(61) Patent of Addition to Application Number:	NA	
Filing Date	:NA	
(62) Divisional to Application Number	:NA	
Filing Date	:NA	

(57) Abstract :

A system for real-time community detection (100) is disclosed. The system (100) according to the present disclosure broadly comprises: a network formation module (104); a pre-processing module (105); a first community detecting module (106); a second community detecting module (108); a third community detecting module (110); and a fourth community detecting module (113). The method of working of said first community detecting module (106), said second community detecting module (108), said third community detecting module (110), said pre-processing module (105), and said fourth community detecting module (113) are also disclosed. Figure to be included in Figure 1

(61) Patent of Addition to Application Number	:NA	
Filing Date	:NA	
(62) Divisional to Application Number	:NA	
Filing Date	:NA	

(57) Abstract :

A simplified calling system for mobile phones is disclosed. Said simplified calling system for mobile phones comprises: an at least a user interface that provides for both number keys and alphabet keys; and an at least an encoding and decoding module. Said at least one encoding and decoding module is configured to: encode ten-digit numeric mobile phone numbers into lesser number of alphanumeric characters; and decode the alphanumeric characters into numeric characters. The disclosed system helps users in remembering their mobile phone numbers more easily, in addition to saving the time of users. Figure to be included is Figure 2

No. of Pages : 11 No. of Claims : 2

(54) Title of the invention : GREEN NANO BIOMATERIAL TO CONTROL PATHOGENS CAUSING VIBRIOSIS IN AQUAFARMING

(51) International classification	:C12Q0001180000, A61P0031040000, A61L0015460000, A61K0031650000, A61L0012140000	(71)Name of Applicant : 1)B.S.Abdur Rahman Crescent Institute of Science and Technology Address of Applicant :GST Road, Chennai, Tamilnadu, India 600048. Tamil Nadu India
(31) Priority Document No	:NA	(72)Name of Inventor :
(32) Priority Date	:NA	1)Dr. S. Hemalatha
(33) Name of priority country	:NA	2)S. Ranjani
(86) International Application No	:NA	
Filing Date	:NA	
(87) International Publication No	: NA	
(61) Patent of Addition to Application Number	:NA	
Filing Date	:NA	
(62) Divisional to Application Number	:NA	
Filing Date	:NA	

(57) Abstract :

Abstract of the invention: The main objective of the present invention is to demonstrate the formulation of using three herbal powders and test its antimicrobial activity against vibriosis causing pathogens isolated from infected fishes. This invention focuses on formulation technology of. The formulation of green nano biomaterial was confirmed through various characterization techniques including Uv-Visible spectrophotometer, Fourier transform infrared absorption spectrum, Particle size analyser, Zeta potential analyser, Field Emission-scanning electron microscopic studies and Energy Dispersive X-Ray Analysis. This invention primarily focuses on effective antibacterial efficacy of green nano biomaterial (GNB) on vibriosis causing fish pathogens. The green nano biomaterial was validated for its Minimum inhibitory concentration, Minimum bactericidal concentration and antibiofilm property. Further, green nano biomaterial was validated for its effect on CTX-M-15 gene, which is the predominant ESBL encoding gene. The presence of CTX-M-15 gene was compared between control, antibiotic treatment and green nano biomaterial treatment. The results are promising, by preventing the growth and biofilm formation in all tested pathogens. The presence of CTX-M-15 gene was also suppressed in green nano biomaterial treated strain when compared with control and antibiotic treatment. Hence, green nano biomaterial can be used as an alternative to antibiotics in treating infection caused by fish pathogens to prevent antimicrobial resistance. This formulation also will help to prevent the horizontal antibiotic resistant gene transfer.

(57) Abstract :

Much foundational research and groundbreaking progress are witnessed throughout the field of deep learning, machine translation, and computer vision for automatic code generation. The efficient model generates simplistic web design templates by following architecture workflow from hand-drawn images. Developing web templates from hand-drawn illustrations ensures that static product web pages are created faster with minimal workers and much lesser cost. The model pipeline practices the word-embedding system obtained by long short-term memory (LSTM) for code fragments. Also, canny edge detection algorithm provided with VGG19 convolutional neural net (CNN) and attention-based LSTM for web template production. Selected features are concatenated, and a terminal LSTM with a SoftMax function is called for final prediction. The proposed model is verified with a benchmark based on the BLUE score, and performance enhancement is compared among the existing image generation algorithms.
