechatronics.
- To develop the mechatronics systems for real time applications.

MODULE I FUNDAMENTALS 8

Introduction to Mechatronics systems – elements – design process – Types of Design: Traditional and Mechatronics design - Integrated product design - Advanced approaches in Mechatronics - Industrial design and ergonomics, safety.

MODULE II PIC MICROCONTROLLER 7

Architecture of PIC 18 – Pin Description – Memory organization: Program memory – Data Memory – I/O Ports – Timers / Counters – Capture / Compare /PWM mode – External Hardware Interrupts – USART – ADC.

MODULE III PIC 18 EMBEDDED C PROGRAMMING 7

I/O ports: Register configuration–programming – Timers: modes–programming – Counters – ADC: configuration registers–programming – External Hardware Interrupts: types–programming.

MODULE IV PROGRAMMABLE LOGIC CONTROLLERS SYSTEMS 8

Introduction –– PLC Architecture, specifications and operation – PLC hardware components, Analog & digital I/O modules , CPU & memory module – Programming devices – PLC ladder diagram, Converting simple relay ladder diagram in to PLC relay ladder diagram. PLC programming Simple instructions – Manually operated switches – Mechanically operated a Proximity switches - Latching relays.

MODULE V SYSTEM INTERFACING: 7

Introduction – Elements of data acquisition and system – Overview of I/O process - Installation of I/O card and software – serial interface standards (RS232/422/485) – General Purpose Interface Bus (IEEE 488) - GUI card – Ethernet switch - Man Machine Interfaces. Sensor interfacing – LED interfacing – LCD interfacing – Motor interfacing – High power devices using relays.

MODULE VI CASE STUDY ON MECHATRONICS SYSTEMS: 8

Disk Drive – Transducer calibration system - Strain gauge weighing system - Controlling temperature of a hot / cold reservoir using PID – pH Control system. virtual instrumentation, Electronics engine management system - Control of pick and place robot – Automatic washing machine - Artificial Intelligence in Mechatronics: Neural network and Fuzzy logic system.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Devdas Shetty and Richard A. Kolk, — Mechatronics System Design‖, Thomson Learning/ Vikas Publishing House, New Delhi, 2011.
2. Mazidi, Muhammad Ali, Mckinlay, Rolin D., and Causey Danny, —PIC Microcontroller and Embedded Systems using Assembly and C for PIC 18‖, Pearson Education Asia, 2015.
3. Bolton,W, “Mechatronics”, Pearson education, second edition, fifth Indian Reprint, 2003.

REFERENCES:

1. Bradley D. Dawson, Burd N.C. and Loader A.J., —Mechatronics: Electronics in Products and Processes‖, Chapman and Hall, London, 1994.
2. Valvano Jonathan W., —Embedded Microcomputer Systems: Real Time Interfacing‖, 3rd Edition, Thomson Asia, Singapore, 2011.
3. Peatman John B., —Design with PIC Microcontrollers‖, Pearson Education, New Delhi, 2009.
4. Sanjay Gupta and Joseph John, "Virtual Instrumentation and LabVIEW", Tata McGraw Hill Publications, Co., 2005.
5. Gary Dunning, ‘Introduction to Programmable Logic Controllers‘’ Thomson Learning, 2001.

OUTCOMES:

On completion of the course the students will be able to

- Identify the components for mechatronics system design.
- Apply the data acquisition system, display systems, recorders, alarms measurement of voltage, current, frequency, temperature, displacement and pressure and its applications in process control industries.
- Interpret architecture and interfacing concepts of PIC18 microcontroller.
- Select the suitable PLC interface for mechatronics system.
- Develop the physical system based on mechatronics design process.
- Build the mechatronics systems for real time applications.

Physics Elective Courses
(To be offered in II Semester)

PHCX 01	FUNDAMENTALS OF ENGINEERING MATERIALS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To help students to acquire the properties and applications of conducting and semiconducting materials.
- To familiarize students with basic ideas about the properties of dielectric and magnetic materials and their applications.
- To familiarize students with basic knowledge of nanomaterials and its electrical, electronic, mechanical and magnetic properties.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I CONDUCTING AND SEMICONDUCTING MATERIALS 7

Conductors: properties, Fermi distribution function, Fermi energy in metals- density of states- conducting polymers-properties-applications, semiconductors: intrinsic and extrinsic semiconductors-carrier concentration, conductivity and energy band gap, semiconducting polymers- properties- applications.

MODULE II DIELECTRIC MATERIALS 8

Polarization- dielectric constant – electronic, ionic, orientational and space charge polarization – frequency and temperature dependence of polarisation – Internal field - Clausius Mosotti relation - dielectric loss – dielectric breakdown – applications of dielectric materials (capacitors and transformers) – Pyroelectricity, Piezoelectricity, ferroelectricity and applications in Ferroelectric Random Access Memory (FeRAM) - multiferroic materials and its applications.

MODULE III MAGNETIC MATERIALS 7

Origin of magnetism-magnetic moment, susceptibility, permeability – Bohr magneton – Dia, Para and Ferro magnetism –Spontaneous magnetization- Domain theory – Hysteresis – soft and hard magnetic materials – antiferromagnetic materials – Ferrites and its application - Giant Magneto-resistance effect (GMR) - Magnetic resonance imaging(MRI).

MODULE IV NANOMATERIALS 8

Properties of nanomaterials – size effect on thermal, electrical, electronic, mechanical, optical and magnetic properties – quantum confinement – classification of nanomaterials –

quantum well, quantum wire, quantum dot - nanoporous materials - carbon nanotubes, graphene - nanocomposites – applications of nano materials.

PRACTICALS

1. Determination of energy band gap of a semiconductor.
2. Determination of resistivity of metals by four point probe method.
3. Determination of dielectric constant of dielectric material.
4. Determination of time constant of a capacitor using RC circuit.
5. Determination of paramagnetic susceptibility of given liquid.
6. Determination of hysteresis loss in a transformer using BH curve.
7. Analysis of size effect on the absorption spectrum of nanomaterials.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. William D. Callister, “Material Science and Engineering”, Wiley Publications, 2006.
2. Raghavan, V., “Materials Science and Engineering”, 5th edition, Printice Hall of India Pvt Ltd. New Delhi, 2004.
3. Wahab. M.A, “Solid State Physics: Structure and Properties of Materials”, Narosa Publishing House Pvt. Ltd., New Delhi , 2nd Edition, 2010.
4. Pillai, S.O., “Solid State Physics”, New Age International, New Delhi, 2005.
5. Charles P. Poole and Frank J. Owens, ”Introduction to nanotechnology”, Wiley (India), 2009.
6. Pradeep. T., “Textbook of Nanoscience and Nanotechnology”, McGraw Hill Education (India) Private Limited, New York, 2012.

OUTCOMES:

On completion of this course, the student will be able to

- apply the concepts of conducting and semiconducting materials for solid state devices.
- comprehend the significance of properties of dielectric magnetic materials and derive these properties from synthesized materials.
- differentiate between the properties of the nanomaterials compared to bulk materials.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 02	HEAT AND THERMODYNAMICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To familiarize students with basic concepts of heat.
- To help students acquire the fundamentals of heat conduction and radiation.
- To enable students acquaint with the basics of thermodynamic concepts.
- To make students understand the fundamentals of heat based experiments.

MODULE I CONCEPTS OF HEAT **10**

Definition of temperature, thermal and thermodynamic equilibrium - relationship between temperature and kinetic energy - definition of solid, liquid, gas - Introduction to phase transitions, critical and triple points- definition of heat capacity, mechanical equivalent of heat -Joule's calorimeter- latent heat- microscopic model of ideal gas - equation of state, internal energy, equipartition theorem- equation of state for non-ideal gases.

MODULE II CONDUCTION AND RADIATION **10**

Thermal conductivity – rectilinear flow of heat – thermal conductivity of a good conductor – Forbe’s method – thermal conductivity of a bad conductor – Lee’s disc method – conduction of heat through compound media - radiation – Planck’s law of blackbody radiation – Wien’s law – Stefan’s law – Newton’s law of cooling from Stefan’s law – Solar constant – Pyrometry.

MODULE III FUNDAMENTALS OF THERMODYNAMICS **10**

Thermodynamic equilibrium – zeroth law of thermodynamics – first law of thermodynamics – Reversible and irreversible processes – second law of thermodynamics - Heat engine – Carnot’s engine – Carnot’s theorem – Internal combustion engines – petrol and diesel engines (qualitative) – Entropy and available energy – temperature – entropy diagram for Carnot’s cycle - Third Law of thermodynamics (qualitative).

PRACTICALS

1. Determination of mechanical equivalent of heat by Joule’s calorimeter.
2. Relation between temperature of a body and time by plotting a cooling curve-Newton’s law of cooling.

