

Cognitive Computing and ADHD: My child has ADHD. How to discover symptoms and treatment for them?

June 26, 2020 at 10:00 – 13:00 CEST

The prevalence rates of diagnosed ADHD amongst children and adolescents aged 4 to 17 is 9.65% of total population or 73.32 million worldwide (GBD, 2017). Attention deficit hyperactivity disorder (ADHD) is a complex neurodevelopmental disorder that can affect and create problems in inattention, disorganization, poor impulsive control behaviours, and be overly active. The symptoms of ADHD begin in childhood and it can continue through adolescence and adulthood. Although ADHD cannot be cured, it can be successfully managed and some symptoms might improve as the child ages. This seminar provides practical information about ADHD for parents, academicians, researchers, and even common people who have no knowledge about this neurobehavioral disorder.

**Paweł Dobrakowski**

M.D., Specialist in Neurology
Humanitas University in Sosnowiec, Poland

**Judit Balazs**

Professor, Child Adolescent and Adult Psychiatrist
Eötvös Loránd University, Hungary
President of Hungarian Psychiatric Association

**Silvana Markovska-Simoska**

Professor, M.D., D.Sci. in Neurophysiology
Academy of Sciences and Arts of North Macedonia
Co-founder, Macedonian Society of Psychophysiology

**Matthias Rauterberg**

Professor, Designing Interactive Systems
Eindhoven University of Technology, Netherland
Editor-in-Chief, Entertainment Computing, Elsevier

Moderator:**Aravindhnen Jaya**

Professor, Computer Application, B.S. Abdur Rahman
Crescent Institute of Science and Technology, India

Organizer:**Bernadetta Kwintiana**
