INVITATION OF THE EVENT

The primary objective of the camp was to collect voluntary blood donations to meet the increasing demand for blood and its components in our community and to raise awareness about the importance of regular blood donation. Encouraged the students to become regular blood donors and establish a sense of social responsibility.

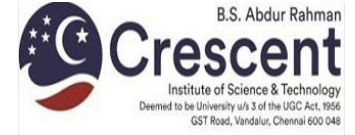

Pre-arrangements were done in Crescent Medical Center with adequate space for registration, donation, and post-donation care. Also, arranged for necessary equipment, including blood collection kits and refreshments for donors. Collaborated with healthcare professionals, including doctors and nurses, to oversee the donation process. A registration desk was maintained to streamline the donation process and gather donor information.

The blood donation camp was conducted as follows:

- **Registration:** Donors were required to fill out a registration form, providing essential personal information and medical history. Qualified medical professionals screened the donors for eligibility.
- **Medical Examination:** Each donor underwent a brief medical examination to ensure their eligibility for blood donation. Vital signs such as blood pressure, pulse rate, and hemoglobin levels were checked.
- **Donation Process:** Eligible donors were guided to the donation area, where trained phlebotomists collected blood using sterile equipment. Each donation took approximately 10-15 minutes.
- **Refreshments:** After donating blood, donors were given refreshments and advised to rest for a short period to ensure their well-being.
- **Documentation:** Accurate records of each donor's information, donation quantity, and post-donation care were maintained for future reference.

It has been observed that 162 students volunteered to donate the blood and 106 students were eligible for donating. The event not only collected a significant quantity of blood but also raised awareness about the importance of regular blood donation camp.

Our heartfelt gratitude to all the donors, volunteers, healthcare professionals, and sponsors who contributed to the success of this noble initiative. The collected

blood units will go a long way in saving lives and providing essential support to local healthcare facilities.