3. Determination of specific heat capacity of liquid by cooling.
4. Determination of thermal conductivity of a good conductor-Forbe's method
5. Determination of thermal conductivity of a bad conductor-Lee's disc method

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur. D.S, “Heat & Thermodynamics”, S.Chand & Co., 2009.
2. Brijlal & Subramaniam, “Heat and Thermodynamics”, S.Chand & Co, Delhi, 2010.
3. Gupta. A.B and Roy. H, “Thermal Physics”, Books and Allied Ltd., 2002.
4. Sharma. J.K and Sarkar. K.K, “Thermodynamics and statistical Physics”, Himalaya Publishing House, 1988.

OUTCOMES:

On completion of this course, the student will be able to

- understand the concepts of heat and its properties.
- comprehend the ideas governing the conduction and radiation processes.
- apply the knowledge of laws of thermodynamics in thermodynamic systems.
- perform heat based experiments and determine its various properties.

PHCX 03 INTRODUCTION TO NANOSCIENCE AND TECHNOLOGY

L	T	P	C
2	0	2	3

OBJECTIVES:

- To acquire basic knowledge about the nanomaterials and applications.
- To learn about the synthesis and imaging techniques of nanomaterials.
- To gain the basic concepts of fabrication techniques.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I NANOMATERIALS AND APPLICATIONS **10**

Properties of nanomaterials – size effect on thermal, electrical, electronic, mechanical, optical and magnetic properties – quantum confinement – classification of nanomaterials – quantum well, quantum wire, quantum dot - nanoporous materials - zeolite, mesoporous materials, carbon nanotubes, grapheme - nanocomposites - applications (qualitative): Molecular electronics-nanoelectronics – nanophotonics - single electron transistor-drug delivery.

MODULE II SYNTHESIS AND IMAGING TECHNIQUES **12**

Top-down and bottom up approaches – mechanical alloying and mechanical ball milling - sol-gel approach - hydrothermal method - precipitation method - spray pyrolysis - spin coating-self assembled monolayer (SAM) - Chemical vapour deposition method – Physical vapour deposition method: laser ablation method, sputtering method.

Optical microscopy – Phase contrast and interference microscopy – confocal microscopy - high resolution Scanning electron microscope (HRSEM) - high resolution Transmission electron microscope (HRTEM) - Atomic force microscope - Scanning Tunnelling microscope (STM).

MODULE III NANOFABRICATION **8**

Photolithgraphy - electron beam lithography - X-ray and Ion beam lithography - nanoimprint lithography - soft lithograpy - nanoelectromechnical systems (NEMS) - nanoindentation principles.

PRACTICALS

1. Synthesis of nanomaterials by sol-gel method.

2. Synthesis of nanomaterials by hydrothermal method.
3. Synthesis of nanomaterials by solid state reaction method.
4. Synthesis of nanomaterials by chemical bath deposition method.
5. Synthesis of nanomaterials by co-precipitation method.
6. Synthesis of nano thin films by spray pyrolysis method.
7. Synthesis of nano thin films by pulsed laser deposition (PLD) method.
8. Analysis of size effect on the absorption spectrum of nanomaterials.
9. SEM characterization of nanomaterials.
10. AFM characterization of nano thin films.
11. Phase confirmation by XRD.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Charles P.Poole and Frank J. Owens, ”Introduction to nanotechnology”, Wiley (India), 2009.
2. Cao. G., “Nanostructures & Nanomaterials: Synthesis, Properties & Applications”, Imperial College Press, 2004.
3. Gaddand. W., Brenner. D., Lysherski. S. and Infrate. G.J., “Handbook of NanoScience Engineering and Technology”, CRC Press, 2002.

5. Chris Mack, “Fundamental Principles of Optical Lithography: The Science of Microfabrication”, John Wiley & Sons, 2008.
6. Bandyopadhyay A.K., “Nano Materials”, New Age International Publishers, New Delhi, 2008.

OUTCOMES:

At the end of the course, the students will be able to

- understand the importance and basic concepts of the nanomaterials.
- comprehend the imaging techniques for nanomaterials.
- illustrate the various nanofabrication techniques.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 04	LASERS AND THEIR APPLICATIONS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To recognize the fundamentals of laser and its characteristics.
- To comprehend and compare the different laser systems.
- To apply lasers in metrology and material processing.
- To understand the working of laser instrumentation.
- To correlate the experimental results for applications.

MODULE I LASER THEORY **8**

Spontaneous and stimulated emission - Population inversion – Einstein's A & B coefficients - Threshold condition – super-radiance Laser – Three level and four level laser systems -conditions for CW and pulsed laser action. Q-Switching - experimental methods - cavity dumping - Mode locking - experimental methods - Spatial and Temporal coherence.

MODULE II DIFFERENT LASER SYSTEMS **8**

Laser systems – General description - Laser structure - excitation mechanism - Different laser systems- He-Ne laser, Carbon-dioxide laser - Excimer laser – Free electron laser- Alexandrite laser - Ti-Sapphire laser – Semiconductor diode laser - Diode pumped solid state laser - Pulsed-CW dye laser- Fibre laser.

MODULE III METROLOGICAL AND MATERIAL PROCESSING APPLICATIONS **8**

CW and Pulsed laser beam characteristics and its measurements - Beam focusing effects - spot size - Power and Energy density Measurements - Distance measurement - Interferometric techniques - LIDARS - different experimental arrangements - Pollution monitoring by remote sensing - Laser gyroscope - Laser welding, drilling, machining and cutting - Laser surface treatment - Laser vapour deposition – Biophotonic applications.

MODULE IV LASER INSTRUMENTATION **7**

Laser for measurement of length, current and voltage – Laser Doppler Velocimetry - Holography and speckle in displacement and deformation measurements - Laser for communication with fiber optics as channel.

PRACTICALS

1. Tuning of Dye Laser using DFDL Arrangement
2. Determination of Brewster Angle using He-Ne laser
3. Study of transversely Pumped Dye Lasers
4. Study of longitudinally Pumped Dye Lasers
5. Determination of power and wavelength using Distributed Feedback Dye Laser (DFDL)
6. Determination of fibre optic losses using semiconductor laser.
7. Bandgap determination of a semiconductor diode.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. William T. Silfvast, “Laser Fundamentals”, Cambridge University Press, 2009.
2. Ghatak. A. & Thyagarajan. K. “Optical Electronics”, Cambridge University, 1994.
3. Laud.B.B., “Laser and Non-Linear Optics”, Second Edition, New Age International (p) Limited Publishers, 2011.
4. Nambiar. K.R., “Lasers Principle, Types and Applications”, New Age International (p) Ltd, 2004.

6. William M.Steen, ”Laser Material Processing”, Springer-Verlag, Berlin, Third Edn., 2005.

OUTCOMES:

At the end of the course, the students will be able

- To complement the knowledge acquired in the theory class.
- To work with dye lasers for tunability of laser wavelength.
- To measure the loss of information involved in fibre optic communication.
- To correlate the results for application.

PHCX 05	MATERIALS SCIENCE	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To gain basic knowledge in conducting and semiconducting materials and their properties.
- To provide basic understanding of properties and applications of dielectric materials.
- To impart knowledge on magnetic and optical materials and their properties & applications.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I CONDUCTING AND SEMICONDUCTING MATERIALS 10

Quantum free electron theory of metals and its importance - Energy distribution of electrons in metals - Fermi distribution function - Density of energy states and carrier concentration in metals - Fermi energy – Classification of solids into conductors, semiconductors and insulators on the basis of Band theory – Introduction to Elemental and Compound semiconductors - Carrier concentration derivation for Intrinsic semiconductors - Density of electrons in conduction band & Density of holes in valence band- intrinsic carrier concentration - Fermi energy & Variation of Fermi energy level with temperature - Mobility and electrical conductivity - Band gap determination.

MODULE II DIELECTRIC MATERIALS 7

Introduction to dielectric materials & basic definitions – Electronic, Ionic, Orientation & Space charge polarizations - Total polarization – Frequency and temperature dependence of polarization - Internal field in a dielectric material - Deduction of Clausius - Mosotti's relation - dielectric loss & loss tangent – Different types of dielectric breakdown – Applications of dielectric materials : Capacitors and Transformers.

MODULE III MAGNETIC MATERIALS 6

Introduction to magnetic materials & origin of magnetic moment - Different types of

magnetic materials and their properties - Ferromagnetism & Domain theory of ferromagnetism - Hysteresis, Soft and Hard magnetic materials - Antiferromagnetic materials - Ferrites and its applications – Applications of magnetic materials : Data storage.

MODULE IV OPTICAL MATERIALS 7

Optical properties of semiconductors - Direct and Indirect bandgap semiconductors – Traps, recombination centre, color center and exciton – Luminescence : Fluorescence and Phosphorescence - Liquid crystal display : twisted nematic crystal display – Applications of Optical materials - Optical Sources : light emitting diode and laser diode - Photo detectors : PIN photodiode and Avalanche Photodiode - Pyroelectric devices - Electro optic effect : Kerr effect and Faraday effect.

PRACTICALS

1. Resistivity measurement of a semiconductor using four point probe method.
2. Determination of band gap of a semiconductor diode.
3. Determination of Hall coefficient of a given semiconductor material.
4. Determination of dielectric constant of a given non-polar liquid.
5. Determination of magnetic susceptibility of a given paramagnetic liquid using Quincke's method.
6. Determination of energy loss of a given transformer core using hysteresis method.
7. To study the I-V characteristics of a photodiode.

L – 30; P – 30; TOTAL HOURS – 60

5. Raghavan. V, ''Materials Science and Engineering'', Prentice Hall of India, 5th Edition, 2004.

OUTCOMES:

On the completion of this course, the students will be able to

- Gain knowledge about fundamentals of conducting and semiconducting materials.
- Understand concepts and applications of Dielectric and Magnetic materials.
- Familiarize Optical materials and their applications in Engineering and Medical fields.
- Complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 06	NON-DESTRUCTIVE TESTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To study the process and applications of ultrasonic inspection method.
- To understand the basic concepts of radiographic inspection method.
- To acquire the knowledge about the various surface Non-Destructive Testing (NDT) techniques.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I ULTRASONIC INSPECTION METHOD **10**

Ultrasonic Testing - Principle of operations - types of sound waves - types of Transducers - transmission and pulse-echo method - straight beam and angle beam, instrumentation - calibration methods - ultrasonic testing technique- data representation, A Scan, B-scan, C-scan. Phased Array Ultrasound, Time of Flight. Diffraction - thickness determination - advantages, disadvantages and applications.

MODULE II RADIOGRAPHIC INSPECTION METHOD **10**

Radiographic testing – Principle - Interaction of X-ray with matter - X-ray radiography - method of generation-industrial radiography inspection techniques – Equipment - Exposure charts - Types of films – Fluoroscopy - Xero-Radiography – Limitations - Gamma radiography - Equipment, radiation sources - method of generation - film processing - interpretations of radiography - safety in industrial radiography.

MODULE III SURFACE NDT TECHNIQUES **10**

Liquid Penetrant Testing – Principles, Characteristics and types of liquid penetrants – developers - advantages and disadvantages of various methods - Inspection Procedure and Interpretation of results. Applications of Liquid Penetrant testing.

Magnetic Particle Testing - Principle-magnetizing technique - procedure –equipment - Interpretation and evaluation of test indications - applications and limitations - demagnetization.

PRACTICALS

1. Inspection of welds using solvent removable visible dye penetrant.
2. Inspection of welds using solvent removable fluorescent dye penetrant.
3. Inspection on non magnetic materials by eddy current method.

4. Inspection on magnetic materials by eddy current method.
5. Inspection of welds by Eddy current Testing.
6. Inspection of welds by Magnetic Particle Testing - Dry method.
7. Inspection of welds by Magnetic Particle Testing - Wet method.
8. Ultrasonic flaw detector - Inspection of defects.
9. Demonstration of Radiographic inspection.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Baldev Raj., Jayakumar T.,Thavasimuthu., “Practical Non-Destructive Testing”, Narosa Publishing House, 2009.

5. Charles J., Hellier, “Handbook of Nondestructive evaluation”, McGraw Hill, New York, 2001.

OUTCOMES:

Upon completion of this course, the students will be able to

- illustrate the ultrasonic inspection methods of NDT.
- understand the basic concept of radiographic inspection method.
- test the surfaces by the various surface NDT techniques.
- complement the knowledge acquired in the theory class and correlate the results for applications.

PHCX 07	PROPERTIES OF MATTER AND ACOUSTICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand principles and properties of elasticity.
- To understand the basic concepts and application of viscosity.
- To analysis acoustic of building.
- To know about photoelasticity and its applications.

MODULE I ELASTICITY **8**

Stress and strain - Hooke's Law of elasticity - Elastic moduli - Stress-Strain Diagram - Poisson's Ratio - Relation between elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Expression for bending moment - Cantilever–Expression for depression - Uniform bending and Non-uniform bending of beams (theory & experiment) - I form Girders (qualitative treatment) and applications.

MODULE II VISCOSITY **8**

Viscosity- Newton’s formula for viscous flow - Streamline and turbulent motion - Reynolds number - Poiseuille's formula - Determination of coefficient of viscosity- factors affecting viscosity - capillary flow method - Stoke's formula- viscosity of highly viscous liquids – Stoke’s method - Lubricants and its applications –viscosity measurements - Viscometer - Variation of Viscosity with Temperature.

MODULE III ACOUSTICS OF BUILDING **7**

Basic requirement for the acoustically good halls - Reverberation and time of reverberation – Sabine’s formula for reverberation time - Absorption coefficient and its measurement -Transmission of sound and transmission loss - Factors affecting the architectural acoustics and their remedy-sound absorbing materials - vibration and noise control systems for buildings.

MODULE IV PHOTOELASTICITY **7**

Polarization - double refraction - Theory of Plane, Circularly and Elliptically polarized light - Quarter wave plate and half wave plate - photo elasticity - Theory of photo-elasticity - Stress optic relations - model materials - analysis techniques - Photo elastic bench - Three dimensional photo elasticity - Digital photo elasticity - Photo elastic coatings.

PRACTICALS

1. Determination of viscosity of liquid by Poiseuille's method.
2. Determination of viscosity of liquid by Stoke's method.
3. Analysis of stress by photo elastic method.
4. Verification of Hooke's law by spring method.
5. Determination of Young's modulus of the cantilever beam.
6. Determination of rigidity modulus by static torsion method.
7. Visit to acoustically good auditorium and identifying the sound absorbing materials in the auditorium.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur D.S., "Elements of Properties of Matter", S.Chand & Co, Delhi, 2009.
2. Gaur R.K., Gupta S.L.,"Engineering Physics", Dhanpat Rai Publishers, 2010.
3. Brijlal and Subramaniam.," Properties of Matter", Eurasia Publishing Co, New Delhi, 2002.
4. Smith C.J.," General Properties of Matter", Orient & Longman,1960.
5. Kenneth G. Budinski and Michel K., Budinski, "Engineering Materials Properties and Selection", Pearson, Singapore, 2002.

OUTCOMES:

Upon completion of this course, the students will be able to

- understand the basic concepts of the elasticity of materials.
- comprehend the concepts of viscosity of liquid and measurement.
- demonstrate the acoustical aspects of building and its importance in construction.
- apply the fundamental concept of photo elasticity for the stress analysis of the object.

PHCX 08	PROPERTIES OF MATTER AND NONDESTRUCTIVE TESTING	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To impart knowledge about the principles and properties of elasticity.
- To learn the laws governing the dynamic of rigid bodies.
- To acquire the knowledge of the various techniques of Non-Destructive Testing (NDT) of materials.
- To understand the principle and basic concept of low temperature applications.

MODULE I ELASTICITY **8**

Stress and strain - Hooke's Law of elasticity - Elastic moduli - Stress-Strain Diagram - Poisson's Ratio - Relation between elastic constants - Work done in stretching and twisting a wire - Twisting couple on a cylinder- Expression for bending moment- Cantilever–Expression for depression - Uniform Bending and Non-uniform bending of beams (theory & experiment) - I form Girders (qualitative treatment) and applications.

MODULE II DYNAMICS OF RIGID BODIES **8**

Rigid bodies - angular acceleration - Torque on a particle - angular momentum - law of conservation of angular momentum - moment of inertia and its significance - Theorem of parallel and perpendicular axis - moment of inertia of a thin uniform bar - moment of inertia of a rectangular lamina - moment of inertia of uniform circular disc - Moment of inertia of hollow and solid cylinders – flywheel
(qualitative) - kinetic energy of rotating body – Routh rule.

MODULE III NDT TECHNIQUES **6**

Ultrasonic Testing- types of Transducers-transmission and pulse-echo method- Radiographic testing- Principle-Interaction of X-ray with matter-X-ray radiography-method of generation-industrial radiography inspection techniques- Liquid Penetrant Testing**-** Inspection Procedure and Interpretation of results.

MODULE IV LOW TEMPERATURE PHYSICS **8**

Definition of Refrigeration and Air-Conditioning - Types of Refrigeration Systems-Applications- Comfort Air Conditioning, Industrial Refrigeration, Food processing

and food chain - Cryogenic treatment - Low temperature properties of engineering materials: Mechanical properties, Thermal properties, Electrical properties.

PRACTICALS

1. Verification of Hooke's law by spring method.
2. Determination of Young's modulus of the beam by bending method.
3. Inspection of welds using solvent removable visible dye penetrant.
   Inspection of welds using solvent removable fluorescence dye penetrant.
5. Inspection of welds by Magnetic Particle Testing.
6. Determination of moment of inertia of the disc by torsion pendulum method.
7. Determination of moment of inertia of the disc by static torsion method.
8. Demonstration of working of flywheel.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Mathur D.S.,"Elements of Properties of Matter", S.Chand & Co, Delhi, 2009.

7. Charles J., Hellier.," Handbook of Nondestructive evaluation", McGraw Hill, New York, 2001.

OUTCOMES:

Upon completion of this course, the students will be able to

- understand the basic of concept of elasticity of materials.
- comprehend the basic concepts of motion of rigid bodies and its applications.
- demonstrate the various NDT techniques and its importance.
- know the low temperature systems and its applications.

PHCX 09	SEMICONDUCTOR PHYSICS AND OPTOELECTRONICS	L	T	P	C
		2	0	2	3

OBJECTIVES:

- To understand the Physics of Semiconductor devices.
- To make the students learn the fundamentals of Photoluminous - semiconductors, Optoelectronic devices, Optical modulators/detectors.
- To make them understand the technology behind latest Display devices like LCD, Plasma and LED Panels.
- To enable the students to correlate theoretical principles with practical applications.

MODULE I PHYSICS OF SEMICONDUCTORS **8**

Elemental and compound semiconductors – Drift and diffusion current - Intrinsic semiconductors – Carrier concentration (derivation) – Fermi energy – Variation of Fermi energy level with temperature – Mobility and electrical conductivity – Band gap determination – Extrinsic semiconductors – Carrier concentration in n-type and p-type semiconductor (derivation) – Variation of Fermi level with temperature and impurity concentration – Variation of Electrical conductivity with temperature – Hall effect – Experiment and applications of Hall effect.

MODULE II OPTOELECTRONIC DEVICES **7**

Light Emitting Diodes (LED) – power and efficiency - double hetero LED - LED structure - LED characteristics - White LED – Applications. Liquid crystal displays – Dynamic scattering and Twisted nematic display, Semiconductor Lasers, Homojunction and Heterojunction laser diodes - Optical processes in semiconductor lasers.

MODULE III OPTICAL MODULATORS **7**

Modulation of light – birefringence –Modulation Techniques - Electro optic effect – Electro optic materials –Types of Electro optic Modulators : Kerr and Pockel modulators –- Magneto optic effect - Magneto optic Modulators – Acousto Optic modulators.

MODULE IV OPTICAL DETECTORS **8**

Photo detectors - photodiodes - phototransistors - noise characteristics - PIN diode – Avalanche Photodiode (APD) characteristics - APD design of detector arrays – Charged Couple Device - Solar cells - Materials and design considerations, Thin film

solar cells, amorphous silicon solar cells.

PRACTICALS

1. Resistivity measurement of a semiconductor using four point probe method.
2. Determination of band gap of a semiconductor diode.
3. Determination of Hall coefficient of a given semiconductor material.
4. Determination of the wavelength of a given laser source using diffraction grating.
5. Determination of Planck's constant using LED.
6. To study the I-V characteristics of photodiode and phototransistor.
7. To study the characteristics of a solar cell.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Arumugam. M, "Physics II", Anuradha Publishers, 5th Edition, 2005.
2. Sze. S.M., "Semiconductor Devices – Physics and Technology", 2nd edn. John Wiley, 2002.

6. Palanisamy P.K., "Semiconductor physics and optoelectronics" Scitech Publications, 2003.

OUTCOMES:

On completion of this course, the student will be able to

- understand the principles of Physics behind semiconductor devices.
- choose the correct semiconductors for electronic devices and display.
- differentiate the working principle of LED and Diode Laser.
- apply the knowledge of modulation of light for different types of optical modulators.
- select suitable photodetectors for different types of applications.
- complement the knowledge acquired in the theory class and correlate the results for applications.

Chemistry Elective Courses
(To be offered II Semester)

CHCX01	ANALYTICAL INSTRUMENTATION	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the student conversant with

- principles, instrumentation and applications of different electroanalytical techniques
- different chromatographic techniques
- principles, instrumentation and applications of various types of absorption and emission spectroscopy
- different thermal analytical methods and their applications

MODULE I ELECTROANALYTICAL TECHNIQUES **7**

Principle and applications: conductometric titrations – potentiometrIc titrations, ion-selective electrodes and pH-metry – coulometry – voltammetry - polarography, amperometric titrations.

MODULE II CHROMATOGRAPHY **8**

Basic concepts of chromatography – paper chromatography – column chromatography – thin layer chromatography – gas chromatography – high performance liquid chromatography – gel permeation chromatography.

MODULE III SPECTROSCOPY **8**

Absorption spectroscopy (principle, instrumentation and applications): Colorimetric analysis – UV-Visible spectroscopy – FTIR spectroscopy - Emission Spectroscopy (principle, instrumentation and applications): fluorescence, phosphorescence and chemiluminescence – Atomic absorption spectroscopy – flame emission spectroscopy.

MODULE IV THERMAL ANALYSIS **7**

Principle, instrumentation and applications: Thermo gravimetric analysis – Differential thermal analysis – Differential scanning calorimetry

PRACTICALS

1. Conductometric titrations: acid-base and precipitation titrations

2. Potentiometric titrations
3. Determination of pH of the unknown solution
4. Estimation of alkali metals using flame emission spectroscopy
5. Estimation of metal ions of coloured solutions using colorimetric analysis
6. Separation of compounds using gas chromatography
7. Separation of compounds using high performance liquid chromatography
8. Analysis of the given sample and interpretation of the data using IR, UV-Visible spectroscopy
9. Demonstration of TGA/DTA and DSC and interpretation of data.

L – 30; P – 30; TOTAL HOURS – 60

6. Settle F. (Editor), Handbook of Instrumental Techniques for Analytical Chemistry, Pearson Education, Singapore, 2004.

OUTCOMES:

The student will be able to

- state the principle and applications of various electro-analytical techniques
- identify the right separation method for a given sample using different chromatographic techniques
- explain the principle, instrumentation & applications of various spectroscopic methods and also to interpret the data
- elaborate the principle, instrumentation and applications of various thermal analytical techniques and interpret the data.

CHCX02	CORROSION AND ITS CONTROL	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with the

- Basic concepts, principles and factors affecting corrosion
- Types and mechanism of corrosion
- Control measures of corrosion by material selection, proper design and by applying organic coatings
- Control of corrosion by applying inorganic coating

MODULE I BASIC CONCEPTS OF CORROSION 8

Corrosion – causes and impacts of corrosion – mechanism of corrosion: Dry corrosion- oxidation corrosion - corrosion by other gases – Pilling-Bedworth rule- Corrosion by hydrogen: hydrogen blistering, hydrogen embritttlement, decarburization and hydrogen attack – corrosion of silver and copper by sulphur compounds – liquid metal corrosion (embritttlement or cracking) – Wet corrosion : hydrogen evolution – presence and absence of oxygen and absorption of oxygen – difference between dry and wet corrosion-factors influencing corrosion-polarization-passivity-emf series and galvanic series- corrosion current -rate of corrosion.

MODULE II FORMS OF CORROSION 7

Forms of corrosion-conditions for electrochemical corrosion –galvanic corrosion – differential aeration corrosion: pitting, water line, wire fencing, crevice and filiform corrosion – stress corrosion – Intergranular corrosion- erosion corrosion – soil corrosion – microbiological corrosion- fretting corrosion- corrosion in composites.

MODULE III CORROSION CONTROL AND ORGANIC COATINGS 8

Corrosion control – selection of materials and designing- cathodic protection – sacrificial anode and impressed current cathodic protection – corrosion inhibitors: anodic, cathodic and vapour phase inhibitors.

Organic protective coatings – paints: constituents – functions – varnishes : types-constituents – functions – lacquers : constituents – functions –enamels-constituents – functions – special paints : fire retardant, water repellant, heat resistant, temperature indicating and luminous paints.

MODULE IV INORGANIC COATINGS 7

Treatment of metal surface-inorganic coatings- classification- metallic coatings : anodic and cathodic coatings-hot dipping : galvanizing and tinning- electroplating—electroless plating – cementation (diffusion) : sherardizing, calorizing and chromizing – metal cladding-metal spraying – non metallic coatings (chemical conversion coatings) : phosphate, chromate, oxide coatings and anodizing – comparison of anodic and cathodic protection.

PRACTICALS

1. Determination and comparison of rate of corrosion of metals in the presence of acid, base and neutral medium by weight loss method.
2. Determination of rate of corrosion of iron in the presence of various acids by weight loss method.
3. Determination of rate of corrosion of iron in the presence and absence of anodic Inhibitor by weight loss method.
4. Determination of rate of corrosion of iron in the presence and absence of cathodic Inhibitor by weight loss method.
5. Electroplating of base metal with copper.
6. Electrolessplating of base metal with copper
7. Chemical conversion coatings such as chromate and phosphate coatings.
8. Demonstration on the study of rate of corrosion by using cyclic voltametry.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. P.C Jain & Monica Jain, Engineering Chemistry Dhanpatrai Publishing Company (P) Ltd., New Delhi (2013).

4. S. Banerjee, A.K. Tyagi, Functional Materials- Preparation, Processing and Applications, ELSEVIER Publications, London ; Waltham, MA : 2011

OUTCOMES:

Students will be able to

- explain the mechanism, compare and enumerate the factors affecting

corrosion

- describe and identify the place and types for a given situation.
- choose and elaborate the suitable organic coating method for a given real time situation.
- apply a suitable metallic coating for a given situation

CHCX03	ELECTRICAL MATERIALS AND BATTERIES	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with

- preparation, properties and applications of plastics used in electrical and electronic applications
- properties and uses of electrical engineering materials
- classification and description of different types of batteries.
- classification and types of fuel cells

MODULE I POLYMERS FOR ELECTRICAL AND ELECTRONIC APPLICATIONS **8**

Preparation, properties and applications **:** polyethylene, polypropylene, EPDM, Nylon-6,6, PVC, PTFE, polycarbonates, ABS, phenol formaldehyde, urea formaldehyde, epoxy resins – polymer blends and alloys.

MODULE II ELECTRICAL ENGINEERING MATERIALS **7**

Conductors: Silver, Copper, Gold, Aluminum – Semiconductors: Germanium, Silicon, Gallium Arsenic – Insulating Materials: Rubbers, Mica, Plastics, Ceramics, Insulating papers – Magnetic Materials: ferromagnetic materials, paramagnetic materials, diamagnetic materials, antiferromagnetic materials, ferrites

MODULE III BATTERIES **7**

Electrochemical and electrolytic cell – batteries: types (primary, secondary and flow cell) – primary batteries: dry cells, alkaline batteries – secondary batteries: nickel-cadmium cell – lead acid storage cell, lithium battery: primary and secondary type – solar cell – dye sensitized solar cell.

MODULE IV FUEL CELLS **8**

Difference between batteries and fuel cells - chemistry of fuel cells - types of fuel cell (based on temperature and electrolyte) – principle, characteristic features, advantages, disadvantages and applications of polymer electrolyte membrane or proton exchange membrane fuel cell (PEMFC), direct methanol fuel cell (DMFC), alkaline fuel cell (AFC), phosphoric acid fuel cell (PAFC), molten carbonate fuel cell (MCFC) and solid oxide

fuel cells (SOFC).

PRACTICALS

1. Free radical polymerization of styrene.
2. Free radical polymerization of PMMA.
3. Preparation of phenol-formaldehyde.
4. Preparation of urea-formaldehyde.
5. Synthesis of epoxy resin.
6. Demonstration of mechanical properties of insulating materials using UTM
7. Demonstration of electrical properties of insulating materials
8. Construction of batteries using natural resources
9. Measurement of EMF for different batteries.

L – 30; P – 30; TOTAL HOURS – 60

7. B. Viswanathan and M. Aulice Scibioh, Fuel Cells: Principles and Applications, Taylor and Francis Group, 2007.

OUTCOMES:

The student will be able to

- summarise the preparation, properties and applications of plastics used in electrical and electronic applications
- enumerate the properties and uses of electrical engineering materials
- illustrate various types of batteries with the aid of a diagram
- classify the fuel cells and elaborate the different types of fuel cells.

CHCX04	ENGINEERING MATERIALS	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students should be conversant with

- properties and uses of different types of refractories and abrasives
- adhesives, cements and lime, setting of cements and their chemical behaviors.
- types, properties and uses of lubricants.
- various types of composite materials.

MODULE I REFRACTORIES AND ABRASIVES **8**

Introduction refractory: -classification - based on chemical nature- characteristic and selection of good refractory - general manufacture of refractory- preparation properties and uses of: silica refractory - magnesite refractory - zirconia refractory, properties of refractories: refractoriness - refractoriness under load - thermal spalling - porosity and dimensional stability, Cermets - super refractory.

Abrasives : introduction - Moh's scale - natural abrasives: diamond – corundum – emery - garnet and quartz, synthetic abrasives: preparation properties and uses: carborundum (silicon carbide)– alundum - boron (norbide) carbide

MODULE II ADHESIVES AND BINDING MATERIALS **7**

Introduction - classification of adhesives –advantage –limitation of adhesive bonding – development of adhesive- factors influencing adhesive action: chemical and physical, application techniques of adhesive – Lime: classification – manufacture - setting and hardening, Gypsum: -Manufacture and properties and uses - Cement : chemical composition- Manufacture – setting and hardening – concrete – weathering of cement and concrete and its prevention- special cements: high alumina cement - sorel cement - white portland cement – water proof cement.

MODULE III LUBRICANTS **7**

Introduction –functions of lubricant- mechanism of lubrication - classification of lubricant – liquid lubricant: vegetable and animal oils – mineral oils, semisolid: grease(calcium, lithium, aluminium) – petroleum jelly, solid lubricant: graphite - molybdenum disulphide, Properties of lubricant: viscosity - viscosity index - flash point and fire point - cloud point and pour point – oiliness - aniline point - carbon residue.

MODULE IV COMPOSITE MATERIALS 7

Introduction – advantageous characteristics of composites, applications of composites, main constituent of composites, types and applications of composites: RCC fibre-reinforced plastics (glass , carbon and aramid) - particulate composite - metal matrix composite - layered composites - failures in fibre-reinforced composites, ceramic matrix composites (CMC) – properties and applications.

PRACTICALS

1. Preparation of refractory bricks
2. Preparation of abrasive papers/cloth
3. Preparation of simple adhesives
4. Estimation of alkalinity in cements
5. Determination of cloud point and pour point
6. Determination of flash point and fire point
7. Preparation of fibre-reinforced composite

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. P.C Jain & Monica Jain, Engineering Chemistry Dhanpatrai Publishing Company (P) Ltd., New Delhi (2013).
2. B.Sivasnakar, “Engineering Chemistry”, Tata McGrow-Hill Publication Limited, New Delhi, second reprint 2008.
3. Engineering Chemistry, Wiley India Editorial Team, Willey India Publisher, New Delhi, 2011.
4. S S Umare & S S Dara, A text Book of Engineering Chemistry, S. Chand& Company Ltd, New Delhi, 2014.

OUTCOMES:

The student will be able to

- classify and describe the manufacture the refractories and enumerate the properties and uses of abrasive materials.
- elaborate the manufacture, properties and uses of various adhesives and binding materials.
- classify lubricants and describe the properties and uses of them
- enumerate the properties and uses of various composite materials.

CHCX05	FUELS AND COMBUSTION	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the students conversant with the

- three types of fuels available and the different processes involved in it.
- analysis of fuel characteristics and manufacture of fuels
- calculations involved in calorific values and minimum air requirement for complete combustion.
- classification, functions, mechanism and properties of lubricants.

MODULE I SOLID FUELS **7**

Characteristics of good fuel. Solid fuel – Wood, Coal – Ranking of coal – selection of coal. Analysis of coal – Proximate analysis. Pulverized coal – Metallurgical coke – Carbonization of coal – types. Manufacture of metallurgical coke – Beehive oven and Otto Hoffman's by-product oven methods.

MODULE II LIQUID AND GASEOUS FUELS **8**

Liquid fuel: Petroleum: Refining of petroleum, Liquid fuels derived from petroleum – Cracking: Thermal (Liquid and Vapour phase) – Catalytic (fixed bed and moving bed cracking – Synthetic petrol: Fischer-Tropsch method– Knocking in petrol and diesel engine: octane number and antiknocking – cetane number and improvement of cetane number – biodiesel (trans-esterification) – Gaseous fuels: Compressed natural gas (CNG) – LPG – oil gas – producer gas – water (blue) gas – biogas.

MODULE III COMBUSTION **8**

Calorific value: Gross and net caloric value – Bomb Calorimeter, Gas calorimeter - Definition of combustion – calculation of minimum requirement of air (problems) – theoretical calculation of calorific values (Dulong's formula), Gross and net calorific values ((problems) – Analysis of flue gas: Orsat's gas analysis method, explosive range, Ignition temperature. Introduction to air pollution from IC (Internal combustion) engines, photochemical smog, primary and secondary pollutants.

MODULE IV LUBRICANTS **7**

Friction and wear – lubricants: definition, functions and mechanism of lubrication

(thick film and thin film) –classification: liquid lubricants: animal and vegetable origin, mineral oil, blended oils, lubricating emulsions and silicones – properties of lubricating oils: viscosity and viscosity index; Flash and fire-point, Cloud and pour point, oiliness, emulsification number, volatility, carbon residue, aniline point – semisolid lubricant: greases and waxes – solid lubricant: graphite and molybdenum disulphide –nanolubricants.

PRACTICALS

1. Testing of fuels - proximate analysis (moisture, volatile matter, ash content and fixed carbon present in coal, coke, charcoal etc)
2. Ash content and carbon residue test
3. Biodiesel synthesis by trans-esterification method (from coconut, groundnut, mustard oil, palm oil)
4. Determination of calorific value of a solid fuel using Bomb calorimeter (coal, charcoal, coke etc)
5. Determination of calorific value of a liquid fuel using Bomb calorimeter (petrol, diesel, biodiesel etc)
6. Determination of cloud point and pour point of a lubricant
7. Determination of flash and fire point of diesel.
8. Aniline Point of diesel
9. Viscosity Index of lubricants and Fuels by Viscometer
10. Flue gas analysis by Orsat's gas analysis method – Demonstration
11. Working of internal combustion engine – Demonstration

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. Jain P.C and Renuka Jain, Physical Chemistry for Engineers, Dhanpat Rai and Sons, New Delhi, 2001.
2. Engineering Chemistry, Wiley India Editorial Team, Willey India Publisher, New Delhi, 2011.
3. John Griswold, Fuels Combustion and Furnaces, Mc-Graw Hill Book Company Inc. University of Michigan, 1946.
4. J.B. Heywood, Internal Combustion Engine Fundamentals, McGraw Hill International Editions, 1989.
5. Bahl B.S., Tuli and Arun Bahl, Essentials of Physical Chemistry, S. Chand and Company Ltd., New Delhi, 2004.

OUTCOMES:

The students will be able to

- compare and contrast the solid, liquid and gaseous fuels and also describe the processes involved in liquid and gaseous fuels.
- analyse the fuel properties such as moisture, votalite matter, ash content, calorific value etc
- calculate minimum air required for complete combustion and calorific values of fuels.
- categorize different lubricants into three types, explain the preparation and determine their properties.

CHCX06	FUNDAMENTALS OF PHYSICAL CHEMISTRY	L	T	P	C
		2	0	2	3

OBJECTIVES:

The students will be conversant with the

- various thermodynamic terms and relate the laws of thermodynamics in chemical processes
- molecularity and order of reaction and derive the rate constant for different order of reactions
- basics of adsorption of different materials and propose mechanisms and surface area measurement
- conditions for equilibrium and learn different components at equilibrium

MODULE I BASIC THERMODYNAMICS **8**

Introduction - Thermodynamic terms - Thermodynamic equilibrium and processes - 1st law of thermodynamics: internal energy, enthalpy, heat capacity, isothermal and adiabatic expansion, Joule-Thomson effect - Zeroth law of thermodynamics: absolute temperature - 2nd law of thermodynamics: - spontaneous and cyclic process, Entropy in isothermal, isobaric and isochoric processes, work and free energy function, Maxwell's relation - 3rd law of thermodynamics

MODULE II CHEMICAL KINETICS **8**

Rate of chemical reaction - order and molecularity of a reaction - Rate constant - kinetics of opposing, parallel and consecutive and chain reactions - isotope effects - effect of temperature on reaction rate - collision theory - absolute reaction rate theory - kinetics in enzyme catalysis

MODULE III SURFACE SCIENCE AND CATALYSIS **8**

Adsorption - adsorption isotherms - uni and bimolecular adsorption reactions - parahydrogen conversion - factors affecting adsorption – Langmuir adsorption isotherm - Hinshelwood mechanism and *Eley-Rideal* mechanism with example - adsorption of gases on solids and surface area measurement by BET method - Terms in catalysis - homogeneous and heterogeneous and enzyme catalysis with example

MODULE IV PHASE RULE 6

Terms involved - Conditions for equilibrium - application of phase rule to water, lead-silver system, freezing mixtures, thermal analysis: cooling curves.

PRACTICALS

1. Determination of the heat capacity of benzoic acid, internal energy of combustion of camphor using Bomb calorimeter. Calculation of enthalpy of combustion and formation for camphor.
2. Determination of adsorption isotherm of (i) acetic acid on charcoal (ii) oxalic acid on charcoal.
3. *Kineticsoffirst and second order reactions.*
4. Phase rule experiments with organic compounds: (i) naphthalene and p-dichloro benzene (ii) naphthalene and diphenyl (iii) m-dinitrobenzenzene and p-nitro toluene.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

6. Puri B.R., Sharma L.R. and Pathania M.S., Principles of Physical Chemistry, 47th Edition, Vishal Publishing Co. India, 2016.

OUTCOMES:

The student will be able to

- calculate entropy, enthalpy and free energy change for different chemical processes
- calculate the rate constant for any chemical and biochemical processes
- differentiate the adsorption processes and calculate the surface area and predict the suitability of catalysts for different chemical processes

- predict the equilibrium conditions for water, alloys, freezing mixtures and draw the thermal curves for phase transition

CHCX07	GREEN TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make students conversant with the

- basic principles of green chemistry and green technology.
- wastes that causes hazards to human health
- chemicals that harms our environment
- need for green processes in various industries

MODULE I GREEN CHEMISTRY PROTOCOL **7**

Need – Significance – 12 Principles with examples – R4 model – Life cycle analysis – sustainable and cleaner production - Green Technology: definition, examples: CFC free refrigerants, green building, energy, 3D printers, nanotechnology – Awards for Green chemistry – organization promoting green chemistry.

MODULE II WASTE & WASTE MINIMISATION **8**

Source of wastes: domestic, industrial, medical, nuclear, e-waste; problems; prevention – economy of waste disposal – Waste minimization techniques: general waste treatment and recycling – alternate waste water treatment technologies: hybrid process – Green computing: goals, green cloud, green ICT - Pollution statistics from various industries (Industrial case studies).

MODULE III GREEN SYNTHESIS **7**

Introduction - Solvent free reactions - green reagents, green solvents in synthesis - microwave and ultrasound assisted reactions – supercritical fluid extraction – green oxidation and photochemical reactions – catalyst and biocatalysts.

MODULE IV GREEN INDUSTRIAL PROCESSES **8**

Polymer industry: biodegradable polymer - textile industry: greener approaches of dyeing, waste disposal – ecofriendly agrochemicals: biofertilizers, biopesticides – Pharmaceutical industry: atom economy, reduction of toxicity, use of biocatalyst, zero waste disposal – Leather industry: greener process in tanning, crusting, surface coating – ecofriendly batteries & fuel cells.

PRACTICALS

1. Synthesis of an ionic liquids (Ex: imidazolium) and testing the solubility of organic

chemicals.

2. Green bromination of stilbene (using pyridine hydrobromide).
3. Green synthesis: Photocatalytic reactions, solvent-free organic reaction – Aldol; green oxidation, green reduction.
4. Microwave assisted chemical reaction. (synthesis of aspirin, pinacol-pinacolone reaction, etc).
5. Comparison of conventional reaction with microwave assisted reactions (atom economy, solvent, etc) [Ex: aldehyde and ketones with hydrazines to give hydrazones].
6. Diels-Alder reaction in eucalyptus oil (green process).

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

4. Rashmi Sanghi, M. M. Srivastava, Green chemistry, Narosa publishers, New Delhi, 2003.

OUTCOMES:

The students will be able to

- outline the principles and implications of green chemistry.
- comprehend the potential risks of waste generated and analyse the threats to human and environment.
- integrate information into design of molecules to avoid/eliminate toxic solvents & reagents or reduce toxic products.
- identify various alternate greener technologies for various industries.

CHCX08	ORGANIC CHEMISTRY OF BIOMOLECULES	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make students conversant with the

- basic concepts in organic chemistry
- types and structure of carbohydrates and lipids
- formation of different structures of proteins from amino acid
- structure of nucleic acids

MODULE I BASIC CONCEPTS IN ORGANIC CHEMISTRY 8

Classification and IUPAC nomenclature of organic compounds – stereochemistry – optical, stereo and geometrical isomerism – types of reagents: electrophiles and nucleophiles – types of reactions: addition, substitution, elimination and rearrangement reactions.

MODULE II CARBOHYDRATES, LIPIDS AND VITAMINS 7

Structure and functions of carbohydrates: mono, di, oligo and polysaccharides – lipids: phospholipids, glycolipids, sphingolipids – cholesterol – steroids – Structure, functions and deficiency disorders of fat soluble vitamins: A, D, E & K - Water soluble vitamins B & C: Thiamine, riboflavin, pantothenic acid, niacin, pyridoxine, biotin, cobalamine, folic acid and ascorbic acid.

MODULE III AMINO ACIDS, PEPTIDES AND PROTEINS 7

Aminoacids: classification, properties - peptides – polypeptides – proteins: primary, secondary, tertiary and quaternary structure – glycoproteins – lipoproteins – Enzymes: classification and functions

MODULE IV NUCLEIC ACIDS 8

Nucleic acids – importance - structure of purines and pyrimidines – nucleotides – polynucleotides - RNA – types & structure - DNA – phosphodiester bonds – chemical, helical structure and functions – DNA replication – gene modification.

PRACTICALS

1. Qualitative tests to identify carbohydrates.

2. Quantitative estimation of carbohydrates.
3. Separation of sugars – TLC and/or paper chromatography.
4. Quantitative estimation of lipids.
5. Separation of amino acids – TLC and/or paper chromatography.
6. Quantitative estimation of proteins by Lowry's method.

L – 30; P – 30; TOTAL HOURS – 60

REFERENCES:

1. V. K. Ahluwalia, Organic Reaction Mechanism, Narosa Publishers, New Delhi, 2002.
2. Johnson Arthur T., Biology for Engineers, CRC Press, Finland, 2011.
3. Jain P.C and Renuka Jain, Physical Chemistry for Engineers, Dhanpat Rai and Sons, New Delhi. 2001.
4. David L. Nelson, Michael M. Cox, Lehninger Principles of biochemistry, Macmillan press, London, 2010

OUTCOMES:

The students will be able to

- classify organic compounds and explain the mechanism of various organic reactions.
- draw the structures and enumerate the functions of carbohydrate, lipids and vitamins.
- correlate the relationship among amino acids, peptides and proteins.
- recognize the role of nucleic acid in the formation of RNA & DNA and differentiate DNA & RNA using their structure and function.

CHCX09	POLYMER SCIENCE AND TECHNOLOGY	L	T	P	C
		2	0	2	3

OBJECTIVES:

To make the student conversant with the

- basic concepts of polymers, classification, types of polymerization and molecular weight & its distribution
- preparation, properties and applications of thermoplastics and introduction to biodegradable polymers
- properties and applications of thermosets, elastomers and FRP
- different types of moulding techniques

MODULE I BASIC CONCEPTS OF POLYMERS **8**

Definitions: monomer, polymer, functionality, degree of polymerization – classification of polymers: source, structure, application, thermal processing behavior (thermoplastics and thermosets), composition and structure (addition and condensation), mechanism (chain growth and step-wise growth) – copolymer: types – Definition –nomenclature of polymers – tacticity – types of polymerization : free radical, cationic and anionic polymerization (concepts only) – average molecular weight of polymer: number, weight – molecular weight distribution (problems)

MODULE II THERMOPLASTICS AND BIODEGRADABLE POLYMERS **8**

Preparation, properties and applications : LDPE, HDPE, polypropylene, PVC, PTFE, PET, polyamides (Nylon-6 and Nylon 6,6) and polycarbonates – polymer blends and alloys – basics of biodegradable polymers.

MODULE III THERMOSET RESINS, ELASTOMERS AND FRP **7**

Thermoset resins : phenolic resins, amino resins (urea and melamine formaldehyde), epoxy resins, unsaturated polyesters – polyurethanes – elastomers : vulcanization of natural rubber, diene based elastomers –fibre reinforced plastics: glass, aramid and carbon.

MODULE IV MOULDING TECHNIQUES **7**

Moulding constituents**:** functions – moulding techniques**:** compression, injection, extrusion (single screw), blow moulding, thermoforming, (mechanical and vacuum forming), lamination.

PRACTICALS

1. Determination of molecular weight and degree of polymerization using Oswald’s

viscometer.

2. Free radical polymerization of styrene.
3. Free radical polymerization of PMMA.
4. Preparation of phenol-formaldehyde.
5. Preparation of urea-formaldehyde.
6. Synthesis of epoxy resin.
7. Synthesis of unsaturated polyester.
8. Preparation of FRP laminates.
9. Demonstration of injection moulding, compression moulding and blow moulding.

L – 30; P – 30; TOTAL HOURS – 60

6. Gowarikar V.R., Viswanathan N.V and Jayadev Sreedhar, Polymer Science, Wiley Eastern Limited, Madras, 1981.

OUTCOMES:

The student will be able to

- classify various polymers, name the polymers and types of polymerization reactions, calculate molecular weight of polymers,
- summarise preparation, properties and applications of thermoplastics and give examples of biodegradable polymers
- elaborate the properties and applications of thermosets, elastomers and FRP
- select the appropriate moulding technique for a given polymer, based on the application

Maths Elective Courses

(to be offered in IV

Semester)

MACX 01	**DISCRETE MATHEMATICS AND GRAPH THEORY**	**L** **3**	**T** **1**	**P** **0**	**C** **4**

OBJECTIVES:

The aims of this course are to

- introduce Logical and Mathematical ability to deal with abstraction.
- familiarize the basic mathematical ideas and terminologies used in computer science.
- translate real life situations into diagrammatic representations.

MODULE I PROPOSITIONAL CALCULUS 8

Propositions – Logical connectives – Compound propositions – Conditional and biconditional propositions – Truth tables – Tautologies and contradictions – Contrapositive – Logical equivalences and implications – DeMorgan's Laws – Normal forms – Principal conjunctive and disjunctive normal forms – Rules of inference – Arguments – Validity of arguments.

MODULE II PREDICATE CALCULUS 7+3

Predicates – Statement function – Variables – Free and bound variables – Quantifiers – Universe of discourse – Logical equivalences and implications for quantified statements – Theory of inference – The rules of universal specification and generalization – Validity of arguments.

MODULE III FUNCTIONS 7+3

Functions – Classification of functions –– Composition of functions – Inverse functions – Binary and n–ary operations – Characteristic function of a set – Hashing functions – Recursive functions – Permutation functions.

MODULE IV ALGEBRAIC SYSTEMS 8+2

Groups, Cyclic Groups, Subgroups, Cosets, Lagrange's theorem, Normal subgroups – Codes and group codes – Basic notions of error correlation – Error recovery in group codes.

MODULE V GRAPH THEORY 7+3

Graphs – incidence and degree – subgraphs – isomorphism – complement of a graph – operations on graphs

MODULE VI PATH AND CIRCUIT 8+2

Walks, trails and paths – Eulerian graphs – Konigsburg bridge problem - Hamiltonian graphs

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1 Trembly J.P and Manohar R, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 30th Reprint 2011.

2 Kenneth H.Rosen, “Discrete Mathematics and its Applications:, 7th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, Special Indian Edition, 2011.

REFERENCES:

2 Thomas Koshy, “Discrete Mathematics with Applications”, Elsevier Publications, 2006.

3 C.L.Liu, D.P.Mohapatra, “Elements of Discrete Mathematics”, 4th Edition, Tata McGraw-Hill Pub. Co. Ltd, New Delhi, 2012.

OUTCOMES:

At the end of the course, student will be able to

- use the concepts of propositional calculus.
- use the concepts of predicate calculus.
- identify types of functions and their importance.
- decode and encode the messages using group theory concepts.
- apply the basic concepts of graph theory.
- represent some real life situations into diagrammatic representation.

MACX 02	PROBABLITY AND STATISTICS	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of this course are to impart the

- knowledge of the theory of probability and random variables
- techniques to carry out probability calculations and identifying probability distributions
- application of statistical inference in practical data analysis

MODULE I BASICS OF PROBABILITY AND STATISTICS 8+2

Sample space, events- axioms of probability and interpretation – Addition, multiplication rules – conditional probability, Independent events - Total probability – Baye's theorem - Descriptive Statistics.

MODULE II ONE DIMENSIONAL RANDOM VARIABLE AND PROBABILITY DISTRIBUTION FUNCTIONS 7+3

Discrete random variable –continuous random variable – Expectation - probability distribution - Moment generating function – Binomial, Poisson, Geometric, Uniform (continuous), Exponential and Normal distributions.

MODULE III TWO DIMENSIONAL RANDOM VARIABLES 8+2

Joint, marginal, conditional probability distributions –covariance, correlation - transformation of random variables.

MODULE IV SAMPLING AND ESTIMATION 7+3

Sampling distributions – basic knowledge on Random , simple random , stratified and cluster samplings – Test of Hypotheses - concepts- Point estimation and Interval estimation.

MODULE V THEORY OF INFERENCE 8+2

Large sample tests – test for single and difference on proportions, single mean, difference of means, difference of variances – confidence intervals. Small sample tests – Student's t test, F test and Chi square test on theory of goodness of fit and analyses of independence of attributes.

MODULE VI DESIGN OF EXPERIMENTS 7+3

Analysis of variance – one way classification – two way classification – Completely

Randomised Block Designs – Randomised Block Design – Latin square designs - Interpretations - case studies.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. T.Veerarajan, “Probability and Statistics”, Tata McGraw-Hill Education, 2008.
2. Miller, I., Miller, M.,Freund, J. E., “Mathematical statistics”, 7th Edition, Prentice Hall International, 1999.
3. S.P.Gupta, “Applied Statistics”, Sultan Chand & Sons

REFERENCES:

1. S.M.Ross, “Introduction to Probability and Statistics for Engineers and Scientists” Fifth Edition, Elesvier.
2. S.C.Gupta and V.K.Kapoor, “Fundamentals of Mathematical Statistics” First edition, Sultan Chand and Sons.
3. Arora and Arora, “Comphrensive Statistical Methods”, S. Chand, 2007

OUTCOMES:

On completion of the course, students will be able to

- do basic problems on probability and descriptive statistics.
- derive the probability mass / density function of a random variable.
- calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.
- calculate point and interval estimates.
- apply some large sample tests and small sample tests.
- carry out the data collection representation analysis and implications and the importance of inferences.

MACX 03	RANDOM PROCESSES	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of the course are to

- acquire the knowledge of the theory of probability and random variables
- study discrete and continuous probability distributions.
- demonstrate the techniques of two dimensional random variables and its distributions.
- introduce the random process, stationarity, Markov process and the study of correlation function and spectral analysis.

MODULE I Basics of Probability 7+3

Sample space, events- axioms of probability and interpretation – Addition, multiplication rules – conditional probability, Independent events - Total probability – Baye's theorem - Tchebychev's inequality.

MODULE II One dimensional Random variable and Probability Distribution functions 7+3

Discrete random variable –continuous random variable – Expectation - probability distribution - Moment generating function – Binomial, Poisson, Geometric, Uniform (continuous), Exponential and Normal distributions.

MODULE III Two dimensional random variables 7+3

Joint, marginal, conditional probability distributions - covariance, correlation and regression lines - transformation of random variables.

MODULE IV RANDOM PROCESSES 8+2

Classification of Random process - Stationary process - WSS and SSS processes - Poisson process – Markov Chain and transition probabilities.

MODULE V CORRELATION FUNCTIONS 8+2

Autocorrelation function and its properties - Cross Correlation function and its properties - Linear system with random inputs – Ergodicity.

MODULE VI SPECTRAL DENSITY 8+2

Power spectral Density Function - Properties - System in the form of convolution - Unit Impulse Response of the System – Weiner-Khinchine Theorem - Cross Power

Density Spectrum.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Veerarajan T., “Probability, Statistics and Random Processes”, Tata McGraw Hill,3rd edition, 2008.
2. Papoulis, “Probability, Random Variables and Stochastic Processes”, 4th Edition, Tata McGraw Hill Company, 2002.
3. S.M.Ross, “Introduction to Probability and Statistics for Engineers and Scientists” Fifth Edition, Elesvier

REFERENCES:

1. Scott L. Miller,Donald G. Childers, Probability and Random Processes, Academic Press,2009.
2. Trivedi K S, “ Probability and Statistics with reliability, Queueing and Computer Science Applications”,Prentice Hall of India,New Delhi,2nd revised edition, 2002

OUTCOMES:

On completion of the course, students will be able to

- do basic problems on probability.
- derive the probability mass / density function of a random variable.
- calculate probabilities and derive the marginal and conditional distributions of bivariate random variables.
- identify and study the different random processes.
- compute correlation functions and related identities.
- compute power spectral density functions and apply Weiner-Khinchine formula.

MACX 04	APPLIED NUMERICAL METHODS	L	T	P	C
		3	1	0	4

OBJECTIVES:

The aims of the course are to

- introduce basic computational methods for analyzing problems that arise in engineering and physical sciences.
- acquire knowledge about approximation theory and convergence analysis associated with numerical computation.

MODULE I NUMERICAL SOLUTIONS OF EQUATIONS 7+3

Bisection method - Regula Falsi method – Secant method - Fixed point iteration method - Newton's Raphson method –Gauss Elimination method - Gauss-Jordon method – Gauss Jacobi method - Gauss-Seidel method.

MODULE II INTERPOLATION 8+2

Finite difference operators – Gregory Newton's forward and backward interpolations – Cubic spline interpolation - Lagrange interpolation - Newton's divided difference formula.

MODULE III NUMERICAL DIFFERENTIATION AND INTEGRATION 8+2

Numerical differentiation using Newton's forward and backward formulae – Numerical integration : Trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Gaussian Two Point and Three Point Quadrature formulae – Double integrals using Trapezoidal and Simpson's 1/3 rule.

MODULE IV INITIAL VALUE PROBLEMS FOR FIRST ORDER ORDINARY DIFFERENTIAL EQUATIONS 7+3

Numerical solutions by Taylor's Series method, Euler's method, Modified Euler's Method - Runge – Kutta Method of fourth order – Milne's and Adam's Bashforth Predictor and Corrector methods

MODULE V INITIAL AND BOUNDARY VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 8+2

Numerical solutions by Taylor's Series method - Runge – Kutta Method of fourth order of second order ODE. Finite difference methods.

MODULE VI BOUNDARY VALUE PROBLEMS FOR PARTIAL 7+3

DIFFERENTIAL EQUATIONS

Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace equation.

L – 45; T – 15; Total Hours –60

TEXT BOOKS:

1. Grewal, B.S., “Numerical methods in Engineering and Science”, 7th edition, Khanna
   Publishers, 2007.
2. C.F.Gerald, P.O.Wheatley, “Applied Numerical Analysis” ,Pearson Education, New Delhi, 2002.

REFERENCES:

1. Chapra S.C, Canale R.P. “Numerical Methods for Engineers”, 5th Ed., McGraw Hill, 2006.
2. M.K.Jain, S.R.K.Iyengar, R.K.Jain, “Numerical methods for Scientific and Engineering Computation”, New Age International Publishers, New Delhi, 2003

OUTCOMES:

At the end of this course, students will be able to

- solve algebraic, transcendental and system of equations.
- apply interpolation techniques.
- carry out numerical differentiation and integration using different methods.
- solve first order ODE using single and multi step methods.
- solve second order ODE, initial and boundary value problems.
- solve the boundary value problems in PDE.

Maths Elective Courses
(To be offered in VI Semester)

MACX 05	MATHEMATICAL PROGRAMMING	L	T	P	C
		2	0	0	2

OBJECTIVES:

The aims of the course are to

- acquire knowledge and training in optimization techniques.
- obtain knowledge about optimization in utilization of resources.
- understand and apply operations research techniques to industrial operations.

MODULE I LINEAR PROGRAMMING PROBLEM 10

Linear programming – formulation of the problem - graphical interpretation of optimality - Simplex method – to obtain basic feasible solution – types of linear programming solution – complications and their resolution.

MODULE II ADVANCED LINEAR PROGRAMMING PROBLEMS 8

Artificial variable - Big M method – Two phase method – alternative optimal solution – unbounded solution - Duality – primal dual relationships.

MODULE III TRANSPORTATION PROBLEM 7

Transportation problems – Initial basic feasible solutions, MODI method, Unbalanced transportation problem, Degeneracy in transportation models,.

MODULE IV ASSIGNMENT PROBLEM 5

Assignment problem – Minimization and Maximization type of problems by Hungarian method.

Total Hours –30

TEXT BOOKS:

1. Hamdy A Taha, “Operations Research - An introduction”, 8th edition, Phil Pearson, 2007.
2. Winston.W.L., “Operations Research”, 4th edition, Thompson-Brooks/Cole, 2003.

REFERENCES:

1. Wayne.L. Winston, “Operations Research Applications and Algorithms”,

4th edition, Thomson learning, 2007.

3. A. Ravindran, D. T. Phillips and J. J. Solberg, "Operations Research: Principles and Practice", 2nd edition, John Wiley & Sons, New York, 1992.
4. Robertazzi. T.G., “Computer networks and systems-Queuing theory and performance evaluation”, 3rd edition, Springer, 2002.

OUTCOMES:

At the end of the course, students will be able to

- formulate industrial problems as mathematical programming problems.
- solve linear programming problems by different methods.
- solve transportation problems by different methods.
- solve assignment problems by Hungarian method.

MACX 06	STATISTICAL METHODS FOR DATA ANALYSIS	L	T	P	C
		2	0	0	2

OBJECTIVES:

The aim of the course is to

- introduce statistical quality control tools.

MODULE I TESTS OF HYPOTHESES AND STATISTICAL INFERENCES 8

Small sample tests – Student's ' t ' test for single mean , difference of means, paired t test – F test for difference of variances – Chi square test on theory of goodness of fit and analyses of independence of attributes.

MODULE II DESIGN OF EXPERIMENTS 7

Analysis of variance – one way classification – two way classification – Completely Randomised Block Designs – Randomised Block Design – Latin square designs - Statistical analysis -Interpretations - case studies.

MODULE III STATISTICAL QUALITY CONTROL-I 8

Quality improvement and statistics –Statistical quality control- statistical process control – control charts – design of control charts –analysis of patterns on control charts - X bar chart, R chart and S chart.

MODULE IV STATISTICAL QUALITY CONTROL-II 7

Process and product control – attribute charts – P, np and C charts – control charts performance.

Total Hours –30

TEXT BOOKS:

1. Douglas C.Montgomery, George C. Runger "Applied Statistics and probability for Engineers" V Edition – John Wiley & Sons Inc.
2. Miller, I., Miller, M., Freund, J. E. "Mathematical statistics" 7th Edition. Prentice Hall International, 1999.

REFERENCES:

1. Dekking, F.M., Kraaikamp, C., Lopuhaä, H.P., Meester, L.E. "A Modern Introduction to Probability and Statistics" Springer, 2nd Edition.
2. Chin Long chiang "Statistical Methods of Analysis "World Scientific Books,

2003.
3. S.C.Gupta and V.K. Kapoor, “Mathematical Statistics” , Sultan Chand publications.
4. Veerarajan “Fundamentals of Mathematical Statistics” I Edition, Yes Dee Publishing Pvt. Ltd., 2017.

OUTCOMES:

On completion of the course, students will be able to

- develop and test hypothesis for different statistical tests
- design an experiment and case study the experiment with different data.
- analyze the industrial data using quality control design tools statistically.
- analyze the industrial data using process and product control tools statistically.

MACX 07	NUMERICAL METHODS FOR INTEGRATION AND DIFFERENTIAL EQUATIONS	L	T	P	C
		2	0	0	2

OBJECTIVES:

- This course aims to solve numerically integral and differential equations.

MODULE I NUMERICAL INTEGRATION 8

Numerical integration by trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Two Point and Three point Gaussian quadrature formulae.

MODULE II NUMERICAL DOUBLE INTEGRATION 6
